CLSTOM-IIOUSE, an office established by the authority of the king, in inaritime cities, or port-towns, for the receipt and manarement of the customs and duties of impurtation and exportation, imposed on merchandise, and regulated bv a vooks of rates. An edifice with considerable pretensions to grandeur, on the score of external decoration, was erected for the purpose of transacting public business, in 1826. Its site was well chosen from its proximity to the Tower; but, unfortunately, the piles on which the building rested, being exposed to the action of the Tharnes, speedily decayed, and the whole of the interior of the edifice sunk to the ground. It has since been rebuilt.
CUSTOS Brevium, the principal clerk belonging to the court of common pleas, whose business it is to receive and keep all the writs inade returnable in that court, filing every return ly itself; and, at the end of each term, to receive prothonotaries of all the records of tie nisi prius, called the posteas. The posteas are first brought in ly the clerks of assize, of every circuit, to that prothonotary who entered the issue in the causes, in order to enter judgment ; and after the prothonotary has entered the verdict and judgment into the roll3 of the court, he delivers them over to the custos brevium, who binds them into a bundle. The custos brevium also makes entries of writs of covenant, and the concord upon every line; he likewise makes out exemplifications and copies of all writs and records in his office, and of all fines levied, which, being engrossed, are divided between him and the chirographer, which last keeps the writ of covenant and the note, and the former the concord and foot of the fine. The custos brevium is appointed by the king's letters patent.

Custos Rotulorum, an officer who has the custody of the rolls and records of the sessions of peace, and also of the commission of the peace itself. He is usually a nobleman, and always a justice of the peace, of the quorum, in the county where he is appointed. This officer is appointed by writing under the king's sign manual, being the lord chancellor's warrant to put them in commission. He may execute his office by a deputy, and is empowered to appoint the clerk of the peace; but he is prohibited from selling his office, under divers penalties.

Custos Spiritualium, he that exercises the spiritual jurisdiction of a diocese, during the vacancy of any see, which, by the canon law, belongs to the dean and chapter; butat present, in England, to the archbishop of the province by prescription.

Custos Temporalium, the person to whom a vacant see or abbey was given by the king as supreme lord. His office was, as steward of the
goods and profits, to gave an account th the escheator, who did the like to the excherpuer.

CUSTREI, n.s. Ir.coustillier. A burhberbearer; a vesel for lolding wine. The word is sometimes written coistrel.

Every one had an archer, a demi-lance, and a custrel. Lord Herbert.

CUSTRIN, a fortified town of Prussia, the capital of the New Mark of Brandenburgh, is situated in a plain at the junction of the Wartha and the Oder. The town though small has spacious suhurbs, and contains 4500 inhabitants. It is encompassed by extensive morasses, which add to its strength; a fortified dike also commences at one of the suburbs, and is continued for the space of three miles by means of thirtysix liridges, across a succession of marshy ground. In the month of August, 1758, this piace was bounbarded and laid in ashes by the Russians, lut afterwards rebuilt in a style of great regularity. It is forty-eight miles east of Berlin.
CUT, 'v. a., v.n.\&n.s. Fr. couper, cou-
Cutter, n. \%.
Cutting, \(n\).s.
Cutter-off, \(n\). \(s\).
Cut-tiroat, n. s. \& udj. Curare, m. s. Few words have Cut-purse, \(n\).s. \(\quad \int\) more shades of meaning than to cut, but in all of them division, producing, in some way or other, a solution of continuity, is expressed or implied. To cut is, to penetrate with a sharp instrument; to hew; to sculpture; to form by cutting; to divide by passing through ; to pierce with an uneasy sensation; to divide packs of cards; to intersect; to castrate; to avoid a person, or pretend not to see or know him; to make way by dividing; to perform the operation of lithotomy. It obtains many additional meanings from its conjunction with down, off, out, short, up, and in. To cut down is, to fell ; to level with the eartl by a blow from a sharp instrument; to diminish the amount of any demand; to excel ; to overpower. To cut off is, to separate by cutting; to extirpate ; to bring to an untimely death; to rescind; to take away; to intercept ; to put an end to; to obviate; to withhold; to preclude; to interrupt; to abbreviate. To cut out is, to shape; to scheme; to adopt; to debar; to excel. To cut short is, to interrupt; to abridge. To cut up is, to divide an animal, or some article of animal food, into convenient parts; to eradicate. To cut in is a phrase used in card-playing, particularly at whist, when the cut made by the parties determines who are to be the players. To cut a caper is to dance. The meanings of the noun are also numercus. It denotes the action of a sharp instrument ; the separation made by

\footnotetext{
lol. Vil.-Part 1.
}
such an instrument; an incised wound; an artificial ghannel; a part cut off from the rest; a small particle; a lot made by cutting into unequal portions, a stick, straw, or bit of paper, which portions are held between the finger and thumb, while another draws the lot; a near passage, which saves distance, by cutting off an angle; an impression taken from an engraving on wood or copper; the plate on which the drawing is engraved; the dividing of a pack of cards; anciently, a fcol or cully; a gelding. Cut and long tail is a proverbial expression for all kinds of men. The participial adjective, cut, signifies prepared for use, in which case it is joined with \(d r y\); rather the worse for liquor; hurt in the feeling. Cut and come again is a trivial expression, denoting that there is an abundance. Cutter is the agent that cuts any thing; a small switt-going vessel; the incisores, or cutting teeth; an officer in the exchequer; a ruffian. Cutter off means a destroyer. Cutting is, a piece cut off; an incision; a caper, but this is obsolete; division, as of a pack of cards. Cut-purse is a thief; cut-throat a murderer; a butcher of men; the animal which is sometimes miscalled a hero. For Cutlery, see the article.

And they did beat the gold into thin plates, and cut it into wires.

Exod. xxxix. 3.
And they caught him, and cut off his thumbs.
Jud. i. 6.
Thy servants can skill to cut timber in Lebanon.
2 Chron. ii.
Who cut up mallows by the bushes and juniperroots for their meat.

Job xxx. 4.
A bowe in honde and arowis had she,
Her clothis cuttid were unto the kne.
Chaucer. The Legende of Dido.
Right as a sword forcutteth and forkcrveth
An arme atwo, my dere son! right so
A tonye cutte:ib friendship all atwo.
Id. Cant. Tales.
Now draweth cutte or that ye forther twinne; He which that hath the shortest shal beginne.

Id. Prol. Cant. Tales.
The cotelere dwellith in this town that made the same kuyff,
And for to prove the trowith he shall be here as blyve.

Id. Cant. Tales.
Either with nimble wings to cut the skies, When he them on his messages doth send, Or on his own dred presence to attend.

Spenser. Hymn on Heavenly Love
But that same squire to whom she was more dere Whenas he saw she should be cut in twaine, Did yield she rather should with him remaine Alive then to himself be shared dead.

Id. Faerie Queene.
Eftsonncs her shallow ship away did slide
More swift than swallow sheres the liquid skye,
Withouten oare or pilot it to guide,
Or winged canvas with the wind to fly :
Only she turnd a pins and by and by
It cut away upon the yielding wave.
Id.
All Spain was first conquered by the Romans, and filled with colonies from them, which were still increased, and the native Spaniards still cut off.

Id. On Ireland,
It hath a number of short cuts or shreddings, which may be better called wishes than prayers. Hooker.

My lady Zelmane and my daughter Mopsa may draw cuts, and the shortest cut speak first. Sidney.

Why should a man, whose blood is warm within, Sit likc his grandsire cut in alabaster? Shakspeare.

Alh, cut my lace asunder,
That my great heart may have some scope to bear, Or else I swoon with this dead killing news.

Id. Richard III.
He that cuts off twenty years of life,
Cuts off so many years of fearing death.
Id. Julius Casar.
By the pattern of mine own thoughts I cut out tho purity of his.

Id. Winter's Tule.
To have an open ear, a quick eye, and a nimble hand, is necessary for a cutpurse.

Id.
Send her money, knight, if thou hast her not in the end, call me cut.

Id. Twelfth Night.
Their clothes are after such a Pazan cut too, That, sure, they've worn out Christendom.

Id. Henry VIII.
A paultry ring
'That she did give, whose poesy was
For all the world like cutler s poetry
Upon a knife: love me, and leave me not.
Shakspeare.
At quintin he,
In honour of this bridaltee, Hath challenged either wide countee: Come cut and long tail; for there be Six bachelors as bold as he.

Ben Jonson. Underwood.
Nor can good Myfon wear on his left hand
A signet ring of Bristol diamond,
But he must cut his glove to shew his pride,
That his trim jewel might be better spyd. Hall.
Tbe king of this island, a wise man and a great warrior, handled the matter so, as he cut off their land forces from their ships.

Bacon.
It is no grace to a judge to shew quickness of conceit in cutting off evidence or coursel too short. Id.

I, for ny part, do not like images cut out in juniper, or other garden-stuff: they be for children. Id.

The burning of the cuttings of vines, and casting them upon land, doth much good.

Id.
All the timber whereof was cut down in the mountains of Cilicia. Knolles.

This great cut or ditch Sesostris the rich king of Egypt, and long after him Ptolemus Philadelphus, purposed to have made a great deal wider and deeper, and thereby to have let the Red Sea into the Mediterranean.
\(I d\).
Cutting is particularly used in heraldry, where the sbield is divided into two equal parts, from right to left, parallel to the horizon, or in the fesse way. The word is also applied to the honorable ordinaries, and even to animals and moveables, when they are divided equally the same way; so however, as that one moiety is color, the other metal. The ordinaries are said to be cut, couped, when they do not come full to the extremities of the shield.

Cutting, in painting, the laying one strong lively color over another, without any shade or softening. The cutting of colors has always a disagreeable effect.

Cutting, in surgery, denotes the operation of extracting the stone out of the bladder by the knife. See Lithotomy.

Cutinc, in the manege, is when the horse's feet interfere; or when with the shoe of one foot ne beats off the skin from the pastern joints of another foot. This is more trequent in the hind feet than the fore: the cause is commonly bad shoeing.

Cutming in Wond is a particular kind of sculpture or engraving; the invention of which, as well as that in copper, is ascribed to a goldsmith of Florence : hut it is to Albert Durer and Lucas they are both indebted for their perfection. See Engraving and Printing. Hugo da Carpi invented a manner of cutting in wood, by means of which the prints appeared as if painted in clair-obscure.

Cuttings, or slips, in gardening, the branches or spigs of trees or plants, cut or slipped off to set again; which is done in any moist fine earth. The best season is from August to April; but care is to be taken, when it is done, that the sap he not too much in the top, lest the cut die before that part in the earth have root enough to support it : nor must it be too dry or scanty; the sap in the branches assisting it to take root. In providing the cuttings, such branches as have joints, knots, or burrs, are to be cut off two or three inches beneath them, and the leaves to be stripped off so far as they are set in the earth. Small top branches, of two or three years' growth, are fittest for this operation.

CUTCH, an extensive province of the southwestern part of Hindostan, situated principally between the twenty-third and twenty-fourth degrees of north latitude. It is bounded to the north by a sandy desert and the province of Sindy; to the south by the gulf of Cutch; to the east by Gujrat, and to the west by Tatta, from which it is separated by the most eastern branch of the Indus. Its limits northward are not accurately defined, but it may be estimated at 110 miles in length, by seventy the average breadth. The greater part of the province is composed of woods and uncultivated plains; where a number of very fine horses are hred, superior camels, and black cattle. Other parts produce grain and cotton. It is chiefly possessed by various independent chiefs, who are often connected with the pirates of the coast: the inhabitants are principally Mahommedans. The chief towns are Boojehooje, Luckput, Bundar, and Mandavie.

Cutcil Gundava, a district of Baloochistan, in Persia, situated at the Dottom of the mountains south-east of Kelat, and about 150 miles in length, by forty-five in breadth. The soil is black and rich, growing every species of grain, together with cotton, madder, and indigo. The rains are in June, July, August, and in the spring months, during the summer, the simoom, or pestilential wind, is frequent and very destructive. The climate is otherwise good, and the soil excellent, producing a large revenue to the khan of Kelat. Great quantities of grain are exported to the sea-ports of Corachie and Sonmeany. To the northward of Cutch Gundava lies Anund Dijil.

CUTCHWARA, a district in the province of Malwah, Hindostan, situated about the twentyfifth degree of north latitude, and mostly tributary to the Malwah Mahrattas. It is intersected
by the (iitlysinde river. The chnef towns are Dewagur and Soonel.

CUTU, signifies knowlerlge or skill. So Cuthwin is a knowing conqueror; Cuthred, a knowing counsellor ; Cuthbert, famous for skill. Much of the same nature are sophocles and Sophianus.

Cutil, or Cuthall, a province of Assyria, on the Araxes, the same with Cush; but others take it to be the country which the (ireeks called Susiana, and whicli to this day, says Ir. Wells, is by the inhabitants called Chusistan. Calınet is of opinion that Cuthah and Scythia wre the same place, and that the Cuthites who were removed into Samaria by Salmaneser (2 Kincs xvii. 24), came from Cush or Cuth, mentioned in Gen. ii. 13. They worshipped the idol Nergal, id. ibid. 30. He adds that they came from Cush, or Cutha upon the Araxes; and that their first settlement was in the cities of the Medes, subdued by Salmaneser and the kings of Syria, his predecessors. The Scriptures inform us, that the Cuthites, upon their arrival in this new country, continued to worship the gods formerly adoeed by them beyond the Euphrates. Esarhaddon, king of Assyria, who succeeded Sennacherib, appointed an Israelitish priest to go thither, and instruct them in the religion of the Hebrews. But these people thought they might reconcile their old superstition with the worship of the true God. They therefore framed particular gods for thenselves, which they placed in the several cities where they dwelt. But afterwards they gave up idolatry, and adhered solely to the law of Moses. The Samaritans were their descendants.

CU'TICLE, n.s.) Lat. cuticula. The outCuticular, adj. (ward skin of the body; a
Cuta'neous, adj. 5 thin skin formed on the surface of any liquor. Belonging or relating to the skin.

This semus, nutritious mass is more readily circulated into the cutaneous or remotest parts of the body.

Floyer on Humours.
When any saline liquor is evaporated to cuticle and let cool, the salt concretes in regular figures, which argues that the particles of the salt, before they concreted, floated in the liquor at equal distances in rank and file.

Newton's Opticks.
Some sorts of cutaneous ernptinns are occasioned by feeding much on acid unripe fruits and farinaceous substances.

Arbuthnot.
In each of the very fingers there are bones and gristles, and ligaments aud membranes, and muscles, and tendons, and nerves and arteries, and veins and skin, and cuticle and nail.

Bentley's Sermons.
Where the spontancous adhesive electric atmospheres are employed to charge plates of air, as in the Galvanic pile, or protably to charge their animal membranes or cuticles, as perhaps in the shock given by the torpedo or gymnotus, it seems necessary that the intervening non-conducting plate must be extremely thin.

Darwin.
Those parts of our system which are in health excited into perpetual action, give us pain when they are not excited into action: thus, when the hands are
for a time immersed in snow, an inaction of the cutaneous capillaries is induced, as is seen from the paleness of the skin, which is attended with the pain of coldness.

Id.

\section*{Cuticle. See Anatomy.}

CU'TLASS, n.s. Fr. coutelas. This word is written sometimes cutlace, sometimes cuttleax; in Shakspeare, curtleax; and in Pope, cutlash. A broad cutting sword: the word is much in use among the seamen.

Werc't not better
That I did suit me all points like a man?
A gallant curtleax upon my thigh,
A boar spear in my hand?
Shakspeare. As You Like It.
Mores, in his curious dissertation on letter founders, calls a cutlass, as it seems, a courtlelasse, among the antique typographic ornaments.

Warton.
CUTLER (Sir John), bart. and citizen of London, was a great benefactor to the grocers' company, and contributed largely to the rebuilding of the college of physicians in Warwick-lane. After his death, however, in 1690 , his executors claimed the sum which he had advanced, with interest, amounting in all to \(£ 7000\). They finally compromised the claim for \(£ 2000\). Pope commemorates this circumstance in some well-known verses; describing our baronet as a perfect miser. It appears, however, that he liberally subscribed to many charities, and built at his own charge the north gallery of his parish-church, St. Margaret's, Westminster. He had two daughters, who were respectively married to John, earl of Radnor, and Sir William Portman, bart. His funeral it is said cost the sum of \(£ 7666\).

CUTLERS, Company of. This company was incorporated in 1413 by Henry V.; their arms are gules, six daggers in three crosses saltire argent, handled and hilted or ; the crest an ele-
 phant with a castle.

CUTLERY, in connection with the mechanical arts, will embrace all kinds of edged and sharp tools, of iron or steel, and the modes of their manufacture.

It might be expected, that in no department of the arts of a country, would the progress of civilisation be more distinctly marked, than in the degree of excellence attained in this manufacture. A knife will purchase half the lands of a village from a barbarous tribe; and Great Britain has well sustained her superiority among civilised nations in the general quality of her cutlery goods.

But in other, and far less civilised countres, a superior steel has heen manufactured for ages. It is a little remarkable, that none of our modern discoveries in chemistry have enabled us to imitate, successfully, the sword and sabre blades of Damascus; and that, within a very few years, in 1795, we helieve, a new kind of foreign steel, the wootz of India, has been introduced into this country, and been found superior to any thing manufactured here for the blades of penknives.

The Damascene blades are supposed, by European cutlers, to be constructed of fine iron and steel-wire welded together in alternate layers;
the wave or water being given to them by sulphate of alımina applied to the final surface. Other accounts state them to be hardened by repeated immersions, when red-hot, in goat's blood. But the real process has never been accurately known in this country; and it is not improbable, that the iron ore of Syria may possess some peculiarity which is the foundation of this excellence in its manufactured steel.

Such a conjecture has been offered by Mr. Stodart, with regard to the ores out of which the wootz of India is formed. For the introduction of it into this country, we are indebted to the late distinguished naturalist, Sir Joseph Banks, who first procured a pen-knife to be made from a cake of it, in the year above-mentioned. The forging was attended with some difficulty, owing to the unequal fusion of the metal, some parts being overcharged with the steely principle, and others being as much deficient in it. But the pen-knife made was excellent. The Indian method of making wootz has been described as follows: forged iron, in pieces, is enclosed in a crucible, and heated in a furnace with wood. Two or three pairs of bellows are employed to augment the heat, until the wood is completely charred, and the iron fused and converted into steel. The chief peculiarity of the process seems to be the use of uncharred wood. A variety of cutting instruments have been manufactured from this steel with great success.

Those articles of cutlery which do not require a fine polish, and are of low price, are made from what is called blistered steel, or that which has not undergone fusion. See our article Steel. Those which require the edge to possess considerable tenacity, but in which superior hardness is not required, are made from sheer steel. The finer kinds of cutlery are made from steel which has been in a state of fusion, and which is termed cast-steel, no other kinds being susceptible of a fine polish. Table-knives are mostly made of sheer-steel, the tang and shoulder being of iron, and the blade being attached, by giving them a welding heat. The knives, after forging, are hardened, by heating them red-hot, and plunging them into water; they are afterwards heated over the fire, till they become blue, and then ground. Forks are made, almost altogether, by the aid of the stamp and appropriate dies. The prongs only are hardened and tempered. Razors are made of cast-steel, the edge of a razor requiring the combined advantages of great hardness and tenacity. After the razor-blade is forged into its proper shape, by the aid of a convex-faced hammer and anvil, it is hardened, by gradually heating it to a bright red heat, and plunging it into cold water. It is tempered by heating it afterwards until a brightened part appears of a straw color. This would be more equally effected by the use of sand, or, what is still better, by hot oil, or a fusible mixture, consisting of eight parts of bismuth, five of lead, and three of tin; a thermometer being placed in the liquid at the time the razors are immersed, for the purpose of indicating the proper temperature, which is about \(500^{\circ}\) of Fahrenheit. After the razor has been ground into its proper shape, it is finished by polishing.

\section*{CUTLERY。}

The glazer, used in polishing, is formed of wood, faced with an alloy of lead and tin; after its face is turned to the proper form and size, it is filled with notches, which are filled up with emery and tallow. This instrument gives the razor a smooth and uniform surface and a fine edge. The polisher consists of a prece of circular wood, running upon an axis, like that of the stone or the glazer. It is coated with leather, having its surface covered with crocus martis. The handtes of razors and knives are made of ivory and tortoise-shell, bone, or other materials, directed by fashion, or the use for which they are designed. The horn of razor-liandles is commonly cut into pieces, and placed between two dies, having a recess of the shape of the handle. By this process it admits of considerable extension, and is dyed black by means of logwood and green vitriol. The clear horn-handles are sometimes stained, so as to imitate tortoise-shell, by being coated with a composition of three parts of potash, one of minium, ten of quicklime, and as much water as will reduce the whole into a pulpy mass. Those parts of the handle requiring darker shades are more thickly covered, and the stains are dried in before the fire.
The manufacture of pen-knives is divided into three departments; the first is the forging of the blades, the spring, and the iron scales; the second, the grinding and polishing of the blades; and the third, the handling, which consists in fitting up all the parts, and finishing the knife. The blades are made of the best caststeel, and hardened and tempered to aloout the same degree with that of razors. In grinding they are made a little more concave on me side than the other, in other respects they are treated in a similar way to razors. The haudles are covered with horn, ivory, and sometimes wood; hut the most durable are those of stags-horn. The general fault in pen-knives is that of being too soft. The temper ought to be not higher than a straw color, as it seldom lappens that a pen-knife is so hard as to snap on the edge.
The beauty and elegance of polished steel is never displayed to more advantage than in the manufacture of the finer kinds of scissars. The steel employed for this purpose should be of the choicest description; it must possess hardness and uniformity of texture for the sake of securing a fine polish, and great tenacity, when hot, for the purpose of forming the bow or ring of the scissar, which requires to be extended from a solid piece, having a hole previously punched through it. It ought also to be very tenacious when cold, to allow that delicacy of form observed in ladies' scissars. After they are forged as near to the same size as the eye of the workman can ascertain, they are paired. The bows and some other parts are filed to their intended form: the blades are also roughly ground, and the two sides properly adjusted to eaclo other, after heing bound together with wire, and hardened up to the bows. They are afterwards heated till they become of a purple color, which indicates their proper temper. Almost all the remaining part of the work is performed at the griuding mill, with the stone, the lap, the po-
lisher, and the brush; the last being used to polish those parts which have been filed, ana which the lap and the polisher cannot touch. Previous to screwing the scissars finally tozether, they are rubled over with the powder of quicklime, and afterwards cleanel with soft sheep leather. The quick-lime absorbs the mosture from the surface. Scissars are ornamented by bluing and gilding; also with studs of gold or polished steel. Very large scissars are manufactured partly of iron and partly of steel; the slanks and bows being of the former. These, as well as those all of steel, which are not hardened all over, cannot be polished : an inferior sort of lustre, however, is given to them by means of a burnish of lardened polished steel, which is very easily distinguisher from the real polish, by the irregularity of the surface. Having entered into these particulars, relatiny to the manufacture of the usual articles found in cutlers' shops, we shall now enter upon some of the more general principles that are appticable to the finer articles of cuttery.
Cutlers do not use any coating to their work at the lardening heat, as the file-cutters do ; indeed, it seems evidently unnecessary when the article is intended to be tempered and ground. The best rule is to harden as little as possible above the state intended to be produced ly tempering. Work which has been overheated has a crumbly edge, and will not afford the wire hereafter to be described. The proper heat is a cherry-red, visille ly day-light. No advantage is obtained from the use of salt in the water, or cooling that fluid, or from using inercury instead of water; but it may be remarked, that questions respecting the fluid are, properly speaking, applicable only to files, gravers, and such tools as are intended to be left at the extreme of hardness.

While Mr. Stodart does not seen to attach much value to peculiarities in the process of hardening, he mentions it as the observation of one of his best workmen, that the charcoal fire should be made up with shavings of leather: and that he never had a razor crack in the hardening since he had used this method. It appears from a consideration of other facts, that this process is likely to prove advantageous. When brittle substances crack in cooling, it arises from the outside contracting and becoming too small to contain the interior parts. But it is known, that hard steel occupies more space than soft, and it may be easily inferred, that the nearer the steel approaches to the state of iron, the less will be this increase of dimensions. If, then, we suppose a razor, or any other piece of steel, to be heated in an open fire with a current of air passing through it, the external part will, by the loss of carbon, become less steety than before; and when the whole piece comes to be hardened, the inside will be too large for the external part, which will probably crack. But if the piece of steel be wrapped up in the cementing mixture, or if the fire itself contain animal coal, and is pus together so as to operate in the manner of that mixture, the external surface, instead of being degraded hy this heat, will be more carbonate? than the internal part, in consequence of which
it will be so far from splitting or bursting during its cooling, that it will be acted upon in a contrary direction, tending to render it more dense and solid.

One of the greatest difficulties in hardening steel-works of any considerable extent, more especially such articles as are formed of thin plates, or have a variety of parts of different sizes, consists in the apparent impracticability of heating the thicker parts before the slighter are burned away; besides which, even for a piece of uniform figure, it is no easy matter to make up a fire which shall give a speedy heat, and be nearly of the same intensity throughout. 'This difficulty,' says Mr. Nicholson, 'formed a very considerable impediment to my success in a course of delicate steel-work, in which I was engaged abont seven years ago; but, after various unsuccessful experiments, I succeeded in removing it by the use of a bath of melted lead, which, for very justifiable reasons, has been kept a secret till now. Pure lead, that is to say, lead containing little or no tin, is ignited to a moderate redness, and then well stirred : into this the piece is plunged for a few seconds; that is to say, until when brought near the surface, that part does not appear less luminous than the rest. The piece is then speedily stirred about in the bath, suddenly drawn out, and plunged into a large mass of water. In this manner, a plate of steel may be hardened so as to be perfectly brittle, and yet continue so sound as to ring like a bell; an effect which I never could produce in any other way. Mr. Stodart has lately made trial of this method, and considers it to be a great acquisition to the art, as, in fact, I found it.'

The letting down, or tempering of hard steel, is considered as absolutely necessary for the production of a fine and durable elge. It has been usual to do this by heating the hardened steel till its hright surface exhibits some known color by oxidation. The first is a very faint straw color, becoming deeper and deeper, by increase of heat, to a fine deep golden-yellow, which changes irregularly to a purple, then to an uniform blue, succeeded by white and several successive faint repetitions of these series. It is well known, that the hardest state of tempered instruments, such as razors and surgeons' instruments, is indicated by this straw color; that a deeper color is required for leather-cutters' knives, and other tools, that require the edge to be turned on one side; that the blue, which indicates a good temper for springs, is almost too soft for any cutting instrument, except saws, and such tools as are sharpened with a file, and that the lower states of hardness are not at all adapted to this use. But it is of considerable importance, that the letting down, or tempering, as well as the hardening, should be effected by heat equally applied, and that the temperatures, especially at the lower heats, where greater hardness is to he left, should be more precisely ascertained than can be done by the different shades of oxidation. Mr. Hartley first practised the method of immersing hard steel in heated oil, or the fusible compound of lead five parts, \({ }_{i j}\) is three, and bismuth eight. The temperature
of either of these fluids may be ascertained in the usual manner, when it does not exceed the point at which mercury hoils; and, by this contrivance, the same advantages are obtained in lowering the temperature of a whole instrument, or any number of them at once, as have already been stated in favor of my method of hardening. Oil is preferable to the fusible mixture for several reasuns. It is cheaper; it admits of the work being seen during the immersion, by reason of its transparency; and there is no occasion for any contrivance to prevent the work from floating.
Mr. Nicholson requested Mr. Stodart to favor him with an account of the temperatures at which the several colors make their appearance upon hardened steel; in compliance with which be made a series of experiments upon surgeons' needles, hardened, highly polished, and exposed to a gradual heat, while floating at the surface of the fusible mixture. The appearances are as follow: No. 1, taken out at \(430^{\circ}\) of Fahrenheit. This temperature leaves the steel in the most excellent state for razors and scalpels. The tarnish, or faint yellowish tinge, it produces, is too evanescent to be observed, without comparison with another piece of polished steel. Instruments, in this state, retain their edge much longer than those upon which the actual straw color has been brought, as is the common practice. Mr. S. informs me, says Mr. Nicholson, that \(430^{\circ}\) is the lowest temperature for letting down, and that the lower degrees will not afford a firm edge. No. 2 , at \(440^{\circ}\), and 3 , at \(450^{\circ}\). These needles differ so little in their appearance from No. 1, that it is not easy to arrange them with certainty when misplaced. No. 4 has the evident tinge, which workmen call pale straw color. It was taken out at \(460^{\circ}\), and has the usual temper of penknives, razurs, and other ine edge-tools. It is much softer than No. 1, as Mr. Stodart assures me, and this difference exhibits a valuable proof of the adrantages of this method of tempering. Nos. 2, 6, 7, and 8, exhibit successive deeper shades of color, having been respectively taken out at the temperatures \(470^{\circ}, 480^{\circ}, 490^{\circ}\), and \(500^{\circ}\). The last is of a bright brownish inetallic yellow, very slightly inclining to purple. No. 9 obtained an uniform deep blue at the temperature of \(580^{\circ}\). The intermediate shades produced on steel, by heats between \(500^{\circ}\) and \(580^{\circ}\), are yellow, brown, red, and purple, which are exhibited irregularly on different parts of the surface. As I had before seen this irregularity, particnlarly on the surface of a razor of wootz, and had found, in my own experience, that the colors on different kinds of steel do not correspond with like degrees of temper, and probably of temperature in their production, I was desirous that some experiments might be made upon it by the same skilful artist. Four beautifully polished blades were, therefore, exposed to heat on the fusible metal. The first was taken up when it had acquired the fine yellow, or uniform deep straw color. The second remained on the mixture, till the part nearest the stem had become purplish ; at which period, a number of small round spots, of a purplish color, appeared in the clear yellow of the blade. The third was left till the thicker parts of the blade were of a deep
ruddy purple; but the concave face still continued yellow. This also acquired spots like the other, and a slight cloudiness. These three blades were of cast-steel ; the fourth, which was made out of a piece called Styrian steel, was left upon the mixture till the red tinge had pervaded almost the whole of its concave face. Two or three spots appeared upon this blade; but the greater part of its surface was variegated with blue clouds, disposed in such a manner, as to produce those waving lines which, in Damascus steel, are called ' the water.' Two results are more immediately suggested by these facts: first, that the irregular production of a deep color upon the surface of brightened steel, may serve to indicate the want of unifornity in its composition; and, secondly, that the deep color, being observed to come on first at the thickest parts, Mr. Stodart was disposed to think, that its more speedy appearance was owing to those parts not having been hardened. See Steel.

An ingenious method of hardening delicate steel-work was some tirre since communicated to Mr. Stodart by Dr. Wollaston. The steel enclosed in a tube is surrounded by the fusible alloy of eight parts lead, two tin, and five bismuth. The tule, with its contents, is then heated in a furnace to rednesss, and plunged into a cooling fluid. It is afterwards thrown into boiling water, by which the alloy is fused, and the steel is left perfectly hardened and unaltered ly twisting or cracking.

Suppose our cutting instrument to be forged, hardened, and let down or tempered; it remains to be ground, polished, and set. The grinding of fine cutlery is performed upon a grind-stone of a fine close grit, called a Bilston grind-stone, and sold at the tool shops in London at a moderate price. The cutlers use water, and do not seem generally to know any thing of the ase of tallow. The face of the work is rendered finer by subsequent grinding upon mahogany cylinders, with emery of different fineness, or upon cylinders faced with hard pewter, called laps, which are preferable to those with a wooden face. The last polish is given upon a cylinder faced with buff leather, to which crocus, or the red oxide of iron, is applied with water. This last operation is attended with considerable danger of heating the work, and almost instantly reducing its temper along the thin edge, which at the same time acquires the colors of oxidation.

The setting now remains to be performed, which is a work of much delicacy and skill : so much so, indeed, that Mr. Stodart says, he cannot produce the must exquisite and perfect edge if interrupted by conversation, or even by noises in the street. The tool is first whetted upon a hone with oil, by rubbing it backwards and forwards. In all the processes of grinding or wearing down the edge, but more especially in the setting, the artist appears to profer that stroke which leads the edge according to the action of cutting, instead of making the back run first along the stone: for if there be any lump or particle of stone or other substance lying upon the face of the grinder, and the back of the tool be first run over it, it will proceed beneath the edge and lift it up, at the same time
producing a notcl. But on the other hand, if the edge be made to move foremost and neet such particle, it will slide beneath it, and suffer no injury. Another precaution in whetting is, that the hand slould not bear heaty; because it is evident, that the same stone must produce a more uniform edge if the steel be worn away by many, than loy few strokes. It is also of essential importance that the hone itself should be of a fine texture, or that its silicious particles should be very minute.

The grind-stone leaves a ragged edge, which it is the first effect of whetting to reduce so thin that it may be bent backwards and forward, This flexible part is called the wire, and if the whetting were to be continned too long it would break off in pieces without regularity, leaving a finer though still very imperfect edge, and tendiur to produce accident while lying on the face of the stone. The wire is taken off by raising the face of the knife to an angle of about fifty degrees with the surface of the stone, and giving a light stroke edge foremost, alternately towards each end of the stone. These strokes produce an edge, the faces of which are inclined to each other in an angle of ahout 100 degrees, and to which the wire is so slightly adherent that it may often be taken away entire, and is easily removed by lightyly drawing the edge along the finger nail. The edge thus cleared, is generally very even: but it is too thick, and must again be reduced by whetting. A finer wire is by this means produced, which will require to be again taken off, if, for want of judgment or delicacy of hand, the artist should have carried it too far But we will suppose the obtuse edge to be very even, and the second wire to be scarcely perceptible. In this case the last edge will be very acute, but neither so even nor so strong as to be durably useful. The finish is given by two or more alternate light strokes with the edre slanting foremost, and the blade of the knife raised, so that its plane forms an angle of alout twenty-eight degrees with the face of the stone. This is the angle which by careful observation and measurement Mr. Stodart habitually uses for the finest surgeons' instruments, and which he cousiders as the best for razors, and other keen cutting tools. The angle of edge is therefore about fifty-six degrees. The excellence and uniformity of a fine edge may be ascertained, by its mode of operation when lightly drawn along the surface of the skin, or leather, or any organised soft substance. Lancets are tried by suffering the point to drop gently through a piece of thin soft leather. If the edge be exquisite, it will not only pass with facility, but there will not be the least noise produced, any more than if it had dropped into water. This kind of edge cannot be produced, but by performing the last two or more strokes on the green hone. The operation of strapping is similar to that of grinding or whetting, and is performed by means of the angular particle of fine crocus, or other material bedded in the face of the strap. It requires less skill than the operation of setting, and is very apt, from the elasticity of the strap, to enlarge the angle of the edge or round it too much. The chief manufactories of cutlery in

England, are at Sheffield and in London. At the former by the local advantages of coal, \&c. on the spot, and the greater division of labor, cutlery in general is afforded at nuch lower prices than in the metropolis, where the finer descriptions of this important manufacture are more attended to, and surgical instruments, in particular, are made witn the greatest skill.

CUTLET, n. s. |Fr. cotelette. A steak; strictly, it means a rib.
So mutton cutlets, prime of meat. Swift.
CUTTACK, a considerable district of Orissa, Hindostan, situated between the twentieth and twenty-second degrees of north latitude. It is bounded on the north by Midnapoor and Mohurbunge; on the south by the Circars; on the east by the Bay of Bengal ; and on the west by several small states of the interior. Its length is about 150 miles, and breadth about sixty, containing a population of \(1,200,000\) souls. Between Gaintee and Bamori the country is richly productive, and is inhabited by weavers, who manufacture muslins in pieces for turbans. From Arickpoor to Cuttack the land is chiefly arable, but interspersed with bushes, ald not thoroughly cultivated. The Mahanuddy River, in passing through this country, often changes its name, according to the vicinity of different towns and villages. It is also watered by other considerable streams. The rents are chiefly paid in cowries.

The holy land of Juggernauth extends about fifteen miles on each side of the temple of Juggernauth, to the north and south. Its occupants have from time immenorial been exempt from the taxes which Hindoos pay for access to the temple, except during the ruth and dole jattries, when they also are liable to a small impost.

The chief towns are Cuttack, Juggernauth, Buddruck, and Balasore. This district is mentioned by the Mahommedan historians as early as the year 1212, under the title of Jagepore, or Jehazpore. It was then subject to a Hindoo prince, who resided at Jagepore; it was subdued by and annexed to Bengal in the reign of Solyman Kerang, 1569. Thus it remained till the year 1751, when it was ceded by the nuwab Alyverdy Khan to the Nagpore Mahrattas, who, in 1803, were again compelled to resign it to the victorious arms of the British, and it is now managed by : civil establishment of judge, collector, \&c.

Cutrack, the capital of the above district, called also Cuttack Benares, formerly Saringgur, was once fortified, aud a highly respectable town; but, during the period it was governed by the Mahrattas, it fell to decay. In the year 1592 it withstood the Mogul arms for nearly a month, and is naturally strong, but the climate is unhealthy. It is at present the residence of the gentlemen of the civil establishment, and has a cantonment for a corps of native infantry.

Cutter, a small vessel, commonly navigated in the channel of England. It is furnished with one mast, and rigged as a sloop. Many of these vessels a.e used in an illicit trade, and others are employed by government to take them; the latter of which are either under the direction of the admiralty, or custom-house.

CUTTLE. Ang.-Sax. cutele. A fish, which, when pursued, darkens the water with an inky substance; a foul-mouthed fellow; a knife.

A way, you cutpurse rascal; you filthy bung, away : by this wine, I'll thrust my knife in your mouldy chaps, if you play the saucy cuttle with me.

Shakspeure. Henry IV.
It is somewhat strange, that the blood of all birds and beasts, and fishes, should be of a red colour, and only the blood of the cuttle should be as black as ink.

Bacon.
He that uses many words for the explaining any subject, doth, like the cuttle fish, hide himself for the most part in his own ink.

Ray on the Creation.
Cuttle-fish. See Sepia.
CUTTS (John lord), was son of Richard Cutts, esq. of Matching in Essex; where the family were settled about the time of Henry VI., and had a large estate. He entered early into the service of the duke of Monnoutn, was aid-de-camp to the duke of Lorraine in Hungary, and signalised himself in a very extraordinary manner at the taking of Buda by the imperialists in 1686; which important place had been for near a century and a half in the hands of the Turks. Returning to England at the Revolution. he obtained a regiment of foot; was created baron Gowran in Ireland, December 6th, 1690 ; appointed governor of the Isle of Wight, April 14th, 1693; was made a major-general; and, when the assassination project was discovered, 1695-6, was captain of the king's guard. He was colonel of the Coldstream guards in 1701; when Mr. Steele, who was indebted to his interest for a military commission, inscribed to him his first work, The Christian Hero. On the accession of queen Anne, he was made a lieute-nant-general of the forces in Holland; commander in chief of the forces in Ireland, under the duke of Ormond, March 23d, 1704-5; and afterwards one of the lords justices of that kingdoın. He died at Dublin January 26th, 1706-7, and was buried there in the cathedral of Christ Church. He wrote a poem on the death of queen Mary, and published, in 1687, Poetical Exercises, written upon several occasiors, and dedicated to her royal highness Mary, princess of Orange. One of his songs is quoted by Steele in his Tatler; but his Muse Cavalier is erroneously ascribed by Walpole to lord Peterborough.

CUT-WATER, the sharp part of the head of a ship below the beak, so called because it cuts or divides the water before it comes to the bow, that it may not come too suddenly to the breadth of the ship, which would retard it.
CUT-WORK, n.s. Embroidered work.
CUVIER (George Leopold Christian Frederic Dagobert), baron and peer; born Aug. 25,1769, at Montbeliard, in the duchy of Würtemburg. His brilliant talents early excited great expectations. His father was an officer. As the son's health did not allow him to become a soldier, he resolved to be a clergyman, and was obliged to pass an examination for the stipend, by the help of which he expected to study at Tübingen. A malicious examiner rejected him. The affair. however, was marked by so much injustice, that prince Frederic, brother of the duke, and governor of the district, thought it his duty to
compensate Cuvier by a place in the Charles Academy at Stuttgart, where he gave up his intention of beconsing a clergyman. In Stuttgart he studied law, although fond of natural history, and to this period of his life he is indebted for his accurate knowledge of the German language and literature. The narrow circumstances of his parents compelled him to accept the office of tutor in the family of count D'Hericy, in Normandy, where he devoted his leisure to natural science. Cuvier soon perceived that zoology was far from that perfection to which Linnæus liad carried botany, and to which mineralogy had been carried by the united labors of the philosophers of Germany and France. The first desideratum was a careful observation of all the organs of animals, in order to ascertain their mutual dependence, and their influence on animal life; then a confutation of the fanciful systems whicl had obscured rather than illustrated the study. Examinations of the marine productions, with which the neighbouring ocean abundantly supplied him, served him as a suitable preparation. A natural classification of the numerous classes of vernes (Linn.) was his first labour, and the clearness with which he gave an account of his observations and ingenious views, procured him an acquaintance with all the naturalists of Paris. Geoffry St. Hilaire invited him to Paris, opened to him the collections of natural history, over whicl he presided, took part with him in the publication of several works on the classification of the mummalia, and placed him at the central school in Paris, May, 1795. The institute, being re-estahlished the same year, received him as a member of the first class. For the use of the central school, he wrote his Tableau Elémentaire de l'Histoire Naturelle des Animaux (1798), by which he laid the foundation of his future faine. From this time he was considered one of the first zoologists of Europe. He soon after displayed his brilliant talents as professor of comparative anatomy. His profound knowledge was not less remarkable than his elevated views, and the elegance with which he illustrated them before a mixed audience. In the lectureroom of the Lycée, where he lectured several years on natural history, was assembled all the accomplished society of Paris, attracted by the ingenuity of his classifications, and by lis extensive surveys of all the kingdoms of nature. In January, 1800, he justly received the place formerly occupied by D'Aubenton, in the Collége de France. Nor did his merits escape the sagacity of Napoleon. In the department of public instruction, in which, one after another, he filled the most important offices, he exercised much influence by his useful improvements and indefatigable activity. He delivered a report very honorable to Germany, in 1811, when he returned from a journey in Holland and Germany, as superintendent of instruction. He was accompanied in his journey by Noël. In 1813 the emperor appointed him Maitre des Requêtes to the council of state, and committed to his care the most important affairs in Mentz. Louis XVIII. confirmed him in his former offices, and raised him to the rank of counsellor. As such, he belonged at first to the committee of legisla-
tion, and afterwards to that of the interior. As a politician, he drew upon himself the reproanches of the liberals. In generat, the political coures of Cuvier forms a contrast to his scientific one, and is, besides, of little importance. The measures of the abbe Frayssinons, then chancellor of the university of l'aris, determined him to resign the office of university-counsellor, in December, 1822. The principal of his works are, Recherches sur les Ossemens Fossiles, 5 vols., 4to., with plates (the classical introduction to this work is printed separately); Discours sur les Révolutions de la Surfice du Globe, et sur les Changemens qu'elles ont produit dans te Règne animal (Paris, 1825); also, Le liegne animal (1817, 4 vols.); Leçuns d'Anatomie Comparće, recueillies par Duméril et Duvernoy ( 1805,5 vols.); Recherches anatomiques sur les Reptiles rcyardés encore comme doutcux (1807, 4to.) : Mémoires pour servir a lllivtoire de l'Anatomie dés Mollusques (1816, 4to.). As perpetual secretary, \&c., of the academy, in the class of plysical sciences, he pronounced éloges on the deceased members of the institute. The Recueil d’Eloges Historiques (L'aris, 1819, 2 vols.), contains models worthy of imitation. The French academy received him, in consequence, among their forty members, and almost all the learned societies of the world sent him honorary diplomas. France is indebted to liim for the establishment of a cabinet of comparative anatomy, which is the finest osteological collection in Europe. Cuvier may be said to have created the science of natural history, having, by his extraordinary and almost instinctive perception of the organic analogies, as traced in the fossil remains which had previously been considered as the mere ornaments of a cabinet of curiosities. thrown a light on the universal system of creation, of which those formed in previous schools could not have even the remotest idea. In the political changes which France underwent, the estimation in which he was held continued unaffected. King Louis Philippe conferred upon him the rank of peer, lis title of baron being merely nominal. Cuvier expired on the 13 th of May, 1832, in the 63rd year of his age, leaving no property but his library and cabinet of natural history, both which were purchased by the French government for 72,000 francs. The French king, also, as a testimony of liis regard for the learning and abilities of the deceased naturalist, conferred a pension of 6000 francs on his widow, with the enjoyment of the apartments in the Jardin des Plants, occupied by her late husband.

CUXHAVEN, a sea-port of Germany, in the duchy of Bremen, situated on the left bank of the Elbe, at its embnucbure. The harbour, being very large and commodious, is much frequented, and vessels generally take in pilots here, in order to ascend the river to Hamburgh. A yacht is stationed out at sea, near the outermost buoy, with pilots ready to conduct any vessel that may demand them. The town and bailiwic belong to the corporation of Hamburgh, who have beld them ever since the fourtenth century. During the late revolutionary wars Cuxhaven became a place of great importance its an eutrepin of

\section*{CYB}

British goods. On the fall of Hamburgh in 1806, it came into the possession of the French, and remained under their domnination ahove seven years. When, at the close of the war, the French defended Hamburgh, Cuxhaven was the scene of some severe fighting. It is sixty miles northwest of Hamburgh, and the light-louse is in long. \(8^{\circ} 43^{\prime} 1^{\prime \prime}\) E., lat. \(53^{\circ} 52^{\prime} 21^{\prime \prime} \mathrm{N}\).
CUYO, or Cuso, an extensive province of Peru, and a portion of the former vice-royalty of Buenos Ayres, is bounded ou the north by Tucuman, on the east by the Pampas deserts, on the south by deserts, and on the west by the Andes.

CYANOMETER, a contrivance, invented by Saussure, to ascertain a comparable specimen or the shade of blue of the sky at different times and in different places.

CYATHUS, \(\kappa v a \theta o \varsigma\), from \(\chi^{v \varepsilon \iota \nu}\), to pour out, was a common measure among the Greeks and Romans, both of the liquid and dry kind. It was equal to an ounce, or the twelfth part of a pint, and was made with a handle like our punch-ladle. The Romans frequently drank as many cyathi as there were muses, i.e. nine; or as many as there were letters in their patron's name. The cyathus of the Greeks is said by Galen and others to have weighed ten drachms; elsewhere he says, that a cyathus contains twelve drachms of oil, thirteen drachms and one scruple of wine, water, or vinegar, and eighteen drachms of honey. Among the Veterinarii, the cyathus contained two ounces.

CYAXARES I., son of Phraortes, king of Media and Persia. He bravely defended his kingdom against the Scythians; made war against Alyattes, king of Lydia; and subjected to his power all Asia, beyond the river Halys. He died after a reign of forty years, in the year of Rome 160.

Cyaxares II. is supposed by Dr. Prideaux and others to be the same as Darius the Mede, the son of Astyages, king of Media. He added seven provinces to his father's dominions, and made war against the Assyrians, whom Cyrus favored.

CYBELE, in Pagan mythology, the daughter of Cœlius and Terra, wife of Saturn, and mother of Jupiter, Neptune, Pluto, \&sc. She is also colled Rhea, Ops, Vesta, Bona Mater, Magna Mater, Berecynthia, Dindymene, \&c., and by some is reckoned the same with Ceres: but most mythologists make these two distinct goddesses. According to Diodorus, she was the daughter of a Lydian prince, and, as soon as she was born; she was exposed on a mountain. She was preserved by sucking some of the wild beasts of the forest, and received the name of Cybele from the mountain where her life had been preserved. When she returned to her father's courl, she had an intrigue with Atys, a beautiful youth, whom her father mutilated, \&c. Most of the mythologists mention the amours of Atys and Cybele. In Phrygia the festivals of Cylele were observed with the greatest solemnity. Her priests, called Corybantes, Curetes, Galli, \&c., it is said were not admitted to the service of the goddess without a previous mutilation. In the celebration of the festivals, they imitated the manners of madmen, and filled the air with shricks and howlings,
mixed with the confused noise of drums, tabrets, bucklers, and spears. This was in commemoration of the sorrow of Cybe.e for the loss of her favorite Atys. The goddess was generally represented as a robust woman, far advanced in pregnancy, to imitate the fecundity of the earth. She held keys in her hand, and her head was crowned with rising turrets, or with leaves of oak. She sometimes appears riding in a chariot, drawn by two tame lions: Atys follows by her side, carryiug a ball in his land, and supporting himself upon a fir-tree, which is sacred to the goddess. She is also represented with a sceptre in her hand, and with many breasts, to show that the earth gives aliments to all living creatures; and she generally carries two linus under her arms. From Phrygia the worship of Cybele passed into Greece, and was solemnly established at Eleusis under the name of the Eleusinian mysteries of Ceres. The Romans, by order of the Sibylline books, brought the statue of the goddess from Pessinus into Italy; and when the ship which carried it had run on a shallow bank of the Tiber, the virtue of Claudia was said to have been vindicated, by removing it with her girdle. It is supposed that the mysteries of Cybele werc first known about 257 years before the Trojan war, or 1.580 years before the Augustan age. The Romans were particularly superstitious in washing, every year on the 6th of the kalends of April, the shrine of this goddess in the waters of the river Almon. Many obscenities prevailed in the observation of the festivals; and the priests themselves were the most eager to use indecent expressions, and to show their unbounded licentiousness.

Cybelicum Marmor, a name given by the ancients to a species of marble dug in the mountain Cybele. It was of an extremely bright white, with broad veins of bluish-black.

CYCAS, in botany, a genus of plants of the monœcia class, and polygamia order. The fruit is a dry plum, with a bivalred kernel. There is but one species described by Linnæus, viz. the circinalis; but professor Thunberg mentions another, viz. 1. C. caffra, broad broom, or bread tree of the Hottentots. This plant, discovered by professor Thunberg, is described in the Nova Acta Reg. Soc. Scient. Ups. vol. ii. p. 283, tab. V. The pith, or medulla, which abounds in the trunk of this little palm, Mr. Sparrman informs us, is collected and tied up in dressed calf or sheep skins, and then buried in the earth for the space of several weeks, till it bccomes sufficiently mellow and tender to be kneaded up with water into a paste, of which they afterwards make small loaves or cakes, and bake them under the ashes. 2. C. circinalis, or sago-tree, which grows spontaneously in the East Indies, and particularly on the coast of Malabar. It runs up with a straight trunk to upwards of forty feet in height, having many circles the whole length, occasioned by the old leaves falling off; for standing in a circular order round the stem, and embracing it with their base, whenever they drop, they leave the marks of their adhesion. The leaves are pinnated, and grow to the length of sevell or eight feet. The pinnæ or lobes are long, narrow entirc, of a shining green, all the way of a
breadth, lance-shaped at the point, closely crowded together, and stand at right angles oul each side the mid-rib, like the teeth of a comb. The fowers are produced in long bunches at the foot-stalks of the leaves, and are succeeded by oval fruit, about the size of large plums, of a red color when ripe, and a sweet flavor. Each coutains a hard brown nut, enclosing a white meat which tastes like a chestnut. This is a valuable tree to the inhabitants of India, as it not only furnishes a considerable part of their constant bread, but also supplies them with a large article of trade. See Sago.

CYCEON, from кvкat \(\nu\), to mix, a name given by the ancient poets and physicians to a mixture of meal and water, and sometimes of other ingredients. These constituted the two kinds of cyceon; the coarser being of the water and meal alone ; the richer and more delicate composed of wine, honey, flour, water, and cheese. Homer, in the 11 th Iliad, speaks of cyceon made with cheese, and the meal of barley mixed with wine, but without any mention either of honey or water; and Ovid, describing the draught of cyceon given by the old woman of Athens to Ceres, mentions only flour and water. Dioscorides understood the word in both these senses; but extolled it most in the coarse and simple kind : he says, when prepared with water alone, it refrigerates and nourishes greatly.

CYCINNIS, a Grecian dance, so called from its supposed inventor, one of the satyrs belonging to Bacchus. It consisted of a combination of grave and gay movements.

CYCLADES, in ancient geography, islands so called, as Pliny informs us, from the Cyclus or orb in which they lie; beginning from the promontory Geraestum of Eubæa, and lying round the island Delos. Their situation and number is not so generally agreed upon. Strabo says, they were first reckoned twelve, but that many others were added: yet most of them lie to the south of Delos, and but few to the north, so that the middle or centre, ascribed to Delos, is to be taken in a loose, not in a geometrical sense. Strabo recites them, after Artemidorus, as follows: Helena, Ceos, Cynthus, Seriphus, Melos, Siphnus, Cimolus, Prepesinthus, Olearus, Nax os, Paros, Syrus, Myconos, Tenos, Andros, Gyarus; but he excludes from the number, Prepesinthus, Olearus, and Gyarus.

Cyclades, Great. See Hebrides, New.
CYCLAMEN, sowbread, a genus of the monogynia order, and pentandria class of plants: natural order twenty-first, preciæ. cor. verticillated, with the tube very short, and the throat prominent : the berry is covered with the capsule. There are but two species, which, however, produce many beautiful varieties. They are low, herbaceous, flowery perennials, of the tuberous rooted kind, with numerous, angular, heartshaped, spotted, marbled leaves; and many fleshy foot-stalks six incheshigh, carrying monopetalous, five-parted, reflexed flowers, of various colors.

CYCLE, n.s.
Cyclómetry n. Lar.cychs; кoклos. of time; a spaze in which the same revolutions begin again ; a method, or account of a method till the same course begins again; imaginary
orbs; a circle in the heavens. Cyclometry is the art of measuring cycles.

\section*{How build, unbuild, contrive}

To save appearances ; how gird the sphere With eentrick, and excentrick, scribbled o'er Cycle and epicycle, orb in orb! Milton.
We do more coummonly use these words, so as to style a lesser space a cycle, and a greater by the name of period; and you may not improperly call the beginning of a large period the epocha thereof.

Holder on Time.
We thought we sloould not attempt an unacceptable work, if here we endeavoured to present our gardeners with a complete cycle of what is requisite to be done throughout cvery month of the ycar.

Ěielyn's Kalendar.
Chained to one centre whirled the kindred spheres, And marked with lunar cycles solar years. Daruin.
I must tell you that Sir H. Savile had confuted Joseph Scaliger's cyclometry.

Wallis.
Cycle of Easter. See Cironology.
Cycle of tue Moon. See Curonology. It is called also the golden number, and the Metonic cycle, from its inventor Meton the Atheniar. At the time of the council of Nice, when the method of finding the time for observing the feast of Easter was established, the numbers of the lunar cycle were inserted in the kalendar, which, upon the account of their use, were set in golden letters, and the year of the cycle called the golden number of that year.

Cygle of tie Sun. See Curonology.
CYCLISUS, in surgery, an instrument in the form of a half moon, used in scraping the scull, in cases of fractures of that part.

Cyclóidal, adj. \(\}_{\text {trical curve, of which the }}\) genesis may be conceived by imagining a nail in the circumference of a wheel : the line which the nail describes in the air, while the wheel revolves in a right line, is the cycloid. Relating to a cycloid; as the cycloidal space is the space contained between the cycloid and its substance.

A man may frame to himself the notion of a parabola, or a cycloid, from the mathematical defnition of those figures.

Reid.
Cycloid, or Trochoid, a mechanical or transcendental curve, which is thus generated:Suppose a circle FE II to roll along the straight line A B, so that all the parts of its circumference be applied to the straight line in succession; the point E , that was in contact with A B at A , will, by a motion thus compounded of a circular and rectilineal motion, describe a certain curve line A, to EDB, which is called a cycloid. The straight line AB is called the base, and the line CD perpendicular to AB , bisecting it at C , and meeting the curve in D , is called the axis of the cycloid. The circle by whose revolution the curve is described is called the generating circle. The following are some of the most remarkable properties of this curve. -1 . The base \(A B\) is equal to the circumference of the generating circle. 2. The axis CD is equal to the diameter of the generating circie. These two properties are obvious from the definition of the curve. 3. Let the generating circle C K D be described on the axis CD as a diameter, and let GKE be perpendicular to the axis, meeting the circle in 15 ,

and the cycloid in E. The straight line EG is equal to the sum of the circular arc DK , and its sine K G. Let the generating circle F EH pass through \(E\) and touch the base \(A B\) at \(F\); join EF and K C, and draw the diameter FH. The chords FE and CK are evidently equal and parallel, therefore \(\mathrm{FC}=\mathrm{EK}\); now \(\mathrm{AC}=\) semicircumference FEH , and \(\mathrm{AF}=\) arc FE which has quitted it, therefore \(\mathrm{FC}=\operatorname{arc} \mathrm{EH}\), or \(\mathrm{EK}=\) arc DK , and \(\mathrm{EG}=\operatorname{arc} \mathrm{DK}+\) sine KG . 4. If EH be drawn touching the cycloid at E, it is parallel to K D the chord of the generating circle. Draw ekg parallel and indefinitely near to EKG , meeting the chord KD in \(n\). Draw KL, D L, touching the generating circle. The triangles \(\mathrm{K} \mathrm{L}, \mathrm{D}, \mathrm{K} k n\) are similar, and KL=LD, therefore \(\mathrm{K} k=k n\); now arc \(\mathrm{DK}=\mathrm{EK}\), and arc \(\mathrm{D} k=e k\), therefore \(\mathrm{K} k\), or \(k n=\mathrm{EK}-e k\), and, adding \(e k\) to each of these equals, \(\mathrm{E} \mathrm{K}=e n\), therefore the indefinitely small part of the cycloidal are E \(e\), which coincides with the tangent, is parallel to \(\mathrm{K} n\), therefore the tangent EH is parallel to the chord KD . 5. The arc DE of the cycloid is equal to twice the chord D K of the generating circle. Join \(\mathrm{D} k\) and draw \(k o\) perpendicular to \(\mathrm{K} n\), then \(\mathrm{K} o\) is the indefinitely small increment of the chord \(k \mathrm{D}\), and \(\mathrm{K} k\) has been proved equal to \(k n\) (4), therefore \(\mathrm{K} n\) is bisected in \(o\); but \(\mathrm{K} n=\mathrm{E} e(4)\) therefore \(\mathrm{E} e\) the increment of the cycloidal arc \(\mathbf{D} e\) is always double Ko the corresponding increment of the chord \(\mathrm{D} k\), therefore the whole arc D E must be double the chord DK. Corollary. The whole cycloid \(\triangle D B\) is equal to four times the axis \(C D\), or four times the diameter of the generating circle. 6. If CD is produced to M , so that \(\mathrm{CM}=\mathrm{CD}\), and if the half of the cycloid BD be placed in the position AM, and the other half AD in the position MB, then, if a thread MQE=MQA be unfolded from the arc MA, the extremity E of this thread will describe the cycloid ADB. Make AP equal and parallel to C M, and on AP describe the semicircle ATP. Let the thread touch the curve at Q ; draw QR perpendicular to AP, cutting the circle in T, and join AT. Then FQ is parallel to AT (4) and thercture equal to it; now EQ is equal to the arc AQ which is double AT (5) or FQ, therefore \(\mathrm{EF}=\mathrm{FQ}=\mathrm{AT}\), if therefore EKG be drawn perpendicular to \(\mathrm{CD}, \mathrm{C} G\) is equal to AR , and \(\operatorname{arc} \mathrm{CK}=\operatorname{arc} \mathrm{AT}\), also the chord KC is equal and paralld. to the chord AT, which is parallel to EF, therefore FC=EK ; now AF or TQ= arc AT (3). Tberefore FC or EK =arc TP 三
\(\operatorname{arc} \mathrm{DK}\) : therefore E is a point in the cycloid ABD . 7. Let DV be drawn parallel to AC , and EV perpendicular to DV , the area contained by the straight lines EV, VD, and ED, the arc of the cycloid, is equal to the area contained by the circular arc DK , and the straight lines DG , G K. Draw \(e v\) parallel to E V, and let \(g e\) meet EV in \(\boldsymbol{x}\).
by similar triangles (4) \(\mathrm{E} x: x e:: \mathrm{DG}: \mathrm{GK}\), that is \(\mathrm{G} g: \mathrm{Vv}:: \mathrm{EV}: \mathrm{GK}\), therefore the rectangle \(\mathrm{GK} \quad \mathrm{Gg}\) = rectangle \(\mathrm{EV} \cdot \mathrm{V} v\), that is, the contemporaneous increments of the circular area \(\mathrm{D} k g\) and cycloidal area \(\mathrm{D} v e\) are equal, therefore the circular area DKG is equal to the cycloidal area DVE. Cor. The area contained by the base AB and the arc of the cycloid AD B is equal to three times the area of the generating circle. For complete the rectangle DCAY, and the space D EAY is equal to the semicircle DKC, therefore the rectangle DYAC is equal to the cycloidal area DEAC together with the semicircle DKC ; but the rectangle DYAC is contained by DC the diameter of the circle and AC which is half its crrcumference, it is therefore four times the area of the semicircle, therefore three times the area of the semicircle is equal to the cycloidal area DEAC. See farther relating to the cycloid under Pendulum.

Cyclope'de, n.s. \(\}_{\text {taioicia. A }}\) A circle of knowledge; a course of the sciences.

The tedious and unedifying cormentaries on Peter Lombard's scholastic cyclopede of divinity. Warton.
Cyclopedta, or Encyclopadia, a term which, in modern times, has been apprupriated, from the Greek, to express those useful and superion Dictionaries of Science and Literature, of which we hope to furnish a favorable specimen. Under the term Excyclopedia, which is the more common, we shall give some account of the principal works of this kind which have appeared in our language.
CYCLOPE'AN, \(a d j\). \(\}\) From the Cyclops.
Cyclo'pick, adj. \}Vast; inspiring terror; furious; savage.

The cyclopean furnace of all wicked fashions, the heart. Bishop Hall.
Cyclopick monsters, who daily seem to fight against heaven.

Bishop Taylor.
CYCLOPS, in fabulous history, the sons of Neptune and Amphitrite: the principal of whom were Polyphemus, Brontes, Steropes, and Pyracmon; but their whole number amounted to above 100. Jupiter threw them into Tartarus as soon as they were born ; but they were delivered at the intercession of Tellus, and became the assistants of Vulcan. They were of prodigious stature, and had each only one eye, which was placed in the middle of the forehead. Some mythologists say, that the cyclops signify the vapors raised in the air, which occasion thunder and lightuing; on which account they are represented as forging the thunderbolts of Jupiter. Others represent them as the first inlabitants of Sicily, who were cruel, of a gigantic form, and dwelt round mount Etna.

CYCLOPTERUS, the sueker, in ichthyology, a genns belonging to the order of anphibia .rantes. The head is obtuse, and furnished with saw teeth: there are four rays in the gills, and the belly fins are eomneeted together in an orbicular form. There are ten spceies. The chief are \(:-1\). C. liparis, or the sea snail, so called from the soft and unetuous texture of its body, resembling that of the land snail. It is almost transparent, and soon dissolves and melts away. It is found in the sea near the mouths of great rivers, and has been seen full of spawn in January. The length is five inches; the color a pale brown, sometimes finely streaked with a darker. Bencath the throat is a round depression of a whitish eolor like the impression of a seal, surrounded by twelve small pate yellow tubera, by which probably it adheres to the stones like the other species. 2. C. lumpus, the lump fish, eock paddle, or sea owl, grows to the length of nineteen inches, and weighs seven pounds. The shape of the body is like that of the bream, deep and very thick, and it swims edgeways. The back is sharp and elevated: the belly flat, of a bright crimson color. Along the body there run several rows of sharp bony tubercles, and the whole skin is covered with small ones. The pectoral fins are large and broad, almost uniting at their base. Beneath these is the part by which it adheres to the rocks, \&cc. It consists of an oval aperture, surrounded with a fleshy, muscular, and obtuse soft substance, edged with many small threaded appendages, which concur as so many claspers. The tail and vent fins are purple. This fish is sometimes eaten in England, heing stewed like carp: hut is both flabby and insipid.
CY'DER, n.s. A fermented drink, made of the juice of apples. See Cider.
A tendency to these diseases is certainly hereditary, though perhaps nut the diseases themselves; thus a less quantity of alc, cyder, wine, or spirit, will induce the gout and dropsy in those constitutions whose parents have been intemperate in the use of those liquors.

Darwin.
Cyder, in rural economy, is particularly used for the liquor expressed and prepared by fermentation from the juice of apples. It has been made in this country from a very early period. Henry of Huntingdon, in describing a guarret that arose at the court of Edward the Confessor, between the two sons of earl Godwin, represents one of them as departing in a rage to Hereford, (still famous for this beverage) where his brother lad ordered a royal hanquet to be prepared. - There he seized his brother's attendants, and cutting off their heads and limbs, he placed them in the vessels of wine, mead, ale, pigment, morat, and cyder.' Henry Hunt., vol. vi. p. 367. But the art of preparing it has never been investigated with much attention, nor improved by science: it is priznpally, to this day, in the hands of the growers of the fruit. We shall present the reader with the best practical directions that have been given to the public on the subject, viz. by Messrs. Marshall, Crocker, and Kinght.

The first of these gentlemen made a tour through the cyder counties with a view to ob-
scrve the different mocthods of proparing it. Thus may be divided into three processes:-I. I're paring the fruit. 11. Cirindine and expressing the juiee from it. III. Fermenting and bothing
I. In preparing the fruit, care must be takem both as to its peeuliar quality, and its stage of ripeness, or the season at which it is yatherect. Few apples are ready for gathering hefore Mi chaelmas; though they are sometimes manufactured before that time. For sale-cyler, and seeping-drink, they are allowed to remain (m) the trees till fully ripe; and in acneral the middle of October is considered a proper time for gathering the stire apples. The ripeness of the fruit is julged of by its falling from the tree; and Mr. Marshall, as well as Mr. Crocker, thinks that the forcing it away before that time robs it of some of its most valualle properties. 'The harvesting of fruit,' says the former, ' is widely different in this respeet from the harvesting o grain, which has the entire plant to feed it after the separation from the soil ; while fruit, after it is severed from the tree, is eut off frimm all possibility of a further supply of nourishment, and, although it may have reaehed its wonted size, some of its more essential particles are undoubtedly left behind in the tree. Fruits which arc late in ripening, however, will sometimes hang on the tree until spoiled ly frost, and particularly the weak watery fruits. The general practice of beating them down with poles is much disapproved o. by Mr. Marshall, because the fruit must thus be unequally ripe, the apples on the same tree not ripening all at the same time; and thus part of the richness and flavor of the fruit is entirely lost : besides, if the fermentation is interrupted or rendered complex by a mixture of ripe and umripe fruits, and the liquor is not, at first, sufficiently purged from its feculencies, it will be difficult to clear it afterwards. To avoid these nconveniences, arising from the unequal ripening of the fruit, the trees ought to be gone over first with a hook when the fruit begins to fall nacurally, and the trees may be afterwards cleared with the poles when it is all sufficiently ripened, or when Ue winter is likely to set in. Mr. Marshall observes, that the due degree of maturation of fruit for liquor is a subject about which men differ much in their ideas. The prevailing practice of gatlering it into heaps until the ripest begin to rot, is wasting the hest of the fruit, and is by no means an accurate eriterion. Sonc shake the fruit, and judge by the rattling of the kernels; others cut through the middis, un! judge hy thear blackness : but none of these appear to be a proper test. It is not the state or the kernels, but of the flesh; not of a fcw individuals, but of the greater part of the prime fruit, which renders the collective body fit or unfit to be sent to the mill. The most rational test of the ripeness of the fruit is, that of the flesh having acquired such a degree of mellowness, and its texture such a degree of tenderness, as to yield to moderate pressure; thus, when the knuekle or the end of the thumb can with moderate exertion be forced into the pulp of the fruit, it is deemed in a fit state for grinding.

Mr. Marshall is of opinion that one of the grand secrets of cyder-making is the skilful sepa-
ration of the ripe and unripe fruit, before sending it to the mill; and as by various accidents they may he confounded, the most effectual metholl of distinguishing them is hy the hand. He also seems to think that the practice of mixing fruits for liquor is improper, because the finer liquors are made from select fruits; and observes, that it might be better to mix liquors after they are made, than to put together the crude fruits.

Mr. Crocker recommends making three distinct gatherings of the erop, and keeping each by itself. The prime cyder will then be made from the first, and the latter gathering and wind-falls make a fair common article. According to Mr. Knight, the merit of cyder will always depend much on the proper mixture, or rather on the proper separation of the fruits. Those whose rinds and pulp are tinged with green or red, without any mixture of yellow, as that color will disappear in the first stages of fermentation, should be carefully kept apart from such as are yellow, or yellow intermixed with red. The latter kinds, which should remain on the trees till ripe enough to fall without bning much shaken, are, as we have noticed, alone capable of making fine cyder. Each kind should be collected separately, as noticed above, and kept till it beeomes perfeetly mellow. For this purpose, in the common praetice of the country, they are nlaced in heaps of ten inches or a foot thick, and exposed to the şun and air, and rain; not being overcovered except in very severe frosts. The strength and flavor of the future liquor are, however, he says, increased by keeping the fruit under eover some time before it is ground; but unless a situation can be afforded it, in which it is exposed to a free current of air, and where it ean be spread very thin, it is apt to contract an unpleasant smell, which will much affect the cyder produced from it. Few farms are provided with proper buildings for this purpose on a large scale, and the improvement of the liquor will not nearly pay the expense of ereeting then. It may reasonably be supposed that much water is absorbed by the fruit in a rainy season; but the quantity of juice yielded by any given quantity of fruit will be found to diminish as it hecomes more mellow ; even in very wet weather, provided it be ground when thoroughly dry. The advantages, therefore, of covering the fruit, will probally be much less than may at first sight be expected. No criterion appears, the writer says, to be known, by which the most proper point of maturity in the fruit ean he ascertained with aceuracy; but he has good reason to believe that it improves as long as it continues to acquire a deeper shade of yellow. Each heap slould be examined prior to its being ground, and any deeayed or green fruit carefully taken away. The expense of this will, he observes, be very small, and will be amply repaid by the excellence of the liquor, and the care with which too great a degree of fermertation may be prevented in the process of making it into cyder. In seasons ordinarily favorable half a hogshead of cyder may be expeeted from the fruit of each tree of an orchard in full bearng. As the numver of trees on the acre varies from ten to forty,
the quantity of cyder must vary in the same proportion, that is, from five to twenty logsheads, Pear trees, in equally good bearing, yield fully one-third more liquor: therefore, although the liquor extracted from pears sells at a lower price than that produced from apples, yet the value by the acre, when the number of trees is equal, is nearly the same.
II. Of grinding the fruit, \&e.-The cydermakers in Herefordshire generally agree in considering it necessary towards the perfection of the eyder, to grind the rinds and seeds of the fruit, as well as the fleshy part, to a pulp; but Mr. Marshall eomplains, that the mills are often very imperfectly finished, and little indebted to the operation of the square and clisel. As perfectly smooth rollers, nowever, would not lay hold of the fruit sufficiently to force it through, it might be proper, he suggests, to grind the fruit first in the mill to a cerian degree, and afterwards put it between two smoother rollers to finish the operation. A bag, containing four corn bushels, is the usual quantity with which they charge a middle-sized mill; and this should yield an equal quantity when ground. After the fruit is ground, it generally remains some time before pressing, that the rind and seeds may communicate their virtues to the liquor ; and for this reason Mr. Marshall reprobates the praetice of pressing the pulp of the fruit whenever the grinding is finished. The ordinary eyder mill is exhibited on the right hand of our plate Cyder Press, \&c., and will be further deseribed at the close of this article.
A difference of opinion exists as to the propriety of pressing the fruit immediately after it is ground. Mr. Knight, an able writeron the apple and pear, contends that it should remain at least twenty-four hours before it is taken to the press. Others recommend two days; but many take it at onee from the mill to the press when the grinding is finished. Mr. Crocker thinks both extremes wrong. There is an analogy, he observes between the making of eyder from apples, and wine from grapes; and the method which the wine-maker pursues ought to be followed by the cyder-maker. When the pulp of the grapes has lain some time in the vats, the vintager thrusts his hand into the pulp, and takes some from the middle of the mass; and when he perceives, by the smell, that the luscious sweetness is gone off, and that liis nose is affected with a slight piquancy, he immediately carries it to the press, and by a light pressure expresses his prime juice. In like manner, should the cyderist determine the time when his pulp should be carried to the press. If he carry it iminediately from the mill th the press, he may lose some small advantage which may be expected from the rind and kernels, and his liquor may be of lower color than lie might wish. If he suffer it to remain too long unpressed, he will find to his cost that the acctous fermentation will come on before the vinous is perfected, especially in the early part of the cy-der-making season. He will generally find that his pulp is in a fit state for pressing in about twelve or sixteen hours. If he must of neecessity keep it in that state longer, he will find a sensible heat therein, which will engender a prema-
ture fermentation; and he nust not delay turning it over, thereby to expose the middle of the mass to the influence of the atmosphere.

In order to press the fruit, or ponmage as it is now called, it is folded up in pieces of haircloth, or placed between layers of clean, sweet straw or reed, and piled up in a square frame or mould: the press is then pulled down and squeezes out the juice, forming the matter into thin and almost dry cakes. Care ought to be taken to keep the straw, reed, or hair-cloths sweet, or the ill effects of their acidity will be communicated to the cyder. The first runnings come off foul and mudily, but the last, particularly in perry, will be as clear and fine as if filtered through paper. The refuse is generally thrown away as useless, or, when dry, ilsed as fuel; if it has not been thoronghly squeezed, the pigs will sometimes eat it ; and some people grind it a second time with watcr, and press it for an inferior liquor for family use. As long as a drop can be drawn, Mr. Marshall recommends to continue the pressure. Even breaking the cakes of the refuse with the hands only, he says, gives the press fresh power over it: regrinding them has a still greater effect: in this state of the materials, the - mill gains a degree of power over the more rigid parts of the fruit, which in the first grinding it could not reach. The most eligible management in this stage of the process appears to be this: grind one pressful a-day; press, and regrind the residuum in the evening; infuse the reduced matter all night among part of the first runnings, and in the morning repress while the next pressful is grinding.
III. Of fermentation and bottling.-In the fermentation of the liquor, the common practice is to have it put into casks or hogsheads, immediately from the press, and to fill them quite full; when the casks are put into airy sheds, where the warmth differs little from the open atmosphere. They are sometimes even exposed to the open air without any covering but a piece of tile or flat stone, propped up over the bung-hole to carry off the rain. It would seem, from Mr. Marshall's acconnt, that the time with cyder, when the fermentation begins, isquite uncertain, in general varying from one day to a month after it is tunned; though liquor taken immediately from the press, if much agitated, will sometimes pass directly into a state of fermentation. If the commencement of the fermentation is uncertain, its continuance is no less so ; liquors that have been agitated will frequently go through it in one day; but otherwise, when allowed to rest, it wil! take from two to six days. The appearance of the liquor also varies according to the ripeness of the fruit: if the fruit has been properly matured, a thick scum is generally thrown up, resembling that of malt liquor. After the liquor has remained some time in the fermenting vessels it is racked off from the lees, and put into fresh casks. But as a fresh fermentation frequently takes place after racking, when this becomes violent, the liquor must be racked again; and sometimes, before the fermentation is checked, the racking must be repeated five or six times; but when there is only a small degree of fermentation, called fretting, the liquor is suffered to remain in the same cask; this degree,
however, is also very undetermined. The best informed cyder-makers are said to repeat the rackings until the liquor appears quiet or nearly so; and when this cannot be accomplished by the ordinary methods of fermentation, they have recourse to fumigating the casks with sulphur, which is called stooming or stumining. For this purpose a match made of thick linen cloth, about ten inches long and an inch broad, well coated with brimstone for about three-fourths of its length, is lighted and hung in at the bunghole of the cask (which has been previously well seasoned, and every other vent stopped), and, while the match burns briskly, the bung is driven in, keeping the uncoated cnd of the match by its side. The match thus suspended, burns as long as the air contained in the cask will supply the fire; and when it dies the bung is taken out with the remmant of the match, after which the cask is allowed to remain two or three hours, more or less, according to the degree of power the sulphur ought to have, before it is filled with liquor. A smell of the sulphureous acid is thus communicated to the liquor, but it goes off in a short time. Mr. Crocker says, when the fermentation ceases, and the liquor appears tolerably clear to the eye, it has also a piquant vinous sharpness upon the tongue, and if in this state the least hissing noise be heard in the fermenting liquor, the room is too warm, and atmospheric air must be let in at the doors and windows. 'Now,' he continues, 'is the critical moment, which the cyderist must not lose sight of; for if he would have a strong, generous, and pleasant liquor, all further sensible fermentation must be stopped. This is best done by racking off the pure part into open vessels, which must be placed in a more cool situation for a day or two ; after which it may again be barrelled, and placed in some moderately cool situation for the winter.'

It is advisable in racking, that the stream from the racking-cock be small, and that the receivingtub be but a small depth below the cock, lest, by exciting a violent motion of the parts of the liquor, another fermentation be brought up The feculence of the cyder may be strained through a filtering-bag, and placed among the second-rate cyders, but it must not be returned to the liquor designed for prime cyder.

It is observed by Mr. Knight, that 'after the fermentation has ceased, and the liquor is become clear and bright, it should instantly be drawn off, and not suffered on any account again to mingle with its lees; for these possess much the same properties as yeast, and would inevitably bring on a second fermentation. The best criterion to judge of the proper moment to rack off will be, be says, the brightness of the liquor; and this is always attended with external marks, which serve as guides to the cyder-maker. The discharge of fixed air, which always attends the progress of fermentation, has entirely ceased; and a thick crust, formed of fragments of the reduced pulp raised by the buoyant air it contains, is collected on the surface. The clear liquor being drawn off into another cask, tbe lees are put, he says, into small bags, simiar to those used for jellies, being made, as noticed above; through these, whatever liquor the lees contain gradually
filtrates, becoming perfectly bright; and it is then returned to that in the cask, in which it has the effect, in some neasure, of preventing a second fermentation, as already hinted. It appears, he says, to have undergone a considerable change in the process of filtration. The color is remarkahly deep, its taste harsh and flat, and it has a strong tendency to become acetous; probably by having given out fixed, and absorbed vital air. Should it become acetous, which it will frequently do in forty-eight hours, it must not on any account, he says, be put into the cask. If however, the cyder, after being racked off, remains bright and quiet, nothing more is to be done to it till the succeeding spring; but if a scum collects on the surface, it must immediatcly be racked off into another cask; as this would produce bad effects if suffered to sink. If a disposition to ferment with violence again appears, it will be necessary, he thinks, to rack off from one cask to another, as often as a hissing noise is heard. The strength of cyder is much reduced, he says, as noticed above, by being frequently racked off; but this, he supposes, arises only from a large portion of sugar remaining unchanged, which adds to the sweetness, at the expense of the other quality. The juice of the fruits which produce very strong cyders, often remains muddy during the whole winter, and much attention must frequently be paid, to prevent an excess of fermentation.'
'The casks into which the liquor is put, whenever racked off, should always have been thoroughly scalded, and dried again; and each should want several gallons of being full, to expose a larger surface to the air of the atmosphere.' 'But,' he adds, 'should the cydermaker neglect the above precautions, the inevitable consequence will he this: another fermentation will quickly succeed, and convert the fine vincus liquor he was possessed of into a sort of vinegar ; and all the art he is master of will never restore it to its former richness and purity.'
He suggests, howevcr, the following correc-tives:- A bottle of French brandy, half a gallon of spirit extracted from the lees of cyder, or a pail full of old cyder, poured into the hogshead soon after the acetous fermentation is begun; but no wonder, continues he, if all these should fail, if the cyder be still continued in a close warm cellar. To give effect to either, it is necessary that the liquor be as much exposed to a cooler air as conveniently may be, and that for a considerable length of time. By such means it is possible fermentation may, in a great measure, be repressed : and if a cask of prime cyder cannot from thence be obtained, a cask of tolerable se-cond-rate kind may. These remedies are innocent; but if the farmer or cyder-merchant attempt to cover the accident, occasioned by negligence or inattention, by applying any preparation of lead, let him reflect that he is about to commit an absolute and unqualified murder on those whose lot it may be to drink his poisonous draught. Such means should, therefore, on no account be ever had recourse to.'
The time of botling depends greatly on the quality of the liquors themselves: good cyder can seldom be bottled with propriety until a year old, and sometimes not till two years. It is
stated by the writer just mentioned, that in th month of April the cyder, in general, will be in a fit state for this operation; but that the critical time for this process is, when the liquor has acquired in the cask its highest degree of perfection : then, when the weather, is fair, the barometer high, and the wind in some northerly point, let the bottles be filled, setting them by uncurked until the morning; then letithe corks be driven very tightly into the necks of the bottles, tied down with small strong twine or wire, and well secured with melted rosin, or other material of the same nature.

Mr. Knight thinks, that cyders which have been made from good fruits, and have been properly manufactured, will retain a considerable portion of sweetness, in the cask, to the end of three or four years; but that the saccharine part, on which alone theirsweetness depends, gradually disappears, probably by a decomposition and discharge of fixed air, similar to that which takes place in the earlier stages of their fermentation.
The premises of a cider manufacturer consist of a mill-house, mill, press, vat, and cask, with their appurtenances. The mill-house is generally one end of an out-building; or perhaps a shed, under which straw or small implements are occasionally laid up. The smallest dimensions, to render it any way convenient, are twenty-four feet by twenty; a floor thrown over it, at seven feet high; a door in the middle of the front, and a window opposite; with the mill on one side, the press on the other side of the window; as much room being left in front, towards the door, for fruit and utensils, as the nature of the mill and the press will allow. It consists of two beams supported by uprights with strong braccs of wood. The apples being introduced between the pressing surfaces, the juice exudes. To produce this effect the more rapidly, a roller is previously employed, very similar to that used for crushing gypsum, in the manufacture of plaster of Paris; and the cohesive fibre of the fruit is by this means broken down. When a screw-press is substituted for this instrument, a spur wheel should be added, and the whole apparatus may then be erected for about £10. We mention this circumstance the more particularly as, while we are now writing, the whole of the duty has been taken off this valuable and healthy beverage, so that it bids fair to be more generally made thán heretofore.

The apple-mill does nut differ essentially from that of a common tauner's mill for grinding bark; and consists of a mill-stone from two feet and a half to four and a half in diameter, running on its edge in a circular stone trough, from nine to twelve inches in thickness, and from one to two tons in weight : the bottom of the trough in which the stone runs is somewhat wider than the thickness of the stone itself; the inner side of the groove rises perpendicularly, but the outer is levelled in such a manner as to make the top of the trough six or eight inches wider than the bottom, by which means there is room for the stone to run freely, and likewise for putting in the fruit, and stirring it up while grinding. The hed of a middle sized mill is ahout nine feet, some ten, and some twelve, the whole being composed of two, three, or four stones, honnd
together with cramps of 1 ron, and finished after being cramped in this manner. The best stones are found in the forest of Dean, generally a dark reddish gritstone, not calcareous; for if the stone was of a calcareous quality, the acid juice of the fruit would act upon it and spoil the liquor; a clean-grained grindstore grit is the fittest for the purpose. The runner is moved by means of an axle passing through the centre with a long arm reaching without the bed of the mill, for a horse to draw by ; on the other side is a shorter arm, passing through the centre of the stone. An iron bolt, with a large head, passes through an eye in the lower part of the swivel, on which the stone turns into the end of the inner arm of the axis; and thus the double motion of it is obtained, and the stone kept perfectly upright. There ought also to be fixed on the inner arm of the axis, about a foot from the runner, a cogged wheel, working in a circle of cogs fixed upon the bed of the mill; these not only prevent the runner from sliding, which it is apt to do, when the mill is full ; but likewise make the work more easy for the horse.

The bottom of the press ought to be made entirely of wood or of stone; the practice of covering it with lead being now well known to be pernicious. A few inches within its outer edges a channel is cut to catch the liquor as it is expressed, and convey it to a lip formed by a projection on that side of tne bed opposite the mill; having under it a stone trough or wooden vessel, sunk within the ground, when the bed is fixed low to receive it. The press is worked with levers of different lengths, first a short, and then a longer one, both worked by the hand; and afterwards a bar, eight or nine feet in length, worked by a windlass. Mr. Marshall computes the expense of fitting up a mill-liouse at about \(£ 20\) or \(£ 25\), or on a small scale at \(£ 10\) or £15, but if the stone has to be brought from a distance, the carriage will make a difference.
- Where iron-mills have been tried, this metal has been found to be soluble in the acid of apples, to which it communicates a brown color, and an unpleasaut taste. No combination has been ascertained to take place between this acid and lead; but as the calx of this metal readily dissolves in, and communicates an extremely poisonous quality to, the acetous juice of the apple, it should never be suffered to come into contact with the fruit or liquor.' Knight on the Apple and Pear,-which may justly be considered as one of the most. valuable treatises on this important subject.
There is a cyder-mill in use in the south of France, worked on a circular platform of boards, and, instead of stone, the wheel or conical roller is of cast-iron. The fruit is thinly spread over the platform, and the roller moved round by one inan or woman. From the rollers covering more breadth than the narrow wheels in use in Engiand, more fruit is crusled in a short time by this sort of mill.
Another and very convenient cyder-mill sometimes consists, in its simplest form, of two toothed or indented wooden cylinders of about nine inc'ines in diameter, each being enclosed in the manner of other mills, having a feeder at the top; and Vol. VII.
being made so as to be turned by the hand The: cylinders are so arranged as to be capable of being removed to a greater or less distance from each other, and thus the business advances in : regular progressive manner, from thic first cutting of the fruit until the cylinders are brought so close together that a kernel cannot pass without being bruised; if a sccond pair of finer toothed cylinders be made to work under these. the pulp will be brought into a perfect state of fineness. It is with difficulty that the same degree of fineness can be effected by the horsemill.
A hand-mill, where cyder is only made for private usc, sometimes consists of a pair of fluted rollers working into each othcr. They are of cast-iron, hollow, about nine inches diameter, with flutes or teeth, about an inch wide, and nearly as much deep: two men work them by land against each other. The fruit passes between them twice; the rollers being first set wide, to break it into fragments, and afterwards closcr to reduce the fragments and the seeds.

Cyder-vats are vessels for receiving the pommage, or the cyder before it is racked off into the cask. They should be made of wood, 2s, where lead is employed, it is liable to be corroded by the acid. Of the casks we have already spoken.

Mr. Crocker observes that, in the districts of Hereford and Worcester, the following are considered as the best liquor fruits: the bennet apple, captain Nurse's kernel, Eton's yellow, Normandy applc, and the yellow or forest stire. And that, in the county of Somerset, the Jersey, the white sour, the margill, vallis apple, barn'sdoor, crab red-streak, Du-ann, Jack Every, coccayee, Clark's primo, Buckland, Pit crab, Slater's pearmain, Slater's No. 19, Slater's No. 20, Slater's No. 21, castle pippin, saw-pit, and the pomme apis, are supposed most valuable. But that in Devonshire, the most esteemed fruits are; the Seaverton red-streak, the sweet broady, the lemon bitter sweet, josey, Orcheton pippin, wine apple, marygold spice-apple, Ludbrook redstreak, green Cornish, the butter-box, red Cornish, broad-nosed pippin, cat's head, brandyapple, Pine's red-streak, winter red, sweet pomme roi, and the Bickley red-streak. Marshall mentions the stire-apple, hagloe crab, the golden pippin, the old red-streak, and the woodcock, as favorite old cyder fruits, now on the decline. It was during the reign of Charles I. that the plantations of Herefordshire acquired the peculiar eminence which they yet retain, when by the spirited exertions of lord Scudamore, and other gentlemen of the county, Herefordshire 'became, in a manner, one entire orchard.' The principal markets for the fruit liquors of this county, are those of London and Bristol, whence great quantities are sent to Ireland, to the East and West Indies, and to other foreign markets, in bottles. The price of the common cyder is generally fixed once a year by a meeting of the dealers at Hereford fair, on the 20th of October.

Cyder Spirit, is a spirituous liquor drawn from cyder by distillation, in the same manner as brandy from wine. Its flavor is not agree-
ahle, but it may be entirely divested of it, and rendered perfectly pure ly rectification. The traders in spirituous liquors are well acquainted with the value of such a spirit as this: they can give it the flavors of some other kinds, and sell it under their names, or mix it in large proportion with foreign brandy, rum, and arrack, in the sale, without danger of detection.
Cyder Wine, a kind of wine made from the juice of apples taken from the press and boiled, and which being kept three or four years is said to resemble Rhenish. The method of preparing it according to Dr. Rush of America, where it is much practised, consists in evaporating in a brewing copper the fresh apple juice till half of it be consumed. The remainder is then immediately conveyed into a wooden cooler, and afterwards put into a proper cask with an addition of yeast, and fermonted in the ordinary way. The process is evidently horrowed from what has long been practised on the recent juice of the grape, under the term of vin cuit, or boiled wine, in Italy, and the islands of the Archipelago. This process has often become an object of imitation in the cyder counties, and particularly in the west of England. Dr. Fothergill made a varicty of experiments to ascertain whether or not the liquor acquires any noxious quality from the copper in which it is boiled, and the result seemed to afford a strong presumption that the wine does contain a ninute impregnation of copper. It is a curious chemical fact, he observes, that acid liquors, while kept boiling in copper vessels, acquire little or no impregnation from the metal, but presently begin to act upon it, when left to stand in the cold.

CYDIAS, an ancient Greek painter who made a painting of the Argonauts in the eleventh Olympiad. This celebrated piece was bought by the orator Hortensius for 164 talents.

CYDNUS, in ancient geography, a river of Cilicia ; rising in Mount Taurus, or rather in Antitaurus, north of Tarsus, through whose middle it ran, in a very clear and cold stream; falling into the sea at a place called Rhegma, a breach, the sea breaking in there, and affording the people of Tarsus a station or port for their ships. The water of the Cydnus is commended by Strabo, as of service in nervous disorders and the gout; it was so cold, however, that bathing in it had alınost proved fatal to Alexander.

CYIJONIA, or Cydon, in ancient geography, one of the three most illustrious cities of Crete, situated in the north-west of the island, with a port walled round. Stephen of Byzantium says, that it was first named Apollonia from Cydon the son of Apollo. Pausanias ascribes the founding of it to Cydon the son of Tegetus, who travelled into Crete. Herodotus affirms, that it was founded by the Samians, and that its temples were erected by them. Alexander, in the first hook of the Cretans, informs us, that it received its name from Cydon the son of Mercury. Cydon was the largest city in the island ; and was enabled to hold the balance between her contending neighbours. Phaleucus, general of the Phoceans, making an expedition into Crete with a fleet and a numerous army, invested Cydon both by sea and land; but, lost his army and his life
before its walls. In succeeding times, when Metellus subdued the island, he assailed Cydon with all his forces; and, after combating an obstinate resistance, subjected it to the power of Rome. Cydon occupied the present situation of Canea; only extending half a league further towards St. Odero.

CY'GNET, n. s. Lat. frorr cygnus. A young swan.

I am the cygnet to this pale faint swan, Who chaunts a doleful hymn to his own deatn. Shakopeare. King John.
So doth the swan her downy cygnets save, Keeping them prisoners underneath her wings.

Id. Henry VI.
Cygnets, from grey, turn white.
Barrn's Natural History.
Young cygnets are good meat, if fatted with oats; but, fed with weeds, they taste fishy.

Mortimer's Husbandry.
Next the changed god a cygnet's form assumes, And playful Leda smooths his glossy plumes.

Darwin.
}

And she bent \(0^{\prime}\) er him, and he lay beneath, Hushed as the babe upon its mother's breast, Drooped as the willow when no winds can breathe, Lulled like the depth of ocean when at rest, Fair as the crowning rose of the whole wreath, Soft as the callow cygnet in its nest.

Byron. Don Juan.
CY'LINDER, n.s.) Kv入ıvópos. A circular Cyli'ndrical, adj. body terminated by two Cyin'drick, adj. \(\}\) flat surfaces. Partaking Cylíndroid, n.s. of the nature of a cylinder; having the form of a cylinder. A cylindroid is a body approaching to the figure of a cylinder.
The square will make you ready for all manner of compartments, bases, pedestals, plots, and buildings ; your cylinder, for vaulted turrets, and round buildings.

Peacham.
The quantity of water which every revolution does carry, according to any inclination of the cylinder, may be easily found.

Wilkins.
Minera ferri stalactitia, when several of the cylindrick strix are contiguous, and grow to ether into one sheaf, is called brush iron ore.

Woodward's Natural History.
Obstructions must be most incident to such parts of the body where the circulation and the elastick fibres are both smallest, and those glands, which are the extremities of arteries formed into cylindrical canals.

Arbuthnot on Aliment.
Nymphs! your fine hands ethereal floods amass From the warm cushion, and the whirling glass; Beard the bright cylinder with golden wire, And circumfuse the gravitating fire.

Darvern.
Pent in dark chambers of cylindric hrass, Slumbers in grim repose the snoty mass.
This knob or corner of a cloud in being attracted by the earth will become nearly cylindrical, as loose wool would do when drawn out into a thread, and will strike the earth with a stream of electricity, perhaps two or ten vards in diameter.

Id

Cylinder, in geometry, a solid body, supposed to be generated by the rotation of a rectangle about one of its sides, as the figure CDEF generated by the revolution of the parallelogram ABE,F round its side \(A B\), which is the axis of the cylinder. See Gerometry.

Cylindroid, in geometry, a solid body, approaching to the figure of a cylinder, but differing from it in some respects, as having the bases elliptical, but parallel and equal.

CYMA'R, n. s. Properly written simar. A slight covering; a scarf.

Her comely limbs composed with decent care,
IIer body shaded with a slight cymar;
Her bosom to the view was only bare.
Dryden.
CYMA'TIUM, n.s. Lat. from кvرáтьov, a little wave. \(\Lambda\) member of architecture, whereof one half is convex, and the other concave. There are two sorts, of which one is hollow below, as the other is above.

In a cornice, the gola, or cymatrum of the corona, the coping, the modillions, or dentelli, make a nob'e show by their graceful projections.

Spectator.
CY'MBAL, n. s. Lat. cymbalum. A musical instrument.

\begin{abstract}
The trumpets, sackbuts, psalteries, and fifes, Tabors, and cymbals, and the shouting Romans,
Make the sun dance. Shakspeare. Coriolonus.

\section*{If mirth should fail, I'll busy her with cares,}

Silence her clamorous voice with louder wars; Trumpets and drums shall fright her from the throne, As sounding cymbals aid the lab'ring moon.
\end{abstract}

\section*{Dryden's Aurengzebe.}
\(A h\) ! tinkling cymbal, and high sounding brass, Smitten in vain! such music cannot charm The eclipse, that intercepts truth's heavenly beam, And chills and darkens a wide-waurering soul. Cowper.
A dolphin now his sportive limbs he laves, And bears the sportive damsel on the waves; She strikes the cymbal as he moves along, And wondering ocean listens to the song. Darwin.

Others their hands applausive beat,
Like cymbals sounding as they meet. Sheridan.
Her large black eyes, that flashed through her long hair
As it streamed o'er her; her blue veins that rose Along her most transparent brow; her nostril Dilated from its symmetry; her lips
Apart ; her voice that clove through all the din, As a lute's picrecth through the cymbal's clash, Jarred but not drowned bv the loud brattling.

Byron. Sardanapalus.
Cymbals, Ancient, Gr. \(\varepsilon u \mu \beta a \lambda o \nu\). Thy cymbal was much used among the ancients. It was made of brass like our kettle drums, and, as some think, in their form, but smaller, and of different use. Ovid gives cymbals the epithet of genialia, because they were used at weddings and other diversions. Cassiodorus and Isidore call this instrument acetabulum, the name of a cup or cavity of a bone wherein another is articulated; and Xenophon compares it to a horse's hoof;
whence it mus! have been hollow: which al, pears, too, from the figure of several other things denominated from it; as a basis, caldron, goblet, cask, and even a shoe, such as those of Einpedocles, which were of brass. The ancient cymbals appear to have been very different from our kettle drums, and thcir use of another kind. To their exterior cavity was fastened a handle, whence Pliny compares them to the upper part of the thigh, and Rabanus to phials. They were struck against onc another in cadence, and made a very acute sound. The invention of them was attributed to Cybele; whence their use in feasts and sacrifices; setting aside this occasion, they were seldom used but by dissolute and effeminate people. M. Lampe attributes the invention to the Curctes, who, as wall as the Corybantes, were reputed to excel in the anusic of the cymbal. The Jews had thei" cymbals, or at least instruirents which translators render cymbals; but as to their material and form, critics are not agreed.

Cymbals, Modern. The modern cymbal lias been sometimes defined as a mean instrument, chiefly in use among vagrants, gypsies, \&c. It consists of steel wire in a triangular form, whereon are passed rings, which are touched and shifted along the triangle with an iron rod held in the left hand, while it is supported in the right by a ring. Durandus says, that the monks sometimes use the word cymbal for the cloisterbell, which called them to the refectory. It is clear that our translators, at least, 1 Cor. xiii. 1, had this small kind of 'tinkling' instruments in view when they contrast \(\chi a \lambda\) кos \(\eta \chi \omega \nu\), sonorous brass, perlaps the sound of the trumpet, with \(\kappa \nu \mu \beta a \lambda o \nu\) \(a \lambda a \lambda a \zeta o s\), a tinkling cymbal.

But modern times have witnessed the extensive introduction of a very different cymbal amongst the military instruments of Europe. It is an instrument of loud percussion, adopted by us inunediately from the east, and resenibling the celebrated cymbals of Bacchus, which were evidently struck one against another, and would produce a sharp clamorous sound. They are employed as being useful for the loulness of their music in marking the due time and military step of a march. But the sounds produced are said to be inappreciable to the ear: this however is not the fact.

CYME, or Cuma, in ancient geography, a city built by Pelops on lis return from Greece. Cyme the Amazon gave it name, on expelling the inhabitants, according to Mela. Livy, Mela, Nepos, Pliny, and Tacitus use the Greek name Cyme, in preference to Cuina. It stood in Eolia, between the Myrina and Phocæa, and in Pentinger's map is set down nine miles from Myrina. From this place was the Sybilla Cumæa, called also Erythræa, from Erythræ, a neighbouring place. It was the country of Ephorus. Hesiod was a Cumean originally; his father coming to settle at Ascra in Bœeotia.

CYMENE, in botany, a name given by the ancient Greeks to a plant with which they used to dye woollen stuffs yellow; and with which the women used also to tinge their hair; yellow being the favorite color in those ages. It is the same plant with the latea herta of the Latins; or what we call dyer's weed.

CYN \(\operatorname{EGI}\) IRUS, an Athenian, celebrated for his extraordinary courace. He was brother to the poet Eschylus. After the battle of Marathon, he pursued the flying Persians to their ships, and seized one of their vcsscls with his right hand, which was immediately severed by the enemy. Upon this he seized the vessel with his left hand, and when he had lost that also, he still kept his hold with his teeth.

CYNANCIIE, a species of quinsy, in which the tongue is inflamed and swelled, so that it hangs out beyond the teeth. Dr. Cullen distinguishes tive species of this disease; viz. 1. cynanche maligna; 2. cynanche parotidæa; 3.cynanche pharyngæa; 4. cynanche tonsillaris; and 5 . cynanche trachealis. See Medicine.

CYNANCHUM, bastaid dogsbane, in botany, a genus of the digynia order, and pentandria class of plants; natural order thirtieth, contortæ. The nectarium is cylindrical and quinquedentated. There are six species; of which the following are the most remarkable: viz. 1. C. acutum, commonly called Montpelier scammony; and 2. C. Monspeliacum, the round-leaved Montpelier scammony. They abound with a milky juice like the spurge, which issues out wherever they are broken; and this milky juice when concreted has frequently been sold for scammony. These plants propagate so fast by their creeping roots, that few people care to admit them into their gardens.

CYNA'NTHROPY, n.s. K \(\quad\) vev кvvog, and \(\boldsymbol{\alpha} \nu \theta \rho \omega \pi 0\). A species of madness in which men have the qualities of dogs.

CYNARA, the artichoke, in botany, a genus of the polygamia æqualis order, and syngenesia class of plants: cal. dilated, imbricated with carnous squame, and emarginated with a sharp point. Of this ger.us there are eight species; of which only two are cultivated for use: viz. 1. C. cardunculus, the cardoon, greatly resembles the artichoke, but is of larger and more regular growth : the leaves being more upright, taller, broader, and more regularly divided : the stalks of the leaves blanched are the only edible parts of the plant. This is a very hardy plant, and prospers in the open quarters of the kitchen garden. It is propagated by seed so:vn annually in the full ground in March; either in a bed for transplantation, or in the place where they are designed to remain. 2. C. scolynius, the garden artichoke, nas large, thick, perennial roots, crowned by a considerable cluster of large pennatifid, erect leaves, two or three feet long. In the middle are upright stalks rising a yard high, on the top of which is a large round scaly head, composed of numerous, oval, calycinal scales, enclosing the florets, sitting ona broad fleshy receptacle, which, with the fleshy base of the scales, is the eatable part of the plant. The varieties of this species are, 1. The conical green-headed French artichoke, having the sinall leaves terminated by spines, a tall stalk, the head somewhat conical, and of a light green color, with the scales pointed at top, opening and turning outward. 2. The globular-lieaded red Dutch artichoke, having leaves without spines, a strong stalk, the head large, globular, a little compressed at top, and of a reddish green color; broad obtuse scales emarginated at ton. growing cluse,
and turning inward. Of these varieties the last is deservedly the most esteemed, hoth on account of its superiority in size and the agreeableness of its flavor. Both varieties are perennial in their root; but the leaves and fruit-stem die to the ground in winter; and the roots remaining, send up fresh leaves and stems every summer, producing a supply of artichokes for twenty years if required. The flowers and seed of all the plants of this genus are produced in the centre of the head; the scales of which are the proper calyx of the flower, which consists of numerous small bluish florets, succeeded by downy seeds sitting naked on the receptacle. Both the varieties of the artichoke are propagated by slips or suckers, arising anuually from the stool or root of the old plants in spring, which are to be taken from good plants of any present plantation in March or the beginning of April, and planted in the open quarter of the kitchen garden, in rows five feet asunder; and they will produce artichokes the same year in autumn. It should however he remarked, that, though artichokes are of many years duration, the annual produce of their fruit will gradually lessen in the size of the eatable parts after the third or fourth year, so that a fresh plantation should be made every three or four years.

CYNARCTO'MACHY. K \(\nu \omega \nu, \alpha \rho \kappa \tau o ̀ s, ~ \mu a \chi \grave{\eta}\). A word coined by Butler, to denote bear-baiting with a dog.

> That some occult design doth lie In bloody cynarctomachy, Is plain enough to him that knows How saints lead brothers by the nose.

IIudibras.
Cyneas, or Cineas, the friend of Pyrrhus and scholar of Demosthenes, who flourished A. A.C.275. Pyrrhus and he wrote a treatise of War, quoted by Tully.

CYNEGE'TICKS, n. s. K \(\quad v \nu \varepsilon \gamma \eta \tau \iota \kappa \alpha\). The art of lunting; the art of training and hunting with dogs.

There are extant, in Greek, four books of cynegeticks, or venation.

Browne's Vulgar Errours.
CY'NICK, \(n\). s. \& adj. \(\} \quad\) Kvvioos. A philoCy'nical, adj. \(\}\) sopher of the snarling or currish sort; a rude man; a snarler; a misanthrope. Having currish qualities; brutal; snarling ; satirical.

How vilely doth this cynick rhime !-
Get you hence, sirrah; saucy fellow, hence.
Shakspeare.
Or been the manes of that Cynic spright
Cloathed with some stubborn clay and led to light?
Or do the relic ashes of his grave
Revive and rise from their forsaken cave? Hall.
He doth believe that some new-fangled wit (it is his cynical phrase) will some time or other find out his art.

Wilhins.
Without these precautions the man degenerates into a cynick, the woman into a coquette; the man grows sullen and morose, the woman impertinent and fantastical.

Addison.
The Cynics of old, and some of the Stores, maintained, that in words there is no indelicacy; that there can be no harm in speaking of any thing that is
natural; and that, if we may sprak withont blame of any one crime, or any ne part or buction of the human body, we may, in like manner, of any other. But this is vile sophistry, tending to the utter debasement of man, and founded in the grussest ignorance of human nature and human language.

Beattie
Cynics, a sect of ancient philosophers, who valued themselves upon their contempt of riches and of pomp, of the arts and sciences, and of every thing in short except virtue and morality. The cynic philosnphers owe their origin and institution to Antisthenes of Athens, a disciple of Sucrates; who being asked of what use his philosophy had been to him, replied, 'It enables me to live with myself.' Diogenes was the most famous of his disciples, in whose character the system of this philosophy appears in its greatest perfection. See Diogfnes. These sages are said to have regarded chastity and modesty as weaknesses; and coarseness, even to indelicacy, was certainly one of their characteristics. They argued that what was right to be done. might be done at all times and in all places. Their chief principle, indeed, in common with that of the stoics, was, that we should follow rature. But the stoics clearly included the government of reason, in the rule of nature, which the cynics, for the greater part, rejected.

CYNIPS, in zoology, a genus of insects belonging to the hymenoptera order. The mouth is armed with jaws, but has no proboscis: the sting is spiral, and mostly concealed within the body. There are many species. We can only mention two:
1. C. quercus folii, or oak-leaf cynips, is of a burnished shining brown color. The antenne are black; the legs and feet of a chestnut hrown; and the wings white, but void of marginal spots. It is in the little smonth, round, liard galls, found under the oak leaves, generally fastened to the fibres, that this insect is produced, a single one in each gall. These latter are ligneous, of a hard compact substance, formed like the rest, by the extravasation of the sap of the leaf, nccasioned by the puncture of the gall fly when it deposits its eggs. Sometimes, instead of the cynips, there is seen to proceed from the gall a larger insect, of a brown color, which is an ichneumon. This iclmeumon is not the real inmate of the gall, or he that formed it.
2. C. quercus gemmæ, or oak bud cynips, is of a very dark green, slightly gilded : its antennæ and feet are of a dun color, rather deep. It deposits its eggs in the oak buds, which produce one of the finest galls, leafed like a rosebud beginning to blow. When the gall is small, that great quantity of leaves is compressed, and they are set one upon another like the tiles of a roof. In the centre of the gall there is a kind of ligncous kernel, in the middle of which is a cavity; and \(\therefore\) that is found the little larva, which feeds there, takes its growth, undergoes its metamorphosis, and breaks through the enclosure of that kind of cod in order to get out. The whole gall is often near an inch in diameter, sometimes nore when dried and displayed; and it holds to a branch by a pedicle.

CYNOBELINE, a king of the South Britons, who flourislied in the reign of Claudius, and
fought several hattles with the Romans unde: Plautius, the prator; about A. D. 43-46.

CYNOGL,OSSUM, hound's tongue, in hotany, a genus of the monogynia ordcr, pentandria class of plants ; natural order forty-first, asperifolix: cor. furnel-shaped, with its throat closed up by little arches formed in it; the seeds depressed, and affixed to the style or receptacle only on their inner side. Thecre are einht species, not remarkable for beauty. C. officinale, the common greater hound's tongue, was formerly used in medicine, and its root supposed to possess narcotic virtues; but it is discarded from the present practice. The smell of the whole plant is very disagreeable. Goats eat it : sheep, horses, and swine refuse it.

CYNOMETRA, in botany, a genus of the monogynia order and decandria class of plants; cal. tetraphyllous: astu. bifid at top ; the legumien carnous, crescent-shaped, and monospermous. Species two, Indian trees.

CYNOMORIUM, in botany, a genus of the monandria order and monœcia class of plants : natural order fiftieth, amentaceæ: cal. imoricated catkin: cor. none: one style; and one roundish seed. Species one only.

CYNOPIIONTIS, in antiquity, a festival observed in the dog-days at Argos, and so called \(a \pi 0\) tzs xuvas \(\oint 0 v \varepsilon เ v\), i. e. from killing dogs; because it was usual on this day to kill all the dogs they met with.

CYNOSARGES, a place in the suburbs of Athens, named from a white or swift dog, who snatched away part of the sacrifice offering so Hercules. It had a gymnasium, in which strangers or those of the half blood performed their exercises; the case of Hercules, to whom the place was consecrated. It had also a court of judicature, to try illegitimacy, and to examine whether persons were Athenians of the whole or half blood.

CYNOSCEPHALE, in ancient geography, a place in Thessaly, near Scotussa; where the Romans, under Q. Flaminius, gained a great victory over Philip, son of Demetrius king of Macedon. These Cynoscephalæ were small tops of several equal eminences; named from their resemblance to dogs' heads, according to Plutarch.

CYNOSSEMA, the tomb of Hecuba, on the promontory Mastusia, over against Sigeum, in the south of the Chersonesus Thracica; named either from the figure of a dog, to which she was fabled to have been changed, or from her sad reverse of fortune.

CYNOSURA, in astronomy, a denomination given by the Greeks to ursa minor, or the little bear, from кvvorвpa, the dog's tail. This is the constellation next our pole, consisting of seven stars: four of which are disposed like the four wheels of a chariot, and three lengthways representing the beam; whence some give it the name of the chariot, or Charles's wain. See Cynostre.

Cy nosura, in mythology, a nymph of Ida, in Crete, said to have nursed Jupiter, who changed her into a star.

Cynosura, Cynoserf, or Cynosuris, in ancient gengraphy, a place in Laconia; but whether maritime or inland, is unccrtain. Here Esculapius was buried.

CY'NOSURE, n. s. From kúvog ovpa. The star near the north pole, by which sailors steer.

\section*{Towers and battlements it sees} Bosomed high in tufted trees, Where perhaps some beauty lies, The cynosure of neighbouring eyes. Milton.
CYNOSURUS, in botany, dog-tail grass; a genus of the digynia order and triandria class of plants; natural order fourth, gramina: cal. bivalved and multiflorous; the receptacle proper, unilateral, and foliaceous. There are ten species, four of which are natives of Britain, viz. the cristatus, or crested dog-tail grass; the echinatus, or rough dog-tail grass; the cæruleus, or blue dog-tail grass; and the paniceus or bearded dog-tail grass.
CYNTHUS, in ancient geography, a mountain of the island Delos, so high as to overshadow the whole island. On this mountain Latona was fabled to have brought forth Apollo and Diana; hence called Cynthius and Cynthia.

Cynuria, or Cynurius Ager, in ancient geography, a district of Laconia, on the confines of Argolis, that proved a perpetual bone of contention between the Argives and Spartans.

CY'ON. See Cion.
Gather cyons for graffs before the buds sprout.
CYPERUS, in botany, a gems of the monogynia order and triandria class of plants; natural order third, calamarix. The glumes are paleaceous, and imbricated towards each side; the corolla is wanting, and there is one naked seed. There are thirty species; the only remarkable are,
1. C. longus, the English, Flemish, or long sweet cyperus, grows in the water, and along banks and river sides. Its root is as thick as an olive, full of little knots or specks, of an oblong figure, gray color, sweet and somewhat sharp taste, and almost without smell when it is newly taken out of the ground. It is much used by perfumers and glovers.
2. C. rotundus, the round cyperus, is a native of the East Indies, and grows by the sides of rivulets and ditches. The root is knotty, wrapped round with fibrous strings, not easy to break, of a brown color without any gray within ; of a pleasant scent, especially when fresh and well dried; the leaves are green, and resemble those of the reed and leek. The roots of both species are esteemed cordial, diuretic, cephalic, resisters of poisons, and expellers of wind.

CY'Pher. See Cipher.
CY'PHERING, n. s. Skill in arithmetic; the art of arithmetic.

Is a fine clerk, and has his cyphering perfeet.
Ben Jonson.

CYPHON, in antiquity, a kind of punishment used by the Athenians. It was a collar made of wood; so called because it constrained the criminal to bow down his head.

CYPHONISM, Cyphonismus, from кv申ן , derived from \(\kappa u \phi \circ \varrho\), crooked, a kind of torture or punisliment in use among the ancients. The learned are at a loss to determine what it was. Some suppose it to be that mentioned by St. Jerome, in his Life of Paul the Hermit, chap. 2,
which cousisted in smearing the body over with honey, and thus exposing the person, with lis lands tied, to the warm sun, to invite the flies and other vermin to torment him.

CYPRÆA, the gowrie, in zoology, a genus of insects belonging to the order of vermes testacea. It is an animal of the limax or snail kind; the shell is one involuted, subovated, obtuse, smooth valve. The aperture on each side is linear, longitudinal, and teethed. There are forty-four species, distinguished by the form of their shells. This genus is called cyprea and venerea from its being peculiarly dedicated to Venus; who is fabled to have endowed a shell of this genus with the powers of a remora, so as to mpede the course of the ship which was sent by Periander, tyrant of Corinth, with orders to mutilate the young nobility of Corcyra.

CY'PRESS-TREE, n. s. Lat. cupressus. A tree anciently used in funerals; thence, poetically, the emblem of mnurning. See Cupressus.

He taketh the cypress and the oak, which he strengtheneth for himself among the trees of the forest.

Isaiah xliv. 14.
The aspine, good for staves, the cypresse funerall.
Spenser. Faerie Queene.
In ivory coffers I have stuffed my erowns; In cypress chests my arras counterpanes.

Shakspeare.
Poison be their drink,
Their sweetest shade a grove of cypress trees.
Id. Henry VI.
Bind ye my brows with mourning cyperise, And palish twigs of deadlie poplar tree. Hall.

Poplars and alders ever-quivering played,
And nodding cypress formed a fragrant shade.
Pope's Odyssey.
Long aisles of cypress waved their deepened glooms, And quivering spectres grinned amid the tombs.

\section*{Darwin.}

Though no funereal cypress shade thy tomb, For thee the wreaths of Paradise shall bloom.

Huddesford. Oh, snatched away in beauty's bloom, On thee shall press no ponderous tomb; But on thy turf shall roses rear Their leaves, the earliest of the year; And the wild cypress wave in tender gloom.

Byron. Hebrew Melodies.

\section*{Cypress. See Cupressus.}

CYPRIANUS (Thascius-Cæcilius), a father of the church, born at Carthage, about the end of the second or beginning of the third century. His parents were heathen; and he himself continued such till the last twelve years of his life. Applying early to the study of oratory, he taught rhetoric in Carthage with the highest applause. His conversion is fixed by Pearson, A. D. 246, at Carthage, where, as St. Jerome observes, he had often employed his rhetoric in the defence of paganism. Cyprian, although a married man, as soon as he was converted, resolved upon a state of continence, which was then thought a high degree of piety. He wrote ably in deience of Christianity, and addressed to Donatus his first production De Gratiâ Dei. He next composed a piece De Idolorum Vanitate, upon the vanity of idols. Cyprian was now ordained priest, and, when the bishop of Carthage died,
none was judged so proper to succeed him as Cyprian. His first episcopal engagement was to draw up a piece De Habitu Virginum, on the dress of young females; in which he inculcates many lessons of modesty and sobriety. In 249 Decius issued very severe edicts against the Christians; and in 250 the heathens, irs the circus and amphitlieatre of Carthage, insisted upon Cyprian's being thrown to the lions. Upon this he withdrew from Carthage, and wrote, in his retreat, some excellent letters to the Libellatici, or those pusillanimous Christians, who procured certificates of the heathen magistrates, to show that they had complied with the emperor's orders, in sacrificing to idols. At his return to Carthage he held several councils on the repentarice of those who had fallen off during this persecution, and other points of discipline; he opposed the schemes of Novatus and Novatianus; and contended for the rebaptising of those who had been baptised by heretics. At last he died a martyr in the persecution under Valerian and Gallienus, in 258. Cyprian wrote eighty-one letters, and several treatises. The best editions of his works are those of Pamelius in 1568; of Rigaltius in 1648; and of Oxford in 1682.

CYPRINUS, in ichthyology, a genus of fishes belonging to the order of abdominales. The mouth is toothless; there are three rays in the gills; the body is smooth and white; and the belly fins have frequently nine rays. There are thirty-one species, principally distinguished by the number of rays in the vent-fin. The most remarkable are 1. C. alburnus, the bleak. These fish keep together in large shoals. At certain seasons they seem to be in great agonies: they tumble about near the surface of the water, and are incapable of swimming far from the place; but in about two hours they recover and disappear. Fish thus affected, the Thames fishermen call mad bleaks. They seem to be troubled with a species of Gordius, or hair worm, which torments them so, that they often rise to the surface and die. The bleak seldom exceeds five or six inches in length. Artificial pearls are made of the scales of this fish, and probably also with those of the dace. They are beaten into a fine powder, then diluted with water, and introduced into a thin glass hubble, which is afterwards filled with wax. The French were the inventors of this art. 2. C. auratus, the golden fish, a small fish domesticated by the Chinese, and generally kept for ornament in their courts and gardens. They breed them in small ponds made for the purpose, in basins, and even in porcelain vessels. This fish is no larger than our pilchard. The male is of a bright red color from the top of the head to the middle of the body: the rest is of a gold color: but it is so bright and splendid, that the finest gilding cannot approach it. The female is white: but its tail and half of its body resemble the lustre of silver. F. du Halde, however, observes, that a red and white color are not always the distinguishing marks of the male and female; but that the females are known by several white spots which are seen round the orifices that serve them as organs of hearing, and the males, by having these spots much brighter. Gold fish are light and lively; they love to sport on the
surface of the water, soon become familiarised, and may even be accustomed to come and receive their food on sounding a small rattle. (i reat care is necessary to preserve them ; for they are extremely delicate, and sensible of the least injuries of the air: a loud noise, such as that of thunder or cannons, a strong smell, a violent slraking of the vessel, or a single touch, will oft-tines destroy them. These fish live with, litte nourishment : those small worms which are engendered in the water, or the earthy particles that are mixed with it, being sufficient for their food. In winter they are removed foom the court to a warm chamber, where they are kept, generally shut up in a porcelain vessel. Duriny that season they receive no nourishment ; however, in spring, when they are carried back to their former basin, they sport and play with the same strength and livetiness as they did the preceding year. In warm countries these fish multiply fast, provided care be taken to collect their spawn, which floats on the water, and which they almost entirely devour. This spawn is put into a particular vessel exposed to the sun, ard preserved there until vivifred by the heat : gold-fish, however, seldom multiply when they are kept in close vases, hecause they are then too much confined. In order to render them fruitful, they must be put into reservoirs of considerable depth, in some places at least, and which are constantly supplied with fresh water. They were first introduced into England about A. D. 1691 ; but were not generally known till 1728 , when a great number were brought over, and presented to Sir Matthew Dekker, and by him circulated round the neighbourhood of London, from whence they have been distributed to most parts of the country. 3. C. brama, the bream, is an inhabitant of lakes, or the deep parts of still rivers. It is a fish that is very little esteemed, being extremely insipid. 4. C. carpio, the carp. This was introdnced into England ahout 1514, by Leonard Maschal. Russia wants these fish at this day. Sweden has them only in the ponds of people on fashion. They chiefly abound in the rivers and lakes of Polish Prussia, where they are sometimes taken of a vast size. They are there a great article of commerce, and sent in well-boats to Sweden and Russia. The merchants purchase them out of the waters of the noblesse of the country, who draw a good revenue from this article. They grow also to a very great size : some authors speak of carp 200 lbs . in weight, and five feet in dength. They are prodigious breeders : the quantity of roe has been sometimes found so great, that when taken out and weighed against the fish itself, the former has been found to preponderate. From the spawn of this fish caviare is made for the Jews, who hold the sturgeon in abhorrence. The carp is extremely cunning, and is sometimes styled the river fox. They will sometimes leap over the nets, and escape that way; at other times they will immerse themselves so deep in the mud, as to let the net pass over them. They are also very shy of taking a bait; yet at the spawning time they are so simple as to suffer themselves to be tickled, handled, and caught by any body that will attempt it. This fish is apt to mix its milt with the roe of other fish; from
which is produced a spurious breed. 5. C. cephalus, the chub, is a very coarse fish and full of bones. It frequents the deep holes of rivers; and in summer commonly lies on the surface, beneath the shade of some tree or bush. \(t\) is very timid, sinking to the bottom on the east alarm, even at the passing of a shadow, but soon resumes its former situation. It feeds on worins, caterpillars, grasshoppers, and other coleopterous insects that happen to fall iuto the water; aud it will even feed on cray-fish. It will rise to fly. Some of this kind have been known to weigh eight or nine lbs. 6. C. barbus, the barbel, a common inhabitant of most fresh waters in Europe, and easily distinguished from the other species of cyprinus, by the upper jaw being advanced far beyould the lower one, and in having the four beards appendant, from which the appropriate name of barbus or barbel is derived. This fish, during the summer, prefers the rapid currents and shallows of rivers, and retires at the approacl of winter to the more full and deeper places. They live in societies; lurking in holes along the sides of the water under shelter of the steepest banks, and feed on smaller fish, and worms and flesh of all kinds, for which they dig in the banks like swine. In the day-time they love to lurk occasionally among weeds, and be tween the stones in retired parts of the river, and wander out at night in search of prey. They spawn in April, and begin to be in season in May and June. The flesh of the barbel was never in great esteem for the table. Mr. Pennant quotes a passage in Ausonius, which, as he observes, is no panegyric on its excellence, for he lets us know it loves deep waters, and that, when it grows old, it is not absolutely bad:

\section*{Laxos exerces barbe natatus \\ Tu melior pejore ævo, tibi contigit uni \\ Spirantum ex numero non inlaudata senectus.}

And he adds himself, that 'they are the worst and coarsest of fresh-water fish, and seldom eaten but by the poorer sort of people, who sometimes boil them with a bit of bacon to give them a relish.' 'The barbel,' says old Walton, 'though he be of a fine slape, and looks big, yet he is not accounted the best fish to eat, neither for his wholesomeness nor his taste; but the male is reputed much better than the female, whose spawn is very hurtfnl.' 7. C. gobio, the gudgeon, is generally found in gentle streams, and is of a small size, the largest not exceeding half a pound weight. They bite eagerly; and are assembled by raking the bed of the river; to this spot they inmediately crowd in shoals, in expectation of food. 8. C. leuciscus, the dace, is gregarious, haunts deep still waters, is a great breeder, very lively, and during summer is very fond of frolicking near the surface of the water. It never exceeds the weight of a pound and a half; the scales are smaller than those of the roach. 9. C. rutilus, the roach, is a common fish found in many of the deep still rivers of this country. 'They are gregarious, keeping in large shoals. It has never been known to exceed five lbs. in weight. 10. C. tinca, the tench, was treated with the same disrespect by the ancients as the barbel;
but is now in much more repute. It has by some been called the pliysician of the fish; and its slime has been said to be of so healing a nature, that the wounded fishes apply it as a styptic. In this country it is reckoned a wholesome and delicious food; but the Germans are of a different opinion. By way of contempt they call it the shoemaker. Gesner even says that it is insipid and unwholesome. It does not commonly exceed four or five lbs., thotgh some have been known to weigh ten, and even twenty. They love still waters, and are rarely found in rivers; they are easily caught. They are thick in proportion to their length. The color of the back is dusky; the corial and ventral fins of the same color; the head, sides, and belly, of a greenish cast, most beautifully mixed with gold, which is in its greatest splendor when the fish is in highest season.

CYPRIPEDIUM, the lady's slipper, in botany, a genus of the diandria order, and gyvandria class of plants: natural order seventh, orchideæ. The nectarium is ventricose, inflated, and hollow. There are three species, of which only one, viz. C. calceolus, is a native of Britain. It grows in rough ground in different parts of the island. The other two species are natives of America. None of them are easily propagated in gardens, and therefore must be transplanted from those places where they are natives.

CY'PRUS, n.s. I suppose from the place where it was made; or corruptly from cypress, as being used in mourning, says Dr. Johnson. A thin transparent black stuff.

> A cyprus, not a bosom, Hides my poor heart !

> Shakspeure.

\section*{Lawn as white as driven snow,} Cyprus black as e'er was crow.

Id. Winter's Tale.
Cyprus, or Kupris, as it is called by the Turks, is the most important island of the Levant, and subject to Turkey. It is situated between \(33^{\circ}\) and \(36^{\prime}\) E. long., and \(30^{\circ}\) and \(34^{\prime}\) N. lat. It is about 150 miles in length by seventy-five broad, and is traversed from east to west by two remarkable mountain ranges, one of which yielded the third Olympus of the ancient mythology. The whole are covered with snow during the winter months, but seem only to render the neat of summer more oppressive. This island was called Macaria, the happy, by the Greeks. Homer celebrates its fertility, calling it by its present name, in Hymn.:

\section*{}

It is also known in history by the names of Acamantis, Ærosa, Amathus, Cerastis, Colinia, Paphia, Salaminia, and Spechia: but its most common name was that which it still bears. The principal towns of ancieut Cyprus were Paphos, Citium, Amathus, Salamis, Idalium, Lapathus, Arsinoe, \&c. There were three celebrated temples here: two dedicated to Venus, who was said to be born here, and was called the Cyprian queen, and one to Jıpiter. The females of the island were proverbially dissipated.

Cyprus, according to Eratosthenes, was first discovered by the Phonicians two or three gene-
rations before Asterius and Minos, kings of Crete; that is, accordiug to Sir Isaac Newton's computation, 2006 years before the (ihristian era. It was then so full of wood that it could not be tilled, and the I'hoenicians first cut down that wood for melting copper, with which the island abounded; afterwards, when they began to sail without fear on the Mediterrancan, that is, after the Trojan war, they built numerous vessels of this wood. But Josephus informs us, that the descendants of Chittim, the son of Javan, and the graudson of Japhet, were the original inhabitants of Cyprus. According to his account, Chittim, seeing his brother Tarshish settled in Cilicia, where le built the city of Tarsus, settled with his followers in this opposite island; and either he or his descendants laid the fommdations of Citium, which, according to Ptolemy, was the most ancient city in the island. As Cyprus was too narrow to contain the great numbers who attended him, he left here as many as might serve to people the country, and with the rest passed over into Macedon. Cyprus was divided amoug several petty kings till the time of Cyrus. He subdued then all; but left each in possession of his kingdom, obliging them only to pay him an annual tribute, and to send supplies of men, money, and ships, when required. The Cyprian princes lived thus subject to the Persians till the reign of Darius Hystaspis, when they attempted, but with little success, to shake off the yoke; their forces being entirely defeated, and themselves again obliged to submit. They made another more successful attempt about A. A.C. 357 ; but they could never become entirely independent. They submitted, it is probable, to Alexander the Great, though historians are silent as to this event. On his death, the dominion of Cyprus was disputed by Antigonus and Ptolemy. At last Antigonus prevailed, and the whole island submitted to him about A.A.C. 304. He and his son Demetrius kept possession of it for eleven years, when it was recovered by Ptolemy, and quietly possessed by him and his descendants till A.A.C. 53, when it was unjustly seized by the Romans. In the time of Augustus, it began to be ranked among the proconsular provinces, and to be governed by magistrates sent thither by the senate. In 648 it was conquered by the Saracens; but recovered by the Romans in 957. They held it, lowever, but for a very short time, and the barbarians kept possession of it till the time of the crusades. It was then reduced by Richard I. of England, who gave it to the princes of the Lusignan family, who held it till A.D. 1570. They divided it into twelve provinces, in each of which was a capital city, from which the province was denominated. So considerable was the island at this time, that besides the cities abovementioned, and others of less note, it contained 800 villages. In 1570 it was taken by the Turks, and it has ever siuce continued under their yoke.

Cyprus has no river, and the torrents that descend from the mountains in winter do not reach the sea in suminer, but form unhealthy stagnant lakes and marshes in the low grounds. It is generally fertile, producing wine, oil, cotton, silk, and pasture; but has large tracts of forest. In minerals it is rich, having mines of
yold and silver, and yielding emeralds, rockcrystal, red jasper, agate, amianthus, terre d'ombre, and other minerals, besides the l'aphian diamond. It has no wild animals but foxes and hares. The population \(1 s\), according to Olivier, 60,000, half Greeks and half Turks; according to Malte Brun 83,000. J)r. Clarke says that its present state may be expressed in a few words. Agriculture neglected; inhabitants oppressed; population destroyed; pestiferous air; contagion; poverty ; indolence ; desolation.'

The bay of Salinas, between Cape Grego and Cape Tagista, or Chiti, is pointed out by the highest summit of the island, Mount Cius, or Rusie, being directly over it, whence it bears west. Larnaca, on the east shore of this bay, has a tolerable road even in winter, though exposed to the south-east and south. The town, which is a heap of ruins, is half a mile from the sloore, on which is a suburb on the site of the ancient Citium: in the vicinity are many salt marshes, whence the name of the bay, which afford considerable quantities of salt, but render the air unhealthy. Salinas (Salamis) is at the head of the gulf; it has a citadel falling to ruin.
The Bay of Limasole, or Limisso, is sheltered ou the west by point Della Gatta: the village at the head of the bay is supposed to stand on the site of Amathonte, and a league east of it are considerable ruins. Piscopia is a village east of the south point of the island, and in the most fertile part of it. On the west coast is Bafia, supposed to be on the site of Paphos: it is a small town with a fort and port for small vessels; the town is on an enninence one mile from the port, and is entirely inhabited by Greeks. Solea (Solce and Expia) is on the north coast, as are Cerino (Ceronia), a village of 200 inhabitants with a castle in good order, and a small port within two rocks, but open to the north and unsafe in winter, Maceria (Macaria and Aphrodisum), and Artemisia.
The commerce of Cyprus is considerable, exporting of its own produce cotton, which is considered the best of the Levant, 5000 bars of 600 lbs. each, cliefly to Venice, Holland, and England; silk, 25,000 bags of 300 lbs . each; wool, 500 bags of 600 lbs . each; wine chiefly to Venice and Leghorn ; coloquintida, 100 quintals, chiefly to Holland and Leghorn; laudanum, madder, cliefly to France; cochineal a sinall quantity; soda to Marseilles; turpentine to Venice ; green earth for painters, and brown umber, chiefly to Holland; corn, though prohibited, finds its way out of the island; salt to Syria and Constantinople; carob beans, pitch, tar, and planks, in small quantities, and some manufactured silks and cottons. The exports are chiefly paid for in specie. About 600 European vessels are computed to visit the island annually.

Wine is the staple product of this island. Its grapes, yielding a juice which is almost a concentrated essence, are considered among the richest and most luscions in the world. The wines made from them strongly resemble Tokay, and, in the language of the east, are said to have power to restore health and youth to the most exhausted frames. They are kept in casks, without any other precaution to exclude tive
air than that of placing a piece of sheet lead over the bung hole．At the age of forty years this noble beverage is supposed to be in perfection， and its qualities are then truly balsamic．All the valuable kinds are white，the red being merely used as vin du pays．The apricots of Cyprus are also delicious．Near Baffa is found an amianthus，or mineral cloth，peculiarly dis－ tinguished for its flexibility，whiteness，and deli－ cate structure．Cyprus is likewise noted for the common Turkey manufactures of leather，car－ pets，and printed cottons．The first is remarkable for its brilliant and lively color．The carpets are of excellent workmanship；and，though barely large enough to cover an English hearth，bring from forty to fifty piastres a－piece．The cottons have the valuable quality of preserving their co－ lors in washing；which，in fact，rather improves them．The principal towns are Nicotia，Fama－ gusta，and Larnica，all situated in the south－east part of the island．

Of the appearance ot the females of Cyprus， renowned from an early period of history，Dr． Clarke gives the following account：－＇The in－ teresting costume presented in the dress of the Cyprian ladies ought not to pass without notice．Their head apparel was precisely mo－ dclled after the kind of Calathus represented upon the Phœ⿱㇒日勺心ician idols of the country，and upon Egyptian statues．This was worn by wo－ men of all ranks，from the wives of the consuls to their slaves．Their hair，dyed of a fine brown color，by means of a plant called Henna，hung behind in numerous long straight braids；and， in some ringlets disposed near the face，were fastened blossoms of the jessamine，strung to－ gether，upon slips from leaves of the palm－tree， in a very curious and pleasing manner．Next to the Calmuck women，the Grecian are，of all others，best versed in cosmetic arts．They pos－ sess the valuable secret of giving a brown color to the whitest locks，and also tinge their eyebrows with the same hue；an art that would be higlly prized by the hoary courtezans of London and of Paris．The most splendid colors are displayed in their labits；and these are very becoming to the girls of the island．The upper robe is always of scarlet，crimson，or green silk，embroidered with gold．Like other Greek women，they wear long scarlet pantaloons，fastened round the ancle， and yellow boots，with slippers of the same color． Around the neck，and from the liead，were sus－ pended a profusion of gold coins，chains，and other trinkets．About their waists they have a large biclt or zone，fastened in front by two large and heavy polished brass plates．They en－ deavour to make the waist as long as possible， and the legs，consequently，short．Naturally cor－ pulent，they take no pains to diminish the size of their bodies by lacing，but seem rather vain of their bulk，exposing their bosoms，at the same time，in a manner highly unbecoming．Notwith－ standing the extraordinary pains they use to dis－ figure their natural beauty by all sorts of ill－ selected ornaments，the women of Cyprus are handsomer than those of any other Grecian island．They have a taller and more stately figure；and the features，particularly of the women of Nicotia，are regular and dignified，ex－
hibiting that elevated cast of countenance so uni－ versally admired in the works of Grecian artists． At present this kind of beauty seems peculiar to the women of Cyprus．＇

The Turkish governor resides at Nicotia；his appointment is renewed annually，and obtained by purchase．So that each succeeding ruler has only the one great point of lis personal aggran－ disement for a short period in view，and the permanent interests of the island are no topic of consideration with any of its masters．A common type on the medals of this island is the temple of the Paphian goddess， as in the annexed figure；in－ scription，KYMPIQN ；some－ times it contains the name of their kings，and sometimes that of the emperors Augustus，Ca－ ligula，Claudius，Galba，Vespa－ sian，Titus，Domitian，Trajan， Septimius Severus，Julia，Caracalla，Geta，or Macrinus．

Cyprus，Knights of，an order instituted by Guy de Lusignan，titular king of Jerusalem，to whom Richard I．of England，after couquering Cyprus，made over his right．

CYRENAICA，an ancient kingdom of Africa， corresponding to the present kingdom and desert of Barca and Tripoli．It was originally inhab－ ited by a number of barbarous nations，differing little from gangs of robbers．Afterwards some colonies from Greece settled in it，and Cyrenaica became so powerful a state，that it waged war with Egypt and Carthage，often with success． In the time of Darius Hystaspis，Arcesilaus，the reigning prince in Cyrenaica，was driven from the throne；on which his mother Pheretima ap－ plied for assistance to the king of Cyprus．Her son afterwards returning to Barca，was there assassinated together with his father－in－law． Pheretima，finding herself disappointed by the king of Cyprus，applied to Darius Hystaspis， and by the assistance of the Persians reduced Barca．Here she behaved with the utmost cruelty．Cyrenaica，however，seems to have re－ nained free till the time of Alexander the Great， who conquered it along with Egypt．Soon after his death，the inhabitants recovered their liberty；but were in a short time reduced by Ptolemy king of Egypt．Under these kings it remained till Ptolemy Physcon made it over to his illegitimate son Apian，who，in the 658th year of Rome，left it by will to the Romans．The senate permitted all the cities to be governed by their own laws；and this immediately filled the country with tyrants，those who were most potent in every，city or district endeavouring to assume the sovereignty of it ．Thus the kingdom was thrown into great confinsion；but Lucullus con－ siderably restored the public tranquillity，during the first Mithridatic war．It was found inipos－ sible，however，totally to suppress these distur－ bances，till the country was reduced to the form of a Roman province，which happened about twenty years after the death of Apion A．A．C． 76．Upon a revolt，the city of Cyrene was ruined by the Romans；but they afierwards re－ built it．In process of time it fell to the Arabs； and then to the Turks，who still retain it

CYRENAICS, a sect of ancient philosophers, so called from their founder Aristippus of Cy rene, a disciple of Socrates. The great priuciple of their doctrine was, that the supreme good of man in this life is pleasure; whereby they not only meant a privation of pain, and a tranquillity of mind, but an assemblage of all mental and sensual pleasures, particularly the last. Cicero makes frequent mention of Aristippus's school ; and speaks of it as yielding debauchees. Three disciples of Aristippus, after his death, divided the sect into three branches, viz. the Hegesiac school, the Annicerian, and the Theodoran; from the names of their authors. Under this division it languished and sunk.

CYRENE, in ancient geograply, the capital of Cyrenaica, arid one of the five cities called Pentapolis, distant from Apollonia, its sea-port, ten miles, situated on a plain of the form of a table, according to Strabo. It is now called Caiboan.

CYRILL (St.), bishop of Jerusalem, succeeded Maximus in 350 . He was afterwards deposed for selling the treasures of the church, and applying the money to the support of the poor during a great famine. Under Julian he was restored to his see, and firmly established in all his honors under Theodosius; in which he continued unmolested to his death in 386 . The remains of this father consist only of twentythree catecheses, and one letter to the emperor Constantius.

Cyricl (St.), patriarch of Alexandria, succeeded Theopliilus, his uncle, in 413. Scarcely was he installed, when he began to exert his authority with great vigor; and drove the Novatians and Jews from Alexandria, pernitting their wealth and synagogue to be taken from them. This proceeding highly displeased Orestes, the governor. Upon which a civil war broke out between them ; many tumults were raised and some battles fought in the very streets o. Alexandria. St. Cyrill also distinguished bimself by his zeal against Nestorius bislop of Constantinople, who, in some of his homilies, had asserted that the Virgin Mary ought not to be called the mother of God. The dispute at first proved unfavorable to Cyrill, whose opinion was not only condemned, but himself deprived of his bisliopric and thrown into prison. But he was soon after released, and gained a complete victory over Nestorins, who in 431 was deposed from his see of Constantinople. Cyrill returned to his see at Alexandria, where he died in 444. St. Cyrill also wrote against Theodorus of Mopsuesta, Diodorus of Tarsus, and Julian the Apostate. He composed commentaries on St. John's gospel, and wrote several other books. His works were published in Greek and Latin in 1638 , in six volumes folio.

CyRUS the Great, the founder of the united empire of the Medes and Persians. The two chief historians, who have written the life of Cyrus, are Herodotus and Xenophon; but their accounts of him are extremely different. The former tells us, that Astyages king of the Medes, dreaming that a vine sprung from the womb of his daughter Mandane, the branches whereof overshadowed all Asia, was told by the sooth-
sayers, that this portended the future power and greatness of a child who should be born of his daughter; and further, that this child should deprove him of his hingdom. Astyages, to prevent the accomplishment of the prediction, married his daughter to Cambyses, a Persian of mean condition, and cominanded one of his officers, mamed Harpagus, to destroy the infant as soon as it came into the world. Harpagus, fearing the resentment of Mandane, put the child into the hands of the king's shepherd. The shepherd's wife, we are told, was so extremely touched with the beauty of Cyrus, that she desired her husband rather to expose her own son, who was born some time before (a story equally unnatural and incredible), and preserve the young prince. Thus Cyrus was brought up among the shepherds of the king, and one day, as the neighbouring children were at play together, being chosen for their prince or clief, he punished one of his comrades with some severity, and the child's parent complained to Astyages. This prince sent therefore for the youthful Cyrus, and observing something noble in his air, tojether with a great resemblance of his daughter Mandane, he inade particular euquiry into his history, and discovered that Cyrus was his grandson. Harpagus, who was the instrument of preserving him, was now punished with the death of his own sort; but Astyages, believing that the royalty which the soothsayers had promised to the young prince, was only that which he had lately exercised among the shepherds' children, laid aside his fears. Cyrus being grown up, Harpagus disclosed the secret of his birth to him, with the manner in which lie had delivered nim from his grandfather's cruelty. He encouraged him to come into Media, and promised to furnish him with forces, in order to make him master of the country, and depose Astyages. Cyrus now, therefore, engaged the Persians to take arms against the Medes, marched at the head of them to meet Astyages, defeated him, and possessed himself of Media. He carried on many other wars; and at length sat down before Babylon, which, after a long siege, he took.

Xenophon's account of the early life of Cyrus is more credible. According to that writer, Astyages king of Media married his daughter Mandane to Cambyses king of Persia, son and successor to Achæmenes. Cyrus was born at his father's court, and was educated with all the care his birth required. When he was about the age of twelve, his grandfather Astyages sent for him to Media, together with his mother Mandane. Some time after, a prince of Assyria having invaded Media, Astyages, with his son Cyaxares and his grandson Cyrus, marched against him. Cyrus distinguished himself in this war, and defeated the Assyrians. Cambyses afterwards recalled him, that he might have him near his own person; and Astyages dying, his son Cyaxares, uncle ny his mother's side to Cyrus, succeeded him in the kingdom of Media. Cyrus, at the age of thirty, was. by his father Cambyses, made general of the Persian troops; and sent at the head of 30,000 men to the assistance of his uncle Cyaxares, whom the king of Babylon and his allies, the Cannadocians,

Carians, Phrygians, Cilicians, and Paphlagonians, were preparing to attack. Cyaxares and Cyrus prevented them, by falling upon them and dispersing them. The latter now advanced as far as Rabylon, and spread terror throughout the country.

From this expedition he returned to his uncle, towards the frontiers of Armenia aud Assyria, and was received by Cyaxares in the tent of the Assyrian king whom he had defeated. After this, Cyrus carried the war into the countries beyond the river Halys, entered Cappadocia, and subdued it entirely. From thence he marched against Cresus king of Lydia, defeated him in the first battle; then besieged him in Sardis the capital; aud after a siege of fourteen days obliged him to surrender. See Crasus. After this Cyrus, having almost reduced all Asia, repassed the Euphrates, and made war upon the Assyrians. He marched directly to Babylon, took it, and there prepared a palace for his uncle Cyaxares. After these expeditions Cyrus returned to his father and mother in Persia, where they were still living; and some time after visiting Cyaxares in Media, hc married his cousin the only daughter and heiress of his uncle's dominions, and returned with her to Babylon. He is now stated to have again engaged in several wars, and subdued all the nations which lie between Syria and the Red Sea. He died at the age of seventy years, after a reign of thirty: but authors differ much concerning the manner of his death. Herodotus, Justin, and Valerins Maximus relate, that he died in a war against the Scythians ; that falling into an ambush, which their queen Toinyris had laid for him, slie ordered his head to be cut off, and cast into a vessel full of blood, saying, 'Thou hast always thirsted after human blood, now glut thyself with it.' Diodorus the Sicilian states, that he was taken in an engagement and hanged. Ctesias assures us, that he died of a wound which he received in his thigh : but by Xenophon's account he died peaceably in his bed, amidst his friends and servants; and certain it is, that in Alexander's time his monument was shown at Pasagarda in Persia. From all this it is obvious, that we are but imperfectly acquainted with the history of this great prince, the founder of the Persian, and destroyer of the Chaldæan empire.

Cyrus was monarch of all the east; or as he himself speaks (2 Chr. xxxvi. 22, 23; and Ezra i. 1,2, ) 'of all the earth,' when he permitted the Jews to return into their own country; A.M. 3466, and A.A.C. 538. The enemies of the Hebrews, making use of this prince's affection to his own religion, prevailed with him to countermand his orders for the building of the temple at Jerusalem (Ezra iv. 5). The prophets frequently foretuld the coming of Cyrus; and Isa. (xliv. 28) mentions him by name 200 years before he was born. Josephus (Antiq. I. II. c. 2) says, that the Jews of Babylon showed this passage of the prophet to Cyrus, which is extremely probable; and that this prince, in the edict which he granted them for their return, acknowledged that he received the empire of the world from the God of Israel; that the same God had described him by name in the writings of the
prophets; and had foretold that he should build a temple to him at Jerusalem. Cyrus is ex pressly styled in scripture, 'the Lord's anointed, and the shepherd of Israel,' (Isaiah xlv. 1. and xliv. 28.) ; and God says of him (Isa. xlv. 5) 'I girded thee, though thou hast not known me Daniel is supposed to allude to this prince Chap. viii. v. 3-20, under the figure of the ram The taking of Babylon by Cyrus was clearly foretold by the prophets. See Babylonia and Belshazza'r. Archbishop Usher fixes the birth of Cyrus to A. M. 3405 ; his first year at Babv lon to 3466 , and his death to 3475 .
Cyrus the Yuunger, son of Darius Nothus, and brother of Artaxerxes. He was sent by his father at the age of sixteen, to assist the Lacedæmonians against Athens. Artaxerxes succeeded to the throne at the death of Nothus; and Cyrus, mad with ambition, attempted to assassinate him. He was discovered, and would have been punished with death, had not his mother Parysatis saved him by her tears and intreaties. This circumstance did not check the ambition of Cyrus; hc was appointed over Lydia and the sea coasts, where he secretly fomented rebellion and levied troops under various pretences. At last he took the field with an army of 100,000 barbarians, and 15,000 Greeks, under the command of Clearchus. Artaxerxes met him with 900,000 men near Cunaxa. The battle was long and bloody; and Cyrus might have perhaps obtained the victory, had not his rashness proved his ruin. It is said that the two royal brothers met in person, and their engagement ended in the death of Cyrus, 401 years before the Augnstan age ; and Artaxerxes, having boasted that his brother had fallen by his hand, put to death two of his subjects for declaring that they had killed him. The Greeks, who were engaged in the expedition, obtained much glory in the battle; and no less by their retreat, which is particularly recorded by Xenophon, one of their leaders. See Xenopion.
CYST, or Kvsıs. A bag contain-
Cr'stis, n. s. ing morbid matter. Con-
Cy'stick, adj. \} tained in a bag. The art
Cystótomy, n.s. or practice of opening or extirpating encysted tumors.

In taking it out, the cystis broke, and shewed itself by its matter to be a meliceris. Wiseman's Surgery.

There may be a consumption, with a purulent spitting, when the vomica is contained in a cyst or bag; upon the breaking of which the patient is commonly suffocated.

Arbuthnot.
The bile is of two sorts : the cystick, or that contained in the gall-bladder, a sort of repository for the gall; or the hepatick, or what flows immediately from the liver.

Id.
CYTHERA, in ancient geography, an island opposite to Malea a promontory, and to Boæ a town of Laconia; sacred to Venus, with a very ancient temple of that goddess, who was exhibited in armour, as in Cyprus. It is now called Cerigo.

CYTHERÆA, in mythology, the surname of Venus, so called from Cythera, her birth-place, where she had a temple, and on the shores of which she was believed to be wafted by the Zephyrs, surrounded by the Cupids, the Graces
the Tritons, and the Nereides, reclunng 111 a languishing posture in a sca-shell.

CY'TINUS, in botany, a genus of the dodecandria order, gynandria class of plants; natural order eleventh, sarmcutaceæ: cal. quadrifid, superior: cor. none; the anthere are sixtcen, and sessile; the fruit an octolocular polyspcrinous berry. Species one, a Cape shrub.

CYTISUS, tree trecfoil, a genus of the decandria order, and diadelphia class of plants ; natural order thirty-second, papilionacer: cal. bilabiated, with the upper lip bifid; inferior, tridentate; the legume attenuated at the hase. There are eleven species; of which the most remarkable are, 1. C. Austriacus, the Austrian, or Tartarian evergreen cytisus, has a shrubby stem, dividing low into many greenish branches, forming a bushy head three or four feet high, having smooth whitish-green leaves, and bright yellow flowers in close umbellate heads at the ends of the branches, having a cluster of leaves under each head. These flowers appear in May. 2. C. laburnum, or large deciduous cytisus, has a large upright tree-stem, branching into a full spreading head, twenty or thirty feet high, having smooth greenish branches, ohlong oval entire leaves, growing by threes on long slender footstalks; and from the sides of all the branches numerous yellow flowers collecting into long spikes, hanging loosely downward, and appearing in May.

CYZICENI, Cyzicenians, the people of Cyzicum, who were noted by the ancients for their timidity and effeminacy. Hence the proverb in Zenodotus and others, tinctura Cyzicenica, applied to persons guilty of an indecency through fear; but stateres Cyziceni, nummi Cyziceni, denote things executed to perfection.

CYZICUM, in ancient geography, an island of the Propontis, on the coast of Mysia ; joined to the continent by two bridges, the first of which was built by Alexander the Great.

Crzicum, or Cyzicus, one of the noblest cities of the Hither Asia; situated in the above is'and. It was a colony of the Milesians, and is famous for its siege by Mithridates, which was raised by Lucullus. The inhabitants were made free by the Romans, but forfeited their freedom under Tiberius. It was adorned with a citadel and walls; had a port and marble towers; and three magazines, one for arms, another for warlike engines, and a third for corn.

CZAR, n.s. 7 Sclav. czar, tzar, from Per.
Czarína, n.s. tajur, a crown; taijzar, a
Cza'rish, adj. monarch. The, emperor of Russia. Czarina is the feminine. Relating to the czar.

There were competitors, the czur of Muscovy's sou, the duke of Newburg, and the prince of Lorraine.

Brownc.

His caarish majesty dispatched an express.
The Titler.
The caarina was satisfied with introducing then, for she found it impossible to render them polite.

Goldsmith.
CZASLAU, or Tzaslail, a town of Bohemia, the capital of a circle of the same name, on the Crudinka. It is said to possess the highest spire in Bohemia; and within the beautiful church is interred the famous Zisca. The circle of Czaslau, or Csaslau, is enclosed by Moravia, the circle of Tabor, Caurzim, Bitschow and Chrudim. The soil is productive, but the manufactures are not flourishing. It contains cight towns, thirty-three boroughs, and 829 villages.

CZERNiGOV, or Tsciernigov, a government of European Russia, erected in the year 1781, and lying between those of Mohilev, Smolensko, Orel, Kursk, Pultava, Kiev, and Minsk. The soil is very fertile. It has been augmented beyond its original boundaries by the addition of the government of NovgorodSieverskoi ; and now contains, according to official returns, 741,850 inhabitants. Czernigov, or Tchernigow, the capital, situated on the right bank of the Desna, is fortified, and is the see of a Greek archbishop. Population \(50 n 0\). Seventy-five miles north of Kiev, and 344 south-west of Moscow.
CZERNOVICZ, or Tschernowitz, a town of Austria, the capital of the Bucharvine, or, more properly, of a circle in Galicia. It is situated at the foot of mountains, on the south bank of the Pruth, on the high road from Lemberg to Jassay, 140 miles south-east of the former, and ninety-five north-west of the latter. It was much enlarged and improved in 1771, and contains 5400 inhabitants. Here is a Greek bishop, a custom-house, a criminal court, a provincial and a charity school. The population of the circle, in 1803, was 195,268.
CZIRKNITZ Zee, a very extraordinary lake of Austria, in Carniola, five miles long and three broad, which annually produces both fish and corn: for, being dry in summer, its bottom is cultivated, and it produces corn, grass, \&c.; but about the 20 th of Septenber the water rushes in from several subterraneous passages, which, with the rains and streams that fall from the inountains, quickly fill it again forthe winter season. These subterraneous passages are probably connected with some gulf, the ebbing or flowing of whose waters depend upon periodical winds or currents.

CZONGRAD, a market town of Hungary, in a county of the same name, situated at the conflux of the Korosch and the Theyss.

Czosgrad, a county of Hungary, enclosed hy the counties of Hewesch, Bekesch, Chonad, Batsch, Pesth, and Little Cumania. It is thirty miles in length and eighteen in breadth.
D. The fourth letter of the Hebrew, Syriac, Greek, Latin, and French languages, is traced by Minsheu in its shape to the Heb 7 daleth, sigunifying, says he, a gate, which the figure of this letter partly resembles. Hence, with a slight alteration, came the Greek \(\Delta\), and by rounding two of the angles of the delta, the Roman \(D\).

D is generally ranked among the lingual lettens, having a middle sound between \(t\) and \(t h\), formed by a stronger impulse of the tongue to the roof of the mouth than the former letter. In Latin words the \(t\) and \(d\) are often changed for one another, as at for ad, set for sed, hut for haud, \&cc. And in the formation of words from the Latin, \(d i\) frequently assumes the shape of \(g i\) or \(j\), as journal for diurnal. In English the sound of \(d\) never varies, nor is it ever mute. D, as a numeral, signifies five hundred; \(\overline{\mathrm{D}}\), five thousand.

Belg. dabber, dabbelen; Fr. dauber. All probably, as Minsheu suggests, from the sound of mud, when struck. To dab is to apply something soft or moist, as to a sore; to strike a soft blow. Dab, as a substantive, is a low word for a man expert at something: also a small fish. Mr. Todd thinks it a corruption of adept, adab. To dabble is to move about; to strike, or strike in water or mud; and, by consequence, to smear, daub, or bespatter: metaphorically, to ' meddle without mastery,' as Dr. Johnson well says; and hence a dabbler is 'a superficial meddler.' A dab-chick is a small water-fowl. We first illustrate dab.

A sore should never be wiped by drawing a piece of tow or rag over it, but only by dabbing it with fine lint.

Sharp.
Of flat fish there are rays, flowks, dabs, plaice.
Carew.
One writer excels at-a title-page; another works away at the body of the book; and the third is a \(d a b\) at an index.

Goldsmith's Essays.
A shadow, like an angel, with bright hair Dabbled in blood.

The little one complained of her legs, that she could neither swim nor dabble with them.

\section*{L'Estrange.}

Neither will a spirit, that dwells with stars, dabble in this impurer mind.

Glanville's Apol.
I scarified, and dabbled the wound with oil of torpontine.

Wiseman's Surgery.
But when he found the boys at play,
And saw them dabbling in their clay,
He stood behind a stall to lurk,
And mark the progress of their work. Swift.
He dares not complain of the twoth-ach, lest our dabblers in politicks should be ready to swear against him for disaffection.

Id.
Shakespeare shall be put into your hands, as clean and as fair as it came out of them: though you, I think, have been dabbling here and there with the
text, I have had more reverence for the writer and the printer, and have left every thing standing.

> Atterbury to Pope.

A dab-chick waddles through the copse
On feet and wings, and wades, and flies, and hops.
Pope.
DA Capo, (Ital. from the head), in music, an Italian term signifying that the beginning of the tune is to be repeated to complete the piece.

DeCCA Jelalpore, an important and productive district of Bengal, situated for the greater part between the twenty-third and twenty-fourth degrees of northern latitude. It is bounded on the north by Mymunsingh, on the east by Tipperah, on the south by Backergunge, and on the west by Ranjeshahy and Jessore. It contains a great number of valuable zemindaries or estates, and is every where intersected by the Ganges and Brahmapootra, and their various branches, so that every town of consequence has its river or canal. These rivers, however, frequently occasion considerable damage by their inundations. In this district it is not uncommon to find fields of rice covered with water, six or eight feet deep. Rice is its principal produce, and has been sold, in cheap years, at the rate of 640 lbs . the rupee. Its other productions of consequence are the betel nut, tobacco, and cotton; but it imports large quantities of the last article, which is manifacture in every town and village. Its muslin arc very fine and delicate. A deputy of the nabob, called the naib nazim, was the chief of this district during the Mahommedan government : the last person who held this office was Jessarut Khan, who having been ordered in 1763, by the nabob Cossim Aly Khan, to put all the English at Dacca to death, kindly put them on board boats, and sent them under the protection of a guard to Calcutta; in reward for which he was appointed, after the expulsion of his master, to act in his former office on behalf of the British, and, on his decease, a pension was settled on his family, and the eldest son honored with the title of nabob. The principal towns of this district are Dacca, Narraingunge, Sunergong, and Rajanagur. It contains nearly \(1,000,000\) inhabitants, most of whom are Mahommedans.

Decca, a considerable city of Bengal, capital of the foregoing district, and for eighty years the capital of Bengal, when it was called Jehangireanagur. It is the residence of a judge, collector, \&cc., and is situated on the north bank of the Boor Gunga (Old Ganges), which is here very deep and broad, at the distance of about 100 miles from the sea. The best houses are built of brick, but the bazaars are often thatched; and every vacant spot is filled with trees. The French, Dutch, and English East India Companies had factories here at an early period; those of the two former are gone to decay. The ancient citadel at the west end of the town is in ruins, but the palace or Pooshteh is in good repair. In this city are manufactured beautiful inuslins, and shell bracelets much worn by the

Hindoo ladies. The hot winds which pervade almost all other parts of India, are, through the abundant irrigation of the neighbourhood, little felt here. The montlis of Septeinber and October are, however, unhealthy. The neighbourhood abounds with game of all sorts, from the tiger to the quail. Provisions and fish are also here very cheap and abundant. Distant by land from Calcuta, 180 miles.

DACE, n. s., called also Dace and Dart, provincially. Sax dagian, from day to shine as in,Lat. luciscit, luciscus; a small fish.

Let me live harmlessly, and near the brink Of 'Trent or Avon have a dwelling place;

Where I may see my quill or cork down sink With eager bite of pearch, or bleak, or dace. Walton.

Dace, in ichthyology, a species of Cyprinus, which see.

DACIA, in ancient geography, a country which Trajan, who reduced it to a province, joined to Moesia by an admirable bridge. This country lies extended between the Danube and the Carpathian Mountains, from the river Tibiscus, quite to the north bend of the Danube; so as to extend thence in a direct line to the mouth of the Danube and to the Euxine; being on the north next the Carpates, terminated by the river Hierasus, now called the Pruth ; on the west by the Tibiscus or Teiss; and comprising a part of Upper Hungary, all Transylvania and Walachia, and a part of Moldavia.

Dacia Aureliana, a part of ancient Illyricum, which was divided into the eastern and western; Sirmium being the capital of the latter, and Sardica of the former.

DACIER (Andrew), was born at Castres in Upper Languedoc, 1651, and studied at Saumur under Tannegui le Fevre, then engaged in the instruction of his celebrated daughter, who became Madame Dacier. The duke of Montausier, hearing of his merit, engaged him in an edition of Pompeius Festus, which he published in 1681. His edition of Horace printed at Paris in ten volumes, 12 mo ., and lis other works, raised liim to great reputation. He was made a member of the Academy of Inscriptions in 1695. When the history of Louis XIV. by medals was finished, he was chosen to present it to his majesty; who settled upon him a pension of 2000 livres, and appointed him keeper of the books of the king's closet. When that post was united to that of library keeper to the king, he was not only continued in the privileges of his place during life, but the survivance was granted tc his wife, a favor of which there had been no former instance. The death, however, of Madame Dacier in 1720, rendered this grant, which was so honorable to her, ineffectual. He died September 18th, 1722 , of an ulcer in the throat.

Dacier (Anne), daughter of Tannegui le Fevre, professor of Greek at Saumur in France, went after her father's death to Paris, whither her fame had already reached: she was then preparing an edition of Callimachus, which she published in 1674. Having shown some sheets of it to M. Huet, preceptor to the dauphin, and to several other men of learning, the work was so highly admired, that the duke of Montausier made a proposal to her of publishing several

Latin authors tor the use of the dauphin. She now, therefors, undertook an edition of Florus, published in 1674 . Her reputation being soon after spread over Europe, Christina, queen of Sweden, ordered count Koniyssmark to compliment her, and offer her a settlement at Stockholm, in return for which Nademoiselle le Fevre sent the queen a Latin letter, with her edition of Florus. In 1683 she inaried M. Dacier; and soon after declared her design of reconciling herself to the clurch of Rome. Both she and lier husband male their public abjuration in 1685. In 1693 she applied herself to the education of her son and daughter; the former, however, died in 1694, and the daughter, after making great attainments, became a nun in the alibey of Longchamp. Her mother has immortalised her memory in the preface to her translation of the Iliad. Madame Dacier was in a very infirm state of health the last two years of her life ; and died, after a painful sickness, August 17th, 1720, aged sixty-nine.

DACOLITHUS, in ichtliyology, a name given by zoologists to a small fish, supposed to be a species of loache, and called by Ray and some others cobitis barbatulea aculeata. It is a very small fish, seldom exceeding two or at most three inches in length. The head is broader and flatter than the body: its back is of a dusky brown color sputted with black, and its belly yellow. It has two beards on each side of the upper jaw; and on the coverings of the gills, on each side, two prickles, or a double-pointed sharp hook, whereby it moves itself among the stones. It delights in shallow waters, with a stony hottom, and spawns in May and June.

 parts, the first longer than either of the others; Minshen. A poetical fuot, consisting of one long syllable and two short, like the joints of a finger; as cāndıdŭs. Bishop Hall uses dactilet as a diminutive.

The nimble dactils, striving to outgo The drawling spondees, pacing it below: The lingering spondees, labouring to delay The breathlesse dactils, with a sudden stay. Whoever saw a colt, wanton and wilde, Yoked with a slow-foote oxe on fallow field, Can right areed how handsomly besets Dull Spoudees with the English dactilets.

Bp. Hall. Satires, 1. 6.
A dactyl has the first syllable accented, and the two latter unaccented: as, labnurer, possible.

Murray. On Prosody.
The dactylic measure being very uncommon, we shall give only one example of one species of it.

From the low pleasures of this fallen nature,
Rise we to higher, \&c.
Id.
Dactyle. The dactyle is said to have been the invention of Dionysius or Bacchus, who delivered oracles in this measure at Delphos, before Apollo. The Greeks call it modiruxos. The dactyl and spondee are the most considerable of the poetical feet; as being the measures used in heroic verse, by Homer, Virgil, \&c. These two are of equal time, but not equal motion.

DaCtylethra, or Dactylithra, digitalis, arnong the ancient plysicians, a medicine used to excite vomiting. It was a sort of topical application, and is described at large by Oribasius.

Dactylic Verses are hexameter verses, ending in a dactyle instead of a spondee; as spondaic verses are those which have a spondee in the fifth foot instead of a dactyle. An instance of a dactylic verse occurs in Virgil: Æ.n. vi. 33.

Bis patrix cecidere manus : quin protinus omnia.
dactyli [per, q. d. the Fingers of Mount Ida, in pagan mythology, personages very differently described by ancient authors. The Cretans paid divine worship to them, as to those who had nursed and brought up the god Jupiter; whence it appears, that they were the same as the Corybantes and Curetes. Nevertheless Strabo makes them different; and says, that the tradition in Phrygia was, that the 'Curetes and Corybantes were descended from the Dactyli Idœi: that there were origiually 100 men in the island, who were called Dactyli Idæi; from whom sprang nine Curetes, and each of these nine produced ten men, as many as the fingers of a man's two lands; and that this gave the name to the ancestors of the Dactyli Idxi.' He relates another opinion, which is, that there were but five Dactyli Idxi ; who, according to Sophocles, were the inventors of iron: that these five brothers had five sisters, and that from this number they took the name of fingers oc Mount Ida, because they were in number ten; and that they worked at the foot of this mountain. Diodorus Siculus says, 'the first inhabitants of the island of Crete were the Dactyli Idæi, who had their residence on mount Ida: that some said they were 100 ; others only five, in numbers equal to the fingers of a man's hand, whence they had the name of Dactyli : that they were magicians, and addicted to mystical ceremonies : that 0 r pheus was their disciple, and carried their mysteries into Greece: that the Dactyli invented the use of irun and fire, and that they had been recompensed with divine honors.' Diomedes the grammarian says, the Dactyli Idæi were priests of the goddess Cybele: called Idæi, because that goddess was chiefly worshipped on Mount Ida in Phrygia; and Dactyli, because that, to prevent Saturn from hearing the cries of infant Jupiter, whom Cybele had committed to their custody, they used to sing certain verses of their own invention, in the Dactylic measure. Strabo gives us the names of four of the Dactyli Idxi: viz. Salaminus, Damnanæus, Hercules, and Acmon. See Corybantes, Crete, and Curetes.

DaCtyliomancy, or Dactyliomantia from \(\delta a \kappa r v \lambda \iota o s\), a ring, and \(\mu a v \tau \varepsilon \epsilon\), divination, a sort of divination performed by means of a ring. It consisted in holding a ring, suspended by a fine thiead, over a round table, on the edge of which were made divers marks with the letters of the alphabet. The ring in shaking, or vibratiug over the table, stopped over certain of the letters, which, being joined together, compose the answer required.

DACTYLIS, in botany, cock's foot grass;
a genus of the digynia order, and triandria class of plants; natural order fourth, gramina : cal., bivalved and compressed, with the one valve longer than the other, carinated, or having the raclis prominent and sharp. There are two species, both natives of Britain; viz. 1. D. cynosuroides, the sinooth cock's foot grass, which grows in marshy places ; and 2. D. glomeratus, the rough cock's foot grass, which is common in meadows and pasture grounds. It is eaten by horses, sheep, and goats; but refised by cows.

DACTYLONOMIA, or Dacty lonomy, from ¿akrvhos, and vopos, a rule, the art of numbering by the fingers. The rule is this; the left thuinb is reckoned one; the index or fore finger two: and so on to the right thumb, which stands for the cypher.

DACTYLUS, in zoology, a name given by Pliny to the pholas. In Toulon harbour, and the road, are found solid hard stones, perfectly entire ; containing, in different cells, secluded from all communication with the air, several living shell-fish, of an exquisite taste, called dactyli, i. e. dates: to come at these fish the stones are broken with mauls. Along the coast of Ancona, in the Adriatic, are stones usually weighing about fifty pounds, and sometimes even more, the outside rugged and easily broken, but the inside so hard as to require a strong arm and an iron maul to break them; within them, and in separate niches, are found small shellfish, quite alive and very palatable, called solenes and cappe laughe. These facts are attested by Gassendi, Blondel, Mayol, the learned bishop of Sulturara, and more particularly by Aldrovandi, a physician of Bologna. The two latter speak of it as a common fact, which they themselves saw.

DADUCHI, Gr. \(\delta a \delta \omega x \notin \varsigma\), torch-bearers, in antiquity, priests of Ceres. The goddess having lost hei daughter Proserpine, say mythologists, began to make search for her at the beginning of the night. In order to do this in the dark, she lighted a torch, and thus set forth on her travels throughout the world: for which reason she is represented with a lighted torch in her hand. In commemoration of this pretended exploit, it became a custom for the priests, at the feasts and sacrifices of this goddess, to run ahont in the temple with torches after this manner:-one of them took a lighted torch from off the altar, and, holding it with his hand, ran with it to a certain part of the temple, where he gave it to another, saying to him, tibi trado: the second ran after the like manner to another part of the temple, and gave it to the third, and he to another and so on

DAD, n.s. ? Heb. 7רו, dodh, beloved; Gr.
Dad'dy. \(a_{a \tau \tau a}\); Hind. ata; Lat. tata; Goth. atta; Fr. papa. Oue among those familiar words with which, in all languages, children first salute their father; and which are universally compcunds of \(a\) and \(t\) or \(d\); or \(a\) and \(h\) or \(p\).

> I was never so bethumpt with words,
> Since first I called my brother's father dad.
> Shakspeare.

His loving mother left him to my care,
Fine child, as like his dad as he could stare.

DADE:, r. a. Dut. douden. To hold up by a eading string.

The little children when they learn to go, By painful mothers daded to and fro. Drayton.
DAD'AL, adj. Lat. devdalus; Gr. סaıòa入入 \(\omega\); to varegate skillfully, first applied to needlework. Why Dr. Johnson warus us against using the word with this meaning is difficult to divine. See Ainsworth, and the fine example from Spenser. Various; variegated. Skilful.

But living art may not least part expresse, Nor life resembling pencill it can paynt, All were Zeuxis or Praxiteles;
His Dadale hand would faile and greatly faynt,
And her perfections with his error taynt.
Spenser. Fueric Quene.
Nor hath
The dedal hand of nature only poured Her gifts of outward grace.

Philips.
DexDALA, two festivals in Beotia; one of them ohserved in Alalcomenos by the Platrans in a large grove, where they exposed in the open air pieces of boilel flesh, and carefilly observed whither the crows that cane to prey upon them directed their flight. All the trees upon which any of these lirds alighted were immediately cut down, and with them statues were made, called Dædala, in honor of Dædalus. The other festival was of a more solemn kind. It was celebrated every sixty years by all the cities of Bœotia, as a compensation for the intermission of the smaller festivals, for that number of years, during the exile of the Platæans. Fourteen of the statues called Dxdala were distributed by lot among the Platrans, Lebadæans, Coroneans, Orchomenians, Thespians, Thebans, Tanagreans, and Chæroneans, because they had effected a reconciliation among the Plateans, and caused them to be recalled from exile about the time that Thebes was restored by Cassander, the son of Antipater. During this festival a woman, in the habit of a bride-maid, accompanied a statue which was dressed in female garments, on the lanks of the Eurntas. This procession was attended to the top of Mount Cithæron by many of the Breotians, who had places assigned them by lot. Here an altar of square pieces of wood cemented together like slones was erected, and upon it were thrown large quantities of combustible materials. Afterwards a bull was sacrificed to Jupiter, and an ox or heifer to Juno, hy every one of the cities of Bœotia, and by the most cpulent that attended. The poorest citizens offered small cattle; and all these oblations, together with Dxdala, were thrown intn the common heap and set on fire, and totally reduced to ashes. They originated in this fable:-When Juno, after a quarrel with Jupiter, had retired to Euboea, and refused to return to his bed, the god, anxious for her returu, went to consult Cithæron king of Platæa, to find some effectual measure to break her olstinacy. Citbæron advised him to dress a statue in woman's apparel, and carry it in a chariot, and publicly to report that it was Platæa the daughter of Asopus, whom he was going to marry. The advice was followed; and Juno, informed of her husband's future marriage, repaired in haste to meet the chariot, and was
easily united to him when she discovered the artful measures he made use of to effect a reconciliation.

DEDALUS, in fabulous history, the soll of Eupalamus, descended from Erectheus king of Athens. He was the most ingenious artist of his age ; and to him we are said to be indebted for the invertion of the wedge, with many other mechanical instruments; as well as the sails of ships. He made statues, we are told, which moved of themselves, and seemed to be endowed with life. After the murder of Talus, he, with his son Icarus, fled from Athens to Crete, where Minos gave him a cordal reception. Dxdalus made a famous labyrinth for Minos, and assisted Pasiphae the queen to gratify ler unnatural passion for a bull. For this action Dxdalus incurred the displeasure of Minos, who ordered him to be confined in the labyrinth which he had constructed. Here he made hiunself wings with feathers and wax, and carefully fitted them to his body and that of his son, whoo was the companion of his confinement. They took their flight in the air from Crete; but the heat of the sun melted the wax on the wings of Icarus, whose flight was too high, and he fell into that part of the ocean, which from him has been called the Icarian Sea. The father, by a proper management of his wings, alighted at Cumæ, where he built a temple to Apollo, and thence directed his course to Sicily, where he was kindly received by Cocalus, who reigned over part of the country. He left many monuments of his ingenuity in Sicily, which still existed in the age of Diodorus Siculus. He was despatched by Cocalus,who was afraid of the power of Minos, who had declared war against him because he had given an asylum to Dxdalus. The flight of Dxdalus from Crete, with wings, is explained by observing that he was the inventor of sails, which in his age might pass at a distance for wings. He lived about A. A. C 1400.

DEMON, \(\delta a \mu \omega \nu\), a name given by the ancients to certain spirits or genii, which they say appeared to men both to do them service and to injure them. The word is derived, according io Plato, in his Cratylus, from \(\dot{\delta} a \eta \mu \omega \nu\), knowing or intelligent ; lut according to others from iatopat, to distribute. They held a iniddle rank between the celestial gods and men, and carried on all intercourse between them. It was the opinion of many tnat the celestial divinities did not themselves interpose in human affairs, but committed the entire administration of the government of this lower would to these subaltern deities. Hence they became the objects of worship. 'If idols are nothing,' says Celeus (Origen cont. Cels. lib. viii. p. 393), 'wnat harm can there be to join in the public festivals? If they are dæmons, then it is certain that they are gods, in whom we are to confide, and to whom we should offer sacrifices and prayers, to render them propitious.' Plutarch teaches, Vit. Romul. p. 36, ed. Paris, 'that according to a divine nature and justice, the souls of virtunus men are advanced to the rank of dæmons; and that from dæmons, if they are properly purified, they are exalted into gods, not by any political institution, but according to riglit reason.' He
says in another place, de Is. et Osir. p. 361, 'that Isis and Osiris were, for their virtue, changed from good dæmons into gods, as were Hercules and Bacchus afterwards, receiving the united honors both of gods and dæmons.' The word dxmon is used indifferently in a good and in a bad sense. In the former sense it is very common among the ancient heathens. P'ythagoras held that dæmons sent diseases to men and cattle. Diogen. Laert. Vit. Pythag. Zaleucus, in his preface to his Laws, supposes that an evil dxmon might be present with a man to influence him to justice. The dæmons of Empedocles were evil spirits, and exıles from heaven. And Plutarch in his life of Dion says, 'it was the opinion of the ancients that evil and mischievous dæmons, out of envy and hatred to good men, oppose whatever they do.' Scarce did any opinion more generally prevail in ancient times than this, viz. that as the departed souls of good men became good damons, so the departed souls of lad men became evil dxmons. Besides the two forementioned kinds of dæmons, the fathers, as well as the ancient philosophers, held a third, viz. such as sprang from the congress of superior beings with the daughters of men. In the theology of the fathers these were the worst kind of dæmons. Different orders of dæmons had different stations and employments assigned them by the ancients. Good dæmons were considered as the authors of good to mankind ; evil dæmons brought innumerable evils both upon men and beasts. Amongst evil dæmons there was a great distinction with respect to the offices assigned them; some compelled men to wickedness, others stimulated them to madness. See Demoniac. Much has been said concerning the dæmon of Socrates; who declared to the world that a friendly spirit, whom he called his dæmon, directed him how to act on every important occasion in his life, and restrained him from imprudence of conduct. See Socrates.

We have seen above, not only the meaning of the word dæmon, but how the ancients worshipped dæmons. They were of various orders, and, according to the situation over which they presided, had different names. Hence the Greek and Roman poets talk of satyrs, dryads, nymphs, fauns, \&c. \&c. See Mythology. These different orders of intelligences, which, though worshipped as gods or demigods, were yet believed to partake of human passions and appetites, led the way to the deification of departed heroes, and other eminent benefactors of the human race; and from this latter probably arose the belief of natural and tutelar gods, as well as the practice of worshipping these gods through the medium of statues cut into a human figure. Drmons, however, were not more zealously worshipped among the heathens, than they have been among Christians. Bishop Newton, after establishing the meaning of Paul's prophetic words, 1 Tim. iv. 1, above referred to, as corresponding exactly to the heathen dæmon worship, says, 'It appears then that the doctrines of dæmons, which prevailed so long in the heathen world, should be revived and established in the Christian church; and is not the worship of saints and angels now in all respects the same that
the worship of dxmons was in former times? The name only is different, the thing is identically the same.'

DEMONIAC, a human being, whose volition and other mental faculties are overpowered and restrained, and his body possessed and actuated, by some created spiritual being of superior power. Such seems to be the determinate sense of the word; but it is disputed whether any of mankind ever were in this unfortunate condition.

It is the opinion of some, that neither good nor evil spirits are known to exert such authority at present over the human race: but in the ancient heathen world, and among the Jews, particularly in the days of our Saviour, evil spirits, at least, are thought by many to have possessed more influence than they do now. The Greeks and Romans imagined that their deities, to reveal future events, frequently entered into the prophet or prophetess who was consulted, overpowered their faculties, and uttered responses with their organs of speech. Apollo was believed to enter into the Pythoness, and to dictate the prophetic answers received by those who consulted her. Other oracles, besides that of Delphi, were supposed to unfold futurity by the same machinery. And in varions other cases, either malignant dæmons or benevolent deities were thought to enter into, and to actuate, human beings. The Lymphatici, the Cerriti, the Larvati, of the Romans, were all of this description; and the Greeks, by the use of the word \(\delta a \mu o \nu_{\text {s }}-\) \(\zeta_{0 \mu \varepsilon y^{\prime}}\), show that they referred to this cause the origin of madness. Among the ancient heathens, therefore, it appears to have been a generally received opinion, that superior beings entered occasionally into men, overpowered the faculties of their minds, and actuated their bodily organs. They might imagine that this happened in instances in which the effects were owing to the operation of different causes; but an opinion so generally prevalent had surely some plausible foundation. The Jews, too, both from the sacred writings, and Josephus, appear to have believed in dæmoniacal possession. The case of Saul may be recollected as one among many in which superior created beings were believed by the Jews to exert in this manner their influence over human life. The general tenor of their history and language, and their doctrines concerning good and evil spirits, prove the opinion of dxmoniacal possession to have been well known and generally received among them.

We shall here subjoin the chief popular arguments on each side of this interesting subject, and add a few remarks. Those who are unwilling to allow that angels or devils have ever intermeddled with the concerns of human life, urge a number of specious arguments. The Greeks and Romans of old, say they, did helieve in the reality of dæmoniacal possession. They supposed that spiritual beings did at times enter into the sons or daughters of men, and distinguish themselves in that situation by capricious freaks deeds of wanton mischief, or prophetic enunciations. But, in the instances in which they supposed this to happen, it is evident that no such thing took place. Their accounts of the
state and conduct of those persons whom they believed to be possessed in this supernatural manner, show plainly that what they ascribed to the influence of dæmons were merely the effects of natural diseases. Whatever they relate concerning the larvati, the ccrriti, and the lymphatici, shows that these were merely people disordered in mind, in the same unfortunate situation with those madmen and idiots, and melancholy persons, whom we have among ourselves. Festus describes the larvati as being furiosi et mentemoti. Plato, in his Timæus, says, sorıs
 Lucian describes dæmoniacs as lunatic, and as staring with their eyes, foaming at the mouth, and heing speechless. It appears still more evidently, that all the persons spoken of as possessed with devils in the New Testament, were either mad or epileptic, and precisely in the same condition with tlre madmen and epileptics of modern times. The Jews, among other reproaches which they threw out against our Saviour, said, He hath a devil, and is mad: why hear ye him? The expressions, he hath a devil, and is mad, were certainly used on this occasion as synonymous. With all their virulence they would not surely ascribe to him at ence two things that were inconsistent and contradictory. Those who thought more favorably of the character of Jesus, asserted concerniug his discourses, in reply to his adversaries, These are not the words of him that hath a dæmon; meaning, no doubt, that he spoke in a more rational manner than a madman could be expected to speak. The Jews appear to have ascribed to the influence of dæmons, not only that species of madness in which the patient is raving and furious, but also melancholy madness. Of John, who secluded himself from intercourse with the world, and was distinguished for abstinence and acts of mortification, they said, He hath a dæmon. The youth, whose father applied to Jesus to free him from an evil spirit, describing his unhappy condition in these words, Have mercy on my son for he is lunatic, and sore vcxed with a dæmon; for ofttimes he falleth into the fire, and oft into the water, was plainly epileptic. Every thing, indeed, that is related in the New Testament concerning dæmoniacs, proves that they were people affected with such natural diseases as are far from being uncommon among mankind in the present age. When the symptoms of disorders cured by our Saviour and his a postles, as cases of dæmoniacal possession, correspond so exactly with those of diseases well known as natural in the presentage, it would be absurd to inspute them to a supernatural cause. It is much more consistent with common sense and sound philosophy, to suppose, that our Saviour and his apostles wisely, and with that condescension to the weakness and prejudices of those with whom they conversed, which so eminently distinguished the character of the author of our holy religion, and must always be a prominent feature in the character of the true Christian, adopted the vulgar language in speaking of those unfortunate persons who were groundlessly imagined to be possessed with dæmons, though they well knew the notions which had given rise to such modes of expression
to be all founded, than to magme that diseases which arise at present from natural causes, were produced in days of old by the intervention of dæmons, or that evil spirits still continue to enter into mankind in all cases of madness, melancholy, or epilepsy. Besides, it is by no means a sufficient reason for receiving any ductrine as true, that it has been generally received through the world. Virror, like an epidemical diseatse, is communicated from one to another. In cert-in circumstances, too, the influence of imarination predominates, and restrains the exertions of reason. Many false opinions have extended their influence through a very wide circle, and maintained it long. On every such occasion as the present, therefore, it becomes us to inquire, not so much how generally any opinion has been received, or how long it has prevailed, as from what cause it has originated, and on what evidence it rests. When we contemplate the frame of nature, we behold a grand and bcautiful simplicity prevailing through the whole. Notwithstanding its immense extent, and thongh it contains such numberless diversities of being, yet the simplest macline constructed by human art does not display greater simplicity, or a happier connexion of parts. We may therefore infer, by analogy, from what is observable of the order of nature in general to the present case, that to permit evil spirits to interineddle with the concerns of human life, would be to break through that order which the Deity appears to have established through his works; it would be to introduce a degree of confusion unworthy of the wisdom of Divine Providence.

In opposition to these arguments the following are urged by the Drmonianists. In the days of our Saviour, it would appear that dæmoniacal possession was very frequent among the Jews and the neighbouring nations. Many were the evil spirits whom Jesus is related in the gospels to have ejected from paticnts that were brought unto lim as possessed and tormented by those malevolent dæmons. His apostles, too, and the first Christians, who were most active and successful in the propagation of Christianity, appear to have often exerted the miraculous powers with which they were endowed on similar occasions. The dæmons displayed a degree of knowledge and malevolence which sufficiently distinguished them from human beings : and the language in which the dromoniacs are mentioned, and the actions and sentiments ascriled to them in the New Testament, show that our Saviour and his apostles did not consider the idea of dæmoniacal possession as being merely a vulgar error concerning the origin of a disease or diseases produced by natural causes. Thic more enlightencd cannot always avoid the use of metaphorical modes of expression; which, though founderl upon error, yet have been so established in language by the influence of custom, that they cannot be suddenly dismissed. But in descriptions of characters, in the narration of facts, and in the laying down of systems of doctrine, we require different rules to be observed. Should any person, in compliance with popular opinions, talk in serious language of the existence, dispositions, declarations, and actions of a race of
beings whom he knew to be absolutely fabulous, we surely could not praise him for integrity: we must suppose him to be either exulting in irony over the weak credulity of those around him, or taking advantage of their weakness, with the dishonesty and the selfish views of an impostor. And if he himself should pretend to any connexion with this imaginary system of beings; and should claim, in consequence of his connexion with them, particular honors from his contemporaries ; whatever might be the dignity of his character in all other respects, nobody could hesitate to brand hin as an impostor. In this light must we regard the conduct of our Saviour and his apostles, if the idea of dæmoniacal possession were to be considered merely as a vulgar error. They talked and acted as if they believed that evil spirits had actually entered into those who were brought to them as possessed with devils, and as if those spirits had been actually expelled by their authority out of the unhappy persons whom they had possessed. They demanded, too, to have their professions and declarations bclieved, in consequence of their performing such mighty works, and having thus triumphed over the powers of hell. The reality of dæmoniacal possession stands upon the same evidence with the gospel system in general. Nor is there any thing unreasonable in this doctrine. It does not appear to contradict those ideas, which the general appearances of nature and the series of events suggest, concerning the benevolence and wisdom of the Deity, by which he regulates the affairs of the universe. We often fancy ourselves able to comprehend things to which our understanding is wholly inadequate: we persuade ourselves at times that the whole extent of the works of the Deity must be well known to us, and that his designs must always be such as we can fathom. We are then ready whenever any difficulty arises to us, in considering the condnct of Providence, to model things according to our own ideas; to deny that the Deity can possibly be the author of things which we cannot reconcile; and to assert that he must act on every occasion in a manner consistent with our narrow views. This is the pride of reason; and it seems to have suggested the strongest ohjections that have been at any time urged against the reality of dæmoniacal possession. But the Deity may surely connect one order of his creatures with another. We perceive mutual relations and a beautiful connexion to prevail through all that part of nature which falls within the sphere of our observation. The inferior animals are connected with mankind, and subjected to their authority, not onty in instances in which it is exerted for their advantage, but even where it is tyrannically abused to their destruction. Among the evils to which mankind have been subjected, why might not their being liable to drmoniacal possession be one? While the Supreme Being retains the sovereignty of the universe, he may employ whatever agents he thinks proper in the execution of his purposes: he may either cominission an angel or let loose a devil, as well as bend the human will, or communicate any particular impulse to matter. All that revelation makes known, all that human
reason can conjecture, concerning the existence of various orders of spiritual beings, good anll had, is perfectly consistent with, and even favorable to, the doctrine of dæmoniacal possession. It is mentioned in the New Testament in such language, and such narratives are related concerning it, that the gospels cannot well be regarded in any other light than as pieces of imposture, and Jesus Christ must be considered as a man who took advantage of the weakness and ignorance of his contemporaries, if this doctrine be nothing but a vulgar error. It teaches nothing inconsistent with the general conduct of providence. In short, it is not the cantion of philosophy, but the pride of reason, that suggests objections against this doctrine.

Such are the leading arguments generally urged on this subject; the reader must of course judge for himself between them; but we cannot dismiss the article without a few additional remarks. It is argued by those who deny the influence of dæmons or evil spirits, that to permit such an influence on the concerns of human life, would be to break through that order which the Deity appears to have established throughout his works, and to introduce a degree of confusion unworthy of the Divine Providence. This, to say the least of it, is a most gratuitous assertion. For surely those who make it are well aware of the existence of much real evil in the affairs of human life, and yet the Divine goverument moves on with a regularity and an order that cannot fail to excite the admiration of every well-disposed mind. Now to meet the objection in all its bearings, we would ask those who make it, whether they think that all the evil which they see existing around them, or any part of it, is effected without the medium of any kind of agency? This, we conceive, no rational man would venture to maintain. The question then is simply this,-of what nature is this agency? To this question, as the point at issue rests solely on the authority of Divine Revelation, we reply,-it is of a purely spiritual naturc, and has its origin in the spiritual world. The existence of such agency, both of a good and of an evil nature, is as clearly taught as any fact made known by the sacred writings. It is by mcans of it that the various affections of the human mind are produced; nor would any difficulty be experienced by us on this point were we constantly to keep in mind that man, in his present state, is intimately connected with both worlds; with the invisible by means of his spirit, and with the visible or material world by means of his body. The cases of dæmoniacal possession that occurred during the time of Christ's sojourning on earth were exactly what, from the information of Scripture, might have been expected to take place. The Eternal (according to the opinion of a vast body of Christians) assumed the human nature, that in it IIe might, in the sight of mankind, effect their deliverance from the infernal influence which threatened their destruction. This was accomplishcr by His passing through a series of the most unparalleled trials, which terminated in a conflict unutterably awfill. The numerous cases of dæmoniacal possession that are introduced to
our notice in the sacred history appear to have been so many specimens of the ascendency which this influence had gained, and the certainty of its being removed; for we find, in every case, that the evil spirit was cast out: and certainly it was no obscute allusion that Jesus made to this when in the immedtiate prospect of the last great conflict with the invisible powres of darkness, and in reference to the grand effect of his triumph over them in the spiritual state, he said, 'Now is the judgment of this world : now shall the prince of this world be cast out.' Does not this very declaration seem to allude to the circumstance of such possessions being less frequent since that time? We say less frequent, because we think there can be no doubt but that some instances of extraordinary evil agency are, for wise purposes, still permitted to appear in the world; although certainly, in no case, to the same extent as before our Lord's subjugation of such agency. We do not deny that superstition has much augmented the number of these; yet it would be easy to specify so:ne cases that have powerful claims on the most rational and enlightened belief.

Demoniacs, in church history, a sect whose distinguishing tenet was said to be, that the devils shall be saved at the end of the world.

DAFF,r.a.\&n.s. ? Goth. doef; Fr. dofua,
Daft, \(n s\). \(\quad\) to stupify. But Dr. Johuson thinks our word daff, or daft, is a corruption of to do aft, or throw aside, and the examples from Shakspeare seem to justify him. To cast off; to daunt. A person treated contemptuously ; a dolt, or coward.

When this jape is tald another day,
I shall be halden a daffe or a cokenay,
I wol arise and auntre it by my fay :
Unhardy is unsely, thus men say.
Chaucer. Cant. Tales.
The nimble-footed mad-cap prince of Wales, And his comrader, that daft the world aside,
Bid it pass.
Shukspeare. Henry IV.
I would she had bestowed this dotage on me: I would have daft all other respects, and made her half myself.

Id.
Da'FFODIL, \(\left.n s . \quad \begin{array}{r}\text { Supposed by Skinner } \\ \text { Daffonílly. } \\ \text { Daffodowndílly. }\end{array}\right\} \begin{aligned} & \text { to be corrupted from as- } \\ & \text { phodelus. A common }\end{aligned}\) fower.
Strew me the green round with duffodowndillies, And cowslips, and kingcups, and loved lilies.

Spenser.
Bid amaranthus all his beauty shed,
And daffodillies fill their cups with tears,
To strew the laureat herse where Lycid lies.
Milton.
The daughters of the flood have searched the mead For violets pale, and cropped the poppy's head : The short narcissus, and fair daffodil, 1'ansies to please the sight, and cassia sweet to smell.

Dryden.

\section*{Daft. See Daff.}

DAG, or Dagge,n.s. Because the Dacians, says Minsheu, first used it. A pistol or hand gun. Dr. Meyrick says, 'the name is peculiar to Great Britain.'

D'ye call this gun a dag?
Beaumont and Fletcher.

Dag, or
Old Fr. dugge; Ital.
I)agge, n. s. dagga; Span. daga;
Dagiger.
1) aGGER-1)Rawinc. III. and Arm. duer; from lleb. 7 ק9, to pierce; Minshcu. A cutting and stabbing weapon, principally the later.

Epon his arme he bare a gaio lracer, Andly his side a sword and a bok ler, And on that other side a wair: denyere, Harn is d wel, alld sharpe is point of epere.

Chaucer. P'rul. to Cant. Tales.
She ran to her son's dugger, and struck harself a. mortal wound.

Sidney.
This sword a dagger lad his page, And was but little for his age, And therefore waited on him so As dwaris upon knights-crrant do. Hudibrue.
They always are at duggersdrauing, And one another cla; perclawing. Id.
I have heard of a quarrel in a tavern, where all were at daggersdrawing, till one desired to know the subject of the quarrel. Sicift.

He strikes himself with his dugger, but heing interrupted by one of his friends, he stabs him, and brrahs the dagger on one his rils.

Iddisun.
The Roman, when his burning heart
Was slaked with blood of Rome,
Threw down the dagger, dared depart In savage grandeur home, Byron.
Dag, v.a.\& n.s. Sax. oaz, to sprinkle, Dag'cle, v.a. \&in. and oaz, dew. T'o beDag'talled. \}mire; let fall into water; Dag'gletail. besprinkle. Dagtailed, or daggletailed, is bemired, bespattered, or muddy.

Would it not vexe thee, where thy syres did kecpe, To see the dunged foldes of dag-tayld sheepe? And ruined house, where holy things were said, Whose free-stone wals, the thatched roofe upbraid?
Bp. Hull.

Now in contiguous drops the flood comes down, Threatening with deluge this devoted town : To shops in crowds the daggled females fly, Pretend to cheapen goods, but nothing buy. Serift.

The gentlemen of wit and pleasure are apt to be choaked at the sight of so many daggletailed parsons, that happen to fall in their way.

Id.
Nor like a puppy daggled through the town,
To fetch and carry sing-song up and down.
Pope.
DAGELET, an island on the coast of Corea, about three leagues in circumference, covered with fine trees, and surrounded with steep rocks, except a few sandy creeks, which form convenient landing places. It was discovered by La P'eyrouse in 1787, who found some boats of a Chinese construction upon the stocks. The meu employed upon them, were supposed to be Corean carpenters, but as the ships approaclied they fled to the woods. The Frencl navigator supposed that the island was uniuhabited; except during summer by people from Corea, for building boats. Long. \(131^{\circ} 22^{\prime}\) E., lat. \(37^{\circ} 25^{\prime} \mathrm{N}\).

DAGHESTAN, a country of Asia, west of the Caspian Sea, between the efflux of the loisint and the Rubas. It is about 134 miles in length by between thirty and forty in breadth. It is almost wholly mountainous; but the soil is productive, and fine crops of grain are raised the

Russians claim the sovereignty of Daghestan,
which is divided into four districts; but their uthority is not universally acknowledged. Many of the inhabitants subsist by plunder; but it has recently been the scene of contest between the Persians and Russians. The chief towns are Tarki, Derbend, Baschli, and Ottermisch.
dago, or Dagho, an island in the Baltic Sea, on the coast of Livonia, between the gulf of Finland and Riga. It is of a triangular figure, and may be about twenty miles in circumference. It has nothing considerable but two castles called Daggerwort and Paden. Long. \(22^{\circ} 50^{\prime}\) E., lat. \(58^{\circ} 44^{\circ} \mathrm{N}\).

DAGOE, Dagho, or Dagen, an island of the Baltic, at the entrance of the gulf of Finland, near the coast of Esthonia, and separated from the island of Oesel by a narrow channel. It is about forty miles long, and from twenty-six to thirty-six broad, and is well peopled. At Dagerort there is a lighthouse.
DAGQN, the idol of Ashdod or Azotus. He is commonly represented as a monster, half man and half fish; whence most learned men derive the name from the Hebrew dag, which signifies a fish. Those who make him to have been the inventor of bread corn, derive his name from the Hebrew, רגון, Dagon, signifying corn; whence Philo-Biblius calls him Zevg Aparozog, Jupiter Aratrius. This deity continued to have a temple at Ashdod to the time of the Maccabees: for the author of the first book of Maccabees tells us, that 'Jonathan, one of the Maccabees, having beaten the army of Apollonius, Demetrius's general, they fled to Azotus, and entered into Bethdagon (the temple of their idol); but Jonathan set fire to Azotus, and burnt the temple of Dagon and all those who were fled into it.' Dagou, according to some, was the same with Jupiter, according to others Saturn or Venus; but according to most Neptune.

Dahalak, Dalaka, or Dalacca, an island in the Red Sea, near the coast of Abyssinia, about twenty-five miles in length, and twelve in breadth, auciently celebrated for its pearl fishery. It is low and flat, with a sandy soil, and in summer destitute of every kind of herbage, except a small quantity of bent grass, which is barely sufficient to feed a few antelopes and goats. From the end of March to the beginning of October, they have no rain in Dahalak ; but in the intermediate months they have heavy showers, when the water is collected into artificial cisterns, to supply the inhabitants during the ensuing summer. Of these cisterns, which are supposed to be either the work of the Persians or of the first Ptolemies, upwards of 300 remained at a recent period, cut out of the solid rock. Its principal port is Dahalece-el-Kebar, but it will only admit small vessels; and its trade is with Masuah. It was formerly much more populous than at present. This as well as the neighbouring islands is dependent upon Masuah; and the governor is furnished monthly with a goat from each of the twelve villages; besides which every vessel putting in here for Masuah, pays him a pound of coffee, and every one from Arabia, a dollar. From these his revenue cliefly arises. Long. \(39^{\circ} 0^{\circ} \mathrm{E}\), , lat. \(15^{\circ} 40^{\prime} \mathrm{N}\).

DAIIL, or DaL, a large river of Sweden, which runs through the provinces of Dalecarlia and Gestricia, and falls into the gulf of Bothnia, four leagues E. S. E. of Gefle. Near Elfkarleby it forms a celebrated cataract, scarcely inferior to the fall of the Rhine at Lauffen.
DAHLIA, in botany, a genus of plants belonging to the syngenesia class and polygamia order, thus named by Cavanilles in honor of Dr . Andrew Dahl, a Siwedish botanist. The stems dic every winter, but the root is perennial and tuberous. The known species are but four. 1. D. pinnata, figured by Cavanilles, and in Andrew's Botanical Repository: it has bipennate leaves of a deep purple color. 2. D. rosea, a rose-colored variety figured by Cavanilles in his Icones. 3. D. coccinea, a scarlet variety; and, 4. D. crocata, a saffron-colored species. These beautiful plants are now becoming so general in British gardens, that a lengthened description would be superfluous: it is sufficient to say, that they elevate the stem like the holly-hock, and bear fine showy axillary and terminal flowers late in the autumn.

DAHOMEY, or Dauma, akingdom of Africa, on the coast of Guinea, situated about sixty or seventy miles from the Atlantic, to the east of Ashantee. This kingdom,which is correctly placed in various old maps, particularly that of Mercator, who names its ancient capital Dauina, was erased from the maps of Africa in 1700, and the existence of the nation of Dauma denied; but it emerged from obscurity in 1727, by the fame of its conquests of the maritime states ot Whidah and Ardra. Dahomey, as known at present, is supposed to reach from the sea coast 150 miles in land, but no European has yet penetrated to that distance from the coast. The soil is a deep rich clay, of a reddish color, with a little sand on the surface, except about Calmina, where it is more light and gravelly; but there is not to be found a stone so large as an egg in the whole country, so far as it has been visited by Europeans. Of farinaceous vegetables, the country yields a plerrtiful supply, in proportion to the culture. The Dahomese likewise cultivate yams, potatoes, the cassada or manioka, the plantain, and the banana. Pine-apples, melons, oranges, limes, guavas, and other tropical fruits, also abound in this fertile country. Nor is it destitute of productions adapted for commerce and manufacture; such as indigo, cotton, the sugar-cane, tobacco, palm-oil, with a variety of spices, particularly a species of pepper, very similar in flavor, and indeed scarcely distinguishable from the black pepper of the East Indies. The Dahomese, like the other inhabitants of tropical climates, plant twice a-year, viz., at the vernal and autumnal equinoxes; after which the periodical rains prevail. The harmattan, or dry wind, blows here strongly from the north-east; but Mr. Norris does not ascribe to it those pestilential qualities which have often been supposed, for while it parches up the ground, and injures every species of vegetable, it does not induce any fatal diseases. It is even said to cure cutaneous eruptions, and stop the progress of small pox, fluxes, and remittent fevers. The greatest bane of the climate is the periodical rains; which are attended with tern-

Die tornadoes. The language is that which the Portuguese call Lingua Geral, and is spoken not only in Dalioney I'roper, but in Whidal, and the other dependent states. The Dahoman religion is vague and uncentain in its principles, and rather consists in the performance of some traditionary ceremonies, than of any fixed system of belief, or moral conduct. According to Mr . Norris, human sacrifices are not unfrequent among the Dahomese. Their kings, he says, water the graves of their ancestors every year with the blood of human victims. The same traveller mentions that the people in general take a peculiar pleasure in contemplating human skulls. The king said to a traveller, 'Some heads I place at my door : others I throw into the market-place. This gives a grandeur to my customs; this makes my enemies fear me; and this pleases my ancestors to whom I scnd them.' The king is even said to sleep in a room paved with the skulls of prisoners of distinction taken in war; and frequently to exclaim, ' Thus I can trample on the skulls of my enemies whenever I please.' It appears to be customary with the Dahomese to cut off the ears of the prisoncrs they take in war, and to send them as a present to the Grand Seignior : upwards of 300 pairs of ears have been sent to him at one time. They believe more firmly in their amulets and fetiches, than in the deity; their national fetiche is the tiger; and their houses or huts are decorated with images, tinged with blood, stuck with feathers, besneared with palm oil, and bedaubed with egys. The government is perhaps the most perfect despotism upon earth, and seems to admit of no intermediate degree of subordination between the king and slave. Norris having asked a soldier if he did not think the enemy numerous in a war in which he found the Dahomesc engaged ; the latter replied, 'I think of my king, and then I dare engage five of the enemy myself' IIe added, 'it is not material, my head belongs to the king, not to myself; if he pleases to send for it, I am ready to resign it ; for if it is shot through in battle, it is no difference to me, I am satisfied.' A minister of state crawls towards the apartment of audience on his hands and knees, till he arrives in the royal presence, where he lays himself flat on his belly, rubbing his head in the dust, and uttering the most humiliating expressions. Being desired to advance, he receives the king's commands, or communicates any particular business, still continuing in a recumbent posture; for no person is permitted to sit, even on the floor, in the royal presence, except the women; and even they must kiss the earth when they receive or deliver the king's message. The king of Dahomey maintains a considerable standing army, commanded by an agaow or general, with several other subordinate military officers; the payment of these troops chiefly depends on the success of the expeditions in which they are engaged. Sometimes the king takes the field at the head of his troops; and on very great emergencies ac the head of his women. For within the walls of the different royal palaces in Dahomey, are immured not less than 3000 women; several hundreds of whom are trained to arms under a female general, and subordinate officers appointed by the king.

These Amazons are regularly exercised, and go through their evolutions with much expertness; their accoutrements being precisely similar to those of the male troops. The dress of the men in Dahomey consists of a pair of striped or white conton drawers, of the manufacture of the comntry, over which they wear a large square cloth of the same, or of European manufacture. This cloth is about the size of a connmon counterpane for the middling class, but much larger for the grandees. It is wrapped about the loins, and tied on the left side by two of the corners, the others hanging down, and sometimes trailing on the ground. A piece of silk or velvet, of sixtecn or eigliteen yards, nakes a cloth for a grandee. The head is usually covered with a beaver or felt hat, according to the quality of the wearer. The king, as well as some of his ministers, often wears a gold or silver laced hat and feather. The arns and upper part of the body remain naked, unless when the party travels, or performs laborious work, when the large clotl is laid aside, and the body is covered with a sort of froek or tunic without sleeves. The feet are always bare, none but the sovereign having a right to wear saudals. The dress of the women, though simple, consists of a greater number of articles than that of the men. They use several eloths or handkerchiefs; the neck, arms, and ancles, are atorned with beads and cowries; and rings of silver, or baser metal, encircle the fingers. The ears are so pierced as to admit the little finger, and a coral bead of that size, red sealing wax, or a piece of oyster-shell, stuck into each. Girls, before the age of puberty, wear nothing but a string of beads or sleflls round the loins, and young women usually expose the breasts. The general character of the Dahomese is marked by a strange mixture of ferocity and politeness. The former appears in the treatment of their enemies; the latter they possess far above most of the African nations with whom we have hitherto had any intercourse. Abomey, the capital, lies between long. \(3^{\circ}\) and \(4^{\circ}\) E., and in lat. \(7^{\circ}\) \(50^{\circ} \mathrm{N}\).
DAILLE (John), a protestant minister of the seventeenth century, the most esteemed by the Catholics of all the controversial writers among the Protestants. He was tutor to two of the grandsons of the illustrious M. du Ilessis Mornai. Mr. Daille laving lived fourteen years in this family, travelled into Italy with his two pupils; one of them died abroad; with the other he visited Italy, Switzerland, Germany, Flanders Holland, and England, and returned in 1621. He was received minister in 1623, and became chaplain to the family of M. Monnai. In 1625 he was appointed miniister of the clurch of Saumur, and in 1626 removed to Paris, where he spent the rest of his life, and composed several works. If is first work, Of the Use of the Fathers, was his masterpiece; printed in 1631. He died in 1670 , aged seventy-seven.

DAILY. See Day.
DAINT, adj. Fr. duin, delicate. Dain'teous, adj. From Lat. dens, a tooth, Dain'ty, n. s. \& adj. because pleasing to the
Dain'tily,adv.
Dain'tiness, n.s.
palate, as Minsheu says: delicious, exqui-
site, or of agreeable taste ; elegant. The adverb and substantives follow the meanings of the zajective.

Be not desirous of his dainties ; for they are deceitful meat.

Proverbs xxiii. 3.
Both halle and chambres, eche in his degree,
Houses of office stuffed with plentee ;
Ther mayst thou see of deinteons vitaille
That may be found as far as lasteth Itaille.
Chaucer. Cant. Tales.
Ther may men fest and realtee beholde, And deintees mo than I can you devise, But all to dere they bought it or they rise. Id.

Ne poets witt, that passeth painter farre In picturing the parts of Beauty daynt,
So hard a workmanship adventure darre.
Spenser. Fueric Queene.
Higher concoction is required for sweetness, or pleasure of taste, and therefore all your dainty plumbs are a little dry.

Bacon.
Truth is a naked and open day-light, that doth not shew the masks and mummeries and triumphs of the world, half so stately and daintily as candlelight. Id.

My house, within the city,
Is richly furnished with plate and gold,
Basons and ewers to lave her dainty hands.
Shakspeare.
Which of you all
Will now deny to dance? She that makes dainty, I'll swear hath corns. Id. Romeo and Juliet.

Therefore to horse ;
And let us not be dainty of leave-taking, But shift away.

Id. Macbeth.
Why, that's my dainty; I shall miss thee; But yet thou shalt have freedom. Id. Tempest.

> What should yet thy palate please?
> Daintiness and softer ease,
> Sleeked limbs and Ginest blood? Ben Jonson.

The duke exceeded in the daintiness of his leg and foot, and the earl in the fine shape of his hands.

Wotton.
It was more notorious for the daintiness of the provision which he served in it, than for the massiness of the dish.

Hakewill on Providence.

> Why should ye be so cruel to yourself, And to those dainty limbs, which nature lent For gentle usage and soft delicacy? Mil!on.
> She then produced her dairy store, And unbought dainties of the poor. Dryden.
> Your dainty speakers have the curse, To plead bad causes down to worse. Prior.
> The shepherd swains, with sure abundance blest, On the far flock and rural dainties feast. Pope.

DAI'RY, n.s. \(\}\) From dey, says Lye, an
Dai'ry-maid. \(\}\) old word for milk. The milk-house, or place where it is managed. A dairy-maid and milk-maid, are nearly synonymous. In Gloucestershire, the dairy is still called a dey-liouse. Yet we supply a very early use of ' dairies.'

Citees and burghes, castles high and towres, Thorpes and barnes, shepenes and dairies, This maketh that thir ben no Faerics.

Chaucer. Cant. Tales.
Dairies being well housewived, are exceeding commodious.

Bacon.

Children, in dairy countries, do wax more tall than where they feed more upon bread and flesh. ld. You have no more worth
Than the coarse and country fairy,
That doth haunt the hearth or dairy. Ben Jonsons
She in pens his flocks will fold,
And then produce her dairy store. Dryden.
The poorest of the sex have still an itch,
To know their fortunes, equal to the rich;
The dxirymaid enquires if she shall take
The trusty taylor, and the cook forsake. Id.
Come up quickly, or we shall conclude that thou art in love with one of Sir Ruger's dairy-maids.

Addison.
Dairy. •The operations of the dairy are connected with the domestic comforts of almost every English family. Man is here seen taking that useful and honorable direction of the works of nature for which he was designed, and his original companion, when a good housewife, is almost more than ' a help meet' for him. She is generally, and for the great benefit of both parties, entrusted with the practical management of this department, even of extensive farming establishments ; and so large a portion of 'skill, frugality, cleanliness, and industry,' is required, as a modern author well observes, in hardly any other of the duties of a farmer's wife.

In our articles Agriculture and Bos we have entered pretty largely into the natural history and peculiarities of the only animal whose milk is extensively used in this country; we shall, in this paper, principally advert,-1. To the selection and general management of cows kept for the dairy, and by cow-keepers, as they are termed. 2. To the operations of the regular dairy in our cheese and butter counties, particularly the former : for in our article Butter will be found many useful directions with regard to that important manufacture. 3. We shall offer a few remarks on the structure of the dairy-house and its furniture.
i. Of the selection and management of cows.In and about London the Holderness cows, a variety of the short-horned breed, are preferred. They have large carcases and yield a great quantity of milk. They take their name from a district in Yorkshire, where, as well as in the county of Durham, they are extensively bred; but most English counties have cultivated the breed in some degree. The Edinburgh dairy-men select the short-horned cow of Roxburghshire for similar reasons. Ayrshire has also a celebrated' breed. In Lancashire (and in the neighbourhood of Liverpool this topic has been well canvassed) a native long-horned cow is said to have a general preference. The Guernsey breed is also highly valuable for its rich and abundant milk. At Caton, in Lancashire, in Mr. Hodgson's dairy establishment, a long-ho.ned cow yielded eight quarts of milk a day and four pounds of butter per week on an average of twelve months, during which period one of the short-horned breed gave nine quarts per day and four pounds and a half of butter per week, both having what they chose to take of exactly the same kind of food. But the quantity each consumed was not noted. Dr. Anderson's strong recommendation of the Alderney cows, as affording ' the richest milk hitherto known; though there are many
individuals of different kinds which afford much richer milk than others,' as he says, sepms long to have kept up the public preference for them int many districts.

Cows known to afford milk and butter of the best qualities, will of course be selected; but neither size nor breed seems to be a uniform criterion. Respectable cow-keepers rarely breed cattle, so that actual experience of the animal is the only final test; and the quantity of milk yielded seems to be, in this case, the sole ground of favoritism. Those who supply the metropolis with milk generally purchase their cows at from three to four years old, and in calf, at Islington, or Smithfield. Some of them own several hundreds. The number scattered in and about London is calculated at about 9000 . Ten bulls are generally allowed to a stock of 300 cows, and the calves are sent to Smithfield market at one, two, or three days old. The quantity of milk given on an average, by each cow, is said to be nine quarts a day, or 3285 quarts per annum. The weekly expense of their food is estimated in the Middlesex Report at \(10 \mathrm{~s}, 3 \mathrm{~d}\). , and the other charges about \(£ 5.7 \mathrm{~s}\). per annum.

These cows are often confined in the cowhouse, or the premises adjoining, during the whole time of their being devoted to the purposes of the cow-keeper; but respectable establishments turn them out to grass in the spring. In the night they are turned into their stalls, and fed at about three in the morning with half a bushel each of grains. From four to half-past six or seven they are milked for the retail dealers; then they receive a bushel each of green food or turnips, and soon after at the rate of a truss ot meadow hay to ten cows. They are now turned out into the cow-yard, from eight to twelve o'clock, and about half-past one to three are milked and fed again as in the morning. This is the regular plan from September to May at least, or during the tumip season. At other parts of the year cabbages and tares diversify their food until they are turned out to grass (where that change of food is supplied to them), and now they remain in the field all night; but are frequently fed with grains to increase their milk, even at this period.

The cow-feeders of Edinburgh, according to the Supplement of the Encyclopædia Britannica, do not find it for their interest to keep their cows for more than one year, or even so long, if they can be fattened sooner. 'Their object is to have as great a quantity of milk as possible in the first instance; and when the cows fall off in milking, as they almost always do from between fonr and six months after calving, to prepare them speedily for the butcher. Most of the cows continne tr give a good deal of milk while they are fattening, and even until they are sent to the shambles. It is expected they should sell to the butcher at the price paid by the cow-keeper. Their food in summer is brewers' and distillers' grains and dreg, wheat shellings or small bran, grass and straw; and in winter the same grains, dreg and bran, with turnips and potatoes, and hay instead of grass. Wlien grains are scarce, cut or chopped lay is mixed with them. Some of them are sent to pasture in fields near the city, for about two
months, during the best of the grass season; but even then a certain number must be kept in the house, for consuming the graina, which are pur'chased by contract for a whole year.'
' With regard to management, the cow-keepers begin with grains, dreg, and bran, mixed together, at five o'clock in the inorning; feed a spcond time at one oclock in the afternoon; and a third from seven to eight in the evening. Grass in summer, and turnips or potatoes in winter, are given at both intervals. A sinall guamtity of straw is laid below the grass. which absorbs its moisture, and is eaten after the grass; and, \(\quad 11\) winter, straw or hay is given after the turnips. Part of the turnips or potatoes are boiled, particularly when there is a scarcity of grains, and intermixed with them. The expense in summer is said to be \(2 s .10 \frac{1}{2} d\)., and in winter \(3 s . i_{2} \lambda_{0}\) per day, for each cow. The cows are seldo a milked more than twice a-day : for about a month after being bought, it is sometimes necessary to milk them three times. The common periods of milking are six o'clock in the morning, from three to four in the afternoon, and, when milked a third time, nine in the evening. Their produce in milk, when fed as already stated, may average about seven Scotch pints, or nearly twelve quarts and a half daily, per cow. When the cows are smaller, and not so well fed, five pints, or about nine quarts, are said to be the average. The price of milk in Edinburgh used to be \(6 d\). per pint, but of late it has been sometimes lower in summer. This is said to be very little more than the price of the food. For interest of money, risk, expenses of management, and profit, there is the dung, worth \(£ 3.10\) s. for each cow; some savincs on the cows while at grass, which costs only 1 s .8 d . per day; and, probably, a small advance of price may be commonly got from the butcher, when the cows are skilfully selected and well managed. There have been instances of cow-feeders contracting with others to retail their milk; but the practice is not common. The cow-kcepers generally retail it themselves. In one instance at guinea a-week for the milk of each cow was paid by retailers to a farmer in the vicinity of Edinburgh.'
'Comparing the London and Edinburgh dairies,' continues the above writer, ' there seems to be a difference in favor of the best of the latter of no less than three quarts and a half per day. If this be the fact, perhaps it is owimy to the whole of the Edinhurgh cows leing always in milk; none of them being kept for years, and bred from, as in the London dairies.'

Dr. Andersons's general aplıorisms on the subject of the qualities of milk canmot be too well impressed on all dairy and cow-kecpers. lle says, 1. Of the milk drawn from a cow at any time, that which comes first is always thinnest, and continues to increase in thickness to the last drop. This is proved by experiment ; and so great is the importance of attending to it, that the person who, by bad milking of his cows, loses but half a pint of his milk, loses, in fact, as much cream as would be afforded by six or eight pints at the beginning, and loses besiaes that part of the cream which fone can give richness and ligh. flavor to his butter 2. When milk throws up
creant to the surface, that portion which rises first will be thicker, and of better quality, as well as in greater quantity, than that which rises in a second equal portion of time. 3. Thick milk throws up a sinaller quantity of cream to the surface than such as is thinner; but that cream is of a richer quality. If water be added to that thick milk, it will afford a considcrably greater quantity of cream than before, but its quality is at the same time greatly debased. 4. Milk when carried in vessels to any distance, so as to suffer considerable agitation, never throws up cream so rich, nor in such quantity, as if the same had been put into the milk-pans without any agitation. From these aphorisms, the following corollaries are deducible. 1. The cows ought always to be milked as near the dairy as possible. 2. The milk of different cows should be kept by themselves, that the good cows may be distinguished from the bad. 3. For butter of a very fine quality, the firstdrawn milk ought always to be kept separate from the last.

The Farmers' Magazine, vol. xv. supplies the following directions on the subject of feeding stalled cows, as those which are practically given by a very intelligent dairy-man, to his cowfeeder and milkers, at Farnham, in Surrey :-
1. To the feeder. 'Go to the cow-stall at six o'clock in the morning, winter and summer; give each cow half a bushel of the field-beet, carrots, turnips, or potatoes cut; at seven o'clock, the hour the dairy-maid comes to milk them, give each some hay, and let them feed till they are all milked. If any cow refuse hay, give her something she will eat, such as grains, carrots, \&c., during the time she is milking, as it is absolutely necessary the cow should feed whilst milking. As soon as the woman has finished milking in the morning, turn the cows into the airing ground, and let therc be plenty of fresh water in the troughs; at nine o'clock give each cow three gallons of a mixture composed of eight gallons of grains and four gallons of bran or pollard; when they have eaten that, put some hay into the cribs; at twelve o'clock give each thrce gallons of the mixture as before; if any cow looks for more, give her another gallon; on the contrary, if she will not eat what you give her, take it out of the manger, never at one time letting a cow have more than she will eat up clean. Mind and keep your mangers clean, that they do not get sour. At two o'clock give each cow half a bushel of carrots, field-beet, or turnips; look the turnips, \(\& c\), over well before you give them to the cows, as one rotten turnip, \&c. will give a bad taste to the milk, and most likely spoil a whole dairy of butter. At four o'clock put the cows into the stall to be milked; feed them on hay as you did at milking time in the morning, ever keeping in mind that the cow whilst milking must feed on something. At six o'clock give each cow three gallons of the mixture as before. Rack them up at eight o'clock. Twice in a week put into cach cow's feed, at noon, a quart of malt dust.'
2. To the dairy-maid. 'Go to the cow-stall at seven o'clock; take with you cold water and a sponge, and wash each cow's udder clean before milking; dowse the udder well with cold water, winter and summer, as it braces, and repels heats.

Keep your hands and arms clcan. Milk each cow as dry as you can, morning and evening, and when you have milked each row, as you suppose, dry, begin again with the cow you first milked, and drip them each; for the principal reason of cows failing in their milk is from negligence in not milking each cow dry, particularly at the time the calf is taken from the cow. Suffer no one to milk a cow but yourself, and have no gossiping in the stall. Every Saturday night give in an exact account of the quantity of milk each cow has given in the week.'
'Where butter is the principal object,' says Mr. Loudon, ' such cows should always be chosen as are known to afford the best and largest quantity of milk and cream, of whatever breed they may be. But the quantity of butter to be made from a given number of cows must always depend on a variety of contingent circumstances; such as the size and goodness of the beasts, the kind and quantity of the food, and the distance of time from calving. As to the first, it need scarcely be mentioned that a large cow will give greater store of milk than one of a smaller size; though cows of equal size differ as to the quantity of cream produced from the milk of each : it is, therefore, on those cows whose milk is not only in large abundance, but which, from a peculiar inherent richness, yields a thick cream, that the butter dairy-man is to place his chief dependence; and where a cow is deficient in either of these, she should be parted with, and her place supplied by one more proper for this use. As to the second particular, namely, the kind and quality of the food, those who would wish to profit by a dairy, ought to provide for their cows hay of a superior goodness, to be given them in the depth of winter, and this in an unlimited degree, that they may always feed till they are perfectly satisfied. And, when the weather will permit, the cows should be indulged with an outlet to marshes or low meadow-grounds, where they may feed on such green vegetables as are present; which is far preferable to the practice of confining them the whole day on dry meat, will enable them to yield greater plenty of milk, and will give a fine yellow color to the butter even in the winter season.'
ii. The operations of the regular dairies of the cheese and butter counties have been justly stated to be very little improved by the application of modern science to farming. Dr. Anderson and Mr. Marslaall are the only scientific writers whose attention seems to have been turned to the subject. The latter, in his Rural Economy of Gloucesterslice, has registered a number of observations on the heat of the dairy-room, and of the milk when the remnet was applied in cheese-making; on the time required for coagulation; and the heat of the whey after: but the chemistry of these arts and productions has been wholly neglected at present. We cannot therefore do better than present the reader with the following popular account of the cheeses best known in this country

Cheshire cheese is prepared in the following manner :-The evening's milk is not touched till the next morning, when the cream is taken off. and put to warm in a metal pan heated with: boiling water. The cows being nilked early 11
the morning, the new milk, and that of the preceding night, thus prepared, are poured into a large tub, together with the cream. A piece of rennet, kept in lukc-warm water from the prcceding evening, is put into the tub in order to coagulate the milk; with which, if the cheese is intended to be colored, a snall quantity of arnotto (or of an infusion of marigolds, or carrots,) is rubbed fine and mixed; the whole is then stirrcd together, and, being covered up warm, it is allowed to stand about half an hour, when it is turned over with a bowl, to separate the whey from the curds, and broken soon after into very small particles: the whey being separated, by standing some time, is taken from the curd, which sinks to the bottom, and is then collected into a part of the tub provided with a slip, or loose board, to cross the diameter of the bottom, for the sole purpose of effecting this separation; on which a board is placed, weighing from sixty to 120 pounds, in order to press out the whey. As soon as it acquires a greater degree of solidity it is cut into slices, and turned over several times, to extract all the whey, and again pressed with weights. See Coagulum, in Cuemistry.

These operations may consume about an hour and a half. It is then taken from the cub and broken very snall by the hand, salted, and put into a cheese-vat, the depth of which is enlarged by a tin hoop fitted to the top. The side is then strongly pressed, both by hand and with a board at top, well weighted; and wooden skewers are placed round the choese, at the centre, which are frequently drawn out. It is then shifted out of the vat, a cloth being previously put on the top of it, and reversed on the cloth into another vat, or again into the same, if well scalded before the cheese be returned to it. The top, or upper part, is next broken by the hand down to the middle, salted, pressed, weighted and skewered as before, till all the whey is extracted. This being done, the clieese is again reversed into another vat, likewise warmed with a cloth under it, and a tin hoop, or binder, put round the upper edge of the cheese and within the sides of the vat; the former being previously enclosed in a cloth, and its edges put within the vessel. These various operations are performed from about seven o'clock in the morning till one at noon. The pressing of the cheese requires about eight hours more, as it must be twice turned in the vat, round which thin wire skewers are passed and shifted occasionally. The next morning it ought to be turned and pressed again, as likewise at night, and on the succeeding day, about the middle of which it is removed to the salting-room, where the outside is salted and a cloth binder tied round it. After this process the cheese is turned twice daily, for six or seven days ; then left two or three weeks to dry, during which time it is turned and cleaned every day; and at length deposited in the common cheese-room, on a boarded floor covered with straw, where it is turned daily till it acquires a sufficient degree of hardness. The room should be of a moderate warmth, but no wind, or current of air, must be permitted to enter, as this generally cracks the cheese. Their outsides, or rinds, are sometimes rubbed with butter or oil to give then a coat.
'A dairy farm of 100 acres,' says an intelligent writer on the agriculture of Cheshire, 'is generally divided into the following proportions: from ten to fourteen acres of oats, from six to eight acres of fallow wheat, and the like quantity of summer fallow; the remainder consists of meadow and pasture, the former occupying about twelve acres. The good dairy farmer attends more to the size, form, and produce of the udder of his cow than to any fancied beauty of shape. This consideration induces him to be particular in the breeding and rearing his calves, and in the management of his cows during the winter and summer seasons. The annual quantity of cheese made from each cow varies from 50 to 500 lbs. and upwards, the produce depending on the goodness of the land, the quality of the pasture, the seasons, and the manner in which the stock are wintered. On the whole, the average produce may be estimated at 300 lbs . from each animal. The quantity of milk yielded daily by each cow, according to this estimate, will be about eight quarts, which it is calculated will produce one pound of cheese.
'On the dairy farms one woman-servant is generally kept to every ten cows, who is employed in winter in spinning, and other household business, but in milking is assisted by al. the other servants of the farm. The cheese is chiefly sold in London, being exported from Chester, Frodsham-bridge, and Warrington. A large quantity goes to Liverpool and Bristol, some more is disposed of to the Yorkshire dealers, and some goes into Scotland. The proper season for calving is reckoned to be from the beginning of March to the beginning of May; and during these months therc is more veal fed in Cheshire than in any other county in the kingdom, though generally killed to spare the milk.'
Gloucester cheesp is made of milk 1 mmediately from the cow; but which, in summer, is thought too hot, and is therefore lowered to the requisite degree of heat, before the rennet is added, by pouring in skim-milk, or, if that will not answer, by the addition of water. As soon as the curd ' is come,' it is broken with a double cheeseknife, and also with the hand, in order to clear is from the whey, which is ladled off. The curd, being thus freed from the principal part of the whey, is put into vats, which are set in the press for ten or fifteen minutes, in order to extract all the remaining liquid. It is then turned out of the vats into the cheese-tubs again; broken sinall and scalded with a pail-full of water, lowercd with whey, about three parts water to one of whey; and the whole is briskly agitated, the curd and water being equally mixed together. After having stood a few minutes, to let the curd subside, the liquor is poured off; and the former collceted into a vat, the surface of which is, when about half full, sprinkled with a little salt, that is worked in among the curd. The vat is then filled up, and the whole mass turned two or three times in it, the edges being pared and the middle rounded up at each turning. At length the curd is put into a cloth and placed in the press, whence it is carried to the shelves, and turned, generally, once a day till it has anquired a sufticlent degree
of compactness to enable it to undergo the operation of washing.

Parmesan cheese has long been famous for its richness and flavor; the following mode of manuiacture is described in the Annales de Chemie. The size of these cheeses varies from sixty to 180 pounds, according to the number of cows in each dairy. During the heat of suminer cheese is made every day, but in the cooler months milk will keep longer, and the cheese is made every other day. The summer cheese, which is the best, is made of the evening milk, after having been skimmed in the morning and at noon. Both kinds of milk are poured together into a caldron capable of holding about 130 gallons, of the shape of an inverted bell, and suspended on the arm of a lever so as to be moved off and on the fire at pleasure. In this caldron the milk is gradually heated to the temperature of about \(120^{\circ}\); it is now removed from the fire, and kept quiet for five or six minutes. When all internal motion has ceased, the rennet is added; this substance is composed of the stomach of a calf, fermented together with wheaten meal and salt; and the method of using it is to tie a piece, of the size of a hazel nut, in a piece of liuen cloth, and steep it in the milk, squeezing it from time to time; a sufficiency of rennet soon passes through the cloth into the milk, which is now to be well stirred, and afterwards left to rest that it may coagulate. In about an hour the coagulation is complete, and then the milk is again put over the fire, and raised to a temperature of about 145 degrees.

During the time it is heating the mass is briskly agitated, till the curd separates in small lumps; part of the whey is then taken out, and a small portion of saffron is added to the remainder in order to color it. When the curd is thus broken sufficiently small, nearly the whole of the whey is taken out and two pailfuls of cold water is poured in; the temperature is thus lowered so as to enable the dairyman to collect the curd, by passing a cloth underneath it and gathering it up at the corners; the curd is now pressed into a frame of wood like a bushel without a bottom, placed on a solid table and covered by a round piece of wood, having a great stone or weight on the top. In the course of the night it cools, assumes a firm consistence, and parts with the whey; the next day one side is rubbed with salt, and the succeeding day the cheese is turned and the other side is rubbed with salt in the same manner as before. This alternate salting of each side is practised for about forty days; after this period the outer crust of the cheese is pared off, and the fresh surface is coated with linseed oil. The convex sides are then colored red with arnotto, and the cheese is fit for sale.

The Stilton cheeses, called the Parmesan of England, are usually made in cylindrical vats, and weigh from six to twelve pounds each. Immediately after they are made they should be put into boxes made exactly to fit them, as they are so extremely rich, that, without this precaution, they would be apt to bulge out and break asunder. In these boxes they shoud be daily turned, and kept two years; they are then fit for sale. Some nake them in a net like a caboage-net, so that
they appear when made like an acorn; but these are never so good as the others, having a thicker coat, and wanting the rich flavor and mellowness of the others. The manufacture of tiose cheeses is not confined to Stilton and its neighbourhool ; as many other persons in Huntingdonshire, and also Rutland and Northampton shires. make a similar sort, sell them for the same price, and give them the name of Stilton cheeses. It is observed by Mr. Hazard, that, though the farmers about Stilton are remarkable for the cleanliness of their dairies, they take very little pains with the rennet; for if they did they would not have so many faulty and unsound cheeses. The inhabitants of other countries might make as good cheese as that of Stilton if they would adhere to the same plan, which is this:-They make a cheese every morning, and to this meal of new milk they add the cream taken from that which was milked the night before. This, and the age of their cheeses, it is said, are the ouly reasons why they are preferred to others, their land not being in any respect superior to that of other countries.

In the Bath Papers, Mr. Hazard gives the following receipt for making rennet. "When the maw-skin is well prepared and fit for the purpose, three pints or two quarts of soft water, clean and sweet, should be mixed with salt, wherein should be put sweet-brier, rose-leaves and flowers, cinnamon, cloves, mace, and, in short, almost every sort of spice and aromatic that can be procured; and if these are put into two quarts of water, they inust boil gently till the liquor is reduced to three pints, and care should be taken that this liquid is not smoked; it should be strained clear from the spices, \&ic., and, when not warmer than milk from the cow, it should be poured upon the vell or maw; a lemon may then be sliced into it, when it may remain a day or two; after which it should be strained again and put into a bottle, where, if well corked, it will, keep good for twelve months, or more: it will smell like a perfume, and a small quantity of it will turn the milk, and give the cheese a pleasing flavor.'

The method of making green cheese we should not, perhaps, omit. In a cheese of this sort, of about ten or twelve pounds weight, an infusion is made by steeping about two handfuls of sage, and one of marigold leaves, with a little parsley, after being bruised, one night in a proper quantity of milk. In the morning the greened milk is strained off, and mixed with about one-third of the whole quantity to be run. The green and the white milks are then run separately, keeping the two curds distinct, until they are ready for vatting. The mixing of them depends on the fancy of the maker. In some cases the two are connected together, blending them in an even and intimate manner; in others, the green curd is broken down into irregular fragments, or cut out in irregular figures by means of proper tins. In the operation of vatting, the fragments or figures are placed on the outsides. The bottom of the vat is first set with them, crumbling the white or yellow curd among them. As the vat fills, others are placed at the edges, and the remainder buried flush with the top. In the management
afterwards, the same plan is pursued as those which we have already deseribed for common cheese.

A duiry house should have a northern aspect, if possible, and good ventilation. The regulation of temperature may be accomplished on the plan suggested by 1)r. Anderson, of having double walls and roofs; or by means of hollow walls; and for common purposes by the walls having a vacuity left, of eiglit or ten inches in width, between the lath and plaster. According to the nature of the business to be carried on in them, these buildings will be of course regulated, both in regard to their size and the number of their conveniences : as whether they are used for butter, eheese, or milk; the number of cows which are kept, \&c. In the Gloueester dairy houses twenty feet by sixteen are the usual dimensions for forty cows; and thirty feet by forty for 100 cows.

A butter dairy should consist of three rooms, or apartments : namely, a milk room, a churning room with necessary apparatus, and a room for the different utensils, and the cleaning and airing them in, when it may be requisite. The cheese dairy should, in the same manner, be composed of three rooms; one for the reception of the milk ; another for the sealding and pressing of the cheese; ana a third for the purpose of salting it in. In addition, there ought to be a room for the stowing of the cheese, which may conveniently be a loft made over the dairy. It is frequently at a distance, which is inconvenient and troublesome.

The milk dairy only requires two good rooms, one for the reception of the milk, and another for the purpose of serving it out in, and that of scalding, cleaning, and airing the different utensils.

The utensils of a cheese dairy are, the cheese tub, in which the curd is broken, and prepared; the cheese-knife, commonly a thin spatula of wood or iron, for the purpose of cutting or breaking down the curd; the cheese-cloth, a piece of thin gauze, in which the cheese is placed in the press; a circular cheese-board; a strong wooden vat, and cheese-press.

The last article is generally constructed with a common wooden screw, though sometimes a large weight is used. The diagram represents a

very commodious one. Cliurns are almost endless in their variety of shapes, and supposed recommendations. Our article CuUry exhibits an improved mode of working this important utensil. We may add, in conclusion, that Mr. Dicas of Liverpool has lately invented a lactometer 'for ascertaining the richness of milk from its specific gravity, and its degree of warmth taken by a thermometer, on comparing its specific gravity with its warmth.'

It is a glass tube a foot long, with a funnel at top; the upper two inches being marked in small divisions, just under the funnel; when the instrument is filled to the lieight of one foot with milk, the depth of ereain it yields is noted by the gradations on the upper part.

An invention of a similar kind has been noticed by the Highland Society of Scotland, in their Report for 1816: Mrs. Lovi's aereometric beads, by whieh the speeifie gravity of the milk is tried first when new milked, and again when the cream is removed.- When milk is tried as soon as it eools,' observes this Report, 'say to \(60^{\circ}\), and again, after it lias been thoroughly skimmed, it will be found that the skimmed milk is of eonsiderably greater gravity; and as this inerease depends upon the separation of the lighter cream, the amount of the inerease, or the difference between the speeifie gravity of the fresh and skimmed milk, will bear proportion to, and may be employed as a measure of, the relative quantities of the oily matter or butter contained in different milks.'- 'The speeifie gravity of skimmed milk depends both on the quantity of the saceharo-saline matters, and of the curd. To estimate the relative quantities of curd, and by that determine the value of milk for the purpose of yielding eheese, it is only required to curdle the skim milk, and ascertain the speeifie gravity of the whey. The whey will, of course, be found of lower specific gravity than the skimmed milk, and the number of degrees of difference affords a measure of the relative quantities of the curd. According to this hypothesis, the aereometrie beads may be employed to aseertain the qualities of milk, relatively both to the manufacture of butter and eheese.' But neither of these inventions, though in themselves ingenious, have been extensively used.

The fixtures of a respectable dairy are, a copper boiler in the scalding-room; benehes and shelves in this room and the cheese-room; a bench or table about two feet wide round the milk-room; and a pump in the centre of the latter.

The utensils of a butter dairy are, pails; sieves of hair cloth, or silver-wire cloth for straining the milk; milk dishes or coolers; an ivory or bone cream-knife, and skimming dishes of willow or ivory; bowls; barrel, or other milk ehurns; butter-makers; and a portable raek for drying dishes in the air; tubs, \&c.

DAIS, in botany, a genus of the monogynia order, and decandria class of plants ; natural order, thirt)-first, vepreculæ: involucrum tetraphyllous : cor. quadrifid, or quinquefid : Frvit monospermous berry Species three, natives of South Sea Isles.

DAI'SY, n. s. ? Sax. bægereze day's-eye; Dar'sied, adj. Sor, as Mr. Thomson conjecsures, dah's, i. e. does-eye. Minsheu says, from \(\delta a t \zeta \omega\), to divide, because of the divisions of the leaves; but this etynology seems too profound for the name of a common flower.

Daisy. See Bellis Perennis.
Dale, n.s. Teut. thaal; Ang.-Saxon, Spanish, Belgic, and Irish, dal, from dalen, descendere, to descend. A valley or low place.

Dale (Richard), an American naval commander, was born in Virginia, Nov. 6, 1756. At twelve years of age he was sent to sea, and, in 1775, he took the command of a merchant vessel. In 1776 he entered, as a midshipman, on board of the American brig of war Lexington, commanded by captain Jolin Barry. In her he cruised on the British coast the following year, and was taken by a British cutter. After a confinement of more than a year in Mill prison, he effected his escape into France, where he joined, in the character of master's mate, the celebrated Paul Jones, then commanding the American ship Bon Homme Richard. Jones soon raised Dale to the rank of his first lieutenant, in which character he signalized himself in the sanguina:y and desperate engagement between the Bon Homme lichard and the English frigate Serapis. He was the first man who reached the deck of the latter when she was boarded and taken. In 1781 he returned to America, and, in June of that year, was appointed to the Trumbull frigate, commanded by captain James Nicholson, and soon afterwards captured. From 1790 to 1794 he served as captain in the East India trade. At the end of this period the government of the United States made him a captain in the navy. In 1801 he took the command of the American squadron of observation, which sailed, in June of that year, from Hampton roads to the Mediterranean. His broad pendant was hoisted on board the figate President. Efficient protection was given by Dale to the American trade and other interests in the Mediterranean. In April, 1802, he reached Hampton roads again. He passed the remainder of his life in Philadelphia, in the enjoyment of a competent estate, and of the esteem of all his fellow-citizens. He died February 24, 1826. Captain Dale was a thorough, brave and intelligent seaman. He was several times severely wounded in battle. The adventures of his early years were of the most romantic and perilous cast. No man could lay claim to a more honorable and honest character.

DALEA, in botany, a genus of plants of the diadelphia class and decandria order. Stamina five or ten, with the wings growing to their column, and united without separate filaments: leguminous: seed one. Species fourteen, natives of North and South America.
dalecarlia, or Stora-Kopparberg, as it has been recently named, is an extensive province of Swedeu, bounded on the west by Norway, on the north by Herjedal, on the east by Helsingland, and on the south by Westmannland. It contains nearly 1300 English square miles, and about 125,000 inhabitants. Though its general aspect is hilly, the mountains are ot
little elevation, except in the neighbourhood oi Norway; the greater part of the 'province is finely diversified with hills, dales, and lakes. It contains also two large rivers, the Dal and the Ljusne. In the south fine rye and barley fields meet the eye; and the potatoe is cultivated with some success; but the perpetual changes of the property and badness of the roads have been formidable obstacles to improvement. Limetrees, elms, and maples, are found growing here nearly under the sixty-second degree of latitude. Dalecarlia has its chief riches, however, in its copper and iron mines, the chief of which (of copper) are at Eahlun and Afvestad. At the beginning of the present century the iron mines emiployed seventy-two smelting-furnaces, and fifty-six forges; the total annual produce being about \(113,000 \mathrm{cwt}\). Sulphur is likewise found; and at Elfvedal are quarries of porphyry. The chief towns are Fahlun, Hedemora, and Soter. The Dalecarlians are of noble make and appearance, and have long been celebrated for their love of liberty. During the struggles of Gustavus Vasa for the crown, they obtained their chief privileges, and have since distinguished themselves on similar occasions. They seem to have imbibed from these circumstances much of the spirit of faction; and they have great contempt for the other Swedes.

DALECHAMPIA, in botany, a genus of the monadelphia order, and monæecia class of plants, natural order thirty-eighth, tricocce. Male involucrum, common and quadripartite: cal. hexaphyllous; cor. none; nectarium laminated or scaly; the stamina monadelphous or coalited at the base, and polyandrous or numerous. Female involucrum, common and triphyllous; style one: caps, tricoccous. Species two, viz. 1. D. scandens, a native of Jamaica, and a climbing plant which rises to a considerable height, and is remarkable for nothing but having its leaves armed with bristly hairs, which sting the hands of those who unwarily touch them. 2. D. Gorolata, a native of New Granada.

DALGARNO (George), a learned Scottish writer of the seventeenth century, was born at Aberdeen, and projected a plan for a universal language, in a work entitled Ars Signorum, Vulgo Character Universalis et Lingua Philosophica, London \(1661,8 \mathrm{vo}\). This exhibits a classification, as the author and his admirers state, of all possible ideas, and a selection of characters adapted to them. He admits only seventeen classes of ideas, and uses the letters of the Latin alphabet, with two Greek characters. His plan resembles that of bishop Wilkins. He was the author also of Didascalophus, or the Deaf and Dumb Man's Tutor. Oxford, 1680, 8 vo.

DALIN (Olof Von), a Swedish historian and poet, born atWinberga in Holland in 1708, was designed for the medical profession, which he abandoned. In 1735 he published a weekly paper, called The Swedish Argus, which gave great satisfaction to the diet, and he was rewarded with the situation of librarian at Stockholm. He has been termed the father of Swedish poetry. His two chief poems are, The Liberty of Sweder; and Bruuliilda, a tragedy. In 1744 he was en
gaged by the diet to write The lIistory of Sweden, and successively raised hinself to be preceptor to prince Gustavus, counsellor in ordinary of the chancery, knight of the northern star, and chancellor of the court. He died in 1763. He was the author of a Translation of Montesquieu's Causes de la Grandeur et de la Décadence des Romaines; and several poerns, fables, \&c., printed in 6 vols. 1767.

DALKEITHI (Gael. i. e. a plain between two rivers), a parish of Scotland, in Mid Lothian, situated between the south and north Eisk, and not exceeding two miles in length or breadth. The soil is partly light and sandy, partly deep clay.

Dalkertir, a considcrable town in the above parish, is six miles south-east of Edinburgh, seated on the north Esk. It contains several good streets, and has a weekly market on Thursday, reckoned one of the best in Scotland for grain; which is all sold for ready money, and supplies the west country about Glasgow, Paisley, Carron, \&c., as well as Edinburgh in part. It has also markets on Monday and Tuesday for meal and cattle, in winter; and a fair the third Tuesday in October. The seat of the duke of Buccleuch is the principal ornament of the place, and the plantations which surround it are laid out with great taste. The house was built in the beginning of the eighteenth century on the site of Dalkeith castle. Long. \(2^{\circ} 20^{\circ}\) W., lat. \(55^{\circ} 50^{\circ} \mathrm{N}\).

Dalkeith Castle formerly stood at the east end of the town of Dalkeith. It was built on a perpendicular rock of great height, and inaccessible on all sides, except the east where it was defended by a fosse, through which the river is said to have run. On the defeat of the Scots at the battle of Pinkie, in 1547, James earl of Morton, Sir David Wedderburn, and many others, fled to this castle; where they were besieged for some time by the English, but were obliged to surrender at last for want of provisions. Here, in 1660, it being the head quarters of general Monk, the restoration of monarchy, by calling home Charles II. was planned.

DALLA, an important island and district of the Delta of the Irrawuddy River, Hindostan. It is covered generally with wood, which shelters numerous wild beasts, but contains also fine pastures, and produces rice and salt in considerable quantities. During the contest between the Birmans and Peguers, in the middle of the last century, this district was often overrun by both armies. The principal towns are Dalla, Cowack, and Gnapee Ghewen.

DA'LLY, v. a. \& n. 7 Ancient Belg. dollen;
Dalifance, n.s. Goth. duella; Saxon,
Dalíier, n.s. dwolian. To talk foolshhly or idly. Hence both to delay, and to trife in love or otherwise.

They that would not be reformed by that correction, wherein he dallied with them, shall feel a judgment worthy of God.

Wisdom xii. 26.

\section*{A Frcre ther was a wanton and a mery, \\ A limitour, a full solempne man :}

In all the ordres foure is non that can
So moche of daliance and fayre language.
Chaucer. Prol. to Cant. Tales.

With faire disport, and courting dalliaunce She intertainde her bover all the way; But when she saw the kniyht his speare advance, Shee soone left off her mirth and wanton play, Aud bad her knight addresse him to the fray,

> Spenser. F'acrie Qwene.

The daily dalliers, with pleasant words, with smiling countenances, and with wagers purposed to bes lost, before they were purposed tu be inade. Ascham.

Not dallying with a brace of courtezans,
But meditating with two deep divines. Shakspeare.
She her airie buildeth in the cedar's top,
And dallies with the wind, and scorns the sun. Id.
- Good lord, you use this dalliunve to excuse

Your breach of promise.
1.

Nor gentle purpose, nor endearing smites, Wanted; nor youthful dalliance, as besecins, Fair couple linked in happy nuptial league, Alone as they.

> He left his cur, and laying hold

Upon his arms, with courage bold
Cried out, 'tis now no time to dally,
The enemy begin to rally.
Hudibrus.
I'll head my people;
Then think of dalliance when the danger's o'er:
My warlike spirits work now another way,
And my soul's tuned to trumpets. Dryden.
One handred thousand pounds must be raised, foe there is no dallying with hunger.

Swift.
DALMANUTHA, in ancient geography, a city of Judea, on the east side of the sea of TiDerias; either the same with Magdala, or situated near it. Hence Mark says, viii. 10, that our Saviour and his disciples landed in the parts of Dalmanutha: while Matthew, recording the same fact, says that they came into the coast or Magdala.
DALMATIA, a country of Europe, in a former maritime division of Austria, was bounded on the north by Bosnia and Croatia, on the east by Servia, and on the south and west by the Adriatic. The country is, as it were, strewed with mountains and hills, which are not altogether unfruitful ; olives, vines, myrtles, and a great variety of palatable and wholesome vegetables growing amongst them. It has also many fertile plains; and feeds considerable numbers of horned cattle and sheep. The rivers of Dalmatia lave no long course, but are mostly navigable. The principal are the Cherka and the Narenta. The air is temperate and pure. The Dalmatians use the Sclavonian language and customs, and profess the Roman Catholic religion.
Dalmatia was distinguished as follows:-1. Hungarian Dalmatia, lying on the upper part of the Adriatic Sea, containing part of ancient Liburnia, and which is more generally called Morlachiz. 2. Venetian Dalmatia, or that part which was possessed by the Venetians, lying to the southeast of Hungarian Dalmatia, and abounds in ancient castles and fortresses. The inhabitants are estimated at 25,000 , and are distinguished by different names, as well as diversity of manners. See Morlachs, and Uhlans. They are warlike, intrepid soldiers, and excellent seamen. The nobiiity and people were well attached to the republic; milaness made them faithful subjects to Venice; their privileges were

\section*{DAL}
respected, and it was dangerous to offend them. The chief towns are Spalatro, the capital, Amissa, Narenta, Sebenico, Trau, and Zara. Besides what the Venetians possessed on the continent, several islands in the Adriatic belong to them, which are considered as part of Dalmatia. This portion belonging to Austria, is strictly the only part to which the name Dalmatia now applies. 3. Turkish Dalmatia, lying east of Venetian Dalmatia. The principal towns are, Herzegovina, the capital, Clinova, and Scardova. 4. The late republic of Ragusa formed another part of Dalmatia.

Dalmatia, Islands of. Besides the islands meluded in the above province, Dr. Oppenheim mentions other seven islands of the late maritime division of Austria, as forming two distinct provinces ; viz. the Four islands of Quarnaro, and the Three Dalmatian islands, peculiarly so called, viz. Brazza, Lesina, and Curtola.

Dalmatia, Lower, or Albania, a province of the late maritime division of Austria, divided from the ci-devant Venetian Dalmatia, by the late republic of Ragusa, and a part of Turkish Dalmatia. It comprehended the canal, town, \&c., of Cattaro, the mountains and valleys of Buda, and the bailiwic of Pastrovichi. It is mountainous, but produces some corn, much oil, and fine fruits. The inhabitants have also collsiderable trade in the Levant.

The name of Dalmatia is said to be derived from the ancient capital Delmium, or Delminium. In the latter ages of the Roman empire this country suffered frequently from the inroads of barbarians, and was finally incorporated with Hungary in the twelfth century. When the Venetians, however, had occupied the sea-coast, they succeeded in the fifteenth century in conquering the interior, which long remained in their possession. By the trcaty of Campo Formio, in 1797, the whole was ceded to Austria; but after the campaign of 1805 Buonaparte claimed it as king of Italy, and afterwards united it with the Illyrian provinces. Cattaro, and the southern part, were in 1806 seized by the llussians; but delivered up to the French at the peace of Tilsit. In the final arrangements of 1814 the whole was again transferred to Austria.

DALRYMPLE (Sir David), an eminent and learned judge of Scotland, born at Edinburgh, Oct. 28th, 1726. He was educated at Eton, and from thence went to Utrecht, where he remained till after the rebellion in 1746. He was admitted a member of the Faculty of Advocates, Feb. 23rd 1748. In March, he 1766, was appointed a lord of Session, and in May, 1776, one of the lords of Justiciary. During this time he wrote several occasional papers, in The World, the Gentleman's Magazine, \&c. In 1773 he published his Remarks on the History of Scotland, which first displayed his talent for minute and accurate enquiry into doubtful points of history. This prepared the public mind for his Annals of Scotland, of whicl the first appeared in 1776 , and the second in 1779, and fully answered the hopes he had excited. In 1786 lord Hailes evinced his unshaken attachment to religious truth, by publishing a 4to. volume, entitled, An Jinquiry into the Secondary Causes, which Mr.

Gibbon has assigned for the rapid progress of Christianity. This was the last work he published; but he attended his duty on the bench till within three days of his death, which happened Nov. 29th, 1792, in the sixty-sixth year of his age. Lord Hailes was twice married ; first to the daughter of the late lord Coalston, and afterward to the daughter of lord Kilkerran, by each of whom he had one daughter. As he left no male issue, his nephew succeeded to his title. IIis knowledge of the laws was accurate and profound; and he applied it in judgment with the most scrupulous integrity. Affectionate to his family and relations, simple and mild in his manners, pure and conscientious in his morals, enlightened and entertaining in his conversation, he left society only to regret that, devoted as he was to more important employments, he had so little time to spare for intercourse with them. His labors in illustration of the history of his country, and many other works of profound erudition, remain as monuments of his accurate and faithful researches for materials, and his sound judgrnent in the selection of them. Besides the works above enumerated, lord Hailes published the following: 1. Memorials and Letters relating to the History of Great Britain, in the reign of James I. 8vo. 1765. 2. The Secret Correspondence between Sir Robert Cecil and James VI. 12mo. 1766. 3. Accounts of the Persecution of Charles II. after the Battle of Worcester, 8vo. 1766. 4. Memorials and Letters relating to the History of Great Britain, in the reign of Charles I. 8vo. 1767. 5. Canons of the Church of Scotland, drawn up in the provincial Synod held at Perth, 1242, 4to. 1769. 6. Historical Memorials concerning the Provincial Councils of the Scottish Clergy, 4to. 7. Aucient Scottish Poems, fronı a MS. of George Bannatyne, 12 mo . 1770 . All in 4 to. in 1787. Lord Ilailes has also left many valuable MSS.

DALTON (John), D.D. an eminent divine and poet, was the son of the Rev. John Dalton, rector of Dean in Cumberland, where he was born in 1709. He was educated at Queen's College, Oxford; and became tutor to lord Beauchanp, only son of the carl of Hertford; during which time he adapted Milton's mask of Comus to the stage, by a judicious insertion of several songs and different passages selected from other of Milton's works, as well as of several songs and other elegant additions of his own, suited to the characters and to the manners of the original author. During the run of this piece he industriously sought out a grand-daughter of Milton's, oppressed both by age and poverty, and procured her a benefit from it, the profits of which amounted to a considerable sum. He was promoted by the king to a prebend of Worcester; where he died on the 2nd of July 1763. Besides the above, he wrote a descriptive poem, addressed to two ladies at their return from viewing the coal-mines near Whitehaven; and Remarks on twelve historical designs of Raplael, and the Museum Grecum et Egyptiacum.

Dalton, a market town of Lancashire. It is seated on the spring-head of a river in a champaign country, not far from the sea; and the ancient castle is made use of to keep the records,

\section*{DAM}
and prisoners for debt, in the liberty of Furness. The church is an ancient, neat building, and has an organ. This town, being in an excellent sporting country, is much resorted to during the season. The port here is large and commodious; and a light-h puse has been erected at the south end of the Isle of Walney. A canal has been cut from the sea up to this town, one mile and a lalf in length, capable of navigating ships of great burden, which is of great advantage to the trade and commerce of the place. Market on Saturday. This is four miles from Ulverston, and \(275 \mathrm{~N} . \mathrm{N} . \mathrm{W}\). of London.

DAM, n.s. \({ }^{2}\) Fr. dame; Span. dama; Heb.
Dame, n.s. ) and Chald. \(\Xi \mathbb{E}\); Arab. ama; Lat. dama, domina; which, however, Minsheu derives from Heb. דמה, to govern; Sans. amma; Teut. ama, to which Thomson thinks Sax. dey, or die, one that gives milk, has been prefixed. A human mother; a female who has borne young animals. Also, a title of honor; a lady; an elderly woman.

But of hirz song, it was as loud and ycrne As any swalow sitting on a berne; Therto she coude skip and make a game, As any kid or calf folowing his dame.

Chaucer. Cant. Tales.
Their dam upstart out of her den effraide, And rushed forth, hurling her hideous taile About her cursed head. Spenser. Fuerie Queene.

This brat is none of mine;
It is the issue of Polixena :
Hence with it, and, together with the dam, Commit them to the fire.

Shakspeare. Winter's Tale.
The dam runs lowing up and down,
Looking the way her harmless young one went,
And can do nought but wail her darling loss.
Id.
Not all these lords do vex me half so much As that proud dame, the lord protector's wife. Id

Bless you, fair dame! I am not to ycu known, Though in your state of honor I am perfect. Id.

Another layeth a well-marked lambe, Or spotted kid, or some more forward stcere, And from the payle doth praise thcir fertile dam.

Bp. Hall. Defiance to Envy.
Who would not repeat that bliss,
And frequent sight of such a dume
Buy with the hazard of his fame?
Waller.
Mother, says a sick kite, let me have your prayers. Alas, my child, says the dam, which of the gods shall 1 go to?
\(L^{\prime}\) Estrange.
They killed the poor cock ; for, say they, if it were not for his waking our dame, she would not wake us.

Id.
Birds bring but one morsel of meat at a time, and have not fewer, it may be, than seven or eight young in the nest together, which, at the return of their dams, do all at once, with equal greediness, hold up their heads and gape.

Ray.
The word dame originally signified a mistress of a family, who was a lady; and it is uscd still in the English law to signify a lady : but in common use, now-a-days, it represents a farmer's wife, or a mistress of a family of the lower rank in the country.

Watts's Logick.

Which As is the hedghog's,
Which sucks at midnight from the wholesome dam Of the young bull, until the milkmaid finds The nipple next day sore asd udder dry. Byron.

No spectre gaunt she saw of bones entwined, With scythe wide brandished as to sweep mankind, But a plump dume, of pampered aspect sly, With fiendlike, scowling merriment of eye.

> Dr. T. Broren.

Dam, v. a. \& n.s. From Gr. \(\bar{c} a \mu a \iota \omega, ~ \grave{c} \alpha \mu a \omega\), to reduce to quiet, or stillness; Ang.-Sax. bemman; Belg. damm. To confine and overcome the force of water; to shut up by moles or banks. To stop up an opening. Shakspeare applies it to fire, and Milton to light, restrained or confined.

I'll have the current in this place dammed up; And here the smug and silver Trent shall run
In a new channel, fair and evonly.
Shakspeare. Henry VI.
The more thou dammest it up, the more it burns.
Id.
Now will I dam up this thy yawning mouth For swallowing the treasure of the realm. Id.

Mon! if your influence be quite dammed up
With black usurping mists, some gentle taper,
Though a rush-candle from the wicker hole
Of some clay habitation, visit us
With thy long levelled rule of streaming light.
Milton.
As when the sca breaks o'er its bounds, And overflows the level grounds, Those banks and dams, that like a skreen Did keep it out, now keep it in.

Hudibras.

> Home I would go,

But that my doors are hateful to my eyes,
Filled and dummed up with gaping creditors,
Watchful as fowlers when their game will spring.
Otuay.
Not with so fierce a rage the foaming food
Roars, when he finds his rapid course withstood,
Bears down the dams with unresisted sway,
And sweeps the cattle and the cots away.
Dryden.
The inside of the dam must be very smooth and straight; and if it is made very sloping on each side, \(i t\) is the better.

Mortimer's Husbandry.
'Tis you must drive that trouble from your soul ; As streams, when dammed, forget their ancicnt current, And, wondcring at their banks, in other channels flow.

Smith.
DAMAGE,v.a.,v.n.\&n.s. \} Fr. domage, Damaceable, adj. dommage; Goth. damnage, from Lat. damnum, injury. To injure hurt, impair; and the injury, or harin done. Damages are an estimated value or supposed, reparation of injury done. Damageable goods are those readily susceptible of injury.

His heart exalts him in the harm
Already done, to have dispcopled heaven,
My damage fondly deemed!
Milton.
Gross errours and absurdities many commit for want of a friend to tell them of them, to the great damage both of their fame and fortune. Bacon.

The lishop demanded restitution of the spoils taken by the Scots, or dumages for the same.

Id.
Such as were sent from thence did commonly do more hurt and damage to the English subjects than to the Irish enemies, by their continual cess and extortion.

Davies.

They believed that they were not able, though they should be willing to sell all they have in Ireland, to pay the damages which had been sustained by the war.
\(I d\).
Damage-feasant. Beasts are said to be damage-feasant, or doing damage, when those of one person are found upon the land of another without his permission and without his fault; for if the owner of a field or enclosure adjoining upon another enclosure neglects to repair his fences, and the beasts pass through, he cannot seize them as damage-feasant. But if the beasts break into a close from the highway, where they were wrongfully left to run at large, the owner of the close may take them up, or distrain them as damage-feasant, though the fence of the close on the side next the highway was defective; for the owner is not obliged to make a fence against beasts where they cannot be lawfully left at large. The owner of land has a right to sue the owner of the beasts in trespass for the damage done by them to his crops, \&c., but the law gives him also the means of stopping the damage, for he may distrain and impound the beasts.

DAMAR, a considerable town and district of Arabia, in the country of Yemen. It is wellbuilt, and has a large castle and a university of the Mussulman sect Zeidi, which, Niebuhr was informed, contained 500 students. It is said to contain 5000 houses. Distant fifty-six miles north of Sana, and ninety-four north-east of Mocha.

DAMASCENE, Lat. damascenus. From Damascus; a plum. See Prunus.

In fruits the white commonly is meaner, as in pears, plums, and damascenes; and the choicest plums are black.

Bacon.
DAMASCENUS (John), an illustrious father of the church in the eighth century, born at Da mascus, where his father, though a Christian, enjoyed the office of counsellor of state to the Saracen caliph, to which the son succeeded. He retired afterwards to the monastery of St . Sabas, and spent the remainder of his life in writing books of divinity. His works have been often printed; but the Paris edition, in 1712, two vols. folio, is esteemed the best.

DAMASCIUS, a celebrated heathen philosopher, born at Damascus, A.D. 1540 , when the Goths reigned in Italy. He wrote the life of his master, Isidorus, and dedicated it to Theodora, a very learned and philosophical lady, who had also been a pupil to Isidorus. In this life, which was copiously written, he frequently made oblique attacks on the Christian religion. We have nothing remaining of it but some extracts preserved by Photius. Damascius succeeded Theon in the rhetorical school, and Isidorus in that of philosophy, at Athens.

DAMASCUS, רחשׁ, Heb. ; a very ancient city of Syria, in Asia. The ancients supposed it to have been built by one Damascus, from whom it took its name; and one of the medals of the city represents a hind suckling a child, supposed to have an allusion to the founder of the city, who is said to have been brought up by dama, a hind, whence his name. This city was in being

in the time of Abraham, Gen. xiv. 15 ; and corsequently may be looked upon as one of the most ancient cities in the world. In the time of David it seems to have been a very considerable place; as the sacred historian tells us that the Syrians of Damascus sent 20,000 men to the relief of Hadadezer, king of Zobah. We are not informed whether, at that time, it was governed by kings, or was a republic. Afterwards, however, it became a monarchy, and proved very hostile to the kingdom of Israel, and would have destroyed it entirely, had not the Deity miraculously interposed in its behalf. This monarchy was destroyed by Tiglath Pileser, king of Assyria, and Damascus was never afterwards governed by its own kings. From the Assyrians and Babylonians it passed to the Persians, and thence to the Greeks, under Alexander the Great. After his death it belonged, with the rest of Syria, to the Seleucidæ, till their empire was subdued by the Romans, about A.A.C. 70. From them it was taken by the Saracens, A.D. 633 ; and it is now in the hands of the Turks.

Notwithstanding the tyranny of the Turkish government, Damascus is still a considerable place. It is situated in a plain of so great extent, that one can but just discern the mountains, which compass it on the other side. It stands on the west side of the plain, about two miles from the head of the river Barrady, which waters it. It is of a long, straight figure, extending about two miles in lengtl, adorned with mosques and steeples, and encompassed with gardens, computed to be full thirty miles round. The river Barrady, as soon as it issues from the clefts of the Antilibanus into the plain, is divided into three streams.; the middle one, which is the largest, runs directly to Damascus, and is distributed to all the cisterns and fountains of the city. The other two seem to be artificial; and are drawn round, one to the rigint, and the other to the left, on the borders of the gardens, into which they are let by little currents, and dispersed every where. This river finally flows into a hollow of the south-east desert, called Behairat-elMerdi, the Lake of the Meadow.

The houses of the city, whose streets are very narrow, are all built on the outside, either with sun-burnt bricks, or Flemish wail ; and yet it is no uncommon thing to see the gates and doors adorned with marble portals, carved and inlaid with great beauty and variety; and, within these portals, to find large courts, beautified with fragrant trees and marble fountains, and surrounded with splendid apartments. In these apartments the ceilings are usually richly painted and gilded; their duans, which are a sort of low stages, seated in the pleasantest part of the room, and elevated about sixteen or eighteen inches above the floor, are floored, and adorned on the sides with variety of marble, mixed in mosaic knots and mazes, spread with carpets, and furnished all round with bolsters and cushions, to the very height of luxury. No city in the world has an equal number of fountains, or more splendid private houses. The interior of some of them is said to contain furniture worth \(£ 5000\) or \(£ 6000\). In this city are shown the church of John the Baptist, now converted into
a famous mosque; the house of Ananias, which is only a small grotto, or cellar, wherein is nothing remarkable; and the house of Judas, with whom Paul lodged. In this last is an old tomb, said to be that of Ananias, which the Turks hold in such veneration, that they keep a lamp continually burning over it. There is a castle belonging to Danascus, which is like a little town, having its own streets and houses; and here a nagazine of the famous Damascus steel was formerly kept. The principal public building worth notice is the Zekia mosque, remarkable for its noble dimensions and general architecture. This is of the Corinthian order throughout; it las two minarets, and is of an oblong figure, crowned by a large stone cupola, supported by four enormous pillars. The gateway is supported by large columns of red granite; on the outside is a superb fountain, which throws the water twenty feet high. Another, with a grove of trees on each side, stands in a spacious court within. Numerous columns support galleries within, and portions of the walls exhibit the remains of mosaic work, with which they were ouce adorned. An hospital for the indigent sick is attached. This mosque is said to have been originally the cathedral church of Damascus. The Christians affirm, that it was dedicated to St. John Damascenus, whose body reposes here; but the Turks call it the mosque of St. John the Baptist. Another mosque is beautifully adorned with all kinds of fine marble, like mosaic pavement; and the tower or minaret of a third, is entirely cased with pantiles. The finest of its numerous hospitals is that constructed by the sultan Selim, consisting of a spacious quadrangle, lined by an interior colonade, which is entirely roofed by forty small domes, covered with lead. ()n the south side of the court there is a mosque, with a magnificent portico, and two exquisite little minarets, surmonnted by a spacious cupola. The patriarch of Antioch has his see at Damascus, where he commonly resides. There is also a Greek, Maronite, Syrian, and Armenian church ; and three convents of Franciscan monks. There are eight Jewish synagogues.

Damascus was, at one time, noted for its general ill-treatment of Europeans; but, although no one can venture to traverse the streets, unless in the Oriental costume, without insult, there is now little difference between the citizens of Da mascus, and those of other eastern cities. A number of persons are generally seen in the streets, calling themselves saints, and appearing like ideots or madmen.

The fruit-tree, called the damascene, and the flower, called the damask-rose, were transplanted from the gardens belonging to this city; and the silks and linens, known by the name of damasks, were first manufactured by its inhabitants. Niebuhr, who has given a plan of this city, makes it 3250 toises, or something less than a league and a-half in circumference, and it probably contains 180,000 inhabitants. The greater part of these are Arabs and Turks; the number of Christians is estimated at 20,000 . Damascus is the rendezvous for all the pilgrims who go to Mecca, from the north of Asia, as

Cairo is for those from Africa. Their number, every year, amounts to from 30,000 to 50,000 , Many of then repair here for four months before the time, but the greatest number only at the eml of the Ramadan. Damascus then resembles ant immense fair ; mothing is to be seen but stranders from all parts of Turkey, and even l'ersia; and every place is full of camels, horses, mules, and merchandise. By means of this caravan, Damascus is become the centre of a very extensive commerce. By Aleppo, the merclaants of this city correspond with Armenia, Natolia, Diarbekir, and even with lersia. They send caravans to Cairo, which, following a route frequented in the time of the patriarchs, take their course by Djesryakoub, 'Tiberias, Naplous, and Gaza. In return, they receive the merchandise of Constantinople and Europe, by way of Said and Bairout. The home consumption is supplied by silk and cotton-stuffs, which are manufactured here in great quantities, and are very well made; by the dried fruits, of their own growth, and sweetmeats, cakes of roses, apricots, and peaches, of which Turkey consumes to the ainount of about \(40,000 \mathrm{lbs}\). The remainder, paid for by course of exchange, occasions a considerable circulation of money, in custom-house duties, and the commission of the merchants. The pachalic of Damascus comprehends nearly the whole eastern part of Syria. In this vast extent of country, the soil and its productions are very various; but the plains of llauran, and those on the banks of the Orontes, are the most fertile; they produce wheat, barley, sesamum, doura, and coiton. This city was one of the objects of Buonaparte's ambition while in the east : a small detachment of his cavalry had defeated the pacha's troops, and he was about to proceed to take possession of Damascus, when he was checked in his progress, in this direction, by British prowess and the disastrous results of the siege of Acre. In the year 1811 the city was menaced by the Wahabees, but the pacha going out to meet them, at the head of 6000 men, they retired. Damascus is 190 miles south of Antioch, 136 N. N. E. of Jerusalem, and 276 S.S.W. of Diarbekir.
Damascls Stefl. See Steel and Cutlery.
DAM'ASK, v.a.\&n.s.) Fr. damasquin; Damasken'ing, n.s. \(\quad\) leal. damaschino.
DAM'ASK-ROSE,n.s. Samask is a silk, first manufactured at Damascus: damaskening an operation of cutlery, whereby the blades of swords and locks of pistols are ornamented, as at Damascus: and damask-rose, a rose variegated, after the manner of damask, with red and white: hence the damask of a cheek.
Not any weaver which his work doth boast In diaper, damask, or in lyne.

Spenser.
Damask-roscs have not been known in England above one hundred years, and now are so common.

Bacon.
And for some deale perplexed was her spirit,
Her damask late, now changed to purest white.

> Fairfar.

They sat recline
On the soft downy bank, damasked with flowers.
Miltua.
F. 2

Wive your shoes, for want of a clout, with a damask napizin. Swift's Rulcs to Servants.
Around him dance the rosy hours, And drmasking the ground with flowers, With ambient sweets perfume the morn. Fenton.
No gradual bloom is wanting from the bud, Nor broad carnations, nor gay spotted pinks, Nor, showered from every bush, the damask-rose. Thomson.
Loud claps the grinning fiend his iron hands,
Stamps with black hoof, and shouts along the lands; Withers the damask cheek, unnerves the strong, And drives with scorpion lash the shrieking throng.

Darwin.
Damask, a silk stuff, with a raised pattern, so that the right side of the damask is that which has the flowers raised above the ground. Damasks should be of dressed silk, both in warp and woof. Those made in France are lialf an ell in breadth.

Damask is also a kind of wrought linen, made chiefly in Flanders; so called, because its large flowers resemble those of damasks. It is chiefly used for tables.

Damaskeening, or Damasking, partakes of the mosaic, of engraving, and of carving; like the mosaic, it has inlaid work; like engraving, it cuts the metal, representing divers figures; and, as in chasing gold and silver, is wrought in relievo. There are two ways of damasking; the one, which is the finest, is when the metal is cut deep with proper instruments, and inlaid with gold and silver wire; the other is superficial only.

DAMAUN, a sea-port in the province of Aurungabad, Hindostan, 100 miles north from Bombay. The Portuguese, who still retain it, reduced this place so early as 1531 . Its houses and churches make a conspicuous figure from the sea; but the commerce is now reduced. Ship-building, however, is carried on to a considerable extent, the teak-forests of the vicinity supplying excellent timber. A slip, coppered, and equipped for sea, in the European style, in 1800, cost about \(£ 14\) sterling per ton, according to Mr. Hamilton. The harbour is commodious for vessels of a small size.

DAMIANISTS, in church history, a branch of the ancient Acephali Severitæ. They agreed with the catholics in admitting the sixth council, but disowned any distinction of persons in the God-head; and professed one single nature incapable of distinction; yet they called God 'the Father, Son, and Holy Ghost.'

DAMIENS (Robert Francis), a French assassin, of some notoriety for his attempt on the life of Louis XV., and for the tortures inflicted on him for that attempt, was born in Artois in 1715. He was the son of a small farmer ; and his character, even in his childhood, procured him the name of Robert le Diable. He enlisted, when young, for a soldier, deserted, and afterwards became the servant of an officer, whom he attended to the siege of Philipsburgh. He was afterwards a domestic in the Jesuits' College at Paris. He finally left sheir service in 1738. He is accused of having afterwards poisoned one of his masters, after which he fled into Flanders. On the last day of the year 1756, he returned
to Paris, whence he proceeded to Versailles; and on the evening of the 5 th of January, 1757, went to the palace, and, as his majesty was about to get into his carriage, to go to Trianon, pushing aside the attendants, made his way up to the king, and stabbed him in the side. He made no effort to escape, but was taken immediately; and, after having been interrogated at Versailles, was transferred to Paris. On his trial he denied having any accomplices, nor did the application of the most cruel tortures wring from him any probable accusation. On being questioned as to the cause of his crime, he said he did not mean to kill the king, and that he could have done it, if he had thought proper. He added, \({ }^{6}\) What I did was, that God might touch the king's heart, and induce him to restore order and tranquillity to the nation. The archbishop of Paris is the sole cause of our troubles.' Having been repeatedly tortured, he was sentenced to be put to death in the same cruel manner with Ravaillac, the murderer of Henry IV.

DAMIETTA, a port-town of Egypt, on the east mouth of the Nile, four miles from the seacoast. The present town stands upon a different site from the ancient Damietta, so repeatedly attacked by the European princes. The latter, according to Abulfeda, was 'a town surrounded by walls, and situated at the mouth of the eastern branch of the Nile.' Stephen of Byzantium informs us, that it was called Thamiatis, under the government of the Greeks of the lower empire, but that it was then very inconsiderable. It increased in importance, in proportion as Pe lusium, which was frequently plundered, lost its power. The total ruin of that ancient town, occasioned the commerce of the eastern parts of the Delta to be transferred to this. It was, however, no longer a place of strength, when, about the year 238 of the Hegira, the emperors of Constantinople took possession of it a second time. The importance of a liarbour, so favorably situated, opened the eyes of the caliphs. In the year 244 of the Hegira, Elmetouakkel surrounded it with strong walls. This obstacle did not prevent Roger, king of Sicily, from takirg it from the Mahommedans, in the year 550 of the Hegira. He did not, however, long enjoy his conquest. Salah Eddin, who about that period mounted the throne of Egypt, expelled the Europeans from Damietta. They returned to besiege it fifteen years after; but the sultan baffled all their efforts. Notwithstanding their land army was supported by a fleet of 1200 sail, they were obliged to make a disgraceful retreat. It was the fate of this place to be often besieged. In the year 615 of the Hegira, under the reign of Eladel, the crusaders attacked it with a very considerable force. They landed on the western shore of the Nile, and their first care was to surround their camp with a ditch and pallisadoes. The mouth of the river was defended by two towers, furnished with numerous garrisons. An enormous iron chain, stretching from one side to the other, hindered the approach of vessels. The crusaders carried, by storm, the tower on the same side with their camp, broke the claain, and opened the entrance of the river for their
fleat. Nejm Eddin, the sultan's son, who was encamped near Damietta, covered it with an army. To stop the enemy's vessels, he threw a bridge over the Nile. 'The Franks overturned it , and the prince adopted the measure of choking up the mouth of the river, which he rendered alnost impassable by several large boats he sunk there. After alternate successes, many bloody battles, and a siege of seventeen months, the Christian princes took Damietta by storm. They did not, however, long enjoy the fruit of so mucl blood spilt, and of an armanent which had cost immense sums. Completely invested near the caual of Achinoun, by the waters of the Nile, and by the Egyptian ariny, they purchased their lives and their liberty by the sacrifice of their conquest. Thirty-one years after this defeat, St. Louis carried Damietta without striking a stroke. The Arabs, however, soon recovered it; but, tired of keeping a place, which continually drew upon them the most warlike nations of Europe, they totally destroyed it, and built another further up in the country. This modern Damietta, first called Menchie, as Abulfeda tells us, has preserved the memory of its origin, in a square still called by that name. Writers, in general, have confounded these two towns, ascribing to the one the attributes of the other.

The present Damietta is of a semicircular form, and stands also on the east bank of the Nile, seven miles and a-half from its mouth. It is reckoned, by Savary, to contain 80,000 souls, but this has been thought an excessive estimate. It has several squares, the most considerable of which has retained the name of Menchie. The bazaars are filled with merchants. Spacious okals, or klans, collecting under their porticos the stuffs of India, the silks of Mount Lebanon, sal ammoniac, and pyramids of rice, proclaim its commercial respectability. The houses, those in particular which are on the banks of the river, are very lofty. . They have, in general, handsome saloons on the top of their terraces, open to every wind; where the Turk, reclining on a sofa, passes his life in smoking, or in looking on the sea, which bounds the horizon on one side; on the great lake that extends itself on the other; and on the Nile, which, running between them, traverses a rich country. Several large mosques, adorned, with minarets, are dispersed over the town. The public baths, lined with marble, are distributed in the same manner as those of Grand Cairo, The linen is clean, and the water very pure. The heat, and the treatment in them, so far from injuring the health, serve to strengthen and improve it, if used with moderation. This custom, founded on experience, is general in Egypt. The port of Damietta is continually filled with a multitude of boats and small vessels. Those called scherm serve to convey the merchandise on board theships in the road, and to unload them : the others carry on the coastingtrade. This town carries on a great thade with Syria, Cyprus, and Marseilles. The rice, called mezelaoui, of the finest quality in Egypt, is cultivated in the neighbouring plains. The exports of it amount, annually, to about six millions of livres. Other articles of the produce of the country are lineris, sal ammoniac, corn, \&c. The Christians
of Aleppo and Damascus, settled in this town, have, for several ages, carried on its principal cominerce. The ball state of the port is very detrimental to 1)anietti. The road, where the vessels lie, being exposed to every wind, the slightest gale obliges the captains to cut their cables, and take shelter in Cyprus, or stand off to sea. The tongue of land, on which Damietta is situated, straitened on one side by the river, and on the other by the western extremity of the lake Menzale, is only from two to six miles wide from east to west. It is intersected by innumerable rivulets in every direction, which render it the most fertile spot in Fgypt. There are many villages around the town, in which are manufactures of the most beautiful linens. The finest napkins, in particular, are made here, fringed with silk. Damietta is 100 miles N.N.E. of Cairo. \({ }^{\kappa}\)

DAMN, v.a.
Damed, part. \& n.s.
Dam'nable, adj.
Dam'nableness, n.s.
Damíably, adv.
Dam'ation, \(n\). s.
Dam'ratory, adj.
Daminify, v.a.
Daminingness, \(n\). s.
Lat. damno; Old Fr. damner; which Minsheu derives from the IIeb. \(=\) า, the shedding of blood in sacrifice or punishment. To condemn; and the state of being con-
demned, temporally or eternally. To curse; to disapprove; to explode. 'Indecently used,' also, as Johnson says, 'in a ludicrous (and triffing) sense.'

I answeride, that it is not eustom to romayns, to dampne ony man before that he that is accused baue his accuseris present. Wicklif. Dedis. 25.

And not as we ben blasfemed, and as sum men seyn, that we seyn, do we yuele things that goode thingis come, whos dampnacioun is just.

Id. Romayss, iii. 8.
For wel thou wost thy selven veraily That thou and I be damned to prison
Perpetual ; us gaineth no rainson.
Chaucer. Cant. Tales.
When now he saw himself so freshly rear,
As if late fight had nought him dumnified,
He was dismayed, and 'gan his fate to fear.
Faerie Quene.
Not in the legions
Of horrid hell ean come a devil more damned
In evils to top Macbeth. Shakspeare. Macbeth.
Let not the royal bed of Denmark be
A couch for luxury and damned incest. Id. Hamlee.
He's a creature unprepared, unmeet for death; And to transport him in the mind he is

\section*{Were damnable.}

Id. Mensure for Measure.
It gives him oceasion of labouring with greater earnestress elsewhere, to entangle unwary minds with the snares of his damnable opinion.

Hooker.
Whence damned viee is shrouded quite from shame, And erowned with virtue's meed, immortal name ! Infamy dispossest of native due,
Ordained of old on looser life to sue.
Bishop Hall. Prologue to Satires.
He that hath leen alfrigbted with the fears of hell, or remembers how often he hath been spared from an horrible damnation, will not be ready to strangle his brother for a trile. Taylor's Worthy Communicant.
He may vow never to return to those sins which he hath had sueh experience of, for the emptiness and damsingness of then, and so think himself a complete penitent.

Hammond.

\section*{DAM}

Now mince the \(\sin\),
And mollify damnation with a phrase:
Say you consented not to Sancho's dcath, But barely not forbade it.

His own impartial thought
Will damn, and conscience will record the fault. Id.
We will propose the question, whether those who hold the fundamentals of faith may deny Christ damnably, in respect of those consequences that arise from them? South's Sermons.
He, who has suffered the damage, has a right to demand in his own name, and he alone can remit, satisfaction : the damnified person lias the power of appropriating the goods or service of the offender, by rigbt of self-preservation.

Locke.

\section*{Dare not}

To brand the spotless virtue of my prince
With falsehoods of most base and damned contrivance.
Rowe.
As he does not reckon every schism of a damnable nature, so he is far from closing with the new opinion of those who make it no crime.

Swift.
The more sweets they bestowed upon them, the more damnably their conserves stunk. Dennis.

You are so good a critick, that it is the greatest happiness of the modern poets that you do not hear their works ; and, next, that you are not so arrant a critick as to damn them, like the rest, without hearing.

Pope.

\section*{Clouds}

Rise curling fast beneath me, white and sulphury, Like foam from the roused ocean of deep Hell, Whose every wave breaks on a living shore,
Heaped with the damned like pebbles.-I am giddy. Byron.
DAMNII, an ancient people of Britain, who inhabited the district situated between the territories of the Selgovæ on the south, and the Caledonii on the north, now called Clydesdale.

DAMOCLES, one of the flatterers of Dionysius the elder, of Sicily. He admired the tyrant's wealth, and pronounced him the happiest man on earth. Dionysius prevailed upon him to undertake, for a while, the charge of royalty, and be convinced of the happiness which a sovereign enjoyed. Damocles ascended the throne, and while he gazed upon the wealth and splendor which surrounded him, he perceived a sword hanging over his head by a single hair. This so terrified him, that all his imaginary felicity vanished at once, and thus represented to him the danger and misery of royal state.

DAMON and Pythias, two illustrious friends of antiquity, who have immortalised their names by the strength and sincerity of their friendship. Damon was a Pythagorean philosopher, who, having incurred the displeasure of Dionysius, tyrant of Syracuse, was condemned to death. He asked a short respite, till he should settle some domestic business, of the utmost importance to his family, but which required his personal presence at some distance from Syracuse. Dionysius agreed to grant his request, upon a condition, which he supposed impossible to be complied with, viz. that Damon should find some person who was willing to suffer death in lis stead, provided he did not return at the time appointed. Pythias, to the surprise of the tyrant, cheerfully surrendered himself as a pledge for his friend Daman; who, after settling
his business, astonished the tyrant still more, by returning punctually at the hour fixed for his execution. Dionysius was so struck with the fidelity of these two friends, that he remitted the punishment, and entreated them to permit him to share their friendship, and enjoy their confidence.

DAMP, r. a., n.s. \& adj.
Damp'ness, n.s.
Damp'ish, adj.
Dampíishness, n.s.
Damp'y, adj.

Sax. and Belg. damp; Teutonic, dumpf. Serenius says from Scyth. daa, rapor. To wet, moisten, make humid; foggy, moist, or heavy air ; and hence to depress, deject, make dull, discourage. Dampish, dampishness, and dampy are diminutives of the same signification.

It has been used by some with great success to make their walls thick; and to put a lay of chalk between the bricks, to take away all dampishness.

Bacon.
A soft body dampeth the sound much more than a hard.
\(I d\).
Night ; not now, as ere man fell,
Wholesome and cool, and mild ; but with black air Accompanied, with damps and dreadful gloom.

\section*{Milton,}

All these and more came flocking, but with looks Downcast and damp: yet such wherein appeared Obscure some glimpse of joy.

Unless an age too late, or cold
Climate, or years, damp my inteaded wing Depressed.
The very loss of one pleasure is enough to damp the relish of another.

L'Estrange.
Nor need they fear the dampness of the sky Should flag their wings, and hinder them to fly;
Twas only water thrown on sails too dry.
Dryden.
She said no more: the trembling Trojans hear,
O'erspread with a damp sweat and holy fear. Id.
This commendable resentment against me, strikes a damp upon that spirit in all ranks and corporations of men.

Swift.
Even now, while thus I stand blest in thy presence, A secret damp of grief comes o'er my thoughts.

Addison.
An eternal state he knows and confesses that he has made no provision for, that he is undone for ever: a prospect enough to cast a damp over his sprightliest bours.

Rogers.
Dread of death hangs over the mere natural man, and, like the hand-writing on the wall, damps all his jollity.

Atterbury.
The heat of the sun, in the hotter seasons, penetrating the exterior parts of the earth, excites those mineral exhalations in subterraneous caverns, which are called damps: these seldom happen but in the summer-time; when, the hotter the weather is, the more freqnent are the damps.

Woodzard.
The lords did dispel dampy thoughts, which the remembrance of his uncle might raise, by applying him with exercises and disports.

Hayward.
Cypress and ivy, weed and wall-flower grown
Matted and massed together, hillocks heaped
On what were chambers, arch crushed, column strown In fragments, chok'd up vaults, and frescos steeped In subterranean damps, where the owl peeped, Deeming it midnight.

Byron.
Damps, in natural history, from the Saxon word damp, signifying vapour, are certain noxi-
ous pxhalations issuing from some parts of the earth, chiefly observed in mines and coal-pits: hough vapors of the same kind often issue from sld lavas of burning mountains, in those countries where volcanoes are common. In mines and coaipits they are chietly of two kinds, called by the miners and colliers the choke and fire-damps. The choke-danp is very much of the nature of fixed air; and usually infests those places which have been formerly worked, but tong neglected, and are known to the miners by the name of wastes. The choke-damp suffocates the miners suddenly, with all the appearances found in those suflocated ly fixed air. Being heavy, it descends towards the lowest parts of the workings, and thus is dangerous to the miners, who can scarcely avoid breathing it. The fire-damp, which seems chiefly to be composed of inflammable air, rises to the roof of the workings, as being specifically lighter than the common atınosphere; and hence, though it will suffocate as well as the other, it seldom proves so dangerous in this way as by its inflammable property, by which it often takes fire at the candles, and explodes with extreme violence. See Coalmines.

Of the formation of these damps we have as yet no certain theory; nor, though the experiments of aerologists are able to show the composition and manner of forming these noxious airs artificially, have they yet thrown much light on the muthod by which nature prepares them on a large scale. There are two general ways in whicl we may suppose this to be done; one bv the stagnation of atmospherical air in old waste places of mines and cual-pits, and its conversion into these mephitic exhalations ; the other by their original formation from the phlogistic or other materials found in the earth, without any interference of the atmosphere. See Gas and Carburetted Hydrogen.

DAMPIER (William), a famous navigator, descended from a respectable family in Somersetshire, and born in 1652 . Losing his father when very young, he went to sea, where he soon distinguished hinself. His Voyage round the World, \&c. are well known, and have gone through many editions. He appears afterwards to have engaged in an expedition concerted by the merchants of Bristol to the South Sea, commanded by captain Woods Rogers; who sailed in August 1708, and returned in September 1711: but no further particulars of his life or death are recorded.

DAM'SEL, n. 8. Goth. damoisell; Ital, and Span. donzella; i. e. a female don, from Lat. dominus. 'A gentlewoman, unmarried, being not a lady,' says Minsheu; and 'quasi parvus dominus, a little lord or master.' Johnson notices its having formerly been applied to both sexes, but gives no instance of it in the masculine. It is now only used in verse.

He seide go ye awey for the damysel is not deed but sleepith, and thei scorneden him.

Wiclif. Mathew 9.

\section*{At last she has}

A damsel spyde slow-footing her before,
That on lier shoulders sad a pot of water bore.
Spenser. Faerie Queene.
With her train of damsels she was gone
In shady walks, the scorching heat to shun.
Dryden.

Kneeling, I my servant's smiles implore, And one mad damsel dares dispute my pover. Prior.
DAM'SON゙, n.s. Corruptly from damascene A small black plum. See Damascexe.

> My wife desired some damsons,

And made me climb with danger of my life.
Shukspeare.
DAN, n. s. From dominus, as now dom in Spain, and Ital. donna, from domina. The old term of honor for men, as we now say master. 'I know not,' says Dr. Johnson, 'that it was ever used in prose, and imagine it to have been rather of ludicrous import.' But Spenser uses it in serious praise of Chaucer, below.

> Old dan Geffrey, in whose gentle spright The pure well-head of poetry did dwellHe whilst he lived was the soveraigne head Of shepherds all. Spenser.

This whimpled, whining, purblind, wayward boy,
This signor Junio's giant dwarf, dan Cupid.

> Shakspeare.

Dick, if thir story pleaseth thee, Pray thank dan Pope, who told it me.
Priur's Almu.

DAN, 27 Heb. i. e. judgment, one of the twelve patriarchs, the fifth son of Jacob. Of his history nothing is recorded, except that he had but one son, named Hushim; though his posterity was afterwards very numerous.

Dan, or the Danites, one of the twelve tribes of Israel, descended from the patriarch Dan. Their number, at the emigration from Egypt, amounted to 62,700 , and they increased in the wilderness. After their settlement in Canaan, a party of them, who went to take Laish, in their way robbed Micah the Ephraimite of his idol, which they continued to worship till they were carried captive by Tiglath Pileser. Samson, the heroic judge of Israel, was of this tribe; and 28,600 of them attended at David's coronation. The Danites appear to have been early acquainted with commerce, for they had ships in the time of Jabin, king of the Canaanites. See Judges v. 17. Their territory extended west of Judah, and was terminated by Azotus and Dora on the Mediterranean.
\(\mathrm{Dan}_{\mathrm{AN}}\) in scripture geography, a city of the Danites, situated on the east side of the springs of Jordan, on the south of Mount Lebanon. It was named Laish or Leshem. Here Jeroboam established idolatry by setting up his golden calves. This city and Beersheba were the two extremities of the kingdom of Israel. Dan was taken and pillaged by Benhadad king of Syria; notwithstanding which it made some figure after the captivity. Some authors say, that it was rebuilt by Philip the tetrarch of Galilee, in our Saviour's time, and nained by him Cæsarea Philippi. It lay east of Sidon and west of Damascus. It is thought by some to be the Lasha of Gen. x. 19.

Das, in modern geography, a considerable river of the United States in North Carolina, whicl has been rendered navigable for hoats a great way up. It unites with the Staunton in Virginia, and forms the Roanoke.

DANAE, in antiquity, a coin somewhat more than an obolus, used to be put into the mouths of the dead, to pay their passage over the river Styx.

Danaf, in fabulous listory, the daughter of Acrisius, king of Argos, by Eurydice. She was confined in a brazen tower by her father, who had been told by an oracle that his daughter's son would put him to death. But Jupiter, who was enamoured of Danae, introduced himself to her bed by changing himself into a shower of gold. From his embraces Danae had a son, with whom she was exposed on the sea by her father. The wind drove the bark which carried her to the coasts of the island of Seriphus; where she was saved by some fishermen, and carried to Polydectes king of the place, whose brother, Dictys, educated the child, named Perseus, and tenderly treated the mother. Polydectes fell in love with her; but, being afraid of her son, he sent him to conquer the Gurgons, pretending that he wished Medusa's head to adorn his nuptials with Hippodamia the danghter of CEnomaus. When Perseus had victoriously finisled his expedition, he retired to Argos with Danae to the house of Acrisius, whom he inadvertently killed. Virgil says that Danae after this came to Italy, and founded the city of Ardea. Some suppose that it was Proctus, the brother of Acrisius, who introduced himself to Danae in the brazen tower; but, whoever was her seducer, the fable of the golden shower plainly implies that the keepers of the tower were bribed. Against such showers, indeed, towers of brass and bars of iron are no defence.

DANAIDES, in fabulous history, the fifty daughters of Danaus king of Argos. When their uncle Egyptus came from Egypt with his fifty sons, they were promised in marriage to their cousins; but before the celebration of their nuptials, Danaus, who had been informed by an oracle that he was to be killed by the hands of one of his sons-in-law, made his daugliters solemuly promise that they would destroy their lusbands. They were provided with daggers, and all except Hypermnestra proved but too obedient to their father's bloody injunctions, as a proof of which they presented him with the heads of their murdered husbands, on the morning after their nuptials. Hypermnestra was summoned to appear and answer for her disobedience in suffering her husband Lynceus to escape; but the unanimous voice of the people declared her innocent, and she dedicated a temple to the godless of Persuasion. The forty-nine sisters were condemned, in hell, to fill with water a vessel full of holes, so that their labor was infinite and their punishment eternal.

DANAUS, in fabulous history, a son of Belus and Anchinoe, who, after his father's death, reigned conjointly with his brother Ægyptus on the throue of Egypt. Some time after a difference arose between the brothers, and Danaus set sail with his fifty daughters in quest of a settlement. He visited Rliodes, where he consecrated a statue to Minerva, and arrived safe on the coast of Peloponnesus, where he was hospitably received by Gelanor king of Argos. Gelanor had lately ascended the throne, and the first years
of his reign were marked by dissensions with his subjects. Danaus took advantage of his unpopularity, and obliged him to resign the crown. The success of Danaus led the fifty sons of Ægyptus to embark for Greece. They were received with hypocritical kindness by their uncle; and soon after all murdered, except lynceus. See Danaides. Danaus at first persecuted Lynceus with unremitted fury; but he was afterwards reconciled to him, and acknowledged him for his son-in-law and successor after a reign of fifty years. He began his reign about A.A.C. 1586; and after death was honored with a splendid monument in Argos, which existed in the age of Pausanias.

DANBURY, a town of the United States of America, in Connecticut, fifty-five miles N.N.E. of New York, and 116 south-west of Boston. This town was settled in 1687, and, with a great quantity of military stores, was burnt by the British on the 26th of April, 1777, but has been rebuilt since the peace. It lies thirty-three miles north-west by west of New Haven.
 Goth. \& Belg. dans; Fr. danse; Ital. danza, from the Heb. \(\gamma 7\), to leap, says Minsheu. To step, or move in measure; to dandle; a motion of one or more musically regulated: one who practises such motions is a dancer; he who teaches them a dancing-master; and a dancing-school the place where they are professedly taught. Dancing is also used for any concerted and regular motion or attendance.
But in the day of eroudis birthe, the daughtir of erodias daunside in the myddil and pleside eroude.

Wiclif. Matt. xiv.
Now his elder son was in the field, and, as he came and drew nigh to the house, he heard music and dancing.

Luke xv.
In olde dayes of the king Artour, 一
The Elf quene with hire joly compagnie
Denced ful ofte in many a grene mede.
This was the old opinion as I rede.
Chaucer. Cant. Tales.
In pestilences, the malignity of the infecting vapour danceth the principal spirits. Bacon.

The honourablest part of talk is to give the occasion, and again to moderate and pass to somewhat else; for then a man leads the dance.

Id.
What say you to young Mr. Fenton? He capers, he dances, he has eyes of youth, he writes verses.

Shakspeare
Thy grandsire loved thee well,
Many a time he dunced thee on his knee. Id.
He at Philippi kept
His sword e'en like a dancer, while I strook
The lean and wrinkled Cassius.
Id.
They bid us to the English dancing-schools,
And teach lavoltas high, and swift courantos; Saying our grace is only in our heels.

Musicians and dancers! take some truce With these your pleasing labours; for great use As much weariness as perfection brings. Donne.
Men are sooner weary to dance attendance at the gates of foreign lords, than to tarry the good leisure of their own magistrates.

Raleigh's Essays.

A certain Egyptian king endowed a dascing-scherb for the instruction of apes of quality. Li' listranyle.

The apes were taught their apes' tricks by a dancingmaster.

Id.
How I loved,
Witness ye days and nights, and all ye hours, That danced away with down upon your feet, As all your business were to count iny passion.

Dryden.
It upbraids you,
To let your father's friend, for three long months, Thus dance attendance for a word of audience.

Id.
The legs of a dancing-master, and the fingers of a musician, fall, as it were, naturally, without thought or pains, into regular and admirable motions.

Locke on Understanding.
Nature, I thought, performed too mean a part, Formirg her movements to the rules of art ; And, vexed, I found that the musician's hand Had o'er the dancer's mind too great command.

Prior.
Midnight shout, and revelry, Tipsy dance. and jollity.

Byron.
Nor short nor slight the sufferance, when the weight
Of frequent \(\operatorname{Sin}\) provokes unpitying Fate;
But for brief mutiny, in frets begun,
And half forgotten e'er the dance is done,
Wild wanderings, more of fancy than of heart,
As light the treason, light the venging smart.
Dr. T. Brown.
Dances, Ancient. There is no account of the origin of dancing among mankind. It is found to exist among the most barbarous and uncivilised nations, and is too intimately connected with the mechanism of the human body to be originally derivable from art. The Greeks were the first people, however, who reduced it to a system. At Athens, it is said, that the dance of the Eumenides, or Furies, on the theatre had so expressive a character as to strike the spectators with irresistible terror; and people imagined they saw in earnest the personified deities commissioned with the vengeance of heaven to pursue and punish their crimes. They had also martial dances, to keep up the warlike spirit of their youth. Plato reduces the dances of the ancients to three classes, viz.
1. Domestic Dances. Of these, some were but simply gambols, or sportive exercises, which had no claracter of imitation, and of which the greater part exist to this day. The others were more complex, more agreeable, figured, and were always accompanied with singing. Among the first or simple ones was the ascoliasmus; which cousisted in jumping, with one foot only, on bladders filled with air or with wine, and rubbed on the outside with oil. The kybestesis was what is called in this country the Somerset. Of the second kind was that called the wine-press, of which there is a description iu Longinus, and the Ionian dances.
2. Mediatorial Dances. These were used in expiations and sacrifices. Among the ancients there were no festivals nor religious assemblies but what were accompanied with songs and dances. They were looked upon to be so essential in these kinds of ceremonies, that to express
the crime of such as were guilty of revealing the sacred mysteries, they employed the word kheista, 'to be out of the dance.' The mostancient of these religious dances is the Baccluc; which was not only consecrated to Bacchus, but to all the deities whose festival was celebratel with a kind of enthusiasm. The most grave and majestic was the hyporchematic; it was executed to the lyre, and accompanied with the voice.At his return from ('rete, Theseus instituted a dance at which he himself assisted, at the head of a numerous and splendid band of youth, round the altar of Apollo. The dance was composed of three parts, the strophe, the antistrophe, and the stationary. In the strophe the movements were from the right to the left ; in the antistrophe from the left to the right. In the stationary they danced before the altar; so that the stationary did not mean absolute pause or rest, but only a more slow or grave movement. P'utarch is persuaded that in this dance there is a profound mystery. He thinks that by the strophe is indicated the motion of the world from east to west; by the antistrophe the motion of the planets from west to east; and, by the stationary, the stability of the earth. To this dance Theseus gave the name of geranos, or 'the crane; because the figures which characterised it bore a resemblance to those described by cranes in their flight.
3. Militury Dances, which tended to make the body robust, active, and well disposed for all the exercises of war. Of these there were two sorts; viz. the gymnopedic, and the pyrrhic. 1. The gymnopedic dance, or the dance of children, was invented by the Spartans for an early excitation of courage in their children, and to lead them on insensibly to the exercise of the arined dance. This dance used to be executed in the public place. It was composed of two choirs; the one of grown men, the other of children; whence, being chiefly designed for the latter, it took its name. They were both in a state of nudity. The choir of the children regulated their motions by those of the men, and all danced at the same time, singing the poems of Thales, Alcman, and Dionysodotus.

The Pyrrhic, or Enoplian dance, was performed by young men armed cap-a-pee, who executed, to the sound of the flute, all the proper movements either for attack or for defence. It was composed of four parts: 1. The podism or footing, which consisted in a quick shifting motion of the feet, such as was necessary for overtaking a flying enemy, or for getting away from him when an overmatch: 2 . The xiphism was a kind of mock fight, in whicl the dancers imitated all the motions of combatants; aiming a stroke, darting a javelin, or dexterously dodging, parrying, or avoiding a blow or tlirust. 3. The komos consisted in very high leaps or vaultings, which the dancers frequently repeated, for the better using themselves occasionally to leap over a ditch, or spring over a wall. 4. The tetracomos was the last part; this was a square figure, executed by slow and majestic movements, but it is uncertain whether it was every where executed in the same manner. Of all the Greeks, the Spartans most cultivated the Pyrrhic dance.

Athenæus relates that they had a law by which they were obliged to exercise their children at it from the age of five years. This warlike people constantly retained the custom of accompanying their dances with hymns and songs. The following was sung for the dance called trichoria, said to be instituted by Lycurgus, and which had its name from its being composed of three choirs, one of children, another of young men, and the third of old. The old men opened the dance, saying, 'In time past we were valiant.' The young men answered, ' We are so at present.', ' We shall be still more so when our time comes,' replied the chorus of children. The Spartans never danced but with real arms. In process of time, however, other nations came to use only weapons of wood on such occasions. Nay, it was only so late as the days of Athenæus, who lived in the second century, that the dancers of the Pyrrhic, instead of arms, carried only flasks, thyrsuses or reeds. But, even in Aristotle's days, they had begun to use thyrsuses instead of pikes, and lighted torches in lieu of javelins and swords. With these torches they executed a dance which was called the conflagration of the world.

Religious dances were not confined to the pagan world. They have been practised both by Jews and Christians. Among the ancient Jews, it appears to have made a part of religious worship on some occasions, as we learn from passages in the Psalms, though we do not find it enjoined as a divine precept. In the Christian churches mentioned in the New Testament, there is no account of dancing being introduced as an act of worship, though it is certain that it was used as such in after ages.

Theatrical or stage dances. The Greeks were the first who united the dance to their tragedies and comedies; not indeed as making part of those spectacles, but merely as an accessary. The Romans copied after the Greeks; but in the reign of Augustus they left their instructors far behind them. Two remarkable men made their appearance at that time, who invented a new species of entertainment, and carried it to a great degree of perfection. These were Pylades and Bathylus, who first introduced among the Romans what the French call the ballet d'action, wherein the performer is both actor and dancer. I'ylades undertook the task of representing, with the assistance of the dance alone, strong and pathetic situations. He succeeded perhaps beyond his own expectation, and may be called the father of that style of dancing which is known to us by the name of grave or serious pantomine. Bathylus, an Alexandrian, and a freedman of Mecænas, took upon himself to represent such subjects as required a certain liveliness and agility. He was handsome in his person; and the two great scourges of Roman follies, Persius and Juvenal, speak of him as the gallant of every woman in Rome. After their death the art gradually sunk into obscurity, and became even entirely forgotten on the accession of Trajan to the empire. Thus buried with the other arts in oblivion, dancing remained uncultivated till about the fifteenth century, when ballets were revived in Italy at a magnificent entertainment
given by a nobleman of Lombardy at Tortona on account of the marriage between Galeas duke of Milan and Isabella of Arragon. At first the women had no share in the public or theatrical dance ; but, in 1681, we find the then dauphiness, the princess of Conti, and some other ladies of the first distinction in the court of Louis XIV. performed a ballet with the opera called Le Triomphe de l'Amour. This union of the two sexes served to enliven and render the spectacle more pleasing and far more brilliant. It was received with so much applause, that in the May of that year, when the same opera was acted in Paris at the theatre of the Palais Royal, it was thought indispensable for the success of that kind of entertainment to introduce female dancers, and they have continued ever since to be the principal support of the opera. Thus, what was at first introduced as a mere accessary to the musical performance, became in process of time its only support ; and this circurnstance excited the emulation of several ballet masters.

Modern dancing is so much the creature of change and fashion, that we feel it impossible to detail its ever-varying steps in a work of science. We must refer our younger readers to the professors of the art ; observing, only, that it seems in itself a natural and most innocent mode of exercise and graceful motion; while, on the other hand, in crowded assemblies, among the suffocating vapors of innumerable lights and breaths, the blood becomes often unnaturally propelled to the breast and head; perspiration is dangerously checked; the lungs are expanded, and the foundation is too often laid of that fatal disease, consumption.
DANCER (Daniel), an extraordinary miser, born near Harrow, in Middlesex, in 1716, of a family who possessed a considerable estate in that county. He succeeded to the family estate in 1736. For upwards of fifty years he led the life of a hermit, having no dealings with mankind but what the sale of his hay necessarily occasioned; and was seldom seen, except when he was out gathering logs from the common, or old iron, or sheep's dung under the hedges. His house was at one time robbed, to prevent which, he fastened up the door, and, by means of a ladder, went in at an upper window, drawing the ladder carefully up after him. He had a sister who lived with him for a number of years, and who left him a considerable increase to his store, at her death ; on which occasion, to put himself in decent mourning, he purchased a pair of second-hand worsted stockings. Even this was an article of luxury, for he commonly wore bands of hay around his legs. He died in 1794, and left his estates to lady Tempest, who had been very charitable to the poor man and his sister.
DANCETTE, in heraldry, an epithet applied to the bordure or ordinary, when very deeply indented, so as to make generally but three points in the breadth of the shield, as fig. 1. a fesse dancette sable, fig. 2, azure two bars indented or. Name James. Double dancette, fig. 3, is an epithet belonging peculiarly to the bend, as argent a bend double dancette, azure, name Henricson.

DANDINI (Cæsar), an historical painter, was born at Florence, and successively studied with Cavalier, Curradi, Passignano, and Christopher Allori, from whom he acquired a very pleasing manner of designing and coloring. He was extremely correct in his drawing, and finished his pictures highly. Several noble altar-pieces in the churches of Florence are of his hand; and one, which is in the chapel l'Annonciata, is particularly admired.

Dandini (Peter), an eminent painter, born at Florence in 1646. He received his first instructions from Valerio Spada, who excelled in small drawings with a pen. He afterwards travelled through most of the cities of Italy, studying the works of those who were most distinguished; and resided long at Venice, where he copied the paintings of Titian, Tintoretto, Paul Veronese, and Correggio. When he returned to Florence the grand duke Cosmo III. kept him perpetually employed, in painting fresco, as well as in oil; his subjects being taken not only from sacred and fabulous history, but from his own fancy, which frequently furnished him with whimsical caricatures. He died in 1712.

DANDIPRAT, n.s., or Dodkin, says Minsheu, 'as little among other money, as a dandiprat or dwarf among other men.' For according to Camden, Henry VII. stamped a small coin of this name. Dr. Johnson says, 'a fool.'
- A very dandiprat and exceedingly deformed. World of Wonders, 1608.
DAN'DLE, v.a. \(\gamma\) Fr.dandiner; Teut.tan-
Dan'dler, n. s. \(\}\) dle; Belg. danden, to trifle. To fondle a child ; to lull it, or dance it lightly up and down. Also to trifle away time; to delay.

> And ye shall suck at the breast,
> Ye shall be carried at the side,
> And on the knees shall ye be dandled.
> Isaiah lxvi. Bishop Lowth's Translation.

Captains do so dandle their doings, and dally in the service, as if they would not have the enemy subdued. Spenser.

Shakspeare.
Sporting the lion ramped, and in his paw Dandled the kid.

Milton.
Motion occasions sleep, a3 we find by the common use of rocking froward children in cradles, or dunding them in their nurses' arms.

Tillotson.

They have put me in a silk gown, and "t gaudy fool's cap; I am ashamed to be dandled thus, and cannot look in the glass without blushing, to sec myself turned into such a little pretty master.

Addisun's Guardian.
DANDOLO (Henry), doge of Venice, was born in 1108, and chosen to that office in 1192. IIe was nearly blind at the period of his election, but neither that circumstance, nor his age, impaired the vigor of his mind, and the events of his government became the principal causes of the greatness of his country. Dandolo induced the senate to join in the fourth crusade, but directed the first efforts of the armament to recover Zara, which had revolted from its allegiance to the republic. He accompanied the expedition to Constantinople, and, on the storming of the city, was the first who leaped on shore. After the various changes with respect to the imperial throne, which succeeded the second siege, Dandolo was nominated emperor, but in consequence of his age, and his pressing ties to \enice, the choice ultimately fell on Baldwin. But Venice. in the slaring of the imperial dominions, of) tained a full moiety, and Dandolo was solemnly invested as prince of Romania. He ended his extraordinary life at Constantinople, at the age of ninety-seven.

Dandolo (Andrew), a learned doge and historian of Venice, was born about 1310. He rose first to the office of procurator of St. Mark, and then to that of doge in 1343. Making war against the Turks with considerable success, he greatly extended Venetian commerce, and opened her trade with Egypt. Genoa bccoming jealous of this trade, a powerful Genoese fleet arrived in the gulf of Venice, and caused so mucl: anxiety to the doge, that it brought on an illness which terminated his life, September 1354. Andrew Dandolo was a correspondent of Petrarch, and to him is ascribed the compilation of the sixth book of the Venetian Laws, and a Chronicle of Venice, written in Latin, and compreliending the History of the Republic, from its conmencement to 1342 . It was first published by Muratori in his collection of original Italian Historians.

DANEGELT, an ancient annual tax of the Anglo-Saxons, first of 1 s . afterwards of 2 s . for every hide of land through the realm, and for maintaining such a numlier of forces as were thought sufficient to clear the British seas ot Danish pirates, who then greatly annoyed our coasts. The danegelt was first imposed as a standing yearly tax on the whole nation, under king Ethelred, A. D. 991. King Stephen, on his coronation day, abrogated it for ever. No church, or church-land paid the danegelt; because, as it is said in an ancient Saxon law, the people of England placed more confidence in the prayers of the church than any military defence they could make!

DANG’ER, v. a., \& n. s. Dangerous, adj.
Dangerously, adv.
Dangerless, adj.
Dang'erousness, n, s.
ing injury: or, says
Minsheu, from iavos, death; but this seems farfetched. To put to risk, hazard, or peril ; a state
of risk or hazard. It lias beer used in an obsolete sense for custody, as in the old French dangier. See the first example.

In danger had he at his owen gise The yonge girles of the diocise, And knew hir counseil and was of hir rede A garland hadde he sette upon his hede.

> Chaucer. Prol. to Cant. Tales.

Fareth every knight thus with his wif as ye? Is this the lawe of king Artoure's hous?
Is every knight of his thus dangerous?
Id. Cant. Tales.
Our craft is in danger to be set at nought.
Acts x .27.
Pompey's son stands up
For the main soldier; whose quality going on, The sides o' th' world may danger. Shakspeare.

He hath writ this to feel my affection to your honour, and to no other pretence of danger.

Id.

\section*{A sort of naughty persons}

Have practised dangerously against your state, Dealing with witches and with conjurors.
Wyser Raymundus, in his closet pent, Laugbs at such daunyer and adventurement; When halfe his lands are spent in golden smoke, And now his second hopeful glasse is broke.

Bishop Hall's Satires. iv. 3.
It is just with God te permit thuse, which think they stand so surely, to fall most dangerously.

Hammond on Fundumentals.
More danger now from man alone we find, Than from the rocks, the billows, and the wind.

Waller.
I shall not need to mind you of judging of the dangerousness of diseases, by the mildness of the part affected.

Boyle.
Already we have conquered half the war, And the less dangerous part is left behind. Dryden.

He showed no less magnanimity in dangerless despising, than others in dangerous affecting, the multiplying of kingdoms.

Sidney,
It is danyerous self-flattery to give soft and smoothing namers to sins in order to disguise. . Mason.

Wealth heaped on wealth, nor truth nor safety buys, The dangers gather as the treasures rise.

Johnson. Vanity of Human Wishes.
Deep in wide raves below the dangerous soil
The sulphurs flame, imprisoned waters boil. Darwin.
fo me, A lmigh:y, in thy mercy shining,
Life's dark and dangerous portals thou didst ope; \(\Lambda\) nd softly cn my mother's lap reclining,

Breathed through my breast the lively soul of hope. K. White.
'Thy days of health, and nights of sleep; thy toils, By danger dignified, yet guiltless; hopes Of cheerful old age and a quiet grave, With cross and garland over its green turf, And thy grand-children's love for epitaph; This do I see-and then I look within- Byron.

Danger, Isles of, three islands in the Pacific Ocean, seen by commodore Byron, in June 1765 ; and which he supposed to be the same with those seen by Quiros, in the beginning of the seventeenth century, and named Solomon's Islands. They were very populous, but so surrounded with rocks on all sides, that it was not safe to attempt to land. 'The islands themselves had a more fertile and beautiful appearance than
any we had seen before,' says this navigator, ' and like the rest, swarmed with people, whose habitations we saw standing in clusters all along the coast. We saw also a large vessel under sail at a little distance from the sloore; but to our unspeakable regret we were obliged to leave the place without further examination, for it was surrounded in every direction by rocks and breakers, which rendered the hazard more than equivalent to every advantage we might procure.' Long. \(169^{\circ} 28^{\prime} \mathrm{W} .\), lat. \(10^{\circ} 15^{\prime} \mathrm{S}\).

DA'NGLE, v.n.) Swed. dingla or dangla,
Dángler, n.s. (seems, as Mr. Todd sug-
Da'ngling, adj. \(S\) gests, the most probable ety mology; but Skinner derives it from Saxon dune, down, and hangan, hanging. To lang loose; to hang on and downwards; to follow. A dangler is a follower.

Go, bind thou up yon dangling apricocks.
Shakspeare.
He'd rather on a gibbit dangle,
Than miss his dear delight to wrangle. Hudibras.
Codrus had but one bed; so short, to boot,
That his short wife's short legs hung dangling out.
Dryden.
But have you not with thought beheld
The sword hang dangling o'er the shield?
Prior.
The presbyterians, and other fanaticks that dangle after them, are well inclined to pull down the present establishment.

Swift.

\section*{A dangler is of neither sex.}

Ralph.
In faithful memory she records the crimes
Or real, or fictitious, of the times;
Laughs at the reputations she has torn,
And holds them dangling at arm's length on scorn.
Cowper. Task.
 God; the fourth of the greater prophets, was born in Judea, of the tribe of Judah, about the thirteenth year of the reign of Josiah, A. M. 3376. He was led captive to Babylon, with other young Hebrews, after the taking of Jerusalem by Nebuchadnezzar, That prince gave them masters to instruct them in the language and sciences of the Chaldeans, and ordered them to be fed with the most delicate viands; but they desired the king's officers to allow them only pulse. The wisdon and conduct of Daniel pleasing Nebuchadnezzar, that monarch gave him several posts of honor. We need not particularise them, or the few events of his life: they are contained in the prophecies universally attributed to him. It is believed that Daniel died in Chaldea, and did not take advantage of the permission granted by Cyrus to the Jews of returning to their own country. St. Epiphanius says he died at Babylon. The prophecies of Daniel concerning the coming of the Messiah, and the other great events of after times, are so clear and explicit, that, as St. Jerome tells us, Porphyry insisted that those which related to the kings of Syria and Egypt, chap. xi., must have been written after the times of Antiochus Epiphanes; whereas this prophecy was translated into Greek 100 years before his time, and was in the hands of the Egyptians, who had no particular kindness for the Jews or their religion. Josephus says the prophecies foretelling the successes of Alexander, chap. viii. 5, xi. 3, were shown to him
by the Jews, in consequence of which they obtained several privileges from him. Artiq. lib. xi. c. 8. The style of Daniel is not so !ofty and figurative as that of the other prophets; but it is more clear and concise, and his narrations and descriptions are simple and natural; in short, he writes more like a historian than a prophet. I'art of his book, viz. from the fourth verse of chapter ii. to the end of chapter vii. was originally written in Chaldee, all the rest of the book is in Hebrew. The first six chapters are a history of the kings of Babylon, and what hefel the Jews under their government. In the last six he is altogether prophetic, foretelling not only what should happen to his own church and nation, but events in which foreigrı princes and kingtoms were concerned; and some of which appear to be even yet unfulfilled.

Daniel (Gabriel), a celebrated Jesuit, and one of the best French historians, was born at Rouen in 1649. He taught polite literature, plitosophy, and divinity, among the Jesuits; and was superior of their house at Paris, where he died in 1728. There are a great number of his works published in French, of which the principal are: 1. A History of France, of which he also wrote an abridgment, in 9 vols. 12 mo . 2 . A History of the French Militia, in 2 vols. 4to. 3. An Answer to the Provincial Letters. 4. A Voyage to the World of Descartes. 5. Letters on the Doctrines of the Theorists, and on Probability. 6. New Difficulties relating to the Knowledge of Brutes: and, 7. A Theological Treatise on the Efficacy of Grace.

Daniel (Samuel), an eminent poet and historian, born near Taunton in Somersetshire, in 1562, and educated at Oxford; but, leaving that University without a degree, he applied himself to English history and poetry under the patronage of the earl of Pembroke. He was afterwards tutor to the lady AnnClifford; and, upon the death of Spencer, was created poet laureat to queen Elizabeth. In king James's reign he was appointed gentlemian extraordinary, and afterwards one of the grooms of the privy clamber to the queen consort. He wrote a History of England, several dramatic pieces, and some poems, and died in 1619.
DANK, n.s.\& adj. ? Swed. dunk; Germ.
Da'neish. \} tunck. Skinner says, from the kindred German word tunken. Damp, moist, humid; or inclining to that state. Milton uses dank as a substantive.

He her the maiden sleeping found,
On the dank aad dirty ground. Shakepeare.
They bound me, bore me thence,
And in a dark and dankish vault at home There left me.

Id.

> Yet oft they quit

The dank, and rising on stiff pinions cour The mid aereal sky.

Milton.
Through each thicket dank or dry,
Like a black mist, low creeping, he held on
His midnight search.
Id.
To wash the skins of beasts and fowls herewith, would keep them from growing dank in moist weather.

Grev.
Each dank steam thè reeking marsh exhales, Contagious vapours, aud volcanic gales. Darwin.

Along the leaguered wall and bristling bank. Of the armed river, while with strageling liuht The stars peep through the vapours dim absl dank.

Byron.
DANMONII, an ancient British mation, supposed to have inhabited the tract of country now called Cornwall and thevonshire, bounded on the: south by the British Ocean, on the wrst by cit. George's Channel, on the north by the Severn Sea, and on the cast hy the country of the Durotrices. Some other British tribes were aloo seated within these limits: as thic Cossini and Ostidamnii, which were probably particular clans of the Ianmonii. V'tolemy names a few places, both on the sea-coasts and in the inland parts of their country, which were known to the Romms. The most considerable of these are the famous promontories of Bolerium and Ocrinium, now the Landsend and the Lizard; and the towns of Isca Danmoniorum and Tamare, now Exeter and Saltash. After the departure of the Ronmans kingly government was immediately revived amongst the Danınonii in the person of Vortigern.
1)ANTE (Aligheri), a most distinguished port of Italy, was born at 1 -lorence in 1265 , of an ancient and honorable family. Boccaceio, who lived in the same period. Las left a very curious and entertaining treatise, on the life, sturlies, and manuers of this extraordinary man; whom he regarded as his master, and for whose wemory he professed the highest veneration. He relates that Dante, before he was ten years old, conceived a passion for the lady whom he has immortalised in his poems. IHer age wats near his own; and her name was Beatrice, the daughter of Folco Portinari, a noble citizen of llorence. The passion of Dante, however, seems to have been of the platonic kind; but or the death of his mistress, at the age of twenty-four, he fell into a deep melancholy, from which his friends endeavoured to raise him, by persuading him to marriage. He followed their advice, but unfortunately made choice of a Xantippe. The poet, not possessing the patience of Socrates, separated from her, and never afterwards admitted her to his presence. In the early part of his life he gained some credit in a military character; distinguishing himself by his bravery in an action where the Florentines obtained a signal victory over the citizens of Arezzo. He became still more eminent by the acquisition of civif honors; and at the age of thirty-five rose to be one of the chief magistrates of Florence, bein:r elected by the suffrages of the people. Italy was at that time distracted by the contending factions of the Gibellines and the Guelphs: the latter, among whom Dante took an active part, were again divided into the Blacks and the Whites. Dante, says Gravina, exerted all his influence to unite these inferior parties; but his efforts were ineffectual, and he had the misfortune to be unjustly persecuted by those of his own faction. A powerful citizen of Florence, named Corso Donati, had taker measures to terminate these intestine broils, by introducing Charles of V'alois, brother to Philip the Fair, king of France. Dante, with great vehemence, opposed this disgraceful project, and obtained the banishment of

\section*{D A N TE.}

Donati and his partizans. The exiles applied to pope Boniface VIII., and by his assistance succeeded in their design. Charles of Valois entered Florence in triumph, and those who had opposed his admission were banished in their turn. Dante took refuge at Signa, and afterwards at Arezzo, where many of his party were assembled. An attempt was made to surprise the city of Florence, bya small army which Dante is supposed to have attended; but the design miscarried, and our poet wandered to various parts of Italy, till he found a patron in the great Candella Scala, prince of Verona, whom he has celebrated. The high spirit of Dante was ill suited to courtly dependence; and he is said to have lost the favor of his Veronese patron by the rough frankuess of his behaviour. From Verona he retired to France, according to Manetti ; and Boccacio affirms that lie disputed in the theological schools of Paris with great reputation. The election of Henry count of Luxemburgh to the empire, in November, 1308, afforded Dante a prospect of being restored to his native city, as he attached himself to the interest of the new emperor, in whose service he is supposed to have written his Latin treatise De Monarchiâ, in which he asserted the rights of the empire against the encroaclınents of the papacy. In 1311 he instigated Henry to lay siege to Florence ; in which enterprise, however, he did not appear in person. The emperor was repulsed by the Florentines; and his death, in 1312, deprived Dante of all hope of reestablishment in Florence. After this he passed some years in Italy, in a state of poverty and distress, till he found an establishment atRavenna, under the protection of Guido Novello da Polenta, the lord of that city, who received this illustrious exile with the most endearing liberality, continued to protect him through the few remaining years of his life, and extended his munificence to his ashes. Eloquence was one of the many talents which Dante eminently possessed, and on this account he was employed on fourteen different embassies. Guido sent him to negociate a peace with the Venetians, who were preparing to attack Ravenna. Manetti asserts that he was unable to procure a public andience at Venice, and returned to Ravenna by land, from his apprehensions of the Venetian fleet; when the fatigue of his journey, and the mortification of failing in the attempt to preserve his patron from the impending danger, threw him into a fever, which terminated in death on the 14th of September, 1321. He died in the palace of lis friend; and the affectionate Guido paid the most tender regard to his memory. He commanded the body to be adorned with ornaments, and after being carried on a bier through the streets of Ravenna, by the most illustrious citizens, to be deposited in a marble coffin. He himself pronounced the funeral oration, and expressed his design of erecting a splendid monument in honor of the deceased: a design which his subsequent misfortunes rendered him unable to accomplish. This was afterwards done by Bernard Bembo, the father of the cardinal of that name. Boccacio asserts that Dante began his Inferno, the work which has i 'mortalised his name, and finished seven cantos of it before his exile; that in the plunder of
his house, on that event, the beginning of his poem was fortunately preserved, but remained for some time neglected, till its merit being accidentally discovered by an intelligent poet named Dino, it was sent to the marquis Malespina, an Italian nobleman, by whom Dante was then protected The marquis restored these papers to the poet, and intreated him to proceed in the work. To this incident we are probably indebted for this celebrated poem, which Dante must have continued under all the disadvantages of an unfortunate and agitated life. It does not appear at what time he completed it; perhaps before he quitted Verona, as he dedicated the Paradise to his Veronese patron. The very high estimation in which this production was held by his countrymen, appears from a singular institution in the republic of Florence; which, in 1373, assigned a public stipend to a person appointed to read lectures on it. The critical dissertations that have been written on Dante are almost as numerous as those to which Homer has given birth; the Italian, like the Grecian bard, having been the subject of the highest panegyric, and of the grossest invective. Voltaire has spoken of him with that precipitate vivacity which so frequently led him to insult the reputation of the best writers. But more temperate and candid critics have sufficiently vindicated his claims as an original and most captivating poet. There are many valuable editions of his works, among which it will be sufficient to specify those of Conte Zapato, Venice, 1767, 3 vols. 4to.; and Parma, Bodoni, 1796, 3 vols. folio. There is an English translation of his Comedia by the Rev. H. Boyd; and another and much better by the Rev. H. F. Carey of Chiswick.

DANTON (George James), a celebrated French politician, who took an active part, during the French revolution, in erecting those bloody tribunals, and establishing that despotic power, to which he himself fell a victim. He was born at Arcis sur l'Aube, in 1760; was bred to the law, and became an advocate: with regard to religious opinions, he openly avowed himself an atheist ; and, in politics, he was a decided republican: but having differed with Robespierre he was accused of monarchical opinions, and, being condemned by the revolutionary tribunal, was guillotined with eight other deputies at Paris on the 5 th of April, 1794, in the thirty-fourth year of his age.

DANTZIC, or Dantzig, the capital of West Prussia, is seated on a branch of the Vistula, about five miles above its embouchure into the Baltic. This city is famous irt history on several accounts, particularly as having been formerly at the head of the Hanse towns. It is large, beautiful, populous, and rich; its houses being generally five stories high, and many of its streets planted. It is traversed by two branches of the Vistula, and consists properly of three towns: the Vorstadt, or Fore-town ; the Aldstadt, or Old-town; and the Rechstadt. The suburbs, called Old and New Scotland, are the best built parts of the place; and the Scotch have considerable privileges here, in consequence, as they tell us, of their gallant defence of the town under one of the family of Douglas, when it was besieged by the

Poles. In the time of king Charles II. there were ahout 53,000 of that nation in the neighbourhood, and Sir John Denham and Mr. Killigrew were sent to tax them by the poll, with the king of Poland's licence; which having obtained, they brought home \(£ 10,000\) sterling, besides their charges in the journey.

Dantzic has a noble harbour; and is still an eminent commercial city, although it seems to have past its meridian: which it enjoyed probably about the time that the president De Thou wrote his Historia sui Temporis, in which he speaks so highly of its commerce and grandeur. It was then a republic, claiming a small adjacent territory, about forty miles round, under the protection of the king and republic of Poland. Its magistracy and the majority of its inhabitants are Lutherans; although other religious professions are tolerated. It lias twenty-six parishes, with many convents and hospitals; and contains four dock-yards for building merchantmen. It has an annual fair, called the fair of St. Dominic, which begins on the 5th of August. Accounts are kept in florins, the value of which is much less than that of Holland or Germany, being not quite equal to \(9 \frac{1}{2} d\). sterling. The chief public buildings are the cathedral, the church of St . Catherine, the Jesuits' college, the town-house, the arsenal, and the court of the nobles. The inhabitants were once computed to amount to 200,000 ; but later computations, and its memorable connexion with the late continental wars, have reduced them to little ahove 40,000 or 45,000.

The road, or gulf of Dantzic consists of an arm of the sea, sheltered from north winds by a tongue of land on which stands the small town of Hela. Its own shipping is numerous, but the foreign ships constantly resorting to it are more so: of these the British are the most in number, particularly when our corn laws admit of the importation of that commodity; Poland being the greatest magazine for corn in all Europe, and Dantzic the principal port for its exportation. Besides which, Dantzic exports considerable quantities of naval stores, potash, linen, and amber. The value of these, and still more that of corn, is of course fluctuating, but \(£ 1,500,000\) sterling is considered a fair average of the annual value of its exports. See our article Corn Laws. It imports, from various parts of Europe, wine, oil, groceries, woollens, silk, iron, copper, lead, skins, and furs.

Dr. Busching affirms that, as early as the year 997, Dantzic was a considerable commercial city. The inhabitants have often changed their masters, and have been under the protection of the English, Dutch, French, and Prussians in succession. The city is surrounded with ramparts which mount upwards of 100 brass cannon ; and although it could not, through its situation, stand a long siege, by the facility it possesses of inundating the neighbourhood it has offered, as in 1807, an effectual resistance to assailants. In 1734 the inhabitants discovered a remarkable attachment and fidelity towards Stanislaus, king of Poland, not only when his enemies the Russians were at their gates, but even in possession of the city. This city was exempted by Frede-
rick the Great, king of l'russia, from those clams which he made on the neighbouting countries; notwithstanding which, lrederick William H., his successor, seized its territories, under pretence of their having heen formerly part of l'olish Prussia, and possessed himself of the port-duties. In 1784 it was blockaded by his troops, on various pretences; but by the interposition of the empress of Russia, and the king of Poland, they were withdrawn; and, a compromise having taken place, the city was restored to its former immunities. In 1793 the king of Prussia seized on the city itself with the remainder of the province, which he added to his dominions. Its internal government, lowever, was undisturbed ; and thus it remained until 1807 , when the French entered it after a long siege, and held it until the peace of 1814, when it returned to Prussia. It was blockaded for a great length of time previously, and ably, though not very humanely, defended by general Rapp. The German is the language in common use here. Dantzic is sixtyeight miles W.S.W. of Konigsberg, thirty southeast of Marienburg, and 235 north-east of Berlin.
DANUBE, the largest and most considerable river in Europe, rising in the Black Forest, near Zunberg, and running north-east through Suabia, by Ulm the capital of that country, then running east through Austria, it passes by Ratisbon, Passau, Ens. and Vienna. It then enters Hungary, and runs south-east from Presburg to Buda, and so on to Belgrade ; after which it divides Bulgaria from Morlachia and Moldavia, discharging itself by several channels into the Black Sea, in the province of Bessarabia. Towards the mouth it was called, by the ancients, the Ister; and it is now said that four of the mouths are clooked up with sand, and that there are only two remaining. It receives sixty rivers, great and small, int its course; and runs near to, or washes the following cities and towns:-Eschingen, Ulm (where it begins to be navigable), Donawert, Neuburg, Ingoldstadt, Passau, Lintr, Ips, Steill, Vienna, Preshurg, Raab or Javarın, Comorn, Waitzen, Pest, Buda, Belgrade, \&c. \&c. It is so deep between Buda and Belgrade, that both the Turks and Christians have had men of war upon it ; and yet it is not navigable to the Black Sea, on account of the cataracts. The Danube was generally supposed to be the northern boundary of the Roman empire in Europe. It was worshipped as a deity by the Scythians. It abounds in fish, and particularly in a large kind of sturgeon.

Danube, Circle of the Upper, one of the chief divisions of the kingdom of Bavaria. It has on its frontiers the circles of the Rezat, the Regen, and the Iser; Tyrol, the lake of Constance, and Wirtemberg. It contains 4350 square miles, and 470,000 inhabitants, mostly Catholics. The capital is Eichstadt, and the other chief towns are, Neuburg, Nordlingen, Dillingen, Gunzburg, Hochstadt, Pappenheim, Donauwerth, and Ingoldstadt. The surface is in general hilly, diversified with forests and lakes, particularly in the direction of the Suabian Alps: and, besides the Danube, it is watered by the Iller and the Lech. In the low country, corn, hemp, and flax abound,
but the majority of the peasantry rear cattle. Iron, coal, and copper, are the mineral productions, and in the towns the manufacture of paper and linen is carried on.

Danube, Circle of the Lower, another circle of Bavaria, consists of the greater part of Lower Bavaria Proper, and the principality of Passau. It borders on Bohemia, U pper Austria, and the circles of the Iser and Regen. Its area is 4335 square miles, and its inhabitants amount to 396,150 . The surface is an alternate successiorr of mountains, valleys, and plains. It is also traversed by the Inn, the IIz, and the Iser. The climate is mild except in the north-west; and the tracts on the south side of the Danube are so fertile in corn as to be accounted the granary of Bavaria: they have besides an excellent breed of horses. The chief productions are corn, flax, and hemp. In the larger towus there are manufactures of linen and other cloths, which, together with the natural productions, produce a brisk trade in the Danube, the Iser, and the Inn. The capital is Passau.

DANVERS, a township of Massachusetts, in Essex county, adjoining Salem on the north-west, in which it was formerly comprehended by the name of Salem village. It consists of two parishes, and was incorporated in 1757.

DANVILLE, a post town of the United States, in Kentucky, situated in a large fertile plain on Dick's River. It consists of about eighty houses. Thirty-five miles S.S.W. of Lexington, and 830 from Philadelphia.-Also a township in Vermont.

DAP, or DAPE, v. n., probably the same with Dab, which see. Dr. Johnson says it is a corruption of dip.
I have taught him how to catch a chub by dapping with a grasshopper.

Walton.
DAPAT'ICAL, adj. Iat. dapiteus, sumptuous. Bailey.
DAPHNE, in ancient geography, a small district on the lake Samachonites, in the Higher Galilee, very pleasant, and plentifully watered with springs, which feed theLesser Jordan, whence its name seems to arise, probably in imitation of that near Antioch.

Daphne, in botany, spurge laurel ; a genus of the monogynia order and octand ria class of plants; natural order thirty-first, vepreculæ: cas. none: cor. quadrifid and marcescent, enclosing the stamina: fruit a monospermous berry. Species thirty, of which the following are the most remarkable. -
1. D. gnidium, the flax-leaved daphne, is a low deciduous shrub: native of Italy, Spain, and about Montpelier. This species seldom grows higher than three feet. The branches are very slender, and ornamented with narrow, spear-shaped, pointed leaves, much like those of the common flax. The flowers are pros duced in panicles at the ends of the branches: they are small, come out in June, but are rarely succeeded by seeds in England.
2. D. laureola, the spurge lanrel or evergreen daphne; a low evergreen shrub, common in some parts of this kingdom, also in Switzerland and Fiance. This shrub seldom grows more than a yard or four feet high : it sends out many
branches from the bottom, and these are covered with a smooth light-brown bark that is very thick. The leaves sit close to the branches, and are produced in such plenty, that they have the appearance, at a small distance, of clusters at the end of the branches. They are spear-shaped, shiuing, smooth, and thick; their edges are entire. These leaves, when growing under the drip of trees, spread open, and exhibit their green color, pure, and untarnished: when planted singly, in exposed places, they naturally turn back with a kind of twist, and the natural green of the leaf is often alloyed with a brown tinge. This shrub is also valuable on account of the fragrance of its flowers; it blows the beginning of January, and will continue until the middle or latter end of April before the flower falls off. They make but little show; being small, and of a greenish yellow. They are succeeded by oval berries, which are first green, and afterwards black when ripe.
3.D.mezereum, the mezereon, or spurge olive, is a low deciduous shrub. It is a native of Germany, and has also been discovered in some woods near Andover in Hampshire. Of this elegant plant there are four varieties: 1.The white; 2. The pale red \(; 3\). The crimson; and 4 . The purple flowering. They are of low growth, seldom arising to more than three or four feet in lieight, and, therefore, are proper even for the smallest gardens. They will be in bloom in February, nay, sometimes in January, when few trees, especially of the shrubby tribe, present their honors. Each twig has the appearance of a spike of flowers of the most consummate lustre; and, whether beheld near or at a distance, it has a most enchanting appearance, and the air is perfumed with their odors to a considerable distance. Besides the beauty of the leaves, which come out after the flowers are fallen, and which are of a pleasant green color and an oblong figure, it will be full of red berries in June, which continue growing till the autumn. The root of the mezereon was long used in the Lisbon diet-drink, a remedy said to be good for several complaints, particularly nodes and other symptoms resisting the use of mercury. The composition of this diet-drink is described in the Edinburgh Physical Essays, by Dr. Donald Monro. On chewing the root it proves very pungent, and its acrimony is accumulated about the fauces, and is very durable. It is employed chiefly under the form of decoction; and enters the decoctum sarsaparillæ compositum of the London college; but it has also been used in powder combined with some inactive one, as that of liquorice root. It is often usefully combined with mercury. The bark of the root, which is the most acrimonious part, is recommended, in the Pharmacopøia Chirurgica, to be steeped in vinegar, and applied to promote the discharge of issues. Mezereon has also been of use in tumors and cutaneous eruptions. The whole plant is very corrosive; and six of the berries, it is said, will kill a wolf. A woman gave twelve grains of the berries to her daughter who hall a quartan ague; she vomited blood, and died immediately.
4. D. villosa, the hairy-leaved daphne, a low deciduous shrub; native of Spain and Portugal.

The stalks are ligheous, about two fect high, and send forth branches alternately from the sides. The leaves are spear-shaped, plane, hairy on both sides, andi grow on very short foot-stalks. The flowers have very narrow tubes, are small, and make no great show; they come out in June, and are not succeedcd by ripe seeds in England. This shrub, in some situations, retains its leaves all winter in such beauty as to cause it to be ranked among the low-growing evergreens; but in others it is sometimes shattered with the first black winds.

Daphise, in the Pagan mythology, daughter of the river Peneus by the godless Terra, of whom A pollo became cnamoured. This passion had been raised by Cupid; with whom Apollo, proud of his late conquest of the serpent I'ython, liad disputed the power of his darts. Daphne heard with horrot his addresses, and endeavoured to avoid his importunity by flight. Apollo pursucd her, and Daphne intreated the assistance of the gods, who changed her into a laurel. Apollo crowned his head with the leaves of the laurel, and ordered that that tree should be for ever sacred to his divinity.

Daphne, a daughter of Tiresias, priestess in the temple of Delphi. She was consecrated to the service of Apollo by the Epigoni, or according to others by the goddess Tellus. She was called Sibyl on account of the wildness of her looks and cxpressions when she delivered oracles. Her oracles were generally in verse; and Homer, according to some, has introduced much of her poetry in his compositions.

DAPMNEPHORIA, a festival in honor of Apollo, celebrated every ninth year by the Bœotians. It was then usual to adorn an olive bough with garlands of laurel and other flowers, and place on the top a brazen globe. on which were suspended smaller ones. In the middle were placed a number of crowns and a globe of inferior size, and the bottom was adorned with a saffron-colored garment. The globe on the top represented the sun or Apollo. That in the middle was an emblem of the moon, and the other of the stars. The crowns, which were 365 in number, represented the sun's annual revolution. This bough was carried in solemn procession by a beantiful youth of an illustrious fanily, and whose parents were both living. He was called \(\delta a \phi \nu \eta \phi \circ \rho o s\), daphnephorus, laurelbcarer; and at the time executed the office ot priest of Apollo. Behind him followed a train of virgins with branches in their hands. In this order the procession advanced as far as the temple of Apollo Ismenius, where supplicatory hymns were sung to the gods.

DAPIININ, in chemistry, the bitter principle of the laurel, first discovered by M. Vauquelin. From the alcoholic infusion of this bark the resin was separated by its concentration. On diluting the tincture with water, filtering, and adding acetate of lead, a vellow daphnate of lead fell, from which sulphureted hydrogen separated the lead, and left the daphnin in small transparent crystals. Thcy are hard, of a grayish color, a bitter taste whon heated, evaporate in acrid acid vapors, sparingly soluble in cold, but moderately in boiling water.

Vol VII.
D.AP'IFER, n.s. Lat. and old Ir. dapefer, a dish carrrier : formerly an officer of consuderable: rank at our coronations, and those of the kinsi- ot France. See Corovarion.

In France the barons and great men gave in like manner their attendance at the king's court. Such were the dupifer, butler, chamberlain, constable, chancellor, and others. Madox's Hist. of the Eache'q.

DAP'l'ER, adj. \} Belg. dapper; T'eut.
Dabiberling, n.s. \(\}\) tappir; which sigmfy brave, valiant; and therefore Dr. Johnson thmhs this word is generally applied in contempt. Ihat Minsheu suggests its possiblc derivation from dapifer (see above), and well defines it, neat; spruce; dainty. Dapperling is a diminutuve of dapper.

The dapper diteis that I won't devise To please youths' fancy.

Spenser. Shepherd's Cabender.
And on the tawny sands and shelves,

\section*{Trip the pert fairies and the dapper clves. Milton.}

A pert dapper spark of a magpie fancied the lirds would never be governed till himself should sit at the helm.

L'Estranye.
DAP'PLE, v. \(a\). \& adj., from apple, as pommelé in the French. To variegate; to streak with different colors: that which is so streaked or variegated.

Horses that are duppled turn white; and old squir. rels turn grisly.

Bacon.
But under him a grey steed did be wield,
Whose sides with dappled circles were endight.
Spenser.
The gentle day
Dapples the drowsy east with spots of grey.
Shakspeare.
Come, shall we go and kill us venison?
And yet it irks me the poor dappled fools,
Being native burghers of this desert city,
Should, in their own confines, with forked heads,
Have their ronud haunches gored.
Id.
The lark begins his flight,
From his watch-tower in the skies,
Till the dappled dawn doth rise. Milton.
The dappled pink, and blushing rose,
Deck my charming Chloe's hair. Prior
The gods, to curse Pamela with her prayers,
Gave the gilt coach and dappled Flanders mares.
Pupe.
Dar, Dart, or Dace, n. s., a fish. See Dace.

Darabjirb, or Darab-guierd, a town of Persia, in the province of Kerman, surrounded by groves of lemon and orange trees, yielding such abundance of fruit that the juice is exported to every part of Persia. It is watered by a copious streain. A-considerable portion of the town is in ruins, but it contains a population of 10,000 or 15,000 , and was formerly very cclebrated, being supposed to lave been founded by the Darius Nothus of ancient historians. It was invested by Lootf Ali Khan, in the year 1794, but he was compelled to relinquish the siege. Distant 150 miles north-east of Schiras.

DARAII, or Dras, a country of Northein Africa, bounded on the north by Morocco, Gezula, and Tafile, on the east and the south by the Great Deseit, and on the west by Suz. It takes its name from the river Darah, or Dras, which
passes through it, and is absorbed in the desert. The principal produce is indigo and dates. The inhalitants are Arabians and Mahommedans, and some of the districts of the country are dependencies of Morocco. It contains a superior breed of goats. Copper and antimony are found in the mountains, and in the southern part, at Atta and Takka, are places of rendezvous for the great caravan which passes to Timbuctoo from Morocco.

DARANTASIA, in ancient geography, a town of the Centrones, in Gallia Narbonensis, between Lemincum and Augusta Protoria, called Forum Claudii by the Romans. It is now called Moûtiers.

DARAPTT, among logicians, one of the modes of syllogisms of the third fiyure, whose premises are universal affirmatives, and the conclusion is a particular affirmative: thus,
\(\mathrm{D}_{\mathrm{AR}}\) Every body is divisible;
ap- Every body is a substance;
TI. Therefore, some substance is divisible.
DARCET (John), a French physician and chemist, was born in 1725, at Douazit in Guienne. Being dissarded by his father, who was a magistrate, for preferring the study of medicine to the profession of the law, he was obliged, while pursuing his studies, to teach Latin for his support, at Bourdeaux. Here he became acquainted with Montesquieu, with whom he went to Paris in 1742; remaining with him as a literary assistant till his death. He afterwards went with the duke de Lauraguais into Germany, and had an opportunity of critically examining the Hartz mines, in Hanover. At the peace he applied himself to technical chemistry, and the improvement of the porcelain manufacture, respecting which he drew up several memoirs presented to the Academy of Sciences in 1766 and 1768. He also demonstrated, about this time, the combustibility of the diamond; on which subject he addressed the academy in 1770. In 1762 he was made regent of the Faculty of Medicine at Paris; in 1771 he married the daughter of the chemist Rouelle; and in 1774 travelled over the Pyrences, to study the geology of those mountains. He succeeded Macquer as a member of the Academy of Sciences, and director of the manufactory of Sevres, and became afterwards inspector-general of the assay of coins, and of the gobelin manufactory. His valuable life was preserved during the reign of terror, by Fourcroy, who procured the obliteration of his name from Robespierre's list ; and he died in 1801, a member of the Institute, and of the conservative Senate.

DARDANELLES, two ancient and strong castles of Turkey, one of which is in Romania, and the other in Natolia, on each side of the ancient Hellespont, now the strait of Gallipoli, which opens a communication between the Archipelago, and the Propontis, or sea of Marmora. The mouth of the canal is four and a half miles over; and the castles which were built in 1659, to secure the Turkish fieet from the insults of the Venetians, are defended on each side by fourteen brass guns with chambers like mortars, to receive granite balls. They are twenty-two feet long, from twenty-five to twenty-eight inches
diameter in the bore, and lie on a paved terrace near the level of the water. They are called the Old Dardanelles, to distinguish them from two others built at the entrance of the strait, about ten miles to the south-west, one of which stands in like manner in Asia, and the other in Europe and called the New Dardanelles. The ships that come from Constantinople are searched at the castle on the side of Natolia. The passage betwixt both these pairs of castles was forced by a British fleet under admiral Duckworth, in February, 1807.
DARDANIA, in ancient geography, 1. A district of Mœsia Superior on the south, now the south part of Servia, towards the confines of Macedonia and Illyricum. 2. A small district of Troas, along the Hellespont. 3. The ancient name of Samothracia ; from Dardanus, who removed thither.
DARDANUS, a son of Jupiter and Electra, who, after the death of his brother Jason, left Samothrace, his native country, and passed into Asia Minor, where he married Batia, the daughter of Teucer king of Teucria. After the death of his father-in-law, he reigned sixty-two years. He built the city of Dardania, and was reckoned the founder of the kingdom of Troy. He was succeeded by Erichthonius. According to some, Corybas, his nephew, accompanied him to Teucria, where he introduced the worship of Cybele. Dardanus taught his subjects to worship Minerva, and he gave them two statues of the goddess, one of which is well known by the name of Palladium. According to Virgil, Dardanus was originally an Italian.
Dare, v. a., v.n. \& n. s. \(\begin{array}{r}\text { Sax. dearren, } \\ \text { Darelve, adj. } \\ \text { Belg. and Teut. } \\ \text { Darren; Lat. au- } \\ \text { Daring, adj. \& n.s. } \\ \text { Daringly, adv. } \\ \text { Daringness, n. s. }\end{array} \quad \begin{aligned} & \text { dere; probably } \\ & \text { from the Greek }\end{aligned}\) Oapןєı, to adventure. To be confident; to be prepared or bold for any purpose; to challenge; to defy. In Shakspeare only do we find dare used as a substantive. In Beaumont and Fletcher's Maid Tragedy, it is used for affrighting or amazing: and this seems to be the meaning in the phrase, to dare a lark or bird.

Dar ony of ghou that hath a cause aghens a nothir be demed at wicked men, and not at hooli men?

Wicklif. 1 Cor, vi.
She was so propre, and swete, and likerous,
I dare well sain if she had ben a mous
And he a cat he wolde hire hente anon
Chaucer. Cant. Tales.
'Ah! dame,' quoth he, 'thou temptest me in vaine
To dare the thing which daily yet I rew;
And the old cause of my continued paine
With like attempt to like end to renew,'
Spenser. Faerie Queene.
I dare do all that may become a man; Who dares do more, is none.

Shakspeare.
Sextus Pompeius
Hath given the dare to Cæsar, and commands The empire of the sea.

We might have met them dareful, beard to beard, And beat them backward home.

Shrimps are dipped up in shallow water with little round nets, not much unlike that which is used for daring larks.

Carew.
Dare to be true! Nothing can need a lie,The fault that needs it must grow two thereby.

Herbert.
He had many days come half seas over; and sometimes passing further, came and lay at the mouth of the harbour, daring them to fight.

Kinolles.
Time! I dure thee to discover
Such a youth, and such a lover. Dryden.
As larks lie dared 10 shun the hobby's flight. Id.
Masters of the arts of policy thought that they might even defy and dare Providence to the face.

South.
The song too daring, and the theme too great.
Prior.
The last Georgick has many metaphors, but not so daring as this: for human passions may be more naturally ascribed to a bee than to an inanimate plant.

Addison.
Some of the great principles of religion are every day openly and daringly attacked from the press.

Attcrbury.
Your brother, fired with his saccess, Too daringly upon the foe did press.

Salifax.
Grieve not, \(\mathbf{O}\) daring prince, that noble heart.
Pope.
He turned not-spoke not-sunk not-fixed his look,
And set the anxious frame that lately shook:
He gazed-how long we gazc despite of pain,
And know, but dare not own, we gaze in vain!
Byron.
But with the breath which fills
Their mountain-pipe, so fill the mountainecrs
With the fierce native daring which instils
The stirring memory of a thousand years,
And Evan's, Donald's fame rings in each clansman's ears!
\(I d\).
On that warm sod, uncrossed by wanderer's path, Some youthful blushing sweetness dares the hath; Half bold, half trembling, her last vesture thrown, Safe from all eyes, yet shrinking from her own.

\section*{Dr. T. Brovon.}

DARES, a Phrygian, who lived during the Trojan war, in which he was engaged, and of which he wrote the history in Greek. This history was extant in the time of Ælian; the Latin translation, now extant, is universally believed to be spurious, though it is attributed by some to Cornelius Nepos. This translation first made ats appearance A. D. 1477, at Milan. Homer mentions Dares, Iliad, lib. v., ver. 10, \& 27.
DARFUl, Darfoor, or Fur, a large kingdom of Central Africa, between Abyssinia and Bornou. We are indebted for all our knowledge of it to Mr. Browne, who resided here from 1793 to 1796 . According to this writer it is bounded on the east by Kordofan, and the conntry of the Shilluks, which separates it from Sennaar and Abyssinia ; on the west by Rergoo, which divides it from Begherme and Bornou; while the regions to the south are occupied by barbarous nations, extending to, and inhabiting the Mountains of the Moon, and the rise of the Bahr-el-Abiad. It does not seem to contain any great river or lake ; during the dry season, therefore, all nature wears a parched and barren appearance; but the rainy seasou begins in June
and continues till September. This is the sowing season, and the king, with his attendants, goes out into the fields, and makes, with his own hand, the first holes in the ground. Water and vegetation are now most abundant. In the south the tamarind, plane, and sycamore are found. The heglig and the nebbek, having very hard wood, are two species peculiar to Darfur. A kind of bean and pea, used not for foorl but for being strung in beads, seems also indigenon. 3 here. Other plants largely produced are the mimosa nilotica, yielding a gum which is carried into Egypt; the water melon, the gourd, Cayenne pepper, hemp, and tobacco. But a sinall quantity of wheat is raised; the principal grains are the dokn, a species of millet, and another species of larger size, called the kassob. The harvest is conducted by women and slaves, who break off the ears with their lands, and carry it away in baskets; while the straw is left standing. The grain being threshed, is buried in the earth to preserve it. It is ground and boiled for food, and eaten either with milk or the juice of a particular kind of herb, which lias a bitter and slightly acid taste.

The wild animals are the lion, hyena, leopard, wild buffalo, wolf, and jackall: herds of the jackall and hyena are said to enter the villages at night. Here are also found the rhinoceros, the elephant, the camelopardalis, the hippopotamus, and the crocodile ; and still more abundantly the invaluable camel. The horses, asses, and sheep are inferior, but goats and horned cattle are numerous, and their flesh very good.

Gold is plentiful both to the east and west, and very fine copper is brought from the south. The rocks consist chiefly of gray granite; containing alabaster, various kinds of marble, sulphur, and fossil salt.
The houses are built of clay, with a coating of plaster; the roofs being flat, and formed of light beams of wood, with a clay covering. A house containing two dongas, the apartment for the slowage of property, two knournacs and two sukteias, both sleeping and sitting rooms, is considered fit for the accommodation of persons of supreme rank.

Mr. Browne did not conceive that the population could be more than 200,000 souls. Cobbe, the capital, contains about 6000 ; our traveller heard only of eight other considerable places, Sweini, Kourma, Cubcabia, Ril, Cours, Shoba, Gidid, and Gelle; although a native of the country named to Dr. Seetzen more than fifty. The capital is wholly occupied by foreign merchants, from Egyot and the eastern countries of Dongola, Kordołan, and Sennaar. Other great towns abound also with Arabs and other foreigners

On the death of the monarch, the crown, which is perfectly despotic, descends to the eldest son; or is seized by any stronger or more popular member of the royal family. The military have, in this case, the chief influence, and are always much courted. The usual residence of the sultan is at a village near Cobbe, called El Fasher. Mr. Browne, being admitted to an audience of state, found the monarch scated on his throne, under a lofty canopy, composed

DAR
of various stuffs of Syrian and Indian fabric, hung loosely on a light frame of wood, and spread with small Turkey carpets. The ministers, or meleks, were seated at some distance on the right and left, and behind them was a line of guards, bearing a spear and target, with caps, in which a black ostrich feather was stuck. The ground in front was filled with spectators and petitioners, to the number of 1500 . On the monarch's left hand stoorl a person whose employment was to sound his praises, and who vociferated continually, 'See the buffaloe, the offspring of a buffaloe, a bull of bulls, the elephant of superior strength, the powerful sultan Abd-el-rach-man-ed-rashid.' His revenue is derived from various sources, and often collected by troops who march through the territory, and seize the cattle until it is paid. The king is also an extensive merchant, exporting and importing every year a large quantity of goods on lis own account.

The religion of Mahomet is professed universally and zealously. But the people are cheerful in their dispositions; and the females not immured, nor, unless in the case of the great, are their faces veiled. A fermented liquor called merise, the same with the bouza of the negroes, is universally indulged in, however, and by both sexes. The men sometimes sit whole days over it. The intercourse of the sexes is extremely licentious, and polygamy has no bounds. The Furians are also considered as by no means conspicuous for honor or even honesty. No property is found to be safe out of the sight of the owner.

The grand intercourse of Darfur is with Egypt, and is carried on entirely by caravans, whose motions from Fur are, however, extremely uncertain, and sometimes two or even three years elapse without one. The caravau going to Egypt is much larger than the one returning, and often consists of 2000 camels. The water is carried in goat-skins or ox-hides, artificially covered to prevent evaporation, and every tenth camel is loaded with straw and beans. Among the articles sent to Egypt, the most important are slaves, taken in the negro countries of the south; ivory, the horns, teeth, and hide of the rhinoceros, the hippopotamus, and the camel. The imports comprise beads of all sorts, toys, glass, arms, light cloths, Barbary caps, carpets, silks, shoes, and writing-paper in large quantities. Commerce is transacted entirely by barter. There is also a considerable intercourse with Mecca, which takes the route by Suakem and Jidda, as much shorter than that by Egypt.

DARIC, in antiquity, a famous gold coin, first struck by Darius the Mede, about A.A.C. 538; probably during his stay at Babylon. From thence the darics were dispersed over the east, and into Greece; where they were also called stateres, and were the gold coins best known in Athens in ancient times. According to Dr. Bernard, the daric weighed two grains more than our guinea. Plutarch says, they bore on one side an archer clothed in a long robe, and crowned with a spiked crown, holding a bow in his left hand, and an arrow in his right; and on the other side the effigies of Darius. There were afterwards half darics.

Darifen, or Terra Firma Proper, once the nortliern division of Terra Firma, or Castile del Oro, is now a province of Colombia, and is bounded on the north by the Spanish Main, or Caribbean Sea; on the east by Carthagena; on the west by Panama; and on the south hy the Pacific Ocean, and the province of Choco. Darien is one of the largest provinces of Tierra Firme: It is about 230 miles long, and eighty broad.
The Gulf of Darien, which is the mouth of the Rio Atrato, or rather a large arm of the Atlantic, is the most important part of the northern coast, and contains several islands of considerable size. The rivers are very large, but few of them navigable, owing to the shoals, bars, and rapids, in which they abound; most of them, liowever, yield grains of gold.
The province of Darien is thinly inhabited, and almost wholly by native tribes, who amoun. perhaps to 30,000 ; the unhealthiness of the clinate and the inpenetrable forests preventing the formation of European settlements. The valleys are so marshy, from the overflowing of the rivers, that the natives generally build their habitations in the branches of high trees.

The clief products are cotton and tobacco. The mouth of the Atrato, though wide, has many shoals; yet it serves to export much of the internal produce of the neighbouring provinces, and is a noted smuggling station, where European goods are exclanged for the gold of Choco. A small fort whicl protects the gold mines of Cana is the principal station on the frontiers of Choco: its garrison is sent monthly from Panama.

Santa Cruz de Cana is the capital, and was formerly a considerable place. There were also at one time nine other towns or missions, and several hamlets; but most of them have been abandoned. In this province the Scotch attempted a settlement in 1699; and for this project a fund was subscribed, amounting to about \(\mathfrak{£} 900,000\) sterling. The plan, however, completely failed, partly, it is said, through the jealousy of the English, but chiefly from the unhealthiness of the climate. Of 1200 individuals who embarked for the colony, not above thirty survived.
Darien, a town of the United States, in Liberty county, Georgia, on the banks of the North Channel of the river Alatamaha, ten miles below Fort Barrington.

DARII, in logic, one of the modes of syllogism of the first figure, wherein the major proposition is an universal affirmative, and the minor and conclusion particular affirmatives : thus,
\(\mathrm{D}_{\mathrm{A}}\) - Every thing that is moved is moved by another;
R1- Some body is moved ;
I, Therefore, some body is moved by another. Darius the Mede. See Cyaxares II.
DARK, v. a., n. s. \& adj,
Dark'en, v. a. \& n.s.
Dark'ener, n.s.
Dark'tsi, adj.
Dark'ling, part.
Dark'ly, udv.
Dark'ness, n.s.
Dark'some, adj.
Darki-woreing, adj.
Saxon, deorck Irish dorch. By antiphrasis, from ס६orw, to see, says Minsheu. To deprive of light (one of our oldest verbs, as Mr. Todd remarks): the state
of being so deprived : not light; opaque; obscure ; blind. Hence ghoomy, not cheerful; not of a showy or vivid color. To darken is to make, as well as to grow, or gradually become, dark. Darkish is dusky; that which is approaching a black or dark color. Darkling is a poetical participle to express the state of being without light. The meaning of the other derivatives seems sufficiently obvious.

And the sumne was derked and the eir, of the smoke of the pitt.

Wiclif. Apoc. 9.
Then the priest shall look: and, behold, if the bright sputs in the skin of their fesh be durkish white. Bible. Lev. 14.
Who hath delivered us from the power oi darkness, and translated us into the kingdom of his dear Son.

Colossians.
Ther saw I first the derke imagining
Of felonie and alle the compassing ;
The cruel ire, red as any glede,
The pikepurse, and eke the pale drede.
Chawer. Cant. Tales.
Fair when that eloud of pride, which oft doth dark Her goodly light, with smiles she drives away.

Spenser.
For light she hated as the deadly bale,
Ay wont in desert darkness to remaine,
Where plain none might her face see, nor she see any laine.

Spenser. Faerie Queene.
What may seem dark at the first, will afterwards be found more plain.

Hooker.
Such was his wisdom, that his confidence did seldoun darken his foresight, espeeially ir things near at hand.

Bacon.
You must not look to have on image in any thing lightsome; for even a face in iron, red-hot, will not be sren, the light confounding the small differences of lightsome and darksome, which shew the figure. Id.

Come, thick night,
A nd pall thee in the dunnest smoke of hell, That my keen knife see not the wound it makes; Nor heaven peep through the blanket of the dark, To cry, hold ! hold!

Shakspeare. Macbeth.
Fleance, his son, who keeps him company, Must embrace the fate of that dark hour.

Shakspeare.
Meantime we shall express our darker purpose.
Id.
The instruments of darkness tell us truths ; Win us with linnest trifies, to betray us In decpest consequence.

Darkling stands
The varying shore o' the world
Cloud and ever-during dark
Surrounds me! from the cheerful ways of men
Cut off.
Milton.
He, here with us to be,
Forsook the courts of everlasting day,
And ehose with us a darksome house of mortal clay,
The wakeful bird
Sings darkling, and, in shadiest covert hid, Tunes her nocturnal note.

Id.

The age, wherein he lived, was dark; but he Could not want sight, who taught the world to see.

Denhum.
The lusts and passions of men do sully and darken their minds, even by a natural influence. Tillotson.

Thou wretched daughter of a dark old man, Conduct my weary steps. Dryden and Lee's (kidepus.

For well you know, and can record alone, What fame to future times conveys but darkens down.

> Dryden.

Mistaken blessing, which old age they call, 'Tis a long, nasty, darksome hospital.
ll.
All the light truth has, or can lave, is from the clearness and validity of thuse preofs upon which it is received; to talk of any other light in the understanding, is to put ourselves in the dark; or in tue power of the prince of durkness. Locke.

Whether the durkened roon to muse invite, Or whitened wall provoke the skewer to write. Pope.

All men of dark tempers, according to their degree of melancholy or enthusiasm, may lind convents fitted to their humours.

Addison on Italy.
Foul ministers, dark-working by the force
Of secret, sapping gold.
Thomson.
Must helpless man, in ignorance sedate,
Roll darkling down the torrent of his fate ?
Must no dislike alarm, no wishes rise,
No eries invoke the mercies of the skies?
Johnson. Vanity of Haman Wishes.
Their quickness is owing to their presumption and rashness, and not to any hidde \(u\) irradiation that in a moment dispels all darkness from their minds.

Burke.
Dark will thy doom be, larker still
Thine immortality of ill. Byron. Siege of Corinth.
So do the dark in soul expire,
Or live like Scorpion girt by fire
So writhes the mind Remorse hath riven, Unfit for carth, undoomed for heaven,
Darkness above, despair beneath
Around it flame, within it death !
Byron.
DAR'LING, adj. \& n.s. Sax. deorling, the diminutive of dear. Favorite; beloved. One much beloved.

Lo my child whom I have chosen; my derlyng in whom it hath wel plesid to my sonl, I schal putte my Spirit on hym : and he schal telle doom to hethene men.

Wiclif. Matt. 12.
Young Ferdinand they suppose is drowned, And his and my loved darling.

Shakspeare.
In Thames, the ocean's darling, England's pride,
The pleasing emblem of his reign does glide.
Halifax.
She became the darling of the prineess.
Addison.
Have a care lest some beloved notion, or some darling seience, too far prevail over your mind. Watts.
Id. And to find out our most beloved \(\sin\), let is consider what are those worldly objects or amusements which give us the highest delight; this, it is probable, will lead us directly to some one of our darling iniquities.

Musin.
The text, that sorts not with his darling whim, Though plain to others, is obscure to hum.

Corper. Progress of Error.
Save me, oh ! save me, from the sword dividing;
Give me my darling from the jaws of death;
Thee will I praise, and, in thy nane coafiding,
Proclaim thy mercies with my latest breath.
K. Whitc.

DARLINGTON, a county of the United States, in Cheraws district, South Carolina, bounded on the south and south-west by I.ynch's

\section*{DAR}

Creek. It is thirty five miles long, and twentyfour broad.

Darlington, a town of Durham, situated on a flat on the river Skerne. It stands on the great road from London to Edinburgl. It has a weekly market, and, excepting January and February, a fair once a fortnight through the year. This town carries on linen and woollen manufactures. A curious water machine for grinding optical glasses, and spinning linen yarn, has been erected here; the invention of a native of the town. It is nineteen miles south of Durham, and 247 north by west of London.

DARMSTADT, a neat town of Germany, the capital of the grand duchy of Hesse. It was fortified by a wall in 1330. The town contains a regency, a court of appeals, a consistory, and criminal court. The prince of Hesse Darmstadt entered into the late confederation of the states of the Rhine, and, by the treaty of alliance, received the title of grand duke, and royal lighness. The palace of the landgrave Louis ViI., and the modern residence of the grand duke, with its beautiful gardens, are principal objects: to which may be added, the town church with the tombs of the landgraves; the state house; the pædagogium, or academy; the public library; the library of the grand duke; the cabinet of natural history (containing a number of curious fossils); the military school ; and the building appropriated to military exercises, an edifice 300 feet by 150 , and capable of containing 3000 men . It is situated on a river of the same name, thirty miles north-west of Heldelberg, and contains 13,000 inhabitants.

Darn, or Dearne, v. a. \& adj. Ang.-Sax. leorn, secret, or concealed ; Arm. and Wel. darne, a patch. To sew up, or conceal holes or rents by imitating the original texture : solitary ; secret.

By many a dearne and painful perch, Of Pericles the careful search
Is made. Shakspeare. Pericles.
He spent every day ten hours in his closet, in darning his stockings, which he performed to admiration. Swift.
Will she thy linen wash, thy hosen darn? Gay.
DAR'NEL, Sax. derren, hurtful. A grass of the temulentum species, hurtful to corn.

But while people were asleep, his enemy came, and sowed darnel among the wheat.

Matt. xiii. 25. Campbell's Translation.
He was met even now
Srowned with rank fumiter and furrow-weeds, Darnel, and all the idle weeds that grow In our sustaining corn.

Shakspeare.
No fruitful crop the sickly fields return; But oats and darnel choak the rising corn. Dryden.
DARNLEY'S Island, a beautiful island in the Eastern seas, in Torres Strait, between New Holland and New Guinea. It is about fifteen miles in circumference, and varied with hills and plains covered with vegetation. The inhabitants are stout, and exseed the ordinary size. The men go perfectly naked, and the women nearly 80. They dwell in conical huts, disposed in villages, and adorned with two or three human
skulls, and several strings of hands, five or six on a string. Their arms are bows and arrows, lances, and long clubs; and they have handsome canoes from fifty to seventy feet in length. They are apparently a treacherous race. Loug. \(142^{\circ}\) \(59^{\prime} 15^{\prime}\) E., lat. \(9^{\circ} 39^{\prime} 30^{\prime \prime} \mathrm{S}\).

DARRAIN', v.a. Old Fr. desrener. By Junius referred to dare. 'It seems to me,' says Dr. Johnson, 'more probably deducible from arranger la battaille.' To prepare, or range troops for battle ; to commence single combat.

And on the morwe, or it were day light, Ful prively two harneis hath he dight,
Both suffisant and mete to darreine
The bataille in the field betwix him tweine.
Chaucer. Cant. Tales.
Therewith they 'gan to hurlen greedily, Redoubted battle ready to darraine. Spenser,
Comes Warwick, backing of the duke of York; Darrain your battle; for they are at hand. Shakspeare.
The town-boys parted in twain, the one side calling themselves Pompeians, the other Cæsarians; and then darraining a kind of battle, but without arms, the Cæsarians got the over hand.

Carew's Survey of Cornwall.
D.ART, v.a., v. n. \& n. s. Fr., Teut. and Arm. dard; Swed. dart ; Ital. dardo ; from Gr. סo \(\rho\). To throw a missile, or short lance; to project any thing offensive; to emit ; to fly as 2 dart ; to let fly. As a substantive, it is the weapon thrown or darted.

In alle thingis take ghe scheeled of feith in which ghe moun quenche all the fyry dartis of the worste.

Wiclif. Effesies vi.
Now, darting Parthia, art thou struck. Shakspeare.
He wets his tusks, and turns, and dares the war; The invaders dart their javelins from afar. Dryden.

O'erwhelmed with darts, which from afar they fling,
The weapons round his hollow temples ring.
Id.
Pan came, and asked what magick caused my smart; Or what ill eyes malignant glances dart. Pope.

See, prompt to ill, the insiduous foe
Now couched in secret bend the bow,
Now to the string adjust the dart
That thirsts to wound the guiltless heart.
Merrick's Psalms.
Glad zephyr leads the van, and waves above
The barbed darts, and blazing torch of love;
Reverts his smiling face, and pausing flings
Soft showers of roses from aurelian wings.
Darwin
And that sarcastic levity of tongue,
The stinging of a heart the world hath stung,
That darts in seeming playfulness around,
And makes those feel that will not own the wound; All these seemed his. Byron.

DARTFORD, a market town of Kent, in the road from London to Canterbury. Here was a celebrated nunnery, which Henry VIII. converted into a royal palace, and which is now a gentleman's seat. The river Darent will admit boats to bring up goods to the town. The first paper-mill in England was erected on this river by Sir John Spilman, to whom king Charles I. granted a patent with \(£ 200\) a-year to encourage the manufactory. On this river also was the first
mill for slitting iron loars to make wire. The town was the first that engaged in the rebellion of W'at Tyler and lack Straw: the market on Saturday is well supplied with provisions. It is seven miles west of Gravesend, fifteen east by south of London.
I)ARTMOOR, an extensive moor and forest in Devonshire, reaching from Brent to Oakhampton, twenty miles from south to north, and between fie and fifteen miles broad from east to west. It contains abont 80,000 acres, and is watered by the river Dart. Many sheep are bred here, but of a small kind, and snbject to the rot. The chief riches of the inhabitants of the villages are their black catte, which thrive well on the coarse herbage. Some thousands of acres of land have lately been cleared, and plantations formed; much barren ground has also been converted into tillage, under the direction of colonel Tyrwhit, by order of his late majesty, when prince of Wales. The French prison, formerly on this moor, is converted into an agricultural settlement for the poor.

DARTMOUTLI, a sea-port town in Devonshire, seated on the river Dart, near its fall into the sea : said to have been formerly called Clifton. It is an ancient corporation, and a borough town, sending one member to parliament. The town is large, well built, and populous; but the streets are narrow, though well paved. The harbour is large and safe, capable of containing 500 slips; and the inhabitants have a considerable trade to the south of Europe, and to Newfoundland. Dartmouth is esteemed a great nursery for seamen, the fishery employing nearly 3000, a certain number of which the owners are obliged by act of parliament to select from land men. It has a weekly market on l'riday for corn and provisions, and one almost every day for fish. It was burnt in the reign of Richard I. by the French, and again in the reign of IIenry VI. They attempted it afterwards, but were repulsed, chielly by the bravery of the women. Beside a great slaughter which was made, they took M. Castel the French general, three lords, and thirtytwo knights, prisoners. It lies thirty mites S.S. W. of Exeter, and 204 west by south of London.

Dartmouth, a thriving sea-port town of the United States, in Bristol county, Massachusetts, situated on the west side of the Accushnet, seventy miles south of Boston. It was incorporated in 1664.

Dartmoutn, a town of the United States, in Elliert county, Georgia, situated on the peninsula formed by the confluence of Broad and Savannah rivers, two miles from Fort James Dart-mouth.-Also a town of the United States, in Grafton county, New Hanıpshire, north-west of the foot of the White Mountains : thirty-three miles north-cast of Haverhill, and eighty-seven northwest of Portsmouth.

DAlRWAR, also called Nasserabad, a town and fortress of the province of Bejapore, Hindostan. Although not regularly fortified, it is by nature very strong, and the ditches are good. The town is situated to the south of the fort, and is surrounded by a wall and ditch. In the year 1685 it was taken from the king of Bejapore by

Aurungzebe, and, soon after the deccase of that monarch, fell into the hands of the Mabrattas. from whom it was taken by Tippoo in 1784, and retained by him till the year 1791, when it was retaken by the Mahrattas, assisted hy the British, after a tedious siege of twenty-nine weeks. It has been lately ceded to the British.

DARW1N (Erasmus), an English plysician and poet, was horn in I ecember, 1731, at E!Iston, near Newark. After receiving the early part of his colucation at ('hestorfichl, he was sent to St. John's College, Cambridge, where he sturdied medicine, and took his bachelor's degree in 1755. He was elected to one of Lord ('hesterfithl's scholarships, worth about fic per anmum. (On leaving Cambridge, he attended the lectures of I)r. Ilunter in London, and afterwards completed his medical studies at ledinburgh, where he took the degree of M. D. Ile first settled at Nottinghan, as a physician; but, not meeting with the practice he hoped for, be went to Litclifield, where his knowledge and acquirements were justly appreciated. In 1757 he married the danghter of Charles Inward lisq., who died in 1770, leaving him three sons. Not long after the death of his wife, Dr. Darwin commenced his laborious work, the Zoonomia, bnt which he declined publishing for above twenty-five years. He next wrote his Botanic (iarden, and The Loves of the I'lants. About 1780 Dr. Darwin married the widow of colonel Pole, of lladhournehall, near Derby, who brought him a large fortune; and he removed, in consequence of this connexion, to Radbourne, with a view of settling in Derby. He continued in this neighbourhood till February 1802, when he removed to I3readwall Priory, about three miles distant, a commodious retirement for his age and infirmities, and at this place he died in his seventy-first year. The literary fame of Dr. Darwin rests on the Botanic Garden, with philosophical notes, in two parts; 1. The Ecnnomy of Tegetation; 2. The Loves of the Plants, 2 vols. 8vo.: Zoonomia, or the Laws of Organic Life, 4 vols. 8 vo .: Plytologia, or the Philosophy of Agricultnre and Gardening, 1 vol. 4to.: works which display not only the poet, but the botanist and the philosopher; though there is frequently too much sacrificed to imagination; and the author evinces a oontempt for all religion. Dr. Darwin was alsn the author of several medical and philosophical papers in the Philosophical Transactions, a Treatise on Female Edncation, and a pocm published since his dcath, entitled The Temple of l'ane. Ite had likewise a principal share in the trauslation of I.innerus's Systema Vegetahnlnm, published in the nane of the Botanical Society of Litchfield.

DASH, v. a. v. n., n. s. \& adv. Goth. and Swed. duska; Scot. dusch. Serenins refers to the first as the etymology of our word, which Dr. Johnson considers in al! its senses ' very doubtful.' Minsheu dcrives it from the Gr. \(\delta \varepsilon เ \sigma \alpha, \delta \varepsilon \iota \sigma \omega\), and defines it 'to bedash, dablle, bemire with dust.' This is at any rate not imiprobable. It is a word variously applied. It signifies to throw; to strike; to break to pieces by collision; to besprinkle; to agitate; to mingle fluids; to strike off in haste; to hot ; to confound; to strike down. As a neuter verb, tollf

DAS
off; to rush through, so as to scatter; to strike, as a ship upon a rock. As a noun, it expresses collision; infusion; a stroke made with the pen; a sudden blow, or striking appearance. Dryden uses it adverbially to express the sound of falling water.

Happy shall he be, that taketh and dasheth thy little ones against the stones. Ps. exxxvii. 9.

If you dash a stone against a stone in the bottom of the water, it maketh a sound.

Bacon.
They that stand high have many blasts to shake them;
And, if they fall, they dash themselves to pieces.
Shakspeare.

\section*{This tempest,}

Dashing the garment of this peace, aboded The sudden breach on't. Id. Henry VIII.

David's throne shall then be like a tree, Spreading and overshadowing all the earth; Or as a stone, that shall to pieccs dash All monarchies besides throughout the world.

Milton.
His tongue
Dropped manna, and could make the worse appear The bettcr reason, to perplex and dash Maturest councils.

Id.
If a woman once dash upon the rock of reproach, she hardly ever recruits her credit. Bp. Taylor.

> Whacum, bred to dash and draw, Not wine, but more unwholesome law.

\author{
Huribras.
}

Nothing dashed the confidence of the mule like the braying of the ass, while be was dilating upon his genealogy.
\(L^{\prime} E s t r a n g e\).
A man that cuts himsclf, and tears his own flesh, and dashes his head against the stones, does not act so unreasonably as the wicked man.

Tillotson.
At once the blushing oars and brazen prow Dash up the sandy waves, and ope the depths below. Dryden.
Docg, though without knowing how or why, Spurred boldly on, and dashed thro' thick and thin; Thro' sense and nonseuse, never out or in. Id.

To dash this cavil, read but the practice of Christian emperors.

South.
Some stronger power eludes our sickly will; Dashes our rising hope with certain ill. Prior.

Never was dashed out, at one lucky hit,
A fool so just a copy of a wit.
Pope.
Io dash over this with a line, will deface the whole copy extremely, and to a degree that, I fear, may displease you.

Id.
There is nothing which one regards so much with in cye of mirth and pity, as innocence, when it has in it a dash of folly.

Addison.
Middling his head, and prone to carth his view, With ears and chest that dash the morning dew.

Tickel.
Torrents that from yon promontory's head Dashed furious down in desperate cascade
Heard from afar amid the lonely night, That oft have led the wanderer right, Are silent at the noise.

Beattie.
- Here Time's huge fingers grasp his giant macc, Aud dash proud Superstition from her basc.

Darwin.

I should lie so,
Had I a knife cven ; but it matters not-
Death hath a thousand gates; and on the marble, Even at the altar foot, whence I look down Upon destruction, shall my head be dashed, Ere thou ascend it.

Byron.
DAS'TARD, v. a., n.s. \& adj. From Sax.
Das'tardise, v. a. abarepizan, to
Das'tardly, adj. \& adv. Iterrify. To affright; make faint-hearted; a coward; poltron.

The cruelty and envy of the people, Permitted by our dastard nobles, Have suffered me by the voice of slaves to bc Whooped out of Rome.

Shakepeare.
Dastard and drunkard, mean and insolent -
Tongue-valiant hero, vaunter of thy might,
In threats the foremost, but the last in fight.

> Dryden.

He had such things to urge against our marriage, As, now declared, would blunt my sword in battlc, And dastardise my courage.
\(I d\).
Brawl and clamour is so arrant a mark of a dastardly wretch, that he does as good as call himsclf so that uses it.

L'Estrange.
Bug-bear thoughts, in the minds of children, make them dustards, and afraid of the shadow of darkness ever after.

Locke.
Curse on their dastard souls, they stand astonished ! Addison.
DASYPUS, the armadillo, or tatou, in zoology; a genus of quadrupeds, belonging to the order of bruta. The dasypus has neither fore-teeth nor dog-teeth ; it is covered with a hard bony shell, intersected with distinct moveable zones or belts: this shell covers the head, the neck, the back, the flanks, and extends even to the extremity of the tail; the only parts to which it does not extend, are the throat, the breast, and the belly, which are covered with a whitish skin of a coarse grain, resembling that of a hen after the feathers are pulled off. The shell does not consist of one entire piece, like that of the tortoise ; but is divided into separate belts, connected with each other by membranes, which enable the aninal to move it, and even to roll itself up like a hedgehog. All the species of this animal are originally natives of the western continent, and are endowed with the faculty of extending and contracting their bodies, and of rolling themselves up like a ball, like the hedgehog, though not into so complete a sphere. They are very inoffensive, excepting when they get into gardens, where they devour the melons, potatoes, and other roots. They walk quickly; but can hardly be said to run or leap, so that they seldom escape the pursuit either of men or dogs. But they dig deep holes in the earth, and seldom go very far from their subterraneous habitations; or, whenat a great distance, require but a few moments to make one. When taken, they roll themselves up, and will not extend their bodies unless they are held near a fire. There is no other method of making them come out from deep holes, but by forcing in smoke or water. The female generally brings forth four young ones every month ; which is the reason why the species are so numerous, notwithstanding they are much sought after

\section*{DAT}
on account of the sweetuess of their flesh. The Indians likewise make baskets, boxes, \&e., of the shells which cover their heads. Linnseus enunerates six speeies of dasypus, prineipally distinguished by the number of their moveable belts. Mr. Kerr, who prefers the arrangement of Buffon to that of Linnæus, enumerates ten species of this genus.

DATA, among , mathematicians, a term for such things or quaatities, as are given, or known, in order to find other things thereby that are unknown. Euelid uses the word data (on which he has a particular tract) for such spaces, lines, and angles as are given in magnitude, or to which we can assign others equal. From the use of this word in mathematics, it has been transplanted into other arts, as philosophy, medicine, \&c. ; where 1t expresses any quantity which, for the sake of a present calculation, is taken for granted to be such, without requiring an immcdiate proof for its certainty ; called also the given quantity, number, or power.

DATCIIET, a town in Buckinghamshire, near Windsor, with a bridge over the Thames, built in the reigu of queen Anne, and noted for its frequent horse-races. It is situated in a valley surrounded on every side with steep hills.

DATE, v.a. \& n.s. \(\}\) Fr. date, from Ital.
Date'cess, adj. Jdato; Lat. datum. To note a particular time; a time noted or appointed ; the time and place at which a letter is written.

Of later date of wives hath he redde, That som han slain hir husbondes in his bedde.

> Chaucer. Cant. Tales.

His days and times are past, And my reliance on his fracted dates Has smit my credit. Shakspeare. Timon. Then raise,
From the conflagrant mass, purged and refined, New heavers, new earth, ages of endless date, Founded in righteousness.

Milton.
Could the declining of this fate, 0 friend,
Our date to immortality extend?
Denham.
My father's promise ties me not to time ;
And bonds without a date, they say, are void.
Dryden.
What time would spare, from steel receives its date;
And monuments, like men, submit to fate. Pope.
The accession of Elizabeth, from which we date the golden age of our language.

Johnson. Plan of Dictionary.
Date, is derived from the Latin datum, given, and implies the place from whence, as well as the time when. Our ancient deeds had no dates, but only the month and year, to signify that they were not made in haste, or in the space of a day, but upon longer and more mature deliberation. The king's grants began with these words, proxsentibus et futuris, \&c.; but the grants of private persons, with omnibus presentes literas inspecturis, \&c.

Date, n.s. \(\quad\) Lat. dactylus. A species Date-tree, n.s. \(\}\) of palm.
Hold, take these keys, and fetch more spices, nurse, -Thev call for dates and quinces in the pastry.

Shakspeare.
i) ete, in botany. See Puegix

Date, in law. A deed is good, though is mentions no date or has a false, or even an impossible date, as the 30th of February ; provided the real day of its being dated or given, that is, delivered, can be proved. Blackstone's Commentary, vol. ii. p. 304.

DATI (Carlo), professor of polite learniug at Florence, his native country, and the private friend of the poet Milton. The chief work ic which Dati applied liinself, was Della l'ittur Antica, of which he published an essay in 1667. He died in 1675.

DATISCA, in botany, a genus of the dodecandria order, and diœecia class of plants; natural order thirty-fourth, misellanex. Nale, cal. pentaphyllous: cor. none: the authere are sessile, long, and fifteen in number. Female, cal. bidented: the styles three: cap. triangular, three-horned, unilocular, pervious, polyspermons, inferior. Species two: 1. D. Cannabina, a native of Canada with a smooth stem ; 2. D. hirta, a native of Pennsylvania with a rough hairy stem.

DATISI, in logic, a mode of syllogisms in the third figure, wherein the major is a universal affirmative, and the minor and conclusion particular affirmative propositions. Thus,
Da- All who serve God are kings ;
ti- Some who serve God are poor;
si. Therefore, some who are poor are kings.
The Dative, in Latin and Greek grammar, is the third case, and is used to express the state or relation of a person or thing to whose advantage or disadvantage some other thing is referred. In the English language, which has no dative, this relation is expressed by the prepositions to or for. In the Greek language, which has no ablative, the dative is used instead of it. See Ablative.

DATUM, or Datus, in ancient geograply, a town of Thrace, situated between Neapolis and the river Nessus, built by a colony of Thracians, according to Eustathius; who places it on the sea-coast, near the Strymon, in a rich and fruitful soil, famous for ship-building and mitues of gold; hence the proverb \(\Delta a \operatorname{cog} A \gamma \alpha \theta \omega \nu\), denoting prosperity and plenty. It was taken by Philip of Macedon, who ehanged its name to Philippi. It was afterwards fainous for the defeat of Brutus and Cassius by Augustus and Antony.

DATURA, the thorn apple, in botany, a genus of the monogynia order, and pentandria class of plants; natural order twenty-eighth, luridx: cor. funnel-shaped, and plaited: cal. tubular, angulated, and deciduous; cars. quadrivalven. There are seven species. D. stramonium, the common thorn-apple, rises about a yard high, with an erect, strong, round, hollow, green stalk, branching luxuriantly on every side: large, oval, irregularly angulated, dark green leaves; and from the divisions of the branches, large white flowers singly succeeded by oval, priekly capsules, growing erect, commonly called thorn apples. At night the upper leaves rise up and enclose the flowers. The blossoms have sometimes a tinge of purple or violet. The flowers consist of one large, funuel-shaped petal, having a long tube, and spreading pentayonal liml), succecded by large roundish capsules of the size

\section*{DAU}
of middling apples, closely beset with sharp spines. An ointment prepared from the leaves gives ease in external inflammations, and in the hæmorroids. Cows, horses, sheep, and goats, refuse this plant.

DAVAL (Peter Esq.) F.R.S., an eminent English mathematician. He was bred a barrister at law; was afterwards master in chancery; and at last accountant general of that court. He translated the Memoirs of the Cardinal de Retz, printed in 12 mo .1723 . In the dispute concerning elliptical arches, when Blackfriars bridge was built, his opinion was applied for by the committee. His answer may be seen in the London Magazine for March \(\mathbf{1 7 6 0}\). He died January 8th, 1763.

DAVALLIA, in botany, a genus of the cryptogamia class, and order filices. Fructification in roundish distinct dots near the margin: involucrim membranaceous, from the surface half-hooded, distinct, somewhat truncate, opening towards the margin. Species nineteen.

DAVANGIRI, a town of the south of India, province of Mysore, district of Chittledroog. It consists of 500 houses, with a small fort in the centre, and has an extensive manufacture of blankets. It carries on a good trade with the Carnatic and its vicinity.

DAUB, v.a.v.n.\&n.s.
Dauber, n.s.
Dauberey, n.s.
Daub'ing, n.s.
Daus'r, adj.
DaUB'Y, adj. as mortar. Hence, to pindesite and gross, to cover with geudy . flatter. As a neuter verb, to play the hypocrite. Daubery and daubing are both used in the sense of the substantive daub; and dauby is an adjective, signifying viscous, adhesive.
She took for him an ark of bulrushes, and daubed it with slime and with pitch.

Exodus.
When the wall is fallen, shall it not be said unto you, Where is the daubing wherewith ye have daubed it?

Ezekiel xiii.
Since princes will have such things, it is better they should be graced with elegancy, than duubed with cost.

Bacon.
So smooth he daubed his vice with shew of virtue, He lived from all attainder of suspect. Shakspeare. I cannot daub it further;
And yet I must.
Id.
She works by charms, by spells; and such daubry as this is beyond our element. Id.
They snatched out of his hands a lame imperfect picce, rudely duubed over with too little reflection.

Dryden.
Let him be daubed with lace, live high, and whore ; Sometimes be lousy, but be never poor.

A sign-post dauber would disdain to paint The one-eycd hero on his elcphant.

Id.
Not in vain the' industrious kind W.ith dauby wax and fiowers the chinks have lined.

It.
Let every one, thcrefore, attend the sentence of his conscience; for, he may be sure, it will not daub nor Hatter.

South.
Hasty duubing will but spoil the picture, and make it so unnatural as must want false light to set it off.
t):uyy.

> The treacherous tapster, Thomas,
> Hangs a new angel two doors from us,
> As fine as daubers hands can make it.
> Swift.

And did you step in to look at the grand picture in your way hack?-Tis a melancholy daub! my lord; not one principle of the pyramid in any one group!

Sterne.
If a picture is daubed with many bright and glaring colours, the vulgar admire it as an excellent piece.

Watts.
Daubenton (Louis-Jean Marie), an eminent French anatomist and naturalist, born at Montbar in Burgundy, on the 29th of May, 1716. His father designed him for the church; but on his death, in 1736, Daubenton relinquished that pursuit for the study of physic and natural history; and in three years after took his degree at Rheims; after which he returned to his own country with the design of following the practice of medicine. But the celebrated Buffon, who was also a native of Montbar, having shortly before succeeded Dufay in the superinterdance of the botanic garden, selected Dauberton to assist him in his improvements and arrangemeats. In 1742 Buffon procured for him the place of demonstrator of the cabinet of natural history, with a salary of only 500 francs, which was afterwards raised to 2000 . The cabinet of natural history, which was of immense service, was arranged and in a great measure collected by his means. The appearance of the History of Quadrupeds, wherein he gave the dissection and description of 182 species, gained him a very high reputation, but raised the jealousy of Reaumur, who then considered himself at the head of natural history. About this time Buffon was persuaded to separate himself from Taubenton; but their intimacy afterwards revived, and continued till Buffon's death. Daubenton was adinitted a inember of the Academy of Sciences in 1744 ; and contributed many valuable dissertations on natural history to its memoirs. But his service to science was not confined to his pen and the press: from 1775 he gave lectures on natural history in the college of medicine; and in 1783 on rual economy. In 1784 he published his Instructions to Shepherds, a work of great excellence. In 1794, when France was ruled by a lawless rabble, it became a niatter of necessity with Daubenton to make application to the section of Sans-culottes for a certificate of civism, to enable him to hold his place in the garden of plants. His request was made under the title of Shepherd Daubenton; and it was granted to him under that name with the greatest facility. At the garden of plants the Convention appointed lim professor of mineralogy; and he gave lectures during the ephemeral existence of the Normal School. He was also the author of a Methodical View of Minerals, and a contributer to both the French encyclopadias. In 1799 he was elected a member of the conservative senate; but the first meeting he attended lie fell from his seat in an apoplectic fit. Speedy assistance being procured, he was restored to his senses, and calmly pointed out, in different parts of his body, the progress of the paralysis, which terminated his life on the 1st of January 1800, in his eighty-third year.

DAUCUS, the carrot, in botany : a genus of the digynia order, and pentandria class of plants; natural order forty-fifth, umbellatæ: con. a little radiated, hermaphrodite. The fruit bristly with short hairs. 'There are six species; but the one which chiefly merits attention is the D. carota, or common carrot. There are several varieties, as the white, the orange, and the purple carrot; but of these the orange is the most esteemed. Carrots are propagated hy seeds, sown at different seasons of the year, to afford a supply for the tahle at all times. The season for sowing for the earliest crop is soon after Christmas. The situation should be open, and in a warm sandy light soil, well dug to a good depth, that the roots may meet with no obstruction in running down, so as to make them forked. The next crop should be sown in February, and the third in July for autumn; and lastly in the end of August, for those which are to stand the winter. These last will be fit for use in March, before any of the spring ones; but they are seldom во tender or well tasted. Carrots were first introduced into England by the Flemings, in the reign of queen Elizabeth.
DAVENANT (Charles), LL.D., an eminent author and civilian, eldest son of Sir William Davenant, was born in 1656, and educated in Cambridge. He wrote several political tracts, and some plays. He was in 1685 empowered, with the master of the revels, to inspect the plays designed for the stage, that no immoralities might be presented; and was also inspector general of exports and imports. His Essays on Trade were reprinted in 5 vols. \(8 v o\) in 1771. He died in 1714.

Davenant (John), bishop of Salisbury, the son of an eminent merchant in London, where he was born in 1570 . He took his degree of A. M. in Queen's College, Cambridge, in 1587, and that of D.D. in 1609, when he was elected professor of divinity, and is chiefly known as having been sent by James I. to the synod of Dort, in 1618.

Davenant (Sir William), an eminent poet, born at Oxford in 1606. After some stay at the university, he entered into the service of Frances first duchess of Richmond, and afterwards of Fulke Greville, lord Brooke. Upon the death of Ben Jonson he was created poet laureat. He wrote his poem Gondibert at Paris, where he formed a design for carrying over a considerable number of artificers, especially weavers, to Virginia; but he and his company were seized by some parliament ships, and he was carried prisoner first to the Isle of Wight, and then to the Tower of London, where, by the mediation of Milton, he was allowed to be a prisoner at large. At this time tragedics and comedies being prohibited, he set up an opera, to be performed by declamation and music. This Italian opera began in Rutland-house in Charter-house yard, 1656 ; but was afterwards removed to the cockpit in Drury-Lane, and was much frequented for many years. His Madagascar, and other poems, were printed in 1648 . He died in 1668.

DAVENTRY, an incorporate town of Northamptonshire, situated near the sources of the Avors and Nen, which flow into opposite seas.

It is seventy-two miles N. N.W. from London, and ten from Northampton. The manor formerly belonged to Joln of Gaunt who had a castle here. The ancient priory is in ruins, but parts of it are inhabited by the poor. On a hill in the neighbourhool are some strong entrenchments occupied by Charles I. before the battlo of Naseby. The ground formerly was used as a race coursc. The town is very narrow and badly paved, and the church but a poor piece of architecture. The affairs of the corporation are managed by thirteen burgesses, one of whom is annually chosen bailiff, a recorder, town clerk, two head wardens, and twenty common councilmen. The bailiff acts as justice of the peace and coroner of the inquest, and the bailiff and ex-bailiff, with the recorder, constitute a quorum of the corporation, and can attach for debts under £100, or, in criminal cases, commit the accused to the county-gaol. Daventry lias a considerable manufacture of whips, and a good market for provisions on Wednesday.

DAUGHT'ER, n.s. 子 Sax. oohren; Goth.
Davghterly, adj. Sdauhtar; Runick dolter; Germ.dohter; Dut. dochter. A female clild; the wife of a son; in the plural, the females of a country. A female taken into the relation of a child, or addressed tenderly. Any female deity or imaginary personage. Daughterly is like, or behaving with the duty of, a daughter.

Jacob went out to see the daughters of the land.
Generis.
Daughter, be of good comfort, thy faith bath made thee whole.

Matt. ix. 22.
A doughter hadden they betwix hem two
Of iwenty yere, withouten any mo,
Saving a child that was of half yere age
In cradle it lay and was a propre pag?.
Chaucer. Cant. Tules.
Your wives, your daughters,
Your matrons, and your raaids, could not fill up
The cistern of my lust.
Shakspeare.
Are you at leisure, holy father, now,
Or shall I corne to you at evening mass?-
-My leisure serves me, pensive daughter, now Id.
Sir Thomas liked her natural and dunghterly affection for him.

Cavendish's Life of More.
Now Aurora, daughter of the dawn,
With rosy lustre purpled o er the lawn. Pope.
Commerce, however we may please ourselves with the contrary opinion, is one of the daughters of fortune, inconstant and deceitful as her mother.

Johnson. Thoughts on Agriculture.
Is thy face like thy mother's, my fair child!
Ada! sole daughter of my house and heart?
When last I saw thy young blue eyes they smiled,
And then we parted, -not as now we part,
But with a hope.
Byron.
DAVID, דור, Heb. i.e. beloved, kiug of Israel, and Hebrew poet, was born at Bethleliem A.A.C. 1085, and died A.A.C. 1015, after having reigned seven years and a half in Hebron, and thirty-three in Jerusalem. We have a complete and faithful portrait of this great prince and poet of the Jews in Scripture; and while in this portrait no fricnd of revelation will pretend that we can exhibit a faultess character, the infidel Bayle allows hin. to have been a great and justly distin-
guished monarch and poet ; and we may refer to his Historical and Critical Dictionary, for a full and tolerably impartial disquisition on the subject.
David (-), a celebrated modern French painter, was born about the middle of the last century, and became the pupil of Vien, an artist
\(f\) considerable eminence. He was painter to the unfortunate Louis XVI. and in September, 1790, presented to the legislative body a picture, representing his entrance into the national assembly. He was afterwards a deputy from Paris to the national convention, where he voted for his royal master's death. With perfect consistency he became a member of the committee of Public Safety during the reign of terror, and closely connected himself with Robespierre. In January, 1794, he was president of the convention. On the fall of Robespierre, he contrived to elude the danger for some time; but at length, in May, 1795, he was committed to the Luxembourg. His professional friends, however, procured his liberation; but during the following winter he joined a new society of terrorists, assembled near the pantheon, and became their first president; and in 1799 attempted to reestablish the jacobin club. About this time he was nade a member of the National Institute for the class of painting; and Buonaparte, in 1800, appointed him painter to the government. During the imperial domination, David enjoyed his highest reputation as a painter, and exercised considerable influence over the measures adopted by the government for the cultivation of the fine arts. On the restoration of the Bourbons he was exiled to Brussels, where he continued to employ his talents till the time of his death, which took place December the 29th, 1825. His best paintings are-The Rape of the Sabines; The Oath of the Horatii; The Death of Socrates ; Napoleon presenting the Imperial Eagles to his Troops; Mars Disarmed by Venus and the Graces, a work executed at Brussels; and The Coronation of Napoleon, exhibited in London in 1822, and said to be the largest painting ever made on canvass. David was clearly of a most cruel and sanguinary disposition in the height of his political career, and it seems to have infected at one time the efforts of his genius. The deputy Reboul found him, in 1792, in the prison of La Force, calmly sketching the prisoners who were going to execution: 'What are you about,' said Reboul, 'I am catching the last impulses of nature in these rascals,' replied David. He will be thought by some of our readers a characteristic painter of Napoleon presenting the Imperial Eagles.

David I, king of Scots, succeeded his brother Alexauder I., A. D. 1124, and died at Carlisle, A. D. 1153. See Scotland.

David II., king of Scots, succeeded his father liobert Bruce, A. D. 1320, when only seven years of age. His nonage proved disastrous to Scotland, and afforded Edward Baliol the opportunity of usurping the crown, by the aid of the English.

DAVID'S (St.), an episcopal town of South Wales, in Pembrokeshire, seated in a barren soil on the river Ilen, not a mile from the sea. It
was once a considerable place, and liad walls, which are now demolished. The cathedral is a fine structure. The see has a bishop, precentor, chancellor, treasurer, four arch-deacons, niweteen prebendaries, eight vicars choral, \&c.: near the church formerly stood a college. St. Nun's Well, near this place, is occasionally resorted to on account of its medicinal virtues. From the cape, near it, there is a prospect into Ireland. It is twenty-four miles north-west of Pembroke, and 266 west by north of London.

DAVIDSON, a county of the United States, in Mero district, in Tennessee, bounded on the north by the state of Kentucky, on the east by Sumner, and on the south by the Indian territory. Its chief town, Nashville, lies on the great bend of Cumberland River.

DAVIES (Sir John), a distinguished \({ }^{\circ}\) statesman, and poet, born at Tisbury, in Wiltshire, in 1570, received his academical education at Queen's College, Oxford, and removed thence to the Middle Temple to study the law; but, after being called to the bar, was expelled from that society, for an insult which he publicly offered to the recorder of London. He now retired to Oxford, where he wrote his celebrated Nosce Teipsum, a poem, and courted the patronage of queen Elizabeth by writing, under the title of Hymns of Astrea, twenty-six acrostics in her praise. In 1601 he was restnred to the Temple, and in the same year was chosen member of parliament for Corfe Castle, and took a distinguished part in the suppression of monopolies. He was sent to Ireland as solicitor-general, on the accession of James I., and became successively attorney-general, and justice of the assize; was made a sergeant of law, and knighted. In 1607 he accompanied the chief justice of Ireland on a progress through the counties of Monaghan, Fermanagh, and Cavan, and drew up an account of the circuit. He soon after visited England, to lay before the king an account of that country, in which he seems to have exercised his judicial function with great impartiality and public spirit; and on his return assiduously recommenced his labors. In 1612 he published A Discovery of the true Causes why Ireland has never been entirely subdued and brought under Obedience to the Crown of England, until the Beginning of His Majesty's happy Reign. During this year the first parliament was convoked for Ireland, formed by a general representation of Catholics and Protestants, and Sir John was chosen speaker of the house of commons. He published, in 1614, A Declaration concerning the title of Prince of Wales; and the year following his Reports of Cases adjudged in the King's Courts in Ireland. Soon after, returning to England, he went several circuits as a judge, and was elected member for Newcastle-under-Line. He was subsequently raised to the office of chief justice of England, but almost immediately cut off by a fit of apoplexy, in December, 1626. His poems were reprinted in 1773,8vo., and form a part of various modern collections. His prose works were collected in one vol. 8vo. 1786, under the title of Historical Tracts, by Sir Juhn Davies. This acute lawyer and prlitician married a daughter of lord Audley, but was !nost
unhappy in his family, his snn proving an ideot, and one of his diaughters of a remarkably flighty disposition. His second daughter married lord Hastings.

DAVILA (Henry Catherine), a celebrated listorian, the youngest son of Antonio Davila, grand constable of Cyprus. IIe was born in 1576, at an ancient castle in Padua, but was brought early into France. At the age of eighteen he sizualized himself in the military scenes of that country; and at the siege of Amiens, where he fought under Henry IV., received a wound in the knee. After peace was established in France, he withdrew into Italy, and entered into the service of the Venetians. While at Venice, he wrote his admirable History of the Civil Wars of France, from the death of Henry II. in 1550 , to the peace of Vervins in 1598. He continued to serve the republic of Venice with great reputation, till he was murdered, in 1631, hy a brutal Veronese, called 11 Turco, who entered the roons of an hotel where he and his family were at supper, and, being reprimanded for his intrusion by Davila, discharged a pistol at the historian, and shot him dead in an instant. His eldest son Antonio, a youth of eighteen, revenged the death of his father by killing the murderer on the spot.

DAVIS (John), a famous navigator in the sixteenth century, was born at Sandridge, near Dartmouth in Devonshire; and distiuguished himself by making three voyages to the northern parts of America, in order to find out a northwest passage to the East Indies; in which he discovered the Straits which bear his name. He afterwards performed five voyages to the East Indies; in the last of which he was slain in a desperate encounter with some Japanese, near the coast of Malacca, on the 27 th of December, 1605. He wrote an account of a second voyage for the discovery of the north-west passage ; a voyage to the East Indies; and other tracts.
Davis's Strait, a narrow sea, lying between the north main of America, and the western coast of Greenland; running north-west from Cape Farewell. Lat. \(60^{\circ} \mathrm{N}\). to Baffin's Bay in \(80^{\circ}\). It extends to long. \(75^{\circ} \mathrm{W}\). communicating with Baffin's Bay, which lies to the north of this strait, and of the North Main, or James's Island.
DAVISON (William), a statesman of Scottish origin, who became secretary of state to queen Elizabeth. His early life is little known, but in 1575 he was employed on a mission to Brabant and Flanders; and commissioned, in a similar way, in 1579 , to the states of Holland. In 1583 he was employed confidentially in Scotland; and, acquiring considerable fame as a diplomatist, was made clerk of the council. On his return from a second embassy into the Low Countries, he was made secretary of state. Camden supposes that he was raised to this office in order to involve him in the mysterious transaction which now proved his ruin. When the commission was opened to bring Mary queen of Scots to trial, the name of secretary Davison was inserted in it, but it does not seem that he was present when it was opened, or ever assisted at Fotheringay Castle. The unhappy princess's death being resolved upon, it only remained to decide upon the manner of it, and here Davison
diffcred with Walsingham, being of opinion tilat it should be open; upon which the latter pretended sickness, which threw the business of drawing up the warrant and bringing it to the queen for signature, on Davison. If Davison's apology, indeed, may be believed, he acted! throughout under dictation; but he was tried in the Star Clamber for revealing the secrets of the queen's council, fined 10,000 marks, and sentenced to imprisonment during her majesty's pleasure; a copy of the proceedings beina sent to king James to account for the death of his mother. The fine was rigorously leried; but he was assisted from time to time with small sums of money, and recommended to king James by the friendship of the earl of Essex. His final fortunes and time of death are not known.
DAVIT, in a ship, a long beam of timber, used as a crane whereby to hoist the flukes of the anchor to the top of the how, without injuring the sides of the ship as it ascends; an operation which, by mariners, is called fishing the anchor. The anchors being situated on both the hows, the davit may be occasionally shifted, so as to project over either side of the ship, according to the position of that anchor on which it is employed. The inner end of the davit is secured by being fixed in the fore channels \(b\), and upon the outer end is hung a large block \(c\), througl which a strong rope traverses, called the fish pendent \(d\); to the foremost end of which i: fitted a large iron hook \(e\), and to the after end a tackle or complication of pullies \(f\); the former of which is called the fish-hook, and the latter the fish tackle. The anchor being previously raised to the cat head. the fish-hook is fastened upon its flukes; and the effort of the tackle being transmitted to the hook, by means of the fish-pendent, draws up that part of the anclor sufficiently liigh upon the how to fasten it. There is also a davit of a smaller kind occasionally fixed in the long-boat, and employed to weigh the anchor therein.

DAULE, a large navigable river of Quito, ill the province of Guayaquil, which, after a course of sixty miles, falls into the Guayaquil, in lat. \(2^{\circ} 8^{\prime} \mathrm{S}\)., on the west side. Its shores are covered with estates and gardens belonging to the inhabitants of Guayaquil, and abound in delicious fruits. It gives name to a small district.
DAUNT, v.a. \(\quad\) Fr.domter; Lat. domitcr;
Dauntiless, adj. \}but perhaps more imme-
Daunticessness. diately derived to our language from Goth. and Swed. dana, signifying to make faint, amazed. To affright, discourage, intimidate. A dauntless man is he who cannot readily be intimidated.

Metellius, the foulc cherle, the swine That with a staf beraft his wif hire lif,
For she drank wine, though I had ben his wif,
Ne shuld he nat have daunted me fra drink.
Chawer. Cant. Tules.

DAUPHIN, a title given by the court of France to the presumptive heir of the crown, on account of the province of Dauphiné, which in 1349 was given to Philip VI. on this condition,
 by Hubert II. dauphin of Viennois. He is styled the eldest son of France. His crown is a circle of gold set round with eight fleur-de-lis, closed at the top with four dolphins, whose tails conjoin under a fleur-de-lis.

Dauphin, in geography, a county of Pennsylvania, formerly contained in that of Lancaster. Its form is triangular; and it is surrounded by the counties of Mifflin, Cumberland, York, Berks, and Northumberland.

DAUPHINE, an extensive south-east province of France, containing the three departments of

Population.

\end{tabular}

Chief Towns. Grenoble. Valence.
Upper Alps, 124,763, Gap.

> 849,795.

Its entire area is about 6700 square miles, the surface being very mountainous, and the lower division intersected by a ridge of the Alps. The pasture is universally good, except where the hills are covered with forests. They contain mines of copper, iron, and lead. The principal rivers are the Isere, the Durance, and the Drome, which rise in the Alps, and terminate in the Phone. In the higher mountains it is cold and sharp, but on the banks of the Rhone the climate is warm. The valleys produce corn, flax, and olives; and the sides of the hills are covered with vines. The culture of silk is also prosecuted with success, particularly in Valence, Romans, Pierrelatte, and Montelimart. Cheese is a principal article of export. The ecclesiastical dignitaries are one archbishop (of Vienne), and three bishops (Grenoble, Valence, and Gap).

DAVY (sir Humphrey, bart.), one of the most distinguished cliemists of the age, was born at Penzance, in Cornwall, December 17th, 1779. After having received the rudiments of a classical education, he was placed with a surgeon and apothecary, who pronounced him an 'idle and incorrigible boy.' He had, however, already distinguished himself at school, and a taste for chemistry, which he displayed in some experiments on the air contained in sea-weed, attracted the attention of Mr. Gilbert, afterwards president of the royal society, and of Dr. Beddoes. The latter, who had just established a pneumatical institution at Bristol, offered him the place of assistant in his laboratory. Here Davy discovered the respirability and exhilarating effect of the nitrous oxide. He published the results of his experiments, under the title of Chemical and Philosophical Researches, \&c., London, 1800. This work immediately obtained him the place of professor of chemistry in the royal institution at the age of twenty-two. In 1803 he was chosen a member of the Royal Society. His lectures at the Royal Institution were attended by crowded and brilliant audiences, attracted by the novelty and variety of his experi-
ments, the eloquence of his manner, and the clearness of his exposition. His discoveries with the galvanic battery, his decomposition of the earths and alkalies, and ascertaining their metallic bases, his demonstration of the simple nature of the oxymuriatic acid (to which he gave the name of chlorine), \&c., obtained him an extensive reputation; and, in 1810, he received the prize of the French Institute. In 1814 he was elected a corresponding member of that body. Having been elected professor of chemistry to the board of agriculture, he delivered lectures on agricultural chemistry during ten successive years, and, in 1813, published his valuable Elements of Agricultural Chemistry. His next discovery was of no less importance to humanity than his former researches had been valuable to science. The numerous accidents arising from fire-damp irs mines led him to enter upon a series of experiments on the nature of the explosive gas, the result of which was the invention of his safety-lamp. In 1818 and 1819 he visited Italy, and made some unsuccessful attempts to unrol the Herculaneum manuscripts. In 1820 be succeeded sir Joseph Banks, as president of the royal society. In 1824 he visited Norway for the purpose of making some scientific investigations. On this voyage he proved the efficacy of his plan for preserving the copper of ships, by covering it in part with a certain quantity of iron. At the same time the trigonometrical measurements of Denmark and Hanover were connected, under his direction, by chronometrical observations, with the measurements in England. This distinguished philosopher died May 29, 1829, at Geneva, whither he had gone for the benefit of his health. Besides the works already mentioned, the most important are Electro-Chemical Researches; Elements of Chemical Philosophy, vol. i. 1802; Bakerian Lectures, 1807-1811; Researches on the Oxymuriatic Acid, 1810; on the Fire-Damp, 1816. He also contributed some valuable papers to the Philosophical Transactions, and the journals of Nicholson and Tilloch.

Davy (William), a clergyman, who was educated at Baliol College, Oxford, where he took the degree of B.D. was curate of Lustleigh, in Devonshire, and the editor, printer, and publisher of a work entitled, 'A System of Divinity, in a course of Sermons on the first Institutes of Religion; on some of the most important articles of the Christian Religion in connexion; and on the several Virtues and Vices of Mankind; with occasional Discourses : being a compilation frons the best sentiments of the polite writers and eminent sound divines, both ancient and modern, on the same subjects, properly connected, with improvements; particularly adapted for the use of chiefs of families and students in divinity, for churches, and for the benefit of mankind in general,' 26 vols. 8 vo. 1785-1807. The singular history of this production is said to be this :- 'Mr. Davy, having completed his preliminary arrangements, issued proposals for publishing his work by subscription; but, being unpatronised and unknown, he had no success.. Undaunted by his disappointment, he determined to become his own
printer. With a press which he constructed himself, and as many worn and cast-off types (purcliased from a country printing-office) as sufficed to set up two pages, he fell to work. Performing every' operation with the assistance of his female tomestic only, and working off a page at a time, he finished forty copies of the first 300 pages. Twenty-six copies he distributed among the universities, the bishops, the royal society, and the reviews, expecting to derive from some quarter or other that patronage and assistance to which he fancied himself entitled. A second time disappointed, he would not abandon his project, but contracted his views, resolving in future to spare his expenses in paper. He had reserved only fourteen copies, and to that number he limited the impression of his entire work. After years of unremitting toil, he saw it completed in 26 volumes. Disdaining to get assistance, for which he could ill afford to pay, he put the books in boards with his own hands, and then took a journey to London for the express purpose of depositing a copy in each of the principal public libraries of the metropolis.' Quarterly Review.

DAW, n. s. Supposed by Skinner so named from its note ; by Junius to be corrupted from dawl, the Germ. tul, and dol in the Bavarian dialect, having the same signification. The name of a bird.

DAWES (Richard), a learned critic of the last century, was born in 1708, in Leicestershire. He was educated at Market Bosworth, and admitted a sizer of Emanuel College, Cambridge, of which he became a fellow in 1731, and in 1793 took the degree of M.A. He distinguished himself by his violent asperity towards Bentley, and in 1736 published a proposal for printing by subscription a translation into Greek verse of Milton's Paradise Lost; but the plan did not proceed. In 1738 he was appointed master of the free grammar-school at Newcastle-upon-Tyne. In 1745 he published his Miscellanea Critica, intended as a specimen of an intended emendatory edition of all the Attic poets. But neither was this design ever completed; the Miscellanea, however, gained the author great reputation, and a second edition of it , with additions, was published in 1781, by Dr. Burgess, bishop of Salisbury. He resigned his schools in 1749, and retired to Heworth, where he died in 1766 .

DAW K, v. a. \& n.s. Scot. dalk. To mark with an incision. A word among workmen for a hollow, rupture, or incision, in their stuff.

DAWN, v.n. \& n.s.? The past particiDawning, n. s. ple, according to Mr. Tooke (Diversions of Purley, v. ii.), of AngloSaxon, ১azian, to grow light. To becoma day ; to grow luminous. Hence to glimmer ; to appear obscurely; to commence. The dawn, or dawning is used for the time between the first appearance of the sun's light and sun-rise.
As it began to dawn towards the first day of the week, came Mary Magdalene to see the sepulchre.

DAX, an old town of France, in Gascony, situated on a plain on the left bank of the Adour, a bridge across which unites it to the suburb, Sablar. It has a wall flanked with towers, and a castle. The place has been long celebrated for its mineral waters. In the middle of the town is a large and deep spring which throws out warm water in large quantities. The surrounding country is flat and sandy, but productive. To the north-west is an immense forest. Population 4400. It is twenty-five miles northeast of Bayonne, and eighty-five south by west of Bourdeaux.

DAY, n.s.
To-day, adv. Dally,adj.\&ado Day-bed, \(n\). s.
Day-bоoк,
Day-break
Day-dream,
Day-labor,
Day-laborer,
Day-ligit,
Day-lily,
Daysman,
Day-spring,
Day-star,
Day-time,
Day-woman
Day-work.

Ang.-Sax. bxz; Goth. Swed. and Belg. dag; Tent. tag ; Icel. dagur ; Lat. dies: all probably fron Gr. ian, light. Minsheu says from Heb. ראה, to fly; or from the Betg. ducht, i. e. de acht (of aught, or some value), as Belg. nacht, night, is from nic acht, no value. The last conjecture is curious, and the coincidence remarkable. We leave the decision of these conflicting etymologies with the learned reader. The time between sun-rise and sunset; from noon to noon; from one evening to another; or from midnight to midnight; or between any two points marking an artificial division of time of this kind; light, sunshine ; any specified or appointed time ; particularly a time appointed to give judgment, and therefore that judgment given; the period of human life; any remarkable period; time in general. To-day appears simply to signify on this day. The meaning o the compounds is obvious, except perhaps tha of daysman, which signifies an umpire or judge Dr. Johnson says, 'a surety.' But the instances from Job ix. and Spenser seem to confirm the former meaning, which is what Ainsworth gives. Wiclif clearly uses it for ' judgment,' in 1 Cor. iv.
And to me it is for the leste thing that I be deened of ghou or of mannys dai, but neither I deme mysilf.

Wiclif. 1 Cor. iv.
I worche a werk in ghoure daies, a werk that ghe schulen not bileeue if ony man schal telle it ghou.

We have, at this time of day, better and more certain means of information than they had.

Woodvard.
Yet are we able only to survey
Dawnings of beams, and promises of day.
Prior.

Cease, man of woman born! to hope relief
From daily trouble, and continued grief. Id.
I think, in these duys, one honest man is obliged to acquaint another who are his friends. Pope.

If bodies be illuminated by the ordinary priswatick colours, they will appear neither of their own daylight colours, nor of the colour of the light cast on them, but of some middle colour between both.

Newton's Optick.
Of night impatient, we demand the day;
The day arrives, then for the night we pray.
The night and day successive come and go,
Our lasting pains no interruption know.
Blackmore.
My ants never brought out their corn but in the night when the moon did shine, and kept it underground in the daytime.

Addison.
Tb ? daily labours of the bee
Awake my soul to industry;
Who can observe the careful ant
And not provide for future want? Gay.
The past is all by death possest,
And frugal fate, that guards the rest,
By giving, bids us live to-day. Fenton.
Are these the questions that raise a flame in the minds of men at this day? If ever the church and the constitution of England should fall in these islands (and they will fall together), it is not presbyterian or popish hierarchy that will rise upon their ruins.

Burke.
Thus Genius rose and set at ordered times,
And shot a day-spring into distant climes,
Ennobling every region that he chose;
He sunk in Greece, in Italy he rose.
Couper's Table Talk.
Parting day
Dies like the dolphin, whom each pang imbues
With a new colour as it gasps away,
The last still loveliest, till-'tis gone-and all is gray.
Day, Civil. See Chronology.
Day, Natural. See Chronology.
Day, Sidereal; Day, Solar. See AstroNOMY.

Days of Grace, in commerce, are a customary number of days allowed for the payment of a bill of exchange, \&c., after the same becomes due. Three days of grace are allowed in Britain; ten in France and Dantzic; eight at Naples; six at Venice, Amsterdam, Rotterdam, and Antwerp; four at Francfort; five in Leipsic; twelve at Hamburg, \&c. In Britain the days of grace are given and taken as a matter of course, the bill being only paid on the last day: but in other countries, where the time is much longer, it would be thought dishonorable for a merchant to take advantage of it; bills are therefore paid on the very day they fall due.

Days of Grace, in law, are those granted by the court at the prayer of the defendant or plaintiff.

Day (Thomas), a benevolent English writer, born in the metropolis, in 1748. While an infant, he was left heir to a fortune of \(£ 1200\) a year by the death of his father, who was a collector of the customs. He received the first part of his education at the Charter-house, and was afterwards sent to Corpus Christi College, Oxford. Leaving Oxford he entered of the Middle Temple, and, having been disappointed in an
sarly affection, look two foandlin\% girls, with the intention of modelling their minds and mamers. The former he placed with a milliner, but the latter he took under his own instruction, till, finding his scheme fruitless, he gave it up, and sent her to a school. He is principally known as the author of the Ilistory of Saudford and Merton, a tale for youth, bearing no small similarity to Rousseau's Emilius. Mr. Day's opinions were more theoretical and sentimentai than adapted to the world as he found it: an instance of which occasioned lis death. Having a foal which he wished to ride, he would not suffer it to be previously broke in, by those usually employed in the task, but, undertaking the management of it himself, was thrown from its back, and received a severe kick on the head, of which he died, September 8th, 1789.

DAY-COAL, in natural history, a name given by the miners of England, and the people who live in coal countries, to that seam or stratum of the coal which lies uppermost in the earth. See Coal.

DAZE, v. a.
Dazzle, v.a. \& v.n.
Sax. ১æ̧ian, to shine.
Dazzlement, n.s. Goth. and Swed. dasa. To overpower with light, so as to confuse or stupify: for both daze and dazzle inay be regarded is the same active verb. Hence to dazzle is also to strike with surprise ; to astonish; and ' a dazed person,' in the North of England, is one of a vacant, staring countenance. As a neuter verb, to dazzle, is to be overpowered with light; to become blind.

Proud of such glory and advancement vayne, White flashing beames do daze his feeble eyen, He leaves the welkin way most beaten playne; And, wrapt with whirling whecles, inflames the skyers With fire not made to burne, but fayrely for to sliyne.

Spenser. Faeric Queene.
The crystall glass, which lent mine eyes their light,
Doth now waxe dym, and dazeled all with dread; My senses all, wyll now forsake me quite,

And hope of health abandoneth my head.
Guscoigne.
Fears use to be represented in such an imaginary fashion, as they rather dazzle men's eyes than open them.

Bacon.
An overlight maketh the eyes dazzle, insomuch as perpetual looking against the sun would cause blindness.

Id.
Dazale mine eyes? or do I see three suns?
Shakspeare.

> Mysteries
> Are like the sun, dazzling, yet plain to all eyes.
> Donne. Satires.

They smote the glistering armies, as they stand, With quivering beams, which dazed the wond'ring eye.

Fuirfax.
Those heavenly shapes
Will dazzle now this earthly with their blaze Insufferably bright.

Milton.
Poor human kind, all dazed in open day,
Err after itiss, and blindly miss their way.
Dryden.
Ah, friend! to dazzle let the vain design ;
o raise the thought, or touch the heart, be thine.
Pope.
It is with books as with women, where a certain plainness of manner and of dress, is more engaging
than that glare of paint and airs and apparel, which may duzzle the rye, but reaches not the affections.

> Hune

We gaze and turn away, and know not where, Dazzlcd and drunk with beauty, till the heart
Reels with its fulness; there-for evor thereChained to the rinariot of triumphal Art,
We stand as captives, and wou'd not depart.
Byron.
Daze, in natural bistory, a name givell by our miners to a glittering sort of stone, which oftens occurs in their works; and, as it is an unprofitable substance, is one of those things they call weeds. The word is applied by them to every stone that is hard and glittering; and therefore comprehends the whole genus of the telangia, or stony nodules, which liave the flakes of talc in their substance.
DEACON, n.s.
\(\left.\begin{array}{l}\text { Deaconess, } \\ \text { Deaconry, } \\ \text { Deaconsup. }\end{array}\right\} \begin{gathered}\text { Gr. itakovos. A ininis- } \\ \text { ter or official servant of the } \\ \text { church, from ita, empha- } \\ \text { tic ; and кovew, to serve }\end{gathered}\) See the following article. Deaconry is both the office of a deacon, and a sort of hospital or religious house at Rome.

Also (it bihoueth) dekenes to be chaast, not double tunged. Wiclif. 1 Tymo. iii.
Likewise must the deacons be grave, \(\mathbb{\&}\).
Bible. I Tim. iii.
When a contemptuous bold deacen had abused his bishop, he complained to S. Cyprian, who was an arch-bishop, and indeed S. Cyprian tells him he dit honour him in the business that he would complain to him.

Bp. Taylor.
Timothy was to prefer those who formerly had been employed by the church as deaconesses, and had discharged that office with faithfulness and propriets.

Macknight on 1 Tim. v. 10.
There were fourteen of these deaconries or hospitals, at Rome, which wore reserved to the cardinals. Du Cange gives in their names.

Chambers.
Deacon, in civil polity, the preses of a corporation, in the royal boroughs of Scotland.

Deacon, in ecclesiastical polity, òraкovos, a servant, one whose business is to baptize, read in the church, and assist at the celebrations of the eucharist. Seven deacons were institnted by the apostles, Acts vi., which number was retained a long time in several churches. Their office was to serve in the Agapæ, and to distribute the bread and wine to the communicants. Another part of their office was to be a sort of directors to the people in the exercise of their public devotions in the church; for which purpose they used certain forms of words, to give notice when cach part of the service began. Whence they are sometimes called eirokerukes, or holy criers of the church. Deacons had, by license from the bishop, a power to preach, to reconcile penitents, to grant absolution, and to represent their bishops in general councils. Their office out of the church was to take care of orploans, widows, prisoners, and all the poor and sick who had any title to be maintained out of the revenues of the church ; to enquire into the morals of the people, and to make their report to the bishop. Whence, on account of the variety of business, it was usual to have several deacons in the same church. In the Romish church, it is the deacon's office to
incense the officiatug priest or prelate; to lay the corporal on the altar; to receive the patera or cup from the subdeacon, and present it to the person officiating ; to incense the cloir ; to receive the pax from the officiating prelate, and carry it to the suldeacon; and at the pontifical mass, when the bishop gives the blessing, to put the mitre un his head, and to take off the archlishop's pall and lay it on the altar. In England, the form of ordaining deacons, declares that it is their office to assist the priest in the distribution of the holy communion; in which, agreeably to the practice of the ancient church, they are confined to the alministering wine to the communicants. A deacon in the Church of England is not capable of any ecclesiastical promotion ; yet he may be a claplain to a family, curate to a beneficed clergyman, or lecturer to a parish church. Ife may be ordained at twenty-three years of age, but it is expressly provided, that the bishop shall not ordain the same person a priest and deacon in the same day. The qualifications of a deacon in the prinnitive church are mentioned by the apostle Paul, 1 Tim. iii. 8-13.

Deaconess, an order of women who had their distinct offices and services in the primitive church. This office appears as ancient as the apostolical age; for St. Paul calls Phebe, ovaroyos, a servant of the church of Cenchrea. Tertullian calls them, viduæ, widows, becanse they were commonly chosen out of the widows of the church; and Epiphanius, and the council of Laodicea, call them \(\pi \rho \varepsilon \sigma \beta v \tau \iota \delta \delta_{\varrho}\), elderly women, because none but such were ordinarily taken into this office. For, by some ancient laws, these four qualifications were required in every on \({ }^{\text {n }}\) that was to be admitted into this order:1. That she should be a widow. 2 That she should be a widow that had borne children. 3. A widow that has been but once married. 4. One of a considerable age, forty, fifty, or sixty years old : though all these rules admitted of exceptions. One part of their office was to assist the minister at the laptizing of women. Another part was to he private catechists to the female catechumens who were preparing for baptism. They were likewise to attend the women that were sick and in distress; to minister to martyrs and confessors in prison; to attend the women's gate in the church; and, lastly, to assign all women their places in the church, regulate their behaviour, and preside over the rest of the widows, whence in some canons they are styled \(\pi \rho \circ к а \tau \theta_{\varepsilon \mu \varepsilon \nu \alpha,}\), governesses. This order, which since the tenth or twelfth century has been wholly laid aside, was not abolished at once, but continued in the Greek church longer than in the Latin, and in some of the Latin churches longer than in others.

Deaconry, diaconia, is a name given to the chapels and oratories in Rome, under the direction of the several deacons, in their respective regions or quarters. To the deaconries were annexed a sort of hospitals or boards for the distribution of alms governed by the regionary deacons, called cardinal deacons, of whom there were seven answering to the seven regions, their chief being called the archdeacon. The hospital adjoining to the church of the deaconry had an
adnimistrator for the temporal concerns, calleyi the father of the deacoury, who was sometimes a priest and sometimes a layman.
DEAD, v.a. v. n. n. s. \& adj.)
Deaden, \(v . a\).
Deadly, adj. \& adv.
Deadliness, \(n\).s.
Deadeess, \(n\).s.
Dead-born, adj.
Dead-boing, part.adj.
Dead-lift, \(n\).s.
Dead-reckoning. n.s.
Sax. bead; Goth.and Icel. daud; Teut. tod. See Deatir. As active verbs, to dead and to deaden, both signifyto cause death, as well as to deprive of power or force; to make vapid or spiritless; but are nearly ohsolete. Lord Bacon uses dead as a neuter verb. Dead, the adjective, is, deprived of life; senseless; withont motion; inactive ; empty; void; dull; useless; unadorned; flat in taste; vapid. As a noun, it signifies those who have suffered death, and, figuratively, a still or quiet season. Deadly is, mortal, or like death. Dead-doirg is, that which is destructive, having the power or design to kill. Deadliness is that state or condition which threatens death; a dead-lift is 'hopeless exigence,' says Dr. Johnson ; that is, figuratively, for the original idea is the heavy mass or 'dead weight' which a lifeless body becomes. See the example from Locke. Deadreekoning is a sea phrase, meaning the reckoning that is kept without observation of the heavenly bodies.

How seyn summen among ghou that the aghenrisynge of deede men is not? and if the aghenrisynge of deede men is not, neither erist roos aghen fro deeth.

Wiclif. 1 Cor. 15.
There was not a house where there was not one dead.

Exod. xii. 30.
At thy rebuke, 0 God of Jacob, both the ehariot and horse are east into a dead sleep.
- Psalms.

I will break Pharaoh's arms, and he shall groan before him with the groanings of a deadly wounded man.

Ez, xxx. 24.
Therewith the fire of jalousie up sterte
Within his brest, and hent him by the herte
Soo woodly, that he like was to behold
The box-tree, or the ashen ded an cold.
Chawcer. Cant. Tales.
Hold, \(\mathbf{O}\) dear lord, your dead-doing hand,
Then loud he cried, I am your humble thrall.
Spenser.
Loth was that other, and did faint though feare To taste the' untried dint of deadly steele ; But yet his lady did so well him eheare,
That hope of new good hap he gan to feele.
Id. Faerie Queene.
That the sound may be extinguished or deaded by discharging the pent air, before it cometh to the mouth of the piece, and to the open air, is not probable.

Bacor.
The beer and the wine, as well within water as above, have not been palled or deaded at all.

Id.
Anointing of the forehead, neck, feet, and baekbone, we know is used for proearing deep sleeps. Id.
Iron, as soon as it is out of the fire, deudeth straitways.

Id. Natural History.
She then on Romen ealls-As if that name,
Shot from the deadly level of a gun,
Did murther her.
Shakspearn

Like dumb statues, or unbreathing stones, Stared each on other, and looked deadly pale.

> Shakgreure.

The quren, my lord, is dead:
She should have died hereafter.
Id. Mucbeth.
The tin sold sometimes higher, and sometimes lower, according to the quick vent and abundance, or the dead sale and scarcity.

Carew.
But why rloth Balbus his deade-doing quill Parch in his rusty scahbard?

Bishop Hall. Satires. vi. 1.
Their flight was only deferred until they might cover their disorders by the dead darkness of the night.

Hayward.
Travelling over Amanus, then covered with deep snow, they came in the dead winter to Aleppo.

Knolles.
And have no power at all, nor shift To help itself at a dead-lift.

Hudibras.
They ncver care how many others
They kill, without regard of mothers,
Or wives, or children, so they can
Make up some fierce dead-doing man.
In the dead of the night, when the men and their dogs were all fast asleep.

L'Estrange.
When it (the cavity) was closed up, the bell seemed to sound more dead than it did when just before it sounded in the open air.

Boyle.
She either from her hopelcss lover fled Or with disdainful glanees shot him dead.

\section*{Dryden.}

Jove saw from higb, with just disdain, The dead inspired with vital life again.

Id.
Nought but a blank remains, a dead void space, A step of life, that promised such a race

Id.
At a second sitting, though I alter not the draught, I must touch the same features over again, and change the dead colouring of the whole.

Young Arcite heard, and up he ran with haste, And asked him why he lookcd deadly wan? Id.

Your gloomy eyes betray a deadness,
And inward languishing. Dryden and Lee's GEdipus.
Mettled sehoolboys, set to cuff,
Will not confess that they lave done enough, Though deadly weary.

Orrery.
After this life, to hope for the favours of merey then, is to expect an larvest in the dead of winter.

South.
They cannot bear the dend weight of unemployed time lying upon their hands, nor the uneasiness it is to do nothing at all.

Locke.
That the dead shall rise and live again, is beyond the discovery of reason, and is purely a matticr of faith.

Id.
This motion would be quiekly deadened by countermotions. Glanville's Scepsis Scientifica.
All, all but truth, drops dead-born from the press, Like the last gazette, or like the last address. Pope.

How cold and dead does a prayer appear, that is composed in the most clegant forms of speech, when it is not heightened by solemnity of phrase from the saered writings.

Addison.
Our dreams are great instances of that activity which is natural to the human soul, and which is not in the power of slcep to deaden or abate. Spectator.

Somewhat is left under dead walls and dry ditches. Arbuthnot.

Anodynes are such thing as relax the tor ston the aftected mervous filbe:s, or destroy the pathoub acrimony which occasions the pain; or what dichto. the sensation of the brain, by procuring slece.
\[
\text { 11. an } \mathrm{D}_{\text {iel }}
\]

A little rill of scanty stream and bed-
A name of blood from that day's sanguine rain
And Sanguinetto tells ye where the dead
Made the earth wet, and turned the unwilling waters red.

Byron.
But, hark!-that licavy sound breaks in once mure,
As if the clouds its echo would repeat,
And nearer, clearer, deadlier than before \({ }^{\prime}\)
Arm! arm !-it is-it is-the cannon's opening roar!
Id.
Dean-fye, in maritime affairs, a sort of round flattish wooden block, usually encircled with a rope, or with an iron band, \(g\), and pierced with three holes through the flat part, in order to receive a rope called the lanyard \(h\), which, corresponding with three holes in another dead-eye \(i\), creates a purchase employed for various uses, but chiefly to extend the standing rigging. In order to form this purchase, one of the dead-eyes is fastened in the upper link of each chain on the ship's side, which is made round to receive and encompass the hollowed outer edge of the dead-eye. After this the lanyard is passed alternately through the holes in the upper and lower dead-eyes, till it becomes six-fold; and is then drawn tight by the application of mechanical powers.

Dead-lights, certain wooden ports, which are made to fasten into the cabin windows, to prevent the waves from gushing into the ship in a high sea; and, as they are made exactly to fit windows, and are strong enough to resist the waves, they are always fixed in on the approach of a storm, and the glass lights taken out, which must otherwise be shattered to pieces by the surges, and suffer great quantities of water to enter the vessel.
Deadly Feun, in English law-books, a profession of irreconcilable enmity, till a person is revenged by the death of his enemy. See Feud. Such enmity and revenge were allowed by law in the time of the Saxons. If any man was killed, and a pecuniary satisfaction was not made to the kindred, it was lawful for them to take up arms and revenge themselves on the murderer: this was called deadly feud; and probably was the original of an appeal.

Dead Sea, in geography, a lake of Judea, into which the river Jordan discharges itself. See Asphaltites.
Dead Water, at sea, the eddy water just astern of a ship; so called because it does not pass away so swift as the water running by her sides does. They say that a ship makes much deadwater when she has a great eddy following lier stem.

DEAF, v.a. \& adj. Sax. abearian, bear: Deafen, v.a. Goth. deif; Dan. docv.
Deafly, adv. \(\quad\) Minsheu says, Tent.
Deafness, n.s. \(\int_{\text {daub, from lleb. }}\). weak: and this. seems confirmed by an olus
meaning of the word in our language, i.e. sterile, unprofitable. To deprive of hearing; to stun: wanting the sense of hearing, totally or partially; dull; determined against a request or solicitation: applied also to sounds heard imperfectly, i. e. weakly. It requires to before the thing or sound that ought to be heard.

And by so myche more thei wondriden and seiden, he dide wel alle thingis and he made deefe men to here and doumbe men to speke. Wiclif. Mark 7.

A good wif was ther of beside Bathe, But she was some del defe, and that was scathe. Chascer. Prol. to Ctint. Tales.
Come on my right hand, for this ear is deaf.
Shukspeare.
1 will be deaf to pleading and excuses;
Nor tears nor prayers shall purchase out abuses. Id.
Hearing hath deafed our sailors; and if they
Know how to hear, there's none know what to say.
Donne.
I found such a deafness that no declaration from the bishops could take place. King Charles.
A swarm of their aerial shapes appears, And futtering round his temples, deafs his ears.

But Salius enters: and, exclaiming loud
For justice, deafens and disturbs the crowd.
Nor silence is within, nor voice express,
But a deaf noise of sounds that never cease; Confused and chiding like the hollow roar Of tides receding from the insulted shore.

Those who are deaf and dumb, are dumb by consequence from their deafness.

Holder.
Whilst virtue courts them ; but, alas, in vain ! Fly from her kind embracing arms, Deaf to her fondest call, blind to her greatest charms. Roscommon.
If any sins affict our life
With that prime ill, a talking wife, Till death shall bring the kind relief, We must be patient, or be deaf.

Thus you may still be young to me, While I can better hear than see :
Oh ne'er may fortune shew her spite,
To make me deaf, and mend my sight. Swift.
Hope, too long with vain delusion fed, Deaf to the rumour of fallacious fame, Gives to the roll of death his glorious name.

Pope.
The Dunciad had never been writ, but at his request, and for his deafness; for, had he becn able to converse with me, do you think I had amused my time soill?

Id.
From shouting men, and horns, and dogs, he flies, Deafened and stunned with their promiscuous crics. Addison.
Wheel in wide circle, form in hollow square, And now they front, and now they fly the war, Picrce the deaf tempest with lamenting crics,
Press their parched lips, and close their blood-shot eyes.

Darwin.
Deafness arises commonly either from an obstruction or a compression of the anditory nerve; from some collection of matter in the cavities of the inner ear; from the auditory passage being stopped up by some hardened excrement; or lastly, from some excrescence, a swelling of the glands, or some foreign body introduced wathin it.

There are also diseases of the internal ear that admit of no distinct classification, and sometimes such defects of the auditory nerves, either as a whole or in part, as to occasion this unhappy peculiarity. The sensibility of these nerves, like that of the rest of the body, becomes also weakened by age and various diseases, so as to occasion what is properly called a loss of hearing.

Our ubject in this paper is to consider deafness distinctly, and as a disease. Its unhappy consequence, in those who are born deaf, Dumbness, is an entirely different topic: at least in a nosological point of view. We shall first treat of both distinctly, and then, in the latter article, give some account of the modern efforts to aneliorate the situation of those in whom these disorders are hopeless. And,
1. Of deafness from deficiency in the auditory organs.-We are said to possess more accurate and detailed descriptions of the anatomy of the ear than of any other part of the body: in our articles Anatomy and Physiology we shall be seen to a arail ourselves of them. But it is remarkable that the profession of an aurist is almost new to the medical world, and that many diseases and deficiencies of the organs of the ear are yet to be explained. We lave perhaps, therefore, less of the just application of knowledge to its diseases than to those of any other part. See Accoustics.

The office of individual portions of this complicated organ, for instance, has been but very imperfectly ascertained. Numerous observations seem to indicate that conșiderable injuries and deficiencies of the membrana tympani may take place without producing much effect upon the faculty of hearing. Persons who, by driving smoke taken in at the mouth, iu large volumes through the ears, indicate a deficiency of this kind, are often found acute in the perception of sounds; and Sir Astley Cooper mentions an instance in which the membrana tympani of one ear being totally destroyed, and that of the other nearly so, by disease, it appeared that the deafness was inconsiderable, and that sound was most readily perceived by the ear in which no trace of the membrane could be discovered. In the same case, the ear was nicely susceptible of musical tones, the individual played well on the flute, and sang perfectly in tune. The power of accommodating the ear to differing intensity of sourid was, indeed, lost for some time after the destruction of the membrane: it, however, gradually returned; and at the period of examination there was no distress arising from that deficiency.
Where deafness has followed the accidental destruction or continued disease of this membrane, it would appear to arise more directly, therefore, from its effect on neighbouring oigans, as on the membranes of the fenestra, and the fluid of the labyrinth, which seem to be essential to the distinct conveyance of sound. The tympanum is, in fact, only one of the outward portals of this mysterious temple, though the last of them at which the sound arrives.

Its functions seem to be analogous with those of the pinua, or outward ear, i.e. to regulate
and direct, only in a more pelfect degree, the waves and impressions of sound. In the case above quoted, after this membrane had been so materially injured, the museles of the external ear seemed to acquire a new power of moving upward, and backwards, which was regularly exerted in the effort to catch an indistinct sound. The whole of the pinna, we need hardly observe, has been frequently removed without any abiding injury to the hearing. And in cases where the auricle has never been formed, the functions of the inner ear have been found perfect. Scarpi considers the fenestra rotunda as a species of second tympanum. So long, therefore, as the internal ear is sound and healthy, all the essential operations of this organ will proceed.

One practical remark may be permitted us here, on a very common practice. Sir Hans Sloane has observed, 'that among the many people in England who had applied to him on account of deafness, the far greater part were thrown into their complaints by too often picking their ears, and thereby bringing humors, or ulcerous dispositions, on them.'-Phil. Trans. No. 246, p. 406.
2. Of diseases of the meatus auditorius, or external passage of the ear.-In this passage, and its secretions, arise the most common impediments to hearing. The exact, healthy quantum of cerumen, or wax, which should be here secreted, has never been ascertained. But in a diseased state of this part of the ear the cerumen has been found completely stopping up the passage, and sometimes forming a false tympanum. The cerumen hardened and permanently lodged on the tympanum is a frequent and uniform cause of deafness. The common application of warm water for this accumulation has never been impoved upon. This passage is also subject to Hereration, which produces a great thickening of the integuments, and consequent obstruction. The ichor, exuding from the ulcerated surface, inspissates in the passage, and is accompanied with much fotor. This disease generally yields to the application of solutions of the metallic salts, as of muriated mercury in lime-water ; or of vitriolated zinc; or to the use of the unguentum hydrargiri nitratum; calomel, or other alteratives being taken at the same time. (Saunders). Polypous excrescences and other extraneous substances sometimes require to be removed by mechanical means from this passage.
3. Of diseases or obstructions of the Eustachian tube.-This forms, in fact, the body of the drum, if we may be allowed the phrase, of which the ear so largely consists. Communicating with the back of the palate, it admits a portion of air to counterbalance that in the meatus, and assists materially, during the vibrations of the tympanum, in perfecting the distinct sensation of sounds. Inveterate deafness is therefure often produced by the disease or obstruction of this organ and its cavity. When air is no longer found here, the tympanum is unduly forced and stretched inward, and thus cannot vibrate as in its perpendicular state.

Ubstructions of this tube arise frequently from syphilitic ulcers in the throat, or sloughing in the cynanche maligna. The deafness ensues on
the healing of the ulcers, that is, when the obstruction is complete. The descent of a nasal polypus into the pharynx, and enlarged tonsils, have also been known to close the tube. Sometimes the cavity has been found filled with mucus.

The only symptom to which medical men can advert in this case is, that when the patient blows, with his nose and mouth stopperl, he does not experience that peculiar sensation, which arises from the inflation of the tympanum. He speaks only of the loss of sense, and complains of no particular symptom. In this respect the deafness differs from all other species.
Sir Astley Cooper has, however, introduced a method of relieving this previously incurable lisease of the ear, by puncturing the tympanum. The effect is said to be an instantaneous restorative to the faeulty of hearing. But there is some difficulty in keeping open the puncture, which is, in point of fact, to become, in this case, an artificial Eustachian tube. A large hole diminishes the perfection of the returning tension sense, and a small one is perpetually closing. If the membrane also be much lacerated or detached at its circumference, the tension will be lessened; yet even, in these cases, the patient receives at evident benefit.

The instrument, in this operation, is passed through the meatus and the anterior or inferior part of the tympanum. The position of the manubriun of the inallens demanding this precaution : a little crack will immediately be heard like that which is occasioned in pricking a common drum, particularly if the tube be entirely closed, as the sound will then be more acute, from the rapid entrance of the air. The instrument must not penetrate far into the tympanum, lest it should pierce its vascular lining; and the escape of blood injure the operation.
4. We come now to the more numerous and important diseuses of the internal ear.-It is evident that deafness often exists when no apparent cause or morbid affection appears ; and that it arises from a nervous insensibility, in some cases, which no surgical aid can remove. The tympanuın will appear perfect, and exercise, apparently, its usual functions; and the secretions of the meatus seem healthy. In some cases, complaint is made of great noises in the head, and, as they often correspond with the beating of the pulse, this has been traced to a peculiar perception of the pulsation of the arteries. The orgatic causes of some of these discases are even traceable to the brain. Where the deafness has been preceded by local inflammation in the head, evacuants, particularly local ones, are generally prescribed; such as the application of leaches and blisters to the neck and behind the ears; and the general antiphlogistic plan should be pursued more or less, according to the nature of the plerothic symptoms.

Imperfect circulation, on the other hand, and general debility, will sometimes be the cause of deafness; when the usual stimulants of electricity and galvanisn have been found effectual, and stimulating liquids may be cautiously dropped into the ear. In the swelling, or enlargement of neighbouring parts of the head or
reck, through scrophulous or syphilitic affections, these disorders, of course, must be attended to, as the root of the disorganisation.

Mr. Saunders has described, at some length, one of the most common and important diseases, connected both with the external and internal ear; and, at the same time, one of the most common causes of deafness that occur. We mean the puriform discharge, or 'running,' as it is popularly called, from the tympanum. He considers it under three states or stages: 1. A simple puriform discharge. 2. A puriform discharge, complicated with fungi and polypi. 3. A puriform discharge, with a caries of the tympanum. The time of transition from one of these stages to another is quite uncertain. In some instances, years do not affect it; and, in others, it seems to advance, almost at once, to a carious state of the bone.

This puriform discharge from the tympanum, he insists, is a local disease, and does not depend on any disordered state of the constitution : general remedies are, therefore, inefficacious. But, as a bad state of health is unfavorable to the healing of any parts, so, in this particular complaint, any disordered condition of the habit should be corrected. The clief dependence is to be placed on direct applications to the parts affected. Injections of vitriolated zinc, acetate of lead, \&c., are very efficacious in suppressing the discharge; and their effects may be aided by the external employment of blisters and setons. The fungous and polypous excrescences must be removed or destroyed by mechanical means; they are only incidental occurrences, and their removal reduces the disease to the first stage.

The deafness during the continuance of this discharge is sometimes very considerable, when the real injury which the organ has sustained is trivial. In the first stage, the mere thickening of parts, or the collection of the discharge, must impede the action of the intervening machinery between the external and internal parts of the ear; and, in the second, the mechanical obstruction of the funguses or polypi excludes the pulses of sound. On this account there is often a remarkable increase of the power of hearing, when the discharge is suppressed in the first and second stages. But as the parts are invisible, \(i^{+}\)is difficult, if not impracticable, to decide à priori, how far the power of hearing can be restored. This, however, is no valid objection to attempting the cure. The sense will not be rendered worse by a failure; and if the discharge should be stopped, the disease which caused it is removed, the organ safe from farther injury, and the patient freed from an offensive inalady. In the last stage, the sense is almost, if not totally, destroyed; and although the discharge be stopped, the patient's hearing will be very little, if at all, improved.

When this disease is cured, the tyinpanum is exposed to the free ingress and egress of the air, and the mucilaginous discharge inspissates, as the mucus of the nose, by the exhalation of its watery parts. By this accident the patient's deafness increases at intervals, for which he often sseks relief. The practitioner, on sounding the tar, perceives this hardened matter; and con-
ceiving, as is really the case; that it produces the augmentation of deafness, is tempted to remove it. But nothing stimulative, nor any rude attempts, can be safe, for there is great danger of reproducing the discharge. Having learned that a discharge has pre-existed, it will be expedient to leave it to spontaneous separation. Suunders's Anatomy and Diseasrs of the Ear.
This is frequently the disorder of the ear, attended with violent inflammations of the tympanum, and even with delirium ; remarkably resembling, in its fluctuations, the tooth-ache, and often popularly but most improperly treated with similar stimulating applications. Parents and individuals who have the care of children cannot be too observant of the nature of frequent discharges from the ear, and should apply early for a good medical opinion as to their cause.

\] \(\mathrm{Gr} . \delta_{\ell} \varepsilon \lambda \varepsilon \downarrow \nu\), says Minsheu, to distribute or divide. These are clearly the leading ideas of the word in all its various applications. To separate and distribute in portions; to dispose of in parts; to scatter; to give to different persons. As a neuter verb, to trade; to transact business; and hence, to negociate and mediate an intercourse between different parties; taking various prepositions, as to deal by, deal in, and deal with. As a substantive, it expresses the part or quantity divided or distributed; the act or practice of apportioning out a pack of cards; a plank of fir, divided, split, or sawn out from the tree. A dealer is a trader, or distributer of various commodities for profit. Dealing, the practise of trading, and hence any kind of business, transaction, or intercourse.

Deal thy bread to the hungry, and bring the poor that are cast out to thy house.

Ieaiah lviii. 7.
And with the one lamb, a tenth deal of flour mingled with the fourth part of an hin of beaten oil.

Exod. xxix. 40.
The treacherous dealer dealeth treacherously, anc the spoiler spoileth.

Isuiah xxi. 2.

> He kept his patient a ful great del
> In houres by his magike naturel.

Chaucer. Prol. to Cant. Tales.
Neither can the Irish, nor yet the English lords, think themselves wronged, nor hardly dealt with, to have that which is none of their own given to them.

Spenser's Ireland.
Whem men's affections do frame their opinions, they are in defence of errour more earnest, a great deal, than, for the mnst part, sound believers in the maintenance of truth.

Hooker.
Concerning the dealings of men who administer government, and unto whom the execution of that law belongeth, they have their judge, who sitteth is heaven.

Id.
But this was neither one pope's fault, nor nne prince's destiny: he must write a story of the empire, that means to tell of all their dealings in this kind.

Raleigh.
Sometimes he that deals between man and man, raiseth his own credit with both, by pretending greate: interest than he hatl in either.

Bacos.

It is generally better to deal by speech than by letter; and by a man himself, than by the mediation of a third.

Id.
To weep with them that weep, doth case snme deal; But sorrow flouted at is double death. Shakspeare.

\section*{Two deep enemies,}

Foes to my rest, and iny sweet sleep's disturbers,
Are they that I would have thee deal upon. Id.
What these are!
Whose own hard dealings teach them to suspect
The theughts of others.
Id.
What a deal of cold business doth a man mispend the better part of life in' In scattering compliments, aud tendering visits.

Ben Jonson.
If she hated me, I should know what passion to deal with.

Sidney.
Still in the night she weeps, and her tears fall
Down her cheeks along, and none of all
Her lovers comfort her. Perfidiously
Her friends hąe dealt, and now are enemy.
Donne. On the Lamentat. of Jeremy.
Gentlemen were commanded to remain in the country, to govern the people, easy to be dealt with whilst they stand in fear.

Hayward.
God's gracious dealinys with men, are the aids and auxiliaries necessary to us in the pursuit of piety.

Hammond.

\section*{Who then shall guide}

His people? Who defend? Will they not deal Worse with his followers, than with him they dealt?

Milton.
I have also found, that a piece of deal, far thicker than one would easily imagine, being purposely interposed betwixt my eye, placed in a room, and the clearer daylight, was not only somewhat transparent, but appeured quite through a lovely red.

> Boyle on Colours.

God did not only exercise this providence towards his own people, but he dealt thus also with other nations.

Tillotson.
They buy and sell, they deal and traffic. South.
Possibly some never so much as doubted of the safety of their spiritual estate; and, if so, they have so much the more reason, a great deal, to doubt of it.

Id.
One with a broken truncheon deals his blows.
Dryden.
But I will deal the more civilly with his two poems, because nothing ill is to be spoken of the dead. Id.

Keep me from the vengeance of thy darts,
Which Niobe's devoted issue felt,
When hissing through the skies the feathered deaths were dealt.
\(I d\).
Such an one deals not fairly by his own mind, nor conducts his own understanding aright. Locke.

With the fond maids in palmistry be deals,
They tell the secret which he first reveals. Prior.
Reflect on the merits of the cause, as well as of the men who have been thus dealt with by their country.

Swift.

\section*{How can the muse her aid impart,} Unskilled in all the terms of art? Or in harmonious numbers put The deal, the shuffle, and the cut?

Id.
I find it common with these small dealers in wit and learning, to give themselves a title from their first adventure.

Id.
The Scripture forbids even the countenancing a poor man in his cause; which is a popular way of freventing justice, that some men have dealt in, though without that success which they proposed to themselves.

Atterbury,

Wherever I find a great deal of gratitude in a poo: man, I take it for granted there would lee as much generosity if he were a rich man. Poue.

You wrote to me with the freedom of a friend, dealing plainly with me in the matter of my own trifles.

Id.
Among authors, none draw upon themselves more displeasure than those who deal in political matters.

Addisin.
The business of mankind, in this life, being rather to act than to know, their portion of knowledge is dealt them accordingly.

Id.
True logick is not that noisy thing that deals all in dispute, to which the former ages had debased it.

Wat's's Loyick.
How Spain prepares her banners to unfold, And Rome deals out her blessings and her gold.

Tickell.
The nightly mallet deals resounding blows.
Gay.
Nature seldom forms an universal genius; but deals out her favours in the present state with a parsimonious hand.

Mason.
I do readily admit that a great deal of the wars, seditions, and troubles of the world did formerly turn upon the contention between interests that wert by the names of protestant and catholic. Burke.

The Goth, the Christian, Time, W ar, Flood, and Fire
Have dealt upon the seven-hilled city's pride;
She saw her glories star by star expire,
And up the stepp, barbarian monarchs rikle,
Where the car climbed the capitol. Byron.
Deal, in carpentry, a thin kind of fir plank, formed by sawing the trunk of a tree into a great many longitudinal divisions, of greater or less thickness according to the purposes it is intended to serve. \(\Lambda\) good method of seasoning planks for deal, is to throw them into salt water as soon as they are sawed, and keep them there three or four days, frequently turning them. In this case they will be rendered much harder, by drying afterwards in the air and sun; but neither this, nor any other method yet known, will preserve them from shrinking. Rods of deal expand laterally, or cross the grain, in moist weather, and contract again in dry.

Deal, in geography, a market town and seaport of Kent, between Dover and Sandwich, and supposed to be the Dola of Nennius, and situated on a flat and level coast. The town of Deal, except it may be the sea's slirinking a little from it, is in much the same condition in which it ever was, even from the earliest accounts. Dr. Halley has proved, in his Miscellanea Curiosa, that Julius Cæsar landed here, Angust 26th, A. A. C. 55. The great conveniency of landing has been of infinite service to the place; so that it is large and populous, divided into the upper and lower towns, adorned with many buildings, and is in effect the principal place on the Downs. To the south of the town is a castle, surrounded by a ditch; it consists chiefly of a round tower, containing apartments for the captain and other officers, and a battery. The batteries and martello towers, constructed during the late war, command from the eminences, evcry access to the shore. Anchors, cables, \&c., are always ready to
supply ships that may need them. It has a very commodinus market held on Tuesday and Wednesday, which is well supplied with every kind of provision, \&c. It lies seven miles south by east of Sandwich, and seventy-four east by south of London.

DEALBA'TION, n.s. Lat. dealbatio. The act of bleaching or making white.

411 secd is wbite in viviparous animals, and such as have preparing vessels, wherein it receives a manifold dealbation.

Browne's Vulgar Errours.
DEAMBULATION, \(n . s\).\(\} Lat. deambula-\) Dea'mbulatory, adj. \} tio. The act, or relating to the practice, of walking abroad. See Ambitation.

DEAMENA, in the mythology, the goddess who was supposed to preside over women during their menses.

DEAN, n.s. \(\}\) Fr. doyen; Lat. decanus;
Dean'ery.n.s. § 'From the Greek word \(\delta\) eka,' says Ayliffe, 'in English, ten, because he was anciently set over ten canons or prebendaries at least in some cathedral church.'

The dean and canons, or prebends, of cathedral churches, werc of great use in the church; they were not only to be of counsel with the bishop for his revenuc, but chiefly for government in causes ecclesiastical. Use your best means to prefer such to those places who are int for that purpose.

Bacon.
Take her by the hand, away with her to the deanery, and dispatch it quickly.

Shakspeare.
He could no longer keep the deanery of the chapelroyal.

Clarendon.
Put both deans in one ; or, if that's too much trou ble,
Instead of the deans makc the deanery double.
Swift.
Dean. As there are two foundations of cathedral churches in England, the old and the new (the new are those which Henry VIII., upon suppression of abbeys, transformed from abbot or prior, and convent, to dean and chapter), so there are two means of creating deans; those of the old foundation are appointed to their dignity, much like bishops, the king first issuing his conge d'elire to the chapter, the clapter then choosing, and the bishop confirming, and giving his mandate to install them. Those of the new foundation are, by a shorter course, installed by virtue of the king's letters patent, without election or confirmation. This word is also applied to the chief officers of certain peculiar churches or chapels; as the dean of the king's chapel, the dean of the arches, the dean of St . George's chapel at Windsor, and the dean of Bocking in Essex. The dean and chapter are the council of the bishop, to assist him with their advice in affairs of religion, as well as in the temporal concerns of his see. When the rest of the clergy were settled in the several parishes of each diocese, these were reserved for the celebration of divine service in the bishop's own cathedral; and the chief of them, who presided over the rest, obtained the name of decanus, or dean, being, probably, at first appointed to superintend ten canons or prebendaries. The chapter, consisting of canons or prebendaries, are sometimes appointed by the king, sometimes by the bishop, and sometines
elected by each other. The dean and chaptes are the nominal electors of a bishop. The bishop is their ordinary and immediate superior; and has, generally speaking, the power of visiting them, and correcting their excesses and enormities. They had also a check on the bishop at common law; for, till the stat. 32, IIen. VIII. cap. 28, his grant, or lease, would not have bound his successors, unless confirmed by the dean and chapter.

Dean, in geography, a forest of England, in Gloucestershire, between the Severn and the county of Monmouth. The forest once contained 30,000 acres of land, in which were twenty-three parishes, and four market towns, with great abundance of fine timber. It was reckoned the chief support of the English nary; and the Spanish armada, it is said, was expressly commissioned to destroy it. The iron forges have lessened the quantity of wood, but not consumed it, as care is said to be taken in cutting it. The hills abound in iron ore

Dean, Great Dean, or Michael Dean, a town in the above forest, with an elegant church and handsome spire. Cloth and pins are its chief manufactures. It has a market on Monday, and fairs Easter Monday and October 10th. It lies twelve miles west of Gloucester, fifteen of Monmoutlh, and 120 south-west of London.

Dean of Guled, in Scottisn law, the cnief judge of a guild-conrt. The dean of guild in Edinburgh, and most of the royal boroughs of Scotland, is a member of, and elected by, the town-council; ranks next to the bailies, and continues two years in office.

DEAR, n.s.\&adj.) Sax. beon; Belg. dier; Dear'bought,adj. Swed.dyr; Isl.dar; Goth. Dear'ling, n. s. chèr ; from Lat. carus, ca-
Dearily, adv. reo, to want, as Minsheu
Dear'ness. n.s. conjectures. One much valued or beloved; valuable; beloved; costly; scarce.

They do feed on nectar, leavenly wise, With Hercules and Hehe, and the rest Of Venus' dearlings, through ber bounty blest.

Spenser.
The whole senate dedicated an altar to Friendslup, as to a goddess, in respect of the great dearness of fricndship between them two.

Bacon.
It is rarely bought, and then also bought dearly enough witl such a fine.

Id.
Your brother Glo'ster hates you.
-Oh, no, he loves me, and he holds me dear.
Shakspeare.
My brother holds you well, and in dearness of heart bath holp to effect your ensuing jarriage. Id.

That kiss
I carried from thee, dear; and my true lip Hath virgined it e'er since.

Id. Coriolanus.
Where life is deare, who cares for coyned drosse? That, spent, is counted gaine; and spared, lossc.

Bp. Hall. Satires ii. \({ }^{2}\).

\section*{0 ficeting joys}

Of Paradise, dearbought with lasting woe. Milton.
He who hates his neighbour mortally, and wiscly too, must profess all the dearness of friendship, with readiness to serve him.

South.

\section*{DEA}

In times of dearth, it drained much coin out of the kingdom, to furnish us with corn from foreign parts.

Bacon.
Pity the dearth that I have pined in,
By longing for that food so long a time.

> Shakspeare.

Of every tree that in the garden grows,
Eat freely with glad heart ; fear here no dearth.

\section*{Milton.}

The French have brought on themselves that deart/o of plot, and narrowness of imagination, which may be observed in all their plays.

Dryden.
There have been terrible years dearths of corn, and every place is strewed with beggars; but dearths are common in better climates, and our evils here lie much deeper.

Swift.
DEATH, n.s. 7 Sax. ъеаð; Belg. dool;
Death-bed, \(\quad\) Teut. tod, todt, thot; from
Death'ful, adj.
Death'less, adj.
Deatih-like,
Death's-door,
Death's-head,
Death's-man,
Deatho or causer of death; the正 final perdition of wicked men. A death's man is a public executioner: death's door, a near approach to death. A deathwatch is an insect making a ticking noise, like a watch, and supposed to presage death. The other compounds seem to require no explanation.

For the sorrowe that is aftir God worchith penaunce into stidefast heelthe, but sorrow of the worlde worchith deeth.

Wiclif. 2 Cor. vii.
They cried out, and said, 0 thou man of God, there is death in the pot.

2 Kings iv. 40.
He is the mediator of the New Testament, that by means of death, for the redemption of the transgressions, they which are called might receive the promise of eternal inheritance.

Heb. ix. 15.
Thou shalt die the deaths of them that are slain in the midst of the seas.

Ezekiel xxviii. 8.
We pray that God will keep us from all sin and wickedness, from our ghostly enemy, and from everlasting death.

Church Catechism.
They were adradde of him as of the deth.
His wanning was ful fayre upon an heth.
Chnucer. Prol. to Cant. Tales.
He answered naught, but in a traunce still lay, And on those guileful dazed eyes of his The cloude of death did sit. Spenser. Faeris Queene.

As in manifesting the sweet influence of his mercy, on the severe stroke of his justice; so in this, not to suffer a man of death to live.

Bacon.
Time itself, under the dcathful shade of whose wings all things wither, bath wasted that lively virtue of nature in man, and beasts, and plants. Raleigh.

In swinish sleep
Their drenched natures lie, as in a death.
Shakspeare.
I had rather be married to a deuth's head, with a bone in his mouth, than to either of these. Id.

He's dead ; I'm only sorry
He had no other deathsman.
Death, a necessary end,
Will come when it will come.
1d. Julius Casar.

Sweet soul, take heed, take heed of perjury ; Thou art on thy death-bed. 1d. Othello.
Life, by this death abled, shall controll Death, whom thy death slew; nor shall to me Fear of first or last death bring miserie, If in thy life's book my name thou enroll.

Donne. Dirine Poems.
There was a poor young woman, that had brought herself even to death's door with grief for her sick husband.

L' Estrange.
No blacks, nor soul-bells, nor deuth'r-heads on our rings, nor funeral sermons, nor tombs, nor epitaphs, can fix our hearts enough upon our frail and miserable condition.

Bishop Hall. Sermon 30.
On seas, on єarth, and all that in them dwell,
A deathlike quiet and deep silence fell. Waller.
Blood, death, and deathful deeds, are in that noise, Ruin, destruction at the utmost point. Milton.

A deathlike sleep!
A gentle wafting to immortal life!
Id.
God hath only immortality, thongh angels and human souls be deathless.

Boyle.
I myself knew a person of great sanctity, who was afflicted to death's-foor with a vomiting.

Taylor's Worthy Communicant.
These are such things as a man shall remember with joy upon his death-bed; such as shall cheer and warm his heart, even in that last and bitter agony.

> South's Sermons.

He must his acts reveal,
From the first moment of his vital breath,
To his last hour of unrepenting death. Dryden.
Then round our death-bed every friend should run, And joy us of our conquest early won. Id. Fables.

Your cruelty was such, as you would spare his life for many deathful torments.

Faith and hope themselves shall die,
While deathless charity remains.
Prior.
A death-bed repentance ought not indeed to be neglected, because it is the last thing that we can do.

Atterbury.
Oft, as in airy rings they skim the heath,
The clam'rous lapwings feel the leaden death. Pope.
Black Melancholy sits, and round her throws
A death-like slumber, and a dread repose.
These eyes behold
The deathful scene; princes on princes rolled. Id.
Misers are muckworms, silkworms beaus, And deathwatches physicians.

Jd.
He caught his death the last county-sessions, where he would go to see justice done to a poor widow-woman. Addison.
The solemn deathwatch clicked the thour she died.
Gay.
We learn to presage approaching deatn in a family by ravens, and little worms, which we therefore call 2 deathwatch.

Watts.
Death opens the gate of fame, and shuts the gate of envy after it,-it unlooses the chain of the captive, and puts the bondsman's task into another man's hands.

Sterne.
Heavens! on my sight what sanguine colours blaze !
Spain's deathless shame : the crimes of modern days. When avarice, slirouded in religion's robe, Sailed to the west, and slaughtered half the globe.
narwin.
Ever since the passing of the acts, which punish with death, the stealing in shops, or houses, or on board ships, property of certain stated values, juries have, from motives of humanity, been in the habit of
frequently finding by their verdicts, that the things stolen were worth much less than had been clearly proved.

Sir S. Romilly.
Horribly beautiful! but on the verge,
From side to side, beneath the glittering morn,
An Iris sits, amidst the infernal surge,
Like Hope upon a death-bed, and, unworn
Its steady dyes, while all around is torn By the distracted waters.

Byron.
Death is generally considered as the separation of the scul from the body; in which sense it stands opposed to life, which consists in their union. Physicians have defined death by a total stoppage of the circulation of the blood. and a cessation of the animal and vital functions consequent thereon, as respiration, sensation, \&c. The signs of death are in many cases very uncertain. If we consult what Winslow or Bruchier bave said on this subject, we shall be convinced, that between life and death the shade is so very undistinguishable, that all the powers of art can scarcely determine where the one ends and the other begins. The color of the visage, the warmth of the body, and the suppleness of the joints, are but uncertain signs of life still subsisting; while, on the contrary, the paleness of the complexion, the coldness of the body, the stiffness of the extremities, the cessation of all motion, and the total insensibility of the parts, are but uncertain marks of death begun. In the same manner also, with regard to the pulse and breathing; these motions are often so small, that it is impossible to perceive them. This ought to be a caution against hasty burials, especially in cases of sudden death, drowning, \&c. See Drowning.

Death, in law. The law makes a disunction betweerr natural and civil death. 1. Civil death takes place, where a-person is not actually dead, but adjudged so by law. Thus, if any person, for whose life an estate is granted, remains beyond sea, or is otherwise absent, seven years, and no proof of his being alive, he shall be accounted naturally dead. 2. Natural death means a person actually dead.

Death-Watch, in natural history, a species of fermes, so called on account of an old tradition, that its beating or ticking in a sick room, is a sure sign of death. See Fermes.

DEAURATE, v.a. \& part. pass. \(\} \quad\) Lat.deau-
Deauration, n.s. \(\}\) ro. Togild; gilded.

And while the twilight and the rowis rede Of Phæbus' light were deaurat alike.

Chaucer. Comp. of Black Kinight.
DEBACCHATION, n.s. Lat. debacchatio. A raging; a madness.

DFBAR, v. a. From de and bar. See Bar. To esclude; to preclude; to shut out from any thing ; to linder.
The same boats and the same buildings are found in countries dcb.tred from all commerce by unpassable mountains, lakes, and deserts. Raleigh's Essays.

Not so strictly hath our Lord imposed Labour, as to debar us when we need Refreshment, whether food, or talk between, Food of the mind.

Milton.

\section*{DEB}

The thread-bare client's poverty Debarres the atturney of his wonted fee?

Bishop Hall's Satires, v. 3.
Civility, intended to make us easy, is employed in laying ehains and fetters upon us, in deburring us of our wishes, and in crossing our most reasonable desires.

Swift.
DEBARB, v. a. Lat. from de and barba. Te deprive of his beard.

DEBARK, \(v . a\). \& \(n\). Fr. debarquer. To disembark. See Embark. Also to strip a tree of its bark.

From hence it appears that the branches of debarked oak-trecs produce fewer leaf-buds, and more fower-buds, which last circumstance I suppose must depend on their being sooner or later debarked in the vernal months.

Darwin.
DEBASE', v.a. \(\quad\) Old Fr. debas, from de
Debas'er, n.s. \}and base. See Base. To
Debasément. reduce, degrade, adulterate, lessen in strength.

It is a kind of taking God's name in vain, to debase religion with such frivolous disputes. Hooker.

Words so debased and hard, no stone
Was hard enough to touch them on.
Hudibras.
He reformed the coin, which was much adulterated and debased in the times and troubles of king Stepher Hale.
Homer intended to teach, that pleasure and sensuality debase men into beasts. Broome on the Odyssey.

It is a wretched debasement of that spriglitly faculty, the tongue, thus to be made the interpreter to a goat or boar.

Government of the Tongue.
A man of large possessions has not leisure to consider of every slight expense, and will not debase himself to the management of every trifle. Dryden.

Restraining others, yet himself not free;
Made impotent by power, debased by dignity. Id.
As much as you raise silver, you debase gold ; for they are in the condition of two things put in oppositc scales; as much as the one rises, the other falls.

\section*{Locke.}

He ought to be careful of not letting his subjects debase his style, and betray him into a meanness of expression.

Addison.

DEBATE', v. a., v. n. \& n.s. Debatéable, adj.
Deba'ter,
Debatéful,
Debatément.

Fr. debattre; Ital. debatire, from Lat. \(b a\) tuo, to beat. To controvert, dispute, contend for: as a neuter verb to deliberate (taking on or upon) ; to dispute. Debateable is disputable; liable or likely to be contended for : a debate, a formal and personal dispute, or controversy.

But God tempride the bodi ghyuynge more worshipe to it to whom it failide, that debate be not in the bodi.

Wiclif. 1 Cor 12.
Debate thy cause with thy neigtbour himself, and discover not a secret to another. Proverbs xxv. 9.

Tho spake our Hoste, A, Sire, ye shuld ben hende, And curteis, as a man of your estat, In compagnie we will have no debat.

Chaucer. Cant. Tales.

\section*{Your several suits}

Have bcen considered and debated on.
Shakspeare.
Now, lords, if heaven doth give successful end To this debate that bleedeth at our doors, We will our youth lead on to higher fields, Ard draw no sworls but what are sanctified.

Without debatement further, more or less,
He should the bearers put to sudden death.
Have I not vowed for shunning such debate, (Pardon ye Satyres), to degenerate?
And, wading low in this plebeian lake,
That no salt wave shall froath upon my backe.
Bp. Hall. Satires, iv. 4.
The French requested, that the debatable ground and the Scottish hostages, might be restored to the Scots.

Hayward.
He could not debate any thing without some commotion, even when the argument was not of moment.

Clarendon.
'Tis thine to ruin realms, o'erturn a statc ;
Betwixt the dearest friends to raise debate. Dryden.
A way that men ordinarily use, to force nthers to submit to their judgments, and receive their opinion in debate, is to require the adversary to admit what they alledge as a proof, or to assign a better. Lockc.

He presents that great soul debating upon the subject of life and death with his intimate friends.

\section*{Tatler.}

It is to diffuse a light over the understanding, in our enquiries after truth, and not to furnish the tongue with debate and controversy. Watts's Logick.
It is knowledge and experience that make a debater.
Chesterfield.
DEBAUCH', v. \(a . \& n . s\). ?
Debauchee', \(n\). s.
Debauchere,
Debaucu'ery,
Debaitch'ment.
Fr. desbaucher; from Lat. debacchor, to offer sacrifice to Bacchus : J anciently written
debosh. To corrupt; in our language deboise and debosh. lewdress or intemperance : a fit or habit of intemperance or lewdness. Debauchery, the constant practice of them. A debauchee is one who is himself devoted to lewdness or excess; a debaucher, one who corrupts others, or seduces them into vice.

Here do you keep a hundred knights and squires Men so disordered, so debauched, and bold, That this our court, infected with their manners, Shews like a riotous inn. Shakspeare. King Lear.

Reason once debauched, is worse than brutishness. Bp. Hall. Contemplations.
They told them ancient stories of the ravishment of chaste maidens, or the debauchment of nations, or the extreme poverty of learned persons.

\section*{Taylor's Rule of Holy Living.}

This it is to counsel things that are unjust ; first, to debauch a king to break his laws, and then to seek protection.

Dryden's Spanish Friar.
The first physieians by debauch were made;
Excess began, and sloth sustains, the tradc.
Dryden.
A man must have got his conscience tloroughly debauched and hardened, before he can arrive to the height of ain.

South.
Could we but prevail with the greatest debauchees among us to change their lives, we should find it no very hard matter to change their judgments. Id.
Oppose vices by their contrary virtues; hypocrisy by sober piety, and debauchery by temperance.

Spratt.
He will for some time contan himself within the bounds of sobriety; till within a little while he recovers his former debauch, and is well again, and then his appetite returns.

Calamy.
No man's reason did ever dictate to him, that it is reasonable for him to debauch himself by intempcrance and brutish senanality.

Tillotson.

Debuuched from nature, how can we relish her genuine productions? As well might a man distinguish objects through the medium of a prism, that presents mothing but a variety of colours to the eye, or a maid pining in the green sickness prefer a biscuit to a cinder.

Smollet.
DEbE'L, v. a.
\(\left.\begin{array}{l}\text { Debe'clate, } v . a . \\ \text { Debella'tion, } n . ~ s . ~\end{array}\right\} \begin{aligned} & \text { Lat. debello. To con- } \\ & \text { quer; to overcome in }\end{aligned}\)
war. Obsolete.
It doth notably set forth the consent of all nations and ages, in the approbation of the cxtirpating and \(d e\) bellating of giants, monsters, and foreign tyrants, not only as lawful, but as meritorious even of divine honour.

Bacon's Holy War.
Him long of old
Thou didst debel, and down from heaven cast With all his army.

Milton.
DEBENTURE, n.s. \} Lat. debentur?, of Debentured, part. \(\}\) debeo, to owe. A note of debt, generally now used respecting goods entitled to an allowance at tne customhouse.

You modern wits, should each man bring his claim, Have desperate debentures on your fame; And little would be left you, I'm afraid, If all your debts to Greece and Rome were paid.

Swift.
Debenture is used at the custom-house for a kind of certificate, signed by the officers of the customs, which entitles a merchant, exporting goods, to the receipt of a bounty or draw back. The forms of debentures vary according to the merchandise exported.
DEBi'LITATE, v.a.) Lat. debilito, of de
Debi'le, adj. and habilis, fit, pro-
Derilita'tion, n.s. per. To weaken; make
Debileity. n.s. Junfit for exertion; to emasculate. Debile is weak, enfeebled. The substantives express a confirmed or habitual state of weakness.

I have not washed my nose that bled, Or foiled some debile wretch, which without note There's many else have done.

Shukspeare.
Methinks I am partaker of thy passion, And in thy case do glass mine own debility.

Sidney.
The weakness cannot return any thing of strength, honour, or safety to the head, but a debilitation and ruin.

King Charles.
The spirits being rendered languid, are incapable of purifying the blood, and debilitated in attracting nutrinent.

Harvey on Consumptions.
In the lust of the eye, the lust of the flesin, and the pride of life, they seemed as weakly to fail as their debilitated posterity ever after.

Browne's Vulgar Eirours.
Aiment too vaporous or perspirable will subject it to the inconveniencies of too strong a perspiration, which are debility, faintness, and sometimes sudden death.

Arbuthnot.
Thus Conscience pleads her cause within the breast, Though long rebelled against, not yct suppressed, And calls a creature formed for God alone, For Heaven's high purposes, and nothis own, Calls him away from selfish ends and aims, From what debilitutes and what inflames.

Cowper. Retircment.

DEBIR, in ancient geography, a sacerdotal city of Palestine, in the southern part of the tribe of Judalı, not far from Hebron. It is also called Kirjath-sepher, and Kirjath-sannah. See Josh. xv. 15, 49.

DE-BOIS-BLANC, an island of the United States, belonging to the north-western territory, which was a voluntary gift of the Chippeway Indians, at the treaty of peace, concluded by general Wayne, at Greenville, in 1795.

DEB'ONAIR, adj. \} Fr. debonnaire, pro-
Debonairily, adv. \} bably from de bon air. Civil; gentle; courteous; well-bred; gay.

He , in the first flowre of my freshest age, Betrothed me unto the only haire
Of a most mighty king, most rich and sage;
Was never prince so faithful and so faire,
Was never brince so meek and debonnaire.
Spenser. Faerie Queene.
Crying, let be that lady debonair.
\(I d\).
Zephyr met her once a-maying;
Fillcd her with thee, a daughter fair, So buxom, blithe, and debonair.

Miltor.
The nature of the one is debonair and accostable; of the other, retired and supercilious; the one quick and sprightful, the other slow and saturnine.

Howel's Vocal Forest.
And she that was not only passing fair,
But was withal discreet and debonair,
Resolved the passive doctrine to fulfil. Dryden.
DEBORAH, דרח, Heb.; i.e. a bee; the nurse of Rebecca, whom she accompanied from Padanaram, and survived. She lived in Jacob's family to an advanced age, and died near Bethel, where she was buried under an oak. Gen. xxiv. 59. xxxv. 8.

Deborah, a prophetess, poetess, and judge of Israel, who excited Barak to deliver his country from the oppressions of Jabin. See Barak. Her message to Barak, her reproof for his cowardice, and her song upon the victory, are recorded in Judges iv. \& v. She flourished about A. M. 2651.

DEBRUISED, in heraldry, a term peculiar to the English, by which is intimated the restraint of any animal, debarred of its natural freedom, by any of the ordinaries being laid
 over it. Argent, a lion ram-
pant; or debruised by a fesse; gules, name Charleston.

DEBT, n.s.
Debi, n.s.
Debt'ed, part. bitum, of debeo, to owe.
Debt'or, n.s. \& adj. That which is owed or Debt-roll, n.s. due to another; obligation. Debted is used by Shakspeare for our modern word indebted. A debtor is he who owes money or any other obligation.

I am debtor both to the Greeks and to the Barbarians, both to the wise and to the unwise.

Rom. i. 14.
This worthy man ful wel his wit besette;
Ther wiste no wight that he was in dette,
So stedfastly dide he his governance
With his bargcines and with his cheersance.
Chaucer. Prol. Camt. Tules

There was one that died greatly in debt: Well, says one, if he be gone, then he hath carried five hundred ducats of mine witl him into the other world.

Bacon's Apothegms.
Your son, my lord, has paid a soldier's debt ; He only lived but till he was a man,
But like a man he died. Shakspeare. Macbeth.
Which do amount to three odd ducats more
Than I stand delted to this gentleman. Shakspeare.
I'll bring your latter hazard back again, And thankfully rest debtor for the first.
\(I d\).
Like to a merchant's debt-role new defac't, When some cracked manour crost his books at last.

Bp. Hall's Satires, iv. 1.
Yo this great loss a sea of tears is due; But the whole debt not to be paid by you. Waller.
The fashion of imperial grandeur is imitated by all inferior and subordinate sorts of it, as if it were a point of honour. They must be cheated of a third part of their cstates; two other thirds they must expend in vanity; so that they remain dobtors for all the necessary provisions of life, and have no way to satisfy those debts, but out of the succours and supplies of rapine.

Cowley.

> Swift, a thousand pounds in debt, Takes horse, and in a mighty fret Rides day and night.

An atheist is but a mad ridiculous derider of piety; but a hypocrite makes a sober jest of God and religion; he finds it easier to be upon his knees than to rise to a good action: like an impuden \({ }^{*}\) debtor, who goes every day to talk familiarly to his creditor, without ever paying what he owes.

Pope.
When I look upon the debtor side, I find such innumerable articles, that I want arithmetick to cast them up: but when I look upon the creditor side, I find little more than blank paper.

Addison.
If he his ample palm
Could haply on ill-fated shoulder lay
Of debtor, strait his body, to the touch
Obsequious, as whilom knights were wont,
To some enchanted castle is conveyed. Philips.
Let him who sleeps too much, borrow the pillow of a debtor. A Spanish Proverb, quoted by Johnson.

Debt, National. See Funds, and Na. tional Debt.

DEBULLI'TION, n. s. Lat. debullitio. A bubbling or seething over.

DECACU'MINATED, adj. Lat. decacuminatus. Having the top cut off.

DECA'DE, n. s. \} Gr. \(\delta \varepsilon \kappa \alpha \alpha_{\rho}\); Lat. decas.
Decagon. n.s. ; The sum of ten; a number containing ten. A decagon (adding \(\gamma \omega \nu \iota \alpha\), a corner), is a figure in plane geometry, containing ten sides and angles.

Men were not only out in the number of some days, the latitude of a few years, but might be wide by whole olympiads, and divers decades of years.

Browne's Vulgar Errours.
We make cycles and periods of years; as, decades centuries, and chiliads, chiefly for the use of compu tations in history, chronology, and astronomy.

Holder on Time.
All ranked by ten; whole decades, when they dine, Must want a Trojan slave to pour the wine. Pope.

\section*{DECA'DENCY, u.s. Fr. decadence. Decay ; fall. See Decay.}

DECAGYNIA, from \(\delta \iota \kappa a\), ten, and \(\gamma v p \eta\), is woman, an order in the class decandria, consisting of plants, whose flowers are furnished witn ten stamina, and the same number of styles. See Botany.

DE'CALOGUE, n.s. Gr. סєкa入oyoc. The ten commandments given by God to Moses.

The commands of God are clearly revealed both in the decalogue and other parts of sacred writ.

Hammond.
Decalogue, in theology, the ten commandments, which were engraved by God on two tables of stone. The Jews, by way of eminence, call these commandments, after Deut. x. 4, the ten words, from whence they had afterwards the name of decalogue. The church of Rome has, in some catechisms, united the second commandment, in an abridged form, with the first; and, to make their number complete, has divided the tenth into two. The reason is obvious. See Stillingfleet's Works, vol. vi. It should, in fairness, however, be added, that Jews, as well as Christians, have divided the commandments differently

DECA'MP, v.n. \(\}\) Fr.decamper. To shift
Deca'mpment, n.s. \(\}\) the camp; to move off. The act of shifting the camp.

The king of Portugal would decamp on the twentyfourth in order to march upon the enemy. Tatler.

DECA'NT, v.a. \()\) Fr. decanter; Lat. de-
Deca'nter, n.s. \}canto. To pour off gently
Decantátion. \(\{\) by inclination. A decanter is a vessel made for receiving wine perfectly clear.

Take aqua fortis and dissolve it in ordinary conzed silver, and pour the coloured solution into twelve times as much fair water, and then decant or filtrate the mixture, that it may be very clear. Boyle.

They attend him daily as their chief,
Decant his wine, and carve his beef. Swift.
DECANUS, in Roman antiquity, an officer who presided over the ten officers, and was head of the contubernium, or serjeant of a file of soldiers.

DECA'PITATE, v.a. \} Lat. decapito. To Decapitation. n.s. \} behead. A beheading, or Decollation, which see.

DECAPOLIS, in ancient geography, a district beyond Jordan, almost wholly belonging to the half tribe of Manasseh; before the captivity, called Bethsan; but after, occupied by heathens. It comprises, as the name denotes, ten principal cities on the other side of the Jordan, except Scythopolis, which stood on this side, but its territory lay on the other.

DECAPROTI, Decemprimi, in Roman antiquity, officers for gathering the taxes. The decaproti were also obliged to pay for the dead, or to answer to the emperor, for the quota parts of such as died out of their own estates.

DECASPERMUM, in botany, a genus of the monogynia order and icosandria class of plants: cal. perianth turbinated, quinquefid at the apex : cor. five roundish petals. The stamina are many filiform filaments, a little shorter than the corolla : pericarp. is a dry, globular, decemlocular berry, with solitary egg-shaped seeds.

DECASTYLE, in the ancient architecture, a building, with an ordnance of ten columns in front, as the temple of Jupiter Olympius was.
\(\mathrm{DECA}^{\prime} \mathrm{Y}\), v. a., \& n. \& n.s. ? Fr. decheoir;
Decayer, n.s.
j from Lat. de and cado. To impair; to make less in value; to decline ; to lose excellence; to be impaired.

And if thy brother be waxen poor, and fallen in decay with thee, then thou shalt relieve him.

Levit. xxv. 35.
Cut off a stock of a tree. and lay that which you cut off to putrefy, to see whether it will decay the rest of the stock.

Bacon.
Infirmity, that decays the wise, doth ever make better the fool.

Shakspeare.

\section*{I am the very man}

That, from your first of difference and decay, Have followed your sad steps. Id. King Lear.
Your water is a sore decayer of your whorson dead body. Id. Hamlet.
She has been a fine lady, and paints and hides Her decays very well.

Ben Jonson.
And those decays, to speak the naked 1ruth,
Through the defects of age, were crimes of youth.
Denham.
He was of a very small and decayed fortune, and of no good education.

Clarendon.
In Spain our springs, like old men's children, be Decayed and withered from thcir infancy. Dryden. The monarch oak,
Three centuries he grows, and three he stays
Supreme in state, and in three more decays.
Dryden.
By reason of the tenacity of fluids, and attrition of their parts, and the weakness of elasticity in solids, motion is much mure apt to be lost than got, and is always upon the decay.

Newton.
Each may feel increases and decays,
And see now clearer and now darker days. Pope.
Now kindred merit fills the sable bier,
Now lacerated friendship claims a tcar;
Year chases year, decay pursues decay,
Still drops some joy from withering life away.
Johnson. Vanity of Human Wishes.
Alas! the lofty city! and alas!
The trebly hundred triumphs! and the day
When Brutus made the dagger's edge surpass
The conqueror's sword in bearing fame away !
Alas, for Tully's voice, and Virgil's lay,
And Livy's pictured page!-but these shall be
Her resurrection; all beside-decay. Byron
DECCAN, or the Country of the South, as extensive region of Hindostan, bounded on the north by the Narbuddah, and on the south by the Krishna, or Kistnah river, extending acruss the peninsula from sea to sea. It was possessed, ill former times, by the rajah of Telingana, and the Hindoo princes, and first invaded by the Mahommedans in 1293. They plundered the city of Deoghir, now called Dowlatabad, and the Tagara of Ptolemy. In the year 1306 the city and fortress were taken, and the rajah, Ram Deo, carried to Delhi. In 1323, Warunkul, the capital of Telingana, was also taken by the Mahommedans, and the Hindoo dynasty overthrown. For some time the Deccan remained subject to Delhi, till the governor having rebelled, laid the foundation of an independent state, under the title of the Bhamenee sultans, whose capital was -Kalberga; this was in 1347. The Bhamenee dynasty, consisting of fourteen persons, continued till the year 1518. On the dissolution of this empire, the Гeccean was subdivided into the five following scates: the Adil Shahy, or Beja-
pore kingdom; the Kootub Shahy, or Golconda . the Nizam Shahy, or Ahmednagur; the Ummaud Shahy, or Berar; the Beered Shahy, or Beeder.

During the reign of Aurungzebe, all these states were reduced, and the Deccan again annexed to the kingdom of Delhi. It was then divided into six governments, viz. Khandesl, Ahmednagur, Beeder, Goiconda, Bejapore, and Berar. In subsequent reigns, these governments came under the superintendance of the Nizam, who, taking advantage of the weak state of the sourt of Delhi, after the Persian invasion in 1739, threw off his allegiance, became independent, and fixed his court at Hyderabad. The Mahrattas, however, were now rising into power, and the nizam was obliged to cede to them the territorities now constituting the dominions of the peishwa. See Hindostan.

DECEASF, v.n. \& n. s. Lat. decedo, decessus, from de and cado, to fall. 'lo die; to quit life: death.

IIe tells us Arthur is deceased to-night.
Shakspeare.
Lands are by human law, in some places, after the owner's decaase, divided unto all his children; in some, all descendeth to the eldest son. Hooker.

You shall die
Twice now, where others, that mortality
In her fair arms holds, shall but once decease.
Chapman.
His latest victories still thickest came,
As, near the centre, motion doth increase;
Till he, pressed down by bis own weighty name, Did, like the vestal, under spuils decease. Dryden.

DECEIT', n.s.
Old Fr. decepte ; Lat.
Deceit'fule adj
Deceitfully, adv. (capio, captus, to take.
Deceit'fulness, n.s. A taking by fraud; a fallacy; a cheat: deceitful is, fraudulent in any degree: deceitfulness, tendency to deceive.

My lips shall not speak wickedness, nor my tongue utter deceit.
\(J o b \times x v i i .4\).
The care of this world, and the deceitfulness of riches, choke the word, and he becometh unfruitul.

Matt. xii. 22.
His demand
Springs not from Edward's well-meant honest love, But from deceit, bred by necessity. Shalkspeare.

I grant him bloody, Luxurious, avaricious, false, deceitful.
Excrcise of form may be decertfully dispatched of course.

Wotlon.
Those, which are plain-hearted in themselves, are the bitterest enemies to deceit in others.

Bp. Hall's Contemplations.
Outward appearances are deceitful guides to our judgment, or affections.

The lovely young Lavinia once had friends, And fortune smiled, deceitfull on her birth.

Thomson.
Human nature is the same now as it was then : the beart as deceitful: and the necessity of watching, knowing, and leeping it, the same.

Mason.
He , who still expects deceit,
Only teaches how to cheat. Johnson's Poems.
A true artist should put a generous deceit on the spectators, and effect the noblest designs by easy methods.

Burke.

DECETVE', v.a.
Deceiv'able, adj.
Deceiv'ableness, n.s.
Deceiver,
Deceiv'ing. nart.

2French, decevoir ; Lat. decipio, from de and capio. See lude, cheat, deprive by fraud; hence to mislead, guide into error, whether by design or otherwise. Deceivable is used both for fraudulent, and for being liable or particularly exposed to fraud. Deceivableness also expresses both artfulness, and a liableness to be deceived.

For synne through occasioun taken bi the eommaundement disseyuyde me, and bi that it slough me. Wiclif. Rumayns vii.
Be not borun aboute with ech wynd of techyng in the weiwardnesse of men in sutil witt to the disseyu\(y n g\) of errowr.

Id. Effesies 4.
With all deceivableness of unrighteousness
2 Tim. ii. 10.
Sporting themselves with their own deceivings, while they feast with you. 2 Pet. ii. 13.
It is no wonder thing though it be so;
A lousy jogelour can deceiven thee,
And parde yet can I more craft than he.
Chaucer. Cant. Tales.
Wine is to be forborne in consumptions, for that the spirits of the wine prey upon the viscid juice of the body intercommon with the spirits of the body, and so deceive and rob them of their nourishment.

Bacon.
It is good to consider of deformity, not as a sign, which is more deceivable, but as a cause which seldom faileth of the effect.

Id.
As for Perkin's dismission out of France, they interpreted it not as if he were detected for a counterfeit deceiver.

Id.
Sigh no more, ladies, sigh no more ;
Men were deceivers ever :
One foot in sea, and one on shore;
To one thing constant never. Shakspeare.
They are worthy to be deceived that value things as they seem.

Bishop Hall. Contemplations.
He received nothing but fair promises, which proved deceivahle.

Hayward.

\section*{0 ever failing trust}

In mortal strength! and oh, what not in man
\(D_{\text {eceivable }}\) and vain?
Milton.
Man was not only deceivable in his integrity, but the angels of light in all their clarity.

Browne's Vulgar Errours.
How happy he that loves not, lives!
tim neither hope nor fear deceives
To fortune who no hostage gives.
Denham.
They raised a feeble cry with trembling notes,
But the weak voice deceived their gasping throats.
Dryden.
Those voices, actions, or gesturcs, which men have not by any eompaet agreed to make the instruments of conveying their thoughts one to another, are not the proper instruments of deceiving, so as to denominate the person using them a liar or deceircr. South.

Some have been deceived into an opinion, that there was a divine right of primogeniture to both cstate and power.

Locke.
Adieu the heart-expanding bowl,
And all the kind deceivers of the soul.
Pope.
He that has a great patron, has the advautage of his negligence and deceivableness.

Government of the Tongue.
By thus disguising our motives, we may impose upon men; but at the same time we impose upon ourselves : and, whilst we are deceiving others, our own
hearts deceive us: and, of all impostures, self-deception is the most dangerous, because least suspected.

\author{
Mason.
}

I have not loved the world, nor the world me; But let us part fair foes: I do believe,
Though I have found them not, that there may be
Words whieh are things,-lhopes which will not deceive,
And virtues which are merciful, nor weave
Snares for the failing.
Byron.
DECE'MBER, n. s. Lat. december. The last month of the year, named december, or the tenth month, when the year began in March.

What slould we speak of
When we are old as you? Wher we shall hear
The rain and wind beat dark Dccember. Shakspeare.
Men are April when they woo, and December when they wed.

Id. As You Like It.
December is the month wherein the sun enters the tropic of Capricorn, and makes the winter solstice. Among the ancient Romans, December was under the protection of Vesta. Romulus assigned it thirty days, Numa reduced it to twenty-nine, which Julius Cæsar increased to thirty-one. In the reign of Commodus this month was called, by way of flattery, Amazonius, in honor of a courtezan, whom that prince passionately loved, and had painted hke an Amazon; but this name died with that tyrant. At the end of December they had the juveniles ludi; and the country people kept the feast of the goddess Vacuna in the fields, having then gathered in their fruits, and sown their corn; whence seems to be derived our popular festival called harvest-home.

DECEMPEDA, \(\delta ı \kappa \pi \pi o v_{s}\), from decem, ten, and pes, a foot; ten-feet rod, an instrument used by the ancients in measuring. It was a rule, or rod, divided into ten feet; the foot was subdivided into twelve inches, and each inch into ten digits. The decempeda was used both in measuring land, like the chain among us; and by architects, to give the proper dimensions and proportions to the parts of their buildings, which use it still retains.

DECE'MPEDAL, adj. Lat. decempeda; frọm Gr. סsxas. Ten feet in length.

DECEMVIRI, ten magistrates of absolute authority among the Romans. The privileges of the patricians raised dissatisfaction among the plebeians; who, though freed from the power of the Tarquins, still saw that the administration of justice depended upon the will and caprice of their superiors ; and it was at length agreed, that ten new magistrates, called decemviri, should be elected from the senate, to put the project into execution. Their power was absolute, all other offices ceased after their election, and they presided over the city with regal authority. They were invested with the badges of the consul, in the enjoyment of which they succeeded by turns; and only one was preceded by the fasces, and had the power of assembling the senate, and confirming decrees. The first decemviri were, Appius Claudius, T. Genutius, P. Sextus, Sp. Veturius, C. Julius, A. Manlius, Ser. Sulpitius, Pluriatius, T. Romulus, and Sp. Posthumius; A.U.C. 302 . Under them the
iaws, which had been exposed to public view, were publicly approved of as constitutional, and ratified by the priests and augurs, in the most solemn manner. They were ten in number, and were engraved on tables of brass; two were afterwards added, whence they were called the laws of the twelve tables, leges XII tabularum, and leges decemvirales. The decemviral power, which was at first beheld by all ranks of people with the greatest satisfaction, was continued ; but in the third year after their creation, the decemviri became odious on account of their tyranny; and the attempt of Ap. Claudius to ravish Virginia totally abolished the office. Consuls were again appointed, and tranquillity re-established in the state. There were other officers in Rome called decemviri, who were originally appointed in the abseuce of the prætor, to administer justice. Their appointment became afterwards necessary, and they generally assisted at sales, called subhastationes, because a spear, hasta, was fixed at the door of the place where the goods were exposed to sale. They were called decemviri litibus judicandis. The officers, whom Tarquin appointed to guard the Sybilline books, were also called decemviri. They were originally two in number, called duumviri, till A.U.C. 388, when their number was increased to ten, five of whom were chosen from the plebeians and five from the patricians. Sylla increased their number to fifteen, hence called quindecemvirs.

DE'CENCE, or
Décency, n. s.
Décent, udj.
Décently. \(u d v\). ter. modesty
 able; and hence sometimes applied to that which is grave or formal.

Come, pensive nun, devout and pure,
Sober, stedfast, and demure,
All in a robe of darkest grain
Flowing with majestick train,
And sable stole of Cyprus lawn
O'er the decent shoulders drawn.
Milton.
Those thousand decencies that daily flow From all her words and actions.
They could not decently refuse assistance to a person, who had punished those who had insulted their relation.

Broome.
And must I own, she said, ny secret smart, What with more decence were in silence kept?

Dryden.
Since there must be ornaments both in painting and poetry, if they are not necessary, they must at least be decent; that is, in their due place, and but moderately used.

Past hope of safety, 'twas his latest care, Like falling Cæsar, decently to die.

Id.

The consideration immediately subsequent to the being of a thing, is what agrees or disagrees with that thing; what is suitable or unsuitable to it; and from this springs the notion of decency of indecency, that which becomes ur misbecomes.

South.
In good works there may be goodness in the general : but decence and gracefulness can be only in the particulars in doing the good.

Sprat.
Immodest words admit of no defence;
For want of decency is want of sense. Roscommon.

Performed what friendship, justice, truth require, What could he more, hut decently retire? Swift.

Were the offices of religion stript of all the external decencies of worship, they would not make a due intpression on the minds of those who assist at them.

Atterbury.
She speak3, behaves, and acts just as she ought ; But never, never reached one generous thought; Virtue she finds too painful an endeavour, Content to dwell in decencies for ever. Pope.
Sentiments which raise laughter, can very seldom be admitted with any decency into an heroick poem.

Addison.
Give every bishop income enough, nut for display of wordly pomp and fashionable luxury, but to enable him to maintain works of charity, and to make a decent provision for his family. Bishop Watson.

DECE'NNIAL, adj. From Lat. decennium. Continuing for the space of ten years.

DECENNALIA, ancient Roman festivals, celebrated by the emperors every tenth year of their reign, with sacrifices, games, and largesses for the people. Augustus first instituted these solemnities, in which he was imitated by his successors.
\(\left.\begin{array}{l}\text { DECENNO'VAL, adj. } \\ \text { Decenno'vary }\end{array}\right\} \begin{gathered}\text { Lat. } \begin{array}{c}\text { decem and } \\ \text { novem. } \\ \text { Relating }\end{array}\end{gathered}\) to the number nineteen.

Meton, of old, in the time of the Peloponnesian war, constituted a decennoval circle, or of nineteen years; the same which we now call the goldeu number.

Holder.
Seven months are retrenched in this whole decennovary progress of the epacts, to reduce the accounts of her motion and place to those of the sun.
\begin{tabular}{|c|c|}
\hline \(s\). & From Lat. deceptio \\
\hline Deceptibi & See Deceit. Fra \\
\hline Decéptible, adj. & the act or means \\
\hline Decéptious, & fraud. Deceptibility \\
\hline Dece'ptive, & and deceptible, \\
\hline Decépt & press a liableness \\
\hline
\end{tabular} imposture ; deceptious and deceptive, the power or design of deceiving. Deceptory, says Dr. Johnson, is, containing means of deceit.

Yet there is a credence in my heart, That doth invert the' attest of eyes and ears; As if those organs had deceptious functions, Created only to calumniate.

Shakspeare.
Reason, not impossibly, may meet
Some spacious object by the foe suborned, And fall into deception unaware.

Milton.
The first and father cause of common errour, is the common infirmity of human nature ; of whose deceptible condition, perhaps, there should not need any other eviction, than the frequent errours we shall ourselves commit.

Browne.
Being thus divided from truth in themselves, they are yet farther removed by advenient deception. Id.

All deception is a misapplyiug of those signs, which, by compact or iustitution, were made the means of men's signifying or conveying their thoughts.

South.
Some errours are so fleshed in us, that they maintain their interest upon the deceptibility of our decayed natures.

Glanville.

\section*{DECE'RPT, adj. \\ Decérptible, adj. \}ped; taken off. That \\ Dece'rption, n. s. which may be, or is} takell off; the act of taking off.

If our souls are decerptions of our parents, then I must have been guilty of all the sins that ever were committed by my progenitors ever since Adam.

Glanville.
DECERTATION, n.s. Lat. decertatio. A contention; a striving; a dispute.

DECE'SSION, \(n\), s. Lat. decessio. A departure; a going away.

DECHA'RMI, v. a. Fr. decharmer. To counteract a charm ; to disenchant.

Notwithstanding the help of physick, he was suddenly cured by decharming the witchcraft. Harvey.

Fr. decider ; Ital. decidere ; Lat. decido, from de and ccedo, or scindo. To cut short a controversy, says Minsheu. To fix an event or issue; to determine. A decider is a judge of controverted matters. Decision, the act or habit of determining, and sometimes of determining promptly. Decisory, able to determine.

The time approaches,
That will with due decision make us know
What we shall say we have, and what we owe. Shakspeare.

\section*{Pleasure and revenge}

Have ears more deaf than adders to the voice
Of any true decision.
The day approached, when fortune should decide The important enterprise, and give the bride.

Dryden.
Their arms are to the last decision bent,
And fortune labours with the vast event. Id.
In' council oft, and oft in battle tried,
Betwixt thy master and the world decide.
Granville.
The man is no ill decider in common cases of property, where party is out of the question. Swift.

Such a reflection, though it carries nothing perfectly decisive in it, yet creates a mighty confidence in his breast, and strengthens him much in his opinion.

Atterbury.
War is a direct appeal to God for the decision of some dispute, which can by no other means be determined. Id.
Who shall decide, when doctors disagree,
And soundest casuists doubt?
Pope.
I cannot think that a jester or a monkey, a droll or a puppet, can be proper judges or deciders of controversy.

Watts.

\section*{For on the event, Decisive of this bloody day, depends The fate of kingdoms.}

Philips.
I never troubled myself with answering any arguments which the opponents in the divinity-schools brought against the articles of the church, nor ever admitted their authority as decisive of a difficulty ; but I used on such occasions to say to them, holding the New Testament in my hand, ' En sacrum codicem!’

Bp. Watson.
DE'CIDENCE, n. s. Lat. decidentia. The quality of being shed, or of falling away; the act of falling away.

Men observing the decidence of their horn, do fall upon the conceit that it annually rotteth away, and successively reneweth again.

Browne's Vulgar Eirours.

DECI'DUOUS, adj. , Lat.deciduus. Fall-
Deci'duousness, n.s. Jing ; not perennial; not lasting through the year.

In botany, the perianthium, or calyx, is deciduous, with the flower.

Quincy.
DECIL, in astronomy, an aspect or position of two planets, when they are distant from each other a tenth part of the zodiac.

DE'CIMAL, adj. Lat. decimus. Numbered or multiplied by ten.

In the way we take now to name numbers by millions of millions of millions, it is hard to go beyond eighteen, or, at most, four-and-twenty decimal progressions, without confusion.

Locke.
Decimal Arithmetic, the art of computing by decimal fractions. See Arithmetic, Index.

DE'CIMATE, v. a. \(\}\) Lat. decimus. To
Decima'tion, n.s. S tithe; to take the tenth; a tithing; a selection by lot of every tenth soldier, in a general mutiny, for punishment.

By decimation and a tithed death,
Take thou the destined tenth. Shakspeare.
A decimation I will strictly make
Of all who my Charinus did forsake ;
And of each legion each centurion shall die.
Dryden.
Decimation was a punishment inflicted by the ancient Romans, on such soldiers as quitted their posts, or behaved themselves cowardly in the field. The names of the guilty were put into an urn, or helmet, and as many were drawn out as made the tenth part of the whole number, and those were put to the sword, and the others saved. The ancient Roman militia, to punish whole legions when they had failed in their duty, made the soldiers draw lots, and put every tenth man to death for an example. The Romans had also the vicesimatio, and even centisimatio, when only the twentieth or hundredth man suffered by lot.

DECI'PHER, v. a. Fr. dechiffrcr, from de and cipher. See Cipher. To explain that which is written in ciphers; hence to unfold; to explain; to write out.
Zelmane, that had the same character in her heart, could easily decipher it.

Sidney.
Assurance is writ in a private character, not to be read, nor understood, but by the conscience, to which the Spirit of God has vouchsafed to decipher it.

South.
Could I give you a lively representation of guilt and horrour on this hand, and point out eternal wrath and decipher eternal vengeance on the other, then might I shew you the condition of a sinner hearing himself denied by Christ.

Id.
Then were laws of necessity invented, that so every particular subject might find his principal pleasure deciphered unto him, in the tables of his laws.

Locke.
Deciphering, the art of reading or explaining ciphers. See Cifher.

DECIUS (Cn. Mctius), a native of Pannonia, sent by the emperor Philip, to appease a sedition in Mœsia. Instead of obeying his master's command, he assumed the imperial purple, and soon after marched against him, and, at his death, became the only emperor. He signalised himself against the Persians; but when he marched against the Goths, he pushed his borse

Vor. VII.
into a deep inarsh, from which he could not extricate himself, and perished, with all his army, by the darts of the barbarians, A.D. 251, after a reign of two years.

Decrus Mus, the name of three patriotic Romans, viz. 1. a celebrated consul, who, after many glorions exploits, devoted himself to the gods manes, for the safety of his country, in a battle against the Latins, about 340 years before the Augustan age. 2. His son, Decius Mus, imitated his example. and devoted himself, in like manner, in his fourth consulship, when fighting against the Gauls and Samnites. 3. His grandson also did the same in the war against Pyrrhus and the Tarentines.

DECK, v. a. \& n.s. \} Sax. oecan, 万ecan;
Décker, n.s. \}Bel. decken; from Lat. tego, tectum. To cover; to adorn; ornament; dress. A deck is the covering of a ship's hold.

His goodly image, liuing eucrinore
In the diuine resemblaunce of your face,
Which with your vẹtues ye embellish more,
And natiue beauty deck with heuenlie grace.
Spenser. Sonnets.
We have also raised our second decks, and given more vent thereby to our ordnance, trying on onr nether overloop.

Raleigh.
Sweet ornament ! that decks a thing divine.
Shakspeare.
Long may'st thou live to wail thy children's loss, And see another, as \(I\) see thee now,
Decked in thy rights, as thou art stalled in mine.
Her keel plows hell, And deck knocks heaven.

Ben Jonson.
The rader Satyre should go ragged and bare, And show his rougher and his hairy hide,
'Tho' mine be smooth, and deckt in carelesse pride. Bp. Hall. Defiance to Enry.
Ye mists and exhalations, that now rise From hill or steaming lake, dusky or grey, Till the sun paint your fleecy skirts with gold; In hononr to the world's great Author, rise ! Whether to deck with clouds the uncoloured sky, Or wet the thirsty earth with falling showers, Rising or falling, still advance his praise. Milton. Now the dew with spangles decked the ground,
A sweeter spot of earth was never found. Dryden.
At sun-set to their ship they make return, And snore secure on decks till rosy morn.

Id. Aneid.
If any, born and bred under deck, had no other information but what sense affords, he would be of opinion that the ship was as stable as a house.

Glanville.
Besides gems, many other sorts of stones are regularly figured : the amianthus, of parallel threads, as in the pile of velvet; and the selenites, of parallel plates, as in a deck of cards.

Grew.
It was intended by the means of these precepts, not to deck the mind with ornaments, but to protect it from nakedness; not to enrich it with aflluence, but to supply it with necessaries.

Johnson. Preface to Preceptor.
Decx, the planked floors of a ship, which connect the sides together, and serve as different platforms to support the artillery and lodge the men; as also to preserve the cargo from the sea, in merchant-vessels. As all ships are broader at the lower deck than on the next above it, and as the cannon thereof are always heaviest, it is
necessary that the frame of it should be much stronger than that of the others; and, for the same reason, the second, or middle-deck, ought to be stronger than the upper-deck or forecastle. Ships of the first and second rates are furnished with three whole decks, reaching from the stem to the stern, besides a forecastle and a quarterdeck, which extends from the stern to the mainmast; between which and the forecastle, a vacancy is left in the middle, opening to the upper deck, and forming what is called the waist. The inferior ships of the line-of-battle are equipped with two decks and a-half; and frigates, sloups, \&c. with one gun-deck and a-half, with a spardeck below to lodge the crew. The decks are formed and sustained by the beams, the clamps, the water-ways, the carlings, the ledges, the knees, and two rows of small pillars, called stanchions, \&c. See Ship-Building.

Deck, Flush, implies a continued floor laid from stem to stern, upon one line, without any stops or intervals.

Deck, Half, a space under the quarter-deck of a ship of war, contained between the foremost bulk-head of the steerage and the forepart of the quarter-deck. In the colliers of Northumberland, the steerage itself is called the halfdeck, and is usually the habitation of the crew.

DECKENDORF, a town of Bavaria, near the Danube. In the year 1633 it was taken by the troops of the duke of Saxe-Weimar, and retaken by the Swedes in 1641. It is twenty-eight miles north-west of Passau, and thirty-eight E.S.E. of Ratisbon. Long. \(12^{\circ} 55^{\circ}\) E., lat. \(46^{\circ} 50^{\prime} \mathrm{N}\).

DECLA'IM, v.a. \& n.) Fr.declamer; Ital.
Decla'imer, n.s.
Decláiming, n.s.
Declamátion,
Decla'matory, adj. declamatore ; of Lat. declunio, from \(d e\) and clamo, to call aloud. speak with formality or vehemence; to address the passions rather than the judgment. Sometimes a college theme or composition is termed particularly, a declamation.

The cause why dcclamutions prevail so greatly, is, for that men suffer themselves to be deluded.

Hooker.
What are his mischiefs, consul? You declaim Against his manners, and corrupt your own.

Ben Jonson.
This a while suspended his interment, and became a declamatory theme amongst the religious men of that age.

Wotton.
Thou mayest forgive his anger, while thou makest use of the plainness of his declamation. Taylor.

He has run himself into kis own declamatory way, and almost forgotten that he was now setting up for a moral poet.

Dryden.
The splendid declaimings of novices and men of heat. South.
It is usual for masters to make their boys declaim on both sides of an argument.

Swift.
Your salamander is a perpetual declaimer against jealonsy.

Addison.
Who could, I say, hear this generous declamator, without being fired at his noble zeal?

Tatler.
Dress up all the virtues in the beanties of oratory, and declaim aloud on the praise of goodness.

Watts.

\section*{DEC}

I pvery week imposed upon myself a task of composing a theme or a declamation in Latin or English. I had great pleasure in lately finding among my papers two of these declamations; there is nothing excellent in either of them, yet I cannot help valuing them, \&c.

Bishop Watson.
Declamatios may be defined a speech made in public, in the tone and manner of an oration, uniting the expression of action to the propriety of pronunciation, in order to give the sentiment its full impression upon the mind. See Oratory. The word is now principally used in a derogatory sense.

\section*{DECLA'RE,va.\&v.n.}

Declárable, adj.
Declara'tion, n.s.
Decla'rative, adj.
Decla'ratory, adj.
Decláratorily, adv.
Decláredly, \(a d v\).
Decla'rement, n.s.
Decla'rer,
Decla'ring, part.

\section*{Fr. declarer: Span.} and Port. declarar ; Lat. declaro, of de and clarus, clear. To make clear, plain, or well known. As a neuter verb, with for or against, to publish an opinion or resolution. That is declarable which is capable of proof: declaration and declarement, the instrument or act of making a thing clear or known: declarative is explanatory: declaratorily, in the form of a declaration: declaratory, affirmative, or that which openly expresses a doubtful, obscure sense, or law : declaredly, avowedly. Declaring, as a substantive, is synonymous with declaration.

Declare his glory among the heathen.
1 Chron. xvi. 24.
Which things, the most part of our old martyrs rather than they would doe, or nnce kneel or offer up one crumbe of incence before an image, suffered most crewell and terrible deaths, as the histories of them at large do declare.

\section*{Homilies. Sermon against Perill of Idolatry.}

And bi three sabotis he declaride to hem of scripturis, and openyde and schewide, that it bihofte crist to suffre, and rise aghen fro deeth.

Wiclif. Dedi. 17.
Nought may the woful spirit in myn herte
Declare o' point of all my sorwes smerte
To you my lady, that I love most,
But I bequethe the service of my gost.
Chaucer. Cant. Tales.
They on humble knee
Making obeysaunce, did the cause declare
Why they were come her roiall state to see,
To prove the wide report of her great maieste.
Spenser. Faerie Queene.
His promises are nothing else but declarations what God will do for the good of men.

Hooker.
In Cæesar's army somewhat the soldiers would have had, yet they would not declare themselves in it, but only demanded a discharge.

This is declarable from the best writers.
Bacon.
Crystal will calefy into electricity ; that is, into a power to attract straws, or light bodies; and convert the needle freely placed, which is a declarement of very different parts.
\(1 d\).
Andreas Alciatus the civilian, and Franciscus de Cordua, have both declaratorily confirmed the same.

Id. Vulgar Errours.
To declure this a little, we must assume that the surtaces of surh bodies are exactly smooth. Boyle.

The interual faculties of will and understanding d. crecing and declaring against them.

Taylor.

These blessings are not only declaratory of the goud pleasure and intention of God towards them, but likewise of the natural tendency of the thing. Tillotson.

There are no where so plain and full declarations of mercy and love to the sons of meu, as are made in the gospel.

I!.
The sun by certain signs declares,
Both when the south projects a stormy day,
And when the clearing north will puff the cloud away.
Dryden's Virgil.
God is said not to have left himself without witness in the world; there being something fixed in the nature of men, that will be sure to testify and declare for him.

South's Sermons.
Thougb wit and learning are ccrtain and habitual perfections of the mind, yet the declaration of them, which alone brings the repute, is subject to a thousand hazards.

South.
To this we may add the vox populi, so declarative on the same side.

Swift.
A declared gout is the distemper of a gentleman ; whereas, the rheumatism is the distemper of a harkneycoachman or chairman, who are obliged to be out at all weathers, and in all hours.

Chesterfield.
I have had and used the opportunities of conversing with men of the greatest wisdom and fullest experience in those matters, and I do declare to you most solemaly and most truly, that on the result of this reading, thinking, experience, and communication, I am not able to come to an immediate resolution in favour of a change of the groundwork of our constitution.

\section*{Burke.}

My declared opposition to the increased and increasing influence of the Crown had made a great impression on His Majesty's mind; for on the dáy I did homage, he asked the Duke of Rutland if his friend the Bishop of Landaff was not a great enemy to the influence of the Crown.

Bishop Watson.
\begin{tabular}{|c|c|}

\hline Declinator, & declinaire; \\
\hline Declin'atory. & Lat. declino, \\
\hline
\end{tabular} from deorsum, downwards, and clino, to bind; Gr. \(\boldsymbol{\kappa} \boldsymbol{\lambda} \iota \boldsymbol{\nu} \omega\). -Minsheu. To bend downwards; to bring down; to shun; avoid; sink : as a neuter verb, to lean or incline downward; to deviate; to sink ; decay. Decline, as well as declension, signifies also the state of decrease, or alteration for the worse; a tendency to a less degree of excellence; descent. Declinable is principally a term of grammar, and expresses that quality of words whereby they can be traced to their roots. Declination, and declinator, are also scientific terms, for which see the articles following:

Neither shalt thou spcak in a cause to derline after many, to wrest judgment.

Exodus xxiii. 2.

\section*{And now fair Phoebus 'gan decline in haste}

His weary waggon to the western vale. Spenser.
The queen, hearing of the declination of a monarcby, took it so ill, as she would never after hear of his suit.

Bacon.
Theyll be by the fire, and presume to know What's don i' th' capitol ; who's like to rise, Who thrives, and who declines. Shakspeare.
Sons at perfect age, and fathers declining, the father should be as a ward to the son.

Id.

\section*{DEC}

A beauty-waining and distressed widow, Even in the afternoon of her best days, Seduced the pitch and height of all his thoughts, To base declension.

Id. Richard III.
Since the muses do invoke my power, I shall no more decline that sacred bower, Where Gloriana, their great mistress, lies. Waller.

Hope waits upon the flow'ry prime;
And summer, though it be less gay,
Yet is not looked on as a time
Of declination or decay.
Sometimes nations will decline so low
From virtae, which is reason, that no wrong,
But justice, and some fatal curse annexed,
Deprives them of their outward liberty. Milton.
And nature, which all acts of life designs, Not like ill poets, in the last declines. Denham.

He had wisely declined that argument, though in their common sermons they gave it. Clarendon.

If it should be said that minute bodies are indissoluble, because it is their nature to be so, that would not be to render a reason of the thing proposed, but, in effect, to decline rendering any.

Boyle.
That a peccant creature should disapprove and repent of every declination and violation of the rules of just and honest, this right reasou, discoursing upon the stock of its own principles, could not but infer.

South's Sermons.
Thus then my loved Euryalus appears;
He lonks the prop of my declining years! Dryden. Autumnal warmth declines;
Ere heat is quite decayed, or cold begun. Id.
There is no declination of latitude, nor variation of the elevation of the pole, notwithstanding what some have asserted.

Woodward.
-Thy rise of fortune did I only wed,
From its decline determined to recede.
Prior.
We may reasonably allow as much for the declension of the land from that place to the sea, as for the immediate height of the mountain. Burnet's Theory.

Those fathers lived in the decline of literature.
Suift.
Faith and morality are declined among us. Id.
God, in his wisdom, hath been pleased to load onr declining years with many sufferings, with diseases, and decays of nature.

Id.
Whatever they judged to be most agreeable or disagreeable, they would pursue or decline. Atterbury.

Supposing there were a declination of atoms, yet will it not effect what they intend; for then they do all decline, and so there will be no more concourse than if they did perpendicularly descend.

Ray.
You decline musa, and construe Latin, by the help of a tutor, or with some English translation. Watts.

There are several ways to know the several planes; but the readiest is by an instrument called a declinatory, fitted to the variation of your place. Moxon.

Declension is only the variation or change of the termination of a noun, whilst it continues to signify the same thing.

Clarke's Latin Grammar.
And leaves the semblance of a lover, fixt
In melancholy deep, with head declined,
And love-dejected eyes.
Thomson.
The surest way to conquer, is sometimes to decline a battle; to weary out the enemy, by keeping him at bay.

But, though the felon on his back could dare The dreadful leap, more rational, his steed Declined the death, and wheeling swiftly round, Or e'er his hoof had pressed the crumbling verge.

Cowper.

This praise, 0 Cheronean sage, is thine ! Why should this praise to thee alone belong ? All else from Nature's moral path decline, Lured by the toys that captivate the throng. Beattie.
Statues of glass-all shivered-the long file
Of her dead Doges are declined to dust ; But where they dwelt, the vast and sumptuous pile

Bespeaks the pageant of their splendid trust.
Byron.
Declination, in astronomy, is either north or south, and either true or apparent, according as the real or apparent place of the object is considered. See Astronomy.
DECLIVITY, n. s. 1 Old Fr. declivité;
Declivous, adj. ffrom the Lat. declivis, declino. See Decline. Descent; obliquity; downwards; gradual descent, opposed to acclivity.

Rivers will not flow unless upon declivity, and their sources be raised above the earth's ordinary surface, so that they may run upon a descent. Woodward.

I found myself within my depth; and the declivity was so small, that I walked near a mile before I got to the shore.

Gulliver's Travels.
And on thy happy shore a temple still,
Of small and delicate proportion, keeps,
Upon a mild declivity of hill,
Its memory of thee; beneath it sleeps
Thy current's calmness.
Byron.

DECOCT, v. a.
Decoction, n.s.
Decon
Decoctible, adj.
Decocture, n.s. coquo, to seethe. To xirat Sien thing by boiling, or heat. Shakspeare uses it, barbarously enough, for strengthening by boiling; decoction is the act of boiling to extract the virtue, or the preparation decocted; and the latter seems the meaning also of decocture.
Sena loseth its windiness by decocting; and subtile or windy spirits are taken off by incension or evaporation.

Bacon.
In infusion, the longer it is, the greater is the part of the gross body that goeth into the liquor: but in decoction, though more goeth forth, yet it either purgeth at the top, or settleth at the bottom. Bacon.
Can sodden water, their barley broth,
Decoct their cold blood to such valiant heat?
Shakspeare.

> They distil their husbands' land
> In decoctions; and are manned
> With ten empirics, in their chamber
> Lying for the spirit of amber. Ben Junson.

There she decocts, and doth the food prepare; There she distributes it to every vein; There she expels what she may fitly spare. Davies.

The lineaments of a white lily will remain after the strongest decoction.

Arbuthnot.
DECOLLATE, v. a. \} Fr. decoller. From
Decollation, n. s. \} Lat. decollatio, de and collum, the neck. To behead; a beheading, or decapitation. Applied also metaphorically

A fine piece (a painting) of a decollated head of St. John the Baptist was shewn to a Turkish Emperor; he praised many things, but he observel that
the skin did not shrink from the wounded part of the neck.

Burke on the Sublime.
He by a decollation of all hope, annihilated his mercy; this, by an immoderancy thereof, destroyed his justice.

Brown.

DE'COMPOSE, v. a.
Decompos'ite, adj.
Decompos'ition, n.s.
Décompound, v.a.\&adj. Fr. decomposer ; Lat. decompono, dccompositus, of Compono,
 a second time, to dissolve (chemically), seem alike the meaning of both verbs. Decomposite and decompound, as adjectives, mean compounded a second time. Decomposition, the act or practice of so compounding, or a resolution of the parts of things chemically.

Decomposites of three metals, or more, are too long to enquire of, except there be some compositions of them already observed.

Bucon.
The pretended salts and sulphur are so far from being elementary parts extracted out of the budy of mercury, that they are rather, to borrow it term of the grammarians, decompound bodies, made up of the whole metal and the menstruum, or other additaments employed to disguise it.

Boyle.
We consider what happens in the compositions and decompositions of saline particles.

Id.
No body should use any compound or decompound of the substantial verbs. Arbuthnot and Pope.
When a word stauds for a very complex idea, that is compounded and decompounded, it is not easy for men to form and retain that idea exactly, Locke.

If the violet, blue, and greeu be intercepted, the remaining yellow, orange, and red will compound upon the paper an orange; and then if the interccpted colours be let pass, they will fall upon this compounded orange, and, together with it, decompound a white.

Newtor.
Bees' wax becomes bleached by exposure to the sun and dews in a similar manner as metals become calcined or rusty, viz., by the water on their surface being decomposed; and hence the inflammable material which caused the colour becomes united with vital air forming a new acid, and is washed away.

Darwin.
In preparing the salt from the brine, there is a refuse part, which is formed by the separation and decomposition of the grosser particles from the pure salt. Sir T. Barnard.
Decomposition, in chemistry, usually signifies the disunion or separation of the constituent parts of bodies. It differs from mere mechanical division, in that, when a body is chemically decomposed, the parts into which it is resolved are essentially different from the body itself; but though a mechanical force is applied to it ever so long, or if with ever so much violence, the minutest particles into which the body may be reduced, still retain their original nature. Thus, let nitre be reduced to ever so fine a powder, each particle retains the nature of nitre as much as the compounded mass; but, if oil of vitriol is applied, a decomposition takes place, and one of the largest component parts of the nitre rises in the form of a smoking acid spirit, which never could have been suspected to lie hid in the neutral salt. See Chemistry.

DE'CORATE, a a. Fr. decorer; Ital. deDecor'ament, n.s. (corature ; from Lat. deDecora tion, n.s. (coro, of decus, honor. To Decoorater adorn, beautify, dress, embellish. Decorament seems synonymous with decoration.

The ensigns of virtues contribute to the ornament of figures; such as the dccorations belonging to the 1 l beral arts, and to war. Dryden.
After all, to inherit is not to acquire, to decorate is not to make.

Johnson.
DE'COROUS, adj. ? Lat. decorus, decet, Decórum, n. s. ; it becometh. See Decorate. Befitting, becoming, proper, suitable to character or station; therefore decorum is be coming gravity and seemliness of beliaviour.

\section*{If your master}

Would have a queen his beggar, you must tell him That majesty, to keep decorum, must
No less beg than a kingdom.
Shakspeare.
I am far from suspecting simplicity, which is bold to trespass in points of decorum.

Wotton.
Every one is a virtuoso, of a higher or lower degree : every one pursues a Grace, and courts a Venus of one kind or another. The venestums, the honestums, the decorum of things, will force its way.

Shaftesbury.
Beyond the fixed and settled rules
Of vice and virtue in the schools,
The better sort shall set before 'em
A grace, a manner, a decorum. Prior
Gentlemen of the army should be, at least, obligea to external decorum: a profligate life and character should not be a means of advancement. Swift.
It is not so decorous, in respect of God, that he should immediately do all the meanest and trifingest things himself, without any inferiour or subordinate minister.

Ray.
If the prudence of reserve and decorum dictates silence in some circumstances, in others prudence of a higher order may justify us in speaking our thoughts.

Burke.
No band of friends or heirs be there, To weep, or wish, the coming blow.
No maiden, with disshevelled hair, To feel, or feign, decorous woe.

Beattie.
DECO RTICATE, v.a. \} Lat. decortico.-
Decortica'tion, n.s. \}To divest of the bark or husk; to husk; to peel ; to strip.

Take great barley, dried and decorticated, after it is well washed, and boil it in water. 'Arbuthnot.

\section*{DECOY, v.a.\&n.s. ? From Goth. duck and} Decoy'-duck, n.s. '; kui, or Dut. koey, a cage. To entrap ducks into a net, or otherwise ; and hence to entrap or ensnare generally. The decoy-duck is the instrument of lure. See below.

A fowler had taken a partridge, who offered to decoy her companions into the spare.

L'Estrange.
These exuberant productions of the earth became a continual decoy and snare : they only excited and fomented lusts.

Woodward.
The Devil could never have had such numbers, had he not used some as decoys to ensnare othcrs.

Government of the Tongue.
An old dramdrinker is the Devil's decoy. Berkeley

There is a sort of ducks, called decoy-ducks, that will bring whole flights of fowl to their retirements, where are conveniences made for catching them.

Mortimer.
Decoyed by the fantastic blaze,
Now lost, and now renewed, he sinks absorpt, Rider and horse.

Thomson.

\section*{A stifled smile of stern vindictive joy}

Brightened one moment Edwin's starting tear, But why should gold man's feeble mind decoy And innocence thus die by doom severe? Beattic.

Decoy, among fowlers, a place made for catching wild fowl. A decoy is generally made where there is a large sheet of water surrounded with wood, and beyond that a marshy and uncultivated country. As soon as the evening sets in, the decoy rises, as they term, it, and the wild fowl feed during the night. 'The decoy-ducks are fed with hemp-seed, which is thrown over the skreens in small quantities, to bring them forwards into the pipes or canals, and to allure the wild fowl to follow, as this seed floats. There are several pipes, as they are called, which lead up a narrow ditch that closes at last with a funnel net. Over these pipes, which grow narrower from their first entrance, is a continued arch of netting suspended on hoops. It is necessary to have a pipe or ditch for almost every wind that can blow, as upon this circumstance it depends which pipe the fowl will take to; and the decuy-man always keeps on the leeward side of the ducks, to prevent his effluvia reaching their sagacious nostrils. All along each pipe, at certain intervals, are placed skreens made of reeds, so situated, that it is impossible the wild-fowl should see the decoy-man, before they have passed on towards the end of the pipe, where the purs \(\theta\)-net is placed. The inducement of the wild-fowl to go up one of these pipes is, because the decoy-ducks trained to this lead the way, either after hearing the whistle of the decoy-man, or enticed by the hemp-seed: the latter will dive under water, whilst the wild-fowl fly on, and are taken in the purse net. It often happens, however, that the wild-fowl are in such a state of sleepiness and dozing, that they will not follow the decoy-duck. Use is then generally made of a dog, who is taught his lesson; he passes backwards and forwards between the reed-skreens, in which are little holes, both for the decoy-man to see, and the dog to pass through; this attracts the eye of the wild-fowl, who, not choosing to be interrupted, advance towards the small and contemptible animal, that they may drive him away. The dog all the time, by the direction of the decoy-man, plays among the screens of reeds, nearer and nearer the purse-net; till at last the man appears behind a screen, and the wild-fowl not daring to pass by him in return, nor being able to escape upwards, on account of the net covering, rush on into the net. Sometimes the dog will not attract their attention, if a red handkerchjef, or something very singular, is not put about him. The general season for catching fowls in decoy, is from the end of October till February. Decoys are commonly let at a certain annual rent, and yield large quantities of ducks, wigeons, and teal; but they have been diminished
in number by the recent drainage of many of the fenny parts of England.
DECREASE,v.a.\&n.\&n.s.
Décrement, n.s.
Decrescent, adj.
Lat. decresco, from de, and cresco, to in- crease. To make less; diminish : as a neuter verb, to grow less; be diminished. The state or act of growing less : decrement is the quantity lost in decrease; and decrescent, growing less.

From the moon is the sign of feasts, a light that decreaseth in her perfection. Eccles. xliii. 7.

He did dishonourable find
Those articles, which did our state decrease.
Daniel.
See in what time the seeds, set in the increase of the moon, come to a certain height, and how they differ from those that are set in the decrease of the moon.

Bacon.
Unto fifty years, as they said, the heart annually increaseth the weight of one drachm; after which, in the same proportion, it decreaseth.

Browne's Vulgar Errours.
Upon the tropick, and first descension from our solstice, we are scarce sensible of declination; but declining farther, our decrement accelerates: we set apace, and in our last days precipitate into our graves.

Rocks, mountains, and the other elevations of the earth, suffer a continual decrement, and grow lower and lower.

Woodward.
By weakening toil and hoary age o'ercome,
See thy decrease, and hasten to thy tomb. Prior.
Heat increases the fluidity of tenacions liquids, as of oil, balsam, and honey ; and thereby decreases their resistance.

Newton.
When the sun comes to his tropicks, days increaso and decrease but a very little for a great while together.

Id.
They who are now, like the Baptist, burning and shining lights, must like him gradually decrease, while others are increasing about them.

Doddridge's Expositor.

from Lat. decretum; qu. Gr. \(\kappa \rho \iota \nu \omega\), to judge. To doom or decide formally or publicly; to make an edict; to establish by law; resolve. A decree is the edict, law, rule, or decision. Decretal, a book of decrees or laws, and particularly of the popes : decretist, he who professedly studies or is skilled in the decretals: decretory, judicial, decisive, final.

When he made a decree for the rain, and a way for the lightning of the thunder.
\(J_{o b} \times x v i i i .26\).
There went a decree from Cæsar Augustus, that al the world should be taxed.

Luke ii. 1.
They shall see the end of the wise, and shall not understand what God in his counsel hath decreed of him.

Wisdom iv.
The second room, whose walls
Were painted fair with memorable gests
Of magistrates, of courts, of tribunals,
Of laws, of judgments, and of decretals. Spenser.
If you deny me, fie upon your law!
There is no force in the decrees of Venice.
Shakspeare.'
Traditions and decretuls were made of equal force, and as authentical as the sacred charter itself.

Howel's Vocal Forest.

DEC

Father eternal ; thine is to decree;
Mine, both in heaven and earth, to do thy will.
Milton.
The motions of the moon, supposed to be measured by scvens, and the critical or decretory days depend on that number.

Browne's Vulgar Errours.
The folly of man, and not the decree of heaven, is the cause of human calamity.

Broome.
There are lenitives that friendship will apply, before it will be brought to the decretory rigours of a condemning sentence.

South's Sermons.
Had heaven decreed that I should life enjoy, Heaven had decreed to save unhappy Troy.

Dryden.
Are we condemn'd by fate's unjust decree,
No more our houses and our homes to see? Id.
The king their father,
On just and weighty reasons, has decreed
His sceptre to the younger.
Rowe.
A decretal epistle is that which the pope decrees either by himself, or else by the advice of his cardinals; and this must be on his being consulted by some particular person or persons thereon.

Ayliffe's Parergon.
The decretists had their rise and beginning under the reign of the emperor Frederick Barbarossa. Id.

Whether' it be decreed by the authority of reason, or the tyranny of ignorance, that, of all the candidates for literary praise, the unhappy lexicographer holds the lowest place, neither vanity nor interest incited me to inquire.

Johnson. Plan of Dictionary.
Here are the ancient editions of the Papal decretals, and the commentators on the civil law, the edicts of Spain, and the statutes of Venice.

\section*{Id. On the Harleian Library.}

\section*{DECREP'ID, or Decrep'it, adj.} Decrep'itate, \(v . a\).
Decrepitátion, n.s. Decrepititess,
Decrep'itude.

Fr. decrepite; Ital. and Span. decrepito; Lat. decrepitus, crackling; from the crackling of a candle or lamp when nearly out, says Minsheu, after Scaliger. Wasted; old; weak; in extreme decay. To decrepitate is used by Browne for the calcining of salt until it ceases to crackle. Decrepitness and decrepitude are man's ' last stage of all.'

Of men's lives, in this decrepit age of the world, many exceed fourscore, and some an hundred years. Raleigh.
This pope is decrepit, and the bell goeth for him: take order that there be chosen a pope of fresh years.

Bacon.
Decrepit miser! base, ignoble wretch. Shakspeare.
If favours out-live one age, they prove decrepit and heartless.

Bishop Hall. Contemplations. And from the north to call
Decrepit Winter.
Milton.
So will it come to pass in a pot of salt, although decrepitated.

Browne's Vulgar Errours.
If true succession from our isle should fail, And crowds profane with impious hands prevail, Not thou, nor those thy factious arts engage Shall reap that harvest of rebellious rage,
With which thou flatterest thy decrepit age. Dryden.
Propped on his staff, and stooping as he goes,
A painted mitre shades his furrowed brows;
The god, in this decrepit form arrayed,
The gardens entered, and the fruits surveyed. Pope.

Mother earth, in this her barrenness and decrepitness of age, can procreate such swarms of curious cngines.

Bentley.
The charge of witchcraft inspires people with a malevolcnce towards those poor decrepit parts of our specics, in whom human nature is defaced by infirmity and dotage.

Addison.
Time in advance behind him hides his wings, And seems to creep decrepid with his age. Young.
The emaciated and decrepid appearance, with the ridiculous and idiotic gestures, of the opium-eaters in Constantinople, is well described in the Memoirs of Baron de T'ott.

Darwin.
Decrepitation, in chemistry, the crackling noise which several salts make when suddenly heated, accompanied by a violent exfoliation of their particles. This phenomenon has been ascribed to the 'sudden conversion of the water which they contain into steam.' But absolutely dry sulphate of barytes decrepitates furiously without any possible formation of steam, or any loss of weight. The same holds with respect to common salt, calcareous spars, and sulphate of potash, which contain no water. In fact, it is the salts which are anhydrous, or destitute of water, which decrepitate most powerfully; those that contain water generally enter into tranquil lique. faction on being heated. Salts decrepitate, for the same reason that glass, quartz, and cast-iron crack, with an explosive force, when very suddenly heated; namely, from the unequal expansion of the laminæ which compose them, in consequence of their being imperfect conductors of heat.

DECRESCENT, in heraldry, a term signifying a representation of the moon when declining from the full to the last quarter, her horns being turned to the sinister side of the shield.

The Decretals compose the second part of the canon law. The first, acknowledged by all the learned as genuine, is a letter of Pope Siricius, written A.D. 385, to Hinerus, bishop of Tarragona, in Spain, concerning some disorders which had crept into the churches of Spain. Gratian published a collection of decretals, containing all the ordinances made by the popes till A.D. 1150. Gregory IX. in 1227, following the example of Theodosius and Justinian, formed a constitution of his own, collecting into one body all the decisions and all the causes which served to advance the papal power; which collection of decretals was called the pentateuch, because it contained five books.

DECRY', v. a. Fr. decrier, de and cry. See Cry. To censure; to blame clamorously, or vehemently.

Malice in criticks reigns so high,
That for small errours they whole plays decry.
Dryden.
Quacks and imposters are still cautioning us to beware of counterfeits, and decry others' cheats only to make more way for their own.

Swift.
Those measures, which are extolled by one half of the kingdomi, are naturally decried by the other

Addison.
Then prompt no more the follies you decry, As tyrants doom their tools of guilt to die. Johnson.

DECUMANA, in ancient history and geography, the name of a nation of the Marse or Marcomanni. See Decumates Agri.

DECUMARIA, in botany: a genus of the monogynia order, and dodecandria class of plants: cal. decaphyllous, superior; petals ten; caps. eight or mine cells and polyspermous. Species two, both natives of Carolina.

DECUMATES Agri, fields granted on a tithe, as appears from Tacitus, to the Gauls who succeeded the Marcomanni, that had till then proved a check to the Roman conquests, on the Rline; and hence, probably, their nanıe, people living on the marches or limits of the empire. DECU'MBENCE, \(n . s\). Lat. decumbo. Decu'mbency, The act of lying
Decu'mbiture, down; the posture of lying down.

This must come to pass, if we hold opinion they lie not down, and enjoy no decumbence at all ; for station is properly no rest, but une kind of motion.

Browne's Vulgar Errours.
Not considering the ancient manner of decumbency, he imputed this gesture of the beloved disciple unto rusticity, or an act of incivility.

If but a mile she travel out of town, The planetary hour must first be known, And lucky moment: if her eye but akes, Or itches, its decumbiture she takes.

\section*{Dryden.}

DE'CUPLE, adj. Lat. decuplus, tenfold. The same number ten times repeated.

Man's length, that is, a perpendicular from the vertex unto the sole of the foot, is decuple unto his profundity; that is, a direct line between tbe breast and the spine.

Browne's Vulgar Errours.
Supposing there be a thousand sorts of insects in this island, if tie same proportion holds between the insects of England and of the world, as between plants domestick and exotick, that is, near a decuple, the species of insects will amount to ten thousand. Ray.

DECURIA, or Decury, among the ancient Romans, ten men under one leader, called the decurio. The decuria was the third part of a turma, or the thirtieth of a legion of horse, which consisted of 300 men. The Roman cavalry was divided into decuriæ, which were subdivisions of a century, each century containing ten decuries.

DECURIO, a subaltern officer in the Roman armies, who commanded a decuria.

DECU'RION, n. s. Lat. decurio. A commander over ten; an officer subordinate to the centurion.

He iustituted decurions through both these colonies, that is, one over every ten families.

Temple.
decuriones Municipales, magistrates in the Roman provirces, who formed a body to represent the Roman senates in free and corporate towns. They consisted of ten, whence the name; and their duty was to watch over the interests of their fellow citizens, and to increase the reverues of the commonwealth. Their court was called curio decurionum and minor senatus; and their decrees, called decreta decurionum, were marked D.D. at the top. They generally styled themselves civitatum patres curiales, and honorati municipiorum senatores. They were s!lected with the samc ceremonies as the Roman
senators; they were to be at least twenty-fiv: years of age, and to be possessed of ten talents.

DECU'RSION, n. s. Lat. decurcus, from de and cursus. The act of running down.
What is decayed by that decursion of waters, is supplied by the terrene faces which water brings. Hale.
DECU'SSATE, v.u. ) Lat. decusso. To in-
Decussa'tron, n.s. \(\}\) tersect at acute angles. The act of crossing, or state of being crossed at unequal angles. See Optics.

The crucigerous ensign carried this figure not transversely or rectangularly intersected, but in a decussation, after the form of an Andrian or Burgundian cross, which answereth this description. Browne.

This it performs by the action of a notable muscle on each side, having the form of the letter \(\mathbf{X}\), made up of many fibres, decussating one another longways.

Ray.
Though there be decussation of the rays in the pupil of the eye, and so the image of the object in the retina, or bottom of the eye, be inverted; yet doth not the object appear inverted, but in its right or natural posture.

Id.
DECUSSORIUM, an instrument used by surgeons, which, by pressing gently on the dura mater, causes an evacuation of the pus collected between it and the cranium, through the perforation made by the trepan.
DEDDINGTON, a market-town of Oxfordshire, formerly a corporation and borough. The Birmingham and Oxford canal passes near this place, and is of considerable advantage to it. In the neighbourhood are two medicinal springs, one of which is highly impregnated with vitriolic salt. It has a weekly market on Saturday. It is seated on an eminence, seventeen miles north of Oxford, and sixty-nine N.N.W. of London.
DEDE'CORATE, v.a. Lat. dedecoro. To
Dedecora'tion, n.s. disgrace; to bring a Dedeco'rous, adj. reproach upon. The act of disgracing; disgrace. Disgraceful.

DEDENTITION, n. s. Lat. de and dentitio. Shedding of teeth. The loss or shedding of the teeth.
Solon divided life into ten septenaries, because in every one thereof a man received some sensible mutation; in the first is dedentition, or falling of teeth.

Browne's Vulgar Errours.
DEDHAM, a town and parish of England, in the county of Essex, situated on the river Stour, over which is a bridge. It is six miles N.N. E. of Colchester, and its church is noted for a fine Gothic steeple. Population about 2200.
Dediam, a township of Massachusets, incorporated in 1637.

Dedram, a town in the above township, the capital of Norfolk county, called by the Indians Tiot. It lies on the south side of Charles River, eleven miles south-west of Boston, and 320 from Philadelphia.
 dicare, from Deo, dicare, to consecrate to God. To devote to some deity, or to some pious or religious service; to resign, appropriate, or inscribe, to a particular person or service. Dedication
is also the act, form, or inscription, used in dedicating. A dedicator, says Johnson, with more temper than accuracy, is one who inscribes his work to a patron, with compliment and servility.

The princes offcred for dedicating the altar, in the day that it was anointed.

Numb. vii. 10 .
A pleasant grove,
Was shot up high, full of the stately tree,
That dedicated is to Olympick Jove,
And to his son Alcides.
Spenser.
Ladies, a general welcome from his grace
Salutes you all: this night he dedicates
To fair content and you.
Shakspeare.
Prayers from preserved souls,
From fasting maids, whose names are dedicate
To nothing temporal.
Id.
It cannot be laid to many men's charge, that they have been so curious as to trouble bishops with placing the first stone in the churches; or so scrupulous as, after the erection of them, to make any great ado for their dedication.

Hooker.
This tenth part, or tithe, being thus assigned unto him, becometh as a thing dedicate and appropriate unto God.

Spelman.
He compiled ten elegant bonks, and dedicated them to the lord Burghley.

Peacham.
He went to learn the profession of a soldier, to which he had dedicated himself.

Clarendon.
Bid her instant wed,
And quiet dedicate her remnant life,
To the just duties of an humble wife.
Prior:
He that would make a real progress in knowledge must dedicate his age as well as youth, the latter growth, as well as the first fruits, at the altar of truth.

Berkeley.
Thus I should begin my epistle if it were a dedicatory one; but it is a friendly letter.

Pope.
Proud as Apollo on his forked hill,
Sat full-blown Bufo, puffed by every quill;
Fed by soft dedication all day long,
Horace and he went hand in hand in song. Id.
Leave dangerous truths to unsuccessful satires;
And flattery to fulsome dedicators.
Id.
Among publick solemnities there is none so glorious as that under the reign of king Solomon, at the dedication of the temple.

Addison.
For growing names the weekly scribbler lies,
To growing wealth the dedicator flies.
Johnson. Vanity of Human Wishes.
Dedication, the act of consecrating a temple, altar, statue, palace, \&c. to the honor of some deity. The use of dedications is very ancient both among the worshippers of the true God and among the heathens : the Hebrews call it กมコา hhanuchah, 'initiation;' which the Greek translators render Eүкаıvıa, and Eүкаıvıб \(\mu_{0}\), 'renewing.' In the Scripture we meet with dedications of the tabernacle, of altars, of the first and second temple, and even of the houses of private persons. One of the most solemn on record is that of the first temple by Solomon, 1 Kings viii., 2 Chron. vi. There were also dedications of vessels, and of the garments of the priests and Levites, as well as of persons themselves. The heathens had also dedications of temples, altars, and images of their gods, \&c. Nebuchadnezzar held a solemn dedication of his statue, Dan. iii. 2. Tacitus, Hist. lib. iv. ch. 53, mentions the dedication of the capitol, upon rebuilding it by Vespasian, \&c. In modern
times dedication is only applied to a church; and is properly the consecration of it pertormed by a bishop, with a number of ceremonies prescribed by the church. See Consecration.

DEDI'TION, n. s. Lat. deditio. The act of yielding up any thing; surrendry.

It was not a complete conquest, but rather a detition upon terms and capitulations agreed between the conqueror and the conquered.

Hale.
DEDU'CE, v. a. Fr. deduire; Span.
Dedu'cible. adj.
Dedu'cive,
Dedúcement,n.s.
Dedu'ct, v. \(u\).
Dedu'ction, n.s
Dedu'ctive, adj.
Dedu'ctively, \(a d v . ~\left\{\begin{array}{l}\text { argument ; to trace a } \\ \text { series of events, or con- }\end{array}\right.\) catenatious circumstances; to subtract or take off; hence to separate, divide. Deducible, and deductive, mean consequential, evident to reason. Deducive, performing, or drawing a conclusion. Deductively, consequentially. Deduction, the result of a series of argumentation; a consequence, as well as a sum or thing subtracted.

Having yet, in his deducted spright,
Some sparks remaining of that heavenly fire.
Spenser.
Out of scripture such duties may be deduced, by some kind of consequence; as by long circuit of deduction it may be that even all truth, out of any truth may be concluded.

Hooker.
I will deduce him from his cradle, through the deep and lubric waves of state and court, till he was swallowed in the gulph of fatality. Wotton Buck.

The condition, alchough deducible from many grounds, yet shall we evidence it but from few.

Browne's Vulgar Errours.
There is scarce a popular errour passant in our days, which is unt either directly expressed, or deductively contained in this work.

Id.
You have laid the experiments together in such a way, and made such deductions from them, as I have not hitherto met with.

Boyle.
All cross and distasteful humours are either expressly, or by clear consequence and deduction, forbidden in the New Testament.

Tillotson.
So far, therefore, as conscience reports any thing agreeable to or deducible from these, it is to be hearkened to.

South.
Praise and prayer are his due worship, and the rest of those deducements which I am confident are the remote effects of revelation.

Dryden.
The general character of the new earth is paradisaical ; and the particular character, that it hath no sea: and both are apparently deducible from its formation.

Burnet.
Reason is nothing but the faculty of deducing unknown truths from principles already known. Locke.

All properties of a triangle depend on, and are deducible from, the complex idea of three lines, including a space.

Id.
We deduct from the computation of our years that part of our time which is spent in incogitancy of infancy.

Norris.
All knowledge of causes is deductive; for we know none by simple intuition, but through the meditation of their effects.

Glanrille.
That by diversity of motions we should spell out things not resembled by them, we must attribute to sowe
secret deduction; but what this deduction should be, or by what mediums this knowledge is advanced, is as dark as ignorance.

0 goddess, say, shall I deduce my rbimes From the dire nation in its early times ? Pope.
Bring then these blessings to a strict account; Make fair deductions; see to what they mount. Id.

A reflection so obvious, that natural instinct seems to bave suggested it even to those who never much attended to the deductions of reason.

Rogers.
Lend me your song, ye nightingales! oh pour The mazy-running soul of melody
Into my varied verse! while I deduce, From the first note the hollow cuokoo sings, The symphony of spring.

Thomson.
Set before you the moral law of God, with such deductions from it as our Saviour hath drawn, or our own reason, well informed, can make.

Duppa.
DEE, a river of England and Wales, which rises at the foot of the lofty mountain Arun, in the north-west angle of Merionethshire, from which it runs through a fine valley in a northeast direction to Denbighshire; visits the northwest border of Cheshire, to which it serves as a boundary; then crossing over to Chester, it flows thence to the sea, forming a broad sandy estuary, which separates Cheshire from Flintshire. This river is navigable from Elsemere, in Shropshire, to Chester; but at this city the navigation is interrupted by a ledge of rocks running across the bed of it, and causing a cascade. The Dee falls into the Irish Sea, fifteen miles below Chester.

Dee, a river of Scotland, in Aberdeenshire, which rises from the hill Breirach, and after running through the parishes of Braemar, Crathy, and many others, with vast rapidity, falls into the German Ocean at Aberdeen, 140 miles from its source. It produces, in great plenty, trout, pikes, eels, \&c., and affords one of the greatest salmon-fisheries in Scotland. In passing through Braemar, the Dee has a fine cascade, with the additional singularity, that for sixty yards it is confined between two rocks, within so narrow a space, that some persons have ventured to step over it.

Dee (John), a famous mathematician and astrologer, born in London, July 1527. In 1542 he was sent to St. John's College, Cambridge. After five years close application to the mathematics and astronomy, he went to Holland ; and, on his return to Cambridge, was elected a fellow of Trinity College, then first erected by king Henry VIII. In 1548, he took the degree of M.A. and left England a second time on account of the suspicion attached to his character as an astrologer. Upon leaving England, he went to the University of Louvain, where he took the degree of LL.D. In 1551 he returned to England, and obtained the rectory of Upton-upon-Severn; but soon after the accession of queen Mary, he was accused of practising against her life by enchantment. He suffered a tedious confinement on this account, and was several times examined; till, in 1555, he obtained his liberty by an order of council. In 1564 he made another voyage to the continent, to present a book he had dedicated to the emperor Maximilian. He returned to England; but, in 1571,
we find him at Lorrain; where, being dauzerously ill, the queen sent over two physicians to his relief. Having once more returned to his native country, he settled at Mortlake in Surry, where he continued his studies with unremitted ardor, and collected a considerable library of curious books and MSS. with a variety of instruments, most of which were afterwards destroyed by the mob. In 1579 queen Elizabeth, being desirous of information concerning the recent discoveries of her subjects in America, commanded Mr. Dee to furnish her with proper geographical descriptions. Accordingly he presented her, in three weeks after, with two large rolls, on which the new countries were geographically described and historically illustrated: these rolls are preserved in the Cottonian library. In 1581 Dee became acquainted with one Edward Kelly, by whose assistance he performed various incantations, and affected, it is said, to maintain a frequent intercourse with the spiritual world. In 1583 they were both introduced to a Polish nobleman, then in England, named Albert Laski, palatine of Siradia, who persuaded them to accompany him to his native country; and they visited, successively, Poland, the court of the emperor Rodolph II., and Bohemia. In 1595 they returned to England, and Dee was once more graciously received by the queen; who made him Warden of Manchester College. In 1604 he returned to his house at Mortlake, where he died in 1608. Queen Elizabeth seems to have made use of Dee, occasionally, as a political agent : he was evidently a mathematician of considerable genius; but his pretensions to astrological and alchemical knowledge disgrace his memory. Dr. M. Casaubon published, in 1659, 'A true and faithful Relation of what passed between Dr. John Dee and some Spirits.'

DEED, \(n, s\). \} Sax. oxo; Belg. dued;
Deed'less. \{Goth. dad ; Lat. from do, ded , says Minsheu; and this from Gr. Dejovat ; to \(^{\text {to }}\) give (effect). An action: any thing done or fully performed; a completed legal instrument oract; fact; reality. Deedless is, inactive; wordy, without performance of pledges or professions.

Aud manye men bileeuyden, and camen knowlechinge and tellynge her dedis. Wiclif. Dedis, xix.

The same had not consented to the counsel and deed.

Luke.
They desire, with strange absurdity, that to the same senate it should belong to give full judgment in matter of excommunication, and to absolve whom it pleased them, clean contrary to their own former deeds and oaths.

Hooker.
The solicitor gave an evidence for a deed, which was impeached to be fraudulent.

Bacon.
From lowest place when virtuous things proceed, The place is dignified by the doer's deed.

Shakspeare.
Speaking in deeds, and deedless in his tongue.
Id.
Nor knew I not
To be with will and deed created free.
Milton.
I, on the other side,
Used no ambition to commend my deeds;
The deeds themselves, tho' mute, spoke loud tae aver
Id:

The monster nought replied; for words were vain, And deeds could only deeds unjust maintain.

\section*{Dryden.}

We are not secluded from the expectation of reward for our charitable deeds. Smalridge's Sermons.

Instant, he cried, your female discord end,
Ye deedless boasters! and the song attend. Pope.
'T was where in early youth lie wont retire
To woo swect Solitudc, and taste her charms Ere that his bosom caught the martial fire;

Ere that his name was great in deeds of arms.
Gay.
Roll on, thou deep and dark blue Ocean-roll! Ten thousand fleets sweep over thee in vain; Man marks the carth with ruin-his control Stops with the shore;-upon tine watery plain The wrecks are all thy deed.

Byron.
DEEG, a celebrated town and fortress of Hindostan, in the province of Agra. It was taken from the Jauts in the year 1776, by the nabob Nujuff Khan, after a siege of twelve months, but soon afterwards restored. Here in 1805 lord Lake defeated the Mahratta army, commanded by Holkar, and, took this supposed impregnable town by storm. At the peace it was restored to the raja Runjeet Sing.

DEEM, v.a:; v. n. \& n.s. Sax. beman; Goth. and Swed. doma; Teut. doeman; Gr. of \(\theta_{\varepsilon} \mu \mathrm{c}\), justice. To judge; to determine; to conclude on consideration: also, as a neuter verb, to judge, determine, or imagine. Shakspeare uses the substantive for judgment or opinion.

Nyle ye deem that ghe be not demed. For, in what doom ye demen, ye schulen be demed; and, in what mesure ye meten, it schal be meten agen to you.

Wiclif. Matt. 7.
But they that skill not of so lieavenly matter, All that they know not, envy, or admire,

Rather than envy, let them wonder at her,
But not to deem of her desert aspirc. spenser.
Here eke that famous golden apple grew,
For which the Idean ladies disagreed,
Till partial Paris dempt it Venus' due. Id.
So natural is the union of religion with justice, that we may boldly deem there is neither, where both are not.

Hooker.
Hear me, my love, be thou but true of heart,
-I true! how now? what wicked deem is this?
Shakspeare.

\section*{He who to be deemed}

A god, deaped fondly into Ætna's flames. Milton.
These blessings, friend, a deity Destowed;
For never can I deem him less than god. Dryden.
Nature, disturbed,
Is leemed vindictive to have changed her course.
Thomson.
They are gone,
And others come: so flows the wave on wave
Of what these creatures call eternity,
Deeming themselves the breakers of the ocean,
While they are but its bubbles, ignorant
That foam is their foundation.
Byron.
How happier she, who in Love's tranquil bower, Jlasps the swect prize of conquest, not the power; Who while one gaze her charms to all prefers,
And one warm heart returns the warmth of hers, Heeds not tho' crowds to half her beauty chill, Should deem some flirt of fashion fairer still.

Dr. T. Brown.

DEEMSTERS, or Demsters. All sontroversies in the Isle of Man are decided withert process, writings, or any charges, by certain judges chosen yearly from among themselves, called deemsters, there being two for each division of the island: they sit judges in all courts, either for life or property; and, with the advice of twenty-four keys, declare what is law in uncommon emergencies.

DEEP, adj. \& n.s. Sax. beep; Guth. and Deep'en, v.a. \& n. Swed. diup; Belg. diep; Deep'ening, n.s. old Goth. \(d y\), to which Deep'ly, adv. Serenius traces this word.
Deep'-mouthed, Deep'-musing, Deep'aess, \(n\) merely the past particidive.' Profound; having length downwards; depressed; sunk; and, because that which is deep in the earth is dark, remote, and undisturbed, gloomy; dark-colored; a dark or strong shade of any color; voluminous in sound; quiet; still. Also, in a metaphorical sernse, gloomy; remote in meaning; sagacious; farpenetrating. Deep, as a substantive, expresses the still and quiet part of night ; an abyss; and, more particularly, the sea. To deepen is, as an active verb, to make deep; to sink low or lower ; to darken; becloud; make gloomy: as a neuter verb, to descend slowly, or by degrees. The adverb, and other substantives, follow these meanings.

And I saigh an aungel comynge doun fro heuene, hauynge the keye of depnesse and a great chayne in his hond.

Wiclif. Apoc. 20.
And the Lord God caused a deep sleep to fall upon Adam.

Genesis ii. 21.
Deep calleth unto deep at the noise of thy waterspouts: all thy waves and thy billows are gone over me.

Psaln xlii. 7.
Some fell upon stony places, and they withered, because they had no deepness of earth. Mat. xiii. 5.

Hee was close and secrete, a deep dissimuler, lowlye of counteynaunce, arrogant of heart, outwardly coumpinable where he inwardely hated, not letting to kisse whom he thoughte to kyll.

Sir T. Moore.
Yet we did lift up our hearts and voices to God above, who sheweth his wonders in the deep. Bacon.

To keep his promise with him, he had deeply offended both his nobles and people.

Id. Henry VII.
He's meditating with two deep divines.
Shakspeare.
There want not many that do fear, In deep of nignt, to walk by this Herne's oak. Id.

This a varice
Strikes deeper, grows with more pernicious root.
Behold the English beach
Pales in the flood with men, with wives and boys,
Whose shouts and claps outvoice that deep-mouthed sea.
When I have most need to employ a friend,
Deep, hollow, treacberous, and full of guile,
Be he to me.
Id. Richard III.
- Klockings so deeply hath sworn ne'er more to come In bawdy-house, that he darcs not go home. Dinne.

\section*{DEE}

If we go down to the great deep, the womb of moisture, the well of fountains, the great pond of the world, we know not whether to wonder at the element itself, or the guests which it contains.

Bishop Hall's Contemplations.
He in my ear
Vented much policy and projects deep
Oi enemies, of aids, battles, and leagues,
Plausible to the world, to me worth nought.
Milton.
And in the lowest deep, a lower deep,
Still threatening to devour me opens wide,
To which the hell I suffer seems a heaven.
Milton's Parudise Lost.
For, even in that season of the year, the ways in that vale were very deep.

Clarendon.
Fear is a passion that is most deeply rooted in our natures, and flows immediately from the principle of self-preservation.

Tilletson.
You must deepen your colours so, that the orpiment may be the highest.

Peacham.
What earth in her dark bowels could not keep
From greedy man, lies safer in the deep. Waller.
Having taken of the deeply red juice of buckthorn berries, I let it drop upon white paper.

Boyle.
The gaping gulph low to the centre lies, And twice as deep as earth is distant from the skies.

Dryden.
Thou hast not strength such labours to sustain :
Drink hellebore, my boy! drink deep, and scour thy brain.
With deeper brown the grove was overspread. Id.
Then toils for beasts, and lime for birds were found, And deep-mouthed \(\operatorname{dog}\) s did forest walks surround.

Id.
If the matter be knotty, and the sense lies deep, the mind must stop and buckle to it, and stick upon it with labour and tbought, and close contemplation. Locke.

Her gloomy presence saddens all the scene, Shades every flower, and darkens every green, Deepens the murmurs of the falling floods,
And breathes a browner horror on the woods. Pope.
But he deep-musing o'er the mountains strayed,
Through many thickets of the woodland shade. Id.
The city of Rome would receive a great advantage from the undertaking, as it would raise the banks and deeper the bed of the Tiber.

Addison.
Virgin face divine
Attracts the hapless youth through storms and waves, Alone in deep of night.

Philips.
Hills, dales, and forests far behind remain,
While the warm scent draws on the deep-mouthed train.
Gay.
While at the bow the watch Arion keeps,
To shun what cruisers wander o'er the deeps.
Falconer.
We have to supply lneans of occupation and subsistence for those, to whom not only England, but Europe is so deeply indebted. Sir T. Bernard.

Cosmetic succour won a vermeil hue,
All soft she spreads, and lo! the rouge is blue!
In vain she wipes and washes, frets and scrubs, The horrid azure deepens as she rabs. Dr. T. Brown.

Such writings, though they may be lightly passed over by many readers, yet if they make a deep impression on one active mind in a hurdred, the effects may be considerable.

Franklin.
Conceiving thunders, Her hollow womb,
And firy
And fiery caverns, roars beneath his foot.
The hills move lightly, and the mountains smoke,
Eir he has touched them.
Cowper.

Me they revile, with many ills molested,
They bid me seek from thee, my Lord, redress, On God, they say, his hope and trust he rested, Let God relieve him in his deep distress.

Kirke White.
The sweetness of the violet's deep blue eyes,
Kissed by the breath of heaven, seems coloured by its skies.

Byron.
The Convent bells are ringing,
But mournfully and slow;
In the gray square turret swinging, With a deep sound, to and fro.

Vain
The struggle ; vain, against the coiling strain And gripe, and deepening of the dragon's grasp, The old man's clench; the long envenomed chain Kivets the living links,-the enormous asp Enforces pang on yang, and stifles gasp on gasp. Id.

DEER, n.s. Sax. beon; Goth. dyr ; Belg. dier; Teut. their ; from Gr. \(\theta \eta \rho\); Kolic \(\phi \eta \rho\). and thence probably from Heb. אר, wild deer. Originally signifying any wild animal, though now confined to the cervine species.
You have beaten my men, killed my deer, and broke open my lodge.

Shakspeare.
The pale that held my lovely deer.
Waller.
I was a stricken deer that left the herd
Long since, with many an arrow deep infixed:
My panting side was charged, when I withdrew
To seek a tranquil death in distant shades.
Cowper. Task.
Deer, in zoology. See Cervus. Of this useful animal there are three principal species in this country, viz. the stag, C. elaphus; the roe, C. capreolus; and C. dama the fallow deer. By castrating the males when newly dropped, says Mr. Loudon, which is not in the least dangerous, it affords the means of having good venison until Christmas, without any other sort of food than the common grass; they also fatten more quickly; the operation must, however, be performed while they are quite young. By stat. 16 Geo . III. cap. 30., if any person shall hunt or take in a snare, or kill or wound any red or fallow deer in any forest, chase, \&c., whether enclosed or not; or in any closed park, paddock, \&c., without the consent of the owner, or be aiding in such offence, they shall forfeit \(£ 20\) for the first offence; and also \(£ 30\) for each deer wounded, killed, or taken. A game-keeper offending, to forfeit double. For a second offence offenders shall be transported for seven years. By stat. 28 Geo . II. cap. 19, destroying goss, furze, and fern, in forests and chases, being the covert for deer, subjects the offenders to a penalty from 55 to 40 s . or to three months' imprisonment

Deer, Great, an island of the East Indian sea, near the west coast of the island of Celebes. Long. \(119^{\circ} 35^{\prime} \mathrm{E}\)., lat. \(5^{\circ} 12^{\prime} \mathrm{S}\).

Deer, Little, a rocky islet in the Eastern Seas, near the west coast of the island of Celebes. Long. \(119^{\circ} 35^{\circ}\) E., lat. \(5^{\circ} 5^{\prime} \mathrm{S}\).
Deer Island, or Muldonich, a small island of the Hebrides, near that of Barry.
Deer Island, a small island of Ireland. in the bay of Galway. Long. \(9^{\circ} \mathrm{W}\)., lat. \(53^{\circ} 9^{\prime} \mathrm{N}\). - Also an island on the coast of North America, in \(\mathrm{Pe}-\) nobscot Bay, about eighteen miles in circumfer-
ence. It is \(\mathbf{1 7 0}\) miles north-east of Boston. Long. \(68^{\circ} 30^{\prime} \mathrm{W} .\), lat. \(41^{\circ} 10^{\circ} \mathrm{N}\)..

\] destroy. Defacement is the injury done. Defacer, he who performs or accomplishes it.

But whanne ye fasten nyle be ye maad as ypocrites sorrowful, for thei defasen hem silf to seme fastynge to men, treuly I seye to you thei han resseyved her meede.

Wiclif. Matt. 6.
But what is this image, and how is it defaced? the poor men of Lyons will tell you, that the image of God is purity, and tbe defacement sin. Bacon.

Give me leave to speak as earnestly in truly commending it, as you have done in untruly and unkindly defacing and slandering it.

Whitgifte.
Pay him six thousand, and deface the bond.
Shakspeare.
That foul defacer of God's handy work
Thy womb let loose to chace us to our graves.
Fatal this marriage,
Defacing monuments of conquered France, Undoing all.
As man was the image of God, so was tbat earthly paradise an image of heaven; both the images are defuced, both the first patterns are eternal.

Bishop Hall. Centemplaions.
Whose statues, freizes, columns broken lie, And, though defaced, the wonder of the eye.

Dryden.
One nobler wretch can only rise, 'Tis he whose fury shall deface The stoick's image in this piece.

Prior.
Thy very weeds are beautiful, thy waste
More rich than other climes' fertility;
Thy wreck a glory, and thy ruin graced
With an immaculate charm which cannot be defaced Byron.
DE Facto, something actually in fact, or existing; in contradiction to de jure, where a thing is only so in justice: as, a king de facto is a person who is actually in possession of a crown; and a king de jure is the person who has a just right to the crown. It was a distinction much in use at the period of the Revolution.

DEFA'ILANCE, n.s. Fr. defaillance. Failure; miscarriage. Obsolete.

The affections were the authors of that unlappy defailance.

Glanville.
DEFA'LCATE, v.a. \(\rangle\) Fr. defalquer; from
Defalca'tion, n.s. \}falx, falcis a sickle. To cut off; to lop; to take away part of an allowance.

The tea-table is set forth with its accustomary bill of fare, and without any defalcation.

Addison.
DEFA'LK, v.a. See Defalcate. To cut off; to lop away.
What he defalks from some insipid \(\sin\), is but to make some other more gustful.

Decay of Piety.
DEFAME, v. a. \& n.s.
Defamer, \(n\). \(s\). Fr. defamer; It.

Defaming, \(n\). s.
Defamation,
Defamatory, \(u d j\). diffamare: Span. and Port. defamar; Latin, defamare, from Greek, \(\phi \eta \mu \eta\), fame, and de, privative. To slander, make infamous, calumniate, deprive of good fame or honor by words or deeds. Defamatory, is lihellous; tendng to defame. The substantives are obrious
in their meaning. In Wiclif's translation of the New Testament, this word is used in the sense of spreading fame or a report; the de being only an expletive.

And the yghen of hem wearen opencd, and Jhesus thretenyde hem and seide se ye that no man wite. But thei gheden out and defumeden him thorugh al that lond. Wiclif. Matt. 9.

I heard the defaming of many. Jer. xx. 10.
Many dougbty knigbts he in his days
Had done to death,
And hung their conquered arms for wore defame On gallowtrees.

Spenser.
My guilt thy growing virtues did defame;
My blackness blotted thy unblemished name.

\section*{Dryden.}

Be silent, and bewarc, if such you see; 'Tis defamation but to say, that's he.
\(I d\).
Augustus, conscious to himself of nuany crimes, made an edict against lampoons and satires, and defamatory writings.
fd.
Defamation is the uttering of contumelious language of any one, with an intent of raising an ill farne of the party; and this extends to writing, as by defamatory libels; and to deeds, as reproachful postures, signs, and gestures.

Ayliffe.
It may be a useful trial of the patience of the \(d e-\) famed, yet the Sefamer has not the less crime.

Government of the Tongue.
The most eminent \(\sin\) is the spreading of defamatory reports.

Id.
They live as if they professed Christianity merely in spite, to defame it.

Decay of Piety.
Many dark and intricate motives thcre are to detraction and defamation; and many malicious spies are searching into tbe actions of a great man. Addison.

Defamation is punishable according to the nature of the offence, either by action upon the case at common law, or by statute in the ecclesiastical court.

DEFATIGATE, v. a. \(\quad\) Lat. defatigo. To
Defatiga'tion, n.s. \(\}\) weary; to tire.
The power of these men's industries, never defatigated, hath been great.

Dr. Maine.
DEFA'ULT, v.a.\& r.s. ? Old Fr. aéfault;
Defa'ulter, n.s. Y Ital. diffalta; Lat. defectus, de, privative, and facio, to do. To fail in peformance. A default is failure of that which ought to be done legally or morally. Defect; want.

But what man wolde him selfe auise His conscience, and nought misuse, He maie well at the first excuse His God, whicbe euer stant in one, In him there is defaute none.

Gower.
But sith thou mayst not so, give leave a while To baser wit, his power therein to spend, Whose grosse defaults thy daintie pen may sile And unaduised ouer sights amend.

Spenser. Sonnets.
Sundrye victorics hadde hee, and sommetime ouer throwes, but neuer in defaulte as for his owne parsone, cither of hardinesse or polytike order.

Sir T. More.
We, that know what it is to fast and pray, Are penitent for your default to-day.

Shakspeare.
la default of the king's pay, the forces were laid upon the snbject.

Dreies.

Left me not rashly call in doubt
Divine prediction: what if all foretold
Had been fulfilled, but through mine own defiault, Whom have I to complain of but myself? Milton.
Partial judges we are of our own excellencies, and other men's defaults.

Suift.
Cooks could make artificial birds and fishes, in de fuult of the real ones. Arbuthnot on Coins.

DEFEA'SANCE. ? Fr. defaisance; Ital.
Defeasible. \}defaciemento; Law Lat. defeisantia. The act of annulling or abrogating any contract or stipulation.

That hoary king, with all his train,
Being arrived where that champion stout, After his foe's defeasance, did remain,
Him goodly greets, and fair does entertain.
Sperser.
He came th the crown by a defeasible title, so was never settled.

Davies.
Defesance is a condition annexed to an act ; as to an obligation, a recognizance, or statute, which performed by the obligee, or the cognizee, the act is disabled and made void, as if it had never been done.

Cowell.
Defeasance, or Defeisance. The difference between a common condition and a defeasance is, that the condition is annexed to, or inserted in, the deed ; and the defeasance is a deed by itself, concluded and agreed on between the parties, and having relation to another deed.

DEFEAT, v. a. \& n. s. \(\}\) Old Fr. desfaite,
Defeature, \(n\) s. from Lat. de, privative, and fucere, to complete an action. To overthrow; to frustrate; undo; mar. Shakspeare says, 'defeat thy favor,' meaning disguise thy face; and defeatures of the face mean disfigurations of it.

They invaded Ireland; and were defeated by the lord Mountjoy.

Bacon.
To his accusations
Me pleaded still not guilty, and alledged
Many sharp reasons to defeat the law. Shakspeare.
Defeat thy favour with usurped beard.
Ye gods, ye make the weak most strong.
Grief hath changed me,
And careful hours, with time's deformed hand,
Hath written strange defeatures in my face. Death,
Then due by sentence when thou didst transgress, Defeated of his seizure many days, Given thee of grace.

Milton.
He finds hinaself naturally to dread a superior Being, that can defeat all his designs, and disappoint all his hopes.

Tillotson.
End Marlborough's work, and finish the defeat.
Addison.
Oh , more than all !-untired by time :
Which, nor defeated hope, nor baffed will,
Could render sullen were she ne'er to smile, Nor rage could fire, nor sickness fret to vent On her one murmur of his discontent.

Byron.

\section*{DEFECATION. n.s. \} Leat. defaco. From}

Défecate, v. a. \& adj. \(\} d e\) and fax, facis, filth. To purge or make clear from lees; to purify.

This liyuor was very defecate, and of a pleasing golden colour.

The blood is not sufficiently defecated or clarified, but remains muddy, ion of things corruptible depends upon the intrinsical defectibility of the connection or union of the parts of things corporal. Id. Origin of Mankind.

Men, through some defect in the organs, want words, yet fail not to express their universal ideas by signs.

Locke.
It will very little help to cure my ignorance, that this is the best of four or five hypotheses proposed, which are all defective.

Id.
If we fall away after tasting of the good word of God, how criminal must such a defection be!

Atterbury.
'Trust not yourself; but, your defects to know, Make use of ev'ry friend-and ev'ry foe.

Pope.
Had this strange energy been less,
Defect had been as fatal as excess. Bluckmore.
If it renders us perfect in one accomplishment, it generally leaves us defective in another. Addison.
The lowness often opens the building in breadth, or the defectiveness of some other particular makes any single part appear in perfection.

Id.

There is more evil owing to our original defection from God, and the foolish and evil dispositions that are found in failen man.

Watts.
And if youth has less of that prudence which is necessary to mauage a family, yet the parents and elder friends of young married persons are generally at hand to afford their advice, which amply supplies that defect.

Franklin.
But once achieved-though barbarous wreck o'erthrow
The sacred fane, and lay its glories low;
Yet shall the sculptured ruin rise to day,
Graced by defect, and worshipped in decay.

\section*{Sheridan.}
\(\mathrm{DEF}^{\prime} \mathrm{END}, v . a\).
Defénce, v.a. \&n.s.
Defénceless, adj.
Deféndable, or
Deféndible,
Deféndant, n. s. \& adj.
Defénder,
Defensa'tive, n.s.
Defensíible, \(a d j\).
Defen'sive, adj. \& \(n\). \(s\).
Defen'sively, adv.
Defe'nst, past part.

Fr. defendre; Span. defender ; Ital. difendere; Lat. defendere, defensus, from \(\sigma \phi \varepsilon \nu \delta o \nu \omega\), ' to fight with a sling,' as Minsheu suggests. To protect; shield; support; make secure; vindicate. Hence to repel; keep off, from the Latin verb; and therefore to forbid or beat off; to prohibit, from the French. See the examples from Chaucer and Milton. To defence, though obsolete, is used as an active verb in the received translation of the Bible. Defenceless is, without protection: defendible, that which may be defended, as is also defensible : and hence the latter likewise signifies justifiable; right: defendant is used as an adjective by Shakspeare. It and defender seem, in a general sense, synonymous; but, legally, the defendant is the party to a suit, who is sued or accused, A defensative is a guard, or, in surgery, a protecting bandage; a plaster. A defensive is also that which serves to defend. The adjective means proper for defence, or protection, as distinguished from assault. The adverb and participle explain theinselves.

Lo this same thing that ghe ben sorouful aftir god, hou mych bisynesse it worchith in ghou, but defend\(y n g\), but yndignacioun, but drede, but desier, but loue, but vemaunce.
-Wiclif. 2 Cor. vii.
My defence to hem that axen me, that is whethir we han not power to ete and drynke?

Id. 1 Cor. 9.
Deliver me from mine enemies, 0 my God : defend me from them that rise up against me.

Psalm lix. 1.
Rehoboam dwelt in Jerusalem, and built cities for defence in Judah.

2 Chron. ii. 5.
O Thomas, jeo vous dis, Thomas, Thomas!
This maketh the fend, this muste ben amended, Ire is a thing that high God hath defended.

Chaucer. Cant. Tales.
Wars preventive, upon just fears, are true defensives, as well as on actual invasions. Bacon.
They must make themselves defensible both against the natives and against strangers. Id.
Heaven defend your souls, that you think
I will your serious and great business scant.
Shakspeare.
Banish your defenders, till at length
Your ignorance deliver you,
As most abated captives, to some nation
That won you without blows.
Id.

A field,
Which nothing but the sound of Hotspur's name
Did seem to make defensible.
Id
Line and new repair our towns of war
With men of courage, and with means defendant.

\section*{Id.}

This is the day appointed for the combat, And ready are the' appellant and defendant. \(\quad I d\).
Stout men of arms, and with their guide of power, Like Troy's old town defenst with Ilion's tower.

Fairfax.
My unpreparedness for war testifies for me that I am set on the defensive part. King Charles.

O sons! like one of us man is become,
To know both good and evil, since his taste
Of that defended fruit.
Milton.
My sister is not so defenceless left
As you imagine: she has a hidden strength
Which you remember not.
\(I d\).
A village near it was defended by the river.
Clarendon.
His majesty, not at all dismayed, resolved to stand upon the defensive only.
\(I d\).
So lawyers, lest the Bear defendant,
And plaintiff Dog, should make an end on't ;
Do stave and tail with writs of error,
Reverse of judgment, and demurrer. Hudibras.
A very unsafe defensative it is against the fury of the lion, and surely no hetter than virginity, or blood royal, which Pliny doth place in cock-broth.

Browne's Vulgar Errours.
Severe defences may be made agaiust wearing any linen under a certain breadth.

Temple.
The use of wine is little practised, and in some places defended by customs or laws.
\(I d\).
Undoubtedly there is no way so effectual to betray the truth, as to procure it a weak defender. South.

If the bishop has no other defensatives but excommunication, no other power but that of the keys, he may surrender up his pastoral staff.

Id.
And here the' access a gloomy grove defends And here the' unnavigable lake extends. Dryden.
Do'st thou not mourn our power employed in vain, And the defenders of our city slain? Id.

He would not be persuaded by danger to offer any offence, but only to stand upon the best defensive guard he could.

Sidney.
Let me be foremost to defend the throne,
And guard my father's glories and my own.
\[
P_{\text {equ }}
\]

Having often heard Venice represented as one of the most defensible cities in the world, I informed myself in what its strength consists. Addison.

There is nothing so bad which will not admit of something to he said in its defence. Sterne.

Those high towers, out of which the Romans might more conveniently fight with the defendants on the wall, those also were broken' by Archimedes' engines.

Wilkins's Math. Magic.
I conceive it very defensible to disarm an adversary, and disable him from doing mischief. Collier.

If I could not avoid his company, why did I not arm myself? Why did I venture defenceless into so much danger.

Mason.
The car of victory, the plume, the wreath,
Defend not from the bolt of fate, the brave.
Beattie.
Depender of the Faith. Fidei defensor, a peculiar title belonging to the king of England; as Catholicus to the king of Spain, and Christian-
issimus to the king of France, \&c. These titles were originally given by the popes. That of Fidei defensor was first conferred by Leo X. on king Henry VIII. for his memorable book against Martin Luther; and the bull for it bears date quinto idus Octob. 1521. It was afterwards confirmed by Clement VII. Chamberlayne says, the title belonged to the kings of England before that time; and for proof hereof appeals to several charters granted to the university of Oxford: so that pope Leo's bull was only a renovation of the ancient right.
DEFERR, v. a. \& v. n. ©Fr. differer; Span. differir; Ital. differire; Lat. differre, from de and fero, to bear away. To put away for a time; to put off; delay; withhold. It is also used for refer, and thus becomes the parent of the substantive deference.
The commissioners deferred the matter unto the earl of Northumberland, who was the principal man of authority in those parts

Bacon.
He will not long defer
To vindicate the glory of his name Aganst all competition, nor will long Endure ii.

Milton.
Neither is this a matter to be deferred till a more convenient time of peace and leisure. Swift.
Inure thyself betimes to the love and practice of good deeds; for the longer thon deferrest to be acquainted with them, the less every day thou wilt find thyself disposed to them.

Atterbury.
Defer the promised boon the goddess cries.
Pope.
Be wise to-day ; 'tis madness to defer;
Next day the fatal precedent will plead;
Thus on, till wisdom is pushed out of life.
Young.
DE'FERENCE, n.s. Fr. deference. Regard; respect. See Defer.

Virgil could have excelled Varius in tragedy, and Horace in lyric poetry, but out of deference to his friends he attempted neither.

Dryden.
A natural roughness makes a man uncomplaisant to others; so that he has no deference fur their inclinations, tempers, or conditions.

Locke.
He may be convinced that he is in an error, by observing those persons, for whose wisdom and goodness he has the greatest deference, to be of a contrary sentiment.

Swift.
Deference is the most complicate, the most indirect, and the most elegant of all compliments.

Most of our fallow suberis are guided prejudice of education, or by a deference to the judg. ment of those who, perhaps, in their own hearts, disapprove the opinions which they industriously spread among the multitude.

Addison.
We ought to show the regard, deference, and honour, which belong to superiors; and the candour, integrity, and benevolence, we owe to all.

Mason.
DE'FERENT, adj. \& n. s. From Lat. deferens, of deferc. See Defer. That which carries or conveys. That carries up and aown.

The figures of pipes or concaves, through which sounds pass, or of other bodies deferent, conduce to the variety and alteration of the sound. Bacon.

It is certain, however, it crosses the received opinion, that sounds may be created without air, though air be the most favourable deferent of sounds.

DEFFAND (Marie du), a Frence lady, distinguished both for her talents and extensive acquaintance with the literati of the last century, was born in 1696, and was the daughter of Gaspard de Vichy, compte de Champ-Rond. She received an excellent education, but no care seems to have been taken to regulate her temper and moral habits, which displayed throughout her life a disgusting portion of selfislıness. In 1718 she married J.B. J. du Deffand, marquis de la Lande, whose ancestors had signalised themselves by their attachment to the dukes of Burgundy. Madame du Deffand left no monument of her abilities except her Correspondence, which has been highly praised by D'Alembert, as affording a model of epistolary style. She died in \(1780^{\circ}\), having, during the last thirty years of her life, been afflicted with blindness. In 1810 appeared Correspondance inedite de Madame du Deffand avec D'Alembert, Montesquieu, le president IIenault, la Duchesse du Maine; Mesdames de Choiseul, de Stael; le Marquis d'Argens, le Chevalier d'Aydie, \&c., 3 vols. 8vo. Her Letters to Horace Walpole have also been printed.

DEFIANCE. See Defy.
DEFI'CIENCE, or
Defi'cIency, \(n . s\). \(\begin{aligned} & \text { Lat. deficio; de pri- } \\ & \text { vative, and facio, to }\end{aligned}\)
Defícient, adj. Deficient, adj. Jmake. Want, imperfection, defect. Deficient ; defective, imperfect. See Defect.

Figures are either simple or mixed : the simple be either circular or angular; and of circular, either complete, as circles, or deficient, as ovals. Wotton.

0 woman ! best of all things as the will
Of God ordained them : his creating hand
Nothing imperfect or deficient left. Milton.

> Thou in thyself art perfect, and in thee Is no deficience found.

Scaliger finding a defect in the reason of A ristotle, introduceth one of no less deficiency himself.

Browne's Vulgar Errours.
Neither Virgil nor Homer were deficient in any of the former beauties.

Dryden.
The characters of comedy and tragedy are never to be made perfect, but always to be drawu with some specks of frailty and deficience, such as they have been described to us in history.

Id.
Several thoughts of the mind, for which we have either none or very deficient names, are diligently to be studied.

Locke.
What great deficience is it if we come short of others? Sprat.
There is no burden laid upon our posterity, nor any deficiency to be hereafter made up by ourselves, which has been our case in so many other subsidies.

Addison.
DEFI'LE, v. a. \& n.s. Defíler, \(n\). s.
Defílement.
Compounded of Derieement. Jafylan. Goth. fyla; Belg. vuyl; from the Gr. фavخos, vile, unclean.Minsheu. To make foul, or unclean; to pollute, violate, corrupt, taint ; and hence to calumniate.

That which dieth of itself he shall not eat to defile himself therewith.

Lev. xxii. 8.
Forgetfulness of good turns, defiling of souls, ad ultery, and shameless uncleanness.

Wisd. xiv. 26.

There is a thing, Harry, known to many in our land oy the name of pitch; this pitch, as ancient writers do report, doth defile.

Skahspeare.
Lust,
By unchaste looks, loose gestures, and foul talk, Lets in defilement to the inward parts.

Milton.
God requires rather that we should die, than defile ourselves with impieties. Stillingfleet.
Every object his offence reviled ;
The husband nurdered, and the wife defiled. Prior.
He is justly reckoned among the greatest prelates of this age, however his character may be defiled by mean and dirty hands.

Swift.
Let not any instances of \(\sin\) defile your requests. Wake.
The unclaste are provoked to see their vice exposed, and the chaste cannot rake into such filth without danger of defilement.

Spectator.
At the last tremendous day, I shall hold forth in my arms my much wronged child, and call aloud for vengeance on her defiler.

Addison.
Thus when Cambyses led lis barbarous hosts From Persia's rocks to Egypt's trembling coasts, \(D_{\text {efiled each hallowed fane, and sacred wood, }}\) And, drunk with fury, swelled the Nile with blood.

Darwin.
Defilee, v. n.\&n.s. Fr. defile, from file, a line of solders, itself derived from Lat. filum, a thread. To pass off in files ; a narrow passage ; a long uarrow pass; a lane.

There is in Oxford a narrow defile, to use the military term, where the partisans used to encounter. Addison.
It has been mentioned by a writer of military ma nœuvres, that defiling should be performed with rapidity, \&c.

James.
Defile, in war, a narrow lane or passage, through which a company of horse or foot can pass only in file, by making a small front; so that the enemy may take an opportunity to stop their march, and to charge them with so much the moreadvantage, as those in front and rear cannot reciprocally come to the relief of one another.

DEFI'NE, v. \(a . \& v, n\).
Defin'able, adj.
Defin'er, \(n\).s.
Defíinte, \(n\). s. \& adj.
Definiteness,
Definitíon,
Defin'itive,
Defin'itively.
Definititiveness.
Fr. and Port. definer ; Spanish, definir; Ital. diffinire; Lat. definire. From do and finem, to give a limit. To set a limit by words or actions; to mark a bound. As a neubound. As a neuter verb, to decide, determine. Definable is, caand hence he who explains or describes a thing. Definite is, precise; exact; determined; and sometimes it is used as a substantive. Definiteness is, certainty; limitedness. Definition, the act or form of defining ; the concise description of a thing. Definitive is, determinate; express; final. Definitiveness, decisiveness.

The unjust judge is the capital remover of landrn:arks, when he defineth amiss of lands and properties.

Bacon.
Idiots in this case of favour,
Would be wisely definite.
Vol. VII.

Definitively thus I answer you:
Your love deserves my thanks; but my desert,
Unmeritable, shuns your high request.
\(I d\).
Bellarmine saith, becausc we think that the body of Christ may be in many places at once, locally and visibly; therefore we may say and hold, that the same body may be circumspectively and definitively in more places at once.

Hall.
Other authors write often dubiously, even in matters wherein is expected a strict and definitive truth.

Browne's Vulgar Errours.
Definitions do not tell an sit, but quid sit; the first is to be supposed before any definition is to be inquired after.

Bishop Taylor.
The Supreme Nature we cannot otherwise define, than by saying it is infinite; as if infinite were definable, or infinity a subject for our narrow understanding.

Dryden.
I drew my definition of poetical wit from my particular consideration of him; for propriety of thoughts and words is only to be found in him.

Id.
Though defining be thought the proper way to make known the proper signification, yet there are some words that will not be defined.

Loeke.
Whose loss can'st thou mean,
That dost so well their miseries define? Sidney.
Hither to your arbour divers times he repaired, and here, by your means, had the sight of the goddess, who, in a definite compass, can set forth infinite beauty.
\(I d\).
Concerning the time of the end of the world the question is, whether that time be definable or

Burnet's Theory.
So universally does repetition contribute to our pleasure in the fine arts, that beauty itself has been defined by some writers to consist in a due combination of uniformity and variety.

Darwin.
Your God, forsooth, is found
Incomprehensible and infinite;
But is he therefore found? Vain searcher . no:
Let your imperfect definition show,
That nothing you, the weak definer, know. Prior.
When the rings appeared only black and white, they were very distinct and well defined, and the blackness seemed as intense as that of the central spot.

Newtors.
What is man? Not a reasonable animal merely; for that is not an adequate and distinguishing definition.

Bentley.
Special bastardy is nothing else but the definition of the general; and the general, again, is nothing else but a definite of the special.

Ayliffe.
Definite, in grammar, is applied to an article that has a precise determinate signification; such as the article the in English, le and la in French, \&c., which fix and ascertain the noun to waich they belong; whereas \(a, a n, u n\), or une, mark nothing particular, and are therefore called indefinite. See Article.
 taking fire, and burning totally away.

The true reason why paper is not burned by the flame that plays about it, seems to be, that the aqueous part of the spirit of wine, being imbibed by the paper, keeps it so moist, that the flame of the sulphureous parts of the same spirit cannot fasten on it ;
and therefore, when the deflagration is uver, you shall always find the paper moist.

Boyle.
Our chymical oils, supposing that they were exactly pure, yet they would be, as the best spirit of wine is, but the more inflammable and deflagrable.
We have spent more time than the opinion of the ready deflagrability, if I may so speak, of salt petre did permit us to imagine.

Id.
DEFLECT', v.r. \(\quad\) From Lat. de and flecDeflec'tion, n. s. \(\}\) to, to turn. To turn Deflex'ure, n.s. aside; to deviate.
At some parts of the Azores the needle deflecteth not, but lieth in the true meridian: on the otherside of the Azores, and this side of the equator, the north point of the needle wheeleth to the west.

Browne's Vulgar Errours.
Needles incline to the south on the other side of the equator; and at the very line, or middle circle, stand without deflection.

Id.
For, did not some from a straight course deflect, They could not meet, they could no world erect.

Blackmore.
As by the cultivation of various sciences, a language is amplified, it will be more furnished with words deflected from their original sense.

Johnson. Preface to Dictionary.
Deflection of the Rays of Light, a property which Dr. Hook observed in 1675, and read an account of before the Royal Society, March 18th, the same year. He says he found it different both from reflection and refraction, and that it was made towards the surface of the opaque body, perpendicularly. This property Sir Isaac Newton calls inflection.
DEFLOUR', v.a. 7 Fr. deflorer ; Span. des-
Deflour'er, n.s. florar; Lat. deflorare;
Deflora'tion, n.s. from de privative and floreo, flos, floris, a flower. To violate a virgin; hence to mar or deface any thing that is beautiful; to select the most valuable of a number of things. The meaning of the substantives is obvious.

> How on a sudden lost,
> Defaced, defloured, and now to death devote!

\section*{Milton.}

The laws of Normandy are, in a great measure, the defloration of the English laws, and a transcript of them.

Hale.
If he died young, he died innoccnt, and before the swectness of his soul was defloured and ravished from him by the flames and follies of a froward age.
Taylor.

I have often wondered, that those deflourers of innocencc, though dead to all the sentiments of virtue and honour, are not restrained by humanity.

Addison.
DEFLU'X, \(n\).s.
Def'luvous, adj. Lat. defluxio, from de,
Deflu'xioy, \(n\) s. , fluo, to flow. The wards.
Both bodies are clammy, and bridle the deflux of humours, without penning them in too much.

Bucon.
We see that taking cold moveth loosencss by contraction of the skin and outward parts; and so doth cold, libewise, cause rhcums and defluxions from the hear.

DE'FLY, adv. From Deft, which see. Dexterously; skilfully. Obsolete. Properly deftly.

> Lo, how finely the graces can it foot
> To the instrument;
> They dauncen defly, and singen soote, In their merriment.

Spenser.
DE FOE (Daniel), a celebrated miscellaneous writer of the last and preceding century. When kingWilliam, to allay the dissent of the people, was obliged to dimiss his Dutch guards, De Foe ridiculed the enemies of government in a well-known poem, called the True-Born Englishman. He next wrote a tract, called the Shortest Way with the Dissenters, a satire on those who now, having the power, wished to retaliate on the Romanists and dissenters those persecutions they had loudiy complained of when inflicted on themselves. For this he was sentenced to the pillory, which so little intimidated him, that, in defiance of this usage, he wrote a Hymn to the Pillory. It is unnecessary to enumerate all his publications : the following are the principal. The History of the Plague in 1665; a novel, entitled The History of Colonel Jack; a New Voyage Round the World by a Company of Merchants, printed for Bettesworth, 1725; The History of Roxana; Memoirs of a Cavalier; The History of Moll Flanders; a religious romance, entitled Religious Courtship; and The Life and Adventures of Robiuson Crusoe, a well-known tale, of which there have been editions without number. The basis of this popular story was afforded by the real history of a Scottish sailor, Alexander Selkirk, who had been left ashore on the island of Juan Fernandez. Selkirk used to relate his adventures at a coffee-house in London, where money was frequently given him by the company, and where De Foe so often heard them, that out of them he formed the above mentioned history. De Foe's malignant enemies have misrepresented this to his disadvantage. He died at Islington in 1731 .

DEFCEDA'TION, n. s. Lat. from defredus, of \(d e\) and fodus, foul. The act of making filthy; pollution. This is not an English word; at least, to make it English, it should be written defedation, says Dr. Johnson.

What native unextinguishable beauty must be impressed and instincted through the whole, which the defoctation of so many parts by a bad printer, and \(\approx\) worse 'editor, could not hinder from shining forth.

Bentley.
DEFO'RCEMENT, \(n\). s. from force. A with holding of lands and tenements by force from the right owner. 'It may be grounded,' says Blackstone, 'on the disability of the party deforced.'

DEFORM', v. a. \& adj.
DEFORM'E, part. adj.
DEFRMA'TION \(n . \delta\). \(\begin{gathered}\text { Fr. deformér; Ital. } \\ \text { difformare; Span. } \\ \text { desformár ; Lat. de- }\end{gathered}\) gure; to mar the form of any thing; to dishonor, disgrace. Deformation is a defacing, disfiguring. Deformity is ugliness, irregularity of form; hence inordinateness, ridiculousness.

I did proclaim,
Tlat whoso killed that monster most deform, Should have mirc only daughter to his dame.

Spenser.
I that am curtailcd of all fair proportion, Cheated of feature by disscmbling nature, Deformed, unfinished, sent before my time Into this breathing world, scarce half made up.

Shakspeare.
Where sits deformity to mock my body, To shape my legs of an unequal size, To disproportion me in every part.

Id.
No glory is more to be envied than that of due reforming either church or state, when deformities are such, that the perturbation and novelty are not like to exceed the benefit of reforming.

King Charles.
Why should not man,
Retaining still divine similitude
In part, from such deformities be free,
And for his Maker's image sake, exempt?
Milton.
So spake the grisly terror; and in shape,
So speaking and so threatening, grew tenfold More dreadful and deform.
Old men with dust deformed their hoary hair. Dryden.
It is well known what strange work there has been in the world, under the name and pretence of reformation; how often it has turned out to be, in reality, deformation; or, at best, a tinkering sort of business, where, while one hole has been mended, two have been made.

Bishop Horne.
Affectation is certain deformity; by forming themselves on fantastic models, the young begin with being ridiculous, and often end in being vicious.

Blair.

\section*{Had no Power presented me}

The possibility of change, I would
Have done the best which Spirit may, to make
Its way, with all Deformity's dull, deadly,
Discouraging, weight upon me, like a mountain.
Byron.
Deformity may be defined, in general, the want of uniformity; though it certainly does not, as some have supposed, include the want of that perfect degree of uniformity that is necessary to constitute beauty. Many are the objects in nature that cannot be said to be beautiful, and yet are by no means deformed. Deformity is either natural or moral. These are both referred by Mr. Hutcheson to an internal sense; and our perceptions of them, as he supposes, arise from an original arbitrary structure of our own minds, by which certain objects, when observed, are rendered the occasions of certain sensations and affections. See Beauty.

> DEFRAUD,v. \(u\).
> Defrauda'tion, n.s.
Defrauder.
> Fr. defrauder; Span.
> Defrauder. dare, from de and fraus, fraudis, deceit. To cheat; deceive; beguile of something: always taking of before the thing gained. Defraudation is privation by deceit or guile. Defrauder, he who cheats another of his property.

My son, defraud not the poor of his living, and make not the needy eyes to wait long. Eccl. iv. 1.

Churches seem injured and defrauded of their rights, when places, not sanctified as they are, prevent them unnecessarily in that pre-eminence and honour.

Hooker.

Their imposture ar* worse than any other, de luding not only into pecuniary defraudutions, but the irreparable deceit of death. Bruwne's Vulgar Errours.

There they, who brothers better claim disown, Expel their parents, and usurp the throne ; Defraud their clients, and, to lucre sold, Sit brooding on unprofitable gold. Dryden.

There is a portion of our lives which every wisc man may justly reserve for his own particular use, without defrauding his native country.

Id.
But now he seizcd Briseis' heavenly charms, And of my valour's prize defrauds my arms. Pore. The profligate in morals grows severc, Defrauders just, and sycophants sincere.

\section*{Blackmore.}

DEFRA'Y, v. \(a\).
Defray'er, n.s.
, ing to Minsheu, from Fr. fredum, a fine. Rather, from de, and frais, Fr. expense. It may, however, be nothing more than a compound of the English verb, free. To pay expenses; to discharge a charge made ; defrayment is, compensation; satisfaction. Defrayer, he who pays or discharges an account.

He would, out of his own revenue, defray the charges belonging to the sacrifices. 2 Mac. ix. 16.

It is easy to lay a charge upon any town; but to foresee how the same may be answered and defrayed, is the chief part of good advisement.

Spenser's State of Ireland.
It is long since any stranger arrived in this part, and therefore take ye no care; the state will defray you all the time you stay; neither shall you stay one day the less for that.

DEFT, adj. Sax. əæfz. Obsolete. Neat; handsome; spruce; fitting.

You go not the way to examine; you must call the watch that are their accusers.-
_- Yea, marry, that's the deftest way.
Shakspeare.
Come, high or low,
Thyself and office deftly show. Id. Macbeth.
Loud fits of laughter seized the guests, to sce
The limping god so deft at his new ministry.
Dryden.
The wanton calf may skip with many a bound, And my cur, Tray, play deftest feats around. Gay.

Young Colin Clout, a lad of peerless meed,
Full well could dance, and deftly tune the reed. Id.
\[
\text { DEFUNCT', n. s. \& adj. \} Lat. defunctus, }
\]

Defunc'tion, \(n . s\). \(\}\) of de and fungor', to finish. In a state of death; dead.

Nature doth abhor to make his couch
With the defunct, or sleep upon the dead.
Shakspeare.
I therefore beg it not
To please the palate of my appetite;
Nor to comply with heat, the young effects
In me defunct, and proper satisfaction.
Id.
Here entity and quiddity,
The souls of defunct bodies, fy. Hulibras.
In many cases, the searchers are able to repert the opinion of the physician who was with the patient, as they receive the same from the friends of the defunct. Graunt.
\(\left.\begin{array}{l}\text { DEFY,'v.a.\& n.s. } \\ \mathrm{DEFY} \text { 'ER, n.s. }\end{array}\right\}\) Defy'er, n.s.
Defíance.
sidere from I
says Minsheu, we differ with those whom we efy. To dare; to challenge; to call to comoat ; to despise ; to disdain; to deny. Defy is used as a substantive by Dryden, bat not commonly. Defiance is the instrument or mode of challenge; any expression of enmity, abhorrence, or contempt.

I knowe her eke a false dissimulour, For finally fortune I do defie.

Chaucer. Prol. to Cant. Tales.
As many fools that stand in better place, Garnished like him, that for a tricksy word Defy the matter.

Shakspeare.
The fiery Tybalt, with his sword prepared, Which, as he breathed defiance to my ears, He swung about his head.

I once again
Defy thee to the trial of mortal fight. Milton.
How many of us can bid defiance to death, and suggest answers to absent temptations, which when they come home to us, we fly off, and change our note.

Bp. Hall's Contemplations.
Nor shall it e'er be said tbat wight
With gantlet blue and bases white,
And round blunt truncheon by his side So great a man at arms defyed.

Hudibras.
Is it not then high time that the laws should provide, by the most prudent and effectual means, to enrb those bold and insolent defiers of heaven ?

Tillotson.

\section*{At this the challenger, with ficree defy,}

His rumpet sounds; the challenged makes reply :
With clangour rings the field, resounds the vaulted sky.

Dryden.
A war without a just defiance made.
Nobody will so openly bid defiance to common sense, as to affirm visible and direct contradictions. Locke.

Here let the pippin, fretted o'er with gold,
In fostering straw defy the winter's cold;
The hardier russet here will safely keep,
And dusky rennet, with its crimson cheek.
Sheridan.
And one enormons shont of " Allah !' rose In the same moment, loud as even the roar Of war's most mortal engines, to their foes Hurling defiance.

Byron.
DEGEN'ERATE, \(v . n . \& a d j\).
Degeneracy, n.s.
Degen'eratenfss,
Degenerative,
Degen'erous, adj.
Degenerously, adv.
Fr.degénerér; Span. degenerar ; Ital.degeneráre; Latin, degenero; from de and genere errare, to wander from its kind. To fall off from the virtue or fame of one's ancestors; to decline in station, in kind, or in class: as anı adjective, unlike or unequal to ancestry; unworthy; base. Degeneracy, degenerateness, and degeneration are synonymous, and signify a state or act that exhibits degradation from the excellence or honor of ancestors; an apostasy or declining from that which is good. Degenerous \(1 s\) synonymous with degenerated.

Most of those fruits that used to be grafted, if they the set of kernels or stones, degenerate. Bacon.

Thou art like enough
To fight against me under Piercy's pay;
To oog his heels, and curtsy at his frowns, To show how much thou art degenerute.

Shukspeure.

Let not the tumultuary violence of some men's immoderate demands ever betray me to that degenerous and unmanly slavery, which should make me strengthen them by my consent.

King Charles.
In plants, these transplantations are obvious; as barley into oats, of wheat into darnell; and those grains which generally arise among corn, as cockle, aracus, œgilops, and other degenerations.

Broune's Vulgar Errours.
So all shall turn degenerate, all depraved ; Justice and temperance, truth and faith, forgot! One man except.

Milton.
When wit transgresseth decency, it degenerates into insolence and impiety.

Tillotson.
'Tis true, we have contracted a great deal of weak. ness and impotency by our wilful degeneracy from goodness; but that grace, which the gospel effers to us for our assistance, is sufficient for us.

Id.
Fair, tall, his limbs with due proportion joined ; But of a heavy dull degenerate mind,
His soul belied the featnres of his face;
Beauty was there, but beauty in disgrace. Dryden.
Degenerous passion, and for man too base,
It seats its empire in the female race;
There rages, and, to make its blow secure, Puts flattery on, until the aim be sure.
When a man so far becomes degenerate as to qui \({ }^{\mathbf{t}}\) tne principles of human nature, and to be a noxious creature, there is commonly an injury done some person or other.

Locke.

> Degenerate from their ancient brood,

Since first the court allowed them food.
Swift.
The ruin of a state is generally preceded by an universal degeneracy of manners, and contempt of religion, which is entirely onr case at \(\mathcal{f r e s e n t . ~ I d . ~}\)

How wounding a spectacle is it to see heroes, like Hercules at the distaff, thas degenerously employed !

Decay of Piety.
There is a kind of sluggish iesignation, as well as poorness and degeneracy of spirit, in a state of slavery.

Addison.
When we think of the infinite pnrity of God, who cannot behold iniquity; and consider the corrupted and digenerate state of human vature; this is apt to make us more apprehensive than is reasonable, of the difficulty of our duty.

Clarke's Sermons.
Tongues, like governments, have a natural tendency to degeneration; we have long preserved our constitution, let us make some struggles for our language.

Johnson. Preface to Dictionary.
DEGLUTI'TION, n. s. Lat. deglutio, of de and glutio, from Gr. \(\gamma \lambda v \boldsymbol{\zeta}_{\omega} \omega\), to swallow.-Ainsworth. The act or power of swallowing.

When the deglutition is totally abolished, the patient may be nourished by clyster3. Arbuthnot on Diet.

Deglutition, in the animal economy, is performed in the first place by means of the tongue, driving the aliment into the œsophagus or gullet, and then, by the contraction of the sphincter, and the fleshy fibres of the œsophagus, which, lessening its aperture, protrude the contents downward into the stomach. In its course, by pressing the glands, the food itself increases the mucus required for lubrication, and thus easily passes without irritation.

DEGRADE', v.a. ) Fr. degradér; Span.
Degrada'tion, n. s. I degradár; Ital. disgrudére ; from Lat. de privative, and gradus a ster.

To deprive of rank or degree; to̊ reduce from a higher to a lower rank or value. Degradation is the state of deprivation so effected; disnissal from trust er office.

\section*{He should}

Be quite degraded, like a hedgeborn swain, That doth presume to boast of gentle blood. Shakspeare.
Nor shalt thou, by descending to assume Man's nature, lessen or degrade thine own.

Milton.
All higher knowled \({ }_{6} \mathrm{e}\) in her prescnce falls
Degraded.
\(I d\).
So deplorable is the deyradation of our nature, that «hereas before we bors the image of God, we now .etain only the image of men. South.

The word degradation is commonly used to denote a deprivation and removing of a man from his degree. Ayliffe.

\section*{Time hath not yet the features fixed,} But brighter traits with evil mixed; And there are hues not always faded, Which speak a mind not all degraded Even by the crimes through which it waded.

Byron. The Giaour.
Degradation from political rank or station was, and is, performed in a different manner in the cases of a peer, a priest, a knight, a gentleman, an officer, \&c. In the time of Francis I. M. Fangel, a French officer, having, in a cowardly manner, given up Fontarabia, whereof he was governor, was publicly degraded. On this occasion twenty or thirty cavaliers were assembled, before whom this gentleman was accused of treason and breach of faith by a king at arms. 'Two scaffolds were erected, the one for the judges, heralds, and pursuivants, and the other for the guilty cavalier, who was armed at all points, and his shield placed on a stake before him, with the point reversed. On one side assisted twelve priests, in surplices, who sung the vigils of the dead. At the close of each psalm they made a pause, during which the officers of arms stripped the condemned of some piece of his armour, beginning with his helnet, and proceeding thus till he was quite disarmed; which done, they broke the shield in three pieces with a hammer. Then the king at arms emptied a basin of hot water on the criminal's head; and the judges, putting on mourning habits, went to the church. The degraded was then drawn from off the scaffold with a rope tied under his armpits, laid on a bier, and covered with mortuary clothes; the priests singing some of the prayers for the dead; and then he was delivered to the civil judge and the executioner of justice. Sir Andrew Harcla, earl of Carlisle, being convicted of treason, 18 Edward II. coram rege: after judgment was pronounced, his sword was broker over his head, and his spurs hewn off his heels; Sir Anthony Lucy, the judge, saying to him : 'Andrew, now thou art no knight, but a knave.' It has been maintained that the king may degrade a peer; but it appears from later authorities, that he cannot be degraded but by act of parliament. We have an instance of ecclesiastical degradation, before condemnation to deatl, in the eighth century, at Constantinople, in the person of the patriarch Constantine, whom Con-
stantine Copronymus caused to be executed. He was made to ascend the ambo; and the patizaren Nicetas sent some of his bishops to strip hims of the pallium, and anathematised him : then they made him go out of the church backwards. When Cranmer, archbishop of Canterbury, was degraded by order of queen Mary, they dressed him in episcopal robes, made only of canvas, put the mitrc on his head, and the pastoral staff in his hand; and in this attire sloowed him to the people. They then stripped him piece by piece. Pope Boniface pronounced that six bishops were required to degrade a priest; but the difficulty of assembling so many bishops, rendered the punishment frequently impracticable.

Degraded, in heraldry, the name of a cross when it has steps at each end, as argent, a cross, degraded sable. Name Wentworth.

DEGREE', n. s. Fr. degrè ; Port. grut; Span. and Ital. grado, from Lat. gradus, a step. See Degrade. Rank; quality; order; place of relative merit or precedency; measure; proportion. Variously applied in the sciences: see the following articles. By degrees is, gradually; by steps, or graduated progress.

Surcly men of low degree are vanity, and men of bigh degree are a lye : to be laid in the balance, they are altogether lighter than vanity. Psalm 1xii. 9.

Methinkith it accordant to reson,
To tell you alle the condition
Of ech of them, so as it semid me,
And which they werin, and of what degree,
And eke in what array that they wer in;
And at a knight then woll I first begin.
Chaucer. Prol. to Cant. Tales.
It was my fortune, common to that age,
To love a lady fair, of great degree,
The which was born of noble parentage, And set in highest seat of dignity.

Spenser.
I embrace willingly the ancient received course and converiency of that discipline, which teacheth infcrior degrees and orders in the church of God.

Hooker.
The book of Wisciom noteth degrees of idolatry, making that of worshipping petty and vile idols more gross than simply the worshipping of the creature.

Bacon.
Degree being vizarded,
The unworthiest shews as fairly in the mask.
Shakspeare.
How vainly do we hope to be perfect at once! it is well for us, if through many degrees we can rise to our consummation. Bishop Hall. Contemplations.

A strange barmonious inclination
Of all degrecs to reformation. Hudibras.
In minds and manners, twins opposed we see; In the same sign, almost the same aegree. Dryden.

If all the parts are equally heard as loud as one another, they will stun you to that degree, that you will fancy your ears were torn in pieces. Id.

As if there were degrees in infinite,
And Heaven itself had rather want perfcction
Than punish to excess.
Farmers in degree,
He a good husband, a good housewife she. Id

The scveral degrees of angels may probably have larger views, and be endowed with capacities able to set before them, as in one picture, all their past knowledge at once.

Locke.
Poesy
Admits of no degrees; but must be still Sublimely good, or despicably ill.

\section*{Roscommon.}

But is no rank, no station, no degree,
From this contagious taint of sorrow free? Prior.
Exulting in triumph now swell the bold notes; In broken air, trembling, the wild musick floats

Till by degrees remote and small,
The strains decay,
And melt away,
In a dying, dying fall.
Pope.
The unusual extension of my muscics on this occasion, made my face ache on both sides to such a degree, that nothing but an invincible resolution and perseverance could have prevented me from falling back to my monosyllables.

Spectator.
A person who is addicted to play or gaming, though he took but little delight in it at first, by degrees contracts a strong inclination towards it.

Id. No. 447.
Men's prejudices, I was sensible, could only be lesscned by degrees; and I was firmly of opinion that no change ought ever to be made in quiet times, till the utility of the change was generally acknowledged. Bishop Watson.
Without hinting the abolition of the order, [I] strongly insisted on the propriety of obliging them to keep exercises in the schools, as the other candidates for degrees did. Id.
How numerous were the instances in which juries found a compassionate verdict, in direct contradiction to the plain facts clearly established before them, we do not know; but hat these evils must all have existed to a considerable degree, no man can doubt.

Sir Samuel Romilly.
Degree, in universities, denotes a quality conferred on the students or members thereof, as a testimony of their proficiency in the arts or sciences, and entitling them to certain privileges.

\section*{Degree of Latitude. See Latitude.}

Degree of Longitude. See Longitude.
I)EHOR"T, v. a. Lat. dehortor; of \(d e\) and hortor; Gr. о \(\omega\), \(\omega \rho \tau \alpha \iota\), to incite. To dissuade.

One severely dehorted all his followers from prostituting mathematical principles unto common apprehension or practioe.

Wilkins.
The apostles vehemently dehort us from unbelief.
Ward.
The autlor of this epistle, and the rest of the apostles, do every where vehemently and earnestly dehort from unbelief: did they never read these dehortations? Id. on Infidelity.

DEJANIIRA, in fabulous history, daughter of Oeneus, king of Etolia, and wife of Hercules, The centaur Nessms, endeavouring to ravish her, was slain by Hercules with a poisoned arrow. Nessus, when dying, gave his bloody shirt to Dejanira; assuring her that it was a sovereign remedy to cure her husband, if he proved unfaithful. Some time after, Dejanira, suspecting his fidelity, sent him the shirt, which he put on, and was seized with the most excruciating torments. Being unable to support his pains, he retired to Mount Oeta, and erecting a pile of wood set fire
to it, and threw himself into the flames; upon whuch Dejanira kılled herself in despair.

DE'ICIDE, n. s. From Lat. deus and cado A barbarism of Prior's, meant, we suppose to express the death of Christ as being both God and man. Fully believing that such he was, we cannot think that a sober theology will warrant this term.

Explaining how Perfection suffered pain, Almighty languished, and Eternal died;

How by her patient victor Death was slain, And earth profaned, yet blessed with deicidc! Prior.

DEJECT', v. a. \& adj.
Deject'edly, adv. \(\quad \begin{aligned} & \text { Old Fr. déejecter; Lat. } \\ & \text { dejicere, from de, and }\end{aligned}\)
Desectiedness, n.s.
Dejection,
Deject'ure. Deser URe. Jp to afflict in any way; to par , dehase: hence adjective signifies cast down; depressed ; low in spirits and manner: dejecture, that which is thrown down in a particular way.

No man in that passion doth look strongly, but dejectedly: and that repulsion from the eyes diverteth the spirits, and gives heat more to the ears, and the parts by them.

Bacon.
I am of ladies most deject and wretched,
That sucked the honey of his music vows.
Shakspeare.
The lowest, most dejectea thing of fortune,
Stands still in esperance; lives not in fear! Id.

\section*{What besides}

Of sorrow, and dejection, and despair,
Our frailty can sustain, thy tidings bring.
Milton.
The liver should continually separate the choler from the blood, and empty it into the intestines; where there is good use for it, not only to provoke dejection, but also to attenuate the chyle.

Ray on the Creation.
Oh! If I did but steadfastly believe, I could not be dejected; for I will not injure myself to say, I offer my mind any inferior consolation to supply this loss.

Lady Russell's Letters.
Eneas here beheld, of form divine,
A godlike youth in glittering armour shine,
With great Marcellus keeping equal pace,
But gloomy were his eyes, dejected was his face.
Dryden.
Nor think to die dejects my lofty mind;
All that I dread is leaving you behind! Popé.
The effects of an alkalescent state, in any great degree, are thirst and a dejection of appetite, which putrid things occasion more than any other.

Arbutlenot on Aliments.
A diseasc opposite to spissitude is too great fluidity, the symptoms of which are excess of animal secretions; as of perspiration, sweat, urine, liquid dejectures, leanness, weakness, and thirst

Id.
Deserted and astonished, he sinks into utter dejection; and even hope itself is swallowed up in despair.

Rogers.
She was dejected; she learned an humbler language, and seemed, if she did not trust in God, at least to have renounced her confidence in herself.

Cowper. Private Correspondence.
Or fondly gay, with unambitious guile,
Attempt no prize but favouring Beauty's smile;
Or bear dejected to the lonely grove
The soft despair of unprevailing love.
Sheridon

DEJERATION, n.s. From Lat. dejero. A taking of a solemn oath.
DE IFORM, adj. From Lat. deus and forma. Of a godlike form.

DE'IFY, v. a. Fr. deifier; Lat. deus, and fo to be made. To make like God; to treat as a deity ; to praise excessively.

He did again so extol and deify the pope, as made all that he had said in praise of his master and mistress seem temperate aud passable. Bacon.

Persuade the covetous man not to deify his money. and the proud man not to adore himself. South.

Daphnis, the fields' delight, the shepherds' love, Renowned on earth, and deifed above. Dryden.

The seals of Julius Cæsar, which we know to be antique, have the star of Venus over them, though they were all graven after his death, as a note that he was deifed.

Id.

\section*{Half of thee \\ Is deified before thy death. \(\begin{gathered}\text { Half of thee }\end{gathered} P_{\text {rior }}\).}

Thus by degrees, self-cheared of their sound And sober judgment, that he is but man, They demi-deify and fume him so,
That in due season he forgets it too.
Cowper's Task.
Onc noble stroke with a whole life may glow, Or deify the canvass till it shine
With beauty so surpassing all below, That they who kneel to idols so divine Break no commandment, for high Heaven is there Transfused, transfigurated.

Byron.
DEIGN, v. a. \& \(n\). Fr. daigner; Lat. dignor, As a verb active, to vouchsafe; to think worthy (with some condescension). To grant ; allow; permit.

Now Sweno, Norway's king, craves composition; Nor would we deign him burial of his men, Till he disbursed ten thousand dollars. Shakspeare,

Deign to descend now lower, and relate
What may no less perhaps avail us known.
Milton.
0 deign to visit our forsaken seats,
The mossy fountains, and the green retreats.
Pope.
Yer nature's care, to all her children just, With richer treasures and an ampler state Endows at large whatever happy man Will deign to use.

Akenside,
News have I none that I can deign to write, Save that it rained prodigiously last night.

Cowoper. Private Correspondence.
DEI NTEGRATE, \(v . a\). Lat. froin \(d e\) and sntegro. To take from the whole; to spoil; to diminish.

DEIPHON, in fabulous history, a brother of Triptolemus, and son of Celeus and Metanira. When Ceres travelled over the world, she stopped at his father's court, and undertook to nurse him and bing him up. To reward the hospitality of Celeus, the goddess, to make his son immortal, every evening placed him on burning coals, to purify him from his mortal particles. The uncommon growth of Deiphon astonished Metanira, who wished to see what Ceres did to make him so vigorous. She was frightened to see her son on burning coals; and her shrieks disturbing the mysterious operations of the goddess, Deiphon perished in the flames.

DEISCAL, or Deisheal, in the ancient British customs, a ceremony originally used in the druidical worship. The temples of the ancient Britons were all circular; and the druids in performing the public offices of their religion, never neglected to make three turns round the altar, from east to west, accompanied by all the worshippers. This was called the deischal, from deas, the right hand, and sul, the suu.
DE'ISM, n.s. Fr. deisme; from Lat. De'ist, n.s. deus, God. See Deity. Deist'ical, adj. Strictly, a belief in God, or one God ; but generally applied to those who, professing such a belief, reject Revelation. See the following article.
In the second epistle of St. Peter, certain deits, as they seem to have been, have laughed at the prophecy of the day of judgment. Burnet.

Deism, or the principles of natural worship, are only the faint remnants or dying flames of revealed religion in the posterity of Noah. \(D_{\text {ryden }}\).

Weakness does not fal. only to the share of Chriszan writers, but to some who have taken the pen in hand to support the deistcal or ant1-christian scheme of vur days.

Watts.
Deism may properly be used to denote natural religion, as comprehending those truths which have a reai foundation in reason and nature; and in this sense it is so far from being opposite to Christianity, that it is one great design of the gospel to illustrate and enforce it. In this sense some of the deistical writers have affected to use it. But deism popularly signifies that system of religion and morals which is supposed to be derived, by the mere force of reason, from the contemplation of the works of nature, and which rejects revelation. In the article Revelation, we shall present the reader with a complete view of the entire argument on this momentous subject.

DE'ITY, n. s. Fr. deité; Span. and Port. dietad; Arm. dei, from Lat. deitus, deus; Gr. \(\Delta t_{0}\), God. Applied also to fabulous gods, and the supposed qualities of a divinity.

DE Jure. See De Facto.
DELACAPEDE (Bernard Germain Stephen Laville, count), a French naturalist, of noble family, was born at Agen, December 16 th, 1756. He was originally destined for the army, and entered while a youtl into the Bavarian service. But his love of science soon procured him the post of keeper. of the cabinets in the Jardin du Roi at Paris, for which he abandoned the army, and which be held to the period of the revolution. He composed, as a continuation of the great work of Buffon, the Natural History of Oviparous Quadrupeds and Serpents. He much improved the royal cabinet; and in 1798 published the Natural History of Fishes, 5 vols. 4to. But the events of the revolution now distracted his attention. He became a member of the department of Paris, and in 1791 one of the deputies of that city. He was successively secretary and president of the National Assembly; and was one of the very few conspicuous \(\hat{m}\) men who steered in safety through the public storms. He was chosen one of the first members of the National Institute, and on the 20th or

January, 1796, carried up an address from a deputation of that body to the council of five hundred, declaring its hatred of royalty. Buonaparte nominated him in 1799 a member of the Conservative Senate; in 1801 he was president of that body, in 1803 grand chancellor of the legion of honor, and in 1804 senator of Paris. He had frequent intercourse with the emperor, to whom he manifested much attachment ; but in January, 1814, when the power of his master was tottering, he assumed a new tone, and at the head of the senate recommended peace. At the restoration of the Bourbons he returned to his studies. His lectures at the Garden of Plants were numerously attended. He published several tracts, and contributed to the Annales du Museum d' Histoire Naturelle, and other periodical works. His History of Cetaceous Animals, which appeared in 1804, was his last work of importance. He died of the small-pox, October 6 th, 1825, and his funeral was attended by several peers of France, members of the Institute, \&ce.

DELACERATION, n. s. From Lat. delacero. A tearing in pieces.

DELACRYMA'TION, n.s. Lat. delacrymatio. A falling down of the humors; the waterishness of the eyes, or a weeping much.
DELACTA'TION, n. s. Lat. delactatıo. A weaning frem the breast.

DELAMBRE, one of the most distinguisled astronomers of our time, born at Atniens in 1749, studied under the abbé Delille, who always remained his friend. He first applied himself to the languages, particularly most of the living ones, and made himself one of the best Hellenists in France. His studies were not directed to astronomy until his thirty-sixth year. He enriched the writings of Lalande with a commentary, and becanie the friend and pupil of the author, who proudly called him his best work. In 1790 , eight years after the discovery of Herschel, Delambre published the tables of that planet, although in that period it had performed but a small part of its eighty years' course. He also constructed tables of Jupiter and Saturn, and of the satellites of Jupiter, which, with several treatises, procured him a reception into the National Institute. He was engaged with Méchain, from 1792 till 1799, in measuring an arc of the meridian from Barcelona to Dunkirk for the verification of which he measured two bases of 6000 toises, one near Melun, the other near Perpignan. See his Base du Système Métrique décimal, ou Mesure de l'Arc du Méridien compris entre les Parallèles de Dunkerque et Barcelonrie, Paris, 3 vols. 4to.; and Recueil d'Observat. Géodésiques faisant Suite au 3 me vol. de la Base du Syst. Métr. rédigé par Biot et Arago. He was made member of the bureau des longitudes. In 1802 Napoleon appointed him in-specteur-général des études, which post he resigned when chosen perpetual secretary of the class of mathematical sciences in 1803. His first tables of the sun were published in 1792; in 1806 appeared his new ones. In 1807 he succeeded Lalande in the collége de France, and wrote his Traité d'Astronomie théorique et pratique, 3 vols. 4 to. 1814; llistoire de l'Astronomie
du moyen âge, 1819 ; Hist. de l'Astron. moderne, 1821, 2 vols.; and Hist. de l'Astron. du 18 me . Siècle, 2 vols.; a collection of works such as no other nation can show. Delambre also distınguished limself, as perpetual secretary of the institute, by the justice and elegance of his éloges. He died in 1822.

DELAMERE Forest, a forest of England, in Cheshire, north of Chester, near the Wieever; abounding with wood on its hills, fine pasture in its valleys, and fish in its waters.

DELANY (Patrick), a learned divine, and ingenious author, was born in Ireland about 1686. He received his education at Trinity College, Dublin, which he entered in the character of a sizer, and afterwards became a fellow. Under the patronage of lord Carteret lie obtained preferment in the church; and in 1732 publislied in London a work entitled Revelation Examined with Candor. In 1738 he published his Reflections upon Polygamy; and, not long after, the Life of David, king of Israel, a work displaying much ingenuity and labor. In 1743 he married a second wife, the widow of a Cornish gentleman, and the following year obtained the deanery of Downe. In 1754 he published Observations on Lord Orrery's Remarks on the Life and Writings of Swift, in which there are many curious anecdotes of the latter. Dr. Delany continued writing for the public till a short time before his death; and his Sermons on Social Duties are still in estimation. He died at Bath in 1768.

DELA•PSED, adj. Lat. delupsus, with plysicians. Bearing or falling down. It is used in speaking of the womb, and the like.
DELATE', v.a.) Lat. delatus, defero. To Dela'tion, n.s. \}carry, convey, or spread.
Dela'tor, n. s. Applied both literally, and to the carrying intelligence, or an accusation. A delator is an accuser; an informer.

DELATIN, a market town of Austrian Gallicia, in the circle of Stanislawow. Near this town are extensive quarries of alum slate. It is twenty-four miles from Stanislawow.

DELAVAL (Edward Hussey), a chemist and natural philosopher, F. R. S. of London and Gottingen, was a brother of lord Delaval, and died at his house in Parliament-place, Westninster, August 14th, 1314, aged eighty-five. He particularly directed his studies to the chemistry of optics, on which he published many excellent papers in the Philosophical Transactions. He was the author of an Experimental Enquiry into the Cause of the Changes of Colors in Opaque and Colored Bodies, with an Historical Preface relative to the Parts of Plilosophy therein examined, and to the several Arts and Manufactures dependent on them, 1777, 4to.; a work which was translated into French and Italian.

DELAWAR, 2 town of Virginia, in King William's county, situated on the peninsula formed by the confluence of the Pamunky and Mattapony. Twenty miles nor:h by west of Williamısburg.
DELAWARE, one oi the United States of North America, situated between \(38^{\circ} 29^{\prime} 30^{\circ}\), and \(39^{\circ} 54^{\circ} \mathrm{N}\). lat, and between \(75^{\circ}\) and \(75^{\circ} 48^{\circ}\)
W. long. being in length ninety miles, and 111 breadth twenty-five, contains 1700 square miles, or \(1,088,000\) acres. It is bounded on the north by Penusylvania, on the south and west by Maryland, and on the east by Delaware Bay and the Atlantlc Ocean. It is divided into three counties, Newcastle, Kent, and Sussex ; of which the chief towns are Wilmington, Dover, and Georgetown. The state of Delaware, the upper parts of the county of Newcastle excepted, is generally low and level. Large quantities of stagnant water, at particular seasons of the year, overspreading a great portion of the land, render it equally unfit for thc purposes of agriculture, and injurious to health. The spine, or highest ridge of the peninsula, runs through the state of Delaware, inclining to the eastern, or Delaware side. In Sussex, Kent, and part of the county of Newcastle, there is a remarkable chain of swamps, from which the waters descend on each side, passing on the east to the Delaware, and on the west to the Chesapeake. Many of the shrubs and plants, growing in these swamps, are similar to those found on the highest mountains. Delaware is chiefly an agricultural state. It includes a very fertile tract of country; and scarcely any part of the United States is better adapted to the different purposes of agriculture, or in which a greater variety of the most useful productions can be conveniently and plentifully reared. The soil along the Delaware River, and from eight to tern miles into the interior country, is generally a rich clay, producing large timber. From thence to the swamps above-mentioned, the soil is light, sandy, and of an inferior quality. The surface of the country is very favorable for cultivation. The heights of Christiana are lofty and commanding; some of the hills of Brandywine are rough and stony; but descending from these, and a few others, the lower country is so little diversified as almost to form one extended plain. In the county of Newcastle the soil consists of a strong clay; in Kent there is a considerable mixture of sand; and in Sussex the quantity of sand altogether predominates. Wheat is the staple of this state. It grows here in such perfection, as not only to be particularly songht by the manufacturers of flour throughout the Union, but also to be distinguished and preferred, for its superior qualities, in foreign markets. It possesses an uncommon softness and whiteness, very favorable to the manufacturers of superfine flour, and in other respects far exceeds the hard and flinty grains raised in general on the higher lands. This state also pioduces plentiful crops of Indian corn, barley, rye, oats, flax, buck-wheat, and potatoes. It abounds too in natural and artificial meadows. Hemp, cotton, and silk, if properly attended to, thrive well.
The county of Essex exports very large quantities of lurnber, obtained from a swamp, called the Indian River, or Cypress Swamp, lying partly within this state, and partly in the state of Haryland. This morass extends six miles from east to west, and nearly twelve from north to sinuth, including an area of nearly 50,000 aicres of land. The whole is a high and level vasin, very wet, though undoubtedly the highest
land between the sea and the bay, whence the Pokonoke descends on the one side, and Indian River and St. Martin's on the other. It contains a great sariety of plants, trees, wild beasts, birds, and reptiles.

Few minerals are found in this state, except iron; but large quantities of bog iron ore, fit for casting, are obtained in Sussex county, among the branches of Nanticoke River.

The coast of this state is indented with a large number of creeks, or small rivers, which generally have a short course, soft banks, and numerous shoals; and are skirted with very extensive marshes. In the southern and western parts spring the head waters of Pocomoke, Wicomico, Nanticoke, Choptank, Chester, Sassafras, and Bohemia rivers, all falling into the Chesapeake; some of them are navigable twenty or thirty miles into the country, for vessels of fifty or sixty tons.

In the beginning of the seventeenth century, the Dutch, under the pretended purchase made by Henry Hudson, took possession of the lands on both sides the river Delaware, and as early as 1623 built a fort at a place since called Gloucester. In 1627, by the influence of William Useling, a respectable merchant in Sweden, a colony of Swedes and Finns came over, furnished with all the necessaries for bcginning a ncw settlement, and landed at Cape Henlopen; at which time the Dutch had wholly quitted the country. The latter however returned in 1630, and built a fort at Lewistown, called by them Hoarkill. The year following, the Swedes built a fort near Wilmington, which they called Christian, or Christiana. Here also they laid out a small town, which was afterwards demolished by the Dutch. The same year they erected a fort higher up the river, upon Tenecum Island, which they called New Gottenburgh, and about the same time built forts at Chester, Elsingburgh, and other places. In 1655 the Dutch, under the command of Peter Stuyvesant, arrived in Delaware River, from New York, then called New Amsterdam, in seven vessels, with 600 or 700 men . They dispossessed the Swedes of their forts on the river, and sent the officers and principal inhabitants prisoners to Holland. The rest submitted to the conquerors, and remained in the country. On the 1st of October, 1664 , Sir Robert Carr obtained the submission of the Swedes on the Delaware. Four years after, colonel Nicholls, governor of New York, with his council, on the 21st of April, appointed six persons to assist captairı Carr in the government of the country. In 1672 the town of Newcastle was incorporated by the state of New York, to be governed by a bailiff and six assistants. They were to have a free trade, without being obliged to make entry at New York, as lad formerly been the practice. Wampum was at this time the principal currency of the country. In 1674 Charles II., by a second patent, dated 29th of June, granted to his brother, the duke of York, all that country called by the Dutch New Netherlands, of which the three counties ot Newcastle, Kcnt, and Sussex were a part. 1ro 1683 the duke of York sold to William Peun the town of Newcastle, with the whole of the
territory which, till the revolution, was called the Three Lower Counties. These three counties were considered as a part of Peunsylvania in maiters of government. The same governor presided over both: but the assembly and courts of judicature were different, as to their constituent members, though in form nearly the same. At the revolution they became a distinct territory, called the Delaware State. See America, North.

The population of the three counties of Delaware, subdivided into hundreds, was thus returned, under the last census :-

\section*{1. Newcastle County.}
\begin{tabular}{lcc} 
& \multicolumn{2}{c}{ Population in 1820.} \\

\end{tabular}

Delaware, a river of the United States, :which rises at two principal heads in the state of New York. It runs towards the south, and in its course forms the boundary line between Pennsylvania, New York, and Jersey; a few miles below Philadelphia it separates the state of Delaware from Jersey, and afterwards loses itself in Delaware Bay. The bay and river are navigable for 155 miles from the sea, up to the great or lower falls at Trenton. A seventy-four gun ship may ascend to Philadelphia; and sloops thirty-five miles further.

Delaware Bay, a large bay or arm of the sea, between the Delaware and New Jersey states, and formed by the mouth of the Delaware river, and several other small ones. The bay is about sixty miles long, and thirty miles across in the centre. It opens into the Atlantic northwest and south-east, between Cape Henlopen on the right and Cape May on the left, and its mouth is twenty-one miles broad.

Delaware County, in Pennsylvania, is southwest of Philadelphia county, on Delaware River. It is about twenty-one miles in length, and fifteen in breadth, containing 115,200 acres, and subdivided into nineteen towuships; the chief of which is Chester. The number of inhabitants is 9,483 . The lands bordering on the Delaware arc low, and afford excellent meadows and pas-
turage; and are guarded from inundations by mounds of earth or dykes. Great numbers of cattle are brought here from the western parts of Virginia and North Carolina, to be fattened for supplying the Philadelphia market.

Delaware County, a county in the state of New York, on the head waters of Delaware River, taken from Otsego county. It is hounded on the north by Otsego county, cast by Schoharie and Green counties, south by Ulster and Sullivan counties, and west by the state of Pennsylvania, by Broome county, and a small part of Chenango county. Its greatest length is fiftyfour miles, its greatest breadth thirty-five; the area 1425 square miles, or 912,000 acres; between \(41^{\circ} 51^{\prime}\) and \(42^{\circ} 1^{\prime}\) north lat. It is of a broken and diversified surface, containing rugged and lofty mountains, with low plains and rich valleys. It sends two members to the house of assembly.

DELAWARES, a nation of North American Indians, formerly numerous and powerful, and who possessed part of Pennsylvania, New Jersey, and New York. This name was given them by the Europeans; for they call themselves Lennilenape, that is, Indian men; or Woapanachky which signifies a people living towards the rising sun. They are now, however, much reduced in number.

DELAY', v.a., v. \(n\) \& n.s. ) Fr. deluyer;
Delay'er, n.s. ) Span. and Port. dilatár ; Ital. dilatare ; Lat. delatio, differre, from de and fero, to put off. To procrastinate; defer; and hence to hinder, frustrate, as well as allay; temper; qualify: as a neuter verb, to stop; cease from action. As a substantive, inactivity; stoppage ; stay. A delayer is an habitual procrastinator.
And when the people saw that Moses delayed to come down out of the mount, the people gathered themselves together unto Aaron. Exod, xxxii. 1.

I have learned that fearful commenting
Is leaden servitor to dull delay;
Delay leads impotent and snail-paced beggary.
Shakspeare. Richard III.
That misery which must be is mitigated with speed, and aggrâvated with delay.

Bp. Hall. Contemplations.
Delayed thankfulness is not worthy of acceptation.
\(I d\).
Thyrsis, whose artful strains have oft delayed
The huddling brook to hear his madrigal. Mifton.
She flies the town, and mixing with the throng
Of madding matrons, hears the bride along:
Wandering through woods and wilds, and devious ways,
And with these arts the Trojan match delays.
Dryden.
Cyrus he found, on him his force essayed;
For Hector was to the tenth year delayed. Id.
There seem to be certain bounds to the quickness and slowness of the succession of those ideas one to another in our minds, beyond which they can neither deldy nor hasten.

Locke.
Sullen and a delayer of Justice.
Swift. Char, of Henry VII.
Be mindful goddess, of thy promise made!
Must sad Ulysses ever be delayed ?
Pope.
At thirty man suspects himself a fool ;
Knows it at forty and reforms his plan;
At fifty chides his infamous delay;
-In all the magnanimity of thought
Resolves, and re-resolves, then dies the same.

\section*{Young.}

DELECTABLE, \(a d j\).
Fr. Span. and
 Delect'ably, adv. \} Ital. dilettabile; Lat.
Delecta'tion, n.s. Jdelectabilis; from delecto, (de and lacto, to suckle) to delight. Delightful; pleasing; state of being pleasing or delightful.

Out break the tears for joy and delectation.
Sir T. More.
Evening now approached:
For we have also our evening and our morn :
We ours for change delectable, not need. Milton.
He brought thee into this delirious grove, This garden planted with the trees of God;
Delectable both to behold and taste.
Id.
Some of his attributes, and the manifestations thereof, are not only highly delectable to the intellective faculty, but are suitably and easily conceptible by us, because apparent in his works; as his goodness, beneficence, wisdom, and power.

Hale.
The apple's outward form,
Delectable, the witless swain beguiles;
Till that with writhen mouth, and spattering noise,
He tastes the bitter morsel.
Philips.

DEL'EGATE, v. a., n.s. \& \(\left.u \dot{a}_{j}\right\} \begin{gathered}\text { Span. and }\end{gathered}\) Delega'tion. 乡Portug. delegar ; Fr. deleguer; Lat. deligo; de and lego; Gr.
 ther one's representative; to entrust with power. A delegate is the party so commissioned; a vicar. The court of delegates is defined by Ayliffe as a court wherein all causes of appeal, by way of devolution from either of the archbishups, are decided.

\section*{If after her}

Any shall live, which dare true good prefcr,
Every such person is her delegate,
To' accomplish that which should have been her fate.
Donne.
As God hath imprinted his authority in scveral parts upon several cstates of men, as princes, parents, spiritual guides; so he hath also delegated and committed part of his care and providence unto them.

Taylor.
Princes in judgment, and their delegate judges, must judge the causes of all persons uprightly and impartially.

Id.
When bishops divided parishes, and fixt the presbyters upon a cure, so many parishes as they distinguished, so many delegations they made.
Bp. Taylor.

Why does he wake the correspondent moon
And fill her willing lamp with liquid light;
Commanding her, with delegated powers,
To beautify the world, and bless the night?
Prior.
Lct the young Austrian then her terrours bear, Great as he is, her delegate in war:

Elect by Jove, his delegate of sway, With joyous pride the summons I'd obey.

\section*{Pope.}

As God is the universal monarch, so we have all the relation of fellow-subjects to him; and can pretend no farther jurisdiction over each other, than what he has delegated to us. Decay of Piety.

The goddess ceased,-the delegated throng, O'er the wide plains delighted rush along; In dusky squadrons, and in shining groups, Hosts follow hosts, and troops succeed to troops.

\section*{Darwin.}

Delegates, Court or, is the great court of appeal in all ecclesiastical causes. These delegates are appointed by the king's commission under his great seal, and issuing out of chancery, to represent his royal person, and hear all appeals to him made by virtue of the statute 25 Henry VIII. cap. 19. The commission is usually filled with lords, spiritual and temporal, judges of the courts at Westminster, and doctors of the civil law.

DELENI'FICAL, adj. Lat. delenificus. Having virtue to assuage or ease pain.

DELE'TE, v. a. . Lat. deletus, from deleo, Deletérious, adj. de, privative, and lin', to Del'etery, \}paint. To blot out; to ob-
Delétion, n.s. literate: deleterious and aeletery signify, destructive; poisonous; deletion is razing out or destroying.

Many things, neither deleterious by substance ot quality, are yet destructive by figure, or some occasional activity.

Browne.

Indeed, if there be a total deletion of every person of the opposing party or country, then the victory is complete, because none remains to call it in question. Hale.
Composed of two deleterious materials, chlorine and sodium, the united substance is more beneficial and salubrious, than it is in the power of our limited understanding to comprehend.

Sir T. Bernard.
Nor doctor epidemick,
Though stored with deletery medicines, Which whosoever took is dead since, E'er sent so vast a colnny
To both the under worlds as he.
Hudibras.
'Tis pity wine should be so deleterious,
For tea and coffee leave us much more serious.
Byron.
DELF, n.s. From Sax. belfan, to dig. A
Delfe. \} mine; a quarry; a pit dug. Also a particular kind of earthenware. See below.

Yet could not such mines, without great pains and charges, if at all, be wrought: the delfs would be so flown with waters, that no gins or machines could suffice to lay and keep them dry.

Ray.
Delft Ware is a kind of pottery of a baked earth, covered with an enamel or white glazing. which gives it the appearance and neatness of porcelain: Some kinds of it differ much from others, either in sustaining sudden heat without breaking, or in the beauty and regularity of their forms, of their enamel, and of the painting with which they are ornamented. In general, the fine and beautiful enamelled potteries, which approach the nearest to porcelain in external appearance, are least able to resist a brisk fire. Those which best sustan a sudden heat are coarse, and resemble common pottery. The basis of this pottery is clay, which is to be mixed, when too fat, with such a quantity of sand, that the earth shall preserve enough of its ductility to he worked, moulded, and turned easily: and yet that its fatness shall be sufficiently taken from it, that it may not crack or shrink too much in drying or in baking. Vessels formed of this earth must be dried very gently to avoid cracking. They are then to be placed in a furnace to receive a slight baking, which is only meant to give them a certain consistence of hardness. And, lastly, they are to be covered with an enamel or glazing; which is done by putting upon the vessels thus prepared, the enamel, which has been ground very fine, and diluted with water. As vessels on which the enamel is applied are but slightly baked, they readily imbibe the water in which the enamel is suspended, and a layer of this enamel adheres to their surface: these vessels may then be painted with colors composed of metallic calces, mixed and ground with a fisible glass. When they are become perfectly dry, they are to be placed in the furnace, included in cases of baked earth called seggars, and exposed to a heat capable of fusing uniformly the enamel which covers them. This heat, given to fuse the enamel, being much stronger than that which was applied at first to give some consistence to the ware, is also the heat necessary to complete the baking of it. The furnace, and the colors used for painting this ware, are the same as those
employed for porcelain, which, in Holland, was once exclusively famous for delft ware, but its sale has lately been greatly rivalled by the potteries of England and Germany.

DELFT, a fine old town of South Holland, once the capital of Delftland, is situated on a canal called the Shie, which, after traversing the city, joins the Mense at Schiedam and Delftshaven. Its figure is a parallelogram, about two miles in circuit ; the streets are clean, neat, and well built, having many handsome houses and magnificent edifices, particularly the stadt-house. The city holds a third rank in the country; its magistracy is composed of four burgo-masters, and seven eschevins, jointly with the vroedschap or common council, who name the escout for three years, and continue him if they judge proper. It has an arsenal generally well furnislied; and the country around it is agreeable, but so low, that, if great care were not taken to keep the dykes and sluices in good repair, it would soon be overwhelmed. The building of this city was begun in 1075, by Godfrey le Bossu, after he had conquered Hulland; since which it has often experienced the calamities of war, as well as those of fire. In the fourteenth century, Albert de Bavaria, count of Holland, took it after a siege of six weeks, dismantled and ruined the castle, and obliged the city to pay 10,000 crowns. In 1536, it was reduced to ashes by a dreadful fire, during which a stork, not being able to save her young, was observed to precipitate herself into the flames. The city was soon after rebuilt with greater magnificence; but in 1654 it was again greatly \({ }^{\text {² damaged }}\) by fire, which destroyed a nagazine of gun-powder, and above 500 houses; since which the powder-magazine is built at some distance from the town. Before the Reformation, Delft liad ten religious houses, besides hospitals and chapels. In one of the present churches is the tomh of William I. prince of Orange, who was assassinated in a house near, which is still standing; and in another that of admiral Tromp. The celebrated Hugo Grotius was a native of this place. The Doelen inn was the scene of many of the councils and preparations of the Dutch patriots in their struggles against Spain. Delft was formerly much celebrated for beer, of which it exported large quantities; and also for a peculiar kind of glazed earthenware, called delft ware. Here are now made several kinds of fine cloth, and carpets. Butter and tobacco pipes also are made here in considerable quantities. It is nine miles northwest of Rotterdam, and thirty south-west of Amsterdam.

DELHI, or Delli, an extensive province of Hindostan, bound on the north by Lahore, and several districts in Northern Hindostan, as Besseer, Dewarcote, and Serinagur ; to the south by Agra and 'Ajmeer; to the east it has Oude, and various ridges of high hills, which separate it from Northern Hindostan; and to the west Ajmeer and Lahore. In leugth it may be estimated at 240 miles, by 180 the average breadth. The greater pait of this province is in the most wretched state of barrenness, having been the seat of continued war for many years; and being naturally very sterile, though formerly well planted

\section*{DEL}
with mangoe trees, scarcely one is now to he seen. The Cauggar River overflows part of the Hurrianch, during the rainy season, after which the pasturage is excellent, and the country tolerably healthy until the desert to the west becomes heated; and, between the Jumna and Sattulege, the soil produces wheat, barley, gram, and other grains; but it is but little cultivated. Irrigation is necessary to insure any crop, and water is found at ten or twelve cubits from the surface of the earth; yet wells are seen only near towns and villages. This province is, at present, occupied in the following manner. The whole district to the east of the Jumna and round the city of © Delhi, with a considerable portion of the north-eastern quarter, are possessed by the British, and governed by a regular civil establishment. The south-west is occupied by the Machery rajah of Alvar, the rajah of Bhurtpoor, and other native chiefs, who are in alliance with, or under the influence of the British. The country to the north-west of the Jumna and south of the Suttulege is occupied by a number of petty Seik chiefs, and other native princes, in dependence on the British, who form a barrier to their territories in this quarter. The western frontier has a natural protection, from the immerise extent of desert and sterile territory by which it is bounded.

Except in the country possessed by the British, the inhabitants still continue to carry on internal warfare; to which they laave been so long accustomed, that they are extremely expert in the use of arms, particularly the lance, sabre, and matchlock. The principal towns are Delhi, Sirhind, Saharunpore, Buriely, Anoopsheher, Merat, Hissar, Seerdhuna, Patteealah, and Budavoon.

Delhi, a celebrated city, for many years the capital of the foregoing province of Hindostan, is situated on the banks of the Jumna; and during the era of its prosperity, is said to have covered a space of twenty miles in length. Its ancient name was Indraput, or Inderprest. It was taken by the Mahommedans in the year 1193, under Cuttubaddeen Khan, who fixed his residence here, and made it his capital. Several succeeding emperors increased and improved it till the beginning of the sixteenth century, when the Afghan monarch, Sekunder Lody, made Agra the seat of empire, and Delhi was neglected until the return of Homayon from Persia in the year 1554, when he rebuilt the old fort of Inderprest, and named it Deenpunnah, or the asylum of religion. During the reigns of Akbar and Jehangire, Delhi was again deserted ; but the emperor Shan Jehan restored it to its former splendor, and expended immense sums of money on the present fortress, the cathedral, mosque, \&c. Superb palaces, mosques, and colleges, in different parts of the city, were raised by his court and followers. The walls which environ the town were put into repair, and its seven gates erected or beautified. Its noble gardens were also now laid out, and the tombs of the saints and deceased sovereigns thoroughly repaired. The canal was lengthened and deepened, and Deihi was rendered the glory of Hindostan. One garden alone is said to have cost a million sterling. The moderil city, apportioned into thirty-six divisions, fach named after some ancient noble family, con-
tains many good brick houses. The streets are narrow, with the exception of two; the first leading from the palace to the Delhi Gate, which is broad and spacious, and lad formerly an aqueduct along its whole extent; the second from the palace to the Lahore Gate. The bazaars appear in a dilapidated state; but in the Chandeny Choke, or Silver Square, is a number of wellfurnished shops. The population has considerably increased under the British management, and every species of property is yearly rising in value. The English resident and other gentlemen live in the town, while the troops have a distinct cantonment. Precious stones of a good quality ate to be had at Delhi, particularly the large red and black cornelian and peerozas; becdree hookal bottoms are also manufactured here. The cultivation in the neighbourhood is principally on the banks of the Jumna, where corn, rice, millet, and indigo, are raised. It stands in long. \(77^{\circ} 19^{\prime}\) E., lat. \(28^{\circ} 43^{\prime} \mathrm{N}\).
DELIA, in antiquity, a festival celebrated every fifth year in the island of Delos, in honor of Apollo. It was first instituted by Theseus; who, at his return from Crete, placed a statue there, whiclı he had received from Ariadne. At the celebration they crowned the statue of the goddess with garlands, appointed a choir of music, and exlibited horse-races. They afterwards led a dance, in which they imitated, by their motions, the various windings of the Cretan labyrinth, from which Theseus had extricated himself by Ariadne's assistance.-There was another festival of the same name yearly celebrated by the Athenians in Delos. It also was instituted by Theseus, who, in going to Crete, made a vow, that he would yearly visit the temple of Delos The persons employed in this annual procession were called Deliastæ and Theori.: The ship, the same which carried Theseus, and had been carefully preserved by the Athenians, was called Theoria and Delias. When the ship was ready for the voyage, the priest of Apollo solemnly adorned the stern with garlands, and a universal lustration was made all over the city. The Theori were crowned with laurels, and before them proceeded men armed with axes, in commemoration of Theseus, who had cleared the way from Treezen to Athens, and delivered the country from robbers. When the ship arrived at Delos, they offered solemn sacrifices to the god of the island, and celebrated a festival to his honor. After this they retired to their ship and sailed back to Athens, where all the people of the city ran in crowds to meet them. Every appearance of festivity prevailed at their approach, and the citizens opened their doors and prostrated themselves before the Deliaste as they walked in procession. During this festival it was unlawful to put to death any maiefactor, and on that account the life of Socrates was prolonged for thirty days.
DELIACUS, among the ancients, denoted a poulterer, or a person who sold fowls, fatted capons, eggs, \&c., because the people of Delos first practised this occupation. Cicero, in his Academic Questions, lib. iv., Pliny, lib. x. cap. 30, and Columella, lib. viii. cap. 8, mention the Deliaci.

DELIBATION, n. s. Lat. delibatio. An essay; a taste.

DELIB'ERATE, v.a.\& \(n\). Fr. deliberer;
Delib'erately, \(u d v . \& a d j\).
Delib́erateness, n.s.
Delib́eration,
Deliberative,
Delib́erativeness. Span. and Por. deliberar ; Ital. and Lat. deliberare; from de, and libra, a ba-
lance. To weigh in mind; consider: as a neuter verb, says Minsheu, to think with a view to shoose, or decide; to hesitate. Deliberate is circumspect; wary; advised.

Commonly it is for virtuous considerations, that wisdom so far prevaileth with men as to make them desirous of slow and deliberate death, against the stream of their sensual inclination.

Hooker.
Echoes are some more sudden, and chop again as soon as the voice is delivered; others are more deliberate, that is, give more space between the voice and the echo, which is caused by the local nearness or distance.

Bacon.
In deliberatives, the point is, what is evil; and, of good, what is greater; and of evil, what is less. Id.

Most Grave-belly was deliberate,
Not rash, like his accusers. Shakspeare. Coriolanus.
They would not stay the fair production of acts, in the order, gravity, and deliberateness befitting a parliament.

King Charles.
How should we deliberate in our actions, which are so subject to imperfection! since it pleased thinc infinite perfection, not out of need, to take leisure.

Bishop Hall. Contemplations.
If mankind had nn power to avoid ill or choose good by free deliberation, it should never be guilty of any thing that was done.

Hammond's Fundamentizls.
He judges to a hair of little indecencies; knows better than any man what is not to be written; and never hazards himself so far as to fall, but plods on deliberately; and, as a grave man ought, is sure to put his staff before him.

Dryden.
When love once pleads admission to our heart, In spite of all the virtue we can boast, The woman that deliberates is lost.

Addison.
Where men are the most sure and arrogant, they are commonly the most mistaken, and have there given reins to passion, without that proper deliberation and suspense, which can alone secure them from the grossest absurdities.

Hume.
DELIBERANDI Annus, in the Scottish law, a year allowed to an heir, to deliberate whether he will enter as heir or not.

Deliberative Voice, a right to give advice and to vote in an assembly. In councils, the bishops have deliberative voices; those beneath them have only consultative voices.

DEL'ICATE, adj.\&n.s.) Fr. delicat ; Span.
Del'rcacy, n.s.
Delícateness,
Deĺicately,
Delíces, n.s. \& pl. and Port. delicado; Ital. delicato; Lat. delicatus; from delicia, delights. A. greeable to the taste, or the senses generally; nice; of small constituent parts; felicitous in construction; elegant: and, as agreeableness, 'sweet, attractive grace,' is peculiarly feminine: a delicate is an effeminate, though not an agreeable man; and expresses also inability to bear hardships. A delicate is used by the Tatler for a aire man:' but the plural substantive, deli-
cates, expresses, like the old word delices, the same as delicacies, i. e. dainties, agreeable viands.

And kingis of the erthe and marchauntis of the erthe diden fornycacioun with hir, and thei ben maad riche of the vertue of delices of hir.

Wiclif. Apoc. 18.
The delicate woman among you would not adventure to set the sole of her foot upon the ground, for delicateness and tenderness.

Deut, xxviii. 56.
Yet was I late promised otherwyse,
This yere to liue in welth and delice.
Sir T. More.
And now he has poured out his idle mind In dainty delices and lavish joys,

Having his warlike weapons cast behind, And flowers in pleasures and vain pleasing toys.

Spenser.
Tender and delicate persons must needs be oft angry, they have so many things to trouble them, which more robust natures have little sense of.

Bacon.
Witness this army, of such mass and charge,
Led by a delicate and tender prince. Shakspeare.
Where they most breed and haunt, I have observed,
The air is delicate.
Id.
The shepherd's homely curds,
His cold thin drink out of his leather botule,
All which secure and sweetly he enjoys,
Are far beyond a prince's delicates.
These delicacies
I mean of taste, sight, smell, herbs, fruits, and flowers,
Walks, and the melody of birds.
Milton.
Eat not delicately, or nicely; that is, be not troublesome to thyself or others in the choice of thy meats, or the delicacy of thy sauces.

Taylor.
Persons born of families noble and rich, derive a weakness of constitution from the ease and luxury of their ancestors, and the delicacy of their own education.

Temple.
A man of goodly presence, in whom strong making took not away delicacy, nor beauty fierceness.

Sidney.
Van Dyck has evon excelled him in the delicacy of his colouring, and in his cabinet pieces.

Dryden.
That which will distinguish his style from all other poets, is the elegance of his words, and the numerousness of his verse : there is nothing so delicately turned in all the Roman language.

Id.
They their appetites not only feed,
With delicates of leaves and marshy weed,
But with thy sickle reap the rankest land.
Any zealous for promoting the interest of his country, must conquer all that tenderness and delicacy, which may make him afraid of being spoken ill of.

Addison.
You may see into the spirits of them all, and form your pen from these general notions and delicacy of thought and happy words.

Felton.
And such, I exclaimed, is the pitiless part
Some act by the delicate mind,
Regardless of wringing and breaking a heart
Already to sorrow resigned.
Cowper
But in his delicate form-a dream of Love, Shaped by some solitary nymph, whose breast
Longed for a deathless lover from above,
And maddened in that vision!
Byron.

DELI'CIOUSS, arj. ? Fr. delicieur; Lat.
Deli'crously, ade. delicia, delights.-
Deli'cioussess, \(n\). s. Sweet; agreeable; delicate; charming; grateful to the sense or mind.

How much she hath glorified hersclf, and lived deliciously, so much torment and sorrow give her.

Rev. xviii. 7.

\section*{The sweetest honey}

Is loathsome in its own dcliciousness,
And in the taste confounds the appetite.
Shakspeare.

Let no man judge of himself, or of the blessings and efficacy of the sacrament itself, by any sensible relish, by the gust and deliciousness, which he sometimes perceives, and at other times does not perceive.
Taylor.

And if some nice and likuurous appetite Desired more daintie dish of rare delite, They scaled the stored crah with clasped knee, Till they had sated their delicious eie.

Bp. Hall. Satires iii. 1.
It is highly probable, that upon Adam's disobedience Almighty God chased him out of Paradise, the fairest and most delicious part of the earth, into some other the most barren and unpleasant. Woodward.

Still on that breast enamoured let me lie,
Still drink delicious poison from thy eye. Pope.
But since, to make use of your own allusion, the cherries began now to crowd the market, and their season was almost over, we consulted our future enjoyments, and endeavoured to make the exquisite pleasure that delicious fruit gave our taste as lasting as we could.

Spectator.
In his last hours his easy wit display :
Like the rich fruit he sings, delicious in decay.
Smith.
\(\mathrm{DELIGHT}^{\prime}, v . a ., v . n . \& n . s\).
Delight'ful, adj.
Delight'fully, adv.
Delight'fulness, \(n\). s.
Deeight'some,
Delight'somely, Delight'someness.

Fr. delecter; Span. and Port. \(d e\) leytar ; It. dilettare, from Lat.delectare, deligo. See Delegate. To please in a high degree; to nave pleasure, followed by in. Delightsome and delightful are synonymous, as are delightsomely and delightfully. Delight is either the satisfaction and pleasure felt or the object that affords them.
Doth my lord, the king, delight in this thing?
2 Sam. xxiv.
Blessed is the man that feareth the Lord, that delighteth greatly in his commandments. Psalm cxii. 1.

For I delyte togidre to the law of God aftir the ynner man, but I see a nother law in my membris aghen fightynge the law of my soule. Wiclif. Romayns 7.

To liven in delit was ever his wone,
For he was Epicures owen sone
That held opinion that plein delits
Was veraily felicite parfite.
Chaucer. Prol. to Cant. Tales.
And though he lysteto see his ladyes grace full sore, Such pleasures as delyght his eye, do not his helthe restore.

Surrey.
The words themselves being so ancient, the knitting of them so short and intricate, and the whole periods and compass of his speech so delightsome for the roundness, and so grave for the strangents.

Spenser.

To thee, that art the sommer's nightingale,
The soueraine goddesses most dcare delignt,
Why do I send this rustic madrigale,
That may thy tunefull care unseason quite.
Id. Faerie Queenr.
Come, sisters, cheer we up his sprights, And shew the best of our delights : We'll charm the air to give a sound, While you perform your antic round.

Shakspeare.
O voice! once heard
Delightfully, increase and multiply;
Now death to hear.
Milton.
If happiness had corsisted in doing nothing, man had not been employed; all his delights could not have made him happy in an idle life.

> Bp. Hall. Contemplations.

The princes delighting their conceits with confirming their knowledge, seeing wherein the sea-discipline differed from the land service, had pleasing entertainment.

Sidney.
This indeed shews the excellency of the object, but doth not altogether take away the delightfulness of the knowledge.

Tillotson.
She was his care, his hope, and his delight,
Most in his thought, and ever in his sight.
Dryden.
Poor insects, whereof some are bees, delighted with flowers, and their sweetness; others beetles, delighted with other kinds of viands. Locke.

He heard, he took, and pouring down his throat, Delighted, swilled the large luxurious draught.

Pope.
No spring, nor summer, on the mountain seen, Smiles with gay fruits or with delightful green.

> Addison.

God has furnished every one with the same means of exchanging hunger and thirst for delightsome vigour

Grew.

\section*{We love}

The king, who loves the law, respects his bounds,
And reigns content within them : him we serve
Freely and with delight, who leaves us free.
Cowper's Task.
But you will say, it is reasonable to conclude that as all your predecessors, in this vale of misery and horror, have found themselves delightfully disappointed at last, so will you. Id. Private Correspondence.

When the soft lute in sweet impassioned strains, Of cruel nymphs or broken vows complains, As on the breeze the fine vibration floats, We drink delighted the melodious notes. Darwin.

Yes, woman, yes! Though in his pompous school Man proud may learn to think and talk by rule, There is the native eloquence, whose grace Flows true to every hour and every place-
That with a swain familiar can recal
Scenes, persons, things, and spread delight on all.
Dr. T. Brown.
DELIMA, in botany, a genus of the monogynia order, and polyandria class of plants : cor. none: cal. five-leaved with a two-seeded berry. Species one only, a native of South America.
DELIN'EATE, v.a. \(\quad\) Lat. delineo; of \(d e\),
Delineátion, n.s. and linea, a line; to
Delin'eament, n. s. make lines. To sketch, or make an outline; hence to paint, and to describe : delineation and delineament both express the painting or drawing made; the representation.

The sun's a type of that eternal light Which we call God, a fair delineament.

More's Song of the Soul.
It followeth, to delineate the region in which God hrst planted his delightful garden.

Raleigh.
The licentia pictoria is very large : with the same reason they may delineate old Nestor like Adonis, Hecuba with Helen's face, and Time with Absalom's head.

Browne.
I have not here time to delineate to you the glories of God's heavenly kingdom; nor, indeed, could I tell you, if I had, what the happiness of that place a ad portion is.

Wake.
In the orthographical schemes, there should be a true delineation, and the just dimensions.

Mortimer.
DELIN'QUENT, n.s. ) Fr. delinquent; Span.
Delin'quency.
) and Port. delinquento; Lat. delinquens, from de, and linquo to leave one's duty. One criminally neglectful of duty : neglect ; failure of duty.

All ruined, not by war, or any other disaster, but by justice and sentence, as delinquents and criminals. Bucon.
The next news we heard was, the House of Commons had drawn up a bill against us, wherein they declared us to be delinquents of a very high nature.

Bp. Hall's Hard Measure.
Such an envious state,
That sooner will accuse the magistrate Than the delinquent; and will rather grieve The treason is not acted, than believe.

Ben Jonson.
They never punish the greatest and most intolerable delinquency of the tumults, and their exciters.

King Charles.
He had, upon frivolous surmises, been sent for as a delinquent, and been brought upon his knees.

Dryden.

\section*{Can}

Thy years determine like the age of man, That thou should'st my delinquencies enquire, And with variety of tortures tire?

Sandy's Paraphrase of Job.
A delinquent ought to be cited in the place or jurisdiction where the delinquency was committed by him. Ayliffe.
Does law, so jealous in the cause of man, Denounce no doom on the delinquent? None.

Cowper's Task.
DELIQ'UATE, v. n. \& a.

Deliqua'tion, n. s.
Deliquium, n.s. Lat. deliquo; from de and liquo (lix, ) liquid) to melt. As a verb active, to dissolve into liquid: deligation and deliquium both signify a dissolving chemically; and hence fainting or swooning.

It will be resolved into a liquor very analogous tc that which the chymists make of salt of tartar, left in moist cellars to deliquate.

Boyle.
Their conscience was not stark dead, but under a kind of spiritual deliquium.

Leath.
When salt of tartar flows per deliquium, it is visible that the particles of water are moved towards the particles of salt.

Bp. Berkeley.
Such an ebullition as we see made by the mixture of some chymical liquors, as oil of vitriol and deliquated salt of tarter.

Cudworth.
DELIQUESCENCE, in chemistry, the property which certain bodies have of attracting moisture from the air, and thereby becoming liquio. This property is never found but in saline substances, or matters containing them.

It is caused by the great affinity winich these substances have with water. The more simple they are, according to Mr. Macquer, the more they incline to deliquescence. Hence, acids, and certain alkalis, which are the most simple, are also the most deliquescent salts. Many neutral salts are deliquescent, chiefly those whose bases are not saline substances. Though the immediate cause of deliquescence is the attraction of the moisture of the air, yet it remains to be discovered, why some salts attract this moisture powerfully, and others, though seeningly equally simple, do not attract it. The vegetable alkali, for instance, attracts moisture powerfully ; the inineral alkali, though to appearance equally simple, does not attract it at all. The acid of tartar by itself does not attract the moisture of the air ; but if mixed with borax, which has a little attraction for moisture the mixture is extremely deliquescent. See Chemistry.

DELI'RATE, v.n. Lat. deliro (from
Delira'tion, \(n\).s.
Delirament,
Delírious, adj.
Delíriousness, n.s.
Delírium. \(d e\), and lira a ridge or turrow); to be mad, because a mad person passes the bounds of reasoll.Ainsworth. To dote; talk wildly or idly : deliration is the same with delirium, and the latter a more common word, signifying alienation of mind; a state of dotage: delirious is light-headed; partaking of delirium.
The people about him said he had been for some hours delirious; but when I saw him he had his understanding as well as ever I knew.

Suift.

\section*{On bed}

Delirious fung, sleep from his pillow fies. Thomson.
Too great alacrity and promptness in answering, especially in persons naturally of another temper, is a sign of an approaching delirium; and in a feverish delirium there is a small inflammation of the brain.

Arbuthnot on Diet.
On the 6th, he was all day delirious, which he mentioned four days afterwards as a sufficient humiliation of the vanity of man. At the intermission of his deliriousness, he was always saying something kind either of his present or his absent friends.

Johnson's Life of Pope.

\section*{How profound}

The gulf! and how the giant element
From rock to rock leaps with delirious bound, Crushing the cliffs, which, downward worn and rent With his fierce footsteps, yield in chasms a fearful vent. Byron.
Delirium. When the ideas excited in the mind do not correspond to the external objects, but are produced by the change induced on the common sensorium, the patient is said to be in a delirium. See Medicine.

DELITIGA'TION, n. s. Lat. delitigo; de and litigo (lites ago, to raise strife), to quarrel. A striving or contending. See Litigation.

\end{tabular} or set free; to disburden; to resclie; to give up: hence to offer; present; exert one's self; utter by speech: delivering over and delivering up are only forms of delivering, and mean resigning
to. Deliserance and delivery are the act of delwering; utterance; activity; and the latter has a particular application to childbirth.

Thanne he delyverede to hem Barabas, but he took. to hem Jhesus, scourgid to be crucificd.

Wiclif. Matt. xxvii.
Thou shalt detiver Pharanh's cup into bis hand, after the former manner, when thou wast his butler. Gen. xl. 13.
Deliver me net over unto the will of mine enemies: for false witnesses are risen up against me, and such as breathe out cruelty.

Pyalm xxvii. 12.
Like as a woman with child, that drawetb near the time of her delivery, is in pain, and crieth out.

Isaiah xxvi, 7.
He hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty those that are bound.

Luke iv. 18.
He that spared not his own son, but delivered him \(u p\) for us all, how shall he not, with him also, freely give us all things ?

Rom. viii. 32 .
We allege what the Scriptures themselves do usually speak, for the saving force of the word of God; not with restraint to any certain kind of delivery, but howsoever the same shall chance to be made known.

Hooker.
People have a superstitious belief, that in the lakour of women it helpeth to the easy deliverance.

Bacon.

> A mirth-moring jest,

Which his fair tongue, conceit's expositor,
7 Delivers in such apt and gracious words,
That aged ears play truant at his tales.
Shakspeare.
Are the cities, that I got with wounds, Delivered up again with peaceful words?

The constables have delivered her over to me, and she shall have whipping enough, I warrant her. Id.

He swore, with sobs,
That he would labour my delivery. On her fright and fears,
She is something before her time delivered. Id.
DELL; n. s. Goth. dale; Belg. del. See Dale.

DELLILE (Jacques), a celebrated French poct, born in 1738, at Clermont in Auvergne, and educated at the university of Paris. He was early distinguislıed for the brilliancy of his talents, and the extent of his acquirements; but the first work by which he made known his name to the public, and laid the foundation of his poetical fame, was a translation of Virgil's Georgics. This procured him a seat in the Academy. His next performance was an original work, entitled Les Jardins, which added considerably to his reputation. About this time, M. Le Comte de Choiseul Gouffier, who had formerly visited and described the interesting shores of Greece, was appointed ambassador to Constantinople, and Dellile was persuaded to accompany him to that city. Thence he went to Greece, where he remained for several months, and finally passed over to Asia Minor, where he was first attacked with a distemper in his eyes, that after his return deprived him entirely of sight. At Constantinople he wrote a considerable portion of his poem on Imagination, and on his return published a translation of the Aneid. He continued also to read lectures at Paris, till the revolution obliged him to emigrate into Switzerland. He alterwards visited

Germany and England. Here, in misfortune and banishment, 'muses of melancholy inspiration,' he composed his poem, Le Malheur et lat Pitić, to give vent to his oppressed feeling:. While he remained in England he also translated the Paradise Lost. After France had become settled under Napoleon, he returned to his native land, where he died in the summer of 1813. Ilis other works are L'Homme des, Champs; ou, les Georgiques Françaises, 1808 ; Les Trois Regnes de la Nature, 1809 ; and la Conversation, 1812, a playful satire.

DELOLME (Jolin Louis), born at Geneva, 1740 (according to some in 1745), was a lawyer in his native city, and the part which he took in its internal commotions by a work entitled Examen des trois Points de Droit, obliged him to repair to England, where he passed some years in great indigence. He wrote for journals, frequented low taverns, was devoted to gaming and pleasure, and lived in such obscurity, that; when he became known by his work on the English Constitution, and some people of distinction were desirous of relieving lim, it was impossible to discover his place of residence. His pride was gratified by this kind of low independence, and he rejected all assistance, excepting some aid from the literary fund, to enable him to return to his country. This was probably in 1775 , since, from that time, he calls himself member of the council of the two hundred in Geneva. Among his peculiarities was this, that, although principally occupied with political law, he was never present at a session of parliament. At the time of his arrival in England, aristocratical arrogance and turbulence had reached its highest pitch in Sweden and Poland, and it was feared, not without reason, in England, that the same evils threatened that country. Delolme entercd into an investigation of this subject. Hence originated his famous work, Constitution de l'Angleterre, ou Etat du Gouvernement Anglais comparé avec la Forme républicaine et avec les autres Monarchies de l'Europe (Amsterdam, 1771); and a work in English, called A Parallel between the English Government and the former Government of Sweden (London, 1772). In both, his principal object was to illustrate the excellence and stability of the English constitution. Its character of a spirited eulogium is undoubtedly the reason that the first politicians of England, lord Chatham, the marquis of Camden, and the author of the celebrated Letters of Junius, spoke so highly of this work of a foreigner. It contains much ingenions reflection on the English constitution, on the energy arising from a happy union of royal power with popular liberty, and particularly on the value of an independent judiciary and the freedom of the press, subjected to penal laws, but not to a censorship. This work, translated by the author himself into English, in 1772 (fourth English edition, 1784, with observations by doctor Charles Coote), is still considered, in England, one of the most "ingenious works on the English constitution. Delolme also published, in English, his History of the Flagellants, or Memorials of IIuman Superstition, (1783, 4to.) ; An Essay on the Union
with Scotland (London, 1796, 4to.) On the occasion of the will of Mr. Thelluson, he wrote lis Observations on the Power of Individuals to prescribe, by testamentary Dispositions, the particular future Uses to be made of their Property (London, 1798, 4to.) He died in July, 1806, at a village in Switzerland.

DELOS, an island of the Archipelago, very famous in ancient history. Originally it is reported to have been a floating island, but afterwards it became fixed. It was fahled to have been the birth-place of Apollo and Diana. It was governed by its own kıngs. Virgil mentions Anius a king of Delos, in the time of the Trojan war, who was afterwards high priest of A pollo, and entertained Eneas with great kindness. The Persians allowed the Delians to enjoy their ancient liberties, after they had reduced the rest of the Grecian islands. In after ages, the Athenians made themselves masters of it; and held it till they were driven out by Mithridates, who granted the inhabitants many privileges, and exempted them from all sorts of taxes. Strabo and Callimachus tell us that Delos was watered by the river Inapus: but Pliny calls it only a spring; and adds, that its waters swelled and abated at the same time with those of the Nile. At present there is no river in the island, but one of the noblest springs in the world, twelve paces in diameter, and enclosed partly by rocks, and partly by a wall. So sacred was the island of Delos held by the ancients, that hostilities were suspended by nations at war, when they lappened to meet in this place. Livy tells us, that some Roman deputies being obliged to put in at Delos, in their voyage to Syria and Egypt, found the galleys of Perseus king of Macedon, and those of Eumenes king of Pergamus, anchored in the same harbour, though these two princes were then at war.-Hence this island was a general asylum, and protection was extended to all living creatures, dogs excepted; for this reason it abounded with hares, no dogs being suffered to enter it. No dead body was suffered to be buried in it, nor child to oe born there; all dying persons, and women ready to be delivered, were carried over to the neighbouring island of Rhenæa. It is now called Sdili.

Delos, an extensive city in the above island, which occupies a spacious plain, reaching from the one coast to the other. It was well peopled, and, after the destruction of Corinth, the richest city in the Archipelago; merchants flocking thither from all parts, both on account of the immunity they enjoyed, and of its convenient situation between Europe and Asia. It contained many stately buildings; as the temple of Apollo, Diana, and Latona; an oval basin, made at an immense expense, for the representation of seafights; and a most magnificent theatre. The temple of Apollo was, according to Plutarch, begun by Erisichthon, the son of Cecrops; but afterwards enlarged and embellished at the common charge of all the states of Greece. It contained an altar built with horns of various animals, so artificially adapted to one another, that they hung together without cement. This altar is said to have been a cube; and the doubling it was a famous mathematical problem
among the ancients. This went under the name of Problema Deliacum, and is said to have been proposed by the oracle, to free the country from a plague. The trunk of the famous statue of Apollo, mentioned by Strabo and Pliny, is still an object of great admiration to travellers. It is without head, feet, arms, or legs; but from the parts that yet remain it plainly appears, that the ancients did not exaggerate when they commended it as a wonder of art. It was of a gigantic size, though cut out of a single block of marble; the shoulders being six feet broad, and the thighs nine feet round. Plutarch tells us, in his Life of Nicias, that he caused to be set up, near the temple of Delos, a huge palm-tree of brass, which he consecrated to Apollo ; and adds, that a violent storm of wind threw down this tree on a Colossean statue raised by the inhabitants of Naxos. Round the temple were magnificent porticoes built at the clarge of various princes, as appears from inscriptions whicl are still very plain.

DELPHI, in ancient geography, a town of Phocis situated on the south-west extremity of mount Parnassus, famous for a temple and oracle of Apollo. A number of goats that were feeding on mount Parnassus, approached a place which had a deep and long perforation. The steam which issued from the hole seemed to inspire the goats, and they played and frisked about in such an uncommon manner, that the goatherd was tempted to lean on the hole, and see what mysteries the place contained. He was immediately seized with a fit of enthusiasm, and his expressious were so wild and extravagant, that they passed for prophecies. This circumstance was soon known, and many experienced the same enthusiastic inspiration. The place was revered; a temple erected to Apollo; and a city built, which became the most illustrious in Phocis. The influence of its oracle controlled the councils of states, directed the course of armies, and decided the fate of kingdoms.

The temple of Apollo was at first a kind of cottage covered with boughs of laurel. An edifice of stone was next erected by Trophonius and Agamedes, which subsisted about 700 years, and was burnt in the year 636 after the destruction of Troy, and A.A.C. 548. It is mentioned in the hymn to Apollo ascribed to Homer. An opulent and illustrious Athenian family, called Alcmæonidæ, which had fled from the tyrant Hippias, raised a new temple, the front of which was of Parian marble. The pediments were adorned with Diana, Latona, Apollo, Bacchus, the setting of the sun, the Muses, and the Thyades. The architraves were decorated with golden armour; bucklers suspended by the Athenians after the battle of Marathon; and shields taken from the Gauls under Brennus. In the portico were inscribed the celebrated maxims of the seven sages of Greece. There was an image of Homer, and in the cell was an altar of Neptune, with statues of the Fates, and of Jupiter and Apollo. Near the hearth before the altar, stood the iron chair of Pindar. In the sanctuary was an image of Apollo gilded. The enclosure was of great extent, and filled with treasures (in which many cities had con-
secrated tenths of spoils faken in war), and with the public donations of renowned states in various ages.

The oracles were delivered by a priestess called Pythia, who received the prophetic influence in the following manner. A lofty tripod, decked with laurel, was placed over the aperture, whence the sacred vapor issued. The priestess, after washing her body, and especially her hair, in the cold water of Castalia, mounted on it, to receive the divine effluvia. She wore a crown of laurel, and shook a sacred tree which grew close by. Having mounted the tripod, she was seized with the most violent paroxysms of frenzy, and in that situation delivered her oracular responses; and if she declined acting, they dragged her by force to the tripod. The habit of her order was that of virgins. The season of enquiry was in the spring, during the month called Busius; after which A pollo was supposed to visit the altars of the Hyperboreans.

The city of Delphi arose in the form of a theatre, upon the winding declivity of Parnassus, whose fantastic tops overwhelmed it like a caropy on the north, while two immense rocks rendered it inaccessible on the east and west, and the rugged and shapeless mount Cirphis defended it on the south. The foot of Cirphis was washed by the rapid Plistus, whose waters fell into the sea a few leagues from the city. This inaccessible and romantic situation from which the place derived the name of Delphi, or solitary, was rendered still more striking by the innumerable echoes which multiplied every sound, and increased the ignorant veneration of visitants for the god of the oracle. The principal inhabitants of Delphi, claiming an immediate relation to Apollo, were entitled to officiate in the rites of his sanctuary; and even the inferior ranks were continually employed in dances, festivals, processions, and all the gay pageantry of an elegant superstition. Delphi, lying in the centre of Greece, and, as was then imagined, of the universe, was conveniently situated for the conflux of votaries. It was customary for those who consulted the oracle to make rich presents to the god : his servants and priests feasted on the uumerous victims which were sacrificed to him; and the rich magnificence of his temple had become proverbial even in the age of Homer. In aftertimes Crœsus, the wealthiest of monarchs, was particularly munificent in his donations. The sacred repository was, therefore, often the object of plunder. Neoptolemus the son of Achilles was slain, while sacrificing, by a priest, on suspicion of a design of that kind. Xerxes divided his army at Panopeus, and proceeded with the main body through Bœotia into Attica, while a part, keeping Parnassus on the right, advanced along Schiste to Delphi ; but they were seized with a panic when near Ilium, and fled. The divine hoard was seized by the Phocians under Philomelus, and dissipated in a long war with the Amphictyons. The Gauls experienced a reception like that of the Persians, and manifested similar dismay and superstition. Sylla, more svise, wanting money to pay his army, sent to borrow from the holy treasury; and when his
messenger wouk have friohtened lan, by reporting that the sound of a harp had been heard! from within the sanctuary, he replied, it was a sign that the god was happy to oblige him. But the temple, in the time of Strabo, was reduced to extreme poverty; and Apollo was silent. Nero attempted to drive him, as it were by violence, from the cavern; killing men at the mouth, and polluting it with blood. An oracle of Apollo at another place informed the consulters, that he should no more recover the power of utterance at Delphi, but enjoined the continuance of the accustomed offerings.

Yet the store appeared inexhaustible; and the robbery of Nero, who removed 500 brazen images, was rather regretted than perceived. The holy treasuries, though empty, served as memorials of the piety and glory of the cities which erected them. The Athenian portico preserved the beaks of ships and the brazen shields, trophies won in the Peloponnesian war; and a multitude of curiosities remained untouched Constantine the Great, however, proved a more fatal enemy to Apollo and Delphi, than either Sylla or Nero. He removed the sacred tripods to adorn the Hippodrome of his new city; where these, with the Apollo, the statues of the Heliconian muses, and the celebrated Pan, dedicated by the Greek cities after the war with the Medes, were extant when Sozomen wrote his history. Afterwards Julian sent Oribasius to restore the temple; but he was admonished by an oracle to represent to the emperor the deplorable condition of the place. 'Tell him,' said the oracle, 'that the well-built court is fallen to the ground. Phœbus has not a cottage, nor the prophetic laurel, nor the speaking fountain, Cassotis; and even the beautiful water is extinct.'

DELPHINIA, a new alkali, procured by the action of dilute sulphuric acid, on the bruised unshelled seeds of the larkspur. The solution of sulphate, thus formed, is precipitated by subcarbonate of potassa. Alcohol separates from this precipitate the vegetable alkali in an impure state.

Pure delphinia is crystalline while wet, but becomes opaque on exposure to air. Its taste is bitter and acrid. When heated it melts; and on cooling becomes hard and brittle like resin. If more highly heated, it blackens and is decomposed. Water dissolves a very small portion of it. Alcohol and æther dissolve it very readily. The alcoholic solution renders syrup of violets green, and restores the blue tint of litmus reddened by an acid. It forms soluble neutral salts with acids. Alkalies precipitate the delphinia in a white gelatinous state like alumina.

DELPHINIC Acrd. The name of an acid, extracted from the oil of the dolphin. It resembles a volatile oil; has a light lemon color, and a strong aromatic odor, analogous to that of rancid butter. Its taste is pungent, and its vapor has a sweetened taste of æther. It is slightly soluble in water, and very soluble in alcohol. The latter solution strongly reddens litmus. 100 parts of delphinic acid neutralise a quantity of base, which contains 9 of oxygen, whence its prime equivalent appears to be \(11 \cdot 11\).

DELPHINIUM, dolphin flower, or larkspur :
in botany, a genus of the trigynia order, and polyandria class of plants; natural order twentysixth, multisiliquæ: cal. none; petals five; nectarium bifid, and horned behind; siliquæ three or one. Species fourteen; two of which are perennial. They are herbaceous plants of upright growth, rising from eighteen inches to four feet in height, garnished with finely divided leaves, and terminated by long spikes of pentapetalous flowers of blue, red, white, or violet colors. One species, viz. D. consolida, is found wild in several parts of Britain, and grows in corn fields. The seeds are acrid and poisonous. When cultivated, the blossoms often become double. Sheep and goats eat this plant; horses are not fond of it ; cows and swine refuse it. The annual larkspur makes a very fine appearance in gardens, and is easily propagated by seeds, being so hardy that it thrives in any soil or situation.

DELPHINUS, the dolphin, in zoology, a genus of fishes belonging to the order of cete. There are five species, viz. 1. D. delphis, the dolphin. This fish was consecrated to the gods, and, celebrated in the earliest time for its fondness of the human race, was honored with the title of the sacred fish. Arion the musician, when flung into the ocean by the pirates, was said to be received and saved by this benevolent fish. Its natural shape is almost straight, the back being very slightly incurvated, and the body slender; the nose long, narrow, and pointed, not much unlike the beak of some birds, for which reason the French call it l' oye de mer. It has forty teeth; twenty-one in the upper jaw and nineteen in the lower; a little above an inch long, conic at their upper end, sharp-pointed, bending a little in. They are placed at small distances from each other; so that when the mouth is shut, the teeth of both jaws lock into one another. The spont-hole is placed in the middle of the head; the tail is semilunar; the skin smooth, the color of the back and sides dusky, the belly whitis! : it swims with great swiftness; and its prey is fish. It was formerly reckoned a great delicacy. This species of dolphin must not be confounded with that to which seamen give the name; the latter being quite another kind of fish, viz. the corsphrna hippuris of Linnæus, and the dorado of the Portuguese. 2. D. leucas, a species called by the Germans wit-fisch, and by the Russians beluga; both signifying white fish: but to this the latter add morskaia, 'of the sea,' to distinguish it from a species of sturgeon so named. They are numerous in the gulf of St. Lawrence, and go with the tide as high as Quebec. 3. D. orca, the grampus, is found from the length of fifteen feet to that of twenty-five. It is remarkably thick in proportion to its length, one of eighteen feet being in the thickest part ten feet diameter. With reason then did Pliny call this ' an immense heap of flesh armed with dreadful teeth.' It is extremely voracious; and will not even spare the porpoise, a congenerous fish. It is said to be a great enemy to the whale. 4. D. orca ensidorsatus, the sword fish. The nose is truncated; the teeth, of which there are forty in both jaws, are sharp-pointed; and on the back is a very long sword-like spine, or bony fin. It inhabits the European seas, the Atlantic, towards
the Antarctic Pole, and Davis's Straits. It is the largest species of the genus, being twenty-four or twenty-five feet long, and from ten to thirteen feet in diameter where thickest ; the lower jaw is much larger than the upper: the spout-hole is on the top of the head, and has two orifices. The spine on the back is often six feet long. It is broadest at the base, and resembles a scimitar or bent sword; being, however, covered with the common skin of the back. It is a bitter enemy to the whale, and carries on a constant war with the seals. It also feeds on flounders. 5. D. phocæna, the porpoise. This species is found in vast multitudes in all parts of the British seas; but in greatest numbers at the time when fish of passage appear, such as mackerel, herrings, and salmon, which they pursue up the bays.

DELPHOS, now called Castri, a town, or rather village, of Turkey in Asia, in Livadia; occupying part of the site of the ancient Delphi. Some vestiges of temples are visible; and above them, in the mountain side, are sepulchres, niches with horizontal cavities for the body, some of which are covered with slabs. A monastery is erected on the site of the Gymnasium. Strong terrace walls and other traces of a large edifice remain. The village is at a distance. Castalia is on the right hand in ascending to it, the water coming from on high and crossing the road; a steep precipice, above which the mountain still rises immensely, continuing on in that direction. The village consists of a few cottages covering the site of the temple and oracle.

DELTA, a part of Lower Egypt, which occupies a considerable space of ground between the branches of the Nile and the Mediterranean Sea: the ancients call it Delta, because it is in the form of a triangle, like the Greek \(\Delta\). It is about 130 miles along the coast from Damietta to Alexandria, and seventy on the sides from the place where the Nile begins to divide itself. It is the most fertile conntry in all Egypt, and it rains more there tlian in other parts, but the fertility is chiefly owing to the inundation of the Nile. The principal towns on the coast are Damietta, Rosetta, and Alexandria; but, within land, Me nousia, and Maala or Elmala. See Egypt.

DE'LTOIDE, adj. from delta, the fourth letter of the Greek alphabet ; so called by reason of its resembling this letter. An epithet applied to a triangular muscle arising from, the clavicula, and from the process of the same, whose action is to raise the arm upward.

Cut still more of the deltoide muscle, and carry the arm backward.

Sharp's Surgery.

\section*{DELU'DE, v. a. \\ Delu'der, \(n\).s.}

Ital. and Lat. deludere,
Delu'dable, adj. from \(d e\), and ludo to deDelu dable, adj. \(\int\) ceive. To cheat; deceive; impose upon: deludable is, easily imposed uporı.

> O, give me leave, I have deluded you; Twas neither Charles, nor yet the Juke. Shakspeare. Henry VI.

Not well understanding omniscience, he is not so ready to deceive himself, as to falsify unto him whose cogitation is no ways deludable.

Browne's Vulgar Eirours.
Let not the Trojans, with a feigned pretence of proffered peace, delude the Latian prince.

Dryden.

And thas the sweet deruders sane their song.
Pope.
For when our poor deluded people at lome, and foreigners abroad, read the poisonous and inflammatory libels that are daily published with impunity they aet aecordingly.

Junius.
Where wavering man, betrayed by venturous pride To chase the dreary paths without a guide, As treaeherous phantoms in the mist delude, Shuns faneied ills, or chases airy good.

Johnsun. Vanity of Juman Wishes.
DELVE, v. u. \& n.s.) Sax. ๖elfan; Teut.
Délver, n. s.
\} delben; Belgic detven; Goth. dalf, a subterranean place. Screnius refers to this last as the origin of the Saxon bedelfan, to bury; and Wiclif confirms this etymology by using dalf for delve. See below. To dig, and, figuratively, to endeavour to fathom the rnind. It is used as a substantive by Spenser and Jonson, for the pit or place dug: a delver is a digger.

But he that hadde taken oon ghede forthe and dalf into the earthe : and hidde the money of his Lord.

Wiclif, Matt. xxv.
When Adam delved, and Eve span,
Who was then the Gentleman? Old Ballad.
He by and by
His feeble feet direeted to the ery;
Which to that shady delve him brought at last, Where Mammon erst did sun his treasury.
-Spenser.
It shall go hard,
But I will delve one yard below the mines, And blow them at the moon. Shakspeare.

What's his name and birth?
-I cannot delve him to the root: his father Was called Sicilius.

Id.
Such a light and mettled dance
Saw you never yet in France;
And by leadmen, for the nonce,
That turn round like grindle-stones,
Which they dig out fro' the delves,
For their bairns' bread, wives, and selves.
Ben Jonson.
Delve of convenient depth your thrashing floor, With tempered clay, then fill and faee it o'er.

Dryden.

\section*{The filthy swine with delving snout}

The rooted forest undermine.
Philips.
DELVINO, one of the principal towns of Lower Albania, between Joannina and Bitrinto. It stands on the side of a mountain, on the site of the ancient Eleus, between the Paria, or ancient Xanthus, and Pistrini; and is well defended by a castle. Population 8000. It is fifty miles E. N. E. of Larissa.

DE'LUGE, n. s. Fr. deluge ; Span. Ital. and Portug. diluvio; Lat. dilavium, from diluo, de and luo; Gr. \(\lambda v \omega\), to wash.

If there had not been so deep a deluge of sin, tnere had been none of the waters.

Bishop Hall Contemplations.
But if with bays and dams they strive to force
His channel to a new or narrow course,
No longer then within his banks he dwells, First t's a torrent, then a deluge, swells.

Denlam.

The apostle doth plainly intimate, that the old world was subject to perish by a deluge, as this is su!, ject to perish by conflagration. Burnet's Theory.

At length corruption, like a general flood,
Shall deluge all.
Pope.
Still the battering waves rush in
Implacable, till deluged by the foan,
The ship sinks, foundering in the vast abyss.
Philips.
The restless flood the land would overflow,
By whieh the deluged earth would useless grow.
Blackmore.
Deluge. Several deluges are recorded in history; as that of Osyges, which overflowed almost all Attica; and that of Dencalion, which drowned all Thessaly in Greece: the most memorable however was the universal deluge or Noah's flood, which overflowed and destroyed the whole earth; and from which only Noah, and those with him in the ark, escaped. See Antediluvian, an article in which we have entered into this subject at some length, and particularly its epoch. See also Chronology.

But the deluge is a topic of great interest both to science and religion. It has given birth, therefore, to various theories and controversies on every point connected with it; and, while we cannot devote much space to the review of them in this work, some of the principal considerations that have been offered respecting its causes and effects may be acceptable to the reader. The great points in question may be reduced to three 1. Was the deluge universal, as is commonly supposed, or partial? 2. Was it from natural agency only, and if so what natural agency effected this mighty convulsion? 3. What were the principal effects and changes resulting?
1. Isaac Vossius and bishop Stillingfleet are amongst the most respectable supporters of an opinion that the deluge was but partial. But the reasoning of the former upon this subject is a little involved in our second question, respecting the agency employed; for it rests partly upon the difficulty there must have been in effecting a universal deluge. 'Many miracles,' he says, ' must have concurred ; but God works no miracles in vain. What need was there to drown those lands where no men lived, or are yet to be found? Although we should believe that part of the earth only to have been overflowed by the waters which we have mentioned, and which is not the hundredth part of the terrestrial globe, the deluge will nevertheless be universal (œcumenical), since the destruction was universal, and overwhelmed the whole habitable world.' Bishop Stillingfleet adopted the same opinion, from az persuasion that the earth was by no means fully peopled, and therefore there was no necessity for the deluge being universal. 'I cannot,'says he, 'see any urgent necessity from the Scripture to assert that the flood did spread itself all over the surface of the earth. That all mankind, those in the ark excepted, were destroyed by it, is most certain according to Scripture. When the Lord said that he would destroy man from the face of the earth, it could not be any particular deluge of so small a country as Palestine, as some have ridiculously imagined; for we find a univessal
corruption in the earth mentioned as the cause; a universal threatening upon all men for this cause; and afterwards a universal destruction expressed as the effect of this flood. So then it is evident that the flood was universal with regard to mankind; but from thence follows no necessity at all of asserting the universality of it as to the globe of the earth, unless it be sufficiently proved; and what reason can there be to extend the flood beyond the occasion of it, which was the corruption of mankind? The only probability of asserting the universality of the flood, as to the globe of the earth, is from the destruction of all iving creatures, together with man. Now though anen might not have spread themselves over the whole surface of the earth, yet beasts and creeping things might, which were destroyed with the flood; for it is said that 'all flesh died that moved upon the earth, and every man.' To what end should there be not anly a note of universality added, but such a particular enumeration of the several kinds of beasts, creeping things, and fowls, if they were not all destroyed? To this I answer; I grant that, as far as the flood extended, all these were destroyed; but see no reason to extend the destruction of these beyond that compass and space of the earth where men inhabited, because the punishment upon the beasts was occasioned by, and could not be concomitant with the destruction of man; but (the occasion of the deluge being the sin of man, who was punished in the beasts that were destroyed for his sake, as well as in himself) where the occasion was not, as where there were animals and no men, there seems no necessity of extending the flood thither.'

The bishop, therefore, thinks it probable that tiis visitation of divine judgment extended only to the continent of Asia, and those animals only which were immediately conrrected with mankind; and he thinks the latter a sufficient reason for Noal's preserving the pairs of animals which he was commanded to take with him into the ark. Bút it is shown, under the article Antediluvian, that, according to the most moderate computations, the world was probably more full of inhabitants than at present; the expression of Scripture is strong, 'that the earth was filled with violence:' and if it were admitted that 'the earth' means only continental Asia, the supposition of a partial deluge involves almost all the difficulties, with regard to the agency employed, that are supposed to be connected with that of a universal one. If the tops of the highest mountains, in a very considerable part of the earth, were covered, the laws of gravity would carry the water that must have been thus elevated over all the ordinary habitations of men, or it would require a miracle to suspend their operation. We shall see that nothing strictly miraculous is supposed on our hypothesis of a universal deluge.
Mr. Bryant, in his Ancient Mythology, adverts at great length to the traditional traces of the fact of a universal deluge in all the early fables and listories of the heathen world. He even contends that this fact furnished the principal, if not the only foundation of ancient idolatry; that the first of all the heathen deities was Noah;
that all the arrient nations regarded him as their founder; and that he, his sons, and the first patriarchs, are alluded to, in most if not all the religious ceremonies. The Egyptian Osiris (he says) was the same with Ham the son of Noah; though the name was sometimes bestowed on Noah himself. Osiris, according to Diodorus Siculus, was wonderfully preserved in an ark, and taught the use of the vine; to build, plant, \&c. 'We may reasonably suppose,' says Mr. Bryant, ' that the particulars of this extraordinary event would be gratefully commemorated by the patriarch himself, and transmitted to every branch of his family; that they were made the subject of domestic converse, where the history was often renewed, and ever attended with a reverential awe and horror, especially in those who had been witnesses to the calamity, and had experienced the hand of Providence in their favor. When there was a falling off from the truth, we might farther expect, that a person of so ligh a character as Noah, so particularly distinguished by the Deity, could not fail of being reverenced by his posterity ; and, when idolatry prevailed, that he would be one of the first among the sons of men to whom divine honors would be paid. Lastly, we might conclude, that these memorials would be interwoven in the mythology of the Gentile world; and that there would be continual allusions to these ancient occurrences, in the rites and mysteries as they were practised by the nations of the earth. In conformity to these suppositions, I shall endeavor to show that these things did happen; that the history of the deluge was reigiously preserved in the first ages; that every circumstance of it is to be met with among the historians and mythologists of different countries, and traces of it are to be found particularly in the sacred rites of Egypt and of Greece.'

If the success of this author, in this great undertaking, was not complete; if his theories involve many doubtful points of history, and some altogether conjectural assumptions ; he embodies on the other hand many unquestionably interesting and important facts, connected with this subject, and which the reader who is desirous of a complete review of it should not overlook. Of Noah, he says, they styled him Prometheus, Deucalion, Atlas, Theuth, Zuth, Xuthus, Inachus, Osiris. When there began to be a tendency towards idolatry, and the adoration of the sun was introduced by the posterity of Alam, the title of Helius, among others, was conferred upon him. Noah was the original Zeus and Dios. He was the planter of the vine, and inventor of fermented liquors: whence he was denominated Zeuth, which signifies ferment, rendered Zeus by the Greeks. He was also called Dionusus, interpreted by the Latins Bacchus, but very improperly. Bacchus was Chus the grandson of Noah: as Ammon may be esteemed Ham, so much reverenced by the Egyptians. Among the people of the east, the true name of the patriarch was preserved; they called him Noas, Naus, and sometimes contracted Nous; and many places of sanctity, as well as rivers, were denominated from him. Anaxagoras of Clazomenæ had obtained some knowledge of him in Egypt

By him the patriarch was denominated Noas or Nous; and both he and his disciples were sensible that this was a foreign appellation; notwithstanding which he las acted as if it bad been a term of the Greek language. Eusebius informs us, that the disciples of Anaxagoras say, ' that Nous is by interpretation, of the deity Dis or Dios; and they likewise esteem Nous the same as Prometheus, because he was the renewer of mankind, and was said to have fashioned them again,' after they had been in a manner extinct. Suidas has preserved, from some ancient author, a curious memorial of this wonderful personage, whom he affects to distinguish from Deucalion, and styles Nannacus. According to lim, this Nannacus was a person of great antiquity, and prior to the time of Deucalion. He is said to have been a king, who, foreseeing the approaching deluge, collected every body together, and led them to a temple, where he offered up his prayers for them, accompanied with many tears.' Other well known traditions, mentioned by Stephenson, speak of the flood of Deucalion in which all mankind were destroyed. Afterwards, when the surface of the earth began to be again dry, Zeus ordered Prometheus and Minerva to make images of clay in the form of men; and, when they were finished, he called the winds, and made them breathe into each, and rendered them vital.' From these accounts, Mr. Bryant concludes: 'However the story may, have been varied, the principal outlines plainly point out the person who is alluded to in these histories. It is, I think, manifest, that Annacus, and Nannacus, and even Inachus, relate to Noachus or Noah. And not only these, but the histories of Deucalion and Prometheus have a like reference to the patriarch : in the 600th year, and not the 300 th, of whose life the waters prevailed upon the earth. He was the father of mankind, who were renewed in him. Hence he is represented by another author, under the character of Prometheris, as a great artist, by whom men were formed anew, and were instructed in all that was good. He seems in the east to have been called Noas, Noasis, Nasus, and Nus; and by the Greeks his name was compounded Dionusus. The Amonians, wherever they came, founded cities to his honor; hence places called Nusa often occur, and many of them are mentioned by ancient authors. These, though widely distant, being situated in countries far removed, yet retained the same original histories; and were generally famous for the plantation of the vine. Misled by this similarity of traditions, people in after times imagined that Dionusus must necessarily have been where his history occurred; and as it was the turn of the Greeks to place every thing to the account of conquest, they made him a great conqueror, who went over the face of the whole earth, and taught mankind the plantation of the vine. Though the patriarch is represented under various titles, and even these not always uniformly appropriated; yet there continually occur such peculiar circumstances of his history, as plainly point out the person referred to. The person preserved is always mentioned as preserved in an ark. He is described as being in a state of darkness, which is repre-
sented allegorically as a state of death. He then obtains a new life, which is called a second birth; and is said to have his youth renewed. He is, on this account, looked upon as the first born of mankind ; and both his antediluvian and postcliluvian states are commemorated, and sometimes the intermediate state is also spoken of. Diodorus calls him Deucalion; but describes the deluge as almost universal.' We have noticed the corresponding Chaldean tradition, \&c. mentioned by Berosus in the article Antediluvians. While we consider the further range of these traditional accounts of the flood over the continent of India, and as far as China, las also its weight in establishing the Mosaic accounts, we shall shortly advert to the present and permanent effects of such a visitation, now remaining, as another proof both of the fact of a deluge, and of its universality. At present we enquire :
2. What was the nature of the agency employed on this occasion? Dr. Thomas Burnet, in his Telluris Theoria Sacra, endeavours to show, that all the waters in the ocean are not sufficient to cover the earth to the depth assigned by Moses. Supposing the sea drained quite dry, and all the clouds of the atmosphere dissolved into rain, we should still want the greatest part of the water of a deluge. According to the Dr. no less than eight oceans would have been requisite. To get clear of this difficulty, he and others have adopted Descartes's theory. That philosopher will have the antediluvian world to have been perfectly round and equal, without mountains or valleys. He accounts for its formation on mechanical principles, by supposing it at first in the condition of a thick turbid fluid replete with divers heterogeneous matters; which, subsiding by slow degrees, formed themselves into different concentric strata, or beds, by the laws of gravity. Dr. Burnet improves on this theory, by supposing the primitive earth to have been no more than a crust investing the water contained in the ocean, and in the central abyss, which he and others suppose. to exist in the bowels of the earth. See Abyss. A.t the time of the flood, this outward crust broke in a thousand places; and sunk down among the water, which thus spouted up in vast cataracts, and overflowed the whole surface. He supposes also, that before the flood there was a perfect coincidence of tho equator with the ecliptic, and consequently that the antediluvian world enjoyed a perpetual spring; but that the violence of the shock, by which the outer crust was broken, shifted also the position of the earth, and produced the present obliquity of the ecliptic. This theory is not only equally arbitrary with the former, but directly contrary to the words of Moses, who assures us, that all the high hills were covered; while Burnet affirms that there were no hills then in being. Dr. Hook conjectured that the shell of earth was subjected at the deluge to a compression into a prolate spheroid, thereby pressing out the water of an abyss under the earth. Dr. Halley ascribes the deluge to the shock of a comet, whereby the polar and diurnal rotation of the globe was changed ; and the ingenious Whiston so far adopted and improved upon this hypothesis, that he published a tract
on the subject entitled, The Cause of the Deluge demonstrated.

The theories above enumerated, though sanctioned by those names which entitled them to our notice, are, we conceive, one and all, destitute of any thing amounting to proof. The following, which endeavours to account for this most remarkable event, without doing any violence to the established laws of nature, is the hypothesis, we believe, of a Mr. James Tytler, a chemist of Edinburgh, who contributed largely to the Encyclopædia Britannica, from which work we make the extract.
1. 'If we consider the quantity of water requisite for the purpose of the deluge, it will not appear so very extraordinary as has been commonly represented. The height of the highest hills is thought not to be quite four miles. It will therefore be deemed a sufficient allowance, when we suppose the waters of the deluge to have been four miles deep on the surface of the ground. Now it is certain, that water, or any other matter, when spread out at large upon the ground, seems to occupy an immense space in comparison of what it does when contained in a cubical vessel, or when packed together in a cubical form. Suppose we wanted to overflow a room sixteen feet every way, or containing 258 square feet, with water, to the height of one ioot, it may be nearly done by a cubical vessel of six feet filled with water. A cube of eight feet will cover it two feet deep, and a cube of ten fect will very nearly cover it four feet deep. It makes not the least difference whether we suppose feet or miles to be covered. A cube of ten miles of water would very nearly overflow 256 square miles of plain ground to the height of four miles. But if we take into our account the vast number of eminences with which the surface of the eartl abounds, the above-mentioned quantity of water would do a great deal more. If, therefore, we attempt to calculate the quantity of water sufficient to deluge the earth, we must make a very considerable allowance for the bulk of all the hills on its surface. To consider this matter, however, in its utmost latitude: the surface of the earth is supposed, by the latest computations, to contain 199,512,595 square miles. To overflow tnis surface to the height of four miles, is required a parallelopiped of water sixteen miles deep, and containing 49,878,148 square miles of surface. Now, considering the immense thickness of the globe of the earth, it can by no means be improbable, that this whole quantity of water may be contained in its bowels, without the necessity of any remarkable abyss or huge collection of water, such as most of our theorists suppose to exist in the centre. It is certain, that as far as the earth has been dug, it has been found not dry, but moist; nor have we the least reason to imagine that it is not, at least, equally moist all the way down to the centre. How moist it really is cannot be known, nor the quantity of water requisite to impart to it the degree of moisture it has; but we are sure it must be immense. The earth is computed to be nearly 8000 miles in diameter. The ocean is of an unfathomable depth; but there is no reason for supposing it more than a few miles. To
make all reasonable allowances, however, we shall suppose the whole solid matter in the globe to be only equal to a cube of 5000 miles; and even on this supposition we shall find, that all the waters of the deluge would not be half sufficient to moisten it. The above-mentioned parallelopiped of water would indeed contain \(798,050,368\) cubic miles of that fluid; but the cube of earth containing no less than 125,000 millions of cubic miles, it is evident that the quantity assigned for the deluge would be scarcely known to moister it. It could have indeed no more effect this way, than a single pound of water could have upon 150 times its bulk of dry earth. We are persuaded, therefore, that any person who will try by experiment how much water a given quantity of earth contains, and from that experiment will make calculations with regard to the whole quantity of water contained in the bowels of the earth, must be abundantly satisfied, that though all the water of the deluge had been thence derived, the diminution of the general store would, comparatively speaking, have been next to nothing. 2. It was not from the bowels of the earth only that the waters were discharged, but also from the air; for we are assured by Moses, that it rained forty days and forty nights. This source of the diluvian waters has been considered as of small consequence by almost every one who has treated on the subject. We shall transcribe the general opinion from the Universal History, Vol. I. where it is very fully expressed. 'According to the observations made of the quantity of water that falls in rain, the rains could not afford one ocean, nor half an ocean, and would be a very inconsiderable part of what was necessary for a deluge. If it rained forty days and forty nights throughout the whole earth at once, it might be sufficient to lay all the lower grounds under water, but it would signify very little as to the overflowing of the mountains; so that it has been said, that if the deluge had been made by rains only, there would have needed not forty days, but forty years, to have brought it to pass. And if we suppose the whole atmosphere condensed into water, it would not all have been sufficient for this effect; for it is certain, that it could not have risen above thirtytwo feet, the height to which water can be raised by the pressure of the atmosphere; for the weight of the whole air, when condensed into water, can be no more than equal to its weight in its natural state, and must become no less than 800 times denser; for that is the difference between the weight of the heaviest air and that of water.' On this subject we must observe, that there is a very general mistake with regard to the air, similar to the above-mentioned one regarding the earth. Because the earth below our feet appears to our senses firm and compact, therefore the vast quantity of water, contained even in the most solid parts of it, and which will readily appear on proper experiment, is overlooked, and treated as a non-entity. In like manner, because the air does not always deluge with excessive rains, it is also imagined that it contains but very little water. Because the pressure of the air is able to raise only, thirty-two feet of water on the surface of the earth, it is therefore supposed we
may know to what depth the atmosphere could deluge the earth, if it was to let fall the whole water contained in it. But daily observations show, that the pressure of the atmosphere has not the least connexion with the quantity of water it contains. Nay, if there is any connexion, the air seems to be lightest when it contains most water. In the course of a long summer's drought, for instance, the mercury in the barometer will stand at thirty mehes, or little more. If it does so at the beginning of the drought, it ought to ascend continually during the time the dry weather continues; because the air all the while is absorbing water in great quantity frons the surface of the earth and sea. This, however, is known to be contrary to fact. At sucl times the mercury does not ascend, but remains stationary; and what is still more extraordinary, when the drought is about to have an end, the air, while it yet contains the whole quantity of water it absorbed, and has not discharged one single drop, becomes suddenly lighter, and the mercury will perhaps sink an inch before any rain falls. The most surprising phenomenon, however, is yet to come. After the atmosphere has been discharging for a number of days successively a quantity of matter 800 times heavier than itself, instead of being lightened by the discharge, it becomes heavier, nay, specifically heavier than it was before. It is also certain, that very dry air, provided that it is not at the same time very hot, is always heaviest; and the driest air which we are acquainted with, namely, Dr. Priestley's dephlogisticated air, is considerably heavier than the air we commonly breathe. For these reasons we think the quantity of water contained in the whole atmosphere ought to be considered as indefinite, especially as we know that by whatever agent it is suspended, that agent must counteract the force of gravity, otherwise the water would immediately descend; and while the force of gravity in any substance is counteracted, that substance cannot appear to us to gravitate at all. 3. The above considerations render it probable, at least, that there is in nature a quantity of water sufficient to deluge the world, provided it was applied to the purpose. We must next cousider whether there is any natural agent powerful enough to effect this purpose. We shall take the phrases used by Moses in their most obvious sense. The breaking up of the fountains of the deep we may reasonably suppose to have been the opening of all the passages, whether small or great, through which the subterraneous waters possibly could discharge themselves on the surface of the earth. The opening of the windows of heaven we may also suppose to be the pouring out the water contained in the atmosphere through those invisible passages by which it enters in such a manner as totally to elude every one of our senses, as when water is absorbed by the air in evaporation. As both these are said to have been opened at the same time, it seems from thence probable, that one natural agent was employed to do both. Now it is certain, that the industry of modern enquirers has discovered an agent unknown to the former ages, and whose influence is so great, that with regarc to this world it may be said to have a
kind of omnipotence. The agent we mear is electricity. It is certain, that, by means of it, immense quantities of water can be raised to a great height in the air. This is proved by the phenomena of water-spouts. Mr. Forster relates, that he happened to see one break very near him, and observed a flash of lightning proceed from it at the moment of its breaking. The conclusion from this is obvious. When the electric matter was discharged from the water, it could no longer be supported by the atmosphere but immediately fell down. Though water-spouts do not often appear in this country, yet every one must have made an observation somewhat similar to Mr. Forster's. In a violent storm of thunder and rain after every flash of lightning, or discharge of electricity from the clouds, the rain pours down with increased violence; thus showing that the cloud, having parted with so much of its electricity, cannot longer be supported in the form of vapor, but must descend in rain. It is not, indeed, yet discovered that electricity is the cause of the suspension of water in the atmosphere; but it is certain that evaporation is promoted by electrifying the fluid to be evaporated. It may therefore be admitted, as a possibility, that the electric fluid contained in the air is the agent by which it is enabled to suspend the water which rises in vapor. If, therefore, the air is deprived of the due proportion of this fluid, it is evident that rain must fall in prodigious quantities. Again: we are assured from the most undeniable observations, that electricity is able to swell up water on the surface of the earth. This we can make it do even in our trifling experiments; and much more must the whole force of the fluid be supposed capable of doing it, if applied to the waters of the ocean, or any others. The agitation of the sea in earthquakes is a sufficient proof of this. . It is certain, that at these times there is a discharge of a vast quantity of electric matter from the earth into the air; and, as soon as this happens, all becomes quiet on the surface of the earth. From a multitude of observations it also appears, that there is at all times a passage of electric matter from the atmosphere into the earth, and vice versâ from the earth into the atmosphere. There is, therefore, no absurdity in supposing the Deity to have influenced the action of the natural powers in such a manner that for forty days and nights the electric matter contained in the atmosFhere should descend into the bowels of the earth; if, indeed, there is occasion for supposing any such immediate influence at all, since it is not impossible that there might have been, from some natural cause, a descent of this matter from the atmosphere for that time. But by whatever cause the descent was occasioned, the consequence would be, the breaking up of the fountains of the deep, and the opening of the windows of lieaven. The water contained in the atmosphere being left without support, would descend in impetuous rains; while the waters of the ocean, those from which fountains originate, and those contained in the solid earth itself, would rise from the very centre, and meet the waters which descended from above. Thus the breaking up of the fountains of the derp, and
the opening the windows of heaven, would accompany each other, as Moses tells us they actually did; for, according to him, both happened on the same day. In this manner the flood would come on quietly and gradually, without that violence to the globe which Burnet, Whiston, and other theorists, are obliged to suppose. The abatement of the waters would ensue on the ascent of the electric fluid to where it was before. The atmosphere would then absorb the water as formerly: that which had ascended through the earth would again subside; and thus every thing would return to its pristine state.'
3. We conclude by noticing some of the alterations and effects which are supposed to have taken place in consequence of the deluge. One of these is the much greater quantity of water in the present than in the old world. Dr. Keill has, indeed, endeavoured to prove, that the present extent of the surface of the waters is necessary to raise such a quantity of vapors as may supply the surface of the earth with rain and with springs. In answer to this it is said, that it may justly be questioned whether all springs are derived from the vapors raised by the sun's heat? and, secondly, Whether the primitive earth stood in need of such a quantity of rain to render it fertile as the present? Dr. Woodward supposes the antediluvian seas to have been nearly of the same extent with those at present, because 'the spoils of the sea, the shells and other marine bodies, are left in such prodigious numbers in the earth, that they could not have been left in such quantities, had not the seas occupieu much the sâme space as they do now.' This argument, however, is thought by Mr. Cockburn to be inconclusive; and that the seas in the present earth are vastly more extended, and consequently the dry land so much less in proportion, may be inferred, he thinks, from the great multitude of islands that lie near the shores of the greater continents, \&c. To all this it may be replied, that the Mosaic account says nothing of the extent of the seas either before or after the flood; but simply tells us, that the waters were poured out upon the surface of the earth from the windows of heaven and the fountains of the deep, and that as the flood decreased the waters returned from off the face of the earth. That the fish, as well as land animals, were more numerous in the antediluvian world than now when such quantities are destroyed by mankind, is also probable, as we see they abound to this day ip uninhabited places. This may account for the astonishing quantities of exuvire to be met with in many different parts of the earth; but from the formation of islands nothing can be concluded concerning the antediluvian world. The late discoveries have shown that many islands have a volcanic origin; that others are formed by the growth of coral; and some by an accumulation of sea-weeds and other matters floating on the surface of the ocean, and detained upon sand-banks and sunk rocks; while not a few of those near the great continent owe their origin to the quantities of mud brought down by the great rivers which fall into the ocean. The inferior fertility of the earth after the deluge is much insisted upon by the same author.

There has been a valuable addition to the spe-
culations we have noticed above, in a moderii work of the Rev. Mr. Townsend, entitled, The Character of Moses established for Veracity as an Historian, recording Events from the Creation to the Deluge. It might be said on opening this volume, Is it necessary again to take up arms in defence of Moses? is not the phalanx of wise and good men who have already stood forth in his behalf sutficient to secure him from any new attack? It is true, indeed, that the ægis of celestial wisdom has often darted its benumbing rays on the impious cavillers, but they rise ever with new courage from the ruin which had overwhelmed them, and rush with blind rage on the bulwarks whence they have been so often repelled. They have begun, of late, to try the effect of new methods of assault, and to exult in the advantageous display of their resources. It was no small triumpl over Revelation to have proved that the earth was never created, but was originally a splinter struck off from the sun by a heavy body which happened to impinge upon it. But a great Epicurean philosopher recently defunct, has proceeded much further, and has finally developed the theory of the animal creation. It seems that the primitive world was one vast pool, in which all creatures sported in the shape of tadpoles, until some of them longing to walk on dry land, legs fitted for that purpose spontaneously sprang forth from the hinder quarters. Some affected hoofs, and gradually became horses ; while others, of a more ambitious character, forced their humbler brethren to carry them on their backs. A great metaphysician, the pride of Scotland, proved, in defiance of Moses, that the primitive men wore tails, and that it was owing to the friction of tight clothing that their posterity have lost so ornamental an appendage. We have not heard, indeed, that the Sansculotte philosophers have recovered this badge, though they are well rid of all other symptoms of humanity; but it is impossible to say how far their perfectibility may reach, and to what new heights of dignity and honor they may be destined to ascend. It is surprising that the old-fashioned tradition has not been rooted out by so many improvements in science; but, as Moses has stood his ground so long, there seems a fair chance of his holding out to the last. Still it is impossible to say what new stratagems may be played off; and, as the enemy seems to be flushed with victory, we are not displeased to lail a new auxiliary. We therefore enter upon some of the facts and reasonings of the work before us with considerable satisfaction.
The design of Mr. Townsend is, to compare the present state of our knowledge of the history of man and of the earth with the relations contained in the early part of Genesis, and by this comparison to establish the character of the historian as a faithful recorder of events. The first part of his work contains a disquisition on the similar traditions which were handed down among many nations from the most ancient times ; but the larger portion of the volume consists of a geological essay on the proofs that our globe has undergone a universal deluge. He shows that the creation of the world, and its emerging from a state of primitive chaos and
from a universal ocean, are not only contained in the works of the Grecian poets and philosophers, but are traced among several more ancient nations. In a curious extract from one of the Paranas are the following details :-' Of all objects in the created world, water existed first. The universe was dark. In this primeval water did Bhagavat, in a masculine form, repose for the space of a thousand ages; after which, the intention of creating other beings, for his own wise purposes, became predominant in the mind of the Supreme. In the first place, by his will, was produced one flower of the lotus; then the form of Brahma, who, emerging from the cup of the lotus, looked round and beheld, from the eyes of his four heads, an immeasurable expanse of water. In this flower he passed 500 years in wonder, perplexity, and prayer; after which he produced the four elements, and the genii which preside over them. From his right side there issued, by the omnipotence of God, a man of perfect beauty, Swayambhuva Menu, that is, son of the Self-existent; and from his left side a woman, named Satarupa.' (P. 43, 44.) To the same purpose is a passage in the ancient Edda of Sæmund, published by Resenius.

On the subject of the deluge, which occupies the principal part of this work, he prefers dwelling on arguments which are in a great measure new, and refers us to other writers for the historical testimony. This we approve, while we think that the historical part of the question is far from being exhausted. The Pralayas or periodical inundations of the Hindoos, as related in the Bhagavat-the successive destructions and renovations of the world, of which a corresponding account is given by Sæmund in the Runic Voluspa, and by Seneca from the representations of the Stoics-and the similar ceremonies practised in celebration of this event in Egypt and in Mexico, are facts which deserve a careful elucidation.

The proofs which Mr. Townsend brings forward of this universal catastrophe are diffused through a geological disquisition which occupies the larger portion of the volume. He takes a general survey of the surface of the earth, and the constitution and order of its strata, as far as they have been explored; in the course of which he uufolds to us in a very interesting manner the fruits of a diligent investigation, continued, as he informs us, during fifty years, and pursued in various parts of Europe. We may safely say that his volume contains far more information than any other work on the same subject.

In order to lay a foundation for the development of the more general phenomena to which he adverts, this author gives a brief view first of the geological formation of our own island. We regret that we cannot follow him through their details: they well prepare the reader to contemplate with interest the succession of formations in other countries. Under this head our author has given us brief notices afforded by travellers in almost every part of the world which has been explored by Europeans. They are very general, yet sufficient to justify the conclusion which Mr. Townsend has drawn from them. 'Whether we exani te,' he observes, 'Europe, Asia, Africa, or

America, the same arrangement may be traced; with this exception, that both in our island, and over the surface of the globe, in some places, the superior strata are deficient, and may be supposed to have been carried off, after they had been deposited in the bosom of the ocean. This arrangement, as al ready stated, includes granite, gneiss, slate, and argillaceous schist, mountain lime-stone, coal, schist, calcareous rocks, with clay, sand, chalk, and its integument of sand and clay.'
The geological theory adopted by Mr. Townsend is highly favorable to this part of the Scriptural History. If, with him, we can trace the actual operation of agents sufficiently powerful toelevate the continent of South America, (which this author conceives to have been those now operating in her abundant volcanoes), and other such extensive regions from the depths of the ocean, it is no longer difficult to conceive, that the waters may have covered the highest mountains, and that great tracts of habitable land may have been submerged.
But absolute and distinct proofs of this event are to be found in the dislocations of strata, and in the phenomena connected with alluvial depositions. There is no part of the earth in which the violent dislocations of the regular strata are not to be found; and they are chiefly abundant in mountainous tracts, of which no other proof need be cited than the vertical position which the strata forming high mountains now hold, while we are assured that these very strata were originally horizontal. But even in the most level countries we need not go far for evidences of these convulsions. Every river, every brook which breaks out under our feet, and every valley which diversifies the surface, owes its existence to the disruption of strata. All the rock formations were at first unbroken and continuous; wherever a valley occurs there is now an interruption of this continuity. That these hollows were not the mere effect of rivers which have worn out courses for their waters may be proved by a variety of geological facts which we have not room to introduce here; but it is put in sufficiently strong light by Mr. Townsend's observations on springs, which are in a great measure new, and of very general interest. Every stratum of rock, before it becomes broken up, carries with it in its course under the surface a stratum of water, which percolates its stony beds, and is confined between impervious layers of clay. It is only where these subterranean courses are disturbed, and the strata are torn asunder by some extraneous force, that fountains and rivers burst forth. These dislocations and disturbances of strata can only be attributed to the agency of vast torrents every where flowing over and disorganising the surface of the earth, and such torrents can only be furnished by the incursions of the ocean. Land floods and rivers are the effects of the previous disruption of the strata, and therefore cannot be considered the efficient causes.
The production of these phenomena by the waters of a deluge is further proved by allurial deposit. The vast extent of alluvions, independently of all other proof, declares that the
ocean gave them birth. One great accumulation of debris fills nearly the whole of Flanders and Holland; it reaches across the channel, and covers the southern and eastern counties of England, concealing under it, at a great depth, the regular strata of these districts. Another alluvion forms Lower Saxony and Holstein. Similar appearances occur in all level countries, and valleys are generally filled with these accumulations, through the midst of which the feeble streams of the present rivers have opened for themselves diminutive channels. That these accumulations were affected at once by vast oceanic torrents, and not by the gradual influence of rain and land floods, appears, Mr. T. observes, from the alluvial strata not being mixed or blended together, but frequently disposed according to their specific gravity. The vast fragments of rock which are found scattered over plains and mountains, in so many parts of the earth, at great distances from their native mountains, lead us forcibly to the same inference.

One of the most important observations which relates to these deposits is the following:-'In all the alluvial districts here particularly noticed, it appears that only one bed of vegetable earth is to be seen. Consequently these strata have not been produced by land floods, at different and at distant periods. They direct our attention to one epoch, and most distinctly give us a measure, by which to estimate the time which has elapsed since either the elevation of our present continents, or the depression of the surrounding seas.'

We are assured, that the incursions of the ocean over the habitable surface of the earth took place at a time since it was actually inhabited by land animals, by the organic remains which the alluvions contain; and this remark leads us to our author's disquisition on the interesting subject of extraneous fossils, with which we shall close our observations. Mr. Townsend is the first who las given us any extensive aczount of the organic remains, in connexion with the strata to which they belong; and in this respect he has rendered great service to the public. The oldest class of rocks contain no vestiges of organised beings, and this fact is sufficient to silence the assertion of Hutton, that the world exhibits no traces of a beginning. Lithophytes and shells occur in the oldest secondary rocks, and more complicated beings gradually make their appearance. All these, however, and indeed all the organic remains occurring in strata which have never been disturbed and disintegrated, may be termed indigenous. It is plain, that the creatures of which they are the spoils lived and died on the places where they are here traced. The shells are found deposited according to families, and confined in a great measure each to its own stratum; and a similar remark applies to other animal remains of this department. It is not so with those of alluvial ground. These are assembled from all parts of the earth, and are thrown together in promiscuous heaps. In the same beds are found shells and corals only known in the Pacific Ocean, and the bones of elephants and rhinoceroses. 'They seem,' says Mr. Townsend, 'to have been transported from
distant climates, and to have been deposited in a tumultuous manner by some grand convulsion, which blended and buried terrene and submariue productions, ancient and recent, in one common grave. The direction in which they have been conveyed, appears to have been from south-east to north-west. Hence, where we have an opportunity of making distirctions respecting their natural habitations, as in the Asiatic and African elephants, it is remarkable that the former, and not the latter, are to be found fossil in the north of Europe. Should the latter have been transported from their native seats by the same convulsion, it is probable that their relics have been deposited in the Atlantic Ocean.'

On the whole, though the arrangment of the author's materials might have been improved in this work, he has added considerably both to the stores of natural history, and to the elucidation and confirmation of the details of the sacred volume on this subject.

Delu'sory. \(\int\) hood; the act of cheating or deluding : the adjectives alike mean apt to deceive.
Yea, they have chosen their own ways, and their soul delighteth in their abominations. I also will chuse their delusions. Bible, Isaiuh lxvi.

\section*{Who therefore seeks in these \\ True wisdom, finds her not, or by delusion.}

Milton.
This confidence is founded on no better foundation than a delusory prejudice.

Glanville.
Phænomena so delusory that it is very hard to escape imposition and mistake.

Woodward.
I waking, viewed with grief the rising sun,
And fondly mourned the dear delusion gone.
Prior.
While the base and grovelling multitude were listeving to the delusive deities, those of a more erect aspect and exalted spirit separated themselves from the rest.

Tatler. No. 81.
Why will any raan be so impertinently officious as to tell me all prospect of a future state is only fancy and delusion? Is there any merit in being the messenger of ill news? If it is a dream, let me enjoy it, since it makes me both the happier and better man.

Addison.
Unnumbered suppliants crowd preferment's gate, Athirst for wealth, and burning to be great; Delusive fortune hears the incessant call, They mount, they shine, evaporate, and fall.

Johnson. Vanity of Human Wishes.
Can we persist to bid your sorsows flow
For fabled sufferers, and delusive woe? Sheridan.
DE'MAGOGUE, n.s. Gr. \(\delta \eta \mu \alpha \gamma \omega \gamma\) о. A ringleader of the rabble; a popular and factious orator.

Who were the chief demagogues, and patrons of tumults, to send for them, to flatter and embolden them? King Charles.
A plausible, insignificant word, in the mouth of an expert demagogue, is a dangerous and dreadful weapon.

South.
Demosthenes and Cicero, though each of them a leader, or, as the Greeks called it, a demagogue, in a popular state, yet seem to differ in their practice.

Swift.

DEMA'IN, n.s. \(\}\) Old Fr. demesne; Fr. doDeméan. maine; both probably from Lat. dominus. That land which a man holds originally of himself, called dominium by the civilians, and opposed to feodun or fee, which signifies those that are held of a superior lord. It is sometimes used also for a distinction between those lands that the lord of the manor has in his own hands, or in the hands of his lessee, demised or let upon a rent for a term of years or life, and such other lands appertaining to the said manor as belong to free or copyholders. Estate in land, or land adjoining a mansion, in which sense demesne has been thought to come from old Fr. mesne, and Lat. mansio.

Having now provided
A gentleman of noble parentage,
Of fair demesnes, youthful, and nobly allied.
Shakspeare.
That earldom indeed had a royal jurisdiction and seigniory, though the lands of that county in demesne were possessed for the most part by the ancient inheritors.

Davies.
Those acts for planting forest trees have hitherto been wholly ineffectual, except about the demesnes of a few geutlemen; and even there, in general, very unskilfully made.

Swift.
\(\left.\begin{array}{l}\text { DEMA'ND, v. } a . \& u . s . \\ \text { Dema'ndable, } a d j .\end{array}\right\}\)
Dema'ndant, n.s.
Demánder. ) mandare ; Lat. demando, from de and mando (manu do, to give with the hand). To claim; ask for as one's own previously, or with authority; hence to question, interrogate. As a substantive it is the claim made; the amount of it in money; an application made for any thing at its price: demandable, that which is due : demandant and demander, he who requires his alleged due by law or otherwise.

And when Uriah was come unto him, David demanded of him how Joab.did, and how the people did, and how the war prospered.

2 Sam. xi. 7.
This matter is by the decree of the watchers, and the demand by the word of the holy ones.

Dan. iv. 17.
All sums demandable, for licence of alienation to be made of lands holden in chief, have been stayed in the way to the hanaper.

Bacon.
The pound of flesh which I demand of him, Is dearly bought ; 'tis mine, and I will have it.

Shakspeare.

\section*{Young one,}

Inform us of thy fortunes; for, it seems,
They crave to be demanded.
Id.
They grow very fast and fat, which also bettereth their taste, and delivereth them to the demander's ready ase at all seasons.

Carew.
The oracle of Apollo being demanded, when the war and misery of Greece should have an end, replied, When they would double the altar in Delos, which was of a cubick form. Peacham on Geometry.
Giving vent, gives life and strength to our appetites; and he that has the confidence to turn his wishes into demands, will be but a little way from thinking he ought to obtain them.

Locke.
My bookseller tells me, the demand for those my papers increases daily.

Addison.

One of the witnesses deposed, that dining on a Sunday with the demandant, whose wife had sat below the squire's lady at church, she the said wife dropped some expressions, as if she thought her lusband ought to be knighted.

Spectator.
There are two manners of demands, the one of deed, the other in law : indeed, as in every pracipe, there is express demand; in law, as every entry in land distress for rent, taking or seizing of goods, and such like acts, which may be done without any words, are demands in law.

Blount.
But the misery of it is, men will not think; will not employ their thoughts, in good earnest, about the things which most of all deserve and demand them.

Mason.
Every man has frequent occasion to state a contract, or demand a debt, or make a narrative of minute incidents of common life. Johnson.

Thus for short sins short hours of penance flow, But heavier guilt demands more lasting woe.

Dr. T. Brown.
DEMBEA, a large lake of Abyssinia, is in the heart of the country, and supposed to be about 450 miles in circumference. It contains many islands, particularly one of great size, which is made a place of confinement. The great river Bahr-el-Azrek, so often supposed to be the true Nile, falls into it on the west, and issues from it on the south-west: it is said that the stream may be distinguished through the whole of its passage. Various small streams also fall into it.

Dembea, a province of Abyssinia, surrounding the great lake of that name. On the north it comprehends that fertile tract of which Gondar is the capital. On the east it includes Foggora, Dara, and Alata; and, on the west, the lands about Waindaga and Dingleber. The whole region is fruitful, and finely varied by mountains and plains. It is particularly described by Bruce.

DEMEAN', v.a. \&n.s. ) Fr. mener; Ital. Demeanour. \(\quad\) menare; Norm. Fr. demesner; whence, thinks Mr. Todd, our word manage, i. e. conduct, carriage, demeanour : perhaps the whole, we might add, from Lat. manus, the hand. To behave; generally to carry one's self in a particular way. There seems to be no good authority for using it for debase. Dr. Johnson's instance from Shakspeare, and Mr. Todd's from Doddridge, are equivocal; but the reader will judge.

At his feet with sorrowful demean, And deadly hue, an armed corse did lie.

Spenser
Now, out of doubt, Antipholis is mad,
Else he would never so demean himself.
Shakspeare.
Angels best like us, when we are most like unto them, in all parts of decent demeanour. Hooker. His gestures fierce
He marked, and mad demeanour, then alone, As he supposed, all unobserved, unseer.

Milton.
He was of a courage not to be daunted, which was manifested in all his actions, especially in his whole demeanour at Rhee, both at the landing and upon the retreat.

Clarendon.
Those plain and legible lines of duty requiring us to demean ourselves to God humbly and devoutly, to our governors obediently, and to our neighbours justly, and to ourselves soberly and temperately. South.

Of so insupportable a pride he was, that where his deeds might well stir envy, his demeanour did rather breed disdain.

Sidney.
A man cannot doubt but that there is a Fod; and that, according as he demeans himself towards him, he will make him happy or miserable for ever.

Tillotson.
Strephon had long perplexed his brains, How with so high a nymph he might Demean himself the wedding night. Swift.
That brow in furrowed lines had fixed at last, And spake of passions, but of passions past ; The pride, but not the fire, of early days, Coldness of mean, and carelessness of praise; A high demeanour, and a glance that took Their thoughts from others by a single look. Byron.
Peter was so affected at his condescending to perform such a mean office, that he says to him, It is a thousand times fitter that I should wash thine, nor can I bear to see thee thus demean thyself.

\section*{Doddridge's Expositor.}

DEME'NTATE, \(\left.v_{1} a.\right\}\) Lat. demento, of de Dementa'tion, n.s. \}and mens, the mind. T'o make mad. Making mad, or frantic.

DEmerara, or Demerara and Essequibo, a colony of Great Britain, in the north-eastern part of South America. It is composed of two governments, named as above, both which, having been finally confirmed to Great Britain by the peace of 1814, are now one united colony. They form a part of what was originallyDutch Guienne; hut the king of the Netherlands only retains, in this part of the world, the colony of Surinam. The general features and natural history of this country have been described already in our article America, Soutir, par. 206-220. Demerara is bounded on the north by the Atlantic Ocean, on the east by a line drawn from the mouth of Albany Creek, in a south-east direction, dividing it from the British colony of Berbice, on the west by the river Pomaron, which divides it from Spanish Guiana; its sonthern boundary is undetermined. Staebroek, the only considerable town, and the seat of government, is in lat. \(6^{\circ} 46^{\prime} \mathrm{N}\)., and long. \(57^{\circ} 45^{\prime} \mathrm{W}\). from London.
The whole country is low and swampy: on the coast the tides rise to the height of from sixteen to twenty-four feet. The rivers are the Essequibo, Demerara, and Canji or Cayonny, the last being supposed to communicate with the Oronoco. The Demerara River has a bar across its mouth, which prevents ships of large burden passing it; but vessels drawing fourteen feet may be loaded at Staebroek. Here are convenient wharfs: no large vessels, however, can lie near them, on account of the declivity of the bank, but are compelled to load and unload their cargoes in the middle of a rapid stream. The Essequibo is easily entered by the largest ships, but they must also be loaded and unloaded in the stream, as the same causes prevent their lying near shore.

We have also noticed the political history of these settlements. It is only necessary to add, that while, under the British government, the general internal.policy is improved, and the roads, drain: ge, \&c., have assumed a very different aspect to that which they bore in former times, the
curse of an extensive dependence on slave-cultivation is no where more evident. Coffee, sugar, and cotton, are the staple articles of produce, and no where on earth is a finer soil presented to the hand of man. It has been transported to other of our western possessions as manure, and has been known to produce thirty crops of rattoon canes in snccession, without replanting. Sometimes it has been cropped two or three years with plantains, to reduce its excessive richness, and afterwards with sugar cannes; but the first, second, and sometimes even the third crop, has been so luxuriant as to be only fit to make rum. Each estate is intersected with dikes and trenches, communicatiug with the river, by means of which, in small flat-hottomed boats, the whole conveyance of the produce is effected from one part of the estate to another. Thus they carry the canes from the field to the sugar-mill and the stillhouse. The earth removed to form these ditches is thrown on beds, which contain the cotton-trees planted in rows six feet asunder. The coffee-trees are planted in rows from nine to twelve feet apart, and the intermediate spaces are filled either by plantain-trees, or the bois immortel, growing to the height of twelve or fourteen feet, and affording a welcome shade to the coffee plants.
In the colony are from 60,000 to 65,000 slaves kept in awe with difficulty, and in no small degree by the strong aversion that subsists between them and the aboriginal Indians of the interior, who readily bring back all stragglers to their masters, and often assist in suppressing insubordination. The colony is governed by the Dutch laws. The free inhabitants do not exceed 3000.

DEME'RIT, n. s. Fr. demerite ; from demeritus, Lat. of demereor. See Merit. Blame.
They should not be able once to stir, or to murmur, but it should be known, and they shortened according to their demerits. Spenser on Ireland.

> I fetch my life and being

From men of royal siege; and my demerits
May speak, unbonnetting, to as proud a fortune
As this that I have reached. Shakspeare. Othello.
Thou livest by me, to me thy breath resign ; Mine is the merit; the demerit thine. Dryden.
Whatever they acquire by their industry or ingenuity, should be secure, unless forfeited by any demerit or offence against the custom of the family.

Temple.
I considered the pessession of it [a bishopric] as a frequent occasion of personal demerit; for I saw the generality of the bishops bartering their independence and the dignity of their order for the chance of a translation, and polluting gospel-humility by the pride of prelacy.

Bp. Watson.
DEME'RSED, part. \(\}\) Fromdemersus, or de-
Demérsion, n.s. \}mergo, Lat. Plunged; drowned. A drowning. In chemistry, the putting any medicine in a dissolving liquor.

DEMESNE. See Demain.
DEMETRIUS I., surnamed Poliorcetes, destroyer of towns, was the son of Antigonus. At the age of twenty-two he was sent by his father against Ptolemy, who invaded Syria. He was defeated f:r Gaza, but soon repaired his loss by
a victory over one of the generals of the enemy. He afterwards sailed with a fleet of 250 ships to Athens, and restored the Athenians to liberty, by freeing them from the power of Cassander and Ptoleiny, and expelling the garrison, which was stationed there under Demetrius Phalereus. After this successful expedition, he besieged and took Munychia, and defeated Cassander at Thermopylæ. His reception at Athens after these victories was attended with the most servile flattery; and the Athenians were not ashamed to raise altars to him as to a god, and consult his oracles. This raised the jealousy of the successors of Alexander ; and Seleucus, Cassander, and Lysimachus united to destroy Antigonus and his son. Their hostile armies met at Ipsus, A. A.C. 301 : Antigonus syas killed in the battle; and Demetrius, after a severe loss, retired to Ephesus. The Athenians, who had lately adored him as a god, refused to admit him into their city; but he soon after ravaged the territory of Lysimachus, and reconciled himself to Seleucus, to whom he gave his daughter Stratonice in marriage. Athens now labored under tyranny, and Demetrius relieved it a second time, and pardoned the inhabitants. The loss of his possessions in Asia recalled him from Greece, and he established himself on the throne of Macedonia. Here he was continually at warwith the neighbouring states, and the superior power of his adversaries obliged him to leave his kingdom, after he had sat on the throne for seven years. He passed into Asia, and attacked some of the provinces of Lysimachus with various success; but famine and pestilence having destroyed the greatest part of his army, he applied to Seleucus for assistance. He, at first, met with a kind reception, but hostilities were again soon begun; and, though he gained some advantages over his son-in-law, he was at last forsaken by his troops, and taken prisoner. Though Seleucus kept him in confinement, he maintained him like a prince, and he passed his time in hunting, and in other laborious exercises. His son Antigonus offered Seleucus all his possessions, and even his person, to procure his father's liberty, but in vain, and Demetrius died in the fifty-fourth year of his age, after a confinement of three years, A. A.C. 286. His remains were given to Antigonus, and honored with a splendid funeral at Corinth, and thence conveyed to Demetrias.

Demetrius I., king of Syria, surnamed Soter, or Saviour, was son of Seleucus Philopater. Being a hostage at Rome, when his father died, his uncle, Antiochus Epiphanes, usurped the kingdom, and was succeeded by his son Antiochus Eupator. Demetrius at last procured his liberty on pretence of going to hunt, and fled to Syria, where the troops received him as their lawful sovereign. He put to death Eupator and Lysias, but, endeavouring to establish himself on his throne by cruelty and oppression, Alexander Bala, the pretended son of Antiochus Epiphanes, claimed the crown, and defeated Demetrius in a pattle, A. A.C. 150.
Demetrius, the disciple of Apollonius Tyanæus, a cynic philosopher of the age of Caligula. The emperor wished to gain him to his interest by a large present; but Demetrius refused it with indignation, and said, If Caligula wishes to bribe
me, let him send me his crown. Vespasian was displeased with his insolence, and banished him to an island. The cynic derided the punishment, and satirised the emperor. He died in an extreme old age; and Seneca observes, that 'mature had brought him forth to show mankind, that an exalted genius can live securely without being corrupted by the vices of the surrounding world.'

Demetrius Pialereus, a celebrated orator and peripatetic philosopher, was the scholar of Theophrastus. He acquired so much autlority at Athens, that he governed the city for ten years; and he ruled with so much wisdom and virtue, that thirty-six statues were erected in honor of him. Being obnoxious, however, to the aristocratical party, they procured an order for his death; but, he escaped into Egypt, and was protected by Ptolemy Lagus. On the death of that prince he was banished by his successor. None of the works of this celebrated philosopher are extant, except his Rhetoric, which is usually printed among the Rhetores Selecti.
Demetrius, czar of Russia, commonly called the false Demetrius, was, according to most authors, a native of Jaroslaw, and a novice in a monastery, where he was instructed by an old monk to personate Demetrius, son of the czar John Basilovitz, who had been murdered by Boris Gudenoy, in 1597. The youth, according to his instructions, went under the name of Demetrius, and pretended to have escaped from his murderers into Lithuania, where he was taken into the service of a nobleman named Wicnovitski, to whom he told his story, and who espoused his cause. When Boris heard of this rival, he sent assassins to despatch him ; but his patron being warned of it conveyed him to Mnieski, palatine of Sandomir, who promised to assist him in his design on the Russian throne, provided he would embrace the Roman Catholic religion, which be readily consented to, and was married to the palatine's daughter. Assisted by the Poles, Demetrius, in 1604, marched into Russia, at the head of a small army, and was soon joined by a number of Russians and Cossacs. He defeated an army sent against him, and an insurrection took place in his favor. On the death of Boris, the people strangled his son, and placed Demetrius on the throne; but his partiality to the Poles and contempt of the Greek religion occasioned an insurrection, and he was murdered in 1606 , after a short reign of about eleven months. Mr. Archdeacon Coxe, contrary to the generality of writers, considers him to have been the true prince Demetrius.

DEMI ATTICI, in ancient history, boroughs or large villages of Attica. The Athenian tribes were distributed into Demi. Homer, in his catalogue, distinguishes the Athenians by the appelcion Demos. And when Theseus prevailed on them to quit the country of Attica, and settle at Athens, they still continued to frequent the Demi, and to perform their religious ceremonies there.

DEMI-CANNON, n.s. From demi, half, and cannon. An ancient piece of artillery, carrying a thirty-six pound ball.

What! this a sleeve, 'tis like a demi-cannen.
Shakspears.
Ten engines, that shall be of equal force either to a cannon or demi-cannon, culverin or demi-culverin, may be framed at the same price that one of these will amount to.

Wilkins.
DEMI-CULVERIN. An old piece of ordnance carrying a thirteen pound ball.

They continue a perpetual volley of demi-culverins. Raleigh.
The army left two demi-culverins, and two other good guns.

Clarendon.
DEMI-DEVIL. From demi and devil. Partaking of infernal nature ; half a devil.

Will you, I pray, demand that demi-deril,
Why he hath thus ensnared my soul and body ?
Shakspeare. Othello.
DEMI-GOD, n.s. From demi and god. Partaking of a divine nature; half a god; a hero produced by the cohabitation of divinities with mortals. See Hero.

He took his leave of them, whose eyes bade him farewell with tears, making temples to him as to a demigod.

Sidney.
Be gods, or angels, demi-gods. Milton.
Transported demi-gods stood round, And men grew heroes at the sound, Inflamed with glory's charms.

Pope.
Nay, half in heaven, except (what's mighty odd)
A fit of vapours clouds this demi-god.
Id.
Who is this?
Who truly looketh like a demi-god,
Blooming and bright, with golden hair, and stature,
If not more high than mortal, yet immortal.
Byron.
DEMI-GORGE, in fortification, is that part of the polygon which remains after the flank is raised, and goes from the curtain to the angle of the polygon. It is half of the vacant space or entrance into a bastion.

DEMI-LANCE, n.s. From demi and lauce. A light lance; a short spear; a half pike.

On their steeled heads their demi-lances wore Small penuons, which their ladies colours bore.

Dryden.
Light demi-lances from afar they throw, Fastened with leathern thongs, to gall the foe.

DEMI-MAN, n.s. From demi and man. Half a man; a term of reproach.

We must adventure this battle, lest we perish by the complaints of this barking demi-man. Knolles.
DEMIS'E, v. a. \& n. s. Fr. demis ; Lat. demitto, demisi, to hand down. (de and mitto, Gr. \(\mu \varepsilon \theta t \eta \mu t)\). Applied to handing down by legacy or death: and, as a substantive, to death itself, by which the crown of a monarchy is generally transmitted.

Inexorable vigour is worse than a lasche demission of sovereign authority.

L'Estrange.
About a month before the demise of queen Anne, the author retired.

Swift.
My executors shall not have power to demise my lands to be purchased.

Swift's Last Will.
Demise, in law, is applied to an estate either in fee simple, fee-tail, or for a term of life or years; and so it is commonlv taken in many writs.

Demise, and Re-demise, denote a conveyance where there are mutual leases made from one to another of the same land, or something out of it.

DEMI-SEMI-QUAVER, in music, the shortest note, two of them being equal to a semiquaver.

DEMIT, v. a. Lat. demitto. See Demise. T'o depress; to hang down; to let fall.

When they are in their pride, that is, advancing their train, if tbey decline their neck to the ground, they presently demit and let fall the same.
'Browne's Vulgar Errours.
DEMI-WOLF, n.s. From demi and wolf. Half a wolf; a mongrel dog between a dog and wolf.

Spaniels, curs,
Showgas, water-rugs, and demi-wolves, are 'cleped All by the name of dogs. Shakspeare. Macbeth.
DEMO'CRACY, n.s. \(\rangle\) Fr. democratic ; Democrat,
Democratic, n.s. Spanish democracia, from Gr. ঠпиокоатєа ( \(\delta \eta \mu\) os the people, and roarte to govern). A government by the people at large. A demorrat is an advocate or partizan of democracy. The old word democratic is only more agreeable tc the etymology.

Thence to the famous orators repair,
Those ancient, whose resistless eloquence
Wielded at will that fierce democratic,
Shook the arsenal and fulmined over Greece.
Milton.
They are still within the line of vulgarity, and are democratical enemies to truth.

Browne's Vulgar Errours.
While many of the servants, by industry and virtue, arrive at riches and esteem, then the nature of the government inclines to a democracy. Temple.

The majority, having the whole power of the community, may employ all that power in making laws, and executing those laws; and there the form of the government is a perfect democracy.

Locke.
\(A \mathbf{A}\) the government of England has a mixture or democratical in it, so the right is partly in the people.

Arbuthnot.
DEMOCRITUS, one of the greatest philosophers of antiquity, was born in Abdera, in Thrace, about the 80th Olympiad, or A.A.C. 466. His father, says Valerius Maximus, was able to entertain the army of Xerxes; and Diogenes Laertius adds, that the king, in return, presented him with some Magi and Chaldeans. From these he received the first part of is education; and, whilst yet a boy, learned theology and astronomy. He next applied to Leucippus, and learned from him the systems of atoms and a vacuum. His father dying, he and his two brothers divided the estate. Democritus made choice of that part which consisted of money, as being, though the least share, the most convenient for travelling; and it is said, that his portion amounted to 100 talents, which is nearly \(£ 20,000\) sterling. He now went to visit the priests of Egypt, from whom he learned geometry: and it is said, that he penetrated ever. into India and Ethiopia, to confer with the Gymnosophists. In these travels he wasted his substance, so that on his return he was maintained by his brother; notwithstanding which, he procured the highest honors of his country,
which he governed with unlimited sway and consummate wisdom. The magistrates of Ab dera made him a present of 500 talents, and erected statues to him, even in his lifetime; but, being naturaily more inclined to contemplation than delighted with public honors and enployments, he withdrew into solitude and retirement. IIe incessantly laughed at human life, as a continued farce, which made the inhabitants of Abdera think he was mad, on which they sent for Hippocrates to cure him; but that celebrated physician told the Abderians, that those who esteemed themselves the most healthy were the most distempered. Democritus died, according to Diogenes Laertius, aged 100, A.A.C. 361. He was the author of many books, which are lost; and from these Epicnrus borrowed his philosophy.

DEMOIVRE (Abraham), an eminent French mathematician, F.R.S. London, was a native of Vitri, in Champagne, and driven from his native country, as a Protestant, by the revocation of the edict of Nantes. He settled in London as a teacher of mathematics, and was particularly celebrated for his skill and accuracy as a calculator, for which the is referred to by Pope:

Sure as Demoivre, without rule or line.
He died in 1754, at the age of eighty-six. His works are, Miscellanea Analytica, 4to.; The Doctrine of Chances, or a Method of Calculating the Probabilities of Events at Play, 4to. ; and a work on Annuities; besides papers in the Transactions of the Royal Society.
\(\left.\begin{array}{l}\text { Demo'LiShi, v. a. } \\ \text { Demólisher, n. s. } \\ \text { Demon'ríron. }\end{array}\right\} \begin{aligned} & \text { Fr. demolir ; from } \\ & \text { Lat. demolari, i. e. de }\end{aligned}\) mass). To destroy a building; hence to destroy generally.

Notwithstanding which, it is now demolished, and all this glory lyeth in the dust, buried in its own ruins; there being nothing standing but a few broken walls, which seem to mourn their own approaching funerals.

Fuiler. Worthies of Devon.
I expected the fabrick of my book would long since have been demolished, and laid even with the ground.

Tillotson.
Red lightning played along the firmament,
And their demolished works to pieces rent.
Dryden.
Two gentlemen should have the direction in the demolition of Dunkirk.

Swift.
The damsel led him thro' a spacious hall,
Where ivy hung the half-demolished wall. Gay
The first care of the builder of a new system is to demolish the fabrics which are standing. Johnson.
The professor of divinity had been nick-named Malleus Hæreticorum ; it was thought to be his duty to demolish every opinion which militated against what is called the orthodoxy of the Church of England. Bp. Watson.

DE'MON, n.s.
Demo'nrac, n. s. \& adj.
Demoníacal, adj.
Demórian, adj \(\int \dot{a} \mu \omega \nu, \delta a t \omega, \delta a \eta-\) inferior deity ; a devil ; generally used in a bad sense.

Demonian spirits now, from the element
Each of his reign allotted, rightlier called
Powers of fire, air, water.
Vol. VII.
Milton.

Demoniack phrensy, moping melancholy.
II.

I felt him strike, and now I see lim fly :
Cursed demon! O for ever broken lie
Those fatal shafts, by which I inward bleed!
Prior.
Those lunaticks and demoniacks that were restored to their right mind, were such as sought after him, and believed in him. Bentley.
But ah ! those dreadful yells what soul can hear, That owns a carcase, and not quake for fear ? Damons produce them doubtless, brazen-clawed, And fanged with brass the damons are abroad.

Cowper.
I said not
You were the demon, but that your approach Was like one.

Byron.
DEMONA, VAL, a province of Sicily, which occupies the north-east portion of the island, extending from the strait of Messina to Catania, and having the Val de Mazzara to the west, and Val de Noto to the south. Its greatest width is sixty-five miles, the length 112 . To it belong the Lipari and other islands. The population is about 521,000 . It is mountainous and woody, being fertile only on the banks of the rivers. The chief productions are silk, hemp, flax, olives, lemons, oranges, figs, and currants; but sulphur abounds in the neighbourhood of Mount Ætna. The atmosphere is here cool and humid. The capital is Messina; the other chief towns are Melazzo, Cefalu, and Taormina.

DEMONO'CRACY, n.s. \(\Delta x i \mu \omega \nu\) and кparé \(\omega\). The power of the devil.

DEMONO'LATRY, r.s. \(\Delta a i \mu \omega \nu\) and \(\lambda a r \rho \varepsilon a \alpha\). The worship of the devil.

DEMONO'LOGY, n.s. \(\Delta \alpha i \mu \omega \nu\) and \(\lambda o ́ \gamma o s\). Discourse of the nature of devils. Thus king James entitied his book concerning witches.
DEMON'STRATE, v. \(a\). Fr. demonstrer ;
Demon'strable, adj.
Demon'strably, adv.
Demonstrátion, n.s. Span. demostrar, dimostrare ; from Lat. demonstrare, Demon'strative, adj.
Demon'stratively, \(a d v\).
Demonstra'tor, \(n\). s. \(d e\), and munstro, to show. To prove with cer-
Demonstrat'ory, \(a d j\). Jainty; to exhibit facts: demonstrable is that which nay be proved or exhibited : demonstration, the highest degree of proof; indubitable evidence: demonstrative, laving the power of indubitable proof, or of clear expression. Demonstratory, having a tendency to demonstrate. The other derivatives seem plain.

An argument necessary and demonstrative, is such as, being proposed unto any man, and understood, the man cannot choose but inwardly yield. Hooker.
What appeareth to be true by strong and invincible denonstration, such as wherein it is not by any way possible to be deceived, thereunto the mind doth necessarily yield.

Id.
Where is a probability on one side, and no appearance of reason to the contrary; that probability does the work of a demonstration.

Bishop Taylor.
He should have compelled his ministers to execute the law, in cases that demonstrably concerned the publick peace.

Clarendon.
Demonstratively understanding the simplicity of perfection, it was not in the power of earth to work then from it.

Browne.

We cannot demonstrate these things so as to shew that the contrary often involves a contradiction.

Tillotson.
Paint:ng is necessary to all other arts, because of the need which they have of demonstrative figures, which often give more light to the understanding than the clearest discourses.

Dryden.
No man, in matters of this life, requires an assurance either of the good which he designs, or of the evil which he avoids, from arguments demonstratively certain.

South.
Where the agreement or disagreement of any thing is plainly and clearly perceived, it is called demonstration.

Locke.
The grand articles of our belief are as demonstrable as geometry.

Glanville.
First, I demonstratively prove,
That feet were only made to move. Prior.
As for business, the world yet knows nothing of his (the Duke of Grafton) talents or resolution; unless a waymard, wavering inconsistency be a mark of genius, and caprice a demonstration of spirit. Junius's Letters.

Demonstration. See Logic.
DEMOSTHENES, the famous Athenian orator, was born at Athens, A.A.C. 381. He lost his father at seven years of age, and was placed under the conduct of guardians, who plundered his property and neglected his education. Demosthenes soon repaired this loss by his extraordindry abilities. He became the disciple of Isæus and Plato, and studied the orations of Isocrates. At the age of seventeen he gave a proof of his eloquence and abilities against his guardians, from whom he recovered the greatest part of his estate. His rising talents were, however, impeded by various natural defects, but which he overcame by dint of resolution and unwearied attention. He declaimed loy the seashore, that he might be used to the noise of a tumultuous assembly, and with pebbles in his mouth, that he might correct a defect in his speech. He confined himself in a subterraneous cave, to devote himself more closely to study ; and, to check all inclination to appear in public, he shaved one half of his head. In this solitary retirement, by the help of a glimmering lamp, he composed the greatest part of those orations which have since been the admiration of all ages, though his contemporaries and rivals inveighed against them, and observed that they smelt of oil. His abilities, as an orator, raised him to consequence at Athens, and he soon influenced all the decisions of the government. In this capacity he roused his countrymen from their indolence, and animated them against the encronchments of Philip of Macedon, In the battle of Cheronæa, his eloquence, however, could not supply the want of courage, and he saved his life by flight. After the death of Philip, he declared himself warmly against his son Alexander. When the Macedonians demanded of the Athenians their orators, Demosthenes reminded his countrymen of the fable of the sheep which delivered up their dogs to the wolves. By the prevalence of party, however, he was forced to retire to Trœzene and Ægina, where, it is said, he lived effeminately. When Autipater inade war against Greece, after the
death of Alexander, Demosthenes was publiely recalled from lis exile, and a galley was sent to fetch him from Figina. His return was attended with much splendor, and all the citizens crowded at the Piræus to see him land. But his triumph and popularity were short. Antipater and Craterus were near Athens, and demanded all the orators to bedelivered up into their hands. Demosthenes fled to the temple of Neptune, in Calauria; and when he saw no hopes of safety, he took a dose of poison, which he always carried in a quill, and expired on the day that the Thesmophoria were celebrated, A.A.C. 322. The Athenians raised a brazen statue to his honor, with an inscription, of which the following is a translation :

Si tibi par menti robur, vir magne, fuisset, Græcia non Macedæ succubuisset hero.
Demosthenes has been deservedly called the prince of orators, and has often been compared with Cicero, whose magnificent eloquence has scarcely the effect of the powerful simplicity of his master, as he was accustomed to style him. Indeed, no orator had ever a finer field than Demosthenes, in his Olynthiacs and Philippics, which are his capital orations. For to the greatness of the subject, and to that integrity and public spirit which breathe in them, they owe the largest portion of their merit.

DEMOTICA, or Dimotuc, a town of European Turkey, in the province of Romania; situared near the Maritsch, where a Greek archbishop resides, and the Christians have two churches. This town was the abode of Cliarles II. for some years. It is twelve miles south of Adrianople.

DEMPSTER of Court, the name formerly given, in Scotland, to the common executioner, or hangman.

DEMULCENT, adj. Lat. demutceo, from de, and mulceo to soften. Softening; mollifying; assuasive.

Pease, being deprived of any aromatick parts, are mild and demulcent in the highest degree ; but, being full of aerial particles, are flatulent, when dissolved by digestion.

Arbuthnot.
Demulcents, among physicians, medicines good against acrimonious humors. Such are the roots of marshmallows, white lilies, liquorice, and viper-grass, the five emollient herbs, \&cc.
 ra, delay. To doubt of: as a neuter verb, to delay a process; to pause ; doubt. A demurrer is defined in the extract from Burns. Demurrage is an allowance to masters of ships for delaying them in port.

Upon this rub the English ambassadors thought fit to demur, and so sent into England to receive directions from the lords of the council.

Hayward.
The latter I demur; for in their lnoks
Much reason, and in their actions, oft appears.
Milton.
0 progeny of heaven, empyreal thrones!
With reason hath deep silence and demur Seized us, though undismayed.

How can I e'er expect to have her,
Having demurred unto her favour?
Hudibras.

Running int demands, they expect from us a sudden resolution in things wherein the devil of Delphos would demur. Browne's Vulgar Errours.

To this plea the plaintiff demurred.
Walton's Angler.
Certainly the lighest and dearest concerns of a temporal life are infinitcly less valuable than those of an eternal; and consequently ought, without any demur at all, to bc sacrificed to them, whensoever they come in competition with them.

South.
There she kept her word :
But with rejoinders and replies,
Long bills, and answers stuffed with lies,
Demur, imparlance, and essoign,
The parties ne'er could issue join.
Swift.
There is something in our composition that thinks and apprehends, and reflects and deliberates, determines and doubts, consents and denies; that wills and demurs, and resolves, and chuses, and rejects.

Bentley.
All my demurs but double his attacks;
At last he whispers, Do, and we go snacks. Pope.
In criminal cases, not capital, if the defendant demur to an indictment, \&c., whether in abatement or otherwise, the court will not give judgment against him to answer over, but final judgment.

\section*{Burn's Justice.}

A demurrer signifies an abiding in point of law, upon which the defendant joins issue, allowing the fact to be true as laid in the indictment. Id.

DEMURE, adj. \& ย. n. \(\geqslant\) Fr. de bons mœurs;
Demurely, \(a d v\). from Lat. mores, Smanners. Of good Demureness, \(n\). \(s\). manners. Of good good sense; but now commonly mean affected modesty or gravity. See the admirable illustration from Dryden. Shakspeare uses demure as a neuter verb, and demurely for solemnly.

Lo! two most lovely virgins came in place,
With countenance demure, and modest grace.
Spenser.
There be many wise men, that have secret hearts and transparent countenances; yet this would be done with a demure abasing of your eye sometimes.

Bacon.
Esop's damsel, turned from a cat to a woman, sat very demurely at the board's end, till a mouse ran before her.

Id.
After a demure travel of rcgard, I tell them I know my place, as I would they should do theirs.

Shakspeare.
Put on a sober habit, Talk with respect, and swear but now and then, Wear prayer-books in my pocket, look demurely. Id.

Hark, how the drums demurely wake the sleepers!
Id.
Your wife Octavia, with her modest eyes,
And still conclusion, shall acquire no honour,
Demuring upon me.
Come, pensive nun, devout and pure,
Sober, stedfast, and demure.
Milton.
Next stood Hypocrisy with holy leer,
Soft smiling, and demurely looking down;
But hid the dagger underneath the gown.
Dryden.
A cat lay and looked so demure as if there had been neither life nor soul in her. \(\quad L^{\prime}\) Eistrange.

Her eyes having in them such a cheerfulness, as nature seemed to smile in them; though her mouth
and checks obeyed to that pretty demureness, which the more one marked, the more one would judge the poor soul apt to believe. Silney

Silent when glad; affectionate though shy ;
And now his look was most demurely sad;
And now he laughed aloud, yct none kncw why.
Beattie.

DEMY, in heraldry, an epithet for any charge borne half, as or a demy-lion rampant ; gules, name Mallory.

DEN. Sax. oen; Belg. denne; Teut.den; Ital. tanna. A cavern; a low place. As the termination of a local name, says Gibson's Camden, it may signify either a valley or a woody place; for the Saxon oen imports both.

And Jhesus seide to him, foxis han dennes, and briddis of hevene han nestis : but manne sone hath not where he schal reste his hed. Wiclif. Matt. 1.

This is the wandering wood, this Errour's den, A monster vile whom God and man does hate; Therefore I read beware. Spenser. Faerie Queene.

They here dispersed, some in the air, some on the earth, some in the waters, some amongst the minerals, dens, and eaves under the earth. Hooker.

What, shall they seek the lion in his den, And fright him there?

Shakspeare
Wbose attempt
At first against mankind sn well had tbrived
In Adam's overthrow; and led their march
From hell's deep-vaulted den to dwell in light.
Milton.
'Tis then the shapeless bear his den forsakes; In woods and fields a wide destruction makes.

Dryden.
DENARIUS, in antiquity, the chief silver coin among the Romans, worth, in our money, about \(7{ }_{4}^{3} d\). at \(5 s .2 d\). per ounce, or \(8 \frac{3}{4} d\). when bullion is high-priced. It was about the size of a six-pence, but much thicker, and had the emperor's head on the one side; the figures on the reverse were various. In our translation of the New Testament, the denarius is called a penny. See Matt. xxii. 19.

DENA'Y, n.s. A word formed between deny and nay. Denial; refusal.

DENBIGH, a borough, market, and fair town in the county of Denbigh, North Wales. It occupies the side of a steep limestone rock, the summit of which is crowned by the ruins of its unce noble castle, and commands an extensive prospect over the admired and fertile vale of the Clwyd. The population is returned at 3,786 . The old town lies at the foot of the rocky pedestal on which the castle rests, and the new town ex tends down the side of the hill in one long and handsome avenue, nearly a length of one mile. Here are a chapel of ease, a town hall, a public dispensary, an old established banking house, and two large inns. The corporation consists of an alderman, two bailiffs, a recorder and two coroners. Denbigh is contributing with Rhuthyn and other places in sending one member to parliament, and derived its charter from king Charles II. The parish church, usually called Whitchurch, lies one mile from the town, and con-
tains the tombs of Humphrey Llwyd, the antiquarian, Edwards, the Cambrian Shakspeare, and of Richard Myddleton, father of Ilugh, who brought the New River to London. The castle owes its greatness to Henry, earl of Lincoln, who also enclosed the town with walls, and, after passing through various owners, it was granted by Elizabeth to the earl of Leicester. This last proprietor raised here the walls of the first protestant church erected in Great Britain, but neglected to complete his design : the ruins stand upon the rock opposite St. Hilary's chapel. There is no event in the history of the fine castle of Denbigh more worthy of historic recollection than the gallant stand it made for king Charles, under the command of the brave William Salisbury. Near the lower termination of the main street, stand the remains of a Carmelite church desecrated into a malt-kiln, but still in excellent preservation.
DENBIGHSHIRE, one of six counties into which North Wales is divided. It presents a front to the Irish Sea on the north, is bounded on the east by Flintshire, Cheshire, and Shropshire. Merioneth and Montgomery shires enclose it on the south,-and Caernarvonshire constitutes its boundary on the west. Its dimensions are 39 miles in length, by an average breadth of 23 , and its area occupies 410,000 acres of. land. The population is calculated at 83,167 . The surface is hilly and inclined to a mountainous character, but the soil in many places remarkably rich. Two ranges of elevated hills pervade the county, and preserve a parallelism to each other during their lengths: one rises from the sea, and crossing over near Gwytherin, and thence to Cerig-y-druidion, falls in with the masses of Merionethshire; Moel Eiddyn, the most elevated summit in the chain, stands 1660 feet above the level of the sea. The Clwydian hills extend a length of thirty, miles and overhang the celebrated vale of Clwyd , whence the origin of their name. Rising near the sea at St. Asaph's, they culminate in Moel Fammau, and descend gradually towards the beautiful vale of Llangollen. The loftiest point, Moel Fammau, attains a height of 1845 feet above the sea, and this has been judiciously selected by the Cambrians as the site of a handsome obelisk, erected to commemorate the happy accomplishment of a fifty years' reign by king George III. The vales of Clwyd, Llanrwst, Llangollen, and the maritime portion of the county, are both beautiful and fertile, while the higher grounds, occupying one-third of the whole surface, are, from neglect, in a very unproductive state. The six hundreds into which the county is divided are called Bromfield, Chirk, Isaled, Isdulas, Yale, and Rhuthyn: these are ecclesiastically partitioned into fifty parishes, most of which are in the diocese of St . Asaph. The towns are larger than those of the other Welsh counties; Wrexham is the most populous, Denbigh an ancient borough, Rhuthyn the assize town, also a contributing borough, besides Llanrwst, Abergelle, and Ruabon, in which weekly markets are held. The Dee is the noblest river which waters the county, but the Conway is the most useful, being navigable for twelve miles
from its embouchure : the others are the Elwy, Aled, Alen, Clwyd,and the Ceiriog, which separates England from Wales in the valley of C"hirk. The principal lakes are the Elwy, Aled, and Conway, in which the rivers bearing their names respectively originate. These all abound in fish, but are devoid of the picturesque scenery which characterizes the other Welsh pools. The oinly artificial navigation established here is a branch of the Ellesmere canal, which is fed by the river Dee, crosses the vale of Llangollen by an aqueduct of twenty-one arches, called Pont-y-cysylte, and passing to Chirk is conducted over the Ceiriog by a second aqueduct of nine stonc arches. Iron is manufactured at Ruabon, where, as well as at Chirk, coal of a superior quality is worked. The woollen manufacture is spread very generally over the county: the slate trade exists only on the borders, but agriculture exerts a universal dominion here. But few remnants of military antiquity are found here: of these the castles of Denbigh and Rhuthyn are the most interesting; and, of the fev monastic establishments, the abbeys of Valle-Crucis and the fine church at Denbigh, now desecrated into a malt-kiln, are the principal. The county returns two members to parliament, and the boroughs of Wrexham, Holt, Denbigh, and Rhuthyn a third. The ancient family of Fielding enjoy the earldom of Denbigh.

DENDERA, a town of Egypt, ou the west side of the Nile, at the edge of a small but fertile plain, about half a mile from the river. Near the town are remarkably magnificent ruins, supposed of an ancient temple of Serapis, or Venus. The portico contains twenty-four columns, in three rows, each above twenty-two feet in circumference, thirty-two feet high, and covered with hieroglyphics. The great peculiarity consists in the square capitals, with a front face of Isis on each side, the effect of which, though singular, is by no means unpleasing. All the walls and ceilings of the interior are covered with sculptures, which display the highest perfection of Egyptian art. They have originally been covered with paint, the brilliant colors of which partially remain. The subjects are various; religious ceremonies, priests, offerings, deities, and human sacrifices. Isis, with Osiris behind her, forms the grand theme of representation. There are also numerous astronomical figures on the ceilings; of these two zodiacs have, in a particular degree, attracted the attention of the learned, who have been much divided as to the date when they were formed. De la Lande would fix their period at 3000 years ago, or 1200 before the Christian era; but Mr. Hamilton is disposed to consider them as much more modern, and as protably formed in the reign of Tiberius. By the side of the great temple is a smaller one, supposed to have been dedicated to Typhon, whose figure is displayed on the capitals; but the chief object of adoration seems to he an infant figure, in which may be distinguished the attitude and character of the young Harpocrates. Mr. Hamilton is of opinion, that several of those structures may have been raised in the time of the Ptolemies; and the names of Tiberius and other Roman emperors, which he found in the inscrip-
tions, prnve that repairs were made at that period. The whole of these edifices, with the Exception of one propylon, is contained within a square of 1000 feet, surrounded by a brick wall. Within the enclosure, a great number of modern buildings have been erected, so as often to hide them entirely from view.

Dr. Richardson, one of our latest travellers in the east, thus describes this spot: ' The scene of ruins is nearly a mile square, and consists of houses of unburnt brick, that lave been repeatedly overturned, and at every restoration, the new houses have been built on the top. The first thing that attracts the eye of the traveller, on the edge of this black field of ruins, is a small square stone building, with four columns; it has an unfinished appearance,' and is without hieroglyphics. It is difficult to say for what purpose this edifice was intended; it looks like a porter's lodge, or habitation for the guardian of the precincts of the temple: and I should not have mentioned it at all, had it not been constructed of the same species of sand-stone with the temple itself; and as these must have been brought thither from a great distance, and at a great expense, it is prolable that this insignificant fabric was connected with it for religious purposes. Advancing from this, for several hundred yards among the brick ruins, we came to an elegant gateway, or propylon, which is also of sand-stone, well hewn, and completely covered with sculpture and hieroglyphics, remarkably wcll cut. Immediately over the centre of the doorway is the beautiful Egyptian ornament, usually called the globe, with serpent and wings, emblematic of the glorious sun poised in the airy firmament of heaven, supported and directed in his course by the eternal wisdom of the Deity. The sublime phraseology of Scripture, ' the sun of righteousness shall arise with healing in his wings,' could not be more accurately, or more emphatically represented to the human eye, than by this elegant device. To this succeed representations of Osiris, Isis, and their son Horus, with processions of priests and people advancing to pay their homage, and presenting their offerings on their knees. Passing under the gateway, we find the principal devices on each side of the passage to be the sceptre of Osiris alternating with a figure, representing the ietter T, suspended by a handle; or, to speak more correctly, with a handle attached to it \(\frac{1}{\gamma}\); it has been called the handled cross, the key of the Nile, and is honored with other designations.' Vol. i. 185-187.
Dr. Richardson considers this as the sign, or letter Thau, mentioned in the Vulgate Latin version of Ezekiel ix. 4; and there intimated as being the sign of life and salvation to those who received it. Some of the female figures are admirably executed, and exhibit a remarkable mildness of feature and expression. The remains of three temples still exist. The largest of these is in a state of fine preservation, and is emphatically termed the temple of Dendera. It is minutely described by Dr. Richardson, whose account, as well as his disquisition on Egyptian deities, will not easily admit of abridgment. We
only remark, that he controverts the commonty received opinion, tlat the splendid sculptures in the pro-naos, which have lately arrived at Paris, are a zodiac; and in this opinion lie is supported by some eminent French literati. He had an opportunity of comparing the original with part of the great Frencl work on Esypt; to the elegant execution of which he gives the just tribute of praise, but he announces it to be extremely incorrect in every part. It is 242 miles south of Cairo, and forty-eight S. S. E. of Girge.

IOENDERMONDE, a handsome town of the Netherlands, with a strong citadel. It is surrounded by marshes and fille meadows, which the inhabitants can lay under water when they please, and seated at the conflux of the Dender and Scheldt, fourteen miles east of Ghent, and nineteen south-west of Antwerp. Inhabitants 5000. In 1667 the town was besieged by Louis XIV. with an army of 50,000 men, but he was obliged to retreat with precipitation, the inhabitants having opened the sluices. The vicinity is very fertile.
DENDRACHATES, in natural history, from \(\delta \varepsilon v i o o v\), a tree, and a xarıs, an agate; the name used by the ancients for an extremely elegant and beautiful species of agate, the ground of which is whitish, variegated with veins of a brighter white. These veins are beautifully disposed in a number of various figures; but generally in many concentric irregular circles, drawn round one or more points. It is common also, in various parts of this stone, to find very beautiful delineations of trees, mosses, sea plants, and the like, so elegantly expressed, that many have erroneously taken them for real plants included in the substance of the stone; whence the name.

DENDRO'LOGY, n. s. \(\Delta \varepsilon ́ v \delta \rho o ́ v\) and \(\lambda o \gamma o \varsigma\). The natural history of trees.

DENDROMETER, from \(\delta \varepsilon \nu \delta \rho o v\), a tree, and \(\mu \varepsilon \tau \rho \varepsilon \omega\), to measure; an instrument so called from it3 use in measuring trees. This iustrument

consists of a semicircle \(\mathbf{A}\), divided into two quadrants, and graduated from the middle; upon the diameter B there hangs a plummet L for fixing the instrument in "a vertical position; there is also a chord D parallel to the diameter, and a radius E , passing at right angles through the diameter and chord. From a point on the radius hangs an altimeter C , between the chord and diameter, to which is fixed a small semicircle G, and a screw, to confine it in any position. The altimeter, which is contrived to form the same angle with the radius of the instrument, as the tree forms with the horizon, is divided from its centre both ways into forty equal parts; and these parts are again subdivided into halves and quarters. Upon the small semicircle G, on which is accounted the quantity of the angle made by the altimeter and radius, are expressed degrees, and the radius is numbered with the same scale of divisions. There is also a nonius to the small semicircle, which shows the quantity of an angle to every five minutes. There is also a groove in the radius, that slides across the axis, by means of a screw I, working between the chord and semicircle of the instrument ; and this screw is turned by the key O . The principal use of this instrument is for measuring the length and diameter of any tree, perpendicular or oblique, to an horizontal plane, or in any situation of the plane on which it rests, or of any figure, whether regular or irregular, and also the length and diameter of the boughs, by mere inspection.

DENDROPHORI, from \(\delta \varepsilon \nu \delta \rho o v\), a tree, and \(\phi £ \rho \omega\), to bear; tree-bearers. In antiquity, priests who marched in procession, carrying branches of trees in their hands, in honor of some god, as Bacchus, Cybele, Sylvanus, \&c. The college of the dendrophori is often mentioned in ancient marbles; and we frequently see, in basso relievos, the bacchanals, represented as men, carrying little shrubs or branches of trees.

DENHAM (Sir John), an eminent English poet, was born in Dublin in 1615; but he received his education in England. In 1641 ne published a tragedy, called The Sophy, which was much admired; and, in 1643, wrote his famous poem called Cooper's Hill, which, according to Dryden, will ever be a standard of good writing. Denham was sent ambassador from Charles II. to the king of Poland; and at the Restoration was made surveyor-general of lis buildings, and created knight of the Bath. On obtaining this post, he is said to have 'renounced his poetry for more important studies; though he afterwards wrote a copy of verses on the death of Cowley. He died at his office, in Whitehall, in 1668.

Denham (Dixon, lieutenant-colonel), eminent by his expedition to central- Africa, was born at London in the year 1786, and, after completing his studies at school, was placed with a solicitor; but, in 1811, he entered the army as a volunteer, and served in the peninsular wars. After the general peace he was reduced to half pay, and, in 1819, was admitted to the senior department of the Royal Military College at Farnham. In 1823-4 he was engaged, in company with captain Clapperton and doctor Oudney, in exploring the central regions ot Af-
yica. See Clapperton. His courage, address, nirmness, perseverance and moderation, his frank energetic disposition, and his conciliating manners, peculiarly fitted him for such an undertaking. The narrative of the discoveries of these travellers was drawn up by Denham. In 1826 he proceeded to Sierra Leone, as superintendant of the liberated Africans, and, in 1828, was appointed lieutenant-governor of the colony; but on the nintl of June, in the same year, ne was attacked by a fever, and died after an illness of a few days.

DENIAL, Denier. See Deny.
DENIE'R, n.s. Lat. denarius. It is pronounced as deneer, in two syllables. A small denomination of French money; the twelfth part of a sous.

You will not pay for the glasses you have burst? -No, not a denier.

Shakspeare.
Denier is a small French copper coin, of which twelve make a sol. There are two kinds of deniers, the one Tournois, the other Parisois, the latter of which is worth a fourth part more than the former. Denier is also the name of a small weight, used in assaying silver. Like the carat, used in trying and expressing the fineness of gold, it is rather imayinary than real, as the whole mass of silver, whatever be its weight, is supposed to be divided iuto twelve deniers ; and as many twelfth parts, as it contains of pure silver, it is called silver of so many deniers fine. Thus sterling silver, of eleven deniers fine, is a mixture, of which eleven parts are pure silver and one part copper. Each denier is supposed to be divided into twenty-four grains; and thus, estimating pure silver at \(6 s\). per oz., an ounce of sterling silver is worth \(5 s .6 d\). ; and the fineness of any quantity of silver can be calculated with the utmost exactness to half a grain in purity, or half a farthing in value per oz. The deniers and grains, used by the assaymasters for this purpose, are real weights, made with the most scrupulous exactness in the above proportions to each other.

DE'NIGRATE, v. a. \} Lat. denigro, from Denigra'tion, n. s. \}de and nigro. To blacken; to make black.

DEN'IZEN, or \(?\) Either, says Minsheu, Denizon, v.a. \& n.s. \(\}\) from old Fr. donaisson, Deniza'tion, n. s. giving (liberty); or from Dane's son, the son of a Dane, according to Dr. Johnson, from the Danes being made free by Alfred. A freeman; a stranger made free; (the Welsh is dinasddyn, a man of the city; and dinesydd, free of the city). To make free.

Denizen is a British law term, which the Saxons and Angles found here and retained. Davies.

That the mere Irish were reputed aliens, appears by the charters of denization, which in all ages were purchased by them.

Id.
Pride, lust, covetize, being several
To these three places, yet all are in all ;
Mingled thus, their issue is incestuous;
Falsehood is denizened, virtue is barbarous.
Donne.
Denizen, in law, an aiielı made a subject by the king's letters patent; otherwise called donaison, because 'his legitimation proceeds ex
donatione regis, from the king's gift.' A denizen is in a kind of middle state between an alien and a natural-born subject, and partakes of both of them. He may take lands by purchase or devise, which an alien may not ; but cannot take by inheritance: for his parent, through whom he must claim, being an alien, had no inheritable blood; and, therefore, could convey none to the son: ana, upon a like defect of blood, the issue of a denizen, bern before denization, cannot innerit to him; but his issue, born after, may. A denizen is not excused from paying the alien's duty, and some other mercantile burdens. And no denizen can be ot the privy council, or eitner house of parliament, or have any office of trust, civil or military, or be capable of any grant of lands, \&c. from the crown.

DENMAN (Jr. Thomas), an eminent physician and medical writer, was born at Bakewell, in Derbyshire, in 1733 , where his father was a respectable apothecary; on whose death, he was, for some time, an assistant to his elder brother. He afterwards came to London, and attended at St . George's Hospital : he then entered the navy, as surgeon's mate, and in 1757 , was made surgeon of a ship. In 1763 he quitted the navy, after having served in the expedition against Belleisle. His first publication was in London, An Essay on Puerperal Fever, which was well received; but his professional prospects were so little satisfactory, that he was happy to obtain the situation of surgeon to one of the royal yachts, which brought nim in a salary of \(£ 70\) a-year, without interrupting his practice. He was shortly after (1770) chosen joint-physician and man-midwife to the Middlesex Hospital, and gave lectures on the latter branch of practice. He thus slowly emerged from olscurity into the most extensive practice: was appointed licentiate in midwifery of the College of Physicians in 1783, and, six years after, an honorary fellow of the Royal Society of Edinburgh. After the death of Dr. William Hunter, he was considered as the most eminent obstetrical practitioner in the metropolis. His great work, is The Introduction to the Practice of Midwifery, which, with his Aphorisms for the Use of Junior Practitioners, claims a place in every medical library. In the decline of life, Dr. Denman relinquished the more laborious part of his practice to his son-in-law, Sir Richard Croft, and became a consulting physician. His death, which was sudden, took place November 26th, 1815.

DENMARK, one of the most ancient monarchies in Europe, comprehends the peninsula of Jutland, Sleswick, Holstein, and Lauenburg, on the continent; and the islands of Zealand, Funen, Langeland, Falster, Laaland, Bornholm, Moen, and several others in the Baltic. Denmark Proper is that part of Scandinavia which formerly went by the name of Cimbrica Chersonesus. It is every where bounded by the sea, except on its southern frontier in Holstein, and stretches northward from about \(53^{\circ} 30^{\prime}\) to \(57^{\circ} 30^{\prime}\) of lat., i.e. from the right bank of the Elbe, to the extreme point of Jutland. This main-land tract is divided into three divisions, of which Holstein forms the southern, Sleswick the central, and Jutland the northern province, each
being governed by laws and institutions, occasionally very dissimilar; and contains, togethe with the adjacent islands, a territory of about 22,000 square miles, and a population of about 1,635,000 inhabitants, thus distributed :

Iceland, the Faroe Islands, and the settlements of Denmark in the East and West Indies and Africa, are supposed to add about 155,000 more to the population in the following proportions:
\begin{tabular}{|c|c|}
\hline Iceland & 50,000 \\
\hline Faroe Isles & 5,500 \\
\hline East and West Indies and Afnca & 100,000 \\
\hline & 155,50 \\
\hline
\end{tabular}

The dismemberment of Norway from Denmark, which took place in 1814, abstracted full onethird of her population and strength, that ancient possession of the Danish crown being estimated to contain at that period 900,000 inhabitants. Denmark received from Sweden, in exchange, Swedisl Pomerania, which she again parted with to Prussia for the duchy of Lauenburgh, and a sum of money.

Her remaining territory is, however, compact, and well situated for commerce. The aspect of the continental part is flat and undiversified, containing neither mountains nor rivers of any magnitude, but it is in an excellent general state of cultivation; and, in the character of its climate and rich pasturage, very much resembling our own country.

It is largely indented by the sea, and possesses numerous creeks and bays, as well as internal lakes, but only one canal of importance, that of Kiel. This will admit vessels of 120 tons burden, and extends from the Baltic to the Eyder at Rendsburg, where the river becomes navigable, thus opening a communication between the two seas, or through 105 miles of territory. Its length is twenty-two English miles. Its breadth at top 100 feet, at bottom fifty-four, and depth ten feet. It was begun in 1777, and completed in 1785, at an expense of \(£ 800,000\) sterling. During the late war between 3000 and 4000 vessels annually passed through it, but in time of peace the number is diminished. It has much improved the internal trade of Sleswick and Holstein.

The revenue of Denmark fluctuates between \(£ 1,700,000\) and \(£ 2,000,000\), about \(£ 120,000\) of which arises from the dues of the Sound: the national debt is nominally \(£ 15,000,000\). The military force somewhat exceeds 20,000 men; the naval force is only 4000 men in service, but capable of being increased with great facility, as there are between 14,000 and 15,000 registered seamen. The seafaring people of the kinydom are altogether little short of 50,000 .

Theie are no mineral productions in Denmark of any commercial importauce; salt is made in considerable quantities from the lime springs of Oldesloe; and a little coal is found; but turf is the great article of fuel. Both timher and salt are imported largely. The agricultural produce cousists of wheat, in small quantity, barley, oats, beans, peas, and potatoes; the last very largely. Excellent madder also abounds, and hops, flax, hemp, and tobacco, are partially cultivated. Gardens are seldom seen except in Arak, the great kitchen garden of the capital. The horned cattle and horses are very superior; in Holstein are some of the best working breeds of both, that are known : the exportation of horses is said to amount to 1200 or 1500 annually, valued at from \(£ 160,000\) to \(£ 200,000\) sterling. Milch cattle are also well managed here: butter and cheese abound: tne sheep, though recently improved by the introduction of merino, and other breeds, are still inferior. 'There are now better meadows, and more hedges and walls in Denmark,' says Mr. Louden, 'than in any country of Germany of the same extent.' Here was founded, in 1686 , the first veterinary school in Germany. 'Artificial grasses and herbage plants enter into most rotations, and rye-grass is perhaps more sown in llolstein than any where, excepting in England. In a word, considering the disadvantages of climate, the agriculture of Denmark is in a more advanced state than that of any other kingdom of (iermany.' Fishing in the bays and creeks is conducted on a large scale; the most important branch is the lierring fishery; beds of oysters and muscles are not uncommon : and fresh water fish abound in several arms of the Baltic, so little is that sea impregnated with salt.

Denmark bas pursued, a studiously pacific policy for more than half a century, and the consequence, until nearly the close of the late was of the Frencl revolution, were the uninterrupted improvement and extension of her commerce. In 1800 she possessed above 2000 merchant men, 20,000 seamen, and 250,000 tons of shipping. During our second war with France these were in a state of rapid increase, but the seizure of her navy in 1807 by Great Britain, and the consequent breach between the two countries, permitted her no longer to carry oin a neutral trade, and she has scarcely to the present time recovered the blow. The chief intercourse of the Danes is with the adjacent coasts of the Baltic, with England, Holland, France, and the Mediterranean.

They have found the benefit of a general carrying trade so considerable, that they have pushed it with success, both in the Mediterranean (where their flag is respected by the Barbary states, equally with that of stronger powers), and to the most distant parts of the globe. The whale fishery, likewise, employs a considerable portion of their seamen, and in the West India trade they have about seventy sail of merchantmen. Their connexion with the Guinea and Gold coasts has been in a great measure discontinued since their honorable abolition of he slave trade in 1803.

The principal exports from Denmark to Eng-
land are skins, raw hides, and, when our corr laws permit, oats. Uutil lately the most extensive part of the trade between the two countries was timber from Norway. The imports from England are manufactured articles, and coronial produce. The duties on the importation of foreign commodities into Denmark are high, hut all kinds of merchandise, with the exception of the following articles, are allowed to be imported; viz. sugar, either raw or refined, coming from European ports, porcelain, colored delf, woolcards, roasted coffee, printed calicoes, and some kinds of woollen cloth.

In 1797 the government laid open the trade to the East Indies (previously monopolised by a Darish East India Company), to all private merchants. Similar liberal regulations have been made with regard to intercourse with their West Indian possessions. The Icelandic trade was laid open by an ordinance from the king towards the close of 1816. The exports of Denmark to this distant part of her dominions are grain, wine, brandy, tobacco, and spices, together with linen and woollen cloths, timber, and hardware. The vessels generally sail thither in May and June, and return with salt fish, whale oil, coarse cloth, woollen stockings, gloves, hides, skins, feathers, and Eider-down. All the necessary supplies for the Greeuland colonies are transmitted from the parent country; and oil, whalebone, seal-skins, and other articles, furnished by the fisheries in the adjacent seas, are taken in return. The manufactures of Denmark are confined to the supply of her own most common wants: and it is necessary to import liardware, printed cottons, and linen. The porcelain manufacture is carried on by the government. A late return of the sugar refineries in Denmark makes their number forty-six ; that of paper mills twenty-two; iron foundries four.

The constitution of Denmark was of a free Gothic original. The convention of the estates, even including the representatives of the hoors or peasants, elected the king, having still a regard to the sor of their late monarch, whom, however, they made no scruple of setting aside, if they deemed him unworthy of the royal disnity. The convention enacted laws; c:onferred the great offices of state ; debated all affairs relating to coinmerce, peace, war, and alliances; and occasionally gave their consent to the imposition of necessary taxes. The king was only the chief magistrate of the people. His business was to see justice administered impartially; to command the army in time of war ; to encourage industry, religion, arts, and sciences; and to watch orer the interests of his subjects. But, by the revolution, in 1660, the constitution was new-modelled, and it was declared that 'the hereditary kings of Denmark and Norway should be in effect, and ought to be esteemed by their subjects, the only supreme head upon earth; they shall be above all human laws, and shall acknowledge, in all ecclesiastical and civil affairs, no higher power but God alone. The king shall enjoy the right of making and interpreting the laws; of abrogating, adding to, and dispensing with them. He may alsn annul all the laws which either he or his predecessors
shall have made, ewcepting this royal law, which must remain irrevocable, and be considered as the fundamental law of the state. He has the power of declaring war, making peace, imposing, taxes, and levying contributions of all sorts,' \&c. \&c. It is finally added, 'If there is any thing further which has not been expressly specified, all shall be comprised in the following words:-The king of Denmark and Norway shall be the hereditary monarch, and endued with the lighest authority; insomuch that all that can be said and written to the advantage of a Christian, hereditary, and absolute king, shall be extended under the most favorable interpretation to the leereditary king or queen of Denmark and Norway,' \&c. To this singular step the representatives of the people were urged at that time by the tyianny of the nobles. They found a hundied tyrants, as a late political bishop said, a hundred times worse than one. The nobility were obliged to make a sumilar surrender of their peculiar privileges.
The established religion is the Lutheran and Episcopal. The reformation was introduced in 1536, the crown taking possession at that period of the revenues of the church, and depriving the bishops of their temporal power: they lave at present full spiritual jurisdiction, but no votes in the legislature; and there exists a complete toleration of dissenters. There is a university at Copenhagen on a large scale, and another of smaller funds at Kiel. There is also a college with four professors at Odensee in Funcn; and Danish literature, though not of general pretensions, has yielded in modern times some distinguished names. We need only mention those of Niebuhr and Le Brun.
Saxo Grammaticus, the most ancient and best of the Danish historians, derives the name of Denmark from Dan the son of Humble, the first king, and Mark, a word signifying a country, in several dialects of the Teutonic; according to which etymology, the word Denmark signifies the country of Dan. He is said to have flourished about A.A.C. 1038 or 1050. Almost all historians agree that he was the son of Humble, a native of Zealand. His possessions and influence were very considerable, not only in Zealand, but in the islands of Langeland and Mona. It was his courage, however, and skill in the art of war, that induced the inhabitants of Denmark to choose him for their king. He was called to the assistance of the Jutlanders upon an irruption of the Saxons into their territories, and promised the sovereignty of the country if he drove out the enemy. On this he raised an army, gained a complete victory over the Saxons, and obliged them to leave the country; and he was accordingly elected king. The history of Denmark, for several ages after Dan, is filled with fabulous exploits of heroes, encounters with giants, dragons, \&c. One of their kings named Frotho, who reigned about A. A. C. 761, is said to have conquered Britain, Sleswick, Russia, Pomerania, Holstein, \&c. an assertion which cannot easily be credited, considering the difficulty which succeeding warriors, even the greatest in the world, found to subdue the inhabitants of those countries. It is certain, how-
ever, that anciently the kingdom of Denma:k made a much more conspicuous figure than it does at present. The Danes appeat to have had a very considerable naval force almost from the foundation of their empire; and the conquests they undoubtedly made in our island are certain proofs of their valor. Their chief enemies were the Swedes, Norwegians, and Saxons; especially the first. With one or other of these nations almost perpetual war was carried on. The kingdom was also often rent by civil dissensions, which the neighbouring monarchs did not fail to take advantage of, in order to reduce the kingdom of Denmark under their subjection. As in general, however, neither party came off with much advantage, the history of these wars affords nothing interesting.

One of the most illustrious of the kings of Denmark was Canute II., the son of Sueno I., surnamed the Great, from his wisdom as well as his conquests. He was at once king of Denmark, Norway, and England. See Canute and England. He also conquered a great part of Sweden. Alstedius ranks him as the sixty-seventh monarch of Denmark. Between his son ('anute III. and Sueno III. there was a succession of ten kings of whom little important is recorded. One of the greatest of the Danish monarchs, after Canute the Great, was Valdemar I. who obtained the throne in 1157; having defeated and killed the usurper Sueno III. after a civil war of ten years. He maintained a long war with the Vandals, whose power he at last entirely broke, and reduced under his subjection the island of Rugen. He also proved victorious over the Norwegians, so that their king and queen came in person to submit to him. In 1165, he laid the foundations of the city of Dantzic; which, though it has siuce become a place of very great consequence, consisted at first only of a few poor fishermen's huts; but the privileges and immunities conferred upon it by this monarch, soon proved the means of its becoming a flourishing city. In 1169, he entirely subdued the Courlanders ; and, soon after, was invested with the duchy of Holstein by the emperor Frederic Barbarossa. He is said to have been poisoned by a quack medicine, given with a design to recover him from a distemper with which he was seized in 1182, after reigning twenty-eight years. In 1195, Canute VI., Valdemar's soll and successor, caused a muster to be made of all the men fit to bear arms in his dominions; and ordered each province to fit out its proportion of shipping, every way equipped, and ready for action. The whole force of Denmark, at that time, consisted of 670 ships of war, besides the squadrons supplied by vassals, tributary states, and allies. The nuniber of the land forces is not mentioned. In the reign of this prince, the Danish dominions were enlarged by the conquest of Stromar, and the districts of Lubec and Hamburgh, formerly Nordalbingia, but now included under the general name of Holstein. He died in 1203, and was succeeded by Valdemar II. who proved a very warlike prince. In 1211 he founded the city of Stralsund. He built the castle of Droningholm an memory of his queen, that name importing the Queeu's Island; and
gained in 1218 a victory over the "Livonians near the fortress of Valdemar, which was thus named from him. The flourishing state in which Denmark was at this time, appears from an estimate of the revenues of the tributary provinces, which is still extant. He kept for constant service 1400 great and small ships, each of which at a medium carried 121 soldiers; making the whole of the standing forces, besides garrisons, consist of 169,400 fighting men. In 1223, however, Henry Palatine, earl of Swerin, a German prince, having been deprived of part of his dominions by Valdemar, surprised and carried off the king himself, and kept him close prisoner for three years. The conditions on which he at last obtained his liberty were,--that he should pay a large sum of money; relinquish Holstein, Swerin, Hamburgh, and all his possessions on the other side of the Elbe; and solemnly swear that he would never take any measures to punish Henry or his associates. This treaty was signed on the 25 th of March 1226. Besides these territories, which Valdemar was obliged to cede by treaty, many tributary princes took the opportunity of his captivity to recover their liberty; and among the rest the inhabitants of Lubec revolted, and entered into alliance with Albert, duke of Saxony, against him. Valdemar, however was not of a disposition to submit tamely to such treatment. He obtained a dispensation from the pope to break his engagements with Henry, and immediately entered Holstein at the head of a numerous army. Here he was met by several German princes; and a desperate engagement ensued. Valdemar at first had the advantage; but, being wounded in the eye, his troops were at last defeated with great slaughter. It does not appear that he was ever able to revenge himself, or to recover the dominions he had lost. Instead of this he was obliged, in 1228 , to cede Lauenburg to the duke of Saxony, who had already seized on Ratzburg and Molna. Soon after his eldest son, Valdemar, was accidentally killed as he was hunting, and his two other sons married the daughters of his two greatest enemies. Abel, the third son, married the daugheer of Adolphus duke of Holstein; and Eric, the ser nd, the duke of Saxony's daughter. These misfortunes are supposed to have hastened his death, which happened in April, 1242; and on this the kingdom was divided between the two young princes, a war commencing the very next year between them. A peace was concluded the year following, and war renewed the year after. In 1250 Eric paid a visit to his brother Abel, entreating his mediation between him and the princes of Holstein, with whom he was then at war. Abel received him, in appearance, with great kindness, but in the mean time laid a plan for murdering him at sea : this was effected, and Abel became master of the whole kingdom. But he did not long enjoy the sovereignty thus wickedly obtained. He was tormented by his own conscience, especially when he found, among his brother's papers, one by which he was left heir to the whole ingdom on the decease of Eric, and many kind expressions with regard to himself. He was at last killed in a battle with his own subjects in 1252 .

From this time to 1333 the kingdom of Denmark gradually declined. Usurpers established themselves in different provinces; while the kings of Sweden did not fail to avail themselves of the distracted state of the Danish affairs. In 1333 died Christopher I1., who possessed only the cities of Scanderberg in Jutland and Neoburg in Fionia, with some few other inconsiderable places, of all the hereditary dominions of Denmark. Halland, Holbeck, Calemburg, and Samsoe, were held by Canute Porsius; Schonen, Lystre, and Bleking, by the king of Sweden, to whom they had been lately sold: Jchn earl of Wagria had the jurisdictions of Zealand, Falstre, Laaland, and Femerin : Gerhard, those of Jutland and Fionia ; and Lawrence Jonea those of Langeland and Arras. Atter the death of Christopher an interregnum of seven years, or according to Marcel of fifteen, ensued. The first attempt for the sovereignty was made by Otho, second son to the late king, who tried to drive Gerhard out of Jutland, but was taken prisoner, and closely confined by Gerhard. The king of Sweden next wrote to pope Benedict XIII., beseeching his Holiness to confirm to him the provinces of Schonen, \&cc., which he possessed; and to allow him to subdue the rest of the kingdom, which was now usurped and rendered miserable by a set of petty princes, who knew not how to govern. To influence the pope he promised to hold this kingdom of him, and to pay him the usual tax collected by the church. This request, however, was refused. Valdemar of Sleswic, nephew to Gerhard, had formerly been elected king; but, on account of the superior influence of Christopher, had never enjoyed the sovereignty. He now, at the instigation of his uncle, resumed his ambitious views. Several of the nobility also cast their eyes on young Valdemar, Christopher's son. But, while these two princes were laying scliemes to aggrandise themselves, the unhappy Danes were distressed by exorbitant taxes, famine, and pestilence, which destroyed more than half of the inhabitants. In the midst of these calamities Gerhard, sovereign of Jutland, proposed to his nephew Valdemar an exchange of territories, which he believed would prove favorable to the designs of the latter on the crown. A treaty for this purpose was actually drawn up and signed ; but the inhabitants, notwithstanding their distressed situation, so highly resented their being disposed of like cattle, from one master to another, that they refused to pay the taxes. Gerhard resolved to compel them, and therefore led 10,000 men, whom he had levied in Germany. into the heart of the province. Providence, however, now raised up an enemy to this tyrant. One Nicholas Norevi, a man greatly esteemed for his courage, public spirit, and prudence, beheld with sorrow the condition to which Denmark was reduced. He had long meditated various projects for its relıef. Young Valdemar, Christopher's son, had a number of adherents in the kingdom. his most dangerous enemy was Gerhard; and, if he could be removed, the Jutlenders would at least be free from an oppressor, and might choose Valdemar, or any other they thought proper, for their sovereign. Collecting, therefore, a body of chosen horse he marched in the night to ilander-

\]
shusen, where Gerhard had fixed his head-quarters; and, having forced open the tyrant's apartment, immediately put him to death. He then fled with the utmost expedition, and, though overtaken by a party of the enemy's horse, forced his way \(t\) brougli them and escaped. Gerhard's sons, hearing of their father's death, retired into Holstein, leaving the army, composed chiefly of Holsteiners, to be cut to picces by the enraged peasants, who fell upon them from every quarter. Still, however, the Holsteiners kept possession of the citadels and fortified places, from which Nicholas resolved to dislodge thenı. He accordingly attacked and took Landen, a oastle situated on the river Scherne: After which he laid siege to Albeg; but the garrison making an obstinate defence, he turned the siege into a blockade, by which they were soon reduced to great extremity. The governor sent an express to Gerhard's sons, acquainting them with the impossibility of his holding out more than a few days, without being relieved. They marched to his retief, and came \(11 p\) with Nicholas just as the governor was ready to surrender, but were defeated; though Nicholas was unfortunately killed in the engagement. Jutland having thus regained its liberty, the rest of the kingdom followed its example. Zealand first openly declared itself. Here Henry, Gerhard's son, maintained several garrisons; and resolved to defend his possessions in spite of all the power of the inhabitants. For this purpose he drew together an army; but in the mean time a tumult arose among the peasants, on account of a Danish nobleman slain by the Holsteiners. By this the people were so irritated that, falling upon the Holsteiners, they killed 300 of them, drove the rest out of the island, and chose Valdemar III. Christopher's son, for their sovereign. The Danes now resumed their courage ; the lands were cultivated, the famine and pestilence ceased, and the kingdom began to flourish as formerly. Matters continued prosperous till 1373, when Valdemar III. died, and was succeeded by his daughter Margaret. Marcel ranks his grandson Olaus V. as his immediate successor; but he, being an infant, can hardly be said to have reigned, and therefore Alstedius ranks his mother, who governed during his infancy, as the successor of Valdemar.

Margaret raised the kingdom of Denmark to its highest pitch of glory. She defeated and deposed Albert king of Sweden, in 1487 ; and partly by her address, partly by hereditary right, she formed the union of Calmar, by which she was acknowledged sovereign of Sweden, Denmark, and Norway. She held her dignity with such firmness and courage, that she was justly styled the Semiramis of the North. Her only son, Olaus V. dying at seven years of age, in 1388; she adopted her sister's son, Eric duke of Pomerania, as her successor, and died in 1412, after a glorious reign of thirty-seven years. Eric IX., her successor, being destitute of her great qualifications, the union of Calmar fell to nothing : but Norway still continued annexed to Denmark. Some say he was deposed, but Alstedius states that he resigned the crown in 1438, and retured to Pomerania, where he died in 1469. Upon his resignation lis nephew, Christopher III. duke of Bavaria, and count
palatine of the Rhine, was elected. After an in glorions reign of ten years, during which Sweden was separated from Denmark, he died in 1448 , and made way fora new royal race, which still continues to reign in Denmark, by the election of Christian,count of Oldenhurg. Christian I. was crowned hing of Denmark in 1448, of Norway in 1450 , and of Sweden upon the deposition of Charles VIII. in 1457, who, however, was restored by the Swcdes in 1464; Christian not having acthered to the terms he had made with them. Hc died in 1481, and was succceded by his son John, who had frequent wars with the brave Swedish governors, Steno and Sweno Sture. John, dying in 1513, was succeeded by Christian II. who recovered Sweden for a short time on the death of Steno Sture; but was expelled for 1 is cruelties, by the illustrious Gustavus Vasa, who threw off the Danish yoke, and restored the independence of his country in 1520. See Sweden.

Christian died in 1559 , but was previously deposed, and Frederick I. duke of Holstein elected king in 1523. He reigried only ten years; dying in 1533, when he was succeeded by his son Christian III. a wise and politic prince, by whom, in 1536, the protestant religion was established in Denmark. He was succeeded in 1559 by his son Frederick II. who, after rcigning about twenty-nine years, left the kingdom to his son Christian IV. who, however, was not crowned till 1596. This monarch twice visited England, in compliment to his son-in-law king James I.; in July 1606 and 1614. In 1629, he was chosen head of the Protestant league formed against the house of Austria; but, though personally brave, he was in danger of losing his dominions; when he was succeeded in that command by the famous Gustavus Adolphus king of Sweden. The Dutch having obliged Christian, who died in 1648, to lower the duties of the Sound, lis son Frederic III. consented to accept of an annuity of 150,000 florins for the whole. The Dutch after this persuaded him to declare war against Charles X. king of Sweden, which had almost cost him his crown in 1657. Charles stormed the fortress of Frederisstadt; and, in the succeeding winter, he marched his army over the ice to the island of Funen, where he surprised the Danish troops, took Odensee and Nyburg, and marched over the Great Belt to besiege Copenhagen itself. Oliver Cromwell interposed; and Frederic defended his capital with great magnanimity till the peace of Roschild; by which he ceded the provinces of Halland, Bleking, and Sconia, the island of Bornholm, Bahus, and Drontheim, in Norway, to the Swedes. Frederic sought to elude these severe terms; but Charles took Cronenburg, and once more besieged Copenhagen by sea and land. The steady inteprid conduct of Frederic under these misfortunes endeared him to his subjects; and the citizens of Copenhagen made an admirabie defence, till a Dutch fleet arrived in the Bal tic, and beat the Swedish fleet. The fortune of war was now entirely changed in favor of Frederic, who showed on every occasion great abilities both civil and military : and, haviny forced Charles to raise the siege of Copenhagen, might have carried the war into Sweden, had not the English fleet under Montague appeared in the Baltic.

This enabled Charles to besiege Copenhagen a third time: but, France and England offering their inedjation, a peace was concluded in that capital: by which the island of Bornholm rettrned to the Danes; but the island of Rugen, Bleking, Halland, and Schonen, remained with the Swedes.

The year 1660, as we have already intimated, affords an instance of a revolution in Denmark, unparalleled in the annals of history, viz. that of a free people resigning their liberty into the hands of their sovereign of their own accord, and without the least compulsion rendering him despotic. This was in part occasioned by the great character which Frederic had acquired by his late prudent and valiant conduct. At that time he had also taken care to ingratiate himself with the commonalty, by obliging the nobility to allow them some immunities which they did not enjoy before, and permitting them by a special edict to possess lands. After the conclusion of the treaty with Sweden, a diet was summoned at Copenhagen, to take into cousideration the state of the kingdom, which was now very much exhausted, by the calamities of war. This distressed state of affairs was, by the commons, attributed to the nobility; who, on the other hand, took no care to conciliate the affections of the inferior classes: but rather increased their discontents by their arrogance. They had even the imprudence to remonstrate against the immunities above mentioned, which liad been granted by the king during the siege of Copenlagen. In consequence of this, the deputies of the commons and clergy united against them; and, being joined by the citizens of the capital, formed a very considerable party. On bringing forward in the assembly the sunis necessary for the national exigencies, a general excise was proposed by the nobles on every article of consumption; and they professed themselves willing to submit to it, thougl, by an express law, their order was to be exempted from taxes. This offer, however, was accompanied with a remonstrance to the king; in which they endeavoured to reclaim many obsolete privileges, and to add fresh immunities, tending to diminish the royal prerogative, and check the rising influence of the commons and clergy. This proposal occasioned great disputes in the diet ; and the two inferior orders insisted, that they would not adinit of any tax which should not be levied equally upon all ranks. The nobles not only refused to comply with this proposal, but even to be subject to the present tax for more than three years; pretending that all taxes whatever were infringements on their privileges. By way of compensation, however, they proposed new duties upon leather and stamped paper, and at last offered to pay a poll tax for their peasants. This at first seemed to be agreeable to the two inferior estates; but they suddenly clanged their minds, and demanded tliat the fiefs and domains, which the nobles had hitherto possessed exclusively, and at a very moderate rent, should be let to the highest bidder. In the heat of the dispute, one of the chief senators having imprudently thrown out some reproachful expressions against the commons, a general ferment ensued, and the assembly was broken up in confusion. This gave occasion
to the interposition of the king's friends; and the idea of rendering the crown hereditary, and enlarging the royal prerogative, began to be suggested as the proper method of humbling the nobility. This was first proposed by the bishop of Zealand ; an act for rendering the crown hereditary was drawn up; and the best method of publicly producing it taken into consideration. All this time the king seemed quite inactive, nor could he he prevailed upon to take any part in an affair which so nearly concerned him. But this indolence was abundantly compensated by the alertness and diligence of his queen. (On the morning of the 8 th of October, therefore, the bishop of Zealand having obtained tlie consent and signatures of the ecclesiastical deputies to the new proposal, delivered it to Nausen, burgomaster of Copenhagen and speaker of the commons, whose speech in favor of it had such an effect upon the assembly, that they subscribed it unanimously; the nobles being all the while in perfect security, and entirely ignorant of the transaction. Next day it was presented to the king by the bishop and Nausen; and finally to the nobles; who, while they professed their general willingness to assent to the declaration, observed to the speaker of the commons that it required the most serious discussion. Nausen replied, that the other estates had already taken their resolution; that they would lose no time in debate; and that, if the nobles would not concur with them, they would immediately repair to the palace by themselves, where they had not the least doubt that the king would graciously accept their proffer. In the mean time the nobles had privately despatched a message to the king, intimating that they were willing to render the crown hereditary in the male line of lis issue, provided it was done with the usual fornialities. But his majesty stipulated for an equal right of succession in the female line. He added, however, that he by no means wished to prescribe rules for their conduct; they were to follow the dictates of their own judgment, and he would owe every thing to their free consent. In the interim, the other deputies arrived at the palace, and the bishop of Zealand addressed his majesty on the resolution taken by the clergy and commons, adding, that they were ready to sacrifice their lives in the defence of an establishment so salutary to the country. His majesty, while he assured them of his protection, and promised a redress of all grievances, mentioned the concurrence of the nobles as a necessary condition; and dismissed them with an exhortation to continue their sittings until they sloould have brought their design to a pacific conclusion. The nobles, breaking up without coming to any resolution, and preparing, it is said, to leave Copenhagen, the court and the popular party took the necessary measures to force them to a concurrence. Orders were given to shut the gates of the capital, when a message arrived that they were ready to concur with the commons, and subscribe to all the conditions of the royal pleasure. Nothing now remained but to ratify the transaction with proper solemnity. Accordingly, on the \({ }^{1} 6\) th of October, the estates anulled in the most solema manner, the capitulation or charter signed by the king on his accession to the throne; ab:olved him
from all his cngagements, and cancelled all the limitations imposed upon his sovereignty! The whole was concluded by the ceremony of doing homage, taking the new oath with great ceremony; after which a new form of government was promulgated under the title of The Royal Law of Dermark.

Frederic III. was succeeded, in 1670, by his son Christian V., who obliged the duke of Holstein Gottorp to renounce the advantages he had gained by the treaty of Roschild. He then recovered a number of places in Schonen; but his army was defeated in the bloody battle of Lunden by Charles XI. of Sweden. This defeat did not put an end to the war, which Christian obstinately continued till he was defeated entirely at the battle of Landscroon; and, having exhausted his dominions in his military operations, he was in a manner abandoned by all his allies, and forced to sign a treaty on the terms prescribed by France, in 1679. Christian, however, did not desist from his miliary attempts; and at last became the ally and subsidiary of Louis XIV. He died in 1699, and was succeeded by Frederic IV., who, like his predecessors, maintained his pretensions upon Holstein ; and, probably, would have become master of that duchy, had not the English and Dutch fleets raised the siege of Tonningen ; while the young king of Sweden, Charles XII., then only sixteeu years of age, landed within eight miles of Copenhagen, to assist his brother-in-law the duke of Holstein. Charles probably would have made himself master of Copenhagen, had not his Danish majesty agreed to the peace of Travendall, which was entirely in the duke's favor. By another treaty concluded with the States General, Frederic obliged himself to furnish a body of troops who were to be paid by the confederates; and who afterwards did great service against the French. Notwithstanding this peace, Frederic was perpetually engaged in wars with the Swedes. While Cliarles was an exile at Bender, he marched through Holstein into Swedish Pomerania, and in 1712 into Bremen, and took the city of Stade. His troops, however, were totally dcfeated by the Swedes at Gadesbusch, who laid his favorite city of Altona in ashes. Frederic revenged himself by seizing great part of the ducal Holstein, and forcing the Swedish general, count Steinbock, to surrender himself prisoner, with all his troops. In 1716 the success of Frederic was so great, in taking Tonningen and Stralsund, driving the Swedes out of Norway, and in reducing Wismar and Pomerania, that his allies began to suspect he was aiming at the sovereignty of all Scandinavia. Upon the return of Charles of Sweden from his exile, he renewed the war against Denmark with a most embittered spirit; but upon his death at the siege of Fredericshal, Frederic durst not refuse the offer of his Britannic majesty's mediation between lim and the crown of Sweden; in consequence of which a peace was concluded at Stockholm, which left him in possession of the duchy of Sleswick. Frederic died in 1730, after having seen his capital reduced to ashes by an accidental fire, in 1728 . His son and successor Chris'ian VI. made no other use of his power,
and the advantages with which he mounted the throne, than to cultivate peace with all his neighbours, and to promote the lappiness of his subjects, whom he eased of many oppressive taxes. In 1734, after guaranteeing the l'ragmatic Sanction, he sent 6000 men to the assistance of the emperor, during the dispute about the succession to the crown of Poland. Though he was pacific, yet he was jealous of his rights, especially over Hamburgh. He obliged the Hamburqhers, in 1736, to call in the mediation of Prussia, to abolish their bank, to admit the coin of Denmark as current, and to pay him a million of silver marks. He had, in 1738, a dispute with king George II. about the little lordship of Steinhorst, which had been mortgaged to the latter by the duke of Holstein Lauenburs, and wnich Christian said belonged to him. Some blood was spilt during the contest; in which Christian, it is thought, never was in earnest. It brought on, however, a treaty, in which he availed himself of his Britannic majesty's predilection for his German dominions; for he agreed to pay Christian a subsidy of \(£ 70,000\) sterling a year on condition of keeping in readiness 7000 troops for the protection of Hanover: which was a gainful bargain for Denmark. And two years after he seized some Dutch ships for trading without his leave to Iceland: but the difference was made up by the mediation of Sweden. Christian liad so great a party in that kingdom, that it was generally thought he would revive the union of Calmar, by procuring his son to be declared successor to lis then Swedish majesty. Some stcps for that purpose were certainly taken : but whatcver Christian's views might have been, the design was frustrated by the jealousy of other powers. Christian died in 1746, with the character of being an excellent monarch. His son and successor, Frederic V., had, in 1743, married the princess Louisa, daughter to king George II. He improved upon his father's plans for the happiness of his people; but took no concern, except that of a mediator, in the German war. For it was by his intervention that the treaty of Closterseven was concluded between the duke of Cumberland and the French general Richelieu. Upon the death of queen Louisa, mother to the late king, he married a daughter of the duke of Brunswick Wolfenbuttel; and died in 1766.

He was succeeded by his son Christian VII. who married the princess Carolina Matilda of England, an alliance which proved unfortunate, as is generally stated through the intrigues of the queen dowager. The king had displaced several of her friends who had for some time had a share in the administration; and the two new favorites, Brandt and Struensee, who had now appeared, paid great court to the queen. The dowager on this took occasion to insinuate, that the queen had condescended to an intrigue with Struensee. The result is familiar to most of our readers. When the plan of removing the existing administration was brought to \(^{\circ}\) maturity, it was resolved to surprise the king in the middle of the night, and force him instantly to sign an order for committing the ministers to separate prisons; to accuse them of high treason in general, and particularly with a design to dethrone or poison
the king. If this could not be properly authenticated, it was determined to suborn witnesses to confirm the report of a criminal correspondence between the queen and Struensee. This design was executed on the night of the 16 th of January, 1772, when a masked ball was given at the court. The queen, after having danced most part of the evening with count Struensee, retired to her chamber about two in the morning. About four the same morning prince Frederic rose, and went with the queen dowager to the king's bed-chamber, accompanied by general Eichstedt and count Rantzau. Having ordered his valet de chambre 10 awake the king, they informed lim that the queen, with Struensee, his brother, and Brandt, were at that moment busy in drawing up an act of renunciation of the crown, which they would immediately after compel him to sign; and there was therefore a necessity for him to give an order for their arrest. Christian is said to have hesitated for some time, and to have been inclined to refuse this scandalous requisition; but at length, through importunity, and, according to some accounts, being even threatened into compliance, he consented to what they required. Count Rantzau was despatched, at an untimely hour, into the queer's apartments, and immediately executed the orders of the king. This unfortunate lady, together with an infant princess, was conveyed in one of the king's coaches to the castle of Cronenburgh, escorted by a party of dragoons. Struensee and Brandt were seized in their beds and imprisoned, as well as other members of the administration to the number of eighteen. The queen dowager and her adherents assumed the government, and a total change took place in all departments of the state. The prince royal, son of queen Carolina Matilda, then in the fifth year of his age, was put under the care of a lady of quality, who was appointed governess, under the superintendency of the queen dowager. Struensee and Brandt were put in irons, and underwent long and frequent examinations. Struensee at last confessed that he had conducted a criminal intrigue with the queen. These ministers were both beheaded on the 28th of April; but many of their partisans were set at liberty. Such is one mode of accounting for the revolution of \(\mathbf{1 7 7 2}\). The confession of Struensee is by many supposed to have been extorted by fear of the torture, and to have no foundation in truth; but, as no means were used by the court of Great Britain to clear up the 'queen's character, the affair undoubtedly wears a suspicious aspect. At last, however, his Britannic majesty interfered so far as to send a small squadron of ships to convoy the unhappy princess to Germany. The city of Zell was appointed for her residence; and in this place she died of a fever on the 10 th May, 1775, aged twenty-three years and ten months.

Of Struensee as a minister, \({ }^{\text {c it must not be for- }}\) gotten,' says an able writer in the Edinburgh Review, September 1826, 'that he was the first minister of an absolute monarchy who abolished the torture, and that he patronised those excellent plans for the emancipation of the enslaved husbandmen, which were first conceived by Reverdil a Swiss, and of which the adoption by the second Bernstorff has justly immortalised that
statesman. He will be honored by after ages for what offended the Lutheran clergy : the free exercise of religious worship granted to Calvinists, to Moravians, and even to Catholics; for the Danish clergy were ambitious of retaining the right to persecute, not only long after it was impossible to exercise it, but even after they had lost the disposition to do so; at first to overawe, afterwards to degrade non-conformists; in both stages, as a badge of the privileges and honor of an established church.'

The same writer, in a Review of general Falkenskiold's Memoirs of the Revolution of 1772, observes, that the evidence against the queen consisted in; a number of circumstances (none of them incapable of an innocent explanation) sworn to by her attendants, who were employed as spies on her conduct. She owned that she was guilty of much imprudence; but in her dying moments she declared to M. Roques, pastor of the Frencl church at Zell, that she never had been unfaithful to her husband. (Communicated by M. Roques to M. Secretan, the editor of Falkenskiold, on the 7th of March 1780. Falk. 234.) It is true that her own signature affixed to a confession was alleged against her. But if general Falkenskiold was rightly informed (for he has every mark of honest intention), that signature proves nothing but the malice and cruelty of her enemies. Schack, the counsellor sent to interrogate her at Cronenburgh, was received by her with indignation when he spoke to her of her connexion with Struensee. When he showed Struensee's confession to her, he artfully intimated that the fallen minister would be subjected to a very cruel death if he was found to have falsely crininated the queen. 'What!' she exclaimed, 'do you believe that if I was to confirm this declaration, I should save the life of that unfortunate man?' Schack answered with a profound bow. The queen took a pen, wrote the first syllable of her name, and fainted away. Schack completed the signature, and carried away the fatal document in triunph. Struensee himself, however, had confessed his intercourse to the commissioners. It is said that his confession was obtained by threats of torture, facilitated by some hope of life, and influenced by a knowledge that the proceeding against the queen could not be carried beyond divorce. But his repeated and deliberate avowals to Dr. Munter do not (it must be owned) allow of such an explanation. Scarcely any supposition favorable to this unhappy princess remains, unless it should be thought likely, that as Dr. Munter's narrative was published under the eye of her oppressors, they might have caused the confessions of Struensee to be inserted in it, by their own agents, without the consent, perhaps without the knowledge of Munter, whose subsequent life is so little known, that we cannot determine whether he ever had the means of exposing the falsification. It must be confessed, however, it is added, that internal evidence does not favor this hypothesis; for the passages of the narrative, which contain the avowals of Struensee, have a striking appearance of genuineness.

Their treatment of Matilda did not long prove advantageous to the queen dowager and her party.-Another revolution took place in April

1784, when the queen dowager's friends were removed, and a new council was formed onder the sole auspices of the prince royal. After that period the king, who from the beginning of his reign showed a great degree of incapacity, was entirely detached from the government; and the prince, who finally succeedcd to the throne in 1808, conducted with great circumspection and ability the whole of the public affairs. The Danes took part with the late empress of Russia in her war with the Turks, the immediate opponent of Denmark being Sweden, and, in 1801, acceded to the confederacy formed by the northern powers against the naval superiority of Great Britain, under the title of a Convention of Neutrality. But this league was quickly dissolved by the appearance of Lord Nelson in the Baltic, who, in the battle of the 2d April of that year, forced the line of defence formed by the Danish fleet before Copenhagen, and compelled the Danes to agree to a cessation of arms, in order to preserve their capital. In this short war they lost their islands in the West Indies, and the settlement of Tranquebar, on the coast of Coromandel. But the dispute between England and the northern powers being soon after amicably adjusted by a treaty, their foreign possessions were restored to them. We have noticed a second rupture between Denmark and Great Britain in 1807, and its fatal consequence to the commerce of the former. In fact it led also to the still more humiliating result of the dismemberment of Norway. For in the united efforts of the allies to crush the power of Buonaparte, this country and Russia both came into that arrangement with the crown prince of Sweden, which terminated in his taking possession of this old appendage of Denmark.

The language of Denmark is a dialect of the Teutonic, and bears a strong affinity to that of Norway: it is disagreeable to strangers on account of the drawiing tone with which it is pro nounced. Many words have been borrowed from the German, and the Dutch is often used in common discourse. French also is well understood, and frequently spoken by all classes.

DENNIS (John), once a critic of celebrity, the son of a tradesman in London, was horn in 1657. He received the rudiments of his education at Harrow, and took his degree of A. B at Caius College, Cambridge, after which he made the tour of Europe. On his return he became acquainted with Dryden, Wycherley, Congreve, and Southern; whose conversation inspiring him with a passion for poetry, and the belles lcttres, diverted him from the exercise of any profession. His zeal, however, for the protestant succession recommended him to the duke of Marlborough, who procured him a place in the customs worth \(£ 120\) per annum; which he enjoyed for some years, till, by want of economy, he was obliged to dispose of it to satisfy some pressing demands. In 1704 came out his favorte tragedy, Liberty Asserted; in which were so mary strokes on the French nation, that he had worked himself into a persuasion, that the king of France would insist on his being delivered up, before he would consent to a peace; and when the congress was held at Utrecht, he is said
to have waited on his patron, the duke of Marlborough, to desire that no such article might be stipulated. The duke told him he really had no interest with the ministry ; but had made no such provision for his own security, though he could not help thinking he had uone the French as much injury as Mr. Dennis. Dennis, partly through a natural petulance of temper, and partly to procure the means of subsistence, was continually engaged in paper wars with lis contemporaries. His attacks on distinguished authors were numerous, among whom were Addison, Steele, and Pope. In the close of his days a play was acted for his benefit, at the little theatre in the Hay-market; when Pope, notwithstanding his previous gross abuse of him, even wrote a prologue to the play. He died on the 6 th of January, 1733. As a dramatic author, it was justly said of him by a wit, that he was the most complete instructor for a dramatic poet, since he could teach him to distinguish good plays by his precepts, and bad ones by his examples.
DENOM'INATE, v.a.
\(\left.\begin{array}{l}\text { Denom'INABLE, adj. } \\ \text { Denom'ination, n.s. }\end{array}\right\} \begin{gathered}\text { Fr. denominer } \\ \text { Span. denominár } ;\end{gathered}\)
Ital. and Lat. deno-
Denominatione, adj.
Denom'inator, \(n\). s. minare; from de and nomino, nomen, a name. To give name to. Denominable sid. nifies, that may be named; denomination the name given: denominative, that which gives a name; characteristic: denominator, the giver of a namc, or a particular number in the doctrine of fractions. See Fractions.

DENON, Dominique Vivant, baron de, was born Feb. 4, 1747, at Chalons-sur-Saône, of a noble family. He was destined to study law at Paris, where he was favorably received in society; and his talent and inclination led him to devote himself to the arts. A comedy which he wrote, called the Good Father, gained him the favor of the ladies. His amiable manners made him a favorite of Louis XV., who appointed him gentilhomme ordinaire about his person. IIe was afterwards attached to an embassy at St. Petersburg, where Catherine, however, observed him with a jealous eye. Subsequently he was intrusted with a diplomatic mission to Switzerland. On this occasion, he drew Voltaire's likeness (engraved by St. Aubin), and the well known picture Le Dejeûner de Ferney. He then occupied, during seven years, a place in the French embassy at Naples. His residence in this city, and repeated visits to Sicily and Malta, gave him an opportunity of exercising his talent for drawing and engraving. Denon had the principal direction of the artists engaged in preparing the abbé St. Non's Voyage Pittoresque de Naples et de Sicile, and the text was chiefly taken from his journal. This elegant work appeared at Paris in 1788. The remainder of Denon's journal, relating to Sicily and Malta, appeared separately, in 1788 . His career at Naples was interrupted by the death of the minister Vergennes, his patron, or, according to some, by the displeasure of the queen, Maria Caroline. But still his love for the study of the great masters detained him in Italy. He resided at Venice during several years, where he shone in the
cireles of the eountess Albrizzi, who was distinguished for her amiable and intelligent eharacter, and loved to be surrounded by men of talent. Denon was not forgotten in her Rittratti, where she hestows the greatest praise on his character, his passion for the arts, his eheerfulness, and amiable disposition, and excuses the raillery with whieh he attacked the foibles of others. The observation and restraint, to which the revolution subjeeted Frenehmen in foreign countries, compelled him to leave Venice. After a short stay in Florence and Switzerland, he was obliged to return to Franee during the reign of terror; but he made himself agreeable to Robespierre, and was, in eonsequence, subsequently aecused of devotion, at that time, to Jacobin prineiples. During this period he exercised himself in engraving. At last, he became acquainted with Buonaparte, and immediately united himself with him. He aceompanied the general in his campaigns to Italy and Egypt, and Desaix to Upper Egypt. The work whieh was the result of this journey, was an addition to Denon's fame, particularly the engravings which ornament it (Paris, 1802, 2 vols. fol., and 3 vols.' 12ino., without engravings). Denon, in this, has shown himself a very able artist. Nature, animate and inanimate, the monuments of centuries, and the Arabian flying through the desert, are represented with great fidelity. When he returned to Paris with Buonaparte, he was appointed general direetor of the museums, and all the works of art executed in honor of the Freneh successes-monuments, coins, the ereetion of the triumphal pillar in the place de Vendome, \&e. He aecompanied Napoleon in all his campaigns, and employed himself in drawing, and in selecting those masterpieees in the conquered countries, which were taken to Paris as trophies. In 1815, he was eompelled to witness the restoration of the spoils. After the abdieation of the emperor, he retained his offiee, hut was deprived of it in 1815, in consequence of having joined Napoleon on his return from Elba. He retained, however, his place in the institute. From that time lie lived retired, and the preparation of engravings and lithographs of his splendid collection of works of art, formed the oeeupation of his last years. He died at Paris, April 28, 1825. His mind was active to the last. Denon much resembled Voltaire in his old age. In 1826 appeared at Paris the Deseription des Objets d'Art composant le Cabinet de feu M. le Bar. V. Denon, in 3 vols. (Monumens antiques, tableaux et estampes). The cabinet was sold by auetion.

DENO'TE, v.a. l Lat. denoto, to mark;
Denota'tion, n. s. \(\{\) to be a sign of; to betoken; to show by signs: the aet of denoting; a symptom

DENOUNCE, v.a. \(\}\) Fr. denoncer; Span.
Denounéer, n.s. \}denunciar; Ital. denonDenouncément. ciare; Lat. denunciare, from de against, and nuncio, to carry orders. To threaten or impugn by publie or open proelamation. Denouncement is the proclamation made.
DENSE, \(a d j\). \} Lat. densus, elose; com-
Dens'ity, n. s. \(\}\) pact; approaehing to solidity.

Devsity, denotes vieinity or eloseness of particles; but in meehanical science, it is used as a term of comparison, expressing the proportion of the number of equal moleculæ, or the quantity of matter in one body to the number of equal molecula in the same bulk of another body. Density, therefore, is directly as the quartity of matter and inversely as the magnitude of the body. Since it may be shown experimentally, that the quantities of matter, or the masses in different bodies, are proportional to their weights; of consequence the density of any body is directly as its weight, and inversely as its magnitude ; or, the inverse ratio of the magnitudes of two bodies, having equal weights, in the same place, constitutes the ratio of their densities.
DE'NSHIRE, \(v . a\). A barbarous term of husbandry.
 teeth, like a saw: dentifriee, a tooth powder: deutise, to renew the teeth; dentition being the eorresponding substantive : and dentist, a modern word for the profession of healing, preserving, and drawing teeth.
DENTALIUM, in natural history, a shell-fish belonging to the order of vermes testacea. The shell eonsists of one tubulous straight valve, open at both ends, and not divided into ehambers. There are twelve speeies, distinguished by the angles, strix, \&c., of their shells.
DENTARIA, tooth-wort, or tooth-violet, in botany, a genus of the siliquosa order, and tetradynamia elass of plants ; natural order, thirtieth, siliquosæ. The siliqua parts with a spring, and the valvules roll spirally baekwards; the stigma is emarginated ; the ealyx closing longitudinally. There are five speeies, all of them hardy perennials; producing annual stalks twelve or eighteen inehes high, adorned with many lobed leaves, and spikes of quadrupetalous eruciform flowers of a red or purple co!or. They deliglit in shady places, and are propagated either by seeds or parting the roots. The seeds may be sown in autumn or early in the spring, in a shady border of light earth; and when the plants are three inches high, they may be planted where they are to remain. The time for parting the roots is in October or November, or early in the spring.

DENTATUS (Curius), a renowned Roman general, whose virtues render him more memorable than his vietories, flourished A. A. C. 272. He was thrice consul ; conquered the Samnites, Sabines, and Lueanians; and gave eaeh eitizen forty acres of land, allowing himself no more. The ambassadors of the Samnites making him a visit, found him boiling turnips in a pipkin ; upon whieh they offered him gold to come over to their interest : he told them his design was not to grow rieh, but to eommand those who were so. He defeated Pyrrhus near Tarentum, and reeeived the honour of a triumph.

DEN

\section*{DEN}

Dentatus (Sicinius), a hero of ancient Rome, of the plebeian order, who flourished about A. UC. 300 . When disputes ran high between the patricians and plebeians, concerning the Agrarian law, Dentatus addressed the people, and expatiated upon his achievements and his hardships. He had served his country in the wars forty years; he had been an officer thirty; first a centurion and then a tribune; he had fought in 120 battles, and by the force of his single arm had saved the lives of a multitude of his fellow citizens. He had gained fourteen civic, five mural, and eight golden crowns; besides eightythree chains, sixty bracelets, eighteen gilt spears, and twenty-three horse-trappings, of which nine were for killing the enemy in single combat: and he had received forty-five wounds, all before, none behind. These were his honors; yet notwithstanding all this, he had never received any share of those lands which were won from the enemy, but continued to drag on a life of poverty and zontempt, whilst others possessed those very territories which his valor had won, without any merit to deserve them, or ever having contributed to the conquest. The people unanimously demanded that the law might be passed, and that such high merit should not pass unrewarded. Some of the senators attempted to speak, but were overpowered by the cries of the people. At last a number of resolute young patricians rushing furiously amongst the crowd, broke the balloting urns, and dispersed the multitude. For this riot they were fined by the tribunes, but they gained their object for the time, by getting the Agrarian law postponed. Such was the justice of the Roman patricians, at one of the most virtuous periods of that celebrated republic.

DENTELLA, in botany, a genus of the monogynia order, and pentandria class of plants: cal. a five-parted perianth. with small subulated leaves; stam. five short subulated filaments; anth. small; pericarp.globular; caps. bilocular; seed, egg shaped, and very numerous. Species one only, a native of New Caledonia.

DentéLli, n.s. Ital. Modillons.
The modillions, or dentelli, make a noble show by graceful projections. Spectator, No. 415.
DENTILES, or Dentils, in architecture, an ornament in cornices bearing some resemblance to teeth, particularly used in the Ionic and Corinthian orders.

DENTISCALPRA, in surgery, an instrument for scouring yellow, livid, or black teeth; to which being applied, near the gums, it scrapes off the foul morbid crust.

Dentition. See Odontology.
DENU'DE, \(v . a\).
Denúdate, v.a.
Denuda'tion, n. s. \(\}_{\text {and nudo ( } n e \text { and duo }}\) clothe). To clothe). To strip; to make naked.

Till he has denudated himself of all incumbrances, he is unqualified.

Decay of Piety.
Not a treaty can be obtained, unless we would denude ourselves of all force to defend us. Clarendon.

If in summer-time you denude a vine-branch of its leaves, the grapes will never ceme to maturity.

Vol. VII.
Ray on the Creation.

DENUNCIA'TION, n. s. Lat. denunczatio. Denuncia'tor, n.s. \(\}\) see Denounce. The act of denouncing; the proclamation of a threat; a public menacer.

In a denunciation or indiction of a war, the war is not confined to the place of the quarrel, but is left at large.

Bucon.
Christ tells the Jews, that, if they believe not, they shall die in their sins; did they never read those denunciations?

Ward.
Midst of these denunciations, and notwithstanding the warning before me, I commit myself to lasting durance

Congreve.
The denunciator does not make himself a party in judgment as the accuser does. Ayliffe's Parerg.

DENY: ッ. a. Fr. nier; Span. denegar;
\(\mathrm{D}_{\text {ENiAL }}, n\) s. (Ital. and Lat. negare; from
Deníer, SLat. ne and ago, to refuse to do. To refuse ; contradict ; and hence to disregard; denounce.

If we denyen he schal denye us; if we bileeuen not he dwellith fcithful he mai not denye himsilff.

Wiclif, 2 Tymo. 2.
It shall be therefore a witness unto you, lest you deny your God.

Joshua xxiv. 27.
And therfor, though he had thus made a realme, holy Scripture denyid to cal hym a kyng. Fortesque.

The denial of landing, and hasty warning us away, troubled us much.

Bacon.
My young boy
Hath an aspect of intercession, whict
Great nature cries-deny not. Shakspeare.
Here comes your father; never make denial:
I must and will have Catherine to my wife. Id.
It may be I am esteemed by my denier sufficient of myself to discharge my duty to God as a priest, though not to men as a prince.

King Charles.
How unworthy is he of life, who with the same breath that he receives, denies the Giver of it.

Bishop Hall. Contemplations.
The negative authority is also leniable by reason.
Browne.
Ah, charming fair, said I,
How long can you my bliss and yours deny?
Dryden.
We may deny God in all those acts that are capable of being morally good or evil: those are the proper scenes in which we act our confessions or denials of him. South.

The best sign and fruit of denying ourselves, is marcy to others.

Spratt.
Our Saviour assures us, that if a tender mother cannot deny the son of her love any reasonable request, much less will God deny his Holy Spirit to them that ask him.

Clarke's Sermons.
No man more impudent to deny, where proofs were not manifest ; no man more ready to confess, with a repenting manner of aggravating his own evil, where denial would but make the fault fouler.

Sidney.
By the word Virtue the affirmer intends our whole duty to God and man, and the denier by the word Virtue means only courage, or, at most, our duty towards our neighbour, without including the idea of the duty which we owe to God. Watts.

If you had been contented to assist him indirectly, without a nutorious denial of justicc, or openly insulting the sense of the nation, you might have satisfied every duty of political friendship. Junius.

It has been asserted, that, if you alter her symbols, you alter the being of the church of England. This, for the sake of the liberty of that church, I must absolutely deny.

Burke.

\section*{DEP}

I have gnashed
My teeth in darkness till returning morn, Then cursed myself till sun-set;-I have prayed For madness as a blessing-'tis denied me. Byron.

DENYS (St.) a town of France, in the department of Paris, famous for a magnificent church, built by king Dagobert, in 632; in which were the tombs of many of the French kings, of the constable Guesclin, and of marshal Turenne. In the treasury, among other curiosities, were the swords of St. Lewis, and the Maid of Orleans, and the sceptre of Charlemagne. The abbey of the Benedictines, a magnificent piece of modern architecture, has more the appearance of a palace than a convent. In 1793 the republican populace broke into the royal tombs, and greatly lilapidated the buildings. In 1806 - Bonaparte caused them to be repaired, selected the church as the burying-place for his own family, and founded a chapter here of ten canons, whicl the Bourbons have retained with some modifications. The late prince of Conde has been interred here since the return of Louis XVIII. St . Denys is seated on the river Crould, near the Seine, five miles north of Paris, and contains 6000 inhabitants.

DEOBSTRUCTT, v. a. \(\}\) From de privative, Deobstru'ent, adj. \(\}\) and Obstruct, which see. To clear away obstacles; deobstruent is, having the power to remove obstructions.

It is a singular good wound-herb, useful for deobstructing the pores of the body.

Morc's Antidote against Atheism.
Such as carry off the fæces and mucus, devbstruct the mouth of the lacteals, so as the chyle may have a free passage into the blood. Arbuthnot on Diet.

All sopes are attenuating and deobstruent, resolving viscid substances.

Id. on Aliments.
DE'ODAND, n. s. Lat. Deo dandum. A thing given or forfeited to God.

Deodands are forfeitures which the ignorance and superstition of ancient times introduced and called by the name of deodands, from the application of them to pious uses.

Burn's Justice.
D'EON (the Chevalier), born in 1728, at Tonnere, in Burgundy, of a respectable family, is principally distinguished for consenting to appear half his life as a woman. He received a liberal education; and, becoming an orphan, the Prince de Conti procured him a commission as a cornet of dragoons. He was employed in 1755 on a mission to Petersburg, after which he joined his regiment, and served with considerable credit in the campaigne of 1762, as aid-de-camp to Marshal Broglio. The year following he was invested with the order of St. Louis, and accompanied the duke de Nivernois to England as secretary. On the duke's leaving England, D'Eon remained in the character of minister plenipotentiary, until he was superseded by the count de Guerchy, to whom he was appointed secretary. At this arrangement he was very indignant, and published in revenge an account of the negociations in which he had been engaged; wherein he stigmatized the conduct of the count. He was prosecuted by de Guerchy for a libel in the Court of King's Rench, in July, 1764, and being found guilty absconded, and was outlawed.

In 1771 doubts were entertaine l concerning his sex, and bets were laid to a great amount that D'Eon was a woman. In one instance this produced an action at law, that ended in a nonsuit. The chevalier in the mean time returned to France, where he assumed (compulsorily it is said) the female dress, but for what reason exactly has never been ascertained; his conduct in this respect was certainly sanctioned by his court, which coutinued his pension, and suffered him to retain the cross of his order.

In 1785 D'Eon came to England, where, still appearing as a woman, he gave lessons in fencing; but when the Revolution deprived him of his pensions, he presented in June 1792 a petitio. to the National Assembly, in which he complained of being obliged to wear a cap and petticoats, and asked permission to resume his military uniform. His petition remained unnoticed. He now again sought an asylum in London, where he passed the latter part of his life in poor circumstances; and died in New Millmanstreet, May 21st, 1810. His confessor, father Elysée, discovering that the chevalier was of the male sex, after his decease invited some medical and other gentlemen to examine the corpse. He was interred in St. Pancras church-yard, where he is registered, 'Charles Genevieve Louise Auguste Andre Timothee D'Eon de Beaumont.' He is said to have been the author of L'Espion Chinois, 6 vols. 12 mo .; Loisirs, 13 vols. 8 vo.; Lettres, Mémoires, et Negociations particulières.

DEOPPILATE, v. a. Lat. de and oppilo. To clear a passage; to free from obstructions.

Though the grosser parts be excluded again, yet are the dissoluble parts extracted, whereby it becomes effectual in dooppilations. Browne's Vulgar Errours.

A physician prescribed him a deoppilatise and purgative apozem.

Harvey.
DEOSCULATION, n.s. Lat. from de and osculum (os, oris, the mouth). Kissing.

We have an enumeration of the several acts of worship required to be performed to images, viz. processions, genufuxions, thurifications, and deosculations

Stillingfieet.
DEPA'INT, v. u. or Depeinct, as Spenser asso writcs it. Fr. depeint; de, and Paint, which see. To picture; to describe by colors; to show by resemblance.

He did unwilling worship to the saint,
That on his shield depainted he did see.
Spenser.
The red rose medlied with tbe white \(y\) fere, In either cheek depeincten livery here. Id. Such ladies fair would I depaint.
In roundelay, or sonnet quaint.
Gay.

Fr. departer ; Span. partirse; It.partisi from Lat.pars, partis;

Q70 (to divide) To separate to part As a neuter verb, to quit a place, taking from after it ; to desert; to fall away; to be lost; to die ; hence to desist from a practice and to revolt. Departing and departure both express the act of going away, and abandoning, or death. Department
is primcipally a continental division of territory, but has also a general application.

And alle folkis schulen be gederid bifore him; and he schal departe hem atwynne, as a scheparde departith scheep fro kid.s.

Wielif. Matt. 25.
I N. take thec N. to my wedded wife, to love and to cherish, till death us depart.

Old Family Prayer Book, (1661).
As her soul was in depurting; for she died.
Gen. xxxv. 18.
They departed quickly from the sepulchre, with fear and great joy, and did run to bring his disciples word.

Matt. xxviii.
Lord, now lettest thou the servant depart in peace, according to thy word.

Luke xxix.
The chymists have a liquor called water of de part, Bacon.
He, which hath no stomach to this fight, Let him depart; his passport shall be made. Shakspeare.
As you wish Christian peace to souls departed, Stand these poor people's friend.

Id.
When your brave father breathed his latest gasp, Tidings, as swiftly as the post could run, Were brought me of your loss ana his depart.

Id. Henry VI.
You've had dispatch in private by the consul ; You are willed by him this evening To depart Rome.

Ben Jonson.
What besides
Of sorrow, and dejection, and despair,
Our frailty can sustain, thy tidings bring;
Departure from this happy place. Milton.
His majesty prevailed not with any of them to depart from the most unreasonable of all their demands. Clarendon.
The fear of the Lord, and departure from evil, are phrases of like importance.

Tillotson.
And couldst thou leave me, cruel, thus alone; Not oue kind kiss from a departing son! No look, no last adieu!

Dryden.
Happy was their good prince in his timely departure, which barred him from the knowledge of his son's miseries.

Sidney.
The Roman fleets, during their command at sea, had their several stations and departments; the most considerable was the Alexandrian fleet, and the second was the African.

Arbuthnot.
The gentlemen, his particular friends, in various departments of ministry, \&cc.

Burke. Character of Lord Chatham.
For a departing being's soul
The death-hymn peals, and the hollow bells knoll. Byron.
Department. This word was adopted by the national assembly of France instead of province, when the ancient provinces of that kingdom were divided into departments, of which, including Corsica, there were eighty-three. These departments were much more equal in point of extent than the provinces; some of the old extensive provinces being divided into four or five departments, whilst some of the smaller ones constitute exactly one, and in some instances two provinces are included in one department. Each department has been subdivided into districts, and each district again into cantons.

Departure, in navigation, is the easting or westing of a ship in respect of the meridian :\%
departed or sailed from; or it is the difference of longitude, either east or west, between the present meridian the ship is under, and that where the last reckoning or observation was made. This departure, any where but under the equator, must be counted according to the number of miles in a degree proper to the parallel the ship is under. The departure, in plane and Mercator's sailing, is always represeited by the base of a right-angled plane triangle, where the course is the angle opposite to it, and the distance sailed is the hypothenuse; the perpendicular or other leg being the difference of latitude. And then the theorem for finding it is always this: as radius to the sine of the course; so is the distance sailed, to the departure sought.

DEPAST \({ }^{\prime}\) URE, v. a. Lat. depascor; de and pasco, from Gr. \(\pi a w . ~ T o ~ f e e d ; ~ t o ~ e a t ~ u p . ~\)

They keep their cattle, and live themselves, in bodies pasturing upon the mountains, and removing still to fresh land, as they have depastured the former.

Spenser.
DEPAU'PERATE, v. a. Lat. depaupero; de and pauper. To make poor; to impoverish; to consume.
To represent God in a carved stone, or a painted table, does depauperate our understanding of God, and dishonours him below the painter's art. Bp. Taylor.

Great evacuations, which carry off the nutritious humours, depauperate the blood.

Arhuthnot.
DEPE'CTIBLE, adj. Lat. depecto. Tough; clammy; tenacious; capable of being extended.

It may be also, that some bodies have a kind of lentor, and are of a more depectible nature than oil, as we see it evident in coloration; for a small quantity of saffron will tinct more than a very great quantity of brazil or wine.

Bacon.
DEPEND', v. a.
Dependince, n.s.
Depend'ant, adj. \& n.s.
Depen'dence,
Depen'dency,
Dependent, adj \& \(n\) hence to be ad.en.s. down, or from, to the will of, or be supported by, another; and to be in suspense, whether of interest or attention. Dependance and dependence, the one from the older French and the other from the Latin verb, are both used in the literal as well as figurative sense.

On God, as the most high, all inferior causes in the world are dependent.

Hooker.
Never be without money, nor depend upon the courtesy of others, which may fail at a pinch. Bacon.

Never was there a prince bereaved of his dependancies by his council, except where there hath been either an over-greatness in one counsellor, or an overstrict combination in divers.

Id.
By no means be you persuaded to interpose yourself in any cause depending, or like to be depending, in any court of justice.

Id.
We work by wit and not by witchcraft;
And wit depends on dilatory time.
Shakspeare.
Her madness hath the oddest frame of senere;
Such a dependency of thing on thing,
fis ne'er I heard in madness.

A great abatement of kindness appears as well in the genera! dependants, as in the duke himself also, and your daughter.

What shalt though expect,
ro be depender on a thing that leans?
Id.
How dependant and servile is the life or man, that annot either want one element, or endure it corrupted. Bishop Hall. Contemplations.
For a six-clerk a person recommended a dependant upon him, who paid six thousand pounds ready money.

Clarendon.
From the frozen beard
Long icicles depend, and crackling sounds are heard. Dryden.
They slept in peace by night,
Secure of bread, as of returning light;
And with such firm dependance on the day,
That need grew pampered, and forgot to pray. Id.
Every moment we feel our dependance upon God, and find that we can neither be happy without him, nor think ourselves so.

Tillotson.
In all sorts of reasoning, the connexion and depers dance of ideas should be followed, till the mind is brought to the source on which it bottoms. Locke.

We speak of the sublunary worlds, this earth, and its dependencies, which rose out of a chaos about six thousand years ago.

Burnet's Theory.
The expectation of the performance of our desire, is that we call dependence upon him for help and assistance.

Stillingfleet.
There is a chain let down from Jove,
So strong, that from the lower end,
They say, all human things depend.
The judge corrupt, the long depending cause, And doubtful issue of misconstrued laws. Prior.

The direful monster was afar descried,
Two bleeding babes depending at her side. Pope.
But if you're rough, and use lim like a dog,
Depend upon if-he'll remain incog. Addison.
We are indigent, defenceless beings; the creatures if his power, and the dependents of his providence.

Rogers.
This is uot like the tribute which earthly kings exact; who as much depend upon their subjects for the support of their power, as their subjects do upon them for the protection of their property. Mason.

Thus happiness depends, as nature shows,
Less on exterior things than most suppose. Cowper.
Man. Think'st thou existence doth depend on time ? It doth; but actions are our epochs, Byron.

DEPERDI'TION, n. s. Lat. deperdo ; de and verdo ; Gr. \(\pi \varepsilon \rho \theta \omega\); to lose or waste. Loss; destruction.

It may be unjust to place all efficacy of gold in the non-omission of weights, or deperdition of any ponderous particles.

Browne.

\section*{DEPHLE'GM, or}

Dephleg'mate, v. a. \}phlegmo. To clear
Dephlégmedness, n.s. from phlegm, or aqueous insipid matter.

We have sometimes taken spirit of salt, and carefully dephlegmed it.

Boyle.
In divers cases it is not enough to scparate the aqueous parts by dephlegmation; for some liquors contain also an unsuspected quantity of small corpuscles, of somewhat an earthy nature, which, being associated with the saline ones, do clog and blunt them, and thereby vraken their activity.

Id.
The proportion betwixt the coralline solution and
the spirit of wine, depends much upon the strength of the former liquor, and the dephlegmedness of the latter.
\(1 d\).
DEPHLOGISTICATED Air. See Oxygen.

DEPICT ; Lat. depingo, depictus, from de and pingo, pictus; to paint; describe.
The cowards of Lacedemon depicted upon their shields the most terrible beasts they could imagine.

Taylor.
When the distractions of a tumult are sensibly depicted, every object and every occurence are so presented to your view, that, while you read, you scem indeed to see them.

Felton.
In a cottage by night may I pass the soft time,
In the field and the meadows all day;
With the wife of my heart, whose charms, in their prime,
Depict her as blooming as May. Brerewood.
DEPIL'ATORY,n.s. \(\quad\) Lat. de privative Depr'lous, adj. \(\}\) and pilus, the hair. That which takes off the hair. Without hair.

This animal is a kind of lizard, or quadruped, corticated and depilous; that is, without wool, fur, or hair.

Browne.
Depilatory Medicines, those applied to take off the hair; such are lime, and other caustic substances, which ought to be used with great caution. Unless they destroy the skin, the roots of the hair remain unaffected, and it will grow again.

DEPLETION, n. s. Lat. depleo, depletus. The act of emptying.
DEPLORE', v. a. T Fr. deplorer ; Sp. and
Deploriable, adj.
Deplor'ableness, n.s.
Deplor'ably, adv.
Deplor'ate,
Deploration.
Port.deplorar ; It. and Lat. deplorare, from de and ploro, to weep. To lament; mourn; bemoan; deplorable, and deplorate, lamentable; that which is to be bemoaned.
This was the deplorable condition to which the king was reduced.

Clarendon.
The bill of all weapons gives the most ghastly and deplurable wounds.

Temple.
But chaste Diana who his death deplored,
With Asculapian herbs his life restored. Dryden.
The case is then most deplorate when reward goes over to the wrong side.

L'Estrange.
Notwithstanding all their talk of reason and philosophy, God knows, they are deplarably strangers to them.

South.
It will be considered in how deplorable a state learning lies in that kingdom.

Swift.
A third's all pallid aspect offered more
The traits of sleeping sorrow, and betrayed,
Through the heaved breast, the dream of some far shore 1
Beloved and deplored.
Byron.
DEPLUME', v. a. \} Lat. deplumatio. To
Deplumátion, n.s. \}pluck; offend. A pluming, or plucking off the feathers: in surgery, a swelling of the eyelids, accompanied with the fall of the hairs from the eye-brows.

DEPONE', v. a. \(\}\) Lat. depono, de and pono,
Depónent, n.s. \(\}\) to lay down. To state on oath, in law. To pledge or adventure any thing on some scheme of success. A particular kind of verb. Sre the extract.

In chancery-such witness (who answers interrogatories), is called a deponent. Cowell.

On this I would depone
As much as any cause I've known.
Hudibras.
Such verbs as have no active voice are called deponents, and generally signify action only ; as fateor, I confess.

Clarke's Latin Grammar.
 from Lat. depopulare (de and populo), to ravage. To destroy the people of a country; to ravage. As a neuter verb, to become dispeopled. A depopulator is a destroyer or waster of inhabited countries.

He turned his arms upon unarmed and unprovided people, to spoil only and depopulate, contrary to the laws both of war and peace.

Bacon.
Where is this viper,
That would depopulate the city, and Be every man himself?

Shakspeare.
How didst thou grieve then, Adam! to behold
The end of all thy offspring, and so sad
Depopulation! thee another flood,
Of tears and sorrow a flood, thee also drowned And sunix thee as thy sons.

Milton
A land exhausted to the last remains, Depopulated towns and driven plains. Dryden. Grim death in different shapes
Depopulates the nations.
Philips.
Remote thou hearest the dire effect of war, Depopulation.
This is not the place to enter into an enquiry whether the country be depopulating. Gैoldsmith.

DEPO'RT, v. a.\& n.s. \} Fr. deporter, de-
Deport'ment, n.s. \}portment; Ital. deportamento, from Lat. portare ; Gr. фо \(\tau \omega\), to carry one's self. To behave, demean; generally used with a compound pronoun.

I will but sweep the way with a few notes, touching the duke's own deportment in that island. Wotton.

> She Delia's self

In gait surpassed and goddess-like deport.
Milton.
The coldness of his temper, and the gravity of his deportment, carried him safe through many difficulties, and he lived and died in a great station. Swift.
Let the ambassador deport himself in the most graceful manner before a prince.

Pope.
What's a fine person, or a beauteous face,
Unless deportment gives them decent grace?
Blessed with all other requisites to please,
Some want the striking elegance of ease.
Churchill.
DEPORTATION, Lat. deportatio, of de and portare.

An abjuration, which is a deportation for ever into a foreign land, was anciently with us a civil-death.

Ayliffe.
DEPO'SE, v. a. \()\) Fr. deposer ; Ital. deporre;
Depusíng, n. s. \}Span. deponer ; Lat. depo-
Deposi'tion. Snere, depositus, from de and pono, to place. Hence, to swear, because by so doing a man deposits or pledges his faith to the truth of his declaration. To lay down, lodge; to degrade, deprive of; and generally, to lay as:de, lay up.

First, of the king ; what shall of him become? The duke yet lives that Henry shall depose

Shukspeare.
There shouldst thou find one heinous article, Containing the deposing of a king.
\(I d\).
Avcording to our law,
Depose him in the justice of his cause. Id.
Love straight stood up and deposed, a lie could not come from the mouth of Zelinane.

Sidney.
Its shores are neither advanced one jot farther into the sea, nor its surface raised by additional mud deposed upon it by the yearly inundations of the Nile.

Woodward.
If you will examine the veracity of the fathers by those circuustances usually considered in depositions, you will find them strong on their side.

Sir K. Digby.
A witness is obliged to swear, otnerwise his deposition is not valid.

Ayliffe.
His [James II.] conduct and the passage of Charles the Second's reign, might rankle still at the hearts of some men, but could not be set to account among the causes of his deposition.

Bolingbroke.
DEPO'SITE, v.a.\& n.s. For etymon,
Deposi'tary,
Deposi'tory. \(\quad\left\{\begin{array}{l}\text { see Depose. To } \\ \text { lay up. The }\end{array}\right.\) place of deposit is a depository; and a person in trust is a depositary.

I gave you all.
-Made you my guardians, my depositaries, But kept a reservation to be followed With such a number.

Shakspeare.
The Jews themselves are the depositories of all the prophecies which tend to their own confusion.

> Addison.

They had since Marsellies, and fairly left it : they had the other day the Valtoline, and now have put it in deposite.

Bacon.
God commands us to return as to him, to the poor, his giftr, out of mere duty and thankfulness : not to deposit them with him, in hopes of meriting by them.

Sprat.
The eagle got leave here to deposit her eggs.
L'Estrange.
The difficulty will be to persuade the depositing of those lusts, which have, by I know not what fascination, so endeared themselves. Decay of Piety.

Deposition. The proof in the high court of chancery is by the depositions of witnesses; and the copies of such regularly taken and published, are read as evidence at the hearing. For the purpose of taking deposition in or near London, there is an examiner's office appointed; but for such as live in the country, a commission to examine witnesses is usually granted to four commissioners, two named on each side, or any three or two of them to take the depositions there. And if the witnesses reside beyond sea, a commission may be had to examine them there upon their own oaths; and if foreigners, upon the oaths of two skilful interpreters. The commissioners are sworn to take the examinations truly and without partiality, and not to divulge them till published in the court of clancery; and their clerks are also sworn to secrecy. The witnesses may be compelled, by a process of subpœna, as in courts of common law, to appear and submit to examination; and when their depositions are taken, they are transmitted to the
court with the same care that the answer of a defendant is sent. 3 Black. 455.

DEPOT denotes any particular place in which military stores are deposited for the use of the army. In a more extensive sense it signifies several magazines collected together for that purpose. It is likewise applied to any particular fort or place, appropriated for the reception of recruits to detached parties, belonging to different regiments. In England, the barracks near Maidstone are depôts for the British cavalry, and Chatham is alloted to the infantry. In the time of war the greatest attention should be given to preserve the several depôts which belong to the fighting army. Hence the line of operation should invariably be connected with them; or rather uo advance should be made upon that line, without the strictest regard being had to the one of communication.

Depôt is again used to denote a particular place at the tail of the trenches, out of the reach of the cannon of the place attacked; where the troops generally assemble, when a sally from the besieged is suspected.

Defôt also means a temporary magazine for forage, for fascines, gabions, tools for mining, \&c., with such other articles necessary for the support of aul army, or for carrying on a siege.

DEPRAVE', v. a.
Deprater, \(n\).s.
Deprava'tion,
Deprav'edness, n.s.
Depravément,
Deprávity.

Fr. depraver; Span. and Portug. depravár; Ital. and Lat. depravare, from de and pravus, crooked. To corrupt, vitiate, calumniate : he who corrupts is a depraver; depravement, depravation, depravedness, and depravity a corrupt, vitiated state; depravation is used by Shakspeare for calumny.
We admire the providence of God in the continuance of scripture, notwithstanding the eudeavours of infidels to abolish, and the fraudulence of heretics to deprave, the same.

Hooker.
Who lives that's not depraved, or depraves?
Shakspeare.
Stubborn critics are apt, without a theme For depravation, to square all the sex.
\(I_{d}\).
What sins do you mean? Our original depravedness, and proneness of our eternal part to all evil.

Hammond.
But from me what can proceed
But all corrupt, both mind and will depraved?
Milton.
He maketh men believe, that apparitions are either deceptions of sight, or melancholy depravements of fancy.

Browne.
A taste which plenty does deprave,
Loaths lawful good, and lawless ill does crave.
Dryden.
We have a catalogue of the hlackest sins that human nature, in its highest depracation, is capable of committing.

South.
This will be equivalent to the proposal made by Boileau to the academicians, that they should review all their polite writers, and correct such impurities as might be found in them, that their authority might not contribute at any distant time to the depravation of the language.

Johnson. Plan of Dictionary.
If this be so, there must be a canse or causes for such a depravity in our common peoplc. Franklin.

DEPRECATE, v.a. Deprecation, n.s. Deprecative, adj.
Deprecatory, adj.
Deprecator, \(u\).s.

Bishop Fox understanding that the Scottish king was still discontent, heing troubled that the occasion of breaking off the truce should grow from his men , sent many humble and deprecatory letters to the Scottish king to appease him.

Bacon.

> I, with leave of speech implored,

And humble deprecation, thus replied. Milton.
Sternutation they generally conceived to be a good sign, or a tad one; and so, upon this motion, they commonly used a gratulation for the one, and a deprecation for the other.

Browne.
In deprecating of evil, we make an humhle acknowledgment of guilt, and of God's justice in chastising, as well as clemency in sparing, the guilty. Grew.
Poverty indeed, in all its degrees, men are easily persuaded to deprecate from themselves. Rogers.

The judgments which, we would deprecate are not removed.

Smalridge.
The Italian entered them in his prayer: amongst the three evils he petitioned to be delivered from, he might have deprecated greater evils.

Baker's Reflections on Learning.
DEPRE'CIATE, v.a. Fr. deprecier, from
Depreciátion, n.s. \} Lat de priv. and pretivon (from Gr. \(\pi\), \(\rho a r \eta s\), a seller) an equivalent given to the seller for his goods. To bring down in price or value ; the act of lessening the value of, or underrating a thing.
They presumed upon that mercy, which, in all their conversations, they endeavour to depreciate and misrepresent.

Addison.
As there are none more ambitious of fame, than thuse who are coiners in poetry, it is very natural for such as have not exceeded in it to depreciate the works of those who have.

Spectator.
It has been held, indeed, by some of the judges (but certainly not by all of them, or at least not upon all ocrasions), that juries in favour of life, may fairly, in fixing the value of the property, take into their consideration the depreciation of money, which has taken place since the statutes passed.

Sir S. Romilly.
\(\left.\begin{array}{l}\text { DEP'REDATE, } \\ \text { DEPREDA'TION, } \\ \text { Der }\end{array}\right\}\) Fr. depreder, from Depreda'tor. Lat. de and prador, to devour. The substantives plainly follow this.
It maketh the substance of the body more solid and compact, and so less apt to be consumed and depredated by the spirits.

Bacon.
It is reported that the shrub called our Lady's Seal, which is a kind of briony, and coleworts, set near together, one or both will die : the cause is for that they be hoth great depredators of the earth, and one of them starveth the other.

Bacon.
The land had never been before so free from robberies and depredations as through his reign.

Wotton.
Were there not one who had said, Hitherto shalt thou come. and no farther; we might well expect such vicissitudes, such clashing in nature, and such depredations and changes of sea and land.

Wooduard.

DEPREHE'ND, v.a. ) Lat. deprehemlo,
Deprehénsion. \(\quad\) from de and prehendere, to take. To catch; to take unawares; to take in the fact.

Who can believe men upon their own authority, that are once deprehended in so gross and impious an imposture?

More.
That wretehed creature, being deprehended in that impiety, was held in ward.

Hooker.
The motions of the minute parts of bodies, which do so great effects, are invisible, and incur not to the eye; but yet they are to be deprehended by experience.

Bucon.
DEPRESS', v.a.\&n.s. Fr. deprimer ; It.

Depress'ion,
Depress'or,
Dep'riment. (and Lat. deprimere, fromdeorsum,downwards, and premere, o press;-Minsheu. To press or push down; hence to let fall; to humble. Depressor and depriment, in anatomy, are terms applied to muscles whose action is to depress the parts to which they adhere.

Depression of the nobility may make a king more absolute, but less safe.

Bacon.
Bricks of a rectangular form, if laid one by another in a level row between supporters sustaining the two ends, all the pieces between will neeessarily sink by their own gravity; and much more, if they suffer any depression by other weight above them. Wotton.

The same thing I have tried by letting a globe rest, and raising or depressing the eye, or otherwise moving it, to make the angle of a just magnitude.

Newton.
Others depress their own minds, despond at the first difficulty, and conclude that the making any progress in knowledge is above their capaeities.

\section*{Lacke.}

\section*{Passion can depress or raise}

The heavenly, as the human mind. Prior. This mournful truth is every where confessed, Slow rises worth, by poverty depressed. Johnson.

DEPRIVE', v.a.
Depriva'tion, \(n\). \(s\).
Depriv'able, adj. \(\}\)
Depriv'able, adj. S Let pion fand and privo. To bereave or after it hence to hinder, depossess, taking of ati, hem. Deprivation has certain formal and legal applications; see below. Deprivable is that which may, in justice, be taken away.

God hath deprived her of wisdom, neither hath he imparted to her understanding. Job, xxxix. 17.

> Most happy he,

Whose least delight sufficeth to deprive
Remembrance of all pains which him opprest.
Spenser.
They gather that enjoy them, (the church's grants) possess them wrongfully, and are deprivable at all heurs.

Hooker.
A minister, deprived for inconformity, said, that if they deprived him, it should cost an hundred men's lives.

Bacon.
He lamented the loss of an excellent servant, and the horrid manner in which he had been deprived of him.

Clarendon.

\section*{From his face I shall be hid, deprived}

His blessed countenance.
Milton.
Fools whose end is destruction, and eternal deprivation of being.

Bentley.

Now wretched Oedipus, deprived of sight,
Led a long death in everlasting night. Pope.
I have no hope of a future existence except that which is grounded on the truth of christianity; I wisi not to be deprived of this hope. Bishop Watson.

Deprivation, Ecclesiastical, is of two kinds, viz. à beneficio, when for some crime a minister is for ever deprived of his living; and ab officio, when a minister is for ever deprived of his order. It is the same with deposition and degradation. It is usually for some heinous crime deserving death, and is performed by the bishop in a solemn manner. See Degradation.

DEPTFORD, a town situated on the Thames, partly in the county of Kent, and partly in Surrey. It derives its name from a deep ford over the Thames, formerly used, but now cleared. It was generally known in ancient records by the name of Deptford Strond. Deptford is now a large and populous town, though it has no market, and is divided into Upper and Lower Deptford. It contains about 300 ? houses, many of which are neat and well built, two churches, several meeting-houses, and two charity schools. The greatest support and consequence of Deptford arises from its excellent docks. Here the royal navy was formerly built and repaired. The storehouses, which form a square, have, in the last war, had several additional buildings: the whole yard covers thirty-one acres of ground, containing two wet docks, one single, the other double, three slips, a basin, and two ponds for masts, with the various manufactories for anchors, cables, masts, blocks, \&c., and apartments for the numerous officers employed. Here the royal yachts are generally kept. Besides the national docks, there are several others belonging to snipbuilders for merchants' vessels. Near the dock formerly stood Says-Court, where Peter the Great resided for some time, and in this yard he completed his knowledge of the practical part of naval architecture. The Red-house, on the north-west side of the dock, is a large collection of warehouses and storehouses for navy provisions. At Deptford, in 1515, was first formed the society of the Trinity House, by Sir Thomas Spert. There are annually relieved by this company about 3000 poor seamen, their widows and orphans, at the expense of \(£ 6000\). The governors are invested with the power of examining the mathematical classes of Christ's Hospital, and the masters of his Majesty's ships ; and have the appointment of all pilots; erecting and maintaining lighthouses, buoys, beacons, \&c. Their business was formerly carried on in a hall in the parish of Deptford Strond; but it is now conducted in a spacious building near the Tower, erected in 1787. This town is four miles east of London.

DEPTH, n. s. Belg. diepte; Teut. tieff. See Deep.. The measure of deepness; hence a deep place ; the sea, an abyss, a quiet place, or season; and, figuratively, obscurity and sagacity. The plural, depths, is very frequent in the received translation of the Bible.
The depths have covered them: they sank into the bottom as a stone.

Exod. xy. 5.
As for men, they had buildings in many places higher than the depth of the water.

Bacon.

Thou spirlt, -_Inspire,
As thou art wont, my prompted song, else mate, And bear through height or depth of Nature's bounds. Milton. And in the depth of winter, in the night, You plough the raging seas to coasts unknown.

Denham.
The false tides skim o'er the covered sand, And seamen with dissembled depths betray.

Dryden.
or tho', in nature, depth and height
Are equally held infinite;
In poetry the height we know,
'Tis only infinite below.
Swift.
There are greater depths and obscurities in an elaborate and well written piece of nonsense, than in the most abstruse tract of school divinity.

Addison's Whiy Examiner.
It is certainly a sign of great self-ignorance, for a man to venture out of his depth, or attempt any thing he wants opportunity or capacity to accomplish.

Mason.
DEPUL'SION, n. s. ? . Lat. depulsio. A beat-
Depu'lsory, adj. \(\quad\) ing or thrusting away.
DEPURE', v. a. ? Fr. depurer; from
Depu'rate, v. a. \& adj. SLat. depurgo; de
Depurátion, n.s. \(S\) and purgo. To cleanse, purify. The verbs are synonymous, and the meaning of the derivatives is plain.

It produced plants of such imperfection and harmful quality, as the waters of the general flood could not so wash out or depure, but that the same defection hath had continuance in the very generation and nature of mankind.

Raleigh.
Brimstone is either used crude, and called sulphur vive; or is of a sadder color, and, after depuration, such as we have in magdeleons, or rolls of a lighter yellow.

Browne's V'ulgar Errours.
Chemistry enabling us to depurate bodies, and in some measure to analyse them, and take asunder their heterogeneous parts, in many chemical experiments we may, better than in others, know what manner of bodies we employ.

Boyle.
Neither can any boast a knowledge depurate from the defilement of a contrary, within this atmosphere of flesh.

Glanville.
 tare; to judge or choose; hence deputatus, a person chosen. To send another; to empower another to transact one's business. A deputy is a person so sent, generally or specially.

And Absolom said unto him, See thy matters are good and right, but there is no man deputed of the king to hear.

2 Sam.
Presbyters, absent through infirmity from their churches, might be said to preach by those deputies, who, in their stead, did but read homilies. Hooker.

A man hath a body, and that body is confined to a place; but where friendship is, all offices of life are, as it were, granted to him and his deputy; for he may exercise them by his friend.

Bacon.
Cut me off the heads
Of all the fav'rites that the absent king
In deputation left behind him here,
When he was personal in the Irish war.
Shakspeare.
He sooks not below the moon, but hath designed the regiment of sublunary affairs into sublunary depurations

Brown.

He exerciseth dominion over them as the vice. gerent and deputy of Almighty God.

Hale's Origin of Mankind.
The authority of conscience stands founded upon its vicegerency and deputation under God. South

And Linus thus, deputed by the rest,
The heroes welcome and their thanks expressed.

\section*{Roscommon.}

A bishop, by deputing a priest or chaplain to administer the sacraments, may remove him.

Ayliffe's Parergon.
DEQUA'NTITATE, v. a. from Lat. de and quantitas. To diminish the quantity of.

This we affirm of pure gold; for that which is current, and passeth in stamp amongst us, by reason of its allay, which is a proportion of silver or copper mixed therewith, is actually dequantitated by fire, and possibly by frequent extinction.

\section*{Browne's Vulgar Errours.}

DERA'CINATE, v. a. Fr. deraciner, from de and racine, a root, from Lat. radir, radicis. To tear up by the roots.

\section*{Her fallow lees}

The darnel, hemlock, and rank fumitory
Doth root upon; while that the culter rusts
That should deracinate such savagery. Shakspeare.
DERAIGN', v. a. See Arraign. But
Deraign'ment, or Minsheu says from either
Derain'ment, n.s. Fr. desarroyer or desranger, to disorder, or Norman defrene,' a proofe of the deniall of a man's owne fact.' To prove, or justify.

When the parson of any church is disturbed to demand tythes in the next parish by a writ of indicavit the patron shall have a writ to demand the advowson of the tythes being in demand: and when it is deraigned, then shall the plea pass in the court christian, as far forth as it is deraigned in the king's court.

Blount.
DERANGE', v. a. \} Fr. desranger, to dis-
Derange'ment, n.s. \(\}\) ordcr. The quotation from Blount includes a curious explanation of this word. It is of modern introduction, as to its general, but now very common, application both to disordered minds and things.

In some places the substantive deraignment is used in the very literal signification with the French disrayer, or desranger; that is, turning out of course, displacing or setting out of order; as, deraignment or departure out of religion, and deraignment or discharge of their profession, which is spoken of those religious men who forsook their orders and professions.

Blount.
Most nations have adopted pecnliar expressions, to signify the form or degree of derangement of intellect. The term derangement, which we have taken immediately from the French, and which means out of rank, or order, is metaphorically applied to the mind, to denote that its ideas are out of the rank, or order generally preserved by intelligent beings. Dr. Rees.

DERA'Y, n.s. Fr. desrayer. To turil out of the right way; ' tumult; disorder; noise; merriment;' and even 'solemnity,' says Dr. Johnson, adding, truly, ' not in use.'

DERBEND, or Derbent, a town of Persia, said to have bcen founded by Alexander the Great, aud once the residence of the celebrated caliph Haroun-al-Raschid. The Russians took it in the year 1722, and retained possession until

1735, when it was restored to the Persians. Afterwards it was subdued and possessed by Feth Ali. In the year 1796, the empress of Russia having declared war against the Persians, count Subow entered Daghestan, at the head of an army; having reconnoitred Derbend, he ordered an assault, but the town surreridered. The highest part of the town is crowned by a fort or citadel of a triangular figure. Many of the stones used are cubes of six fcet, but the ramparts are so narrow that caunon are mounted only on the towers. The entrance to the town is through an ancient iron gate. There is a tradition in the neighbourlood that the empire of the Mahommedans is to be overthrown by a yellow infidel army, which shall enter by this gate. No stranger is, therefore, permitted to enter the fortress, and a tax is taken of all strangers at the gate before mentioned. The streets of Derbend are irregular, but the town is well supplied with water from a fine, but almost ruined, aqueduct. The inhabitants consist of various eastern tribes and Jews, and amount altogether to about 4000 . It is a place of little trade, but a great quantity of saffron is cultivated in the neighbourhood, and the gardens are fine. To the north-east there are some graves covered with flag-stones above the ratural size of man; and many curious tombs in the vicinity. One of these, some years ago, was found to contain undecayed bones of the natural dimensions, a battle-axe, shield, and spear. The walls are built with stones as hard as marble; and near it are the remains of a wall which reached from the Caspian to the Black Sea. It is seated near the Caspian Sea, at the foot of Mount Caucasus, in long \(48^{\circ} 60^{\circ}\) E., lat. \(42^{\circ} 8^{\prime} \mathrm{N}\)., and is now the capital of the principality or khanship of Derbend. See below. It extends, on a declivity to the margin of the shore, full three miles, and is about half a mile wide. To the west is a passage leading into the mountains, which are possessed by barbarous independent tribes. Derbend is considered one of the gates of Persia, and is name signifies, in Persian, a locked door. It is surrounded by walls and towers of considerable strength.

Derbend, a principality or khanship of Persia, bounded on the north by the river Derbak, or Kerebagh, on the south by the rivers Kur and Salian, on the east by the Caspian Sea, and on the west by the district of Talasseran. It extends about twenty miles in length by fifteen in breadth: it is mountainous and well watered. The soil is very fertile, wheat yielding twenty and rice forty fuld. There are also fine grapes produced, but the wine is not good. Some silk and woollen manufactures are also carried on.

Derbend, or Derbent, a town of European Turkey, in the province of Romania, twenty miles north of Adrianople.

DERBY, or Derbyshire, an inland county of England, stuated nearly in the centre of the island, and at an almost equal distance from the eastern and western seas. It is bounded on the north by Yorkshire and part of Cheshire ; on the east by Nottinghamshire ; on the south by Leicestershire ; and on the west by Staffordshire and Cheshire. Its form is extremely irregular ; but probably the figure to which it approaches the
nearest is that of an inverted pylamid; this, however, is extremely arbitrary, owing to its uncommon indentations and projections. It is of considerahle extent, being computed to be the twentieth in point of magnitude, and the nineteenth in point of population, of all the English counties. Its greatest length, in a direction S.S.E. to N.N.W. is about fifty-six miles and a lalf. Its greatest breadth, from E.N.E. to W.S.W., thirty-three miles. It contains about 972 square miles, or 622,080 statute acres. Here are six hundreds, one bornugh, eleven market towns, and 116 parishes. This county is in the diocese of Litchfield and Coventry, and the province of Canterbury, and is included in the midland circuit.

Prior to the Roman invasion, the site of the present county belonged to the Coritani. The Romans included it in the division named Flavia Cæsariensis; but during the time of the AngloSaxons it belonged to the kingdon of Mercia. The word Derby, from whence comes the name of the county, is of uncertain derivation. By the Saxons it was called Northworthig, and by the Danes Deoraby. The latter is obviously the source whence its modern name, and probably that of the river Derwent, is derived ; but its precise meaning cannot now be ascertained.
The eastern and western districts, into which the Derwent naturally divides this county, are materially different, both in1 respect to the air, the face of the country, and the soil. The climate of the eastern division is healthy, temperate, and pleasant; but in the western district the air is much keener, and the state of the weather always more changeable. The face of the country presents, if not the most agreeable and pleasing, certainly the most varicd and romantic scenery of any county in England. There is the most striking difference and contrast of features between the northern and southern parts; the former abounding with hill and dale. The country gradually rises until we come to the neighbourhood of Wirksworth, and then begins to assume that picturesque and sublime appearance which it continues to possess to its extremity. That chain of hills arises, which stretching northwards is continued in a greater or less brealth quite to the borders of Scotland, and forms a natural boundary between the east and west sides of the northern part of the kingdom. Its course in this county is inclined a little to the west. It spreads as it advances northerly, and at length fills up the whole of the north-west angle; also overflowing a little, as it were, towards the eastern parts. The hills are at first of small elevation; but, being in their progress piled one upon another, they form very elerated ground in the tract called the High Peak, though without any eminễnces which can rank among the loftiest mountains even of this isfand. The most considerable in height are the Axe-edge and the Kinder-scout mountains. Mr. Farey, in his admirable and comprehensive View of the Agriculture and Minerals of this county, has given an alphabetical list of the several mountains, hills, and eminences throughout Derbyshire, or in the borders of the adjoining counties, descritiing their situations, the strata on the top of each,
\&c. These amount to upwards of 700 in number. This intelligent and truly scientific writer has also enumerated upwards of fifty of the principal narrow and rocky valleys or defiles with precipitous cliffs in and near to this county, describing their situations, the strata exhibited in their sides and bottoms, and the names of the most noted rucks, caverns, \&c., in each. These lists are uncommonly curious and interesting. The High Peak is not, as many suppose, a high barren rock, but an extensive range of rather elevated ground, called the Peak Hundred. It is caltivated and populons.
The principal rivers of Derbyshire, beside the Derwent, are the Trent, the Dove, the Wye, the Errewash, and the Rother. The Derwent rises in the High Peak district, and leaves this county on the Leicestcrshire border near Wilne. The Trent enters the county from Staffordshire, a little south of Calton, and leaves it near Barton, on the confines of Leicestershire. The Dove rises a little south of Buxton, and, joining the Trent near Burton in Staffordshire, finally quits the county. The Wye, rising in the viciuity of Buxton, never leaves the county, but falls into the Derwent a few miles below Bakewell. The Errewash rises in the coal district near Alfreton, and falls into the Trent a few miles below its junction with the Derwent. The Rother rises near Chesterfield, and enters Yorkshire between Kilmarsh and Beighton. These rivers are well stocked with almost every kind of fresh-water fish. The Dove and the Trent have been long celebràted by Cotton, and still more by his invaluahle friend, the pleasing and honest Isaac Walton, in his admirable book on angling. Nor has the Derwent received less honor from the pens of Darwin and Seward. This county is benefited by an extensive inland navigation. The principal canals are the following: the Grand Trunk from the Trent near Wilden-Ferry to the river Mersey near Runcorn-Gap. It was planned by the ingenious Mr. Brindley, and was begun on July 17th, 1766, and finished in May 1777. The Chesterfield Canal, another of Mr. Brindley's projects, extends from Chesterfield to the river Trent, at which it arrives a little below Gainsborough : its whole length being about forty-six miles. Langley Bridge, or Errewash Canal, extends from Langley Bridge to the Trent, opposite to the entrance of the Soar. Its length is about eleven miles. The Peak Forest Canal was completed in the year 1800 . It extends about fifteen miles in length, besides a railway of six miles, from the Ashton-under-line Canal, near Duckensfield Bridge, to the basin and limekilns at Chapel-Milton. The railway, passing Chapel-en-le-Erith, leads to Loads-knowl limestwne quarries in the Peak. Cromford Canal begins at Cromford, near Matlock, and joins the Errewash Canal at Langley Bridge: its length is about fourteen miles. Ashby-de-la-Zouch Canal, about fifty miles in length, joins the Coventry Canal at Marston Bidge, about two miles to ths south of Nuneaton, and ends at Ashhy-de-k-Zouch in Leicestershire. The Derby Canal commences in the Trent, at Swarkenstone Bridge; and, crossing the Trent and Mersey Canal, terminates at Little Eaton, about three milcs north
of Derby. The length of this brarch is shout eight miles and a half, with a rise of about twentynine feet. There is a railway branch of four miles and a half to the Smithy Houses and thence to the collieries near Derby. Another branch of this canal begins at Derby, and holds an easterly direction nearly parallel to the road leading to Nottingham, and finally joins the Errewash Canal between Long Eaton and Sandiacre: its length is eight miles and a half. This canal is fortyfour feet wide at top, twenty-four at bottom, and five deep in the ebbest part.
There is an almost endless variety of soil in this county. In the northern parts very extensive peat-bogs exist. The soil in these districts consists chiefly of ligneous particles, being the roots of decayed vegetables mixed with argillaceous earth or sand, and a coaly substance derived fror decayed vegetable matter. The surface presents nothing but the harren black moss, thinly covered with heath or ling. But in many parts of the Peak there is to be found what the inhabitants call a corn-loam, apparently consisting of a virgiu earth impregnated with nitre. This soil is good; but the parts where it is found are counterbalanced by vast tracts of barren hills and mountains, whose sides present very little soil, being chiefly composed of rocks. In those parts of Derbyshire near the horders of Cheshire and Staffordshire these barren rocks are rery high, hleak, and numerous. Indeed so uneven znd rugged is almost all the road between Macclesfield in Cheshire and Buxton in this county, that it has been quaintly remarked to be-
\[
\begin{aligned}
& \text { Up hill to Buxton all the way, } \\
& \text { And up hill all way back. }
\end{aligned}
\]

When the mountain is formed of the limestone, the soil, though scanty, is productive of the finer grasses, which form good pasturage for sheep. On that part which is called the East Moror, observes the Rev. D. P. Davies, a late elegant writer on the history, \&cc., of this county, there is scarcely any vegetation; not a dale or a glade which seems to have received the cultivating hand of man, or the fostering smile of nature. The most common soil in the southern parts is a reddish clay or marl. This soil is also found to prevail through the middle part of the extensive tract of limestone which lies on the north-west side of the county, and consists of much calcareous earth, which readily efferresces with acids. Some parts of the southern district are interspersed with small heds of sand or gravel. The large tract of country producing coal is covered with a clay of different colors ; black, gray, brown, and especially yellow. This kind of soil is also found in some parts where the gritstone is met with; but there it is frequently of a black color and bituminous quality. That on the north side of the county, where the limestone prevails, is of a brown color and loose texture. The soil on the banks of the rivers and in the valleys is different from that of the adjacent parts, and has evidently been altered by the depositions from the frequent inundations. It is extremely difficult to compress the great mass of information which Mr. Farey and others have collected relative to the soils of this county. Mr. Farey's map, however, contains a delineation of the several
soils of this and the adjoining one. Those which belong to this are the following:-A very extensive tract, from Morley south, along the borders of Nottinghamshire, to the extreme boundaries of the county on the edge of Yorkshire north, consists of numerous strata of bind, clunch, shale, and other argillaceous strata, enclosing and separating seams of coal and coaly impressions of vegetables. These strata, on exposure to the air, rain, and frosts, perish and fall to different kinds of clay or loam.

The very extensive coal district, branching out of Derbyshirc, north and south, into Yorkshire and a small part of Nottinghamshire, has been not unaptly denominated the Derbyshire and Yorkshire Coal Field. Mr. Farey, with his usual attention to interesting detail, has given an alphabetical list of about 500 collieries which are, or have been, worked in. Derbyshire and in the bordering parts of the seven adjacent counties. Of these it appears nearly one-half are in Derby-shire.-The gravel of which these coal districts are chiefly composed, produces a clayey soil, which is indiscriminately strewed over the county, but chiefly in patches about Derby and parts bordering on Staffordshire. These patches of land are again intermixed with other patches of red marl strata, occupying the largest portion of the southern districts. The yellow limestone strata are to be found chiefly, if not entirely, in some few parts bordering on Nottinghamshire, a little abore and below Bolsover, in this county. It occupies nearly 21,600 acres. The coalmeasures, or strata, already mentioned, occupy altogether 190,000 acres. The gritstone and shale strata occupy, with the exceptions yet to be mentioned, a tract of land about 160,500 acres, extending rather diagonally from Duffield south to the borders of Lancashire north; and in breadth in the widest part, from about Chapel-en-le-Frith to near Dove on the borders of Yorkshire. The mineral limestone and toadstone strata occupy an unshapen mass of land, extending from Wirksworth to Castleton, being about 51,500 acres. Along the same tract of country, but more to the Staffordshire side, is also a limestone stratum, making a surface of about 40,500 acres. This limestone appears to have undergone an amazing degree of shrinking; and hence there are vast shake-holes and caverns, some of them of a tremendous and frightful depth, in various parts These ǹatural caverns are in number abont twenty-seven. It will be proper to enumerate one or two of them in this place.

Bagshaw's Cavern, or the Crystallised Cavern, in Mule-Spinner Mine, is a little south-west of Bradwell, and is 400 yards in length. Elden Hole, surrounded with a stone wall, a little north of Peak Forest Town, is a very deep hole, connecting with a vast lateral cavern below. The opening or chasm in the rock is about five yards long and three broad. The top of it is somewhat higher than the surface of the earth, with a very jagged and uneven mouth, opening into a chasm, 'steep, black, and full of horror.' This chasm aas more than once been descended. It was forme ly represented as altogether unfathomable, and teeming, at a certain depth, with such
noxious air, that no animal could respire it without inevitable destruction. Cotton affirmed, more than a century ago, that he let down 884 yards of line, of which the last eighty yards were wet, without finding a bottom; and it has been confidently asserted, that a poor mat, who was once lowered in a basket to the depth of 200 yards, on being drawn up died in a state of delirium. We cannot give a better description of the actual depth and dimensions of this singular cavern, than the following of Mr. Lloyd's, as contained in vol. xiii. of the Philosophical Transactions Alridged. Mr. Lloyd having seen several accounts of the unfathomable depth of Elden Hole, in Derlyshire, and being in that neighlonurhood, he was inclined to make sonie enquiries about that noted place, of the adjoining inlabitants; who informed him that about fourteen or fifteell years lefore, the owner of the pasture in which this chasm is situated, having lost several cattle, had agreed with two men to fill it up; but finding no visible effects of their lahor, after laving spent some days in throwing down many loads of stones, they ventured to be let down into it, to see if their undertaking was practicable; when, on finding at the bottom a vast large cavern, they desisted from their work, as it would have becn almost impossible to have procured a sufficient quantity of stones to have filled it up. On enquiry of one of these men whether there were any damps at the bottom, and being assured in the negative, Mr. L. procured two ropes of forty fathoms nearly in length, and eight men to let him down.

For the first twenty yards Mr. L. was let down, he could assist himself with his hands and feet, as it was a kind of confined slope; but after that the rock jetted out into large irregular pieces, on all the three sides next him; and on that account lie met with some difficulty in passing, for about the space of ten yards more; भt which depth the rope was moved at least five or six yards from the perpendicular. Thence down, the breadth was about three yards, and the length at least five or six, through craggy irregular slits of rock, which were rather dirty, and covered with a kind of moss, and pretty wet, till he came within about twelve or fourteen yards of the bottom, and then the rock opened on the east side, and he swung till he descended to the floor of the cave, where he perceived there was light enough came from the mouth of the pit, though at the distance of sixty-two perpendicular yards, to read any print. When at the bottom, he perceived that the cavern consisted of two parts; the first being a cave, in shape not much unlike that of all oven; and the latter, a vast dome of the form of the inside of a glass-house; with a small arched passage from the one to the other, through which a slope of loose stones, that have been thrown in from time to time, extends from the wall at the west side of the first dome, to almost the bottom of the second cave or dome, with such an angle, that the farther end of the cave is lower by twenty-five yards than the place where he first landed. The diameter of this caverin may be nearly fifty yards: the top he could not trace with the eye; but he had reason
to believe it extended to a vast height; for when nearly at the top of one of the incrusted rocks, at the height of about twenty yards, he could find no closure of the dome, though he then saw much farther than when he stood at the bottom.

The curiosities to be met with in the small cavern are not worth mentioning; indeed he did not meet there with any stalactitical incrustations whatever; but the wall consisted of rude and irregular fragments of rock. But among the singularities in the second cavern, he observed the following ; climbing up a few loosestones on the south side, he descended again through a small slit into a little cave, four yards long and irregular, as to height not exceeding two yards ; and the whole lined with a kind of sparkling stalactites, of a fine deep yellow color, with some small stalactitical drops hanging from the roof. Facing the first entrance is a most noble column, of the same kind of incrustation, above thirty yards high : and, proceeding on to the north, he came to a large stone, covered with the like matter; and under it was a hole two yards deep, lined with the same; whence sprung a rock consisting of vast solid round masses, like the former in color, though not in figure, on which he easily ascended to the height of twenty yards, and got some fine pieces of stalactites, pendent from the cragged sides which joined this rock.

After this, proceeding forward, he came to another pile of incrustations, different from the two former, and much rougher; and which was not tinged with such a yellow, but rather with a brown color; and at the top of this also is a small cavern, into which he went. The last thing he took notice of was the vast drops of stalactites, hanging like icicles from every part of the vault; some of which were as large as a man's body, and at least four or five feet long. The greatest part of the walls of the large cavern was lined with incrustations, and they were of three kinds: the first being the deep yellow stalactites; the second being a thin coating, like a kind of light stone-colored varnish on the surface of the limestone, and which glittered exceedingly by the light of the candles; and the third being a sort of rough efflorescence, every minute shoot resembling a kind of rose-flower. Having satisfied his curiosity with a view of this astonishing vault, he began to return. Fastening the rope to his body, he gave the signal to be drawn up; which he found to be a much more difficult and dangerous task than the descent, owing to his weight drawing the rope into clefts, between the fragments of the rock, which made it stick; and to his body jarring against the sides, which he could not possibly prevent with his hands. Another circumstance also increased the danger, which was, the rope loosening the stones over head, whose fall he every instant dreaded.

After writing the above, Mr. L. was informed there was formerly the mouth of a second shaft in the floor of the great carern, somewhere under the great heap of stones; and that it was covered up by the miners, at the time when so many loads were thrown in from the top. It is reported to have gone down a vast depth farther, and to have had water at the bottom; buthe did not perceive any remaining appearance of such
opening himself, nor did the miners, who went down with him, say any thing about it.

Golconda is also a very large cavern, near Hopton. Poole's Hole, about half a mile S.S.W. of Buxton, is a very long cavern. The entrance is extremely narrow; but at the end of about twenty or thirty yards a spacious and lofty cavern opens, from the roof and sides of which water, continually dropping, congeals into large pillars and masses on the floor. Further up the cavern is a large suspended icicle or stalactite, denominated The Flitch of Bacon. Beyond this the cavern again becomes contracted; but a little further on it again expands, into a greater height and width, and continues so till we reach what is called Mary Queen of Scots' Pillar, a name given to a large massy column of stalactites, on accourt of its having been visited by that much injured princess during her stay at Buxton, when she wrote on a pane of glass at the ball:

> Buxton, whose fame thy baths shall ever tell, Which I, perhaps, shall see no more, farewell !

The cavern extends beyond this pillar about 100 yards, and is, from its mouth to this place, about 669 yards. Peak's Hole, near Castleton, is also a remarkable cavern, in which are several lakes or springs of water. Besides these horrid caverns there are numerous water-shallows or holes in the rocks, into which streams of water fall and disappear: in all about twenty.

Both Mr. Lloyd and the traditions of this neighbourhood, mention the appearance of water at the bottom of the several shafts. It has been conjectured that this is the continuation of a subterranean river; indeed of that very stream which runs out of the mouth of the ocean at Castleton.

Among the wonders of the Peak is Tide's or Weeden's Well, constituting one of the class which ebl) and flow like the sea. That it does ebb and flow is certain; but it is at very unequal periods, sometimes unt in a day or two, and sometimes twice in an hour. The basin of the spring is about a yard deep, and the same in length and breadth. When it flow i, the water rises with a bubbling noise, as if the air, which was pent up within the cavities of the rock, was forcing itself a passage, and driving the water before 1 t. It is occasionally used as a restorative.

But the great med:cinal wonder of Derbyshire is Buxton Wells, the waters of which, beside their medicinal use, have this singularity, that within five feet of one of the hot springs there arises a cold one; as, indeed, in several other places in England, and other countries. These springs possess a less degree of warmth than those at Bath. The water is sulphureous, with a small quantity of saline particles, hut it is not in the least impregnated with a sulphureous acid, hence they are verv palatable in comparison with other medicinal waters. See Buxton. Mr. Pennant observes, with his usual elegance:6 With joy and gratitude I this moment reflect on the efficacious qualities of the waters; I recollect with rapture the return of spirits, the flight of pain, and the re-animation of n:y long, long crippled rheumatic limbs.' About twelva
miles south-east of Buxton, in one of the most romantic situations of the whole kingdom, is Matlock. Here too is a medicinal bath of great value, the warm springs of which were first discovered about the year 1698. Near this place there is a petrifying spring; and the whole surrounding country is uncommonly interesting and romantic. In. many respects Matiock, as a wa-teriny-place, is preferable to Buxton. Here are less bustle, noise, and dissipation.

Having dwelt at some lengtl on the soil, \&c., of this county, there is less occasion and still less foom to detail its other natural productions. These chietly consist of lead, antimony, millstones, grind-stones, marble, alabaster, alım, pitcoal, and iron, which constitute, of course the great bases of its trade. In addition, there are silk and cotton mills at Derby and Ashhourne; respectable marble works at Ashford ; and considerable woollen manufactories in various parts. Malt is also made in this county in considerable quantity. It sends to parliament two members for the county, and two for the town of Derby.

There is a singular custom in this county of strcwing the churches on the anniversary of the dedication of the church, or on midsummer eve, with rushes. The aucient custom of hanging up garlands of roses in the churches, with a pair of gloves cut out of white paper, which had been carried bcfore the corpses of unmarried women at their funerals, also prevails in the neighbourhood of the Peak; and the county wakes are generally observed on the Sunday following the day of the dedication of the clurch or chapel, or on the saint's day after whom it is named. Druidical circles, tumuli of earth and stones, rocking-stones, rock-basins, and rude military works, attest the ancient British customs. The principal Roman remains are, an altar preserved in Haddun-Hall; some inscribed pigs of lead lately transferred to the British Museum; and the silver plate found in Risley-Park. Several Roman roads passed through the county; and stations may be traced in several places.

Sir Richard Ark wright, Brindley, Samuel Richardson, Authony Blackwall, Flamsteed the astronomer royal, and bishop Halifax, are among the 'worthies' it has produced. The gentlemen's seats, though not numerous, are nowhere exceeded in individual splendor and romantic situation. See Chatsworth.

Derby, the county town of Derbyshire, is seated on the Derwent, over which it has a handsome stone bridge. A small brook runs through it under nine stone bridges. It is large, populous, and well built; containing five churches, of which All Saints is the chief, the tower of which is 178 feet in height, the upper part befng richly ornamented. The interior is particularly light, elegant, and spacions. The roof is supported by five columns on each side; the windows are large and handsome, and the symmetry and proportions of the wholc building have a very pleasing effect. In ancient writings this church is called All-Hallows, which name it still retains among the common people. It was originally a free collegiate chapel, and besides the master or rector, who was the dean of Lincoln, had seven prebendaries. The county hall, county gaol, infir-
mary, an elegant assembly room, and a theatre, are the other principal buildings. The county hall is a handsome stone building, erected in the year 1730. In 1734 a machine was erected here by Sir Thomas Lonibe, for the manufacturing of silk, the model of which he brought from Italy at the risk of his life. It was the first of its kind erected in England; and its operations are to wind, double, and twist the silk, so as to render it fit for weaving. It has employed many hands in the town. When Sir Thomas's patent expired, in 1732, parlianent was so sensible of the value and importance of the inachine that they granted limi a further recompense of \(£ 14,000\), for the hazard and expense he had incurred in introducing and erecting it, upon condition that he should allow an exact model of it to be taken. This model is deposited in the Tower of London. Derby has a considerable manufactory of silk, cotton, and fine worsted stockings; and a fabric of porcelain equal, if not superior, in quality to any in the kingdom. Several hands are employed in the lapidary and jewellery branches; and the work of this kind, executed here, is in high estimation. Derbyshire spar and marble, as well as foreign marble, are also wrouglt here into various ornamental articles. The malting trade is extensively carried on in this town. It is governed by a mayor, nine aldermen, \&c. The aldermen are appointed for life, unless removed for ill behaviour. The recorder is chosen by the corporation, who can remove him at pleasure. The common-clerk is coroner and clerk of the peace, and is likewise chosen by the corporation; but both these officers must be approved of by his majesty. This town sends two members to parliament, who are elected by the corporation, freemen, and sworn burgesses; the nayor is the returning officer. A court of record is held here every second Tuesday, besides the quarter sessions, and a half-yearly court-leet.
The Derby General Infirmary is an excellent institution, situated near the London road, in a healtlfful, airy, and dry situation, abounding with good water. The building is constructed of a bcautiful hard white stone, of a handsome, yet simple elevation, of three stories, containing a light central hall, with a donble stair-case. Here the iron dome, the wide stonc gallery, and the very large stone stair-case resting upon the perforated floor of the hall, which covers part of the basement story, excite admiration from their well known strength and solidity. This mifrnary possesses a degree of perfection unknown to similar establishnents; for instance, in the construction of two light and spacious rooms, oue for each sex, called day, or convalescent rooms, where persons recovering, instead of beillg contined to the sáme room day and night, as has been the usual practice, may eat their meals and pass the day. Here is also a fever house, where relief is administered, in case of infectious diseases. The entrance to this is directly opposite to the front, and has no internal connexion with the infirmary. Besides the convalescent rooms, and the fever house, superior accommodations are provided for patients laboring under acute diseases in general ; these consist of four small wards, containing one, two, three, and four beds respectively, with a
water-closet, nurse's bed-room, and scullery. This arrangement enables the medical men to separate the diseases from each other, as may best suit their uatures; and the wards being parted off from the body of the house by folding doors, silence is obtained, aud too much light excluded (essential in some cases), rendering this part of the establishment more convenient, perhaps, on the whole than many private houses. Another contrivance is, that ventilation shall be copious. and the warmth regulated at pleasure: and with respect to water-closets, to prevent the draft frora the house being reversed, a mode of construction has been invented which does away cvery objection. A small steam engine is used to pump water, wash, \&c. A statue of Esculapius, indicating the object of this useful institution, is placed upon the centre of the dome. The building is calculated to hold upwards of 100 patients. Three physicians, four surgeons, and a house apothecary, have been appointed to the institution since it was opened for relief of in and out patients in June 1810.
The ordnance depôt is situated near the infirmary, and was erected, according to a plan of Mr. W yatt's, in 1805. It consists of an armory in the centre, calculated to contain 15,000 stand of arms. Above this is a room of the same proportions, containing accoutrements for the use of the army. On the north and south sides are two magazines, capable of containing 1200 barrels of ammunition. Four dwellings are situated in the angles of the exterior wall; two of which are barracks, and the other two are the residences of officers in the civil department.

Derby, as the centre of the literature of the county, and the scene of many of its improvements, has given birth to, and still boasts, many excellent literary institutions and libraries. The Derhy Philosophical Society, the object of which is, the promotion of scientific knowledge by occasional meetings and conversation, and by the circulation of books, was founded by Dr. Darwin, who spent the last twenty years of his life in this neighbourhood. The first meeting, in the year 1788, was at Dr. Darwin's house; and he retained the chair of this society till his decease. It boasts a considerable number of members, and is in possession of an extensive and valuable library.

Another flourishing institution made its appearance here in the year 1808, under the title of the Derby Literary and Philosophical Society. The objects of this association are, 'the pursuit of literary and scientific enquiries, and the improvement of its members in the power of gaining and of communicating knowledge.' The mcans by which these objects are attempted to he accomplished are the production and discussion of papers, or essays, which may be written on any subject connected with literature or sciencc, excluding only the practical departments of medicine and surgery, party politics and religion. It is a fundamental law of this society, that each member shall furnish an essay in his turn, and no instance has hitherto occurred in which this rule has been violated. The meetings are held monthly from September to April inclusively, one paper being read, and another
discussed, on each evening. These are the principal institutions, but there are eight or ten others in the town, and one exclusively devoted to the cultivation of Freach literature. Derhy has a market on Wednesday and Friday. It is situated in a fine plain, opening as it advances soutliward into a beautiful and highly cultivated country. It is thirty-six miles north of Coventry, and 126 north-west by west of London.

Derby, a town of the United States, in Orleans county, Vermont, on the north line of the state, and on the east shore of lake Memphremagog.

Derby, a town of New Haven county, Connecticut, on the point of land formed by the confluence of Naugatuck and Housatonick rivers. This town was settled in 1665, under New IIaven jurisdiction, and has an academy.

Derby, a town of Pennsylvania, in Chester county, seven miles from Chester, and five from Philadelphia. It is situated or Derby Creek, which fâlls into Delaware River, near Chester.

Derby, West, a township of England, in the county of Lancaster, four miles from Liverpool, and containing about 3000 inhabitants.

To DERE, v. a. Sax. depian. To hurt. See Dare. Obsolete.

So from immortal race he does proceed, That mortal hands may not withstand his might
Dred for his derring doe, and bloody deed;
For all in blood and spoil is his delight.
Faerie Queene.
Dereham, or Market Dereham, a market town of Norfolk, sixteen miles north from Norwich, and \(100 \frac{1}{2}\) N.N.E. from London. This is a clean and well paved place, and stands on a small rivulet which supplics it with water. The church is a very ancient structure, and the steeple is open to the body like that of a cathedral: it contains four chapels, one of which, St. Edmunds, contains an antique chest, taken out of the ruins of Beckenham Castle, in which are deposited the records of the church. The font, erected in 1468, is a fine specimen of ancient sculpture, being richly carved. In the churchyard stands a square tower containing a peal of bells. In this church the poet Cowper was buried in 1800. Here are also three respectable meeting-houses. This tnwn has sustained considerable damage by fires ; first in the year 1581 , when nearly the whole town was destroyed; and again in 1679. The market is on Friday, well stocked with provisions, and the greatest pig market in the county.

DERELICT', n. s.\& adj. \} Lat. derelictus, Derelic'tion, n. s. \(\} d e\) and relinquo, linquo, to leave. Terms first applied to property voluntarily relinquished or forsaken : hence to any other abandonment or forsaking; to emptiness; and figuratively to the mind.

There is no other thing to be looked for, but the effects of God's most just displeasure, the withdrawing of grace, dereliction in this world, and in the world to come confusion.

Hooker.
Derelict lands, suddenly left by the sea \({ }_{3}\) belong to the king: but if the sea shrink back so slowly that the gain be by litule and little, it shall go to the owner of the lands adjoining.

2 Comm. 261, quoted by Jacobs.

They easily frevailed, so as to seize upon the must vacant, unoccupied, and derelict minds of his [lord Chatham's] friends. Burke.
Derelicts imply, also, such lands as the sea, by receding from them, leaves dry and fit for cultivation. If they are left by a gradual recess of the sea, they are adjudged to belong to the owner of the adjoining lands; but when an island is formed in the sea, or a large quantity of new land appears, such derelict lands belong to the king.

DERHAM (Dr. William), a celebrated English divine, born in 1657 . In 1682 he was presented to the vicarage of Wargrave in Berkshite, and, in 1689, to the rectory of Upminster, Essex. Applying himself with great eagerness to natural and experimental philosophy, he soon became a distinguished member of the Royal Society, whose Philosophical Transactions contain a great variety of curious and valuable pieces, the fruits of his industry. In his younger years he published his Artificial Clock-maker, which has been often reprinted: and in 1711, 12, and 14, he delivered the Boyle's Lectures, which he afterwards digested under the well-known titles of Physico-Theology and Astro-Theology; or a Defence of the being of a God from a Survey of the Works of Creation and of the Heavens. He next published Christo-Theology, a demonstration of the divine authority of the Christian religion. He died at Upminster in 1735, and left a valuable collection of curiosities, particularly specimens of English birds and insects.

DERIDE, v. a.) Ital. and Lat. deridere, Deríder, n.s. from de and rideo. To Derísion, laugh; to mock with laughDerísive, adj. Deri'sory. nymous adjectives.

I am in derision daily; every one mocketh me.
Jer. xx. 7.
Upon the wilful violation of oaths, execrable blasphemies, and like contempts offered by deriders of religion, fearful tokens of divine revenge have been known to follow.

Hooker.
The faith of the righteous cannot be so much derided, as their success is magnified.

\section*{Bishop Hall. Contemplations.}

Ensnared, assaulted, overcome; led bound,
Thy foe's derision, captive, poor, and blind, Into a dungeou thrust.
- Milton.

What shall be the portion of those who have derided God's word, and made a mock of every thing that is sacred and religious?

Tillotson.
O'er all the dome they quaff, they feast;
Derisive taunts were spread from guest to guest,
And each in jovial mood his mate addressed. Pope.
Are we grieved witn the scorn and aerision of the profane? Thus was the blessed Jesus despised and rejected of men.

Rogers.
Some, that adore Newton for his fluxions, deride him for his religion.

Berkley.
I know that expectation, when her wings are onco expanded, easily reaches heights which performance never wili attain; and when she has mounted the snumit of perfection, derides her follower, who dies in the pursuit.

Johnson. Plan of Dictionary.

DERII \({ }^{\prime} \mathrm{E}, v . a . \& v . n\). Deriv'able, adj.
Derméation, n.s.
Deriv'ative, n.s. \& adj. Deriv'stively, \(u d v\).
Deriv'er, n.s.

Fren. deriver: Span. and Port. derivar; Ital. and Lat. derivare, to draw water, from de and rivus; Heb. היר, a stream, Hence to draw or trace from a source; and as a neuter verb to come from; to owe origin to. Derivable is traceable, to or from; hence deducible in argument. Derivation, literally, a drainage of water, and a drawing out, or displaying words or ideas from their original sources; the drawing out a peccant humor of the body; and the thing drawn out, or derived. Derivative is used as a substantive in this last sense.

Though not in word nor deed ill meriting, Is from her knight divorced in despayre,
And her dew loves deryv'd to that vile witchers snayre.
Spenser. Fuerie Queene.
(Thrist having Adam's nature as we have, but incorrupt, deriveth not nature, but incorruption, and that inmediately from his own person, unto all that belong unto him.

Hooker.
I am, my lord, as well derived as he,
As well possest.
Shakspeare.
For honour,
'Tis a derivative from me to mine,
And only that I stand for.
Id.
The streams of the publick justice were derived into every part of the kingdon.

Davies.

> By which I knew the time,

Now full, that Inc, more should live obscure;
But openly begin, as best becomes
The authority which I derived from Heaven.
Milton.
As it is a dervative perfection, so it is a distinct kind of perfection from that which is in God. Hale.

They endeavour to derive the varieties of colors from the various proportion of the direct progress or motion of these globules to their circumvolution, or motion about their own centre.

Boyle.
The word Honestus originally and strictly signifies no more than creditable, and is but a derivative from Honor, which signifies credit or honuur.

South.
Such a oue makes a man not only a partaker o other men's sins, but also a deriver of the whole intire guilt of them to himself.
\(I d\).
Men derive their ideas of duration from their reflection on the train of ideas they observe to succeed one another in their own understandings. Locke.

Most of them are the genuine derivations of the hypothesis they claim to.

Glanville.
Among other derivatives I have been careful to insert and elucidate the anomalous plurals of nouns and preterites of verbs.

Johnson. Preface to Dictionary.
Here is the fountain of truth, why do you follow the streams derived from it by the sophistry, or polluted by the passions of man? Bishop Watson.

The mind that is immortal-it derives
No colour from the fleeting things without;
But is absorbed in sufferance or in joy,
Born from the knowledge of its own desert.
Byron.
DERNIE \({ }^{\prime}\), adj. Last. Is a French word used only in the following phrase.

In the Impcrial Chamber, the term for the prosecution of an appeal is not circumscribed by the term of one or two years, as the law clsewhere requires in the empire; this being the dernier resort. Ayliffe.

The court of dernier resort is the peerage of England.

Franklin.
DERMESTES, in zoology, a genus of insects belonging to the order of coleoptera. The antennæ are clavated, with three of the joints thicker than the rest; the breast is convex; and the head is inflected below the breast. Many varieties of this genue, as well as their larva, are to be met with in dried skins, bark of trees, wood, seeds, flowers, the carcases of dead animals, \&c. There are eighty-seven species, of which the following are the inost remarkable: D. domesticus varies greatly in size and color, some being found of a dark brown, others of a much lighter liue. The form of it is oblong, almost cylindrical. The elytra are striated, the thorax is thick and rather gibbous. This little animal, when touched, draws in its head under its thorax, and its feet beneath its abdomen, remaining so motionless that one would think it dead. This is the insect which makes in wooden furniture those little round holes that reduce it to powder. D. ferrugineus is the largest of the genus; its color is a rusty iron, having many oblong, velvet black spots upon the elytra, which give the insect a gloomy, yet elegant appearance. D. lardarius, of an oblong form and of a dim black color, easily distinguishable by a light brown stripe that occupies transversely almost the anterior half of the elytra. That color depends on small gray hairs situated on that part. The stripe is irregular at its edges, and intersected through the middle by a small transversal streak of black spots, three in number, on each of the elytra, the middlemost of which is somewhat lower than the rest, which gives the black streak a serpentine form. Its larva, which is oblong, somewhat hairy, and divided into segments alternately dark and light colored, gnaws and destroys preparations of animals preserved in collections, and even feeds upon the insects; it is also to be found in old bacon. This species may be destroyed by arsenic. D. violaceous, a beautiful little insect: its elytra are of a deep violet blue. The thorax is covered with greenish hairs, the legs are black. The whole animal's being of a glittering brilliancy renders it a pleasing object. The larva, as well as the perfect insect, inhabits the bodies of dead animals.

DERMODY (Thomas), an English poet, was born in the south of Ireland in. 1775. His father was a schoolmaster at Ennis, and employed him, when only nine years old, in teaching the Latin and Greek languages. He, however, ran away from home at an early age, and enlisted as a common soldier. Having obtained the notice of the present marquis of Hastings, that nobleman procured him a commision; but his conduct was most dissipated, and rendered all efforts to serve him abortive. A volume of his poems appeared in 1800; and another was published in 1802, in which year he died, at Sydenham in Kent, of disease brought on by his vices. His pieces have since been collected and published by Mr. Raymond.

DER'OGATE, v. a., v. n. \& \(a d j\).? Der')gately, \(a d v\). Deroga'tion, n. s. Derog'ative, adj. Derog'atory, adj. Derog'atorily, \(u d v\). from de and rooo, to dema) derogare, diminish the legal force of a prior act so as in custom; hence to disparage generally : and, as a neuter verb, to detract; lessen reputation; degenerate. The adjective means degenerated; degraded. Derogative and derogatory mean detractious; dishonorable.

So surcly he is a very brave man, neither is that any thing which \(I\) speak to his derogation; for in that I said he is a mingled people, it is no dispraise.

Spenser on Ireland.
We should be injurious to virtue itself, if we did derogate from them whom their industry hath made great.

Hooker.
Is there no derogation in it?
-You cannot derogate, my lord.
Shakspeare.
Into her womb convey sterility;
Dry up in her the organs of increase, And from her derogate body never spring A babe to honour her. Id. King Lear.
The wiscst princes need not think it any diminution to their greatness, or derogation to their suff. ciency, to rely upon counsel.

Bacon.
By several contrary customs and stilcs used here, many of those civil and canon laws are controulcd and derogated.

Hale.
That spirits are corporeal, seems to me a conceit derogative to himself, and such as he should rather labour to overthrow; yct thereby he establisheth the doctrine of lustrations, amulets, and charms.

Browne's Vulgar Errours.
That which enjoins the deed is certainly God's law; and it is also certain, that the scripture, which allows of the will, is neither the derogution nor relaxation of that law.

Sulth.
These deputed beings are derogatory from the wisdom and power of the Author of Nature, who doubtless can govern this machine he could create, by more direct and easy methods than employing these subservient divinities.

Cheyne.
None of these patriots will think it a derogation from their merit to have it said, that they reccived many lights and advantages from their intimacy with my lord Somers.

Addison.
Dehogatory Clause, in a testament, is a certain sentence, cipher, or secret character, which the testator inserts in his will, and of which he reserves the knowledge to himself alone, adding a condition, that no will he may make hereafter is to be reckoned valid, if this derogatory clause is not inserted expressly and word for word. It is a precaution invented by lawyers against latter wills extorted by violence or obtained by suggestion.

Derry, a township of the United States, in Dauphin county, Pennsylvania, situated on the east side of Swatara Creek, two miles above its confluence with the Susquehannah, and celebrated for its curious cave. Its entrance is under a high bank, nearly twenty feet wide, and about eight or ten feet in height. It descends gradually nearly to a level with the creek. Its
apartments are numerous, of different sizes, and adorned with stalactites curiously diversified in size and color.

IDER’VIS, n. s. Fr. dervis, from Per. dervish. See the article below. A priest or monk among the Turks.

Even there, where Christ vouchsafed to teach, Their dervises dare an impostor preach. Sandys.
The derois at first made some scruple of violating his promise to the dying brachman; but told him, at last, that he could conceal nothing from so excellent a prince.

Spectator.
Dervis, or Dervich, a name given to a sort of monks among the Turks, who lead a very austere life, and profess extreme poverty; though they are allowed to marry. The word originally signifies a beggar, or a person who has nothing; and because the religious, and particularly the followers of Mevelava, profess not to possess any thing, they call both the religious in general, and the Mevelavites in particular, dervises. There are in Egypt several kinds : those that are in convents are a kind of religious order and live retired; though there are of these some who travel and return again to their convents. Some take this character, and yet live with their families, and exercise their trades: of this kind are the dancing dervises at Damascus, who go once or twice a week to a little uninhabited convent, and perform their extraordinary exercises. There is a third sort of them who travel about the country, and beg, or rather oblige people to give, for whenever they sound their horn something must be given them. The people of these orders, in Egypt, wear an octagonal badge, of a greenish white alabaster, at their girdles, and a high stiff cap without any thing rourd it. The dervises in Persia, are called abdals, servants of God. See Abdals. The dervises called Mevelavites are a Mahommedan order of religious; the chief or founder of which was one Mevelava. They are very numerous. Their chief monastery is that near Cogni in Natolia, where the general makes his residence, and where all the assemblies of the order are held; the other houses being all dependent on this, by a privilege granted to this monastery under Ottoman I. These dervises affect humility and charity. They always go bare-legged and open-breasted, and frequently burn themselves with hot irons, to inure themselves to patience. They always fast on Wednesdays, eating nothing on those days till after sun-set. Tuesdays and Fridays they hold meetings, at which the superior presides. One of them plays all the while on a flute, and the rest dance, turning their bodies round and round with the greatest swiftness imaginable. This practice they observe with great strictness, in memory, it is said, of Mevelava their patriarch turning miracnlously round for the space of four days, without any food or refreshment, his companion Hamsa playing on the flute; after which he fell into an ecstacy, and therein received revelations for the establishment of his order. They believe the flute an instrument consecrated by Jacob and the shepherds of the Old Testament, because they sang the praises of God upon it. They profess poverty, chastity, and obediVol. VII.
ence; but if they choose to go out and marry, they are always allowed. The generality of dervises are mountebanks: some apply themselves to legerdemain, postures, \&c., to amuse the people; others pretend to sorcery and magic: but all of them, contrary to Mahomet's prccept, are said to drink wine, brandy, and other strong liquors, to give them the degree of gaiety their order requires. The dervises are great travellers; and, under pretence of preaching, and propagating their faith, are continually passing from one place to another: on which account they have been frequently used as spies. See Mahomet and Koras.

Derwent, a rapid river of the county of Cumberland, rising in Borrowdale, from whence it emerges to form a lake. It receives the Cocker at Cockermouth, after which it falls into the Irish sea at Workington.

Derwent, a second river of England, which ruris into the Ouse, five miles south-east of Selby, in the county of York. 3. A river of England, which rises in Northumberland, and flows into the Tyne, about three miles above Newcastle. 4. A river of England which rises in the northern part of the county of Derby, and is formed of several streams, one of which issues from the cavern of Castleton. It forms one of the principal ornaments of the magnificent seat of Chatsworth and afterwards falls into the Trent, eight miles E.S. E. of Derby.

Derwent Fells; a chain of mountains in Cumberland, reckoned among the loftiest in England. One of them is celebrated for its mines of black lead, from which, for its superior quality, great part of Europe and America are supplied. In travelling through the valley of Borrowdate, amongst these mountains, they exhibit to the admirer of nature's romantic beauties, the representation of a stormy ocean; the numerous distant hills appearing like so many waves rising and undulating behind each other. The immense masses of rugged rocks, however, abruptly brokeil off here and there, occasionally start up to dispel the illusions of fancy; and, together with the trees, villages, farms, and cattle, which he discovers as he proceeds, serve to convince the traveller that he is still on terra firma.

Derwent Water, or the Lake of Keswick, a beautiful lake of Cumberland, in the vale of Keswick, lying between the mountain of Skiddaw on the north and the craggy hills of Borrowdale on the south, whence it derives its chief supplies of water. See Cumberland.

DESAGULIERS (John Theophilus), a Protestant divine, born at Rochelle in 1683. He was educated at Clırist Church, Oxford; where he succeeded Dr. Keill in reading lectures on experimental philosophy at Hart Hall. The duke of Chandos made Dr. Desaguliers his chaplain, and presented him to the living of Edgware, near his seat at Cannons: he was afterwards chaplain to Frederic prince of Wales. He introduced the practice of reading public lectures on experimental philosophy, in London, and continued them with great success to the time of his death in 1749. He communicate many curious papers to the Philosophical Transactions; published a valuable Course of Experimental Philosophy, in 2 vols, 4to; and edited
an edition of Gregory's Elements of Catoptrics and Dioptrics, with an Appendix on Reflecting Telescopes, 8vo. He was also a member of several foreign academies.

DESAIX (Louis Clarles Anthony), a cetebrated Freuch general, born near Riom, in 1768. At an early life he made choice of the military life, and before the revolution had risen to the rank of lieutenant. In the republican army he was first employed as aid-de-camp to general Custine. He displayed great bravery at the battle of Lauterbourg, where, though severely wounded, he kept the field, rallying the disordered batalions. Having been successively created general of brigade and of division, he contributed, very considerably, to the fanous retreat of Moreau. At the battle of Rastadt he commanded the left wing of the French army, obliging the archduke Charles to fatl back; and he afterwards heroically defended the bridge of Keht, where he was severely wounded. He accompanied Buonaparte into Egypt, where he was appointed governor of the upper part of the country. Having signed the treaty of El Arish with the Turks and English, he returned to Leghorn, but was detained there as a prisoner of war by admiral lord Keith. Upon obtaining his parole he returned to France, and accompanied Buonaparte to Itåly. He was killed at the battle of Marengo, June 14th, 1800.

DESAQUADERO, a river of South America, in Peru, over which the Ynca Huana Capac built a bridge of flags and rushes, to transport his army to the other side, and which remained a few years since.

DESART, or Desert, a large extent of country entirely barren, and producing nothing. In this sense some are sandy desarts; as those of Lop, Xamo, Arabia, and several others in Asia; in Africa, those of Libya and Zara : others are stony, as the desart of Paran in Arabia Petræa. The Desart, peculiarly so called in Scripture geography, is that part of Arabia south of the Holy Land, where the children of Israel wandered forty years. See Desert.

DESATIR is a lately discovered collection of sixteen sacred books, consisting of the fifteen old Persian prophets, together with a book of Zoroaster. This, at least, is what the book itself pretends to be. The collection is written in a language not spoken at present any where, and equally different from the Zend, the Pelvi, and modern Persian. The last of the fifteen prophets, Sasan, who lived at the time of the downfal of the Sassanides, when the Arabians conquered the country, literally translated the Desatir, and accompanied it with commentaries. This work was afterwards, until the 17 th century, one of the chief sources of the ancient Persian religious doctriues, interwoven with astrology and demonology; and, after having been forgotten for about a century and a half, a learned Parsee discovered it at Ispahan. His son, Molla Firuz, was induced by the marquis of Hastings to publish an edition of the Desatir at Bombay, in 1820, to which Erskine added an English translation. Erskine, however, considers the collection as spurious; and Sylyester de Sacy (Journal des Savants, Feb., 1821) believes that the Desatir is the work of a Parsee in the 4th century
of the Hegıra, who, as he thinks, invented the language, in order to give to the collection, which is itself an assemblage of old traditions and significant mysteries, an air of genuineness. Joseph von Hammer, on the contrary, is said to consider it as genuine. At all events, it is interesting to learn from this work, with greater accuracy, an old religious system of the East, in whicli are to be found, with pandæmonism and the metempsychosis, the elements of the worship of the stars, of astrology, the theurgy, the doctrine of amulets, as well as the elenients of the Hindoo religion, particularly the system of castes, and many elements of the Christian religion. Yet no trace of any connexion with the Zendavesta and the magic of the Parsees has been found in the Desatir.

DE'SCANT, v. n., \& n.s. Span. and Ital. discanto, from Lat. de and canto, to siug. The verb seems formed in our language from the noun, which signifies a song or tune, in parts; a harmony for different voices or instruments : hence, a discourse consisting of various parts; and to sing in various parts. To discourse; declaim; generally used in the latter sense, contemptuously.

Descant, in music, signifies the art of composing in several parts. Descant is threefold, viz. double, figurative, and plain. Double descant is when the parts are so contrived, that the treble, or any high part, may be made the bass ; and, on the contrary, the bass the treble. Figurative or florid descant is that part of an air of music wherein some discords are concerned, as well, though not so much, as concords. This may be termed the ornamental and rhetorical part of music, in regard that there are introduced all the varieties of points, syncopes, diversities of measure, and whatever is capable of adorning the composition. Plain descant is the ground-work and foundation of all musical compositions, consisting altogether in the orderly placing of many concords answering to simple counterpoint.

DESCARTES, René (Renatus Cartesıus), an original thinker, and reformer of philosophy, with whom the modern or new philosophy is often considered as commencing, was born in 1596, at La Haye, in Touraine, and died at Stockholm, in, 1650. While pursuing his education in the Jesuits' school at La Fleche, where he studied philology, mathematics, and astronomy, his superior intellect manifested itself. After having read much, without coming to any certain conclusions, he travelled. Both his birth and inclination led him to embrace the military profession, and he fought as a volunteer at the siege of Rochelle, and in Holland under prince Maurice. While he served in Holland, a mathematical problem in Dutch, pasted up in the streets of Breda, met his eye. Not being acquainted with the language, he asked a man who stood near him to translate the problem to him. This man happened to be professor Beecman, principal of the university of Dort, and himself a mathematician. He smiled at the question of the young officer, and was greatly surprised, the next morning, to find that he had solved it. From hence Descartes went to Germany, and
elitered the Bavarian service. His situation, however, affording lim little opportunity of pursuing his favorite studies, he left the army in 1621, and visited Moravia, Silesia, Poland, Pomerania, and the shores of the Baltic. In order to see West Friesland with advantage, he purchased a boat, and embarked with a single valet. The sailors, thinking him a foreign merclant, with much money in his baggage, resolved to kill him. Imagining him ignorant of their language, they conversed of their plan openly. Descartes, seeing his danger, drew his sword, addressed them in their own tongue, and threatened to stab the first man that should offer him violence. The sailors were overawed, and gave up their design. After a variety of travels, he remained in Holland, where he composed most of his writings, from 1629 to 1649, drew about him many scholars, and was engaged in many learned controversies, especially with theologians. His celebrated system abounds in singularities and originalities; but a spirit of independent thought prevails throughou \({ }^{+}\)it, and has contributed to excite the same spirit in others. It has done much to give to philosophical inquiries a new direction, and found many adherents, especially in England, France, and Germany. Descartes founds his belief of the existence of a thinking being on the consciousness of thought:
"I think, therefore I exist" (cogito, ergo sum). He developed his system with much ingenuity, in opposition to the then empiric philosophy of the English, and the Aristotelian scholastics, and adopted the rigorous, systematic or mathematical method of reasoning. From his system originated the notion among the moderns, that the very existence and certainty of philosophy consists in definitions, arguments, and a methodical arrangement of them. The thinking being, says Descartes, or the soul, evidently differs from the body, whose existence consists in space or extension, by its simplicity and immateriality (whence, also, its immortality), and by the freedom that pertains to it. But every perception of the soul is not clear and distinct; it is in a great degree involved in doubt, and is so far an imperfect, finite being. This imperfection of its own leads it to the idea of an absolutely perfect being. (He, therefore, here makes use of the (so called) ontological proof of the existence of God, in a different manner from that in which Anselm of Canterbury lad, somewhat earlier, employed the same; and hence the name of the "Cartesian proof.") He placed at the head of his system the idea of an absolutely perfect being, which he considers as an innate idea, and deduces from it all further knowledge of truth. The principal problems of metaphysics he conceived to be substantiality and causality. He contributed greatly to the advancement of mathematics and physics. He made use of the discoveries and observations of others, defining them accurately, and assigning them their place in his system. The higher departments of geometry (to which he successfully applied analysis), as well as optics, dioptrics, and mechanics, were greatly extended by him, their method simplified, and thereby the way prepared for the great discoveries made in the sciences by Newton and

Leibnitz; for instance, he contributed much to define and illustrate the true law of refraction. His system of the universe attracted great attention in his time, but has been long since exploded. It rests on the strange hypothesis of the heavenly vortices, immense currents of ethereal matter, with which space is filled, and by which he accounted for the motion of the planets. He labored much to extend the Copernican system of astronomy. Descartes loved independence; he nevertheless suffered limself to be persuaded to go to Stockholm, upon the invitation of queen Christina, who was very desirous of his society. He died at that place four month: after his arrival. His body was carried to l'aris in 1666, and interred anew in the church of St. Genevieve du Mont. Descartes was never married, but had one natural daughter, Francina, who died in his arms, in her fifth year, and whose loss lie felt acutely. His works have at various times been published, singly and together; as, for instance, at Amsterdam, 1692, 9 vols. 4to. Baille and Tarpelius have written his life. (See his letters; also the eulogies on him by Gaillard, Thomas, and Mercier, and Leibnitz's account of him in his letters.)

DESCEND', v. a.\&v.n. Fr. descendre;

Descendiant, n.s.
Déscendéext, adj.
Descendible,
Descen'sios, n. s.
Descen'sional, adj.
Descent', nos.
\(\qquad\) downwards; or cling as to a roper wards. As a neuter verb, to fall, or sink, or go downwards : hence, to be derived from, and to come in order of inheritance. A descendant is applied to offspring, near or remote : descendent, falling, sinking; derived from : descendible, that which may be descended, or may descend. Descension, figuratively, a degradation, or a declension.

Descent, in heraldry, is used to express the coming down of any thing from above; as, a lion en descent is a lion with his head towards the base points, and his heels towards one of the corners of the chief, as if he were leaping down from some high place.

Descent, or hereditary succession, in law, is the title whereby a man, on the death of his ancestor, acquires his estate by right of representation, as his heir at law. An heir, therefore, is he upon whom the law casts the estate immediately on the death of the ancestor; and an estate so descending to the heir is in law called the inheritance. See Inueritance. Descent is either lineal or collateral. Collateral descent is that springing out of the side of the line or blood; as from a man to his brother, nephew, or the like. See Consanguinity. Lineal descent is that conveyed down in a right line from the grandfather to the father, from the father to the son, and from the son to the grandson, \&c.

Descent of Dignities. A dignity differs from common inheritances, and goes not according to the rules of the common law: for it descends to the half blood: and there is no coparcenership in it, but the eldest takes the whole.

The dignity of pecrage is personal, annexed to the blood; and so inseparable, that it cannot be trausferred to any person, nor surrendered even to the crown: it can move neither forward nor backward, but ouly downward to posterity ; and nothing but corruption of blood, as if the ancestor be attainted of treason or felony, can hinder the descent to the heir.

DESCRIBE', v. \(a\). Fr. descrire ; Span.
Describéer, n.s. descriver ; Ital. descri-
Descrip'tion, n.s. vere; Lat. describere,
Descriptive, adj. from de, concerning, and
Descrivé, v.a. Scribere, to write. To delineate ; trace out; distribute a thing or country into its parts: description is both the act and form of describing. Descrive is used for describe by Surrey.

DESCRY', v.a.\& n.s. ₹ Fr. descrier. To Descríer, n. s. ) give notice of any thing suddenly discovered : hence to spy out; detect; discover.

How near 's the other army?
-Near, and on speedy foot, the main descry
Stands in the hourly thought. Shakspeare.
Deseada, Desirada, or Desiderada, the first of the Caribbee Islands, discovered by Columbus in his second voyage, in 1494, when he gave it that name. - It is ten miles long and five broad, and looks at a distance like a galley, with a low point at the north-west end. The soil is in some places black and good, in others sandy and unproductive. It lies twelve miles cast of Guadaloupe.

Deseada, or Cape Desire, the south point of the Straits of Mayellan, at the entrance of the South Sea. Long. \(74^{\circ} 18^{\prime} \mathrm{W}\)., lat. \(53^{\circ} 4^{\prime} \mathrm{S}\).

DES'ECRATE, v.a. ? Lat. desacro, from
Desecra'tion.
) de, privative, and sacro, to consecrate; although the Latin compound desacro also signifies to hallow. To apply to common or profane purposes, that which has been consccrated.

The founders of monasteries imprecated cvil on those who should desecrate their dnnations.

Salmon's Survey.
DESERT', v.a., n.s. \& adj.) Fr. deserter;
Deserter, from Lat. dese-
Deser'tion, \(\quad\}\) ro, desertum.
Deser'trice, n.s. Fem. To leave, forsake, abandon. A desert is a solitary, forsaken place; hence, as an adjective, wild, unfrequented, uninhabited: a deserter, hc who forsakes his post of duty; and Milton has afforded us a feminine substantive of this meaning.

And it is written in the book of salmys, the abstacioun of hem be maad desert, and be there noon that dwelle ir it, and anothir take his bishopriche.

Wiclif. Dedis. 1.
He found him in a desert land, and in the waste howling wilderness. Deuteronomy, xxxii. 10.
For light she hated, as the deadly bale,
Ay wont in desert darkness to remainc,
Where plain none might her see, nor she see ony plainc. Spenser. Faerie Queene.

\section*{I have words}

That would be howled out in the desert air, Where hearing should not catch them.

Shakspeare.

He, looking round on every side, beheld
A pathless desert, dusk with horrid shades.
Milton.
[It is] as vain to go about to compel (the unhappy pair) into one flesh as to weave a garment of sand.Cleave to a wife, but let her he a wife, not an adversary, not a desertrice.

Id. Tetrachordon.
Hosts of deserters, who your honour sold,
And hasely broke your faith for bribes of gold.
Dryden.
Christ hears and sympathises with the spiritual agonies of a soul under desertion, or the pressures of some stinging affliction.

South.
What is it that holds and keeps the orbs in fixed stations and intervals, against an incessant and inherent tendency to desert them?

Bentley.
The members of both houses, who at first withdrew, were counted deserters, and outed of their places in parliament.

King Charles.
Thou, false guardian of a charge too good,
Thou, mean deserter of thy brother's blood. Pope.
A deserter, who came out of the citadel, says the garrison is brought to the utmost necessity.

Tatler. No. 59.
Desertcd is my own good hall,
Its hearth is desolate;
Wild weeds are gathering on the wall;
My dog howls at the gate.
Byron.
Deserter. A deserter is, by the articles of war, punishable by death; which, after conviction, is executed upon him at the head of the regiment he formerly belonged to, with his crime written on his brcast. A reward of twenty shillings is given to every person who apprelends a deserter, and persons concealing, harboring, or buying the clothes, arms, \&c. of such person, are liable to very heavy penalties. No non-commissioned officer or soldier shall cnlist himself in any other regiment, troop, or company, without a regular discharge from the regiment, troop, or company, in which he last served, on the penalty of being reputed a deserter, and suffering accordingly : and in case any officer shall knowingly receive and entertain such non-commissioned officer or soldier, or shall not, after his being discovered to be a deserter, immediately confine him, and give notice thereof to the corps in which he last served, he, the said officer so offending, shall, by a court-martial, be cashiered.
DESERT', n. s. \(\}\) Old Fr. deserte, or a
I)esert'less, udv. Sparticipial form of De serve, which see. Merit or demerit; title to reward or punishment: desertless is used by Dryden for without merit.

Being of necessity a thing common, it is, through the manifold persuasions, dispositions, and occasions of men, with equal desert both of praise and dispraise, shunned by some, by others cesired. Hooker.

Use every man after his desert, and who shall. 'scape whipping?

Shakspeare.

> She said she loved,

Loved me descrtless; who with shame confest
Another flame had seized upon my breast. Dryden.
All desert imports an equality between the good conferred, and the good deserved, or made due.

South.
I was determined to be advanced in my profession by force of desert, or not at all. Bishop Watson.

DESERVÉ,v.a.
Deser'ver, n.s.
Deser'vediy,
DEEER'VING, n.s.浬. To be worthy of good or ill: all the derivatives from this root are applied to both by respectable writers. But when used absolutely, to be deserving, \&c., it commonly expresses merit.

Those they honoured, as having power to work or cease, as men deserved of them.

Hooker.
Their love is never linked to the deserver,
Till his deserts are passed.
Shakspeare.

\section*{All friends shall taste}

The wages of their virtue, and all foes The cup of their deservings.

Id.
Heavy, with some high minds, is an overweight of obligation; or otherwise great descrvers do, perchance, grow intolerable presumcrs.

Wottun.
Yet well, if here would end
The misery : I deserved it, and would bear
My own deservings.
Milton.
Ill deserving of others can be no excuse for our injustice, for our uncharitableness.

Bp. Hall. Contemplations.
Courts are the places wherc best manners flourish, Where the deserving ought to rise.

Otway.
A mother cannot give him death : though hc
Deserves it, he deserves it not from me. Dryden.
Since my Orazia's death I have not secn
A beauty so deserving to be queen.
Id.
According to the rule of natural justice, one man may merit and deserve of another.

South.
A man deservedly cuts himself off from the affections of that community which he endeavours to subvert.

Addison.
Annex to each bishoprick some portion of the royal ecclesiastical patronage, which is now prostituted by the Chancellor and the Minister of the day to the purpose of parliamentary corruption, that every Bishop may have means sufficient to reward all the \(d e\) serving clergy of his diocese.

Bp. Watson.

\section*{DESIC'CATE, v. a. \& \(n\). \\ Desićcants, n.s. \\ Desicca'tion. \\ \}Lat. desicco, de and siccus; Heb. ציה dry (Min-} sheu). To dry up; to exhaust; to grow dry; Desiccants are applications that dry up sores.

Where there is moisture enough, or superfluous, their wine helpeth to digest and desiccate the moisture. Bucon's Natural History.
If the spirits issue out of the body, there followeth desiccation, induration, and consumption.

Id.
Seminal ferments were elevated from the sea, or some desiccated places thereof, by the heat of the sun.

Hale.
This, in the beginning, may be prevented by desiccants, and wasted.

Wiseman.
If tea be a desiccative, according to Paulli, it cannot weaken the fibres, as our author imagines; if it be emetick, it must constringe the stomach, rather than relax it.

Johnson.
DESIDE'RATE, v. a. ? Lat. desidero. To
Desidera'tum, n.s. ywant or desire in absence. A desideratum is that which is much, or has been long, desired.

Eclipses are of wonderful assistance toward the solution of this so desirable and so much desiderated problem.

DESIGN', v.a.\& n.s. Designable, adj.
Designátion, n.s.
DESIGN'EILY, adv.
Design'er. u.s.
Designing part. adj.
Design'less, \(a d j\)
Desigineessty, advo
Design'ment, \(n\).s.

Fr. desiner;Span desinar ; Ital. desegnare; Lat. designare. To show a thing by signs or tokens; to purpose; to form or order with a particular purpose in view, taking for after it; to devote, taking to ; to plan, project. As a substantive a desion is the scheme or plan of an undertaking in the mind, or in any form of development: and designment is synonymous with design: designable is distinguishable: designation, the act or form of pointing or marking out: designedly, purposely, with some proposed object in view : designing is generally used in an ill sense. Designless is without plan or scheme, purposeless; designlessly is inadvertently.

\section*{Leave these sad designs}

To him that hath more cause to be a mourner.
Shakspearc.
News, lords! our wars are done:
The desperate tempest hath so banged the Turks, That their designment lalts.
William the Conqueror forcbore to use that claim in the beginning, but mixed it with a titulary pretence, grounded upon the will and designation of Edward the Confessor.

Bacun.
We are to observe whether the picture or outlines be well drawn, or, as morc elegant artizans term it, well designed; then, whether it be well coloured; which be the two general heads.

Wotton.
That Providence, which keeps the whole from destruction, will also keep all its necessary parts from corruption, lest the work of God become insufficient to the end of its designation.

Bishop Taylor.
One of those places was designed by the old man to his son.

Clarendon.
In this great concert of his whole creation, the designlessly conspiring voices are as differing as the conditions of the respective singers.

Boyle.
'Tis a greater credit to know the ways of captivating nature, and making her subserve our purposes and \(d e\) signments, than to have learned all the intrigues of policy.

Glanville.
Is he a prudent man, as to his temporal estate, that lays designs only for a day, without any prospect to the remaining part of his life ?

Tillotson.
The acts of religious worship were purposely \(d e\) signed for the acknowledgment of a Being, whom the most excellent creatures are bound to adore as well as we.

Stillingfleet.
You are not for obscurity designed,
But, like the sun, must cheer all human kind.
Dryden.
He was born to the inheritance of a splendid fortune; he was designed to the study of the law. Id.

A sedate settled design upon another man's life, puts him in a state of war with him against whom he has declared such an intention.

Locke.
'Tis not enough to make a man a subject, to convince him that there is regal power in the world ; but there must be ways of designing and knowing the person to whom this regal power of right belongs. Id.

The power of all natural agents is limited: the mover must be confined to observe these proportions and cannot pass ovcr all these infinite designable de grees in an instant.

Digby.

Uses made things; that is to say, some things were made derignedly, and on purpose, for snch an nse as they serve to. Ray on the Creation.
There is a plain designation of the Duke of Marlborough : one kind of stuff used to fatten land is called marle, and every body knows that borough is a name for a town.

Swift.
There is a great affinity between designing and poetry; for the Latin poets, and the designers of the Roman medals, lived very near one another, and were bred np to the same relish for wit and fancy.

Addisun.

\section*{The hand strikes ont some new design,}

Where life awakes and dawns at every line. Pope.
"Twonld shew me poor, indebted, and compelled, Designing, mercenary; and I know
You would not wish to think I could be bonght.
Southern.
It has therefore always been both the rule and practice for snch designers to suborn the publick interest, to countenance and cover their private.

Decay of Piety.

\section*{Spectators only on this bnstling stage,}

We see what vain designs mankind engage.
Churchill.
Would I describe a preacher, such as Paul, Were he on earth, would hear, approve, and own, Paul should himself direct one, I would trace His master-strokes, and draw from his design.

Cowper.
Design, in manufactories, expresses the figures with which the workman enriches his stuff, or silk, and which he copies after some painter or eminent draughtsman, as in diaper, damask, and other liowered silk and tapestry, \&c. In undertaking of such kinds of figured stuffs, it is necessary, says Mons. Savary, that before the first stroke of the shuttle, the whole design be represented on the threads of the warp; we do not mean in colors, but with an infinite number of little packthreads, which being disposed so as to raise the threads of the warp, let the workman see, from time to time, what kind of silk is to be put in the eye of the shuttle for woof. This method of preparing the work is called reading the design, and reading the figure, which is performed in the following manner: a paper is provided, considerably broader than the stuff, and of a length proportionate to what is intended to be represented thereon. This they divide lengthwise, by as many black lines as there are intended threads in the warp; and cross these lines by others drawn breadthwise, which, with the former, make little equal squares; on the paper thus squared, the draughtsman designs his figures, and heightens them with colors as he sees fit. When the design is finished, a workman reads it, while another lays it on the simblot. To read the design is to tell the person who manages the loom the number of squares or threads comprised in the space he is reading, intimating at the same time, whether it is ground or figure. To put what is read on the simblot is to fasten little strings to the several packthreads, which are to raise the threads named; and this they continue to do till the whole design is read. Every piece being composed of several repetitions of the same design, when the whole design is drawn, the drawer, to re-begin the design afresh, has nothing to do but to raise the
little strings, with slip-knots, to the top of the simblot, which he had laid down to the bottom: this he is to repeat as often as is necessary till the whole is manufactured. The ribbon weavers have likewise a design, but far more simple than that now described. It is drawn on paper with lines and squares, representing the threads of the warp and woof. But instead of lines, whereof the figures of the former consist, these are constituted of points only, or dots, placed in certain of the little squares formed by the intersection of the lines. These points mark the threads of the warp that are to be raised, and the spaces left blank denote the threads that are to keep their situation: the rest is managed as in the former.

Design, in music, is defined by Rousseau to be the invention and the conduct of the subject, the disposition of every part, and the general order of the whole. See Music.

Design is particnlarly used, in painting, for the first idea of a large work, drawn roughly, with an intention to be executed and finished in large. In this sense it is the simple contour or outlines of the figures intended to be represented, or the lines that terminate and circumscribe them : such design is sometimes drawn in crayons on ink, without any shadows at all: sometimes it is hatched, that is, the shadows are expressed by sensible outlines, usually drawn across each other with the pen, crayon, or graver. Sometimes the shadows are made with the crayon rubbed so as that there do not appear any lines: at other times, the grains or stroke of the crayon appear, as not being rubbed; sometimes the design is washed, that is, the shadows are done with a pencil in Indian ink, or some other liquor; and sometimes the design is colored, that is, colors are laid on resembling those intended for the grand work.

Designation of an estate is made by the tenants, butments, and boundings. Among the Romans there were designations of the consuls and other magistrates, some time before their elections.

DESIGNATOR, a Roman officer, who assigned and marked each person his place and rank in public ceremonies, shows, processions, \&cc. He was a kind of master of the ceremonies, who regulated the seats, march, order, \&c. There were designators at funeral solemnities, and at the games, theatres, and shows, who not only assigned every one his place, but also led him to it; as appears from the prologue to the Pcenulus of Placetus.

Designing, the art of delineating or drawing the appearance of natural objects, by lines, on a plane. To design, according to the rules of mathematics, makes the object of perspective. See

\section*{Perspective.}

DESIRE', v. a. \& n. s.) Fr. desirer; Span. Desir'able, adj. dessear; Lat. deside-
Desir'ably, udv.
Desir'ableness, \(n\). s.
Desirier,
Desir'ous, adj.
Desiriously, \(a d v\). rare, which Minsheu thinks derived fiom de sideribus, the stars having been the first objects of worship and admiration. To wish; to long for; intreat of, or for; demand. As a noun it generally expres es
a strong or earnest wish. That is desirable which is wished with earnestness ; plcasant; delightful. Desirous is full of desire.

And he seide to hem with desier I haue desirid to ete this pask with you bifore that I suffre.

Wiclif. Lukk. 22.
Be not destrous of his dainties; for they are deceitful food.

Prov. xxiii. 3.
For possible is, \(\sin\) thou hast hir presence,
And art a knight, a worthy and an able,
That by some cas, \(\sin\) Fortane is changealle,
'Ihou maiest to thy desir sometime atteine.
Chaucer. Cant. Tgles.
A doleful case desircs a doleful song,
Without vain art or curious compliments.
Spenser.
The same piety which maketh them that are in authority desirous to please and resemble God by jusiice, inflameth every way men of action with zeal to do good.

Hooker.
I will counterfeit the bewitchment of some popular man, and give it bountifully to the desirers.

Shakspeare.
Sir, I intreat you home with me to dinner,
-I humbly do desire your grace of pardon ;
I must away this night.
Id.
Men ale drowsy and desirous to sleep before the fit of an ague, and yawn and stretch.

Bacon.
Adam the while,
Waiting desirous her return, had wove Of choicest flowers a garland.

Milton.
Jove beheld it with a desiring look.
Dryden.
Desire's the vast extent of human mind;
It mounts above, and leaves poor hoye behind.
Id.
Desire is the uneasiness a man finds in himself upon the absence of any thing, whose present enjoyment carries the idea of delight with it.

Locke.
She then let drop some expressions about an agate snuff-box: I immediately took the hint, and bought one; being unwilling to omit any thing that might make me desirable in her eyes.

Addison.
This desire of knowledge, like other affections planted in our nature, will be very apt to lead us wrong, if it be not well regulated.

Mason.
Fiction raises the mind by accommodating the images of things to our desires, and not, like history and reason, subjecting the mind to things. Byron.

Desire, Port, a harbour on the eastern coast of South America, so called by Sir Thomas Cavendish, in 1586. On the south side of its entrance is a remarkably steep rock, which is an excellent sea-mark. The harbour was found, by commodore Byron, to be narrow for nearly four miles, with a tide running at the rate of eight miles an hour. There were also various rocks and shoals; but they were all above water. Long. \(64^{\circ} 25^{\prime} \mathrm{W}\)., lat. \(47^{\circ} 7^{\prime} \mathrm{S}\).

DESIST', v.n. ) Fr. desister ; Span. de-
Desist'ance, n. s. \(\}\) sister; Ital. and Lat. desistere, from de (from), and sisto, sto; Gr. \(\sigma \tau a \omega\), to stand. To stand off, or cease from any thing; to stop. Desistance is cessation.

Desist, thou art discerned,
And toil'st in vain; nor me in vain molest.

Men usually give frectiest where they have not given belor: : and make it both the motive and excuse of their desistance from giving any more, that they have given ahready.

Boyle.
There are many who will not quit a project, though they find it pernicious or absurd; but will readily desist from it, when they are convinced it is impracticable.

Addison.
DESTTTVE, adj. Lat. desilus. Ending; concludent ; final.

Inceptive and desitive propositions are of this sort; the fors vauish as the sun rises; but the fogs have not yet begun to vanish, therefore the sun is not yet risen. Watts.
DESK, n. s. Dut. disch, a table; Teut. tisch. - An inclining table for the use of writers or readers, made commonly with a box or repository connected with it.

Tull her in the desk,
That's eovered o'er with Turkish tapestry,

> Thw is is purse of ducats. Shahspcare.

He is drawn leaning on a desk, with his bible before him.

Walton's Angler.
I have been obliged to leave unfinished in my desk the heads of two essays.

Pupe.
Swect sleep enjoys the curate in his desk,
The tedious rector drawling o'er his head;
And sweet the elerk below.
Cowper.
DESMOULINS (B. C.), one of the dema gogues of the French revolution, was born at Guise, in Picardy, in 1762, and is said to have been a descendant of the celebrated Charles Dumoulin. Educated with Robespierre, for the bar, he became a counsellor of parliament, and commenced his career, as an advocate, by pleading against his father, on a charge for his board. From the commencement of the revolution he was connected with Robespierre, and became the editor of a journal, in which he styled himself attorney-general of the Lantern. He was the great director of the factious mob of Paris, but at one time was esteemed by La Fayette. In a denunciation against him to the Constituent Assembly, in 1790, for his virulent abuse of the king, Desmoulins was warmly defended by all the jacolins. After the unhappy flight of Louis XVI. to Varennes, he was one of the instigators of the meeting of the Champ de Mars; and was conspicuous in the insurrection of the 20th of June, 1792, as well as in that of the 10 th of August. He now became secretary to Danton, the minister of justice, and was chosen a deputy from Paris to the convention, in which, of course, he voted for the death of the king. Robespierre, however, was jealous of his connexion with Danton; he was arrested March 31st, 1794, and on the 5th of April suffered by the guillotine. Beside a great number of political pamphlets, Desmoulins published Les Revolutions de France et de Brabant; Le Vieux Cordelier; Histoires des Brissotins; Satires ; and Opuscules de Camille Desmoulins.

DES'OLATE, v. a. \& adj.
Des'olately, adv.
Desola'tion, n.s.
Desolater. Fr. desoler ; Sp. dessolar ; Italian \} and Lat. desolare, from de and solus. To depopulate; make desert; solitary; uninhabited. Desolation is the act or consummation of ruin or destruction; desulater, he who accous-
plishes it. Wiclif makes a curious use of the verb for being removed from.
And britheren, we desolat fro ghou for a tyme bi mouth and in beholdyng but not in herte, han highed more plenteuousli to se ghoure face with greet desier.

Wiclif. 1 Tessal. ii.
How is Babylon become a desolation among the uations!

Jer. 1. 23.
The lion would not leave her desolate,
But with her went along, as a strong gard
Of her chast person. Spenser. Faerie Queene.
What with your praises of the country, what with your discourse of the lamentable desolution thereof made by those Scots, you have filled me with a great compassion.

Spenser's State of Ireland.
Let us seek some desolate shade, and there
Weep our sad bosoms empty. Shakspeare.
Without her follows to myself and thee,
Herself, the land, and many a Christian soul,
Death, desolation, rain, and decay.
Id.
The island of Atlantis was not swallowed by an earthquake, but was desolated by a particular deluge. Bacon.

\section*{Thick around}

Thunders the sport of those, who with the gun, And dog impatient bounding at the shot, Worse than the season desolate the fields.

Thomson.
It is remarkable, that they never see any way to their projected good but by the road of some evil. Their imagination is not fatigued with the contemplation of human suffering, through the wild waste of centuries, added to centuries of miseries and desolation.

Burke.

\section*{He calls for famine, and the meagre fiend}

Blows mildew from between his shrivelled lips,
And taints the golden ear. He springs his mines,
And desolates a nation at a blast.
Coroper.

> The desolater desolate!
> The victor overthrown!
> The arbiter of others' fate

A suppliant for his own!
Byron.
DESPARD (Edward Marcus), was a native of Queen's county, in Ireland, where his family maintained considerable respectability. When but nineteen, he entered into the army as an ensign, and soon became distinguished for his skill as an engineer. About the close of the American war, he served in the West Indies, where his talents appeared particularly conspicuous in an expedition on the Spanish Main. He was promoted to the rank of lieutenant-colonel for his achievements on this occasion, and, in 1784, was appointed English superintendant in the Bay of Honduras; but his conduct proving offensive to the settlers, they complained to the government at home; in consequence of which he was suspended. He arrived in England in 1790, and made application to government for an investigation of his conduct, but his claims were re"ected; upon which he became a violent democrat, and, in consequence of his inflammatory conduct, was apprehended, during the suspension of the Habeas Corpus Act, and sent to Cold Bath-fields prison; and finally to Tothill-fields bridewell. He was afterwards liberated on his own recognisance. Soured, apparently, by his disastrous fate, he now endeavoured to seduce and corrupt some of the lowest of the soldiery; 3nd, having collected some ferv of similar senti-
ments, held secret meetings with them at different places, to which no persons were admitted without a treasonable oath. Various plans were agitated in this club for the murder of the king and other desperate undertakings; but, some of the conspirators having discovered the plot, the colonel, and several others, were apprehended, and brought to trial by a special commission, February 5th, 1803. Despard and nine others were found guilty, on the clearest proof, and executed on Monday, the 21st.

DESPAIR', v.n. \& n.s.) Fr. desesperer;
Despairéer, \(n\).s. Span, and Port.
Dispair'ful, adj. desesperar; Lat.
Despair'ingly, adv. desperare; from de (privative) and spero to hope; Heb. שטובר. To be hopeless; to despond, taking of, in modern usage, before the object. Despair is hopelessness; confirmed despondency; and sometimes expresses the cause of such a state of mind.
We are troubled on every side, yet not distressed; we are perplexed, but not in despair. 2 Cor. iv. 3.
Other cries among the Irish savor of the Scythian barbarism; as the lamentations of their burials, with despairful outcries.

Spenser.

> Strangely visited people,

All swoln and ulcerous, pitiful to the eye;
The mere despair of surgery, he cures;
Hanging a golden stamp about their necks,
Put on with holy prayers.
Shakspeare.
We commend the wit of the Chinese, who despair of making of gold, but are mad upon making of silver.

Bacon.
He speaks severely and despairingly of our society.
Boyle.
That sweet but sour despairful care.
Sidney.
Equal their flame, unequal was their care; One loved with hope, one languished with despair

Dryden.
He cheers the fearful, and commends the bold, And makes despairers hope for good success. Id.
Despair is the thought of the unattainableness of any good, which works differently in men's minds; sometimes producing uneasiness or pain, sometimes rest and indolence.

Locke.
Are not all or most evangelical virtues and graces in danger of extremes? As there is, God knows, tou often a defect on the one side, so there may be an excess on the other: may not hope in God, or godly sorsow, be perverted into presumplion or despair? Spraf.

Enlivening Hope, and fond Desire,
Resign the heart to Spleen and Care;
Scarce frighted Love maintains her fire, And rapture saddens to despair.

Johnson. Wintex's Walk.
DESPATCH', v. a. \& n.s. \(\}\) Fr. despecher:
Despatch'ful, \(a d j\). \}Span. despachar. To send off or away in haste; hence to perform business quickly, and to assassinate. The substantive is used not only for prompt performance of business, but intelligence, or news, supposed to be sent with despatch; and in the plural for official or public intelligence or papers. Dec patciful is, sent in haste. The \(e\) of the first syllable has become of late almost universal.

And the company shall stone them with stones, and despatch them with their swords. Ezek. xxiii. 47.

What are the brothers parted?
-They have despatched with Pompey; he is gone. Shakspeure.

Edmund, I think, is gone,
In pity of his misery to despatch
His knighted life.
Shukspeare.
Long and curious speeches are as fit for despatch as a robe or mantle, with a long train, is for a race.

Bacon.
So saying, with despatchful looks in haste
She turns, on hospitable thoughts intent. Milton.
Bushes are of so quick despatch, that the joy of the wieked is compared to a fire of thorns.

Bp. Hall. Contemplations.
Doctor Theodore Coleby, a snber man, I despatched immediately to Utreeht, to bring the moxa, and learn the exact method of using it.

Temple.
Despatch me quiekly, I may death forgive; I shall grow tender else, and wish to livc.

Dryden.
No sooner is one action despatched, which, by suel a determination as the will, we are set upon, but another uneasiness is ready to set us on work. Locke.

Let one desputchful bid some swain to lead, A well-fed bullock from the grassy mead. Pope.
You'll see, could you her inward motions watch, Feigning delay, she wishes for despatch;
Then to a woman's meaning would you look,
Then read her backward. Granville.
DES'PERATE, adj. \& n.s.
Des'perately, adv.
Des'ferateness, n.s.
Desperátion. Desperation. irretrievable : hence rash; mad; and expressing an extreme degree of any thing bad.

Were it not the part of a desperate physician to wish his friend dead, rather than to apply the best endeavours of his skill for his reeovery?

Spenser's State of Ireland.
Since bis exile she hath despised me most ;
Forsworn my eompany, and railed at me,
That I am desperate of obtaining her. Shukspeare.
These debts may be well called desperate ones; for a mad man owes them.

Id.
The going on not only in terrors and amazement of conscience, but also boldly, hopingly, contidently, in wilful habits of \(\sin\), is called a desperateness also; and the more bold thus, the more desperate. Hammond.

As long as we are guilty of any past \(\sin\), and have no promise of remission, whatever our future care be, this desperation of success chills all our industry, and we \(\sin\) on because wc have sinned.

Id.
Grace often resisted turns to desperateness.
Bishop Hall. Contemplations.
'Tis not amiss, ere ye're giv'n o'er,
To try one despcrate med'cine more;
For where your case can be no worse,
The desperatest is the wisest course!
Hudibras.
In a part of Asia, the sick, when their case comes to be theught desperate, are carried out and laid on the earth, before they are dead, and left there. Locke.

She fell desperately in love with him, and took a voyage into Sicily in pursuit of him. Addison.

> Concluding all mere desperate sots and fools,

That durst depart from Aristotle's rules. Pope.
Beware of desperate steps, the darkest day,
Live till to-morrow will have passed away.
Cowper.

\section*{I cannot find my hero; he is mixed} With the heroic crowd that now pursue The fugitives, or battle with the desperate. What have we here?

DE'SPICABLE, adj.
Sce Despise. Con-
Déspicableness, n. \(s\). temptible; mean Déspicably, adv. Slow.
Our ease werc miserable, if that wherewith we mos. endeavour to please God werc in his sight so vilc and despicable as men's disdainful speech would make it.

Hooker.
All the earth he gave thce to possess and rule, No despicable gift.

Miltox.
Not less even in this despicable hero,
Than when my name shook Africk with affright,
And froze your hearts beneath your torrid zone.
Dryden,
Here wanton Naples erowns the happy shore,
Nor vainly rich, nor despicably poor;
The town in soft solemnities delights, And gentle poets to her arms invites. Addison.
We consider the great disproportion between the infinity of the reward and the despicableness of our serviee.

Decay of Picty.
There is, indeed, no employment, however despicable, from which a man may not promise himself more than competence, when he sees thousands and myriads raised to dignity, by no other merit than that of contributing to supply their neighbours with the means of sucking smoke through a tube of clay, \&c.

Adventurer.
DESPI'SE, \(v . a\).
Despis'able, \(a d j\).
Despis'er, n.s. Despien, down and specio; Gr. \(\sigma \kappa \varepsilon \pi \tau \omega\); Heb. Пקシ, to look or see. To look upon with contempt, to scorn; abhor: despisable is contemptible.
God chees the feble thingis and despisable thingis of the world to confounde the stronge thingis.

Wiclif. 1 Cor. 1
Behold ye despascrs, and wonder, and perish.

\section*{Isaiah.}

However yet they me despise and spight,
I feed on sweet contentment of my thought.
Spenser. The Tears of the Musez.
Let not your ears despise my tongue for ever, Which shall possess them with the heaviest sound
That ever yet they heard.
Shakspeare.
As the wicked have no peace with God, so the godly have no peace with men; for if they prosper not they are despised; if they prosper they are envied.

Bp. Hall. Contemplations.
All cold, but in her breast, I will despise;
And dare all heat but that in Celia's eyes, Roscommon.
I am obliged to you for taking notiee of a poor olo distressed courtier, commonly the most despisable thing in the world.

Arbuthnot to Popc.
Admire, exult-despise-laugh, weep,-for herc
There is such matter of all feeling :-Man!
Thou pendulum betwixt a smile and tear,
Ages and realms are crowded in this span. Byron.
DESPITE', v. a. \& n.s. Fr. dipit; Dutch
Despitéful, adj.
Despitéfully, \(a d v\).
Despitéfulness, \(n\).s.
Despit'eous, adj.
Despit'eously, \(u d v\). malignity; and hence defiance. Despiteful is malicious, mischievous, splenetic. Despitefulness, synonymous with despite ; and despiteous, despiteously, with despite-
tul, despitefully. Wiclif uses despite for dishonor.

Wher a pottere of cley hath not power to make of the same gobet oo vessel into onour, a nothir into dispyt?

Wiclif. Romayns 9.
Pray for them that despitefully use you and persecute you.

Matthew v. 44.
But out the child he hent
Despiteously, and gan a chere to make,
As though he would have slain it or he went.
Chaucer. Cant. Tales.
Full many mischiefs follow cruell wrath;
- Bitter despight, with rancour's rusty knife ; And fretting griefe the enemy of life.

Spenser. Faerie Queene.
The knight of the red-cross, when him he spied, Spurring so hot with rage despiteous,
Can fairly couch his speare.
The mortal steel despiteously entailed
Deep in their flesh, quite through the iron walls,
That a large purple stream adown their giambeux falls. Spenser.
The life thou gavest me first, was lost and done; Till with thy warlike sword despite of fate,
To my determined time thou gavest new date.
Shakspeare.
Turning despiteous daughter out of door.
Id.
Saturn, with his wife Rhea, fled by night; setting the town on fire, to despite Bacchus.

Raleigh.
Preserve us from the hands of our despiteful and deadly enemies.

King Charles.
His punishment, eternal misery,
It would be all his solace and revenge,
As a despite done against the Most High,
Thee once to gain companion of his woe. Milton.
Know I will serve the fair in thy despite.
Dryden.
With men these considerations are usually the causes of despite, disdain, or aversion from others; but with God they pass for reasons of our greater tenderness towards others.

Sprat.
Say, would the tender creature, in despite
of heat by day, and chilling dews by night,
Its life maiutain?
Blackmore.
Venice! thy lot
Is shameful to the nations,-most of all,
Albion ! to thee : the Ocean queen should not
Abandon Ocean's children; in the fall
Of Venice think of thine, despite thy watery wall.
Byron.
DESPOLL', v.a. \(\quad\) De and spoil. Fr. \(d e-\)
Despolia'tion, n. s. \}pouiller,Ital.despogliare; Lat. despoliare. See Sporl. To rob; strip; divest ; deprive; taking of. Despoliation is the act of stripping, or plundering.

\section*{A groom gan despoil}

Of puissant arms, and laid in easy bed. Spenser. You are nobly born,
Despoiled of your honour in your life. Shakspeare.
He waits, with hellish rancour imminent,
To intercept thy way, or send thee back
Despoiled of innocence, of faith, of bliss. Milton.
He, pale as death, despoiled of his array,
Into the queen's apartment takes his way. Dryden. Even now thy aid,
Eugene, with regiments unequal prest,
Awaits : this day of all his honours gained
Despoils him, if thy succour opportune
Defends not the sad hour.
Philips.
These formed stones, despoiled of their shells, and exposed upon the scrface of the ground, in time moulder away.

Woodward.

DESPOND', v.a.
Despónding, adj.
Despond'ency, n. s. \(\int \begin{aligned} & \text { Lat. despondeo. To } \\ & \text { despair ; to lose hope. }\end{aligned}\) to become hopeless or desperate.

It is every man's duty to labour in his calling, and not to despond for any miscarriages or disappointments that were not in his own power to prevent.

L'Estrange.
Physick is their bane :
The learned leeches in despair depart, And shake their heads, derponding of their art.

Dryden.
Others depress their own minds, despond at the first difficulty; and conclude, that making any progress in knowledge, farther than serves their ordinary business, is above their capacities.

Locke.
It is well known, both from ancient and modern experience, that the very boldest atheists, out of their debauches and company, when they chance to be surprised with solitude or sickness, are the most suspicious, timorous, and despondent wretches in the world.

Bentley.
Aim at perfection in every thing, though in most things it is unattainable; however, they who aim at \(i t\), and persevere, will come much nearer to it, than those whose laziness and despondency make them give it up as unattainable.

Chesterfield.
DESPO'NSATE, v.a. Lat. desponso. To
Desponsa'tion, n.s. Sbetroth; to affiance; to unite by reciprocal promises of marriage; the act of betrothing.
DES'POT, n.s. Fr. despot, from
Despotic, \(a d j\).
Despotical, adj.
Despot'icalness, \(n\).s. Des'potism, Olute prince; a tyrant: despotic is, absolute in power; arbitrary: despotism, despoticalness, the power of a despot.

> God's universal law
> Gave to the man despotick power
> Over his female in due awe,
> Nor from that right to part an hour,
> Smile she or lowre.

Milton.
In all its directions of the interior faculties, reason conveyed its suggestions with clearness, and enjoined them with power: it had the passions in perfect subjection; though its command over them was but persuasive and political, yet it had the force of coactive, and despotical.

South.
We see in a neighbouring government the ill consequences of having a dexpotic prince. Addison.

Can despots compass aught that hails their sway?
Or call with truth one span of earth their own,
Save that wherein at last they crumble, bone by bone!
Byron. Childe Harold's Pilgrimage.
Despot originally signified the same with herus, a master. Nicephorus having ordered his son, Stauracius, to be crowned, the son, out of respect, would only take the name \(\triangle E C\) ПOTHC, leaving to his father that of BACIAEYC. The following emperors, however, preferred \(\triangle E C \Pi O T H C\) to BACIAEXC; particularly Constantine XII., Michael Ducas, Romanus Diogenes, Nicephorus Botoniates, the Comneni, and some others. In imitation of the princes, the princesses likewise assumed the title of \(\triangle E C H O I N A\). It was the emperor Alexius Angelus that created the dignity of despot, and made it the first after that of emperor, or Au-
gustus, above those of Sebastocrator and Cæsar. The despots were usually the emperor's sons or sons-in-law, and their colleagues, or co-partners, in the empire, as well as their presumptive heirs. Those who were sons of the emperors had more privileges and authority than those who were only sons-in-law. Codin, p. 38, describes the habit and ornaments of the despot. See the notes of Father Goar on that author. Under the successors of Constantine the Great, the title Despot of Sparta was given to the emperor's son or brother, who had the city of Sparta or Lacedemon by way of appendage.

DESQUAMA'TION, n. s. Lat. from squama. The act of scaling foul bones. A surgical term.

DESSAU, or Dessaw, a strong town of Germany, in Upper Saxony, the capital of the principality of Anhalt. It was first fortified by prince Leopold in 1341, and has one Lutheran and two Calvinist churches, besides a Catholic and Jewish chapel. Inhabitants about 10,000 , of which the Jews form one-tenth. Dessau, the surrounding district, contains 53,500 inhabitants : its chief products are corn and flax: it has also considerable pastures. The people manufacture cloths, hats, and stockings. It is seated on the Mulda, a branch of the Elbe, twenty-eight miles south-east of Magdeburg, thirty-seven north of Leipsic, forty-eight southwest of Potsdam, and sixty north-west of Dresden. One of the most remarkable objects here is a dyke at the side of the Elbe, nearly five miles long, from ten to eleven feet high, and sixty feet thick at the base. Long. \(12^{\circ} 17^{\prime} 1^{\prime \prime}\) E., lat. \(51^{\circ} 50^{\prime} 6^{\prime \prime} \mathrm{N}\).

DESSALINES (John James), brother of the brave Toussaint l'Ouverture, of St. Domingo, was born in slavery, and first emerged with him to notice in the active part they both took in the commotions excited in St. Domingo in 1791. Dessalines particularly distinguished himself by his defence of Crete le Perrot against the French general, Leclerc. When Toussaint was obliged to make peace with the French, Dessalines was included in the treaty, though he by no means approved it; and what followed, but too well confirmed his suspicions of the French. Toussaint was treacherously seized, and carried to France, where he died. Dessalines was now unanimously elected commander-in-chief of the forces, which rose upon Rochanbeau, who had succeeded Leclerc, and who treated the black inhabitants of St. Domingo with no less cruelty than his predecessor. He, at once, attacked Rochambeau with the main body of his army, near Cape François, the capital of the island, and defeated him with great slaughter, compelling him to retreat into the town, and finally to surrender to the English. Dessalines now exerted himself to provide for the future security, and concerted a variety of measures for the internal regulation, of the island. He first caused a proclamation of independence to be issued on the 29th of November, 1803, in which the colony was solemnly declared to be for ever separated from France. His next step was to abolish the name of St. Domingo, and substitute in its place the original appellation of Hayti. He was subsequently chosen governor of Hayti during his
life, with authority to appoint his successor ; and on the 8th of October, 1804, proclaimed emperor. This dignity, the acceptance of which forms the only conspicuous act of folly in his course, he only enjoyed about two years. In October, 1806, Christophe, the second emperor, headed a successful conspiracy against him, and murdered him, by surprise, in his palace.

DESSAULT (Peter Joseph), an eminent French surgeon, born at Magny Vernois, near Macon, in 1744. He received the early part of his education among the Jesuits, with a view to the priesthood, which profession he afterwards declined, and became a student in the military hospital of Besort. When about twenty years of age, he removed to Paris, where the greater part of his time was spent at the anatomical theatres and hospitals; and, in the winter of 1766 he commenced teacher of anatomy. His fame soon spreading, he was in a short time attended by 300 pupils; and, in 1776, was admitted a member of the corporation of surgeons. In 1782 he was appointed surgeon-major to the hospital of Charity. At this time Dessault was considered as one of the first surgeons in Paris; and having succeeded to the next vacancy at the Hotel Dieu, he was entrusted with almost the whole surgical department of that hospital, after the death of Moreau. A clinical school of surgery, on a liberal and extensive plan, was here instituted by him, which attracted a concourse of students, not only from all corners of France, but from foreign countries, and his lectures were frequently attended by 600 students; so that it may be said, the greater part of the surgeons in the French army deived the knowledge of their profession from his school. In 1791 he commenced his Journal de Chirurgerie, a work of considerable reputation. In the midst, however, of his useful and important labors, the prevailing parties of this turbulent period took offence at him as standing neutral; and in 1792, after being twice examined, he was seized, while delivering a lecture, and confined in the Luxembourg prison, where he remained three days; but his usefulness restored him to his former situation. Upon the establishment of the school of health, he was made clinical professor for external maladies; and he was particularly instrumental in the conversion of the Eveché into an hospital for surgical operations. So deeply, however, was he affected by the horrid scenes which were exhibited in May, 1795, that he was seized with a fever, accompanied with delirium, and died on the 1 st of June, aged fiftyone.

DESSE'RT, n.s. Fr. desserte. The last course at an entertainment; the fruit or sweetmeats set on the table after the meat.
To give thee all thy due, thou hast the art
To make a supper with a fine dessert. Dryden.
At your dessert bright pewter comes too late,
When your first course was well served up in plate. King.
And here, assembled cross-legged round their trays.
Small social parties just begun to dine ;
Above them their dessert grew on its vine,
The orange and pomegranate nodding o'er,
Dropped in their laps, scarce plucked, their mellow store. Byrrn

DESTINE, v.a.
Des'tinate, \(v, a\).
Destina'tion, n.s. Des'tiny,
Out of this prison helpe that we may 'scape,
And if so be our destine be shape
By eterne word to dien in prisoun
Of our lignage have som compassion.
Chaucer. Cant. Tales.
But who can turn the stream of destiny,
Or break the chain of strong necessity,
Which fast is tied to Jove's eternal seat?
Faerie Queene.
Thou art neither like thy sire or dam;
But, like a foul mis-shapen stigmatick,
Marked by the destinies to be avoided. Shakspeare.
The destinies of old put poverty upon the celestial herald as a punishment; and ever since those Gemini, or twin-born brats, Poetry and Poverty, have been inseparable companions.

Burton.
Wherefore cease we then ?
Say they who counsel war: we are decreed,
Reserved and destined to eternal woe;
Whatever doing, what can we suffer more? Milton.
'They'll find i' th' physiognomies
\(0^{\prime}\) ' th' planets, all men's destinies;
Like him that took the doctor's bill,
And swallowed it instead \(n^{\prime}\) th' pill. Hudibras.
There is a great variety of apprehensions and fancies of men, in the destination and application of things to several ends and uses.

Hale.
All altars flame; before each altar lies, Drenched in his gore, the destined sacrifice. Dryden.
Birds are destinated to fly among the branches of trees and bushes.

Ray on the Creation.
The infernal judge's dreadful power
From the dark urn shall throw thy destined hour.
Prior.
May heaven around this destined heaa,
The choicest of its curses shed.
Id.
Some against hostile drones the hive defend, Others with sweets the waxen cells distend; Each in the toil his destined office bears,
And in the little bulk a mighty soul appears. Gay.
DES'TITUTE, adj. ? Fr. destitué ; Span.
Destitu'tion, \(n\). s. \(\int\) destituydo; Ital. destituto, from Lat. destituo, (de and statuo), to forsake. Forsaken; abandoned; taking of; friendless, low.
He will regard the prayer of the destitute, and no \({ }^{t}\) despise their prayer.

Psalm cii. 17.
That destitution in food and cloathing is such an impediment, as, till it be removed, suffereth not the mind of man to admit any other care. Hooker.
The order of paying the debts of contract or restitution is set down by the civil laws of a kingdom; in destitution or want of such rules, we are to observe the necessity of the creditor, the time of the delay, and the special obligations of friendship.

Taylor.

\section*{Take the destined way}

To find the regions destitute of day.
Dryden.
Nothing can be a greater instance of the love that mankind has for liberty, than such a savage mountain covered with people, and the Campania of Rome, which lies in the same country, destitute of inhabitants.

Addison.
DESTROY', v. a. \(\}\) Fr. detruire; Span. \(^{\prime}\)
Destroy'er, n. s. Jdestruire; Ital. distruggere ; Lat. destruere, de privative, and struo, Gr.
arg \(\omega \omega\), to build. To overturn an edifice; hencz to ruin; lay waste; put an end to; kill.

Neither grutche ghe as somme of hem gruchiden, and thei perisscheden of a distriers. Wiclif. 1 Cor. x .

The Lord will destroy this city. Gen. xix. 14.
'Tis safer to be that which we destroy, Than by destruction dwell in doubtful joy.

Shakspeare.
Triumph, to be styled great conquerors, Patrons of mankind, gods, and sons of gods !
Destroyers rightlier called, and slayers of men.

\section*{Milton.}

The wise Providence has placed a certain antipathy between some animals and many insects, whereby they delight in their destruction, though they use them not as food; as the peacock destroys snakes and adders ; the weazel, mice and rats; spiders, flies ; and some sorts of flies destroy spiders.

Hale.
Do we not see that slothful, intemperate, and incontinent persons destroy their bodies with diseases, their reputations with disgrace, and their faculties with want?

Bentley.
Yet, guiltless too, this bright destroyer lives;
At random wounds, nor knows the wound she gives.
Pope.
Armies, though always the supporters and tools of absolute power, for the time being, are always the destroyers of it, too; by frequently changing the hands in which they think proper to lodge it. Chesterfield.

When Nero perished by the justest doom
Which ever the destroyer yet destroyed,
Amidst the roar of liberated Rome,
Of nations freed, and the world overjoyed,
Some hands unseen strewed flowers upon his tomb.
Byron.
DESTRUC'TION, n. s. Lat. destructio,
Destruc'tible, adj.
Destructibílity,
Destructíive, adj.
Destructíiveey, ado.
Destructíiveness, \(n\). s.
Destrućtor. from destruo. See Destroy. The act or consummation of destroying ; hence, killing, murder. Destructible is, liable to be destroyed ; destructive is, having the quality of destroying; wasteful ; tending to ruin, or causing it. The adverb and noun following, express a similar sense. Destructor is used by Boyle for destroyer.

For the aarmuris of our knytghood ben not fleischli, but myghti bie God to the destructionn of strengthis.

Wiclif. 2 Cor. 10.
Broad is the way that leadeth to destruction.
Matthew.
'Tis safer to be that which we destroy,
Than by destruction dwell in doubtful joy.
Shakspeare.
What a favour is it to men, to be reserved from common destruction, to be sacrificed to their Maker and Redeemer.

Bp. Hall. Cuntemplations.
Helmont wittily calls the fire the destructor and the artificial death of things.

Boyle.

\section*{In ports and roads remote,}

Destructive fires among whole fleets we send.
Dryden.
Excess of cold, as well as heat, pains us; because it is equally destructive to that temper which is nevessary to the preservation of life.

Locke.
He will put an end to so absurd a practice, which makes our most refined diversions destructive of all politeness.

Addison.
What remains but to breathe out Moses's wish ? 0 that men wcre not so destructively foolish :

Decay of Piety.

The vice of professors excecds the destructiveness of the most hostilc assaults, as inte3tine treachery is more ruinous than foreign vinlence.

Id.
Waste cannot be accurately told, though we-are sensible how destructive it is.

Johnson.

\section*{If he was}

Aught but a phantasy, and could be classed
With forms which live and suffer-let that passHis shadow fades away into destruction's mass.

Byron.
DESUDA'TION, n. s. Lat. desudatio. A profuse and inordinate sweating, from what cause soever.

DES'UETUDE, n. s. Fr. desuctude; Latin, desuetudo, from desuesco, desuetus; de privative and suesco, to be accustomed. Cessation of custom or habit.

How come they to be prejudiced, rescinded, abrogated, by contrary laws, and desuetude, by change of times and opinions. Bp. Taylor.
By the irruption of numerous armies of barbarous people, those countries were quickly fallen off, with barbarism and destetude, from their former civility and knowledge.

Hale.
DESULTOR, in antiquity, a vaulter or leaper, who, leading one horse by the bridle, and riding another, jumped from the back of the one to the other. This practice required great dexterity, being performed before the use of either saddles or stirrups. The custom was practised in the arny chiefly among the Numidians, who always carried with them two horses for that purpose, changing them as they tired: the Sarmatæ also were great masters of this exercise.

DES'ULTORY, adj. \} Latin desultorius.
Desultor'ious. \}Vaulting or leaping to and fro. See above. Unsettled; without method in thought or action; wavering.
'Tis not for a desultory thought to atone for a lewd course of live : nor for any thing but the superinducing of a virtuous habit upon a vicious one, to qualify an effectual conversion.
\(L^{\prime} E_{s t r a n g e .}\)
Let but the least trifle cross his way, and his desultorious fancy presently takes the scent, leaves the unfinished and half-mangled notion, and skips away in pursuit of the new game,

Norris.
Take my desultory thoughts in their native order, as they rise in my mind, without being reduced to rules, and marshalled according to art.

Felton on the Classics.
DESU'ME, v.a. Lat. desumo. To take from any thing; to borrow.

This pebble doth suppose, as pre-existent to it, the more simple matter out of which it is desumed, the heat and influence of the sun, and the due preparation of the matter.

Hale.
They have left us relations suitable to those of Flian and Pliny, whence they desumed their narrations.

Browne.
DETACH', v.a. \(\}\) Fr. detacher, from dis Lat.
Detachment. \} and Attach, which see. To separate; disengage: hence to select and send out a body of military : a detachment is applied to the body so sent out.

Mean while the Squire was on his way,
The knight's late orders to obey ;
Who sent him for a strong detachment
Of beadles, constables, and watchmen.
Hudibras.

If ten men arc in war with forty, and the latter detach only an cqual number to the engagement, what benefit do they rcceive from their superiority?

Addison.
The sevcral parts of it arc detached one from the other, and yet join again, onc cannot tell how.

> Pope.

Besides materials, which are brute and blind,
Did not this work require a knowing mind,
Who for the task should fit detachments chuse From all the atoms? Blackmore.

Detachments are sometimes formed of entire squadrons and battalions; but more generally of a number of men picked out from several regiments or companies equally, to be employed as the general may see proper; whether on an attack, or to scour the country. A detachment of 2000 or 3000 men is a command for a brigadier general : 800 for a colonel : 400 or 500 for a lieutenant-colonel. A captain never marches on a detachment with less than tifty men, a lieutenant, an ensign, and two serjeants. A lieutenant is allowed thirty, and a serjeant; arid a seajeant ten or twelve men.

DE'TAIL, v. a. \& n. s. Fr. detailler. From de and Tell, which see. To relate in particulars, or with minuteness.
They will perceive the mistakes of these philosophers, and be able to answer tbeir arguments, without my being obliged to detail them.

Cheyne.
I was unable to treat this part of my subject morc in detail, without becoming dry and tedious. Pope.

His train of reasoning is ingenious and whimsical ; but I am not at leisure to give you a detail.

\section*{Franklin.}

DETAIN', v. a. Fr. detiner: Span. dete-
Detainer, n. s. \}ner, from Lat. detinere, de
Detainoder. \(\int\) and teneo; Gr. \(\tau \varepsilon \iota \omega\), to stretch. To hold or keep back; to restrain; to keep in custody. See Detinue.

Let us detain thee until we sball have made ready a kid.

Judges, xiii. 13.
These doings sting him
So venomously, that burning shame detains him
From his Cordelia.
Shakspeare.
Detain not the wages of the hireling ; for every degree of detention of it, beyond the time, is injustice and uncharitableness.

Taylor.
Judge of the obligation that lies upon all sorts of injurious persons; the sacrilegious, the detainers of tithes, and cheaters of men's inheritances. \(\quad I d\).

Had Orpheus sung it in the nether sphere,
So much the hymn had pleased the tyrant's ear,
The wife had been detained to keep her husband there.
Dryden.
DETECT, v.a. \(\gamma\) Lat. detectus, from dete-
Detectier, n.s. \}gere, de privative, and tego
Detection. J to hide. To discover a crime, or scheme; to discover generally.

There's no true lover in the forest; else sighing every minute, and groaning every hour, would detect the lazy foot of time as well as a clock. Shakspeare.

Should I come to her with any detection in my hanc: I could drive her then from the ward of her family.
\(I d\).
Though should I hold my peace, yet thou
Wouldst easily detect what I conceal. Milton.
Detection of the incoherence of loosc discourses was wholly owing to the syllogistical form. Locke.

The utmost infinite ramifications and inosculations of all the several sorts of vessels may easily be detected by glasses. Ray.
Not only the sea, but rivers and rains also, are instrumental to the detection of amber, and other fossils, by washing away the earth and dirt that concealed them.

Woodward.
DETEN'TION, n.s. From Detain, which see. The act of keeping back, or withholding; restraint; custody.

How goes the world, that I am thus encountered With clamorous clains of debt, of broken bonds, And the detention of long-since due debts, Against my honvur ?

Shakspeare.
This worketh by detention of the spirits, and constipatiou of the tangible parts.

Bacon.
DETENTS, in a clock are those stops which, by being lifted up or let fall down, lock and unlock the clock in striking. See Clock.

Detent-wheel, or Hoop-wheel, in a clock, a wheel which has a hoop almost round it, wherein there is a vacancy, at which the clock locks.

DETER', v. a. \(\}\) Lat. deterreo, from de
Deter'ment, \(n\).s. \(\}\) and terreo, to frighten; Gr. т \(\rho \varepsilon \omega\), to tremble. To discourage by terror; to affright from.

I never yet the tragick strain assayed,
Deterred by the inimitable maid. Waller.
These are not all thy determents that opposed my obeying you.

Boyle.
Many and potent enemies tempt and deter us from our duty; yet our case is not hard, so long as we have a greater strength on our side.

Tillotoon.
Beauty or unbecomingness are of more force to draw or deter imitation, than any discourses which can be made to them.

Locke.
The ladies may not be deterred from corresponding with me by this method.

Addison.
Death is not sufficient to deter men who make it their glory to despise it; but if every man who fought a duel were to stand in the pillory, it would quickly lessen the number of these imaginary men of honor.

Id.
Get a habit of doing right, whatever pain it costs you; let no difficulties deter you in the way of virtue; and account every thing else despicable, in comparison of this.

Johnson.
I do not give you to posterity as a pattern to imitate, but as an example to deter.

Junius.
DETERGE', v. n. \(\}\) Fr. deterger ; Lat. deDetergent, adj. \} tergere, de and tergo. To cleanse, applied particularly to the cleansing of sores. Detergent, having the quality of cleansing.

The food ought to be nourishing and detergent.
Arbuthnot.
Sea salt preserves bodies through which it passeth, from corruption; and it detergeth the vessels, and keeps the fluids from putrefaction.

Consider the part and habit of body, and add or diminish your simples as you design to deterge or incarn.

Wiseman.
DETERIORATION, n.s. From Lat. deterior. The act of making, or state of growing worse.

When the deteriorution of a commodity, seized by an officer, arises from the fault of the keeper, he is answerable for the same.

Dr. A. Rees.
DETER'MINE, v. \(a\). \& v.n.) Fr. deter-
Deter'minate, v. u. \& adj.
Deter'minately, adv.
Detervination mes
Deter'minative, \(n\). s. \& adj.
Determina'tor. miner ; Span. determinar ; Ital. and Lat. detcrminare, terminus ; Gr. тєя \(\mu\) a, a bound. To mark or fix a bound; hence to conclude; settle; adjust generally; and to choose or influence choice. As a neuter verb, to conclude; settle an opinion; decide and resolve. Determinate and determine seem synonymous as verbs active, but the former is obsolete.

And maad of oon al the kynde of men to enhabite on all the face of the erthe, determynynge tymes ordeyned and teermys of the dwellyng of hem.

Wiclif. Dedis. xvii.
Jonathan knew that it was determined of his father to slay David.

1 Sam. xx. 33.
In those errors they are so determinately settled, that they pay unto falsity the whole sum of whatsoever love is owing unto God's truth.

Hooker.
Now, noble peers, the cause why we are met
Is to determine of the coronation. Shakspeare.

> I' the progress of this business,

Ere a determinate resolution, he,
I mean the bishop, did require a respite. Id.
The fly-slow hours shall not determinate
The dateless limit of thy dear exile.
Id.
They have acquainted me with their determination, which is to go home, and trouble you no more.

Id. Merchant of Venice.
The knowledge of men hitherto hath been determined by the view or sight; so that whatsoever is invisible, either in respect of the fineness of the body itself, or the smallness of the parts, or of the subtilty of the motion, is little enquired.

Bacon.
They were apprenended, and, after conviction, the danger determined by their deaths. Hayward.

Eve! now expect great tidings, which perhaps Of us will soon determine or impose New laws to be observed.

Milton.
The proper acts of the intellect are intellection, deliberatiou, and determination, or decision.

Hale's Origin of Mankind.
Whether all plants have seeds, were more easily determinable, it we could conclude concerning hartstongue, ferne, and some others.

Browne's Vulgar Errours.
Like men disused in a long peace, more determtnate to do, than skilful how to do.

Sidney.
Think thus with yourselves, that you have not the making of things true or false; but that the truth and existence of things is already fixed and settled, and that the principles of religion are already either determinately true or false, before you think of them.

Tillotoon.
Revolutions of state, many times, make way for new institutions and forms, and often determine in either setting up some tyranny at home, or bringing in some conquest from abroad.

Temple.
A man may suspend the act of his choice from being determined for or against the thing proposed, till he has examined it.

Licke.
Demonstrations in numbers, if they are not more evideut and exact than in extension, yet they are
morc general in their use, and determinate in their application.
rd.
As soon as the studious man's hunger and thirst makes him uneasy, he, whosc will was never determined to any pursuit of good chcer, is, by the uneasiness of hunger and thirst, presently determined to eating and driuking.

Id.
When we voluntarily waste much of our lives, that remissness can by no mcans consist with a constant determination of will or desire to the greatest apparent good.
\(I d\).
That individual action, which is justly punished as sinful in us, cannot proceed from the special influence and determinaiive power of a just cause.

Bramhall against Hobbes.
All pleasure springing from a gratified passion, as most of the pleasure of \(\sin\) does, must needs determine with that passion.

South.
Probability, in the nature of it, supposes that a thing may or may not be so, for any thing that yet appears, or is certainly determined, on the other side.

Destruction hangs on every word we speak,
On every thought, till the concluding stroke
Determines all, and closes our design. Addison.
No sooner have they climbed that hill, which thus determines their view at a distance, but a new prospect is opened.

Atterbury.
To make all the planets move about the sun in circular orbs, there must be given to each, by a determinate impulse, these present particular degrees of velocity which they now have, in proportion to their distances from the sun, and to the quantity of the solar matter.

Bentley.
Consult thy judgment, affections, and inclinations, and make thy determination upon every particular; and be always as suspicious of thyself as possible.

Calamy.
He confined the knowledge of governing to justice and lenity, and to the speedy determination of civil and criminal causes.

Gulliver's Travels.
The long dispute among the philosophers about a vacuum, may be determined in the affirmative; that it is to be found in a critic's head.

Swift.
If the term added to make up the complex subject does not necessarily or constantly belong to it, then it is a determinutive, and limits the subject to a particular part of its extension; as, every pious man shall be happy.

Wutts.
How far this unexpected distinction can be rated among the happy incidents of life, I am not yet able to determine.

Johnson. Plan of Dietionary.
DETERRA'TION, \(n\). s. Lat. de and terra; Fr. deterrer. Discovery of any thing by removal of the earth that hides it ; the act of unburying.

This concerns the raising of new mountains, deterrations, or the devolution of earth down upon the valleys from the hills and higher grounds. Woodward.
DETER'SION, n.s. \(\quad\) From Lat. deter-
Deter'sive. adj. \& n. s. \}go. See Deterge. The act of cleansing a sore. Having the power to cleanse. An application that cleanses wounds.
I endeavoured detersion, but the matter could not be discharged.

Wiseman.
We frequently see simple ulcers aflicted with sharp humours, which corrode them, and render them painful sordia ulcers, if not timely relieved by detersives and lenients.

Id.

DETEST \({ }^{*}, v \cdot a\).
Detest'able, adj. Fr. detester; Span. Dersa' detestar; Lat. detestare, Detestátion, \(n\).s. from deum testari (odioDetest'er. sum illud est), a form of declaring hatred to, and innocence of any crime. Detestatio was the swearing a thing to be hateful and odious. To hate; abominate: hateful; abhorred: a detester is one who hates or abhors.

> He was dcadly made,
> And all that life preserved did detest.

Faerie Queene.
That detestable sight lim much amazd,
To see the' unkindly imps of heaven accurst
Devoure their dam. Spenser. Faerie Queene.
I've lived in such dishonour, that the gods
Detest my baseness.
Shakspeare.
Glory grows guilty of detested crimes,
When for fame's sake, for praisc, an outward part,
We bend to that the working of the heart. Id.
He desired him to consider that both armies consisted of Christians, to whom nothing is more detestable than effusion of human blood. Hayward.

Then only did misfortune make her see what sho had done, especially finding in us rather detestation than pity.

Sidney.
There is that naturally in the heart of man which abhors \(\sin\) as \(\sin\), and consequently would make him detest it both in himself and cthers too. South.

Who dares think one thing, and another tcll, My heart detests him as the gates of hell. Pope.

Our love of God will inspire us with a detestation for \(\sin\), as what is of all things most contrary to his divine nature.

Swift.
It is the peculiar condition of falsehood, to be equally detested by the good and bad. Johnson.

The detestable maxim, Qui nescit dissimulare nescit regnare, will not be heard of in heaven. Bp. Watson.

DETHRONE, \(v . a\). Fr. detroner ; de and throne (Lat. thronus). To divest of regal dignity.

The queen became the object of public hatred, the dethroned king was regarded with pity. Hume.
\(\mathrm{DETIN}^{\prime} \mathrm{UE}, n\). s. Fr. detenue. A writ that lies against him, who, having goods or chattels delivered him to keep, refuses to deliver them again.
Detinue lies for any thing certain and valuable, wherein one may have a property or right; as for a horse, cow, sheep, hens, dogs, jewels, plate, cloth, bags of money, sacks of corn, \&c. It must be laid so certain, that the thing detained may be known and recovered: and therefore, for money out of a bag, or corn out of a sack, \&cc., it lies not; for the money or corn cannot in this case be known from other money or corn; so that the party must have an action on the case, \&c. Yet detinue may be brought for a piece of gold of the price of 22 s . though not for 22 s . in money. In this action, the thing detained is generally to be recovered, and not damages; but if one cannot recover the thing itself, he shall recover damages for the thing, and also for the detainer.
DET'ONATE, \(v . n .7 \quad\) Lat. detono, from de \(\left.\begin{array}{l}\text { Detona'tion, n.s. } \\ \text { Det'onise, v. a. }\end{array}\right\}\) emphatic, and tonus, a sound. To thunder or make a great noise. It is used for various explosions in chemistry. To detonise is to calcine with detonation.

A new coal is not to be cast on the nitre, till the detonation occasioned by the former be either quite or almost altogether ended; unless it chance that the puffing matter do blow the coal too soon out of the crucible.

Boyle.
ineteen parts in twenty of detonized nitre is destroyed in eighteen days. Arbuthnot on Air.
The nitrates yield oxygen gas mingled with nitrogen gas by the action of fire; they give out a white vapour of nitric acid when acted on by concentrated sulphuric acid; and, when mixed with combustible substances, produce, at a red heat, inflammation and detonation.

Parke's Chemisal Catechism.
Detonation, in chemistry, signifies an explosion with noise made by the sudden inflammation of some combustible body: such as are the explosions of gunpowder, and fulminating powders. See Chemistry.

DETORT', v.a. Lat. detortus, of detorqueo. \(_{\text {. }}\) To wrest from the original import, meaning, or design.

They have assumed what amounts to an infallibility in the private spirit, and have detorted texts of scripture to the sedition, disturbance, and destruction of the civil government.

Dryden.
Detour des Anglois, or English Turn, a circular direction of the river Mississippi, in North America, so very considerable, that vessels cannot pass it with the same wind that conducted them to it, and must either wait for a favorable wind, or make fast to the bank, and haul close ; there being sufficient depth of water for any vessel that can enter the river. The two forts and batteries at this place on both sides the river, are more than sufficient to stop the progress of any vessel whatever. Dr. Cox, of New-Jersey, ascended the Mississippi to this place, anno 1698, took possession, and called the country Carolina. It lies eighteen miles below New Orleans, and eighty-seven above the Balize.

DETRACT v. a. Fr. detracter; Span.
Detract'er, n.s.
Detraction,
Detrac"tious, adj.
Detractory,
Detract'ress, n.s Gr. ¢ןagow, to draw
act : Der gem, character. Detractory, and detractious, alike mean, dishonorable to character.

Lest pcrauenture stryuyngis, enuyes, sturdnessis, dissenciouns, and detrasciouns, priuy spechis of discord ben among ghou.

Wiclif. 1 Cor. 12.
I am right glad to be thus satisfied, in that I yet was never able till now to choke the mouth of such detracters with the certain knowledge of their slanderous untruths.

Spenser on Ireland.
I put myself to thy direction, and
Unspeak mine own detraction; here abjure
The taints and blames I laid upon myself,
For strangers to my nature.
Shakspeare.
Those were assistants in private, but not trusted to manage the affairs in publick; for that would detract from the honour of the principal ambassador. Bacon.

You shall enquire of the unlawful taking of partridges, and pheasants, or fowl, the detraction of the eggs of wild-fowls, \&sc.
\(I d\).
By the largeness of the cornices they hinder both the light within, and likewise detract much from the view of the front without.

Wotton.

Fame, that her high birth to raise Seemed erst so lavish and profuse, We may justly now accuse Of detraction from her praise.

Miltone
The painters are most envious, if they want
Good colours for preferment; virtuous ladies
Love this way to be flattered, and accuse
The workman of detraction, if he add not
Some grace they cannot truly call their own.

\section*{Massinger.}

This is not only derogatory unto the wisdom of God, who hath proposed the world unto our knowledge, and thereby the notion of himself; but also detractory unto the intellect and sense of man.

Browne.
The multitude of partners does detract nothing from each private share, nor does the publickness of it lessen propriety in it.

Boyle.
No envy can detract from this : it will shine in histury, and, like swans, grow whiter the longer it endures.

Dryden.
Away the fair detracters went,
And gave by turns their censures vent.
Swift.
If any shall detract from a lady's character, unless she be absent, the said detractress shall be forthvith ordered to the lowest place of the room. Addison.

The detractory lye takes from a great man the reputation that justly belongs to him. Arbuthnot.

Detraction, in the native importance of the word, signifies the withdrawing or taking off from a thing; and, as it is applied to the reputation, it denotes the impairing or lessening a man in point of fame, rendering him less valued and esteemed by others, which is the final aim of detraction.

Ayliffe.
Hard is his fate on whom the public
Is fixed for ever to detract or praise ;
Repose denies her requiem to his name,
And folly loves the martyrdom of Fame.
Byron.
DETRANCHE, in beraldry, a line bendwise, proceeding always from the dexter side, but not from the very angle diagonally athwart the shield.

DET'RIMENT, n.s. \(\boldsymbol{\text { D F }}\), detriment ; Spa.
Detrimen'tal, adj. ; Portug. and Ital. detrimento; Lat. detrimentum, from detero, detritus, worn, because that which is worn is thereby injured. Injury; diminution; harm. Detrimental is, mischievous; causing injury.

Difficult it must be for one Cbristian church to aholish that which all lad received and held for the space of many ages, and that without any detriment unto religion.

Hooker.

\section*{I can repair}

That detriment, if such it be, to lose
Self-lost.
Milton.
He with the foe began to buckle,
Vowing to be revenged for breach
Of crowd and skin upon the wretch,
Sole author of all detriment
He and his fiddle underwent.
Hudibras.
Let a family burn but a candle a night less than the usual number, and they may take in the Spectator without detriment to their private affairs. Addison.

Obstinacy in prejudices, which are detrimental to our country, ought-not to be mistaken for virtuous resolution and firmness of mind.

Id.
And the reason seems to be, because an apprehension of the displeasure of their superiors. and the detrimental consequences which may accrue from thence, may be a check upon them, and engage them to pay the just regards which they expect.

Muson.

DETRITION, n. s. Lat. detero, detritus, \(\pi=\mathrm{m}\) de and tero; Gr. \(\tau \varepsilon \rho \omega\), to rub. The act of wearing away.
Detroit River, or Strait of St. Clair, the strait or river which flows from lake St. Clair into lake Erie, and forms part of the boundary between the United States and Upper Canada. It is forty miles long, and the great channel by which the waters of the lakes of Canada, Huron, Superior, and Michigan, are conveyed to the ocean. On the east side cultivation has made great progress.

Detroit, a flourishing town of the United States, on the west side of the above river. The fort and military works are very strong; but they were taken in 1812, by the British, undergeneral Brock.

DETRUDÉ,v.a. ) Lat. detrudo; de and
Detru'sion, \(n\). s. Ytrudo, to thrust ; to push. down; the act of thrusting or forcing down.

Philosophers are of opinion, that the souls of men may, for their miscarriages, be detruded into the bodies of beasts.

Locke.
From this detrusion of the waters towards the side, the parts towards the pole must be much increased.

Keil against Burnet.
At thy command the vernal sun awakes
The torpid sap, detruded to the root
By wintry winds.
Thomson.
Such as are detruded down to hell,
Either for shame they still themselves retire,
Or, tied in chains, they in close prison dwell.
To DETRU'NCATE, v.a. Lat. detrunco; Detruncátion, n.s. \(\quad\}_{d e}\) and trunco. To lop; to c'st; to shorten by deprivation of parts.

It may sometimes happen by hasty detruncation, that the gentral tendency of a sentence may be changed.
Johnson. Pref. to Dictionary.

DETTINGEN, a village of Germany, in the electorate of Mentz, situated on the east side of the Maine, where a battle was fought between the English, under the command of king George II. in person and the earl of Stair, and the French, under the command of the duke of Noailles. The English had the honor of the day ; but were soon obliged to leave the field of battle, which was taken possession of by the French, who treated the wounded English with great clemency. It is nine miles south of Hanau, and six north-west of Aschaffenburgh. Long. \(9^{\circ} 5^{\prime} \mathrm{E}\)., lat. \(49^{\circ} 55^{\prime} \mathrm{N}\).

DETURBATION n.s. Lat. deturbo. The act of throwing down; degradation.

DEVAPORATION, n. s. Lat. from de and vapor. The condensation of vapor.

For the wind blows uniformly upon this hot part of the coast of Peru, but no cause of deraporation occurs till it begins to ascend the mountainous Andes, and then its own expansion produces cold sufficient to condense its vapour.

Darvin.
DEVAPRAYAGA, a town of the province of Serinaghur, Northern Hindostan, situated at the junction of two branches of the most sacred part of the Ganges. It is built on the side of a mountain, about 100 feet above the stream. The houses are of stone, covered with shingles. The celcbrated temple of Ramachandra, cortaining Voc. Vilf.
a statue of the deity, of biack stone, is constructed of large blocks of cut stone, piled up, without mortar, to the height of sixty feet. It is at the upper part of the town, and surrounded by twenty-five villages, which belong to the Brahmins. This place suffered much by an earthquake in 1803.
DEVASTA'TION, n.s. Lat. devasto, de and vastus. Waste; havock; desolation; destruction.
By devastation the rough warrior gains,
And farmers fatten most when famine reigns Garth.
That flood which overflowed Attica, in the days of Ogyges, and that which drowned Thessaly in Deucalion's time, made cruel havock and devastation among them.

Woodward.
If itexcite a man to wicked attempts, make him willing to sacrifice the esteem of all wise and good men to the acclamations of a mob; to overleap the bounds of decency and truch, \&c. it is then not only vanity but vice; a vice, which of all others hath made the greatest havock and devastation among men. Mason.
DEUCALION, king of Thessaly, is said to have been the son of Prometheus. A flood recorded to have happened in this time (about A. A. C. 1500 ), is supposed to lave been only an inundation of the neighbouring country, occasioned by heavy rains, and an earthquake that stopped the course of the river Peneus. He governed his people, we are told, with great equity; but the rest of mankind, being extremely wicked, were destroyed by a flood, while Deucalion and Pyrrha his queen saved themselves by ascending mount Parnassus. When the waters decreased, they went and consulted the oracle of Themis, on the means by which the earth was to be repeopled, and were ordered to veil their heads and faces, to unloose their girdles, and throw behind their backs the bones of their great mother. At this advice Pyrrha was seized with horror; but Deucalion explained the mystery, by observing, that their great mother must mean the earth, and her bones the stones; when taking them up, those Deucalion threw over his head became men, and those thrown by Pyrrha women. M. Bryant and others have supposed, that Deucalion was the same with the patriarch Noah; and that his flood in Thessaly, and those or Ogyges in Attica, and Prometheus in Egypt, were the same with that of Noah recorded in Scripture. See Deluge.

DEUCE, Goth. dus ; Lat. dusius ; Arm. teus, once applied to good as well as evil spirits. See Demon.
'Twas the prettiest prologue, as he wrote it ; Well, the deuce take me if I ha'n't forgot it.

\section*{Congreve.}

Deuce, n. s. Fr. deux. Two: a word used in games.
You are a gentleman and a gamester; then, I am sure, you know how much the cross sum of deuce ace amounts to. Shakspeare.
DEVE'LOP, v.a. Fr. developer; Lat. develo To disengage from something that enfolds or conceals; to disentangle.

Take him to develop, if you can, And hew the block off, and get out the man.

\section*{DEV}

In his eye
And nostril, beautiful disdain, and might, And majesty, flash their full lightnings by, Developing in that one glance the Deity. Byron.
DEVENTER, the capital of a district in the province of Overyssel, Netherlands, situated in a fertile country, on the right bank of the river Yssel, is not a town of great size, but is strong, being surrounded by a wall, well flanked with towers, and defended with broad and deep ditches. The cathedral is a fine structure. There are besides three parish churches, and several convents ; and an athenæum, or provincial academy. The manufacture of this place is linen, and the trade is in butter, cheese, and cattle. There is a beauciful promenade on the Yssel. Population. 10,100 . It is eight miles N. N. W. of Zutphen, and forty-six east of Amsterdam.

DEVEREUX (Robert), earl of Essex. See

\section*{Essex.}

DEVE'ST, v. a. Fr. devester ; Lat. de and vestis. See Divest. To strip; to deprive of clothes.

What are those breaches of the law of nature and nations, which do forfeit and devest all right and titl in a nation to government?

Bacon.
-Friends all but now,
In quarter and in terms, like bride and groom Devesting them for bed.

Shakspeare.
Come on, thou little inmate of this breast,
Which for thy sake from passions I devest. Prior. DEVE'X, adj. \} Lat. devexus. Bending
Devéxity, n.s. \} down; declivous; incurrated downwards; declivity.

DE'VIATE, v. n. 7 Lat. de viâ decedere,
Devia'tion, n.s. STo wander from the
De'vious, adj. Sright or common way ;
.o go astray.
In this minute devious subject, I have been necessitated to explain myself in more words than may seem needful.

Holder.
A story should, to pleasc, at least seem true, Be apropos, well told, concise, and new :
And whensoe'er it deviates from these rules,
The wise will sleep, and leave applause to fools.
Stillingfleet.
The rest to some faint meaning make pretence, But Shadwell never deviates into sense. Dryden.

Some lower muse, perhaps, who lightly treads
The devious paths where wanton fancy leads. Rowe.
What makes all physical and moral ill?
ThereNature deviates, and here wanders Will. Pope.
These bodies constantly move round in the same tracks, without making the least deviation. Cheyme.

One devious step at first setting out, frequently leads a person into a wilderness of doubt and error.

\section*{Clarissa.}

Worthy persons, if inadvertently drawn into a \(d_{s}\) viation, will endeavour instantly to recover their lost ground, that they may not bring error into habit.

Id.

\section*{Every muse,}

And every blooming pleasure, wait without
fo bless the wildly devious morning walk.
Thomson.
To what gulfs
A single deviation from the track
Of human dutics leads even those who claim The homage of mankind as their born due, And find it, till they forfeit it themselves!

Byron.

\section*{DEV}

DEVICE', n.s. See Devise.
DEV'IL, \(>\) Goth. diofl ; Sax. diofut,
Devillisif, adj. Teut. teuffel; Trish duol;
Dev'ilisuly, adv. Belg. duvell; Fr. diuble; Span. diablo, from Lat. diubolus; Gr. סıaßo入os, \(\delta \iota \alpha \beta \alpha \lambda \lambda \omega\), from \(\delta \iota a\), through and \(\beta a \lambda \lambda \omega\), to cast; to strike through as with a dart; and thence as with slander. The great spiritual enemy of man, called in Scripture 'an accuser;' a term of reproach, expressing extreme wickedness, raal, or supposed : a ridiculous expletive : the adjective and adverb seem plain.

Clothe ghou with the armure of God, that ghe moun stande aghens aspiyngis of the deuel.

Wiclif. Effesies 6.
Have not I chosen you twelve, and one of you is a devil?

Bible. John vi. 70.
This wisdom descendeth not from above, but is earthly, sensual, devilish. Id. James iii. 15.

For grief thereof and devilish despight,
From his infernal furnace forth he threw
Huge flames, that dimmed all the heaven's light, Enrolled in duskish smoke and brimstone blue.

Spenser.
The devil was ill and the devil a monk would be, The devil was well the devil a monk was he.

Old Proverb.
See thyself, devil ;
Proper deformity seems not in the fiend
So horrid as in woman.
Shakspeare.
A devilish knave ! besides, the knave is handsome, young, and blyth; all those requisites are in him that delight.
Worldly wealth is the devil's bait; and those whose minds feed upon riches, recede, in general, from real happiness, in proportion as their stores increase; as the moon when she is fullest of light is farthest from the sun.

Burton.
Be frustrate all ye stratagems of Hell,
And devilish machinations come to nought.
Milton.
Those trumpeters threatened them with continual alarms of damnation, if they did not venture life, fortune, and all, in that which wickedly and devilishly those impostors called the cause of God. South.

The things, we know, are neither rich nor rare; But wonder how the devil they got there! Pope

With all these tokens of a knave complete,
If thou art honest, thou 'rt a devilish cheat.
Addison.
Devir, an evil angel, one of thosecelestial spirits cast down from heaven for aspiring to be equal with God. The Ethiopians paint the devil white. Satan and Belial are equivalent to this term in the Old Testament : nor do we meet with it in any heathen authors, in the sense it is taken among Christians, that is, as a creature revolted from God, although their theology was familiar with evil genii and dæmons. See Demos and Demoniac. Soine of the aboriginal nations of America have a notion of two collateral independent beings, one of whom is grood, and the other evil ; which last they imagine has the superintendance of the earth, for which reason they chiefly worship him; and hence they have been said to worship the devil. The Chaldeans and Persians, in like manner, believed in both a good principle and an evil one; which last they imagined was an enemy to mankind. Isaiah, according to some commentators, when speaking of
the fall of the king of Babylon, alludes to that of the devil, calling him Lucifer, son of the morning. The Arabians call Lucifer, Eblis; which some writers suppose to be a diminutive or corruption of the word Diabolus.

Devilif a Bush, in botany. See Nigella.
DEVISE', v.a. \(\}\) Fr. deviser; Sparı. and
Devi'ser, n.s. Portug. devisar, according
Devicé, n. s. to Skinner, from Lat. devisare, to look about. To contrive; consider : a device is the scheme or plan contrived: hence also a sketch or drawing on a shield; a token.

Behold I frame evil against you, and devise a device against you.

Jer, xiii. 11.
Her merry fit she freshly 'gan to rear, And did of joy and jollity devise,
Herself to cherish and her guest to chear.
Faeric Queene.
At last the nourse in her fool hardy wit Conceived a bold devise, and thus bespake.

Id.
Touching the exchange of laws in practice with laws in device, which they say are better for the state of the church, if they might take place; the farther we examine them, the greater cause we find to conclude, although we continue the same we are, the harm is not great.

Hooker.
Devise but how you'll use him when he comes, and let us two devise to bring him thither. Shakspeare.

He's gentle; never schooled, and yet learned; full of noble device, of all sorts enchantingly beloved.
\(I d\).

\section*{This is our device,}

That Falstaff at that oak shall meet with us. Id.
Being divided from truth in themselves, they are yet farther removed by advenient deception; for true it is, if I say they are daily mocked into error by devisers.

Browne.
Then change we shields and their devices bear; Let fraud supply the want of force in war. Dryden.

The authors of useful inventions, the devisers of wnolesome laws, as were the philosophers of antient times, were honoured as the fathers and prophets of their country.

Grew.
Hibernia's harp, device of her command,
And parent of her mirth, shall there be seen.
Prior.
He intended it as a politick device to lessen their interest, and keep them low in the world.

Atterbury.
Ye sons of art, one curious piece devise,
From whose constructure motion shall arise.
Blackmore.
A tavern with a gaudy sign,
Whose bush is better than the wine,
May cheat you once-will that device,
' Neat as imported,' cheat you twice? Garrick.
Device, in heraldry, painting, and sculpture, an enblem used to represent a certain family, person, action, ar quality ; with a suitable motto, applied in a figurative sense. The essence of a device consists in metaphorical similitude between the things representing and represented: thus a young nobleman, of great courage and ambition, is said to have borne his device, in a carousal at the court of France, a rocket mounted in the air, with this motto in Italian, ' poco duri purche m'inalzi ;' importing, that he preferred a short life, provided he might thereby attain to glory and eminence. The Italians have reduced the making of devices into an art.

Devise, v.a. \& n.s. \(\}\) Old Fr. devise, a Deviseé, n.s. Swill. To give by will; the act of giving or bequeathing by will: devisee, he to whom something is bequeathed by will. Devisour, he who bequeaths it.
The alienation is made by devise in a last will onty, and the third part of these profits is there demandable.

Locke.
This word devisee is properly attributed, in our com. mon law, to him that bequeaths his goods by his last will or testament in writing; and the reason is, because those that now appertain only to the devisour, by this act are distributed into many parts. Cowell.
DE'VITABLE, adj. \} Lat. devitabilis. Pos-
Devita'tion, \(n\).s. \(\}\) sible to be avoided; avoidable : the act of escaping or avoiding.
DEVIZES, a town of Wiltshire, six miles north fromLavington, and eighty-nine west froinLondon. It contains two churches and a chapel, besides a place of worship for dissenters, and returns two members to parliament. Here was formerly a castle, supposed to be one of the strongest in England ; but it is now nearly destroyed. Two markets are held weekly, one on Monday, principally for butcher's meat ; the other on Thursday for corn, wool, cattle, \&c., considered one of the best in England. Considerable manufactures are carried on, particularly of serges, kerseymeres, and broad-cloth. In the market place is erected a stone with an inscription, as a memorial of divine vengeance inflicted on a woman who called God to witness a falsehood concerning some money. The corporation consists of a mayor, recorder, ten magistrates, and twentyfour common-council-men. The number of burgesses is unlimited, and they have a right to vote for representatives in parliament as soon as they are made free. Its name is to be derived from the Latin divisæ, divided, from its having been anciently divided between the king and the bishop of Salisbury ; and it is supposed to have been the Punctuobice of Ravennus. The Romans enclosed it with a vallum and ditch, in which there is now a road almost round the town. Brass figures of household gods, coins, bricks, and urns, evidently Roman, have been dug up here.
DEVOID', adj. Fr. vuide. Empty; vacant; void.
When I awoke and found her place devoid, And nought but pressed grass where she had lyen, I sorrowed all so much as earst I joyed.

> Faerie Quene

That the soul and angels are devoid of quantity and dimension, and that they have nothing to do with proper locality, is generally opinioned. Glanville.
DEVOIR', n.s. Fr. devoir ; Lat. debere. To owe service.
DEVOLVE' v.a. \& n.s. \} Lat.devolvo; de
Devolu'tion, n.s. \(\quad\) Sand volvo, to roll. To roll down or upon; hence, to give in succession. Devolution is the art of so removing or giving, or the removal so effected.
DEVON, a river of Scotland, in the counties of Perth and Clackmannan, which rises in the Ochil hills, and after running ten miles directly east, makes a turn to the west at a place hence called the Crook of Devon; then passes through
the vale of Glendovan to the Rumbling Bridge and Caldron Linn, where it forms a scenery, wild, beautiful, and romantic.

DEVONPORT, a sea-port, market, and borough town, in the county of Devon, England, returning two members to parliament under the Reform Bill of 1832. It is in the parish of Stoke Dancarel, on the Hamoaze, a creek in the estuary of the Tamar, and received its present name by command of George IV., in 1824. Its foundation may be attributed to the docks constructed here originally by William III., and enlarged in the reign of George III. The royal dock yard occupies an area of seventy-one acres and thirty-six poles, and includes one wet and three dry or graving docks, formed in so many excavations of a slaty stratum, and faced with Portland stone. In the dock yard is a chapel, opened in 1817, a magazine, gun-wharf, covering five acres of ground, a surgery and permanent medical establishment, besides officers' apartments, store houses, and other necessary buildings. The town is governed by commissioners, elected by those of the inhabitants who contribute eight pounds annually to the poor's rate, and for the election of members to parliament a returning officer is appointed by the sheriff of the county. Courts leet and baron are held by the constable of the manor, and petty sessions by the county magistrates. The commercial interests have been promoted by the erection of an exchange in Ker Street, and general traffic is conducted in a market place. The trade and manufacture peculiar to this place are block, sail, rope making, and such others as are connected with nautical equipment. The town is strongly fortified. The fort and battery on Mount Wise, command the harbour entrance and the sound, and here also is the house of the port admiral. There is one ferry at Crimble Passage, one to Mount Edgcumbe, and a flying bridge preserves an easy communication with Saltash, in Cornwall. Devonport is 218 miles southward of London, and contains a population of 44,454 souls.

DEVONSHIRE is a maritime county, one of the most valuable in England; and is bounded on the north and north-west by the Bristol Channel; on the west by Cornwall, the river Tamar, and a small rivulet called Marsland Water; on the soutin and south-east it is skirted by the British Channel; on the east and north-east it borders on the counties of Dorset and Somerset, the dividing limits being artificial. In point of extent this county is second only to Yorkshire, and the fourth in population. Its greatest length, which is from north to south, is about seventythree miles; and its greatest breadth, from east to west, sixty-five miles. It contains about 1,600,000 acres, or upwards of 2,493 square miles. This county is divided into thirty-three hundreds, 349 parishes, 117 vicarages, 1733 villages, one city, and thirty-seven market towns. It is in the diocese of Exeter, and the western eircuit of the province of Canterbury.

It was incorporated by the Romans with Cornwall, under the general appellation of Danmonium; its original name being Dyvnaint, signifying deeps or hollows. During the Heptarchy
it belonged to the West Saxons, and was then called Devonscyre. It was included in the first Roman district, or Britannia Prima.
The climate of Devonshire differs materially in the northern and southern districts. It is, however, in general mild and genial. The northern district, considered in its most extensive sense, as comprehending the whole district hetween Dartmoor and the British Channel, but, more generally speaking, embracing only the parts round Biddeford, Barnstaple, South Moulton, and the north coasts, is by no means comparable to the temperature which characterises the southern parts of the county; yet even here, and along the sea coasts, from the northern extremity of the district to the most southern, snow seldom lies longer than a few hours, except indeed on the summits of some of the high hills. In the southern parts the progress of vegetation is but little impeded during winter, and the ground almost constantly wears an aspect of verdure and beauty. The climate of Devonshire has been frequently recommended by the faculty as preferable for delicate invalids, even to Lisbon or the South of France. The face of the country is exceedingly varied and uneven. The heights in many parts, but particularly in Dartmoor and its vicinity, swell into mountains; the altitudes of the principal eminences heing from 1500 to 1800 feet. 'On approaching this tract from the south and south-east, the eye is bewildered by an extensive waste, exhibiting gigantic tors, large surfaces covered with masses of scattered granite, and immense rocks, which seem to have been precipitated from the steep declivities into the valleys. These huge and craggy fragments are spread confusedly over the ground, and have been compared to the ponderous masses ejected by volcanoes, to the enormous ruins of formidable castles, and to the wrecks of mountains torn piecemeal by the raging elements.' Taking the plare of high water in the Bristol Channel as a base, it appears that the highest hill, which is Dunkery Beacon, on part of Exmoor Forest, is 1890 feet ; the next, Castle Head-down, High Bray parish, 1500 feet. The lowest, which is Hilsborough, overhanging the town of Ilfracombe to the east, is about 300 feet. Exmoor has recently been disforested by act of parliament.

The principal rivers of Devonshire are the Exe, the Torridge, the Teign, the Taw, the Oke, the Dart, the Plym, the Otter, the Axe, and the Tamar: though this last belongs more properly to Cornwall. It forms at its mouth the harbour of Hamoaze, or Plymouth Sonnd. All these rivers abound in fine salmon. Sufficient attention does not appear to have been paid to the inland navigation of this extensive county, though it contains one of the most ancient specimens of canal navigation in the kingdom: this is the Haven at Exeter, which was formed in the year 1544. It is properly a canal, and conveys shipping from the tideway above Topsham to the quay at Exeter, which is effected by an embanked na middle of the line. The Crediton and Exeter Canal is also a fine work; as is the Tavistock Canal, undertaken in the year 1803, under the superintendance of Mr. John Taylor. The Tamar Canal skirts the western edge of this county

The principal mineral waters in the county are at Bampton, Cleeve, Lomerton, Lifton and Tavistock.

The soils of this county divide thenselves into four kinds, the first of which is found to occupy the smallest space. Risdon, in his Survey of Devon, says that ' on the east side of the shire the mould standeth most upon white chalk, which is passing good for sheep and corn.' The second is the red land, surrounding Exeter, and extending considerably east and west of it ; this is deemed good pasture land. The third is the peat soil, of which Dartmoor furnishes the principal example. Of this soil Risdon speaks somewhat disparagingly, saying that it is richer in its bowels than in the face thercof, yielding tin and turf.' The fourth, which pervades by far the greater part of the conuty, though varied in its appearances by casual admixtures, is what has lately obtained the name of dun-land. It is furnished probably by the decomposition of schistus rock, on which it lies, and is found in almost every state, from the most fertile to the most sterile. The writer of most excellent and accurate ' Remarks on the present State of the County of Devon, introductory to the new edition of Risdon's Survey,' published in 1811, observes that ' the soil most prevalent is remarkable in two circumstances; its rapid spontaneous production of grass when under good management, and its total want of calcareous principle.'

The cattle of Devonshire are in the highest request in all parts of the kingdom; and distinguished by fineness of bone and skin: the sheep are small and subject to the rot. This county has also long been famed for its cyder, which is the beverage of the lower classes. Two hundred years ago, many copyholders might pay their lords' rent with their cyder oniy. The above writer adds, that 'this is even now probably in some parts and in some seasons the case, though the orchards are not either so large and productive, or so numerous as they used to bc.' Much butter is made in the grass lands and that without the churn. This writer has given a truly interesting and scientific outline of the mineralogy of Devon, which, as he very justly observes, is a feature of distinguished importance in this county, whether we regard the value of the mineral productions, or the phenomena which it presents to the scientific enquirer. The general character of this mineralogy is that of an elevated tract of granite, running from north to south across the district, and passing into or under a superstratum of primitive schistus on its western side, and of alluvial sand-stone and chalk on the eastern limits. A vein of culm was found some years ago near Chittlehampton, varying from about four inches to one foot in thickness, and dipping about one foot in three to the southward. It was wrought for a short time, but the expense being considerable, it was abandoned. In Bovey Heathfield, which seems to have been formerly covered by the tide, that remarkable substance called Bovey coal, is found. It ruus nine miles to the southward, keeping to the west of large beds of potters' clay. The uppermost strata are within a foot of the surface, and from eighteen inches to four feet thick: the
deepest stratum is sixteen feet thick. At the bottom is a bed of clay and sand. This coal retains the vegetable structure, and has the appearance of charred wood, impregnated with bitumen. It is divided into two kinds, the stone coal and the wood coal; the last has more of the peculiar properties. When this coal is burning, a thick heavy smoke, of a fæetid and disagreeable nature, arises from it. The small coal, thrown into a heap, and exposed to the weather, will take fire of itself. Its specific gravity is from 1.4 to 1.558 , and its proportion of pure carbon from 54 to 75 per cent.

The chef mineral productions are tin, which the granite hills of Dartmoor have produced probably for many ages, as traces of seam works and mines are to be seen in every part of this immense waste. Stone, which is justly esteemed as the best in existence for the purpose of building where durability is to be regarded. The same kind of granite rock, which produces tin, has also produced some lodes of copper. This county also produces lead and silver; also iron, zinc, antimony, manganese, wolfram, arsenic, and cobalt. 1.50 miles of this extensive county lies on the sea-coast, and contains innmy excellent bays, harbours, and sea-ports, of which the principal, and one of the best in the world, is that of Devonport (late Plymouth Dock). See Plymoutri. The coasts, as well as the rivers, abound with fish, and particularly the southern coast. Torbay is famous for its fine soles and turbot. Plymouth for Johndorey; Topsham, Starcross, and Lympstone for oysters: and the rarc fish, opalı and torpedo, are sometimes caught on the coasts. Its pleasant situation, and the cheapness of all the necessaries of life, have induced a great number of the nobility and gentry to adorn it with seats.

This county sends twenty-two members to the Imperial Parliament under the provisions of the Reform Bill of 1832 , viz. four for the county; two for the city of Exeter ; two for Totness ; two for Plymouth; two for Barnstaple; two for Honiton; two for Tavistock; one for Ashburton; one for Dartmouth; two for Tiverton, and two for Devonport.

Of the 'Worthies of Devon,' coliected down to the commencement of the eighteenth century, in a folio volume, hy the Rev. John Prince, we can only mention the following :-Sir John Fortescue Aland, an able judge; Bishop Barrington; Archbishop Baldwin, who accompanied Richard I. to the Holy Land, and died there in 1191 ; Henry de Bathe, a learned judge, who died 1261; Lady Mary Chudleigh; John Churchill, the iminortal duke of Marlborough; The Rev. archdeacon Conant, on whom his friend Dr. John Prideaux used thus admirably to pun, 'Conanti nihil est difficile;' William Courtney, archbishop of Canterbury, who condemned Wicliffe and his followers; Mrs. Hannah Cowley, an ingenious dramatic writer; John Davis, the navigator who discovered the well-known straights in North America, which bear his name; Sir Francis Drake; John Dunning, lord Ashburton; Sir John Fortescue; Monk, duke of Albemarle; Sir Walter Raleigh; Sir Joshua Reynolds, \&c \&c.

The principal manufactures of the county are serges, kerseys, shalloons, broad-cloth, and blond lace, in which, and in corn, cattle, fish, and its mineral productions, the inhabitants carry on a considerable trade. Barnstaple potteries have increased of late years; they consist of dairy and kitchen utensils. There is a considerable ship-building trade at Barnstaple. The woollen cloth manufactures at Tiverton, Great Torrington, and the wool-combing of Chumleigh were formerly extensive, but have now decayed or vanished. There is, however, a considerable trade in the gloving business at the former place. The iron, cordage works, \&c., for the Royal Dockyard at Plymouth, have long been extensive sources of manufacture. Serges are manufactured at Totness, Moreton, Hempstead, Chafford, and other places; and the long ells of Devonshire have been long known. Silk and porcelain have been deemed the principal manufactures of the county; but the productions from the minerals of the county are perhaps equal to any, excepting indeed the woollen manufactory. There is also a considerable quantity of yarn manufactured in the county, as well as of laces.

Devonshire (Georgiana, duchess of), was the eldest daughter of John earl Spencer, and born June 9th, 1757. She married, in 1774, William duke of Devonshire, and was long the object of attraction to the fashiunable world, and the patroness of taste in the fine arts. She became well acquainted with the history and polity of nations, but the belles lettres principally attracted her regard. She left an elegant poem on the passage of Mount St. Gothard, which Dellile translated into French. She died at Devonshire House, Piccadilly, March 30th, 1806.

\section*{DEVORA'TION, n. s. See Devour.}

DEVO'TE, v. a. \& adj.) Lat. devoveo, de-
Devotee', n.s.
Devo'tedness, n.s.
Devótion, n.s.
Devo'tional, adj.
Devótionalist, n.s. in hence toappropriate manner: to resign. Hence, also, to doom, to execrate. A devotee, Dr. Johnson defines as one erroneously or superstitiously religious; but it is also used for one warm in religion generally. Devotion is the act, habit, or state, of being devoted or given up to; devotional pertaining to devotion; devotionalist, synonymous with devotee.

With deuocion we han avowid, that we schulen not taaste ony thing til we sleen poul.

Wiclif. Dedis, 23.
No devoted thing that a man shall devote unto the Lord, of all that he hath, both of man and beast, and of the field of his possession, shall be sold or redcemed.

Lev. xxvii., 21.
They tied were to stedfast chastity, And continence of life, that all forgon, They mote the better tend to their devotion.

Spenser. Faerie Queene.
Religious minds are inflamed with the love of publick deootion.

Hooker.
What black magician conjures up this fiend,
To stop devoted charitable deeds? Shakspeare.

\section*{DEV}

Be opposite all planets of good luck
To my proceeding, if, with pure heart's love, Immaculate devotion, huly thoughts,
I tender not thy beauteous princely daughter.
Id.
Nor are the sobercst of them so apt for that devotional compliance and juncture of hearts, which I dcsire to bear in holy offices, to be performed with me.

King Charles.
In vain doth man the name of just expect, If his devotions he to God neglect. Denham.

To destruction sacred, and devote,
He with his whole posterity must die.
Milton.
Grateful to acknowledge whence his good
Descends, thither with heart, and voice, and eycs Dirccted in devotion, to adore
And worship God supreme, who made him chief
Of all his works.
Id.
Whatever may fall from my pen to her disadvanage, relates to her but as she was, or may again be, an obstacle to your devotedness to seraphick love.

Boyle.
He had a particular reverence to the person of the king, and the more extraordinary devotion for that of the prince, as he had had the honour to be trusted with his education

Clarendon.
Goddess of maids, and conscious of our hearts, So keep me from the vengeance of thy darts, Which Niobe's devoted issue felt, When, hissing through the skies, the feathered deaths were dealt.

Dryden.
The owning of our obligation unto virtue, may be styled natural religion; that is to say, a devotedness unto God, so as to act according to his will. Grew.

Your devotion has its opportunity : we must pray always, but chiefly at certain times.

Sprat.
The favourable opinion and good word of men comes oftentimes at a very easy rate, by a few demure looks, with some devotional postures and grimaces.

South.
Let her, like me, of every joy forlorn,
Devote the hour when such a wretch was born; Like me to deserts and to darkness run. Rowe.

From the full choir when loud hosannas rise, Aud swell the pomp of dreadful sacrifice; Amid that scene, if some relenting eye Glance on the stone where our cold reliques lie,
Devotion's self shall steal a thought from heaven,
One human tear shall drop, and be forgiven.
Pope.

> Ah why, Penelope, this causeless fear, To render sleep's soft blessings insincere? Alike devote to sorrow's dire extreme,
> The day reflection and the midnight dream.

Id.
Pilgrimages are often either enjoined by confessors, or undergone by devotees.

Serce.
Aliens were devoted to their rapine and dcspight.
Decay of Piety.
Devotion may be considered either as an exercise of publick or private prayers at set times and occasions, or as a temper of the mind, a state and disposition of the neart, which is rightly affected with such exercises. Law on Christ's Perfection.
With such a cause as yours, my lord, it is not sufficient that you have the court at your devotion, unless you can find means to corrupt or intimidate the jury.

Junius.
He sue for mercy! He dismayed By wild words of a timid maid!
He, wronged by Venice, vows to save Her sons devoted to the grave.

Byron.
-A mere ideal, unintelligible, notion, fit only for the eloistered monk, or the superstitious devotee.

Porteus.
Devotion, among the ancient Romans, a kind of sacrifice or ceremony, whereby they consecrated themselves to the service of some person. The ancients thought that the life of one might be ransomed by the death of another; whence these devotions became frequent for the lives of the emperors. Devotion to any particular person was unknown among the Romans till the time of Augustus. The day after the title of Augustus had been conferred upon Octavius, Pacuvius, a tribune of the people, publicly declared, that he would devote himself to Augustus, and obey him at the expense of his life, if he was commanded. This example of flattery was immediately followed by all the rest; till at length it hecame an established custom never to go to salute the emperor, without declaring that they were devoted to him. Before this, the Roman practice was much more noble and patriotic, viz. that of devoting themselves to their country. See Decius.

DFVOUR', \(\boldsymbol{v . a .}>\) Lat. devoro; of Gr .
Devour'er, n.s.
Devora'tion, n. s. \(\}\) To eat up ravenously as a beast or wild animal; to destroy: hence to consume or enjoy with eagerness. Devoration says Dr. Johnsolt, is 'the act of devouring,' but we have seen no instance of its occurrence.

And I took the book of the aungelis hond and deuovride it, and it was in mi mouthe as sweete as boiny, and whanne I hadde deuouride it mi wombe was bitter.

Wiclif. Apoc. 10.
A fire devoureth before them, and behind thent a flame burneth.

Joel, ii. 3.
We've willing dames enough : there cannot be
That vulture in you, to devour so many
As will to greatness dedicate themselves,
Finding it so inclined.
Shakspeare
So looks the pent up lion o'er the wretch
That trembles under his devouring paws.
Id.
Rome is but a wilderness of tygers ;
Tygers must prey, and Rome affords no prey
But me and mine : how happy art thou, then,
From these devourers to be banished !
Death stalks behind thee, and each flying hour Does some loose remnant of thy life devour.

Dryden.
Such a pleasure as grows fresher upon enjoyment; and though continually fed upon, yet is never devoured.

South.
Notwithstanding that Socrates lived in the time of this devouring pestilence at Athens, he never caught the least infection.

Addison.
Since those leviathans are withdrawn, the lesser devourers supply their place: fraud succeeds to violence.

Decay of Piety.
You, while amazed his hurrying hordes retire From the fell havoc of devouring fire.
Taught the first art ! with piny rods to raise
By quiek attrition the domestie blaze. Darwin.
DEVOUT', adj. ) Lat. devotus. See De-
Devout'ly, adv. \} votion. Pious; religious; devoted to holy duties.

Her twilights were more clear than our mid-day, She dreamt devoutlier than most use to pray. Donne.

Her grace rose, and with modest paees Came to the altar, where she kneeled ; and saint-like Cast her fair eyes to heaven, and prayed devoutly. Shakspeare.
One of the wise men having a while attentively and devoutly viewed and contemplated this pillar and eross, fell down upon his face.

Bacon.
Anon dry ground appears, and from his ark
The ancient sire descends with all his train;
Then with uplifted hands, and eyes devout, Grateful to heaven.

Milton.
For this, with soul devout, he thanked the god; And, of suecess secure, returned to his abode.

Dryden
Think, 0 my soul, devoutly think, How, with affrighted eyes,
Thou saw'st the wide extended deep In all its horrors rise !

Addison.
We must be constant and derout in the worship of our God, and ready in all aets of benevolence to our neighbour.

Rugers.
To secnnd causes we seem to trust, without expressing, 3 devoutly as we ought to do, our dependance on the first.

Atterbury.
DEUTEROCANONICAL, from \(\delta \varepsilon v \tau \varepsilon \rho \circ\), second, and ravovtкos, canonical, in the school of theology, an appellation given to certain books of holy scripture, which were added to the canon after the rest; either because they were not written till after the compilation of the canon, or by reason of some dispute about them. The Jews acknowledge several books in their canon, which were later than the rest. They say, that under Ezra a great assembly of their doctors, which they call lyy way of eminence the great synagogue, made the collection of the sacred books which we now have in the Hebrew Old Testament, including those which were not written before the Babylonish captivity, viz. Ezra, Nehemiah, Esther, Ezekiel, Daniel, Haggai, Zechariah, and Malachi; and the Romisin church has since added others to the canon, that were not, and could not be, in the canon of the Jews, being written long after. Such are several of the apocryphal books, as the Maccabees, Ecclesiasticus, Wisdom, \&c. Others were added stil. later. The deuterocanonical books in the modern canon are, the epistle to the Hebrews; those of James and Jude; the second of St. Peter, the second and third of St. John; and the Revelation.

DEUTEROG'AMY, n.s. \(\Delta \varepsilon v \tau \varepsilon \rho \circ \varsigma\) and \(y \alpha \mu \sigma \sigma\) A second marriage;

DEUTERON'OIMY, n.s. \(\Delta \varepsilon v \tau \varepsilon \rho \circ \varsigma \nu 0 \mu \circ\). The second book of the law; the fifth book o Moses.

Dedternnomy was the last of the five books written by Moses, and contains, as its name imports, the repetition of the law. It was written in the fortieth year after the delivery from Egypt, Moses being then in the 120th year of his age. In the Hebrew it contains eleven paraches, though there are only ten in the editions of the rabbins at Venice, twenty chapters, and 955 verses. In the Greek, Latin, and other versions, it contains thirty-four cliapters. The last is no: by Moses. Some suppose it was written by Joshua immediately after Moses's deat'1; which is the most probable opinion. Others say it was
added by Ezra. See Pentateucir. This book opens with an interesting address to the Israelites, in which Moses briefly recapitulates the many instances in which they had experienced the divine favor since their departure from Horeb. He describes the success and victories which had marked their progress; and the incredulous murmurs and ingratitude, by which the people had incensed God; so that of the multitude which were brought out of Egypt, few now remained. He proceeds to rehearse the various commandments, statutes, and judgments which had been delivered to them by God, that they might become ' \(a\) wise and understanding people;' and while he intersperses with those laws, frequent instances of their past misconduct, he unfolds the glorious attributes of God, and reiterates many persuasive motives. He enjoins them, on their first entrance into Canaan, to give a public display of their reverence for God's law, by erecting stones on which all its words and precepts might be inscribed. He renews the covenant with the people, including all that previously passed at Horeb; and ratifies those assurances of spiritual blessings, long since imparted to Abraham and his descendarits. He then, in consistency with the promises and sanctious of both covenants, sets forth, for their instruction, life and good, and death and evil, temporal and eternal recompense, present and future punishment.

DEUTEROPOTMI, in Grecian antiquity, a designation given to such of the Athenians as had been thought dead, and, after the celebration of the funeral rites, unexpectedly recovered.
DEUTERO'SCOPY, n.s. \(\Delta \varepsilon v \tau \varepsilon \rho o \varsigma\) and \(\sigma x о \pi \epsilon \omega\). The second intention ; the meaning beyond the literal sense: not in use.

Not attaining the deuteroscopy, or second intention of the words, they are fain to omit their consequences, coherences, figures, or tropologies.

\section*{Browne's Vulgar Errours.}

DEUX Ponts, a ci-devant duchy and principality of Germany, in the circle of the Upper Rhine. It was composed of the ancient county of the same name, and the connty of Veldentz, and bounded by the provinces of Alsace and Lorrain on the south and south-west, by the electorate of Treves on the north, and the Lower Palatinate on the east ; but much intersected by the possessions of different princes. In the year 1385 it was annexed to the Palatinate. The descendants of the princes palatine having obtained the throne of Sweden, and given three princes to that kingdom, Charles X. XI. and XII., it remained under the dominion of Sweden during that period; but this line becoming extinct, it descended to the house of Birkenficld, in the possession of which it continued till its late subjection to the power of France. The duchy was overrun by the French in 1793, and finally attached to that kingdom in 1797, when it was included in the department of the Sarre and Moselle. It is mountainous, and abounds in mines of copper, mercury, iron, and coals; as well as in vineyards, pastures, and corn-fields, which sufficiently supply the people. The principality, when under the German empire, paid for the Roman month 240 florins, and to the im-
perial clamber 172 rix-dollars, and thirty-six kruitzers. The revenues were estimated at 500,000 florins. It returned in 1814 to the possession of Austria, and has since been exchanged for other districts with Bavaria. It is now a part of the Bavarian province of the Rhine, and has about 60,000 inhabitants.

Deux Ponts, or Zweybrucken, as the Germans call it, a town of Germany, now annexed to France, and included in the department of Sarre and Moselle, of which it is the capital; as it was, till December, 1797, of the ci-devant duchy. It was the seat of justice for the principality, and has churches for Roman Catholics, Lutherans, and Calvinists. It is seated on the Erlbach, forty-six miles west of Manheim, fifty south-west of Mentz, and forty-nine north by west of Strasburgh. Long. \(7^{\circ} 26^{\prime}\) E., lat. \(49^{\circ} 16^{\prime} \mathrm{N}\).

Deux Ponts, Les, a town of the Bavarian States, the capital of the foregoing district, is situated on-the right bank of the Little Erlbach, and has a castle, formerly the ducal residence The clief objects of interest are a beautiful organ in the town church, the new Lutheran church and academy, and the orphan-house. In 1709 Stanislaus Leczynsky, king of Poland, took up lis residence here, and built the palace of Schuhflick, about half a mile from the town. The town is distinguished for its valuable editions of the Greek and Latin classics. Population 5000. It is forty-six miles west of Manheim, and fiftyeight east of Mentz.

Large rowles of fat about his shoulder slung, And from his neck the double dewlap hung. Addison.
The dewlapt bull now chases along the plain, While burning love ferments in every vein. Gay.
R.est, sweet as dewdrops on the flowery lawns, When the sky opens, and the morning dawns.

Tickell.
Now sliding streams the thirsty plants renew, And feed their fibres with reviving dew. Pope.

No more the morn, with tepid rays, Unfolds the flower of various hue,
Noon spreads no more the genial blaze, Nor gentle eve distils the dew.

Johnson. Ode to Winter.
The spring is come; the violet's gone, The first-born child of the early sun; With us she is but a winter's flower, Tbe snow on the hills cannot blast her bower, And she lifts up her dewy eye of blue T', the youngest sky of the self-same hue.

Byron.

Dew is defined by Dr. Hutton 'a thin light insensible mist, or rain, ascending with a slow motion, and falling while the sun is below the horizon.' He adds, ' that it appears to differ from rain, as less from more' Its origin and matter are doubtless from the vapors and exhalations that rise from the earth and water. See Eximatation.

As it appears only during clear nights, when the heavens seem to glow with constellations, the ancients finely imagined it to be actually shed from the stars, and therefore to partake of a pure and celestial essence. 'Hence,' says Mr. Leslie, ' the vulgar notion that dew falls, which has prevailed through all ages, and continues to tincture every language.' 'Plutarch asserts it to be most abundant in the time of full moon. The lunar beams themselves were supposed to contribute some influence, being of a cold nature, and therefore possessed of a humifying quality. The moon, it was imagined, performed merely the office of an imperfect mirror, reflecting the softened lustre of the sun without any portion of his heat.' Certain abstergent qualities were at the same period ascribed to dew. Ammianus Marcellinus says that the health of mountaineers is principally owing to their constant exposure to bracing dews.

It was long disputed whether the dew is formed from the vapors ascending from the earth during the night time, or from the descent of such as have been already raised through the day. M. Huet shows that dew does not fall but rises. Some of the most remarkable experiments in support of this hypothesis are those of Mr. Du Fay of the (Royal) Academy of Sciences at Paris. He supposed, that if the dew ascended, it must wet a body placed low down sooner than one placed on a higher situation; and if a number of bodies were placed in this manner the lowermost would be wetted first, and the rest in like manner, gradually up to the top. To determine this, he placed two ladders against one another, meeting at their tops, spreading wide asunder at the bottom, and so tall as to reach thirty-two feet high. To the several steps of these he fastened large squares of glass like the panes of windows, placing them in such a manner that they should not overshade one another. On the trial it appeared exactly as Mr. Du Fay had appreliended. The lower surface of the first piece of glass was first wetted, then the upper, then the lower surface of the pane next above it; and so on, till all the pieces were wetted to the top. Hence it appeared plain to him, that the dews consisted of the vapors ascending from the earth during the night; which, being condensed by the coldness of the atmosphere, are prevented from being dissipated as in the day-time by the sun's heat. He afterwards tried a similar experiment with pieces of cloth instead of panes of glass, and the result was quite conformable to his expectations. He weighed all the pieces of cloth next morning, to know what quantity of water each had imbibed, and found those that had been placed lowermost considerably heavie. than such as had been placed at the top; thougl he owns that this experiment did not succeed su perfectly as the former. M. Muschenbroeck, wno embraced the contrary opinion, thought he had
invalidated all Mr. Du Fay's proofs, by repeating his experiments with the same success, on a plane covered with sheet lead. But to this M. Du Fay replied, that there was no occasion for supposing the vapor to rise through the lead, nor from that very spot; but that, as it arose from the adjoining open ground, the contirual fluctuation of the air could not but spread it abroad, and carry it thither in its ascent. This experiment of M. Muschenbroeck's was not considered sufficient to overthrow those of M. Du Fay. Yet one thing seemed to favor the hypothesis of its descent, i. e. that in cloudy weather there is little or no dew to be observed. And Muschenbroeck, continuing his experiments, made the interesting discovery that dew forms in very different proportions on different bodies, for that it will scarcely adhere to a polished metal surfacc, while it abounds on glass or porcelain. The color of the substance appeared also, he found, to alter the cffects. A piece of red leather acquired, ly exposure through the night, twice as much dew as another black or blue piece of the same size. He was afterwards, however, led to attribute thus latter circumstance to the coloring matter of the morocon leather used.
M. Du Fay also continued his experiments : and the result was, that on neither side of this controversy was there a sufficient preponderance of proof to decide the question; but the old doctrine of Aristotle on the subject was revived, viz. that dew separates, under certain circumstances, from the air, and becomes attracted to particular bodies; or that the moisture, in which it directly originates, is suspended in the atmosphere by a perfectly chemical process, similar to that by which salts are dissolved in water, heat in both cases leing found to increase the solvent power.

Profcssor Leslie's attention was first drawn to the suhject as early as the year 1798. By means of his hygrometer he then established the curious fact, that the moisture of air is deposited on glass before it actually reaches the point of saturation. He thus explains, in his valuable Treatise on the Relations of Air to Heat and Moisture, the general result of his investigations at this and a subsequent period:-' In fine calm weather, after the rays of the declining sun have ceased to wain the surface of the ground, the descent of the higher mass of air gradually chills the undermost stratum, and disposes it to dampness, till their continued intermixture produces a fog, or low cloud. Such fogs are, towards the evening, often observed gathering in narrow vales, or along the course of sluggish rivers, and generally hovering within a few inches of the surface. But in all situations, these watery deposits, either to a gleater or a less degree, occur in the same disposition of the atmosphere. The minute suspended globules, attaching themselves to the projecting points of the herbage, form dew in mild weather, or shoot into hoar-frost when cold predominates. They collect most readily on glass, but seem to be repelled by a bright surface of metal.' In clear and calm weather, the air is always drier near the surface during the day than at a certain height above the ground, but it becomes damper on the approach of evening, while, at some elevation, \(\mathrm{i}^{\mathrm{r}}\) retains a moderate degree of dryness through the whole of the uight. If the sky be
clouded, less alteration is betrayed in the state ot the air, both during the progress of the day, and at different distances from the ground; and, if wind prevail, the lower strata of the atmosphere, thus agitated and intermingled, will be reduced to a still nearer equality of condition.' (pp. 92 and 192). See Meteorology.
Some interesting experiments wcre now made in France, in regard to the tendency M. du Fay had observed in different hodies, to imbile dew in different proportions. It had long been seen that dew is deposited on glass, when metals in its neighbourhood remain dry; M. Prévost of Montaubon however discovered some new and curious facts relative to this deposition. When thin plates of inetal are fixed on pieces of glass, it sometimes happens that they are as much covered with dew as the glass itself: but more frequently they remain dry; and in this case they are also surrounded by a dry zone. But when the other side of the glass is exposed to dew, the part which is opposite to the inetal remains perfectly dry. If the metal be again covered with glass, it will lose its effect in preventing the deposition.
These experiments may be conveniently confirmed on the glass of a window, when moisture is attaching itself to either of its surfaces. Mr. Prévost remarks that it often happens that dew is deposited externally, even when the air within is warmer than without. A plate of metal fixed internally on the window receives a larger quantity of moisture than the glass, while the space opposite to an external plate remains dry : and, if the humidity is deposited from without, the place opposite the internal plate is also more moistened, while the external plate remains dry: and both these circumstances may happen at once with the same result. A sinall plate fixed externally, opposite to the middle of the internal plate, protects this part of the plate from receiving moisture; and a smaller piece of glass, fixed on the external plate, produces again a central spot of moisture on the internal one: and the same changes may be continued for a number of alternations, until the whole thickness hecomes more than half an inch. Gilt paper, with its metallic surface exposed, acts as a metal; but when the paper only is exposed it has no effect. When a plate of metal, on which moisture would have been deposited, is fixed at a small distance from the glass, the moisture is transferred to the surface of the glass immediately under it without affecting the metal : if this plate is varnished on the surface remote from the glass, the effect remains; but if on the side next the glass, it is destroyed. The oxidation of metals renders them also unfit for the experiment. When glasses partly filled with mercury, or even with water, are exposed to the dew, it is deposited only on the parts which are above the surface of the fluid. But in all cases when the humidity is too copious the results are confused. In order to reduce these facts to some general laws, M. Prévost observes, that when the metal is placed on the warmer side of the glass, the humidity is deposited more copiously either on itself or on either surface of the glass in its neighbourhood : but that, when it is on the colder side, it neither receives humidity, nor permits its deposition on
the ghass : that a coat of glass, or varnish, destroys the efficacy of the metal, but that an additional plate of metal restores it.
M. Prévost was at first disposed to attribute these phenomena to the effects of electricity, but r.e thinks it possible to explain them all by the action of heat only; for this purpose he assumes, first, that glass attracts humidity the more powerfully as its temperature is lower; secondly, that metals attract it but very little; thirdly, that glass exerts this attraction, notwithstanding the interposition of other bodies; and, fourthly, that metals give to glass, placed in their neighbourhood, the power of being heated by warm air, and being cooled by cold air, with greater rapidity. Hence, that the temperature of the glass approaches more nearly to that of the air on the side opposite to the metal, and attracts the humidity accordingly, more or less, either to its own surface, or to that of the metal. We should, indeed, have expected a coutrary effect; that the metal would rather have tended to communicate to the glass the temperature of the air on its own side; but, granting that the assumptions of M. Prérost serve to generalise the facts with accuracy, their temporary utility is as great as if they were fundamentally probable.

Dr. Wells, however, has traced up the phenomena of dew to their legitimate sources. 'Very little,' he observes, with Aristotle, 'is deposited, except on calm and clear nights, or when the clouds are high. It is never seen on nights both cloudy and windy; and if, in the course of the night, the weather, from being serene, should become dark and stormy, dew, which had been deposited, will disappear. In calm weather, if the sky be partially covered with clouds, more dew will appear than if it were entirely uncovered.'

Dew probably begins in the country to appear upon grass, in places shaded from the sun, during clear and calm weather, soon after the heat of the atmosphere has derlined, and continues to be deposited through the whole night, and for a little after sun-rise. Its quantity will depend, in some measure, on the proportion of moisture in the atmosphere, and is, consequently, greater after rain thau after a long tract of dry weather; and in Europe, with southerly and westerly winds, than with those which blow from the north and the east. The direction of the sea determines this relation of the winds to dew. For in Egypt, dew is scarcely ever ohserved, except while the northerly or Etesian winds prevail. Hence, also, dew is generally more abundant in spring and autumn, than in summer. And it is always very copious on those clear nights which are followed by misty mornings, which show the air to be loaded with moisture. And a clear morning, following a cloudy night, determines a plentiful deposition of the retained vapor. When warmth of atmosphere is compatible with clearness, as is the case in southern latitudes, though seldom in our country, the dew becomes much more copious, because the air then contains more moisture. Dew continues to form with great copiousness, as the night advances, from the increased refrigeration of the ground. Dew, according to Aristotle, is a species of
rain, formed in the lower atmosphere, in consequence of its moisture being condensed, by the cold of the night, into minute drops. Opinions of this kind, says Dr. Wells, are still entertained by many persons, annoug whom is the very ingenious professor, Leslie. (Relations of Heat and Moisture, Pp. 37 and 132). A fact, however, first taken notice of by Gerstin, who published his Treatise on Dew in 1773, proves them to be erroneous; for he found that bodies a little elevated in the air, often become moist with dew, while simitar bodies, lying on the ground, remain dry, though necessarily, from their position, as liable to he wetted, by whatever falls from the heavens, as the former. The above notion is perfectly refuted by what will presently appear relative to metallic surfaces exposed to the air in a horizontal position, which remain dry, while every thing around them is covered with dew.
After a long period of drought, when the air was very still and the sky serene, Dr. Wells exposed to the sky, twenty-eight minutes before sun-set, previously weighed parcels of wool and swandown, upon a smooth, unpainted, and perfectly dry fir-table, five feet long, three broad, and nearly three in height, which had been placed, an lour before, in the sunshine, in a large level grass-field. The wool, twelve minutes after sull-set, was found to be \(14^{\circ}\) colder than the air, and to have acquired no weight. The swandown, the quantity of which was much greater than that of the wool, was, at the same time, \(13^{\circ}\) colder than the air, and was also without any additional weight. In twenty minutes more, the swandown was \(14^{\circ} 30^{\circ}\) collder than tne neighbouring air, and was still without any increase of its weight. At the same time the grass was \(15^{\circ}\) colder than the air four feet above the ground.

Dr. Wells, by a copious induction of facts, derived fron observation and experiment, establishes the proposition, that bodies become colder than the neighbouring air before they are dewed. The cold, therefore, which Dr. Wilson and Mr. Six conjectured to be the effect of dew, now appears to be its cause. But what makcs the terrestrial surface colder than the atmosphere? The radiation or projection of heat into free space. Now the researches of professor Leslie and count Rumford have demonstrated, that different bodies project heat with very different degrees of force.

In the operation of this principle, therefore, conjoined with the power of a concave mirror of cloud, or any other awning, to reflect, or throw down again those calorific emanations which would be dissipated in a clear sky, we shall find a solution of the most mysterious phenomena of dew. Two circumstances must here be consi-dered:-
I. The exposure of the particular surface to be dewed, to the free aspect of the sky.
II. The peculiar radiating power of the surface. 1. Whatever diminishes the view of the sky, as seen from the exposed body, obstructs the depression of its temperature, and occasions the quantity of dew formed upon it, to be less than would have occurred, if the exposure to the sky had been complete.

Dr. Wells bent a sheet of pasteboard into the shape of a pent-house, making the angle of flexure \(90^{\circ}\), and leaving both ends open. This was placed one evening, with its ridge uppermost, upon a grass-plat, in the direction of the wind, as well as this could be ascertained. He then laid ten grains of white, and moderately fine wool, not artificially dried, on the middle part of that spot of the grass which was sheltered by the roof, and the same quantity on another part of the grass-plat, fully exposed to the sky. In the morning, the sheltered wool was found to have increased in weight only two grains, but that which had been exposed to the sky, sixteen grains. He varied the experiment on the same night, by placing, upright, on the grass-plat, a hollow cylinder of baked clay, one foot diameter, and two feet and a-half high. On the grass sound the outer edge of the cylinder, were laid ten grains of wool, which, in this situation, as there was not the least wind, would have received as much rain as a like quantity of wool fully exposed to the sky. But the quantity of moisture acquired by the wool partially screened by the cylinder from the aspect of the sky, was only about two grains, while that acquired by the same quantity, fully exposed, was sixteen grains. Repose of a body seems necessary to its acquiring its utmost coolness, and a full deposit of dew. Gravel-walks and pavements project heat, and acquire dew, less readily than a grassy surface. Hence, wool placed on the former, has its temperature less depressed than on the latter, and, therefore, is less bedewed. Nor does the wool here attract inoisture by capillary action on the grass, for the same effect happens if it be placed in a saucer. Nor is it by hydrometric attraction; for, in a cloudy night, wool placed on an elevated board acquired scarcely any increase of weight.

If wool be insulated a few feet from the ground, on a bad conductor of heat, as a board, it will become still colder than when in contact with the earth, and acquire fully more dew than on the grass. At the windward end of the board it is less bedewed than at the sheltered end, because, in the former case, its temperature is nearer to that of the atmosphere. Rough and porous surfaces, as shavings of wood, take more dew than smooth and solid wood; and raw silk and fine cotton are more powerful in this respect than even wool. Glass projects heat rapidly, and is as rapidly coated with dew. But bright metals attract dew much less powerfully than other bodies. If we coat a piece of glass, partially, with bright tin-foil, or silver leaf, the uncovered portion of the glass quickly becomes cold by radiation, on exposure to a clear nociurnal sky, and acquires moisture ; which, beginning on those parts most remote from the metal, gradually approaches it. Thus, also, if we coat outwardly a portion of a window-pane with tin-foil, in a clear night, then moisture will be deposited inside, on every part except opposite to the metal. But if the metal be inside, then the glass under and beyond it will be sooner, or most copiously bedewed. In the first case,
the tin-foil prevents the glass under it from dis. sipating its heat, and, therefore, it can receive no dew; in the second case, the tin-foil prevents the glass, which it coats, from receiving the calorific influence of the apartment, and hence it is sooner refrigerated by external radiation than the rest of the pane. Gold, silver, copper, and tin, bad radiators of heat and excellent conductors, acquire dew with greater difficulty than platina, which is a more imperfect conductor; or than lead, zinc, and steel, which are better radiators. Hence, dew which has formed upon a metal will often disappear, while other substances in the neighbourhood remain wet; and a metal, purposely moistened, will become dry, while neighbouring bodies are acquiring moisture. This repulsion of dew is communicated by metals to bodies in contact with or near them. Wool laid on metal acquires less dew than wool laid on the contiguous grass.

If the night becomes cloudy, after having been very clear, though there be no change with respect to calmness, a considerable alteration in the temperature of the grass always ensues. U pon one such night, the grass, after having been \(12^{\circ}\) colder than the air, became only \(2^{\circ}\) colder; the atmospheric temperature being the same at both observations. On a second nigitt, the grass became \(9^{\circ}\) warmer in the space of an hour and a half. On a third night, in less than forty-five minutes, the temperature of the grass rose \(15^{\circ}\), while that of the neighbouring air increased only \(3 \frac{1}{2}^{\circ}\). During a fourth night, the temperature of the grass, at half past nine o'clock, was \(32^{\circ}\). In twenty minutes afterwards, it was found to be \(39^{\circ}\), the sky in the mean time having become sloudy. At the end of twenty minutes more, the sky being clear, the temperature of the grass was again \(32^{\circ}\). A thermometer lying on a grass-plat will sometimes rise several degrees, when a cloud comes to occupy the zenith of a clear sky.

When, during a clear and still night, different thermometers, placed in different situations, were examined at the same time, those which were situated where most dew was formed, were always found to be the lowest. On dewy nights the temperature of the earth, half an inch or an inch beneath the surface, is always found much warmer than the grass upon it, or the air above it. The differences on five such nights, were from \(12^{\circ}\) to \(16^{\circ}\).

In making experiments with thermometers, it is necessary to coat their bulbs with silver or gold leaf, otherwise the glassy surface indicates a lower temperature than that of the air, or the metallic plate it touclies. Swandown seems to exhibit greater cold, on exposure to the aspect of a clear sky, than any thing else. When grass is \(14^{\circ}\) below the atmospheric temperature, swandown is commonly \(15^{\circ}\). Fresh unbroken straw and shreds of paper, rank in this respect with swandown. Charcoal, lamp-black, and rust of iron, are also very productive of cold. Snow stands \(4^{\circ}\) or \(5^{\circ}\) higher than swandown laid upon it in a clear night.

The following tabular view of observations by Dr. Wells, is peculiarly instructive :-
\begin{tabular}{|c|c|c|c|c|c|}
\hline & 6h. \(45^{\prime}\) & 7 h . & 7h. \(20^{\prime}\) & 7h. \(40^{\circ}\) & 8h. \\
\hline Heat of the air four feet above the grass, & \({ }^{601}{ }^{\circ}\) & \({ }^{603}{ }^{\text {a }}\) & \(59^{\circ}\) & \(53^{\circ}\) & \(54^{\circ}\) \\
\hline - wool on a raised board, & 531 & \(54 \frac{1}{2}\) & \(51 \frac{1}{2}\) & \(48 \frac{1}{2}\) & \(4 \frac{1}{2}\) \\
\hline - swandown on the same, & \({ }_{58}^{54 \frac{1}{2}}\) & 53
57 & \({ }_{5}^{51}\) & 47. & \(42 \frac{1}{4}\) \\
\hline crass-plat, & 53 & 51 & & 49 & 42 \\
\hline
\end{tabular}

The temperature always falls in clear nights; but the deposition of dew, depending on the moisture of the air, may occur or not. Now, if coid were the effect of dew, the cold connected with dew ought to be always proportional to the quantity of that fluid; but this is contradicted by experience. On the other hand, if it be granted that dew is water precipitated from the atmosphere by the cold of the body on which it appears, the same degree of cold in the precipitating body may be attended with much, with little, or with no dew, according to the existing state of the air in regard to moisture; all of which circumstances are found really to take place. The actual precipitation of dew, indeed, ought to evolve heat.
A very few degrees of difference of temperature between the grass and the atmosphere are sufficient to determine the formation of dew, when the air is in a proper state. But a difference of even \(30^{\circ}\), or more, sometimes exists, by the radiation of heat from the earth to the heavens. And hence, the air near the refrigerated surface must be colder than that somewhat elevated. Agreeably to Mr. Six's observations, the atmosphere, at the height of 220 feet, is often, upon such nights, \(10^{\circ}\) warmer than what it is seven feet above the ground. And had not the lower air thus imparted some of its heat to the surface, the latter would have been probably \(40^{\circ}\) under the temperature of the air.

Insulated bodies, or prominent points, are sooner covered with hoar-frost and dew than others; because the equilibrium of their temperature is more difficult to be restored. As aerial stillness is necessary to the cooling effect of radiation, we can understand why the hurfful effects of cold, heavy fogs, and dews, occur chiefly in hollow and confined places, and less frequently on hills. In like manner, the leaves of trees often remain dry throughout the night, while the blades of grass are covered with dew.

No direct experiments can be made to ascertain the manner in which clouds prevent or lessen the appearance of a cold at night, upon the surface of the earth, greater than that of the atmosphere. But it may be concluded from the preceding observations, that they produce this effect almost entirely by radiating heat to the earth, in return for that which they intercept in its progress from the earth towards the heavens. The heat extricated by the condensation of transparent vapor into cloud must soon be dissipated; whereas, the effect of greatly lessening, or preventing altogether, the appearance of a greater cold on the earth than that of the air, will be produced by a cloudy sky during the whole of a long night.

We can thus explain, in a more satisfactory manner than has usually been done, the sudden
warmth that is felt in winter, when a fleece of clouds supervenes in clear frosty weather. Chemists ascribed this sudden and powerful change to the disengagement of the latent heat of the condensed vapors; but Dr. Wells's thermometric observations on the sudden alternations of temperature by cloud and clearness, render that opinion untenable. We find the atmosphere itself, indeed, at moderate elevations, of pretty uniform temperature, while bodies at the surface of the ground suffer great variations in their temperature. This single fact is fatal to the hypothesis derived from the doctrines of latent heat.
'I had often,' says Dr. Wells, 'smiled, in the pride of half knowledge, at the means frequently employed by gardeners to protect tender plants from cold, as it appeared to me impossible that a thin mat, or any such flimsy substance, could prevent them from attaining the temperature of the atmosphere, by which alone I thought them liable to be injured. But when I had learned that bodies on the surface of the earth become, during a still and serene night, colder than the atmosphere, by radiating their heat to the heavens, I perceived immediately a just reason for the practice which I had before deemed useless. Being desirous, however, of acquiring some precise information on this subject, I fixed perpendicularly, in the earth of a grass-plat, four small sticks, and over their upper extremities, which were six inches above the grass, and formed the corners of a square whose sides were two feet long, I drew tightly a very thin cambric handkerchief. In this disposition of things, therefore, nothing existed to prevent the free passage of air from the exposed grass to that which was sheltered, except the four small sticks, and there was no substance to radiate downwards to the latter grass, except the cambric handkerchief.'
- The sheltered grass, however, was found nearly of the same temperature as the air, while the unsheltered was \(5^{\circ}\) or more colder. One night the fully exposed grass was \(11^{\circ}\) colder than the air ; but the sheltered grass was only \(3^{3}\) colder. Hence we see the power of a very slight awning to avert or lessen the injurious coldness of the ground. To have the full advantage of such protection from the chill aspect of the sky, the covering should not touch the subjacent bodies. Garden walls act partly on the same principle. Snow screens plants from this chilling radiation. In warm climates, the deposition of dewy moisture on animal substances hastens their putrefaction. As this is apt to happen only in clear nights, it was anciently supposed that bright moonshine favored animal corruption.

From this rapid enission of heat from the surface of the ground, we can now explain the formation of ice during the night in Bengal, while the temperature of the air is above \(32^{\circ}\). The
nights most favorable for this effect, are those which are the calmest and most serene, and on which the air is so dry as to deposit little dew after midnight. Clouds and frequent changes of wind are certain preventives of congelation. 300 persons are employed in this operation at one place. The enclosures formed on the ground are four or five feet wide, and have walls only four inches high. In these enclosures, previously bedded with dry straw, broad, shallow, unglazed earthen pans are set, containing unboiled pumpwater. Wind, which so greatly promotes evaporation, prevents the freezing altogether, and dew forms in a greater or less degree during the whole of the nights most productive of ice. If evaporation were concerned in the congelation, wetting the straw would promote it. But Mr. Williams, in the 83d vol. of the Philosophical Transactions, says, that it is necessary to the success of the process that the straw be dry. In proof of this he mentions, that when the straw becomes wet by accident it is renewed; and that when he purposely wetted it in some of the enclosures, the formation of ice there was always prevented. Moist straw both conducts heat and raises vapor from the ground, so as to obstruct the congelation. According to Mr. Leslie, water stands at the head of radiating substances.
DEWARCUNDAH, a sterile, or rather a desolated district of Hindostan, province of Golconda, extending along the south side of the river Godavery, and situated between the eighteenth and nineteenth degrees of northern latitude. The country contains the ruins of a number of forts and villages, which evince it to have been formerly well cultivated.

Dew-Born, in country affairs, a distemper in cattle, being a swelling in the body, as much as the skin can hold, so that some beasts are in danger of bursting. It proceeds from greediness in feeding, when put into a rank pasture; but commonly when the grass is full of water. In this case the beast should be exercised, and made to purge well; but the proper cure is bleeding in the tail ; then take a grated nutmeg, with an egg, and breaking the top of the shell, put out so much of the white as that you may have room to slip the nutmeg into the shell; mix them together, and then let shell and all be puc down the beast's throat; that done, walk him up and down, and he will soon mend.

DE WITt (John), a celebrated Dutch statesman, born in 1625, at Dort. At the age of twenty-three, he published Elementa Curvarum Linearum; and, after taking his degrees, became, in 1650, pensionary of Dort, and distinguished himself very early in the management of public affairs. He opposed the war with the English as injurious to the States; and when the event justified his predictions, he was unanimously chosen pensionary of Holland. In this capacity he labored to procure a peace with Cromwell; in which peace a secret article was introduced for the exclusion of the House of Orange. In the war with England, after the Restoration, when it was thought expedient, on Oplam's defeat and death, that some of their own deputies should command the fleet, he was one of the three in commission, and wrote an accurate re-
lation of all that happened during the expedition; for which, at lis return, he received the solemn thanks of the States-General. In 1667 he established the perpetual edict for abolishing the office of Stadtholder, which produced seditions and tumults; on which the pensionary begged dismission from his post: this was granted, with thanks for his services. But the invasion of the French, and the internal division among the Hollanders, spread every where terror and confusion. Cornelius, the pensionary's brotner, was imprisoned, and condemned to exile; and a report being raised that he would be rescued, the mob armed, and surrounded the prison where the two brothers were together, dragged them out, barbarously murdered them, hung the bodies on the gallows, and cut them to pieces. Such was the end of John De Witt, a man whose life had been devoted to the service of his country, without any consideration of his own emolument. Besides the work already mentioned, he wrote a book on the maxims of government, a translation of which, entitled, The true Interest and Political Maxims of the Republic of Holland, has been printed in London.

De Witt's Land, part of the north-west coast of New Holland, discovered by a Dutch navigator of that name, in 1628. It is supposed to comprehend about ten degrees of latitude, and fiftcen of longitude. Many low and sterile islands, were afterwards discovered along the coast, by the French.
DEX'TER, adj. From Lat. dexter,

Dex'tral, adj.
Dextra'lity, \(n\).s.
Dexteritit, \(n\). \(s\). Dex'terous, adj.
Dex'terously, adv. the right hand. Gr.
 to receive, because we generally receive things with the right hand. The right, not the left; a term in heraldry. Dextral is a synonymous general term. Dextrality, the state of being on the right hand side. Dexterous is, clever; expert ; because the right hand is generally more so than the left.

My mother's blood
Runs on the dexter cheek, and this sinister
Bounds in my sire's.
Shakspeare.
His wisdom, by often evading from perils, was turncd rather into a dexterity to deliver himself from dangers, when they pressed him, than into a providence to prevent and remove them afar off. Bacon.

In business dexterous, weighty in debate. Johnson.
As for any tunicles or skins, which should hinder the liver from enabling the dextral parts, we must not conceive it diffuseth its virtue by mere irradiation, but by its veins and proper vessels.

Browne's Vulgar Errours
If there were a determinate prepotency in the righ and such as ariseth from a constant root in nature we might expect the same in other animals, whose parts are also differenced by dextrality.

Id.
They attempted to be knaves, but wanted art and dexterity.

South.
But tnen my study was to cog the dice,
And dext'rously to throw the lucky sice. Dryden.
They confine themselves, and are dexterous managers enough of the wares and products of that corner witk. which they content themselves.

Locke.
For both their dexterous hands the lance could wield.

Pope.

The mcasures, for instancc, in -xhich your Crace's artivity has been chiefly exerted, as they were adopted without skill, should have been conducted with more chan common dexterity.

Junits.
Dfoxter, in heraldry, an appellation given to whatever belongs to the right side of a shield or coat of arms: thus we say, bend dexter, dexter point, \&c.

DEY, the title of the sovereign of Algiers, under the protection of the grand siguior. A prince, under this title, was appointed by the sultan, at the request of the Turkish soldiers, in 1710. The term dey, in the Turkish language, signifies an uncle by the mother's side. The reason of the denomination is this: the Turkish military consider the grand seignior as their father; the state as their motlier, by which they are nourished and maintained; and the dey as the brother of the state, and consequently the uncle of all who are under his dominion. See Algiers.

DIABE'TES, n. s. \(\Delta \iota a \beta a i \tau \eta s . ~ A ~ m o r b i d ~\) copiousness of urine; a fatal colliquation by the urinary passages.

An increase of that secretion may accompany the general colliquations; as in fluxes, hectic sweats and coughs, diabetes, and uther consumptions.

Derham's Physico-Tñeology.
A theory of the diabetes and dropsy, produced by drinking fermented or spirituous liquors, is-explained in a treatise on the inverted motions of the lymphatic system.

Darwin.
Diabetes, from \(\delta \iota a\), through, and \(\beta a \iota \nu \omega\), to pass. An immoderate flow of urine. A genus of disease in the class neuroses, order spasmi of Cullen. There are two species of this complaint: Diabetes insipidus, in which there is a superabundant discharge of limpid urine, of its usual urinary taste; and diabetes mellitus, in which the urine is very sweet, and contains a great quantity of sugar.

DIABOL'ICAL, adj. \} From Iat. diabolus.
Diabol'ick.
\}See Devil. Devilish; partaking of the qualities of the deril; impious; atrocious.

This, in other beasts observed,
Doubt might beget of diabolick power,
Active within, beyond the sense of brute.
Milton.
The practice of lying is a diabolical exercise, and they that use it are the devil's children. Ruy.

They are beautiful, and cannot, sure, be demons? Stranger. True;
The Devil's always ugly ; and your beauty
Is never diabolical.
Byron.
DIACH'YLON, in pharmacy, an emollient digestive plaster composed of mucilages or viscid juices drawn from certain plants. See Pharmacy.

DIACO'DIUM, n.s. \(\Delta \iota a \kappa \omega \delta \iota o v\). The syrup of poppies.

DIACO'USTICS, n. s. \(\Delta\) dakssıka. The doctrine of sounds.

DIACRII, in antiquity, the name of a faction at Athens. That city was divided into two parties: the one desired an oligarchy, and would only have a few persons employed in the government: the others were for a democratical goverument, wherein the whole people should
have a share. The first were called diacrii, and the latter pediaci; the latter inhabiting the lower, and the former the aroov, or upper part of the city.-The laws of Soion imported, that Pisistratus should be chief of the diacrii ; though the scholiast on Aristophanes's comedy of The Wasps, affirms that Pandion distributed the quarter of the diacrii among his sons, and put Lycus at their head.

DIADELPHIA, from íc twice, and \(x \delta \varepsilon \lambda \phi\) oc a brother, the seventeenth class in the sexual system, comprehending those plants which bear hermaphrodite flowers with two sets of united stamina; but this circumstance must not be absolutely depended on. They are the papilionacei of Tournefort, the irregulares tetrapetali of Rivinus, and the leguminosa of Ray. See Botany.

DI'ADEM, n.s. Fr. diadéme; Span. and
Dr'ademf.d, adj. \}Lat. diadema; Gr. íai \(\eta \mu a\), from \(\delta \omega s\) and \(\delta \varepsilon \omega\), to bind. The fillet, tiara, or crown of monarchs. See Crown. Diademed is crowned.

And the ighen of him weren a flawme of fier, and in his heed manye diademys. Wiclif. Apoc. xix.

Thou shalt be a crown of glory in the hand of the Lord, and a royal diadem in the band of thy God.

Isaiah ixii. 3.
The sacred diadem in pieces rent,
And purple robe gored with many a wound.
Spenser.
Methought I sat in seat of majesty,
In the cathedral church of Westminster,
And in that chair wherc kings and queens are crowned,
Where Henry and Dame Margaret kneeled to me, And on my head did set the diadem. Shakspeare.

> A crown,

Golden in show, is but a wreath of thorns;
Brings dangers, troubles, cares, and sleepless nights, To him who wears the regal diadem.

Milton.
A list the coblers' temples ties,
To keep the hair out of their eyes; From whence 'tis plain the diadem,
That princes wear, derives from them.
Swift.
Not so, when diademed with rays divine,
Touched with the flame that breaks from virtue's shrine,
Her priestless muse forbids the good to die, And opes the temple of eternity.

Pope.
What is the exaltation of the meanest beggar from a dunghill to an earthly diadem, when comparcd with that of human nature from the grave to the throne of God.

Bp. Horne, Psal. cxiii. 7.
And she, proud Austria's mournful flower,
Thy still imperial bride;
If still she loves thee hoard that gem,
'Tis worth thy vanished diadem.
Byron. Ode to Napoleon.
Diadem, in antiquity, a head-band or fillet, worn by kings as a badge of their royalty. It was made of silk, thread, or wool, and tied round the temples and forehead, the ends being tied behind, and let fall on the neck. It was usually white and plain, though sometimes embroidered with gold, and set with pearls and precious stones. In latter times it came to be twisted round crowns, laurels, \&c., and even appears to have been worn on divers parts of the
body. The word is derived from the Greek, as mentioned in the preceding article.

Diadem, in heraldry, is applied to circles or rims serving to inclose the crowns of sovereign princes, and to bcar the globe and cross, or the fleurs-de-lis for their crest. The crowns of sovereigns are bound, some with a greater, and some with a less number of diadems. The bandage about the heads of Moors on shields is also called diadem, in blazoning.
DI'ADROM, n.s. \(\Delta a d \rho \rho \rho \mu \varepsilon \omega\). The time in which any particular motion is performed.
A gry is one tenth of a line, a line one tenth of an inch, an inch one tenth of a philosophical frot, a philosophical foot one third of a pendulum; whose diadroms, in the latitude of forty-five degrees, are each equal to one second of time, or a sixtieth of a minute. Locke.
DIE'RESIS, n.s. Atatofots. The separation or disjunction of syllables, as aër.
Diaresis is also a kind of metaplasm, or addition to a word, by dividing one syllable into two; as aulae, by a diceresis, is a word of three syllables, instead of aulx.

Dr. A. Rees.
Dieresis, in medicine, is the consuming of the vessels of an animal body, when, from some corroding cause, certain passages are made which naturally ought not to have been, or certain natural passages are dilated beyond their ordinary dimensions, so that the humors which ought to have been contained in the vessels extravasate or run out.

Dieresis, in surgery, an operation serving to divide and separate the part when the continuity is a hindrance to the cure.

DILETETÆ, in Grecian antiquity, a kind of judges, of which there were two sorts; viz. Diætetæ cleroti, public arbitrators, chosen by lot to determine all causes exceeding ten drachms, within their own tribe; and from their sentence an appeal lay to the superior courts. And diætetæ diallecterii, private arbritators from whose sentence there lay no appeal. They always took an oath to administer justice without partiality.

DIAGLYPHICA, the art of cutting or engraving figures on metals, such as seals, intaglios, matrices of letters, \&c., or coins for metals. See Engraving.

DIAGNO'STICK, n. s. \(\Delta_{\text {ta }}\) ay \(\nu \omega \sigma \kappa \omega\). A symptom by which a disease is distinguished. Used also figuratively.

One of our physicians proved disappointed of his prognosticks, or rather diagnosticks.

\section*{Harvey on Consumptions}

DIAG'ONAL, adj. \& n.s. ? Fr. diagonal,
Diagonally, adv. \} from Gr. дьсүш-
 from one angle of a square to another.
The monstrosity of the badger is ill-contrived, and with some disadvantage; the shortness being fixed into the legs of one side, that might have been more properly placed upon the diagonal movers.

Browne's Vulgar Errours.
When a man has in his mind the idea of two lines, viz. the side and diagonal of a square, whereof the diagonal is an inch long, he may have the idea also of the division of that line into a certain number of equal parts.

Locke.
All sorts of stone composed of granules, will cut and rive in any direction, as well in a perpendicular, or in a diagonal, as horizontally and parallel to the side of the strata.

Woodward.
If a region of air be gradually removed from north to south, it would also blow diagonally between the north and east.

Darvin.
Diagonal, in geometry, a right line drawn across a quadrilateral figure, from one angle to another; by some called the diameter, and by others the diametral, of the figure. See Geometry.
DIAGORAS, surnamed the Atheist, lived in the ninety-first Olympiad. He was not a native of Athens, but he taught there. He had composed a poem which a certain poet stole from him. He sued the thief, who swore it was his own, and obtained fame by it. This tempted Diagoras to deny a Providence. The Athenians summoned him to give an account of his doctrine. He tled, and they set a price upon his head, promising a reward to any who should kill him; but he took shipping, and was wrecked.
DI'AGRAM, n.s. \(\Delta t a y \rho a \mu \mu a\). A delineation of geometrical figures; a mathematical scheme.
Many a fair precept in poetry is like a seeming demonstration in the mathematics; very specious in the diagram, but failing in the mechanic operation.

Dryden.
Why do not these persons make a diagram of these cogitative lines and angles, and demonstrate their properties of perception and appetite, as plainly as we know the other properties of triangles and circles?

Bentley.
DIAGRY'DIATES, n.s. From Lat. diagrydium. Strong purgatives made with diagrydium.

All cholerick humours ought to be evacuated by diagrydiates, mixed with tartar, or some acid, or rhubarb powder.

Floyer.

\section*{D I A L LING}

DI'AL, n.s. Lat. diale, belonging to the \(\mathrm{Di}^{\prime} \mathrm{al}_{\text {-plate, }}\) (day. An instrument for markDíalling, (ing the hour of the day. Dial\(\mathrm{Di}^{\prime}{ }^{\prime}\) llists. ling is the art of making dials.

Full faire of windowes and delightful bowres, And on the top a diall told the houres.

Spenser. Faerie Qucene.
0 , gentlemen, the time of life is short :
To spend that shortness basely were too long, Though life did ride upon a dial's point Still ending at the arrival of an hour.

Shakspeare. Henry IV.
It is not necessary in the arts of dialling or navigation to mention the true system or earth's motion.

Berkeley.
Strada tells us that the two friends, being each of them possessed of a magnetical needle, made a kind of dial-plate, inscribing it with the four-and-twenty letters, in the same manner as the hours of the day are marked upon the ordinary dial-plate.

\section*{Addison's Spectator.}

Scientifick dialists, by the geometrick considerations of lines, have found out rules to mark out the irregular motion of the shadow in all latitudes, and, on all planes.

Moxon.
While dial is derived from theLatin dies, day, because it indicates the hour of the day, the ancients also called it sciatherium, from its effect by the shadow.
1. Dialling may be defined the art of drawing dials on the surface of any given body, whether plane or curved. By the Greeks and Romans this art is called gnomonica, and sciatherica, because it distinguishes the hours by the shadow of the gnomon.
2. This art is of great antiquity, for we read in Isaiah, xxxviii. 8, of the dial of Ahaz, who began to reign 400 years before Alexander, and within twelve years of the building of Rome.
3. Among the ancients Anaximenes the Mildsian, and Thales, are said to have made dials; and Vitruvius mentions one made by the ancient Chaldee historian Berosus, on a reclining plane almost parallel to the equator.
4. Aristarchus of Samos invented the hemispherical dial, and there were at the same time some spherical ones, with a needle for a gnomon. The discus of Aristarchus was an horizontal dial, with its rim raised up all around to prevent the shadow from stretching too far.
5. It was late before the Romans became acquainted with dials. The first sun-dial at Rome was set up by Papirius Cursor, about the year of the city 460 ; before which time, says Pliny, there is no mention of any reckoning of time but by the sun's rising and setting: it was set up at or near the temple of Quirinus, but was very inaccurate. About thirty years after M. Valerius Messala, being consul, brought out of Sicily another dial, which he set up on a pillar near the rostrum; but because it was not made for that latitude it did not show the time truly. They made use of it for Vol. VII.
ninety-nine years; till Martius Philippus set up another more exact.
6. The first professed writer on dialling is Clavius: who demonstrates both the theory and the operations, after the manner of the ancient mathematicians; but with so much intricacy, that few perhaps ever read them all. Dechales and Ozanam give much simpler demonstrations in their Courses, and Wolfius in his Elements. M. Picard has given a new method of making large dials, by calculating the hour lines; and M. De la Hire, in his Dialling, printed in 1683, a geometrical method of drawing hour lines from certain points determined by observation. Eberhardus Welperus, in 1625, published his Dialling, in which he lays down a method of drawing the primary dials on a very easy foundation. The same foundation is described at length by Sebastian Munster, in his Rudimenta Mathematica, published in 1551.
7. Sturmius, in 1672 , published a new edition of Welperus's Dialling, with the addition of a whole second part, about inclining and declinirg dials, \&c. In 1708 the same work, with Sturmius's additions, was republished, witl the addition of a fourth part, containing Picard's and De la Hire's methods of drawing large dials. Paterson, Michael and Muller, have each written on dialling in German; Coetsius, in his Iorologiographia Plana, printed in 1689; Gauppenius in his Gnomonica Mechanica; Bion in lis Use of Mathematical instruments; the late ingenious Mr. Ferguson in his Select Lectures; Mr. Emerson in his Dialling ; and Mr. W. Jones in his Instrumental Dialling, \&c.

\section*{Definitions.}
8. A dial is a surface, generally plane, upon which lines are described in such a manner, that the shadow of a wire, or of the upper edge of another plane, erected perpendicularly on the former, may show the time of the day.
9. The edge of the plane by which the time of the day is found is called the stile of the dial, which must be parallel to the earth's axis; and the line on which the said plane is erected is called the substile.
10. The angle included between the substile and stile is called the elevation, or height, of the stile.
11. Dials, the planes of which are parallel to the plane of the horizon, are called horizontal dials; and those which have their planes perpendicular to the plane of the horizon, are called vertical, or erect, dials.
12. Erect dials, the planes of which directiy front the north or south, are called direct north, or south, dials : all other erect dials are called decliners, because their planes are turned away from the north or south.
13. Dials, the planes of which are neither parallel nor perpendicular to the plane of the horizon, are called inclining or reclining dials, according as their planes make acute or obtuse angies
with the horizon; and, if their planes are also turned aside from facing the south or north, they are called declining inclining, or declining reclining, dials.
14. The intersection of the plane of the dial, with that of the meridian, passing through the stile, is called the meridian of the dial, or the hour line of XII.
15. Meridians, the planes of which pass through the stile, and make angles of \(15^{\circ}, 30^{\circ}\), \(45^{\circ}, 60^{\circ}, 75^{\circ}\), and \(90^{\circ}\), with the meridian of the place, which marks the hour line of XII, are called hour circles; and their intersections with the plane of the dial are called hour lines.
16. In all declining dials the substile makes an angle with the hour line of XII., and this anglc is called the distance of the substile from the meridian.
17. The declining plane's difference of longitude is the angle formed at the intersection of the stile and plane of the dial, by two meridians; one of which passes through the hour line of XII, and the other through the substile.

\section*{Principles of Dialling.}
18. If the whole earth, \(a \mathrm{Pe} p\), fig. 1, plate I ., were transparent and hollow, like a sphere of glass, and had its equator divided into twenty-four equal parts by so many meridian semicircles, \(a\), \(b, c, d, e, f, g, \& c\). ., one of which is the geographical meridian of any given place, as London, (which is supposed to be at the point \(a\) ); and if the hour of XII were marked at the equator, both upon that meridian and the opposite one, and all the rest of the hours in order on the rest of the meridians, those meridians would be the hour circles of London: then, if the sphere had an opaque axis, as PEp, terminating in the poles P and \(p\), the shadow of the axis would fall upon every particular meridian and hour when the sun came to the plane of the opposite meridian, and would consequently show the time at London, and at all other places on the meridian of London.
19. If this sphere were cut through the middle by a solid plane, ABCD , in the rational horizon of London, one-half of the axis E P would be above the plane, and the other half below it; and, if staight lines were drawn from the centre of the plane to those points where its circumference is cut by the hour circles of the sphere, those lines would be the hour lines of a horizontal dial for London: for the shadow of the axis would fall upon each particular hour line of the dial when it fell upon the like hour circle of the sphere.
20. If the plane which cuts the sphere be upright, as AFCG, fig. 2. touching the given place (London) at F, and directly facing the meridian of London, it will then become the plane of an erect direct south dial; and if right lines be drawn, from its centre, \(E\), to those points of its circumference where the hour circles of the sphere cut it, these will be the hour lines of a vertical or direct south dial for London, to wbich the hours are to be set, as in the figure, and the lower half, \(\mathrm{E} p\), of the axis will cast a shadow on the hour of the day in this dial, at the same time that it would fall upon the like hour
circle of the sphere if the dial plane were horizontal.
21. If the plane (still facing the meridian) be made to incline, or recline, any given number of degrees, the hour circles of the sphere will still cut the edge of the plane in those points to which the hour lines must be drawn straight from the centre; and the axis of the sphere vill cast a shadow on these lines at the respective hoturs.
22. The same will be the case if the plane be made to decline by any given number of degrees from the meridian towards the east or west: provided the declination be less than \(90^{\circ}\), or the reclination be less than the co-latitude of the place; and the axis of the sphere will be a gnomon, or stile, for the dial. But it cannot be a gnomon when the declination is quite \(90^{\circ}\), nor when the reclination is equal to the colatitude; because, in these two cases, the axis has no elevation above the plane of the dial. And thus it appears that the plane of every dial represents the plane of some great circle upon the earth; and the gnomon the earth's axis, whether it be a fine wire, as in the above figures, or the edge of a thin plate, as in the common horizontal dials.
23. The whole earth, as to its bulk, is but a point, if compared to its distance from the sun; and therefore, if a small sphere of glass be placed upon any part of the earth's surface, so that its axis be parallel to the axis of the earth, and the sphere have such lines upon it, and such planes within it, as above described, it will show the hours of the day as truly as if it were placed at the earth's centre, and the shell of the earth were as transparent as glass.
24. But hecause it is impossible to have a hollow sphere of glass, perfectly true, blown round a solid plane; or, if it were, we conld not get at the plane within the glass to set it in any given position; we make use of a wire sphere to explain the principles of dialling, by joining twenty-four semicircles together at the poles, and putting a thin flat plate of brass within it, as is shown in the preceding figures.

\section*{Dialling by the Terrestrial Glore.}
25. A common globe of twelve inches diameter has generally twenty-four meridian semicircles drawn upon it. If such a globe be elevated to the latitude of any given place, and turned about until one of these meridians cut the horizon in the north point, where the hour of XII is supposed to be marked, the rest of the meridians will cut the horizon at the respective distances of all the other hours from XII. And if these points of distance be marked on the horizon, and the globe be taken out of the horizon, and a flat board or plate be put into its place,even with the surface of the horizon; then if straight lines be drawn from the centre of the board, to those points of distance on the horizon which were cut by the semicircles; these lines will be the hour lines of a horizontal dial for that latitude, the edge of whose gnomon must be in the very same situation in which the axis of the globe was befcre it was taken out of the horizon : that is, the gnomon must make an angle with the plane of the dial,

Fi゙ィ． 1.

Fig． 3

Fig． 5

DTALIING SCALE．
equal to the latitude of the place for which the dial is made.
26. If the pole of the globe be elevated to the co-latitude of the given place, and any meridian be brought to the north point of the horizon, the rest of the meridians will cut the horizon in the respective distances of all the hours from XII, for a direct south dial, the gnomon of which must form an angle with the plane of the dial equal to the co-latitude of the place; and the hours on this dial must be placed in a direction contrary to that in which they stand on the horizontal dial.
27. But if the globe have more than twentyfour meridian semicircles upon it, we must take the following method for making horizontal and south dials:-Elevate the pole to the latitude of the place, and turn the globe until any particular meridian (suppose the first) comes to the north point of the horizon, and the opposite meridian will cut the horizon in the south. Then set the hour index to the uppermost XII on its eircle, and turn the globe westward until \(15^{\circ}\) of the equator pass under the brazen meridian, and the hour index will be at \(I\), for the sun moves \(15^{\circ}\) every hour), and the first meridian will cut the horizon in the number of degrees from the north point that I is distant from XII. Turn on until other \(15^{\circ}\) of the equator pass under the brazen meridian, and the hour index will then be at II, and the first meridian will cut the horizon in the number of degrees that II is distant from XII : and so. by making \(15^{\circ}\) of the equator pass under the brazen meridian for every hour, the first meridian of the globe will cut the horizon in the distances of all the hours from XII to VI, which is just \(90^{\circ}\); and then the distances of XI, X, IX, VIII, VII, and VI, in the forenoon will be the same from XII, as the distance of I, II, III, IV, V, and VI, in the afternoon : and these hour lines continued through the centre, will give the opposite hour lines on the other half of the dial.
28. To make a horizontal dial for the latitude of London, which is \(51^{\circ} 30^{\prime}\) north, elevate the north pole of the globe \(51^{\circ} 30^{\prime}\) above the north point of the horizon; and then turn the globe, until the first meridian (which, on the British terrestrial globe, is that of London), cuts the north point of the horizon, and set the hour index to XII at noon. Then turning the globe westward until the index points successively to I, II, III, IV, V, and VI, in the afternoon, or until \(15^{\circ}, 30^{\circ}, 45^{\circ}, 60^{\circ}, 75^{\circ}\), and \(90^{\circ}\) of the equator pass under the brazen meridian, the first meridian of the globe will cut the horizon in the following numbers of degrees from the north towards the east, viz. \(11 \frac{2}{3}, 24 \frac{1}{4}, 38 \frac{1}{2}, 53 \frac{1}{2}, 71 \frac{1}{15}\), and 90 ; which are the respective distances of the above hours from XII upon the plane of the horizon. To transfer these, and the rest of the hours, to a horizontal plane, draw the parallel right lines \(a c\), and \(d b\), fig. 3 , upon that plane, as far from each other as is equal to the intended thickness of the gnomon or stile of the dial, and the space included between them will be the meridian or twelve o'clock line on the dial. Cross this meridian at right angles with the six o'clock line, \(k h\), and setting one foot of the compasses in
the intersection \(a\), as a centre, describe the quadrant \(k e\) with any convenient radius or opening of the compasses; then setting one foot in the intersection \(b\), as a centre, with the same radius describe the quadrant \(f h\), and divide each quadrant into ninety equal parts or degrees, as in the figure.
29. As the hour lines are less distant from each other about noon than in any other part of the dial, it is best to have the centres of these quadrants at a little distance from the centre of the dial plane, on the side opposite to XII, in order to enlarge the hour distances thereabouts, under the same angles on the plane. Thus the centre of the plane is at C , but the centres of the quadrants are at \(a\) and \(b\). Lay a ruler over the point \(b\), and (keeping it there for the centre of all the afternoon hours in the quadrant \(f^{\prime} h\) ), draw the hour line of I through \(11^{\circ} 30^{\prime}\) in the quadrant; the hour line of II through \(24^{\circ} 30^{\circ}\); of III through \(38^{\circ} 5^{\prime}\); IV through \(53^{\circ} 30^{\prime}\); and \(V\) through \(71^{\circ} 4^{\prime}\) : and, because the sun rises about four in the morning on the longest days, at London, continue the hour lines of \(I V\) and \(V\) in the afternoon through the centre \(b\) to the opposite side of the dial.
30. the other quadrant is now to be divided, but it is very obvious that the same minute process need not be gone through in doing so, as the divisions already laid down may be readily transferred to the quadrant \(e k\); as the labor of dividing both may be much shortened by working from a scale, having a line of chords upon it, as will be shown presently.
31. If a plate similar to this triangle be made as thick as the distance between the lines \(a c\) and \(b d\), and set upright between them, touching at \(a\) and \(b\), its hypothenuse \(a g\) will be parallel to the axis of the world, when the dial is truly set; and will cast a shadow on the hour of the day.
32. To make an erect direct south dial, fig. 4, elevate the pole to the co-latitude of the place, and proceed in all respects as above for the horizontal dial, and from VI in the morning to VI in the afternoon; only the hours must be reversed, as in the figure; and the hypothenuse \(a g\), of the gnomon ag \(h\), must make an angle with the dial-plane equal to the co-latitude of the place. As the sun can shine no longer on this dial than from six in the morning until six in the evening, there is no occasion for having any more than twelve hours upon it.
33. To make a direct dial, declining from the south towards the east or west, elevate the pole to the latitude of the place, and screw the quadrant of altitude to the zenith. Then, if the dial decline towards the E . (which we shall suppose it does), count in the horizon the degrees of declination, from the E. point towards the N. and bring the lower end of the quadrant to that degree of declination at which the reckoning ends. Then bring any particular meridian of the globe (suppose the first) directly under the graduated edge of the upper part of the brazen meridian, and set the hour to XII at noon. Then, keeping the quadrant of altitude at the degree of declination in the horizon, turn the globe eastward on its axis, and observe the degrees cut by the
first meridian in the quadrant of altitude (counted from the zenith), as the hour circle comes to XI, \(\mathrm{X}, \mathrm{IX}, \& \mathrm{c}\). , in the forenoon, or as \(15,30,45\), \&c. degrees of the equator pass under the brazen meridian at these hours respectively; and the degrees then cut in the quadrant by the first meridian, are the respective distances of the forenoon hours from XII on the plane of the dial.
34. Then, for the afternoon hours, turn the quadrant of altitude round the zenith until it comes to the degree in the horizon opposite to that where it was placed before; namely, as far from the W. point of the horizon towards the \(S\). as it was set at first from the E. point towards the N.; and turn the globe westward on its axis, until the first meridian comes to the brazen meridian again, and the hour index to XII; then, continue to turn the globe westward, and as the index points to the afternoon hours, I, II, III, \&c., or as \(15^{\circ}, 30^{\circ}, 45^{\circ}, \& c\). , of the equator pass under the brazen meridian, the first meridian will cut the quadrant of altitude in the respective number of degrees from the zenith that each of these hours is from XII on the dial. And when the first meridian goes off the quadrant at the horizon in the forenoon, the hour index shows the time when the sun will come upon this dial. and when it goes off the quadrant in the afternoon, the index will point to the time when the sungoes off the dial. Having thus found all the hour distances from XII, lay them down upon the dial plane, either by dividing a semicircle into two quadrants of \(90^{\circ}\) each (beginning at the hour 'ine of XII), or by the line of chords, as above Jirected.
35. In all declining dials, the line on which the stile or gnomon stands (commonly called the substile line) makes an angle with the twelve o'clock line, and falls among the forenoon hour lines, if the dial declines towards the \(\mathbf{E}\); and among the afternoon hour lines, when the dial declines towards the W. that is, to the left.hand from the twelve o'clock line in the former case, and to the right hand from it in the latter.
36. To find the distance of the substile from the twelve o'clock line, if the dial declines from the \(\mathbf{S}\). towards the \(\mathbf{E}\). count the degrees of the declination in the horizon from the E. point toward the \(N\). and bring the lower end of the quadrant of altitude to that degree of declination where the reckoning ends; then, turn the globe until the first meridian cuts the horizon in the like number of degrees, counted from the S. point toward the \(\mathbf{E}\). and the quadrant and the first meridian will then cross one another at right angles; and the number of degrees of the quadrant, which are intcreepted between the meridian and the zenith, is equal to the distance of the substile line from the twelve o'clock line; and the number of degrees of the first meridian, which are intercepted between the quadrant and the \(N\). pole, is equal to the elevation of the stile above the plane of the dial.
37. If the dial declines westward from the S., count that declination from the E. point of the horizon towards the \(S\). and bring the quadrant of altitude to the degree in the horizon at which the reckoning ends; both for finding the forenoon ncurs, and distance of the substile from the meridian: and for the afternoon hours, bring the qua-
dirant to the opposite degree in the horizon, namely, as far from the W. towards the N. and then proceed in all respects as above.
38. Thus when our declining dial is finislied, we have four dials, viz. 1. A north dial declining eastward by the same number of degrees; \(2 . \hat{\Lambda}\) north dial declining the same number west; 3 . A south dial, declining east; and, 4. A south dial declining west; only placing the proper number of hours, and the stile or gnomon respectively, upon each plane. For, in the S. W. plane, the substilar line falls among the afternoon hours; and in the S. E. of the same declination, among the forenoon hours, at equal distances from XII. And so all the morning hours on the W. decliner, will be like the afternoon hours on the E. decliner ; and the S. W. decliner, the N. E. decliner, by only extending the hour lines, stile and substile, quite through the centre: the axis of the stile (or edge that casts the shadow on the hour of the day), being in all dials whatever, parallel to the axis of the world, and consequently pointing towards the north pole of the heaven in north latitudes, and towards the south pole, in south latitudes.

\section*{Metiod of constructing Dialling Lines.}
39. Describe, with any opening of the compasses, as E A, fig. 5, according to the intended length of the scale, the circle ADCB, and cross it at right angles by the diameters C E A and D E B ; divide the quadraut A B first into 9 equal parts, and then each part into 10 ; so shall the quadrant be divided into 90 equal parts or degrees. Draw the right line A F B for the chord of this quadrant; and, setting one foot of the compasses in the point A, extend the other to the several divisions of the quadrant, and transfer these divisions to the line A F B by the arcs \(10,20,30, \& c\)., and this will be a line of chords, divided into 90 unequal parts.
40. Divide the quadrant \(\mathrm{C} D\) into 90 equal parts, and from each point of division draw right lines, as \(i, k, l\), \&c., to the line \(\mathbf{C} \mathbf{E}\); all perpendicular to that line, and parallel to DE, which will divide E C into a line of sines; and although these are seldom put among the dialling lines on a scale, yet they assist in drawing the line of latitudes. For if a ruler be laid upon the point \(D\), and over each division in the line of sines, it will divide the quadrant C B into 90 unequal parts, as \(\mathrm{B} a \mathrm{~B} b\), \&c., shown by the right lines \(12 a\), \(20 \mathrm{~b}, 30 \mathrm{c}\), \&c., drawn along the edge of the ruler. If the right line \(B C\) be drawn, subtending this quadrant and the nearest distances, \(\mathrm{B} a, \mathrm{~B} b, \mathrm{~B} c\), \&c., be taken in the compasses from \(B\), and set upon this line in the same manner as directed for the line of chords, it will make a line of latitudes BC , equal in length to the line of chords \(\mathrm{A} B\), and an equal number of divisions, but very unequal as to their lengths.
41. Draw the right line D G A, subtending the quadrant \(\mathrm{D} A\); and parallel to it, draw the right line \(r s\), touching the quadrant D B at the numcral figure 3. Divide this quadrant into six equal parts, as \(1,2,3, \& c\). , and through these points of division draw right lines from the centre Eto the line \(r s\), which will divide it at the points where the six hours are to be placed, as in tno

Fig． 7.

Fig．？．

Fig． 0.

Fig．s．

F゙g． 7.

Fig． 6.

figure. If every sixth part of the quadrant be subdivided into four equal parts, righit lines drawn from the centre through these points of division, and continued to the line \(r s\), will divide each hour upon it into quarters.

\section*{Method of constructing Diaks by Dialling Lines.}
42. This is the easiest of all mechanical mothods, and by nuch the best, when the lines are truly divided : and not only the half hours and quaiters may be laid down by all of them, but every fifth minute by most, and every single minute by those where the line of hours is a foot in length. Having drawn the double meridian line \(a b, c d\), fig. 6 , on the plane intended for a horizontai dial, and crossed it at right angles by the six o'clock line \(f e\), as in fig. 3 , take the latitude of the place with the compasses, from the scale of latitudes, and set that extent from \(c\) to \(e\), and from \(a\) to \(f\), on the six o'clock line: then, taking the whole six hours between the points of the compasses from the scale of hours, with that extent set one foot on the point \(e\), and let the other foot fall where it will upon the meridian line \(\boldsymbol{c} d\), as at \(d\). Do the same from \(f\) to \(b\), and draw the right lines \(c d\) and \(f b\), each of them will be equal in length to the whole scale of hours. Then, setting one foot of the compasses in the beginning of the scale at XII, and extending the other to each hour on the scale, lay off these extents from \(a\) to \(e\) for the afternoon hours, and from \(b\) to \(f\) for those of the forenoon: this will divide the lines \(d e\) and \(b f\) in the same manner as the hour scale is divided at \(1,2,3,4\), and 6 ; on which the quarters may also be laid down, if required. Then, laying a ruler on the point \(c\), draw the first five hours in the afternoon, from that point, through the dots at the numeral figures 1 , \(2,3,4,5\), on the line \(d e\); and continue the lines of IV and \(V\) through the centre \(\boldsymbol{c}\), to the other side of the dial, for the like hours of the morning: which done, lay the ruler on the point \(a\), and draw the last five hours in the forenoon through the dots, \(5,4,3,2,1\), on the line \(f b\); continuing the hour lines of VII and VIII through the centre \(a\) to the other side of the dial, for the like hours of the evening; and set the hours to their respective lines, as in the figure. Lastly, make the gnomon the same way as directed above for the horizontal dial, and the whole will be finished.
43. To make an erect south dial, take the colatitude of your place from the scale of latitudes, and then proceed in all respects for the hour line as in the horizontal dial ; only reversing the lours as in fig. 4, and making the angle of the stile's height equal to the co-latitude.
Geometrical method of Drawing the Hour Lines.
44. I. To construct a horizontal dial, fig. 1, plate II.-Describe with any opening of the compasses, as Z L , the two semicircles LF \(k\) and \(\mathrm{LQ} k\), upon the cen tres Z and \(z\), where the six o'clock line crosses the double meridian line, and divide each semicircle into twelve equal parts, beginning at L (though strictly speaking, only the quadrants from \(L\) to the six o'clock line need be
divided); then connect the divisions which are equi-distant from L, by the parallel lines K :I, I N, II O, G P, and F(Q. 1) raw V Z for the ilypothenuse of the stile, making the angle 1 I E equal to the latitude of the place; and cortinue the line V Z to R. Draw the line R \(r\) paralle: to the six o'clock line, and set off the distance \(a \mathrm{~K}\) from Z to Y , the distance \(b\) I from \(Z\) to S , c II from Z to W, \(d\) G from Z to T , and e I from Z to S . Then draw the lines \(\mathrm{S} s, \mathrm{~T} t\), W \(x, \mathrm{X} x\), and \(\mathrm{Y} y\), each parallel to \(\mathrm{R} r\). Set off the distance \(y \mathrm{Y}\), from \(a\) to 11 , and from \(f\) to 1 ; the distance \(x\) X from \(b\) to 10 , and from \(g\) to 2 ; \(w \mathrm{WW}\) from \(c\) to 9 , and from \(h\) to \(3 ; t \mathrm{~T}\) from \(d\) to 8 , and from \(i\) to \(4 ; s S\) from \(e\) to 7 , and from \(n\) to 5 . Then laying a ruler to the centre Z, draw the forenoon hour lines through the points \(11,10,9\), 8,7 ; and laying it to the centre \(z\), draw the afternoon lines through the points \(1,2,3,4,5\); continuing the forenoon lines of VII and VIII through the centre Z, to the opposite side of the dial, for the likc afternoon hours; and the afternoon lines IV and \(V\) through the centre \(z\), to the opposite side for 'the like morning hours. Set the hours to these lines as in the figure, and then erect the stile or gnomon, and the dial will be finished.
45. HI. To construct a south dial, draw the line V Z, making an angle with the meridian Z L equal to the co-latitude of your place; and proceed in all respects as in the above horizontal dial for the same latitude, reversing the hours as in fig. 4, and making the elevation of the gnomon equal to the co-latitude.
46. III. To construct a north dial. See fig. 2. If the hour lines IV and V, as also VII and VIII on the south dial, fig. 4, plate I. be continued beyond the line VI \(a\) VI, and the triangle \(\operatorname{ag} h\) turned about the point \(a\), till \(a h\) fall on \(a\) XII produced, it is evident a north dial is thereby had. The hour line for VII in the morning on the south dial, when produced, forms the hour line for V in the morning on the north dial: and the hour line for \(V\) in the afternoon, on the south dial, forms the hour line for VII in the evening on the north dial. The manner of placing the characters for the other hours is therefore obvious.
47. IV. To construct an east dial. On the eastern side of the plane of the meridian, draw a line A B, fig. 3, parallel to the horizon, draw also a line AK, making with AB an angle KAB equal to the complement of the latitude of the place for which the dial is made. Take a point D in AK, and on that point for a centre describe a circle. Through D draw EC perpendicular to AK , thus the circle will be rlivideci into four quadrants; divide two of these quadrants into six equal parts, as in the fiure. Draw a straight line F EG perpendicular to EC, the diameter of the circle, and from the centre D through the seve:al divisions, draw the right lines I) IV, D V, D VI, D VII, D VIII, D IX, D X, D XI. Through IV, V, VI, VII, \&c.; draw lines IV, IV, V, V, \&c. parallel to E DC. Lastly, in D erect a stile equal to the radius D E, perpendicular to the plane; or on two little pieces perpendicularly fixed in EC, and equal to the same \(\mathbf{D E}\), fit an iron rod parallel to

EC, thus will each index at the several hours project a shadow to the respective hour lines IV IV, V V, VI VI, \&c. The east dial, it is obvious, can only show the hours till twelve o'clock.
48. V. To construct a west dial. The construction is perfectly the same as that of an east dial, only that its situation is inverted, and the hours are written accordingly. A west dial, it is obvious, can only be illuminated after noon, and therefore, joined with an east dial, shows all the hours of the day.

\section*{Of Universal Dials.}
49. I. The universal dial, invented by Pardie, fig. 4 , consists of three principal parts; the first whereof is called the horizontal plane A, because in practice it must be parallel to the horizon. In this plane is fixed an upright pin, which enters into the edge of the second part BD, called the meridional plane; which is made of two pieces, the lowest whereof, B , is called the quadrant, because it contains a quarter of a circle, divided into \(90^{\circ}\); and it is only into this part, near B, that the pin enters. The other piece is a semicircle \(D\) adjusted to the quadrant, and turning in it by a groove, for raising and depressing the diameter EF of the semicircle, which diameter is called the axis of the instrument. The third piece is a circle, G, divided on both sides into twenty-four equal parts, which are the hours. This circle is put upon the meridional plane, so that the axis EF may be perpendicular to the circle, and the point \(\mathbf{C}\) be the common centre of the circle, semicircle, and quadrant. The straight edge of the semicircle is chamfered on both sides to a sharp edge, which passes through the centre of the circle. On one side of the chamfered part, the first six months of the year are laid down, according to the sun's declination for their respective days, and on the other side the last six months. And against the days on which the sun enters the signs, there are straight lines drawn upon the semicircle, with the characters of the signs marked upon them. There is a black line drawn along the middle of the upright edge of the quadrant, over which hangs a thread \(H\), with its pluminet \(I\), for levelling the instrument. From the 23d of September to the 20th of March, the upper surface of the circle must touch both the centre \(\mathbf{C}\) of the semicircle, and the line of \(r\) and \(\bumpeq\); and from the 20th of March to the 23d of September, the lower surface of the circle must touch that centre and line.
50. To find the time of day by this dial, set it on a level place in sun-shine, and adjust it by the levelling screws \(k\) and \(l\), until the plumbline hangs over the black line upon the edge of the quadrant, and parallel to the said edge; move the semicircle in the quadrant, until the line of \(r\) and \(\bumpeq\) (where the circle touches) comes to the latitude of the place in the quadrant : then turn the whole meridional plane BD , with its circle \(G\), upon the horizontal plane \(A\), until the edge of the shadow of the circle falls on the day of the month in the semicircle; and then the meridional plane will be due north and soutl; the axis EF will be parallel to the axis
of the world, and will cast a shadow upon the true time of the day among the hours of the circle.
51. When the instrument is thus rectified, the quadrant and semicircle are in the plane of the meridian, and the circle is then in the plane of the equinoctial. Therefore as the sun is above the equinoctial in summer (in northern latitudes), and below it in winter, the axis of the semicircle will cast a shadow on the hour of the day, on the upper surface of the circle, from the 20th of March till the 23d of September; and from the 23d of September to the 20th of March, the hour of the day will be determined by the shadow of the semicircle upon the lower surface of the circle. In the former case the shadow of the circle falls upon the day of the month, on the lower part of the diameter of the semicircle; and in the latter case on the upper part.
52. The method of laying down the months and signs upon the semicircle is as follows:Draw the right line ACB , fig. 5 , equal to the diameter of the semicircle \(A D B\), and cross it in the middle at right angles with the line ECD, equal in length to ADB ; then EC will be the radius of the circle FCG, which is the same as that of the semicircle.. Upon \(\mathbf{E}\), as a centre, describe the circle FCG, on which set off the arcs \(\mathbf{C} h\) and \(\mathbf{C} i\), each equal to \(23 \frac{1}{2}^{\circ}\), and divide them accordingly into that number for the sun's declination. Then laying the edge of a ruler over the centre \(\mathbf{E}\), and also over the sun's declination for every fifth day of each month, mark the points on the diameter AB of the semicircle from \(a\) to \(g\), which are cut by the ruler; and there place the days of the months accordingly, answering to the sun's declinations. Then setting one foot of the compasses in C , and extending the other to \(a\) or \(g\), describe the semicircle \(a b c d e f g\); which divide into six equal parts, and through the points of division draw right lines parallel to CD , for the beginning of the signs (of which one half are on one side of the semicircle, and the other half on the other), and set the characters of the signs to their proper lines, as in the figure.
53. II. The universal, or astronomical equinoctial ring-dial is an instrument that serves to find out the hour of the day in any latitude. It consists of two flat rings or circles, useally from four to twelve inches diameter, and of a moderate thickness; the outward ring representing the meridian of the place it is used at, contains two divisions of \(90^{\circ}\) each, opposite to one another, serving to let a sliding piece and ring (by which the dial is usually suspended) be placed on one side, from the cquator to the N . pole, and on the other side to the S., according to the latitude of the place. The inner ring represents the equator, and turns diametrically within the outer, by means of two pivots inserted in each end of the ring at the hours XII. Across the two circles is screwed to the meridian a thin pierced plate or bridge, with a cursor, that slides along the middle of the bridge: this cursor has a small hole for the sun to shine through. The middle of this bridge is conceived as the axis of the world, and its extremities as the poles; on the one side are delineated
the twelve signs of the zodiac, and sometimes opposite the degrees of the sun's declination; and on the other side the days of the month throughout the year. On the other side of the outer ring A are the divisions of \(90^{\circ}\), or a quadrant of latitude. It serves, by the placing of a common pin in the hole, to take the sun's altitude, from which the latitude of the place may easily be found.
54. In using this dial, place the line in the middle of the sliding piece, over the degree of latitude of the place. Suppose, for example, \(51 \frac{1}{2}\) for London; put the line which crosses the hole of the cursor C to the day of the month of the degree of the sign. Open the instrument till the two rings be at right angles to each other, and suspend it by the ring, that the axis of the dial represented by the middle of the bridge may be parallel to the axis of the earth, viz. the north pole to the north, and vice versâ. Then turn the flat side of the bridge towards the sun, so that his rays passing through the small hole in the cursor may fall exactly in a line drawn through the middle of the concave surface of the inner ring or hour-circle, the bright spot shows the hour of the day in the said concave surface of the dial. The hour XII cannot be shown by this dial, because the outer ring, being then in the plane of the meridian, excludes the sun's rays from the inner; nor can this dial show the hour when the sun is in the equinoctial, because his rays, then falling parallel to the plane of the inner circle or equinoctial, are excluded by it.
55. III. Figs. 6, 7, and 8, a universal dial on a plain cross, as described by Mr. Ferguson. It is moveable on a joint C , for elevating it to any given latitude on the quadrant Co 90, as it stands upon the horizontal board A. The arms of the cross stand at right angles to the middle part; and the top of it, from \(a\) to \(n\), is of equal length with either of the arms \(n e\) or \(m k\). See fig. 6. The dial is rectified by setting the middle line \(t u\) to the latitude of the place on the quadrant, the board A level, and the point N. northward by the needle; thus, the plane of the cross will be parallel to the plane of the equator. Then, from III o'clock in the morning till VI, the upper edge \(k l\) of the arm \(i o\) will cast a shadow on the time of the day on the side of the arm cm ; from VI till IX, the lower edge \(i\) of the arm \(i o\) will cast a shadow on the hours on the side oq. From IX in the morning to XII at noon, the edge \(a b\) of the top part \(a n\) will cast a shadow on the hours on the arm \(n e f\); from XII to III in the afternoon, the edge \(\boldsymbol{c} d\) of the top part will cast a shadow on the hours on the arm klm ; from III to VI in the evening, the edge \(g h\) will cast a shadow on the hours on the part \(p u\); and from VI to IX, the shadow of the edge ef will show the time on the top part \(a n\). The breadth of each part \(a b, e f, \& c\)., must be so great, as never to let the shadow fall quite without the part or arm on which the hours are marked, when the sun is at his greatest declination from the equator.
56. To determine the breadth of the sides of the arms which contan the hours, so as to be in just proportion to their length; make an angle ABC, fig. 7 , of \(23^{\circ} 30^{\prime}\), which is equal to the sun's greatest declination: and suppose the
length of each arm, from the side of the loug middle part, and also the length of the top part above thc arms, to be cqual to \(\mathrm{B} d\). Then as the edges of the shadow, from cach of the arms, will be parallel to Be , making an angle of \(23^{\circ} 30^{\prime}\) with the side Bd of the arm, when the sun's declination is \(23^{\circ} 30^{\circ}\); it is plain, that if the length of the arm be \(\mathrm{B} d\), the least breadth that it can have, to keep the edge \(B e\) of the shadow Begd from going off the side of the arm \(d e\) before it comes to the end of it \(e d\), must be equal to \(e d\) or \(d \mathrm{~B}\). But to keep the shadow within the quarter divisions of the hours, when it comes near the end of the arm, the breadth of it should be still greater, so as to be almost doubled, on account of the distance betwcen the tips of the arms.
57. The hours may be placed on the arms, by laying down the cross \(a b c d\), fig. 8 , on a sheet of paper; and with a black lead pencil held close to it drawing its shape and size on the paper. Then take the length \(a e\) in the compasses, and with one foot in the corner \(a\), describe with the other the quadrant \(e f\). Divide this are into six equal parts, and through the points of division draw right lines \(a g, a h, \& c\). ., continuing three of them to the arm \(c e\), which are all that can fall upon it; and they will meet the arm in those points through which the lines that divide the hours from each other are to be drawn right across it. Divide each arm for the three hours contained in it, in the same manner; and set the hours to their proper places, on the sides of the arms, as they are marked in fig. 6. Each of the hour spaces should be divided into four equal parts, for the half hours and quarters, to the quadrant ef; and right lines should be drawn through these division-marks in the quadrant, to the arms of the cross, in order to determine the places thereon where the subdivision of the hours must be marked. This kind of universal dial is easily made, and lias a pretty uncommon appearance in a garden.
58. IV. The universal mechanical dial, fig. 9, affords, by its equinoctial circle, an easy method of describing a dial on any kind of plane. For example: suppose a dial is required on a horizontal plane. If the plane be immoveable, as ABCD , find a meridian line as GF; or, if moveable, assume the meridian at pleasure : then by means of the triangle FKF, whose base is applied on the meridian line, raise the equinoctial dial H till the index GI becomes parallel to the axis of the earth (which is so, if the angle KEF be equal to the elevation of the pole), and the XII o'clock line on the dial hang over the meridian line of the plane or the base of the triangle. If then, in the night, or in a dark place, a lighted candle be successively applied to the axis GI, so as the shadow of the index or style GI fall upon one loour line after another, the same shadow will mark out the several hour lines on the plane ABCD. Noting points, therefore, on the shadow, draw lines through them to \(G\); then an index being fixed on \(G\), according to the angle IGF, its shadow will point out the several hours by the light of the sun. If a dial were required on a vertical plane, having raised the equinoctial circle as directed, push
forward the index GI till the tip thereof, \(I\), touch the plane. If the plane be inclined to the horizon, the elevation of the pole should be found on the same; and the angle of the triangle KEF should be made equal thereto.
59. V. Fig. 1, plate III., represents a universa! dial, which slows the hour of the day by a terrestrial globe, and by the shadows of several gnomons, at the same time; together with all the places of the earth which are then enlightened by the sun; and those to which the sun is then rising, or on the meridian or setting. This dial is made of a thick square piece of wood, or hollow metal. The sides are cut into semicircular hollows, in which the hours are placed; the stile of each hollow coming out from the bottom thereof as far as the ends of the hollows project. The conners are cut nut into angles, in the insides of which the hours are also marked; and the edge of the end of each side of the angle serves as a stile for casting a shadow on the hours marked on the other side. In the middle of the uppermost side, or plane, there is an equinoctial dial; in the centre of which an upright wire is fixed, for casting a shadow on the hours of that dial, and supporting a small terrestrial globe on the top.
60. The whole dial stands on a pillar, in the middle of a round horizontal board, in which there is a compass and magnetic needle, for placing the meridian stile towards the S . The pillar has a joint with a quadrant upon it, divided into \(90^{\circ}\), for setting it to the latitude of any given place. The equator of the globe is divided into twenty-four equal parts, and the hours are laid down upon it at these parts. The time of the day may be known by these hours, when the sun shines upon the globe.
61. To rectify and use this dial, set it on a level table, or on the sole of a window, where the sun shines, placing the meridian style due S . by means of the needle; which will be, when the needle points as far from the \(\mathbf{N}\). fleur-de-lis toward the W. as it declines westward at the place. Then bend the pillar in the joint, till the black line on the pillar comes to the latitude of the place in the quadrant. The machine being thus rectified, the plane of its dial part will be parallel to the equator, the wire or axis that supports the globe will be parallel to the earth's axis, and the N . pole of the globe will point toward the N. pole of the heavens.
62. The same hour will then be shown in several of the hollows, by the ends of the shadows of their respective stiles; the axis of the globe will cast a shadow on the same hour of the day, in the equinoctial dial, in the centre of which is it placed, from the 20th of March to the 23 rd of Septeraber; and, if the meridian of the place on the globe be set even with the ineridian stile, all that part of the globe that the sun shines upon will answer to those places of the real earth which are then enlightened by the sun. The places where the shade is just coming upon the globe, answer to all those places of the earth in which the sun is then setting; as the places where it is going off, and the light coming on, answer to all the places of the earth where the sun is then rising. And lastly, if the hour of VI
be marked on the equator in the meridian of the place (as it is marked on the meridian of London in the figure), the division of the light and shade on the globe will show the time of the day.
63. The northern stile of the dial is hid in the figure by the axis of the globe. The hours in the hollow to which that stile belongs, are also supposed to be hid by the oblique view of the figure: but they are the same as the hours in the front hollow. Those also in the right and left hand semicircular hollows are mostly hid from sight; and so also are all those on the sides next the eye of the four acute angles.
64. The construction of this dial is as follows: on a thick square piece of wood, or metal, draw the lines \(a c\) and \(b d\), fig. 2 , as far from each other as you intend for the thickness of the stile \(a b c d\); and in the same manner, draw the like thickness of the other three stiles, efgh, iklm, and nopq, all standing outright as from the centre. With any convenient opening for the compasses, as \(a \mathrm{~A}\), so as to leave proper strength when KI is equal to \(a \mathrm{~A}\), set one foot in \(a\), as a centre, and with the other describe the quadrantal arc Ac. Then, without altering the compasses, set one foot in \(b\) as a centre, and with the othei describe the quadrant \(d \mathrm{~B}\). All the other quadrants in the figure must be described in the same manner, and with the same opening of the compasses, on their centres efik, and no, and each quadrant divided into six equal parts, for as many hours, as in the figure; each of which parts must be subdivided into four, for the half hours and quarters. At equal distances from each corner, draw the right lines \(\mathrm{I} p\) and \(\mathrm{K} p, \mathrm{~L} q\) and \(\mathrm{M} q, \mathrm{~N} r\) and \(\mathrm{O} r, \mathrm{P} s\) and Qs : to form the four angular hollows \(\mathrm{I} p \mathrm{~K}, \mathrm{~L} q \mathrm{M}, \mathrm{N} r \mathrm{O}\), and \(P s Q\); making the distances between the tips of these hollows, as IK, LM, N O, and PQ, each equal to the radius of the quadrants: and leaving sufficient room within the angular points \(p q r\) and \(s\), for the equinoctial in the middle.
65. To divide the inside of these angles for the hour spaces, take the following method:-Set one foot of the compasses in the point I as a centre, and open the other to K ; and with that opening describe the arc \(\mathrm{K} t\) : then, without altering the compasses, set one foot in \(K\), and with the other describe the arc \(\mathrm{I} t\). Divide each of these arcs, from I and K to their intersection at \(t\), into four equal parts; and from their centres 1 and \(K\), through the points of division, draw the right lines I \(3, \mathrm{I} 4, \mathrm{I} 5, \mathrm{I} 6, \mathrm{I} 7\) : and K 2 , \(\mathrm{K} 1, \mathrm{~K} 12\), K 11 ; and they will meet the sides \(\mathrm{K} p\) and \(\mathrm{I} p\) of the angle I \(p \mathrm{~K}\) where the hours thereon must oe placed. And these hour spaces in the arcs must be subdivided into four equal parts, for the half hours and quarters. Do the like for the other three angles, and draw the dotted lines, and set the hours in the insides where those lines meet them, as in the figure; and the like hour lines will be parallel to each other in all the quadrants and in all the angles. Mark poirts for all these hours on the upper side: and cut out all the angular hollows, and the quadrantal ones quite through the places where their four gnomons must stand; and lay down the hours on their insides, and set in their gnomons, which nust be as broad as the dial is thick, and this

Fig. 3.

Fig. 1.

Fig. 2.

hreadth and thickness must be large enough to keep the shadows of the gnomons from ever falling quite out of the sides of the hollows, even when the sun's declination is at the greatest. Lastly, draw the equinoctial dial in the middle, all the hours of which are equidistant from each other; and the dial will be finished.
66. As the sun goes round, the broad end of the shadow of the stile \(a c b d^{d}\) will show the hours in the quadrant \(\mathrm{A} c\), from the sun-rise till VI in the morning; the shadow from the end M will show the hours on the side \(\mathrm{L} q\) from V to IX in the morning; the shadow of the stile ef \(g h\) in the quadrant \(\mathrm{D} g\) in the long days, will show the hours from sun-rise till VI in the morning; and the shadow of the end N will show the morning hours, on the side \(\mathrm{O} r\), from III to VII. Just as the shadow of the northern stile \(a b t d\) goes off the quadrant A.c, the shadow of the southern stilc \(i k l m\) begins to fall within the quadrant \(\mathrm{F} l\), at VI in the morning; and shows the time, in that quadrant, from VI to XII at noon; and from noon till VI in the evening, in the quadrant \(m \mathbf{E}\). And the stadow of the end O shows the time from \(\mathrm{X1}\) in the forenoon till III in the afternoon, on the side \(r \mathrm{~N}\); as the shadow of the end P shows the time from IX in the morning till I o'clock in the afternoon on the side Qs.

67 At noon, when the shadow of the eastern stile efgh goes off the quadrant \(h \mathrm{C}\), in which it showed the time from VI in the morning till noon, as it did in the quadrant \(g \mathrm{D}\), from sunrisc till VI in the morning, the shadow of the western stile nopq begins to enter the quadrant \(\mathrm{H} p\); and shows the hours thereon from XII at noon till VI in the evening: and after that till sun-set, in the quadrant \(q \mathbf{G}\); and the end \(\mathbf{Q}\) casts a shadow on the side \(\mathrm{P} s\), from V in the evening till IX at night, if the sun be not set before that time. The shadow of the end I shows the time on the side \(\mathrm{K} p\) from III till VII in the afternoon; and the shadow of the stile abcd shows the time from VI in the evening till the sun sets. The shadow of the upright central wire, that supports the globe at top, shows the time of the day, in the middle or equinoctial dial, all the summer half-year, when the sun is on the north side of the equator.

\section*{Dialling by Spherical Thigonometry.}
68. The construction of sun-dials on all planes whatever, may be included in one general rule; sufficiently intelligible, if that of a horizontal dial for any given latitude be well understood. For there is no plane, however obliquely situated with respect to any given place, but what is parallel to the horizon of some other place; and, therefore, if we can find that other place, by a problem, on the terrestrial globe, or by a trigonometrical calculation, and construct a horizontal dial for it; that dial applied to the place where it is to serve will be a true dial for that place.Thus, an erect direct south dial in \(51^{\circ} 30^{\prime}\) N. lat. would be a horizontal dial on the same meridian, \(90^{\circ}\) southward of \(51^{\circ} 30^{\prime} \mathrm{N}\). lat.: which falls in with \(38^{\circ} 30^{\circ} \mathrm{S}\). lat. But if the upright plane declines from facing the south at the given
place, it would still be a horizontal plane \(90^{\circ}\) from that place, but for a different longitude, which would altcr the reckoning of the hours accordingly.
69. To calculate the angles which the hour lines of a horizontal dial make with the meridian or twelve o'clock line, see fig. 3. Let N E.S W represent the horizon of any place, PSN the meridian, and P the N . pole of the sphere: let KPH be any hour circle, for example, the circle which makes with the meridian an angle of \(15^{\circ}\), then the arch of the horizon intercepted between N , the north, and PII the hour circle, in the plane of which the sun is at Xl or I o'clock, measures the angle contained by the substile of the dial, and the hour lines corresponding to these hours. In the spherical triangle P NH, right angled at N , there are given the side PN, which is the elevation of the pole above the horizon, and the angle N PH which is contained by the meridian and hour circle, to find NH the arch of the horizon opposite that angle. By spherical trigonometry, radius is to the sine of PN as the tangent of N P II to the tangent of NHI the side required. Hence we have this practical rule. To find the angle which any hour line of a horizontal dial makes with the meridian, or which is tle same, to find the angle which the hour lines on any dial make with the substile.-To the logarithmic sine of the latitude of the place for which the dial is made, add the logarithmic tangent of the sun's distance from the meridian, for the hour required, the sum, \(1-10\), is the logarithmic tangent of the angle required.
70. Example.-To find the angles which the hour lines of XI or I make with the meridian of a horizontal dial for the latitude of London, which is \(51^{\circ} 30^{\circ}\).
\[
\begin{array}{lll}
\begin{array}{l}
\text { To logarithmic sine of } 51^{\circ} 30^{\prime} \\
\text { Add logarithmic tangent of } 15^{\circ}
\end{array} & \begin{array}{l}
9 \cdot 89354 \\
9 \cdot 42805
\end{array} \\
& . & 9 \cdot 32159
\end{array}
\]
which is the tangent of \(11^{\circ} 51^{\prime}\) rearly. In like manner it will be found, that the hour lines of X and II make each with the meridian an angle of \(24^{\circ} 18^{\prime}, \& c\). And by computing in this manner, with the sine of the latitude, and the tangents of \(30^{\circ}, 45^{\circ}, 60^{\circ}\), and \(75^{\circ}\), for the hours of II, III, IV, and V in the afternoon ; or of X, IX, VIII, and VII in the forenoon ; you will find their angular distances from XII to be \(24^{\circ} 18^{\prime}, 38^{\circ} 3^{\prime}\), \(53^{\circ} 35^{\prime}\), and \(71^{\circ} 6^{\prime}\); which are all that there is occasion to reckon. And these distances may be set off from XII by a line of chords; or rather, by taking 1000 from a scale of equal parts, and setting that extent as a radius from C to XII, fig. 4, and then, taking 209 of the same parts, which are the naturat tangents of \(11^{\circ} 50^{\prime}\) and setting them from XII to XI and I, on the line HO, which is perpendicular to C XII: and so for the rest of the hour lines, which in the table of natural tangents, against the above distances, are \(452,782,1355\), and 2920, of such equal parts from XII, as the radius C XII contains 1000. And, lastly, set off 1257, the natural tangent of \(51^{\circ} 30^{\prime}\), for the angle of the
stile's height, which is equal to the latitude of the place.

\section*{Declining Dials.}
71. Let us suppose that an upright plane at London declines \(36^{\circ}\) westward from facing the south, and that it is required to find a place on the globe to the horizon of which the said plane is parallel; and also the difference of longitude between London and that place.
72. Let NESW be the horizon of London, fig. 5 , whose zenith is Z , and P the N. Pole of the sphere ; and let \(\mathrm{Z} h\) be the position of a vertical plane at Z, declining westward from \(\mathbf{S}\) (the south) by an angle of \(36^{\circ}\); on which plane an erect dial for London at Z is to be described. Make the semi-diameter Z D perpendicular to \(\mathrm{Z} h\), and it will cut the horizon in \(\mathrm{D}, 36^{\circ}\) west of the south S . Then a plane, in the tangent HD , touching the sphere in D , will be parallel to the plane \(\mathrm{Z} h\); and the axis of the sphere will be equally inclined to both these places. Let W Q E be the equinoctial, whose elevation above the horizon of Z (London) is \(38^{\circ} 30^{\circ}\) : and PRD be the meridian of the place D , cutting the equinoctial in \(\mathbf{R}\). Then it is evident, that the are \(\mathbf{R D}\) is the latitude of the place D , where the plane \(\mathrm{Z} h\) would be horizontal, and the arc RQ is the difference of longitude of the planes \(\mathrm{Z} h\) and DH.
73. In the spherical triangle WDR, the arc WD is given, for it is the complement of the plane's declination from \(S\) the south; which complement is \(54^{\circ}\), viz. \(90^{\circ}-36^{\circ}\) : the angle at R , in which the meridian of the place D cuts the equator, is a rignt angle; and the angle R W D measures the elevation of the equinoctial above the horizon of Z, namely \(38^{\circ} 30^{\prime}\). Say, therefore, as radius is to the co-sine of the plane's declination from the south, so is the co-sine of the latitude of Z to the sine of RD the latitude of D : which is of a different denomination from the latitude of Z , because Z and D are on different sides of the equator.
\begin{tabular}{|c|c|}
\hline As radius & 10.00000 \\
\hline To co-sine \(36^{\circ} 0^{\prime}=\mathrm{RQ}\) & 96 \\
\hline So co-sine \(51^{\circ} 30^{\prime}=\mathrm{QZ}\) & 9.794 \\
\hline
\end{tabular}

To sine \(30^{\circ} 14^{\prime}=\) Dir \(9 \cdot 70211=\) the latitude of \(D\), whose horizon is parallel to the vertical plane \(\mathrm{Z} h\) at Z .
74. To find \(R Q\) the difference of longitude of the places D and Z ; say, as radius is to the cosine of RWD \(38^{\circ} 30^{\prime}\), the height of the equinoctial at Z , so is the co-tangent of DW \(36^{\circ}\) the plane's declination, to the co-tangent of RQ the difference of longitudes. Thus,
To the logarithmic sine of \(51^{\circ} 30^{\prime} \quad 9 \cdot 89354\)
Add the logarithmic tangent of \(54^{\circ} 0^{\prime}\)
\(10 \cdot 13874\)
Their sum rejecting 10 10.03228 is the nearest tangent of \(47^{\circ} 8^{\prime}=\mathrm{WR}\); which is the co-tangent of \(42^{\circ} 52^{\prime}=R \bar{Q}\), the difference of longitude sought. Which difference, being reduced to time, is \(2 \mathrm{~h} .51 \frac{1}{2} \mathrm{~m}\).
75. And thus having found the latitude and longitude of the place D , to whose hosizon the
vertical plane at Z is parallel, we proceed to the construction of a horizontal dial for the place D, whose latitude is \(30^{\circ} 14^{\prime}\) south ; but anticipating the time at D by 2 h .51 m ., neglecting the half minute in practice, because \(D\) is so far westward in longitude from the meridian of London; and this will be a true vertical dial at London, declining westward \(36^{\circ}\).
76. Assume any right line CS L, fig. 4, for the substile of the dial, and make the angle KCP equal to the latitude of the place, viz. \(30^{\circ} 14^{\prime}\), to the horizon of which the plane of the dial is parallel; then CRP will be the axis of the stile, or edge that casts the shadow on the hours of the day, in the dial. This done, draw the contingent line \(\mathrm{E} Q\), cutting the substilar line at right angles in K ; and from K make KR perpendicular to the axis CRP. Then \(\mathrm{KG}=\) KR being made radius, that is, equal to the chord of \(60^{\circ}\), or tangent of \(45^{\circ}\) on a good sector, take \(42^{\circ} 52^{\prime}\) (the difference of longitude of the places Z and D ) from the tangents, and having set it from K to M, draw CM for the hour line of XII. Take \(\mathrm{K} N\), equal to the tangent of an angle less by \(15^{\circ}\) than KM ; that is, the tangent of \(27^{\circ} 52^{\prime}\) : and through the point N draw CN for the hour line of I . The tangent of \(12^{\circ} 52^{\prime}\) (which is \(15^{\circ}\) less than \(27^{\circ} 52^{\prime}\) ), set off the same way, will give a point between K and N , through which the hour line of II is to be drawn. The tangent of \(2^{\circ} 8^{\prime}\), the difference between \(45^{\circ}\) and \(50^{\circ} 42^{\prime}\). placed on the other side of CL , will determine the point through which the bour-line of III is to be drawn; to which \(2^{\circ} 8^{\prime}\), if the tangent of \(15^{\circ}\) be added, it will make \(17^{\circ} 8^{\prime}\); and this set off from \(K\) towards \(Q\), on the line \(E Q\), will give the point for the hour line of IV; and so of the rest. The forenoon hours line are drawn the same way, by the continual addition of the tangents \(15^{\circ}, 30^{\circ}, 45^{\circ}, \& c\). , to \(42^{\circ} 52^{\prime}=\) the tangent K M for the hours of XI, X, IX, \&c., as far as necessary; that is, until there be five hours on each side of the substile. The sixth hour, accounted from that hour or part of the hour on which the substile falls, will be always in a line perpendicular to the substile, and drawn through the centre \(\mathbf{C}\).
77. In all erect dials, C M, the hour line of XII is perpendicular to the horizon of the place for which the dial is to serve; for that line is the intersection of a vertical plane with the plane or the meridian of the place, both which are perpendicular to the plane of the horizon; and any line HO, or \(h o\), perpendicular to CM, will be a horizontal line on the plane of the dial, along which line the hours may be numbered; and CM being set perpendicular to the horizon, the dial will have its true position.
78. If the plane of the dial had declined by an equal angle towards the east, its description would have differed only in this, that the hourline of XII would have fallen on the other side of the substile CL, and the line HO would have a subcontrary position to what it has in this figure.
79. And these two dials, with the upper points of their stiles turned toward the N . Pole, will serve for other two planes parallel to then; the one declining from the N. towards
the E., and the other from the N . toward the W ., by the same quantity of angle. The like holds true of all dials in general, whatever be their declination and obliquity of their planes to the horizon.
80. If the plane of the dial not only declines, but also reclines, or inclines. Suppose its declination from fronting the south \(S\) be equal to the arc SD, fig. 6, on the horizon; and its reclination be equal to the arc \(\mathrm{D} d\) of the vertical circle D Z : then it is plain, that if the quadrant of altitude \(\mathrm{Z} d \mathrm{D}\) on the globe cuts the point D in the horizon, and the reclination is counted upon the quadrant from D to \(d\); the intersection of the hour-circle \(\mathrm{PR} d\), with the equinoctial WQE, will determine Rd, the latitude of the place \(d\), whose horizon is parallel to the given place \(\mathrm{Z} h\) at Z ; and RQ will be the difference in longitude of the places at \(d\) and Z. Trigonometrically thus :-Let a great circle pass through the three points, \(\mathrm{W}, d, \mathrm{E}\); and in the triangle W D \(d\), right angled at D , the sides W D and \(\mathrm{D} d\) are given; and thence the angle \(\mathrm{DW} d\) is found, and so is the hypothenuse W \(d\). Again, the difference, or the sum, of \(\mathrm{D} \mathrm{W} d\) and \(\mathrm{DW} R\), the elevation of the equinoctial above the horizon of Z, gives the angle \(d\) WR; and the hypothenuse of the triangle W R \(d\) was just now found; whence the sides \(\mathrm{R} d\) and WR are found, the former being the latitude of the place \(d\), and the latter the complement of RQ , the difference of longitude sought. Thus, if the latitude of the place Z be \(52^{\circ} 30^{\prime} \mathrm{N}\). the declination S D of the plane \(\mathrm{Z} h\) (which would be horizontal at \(d\) ) be \(36^{\circ}\), and the reclination be \(15^{\circ}\), or equal to the arc \(\mathrm{D} d\); the south latitude of the place \(d\), that is, the arc \(\mathrm{R} d\), will be \(15^{\circ} 9^{\prime}\); and RQ , the difference of the longitude, \(36^{\circ} 2^{\prime}\). From these data, therefore, let the dial, fig. 7, be described, as in the former example.
81. There are several things requisite in the practice of dialling; the chief of which shall be given in the form of arithmetical rules, simple and easy to those who have learned the elements of trigonometry. For in practical arts of this kind, arithmetic should be used as far as it can go; and scales never trusted to, except in the final construction, where they are absolutely necessary in laying down the calculated hour distances on the plane of the dial,
82. The latitude of the place, the sun's declination, and his hour distance from the meridian, being given, to find, first, his altitude, second, his azimuth. Let \(d\), fig. 6, be the sun's place, \(d \mathrm{R}\), his declination; and in the triangle PZd , \(\mathrm{P} d\) the sum, or the difference of \(d \mathrm{R}\), and the quadrant P R, being given by the supposition, as also the complement of the latitude PZ , and the angle \(d \mathrm{P} \mathrm{Z}\), which measures the horary distance of \(d\) from the meridian; we shall (by spheric trigonometry) find the base \(\mathrm{Z} d\), which is the sun's distance from the zenith, or the complement of his altitude. And, as sine \(\mathrm{Z} d\) : sine \(\mathrm{P} d\)
: sine \(d \mathrm{PZ}: d \mathrm{ZP}\), or of its supplement DZS , the azimuthal distance from the south.
83. Or the practical rule may be as follows: Write A for the sine of the sun's altitude, L and \(l\) for the sine and co-sine of the latitude, \(D\) and \(d\) for the sinc and co-sine of the sun's declina-
tion, and H for the sine of the horary distance from VI. Then the relation of H to A will havc three varieties.
84. When the declination is towards the elevated pole, and the hour of the day is between XII and VI; it is \(\mathrm{A}=\mathrm{L} \mathrm{D}+\mathrm{H} \ell d\), and \(\mathrm{H}=\) \(\mathrm{A}-\mathrm{LD}\),
\({ }^{\text {ld }}\) 85. When the hour is after VI, it is \(\Lambda=L D\) \(-\mathrm{H} l d\), and \(\mathrm{II}=\frac{\mathrm{LD}-\mathrm{A}}{l d}\)
85.* When the declination is toward the depressed pole, we have \(\mathrm{A}=\mathrm{If} l d-\mathrm{L} \mathrm{D}\), and \(\mathrm{II}=\frac{\mathrm{A}+\mathrm{LD}}{l d}\)
86. These theorems will be found useful and expeditious enough for solving those problems, in geography and dialling, which depend on the relation of the sun's altitude to the hour of the day.
87. Example I. Suppose the latitude of the place to be \(51^{\circ} 30^{\prime}\) north: the time five hours distant from XII, that is, an hour after VI in the morning, or before VII in the evening; and the sun's declination \(2^{\circ}\) north. Required the sun's altitude?
Then to \(\log . \mathrm{L}=\log . \sin .51^{\circ} 30^{\prime}-1 \cdot 89354\) add \(\log\). \(\mathrm{D}=\log\). \(\sin .20^{\circ} 0^{\prime}-1 \cdot 53405\)

Their sum -1.42759 gives
\(\mathrm{L} D=\) logarithm of 0.267664 , in the natural sines.
And, to \(\log\). \(\mathrm{H}=\log \cdot \sin .15^{\circ} 0^{\prime}-1 \cdot 41300\)
add \(\left\{\begin{array}{l}\log . l \\ l\end{array}=\log\right.\). \(\sin .38^{\circ} 0^{\prime}-1 \cdot 79414\)
\(\left\{\log d=\log \cdot \sin .70^{\circ} 0^{\prime}-1 \cdot 97300\right.\)
Their sum -1.18014 gives
\(\mathrm{H} l d=\) logarithm of 0.151408 , in the natural sines. And these two numbers ( \(0 \cdot 267664\) and 0.151408 ) make \(0.419072=\mathrm{A}\); which, in the table, is the nearest natural sine of \(25^{\circ} 47^{\prime}\), the sun's altitude sought.
88. In these calculations the radius is considered as unity, and not 10.00000 , by which, instead of the index 9 , we have -1 , which only makes the work a little easier.
89. The saine hour distance being assumed on the other side of VI, then LD-Hld is \(0 \cdot 116256\), the sine of \(60^{\circ} 40^{\prime} 30^{\circ}\); which is the sun's altitude at V in the morning, or VII in the evening, when his N. declination is \(20^{\circ}\). But when the declination is \(20^{\circ} \mathrm{S}\). (or towards the depressed pole) the difference \(\mathrm{H} l d-\mathrm{LD}\) becomes negative; and thereby shows, that an hour before VI in the morning, or past VI in the evening, the sun's centre is \(6^{\circ} 40^{\circ} 30^{\prime \prime}\) below the horizori.
90. Example II. From the same data to find the sun's azimuth. If \(\mathrm{H}, \mathrm{L}\), and D , are given, then from H having found the altitude and its complement Zd : and the arc Pd (the distance from the pole) being given; say, As the co-sine of the altitude is to the sine of the distance from the pole, so is the sine of the hour distance from the meridian to the sine of the azimuth distance from the meridian. Let the latitude be \(51^{\circ} 30^{\circ}\) N., the declination \(15^{\circ} 9^{\prime} \mathrm{S}\)., and the time 2 h . 24 m . in the afternoon, when the sun begins to illuminate a vertical wall, and it is required to find the position of the wall. Then, by the fore-
going theorems, the complement of the altitude will be \(81^{\circ} s 2^{\prime} 30^{\prime \prime}\), and \(\mathrm{P} d\) the distance from the pole being \(109^{\circ} 5^{\prime}\), and the horary distance from the meridian, or the angle \(d \mathrm{PZ}, 36^{\circ}\).
\[
\begin{array}{ll}
\text { To log. sin. } 74^{\circ} 51^{\prime} & -1.98464 \\
\text { Add log. sin. } 36^{\circ} 0^{\prime} & -1.76922 \\
\text { And from the sum } & -1.75386
\end{array}
\]

Take the log. sin. \(81^{\circ} 32 t^{\prime}-1 \cdot 99525\)
\[
\text { Remains }-1 \cdot 75861=\text { log. } \sin .
\] \(35^{\circ}\), the azimuth distance sought.
91. When the altitude is given, find from thence the hour, and proceed as above. This praxis is of singular use on many occasions; as, 1. In finding the declination of vertical planes more exactly than in the common way, especially if the transits of the sur's centre are observed by applying a ruler with sights, either plain or telescopical, to the wall or plane whose declination is required. 2. In drawing a meridian line, and finding the magnetic variation. 3. In finding the bearings of places in terrestrial surveys; the transits of the sun over any place, or his horizontal distance from it, being observed, together with the altitude and hour; and thence determining small differences of longitude. 4. In observing the variations at sea, \&c.

Of finding the Declination, Inclination, and Reclination of Planes.
92. The declination, inclination, and reclination of planes are frequently taken with a sufficient degree of accuracy by an instrument called the declinator or declinatory.
92.* The construction of this instrument, as somewhat improved by Mr. Jones, is thus: On a mahogany board is inserted a semicircular arch of ivory or box-wood, divided into two quadrants of \(90^{\circ}\) each, beginning frons the middle. On the centre of this arch turns a vertical quadrant, which is divided into \(90^{\circ}\), beginning from the base; on which is a moveable index, with a small hole for the sun's rays to pass through, and form a bright spot on a certain mark. The lower extremity is pointed, to mark the linear direction of the quadrant when applied to any other plane; as this quadrant takes off occasioually, and a plumb-line hangs at the centre, for taking the inclinations and reclinations of planes. On the plane of the board is inserted a compass of points and degrees, with a magnetical needle turning on a pivot over it. See Declinatory.
93. The addition of the moveable quadrant and index considerably extend the utility of the declinator, by rendering it convenient for taking equal altitudes of the sun, the sun's altitude, and bearing, at the same time, \&c. To apply this instrument in taking the declination of a wall or plane: Place the back part of it in a horizontal direction to the plane proposed, and observe what degree or point of the compass the N. part of the needle stands over from the north or the south, and it will be the declination of the plane froin the north or south accordingly. In this case, allowance must be made for the variation of the needle (if any) at the place; and which,
if not previously known, will render this operation very inaccurate.
94. But the most exact way for taking the declination of a plane, or finding a meridian line, by this instrument, is, in the forenoon, about two or three hours before twelve o'clock, to observe two or three heights or altitudes of the sun; and at the same time the respective angular polar distances. Write these down ; and in the afternoon watch for the same, or one of the same altitudes, and mark the angular distances or dis tance on the quadrant; the division or degree exactly between the two noted angular distances will be the true meridian, and the distance at which it may fall from the centre of the divisions, will be the declination of the plane. The reason for ohserving two or three altitudes and angles in the morning is, that in case there should be clouds in the afternoon, we may have the chance of one corresponding altitude.

\section*{Of the right placing of Dials.}
95. The plane on which the dial is to rest being duly prepared, and every thing necessary for fixing it, you may find the hour with tolerable exactness by a large equinoctial ring-dial, and set your watch to it. And then the dial may be fixed by the watch at your leisure.
96. If you would be more exact, take the sun's altitude by a good quadrant, noting the precise time of observation by a clock or watch. Then compute the time for the altitude observed; and set the watch to agree with that time, according to the sun. HIadley's quadrant is very convenient for this purpose: for by it you may take the angle between the sun and lis image reflected from a basin of water; the half of which angle, subtracting the refraction, is the altitude required.
97. This is best done in summer; and the nearer the sun is to the prime vertical, the east or west azimuth, when the observation is made, so much the better. Or, take two equal altitudes of the sun in the same day; one any time between seven and ten in the morning, the other between two and five in the afternoon; noting the moments of these two observations by a clock or watch : and if the watch shows the observations to be at equal distances from noon, it agrees exactly with the sun: if not, the watch must be corrected by half the difference of the forenoon and afternoon intervals; and then the dial may be set true by the watch.
98. For example, suppose you had taken the sun's altitude when it was twenty minutes past VIII in the morning by the watch; and found, by observing in the afternoon, that the sun had the same altitude ten minutes before IV; then it is plain, that the watch was five minutes too fast for the sun: for five minutes after XII is the middle time between VIII h. 20 m . in the morning, and III h. 50 m . in the afternoon; and, therefore, to make the watch agree with the sun, it must be set back five minutes.
99. In -many cases, where the situation is suitable, it is very desirable to have a true meridian line for the regulation of clocks and watches; we shall, therefore, here insert Mr. Ferguson's method of constructing one.

Make a round hole, about a quarter of an inclı diameter, in a thin plate of metal; and fix the plate in the top of a south window, in such a mauner that it may recline from the zenith at an angle equal to the colatitude of your place, as nearly as you can guess: for then the plate will face the sun directly at noon on the equinoctial days. Let the sun shine freely through the hole into the room; and hang a plumb-line to the ceiling of the room, at least five or six feet from the window, in such a place as that the sun's rays, transmitted through the hole, may fall upon the line when it is noon by the clock; and having marked the said place on the ceiling, take away the line.

Having adjusted a sliding bar to a dovetail groove, in a piece of wood about eighteen inches long, and fixed a hook into the middle of the bar, nail the wood to the above-mentioned place on the ceiling parallel to the side of the room in which the window is; the groove and the bar being towards the floor: then hang the plumbline upon the hook in the bar, the weight or plummet reaching almost to the floor; and the whole will be prepared for further and proper adjustment.

This done, find the true solar time by either of the last two methods, and thereby regulate your clock. Then, at the moment of the next noon by the clock, when the sun shines, move the sliding bar in the groove, until the shadow of the plumbline bisects the image of the sun, made by his rays transmitted through the hole, on the floor, wall, or on a white screen placed on the north side of the line ; the plummet at the end of the line hanging freely in a pail of water placed below it on the floor.- But because this may not be quite correct for the first time, on account that the plummet will not settle immediately, even in water; it may be farther corrected on the following days, by the above method, with the sun and clock; and so brought to a very great exactness.

The rays transmitted through the hole will cast but a faint image of the sun, even on a white screen, unless the room be so darkened that no sunshine may be allowed to enter but what comes
through the small hole in the plate. And always, for some time before the observation is made, the plummet ought to be immersed in a jar of water, where it may hang freely; by which means the line will soon become steady, which otherwise would be apt to continue swinging.

\section*{Of the Double Horizontal, the Babylonias and Italian Dials.}
100. Sometimes a stereographic projection of the hour circles, and the parallels of the sun's declination, is added to the gnomonic projection, on the same horizontal plane; the upright side of the gnomon being sloped into an edge, standing perpendicularly over the centre of the projection: so that the dial, being in its due position, the shadow of that perpendicular edge is a vertical circle passing through the sun, in the stereographic projection. The months being duly marked on this dial, the sun's declination, and the length of the day at any time, are had by inspection; as also his altitude, by means of a scale of tangents. But its chief property is, that it may be placed true, whenever the sun shines, without the help of any other instrument.
101. The Babylonian and Italian dials reckon the hours, not from the meridian as with us, but from the sun's rising and setting. Thus, in Italy, an hour before sun-set is reckoned the twentythird hour ; two hours before sun-set the twentysecond hour ; and so of the rest. And the shadow that marks them on the hour-lines, is that of the point of a stile. This occasions a perpetual variation between their dials and clocks, which they must correct from time to time, before it arises to any sensible quantity, by setting their clocks so nuch faster or slower. And in Italy, they begin their day, and regulate their clocks, not from sunset, but from about mid-twilight, when the Ave Maria is said ; which corrects the difference that would otherwise exist between the clock and the dial. The improvements which have been made in all sorts of instruments and machines for measuring time, have rendered these dials of little account.

Dialling in a mine, called also plumbing, is the using of a compass, which the miners call dial, and a long line to know which way the load or vein of ore inclines, or where to shift an airshaft, or bring an adit to a desired place.
Dialling Lines, or Dialling Scales. See Dialling, Index.

Dialling Sector is a sector having upon it, besides other lines, the dialling lines, the construction of which is shown under Dralling. It is evident that some advantage will be obtained in the practice of dialling by having the line placed on a sector. See Sector.

Difalling Sphere, is an instrument made of brass, with several semicircles sliding over one another, on a moving horizon, to demonstrate the nature of the doctrine of spherical triangles, and to give a true idea of the drawing of dials on all manner of planes.
Dialling Trigen, an instrument invented by Mr. Benjamin Martin, consisting of two graduated scales and a plane, used by some in the practice of dialling.
DI'ALECT, n. s. Fr. dialecte ; Span. dialecto; Ital. dialetto; Lat. dialectus; Gr. \(\delta\) бa入єкroo, from \(\delta \iota \alpha\) and \(\lambda_{\dot{\varepsilon} \gamma \omega \text {, to speak. Language; }}\) style ; the mode of expression peculiar to a certain district.
Whea themselves do practise that whereof they write, they change their dialect; and those words they shun, as if there were in them some secret sting.

In her youth
There is a prone and speechless dialect, Such as moves men.

Shakspeare. Measure for Measure.
If the conferring of a kindness did not bind the person upon whom it was conferred to the returns of gratitude, why, in the universal dialect of the world, are kindnesses still called obligations ?

South.

The Tuscan language is greatly admired for its elegance, and the meanest inhabitants of Florence speak a dialect which the rest of Italy are proud to imitate.

Johnson.
Dialect is an appellation given to the lan guage of a province, in so far as it differs from that of the whole kingdom. The term is particularly used in speaking of the ancient Greek, whereof there were four dialects, each of which was a perfect language in its kind, that took place in certain countries. In Great Britain, besides the two dialects of English and Scotch, almost every county has a dialect of its own, all differing considerably in pronunciation, accent, and tone, although one and the same language.
Dialectics, in the literary history of the ancients, that branch of logic which taught the rules and modes of reasoning. See Locic. Zeno Eleates was the first who discovered the natural series of principles and conclusions observed in reasoning, and formed an art thereof in form of a dialogue; which, for this reason, was called dialectica. The dialectica of the ancients is usually divided into several kinds: The first was the eleatica, that of Zeno Eleates, which was threefold; viz. consecutionum, colloqutionum, and contentionum. The first consisting of rules for deducing or drawing conclusions. The second, the art of dialogue; which became of such universal use in philosophy, that all reasoning was called interrogation: then, syllogism being laid aside, the philosophers used dialogue, and required the respondent to conclude and argue from the several concessions made. The last part of Zeno's dialectics, spesıкך, was contentious, or the art of disputing and contradicting; though some, particularly Laertius, ascribe this part to Protagoras a disciple of Zeno.

The second is the dialectica megarica, whose author is Euclid, as of Megara. He gave much
into the method of Zeno and Protagoras; though there are two things appropriated to him : the first, that he impugned the demonstrations of others, not by assumptions, but conclusions; continually making illations, and proceeding from consequence to conscquence: the second, that he set aside all arguments drawn from comparisons of similitude as invalid. He was succeeded by Eubulides, from whom the sophistic way of reasoning is said to be derived. In his time the art is described as manifold : mentiens, fallens, electra, obvelata, arcevalis, cornuta, and calva. See Sopursm.

The third is the dialectica of Plato, which he proposes as a kind of analysis to direct the human mind, by dividing, defining, and bringing things to the first truth; where being arrived, it applies itself to explain sensible things, but with a view to return to the first truth where alone it can rest. Such is the idea of Plato's analysis.
The fourth is Aristotle's dialectica: containing the doctrine of simple words, delivered in his book of Prædicaments; the doctrine of propositions, in his book De Interpretatione; and that of the several kinds of syllogism, in his books of Analytics, Topics, and Elenchuses.
The fifth is the dialectica of the Stoics; which they call a part of philosophy, dividing it into rhetoric and dialectic; to which some add the definitive, whereby things are justly defined; comprehending likewise the canons or criterions of truth. The Stoics, before they treat of syllogisms, have two principal places; the one about the signification of words, the other about the things signified. On occasion of the first, they consider abundance of things belonging to the grammarian's province: what, and how many letters; what is a word, diction, speech, \&c. On occasion of the latter, they consider things themselves, not as without the mind, but as in it, received in it by means of the senses. Accordingly, they first teach, that nil sit in intellectu, quod non prius fuerit in sensu ; ' whatever is in the mind came thither by the senses;' and that aut incursione sui, as Plato, who meets the sight; aut similitudine, as Cæsar by his effigy; aut proportione, either by enlarging as a giant, or by diminishing as a pygmy; aut translatione, as a Cyclops; aut compositione, as a Centaur ; aut contrario, as death; aut privatione, as a blind man.

The sixth is Epicurus's dialectica: who had recourse to certain canons, the collection whereof he called Canonica; and as all questions in philosophy are either de re or de voce, he gave separate rules for each.
 the art of reasoning. See Dialect.

DIALEC'TICAL, adj. Logical; argumentative.

Those dialectical subtleties, that the schoolmen employ about physiological mysteries, more declare the wit of him that uses them, than increase the knowledge of sober lovers of truth.

Boyle.
DIALITHA, in the writings of the ancients, a word used to express the elegant ornaments of the Greeks and Romans, composed of gold and gems. They also called these lithocolla, cemented stones or gems; the gold being in this
case as a cementto hold the stones together. They wore bracelets and other ornaments about their dress : and their cups and table-furniture were of the same kind. The green stones wcre found to succeed best, and the emerald and clirysolite were most in esteem for this purpose. Pliny says of them: ' Nihil jucundius aurum decet,' ' Nothing becomes gold better.'

Díalogue, n.s. \& v.n. \(\}\) and \(\lambda\) oyos, a word. A speaker in a conference; a conference or con versation between two or more persons. To hold a conference.

Will you hear the dialogue that the two learned men have compiled in praise of the owl and cuckow ? Shakspcare.
Dost dialogue with thy shadow?
Id. Timon.
In easy dialogues is Fletcher's praise; He moved the mind, but had not power to raise.

Dryden.

\section*{With the stars}

And the quick Spirit of the Universe
He held his dialogues; and they did teach
To hirn the magic of their mysteries. Byron.
DIALYSIS, in grammar, a mark or character, consisting of two points (*) placed over two vowels, because otherwise they would make a diphthong, as Mosäic, Phäeton, \&c.

DIAMASTIGOSIS, a festival of Sparta, in honor of Diana Orthia, which received that name \(a \pi 0\) tov \(\mu a s c \gamma o v y\), from whipping, because boys were whipped before the altar of the goddess. These boys, called Bomonicæ, were originally free-born Spartans, but in the more delicate ages they were of mean birth, and generally of a slavish origin. This operation was performed by an officer in a severe and unfeeling manner; and that no compassion should be raised, the priest stood near the altar with a small light statue of the goddess, which suddenly became heavy and insupportable if the lash of the whip was less rigorous. The parents of the children attended the solemnity, and exhorted them not to show themselves, either by fear or groans, unworthy of Laconian education. These flagellations were so severe, that the blood gushed in profuse torrents, and many expired under the lash of the whip, without uttering a groan, or betraying any marks of fear. Such a death was reckoned very honorable, and the corpse was buried with much solemnity with a garland of flowers on its head. The origin of this festival is unknown. Some suppose that Lycurgus first instituted it to inure the youth of Lacedemon to bear labor and fatigue, and render them insensible to pain and wounds. Others maintain, that it is a mitigation of an oracle, which ordered that human blood should be shed on Diana's altar; and according to their opinion, Orestes first introduced that barbarous custom, after he had brought the statue of Diana Taurica into Greece. There is another tradition which mentions that Pausanias, as he was offering prayers and sacrifices to the gods, before he engaged with Mardonius, was suddenly attacked by a number of Lydians who disturbed the sacrifice, and were at last repelled with staves and stones, the only weapons with which the Lacedemonians were provided at that
moment. In commemoration of this, therefore, the whipping of boys was instituted at Sparta, and after that the Lydian procession.

DIAM'ETER, n. s.
Diametral, adj.
Diametrally, adv.
Diamet'rical, adj.
Dianet'ricaley through the centre of ilinear figure, divides it into is a pars. Diametral and diametrical is describing or relating to a diameter; also, in a figurative sensc, directly opposite; or perhaps, to the greatest length opposed, as are the points of a circumference touched by the ends of a diameter. Diannetrally and diametrically are also synonymous.

The space between the earth and the moon, according to Ptolemy, is seventeen times the diameter of the earth, which makes, in a gross account, about one hundred and twenty thousand miles. Raleigh.

He made an instrument to know If the Moon shine full or no.
-Tell what her dianeter to an inch is, And prove that she's not made of green cheese.

Hudibras.
He persuaded the king to consent to what was diametrically against his conscience and his honour, and, in truth, his security.

Clarendon.
Christian piety is, beyond all other things, diametrally opposed to profaweness and impiety of actions.

Hammond.
Thus intercepted in its passage, the vapour, which cannot penetrate the stratum diametrically, glides along the lower surface of it, permeating the horizontal interval, which is betwixt the said dense stratum and that which lies underneath it.

Woodward.
That the longer diameter of an ellipsis may be shortened, till it shall differ little from a circle, is indisputably true.

Johnson.
Diameter. The line, which passing through the centre of a circle, or other curvilinear figure, divides it into equal parts. The impossibility of expressing the exact proportion of the diameter of a circle to a circumference, by any received way of notation, and the absolute necessity of bririging it as near the truth as possible, has induced some of the most celebrated men in all ages to endeavour to approximate it. The first who attempted it with success was the celebrated Van Cuelen, a Dutchman, who, by the ancient very laborious method, carried it to thirtysix decimal places; these he ordered to be engraven on his tomb-stone, thinking he had set bounds to improvement. However, the indefatigable Abraham Sharp carried it to seventy-five places in decimals; and since that time it has been carried much further.

DI'AMOND, n. s. \()\) Fr. and Dint. diamant; Di'amonded, adj. \} Ital. Span. and Port.diamante ; Teut. demant, from Lat. adamas, adamantis; Gr. a \(\alpha a \mu \varsigma_{\varsigma}, ~ a \delta \alpha \mu a \nu \tau o \varsigma, ~ i . ~ e . ~ a ~ p r i v a t i v e, ~\) and \(\delta a \mu a \zeta \omega\) to subdue, because too hard to break or mould into shape. See the article below. A precious stone. Diamonded is, slaped like a diamond.

I see how thine eye would emulate the diamond: shou hast the right arch bent of the brow.

Shakspeare.

Lop a bough of a tree, and one shald belold the grain thereof (by some seret cause in nature) diamonded or streaked in the fashion of a lozenge. Fuller.
Certainly the price and virtue of things consist not in the quantity : one diamond is more worth than many quarries of stone. Bp. Hall. Contemplations.

The diamond is by mighty monarchs worn,
Fair as the star that usbers in the morn.
Blackmore.
The lively diamond drinks thy purest rays, Collected light, compact.

Thomson.
Shakspeare opens a mine which contains gold and diamonds in inexhaustible plenty, though clouded by incrustations, debased hy impurities, and mingled with a mass of meaner minerals.

Johnson.
The Diamond is a genus of siliceous earths, called adamas gemma by the Latins, demant by the Germans and Swedes, and diamant by the Frepch, and is the hardest of all stones hitherto discovered. See Adamas. It was thought by the ancients that the diamond became soft and malleable, by steeping it in hot goat'sblood. Diamonds are found only in the East Indies, and in Brasil in South America. The diamond mines are in Golconda, Visapour, Bengal, and the island of Borneo. See these articles. In the mines of Golconda are found a great number of stones from ten to forty carats, and upwards; and it was here that the famous - diamond of Aurcngzebe, the great mogul, was found, which before it was cut weighed 793 carats. The stones of this mine are not very clear ; their water is usually tinged with the quality of the soil : being black where that is marshy; red where it partakes of red; and sometimes green and yellow, where the ground is of these colors. Another defect is a kind of greasiness appearing on the diamond, when cut, which takes off part of its lustre. There are usually not fewer than 60,000 persons, men, women, and children, at work in this mine. When the miners have found a place where they intend to dig, they level another somewhat bigger near it, and enclose it with walls about two feet high, leaving apertures from space to space, to give passage to the water. They dig twelve or fourteen feet deep, and till they find water. Then they cease, and the water thus found serves to wash the earth two or three times, after which it is let out at an aperture reserved for that purpose. This earth being well washed and dried, they sift it in a kind of open sieve, as we do com; then thresh it, and sift it afresh; and lastly, search it well with the hands to find the diamonds. The miners work naked, except that they have a thin linen cloth before them. They have also inspectors, to prevent their concealing diamonds; which, however, they frequently do, by swallowing them when not observed.

Diamonds are commonly clear and pellucid, yet some are met with of a rose color, or inclining to green, blue, or black, and some have black specks. Tavernier saw one in the treasury of the mogul, with black specks in it, weighing about fifty-six carats; and he informs us, that yellow and black diamonds are produced in the mines at Carnatica. Mr. Dutens also relates, that he saw a black diamond at Vienna in the collection of the prince de Lichtenstein. Sorne
damonds have a greenish crust; and of these M. Tavernie: relates, that they burst into pieces while working into a proper shape, or in the very act of polishing on the wheel. In confirmation of this, he mentions a large diamond wortl upwards of \(£ 5000\) sterling, which burst into nine pieces while polishing on the wheel at Venice. The finest diamonds are those of a color like pure water, of a regular form, and free from stains, spots, specks, flaws, and cross veins. Diamonds, tinctured yellow, blue, green, or red, in a high degree, are next in esteem ; but if they are tinctured with these colors only in a low degree, the value is greatly diminished. There are also diamonds of a brown, and some of a dark liue; the frist resembling the brownest sugar-candy, and the latter dusky iron. In the Philosophical Commerce of Arts, Dr. Lewis tells us of a black diamond that he himself had seen. At a distance it looked uniformly black, but on closer examination appeared in some parts transparent, and in others charged with foulness, on which the black hue depended. These gems are lamellated, consisting of very thin plates like talc, but very closely united, the direction of which must be found out by lapidaries before they can work them properly. Such as have their foliated substance not in a flat position, are called by the workmen diamonds of nature.

The first water in diamonds means the greatest purity and perfection of their complexion, which ought to be that of the purest water. When diamonds fall short of this perfection, they are said to be of the second or third water, \&c., till the stone may be properly called a colored one : for it would be an impropriety to speak of an imperfectly colored diamond, or one that has other defects, as a stone of a bad water only.

Diamond is so hard, that it can only be cut and ground by itself and its own substance. To bring it to that perfection which augments its price so considerably, they begin by rubbing several against each other while rough, after having fixed them to the ends of two wooden blocks, thick enough to be held in the hand, with a mixture of rosin and brick dust. It is this powder, thus rubbed off, and received in a little box for that purpose, that serves to grind and polish the diamonds. This is done by a mill, which turns a wheel of soft iron, sprinkled over with diamond dust mixed with oil of olives. The same dust, well ground, and diluted with water and vinegar, is used in the sawing of diamonds, which is performed with an iron or brass wire as fine as a hair. Sometimes, in lieu of sawing, they cleave them, especially if there be any large shivers therein. But the Europeans are not usually daring or expert enough to run the risk of cleaving, for fear of breaking
1. The greatest diamorid ever known belongs to the king of Portugal, and was found in Brasil. It is still uncut; and Mr. Magellan informs us, that it was larger, but a piece was broken off by the ignorant countryman who chanced to find this great gem, and tried its hardness by the stroke of a large lammer upon an anvil. This prodigious diamond weighs 1680 carats; and although it is uncut, Mr. Rome de l'Isle says Vol. VII.
that it is valued at \(£ 224,000,000\) sterling, whiten gives the estimation of \(79 \cdot 36\), or about \(£ 80\) ster. ling for each carat; viz. for the multiplicand of the square of its whole weight. But even in case of any error of the press in this valuation, if we employ the general rule abovementioned, this great gem must be worth, at least, above £3,500,000 sterling. 2. The famous dianond which adorns the imperial sceptre of Russia under the eagle at the top of it, weighs 779 carats, and is worth at least \(£ 4,854,728\) sterl., although it hardly cost 135,417 guineas. This diamond was one of the eyes of a Malabarian idol, named scheringlam. A French grenadier, who had desertel from the Indian service, contrived to becone one of the priests of that idol, from which he stole one of its eyes; he then ran away to the English at Trichinapeuty, and thence to Madras. A ship's captain bought it for 20,000 rupees; afterwar a Jew gave \(£ 17,000\) or \(£ 18,000\) sterling for it: at last a Greek merchant, named Gregory Suffrs offered it to sale at Amsterdam in 1766; and the late prince Orloff purchased it, as he himself tohl Mr. Magellan in London, for the empress Catharine II. The figure and size of this dianıond may be seen in the British Museum in London : it is not of a regular form. 3. The diamond of the great mogul is cut in rose ; weighs 279 ? carats, and is worth 380,000 guineas. This diamond has a small flaw underneath near the bottom; and Tavernier, page 389, who examined it, valued the carat at 150 French livres. Before this diamond was cut it weighed 7935 carats, according to Rome de l'Isle; but Tavernier, vol. 2, p. 339, says, that it weighed 900 carats before it was cut. If this is the same diamond, its loss by being cut was very extraordinary. 4. Another diamond of the king of Portugal, which weighs 215 carats, is extremely fine, and is worth at least 369,800 guineas. 5-7. The diamond of the emperor of Germany weighs \(139 \frac{1}{2}\) carats ; and is worth at least 109,520 guineas. Tavernier says, that this diamond has a little hue of a citron color; and he valued it at 135 livres tournoises the carat. Robert de Berquen the grandson of Louis, says, that this diamond was cut into two: that the grand Turk had another of the same size; and that there were at Bisnagar two large diamonds, one of 250 and another of 140 carats. 8. The diamond of the late king of France, called the Pitt or Regent, weighs \(136 \frac{3}{4}\) carats : this gem is worth at least 208,333 guineas, although it did not cost above the half of this value. 9. The other diamond of the same monarch, called the Sancy, weighs fifty-five carats: it cost 25,000 guineas; and M. Dutens says, that it is worth much above that price.

For the valuation of diamonds of all weights, Mr. Jefferies lays down the following rules.- He first supposes the value when rough to be \(£ 2\) per carat, at a medium; then to find the value of diamonds of greater weights, multiply the square of their weight by 2 , and the product is the value required. Example. To find the value of a rough diamond of two carats, \(2 \times 2=4\), the square of the weight; which, multiplied by 2 gives \(£ 8\), the true value of a rough diamond of two carats. For finding the value of manulac-
tured diamonds, he supposes half their weight to be lost in manufacturing them. To find their value, multiply the square of double their weight by 2 , which will give their true value in pounds. Thus to find the value of a wrought diamond weighing two carats; we first find the square of double the weight, viz. \(4 \times 4=16\); then \(16 \times 2=32\). So that the true value of a wrought diamond of two carats is \(£ 32\).

The names of oriental and occidental, given by jewellers to this and all other precious stones, have a different meaning from the obvious sense; the finest and hardest being always called oriental whether they be produced in the east or not. Those called occidental are of inferior value; but according to Mr. Jefferies, who has written a treatise on the subject, the diamonds of Brasil equal the finest oriental ones. Diamonds are also distinguished according to their figure, by the names of rose diamonds, brilliants, and rough diamonds.

Brilliant diamonds are those cut in faces both at top and bottom; and whose table, or principal face at top, is flat. To make a complete square brilliant, if the rough diamond be not round of a square figure, it must be made so; and if the work be perfectly executed, the length of the axis will be equal to the side of the square base of the pyramid. Jewellers then form the table and collet by dividing the block, or length of the axis, into eighteen parts. They take 5 -18ths from the upper part, and \(1-18\) th from the lower. This gires a plane at \(4-18\) ths from the girdle for the table; and a smaller plane at \(5-18\) ths distance for the collet, the breadth of which will be 1-5th of the breadth of the table. In this state the stone is said to be a complete square table diamond. The brilliant is an improvement on the table diamond, and, according to Mr. Jefferies, was introduced within the last century. To render a brilliant perfect, each corner of the above described table diamond, must be shortened by \(1-20\) th of its original. The corner ribs of the upper sides must be flattened, or run towards the centre of the table 1-6th less than the sides; the lower part, which terminates in the girdle, must be 1-8th of one side of the girdle; and each corner rib of the under sides must be flattened at the top, to answer the above flattening at the girdle, and at the bottom must be 1-4th of each side of the collet. The parts of the small work, which complete the brilliant, or the star, and skill facets, are of a triangular figure. Both of these partake equally of the depth of the upper sides from the table to the girdle; and meet in the middle of each side of the table and girdle, as also at the corners. Thus they produce regular lozenges on the four upper sides and corners of the stone. The triangular facets, on the under sides, joining to the girdle, must be half as deep again as the above facets, to answer to the collet parts. The stone here described is said to be a full-substanced brilliant. If the stone is thicker than in the proportion here mentioned, it is said to be an over-weighted brilliant. If the thickness is less than in this proportion, it is called a spreadbrilliant. The beauty of brilliants is diminished by their being either over-weighted or spread. The true proportion of the exis, or depth of the
stone to its side, is as 2 to 3 . Brilliants are distinguished into square, round, oval, and drops, from the figure of their respective girdles.

Rose diamonds are quite flat underneath, with their upper part cut in divers little faces, usually triangles, the uppermost of which terminate in a point. The depth of the stone from the base to the point must be half the breadth of the diameter of the base of the stone. The diameter of the crown must be \(2-5\) ths of the diameter of the base. The perpendicular, from the base to the crown, must be \(3-5\) ths of the diamcter of the stone. The lozenges which appear in all circular rose diamonds, will be equally divided by the ribs that form the crown; and the upper angles or facets will terminate in the extreme point of the stone, and the lower in the base or girdle.

Rough diamonds are the stones, as nature produces them in the mines. They should be chosen uniform, of a good shape, trausparent, not quite white, and free of flaws and shivers. Black, rugged, dirty, flawey, veiny stones, and all such as are not fit for cutting, they use to pound in a steel mortar made for that purpose; and when pulverised they serve to saw, cut, and polish the rest. Shivers are occasioned in diamonds by this, that the miners, to get them more easily out of the vein, which winds between two rocks, break the rocks with huge iron levers, which shakes, and fills the stone with cracks and shivers.

It has been proved that diamonds are capable of being dissipated, not only by the collected heat of the sun, but also by the heat of a furnace. Boyle says, that he perceived certain acrid and penetrating exhalations from diamonds exposed to fire. A diamond by exposure to a concave speculum, the diameter of which was forty inches, was reduced to an eighth part of its weight. In the Giornale de Letterriti d'Italia, there is a relation of experiments made on precious stones, by order of the grand duke of Tuscany, with a burning lens, the diameter of which was two-thirds of a Florentine ell, near the focus of which was placed another smaller lens. By these experiments we find, that diamonds were more altered by solar heat than most of the other precious stones, although not the least appearance of a commencing fusion was observable. A diamond weighing thirty grains, thus exposed during thirty seconds, lost its color, lustre, and transparency, and became of an opaque white. In five minutes bubbles appeared on its surface ; soon afterwards it burst into pieces, which were dissipated; and the small fragment which remained was capable of being crushed into fine powder by the pressure of the blade of a knife. Neither. the addition of glass, flints, sulphur, metals, or salt of tartar prevented this dissipation of diamonds, or occasioned any degree of fusion. By other experiments made by order of the emperor Francis I. we find, that diamonds were entirely dissipated by having been exposed in crucibles to a violent fire of a furnace during twenty-four hours; while rubies by the sanie heat were not altered in weight, color, or polish. By exposing diamonds during two hours only at a tume, the following alterations produced on them by fire were observed. First, they lost their polish
then they were split into thin plates; and, lastly, totally dissipated. By the same fire, emeralds were fused. See Magasin de Hambourg, tom. xviii. The action of fire on diamonds was, notwithstanding the above-mentioned experiments, doubted in France, where numerous experiments have been made. M. D'Arcet, found, not only that diamonds included in porcelain crucibles, closed or covered with perforated lids, and exposed to the long and intense heat of a porcelain furnace, were perfectly dissipated ; but also, that these stones could, in a few hours, be totally volatilised with a much inferior degree of heat, by exposing them in a coppel, under the muffle of an assay furnace. In this experiment, he observed that the dissipation was gradual, and that it was effected by a kind of exfoliation. The dissipation of diamonds exposed in coppels was confirmed by M. Macquer, who farther observed, that the diamonds were, before the dissipation began, rendered, by the fire, brilliant and shining, as it were, with a phosphoric light. To determine whether the dissipation of diamonds was effected by their reduction into vapor, or by a combustion or other effect of air upon them, Messrs. Lavoisier, Macquer, and Cadet, exposed diamonds to intense heat in an earthen retort, during several hours, but without any other effect than that their polish was destroyed, and about 1-7th of their weight diminished. M. Mitouard put diamonds in a tobacco-pipe filled with pounded charcoal accurately closed with lute. He further secured the diamonds from access of air or flame, by placing the tobacco-pipe in a crucible, to which another crucible was inverted and carefully luted. The diamonds, thus excluded from external air, having been exposed to the most intense heat which could be excited in a well constructed furnace, were not thereby altered or diminished.

Lavoisier, in a memoir published in 1772, showed that when the diamond is burnt, carbonic acid gas is obtained, and that there is a striking analogy between it and charcoal. In 1785 Guyton Morvau found that the diamond is combustible when dropped into melted nitre; that it burns without leaving any residuum, and in a manner analogous to charcoal. In 1797 Mr . Tennant repeated this experiment with much more precision; and the conclusion he drew from it was, that when a diamond is burnt, the whole of the product is carbonic acid gas; that a given weight of diamond yields just as much carbonic gas as the same weight of charcoal; and that diamond and charcoal are both composed of the very same substance.

Sir Humphry Davy, from the action of potassium on it, and its non-conduction of electricity, suggested in his third Bakerian lecture, that a minute portion of oxygen might exist in it; and in his new experiments on the fluoric compounds he threw out the idea, that it might be the carbonaceous principle, combined with some new, light, and subtle element, of the oxygenous and chlorine class.

This unrivalled chemist, during his residence at Florence in March, 1814, made several experiments on the combustion of the diamond and of plumbago, by means of the great lens in
the cabinet of natural history; the - 1 m : insen: ment as that employed in the first trials on the action of the solar heat on the diamond, inst tuted in 1694 by Cosmo III, grand dukn Tuscany. He subsequently made a scries of researclies on the combustion of different kint of cliarcoal at Roine. His mode of investigation was peculiarly elegant, and led to the ino it decisive results.

From the results of his different experiments, conducted with the most unexceptionable precision, it is demonstrated, that diamond affords no other substance by its combustion than pure carbonic acid gas; and that the process is inerely a solution of diamond in oxygen, without any change in the volume of the gas.

Diamond, in the glass trade, an instrument used for squaring the large plates or pieces; and, among glaziers, for cutting their glass. These sorts of diamonds (which are small broken pieces of real diamonds), are differently fitted up. To be used for large pieces, as lookingglasses, \&c. they are set in an iron ferrule, abont two inches long, and a quarter of an inch in diameter, the cavity of the ferrule being filled up with lead, to keep the diamond firm : therc is also a handle of box or cbony fitted to the ferrule, for holding it by. An application of the diamond, of great importance in the art of engraving, has been also made within a few years ly the late Wilson Lowry, the eminent engraver, and first inventor of the mcchanical methods now used in that part of the process called etching. He applied them to the purpose of drawing or ruling lines, which are afterwards to be deepened by aqua-fortis. Formerly steel points, called etching-needles, were used for that purpose, but they soon became blunt by the friction against the copper.

Diamond, in heraldry, a term used for expressing the black color in the achievements of peerage. Guillim does not approve of blazoning the coats of peers by precious stones, instead of metals and colors; but the English practice allows it. Morgan says the diamond is an emblem of fortitude.

Dramonds, Cornisif, a name given by many people to the crystals found in digging the inines of tin in Cornwall.

Diamoni IArbour, a harbour in the Ganges, or IIoogly River, about thirty-four miles below Calcutta. The Company's ships are generally unloaded here, and take in their lomewardbound cargoes. The place is unhealthy; and owing to the heavy exhalations the sleeping in it is next to certain death. The country on both sides of the river abounds with tigers. The village is poor; but at Fulta, twelve miles up the river, there is a market and a good inn.

DIANA, the goddess of hunting. According to Cicero, there were three of this name: a daughter of Jupiter and Proserpine, who became mother of Cupid-a daughter of Jupiter and Latona-and a daughter of Upis and Glauce. The second is the most celebrated, and to her the ancients allude She was early averse to marriage, and obtained leave of her father to live in perpetual celibacy, and to preside over the pains of women. To shun the society of
men she devoted herself'to hunting, and was always accompanied by a number of chosen virgins, who, like herself, abjured marriage. She is represented with a quiver, attended with dogs, and sometimes drawn in a chariot by two white stags. Sometimes she appears with wings, holding a lion in one hand and a panther in the other, with a chariot drawn by two heifers, or two horses of different colors. She is tall, her face something manly; her legs are bare, wellshaped, and strong, and her feet covered with a buskin. Slie received many surnames, particularly from the places where her worslip was established, and from the functions over which she presided. She was called Lucina, Ilythia, or Juno Pronuba, when invoked by women in child-bed; and Trivia, when worshipped in the cross-ways, where her statues were generally erected. She was supposed to be the same as the moon, and Proserpine or Hecate; hence she was called Triformis; and some of her statues represented her with three heads,--that of a horse, a dog, and a boar. Her powers and functions under these three characters have been expressed in these lines :-
Terret, lustrat, agit, Proscrpina, Lana, Diana, Ina, suprema, feras, sceptro, fulgore, sagitta.
She was also called Agrotera, Orthia, Taurica, Delia, Cynthia, Aricia, \&c., and supposed to be the same as the Isis of the Egyptians, whose worship was introduced into Greece with that of Osiris. When Typhon waged war against the gods, Diana metamorphosed herself into a cat to ávoid his fury. The most famous of her temples was that of Ephesus. See Ephesus. She was there represented with a great number of breasts, and other symbols of Cybele, or the earth. Though the patroness of chastity, yet she is said to have descended from her dignity to enjoy the company of Endymion, and to have granted favors to P’an and Orion. The inhabitants of Taurica were particularly attached to the worship of this goddess, and offered on her altar all the strangers that were shipwrecked on their coasts. Her temple in Aricia was always served ty a priest who had murdered his predecessor; and the Lacedæmonians yearly offered her human victims till the time of lycurgus, who changed this barbarous custom for the sacrifice of flagellation. See Diamastigosis. The Athenians generally offered her goats; and others a white kid, a boar pig, or an ox. Among plants, the poppy and the dittany were sacred to her. She had oracles in Egypt, Cilicia, and Ephesus.

DIANE FANUM, in ancient geography, a promontory of Bithynia; now called Scutari, a citadel, opposite to Constantinople, on the east side of the Bosphorus Thracius.

DIANDRIA, from ics twice, and \(\alpha \nu \eta \rho\) a man, the second class in Linnæus's sexual system, consisting of hermaphrodite plants, which have flowers with two male organs. See Botany.

DIANIUM, in ancient geography, a town in Valentia, famous for a temple of Diana, whence the name; now called Denia.

DIANTHERA, in botany. See Justicia.
DIANTHUS, the clove-gilliflower, carnation, pink, sweet-william, \&c., a genus of the digynia
order, and decandria class of plants; natural order twenty-second, caryophyllei : cal. cylindrical, and monophyllous, with four scales at the base. There are five petals with narrow heels; the capsule is cylindrical and unilocular. There are many species, but not above four that have much beauty as garden flowers. But each of these furnishes several beautiful varieties: viz.
1. D. barbatus, or bearded dianthus, commonly called sweet-william. This rises with many thick leafy shoots, crowning the root in a cluster close to the ground; garnished with spearshaped evergreen leaves, from half an inch to two inches broad. The stems are upright and firm, branching erect two or three feet high, having all the branches and main stem crowned by numerous flowers in aggregate clusters of different colors and variegations.
2. D. caryophyllus, clove-gilliflower, including all the varieties of carnation. It rises wth many short trailing shoots from the root, garnislied with long, very narrow, evergreen leaves; and amidst them upright slender flower-stalks, from one to three feet high, emitting many side shonts, all of which, as well as the main stalk, are terminated by large solitary flowers, having short oval scales to the calyx, and crenated petals. The varieties of this are very numerous, and unlimited in the diversity of flowers.
3. D. Chinensis, Chinese, or Indian pink, is an annual plant, with upright firm flower-stalks, branching erect on every side, a foot or fifteen inches high, having all the branches terminated by solitary flowers of different colors and variegations, appearing from July to November.
4. D. deltoides, or common pink, rises with numerous short leafy sloots, crowning the root, in a tufted head close to the ground, closely garnished with small narrow leaves, and from the ends of the shoots many erect flower-stalks, from about six to fifteen inches high, terminated by solitary flowers of different colors, single and double, and sometimes tirmly variegated. This species is perennial, as all the varieties of it commonly cutivated also are.

Dl'APASE, or DIAPA'son, n. s. Gr. ס̌ea \(\pi a \sigma \omega \nu\). A chord including all tones. The first is the old word.

The sweet numbers and melodious measures,
With which I wont the winged words to tie,
And make a tuneful diapase of pleasures,
Now being let to run at liberty.
Spenser.
It discovereth the true coincidence of sounds intc diapasons, which is the return of the same sound.

Bacon.

\section*{Harsh din}

Broke the fair musick that all creatures made
To their great Lord, whose love their motion swayed In perfect diupason, whilst they stood
In first obedience, and their state of good. Milton.
From harmony, from heavenly harmony,
This universal frame began ;
From harmony to harmony
Through all the con:pass of the notes it ran, The diapason closing full in man. Dryden.
Diapason denotes a chord which includes all tones : it is the same with that we call an eighth, or an octave; because there are but seven tones or notes, and then the eighth is the same again with the first.

Hurris

How musical! when all-devouring Time, Here sitting on his throne of ruins hoar, While winds and tempests sweep his various lyre, How sweet thy diapason, Melancholy. Byron.
Diapason among musical instrument makers, a kind of scale whereby they adjust the pipes of their organs, and cut the holes of their hautboys, flutes, \&c., in due proportion for performing the tones, semi-tones, and concords just.

Diapason, in music, a musical interval by which most writers on music express the octave of the Greeks.

Diafason Diaex, a kind of compound concord, of which there are two sorts: the greater, which is in the proportion of 10.3 ; and the lesser, in that of 16.5 .

Diapason Diapente, a compound consonance in a triple ratio, as \(3-9\). This interval, says Martianns Capella, consists of nine tones and a semi-tone, nineteen semi-tones, and thirtyeight dieses. It is a symphony made when the voice proceeds from the first to the twelfth sound.

Diapason Diatessaron, a compound concord, founded on the proportion of eight to three. To this interval Martianus Capella allows eight tones and a semi-tone, seventeen semitones, and thirty-four dieses. This is when the voice proceeds from its first to its eleventh sound. The moderns would rather call it the eleventh.

DIAPEDESIS, in medicine, a transudation of the fluids through the sides of the vessels that contain them, occasioned by the blood's becoming too much attenuated, or the pores too open.

DIAPENTE, in ancient music, an interval marking the second of the concords, and with the diatessaron an octave. This is what in modern music is called a fifth.

DI'APER, n.s. \&v.a. Fr. diapre; so called from Ypres (D'Ypres), as Denim from Nismes. Linen cloth woven in flowers, and other figures; the finest species of figured linen after damask. Hence, as a verb, to diversify or variegate with flowers, or to imitate diaper.

Not any damsel, which ber vaunteth most
In skilful knitting of soft silken twine;
Nor any weaver, which his work doth boast
In diaper, in damask, or in lyne,
Might in their diverse cunning ever dare
With this so curious net-work to compare.
Spenser.
For fear the stones her tender foot should wrong, The ground he strewed with flowers all along, And diapered like the discoloured mead.
\(I d\).
Let one attend him with a silver bason Full of rose-water, and bestrewed with flowers;
Another bear the ewer, a third a diaper.
Shakspeare.
If you diaper upon folds, let your work be broken, and taken, as it were, by the half; for reason tells you, that your fold must cover somewhat unseen.

Peacham on Drawing.
Flora used to cloath our grand.dame earth with a new livery, diapered with various flowers and chequered with delightful objects. Howel's Vocal Forest.
DIAPHAN'IC, adj.) Gr. \&ıaфaveєa. Trans-
Diaph'anous, adj. parency: pellucidness; Diaphanéity, n.s. power of transmitting light.

A ristotle calleth light a quality inherent or eleaving to a diaphanous body.

Raleigh.

Air is an element superior, and lighter than water, through whose vast, open, subtile, diaphanick, or transparent body, the light, afterwards created, easily transpired.

Id.
Because the outward coat of the eye ought to be pellucid, to transmit the light, which, if the eyes should al ways stand open, would be apt to grow dry and shrink, and loose their diaphancity; therefore are the eyelids so contrived as often to wink, that they so may, as it were, glaze and varnish them over with the moisture they contain.

Ray.
Diaphore'sis, in medicine, an elimination of the humors in any part of the body through the pores of the skin. See Mebtcine,

DI'APIIRAGM, n.s. Gr. ôtappayرa. The midriff which divides the upper cavity of the body from the lower. Any division or partition which divides a hollow body.

It consists of a fasciculus of bodies, round, about one sixth of an inch in dianeter, hollow, and parted into numerous cells by means of diaphrugms, thick set throughout the whole length of the body.

Woodward on Fossils.
Diaphragm, or Diaphragma. See Anaтомy. Plato, as Galen informs us, first called this muscle diaphragm, from the verb ouaфpartesv, to separate or be between two.

DIAPHORE'S1S, itaфооŋбts, in rhetoric, a figure expressing the hesitation or uncertainty of the speaker. It is most naturally placed in the exordium of a discourse. We have an example in IIomer, where Ulysses, about to relate his sufferings to Alcinous, begins thus:
 Quid primum, quid deinde, quid postremo alloquar?

DIAPHORET'lCK, adj. Gr. סıaфop \(\quad \iota \kappa\) к.s. Sudorific; promoting a diaphoresis or perspiration; causing sweat.

A diaphoretick medirine, or a sudorific, is something that will promote sweating.

Watts.
Diaphoreticks, or promoters of perspiration, help the organs of digestion, because the attenuation of the aliment makes it perspirat,le.

Arbuthnot.
DIARBECK, Diarbfere, or Diarbekir, an extensive province of Asiatic Turkey; comprehending, in its greatest extent, Diarbekir, properly so called, Yerak or Chaldea, and Curdistan, which were the ancient countries of Mesopotamia, Chaldea, and Assyria, with Babylon. See Kurdistan. It is called Diarbeck, and Diarbeker, from the word dhyar, a duke or ruler, and beker, country. It extends along the banks of the Tigris and Euphrates from N. N. W. to south-east, that is, from Mount Taurus, which divides it from Turcomania on the north, to the inmost recess of the Persian gulf on the south, about 600 miles; and from east to west, that is, from Persia on the east, to Syria and Arabia Deserta on the west, in some places 200 , and in others about 300 , miles; but in the southern or lower parts not above 150. It extends also from the thirtieth to the thirty-eighth degree of latitude, and lies under part of the fifth and sixth climates, whose longest day is about fourteen hours and a half, and enjoys a good temperature of air, as well as in the creater part of it a rich and fertile soil; alhough there are some large desert tracts in it. Having a cou-
siderable frontier towards Persia, it is well guarded and fortified; but its many ancient cities are at present dwindled into heaps of ruins. Diarbekir, Bagdad, and Mosul, are however considerable places. The rivers Euphrates and Tigris have almost their whole course through this country.

Diarberir, or Diarbeck Proper, is bounded on the north by Turcomania, on the west by Syria, on the south by part of Arabia Deserta and Yrack Proper, and on the east by Curdistan. It is the same country that is called Padanaram by Moses, signifying fruitful, which it still is in a very high degree, especially on the north side; where it yields corn, wine, oil, and fruits, in great abundance. Christianity flourished here in an eminent manner, till its purity was sullied about the beginning of the sixth century by the heresy of the Jacobites, whose patriarch resided here at a very recent period. It is now a pachalic or government of Turkey, subdivided into twelve districts. The principal towns are Diarbekir, Mosul, Orsa or Edessa, Nisibis, Gezir, Merdin, Zibin, Amadia, and Carasara; all of little note except Diarbekir and Mosul.

Diarbekir, Diabbeck, or Carahmed, the capital of the above district, is situated in a delightful plain, on the banks and near the head of the Tigris, about 155 miles or fifteen caravan days' journey, north-east of Aleppo. A bridge of ten arches over the liver is said to have been built by order of Alexander the Great. It is one of the richest and most mercantile cities in all Asiatic Turkey; and was once well fortified, being encompassed with a double wall, the outermost of which was flanked with seventy-two towers; but the whole is now in a very dilapidated state. The streets are narrow, but the houses, being of stone and lofty, look respectable; and it has several stately piazzas or bazaars, well stored with all kinds of merchandise, and twelve magnificent mosques, said to have been formerly Christian churclies. The Armenian cathedral is a handsome structure, the roof of which is supported by two rows of pillars; and the whole floor covered by carpets. A very handsome fountain in the court in front throws the water to a considerable height. Extensive manufactures are carried on here in iron, copper, silk, wool, and cotton; but its chief article of trade and manufacture is Turkey leather, of which the sale is immense. It has also a manufacture of fine dyed linen and cotton cloths, which are nearly in the same request. There are many large and convenient inns on both sides of the river, for the caravans that go to and from Persia; and the place is much frequented by pilgrims of all nations and religions. The Turkish ladies are said here to enjoy an extraordinary degree of liberty, and are commonly seen on the walks of the city in company with the Christian women, with whom they live in great friendship. The citizens generally are said to be polite, affable, and courteous. A basha resides here, who has very extensive jurisdiction. He has commonly a hody of 20,000 horse under him. The adjacent territory is very rich and picturesque; the bread, wine, flesh, and fruits, excellent. The inhabitants, who consist of Turks, Armenians, Kurds,

Catholics, and Jacobites, are computed at 80,000 hy Gardanne, at 33,000 by Mr. M‘Donald Kinneir; the real number may probably be a medium between the two. Diarbekır is sixty miles from Merdin, 172 from Malatia, and 540 E.S.E. of Constantinople.

DIARRHE'A, n. s.) Gr. סtapgoty. A flux,
Diarrnétick, adj. \(\}\) productive of frequent stools. The adjective signifies purgative.

In the midst of that service was I surprised with a miserable distemper of body; which ended in a diartheea biliosa, not without some beginning and further threats of a dysentery; wherewith I was brought so low, that there seemed small hope of my recovery.

Bp. Hall's Account of Himself.
Millet is diarrhcetick, cleansing, and useful in diseases of the kidneys.

Arbuthnot.
During his diarrhcea I healed up the fontanels.
Wiseman.
It is certain, that much swimming is the means of stopping a diarrhcea, and even of producing a constipation.

Franklin.
Diarriga, in medicine, an excessive purging, distinguished by frequent stools with the natural excrement, not contagious, and seldom attended with pyrexia. It is a genus of disease in the class neuroses, and order spasmi of Culler, containing the following species:1. Diarrhea crapulosa. The feculent diarrhœa, from crapulus, one who overloads his stomach. 2. Diarthœa biliosa. The bilious, from an increased secretion of bile. 3. Diarrhœa mucosa. The mucnus, from a quantity of slime being voided. 4. Diarrhœea hepatirrhcea. The hepatic, in which there is a quantity of serous matter, somewhat resembling the washings of flesh, voided; the liver being primarily affected. 5 . Diarrhoa lienterica. The lientery; when the food passes unchanged. 6. Diarrhea coliaca. The cceliac passion: the food passes off in this affection in a white liquid state like chyle. 7. Diarrhrea' verminosa Arising froon worms.

II'ARY, n. s. Lat. dzarium. An account of the transactions, accidents, \&c, of every day; a journal.

In sea voyages, where there is nothing to be seen but sky and sea, men make diaries; but, in land-travel, wherein so much is to be observed, they omit it.
I go on in my intended diary.
Bacon.
DIASTOLF \(n\) a DIA NoLE, n. s. \(\Delta a s o \lambda \eta\). A figure in rhetoric, by which a short syllable is made long: also, the dilation of the heart.

The systole seems to resemble the forcible bending of a spring, and the diastole its flying out again to its natural state.

Ray on the Creation.
If systole or diastole move
Quickest when he's in wrath or love. Hudibras.
DI'ASTYLE. \(\Delta \iota a\) and \(5 v \lambda o s\), a pillar. A sort of edifice, where the pillars stand at such a distance from one another, that three diameters of their thickness are allowed for intercolumniation.

Harris.
DIATES'SERON, u.s. Of \(\delta u a\) and \(\tau \varepsilon \sigma \sigma \varepsilon \rho a\), four. An interval in music, composed of one greater tone, one lesser, and one greater semitone; its proportion being as four to three. It is called, in musical composition, a perfect fourth. Harris.

Datmists, Asthenic, is described to be that state of the body, wherein there is 'too little excitement of the whole living system, arising from the debilitating noxious powers, impairing all the functions, disturbing some, giving a false appearance of increasing others, but always debilitating.'

Diatuesis, Stilenic, is that state of the body, wherein 'all the functions are first increased; a disturbance or irregularity then takes place in some; others are impaired; but not, as long as this diathesis lasts, by a debilitating operation.'

DIATON'IC. Of siarovos. The ordanary sort of music which proceeds by different tones,
either in ascending or descending. It contains only the two greater and lesser tones, and the greater semi-tone.

Harris.
Dratosic, in music, is compoundel of two Greek words, viz. the preposition \(\hat{c} a\), signifying a transition from one thing to another, and the substantive rovos, importing a given degree of tension and musical note. It is indifferently applied to a scale or gamut, to intervals of a certain kind, or to a species of music, whether in nuelody or harmony, composed of these intervals. We copy the following scale of the Greek diatonics from Dannely's Musical Dictionary:-

DIAUGOPHRAGMIA, in natural history, a genus of fossils of the order of septarix, whose partitions, or septa, consist of spar with an admixture of crystal. Of this genus there are three species: 1. A red kind, with brownish-yellow partitions; 2. A brownish-yellow kind, with whitish partitions; 3. A bluish-white kind, with straw-colored partitions.

DIAZ (John), a martyr to the frantic zeal of his brother against the protestant religion, was born in the beginning of the sixteenth century, at Cuenza in Spain. He studied theology at Paris, and under the celebrated Calvin at Geneva. He was the companion of Bucer at the Ratisbon conference; and, going soon after to Neuburgh, was visted by his brother and murderer Alphonsus Diaz, an advocate of the court of Rome. This zealot, failing in his endeavour to reclaim him to popery, immediately plotted against his life. He pretended to close his visit and take his departure, but secretly returned at break of day to the apartment of Diaz, with a companion, who affected to be the bearer of a letter. Gaining admission on this pretence, while Diaz was reading the paper presented, Alphonsus's comrade
gave him a death-blow on the head with an axe, and fled. This murder took piace in March 27th, 1546; and, though the assassins were taken, the emperor Charles V. put a stop to the proceedings against them. The miserable fratricide afterwards hanged himself. An account of his death was composed in Latin, under the title of Historia vera de Morte J. Diazii. It produced a great sensation at the time. J. Diaz was the author of A Summary of the Christian Religion.

DIAZEUTIC Tone. Of \(\delta \epsilon \alpha\) and \(\xi_{\varepsilon v \gamma \nu v \mu}\). In the ancient Greek music, it disjoined two fourths, one on each side of it ; and which, being joined to either, made a fifth. This is, in our musick, from A to B .

They allowed to this diazeutick tone, which is our La, Mi , the proportion of nine to eight, as being the unalterable difference of the fifth and fourth. Hagris.

\end{array}\right\} \begin{gathered}
\text { Dut. dipfel, } \\
\text { DIB'BLER. }
\end{gathered}
\] ner; from dabble, Junius; or a corruption of dog-bill, according to Mr. Thomson. A small spade; a pointed instrument with which are made holes for planting or sowing. The verb is of recent introduction.

Through cunning, with dibble, rake, mattock, and spade,
By linc and by level trim garden is made.
Tusser's Husbandry.
Wheat is generally dibbled in October, on land newly broken up from clover-ley a man with an iron dibble, about three feet long, in each hand, walking backward and making two rows of holes in each furrow, slice, or flag; they are made about four inches distant from cach other and from one to two inches deep. The dibbler is followed by two or three women, boys, or girls, who drop two or three grains into each hole.

Dixon's Agriculture.
DIBDIN (Charles), a celebrated writer of :nuys and musical composer, was the son of a silversmith of Southampton, where he was born about the year 1745 . He was intendel for the church, and received his early education at Winchester school. At the age of fourteen, however, he became a candidate for the situation of organist in a Hampshire village, and, relinquishing all views of entering the church, came at the invitation of an elder brother, a captain in the West India trade, to London. Here he was first engaged in composing ballads, and tuning pianofortes. He made his first appearance as a performer in 1762, at the Richmond theatre, and two years afterwards appeared on the London stage, as Ralph in The Maid of the Mill. The chief part of the music to Lionel and Clarissa, and the whole of that to the musical entertainment of The Padlock, now established his fame as a composer for the drama, which he rapidly increased. The most celebrated of his pieces, perhaps, are The Deserter, The Waterman (the dialogue of which is also his production), and the Quaker, which appeared between 1772 and 1775. Mr. Dibdin never shone as an actor; and, having quarelled with Garrick and some other proprietors of the London theatres, he quitted the stage altogether, and made a successful attempt to entertain the public by accompanying himself, iu his own songs, on the piano-forte. His saloon was near Leicester square, and known by the title of Sans Souci. His songs and entertainments produced at this time are said to have exceeded 1200. His sea songs are considered very superior: witness the immense popularity of his Tom Bowling, Poor Jack, \&c. The former is said to have been a tribute of affection to the memory of his brother. Imprudence, however, always kept Dibdin poor; and, though assisted by government and many opulent individuals, he died in indigent circumstances in 1814. An edition of his best songs has been published by Dr. Kitchiner.

DIBRA, a town of European Turkey, in Macedonia, near Albania. It was besieged by the Turks in 1442, who conveyed a dead dog into the only spring that supplied the town with water, which compelled the inhabitants to surrender. It is thirty miles north of Akrida.

DIB'STONE, n.s. A little stone which children throw at another stone.

I have scen little girls exercise whole hours together, and take abundance of pains, to be expert at dibstones.

Locke
DICAC'ITY, n. s. Lat. dicacitas. Pertness; sauciness.

DICÆARCHUS, a scholar of Aristotle, who composed a great number of books which were valued highly by Cicero and Atticus. He wrote a work to prove that men suffer more mischief from one another than from all evils beside. Another work he composed, concerning the republic of Lacedæmon, was read every year before the youth in the assembly of the ephori. Geography was one of his principal studies, on which science there is a fragment of a treatise of his still extant, and preserved among the Veterıs Geographix Scriptores Minores.

\] ble. A dicer; a gamester.

In prison! certes nay, but in paradise; Wel hath Fortune yturned thee the dise
That h'ath the sight of her, and I the absence. Chawcer's Canterbury Tales.
They make marriage vows
As false as dicers' oaths. Shakspeare. Hamiet.
I was virtuously given as a gentlcman need to be; virtuous enough; swore little; diced not above seven times a week.

Shakspeare Henry IV.
It is above a hundred to one against any particular throw, that you do not cast any given set of faces with four culical dice, because there are so many several combinations of the six faces of four dice. Bentley.

I look upon every man as a suicide from the moment he takes the dicebox desperately in his hand; and all that follows in his career from that fatal time is only sharpening the dagger before he strikes it to his heart.

Cumberland.
Drce, among gamesters, cubical pieces of bone or ivory, marked with dots on each side of their faces, from one to six. Sharpers have several ways of falsifying dice: by drilling and loading them with quicksilver; by filing and rounding them, \&c.

The dice box is a narrow deep cornet, channelled within. It answers to what the Romans called fritillus; whence, crepitantes fritilli: and, in Seneca, resonante fritillo. Besides the fritillus, the Romans, for greater security, had another kind of dice-box called pyrgus, \(\pi v \rho \gamma o s\), and sometimes turricula. It was placed immoveable in the middle of the table, being open at both ends, and likewise channelled within; over the top was placed a kind of funnel, into which the dice were cast ont upon the fritillus; whence descending, they fell through the bottom on the table; by which all practising on them with the fingers was effectually prevented. For want of some contrivance of this kind, our sharpers have opportunities of playing a variety of tricks with the box.

DICH. This word seems corrupted, says Dr Johnson from dit for do it.

Rich men \(\sin\), and I eat root :
Much ond dich thy good heart, Apemantus.
Shakspeare. Timon.
DICHOT'OMY, n. s. \(\Delta \iota \chi\) огорıа. Distribution of 1 deas by pairs.

Some persons have disturbed the order of nature, and abused their readers by an affectation of dichotomies, trichotomies, sevens, twelves, \&c.

Watts.
Dichoтому, a term used by astronomers for that appearance on the moon, wherein she is
bisected, or shows just half her disk. In this situation the moon is said to be in a quadrate aspect, or to be in her quadrature.

DICK'ENS. A kind of adverbial exclamation, importing, as it seems, much the same with the devil. Bely. dicker.

Where had you this pretty weathercoek!
I cannot tell what the dickens his name is my husband had him of. Shaks. Merry Wives of Windsor.

What a dichens does he mean by a trivial sum ? But ha'n't you found it, Sir?

Congreve. Old Bachelor.
DICKINSON (Edmund), a celebrated English physician and chemist, born in 1624 . He studied and took his degrees at Merton College, Oxford; and, in 1655, published there his Delphi Pheenicizantes, \&c., a learned piece, in which he attempted to prove, that the Greeks borrowed the story of the Pythian Apollo, and all that rendered the oracle at Delphi famous, from the Holy Scriptures, and from the book of Jushua in particular. He practised physic first at Oxford; but, removing to London in 1684, and restoring the earl of Arlington from a dangerous illness, he was promoted to be physician in ordinary to Charles II.; and continued in his appointments by his successor. After the Revolution, being afflicted with the stone, he retired from practice, and died in 1707. He published Physica Vetus et Vera, \&c., containing a system of philosophy chiefly framed on principles collected from the Mosaic history.

DICTAMNUS, white dittany, or fraxinella, a genus of the monogynia order and decandria class of plants; natural order twenty-sixth, multisiliquæ: cal. pentaphyllous; the petals are five, and patulous; the filaments sprinkled with glandulous points, the capsules five, coalited. There is only one species. It has thick, penetrating, perennial roots, collected into a head at top, sending up erect stalks annually two or three feet high, garnished with pinnated alternate leaves, of three or four pair of oblong stiff lobes, terminated by an odd one; and the stalks crowned by long pyramidal loose spikes of flowers, of white, red, and purple colors. They are very ornamental plants, and succeed in any of the common borders. The dittany which grows in Crete, Dalmatia, and the Morea, formerly constituted an article in the materia medica. The leaves in smell and taste somewhat resemble lemon thyme, but have more of an aromatic flavor, as well as a greater degree of pungency; when fresh, they yield a considerable quantity of essential oil.

\footnotetext{
DIC"TATE, v. a. \& n.s.
Dicta'tion, \(n\). \(s\).
Dicta'ror,
Fr. dicter; Ital.
Dictato zial, adj.
Dicta'torsuip, n. s. dettare; Lat. dictare; from dico, à to spen Chald. P , to see; Aspeak. Ro declare or prescribe with authority. As a substantive, dictate is the rule or maxim laid down; dictation, the act of dictating; dictator, one who delivers rules or orders; and particularly a Roman magistrate invested with absolute authority in certain exigencies. The other derivatives follow these meanings.
}

This is the solemnest title they ean eonfer under the princedom, being indeed a kind of dictatorship.

Wotton.
Unanimous they all conmit the care
And managenent of this main enterprise
To him their great dictator.
Milton.
He that was fetched from the plough to be made dictator, had not half his (a clown's) pride and inso. lence.

Butler.
Kind dictators made, when they eame home, Their vanquisbed foes free citizens of Rome.

Waller.
This is that perpetual dictatorship which is exercised by Lueretius, though often in the wrong. Dryden.

Those right helps of art, which will scarce be found by those who servilely confine thenselves to the dictates of others.

Loctue.
Then let this dictate of my love prevail.
Pope's Ol.
That riches, honours, and outward splendour, should set up persons for dietators to al! the rest of mankind, is a most slianeful invasion of the rimht of our understanding.

Watts.
Judgment, like other faeulties, is improved by practice, and its advancement is hindered by submission to dictatorial decisions, as the memory grows torpid by the use of a table-book.

Johinson.
Thou, who with thy frown
Annihilated senates-Roman, too
With all thy viees, for thou didst lay dorn
With an atoning smile a more than carthly crownThe dictatorial wreatl,-couldst thot divine
To what would one day dwindle that which made Thee more than mortal? Byron.
\(A\) Dictator was first chosen during the Roman wars against the Latins. The consuls being unable to raise forces for the defence of the state, because the plebeians refused to enlist if they were not discharged from all the debts they had contracted with the patricians, the senate found it necessary to elect a new ma istrate with absolute and uncontrolable power to take care of the state. The dictator remained in office for six months, after which he was again elected, if the affairs of the state seemed to be desperate; but if tranquillity was re-established, he generally laid down his power before the time was expired. He knew no superior in the republic, and even the laws were subjccted to him. He was called dictator, quoniam dictis ejus parebat populus, because the people implicitly obeyed his command. He was named by the consul in the night viva voce, and his election was cenfirmed by the auguries. As his power was absolute, he could proclaim war, levy furces, conduct them against an enemy, and disband them at pleasure. He punished as he pleased, and from his decision there lay no appeal, at least till later times. IIe was preceded by twentyfour lictors with the fasces; during his administration, all other officers, except the tribunes of the people, were suspended, and he was the master of the republic. But amidst ail this independerce, he was not permitted to go beyond the borders of Italy; he was always obliged to march on foot in his expeditions, and he never could ride in difficult and laborious marches, without previously obtaining a formal leave from the people. He was chosen only when the state was in imminent danger from foreigu enemies. or
intestine seditions. In the time of a pestilence, a dictator was sometimes elected ; as also to hold the comitia, or to celebrate the public festivals, or drive a nail in the capitol ; by which superstitious ccremony the Romans believed that a plague could be averted, or the progress of an enemy stopped. This office, so respectable and illustrious in the first ages of the republic, became odious by the perpetual usurpations of Sylla and Cæsar; and after the death of the latter, the Roman senate passed a decree which for ever forbade a dictator to exist in Rome. The dictator, as soon as elected, chose a subordinate officer, called his magister equitum, master of horse. 'This officer could do nothing without his express order. This subordination, however, was some time after removed; and during the second Punic war, the master of the horse was invested with a power equal to that of the dictator. A second dictator was also chosen for the clection of magistrates at Rome after the battlc of Cannæ. The dictatorship was origiginally confined to the patricians; but the plcbcians were afterwards admitted to share it. Titus Lartius Flavus was the first dictator, A.U.C. 253. The institution has been revived in South America, in modern times, in the person of the illustrions Bolivar.

DI'CTION, n. s. Fr. diction; Lat. dictio. Style; language ; expression.

There appears in every part of his diction, or expression, a kind of noble and bold purity. Dryden.

We are refined! and plain manners, plain dress, and plain diction, would as little do in life, as acorns, herbage, and the water of the neighbouring spring, would do at table.

Chesterfield.
DIC"TIONARY, n. s. Fr. dictionaire; Span. dictionario; Ital. dittionario ; Lat. dictionarium, from dictio, dico, to speak. See Diction. A book containing the words of a language, with their explanations; a lexicon; a nomeuclature of words or things.

Some have delivered the polity of spirits, and left an account that they stand in awe of charms, spells, and conjurations; that they are afraid of letters and characters, notes and dashes, which, sct together, do signify nothing; and not only in the dictionary of man, but in the subtler vocabulary of Satan.

Browne's Vulgar Eirrours.
Is it such a fault to translate simulacra images? I see what a good thing it is to have a good catholick dictionary.

Stillingfleet.
An army, or a parliament, is a collection of men ; a dictionary, or nomenclature, is a collection of words.

Watts.
It is not enough that a dictionary delights the critick, unless, at the same time, it instructs the learner. Johnson. Plan of Dictimary.
DICTYNNIA, in antiquity, fcasts celebrated at Lacedæmon and in Crete, in honor of Diana, or of a nymph taken for her, who, having plunged herself into the sea, to escape the passion of Minos, was caught in fishermen's nets, ouscva, whence the name.
DICTYS, a very ancient Cretan historian, who, serving under Idomeneus in the Trojan war, wrote the history of that expedition. Tzetzes tells us that Homer formed his Iliad upon the plan of that history. The Latin history of Dictys, which has come down to us, is spurious.

DIDAC’TICAL, adj. \} Gr. סıঠактикos. Pre-

Didaćtick. cepts: thus a didactic poem is a poem that gives rules for some art ; as the Georgics

The means used to this purpose are partly didactical, and partly protreptical ; demonstrating the truth of the gospel, and then urging the professors of those truths to be stedfast in the faith, and to beware of infidelity.

Ward on Infidelity.
But what shall I say to Junius, the grave, the solemn, the didactic!

Horne Tooke.
DID'APPER, n.s. From dip. A bird that dives into the water.
DIDASCAL'ICK, adj. Greek, סíaaradıros. Preceptive; didactic; giving precepts in some art.

I found it necessary to form some story, and give a kind of body to the poem: under what species it may be comprehended, whether didascalick or heroick, I leave to the judgment of the criticks. Prior.

DID'DER, v. a. Teut. diddern; Ger. zittern. To quake with cold; to shiver. 'A provincial word,' says Skinner.

DIDELPHIS, in zoology, the opossum; a genus of quadrupeds belonging to the order of feræ, the characters of which are these :-They have ten fore-teeth in the upper jaw, and eight in the under one. The dog-teth are long; the tongue is somewhat ciliated; and they have a pocket formed by a duplicatnre of the skin of the belly, in which the dugs are included. Kerr enumerates nineteen species; the chief are:1. D. brachyura, the short-tailed opossum of Pennant, of a red color, has naked ears, and a short hairy tail, thick at the base, and gradually lessening to the extremity. The body is from three to five inches and a half long. The fur is very soft and glossy, and there is a beautiful red streak along the sides of the head and body. This species inhabits the woods of South America. The female has from nine to twelve young at a birth, which adhere to her teats as soon as born, and she has no pouch. This species agrees with the Murina, in the general form of the body. 2. D. cancrivora, the crab-eater of Buffon, or the Cayenne opossum, has a long slender face; ears erect, pointed, and short: the coat woolly, mixed with very coarse hairs, three inches long, of a dirty white from the roots to the middle; from thence to the ends, of a deep brown; sides and belly of a pale yellow; legs of a dusky brown; thumb ou each foot distinct ; on the toes of the fore-feet, and thumb of the hind, are nails, very long, taper, naked, and scaly. Length seventeen French inches; of the tail fifteen and a lialf. The subject measured was young. It inhabits Cayenne; is very active in climbing trees, on which it lives the whole day. In marshy places it feeds on crabs, which, when it cannot draw out of their holes with its feet, hooks them by means of its loug tail. If the crab pinches its tail, the animal sets up a loud cry, resembling the human roice, which may be heard afar; but its common voice is a grunt like a young pig. It is well furnished with teeth, and will defend itself stoutly against dogs; brings forth four or five young, which it secures in some hollow tree. The natives eat
these animals, and say their flesh resembles a hare. They are easily tamed, and will then refuse no kind of food. 3. D. cayopollin, the Mexican opossum of Buffon and Pennant, is of an ash color on the head and upper parts of the body: the belly and legs are whitish : the tail is long and pretty thick, varied with brown and yellow; it is hairy near an inch from its origin, the rest naked: the length of the animal from nose to tail, about seven inches and a half; of the tail, more than eleven. It inhabits the mountains of Mexico, and lives in trees, where it brings forth its young : when in any fright, they embrace the parent closely. Her belly has no pouch. The tail is prehensile, and serves instead of a hand. 4. D. gigantea, the kangaroo. This animal has a small head, neck, and shoulders; the body increasing in thickness to the rump. The head is oblong, formed like that of a fan, and tapering from the eyes to the nose; end of the nose naked black; the upper lip divided. The nostrils are wide and open; the lower jaw is shorter than the upper; and the aperture of the mouth small : there are whiskers on both jaws, those on the upper longest; and strong hairs above and below the eyes. The eyes are not large; the irides are dusky; the pupil is of a bluish black. The ears are erect, oblongly ovated, rounded at the ends, and thin, covered with short hairs, four inches long. There are no canine teeth, but six broad cutting teeth in the upper jaw; two long lanceolated teeth in the lower, pointing forward; and four grinding teeth in each jaw, remote from the others. The belly is convex and great. The fore legs are very short, scarcely reaching to the nose, and useless for walking. The hind legs are almost as long as the body, and the thighs are very thick : on the fore feet are five toes, with long conic and strong claws; on the hind feet only three; the middle toe is very long and thick, like that of an ostrich ; the two others are placed very distinct from it, and are small; the claws are short, thick, and blunt: the bottom of the feet, and hind part, black, naked, and tuberculated, as the animal rests often on them. The tail ts very long, extending as far as the ears; thick at the base, tapering to a point. The scrotum is large and pendulous. The hair on the whole animal is soft, and of an ash color. lightest on the lower parts. It inhabits the western side of New Holland, and has as yet been discovered in no other part of the world. It lurks among the grass, and feeds on vegetables; it goes entirely on its hind legs, making use of the fore feet only for digging, or bringing its food to its mouth. The dung is like that of a deer. It is very timid; at the sight of men it flies from them by amazing leaps, springing over bushes seven or eight feet high, and going progressively from rock to rock. It carries its tail quite at right angles with its body when it is in motion; and when it alights, often looks back. 5. D. murina, the murine opossum, has the faee and upper parts of the body of a tawny color; the belly of a yellowish white: the tail is slender, and covered with minute scales to the very rump: the length of the animal from acose to tail, about six inches and a half; the tail
of the same length; the female wants the false. belly of the last ; but on the lower part the skin forms on eaeh side a fold, between which the teats are lodsed. It inhabits the hot parts of Soutlı America; agrees with the others in its food, manners, and the prehensile power of its tail. Count de Buffon, from inspection, says the female has fourteen teats, and brings from ten to fourteen young ones at a time; they affix themselves to the teats as soon as they are born, and remain attached like inanimate things, till they attain growth and vigor to shift a little for themselves. 6. D. opossum, the sarigue of Buffon, or Molucca opossum of Pennant, has long, oval, and naked ears: the mouth is very wide; the lower side of the upper jaw, throat, and belly, is of a whitish ash color; the rest of the laair a cinereous brown, tipt with tawny, darkest on the back: the tail is as long as the hody; near the base covered with hair; the rest naked; the claws are hooked. On the belly of the female is a pouch, in which the young slielter. Maregrave found six young within the pouch. It has ten cutting teeth above, and eight below. Over each eye is an oblong white spot. The length of the animal from nose to tail is ten inches; and the tail exceeds the length of the head and body. Its whole figure is of a slender and elegant make. This species is found in great numbers in Aroe and Solor. It is called in the Indies pelandor Aroe, or the Aroe rabbit. They are reckoned very delicate eating, and are very common at the tables of the great, who rear the young in the same places in which they keep their rabbits. It inhabits also Surinam, and the hot parts of America. 7. D. tridactyla, Phillip's opossum, or the kangaroo rat, is described as similar, both in the general shape of the body and the conformation of the legs, to the kangaroo ; but the visage having a strong resemblance to that of the rat, and the color of the whole not ill resembling that animal, it has obtained the name of the kangaroo rat. It is an inhabitant of New Holland; and two of the species were seen alive at the exhibition of animals over Exeter 'Change in 1790, where one of them brought forth young. This species has two cutting teeth in front of the upper jaw, with three others on each side of them; and at a distance one false grinder, sharp at the edge, and channelled or fluted on the sides; and close to these, two true grinders: in the lower jaw there are two long cutting teeth, formed like those of the squirrel, with three grinders corresponding with those in the upper jaw. 8. D. volans, the flying opossum, a beautiful species, and clothed with fur of the most exquisite texture, is an inhabitant of New South Wales. In length, from the tip of the nose to the root of the tail, it is twenty inches; the tail itself is twenty-two inches; at the base, quite light, increasing gradually to black at the end: the ears are large and erect: the coat or fur is of a rich and most delıcate texture, appearing on the upper parts of the body at first sight, of a glossy black; but on a nicer inspection, is found to be mixed with gray; the under parts are white, and on each hip is a tan-colored spot, nearly as big as a shilling; at this part the fur is thinnest, but at the
root of the tail it is so rich and close that the lide cannot be felt through it. The fur is also continued to the claws. On each side of the body is a broad flap or membrane (as in the flying squirrels), which is united to both the fore and hind legs. The jaws are furnished with teeth, placed as in some others of this genus: in the upper jaw forwards are four small cutting teeth, then two canine ones, and backwards five grinders: the under jaw has two long large cutting teeth and five grinders, with no intermcdiate canine ones, the space being quite vacant. The fore legs have five toes on each foot, with a claw on each; the hinder ones four toes, with claws (the three outside ones without any separation), and a thumb without a claw, enabling the animal to use the foot as a hand, as many of the opossum tribe are observed to do.

DIDEROT (Denys), a celebrated French writer, born at Langres in 1713. He was educated among the Jesuits, with a view to the church, and received the tonsure ; but, disliking the profession, he was placed with a lawyer. This pursuit, however, he also abandoned, and thereby incurred his father's displeasure. He did not devote himself particularly to any one object of study; hut his attention was at different times engrossed by genmetry, metaphysics, and the belles lettres. In 1745 he published Principles of Moral Philosophy, 12 mo . which first brought him into public notice as an author. Next year he published a piece, entitled Pensées Philosophiques, a work which gained him considerable fame, and was highly applauded by the partizans of the new philosophy, among whom he had now enrolled himself, and to the propagation of which he applied in the most zealous manner. He afterwards gave a second edition of this work, under the title of Etrennes aux Esprits Forts, which was eagerly read. Abnut this period, having been concerned in a Medical Dictionary, it gave rise to the idea of the Dictionnaire Encyclopédique; and, in conjunction with his friend d'Alembert, the plan of this vast undertaking was formed. Diderot's share in this work was large, for, besides many articles in various departments of science, the whole of the arts and trades were furnished by him. Between the years 1751 and 1767, the first edition of the dictionary was completed; and although Diderot had labored almost twenty years upon it, he received but a small consideration. During this period, however, he composed various other works, particularly A Letter on the Blind, for the use of those who See; a work for which the author was confined six months at Vincennes, on account of the free sentiments it contained. About two years after, he published A Letter on the I)eaf and Dumb, for the usc of those who Hear and See, 2 vols. 12 mo . His next productions were two comedies, in prose, Le liils Naturel, 1757; and Le Pere de Famille, 1758, which latter has been thought one of the best sentimental comedies that ever appeared on the French stage. Besides the above-mentioned works, Diderot wrote A Panegyric on Richardson; and An Essay on the Life and Wrtings of Seneca, which was published in 1779, and was the last work of his pen. At the conclusion of
the Encyclopedie, he was obliged to dispose of his library. The empress of Russia became a purchaser; the price which the philosopher received was 50,000 livres; while he was to be allowed the use of it during his life. Diderot was a member of the Academy of Sciences at Berlin. He died suddenly as he rose from table, July 31st, 1784. His works have been collected and published in two large octavo volumes.

DIDO, or Elissa, a daughter of Belus, king of Tyre, who married Sichæus or Sicharbas her uncle, priest of Hercules. Her brother, Pygmalion, who succeeded Belus, murdered Sichæus, to get possession of his immense riches; and Dido, disconsolate for the loss of her husband, whom she tenderly loved, and by whom she was equally esteemed, set sail in quest of a settlement, with a number of Tyrians, to whom the cruelty of the tyrant had hecome odious. According to some writers, she threw into the sea the riches of her husband, which Pygmalion so greedily desired; ard by that artifice compelled those ships to fly with her that had come by order of the tyrant to obtain the riches of Sichæus. But it is more probable that she carried the riches along with her, and by their influence prevailed on the Tyrian seamen to follow her. During her voyage, Dido visited the coast of Cyprus, where she obtained fifty wives for her Tyrian followers. A storm drove her fleet on the African coast, where she bought of the inhabitants as much land as could be surrounded by a bull's hide cut into thongs. Upon this land she built a citadel, called Byrsa; and the increase of population, and the rising commerce among her subjects, soon obliged her to enlaryc her city, and the boundaries of her dominions. Her beauty, as well as the fame of her enterprise, gained her many admirers; and her subjects wished to compel her to marry Iarbas, king of Mauritania, who threatened them with a dreadful war. Dido begged three months to give her decisive answer; and during that time she erected a funeral pile, as if wishing by a solemn sacrifice to appease the manes of Sichæus, to whom she had promised eternal fidelity. When all was prepared, she stabbed herself on the pile in presence of her people; and by this uncommon action, obtained the namc of Dido, 'valiant woman,' instead of Elissa. According to Virgil and \(O\) vid, the death of Dido was caused by the sudden departure of Æneas, of whom she was deeply enamoured, and whom she could not obtain as a husband. This poetical fiction represents Æneas as living in the age of Dido, and introduces an anachronism of nearly 300 years. Dido left Phœenicia 247 years after the age of Æneas, and about A.A.C. 953. This chronological error proceeded not from the ignorance of the poets, but from a voluntary fiction. While Virgil describes, in a beautiful episode, the desperate love of Didn, and the submission of Æneas to the will of the gods, he traces the origin of the hatred between the republics of Rome and Carthage, and pretends that it was kindled by a more remote cause than the jealousy and rivalship of two flourishing empires. Dido, after her dcath, was honored as a deity by her subjects.

DIDOT (Ambrose), a celebrated French typographer, was born at Paris in 1730. His
father was a printer and bookseller, and, having seceived a classical education, he materially improved various branches of his business, and the trades connected with it. The manufacture of fine paper received his early attention, and be invented many machines and instruments in aid of stereotyping. His edition of the Delphin classics, and various other works, will long distinguish his name. One of his sons became a celebrated type-founder, another shared with his father the reputation of being ona of the first printers in Europe. His anxiety for accuracy is said to have been so great, that at the age of seventy-three, he read five times over each sheet of his son's edition of Montaigne. He died at Paris in 1804.

DIDUC"TION, n.s. Lat. diductio. Separation by withdrawing one part from the other.

He ought to shew what kind of strings they are which, though strongly fastened to the inside of the receiver and superficies of the bladder, must draw as forcibly one as another, in comparison of those that within the bladder draw so as to hinder the diduction of its sides.

Boyle.
DIDUS, or DoDo, in ornithology, a genus belonging to the order of gallinæ. The bill is contracted in the middle by two transverse ruga; each mandible is inflected at the point; and the face is bare behind the eyes. Only one species, viz. the ineptus, is mentioned by Linnæus: three are described by Buffon, viz. :-
1. D. ineptus, the dronte of Buffon, or hooded dodo, is somewhat bigger than a swan, and nearly three feet in length. The bill is strong, large, and hooked at the end; the gape stretches beyond the eyes: the color is a very pale blue, except the end of the upper mandible, which is yellowish, and a red spot on the bend of it ; the end of the lower is blackish; the irides are white. The general color of the plumage is cinereous, and soft to the touch ; the belly and thighs are whitish. The head is large, and seems as it were covered with a black hood or cowl. The wings are very short, and of a yellowish ashcolor: the tail feathers are curled, stand up on the rump, and incline to yellow. The legs have four toes, three before and one behind; are very stout, short, and yellowish; the claws are black. It inhabits the islands of Mauritius and Bourbon in the Indian Ocean.
2. D. Nazarenus, the Nazarene dodo is bigger than a swan. The bill is a little bent downwards and large : instead of feathers, the whole is covered over with a black down ; but the wings are feathered, and it has some frizzled ones upon the rump, which serve instead of a tail: the legs are long and scaly, and there are three toes on each foot. This was met with in the Isle of France, and described as above by Fr. Cauche; who adds, that the female lays only one egg, which is white, and as big as a penny loaf, and that there is always found with it a white stone of the size of a hen's egy; that it makes its nest of leaves and dry herbs, in the forests, on the ground ; and that there is likewise found a gray stone in the gizzard of the young bird.
3. D. solitarius, the solitaire of Buffon, or solitary dodo, is a large bird, and the male is said to weigh sometimes forty-five pounds. The neck
is of a proportionable length, and the cye black and lively : the head is not crested, and the general color of the plumage is gray and brown mixed: it has scarce any tail, and the bastard wing swells out into a round knob: the wings are tor, short for flight ; and the hind parts are rounded like a horse's rump, being clothed with feathers, which may be termed coverts. The females are covered with sometimes brown, and sometimes light yellow feathers, and appear vcry beautiful. The feathers on each side of the breast enlarge into two white tufts, somewhat resembling the bosom of a woman. Those of the thighs are rounded at the end like shells; and, according to Leguat, the bird has altogether a noble and elegant gait. It is an inhabitant of the Isle of Rodrigue, where it is not uncommon; but not met with in flocks, scarcely more than two being found together. It makes its nest in by-places, of the leaves of the palm, a foot and a half in thickness; and lays one egg, bigger than that of a goose. The mate sits in his turı; and does not suffer any bird to approach within 200 yards of the spot while the hen is sitting, which is seven weeks. They are chased in the winter season, viz. from March to September, being then fat; and the young birds are much esteemed for the table.

DIDYMUS, of Alexandria, an ecclesiastical writer of the fourth century; who though he is said to have lost his sight at five years of age, when he had scarcely learned to read, yet applied so earnestly to study, that he was thought worthy to fill the chair in the famous divinity school at Alexandria. He was the author of a great number of works: but all we have now remaining are, a Latin Translation of his book upon the Holy Spirit, in the works of St. Jerome, who was the translator; Short Strictures on the Canonical Epistles; and a book against the Manichees.

DIDYNA'MIA; from \(\delta \varsigma\), twice, and \(\delta \nu \nu a \mu \iota \varsigma\), power; the name of the fourteenth class in linnæus's sexual method ; consisting of plants with hermaphrodite flowers, which have four male organs, two long and two short. See Botany.

DIE, v.n. Goth. deia; Sax. daedian; Dan. and Swed. \(d o\); from Gr. \(\delta \varepsilon i \delta \omega\), to fear, because death is generally an object of fear, says Minsheu, ingeniously. To lose or depart from life; taking by before an instrument of death; of before a disease, or a positive cause of death ; and for before a privative; to sink or faint; grow vapid; to vanish ; perish; be doomed to hell.

For wher we lyuen, we lyuen to the Lord, and whether we dien, we dien to the Lord, therefore wher we lyuen or dien we ben of the Lord.

Wiclif. Romayns. 14.
His heart died within him, and he became as a stone.

1 Samuel.
Except a corn of wheat fall into the ground, and die, it abideth alone; but if it die, it bringeth forth much fruit.

If I die for it, as no less is threatened me, the king my old master must be relieved.

Shakspeare. King Lear
How now, my lord, why do you keep alonc
Of sorriest fancies your companion making,
Using those thoughts which should indecd have died
With them they think on.
Id. Macbeth.

This battle fares like to the morning's war, When dying clouds contend with growing light. Id.

O, thou great power, in whom we move, By whom we live, to whom we die, Behold me through thy beams of love, Whilst on this couch of tears I lie. Wotton.
So long as God shall live, so long shall the damned die.

Hakewill on Providence.
At first she startles, then she stands amazed; At last with terror she from thence doth fly,

Ind loaths the watery glass wherein she gazed, And shans it still, although for thirst she die.

Davtes.
Oh let me live my own, and die so too! To live and die is all I have to do. Denham. The dira only served to confirm him in his first opinion, that it was his destiny to die in the ensuing combat.

Dryden.
If any sovereignty, on account of his property, had been vested in Adam, which in truth there was not, it would have died with him.

Locke.
The young men acknowledged in love-letters, that they died for Rebecca.

Tatler.
He in the loaden rineyard dies for thirst.
Addison.
Hipparchus being passionately fond of his own wife, who was enamoured of Bathyllus, leaped and died of his fall.

Id.
The smaller stains and blemi shes may die away and disappear, amidst the brightness that surrounds them; but a blot of a deeper nature casts a shade on all the other beauties, and darkens the whole character.

Id. Speetator.
Trembling, hoping, lingering, flying, Oh the pain the bliss of dying!

Pope.
Talk not of life or ransom, he replies; Patroclus dead, whoever meets me, dies :
In vain a single Trojan sues for grace;
But least the sons of Priam's hateful race; Die then, my friend! what boots it to deplore? The great, the good Patroclus is nu more! He, far thy better, was foredoomed to die;
And thou, dost thou, bewail mortality?

\section*{Pope's Homer.}

They often come into the world clear, and with the appearance of sound bodies; which, notwithstanding, have been infected with disease, and have died of it, or at least have been very infirm. Wiseman.

Thy body dies ; but thou, thou must live for ever, and thine eternity will take its tincture from the manner of thy behaviour, and the habits thou contractest, during this thy short co-partnership with flesb and blood.

Mason.
If the man who turnips cries,
Cry not when his father dies,
\({ }^{\text {'Tis a proof that he had rather }}\)
Have a turnip than his father.
Dr. Johnson.
'Tis solitude should teach us how to die;
It hath no flatterers; vanity can give
No hollow aid; alone--man with his God must strive.
Byron.
Like the figures on arras, that gloomily glare, Stirred by the breath of the wintry air
So seen by the dying lamp's fitful light,
Lifcless, but life-like, and awful to sight.
Dre, n. s. Fr. dé; Ital. Span. and Portug. dádó; Lat.tesserc (dice), from Gr. \(\tau \varepsilon \sigma \sigma \alpha \rho a\), four, because four sided. A small cube, marked on its faces with numbers from one to six, which gannesters
thow in play. Hence hazard, chance; and geneally any small cube.

Eftsoons his cruel hand Sir Guyon staid, Temipering the passion with adviscment slow,

And mustering might on encmy dismaycd; For the' equal die of war he well did know.

Faerie Queene.
I have set my lifc upon a cast,
And I will stand the hazard of the die.
Shakspeare. Richard 111 .
To put it to the chance and try,
I' the ballot of a box and dye,
Whether his money be his own,
And lose it, if he be o'erthrown. Butcr.
Thine is the adventure, thine the victory:
Well has thy fortune turned the die for thce.
Dryden.
. He knows which way the lot and the die shall fall, as perfectly as if they were already cast. South.

Young creatures have learned spelling of words by having them pasted upon little flat tablets or dies.

Watts.
Die, n.s., plural dies. The stamp used in coinage.

Such varicty of dies made use of by Wood in stamping his money, makes the discovery of counterfents more difficult.

Swift.
DIEMEN (Anthony Van), governor of the Dutch East India possessions, was born at Kuilenberg, of which place his father was burgomaster. He went out to India in an inferior station, but was employed there as accountant to the government; and in 1625 became a member of the supreme council. In 1631 he returned to Holland as commander of the India fleet, but the following year went out again as director general ; and not long after was appointed governor general, in which station he greatly extended the Dutch interest and power in the east. In 1642 he sent Abel Tasman on a voyage to the south, the consequence of which was the discovery of the island near the south coast of New Holland, which Tasman named Van Diemen's Land. He died in 1645.

DIEMEN'S (Van) Land, an island of Australasia, to the south of New Holland, from which it is separated by Bass's Straits ; having its north coast in S. lat. \(40^{\circ} 41^{\prime}\), and its sonthern promontory in \(43^{\circ} 38^{\circ} \mathrm{S}\). Its length is about 170 miles, and breadth about 154 . It was first seen by the Dutch commander, Tasman, in 1642, who, mistaking it for a part of what was then called the Great South Land, or New Holland, gave it its present name, in honor of the Dutch governor-general of Batavia, Anthony Van Diemen. But the Dutch did not land here at this time ; Tasman's carpenter only swam through the surf, ' with the prince's flag, and a post, to set up as a memorial of their visit, to the posterity of the inhabitants of this country.' Our own enterprising navigators, Furneaux, Cook, Hayes, and above all Mr. Bass, the companion of captain Flinders, have far better pretensions to be called its discoverers. Furneaux and Cook anchored in Adventure Bay, and the latter had some communication with the islanders: subsequently, Bligh and captain Cox put into Adventure and Oyster Bay; and, in 1794, captain Hayes, of the Bombay marine, sailerl up
what he named the Derwent River. But none of these navigators, nor yet the French, under d'Entrecasteaux, who discovered Storm Bay, supposed this to be an island; a fact which Mr. Bass first announced in the close of 1798, after tracing 600 miles of the coasts in this neiglibourhood, in a small decked whale-boat. Together with captain Flinders, he also first visited Port Dalrymple.

The general appearance of this island is diversified by ranges of moderate hills and broad valleys, having a fine soil. The hills, the ridges of which 'form,' according to Mr. Evans, 'irregular circles, are for the greater part wooded; and, from their summits, are to be seen levels of good pasture-land, thinly interspersed with trees, the grass growing most luxuriantly. These beautiful plains are generally of the extent of 8000 or 10,000 acres; and this description is to be considered as common to the whole of the island.' The southern extremity terminates in a promontory, whose shape corresponds with, but whose height exceeds, that of the Table Mountain, of the Cape of Good Hope, and to which has been given the same name. The height of the Table, behind Hobart Town, is \(396 .+\) feet; that of the Cape 3315. The former is covered with snow for seven or cight months in the year. To the eastward of the Tamar is a considerable mountain, named Ben Lomond, whose height has not been ascertained; and another callcd Tasman's Peak. There is also a lofty mountain on the north-western part of the island, and a range of hills, called the Asbestos Hills, from the great quantity of that substance found in them. In the south-west part of the island, at the distance of about sixty miles to the north-west of Hobart Town, are the Western Mountains, whose height is computed to exceed 3000 feet. A beautiful lake, in the midst of the last-mentioned range, was visited, for the first time, in 1817, by Mr. Beaumont, the provost-marshal of the island. The principal branch of the Derwent is supposed to flow from it, and he describes it as about fifty miles in circumference, and having its banks moderately clothed with wood. About the middle of the island are saltpan plains, on which are several small lakes, the waiers of which are strongly impregnated with salt, and from which many tons of this article are annually extracted. On all the lakes and rivers are water-fowl in abundance.

The climate is described as exceedingly fine and congenial to Englishmen. 'It is in fact,' says the Quarterly Review, ' England with a finer sky, witu less of its winter frosts and of its autumnal and spring moisture; all the fruits and vegetables of an English kitchen-garden are, without difficulty, raised liere.' During summer the ordinary course of the weather is the alternate land and sea breeze, the former commencing early in the morning, and prevaling till noon, when it is succeeded by the latter, which usually lasts till after sun-set. Occasionally, however, a hot wind blows from the north or north-west, which, though resembling that of New South Wales, which there raises the thermometer to \(106^{\circ}\) in the shade, is greatly mitigated in Van Diemen's Land, by passing across Bass's Straits.

The autumn is generally a serene and delightul season, and the weather continues fine and opeu to the middle or end of May. In June, rain, sleet, and, in elevated situations, snow, set in. with strong southerly gales; but, even in winter, fine weather intervenes, and neither wind nur rains can be said to be periodical. Slight frosts occur at night, but neither ice nor snow remains throughout the day in the valleys and plains. In September the spring rapidly advances, and in October the weather resembles the 'faithless April of an English May.

Yan Diemen's Land has four principal ports, connected with its rivers: Storm Bay, terminatin' with the Derwent; Port Dalrymple, or the Tamar; Port Macquarie, and Iort Davey. This river Derwent, besides its direct outlet into Storm Bay, lias a lateral one into Storm Bay Passage, canal d'Entrecasteaux, a strait about thirty miles long; dividing the large island Bruny from the main land, and continuing from two to five miles wide, till it opens to the Southern Ocean, at Tasnıan's Head. This large inlet presents every where bold shores and deep, water, perfectly sheltered from all winds, and forming a noble port. The Derwent, at its entrance, is two miles broad, and takes a northerly course, which varies in breadth from one to two miles, expanding, occasionally, into large basins equally deep and safe for the distance of twentyfive miles, to which point ships of 500 tons burden can navigate with ease. Here the river begins to freshen, and continues hence for the distance of forty miles, narrowing gradually, but affording a safe passage for vessels of fifty tons as far as New Norfolk, where a ridye of rocks forms a rapid, and abruptly terminates the navigation.

Twelve miles up the Derwent, on the western bank, stands Hobart Town, the capital of the island, picturesquely placed under the Table Mountain already named. Down its side trill several rivulets, one of the most considerable ot which passes through the town, and discharges itself into Sallivan's Cove. The town is laid out on an extensive and regular plan, and has many handsome brick houses; but the majority of the buildings are of wood and plaster. There are very few that are not white-washed (for lime abounds in the neighbourhood), and glazed; and each has a paled garden. Several respectable public buildings are either completed or in progress; as a large church of brick and stone, a government-house, a county-jail, store and commissariat offices, a barrack for 100 men, dud a small hospital, fenced in together; a battery, guard-house, magazine, \&cc. The farms of settlers extend principally along the banks of the Derwent, from the entrance of the river frum Storm Bay Passage; for the shores of Van Diemen's Land have often a rich black mould close to the edge of the cliff. On the Hobart side, the most considerable group of settlements is New Town, about two miles from Hobart Town, and is watered by a fine stream. A little below Hobart Town, on the opposite bank, is the settlement of Clarence Plains.

To the eastward, upon the north and eas: sides of an extensive salt-water inlet, commum
rating with what the settlers call Frederik Hendrik's Bay, is the more considerable settlement of Pittwater, the chief granary of the island. It is watered by two streams, and presents to view a vast extent of naturally clear ground. On the road from Hobart Town to Port Dalrymple, there is a plain extending, in one direction, for twenty miles, and clear land is frequent on that side of the island. To the northwest of Pittwater is the Coal River settlement. About twelve miles higher up are several farms; midway, stands Mount Direction, a renarkably picturesque liill. There are several scattered farms in this quarter, and on the east of the Derwent, as far as New Norfolk. Above the falls at this place the Dervent receives many rivulets; and a most beautiful and fertile country lies on its banks. All these settlements form together a county, under the name of Buckinghamshire, comprising about half the island, the other half being called the county of Coruwall.
The clief settlement near Port Dalrymple is Launceston, situated forty miles up the Tamar, at the confuence of two small streams, called the North and South Esk. This town is about 120 miles across the island from Hobart Town. The Tamar, not admitting large vessels more than seven or eight miles, George Town las been recently laid out near the mouth of the river, and governor Macquarie speaks of it being already in a flourishing state.
Port Macquarie and Port Davey are on the western coast. The channel inwards, of the former, is made between an island and the west head of entrance; it is very deep, but not more than thirty yards wide; the basin is navigable, but shoally for about eight miles, after which there is deep water. In its cliffs are veins of coal, and on its shores abundance of useful and valuable timber, particularly a sort of cedar called the Iluon pine, much esteemed in the colony and in India, for its peculiar property of repelling insects. Port Davey is more to the southward, and is a spacious port, with an open entrance; but the country is rocky and barren, and the timber difficult of access. Into these two ports fall Gordon's and several other rivers.
The mineralogical productions of this island are iron, copper, slate, alum, limestone, asbestos, and basalt; together with crystal, cornelian, jasper, marble, and various petrifactions. The first is most abundant towards Launceston, where entire mountains of this mineral, yielding twenty per cent. of ore, are said to be found. Its botany, and general natural history, resemble those of New South Wales. All kinds of European grain flourish; the harvests have never failed, it is said, for want of rain. 'Barley and oats produce most abundantly, and the wheat is superior to that which is grown in New South Wales ; so greatly, indeed, that the difference of price which it bears in Sydney market will generally pay the expense of transport thither; and the average produce is generally greater, with the exception, perhaps, of the flood-lands on the banks of the Hawkesbury and Nepean. The natural grasses afford abundance of pasturage at all seasons of the year, and supersede the 11 ecessity of making provi-
sion for winter provender in the shape of hay nr other artificial food; and, notwithstanding the greater severity of the winters, every description of stock attains a larger size here than in the neighbourhood of Port Jackson. The only advantage which the large island seems to enjoy over this, consists in the fineness of its wool, and the great excellence and variety of its fruits; particularly the grape, which promises to yield as good wine as ary that is made in France, Spain, or Portugal. The temperature of Van Diemen's Land is not sufficiently high for the cultivation of the vine; but, by the introduction of the Merino sheep, the wool has been already so much improved, as to leave no doubt it will soon become a valuable article of export to the mothercountry. Mr. Wentworth supposes, that twenty years hence, this single article will raise the colonists of New Soutli Wales and Van Diemen's Land, to as high a pitch of happiness and prosperity as is enjoyed by any portion of his majesty's subjects in any quarter of the globe; and that they may be enabled to ship, for Great Britain, every year, at least to the value of a million sterling. The exports, at present, consist of cattle, sheep, wool, flour, corned meats, hams, tongues, dried fish, hides, tallow, barilla, bark for tanning leather, seal-skins and oil, whale-oil, and spars. The markets hitherto opened to the colonists are England, the Cape of Gnod Hope, Mauritius, and the East Indies. They liave also sent considerable supplies of butcher's meat, corn, and potatoes to Port Jackson.'-Quarterly Review.

The wild animals are, the kangaroo, opossum, wombat, squirrel, kangaroo-cat, \&c., and (rarely) the hyæna opossum. Horned cattle, and particularly sheep, thrive excellently well, the ewes generally dropping lambs twice a year. Goats and pigs run wild. Few indigenous plants were found here, but nearly all the European fruits have cultivated with snccess.

Van Diemen's Land has a lieutenant-governor and judge-advocate of its own, commissioned by his majesty; but it has not obtained the benefit of a separate criminal jurisdiction, so that prisoners for trial, prosecutors and witnesses, are compelled to make the voyage to Port Jackson. Its civil jurisdiction is confined to causes of \(£ 50\) value; but the judge of the supreme court of New South Wales has lately made a circuit to the island for the trial of causes of greater value. The colony is peopled by free settlers and convicts from England as well as from New South Wales.

The remaining natives are few in number considering the extent of country which they yet hold free, and in that state of extreme wretchedness which probably forbids their increase. They are, at present, hostilely inclined to Europeans; a circumstance ascribed to a fatal quarrel at the first settling, in which several of them were killed by the rash command of a young officer, and the memory of which has been kept alive by occasional encounters in the interior. The stockkeepers of the settlers are often assaulted by them with spears and stones; but a more friendly intercourse has been effected on the Western Coasts.

The following Tables show:-1. The progress of Population in this Colony, from 1818 to 1820 (omitting the military). 2. The Imports and Exports of the capital at the same period.

Vof., VII.

DIEPHOLT, or Drepinolz, a county of Westphalia, belonging to Hanover, bounded on the north by the county of Hoya, on the east by Minden, on the south by the bishopric of Osnaburg, and on the west by Munster. It is about twenty-four miles long, and twelve broad; and is full of briers, underwood, and morasses; except along the Dumma Lake. It contains four towns and about 16,000 inhabitants. The people are Lutherans, and subsist chiefly by feeding cattle, which they sell to Holland and the countries bordering on the Rhine, along with coarse woollens and linens. This territory was erected into a country by Maximilian I. In 1585 it passed to the duchy of Zell, and from them to the electorate of Hanover. The inhabitants rear cattle and flax.

DIEPPE, a town of Normandy, in the department of the Lower Seine, with a good harbour, formed by the mouth of the river Arques. It has an old castle westward, and two piers. Packet boats pass between this port and Brighton constantly. They are about sixty-six miles distant. The church of St. James is a very fine structure, and there is a tower from which, in fine weather, the coast of England may be seen. The principal trade consists in fish, ivory toys, and laces. It was bombarded, and great part of it burnt by the English, in 1694 . Here is a navigation school very well conducted. It contains about 20,000 inhabitants; and lies thirtyfour miles north of Rouen, and 100 north-west of Paris.

Dies Marchie was the day of congress or meeting of the English and Scotch, annually appointed to be held on the marches or borders, in order to adjust all differences between them.

DIESIS, in music, is the division of a tone less than a semitone; or an interval consisting of a less or imperfect semitone. Diesis is the smallest and softest change or inflexion of the voice imaginable: it is called a faint, expressed thus (X) by a St. Andrew's cross or saltire.

DIESPITER, in antiquity, a name given to Jupiter; and signifying diei pater, father of the day.

DI'ET, n.s. From dies, an appointed day, Skinner; from diet, an old German word signifying a multitude.-Junius. An assembly of princes or estates. See the article.

An emperor in title without territory, who can ordain nothing of importance but by a diet, or assembly of the estates of many free princes, ecclesiastical and temporal.

Raleigh.
 To feed or live by rule; to give food to; as a neuter verb, to feed; eat: diet as a substantive is food, generally, or allowance of food. Dietary and dietic, pertaining to diet.

For his diet, there was a continual diet given him by the king.

Jeremiah.
She diets him with fasting every day,
The swelling of his wounds to mitigate,
And made him pray both early and eke late.
Faerie Queene.

I'm partly led to diet my revenge, For that I do suspect the lusty Muor Hath leapt into my seat. Shakspeare. Othello. When we've stuffed These pipes, and these conveyances of blood, With wine and feeding, we have suppler souls, Than in our priestlike fasts ; therefore I'll watch him Till he be dieted to my request. Id. Coriolanus.

Shew a while like fearful war,
To diet rank minds sick of happiness, And purge the obstructions which begin to stop Our very veins of life.

Id. Henry IV.
He sauced our broth as Juno had been sick, And he her dieter.

1d. Cymbeline.
I commend rather some diet for certain seasons, than frequent use of physick; for these diets alter the body more, and trouble it less.

Bacon.
He received no other counsel than to refrain from cold drink, which was but a dietetical caution, and such as culinary prescription might have afforded.

Browne's Vulgar Errours.
Time may come, when men
With angels may participate; and find
No inconvenient diet, nor too light fare. Milton. Henceforth my early care
Shall tend thee, and the fertile burden ease; Till, dieted by thee, I grow mature
In knowledge as the gods, who all things know.
Id.
No part of diet, in any season, is so healthful, so natural, and so agreeable to the stomach, as good and well-ripened fruits.

Temple.
Nature delights in the most plain and simple diet.
Addison.
We have lived upon expedients, of which no country had less occasion; we have dieted a healthy body into a consumption, by plying it with physick instead of food.

Swift.
This book of Cheyne's became the subject of conversation, and produced even sects in the dietetick philosophy.

Arbuthnot on Aliments. Pref.
Milk appears to be a proper diet for human bodies, where acrimony is to be purged or avoided; but not where the canals are obstructed, it being void of all saline quality.

Id.
As an article of diet, salt seems to act simply as a stimulus, not containing any nourishment, and is the only fossil substance which the caprice of mankind has yet taken into their stomachs along with their food.

Darvin.
Dier, in medicine, according to some, comprehends the whole regimen of life, with regard to air, meat, drink, sleep, watching, motion, rest, the passions, retentions and excretions. Others restrict the term to eating and driuking alone. See Food. The natural constitution of the body of man is such, that it can easily bear some changes and irregularities without much injury. Had it been otherwise, we should be almost constantly put out of order by slight causes. This advantage arises from those wonderful communications of the inward parts, whereby, when one part is affected, another comes immediately to its relief. Thus, when the body is too full, nature causes evacuations through some of the outlets: and for this reason, diseases from absolute inanition are generally more dangerous than from repletion, unless the latter be excessive: because we can more expeditiously diminish thar. increase the juices of the body. Unon the same
account, though temperance be beneficial to all men, the ancient physicians advised persons in good health, now and then to eat and drink more plentifully than usual. But of the two, intemperance in drinking is safer than in eating. If a man be obliged to fast, he ought to avoid all laborious work. From satiety it is not proper to pass directly to sharp hunger, nor from hunger to satiety: neither will it be safe to indulge absolute rest immediately after excessive labor, nor suddenly to fall to work after long idleness. In a word, all changes in the way of living should be made by degrees. The softer and milder kinds of aliment are proper for children, and for youth the stronger. Old people ought to lessen the quantity of their food, and increase that of their drink : but some allowance is to be made for custom, especially in cold climates like ours: for as in these the appetite is keener, so is the digestion better performed. The article AliMENT presents a regular table of all the ordinary articles of human food, or diet : in that of \(\mathrm{D}_{1}\) gestion more remarks on this subject occur.
Diet, general, of the German Empire, was usually held at Ratisbon, It consisted of the emperor, the nine electors, and the ecclesiastical princes; viz. the archbishops, bishops, abbots, and abbesses; the secular princes, being dukes, marquises, counts, viscounts, or barons; and the representatives of the imperial cities. It met on the emperor's summons, but any of the princes might send deputies. Peace and war, the levying of general taxes, and the assessment of different states, were among the principal subjects submitted to the deliberation of the diet. But it required the consent of the emperor to give their determinations the force of laws. The imperial dignity, though not hereditary, was possessed for several ages, without interruption, by the house of Austria. The Confederation of the Rhine, during the domination os Buonaparte, completely dissolved this ancient system, and compelled the house of Austria to resign the style and title of emperor of Germany, which it has not since resumed.
At the congress of Vienna, however, the constitution of Germany was so far remodelled on the former plan, that a new diet was created to watch over the interests of what was now called the Germanic Confederation. By this confederation, although the title of elector ceases, all the states have a vote in the diet according to their respective territories, and the population. The emperor of Austria has no other preponderance
than that which arises from the extent of his dominions within the limits of the coufederacy. Two new kingdoms were created in the north, and two in the south. These were IIanover and Saxony, in the former; and Bavaria and Wirtemburg, in the latter.

The great powers of this new confederation are Austria, Prussia, Hanover, Saxony, Bavaria, and Wirtemburg. In the diet, each member of the confederacy has an equal vote. The members, as constituted by the act of corgress, are seventeen, composed of the following separate or combined powers :-
1. Austria.
2. Prussia.
3. Bavaria.
4. Saxony, kingdom (not the duchies).
5. Hanover.

6 Wirtemberg.
7. Baden.
8. The electorate of Hesse.
9. The grand duchy of Hesse.
10. Denmark for Holstein and Lauenburg.
11. The Netherlands for Luxemburg.
12. The grand ducal, and the ducal houses of Saxony.
13. Brunswick and Nassau.
14. Mecklenburg, Schwerin and Strelitz.
15. Oldenburg, Anhalt, and Schwartzburg.
16. Hohenzollern, Liclitenstein, Reuss, Shaum-burg-Lippe, Lippe, and Waldeck.
17. The free towns of Lubeck, Frankfort, Bremen, and Hamburg.

This list therefore exhibits the present political division of Germany, and the states included under the same number vote in the diet conjointly. The deliberations of this body embrace all ordinary discussions; but when general laws are to be enacted, or changes made in the fundamental rules or principles of the confederation, the diet forms itself into a general assembly, in which each state votes separately. But as it would evidently have been an unequal partition of power to have given each an equal voice in this assembly, the number of votes possessed by the several states are regulated by their territorial extent and importance. For this purpose, the whole of the confederacy is divided into four classes, which, with the population of each state, according to the official returns of 1818, and the number of votes it possesses in the general assembly, are as follow, viz :-

First Class.

Tuird Class.

This federative body keeps up a military arnament, composed in time of peace of 120,000 men, including 96,000 infantry, 18,000 cavalry, and 6000 artillery. In war the contingent is to be increased; the forces being one in every hundred of the population, which, according to the preceding scale, would be 301,000 . A reserve of one in every 200 is also to be maintained; which would therefore at present amount to 150,000 men. Of this ariny
\begin{tabular}{|c|c|}
\hline Austria furnishes & 94,822 \\
\hline Prussia & 79,234 \\
\hline Bavaria & 35,600 \\
\hline Wirtemburg & 23,955 \\
\hline Hanover & 13,054 \\
\hline Saxony, kingdom of & 12,000 \\
\hline Baden & 10,000 \\
\hline The other states & 32,335 \\
\hline & 301,000 \\
\hline
\end{tabular}

The pecuniary contributions of the several members of the confederacy have also been voted for five years; after which the proportions are subject to revision. The fortresses that are considered as essential to the defence of the dominions, belong in common to the confederation, and are to be repaired and supported at the general expense. Gerinersheim, as commanding the passage of the Rhine, is to be made a place of great strength; as well as Homburg and Ulm. For completing the fortifications of the last of these places, the sum of \(£ 800,000\) was voted by the diet in 1818. In time of war, a generalis-
simo is to be chosen by the diet, and who is to be accountable to them alone for his conduct.
DIETRICH, or Dietricy (Christian William Ernest), a modern artist, born at Weimar in 1712. He resided chiefly at Dresden, where he was professor of the Academy of Arts. He succeeded both in history and landscape, and painted above 150 small subjects, which he engraved in the style of Salyator Rosa. Some of these etchings are exceedingly rare.
DIEU et mon Drort, Fr. i. e. God and my right. The motto of the arms of England, first assumed by Richard I. to intimate that he did not hold his empire in vassalage of any mortal. It was afterwards taken up by Edward III. and was continued without interruption to the time of king Willian III. who used the motto Je inaintiendray, though the former was still retained upon the great seal. After him queen Anne used the motto Semper eadem, which had been before used by queen Elizabeth; but ever since queen Anne, Dieu et mon droit has been the royal motto.
Dieu ef son Acte, in common law, a maxim that the act of God shall hurt no man : so that if a house be beat down by a tempest, the lessee shall not only be free from an action of waste, but also have a right to take the timber to rebuild the house.
Dieu, Islf de, an island in the Atlantic, near the coast of France, about seven miles long, and two wide, fifteen miles S.S.W. of Noirmoutier. Long. \(15^{\circ} 17^{\prime}\) E. of Ferro, lat. \(46^{\circ} 42^{\prime}\) N.
DIEZ (Juan or John Martin), better known as the Empecinado of modern Spanish guerilla warfare, was the son of a peasant of Valladolid,

Old Castile, and born in 1775. Having twice before served in the army, as a private dragoon, he first distinguished himself on the invasion of Spain by Buonaparte in 1808, when placing himself at the head of a party of four or five of his neighbours, he commenced killing the French couriers, seizing their horses, arms, \&c. After the massacre committed by the French army at Madrid, Martin openly defied and harassed shem in various directions; and besetting the wads, seized their convoys, and exceedingly harassed their small parties. He and his twelve principal comrades are said to have slaughtered 600 Frenchmen in three months. Heat first neither gave nor expected quarter; but when at the head of about fifty men, abandoned this mode of warfare, but continued to sigualise himself by great personal efforts. In one affair, being opposed to the commander of an cnemy's party, the Empecinado received a sword-thrust through his arm into his side; when, enraged by the pain, he seized his adversary by the neck, dragged him from his lorse, and fell with him to the ground, keeping himself uppermost. The struggle was violent, until both were disarmed, when, as the Frenchman refused to surrender, the Empecinado holding him down with one hand, snatched up a stone with the other and dashed his brains out. In September, 1809, Martin commanded 170 men, mounted, and placed them under the orders of the junta of Guadalaxara. He afterwards received the rank of a brigadier general of cavalry, but very unwillingly exchanged his peasant's dress for uniform.

When the duke of Wellington entered Madrid in triumph, Diez attended him, and received his commands to join the army in the neighbourhood of Tortosa, at the head of 4850 men. After the peace he addressed a lettcr to king Ferdinand, dated February 13th, 1815, and cvincing cousiderable powers of mind. It was published in 1823, in ' The Military Exploits of D. Juan Martin Diez, the Empecinado, who first commanded, and then organised the System of Guerilla Warfare in Spain.' Yet he could write, it is said, no more than his name. On the establishment of the present wretched system of government in Spain the Empecinado becanie obnoxious to the ruling powers, and, notwithstandiug all his former services, was seized on a charge of conspiracy, tried, and executed at Ruedtz, the 19th of August, 1825.
DIFF, the name of an instrument in music among the Arabs, serving chiefly to beat time to the voice; it is a hoop, sometimes with pieces of brass fixed to it to make a gingling, over which a piece of parchment is distended. It is beat with the fingers, and is the true tympanum of the ancients.

DIFFARREATION, in Roman antiquity, a ceremony whereby the divorce of their priests was solemnised. The word comes from the preposition dis, used in composition for division, and farreatio, a ceremony with wheat, of far, wheat Diffarreation was properly the dissolving of marriages contracted by confarreation, which were those of the pontifices or priests. Festus says, it was performed with a wheaten cake. Vigenere will have confarreation and
diffarreation to be the same thing, contrary to the obvious derivation of the words.

DIF'FER, v.n. French differér;
Difference, v.a.\& n.s. Span. deferenciar;
Dif'ferent, adj. Ital. différire, Lat.
Differential,
Dif'ferently, adv.
Dififeringly, adv. diffcrre, from dis different,andferre, to scatter. To be distinguished from; to contend ; to be at variance. To difference is to make things to differ; a difference, the diversity or contrariety made : hence a dispute; quarrel; and the evidence or ground of distinction, or quarrel. Differential is a scicntific term explained below. The two adverbs seem synonymous.

Where the faith of the holy church is one, a dif. ference between customs of the church doth no harm.

Hooker.
You shall see great difference betwixt our Bohemia and your Sicilia.

Shakspeare. Winter's Tale.
Oh the strange difference of man and man!
To thee a woman's services are due;
My zoul usurps my body. Id. King Lear.
What was the difference?
\(\longrightarrow\) It was a contention in publick. Id. Cymbeline.
This nobility, or difference from the vulgar, was not in the beginning given to the succession of blood, but to the succession of virtue.

Raleigh.
A man of judgment shall sometimes hear ignorant men differ, and know well within himself that those which so differ mean one thing, and yet they them selves never agree.

Bacon.
If the pipe be a little wet on the inside, it will make a differing sound from the same pipe dry. Bacon.

This is notoriously known in some differences of brake or fern. Browne's Vulgar Erronrs.

Opiniators naturally differ
From other men; as wooden legs are stiffer
Than those of pliant joints, to yield and bow,
Which way soe'er they are designed to go.
Butler.
Such protuberant and concave parts of a surface may remit the light so differingly, as to vary a colour.

Boyle.
Nothing could have fallen out more unlukcily than that there should be such differences among them about that which they pretend to be the only means of ending differences.

Tillotson.
Most are apt to seek all the differences of letters in those articulating motions; whereas several combinations of letters are framed by the very same motions of those organs which are commonly observed, and are differenced by other concurrent causes. Holder.

Thus, born, alike, from virtue first began
The difference that distinguished man from man :
He claimed no title from descent of blood;
But that, which made him noble, made him gond.
Dryden.
Though it be useful to discern every variety that is to be found in nature, yet it is not convenient to consider every difference that is in things, and divide them into distinct classes under every such difference.

Locke.
Grass differenceth a civil and well cultivated region from a barren and desolate wilderness.

Ray.
In things purely speculative, as these are, and no ingredients of our faith, it is free to differ from one another in our opinions and sentiments.

Burnet's Theory.

The world's a wood, in which all lose their way, Thouglı by a different path cach goes astray.

Buckingham.
There are certain measures to be kept, which may leave a tendency rather to gain than to irritate those who differ with you in their sentiments.

Addison's Freeholder.
He may consider how differently he is affected by the same thought, which presents itself in a great writer, from what he is when he finds it delivered by an ordinary genius.
\(I d\).
By different methods different men excel;
But where is he that can do all things well?
Churchill.
Plntarch, discoursing of the effects of the air on the minds of men, observes, that tbe inhabitants of the t'iræum possessed very different tempers from those of the higher town in Athens, which was distant about four miles from the former : but I believe no onc attributes the difference of manners in Wapping and St. James's to a difference of air or climate. Hume.

Tbe difference of natural tempers seems to be chiefly owing to the different degrees of influence the several passions have upon the mind.

Mason.
The powers of the letters, when they were applied to a new language, must have been vague and unsettled, and therefore different hands would exhibit the same sound by different combinations.

Johnson. Preface to Dictionary.
Differential method, is applied to the doctrine of infinitesimals, or infinitely small quantities, called the arithmetick of fluxions. It consists in descending from whole quantitics to their infinitely small differences, and comparing together these infinitely small differences, of what kind soever they be : and from thence it takes the name of the differential calculus, or analysis of infinitesimals.

Harris.
Difference, in heraldry, a term given to the figures added to coats of arms, serving to distinguish one family from another; and to show how distant younger branches are from the elder or principal branch.

Difference, in logic, an essential attribute belonging to some species, and not found in the genus; being the idea that defines the species. Thus, body and spirit are the two species of substance, which, in their ideas include something more than is included in the idea of substance. In body, for instance, is found impenetrability, and extension, in spirit, a power of thinking and reasoning; so that the difference of body is impenetrable extension, and the difference of spirit is cogitation.
Difference, in mathematics, is the remainder, when one number or quantity is subtracted from another.

Differential, in the higher geometry, is an infinitely small quantity, or a particle of quantity so small as to be less than any assignable one. It is called a differential, or differential quantity, because frequently considered as the difference of two quantities; and, as such, is the foundation of the differential calculus. Sir Isaac Newton, and the English, call it a moment, as being considered as the momentary increase of quantity. See Calculus.

DIFFICILE, adj. Difficileness, n. s. Dif'ficult, adj. Difficultly, adv.
Dif'ficulty, n.s. Fr. difficile; Span. dificil ; İtal. and Lat. difficile, de, privative, and facilis, easy. Hard; not easy; not obvious; distressing; scrupulous. Difficile and difficult are synonymous adjectives; the former being common in our old writers. The synonymous substantives are difficulty and difficileness.

It is difficult in the eyes of this people.
Zachar.
The cardinal finding the pope difficil in granting the dispensation, doth use it as a principal argument, concerning the king's merit, that he bad touched none of those deniers which had been levied by popes in England.

Bacon.
There be that in their nature do not affect the good of others : the lighter sort of malignity turneth but to a crossness or frowardness, or aptness to oppose, or difficilness, or the like; but the deeper sort to envy and mere miscbief.

Id.
The way he came, not having marked, return
Was difficult, by human steps untrod. Milton.
Latin was not more difficil
Than to a blacklird 'tis to whistle. Hudibrce. Some write in Hebrew, some in Greek, And some, more wise, in Arabic, To avoid the critic, and the expense Of difficulty, wit, and sense.

Id.
A man, who has always indulged himself in the full enjoyment of his station, will difficultly be persuaded to think any methods unjust that offer to continue it.

Rogers's Sermons.
They mistake difficulties for impossitilities ; a pernicious mistake certainly; and tbe more pernicious, for that men are seldom convinced of it, till their convictions do them no good.

South.
Men should consider, that raising difficulties concerning the mysteries in religion, cannot make them more wise, learned, or virtuous.

Swift.
It is very difficult to praise a man without putting him out of countenance.

Addison.
If, therefore, we would have the benefit of seeing our language more generally known among mankind, we should endeavour to remove all the dificulties, however small, that discourage the learning of it. But I am sorry to observe, that of late years those difficulties, instead of being diminished, have been augmented.

Franklin.
Some of the cases which occurred about this time are of such a kind, that it is difficult to imagine by what casuistry the jury could have been reconciled to their verdict.

Sir S. Romilly.
Nothing so difficult as a beginning
In poesy, unless perhaps the end;
For oftentimes when Pegasus seems winning
The race, he sprains a wing, and down we tend, Like Lucifer, when hurled from heaven for sinning. Byron.
DIFFIDE', v. \(n . \quad\) Fr défier ; from Lat.
Dif'fidence, \(n\). s. diffudo \(; d e\), privative, \(\mathrm{D}_{\text {if }}\) fident, adj. Sand fide, confidence; trust. To distrust ; have no reliance on : diffidence, the more common word, is therefore, doubt; distrust; whether applied to ourselves or others.

No man almost thought himself secure, and men durst scarce commune or lalk one with another; but there was a general diffidence every where.

Bacon's Henry VII.

I am not so confident of my own sufficiency, as not willingly to admit the counsel of others; but yet I am not so diffident of myself, as brutishly to submit to any man's dictates.

King Charles.
You have brought scandal
To Israel, diffidence of God, and doubt
In feeble hearts, propense cnough before
To waver.
Milton's Agonistes.

\section*{Be not diffident}

Of wisdom; she deserts thec not, if thou
Dismiss not her, when most thou need'st her nigh. Milton.
If the evidence of its being, or that this is its true sense, be only on probable proofs, our assent can reach no higher than an assurance or diffidence arising from the more or less apparent probability of the proofs.

Locke.

\section*{With hupe and fear}

The woman did the new solution hear : The man diffides in his own augury, Aud doubts the gods.

Dryden.
The generality of mankind, either out of laziness, or diffidence of their being able to judge right in points that are not very clear, are apt rather to take things upon trust, than to give themselves the trouble to examine whether they be true or no. Buckingham.

Be silent always when you doubt your sense;
And speak, though sure, with seeming diffience.
Pope.
Distress makes the humble heart diffident. Clarissa.
Pliny speaks of the Seres, the same , people with the Chinese, as being very shy and diffident in their manner of dealing.

Arbuthnot.
My memory of past errors makes me diffident for he future. Hume on the Human Understanding.

DIFFI'ND, v. a. Lat. diffindo. To cleave in two; to split.

DIFFI'SSION, n. s. Lat. diffissio. The act of cleaving or splitting.

DIFFLA'TION, n. s. Lat. difflare. The act of scattering with a blast of wind.

DIFFLU'ENCE, or Lat. diffuo; dis, diDiffluen'cy, n.s. \}versely, and fiuo, to Difflu'ent, adj. Sflow; Gr. \(\beta \lambda o w\). To flow diversely. The flowing away on all sides, as a fluid.

Ice is water congealed by the frigidity of the air, whereby it acquireth no new form, but rather a consistence or determination of its diffluency; and admitteth not its essence, but condition of fluidity.

Browne's Vulgar Errours.
DI'FFORM, adj. , From Lat.forma. Con-
Di'fformity, n.s. \(\}\) trary to uniform; having parts of different structure; dissimilar; unlike; as a difform flower, of which the leaves are unlike each other.

While they murmur against the present disposure of things, they desire in them a difformity from the primitive rule, and the idea of that mind that formed all things best.

Browne's Vulgar Errours.
The unequal refractions of difform rays proceed not from any contingent irregularities; such as are veins, an uneven polish, or fortuitous position of the pores of glass. Newton.

DIFFRA'NCHISEMENT, n.s. Fr. frunchise. The act of taking away the privileges of a city.

DIFFUS'E, va. \& adj.
Diffese'd, part. adj.
Diffe'sedly', adv.
Diffu'sednese, n. \(s\).
Diffésion,
Diffu'sive, adj.
Diffu'sively, adv.

Ital. diffondere, Lat. diffundere ; dis, diversely, and fun do, to shed. To pour out on a superficies; hence to spread, to scatter; diffuse, as an adjective, therefore, sometimes mean' obscure of meaning; difficult to gather; also extended. Diffusion is a state of dispersion; copiousness; exuberance.

He grows like savages,
'Tn swearing and stern looks, diffused attire,
And every thing that seems unnatural.
Shakspeare. Henry V.
Whereas all bodies act either by communication of their natures, or by the impressions and signatures of their motions, the diffusion of species visible seemeth to participate more of the former operation, and the species audible of the latter. Bacm's Nutural Histary.

Wisdom had ordained
Good out of evil to create; instead
Of spirits malign, a better race to bring
Into their vacant room, and thence diffuse
His good to worlds, and ages, intinite. Milton.
A sheet of very well sleeked marble paper did not cast distinct colours upon the wall, nor throw its light with an equal diffusion; but threw its beams, unstained and bright, to this and that part of the wall.

Boyle on Colours.

\section*{A chief renowned in war,}

Whose race shall bear aloft the Latian name,
And through the conquered world diffuse our fame.
Dryden.

The stars, no longer overlaid with weight,
Exert their heads from underneath the mass,
And upward shoot, and kindle as they pass,
And with diff usive light adorn their heavenly place.
Id.
No man is of so general and diffusive a lust, as to prosecute his amours all the world over. South.

They are not agreed among themselves where infallibility is seated; whether in the pope alone, or a council alone, or in both together, or in the diffusive body of Christians.

Tillotson.
All liquid bodies are diffusive; for their parts being in motion, have no connexion, but glide and fall off any way.

Burnet's Theory of the Earth.
The fault that I find with a modern legend is its diffusiveness; you have sometimes the whole side of a medal overrun with it.

Addison on Medals.
The wisdom of the ignorant somewhat resembles the instinct of animals; it is diffused, but in a very narrow sphere; but within the circle it acts with vigour, uniformity, and success.

Goldsmith.
Some glossy-leaved and shining in the sun,
The maple, and the beech of oily nuts
Prolific, and the lime at dewy eve,
Diffusing odours.
Cowper.
DIG, v. a.\& v. n. Saxon, dic; Dan. dyger; Belg. dyken; from dick, a ditch. To pierce and turn over the earth; to cultivate ground; to form by digging; to pierce; to obtain any thing by this operation. As a neuter verb, to work with the spade.
They long for death, but it comcth not; and dig for it more than for hid treasures.
\(J o b\) iii. 21.
If I digged up thy forefathers' graves,
And hung their rotten coffins up in chains,
It would not slake mine ire. Shakspeare.

\section*{D I G A M M A.}

The walls of your garden, without their furnilure, .onk as ill as these of your ho ase : so that you cannot cig up your garden too often.

Temple.
When we visited mines, we have been told by diggers, that even when the sky seemed clear, there would suddenly arise a steam so thick, that it would put out their candles.

Boyle.
Nor was the ground alone required to bear
Her annual income to the crooked share;
But greedy mortals, rummaging her store,
Digged from her entrails first the precious ore.

> Dryden's Ovid.

A rav'nous vulture in his opened side
Her crooked beak and cruel talons tried; Still for the growing liver digged his breast; The growing liver still supplied the feast. Id. Eneid.
The Italians have often dug into lands, described in old authors as the places where statues or obelisks stood, and seldom failed of success.

Addison's Travels.
It is digged out of even the highest mountains, and all parts of the earth contingently; as the pyrites.

Woodward.
The bushman spade is a pointed stick about three feet long, to which there is affixed about the middle a stone to increase its power in digging up bulbous roots.

Burchell's Travels.
DIGAMMA, a letter of the Greek language retained in the Æolic dialects. Dr. Jones obscrves that such letters were formerly aspirates, as they derived their origin from the strong gutturals, which the Greeks borrowed from the oriental tongues; and hence he traces the origin of the Æolic digamma. It is the tendency of every guttural, says this writer, when become habitual, to soften down in the rapidity of ntterance into a mere aspirate. The digamma, he contends, did not belong, as Dr. Bentley and others supposed, to the Æolic dialect only, but to all the dialects of Greace in their more ancient mode of pronunciation; and he observes, in opposition to the opinion of the learned, who say that the digamma at first prevailed, and was afterwards succecded by the aspirate, that the gutturals at first prevalled, which were softened into mere aspirates, and that these were again changed for a more easy and agreeable letter, which being simply a labial, was diversified by different people into \(y\), \(v, v, \phi, b\) or \(f\).

Dr. Marsh would have it called, the Pelasgic digamma. 'The connexion,' says he, 'between the Pelasgi and the Æolic dialect has been fully established. Indeed, it might properly be called the Pelasgic dialect: for it was used by the Pelasgi, before the name of ELolic existed. The principal migrations of the Pelasgi, hoth to Italy, and to the islands in the Egean sea, took place from Thessaly, as we have already seen, during the reign of Deucalion. They carried, therefore, their dialect to Italy, and to the islands in the Ægean sea, before that dialect had acquired the appellation of Eolic. The character, therefore, which distinguishes the Eolic dialect, might properly be called the Pelasgic digamma.'-Horo Pelasga, p. 50.

This, however, the learned bishop of Salisbury disputes.- 'By the Æolians,' the Digamma, as he states, 'was anciently called Vau, or Wau, the name which is given to the sixth letter in the

Hebrew, Syriac, and Samaritan Alphabets, and to the letter corresponding to it in the Arabic and Ethiopic Alphabets. The term Digamma has littlc or no relation to its power, and must have been given to it after the knowledge of its origin was lost. The Greek grainmarians, comparing it with the third letter of their alphabet, called it a double gamma; but it was in fact a double Vau. Its new name must have followed its new figurc, which was probably given it to distinguish the consonant power of the letter from the vowel.'-Letter to the Bishop 'of Durham. 1815.

However this may be, Homer has so frequently used it, as to give it with some writers the name of the Homeric digamma. His object was clearly to avoid cvery hiatus of vowels: but when the introduction of aspirates had insensibly alolished the use of this letter with the transcribers, its existence could only be traced in a few ancient inscriptions. To remove the harshness thus often apparent in this great poet, the commentators interposed the final \(\nu\), or the particles \(\nu^{\prime}, \delta^{\prime}, r^{\prime}\), altering, with respect to the first, the case of words sometimes and consequently the sense. 'Numberless passages,' says Dr. Valpy, 'remained in their naked deformity, and exercised the conjectural sagacity of grammarians and commentators. Thus in the verse in the opening of the Iliad; ' \(\mathrm{H} \rho \omega{ }^{\prime} \omega \nu\) av̉-
 monjous effect of the concurrence of the two \(\varepsilon\), they cut off the former. The quantity of the latter created another difficulty. Soine doubled the \(\lambda\), and others asserted that \(\varepsilon\) was lengthened before the liquid. But there were passages, to which even these and similar expedients were inapplicable. A successful effort was made by the great Bentley tor remove these embarrassments. The rcstoration of the digamma has at length vindicated the poet, and displayed the harmonions bcauties of his original versification.' Dr. V. fumishes us with the following Table of words it Humer, which either constantly, or generally admit the digamma in the initial vowel.

\begin{tabular}{|c|c|c|}
\hline  & I & iTves, \\
\hline ย̇бтí & 'áx \({ }^{\text {a }}\) & i¢ \(\boldsymbol{1}\), \\
\hline Ėrus, & lád \(\chi\), & \(i \psi\), \\
\hline Ẽtos, & " \(\delta\) ots, & \(i \omega \dot{\eta}\), \\
\hline ETtúctog, & " \(¢ \mu \ldots\), &  \\
\hline \(\varepsilon \omega\), to put on. & іккєлоs, & 0 \\
\hline H & "I \(\lambda \iota 0 \mathrm{~S}\), ives, & ӧ¢оє¢, \\
\hline ท̇çus, \({ }^{\text {H }}\) & iviov, & oif \(\mu \alpha\), \\
\hline \(\eta{ }^{\eta} \delta \omega\), & iov, & oikos, \\
\hline \(\dot{\eta} \theta\) os, & iovedas, & oivos, \\
\hline \%jios, & \({ }^{7} \mathrm{I}\) ¢ L ¢, & ovt \\
\hline \(\bar{\eta} \times \alpha\), adv. & is, & où \(\lambda \alpha \mu \mathrm{o}\) ¢, \\
\hline ที้ \(0 \downarrow\), & \(\stackrel{\sim}{i \sigma \eta \mu}\), & -ũ̀os, \\
\hline \(\stackrel{\text { Hin }}{\substack{\text { n }}}\) & ioos, & oṽ¢oข. \\
\hline \({ }^{\text {he }}\) &  & \(\Omega\) \\
\hline Hep
ทiov, &  & \(\ddot{\omega} \lambda \xi\), \\
\hline \(\boldsymbol{\eta} \chi \boldsymbol{\eta}\). & ícéa, & \(\dot{\omega} \mathrm{c}\), \\
\hline
\end{tabular}

The form of the digamma in the first instance was that of a gamma reversed; then that of a gamma; afterwards it was written in the shape of a double gamma \(F\), whence it derives its name; and hence it has been written \(\Gamma\) as \(\Gamma a \beta\) ot for \(\mathbf{F}_{a \beta ı o} \Gamma_{\varepsilon} \theta_{\varepsilon \nu}\) for \(\mathrm{F}_{\varepsilon} \theta_{\varepsilon \nu}\), \(\Gamma_{\varepsilon \nu \tau 0}\) for \(\mathrm{F}_{\varepsilon \nu \tau 0}\), Æol. for \({ }_{\varepsilon}^{2} \nu \tau 0\), Dor. for \(\begin{aligned} & \ell \\ & \lambda \tau 0 \\ & \text {, from } \\ & \varepsilon \\ & \lambda\end{aligned} \omega, \& c\). Claudius ordered chat it should be written \&, or \(\mathbf{F}\) reversed, but that form seems to have ceased after it was used in the inscription on the tomb of that emperor 'terminasit.' It has often been expressed by B , and sometimes by \(\mathrm{K}, \mathrm{M}, \Pi, \mathrm{P}, \Phi\), X. See letter \(\mathbf{F}\).

DI'GAMY, n. s. Gr. \(\delta\) б \(\gamma\) a \(\mu \mathrm{a}\). Second marriage ; marriage to a second wife after the death of the first : as bigamy, haring two wives at once.

Dr. Champny only proves, that archbishop Cranmes was twice married ; which is not denied : but brings nothing to prove that such bigamy, or digamy rather, deprives a bishop of the lawful use of his power of ordaining.

Bishop Fernc.
DIGBY, a town of Nova Scotia, on the southeast side of Annapolis Bay, eighteen miles southwest of Annapolis, and fifty-three north by east of Yarmouth. It is one of the most considerable of the new settlements of Nova Scotia.

Digey (Sir Kenelm), an illustrious author and statesman of the seventeenth century, was descended of an ancient English family. His father, Everard, was beheaded under king.Jannes, I. for being engaged in the gunpowder plot. King Charles I. made the son a gentleman of the bed-chamber, commissioner of the navy, and governor of the Trinity House. He granted him letters of reprisals against the Venetians, by virtue of which he took several prizes, with a small fleet. He fought the Venetians near the port of Scanderoon, and bravely made his way through them with his booty. He also translated various authors into English; and his Treatise on the Nature of Bodies and the Immortality of the Soul, discovers great penetration and knowledge. In the beginning of the civil wars, he exerted himself vigorously in the king's cause; but was afterwards imprisoned, by order of the parliament, in Winchester-house, and had leave to depart thence in 1643. He afterwards compounded for his estate, but was ordered to leave the nation; when he went to France, and was se't on two
embassies to pope Innocent X . from the queen, widow of Charles I. whose chancellor he then was. On the Restoration he returned to London, where he died in 1665, aged sixty.

DIGE'ST, v. a. \& \(n . s . \quad\) Fr. digerer; Sp.
Digesi'er, n.s. digestir; Lat. di-
Digestible,
Digestion, \(n\) s.
Digest'ive, adj. \& n.s. to
Digesture. into the proper classes, or sorts: hence to concoct in the stomach, and soften or adapt by heat ; and to receive with enjoyment. The derivatives all follow these meanings.

> First, let us go to dinner,
-Nay, let me praise you while I have a stomach. -No, pray thee, let it serve for table talk, Then, howsoe'er thou speak'st, 'mong other things I shall digest it.

Shakspeare.
Now good digestion wait on appelte
And health on both.
Ii.

I had a purpose to make a particular diyest, or recompilement to the laws of mine own nation.

\section*{Bacon.}

We conceive, indeed, that a perfect good concoction, or digestion, or maturation of some metals, will produce gold.
II.

Those medicines that purge by stool are, at the first, not digestible by the stomach, and therefore move immediately downwards to the guts.
\(I d\).
A chilifactory menstruum, or a digestive preparation, drawn from species or individuals, whose stomachs peculiarly dissolve lapideous bodies.

Browne's Vulgar Errours.
It is not good to devour the favours of God too greedily: but to take them in, that we may digest them.

Bp. Hall. Contemplations.
The earth and sun were in that very state; the one active, piercing, and digestive, by its heat; the other passive, receptive, and stored with materials for sucl. a production.

Hale.
The digestion of the counsels in Sweden is made in senate, consisting of forty counsellors, who are generally the greatest men.

Temple.
Rice is of excellent use for all illnesses of the stomach, a great restorer of health, and a great digester. Id.
When men comfort themselves with philosophy, it is not because they have got two or three sentences, but because they have digested those sentences, and made them their own; so upon the matter, philosophy is nothing but discretion.

Selden.
Every morsel to a satisfied bunger, is only a new labour to a tired digestion.

South
Did chymick chance the furnaces prepare,
Raise all the labour-houses of the air,
And lay crude vapours in digestion there?
Blackmore.
People that are bilious and fat, rather than lean, are great eaters and ill digesters.

Arbuthnot.
Laws in the digest shew that the Romans applied themselves to trade.

Id. On Coins.
I dressed it with digestives.
Wiseman.
The first stage of healing, or the discharge of mat ter, is by surgeons called digestion.

Sharp's Surgery.
Chosen friends, with sense refined,
Learning digested well.
Thomson.
Britain has not yet well digested the loss of it: dominion over us; and has still at times some flattering hopes of recovering it.

Franklin.

\section*{DIG}

As Life discordant elements arrests, Rejects the noxious, and the pure digests, Combines with Heat the fluctuatiug mass, And gives awhile solidity to gas. Darwin.

Oh, the souls of some men
Thou wouldst digest what some call treason, and Fools treachery.

Byron.
Digest, Digestum, is a collection of the Roman laws, ranked and digested under proper titles by order of the emperor Justinian. That prince gave his chancellor Tribonianus a commission for this purpose: who, in consequence of this, chose sixteen jurisconsulti, or lawyers, to work upon them. These, accordingly, took the best decisions from the 2000 volumes of the ancient jurisconsulti, and reduced them all into one body; which was published A.D. 533, under the name of the Digest. To this the emperor gave the force of a law, by a letter at the head of the work, which serves it as a preface. The Digest makes the first part of the Roman law, and the first part of the corpus or body of the civil law contained in fifty books. It was translated into Greek under the same emperor, and called Pandecta. See Pandects. Cujas says, that Digest is a common name for all books disposed in a good order and economy; and hence Tertullian calls the gospel of St. Luke a digest. Hence also abridgments of the common law are denominated digests of the numerous cases, arguments, readings, pleadings, \&c., di• \(e\) ersed in the year books and other reports and books of law, reduced under proper heads. The first was that of Statham, which comes as low as Henry VI.

Digester, an instrument invented by Mr. Papin about the beginning of the last century. It is a strong vessel of copper or .iron, with a cover adapted to screw on with pieces of felt or paper interposed. A valve with a small aperture is made in the cover, the stopper of which valve may be more or less loaded, either by actual weights, or by pressure from an apparatus on the principle of the steelyard. The purpose of this vessel is to prevent the loss of heat by evaporation. The solvent power of water when heated in this vessel is greatly increased.

Digestion. For the rationale of this process, see Physiology. See also the word Bile for an account of part of the changes which aliment undergoes, before it may in one sense be said to be duly digested; and, for an account of the derangements in the process of digestion see the article Medicine, and the word Stomach; under which last word, the reader will find a detailed account of those modern theories which have recently excited so much attention in respect of stomach derangements and their general influence over the frame. It is under this word, that we propose discussing the merits and demerits of these theories, and engaging in a somewhat comprehensive disquisition on the subject in all its bearings.

Digestives, in medicine, such remedies as strengthen and increase the tone of the stomach, and assist in the digestion of food. To this class belong all stomachics and strengtheners, or corroborants.

Digging, among miners, is appropriated to the
operation of freeing any kind of ore from the bed or stratum in which it lies, where every stroke of their tools turns to account : in contradistinction to the openings made in search of ore, which are called hatches, or essay hatches: and the operation itself, tracing of mines or hatching. When a bed of ore is discovered, the beele-men free the ore from the fossils around it; and the shovelmen throw it from one shamble to another, till it reaches the mouth of the hatch. In most mines, to save the expense as well as fatigue of the shovel-men, they raise the ore by means of a winder and two buckets, one of which goes up as the other comes down.

DIGHT, v.a. Goth. \& Swed. duga; Sax. dihten. To arrange; dress; embelish. It seems always to signify the past; the participle passive is dight, as dighted in Hudibras is perhaps improper.

Every spirit as it is most pure
And hath in it the more of heavenly yight,
So it the fairere body doth procure
To habit in, and it more fairly dight
With cheerful grace, and amiable sight.
Spenser.
On his head his dreadful hat he dight, Which maketh him invisible to sight.

Hub. Tale.
Let my due feet never fail To walk the studious cloisters pale And love the high embowed roof, With antick pillar, massy proof; And storied windows richly dight, Casting a dim religious light.

Milton.
Just so the proud insulting lass Arrayed and dighted Hudibras. Hudibras.
DIG'IT, n.s. \(\}\) Lat. digitus; from Gr. Digitated, adj. \(\}_{\text {delkw, }}\) סeneros, to show, because we point out any thing with the finger. Any of the numbers expressed by a single finger. Also a measure of about three-fourths of an inch, from the width of the finger; or the twelfth part of the sun's or moon's diameter. Digitated is branched out.

Not only the numbers seven and nine, from considerations abstruse, have been extolled by most, but all or most of other digits have been as mystically applauded.

Browne's Vulgar Errours.
For animals multifidous, or such as are digitated, or have several divisions in their feet, there are but two that are uniparous; that is, men and elephants.

\section*{Id.}

If the inverted tube of mercury be but twenty-five digits high, or somewhat more, the quicksilver will not fall, but remain suspended in the tube, beeause it cannot press the subjacent mercury with so great a force as doth the incumbent cylinder of the air, reaching thence to the top of the atmosphere. Boyle.

Digit, in astronomy, is used to express the quantity of an eclipse. Thus an eclipse is said to be of six digits, when six of these parts are hid.

Digit, is also a measure taken from the breadth of the finger. It is properly three-fourths of an inch, and contains the measure of four barleycorns laid breadthwise.
DIGITALIS, fox-glove, a genus of the angiospermia order, and didynamia class of plants; natural order twenty-eighth, luridæ: cal. quin-
quepartite: cor. campanulated, quinquefid, and ventricose; caps. ovate and bilocular. There are six species: five of which are liardy, herbaceous, biennial, and perennial plants, and the sixth a tender shrubhy exotic. The herbaceous species rise two or three feet high, crowned with spikes of yellow, iron-colored, or purple flowers. The shrubby sort rises five or six feet high, having spear-shaped rough leaves, four or five inches long, and half as broad; the branches being all terminated with flowers growing in loose spikes. All the species are easily raised by seeds. An ointment made of the flowers of purple fox-glove and May butter, is much commended by some physicians for scrophulous ulcers which run much and are full of matter. Taken internally this plant is a siolent purgative and emetic; and is therefore only to be administered to robust constitutions: indeed it often proves even then a poison. An infusion of two drachms of the leaf in a pint of water, given in half-ounce doses every two hours or so, till it begin to purge, is recommended in dropsy, particularly that of the breast. It is said to have produced an evacuation of water so copious and sudden, in ascites, by stool and urine, that the compression of bandages was found necessary. The plentiful use of diluents is ordered during its operation. But besides being given in infusion, it has also been employed in substance. And when taken at bedtime to the extent of one, two, or three gra:ns of the dried powder, it often in a short time operates as a very powerful diuretic, without producing any other evacuation. Even this quantity, however, will sometimes excite very severe vomiting, and that too occurring unexpectedly.

DIGLADIA'TION, n. s. Lat. digladiatio. A combat with swords; any quarrel or contest.

Aristotle seems purposely to intend the cherishing of controversial digladiations, by his own affection of an intricate obscurity. Glanville.
DIGLIGGYHEUR, a town in the island of Ceylon, about ten miles to the eastward of Candy, on the road to Battacolo. The district around is very wild and impenetrable, for which reason it was once a royal residence; and when the king was driven out of Candy, and his capital burned by the British in 1803, he found here a retreat, to which no European army could penetrate. There are a few villages among the surrounding hills, 'and some rice grounds.

DIGLYPH, in architecture, a kind of imperfect triglyph, console, or the like : with two channels or engravings either circular or angular.

DIGNE, the chief town of the department of the Lower Alps, France, famous for the baths near it. It is seated on the Bleone, and is a bishop's see. The streets are steep and winding, and the houses mean; but the cathedral is a respectable edifice, and there are four other churches Not far from the town there is an extinct volcano. It contains about 3500 inhabitants. Thirity miles south of Apt, and thirty-four south by west of Embrun.

\section*{DIG'NIFY v.a.}

Dignifica'tion, \(n\). s.
Dig'nified, adj.
Dig'nitary, n. s.
Dig'nity, n. s.

From Lat, dignus (Gr. \(\delta \iota \kappa \eta\), right) worthy; and facio to make. Tuadvance; promote; raise to honor. Digni-
fication and dignity are syuonymous substantives; and the cognates of the latter. Fr. dignité; Span. ügnidad; It. dignita, Dignities is used by Browne for the general or chief inaxims of a science. Ayliffe says, that among ecclesiastics, 'we understand by a dignity that promotion or preferment to which any jurisdiction is attached.' Dignitary has also a peculiar application to clergymen, above the rank of a parishpriest; but is likewise used generally.

Angels are not any where spoken so highly of as our Lord and Saviour Jesus Christ, and are not in dignity equal to him.

Hooker.
Such a day,
So fought, so followed, and so fairly won,
Came not till now to dignify the times
Since Cæsar's fortunes! Shakspeare. Henry IV.
Not that we think us worthy such a guest,
But that your worth will dignify our feast.

\section*{Ben Jonson.}

The sciences concluding from dignities, and principles known by themselves, receive not satisfaction from probable reasons, much less from bare asseverations.

Brown.
I grant that where a noble and ancient descent and merit meet in any man, it is a double dignification of that person.

Walton's Angler.
Abbots are stiled dignified clerks, as having some dignity in the church.

Ayliffe's Parergon.
If there be any dignitaries, whose preferments are perhaps not liable to the accusation of superfluity, they may be persons of superior merit. Swift.

Some nen have a native dignity, which will procure them more regard by a look, than others can obtain by the most imperious commands. Clarissa.

The peaceable lawyers are, in the first place, many of the benchers of the several inns of court, who seem to be the dignitaries of the law, and are endowed with those qualifications of mind that accomplish a man rather for a raler than a pleader. Addison.

No turbots dignify my boards;
But gudgeons, flounders, what my Thames affords.
Pope.
We all know, that those who loll at their ease in high dignities, whether of the church, or of the state, are commonly averse to all reformation. Burke.

> Or, turning to the Vatican, go see
> Lancoon's torture dignifying pain-
> A father's love and mortal's agony
> With an immortal's patience blending. Byron.

Dignity, as applied to the titles of noblemen, signifies honor and authority. And dignity may be divided into superior and inferior; as the titles of duke, marquis, earl, baron, \&c. are the highest names of dignity; and those of baronet, knight, serjeant at law, \&c., the lowest. Nobility only can give so high a name of dignity as to supply the want of a surname in legal proceedings; and as the omission of a name of dignity may be pleaded in abatement of a writ, \&c., so it may be where a peer who has more than one name of dignity is not named by the Most Noble. No temporal dignity of any foreign nation can give a man a higher title liere than that of Esquire. The first personal dignity after the nobility is a knight of the order of St. George, or of the garter, first inștituted by Edward III. A. D. 1344. Next (but not till after certain official dignities, as privy-counsellors, the chancellors of the ex-
chequer and duchy of Lancaster, the chief justice of the king's liench, the master of the rolls, and the other Enylish judges,) follows a knight banneret; who indeed by statutcs 5 Richard II. c. 4, and 14 Richard II., c. 11, is ranked next after barons; and his precedence before the younger sons of viscounts was confirmed by order of king James I. But to entitle him to this rank, he must have been created by the king in person, in the field, under the royal banners, in time of open war; else he ranks after baronets, who are the next in order; which title is a dignity of inheritance, created by letters patent, and usually descendible to the issuc male. Next follow the knights of the Bath. The last of these inferior nobility are knights bachelors; the most ancient though the lowest order of knighthood amongst us. See Bachelor. The above, with those enumerated under the article Nosility, Sir Edward Coke says, are all the names of dignity in this kingdom; Esquires and Gentlemen bcing only names of worship. But before these last the heralds rank all colonels, serjeants at law, and doctors of law, physic, and divinity.

DIGNO'TION, n. s. From Lat. dignosco. Distinction; distinguishing mark.
That temperament all dignotions, and conjecture of prevalent humours, may be collected from spots in our nails, we are not averse to concede.

\section*{Browne's Vulgar Eirrours.}

DIGRESS', v.n.) Span. and Port digreDigress'ion, n. s. \(\}\) dir; Ital. digredire ; Lat. Digress'ive, adj. Sigrediri, digressus, from dis and gradior, gressus, to step; to go aside from a road, or dcsign; to wander; expatiate. Digressive is wandering.

Thy noble shape is but a form of wax,
Digressing from the valour of a man.
Shakspeare.
The digression of the sun is not equal ; but, near the equinoctial intersections, it is right aud greater; near the solstices, more oblique and lesser.

Browne's Vulgar Errours.
He, she knew, would intermix
Grateful digressions, and solve high dispute With conjugal caresses.

Mitton.
The good man thought so much of his late conceived commonwealth, that all other matters were but digressions to him.

Sidney.
In the pursuit of an argument, there is hardly room to digress into a particular definition, as often as a man varies the signification of any term. Locke.

Digressions in a book are like foreign troops in a state, which argue the nation to want a heart and hands of its own; and often either subdue the natives, or drive them into the most unfruitful corners.

Swift.
The excellence of this work is not exactness but copiousness. The wild diffusion of the sentiments, and the digressive sallies of imagination, would have been compressed and restrained by confinement to rhyme.

Johnson.
DIGYNIA; from \(\delta \iota \varsigma\), twice, and \(\gamma v \nu \eta\), a woman; the name of an order in the first thirteen classes, except the ninth, in Linnæus's sexual method; consisting of plants, which have two female regans.

DII, the divinities of the ancient heathens, were very numerous. Every object which caused
terror, inspired gratitude, or bestowed affiuence, received the tribute of veneration. Man saw a superior agent in the stars, the elements, or the trees, and supposed that the waters which communicated fertility to his fields and possessions, werc under the influence and direction of some invisible power inclined to favor and to benefit mankind. Thus arose a train of divinities which imagination arrayed in different forms and armed with different powers. They were supposed to be endowed with understanding, and actuated by the same passions which daily afflict the human race; and to be appeased or provoked, like the imperfect beings whose fears gave them birth. Their wrath was to be mitigated by sacrifices and incense; and sometimes human victims bled, and thus real crimes were committed, to expiate crimes, which superstition alone supposed to exist. The sun, from his powerful influence and animating nature, first claimed the adoration of the uncivilised inhabitants of the earth. The moon also was honored with sacrifices, and addressed in prayers; and after immortality had been liberally bestowed on all the heavenly bodies, mankind classed among their deities the brute creation, and the cat and the sow shared equally with Jupiter himself, the father of gods and men, the devout veneration of their votaries. This immense number of deities has been divided into different classes according to the fancy of the mythologists. The Romans generally reckoned two classes of the gods. Among the demi-gnds, who were said to have merited immortality by the greatness of their exploits and services to mankind, were Vcrtumuns, Hercules, Jason, Castor, and Pollux, whose parents were some of the immortal gods. All the passions and moral virtues were also reckoned powerful deities, and temples were raised to the goddesses of concord, peace, \&c. According to Hesiod, there were no less than 30,000 gods that inhabited the earth, and were guardians of men, all subservient to Jupiter. To these, succeeding ages added an almost equal number; and indeed they were so numerous, and their functions'so various, that we find temples erected and sacrifices offered, to unknown gods. All the gods of the ancients were supposed to have once lived upon earth as mere mortals; and even Jupiter himself, the ruler of heaven, is represented by the mythologists as once a helpless child; and all the particulars, attending the birth \({ }^{\prime}\) and education of Juno, are recorded. In process of time, not only virtuous men, who had bcen the patrons of learning and the supporters of liberty, but also thieves and pirates, were admitted among the gods, and the Roman senate servilely granted immortality to the most cruel and worthless of their emperors.

DIJAMBUS, in Latin poetry, the foot \(\mathrm{o}_{-}^{*}\) a verse of four syllables; it is compounded of two iambics, as sěvēritas.

DIJON, or Digon, an ancient and handsome city of France, a bishop's see, in the department of the Cote d'Or and ci-devant province of Burgundy. It has a university which has long been among the most celebrated and best regulated in France. The public structures, and particularly the churches, are very fine. In front of the cidevant Place Royale, is the ancient palace of the
dukes of Burgundy ; and at the gates of Dijon is a late Chartreuse founded in 1383, in which are some magnificent tombs of those princes. The Place Royale, in the form of a horse-shoe, is the principal part of the city. Among the churches worth notice are, that of St. Benigne, the spire of which has an elevation of 370 feet; the church of St. Michael, remarkable for the richness of its portal; that of St. Stephen, now the cathedral church; and the church of Notre Dame, esteemed one of the best models of Gothic architecture in Europe. Of the old monastic institutions, the richest was the Cistercian abbey, the origin of all, of that order throughout Europe. Here is also a citadel built by Louis XI. The streets are well paved, and regular, and the houses in general neat ard commodious; the population, including the suburbs, is 21,600 . Here are manufactures of silk, cotton, and wool, the trade in which has been much inproved by the recent construction of a canal from this place to St. Jean de Loire. Three great annual fairs are held here: March 10th, June 14th, and November 10th, lasting eight days each. Dijon is built on an oval plan and seated in a pleasant plain, which produces excellent wine, between two small rivers, fortyeight miles north-east of Autun, 100 miles north of Lyons, and 175 south-east of Paris; contains professorships of theology, philosophy, mathematics, Latin, German, history, rhetoric, eloquence and poetry. Hereare alsn a drawing school, a library of 4000 volumes, a museum of paintings and engravings, and a theatre. The academy of sciences was founded in 1725 . Among the eminent characters of Dijon, may be mentioned the celebrated Bossuet, and the poets Crebillon and Piron. It has several public walks; of which the most frequented are the ramparts.

DIJUDICA'TION, n. s. Lat. dijudicatio. Judicial distinction.

DIKE, n.s. Goth and Swed. dike; Saxon, dic; Erse dyk; Fr. digue; from Gr. \(\tau \varepsilon\) Xos; Heb. Pr 7 a wall, or mound. A boundary of lands made by water, and often by embankments on the side; a channel for water.

God, that breaks up the flood-gates of so great a deluge, and all the art and industry of man is not sufficient to raise up dykes and ramparts ag̣ainst it.

Cowley.
The dykes are filled, and with a roaring sound The rising rivers float the nether ground.

Dryden's Virgil.
The king of dykes ! than whom \(n n\) sluice of mud With deeper sable blots the silver flood.

Pope's Dunciad.
- Dike denotes also a ditch or drain, made for the passage of waters. The word seems formed from the verb to dig; though others derive it from the Dutch diik, or dyke, a dam, sea-bank, or wall.
"DIKE, or dyke, is a work of stone, timber, or fascines, raised to oppose the entrance or passage of the waters of the sea, a river, lake, or the like. See Holland.
DILAC'ERATE, v.a \(\}\) Lat. dilacero. To
Dilaceration n.s. \(\}\) tear; to rend; to force in two.

The infant, at the accomplished period, straggling tce come forth, dilacerates and breaks those parts which restrained him before. Brownc's Vulgar Errours.

The greatest sensation of pain is by the obstruction of the small vessels, and dilaceration of the nervous fibres.

Arbuthnot.
DILA'NIATE, v. a. Lat. dilanio. To tear ; to rend in pieces.
Rather than they would dilaniate the entrails of their own mother, and expose her thereby to be ravished, they met half way in a gallant kind.

Howel's Eng. Tears.
DILAP'IDATE, v.n. \} Lat. dilapido. To
Dilap'idation, n.s. Ggo to ruin; to fall by decay. The incumbent's suffering the chancel, or any other edifices of his ecclesiastical living, to go to ruin or decay, by neglecting to repair the same: it likewise extends to his committing, or suffering to be committed, any wilful waste in or upon the glebe-woods, or any other inheritance of the church. (Ayliffe's Parergon.) This word has also been applied generally of late.
'Tis the duty of all church-wardens to prevent the dilapidations of the chancel and mansion-house belonging to the rector or vicar.

Ayliffe.
 טלט, to set at large. To extend; spread out; enlarge; hence to relate at length or diffusely : as a neuter verb, to widen ; speak largely. Dilatability is admitting of extension. Dilatation, the act of extending, or state of being extended.

But ye thereby much greater glory gate,
Than had ye sorted with a prince's peer; For now your light doth more itself dilate, And in my darkness greater doth appear. Spenser.
But he would not endure that woful theam For to dilate at large.

Faeric Queene.
Do me the favour so dilate at full
What hath befallen of them, and thee, till now.
Shakspeare.
Joy causeth a cheerfulness and vigour in the eyes; singing, leaping, dancing, and sometimes tears : all these are the effects of the dilatation, and coming forth of the spirits into the outward parts.

Bacon's Natural History.
It may be behoveful for princes, in matters of grace, to transact the same publickly, and by themselves ; or their ministers to dilate upon it, and improve their lustre, by anv addition or eloquence of speech.

Clarendon.

> Satan alarmed, Collecting all his might, dilated stood, Like Teneriff, or Atlas, unremoved. Milton.
The motions of the tongue, by contraction and dilatation, are so easy and so subtle, that you can hardly conceive or distinguish them aright. Hulder.
We take notice of the wonderful dilatability or extensiveness of the gullets of serpents: I have taken wo adult mice out of the stomach of an adder, whose neck was not bigger than my little finger. Ray.

Diffused, it rises in a higher sphere;
Dilates its drops, and softens into air. Prior.

His heart dilates and glories in his strength, Addison.
The second refraction would spread the rays one way as much as the first doth another, and so dilate the image in breadth as much as the first doth in length.

Newton.
The windpipe divides itself into a great number of branches called bronchia: these end in small airbladders, dilatable and contractible, capable to be inflated by the admission of air, and to subside at the expnlsion of it.

Arbuthnot on Aliments.
The buccinatores, or mowers up of the cheeks, and the dilators of the nose, are too strong in cholerick people.

Id.
This fluid may possibly be the same with that which, being attracted by and entering into other more solid matter, dilates the substance, by separating the constituent particles, and so rendering some solids fluid, and maintaining the fluidity of others.

> Franklin.

Here, there, he points his threatening front, to suit His first attack, wide waving to and fro
His angry tail ; red rolls his eyes, dilated glow.
Byron.
Dilatation, in physics, a motion of the parts o. any body, by which it is so expanded as to occupy a greater space. This expansive motion depends upon the elastic power of the body; whence it appears that dilatation is different from rarefaction, this last being produced by the means of heat.

Dilatory Pleas, in law, are such as are put in merely for delay, and there nay be a demurrer to a dilatory plea, or the defendant shall be ordered to plead better, \&c. The truth of dilatory pleas is to be made out by affidavit of the fact, by stat. 4 and 5 Anne.

DILATRIS, in botany, a genus of the monogynia order, and triandria class of plants: cal. none: cor. has six petals, and is shaggy ; the stigma simple. Species three; all natives of the Cape.

DIL'ATORY, adj. Fr. dilatoire ; Lat. dilatorius. See Dilate. (For a dilatory person spreads or extends his work.) Slow; delaying; tardy.

These cardinals trifle with me: I abhor This dilutory sloth, and tricks of Rome.

Shakspeare. Henry VIII.
An inferior council, after former tedious suits in a higher court, would be but dilatory, and so to little purpose.

Hayward.

\section*{All promise is poor dilatory man, And that through every stage. Young.}

A dilatory temper commits innumerable cruelties withont design.

Addison's Spectator.
DILEC'TION, n. s. Lat. dilectio. The act of loving; kindness.

So free is Christ's dilection, that the grand condition of our felicity is our belief.

Boyle's Seraphic Love.
DILEM'MA. Fr. dilemme; Lat. dilemma; Gr. \(\delta_{\iota} \lambda \eta \mu \mu a\), from \(\delta_{\iota s}\) and \(\lambda \eta \mu \mu a\), an assumption, ò \(\lambda a \mu \beta a \nu \omega\), to take. An argument or sophism capable, apparently, of two equally correct, but opposite conclusions.

A dilemma, that Morton used to raise benevolence, some called his fork, and some his crotch.

Bacon's Henry VII.

Quoth he, in all my past adventures
I ne'er was set so on the tenters,
Or taken tardy with dilemma,
That every way I turn does hem me.
Hudibras
Hope, whose weak being ruined is
Alike if it succeed, and if it miss;
Whom good or ill does equally confound, And both the horns of fate's dilemma wound.

Cowley.
A dire dilemma; either way I'm sped; If foes they write, if friends they read, me dead. Pope.
DIL'IGENCE, n. s. \({ }^{2}\) Fr. diligént; Span., Dil'igent, adj. Port., and Ital. dili-
Dil'igently, adv. Sgénte; Lat. diligens, from diligere, to favor (work). Industry; constancy in business; continued application. Hence a name, not seldom inisapplied, of stage coaches.

Seest thou a man diligent in his business, he shall stand before kings. Prov. xxii. 29.

Brethren, give diligence to make yonr calling and election sure. 2 Pet. i. 10.

Still when she slept he kept both watch and ward; And when she wakt he wayted diligent,
With humble service to her will prepard.
Spencer. Faerie Queene.
If you inquire not attentively and diligently, you shall never be able to discern a number of mechanical motions.

Bacon.
But the power of nature is only the power of using to any certain purpose the materials which diligence procures, or opportunity supplies.

Johnson.
Now, who would have suspected your friend Miss Prim of an indiscretion? Yet such is the illnature of people, that they say her uncle stopped her last week, just as she was stepping into the York diligence with her dancing master.

Sheridan.
DILL, n. s. Sax. blle; Pers. dilee, from dil, the heart, a cordial. It hath a slender, fibrous, annual root ; the leaves are like those of fennel ; the seeds are oval, plain, streaked, and bordered.

Dill is raised of seed, which is ripe in August.
Mortimer.
DILLEMBURG, or Dillenburg, a town of Germany, in Westphalia, and capital of Nassau Dillenburg, situated on the Dille. Near it is a furnace for the smelting of copper. The sovereignty of this town was added to the grand duke of Berg, by the late freaty of confederation between the states of the Rhine. It is fourteen miles north-west of Wetzlar. Long. \(8^{\circ} 22^{\prime}\) E., lat. \(50^{\circ} 36^{\prime} \mathrm{N}\).

DILLINGEN, a neat town of Bavaria, on the left bank of the Danube, with a university or lyceum. The bishop of Augsburg resided here formerly, and it is still a bishop's see. It contains a chapter and three convents; and was formerly a county; the princes of which were powerful. Near this town Louis XVIII. was fired \(a t\), and wounded in the forehead, by some unknown assassin, July 12th, 1796. Population 3120. It is twenty-three miles north-east of Augsburg and twenty-four north-east of Ulm.

DILLENIA, in botany, a genus of the polygynia order, and polyandria class of plants: cal. pentaphyllous; the petals five: caps. nu-

\section*{DIM}
merous, polyspermous, coalited and full of pulp. Species eight; all Indian plants.

IILLENIUS (John James), an eminent botanist, born at Darmstadt in Germany, in 1687, and educated at the university of Gieffen. He contributed several curious papers to the Miscellanea Curiosa, and, in 1721, accompanied Dr. Sherard to England, where he spent the remander of his days. Soon after his arrival he undertook a new edition of Ray's Synopss Stirpium Britannicarım. He was appointed the first botanical professor at Oxford, on Dr. Sherard's foundation, and in 1735 the university admitted him to the degree of M.D. He died in 1747. He published an elaborate work, entitled Hortus Elthamensis, and also a History of Mosses.

DILLON (Wentworth), earl of Roscommon, a British poet of celebrity, was the son of James, earl of Roscommon, by a sister of the earl of Strafford. Though born in Ireland (in 1633) he received his education at lord Strafford's seat in Yorkshire, and finally entered the Protestant university of Caen in Normandy, under the celebrated Bochart. After travelling into Italy he returned, soon after the Restoration, to England, and was made captain of the band of pensioners. He now ruined his estate by gaming ; and, being involved also in quarrels, he returned to Ireland, where his property lay. Here, however, he followed nearly the same course as in England, until his marriage with a daughter of the earl of Burlington. He now appears to have cultivated letters, and to have reformed himself. He projected,among other modes of promoting literature, an academy for improving and fixing the English language; but the scheme was never accomplished. On the accession of James II. he visited Italy, and took up his residence at Rome, where he died of the gout in 1684. Lord Roscommon was not a voluminous writer, his principal piece being a poetical Essay on Translated Verse, in which he lays down the rules that ought to govern translations. Other poems of this writer are translations of Horace's Art of Poetry, of Virgil's sixth Eclogue, of the Dies Iræ, of a scene in Pastor Fido, \&c. Dr. Johnson calls him the most correct writer of English verse before Dryden ; and Pope has said of him, addressing a poet of rather different character,

Unhappy Dryden! in all Charles's days,
Roscommon only boasts unspotted lays.
DILU'CIDATE, v. a. From Lat. Ailuci-
Disu'cid, adj. \({ }^{\text {dare. To make clear, }}\)
Dilucida'tion to free from obscurity.

I shall not extenuate, but explain and dilucidate, according to the custom of the aneients.

Browne's Vulgar Errours.
DILUTE', \(v . a . \& a d j\).
Dilu'ter, n.s.
From Lat. diluo,
Dilu'tion,
Dilúent.
(o wash. To make lhin or fluid-like; to weaken; make vapid. Dilution is the act of making thin or weak, or the thing so made.

Drinking a large dose of diluted tea, as she was ordered by a plysician, she got to bed. . Locke.

If the red and blue colours were more dilute and weak, the distance of the images would be less than an inch; and if they were more intense and full, that distance would be greater.

Newton.
Water is the only diluter, and the best dissolvent of most of the ingredients of our aliment.

Arbuthnot on Aliments.
There is no real diluent but water : every fluid is diluent, as it contains water in it.
\(I d\).
Opposite to dilution is coagulation, or thickening, which is performed by dissipating the most liquid parts by heat, or by insinuating some substances, which make the parts of tbe fluid cohere mor strongly.

DILU'VIAN, adj. From Lat. diluvium, de and \(l u v\), to wash. Relating to the deluge.

Suppose that this diluvian lake should rise to the mountain tops in one place, and not diffusc itself equally into all countries about. Burnet's Theory.

DIM, v.a.\&adj. Goth. dimma; Sax.dimDim'ish, adj. me; Swed. dimm; Welsh Din'ishly, adv. \}dy; Erse dow. According Dimisuness, n.s. to Minsheu from \(\delta \varepsilon \mu \mu \mathrm{s}\), fear, because the dark occasions fear. To becloud; darken; make less bright, or obscure: as an adjective, somewhat dark ; and hence not seeing clearly; dull. Dimish is a diminutive of dim.

When Isaac was old his eyes were dim that he could not see.

Gen. xxvii. 1.
The statu of Mars began his hauberke ring,
And with that sound he herd a murmuring
Full low and dym, that saied, 'Vietory!'
Chaucer.
And her fair eyes, like stars that dimmed were
With darksome cloud, now shew their goodly beams.
Spenser.
As where the Almighty's lightning brand does light,
It dims the dazed eyen, and daunts the senses quite.

Id. Faerie Queene.
All of us have cause
To wail the dimming of our shining star.
Shakspeare. Richard III.
It hath been observed by the ancients, that much use of Venus doth dim the sight; and yet eunuchs, which are unable to generate, are nevertheless also dim sighted.

Bacon.
Thus while he spake, each passion dimmed his face, Thrice changed. Milton.
Unspeakable! who sittest above these heavens, To us invisible, or dimly seen,
In these thy lowest works
\(I d\).
In the beginning of our pumping the air, the mateh appeared well lighted, though it had almost filied the receiver with fumes; but by degrees burnt more and more dimly.

Boyle's Spring of the Air.
The principal figure in a picture is like a king among his courtiers, who dims all his attendants.

Dryden.
Every one deelares against blindness, and yet who almost is not fond of that which dims his sight?

Locke.
'Tis true, but let it not be known, My eyes are somewhat dimish grown; For nature, always in the right,
To your decays adapts my sight. Swift.
For thee I dim these eyes, and stuff this head, With all such reading as was never read.

Pope's Dunciad.

Add to ail these improvements backwards another modern fancy, that grey printing is more beautiful than black. Hence the English new bonks are printed in so dim a character, as to be read with difficulty by old eyes, unless in a very strong light, and with good glasses.

Franklin.
But when the fading eye grows dim,
And fails each faint and wasted limb,
And short and frequent pantings show The sad disease that lurks below. Bowdler.

I linger yet with Nature, for the night
Hath been to me a more familiar face Than that of man; and in her starry shade Of dim and solitary loveliness,
I learned the language of ancther world. Byron.
DIMACHIE; from \(\delta \stackrel{s}{ }\), deuble, and \(\mu \alpha \chi^{\omega}\), I §ight; in antiquity, a kind of horsemen, first instituted by Alexander. Their armour was lighter.than that of the infantry, and at the same tome heavier than that used by horsemen, so that they could act as horse or foot as occasion required.
DIMCHURCH, or Dischurch, a village of England, in Kent, situated by the side of a strong dyke, called Dimchurch Wall, between Romney and Hythe, made to prevent the encroachments of the sea, with a road on the top which is mostly wide enough for carriages to pass each other. Here are kept the records of the Romney Marsh; and the court is held here by the lords of the Marsh and the members of the corporation, to regulate all affairs concerning it It is four miles and a half N.N.E. of New Romney, and four and a half S. S. W. of Hythe.

DIMEN'SION, n.s. \(\quad\) Fr. and Span. di-
Dimen'sionless, adj. mension; Ital. dimenDimen'sive. \(\quad\) sione; Lat. dimensio; de and mensio, from metior, Gr. \(\mu \varepsilon \tau \rho \varepsilon \omega\), to measure. Extent ; capacity; solid contents. Dimensionless is used by Milton for without bulk. Dimensive is marking the boundary or dimensions.

\section*{Wherefore base}

When my dimensions are as well compact, My mind as generous, and my shape as true, As honest Madam's iseue ?

Shakspeare.
All bodies have their mensure, and their space But who can draw the soul's dimensive lines?

Davies.

\section*{In they passed}

Dimensionless through heavenly doors. Milton.
My gentleman was measuring my walls, and taking the dimensions of the room.

Swift.
To judge rightly of our nwn worth, we should retire a little from the world, to see its pleasures, and pains too, in their proper size and dimensions.

Sterne.
Thus mingled still with wealth and state,
Croesus himself can never know;
His true dimensions and his weight
Are far inferior to their show.
Watts.
Dimension, in geometry, is either length, breadth, or thickness; hence a line has one dimension, viz. length; a superficies two, viz. length and breadth ; and a body or solid has three, viz. length, breadth, and thickness.

DIMICATION, n.s. Lat. dimicatio. A battle; the act of fighting ; contest.

DIMIDIA'TION, n. s. Lat. dimidiatio. The act of halving ; division into two equal parts.

DIMIN'ISH, v. a. a. \& \(n\).) Diminishingly, adj. Diminútion, n.s.
Diminutive, n. s. \& adj. Dimińutively, adv. Dimińutiveness, \(n\). \(s\). Des: less; to imparr; take from in any way; degrade: as a neuter verb, to grow less; be impaired or degraded. Diminutive, as a substantive, and diminutiveness, express littleness. Diminutive also means, that makes little; any thing small.

Ye shall not add unto the word which I commenc you, neither shall you diminish aught from it.

Deut. iv. 2.
The poor wren,
The most diminutive of birds, will fight, Her young ones in her nest, against the owl.

Shakspeare. Macbeth.
Follow his chariot ; monster-like, be shown
For poor'st diminutives, for doits! Shakspeare.
The one is not capable of any diminution or augmentation at all by men; the other apt to admit both.

\section*{Hooker.}

He afterwards proved a dainty and effeminate youth, was commonly called, by the diminutive of his name, Peterkin or Perkin. Bacon's Henry VII.

Make me wise by thy truth, for my own soul's salvation, and I shall not regard the world's opinion or diminution of me.

King Charles.
Impiously they thought
Thee to diminish, and from thee withdraw The number of thy worshippers.

Milton.
0 thou that with surpassing glory crowned,
Look'st from thy sole dominion like the God,
Of this new world; at whose sight all the stans,
Hide their diminished heads
Sim, while but Sim, in good repute did live;
Was then a knave, but in diminutive. Cotton.
What judgment \(I\) had, increases rather than diminishes ; and thoughts, such as they are, come crowding in so fast upon me, that my only difficulty is to chuse or to reject.

Dryden.
The light of man's understanding is but a short, diminutive, contracted light, and looks not beyond the present.

South.
Finite and infinite seem te be looked upou as the modes of quantity, and to be attributed primarily to those things which are capable of increase or diminution.

Locke.
I never heard him censure, or so much as speak diminishingly, of any one that was absent.

Id.
The gravitating power of the sun is transmitted through the vast bodies of the planets without any diminution, so as to act upon all their parts, to their very centres, with the same force, and according to the same laws, as if the part upon which it acts were not surrounded with the body of the planet.

Newton.
They know how weak and aukward many of those little diminutive discourses are.

Watts.
Crete's ample fields diminish to our eye;
Before the Boreal blasts the vessels fly.
Pope's Odyssey.
Security diminishes the passions; the, mind, when left to itself, immediately languishes.

Hume.
Check then the solicitations of the flesh; and dare to do nothing that may diminish thy native excellence, dishonour thy high original, or degrade thy noble nature.

Mason.

Thence with what pleasure have we just discerned The distant plough, slow moving, and beside
His labouring team, that swerved not from the track, The sturdy swain diminished to a boy. Cowper.

DIM'ISSORY, adj. Lat. dimissorius. That by which a man is dismissed to another jurisdiction.

A bishop of another diocess ought neither to ordain or admit a clerk, without the consent of his own proper bishop, and without the letters dimissory.

Ayliffe.
Dimissory Letters, literæ dimissoriæ, in the canon law, a letter given by a bishop to a candidate for holy orders, having a title in his diocess, directed to some other bishop, and giving leave for the bearer to be ordaincd by him. When a person produces letters of ordination or tonsure, conferred by any other than his own diocesan, he must at the same time produce the letters dimissory given by his own bishop, on pain of nullity. Letters dimissory cannot be given by the chapter, sede vacante; this being deemed an act of voluntary jurisdiction, which ought to be reserved to the successor.

DI'MITY, n.s. A tine kind of fustian, or cloth of cotton.

I directed a trowze of fine dimity. Wiseman.
DIM'PLE, \(n . s . \& v . n\).\() Dint, a hole; din-\)

Dimplen, adj.
Dimp'ly, \(a d v\). ( a careless pronunciation made dimple, says Skinner. A small hollow, or depression, often applied to the face.

On each side her
Stood pretty dimpled boys like smiling cupids.
Shakspeare.
By dimpled brook, and fountain brim,
The wood-nymphs decked with daisies trim
Their merry wakes and pastimes keep:
What hath night to do with sleep? Milton.
The wild waves mastered him, and sucked him in, And smiling eddies dimpled on the main. Dryden.

As the smooth surface of the dimply flood
The silver-slippered virgin lightly trod.
Warton's Isis.
In her forehead's fair half round,
Love sits in open triumph crowned ;
He in the dimple of her chin,
In private state, by friends is seen.
Prior.
The dimple [laugh] is practised to give a grace to the features, and is frequently made a bait to entangle a gazing lover.

Steele.

\section*{How frail is Beauty's bloom !}

The dimpled cheek-the sparkling eye-
Scarce seen, before their wonders fly To decorate a tomb.

Robinson.
DIMEERITÆ; from \(\delta \iota a\), and \(\mu \circ \rho \rho \omega\), to divide; a name given to the Apollinarists, who at first held that Christ only assumed a human body without taking a reasonable soul ; but, being at length convinced by texts of Scripture, they allowed that he did assume a soul, but without understanding, the Word supplying that faculty. From this way of separating the understanding from the soul they were denominated Dimœritæ, or separaters.

DIMOTUC, a town of European Turkey, in Romania, with a Greek archbishop's see. It is seated on a mountain surrounded by the river

Vol. VII.

Meriza, twelve mules south-west of Adrianople Long. \(26^{\circ} 15^{\prime}\) E., lat. \(41^{\circ} 35^{\prime} \mathrm{N}\).

DIMSDALE (Thomas), a celebrated English physician, the son of a surgeon at Theydon (iar non in Essex, where he was born in 1712. He studied some time at St. 'Thomas's Hospital, London; and, about 1734, commenced practitioner at Hertford. In 1745 he accompanied the army under the duke of Cumberland as assistant surgeon, and continued in that capacity till Carlisle had surrendered to the royal army, when he returned to Hertford. In 1761 he took the degree of M. D., commenced physician, and became celebrated by his successful mode of inoculating for the small pox. He published a treatise on it in 1767, which was quickly translated, and circulated all over the continent. His fame as a skilful practitioner occasioned his being invited to Russia to inoculate the empress Catherine and her son, in 1768 , for which he was appointed counsellor of state and physician to her imperial majesty, with an annuity of \(£ 500\) : he was at the same time created a baron of the Russian empire, and the same title was conferred on his son. At Moscow he inoculated also a considerable number of the people; but refused the invitation of the empress to reside in Russia as her physician, and after being admitted, at Sans Souci, to a private audicnce of Frederic II. king of Prussia, he returned to England. In 1780 he was elected M.P. for the borough of Hertford; upon which he declincd his practice, except for the relief of the poor. In 1781 he again visited Russia to inoculate the late emperor Alexander and his brother, in which he experienced the same success as before. On his resignation, in 1790, his son Nathanael was elected representative of the borough of IIertford. Baron Dimsdale died at Hertford, after a short illness, in 1800.

DIN, v. a. \& n.s. Sax. byn, from bynan, to make a noise; Ice dyna, to thunder. To sun with a noise ; stupify; overpower with clamotr; the noisc made.

\section*{And all the way he roared as he went,} That all the forest with astonishment
Thereof did tremble, and the beasts therein
Fled fast away from that so dreadful din.
Hubberd's Tale.
0 , 'twas a din to fright a monster's ear ;
To make an earthquake : sure, it was the roar Of a whole herd of lions. Shakspeare.

Now night, over heaven
Inducing darkness, grateful truce imposed,
And silence on the odious din of war. Milton.
Rather live
To bait thee for his bread, and din your ears
With hungry cries.
Otway.
Some independent ideas, of no alliance to one another, are, by education, custom, and the constant din of their party, so coupled in their minds, that they always appear there together, and they can no more separate them in their thoughts than if they were but one idea, and they operate as if they were so.

Locke.
What shall we do if his majesty puts out a proclamation commanding us to take Wood's halfpence? This hath been often dinned in my ears.

Suift.
Nature's eye is melancholy
O'er the city high and holy :
S

DIK
But without there is a din Should arouse the' saints withın, And revive the heroic ashes Round which yellow Tiber dashes. Byron.
DINAGEPORE, a district of Bengal, situated petween the twenty-fifth and twenty-sixth degrees of northern latitude. It is bounded on the north and west by Purneah, on the east by Rungpore and Ghoragot, and on the south by Bettooriah. The soil is much diversified, and the general face of the country is divided into small valleys of two or three miles broad. These are watered by rivers, which, in the rainy seasons, inundate the low lands and swell into large lakes fifty or sixty miles long, till the falling of the Ganges permits the water to retire, after which these lowlands are covered with lusuriant pasture, and are capable of producing abundant crops of rice. The soil does not answer for grain, but indigo, tobacco, and hemp are cultivated successfully, It is on the whole, however, one of the poorest districts of Bengal. Three-fourths of the inhabitants are Hindoos.

Dinagepore, or Rajigunge, the capital of the above district, is situated on an island formed by the Pernabubah, and is the residence of the rajah. It is a considerable place of trade.

DINAI ; Heb. דיגה, i. e. judgment ; the only daughter of the patriarch Jacob. Her misfortune with the prince of Shecherm; his honorable proposal of repairing the injury by marriage; and the prevention of the fulfilment of his generous intention by the treachery and barbarity of her bloody brethren, Simeon and Levi, are recorded in Gen. xxxiv. See Levi.

Dinan, or Dinant, a town of the depart ment of the Cotes du Nord, Brittany, containing manufactures of cotton, linen, and flannel, and about 4200 inhabitants. It is surrounded with walls, and has an old castle, situated on the river Rance, a few miles from the sea. The small harbour is about thirteen miles south of St . Malo.

DINAPORE, a town, or rather a military cantonment, belonging to the British, situated on the southern bank of the river Ganges, in the province of Bahar, eleven miles and a half west of the city of Patna, for the defence of which it was constructed, in the year 1767. It consists of two laandsome brick squares that will contain 1200 men, and superior barracks for the European officers. 'The officers,' says Mr. Hamilton, 'have more accommodations than in any barracks in England; and the private soldiers of the European regiments are provided with large and well aired apartments. The native soldiers are quartered in small huts, which to them is no hardship. The magazine built by Mr. Hastings has had \(£ 15,000\) expended on it. In the vicinity is an excellent house in the European style, built by the soudalı Ali, nabob of Oude.
dindigul, or Dandigala, a district in. the south of India, situated between the tenth and eleventh degrees of north latitude. It is bounded on the north by Coimbetoor and Kistnagherry, on the east by the Polygar territory and Madura, on the south by Travancor and Madura, and on the west by Travancor, Cochin, and Malabar. The principal rivers are the

Noil and the Amravati; and the chief towns Dindigul, Balny, and Palapetty. Particular inhabitants are here in the enjoyment of a portion of land, rent free, and the hereditary occupiers of the rest. This district was ceded to the British by Tippoo, in 1792, and, together with Madura, the Manapara Pollams, Ramnad, and Shevagunga, now forms one of the collectorships of the Madras presidency. The Dindigul districts and sequestered pollams have been converted into forty zeniindaries.
Dindigul, the capital of the district of the same name, in southern India; has a fort, situated on a strong rock, in the midst of a plain, which is bounded on the west by the great range of mountains which separates it from the coast of Malabar, and on the east by a lower range, which runs between it and the district of Madura. This place was taken in 1755 by the Mysore rajahs, and by the British arıny in May, 1783, but restored to Tippoo at the peace of 1784. Travelling distance from Seringapatam 198 niles, from Madras 275 miles.

DINDYMA, or Dindymus, a mountain or ridge, allotted by many to Phrygia. Strabo mentions two mountains of this name, one in Mysia, near Cyzicus, the other in Gallogrecia, near Pessinûs, and none in Phrygia. Ptolemy extends this ridge from the borders of Troas, through Phrygia to Gallogrecia: though, therefore, there were two mountains called Dindymus in particular, both sacred to the mother of the gods, and none of them in Phrygia Major, yet there might be several hills and eminences in it, on which this goddess was worshipped, and tnerefore called Dindyma in general.
 or principal, meal to. To feed; to eat that meal. The dining-room, dinner, and dinner-time, are in this country well understood.

Pernaps some merchant hath invited him, And from the mart he's somewhere gone to dinner: Good sister let us dine, and never fret. Shakspeare.

At dinner-time,
I pray you have in mind where we must meet.
Id.
He would dine with him the next day.
Clarendon.
Before dinner and supper, as often as it is convenient, or can be had, let the public prayers of the church, or some parts of them, be said publicly in the family.

Taylor.
The apartments within were very splendid, especially the dining-room; and many other of the rooms were well adorned with mouldings and fret-work; some of whose marble clavils were so delicately fine, that they would reflect an object true and lively from a great distance.

Fuller. Worthies of Devon.
Boil this restoring root in generous wine,
And set beside the door the sickly stock to dine.
Dryden.
Thus, of your heroes and brave boys,
With whom old Homer makes such noise, The greatest actions I can find,
Are, that they did their work and dineti.
Prior.

Then from the mint walks forth the man of rhyme, Happy to catch me just at dinner-time.

Poze.
On carcasses of every kind, This man hath elegantly dined.

Gay.
Whirling
DINETTICAL, adj. \(\Delta \iota \nu \eta \tau \iota \kappa o\). round; vertiginous.

Some of late have concluded, from spots in the sun, which appear and disappear again, that, besides the revolution it maketh with its orbs, it hath also a dinetical motion, and rolls upon its own poles.

Browne's Vulgar Errours.
A spherical figure is most commodious for dinetical motion, or revolution upon its own axis. Ray.

DING. Goth. denga; Sax. dengan; Dutch dringen, to beat about. To dash violently; to bluster; bounce.

Let us all ring fancy's knell; Dings dong bell.

Shakspeare.
He huffs and dinys, because we will not spend the little we have left, to get him the title of lord Strut. Arbuthnot.
DINGELFINGEN, a well-built old town of Lower Bavaria, situated on the Iser, in the circle of the Danube, and containing 2080 inhabitants. It is divided into the upper and lower towns; the former standing on a steep eminence, communicating with the hills by a sort of dry aqueduct. It is eighteen miles northeast of Landshut, and forty-eight north-east of Munich.

DIN'GLE, n.s. From Sax. ben, or bin, a hollow. A hollow between hills; a dale.

\section*{I know each lane, and every alley green,}

Dingle or bushy dell of this wild wood;
And every bosky bourn from side to side,
My daily walks and ancient neighbourhood.
Milton.
Dingle, in geography, a sea-port of Ireland, in Kerry, Munster, seated on the north side of a bay, and formerly a place of great trade, particularly with Spain. Several of the houses are built in the Spanish fashion, with ranges of stone balcony windows. It is a borough, and sent two members to the Irish parliament. It is twenty-four miles W.S.W. of Tralee, and 166 of Dublin.

DINGWALL, an ancient and flourishing royal borough, in the county of Ross, Scotland, erected by king Alexander II., in 1226. Its charter of that date was confirmed and renewed by James IV., and the inhabitants empowered to elect a provost, two baillies, dean of guild, treasurer, and ten counsellors. It joins with Kirkwall, Wick, Dornoch, and Tain, in sending a representative to the British parliament. From the remains of some old causeways, Dingwall appears to have been anciently much more extensive than it is now. The ruins of its castle are still to be seen, consisting of ' stones so strongly cemented with mortar that it is easier to break a solid rock than to separate those of which it is composed.'. It was surrounded with a deep ditch, and a regular glacis remains. The town has been much enlarged and improved, and a considerable inland trade is carried on in it. It lies eighteen miles west of Cromarty, and is seated on the Frith.

DINOCRATES, a celebrated architect of Macedonia, who rebuilt the temple of Ephesus, when burnt by Erostratus, with much more magnificence than before. Vitruvius informs us, that Dinocrates proposed to Alexander the Great to convert mount Athos into the figure of a man, whose left hand should contain a walled city, and all the rivers of the mount fow into his right, and from thence into the sea! He also conceived a scheme for building the dome of the temple of Arsinoe at Alexandria, of loadstone, that should, by its attraction, uphold her iron image in the centre, suspended in the air.

DINT, v.a. \& n. s. Sax. byint ; Goth. dunt, a blow; a stroke. To give a blow that marks or indents : the blow given; force.

Much daunted with that dint, her sense was dazed; Yet, kindling rage, herself she gathered round.

Spenser.
A gentle knight was pricking on the plaine
Ycladd in mighty arms and silver shieldc,
Wherein old dints of deepe wounds did remainc, The cruel marks of many 'a bloody fielde.

Spenser. Fuerie Queene.
Leave, leave, fair bride, your solitary bone,
No more shall you return to it alone;
It nurseth sadness; and your body's print,
Like to a grave, the yielding down doth dint.
Donne.
Now you wecp; and I perceive you fecl
The dint of pity. Shakspeare. Julius Cesa, Neither vainly hope
To be invulnerable in these bright arms,
Though tempered heavenly ; for that mortal dine,
Save he who reigns above, none can resist.
Milton.
Deep-dinted wrinkles on her cheeks she draws;
Sunk are her eyes, and toothless are her jaws.
Dryden's Aneid.
We are to wrest the whole Spanish monarchy out of the hands of the enemy; and, in order to it, to work our way into the heart of his country by dint of arms.

Addison.
Fast by the rock, all menacing but mute,
He stood; and save a light beat of his foot,
Which deepened now and then the sandy dint
Beneath his heel, his form seemed turned to flint.
Byron.
DINUMERATION, n.s. Lat. dinumeratio. The act of numbering out singly.

DIO, surnamed Chrysostom, (golden mouth), a celebrated orator and philosopher of Greece, in the first century, born at Prusa, in Bithynia. He attempted to persuade Vespasian to quit the empire; and Domitian was so offended at his freedom of speecli that he would have put him to death had he not fled into Thrace. After the death of that tyrant Dio returned to Rome, and acquired the esteem of Trajan, who made him ride with him in his triumphal chariot. There are still extant eighty of Dio's Orations, and some other of his works,-the best edition of which is that of Samuel Raimarus, in 1750, in folio.

DI'OCESS, n.s. \(?\) Gr. \(\delta \iota \alpha\), and oぃ \(\eta \sigma \iota \varsigma\),
Dioc'esan, n.s. \& adj. \} or see the article following. The circuit of a bishop's jurisdiction : diocesan is the bishop administering therein.

None ought to be admitted by any bishop, but such as have dwelt and remained in his diocess a convenient time.

Whitgift.

One younger man amongst the rest would take upon him to defend that every diocesan bishop was pope. I answered him with some scorn.

Bp. Hall's Hard Measure.
Although he (the bishop) had not all the diocess actually in communion and subjection, yet his charge, his diocess was so much. Just as with the Apostles, to whom Christ gave all the world for a diocess, yet at first they had but a small congregation. Bishop Taylor.

I have heard it has been advised by a diocesan to his inferior clergy, that they should read some of the most celebrated sermons printed by others.

Tatler.
This realm has two divisions, one into shires or counties, in respect of temporal policy ; another into dioceses, in respect of jurisdiction ecclesiastical.

\section*{Cowell.}

Oblige him to a longer residence in his diocese than is usually practised, that he may do the proper work of a bishop; that he may direct and inspect the flock of Christ; confirm the unstable, reclaim the reprobate, \(\& c\).

Bishop Watson.
Diocese is also used in ancient authors for the province of a metropolitan. Diocesis meant, originally, a civil government, composed of divers provinces. The first division of the empire into dioceses is ordinarily ascribed to Conseantine, who distributed the whole Roman state into four : viz. those of Italy, Ihyria, the east, and Africa. And yet, long before Constantine, Strabo, who wrote under Tiherius, takes notice (lib. xiii. p. 432) that the Romans had divided Asia intn dioceses; and complains of the confusion suclı a division occasioned in geography, Asia being no longer divided by people, hut by dioceses, each of which had a tribunal or court, where justice was administered. Constantine, then, was only the institutor of those large dioceses which comprehended several metropoles and governments; the former dioceses only comprehending one jurisdiction, or the country under one judge, as appears from this passage in Strabo, as well as from Cicero himself; lib. iii. epist. ad famil. 9. and lib. xiii. ep. 67. Thns, at first, a province included diverse dioceses; and afterwards a diocese came to comprise divers provinces. In after times the Roman empire became divided into thirteen dioceses or prefectures; though, including Rome and the suburbs, there were fourteen. These fourteen dioceses comprehended 120 provinces; each province had a proconsul, who resided in the capital; and each diocese of the empire had \(\mathrm{a} \cdot\) consul, who resided in the principal city of the district. On this civil constitution the ecclesiastical one was afterwards regulated: each diocese had an ecclesiastical vicar or primate, whose judgment determined all the concerns of the church within his territory. At present diocese is confined to a single province, under a metropolitan, or more commonly to the single jurisdiction of a bishop. Brito affirms diocese to be properly the territory and extent of a baptismal or parochial church; whence the word is used by divers authors to signify a sinple parish.

DIOCLEIA, \(\operatorname{\Delta tor}^{2} \boldsymbol{\varepsilon} \epsilon\), in antiquity, a solemnity kept in the spring, at Megara, in memory of the Athenian hero, who died in the defence of the youth he loved.

DIOCLESIANUS (Caius Valerius Jovius), a celebrated Roman emperor, born of an olbscure family in Dalmatia, in 245. He was first a common soldier, and by merit and success he gradually rose to the office of a general ; and at the death of Numerian, in 284, was invested with imperial power. In this high station he rewarded the fidelity of Maximian, who had shared with him all the subordinate offices in the army, by making him his colleague on the throne. He created two subordinate emperors, Constantius and Galerius, by the title of Cæsars, whilst he claimed for himself and his colleague the superior title of Augustus. Dioclesian has been celebrated for his military virtues; and though he was not polished by education, was, nevertheless, a patron of learning. He was bold, resolute, and active; but his cruelty to the Christians has been deservedly branded with infamy. After he had reigned twenty-two years in the greatest prosperity, he publicly abdicated the crown at Nicomedia, in 305, and retired to a private station at Salona. Maximian, his colleague, was compelled to follow his example; and when he, some time after, endeavoured to rouse the ambition of Dioclesian and persuade him to re-assume the imperial purple, he received for answer, that Dioclesian took now more delight in cultivating his little garden, than he formerly enjoyed in a palace, when his power was extended over all the earth. He lived nine years after his abdication ir, the greatest security and enjoyment at Salona, and died in 314, in the sixty-eighth year of his age. His persecutior. of the Christians forms a chronological era, called the era of Dioclesian, or of the Martyrs. It was long used in theological writings, and is still followed by the Copts and Abyssinians. It commenced August 29th, A. D. 284.

DIOCTAHEDRIA, in natural history, a genus of pellucid and crystalliform spars, composed of two octangular pyramids, joined hase to base, without any intermediate column. Of these some bave long pyramids, others short and sharp-pointed ones, and others short and obiuse pointed ones; the two former species being found in the Hartz, and the last in the mines of Connwall.

DIODATI (John), a Protestant divine, and professor of theology at Geneva, who was born at Lucca in 1579, and died at Geneva in 1652. He is distinguished by his translations \(\cdot\) 1. Of the Bible into Italian, with notes, Geneva, 1607, 4to. This work is, however, rather a paraphrase than a translation, and the notes, divine meditations more than critical reflections. 2. Of the Bible into French, Geneva, 1644; and 3. (1t Father Panl's History of the Council of Trent into French.

DIODIA, in botany, a genus of the monogynia order, and tetrandria class of plants; natural order, forty-seventh, stellata : cor. monopetalons and furmel-shaped: caps. bilocular and dispermous. Species six, natives of the West Indies and of Mexico.

DIOD()N, the sun-fish, in ichthyology, a genus belonging to the order of branchiostega. There are three species : viz.
1. D. trystrix, or the globe-fish, common to

Europe and South Carolina. The form of the body is usually oblong; but when alarmed it has the power of inflating the belly to a globular slape of great size. This seems designed as a means of defence against fish of prey, as they have less means of laying hold of it, and are besides terrified by the numerous spines with which that part is armed, and which the animal can erect on every part. The mouth is small; the irides white, tinged with red; the back, from head to tail, almost straight, or at least very slightly elevated, of a rich deep blue color. It has the pectoral, but wants the ventral fins: the tail is almost even, divided by an angular projection in the middle; tail and fins brown. The belly and sides are white, shagreened, or wrinkled, and beset with innumerable small sharp spines, adhering to the skin by four processes.
2. D. mola, or the short sun-fish, differs from the oblong, in being much shorter and deeper. The back and the anal fins are higher, and the aperture to the gills not semilunar, but oval. The situation of the fins is the same in both. Both kinds are taken on the western coasts of this kingdom, but in much greater numbers in the warmer parts of Europe.
3. D. oblongus, the oblong sun-fish, grows to a great bulk: one examined by Sylvianus was above 100 pounds in weight; and Dr. Borlase mentions another taken at Plymouth in 1734, that weighed 500 . In form it resembles a bream, or some deep fish cut in the middle. The mouth is very small, and contains in each jaw two broad teeth, with sharp edges. The eyes are small; before each is a small semilunar aperture; the pectoral fins are very small, and placed behind them. The color of the back is dusky, and dappled; the belly silvery; between the eyes and the pectoral fins are certain streaks, pointing downwards. The skin is free from scales. When boiled, it has been observed to turn into a glutinous jelly, resembling boiled starch when cold, and served the purposes of glue on being tried on paper and leather. The meat of this fish is uncommouly rank: it feeds on shell-fish. The sun-fish of the Irish, the squalus of Gmelin, differs in all respects from this.

DIODORUS, surnamed Siculus, an ancient historian, born at Argyra, in Sicily. He wrote a history of Egypt, Persia, Syria, Media, Greeece, Rome, and Carthage; and it is said that he visited all the places mentioned in his history, which was the labor of thirty years. He is, however, too credulous in some of his narratives; and often dwells too long upon fabulous reports and trifling incidents; while events of the greatest importance to history are treated with brevity, and sometimes passed over in silence. He lived in the age of Cessar and Augustus, and spent much time at Rome to procure information, and authenticate liis history. This important work, which le composed in Greek, contained forty books of which there are only fifteen remaining. The best editions are that of Amsterdam, 1745, in 2 vols. folio, and IIeyne, 10 vols. 8 vo. 1793.

DICECIA, the twenty-second class in Linnæus's sexual system, consisting of plauts which, having no hernaphrodite flowers, produce male
and female flowers on separate roots. Thiese last only ripen the seeds; but require for that purpose the vicinity of a male plant; for the aspersion or sprinkling of the male dust. From the seeds of the female flowers, thus impregnated, are raised both male and female plants. The plants in the class diœcia are therefore all either male or female, on separate roots; not hermaphrodite, as in the greater number of classes; nor with male and female flowers upon one root, as in the class monœcia. See Botany.

DIOGENES of Apollonia, in the island of Crete, held a considerable rank among the philosophers who taught in Ionia before Socrates appeared at Athens. He was the scholar and successor of Anaximenes, and in some measure rectified his master's opinion concerning air being the cause of all things. It is said that he was the first who observed that air was capable of condensation and rarefaction. He taught with great reputation at Athens; but was at length banished for the freedom of his opinions. He died about A.A.C. 450.

Diogenes the Cynic, an ancient philosopher, the son of a banker of Sinope. Being banished with his father for coining money, he retired to Athens, where he studied philosophy under Antisthenes. Here he added new degrees of austerity to the sect of the Cynics, and never did any philosopher carry contempt for the conveniences of life so far. He lodged in a tub; and had no other property beside his staff, wallet. and wooden bowl, which last he threw away, on seeing a boy drink out of the hollow of his hand. He used to call himself a vagabond, who had neither house nor country; was obliged to beg was ill clothed, and lived from hand to movili Sucl singularity soon gained him reputation ; and Alexander the Great condescended to visit the philosopher in his tub. He asked if there was any thing in which he could oblige him: 'Ger out of my sunshine' was the only answer from the philosopher. The conqueror was so struck with the independence of mind thus exhibited, that he declared, 'if he was not Alexander, he would choose to be Diogenes.' In reply to one who asked at what time he ought to dine, Diogenes said, 'If you are a rich man, when you will; if you are poor, when you can.' 'Would you be revenged upon your enemy,'said Diogenes, 'be virtuous, that he may have nothing to say against you.' As Diogenes was going over to the island of Ægina, he was taken by pirates, who carried him into Crete, and there exposed him to sale. He answered the crier, who asked him what he could do, that 'he knew how to command men \(:\) ' and perceiving Xeniades, a Corinthian, going by, he said, 'Sell me to that gentleman, for he wants a master.' Xeniades, struck with the singularity if. Diogenes, bought him and carried him to Corinth, appointed him tutor to his children, and soon entrusted him with the management of his house. Diogenes's friends being desirous of redeeming him, 'You are fools,' said he ; 'the lions are not the slaves of those who feed them, but they are the servants of the lions.' Some say that Diogenes spent the remainder of his life in Xeniades's family; but Dio Chrysoston asserts that he passed the winter
at Athens, and the summer at Corinth. He died at Corinth when he was about ninety years old : but authors are not agreed either as to the time or marirer of his death. The account of Jerom is, that as he was going to the Olympic games, a fever seized him; upon which he lay down under a tree, and refused the assistance of those who accompanied him. 'Go you to the games,' said he, 'and leave me to contend with my illness. If I conquer, I will follow you: if I am conquered, I shall go to the shades below.' He despatched himself that very night ; saying, that 'he did not so properly die, as get rid of his fever.' He had for his disciples Onesicritus, Phocion, Stilpo of Megara, and several other great men. His works are all lost.

Diogenes, surnamed Laertius, from Laerta in Cilicia, his birth place, an ancient Greek author, who wrote ten books of the Lives of the Philosophers, still extant. In what age he flourished is not determined. The oldest writers who mention him are Sopater of Alexandria, who lived in the time of Constantine the Great, and Hesychius Milesius, who lived under Justinian. Diogenes often mentions Plutarch and Phavorinus; and Menage has fixed the period of his appearance at the time of Severus, or about A.A.C. 200. He divided his Lives into books, and inscribed them to a learned lady of the Platonic school, as he himself intimates in lis Life of Plato. There have been several editions of his Lives of the Philosophers; but the best is that printed in 2 vols. 4to., at Amsterdam, 1693.

DIOMEDES, in fabulous history, a tyrant of Thrace, who is said to have fed his horses with the flesh of men. Hercules killed him, and threw him to be eaten by his own carnivorous horses; Hyginus says there were four of them, and that the hero afterwards killed them, along with Abderus, their groom.

Diomedes, king of Etolia, the son of Tydeus and Deiphyle, one of the bravest of the Grecian cliefs in the Trojan war. He went with Ulysses to steal the Palladium from the temple of Minerva in Troy; and assisted in murdering Rhesus king of Thrace, and carrying off his horses. At his return from the siege of Troy, he lost his way in the darkness of the night, and landed in Attica, where his companions plundered the country, and lost the Trojan Palladium. During his long absence, his wife Ægiale had prostituted herself to Cometes, one of her servants. This was attributed to the resentment of Venus, whom Diomedes had wounded in a battle before Troy. He resolved to abandon his native country, which was the seat of his disgrace ; and the attempts of his wife to take away his life, hastened his departure. He came to that part of Italy which has been called Magna Grecia, where he built a city, which he called Argyrippa, and married the daughter of Daunus. the king of the country. He died there in extreme old age; or, according to a certain tradition, he perished by the hand of his father-in-law. His death was greatly lamented by his companions, who, in the excess of their grief, were changed into birds resembling swans. These birds took flight into a neighbouring island in the Adriatic, and became remarkable for the tameness with which they ap-
proached the Greeks, and for the horror with which they shunned all other nations. They are called the birds of Diomedes. Altars were raised to Dioniedes, as to a god, one of which Strabo mentions at Timavus.
DIOMEDIA, in ornithology, a genus belonging to the order of anseres. The bill is strait; the superior mandible is crooked at the point, and the lower one is truncated; the nostrils are oval, open, a little prominent, and placed on the sides. There are four species : the principal are:-
1. D. demersa, has no quill-feathers on the wings; and the feet have four toes, connected together by a membrane. It is the black pengun of Edwards, about the size of a goose, and is fcuud at the Cape of Good Hope. It is an excellent swimmer and diver; but hops and flutters in a strange aukward manner on the land; and, if hurried, stumbles perpetually, and frequently runs for some distance like a quadruped, making use of the wings till it can recover its upright posture, crying out at the same time like a goose, but in a much hoarser voice. It is said to clamber some way up the rocks in order to make the nest; in doing which, it has been observed to assist with the bill. The eggs are two in number, white, as large as those of a duck, and reckoned delicious eating, at least are thought so at the Cape, where they are brought in great numbers for that purpose. At this place the birds are often seeu kept tame; but in general they do not survive the confinement many months.
2. D. exulans, has pennated wings, and three toes on each foot. It is the alhatross of Edwards; and is about the size of a pelican. These birds are found in the ocean beiwixt the tropics, and at the Cape of Good Hope. They are also often seen in vast flocks in Kamtschatka, and the adjacent islands, about the end of June, where they are called great gulls; but it is chiefly in the bay of Penschinensi, the whole inner sea of Kamtschatka, the Kurile Isles, and that of Bhering; for on the eastern coasts of the first they are scarce, a single straggler only appearing now and then. Their chief motive for frequenting these places seems to be plenty of food; and their arrival is a sure presage of shoals of fish following. At their first coming they are very lean, but soon grow immensely fat. They are very voracious, and will often swallow a salmon of four or five pounds weight; but as they cannot take the whole of it into their stomach at once, part of the tail end will often remain out of the mouth; and the natives, finding the bird in this situation, easily knock it on the head on the spot. Before the middle of August they migrate elsewhere. They are often taken by a hook baited with a fish, not for the sake of their flesh (it being hard and unsavory) but on account of the intestines, a particular part of which is blown up as a bladder, and serves as a float to buoy up nets in fishing. Of the bones, tobacco-pipes, needle-cases, \&c., are made. When caught they defend themselves stoutly with the bill. Their cry is harsh and disagreeable, not unlike the braying of an ass. The breeding places of the albatross, if at all in the northern hemisphere, have not yet been pointed out ; but we are certain of their nultiplying in the southern, viz. Patagonia and Falk-
land Islands ; to this last place they come about the end of September or beginning of October, among other birds, in great abundance. The nests are made on the ground with earth, are round in shape, a foot in height, indented at top. The egg is larger than that of a goose, four inches aud a half 1 ng , white, inarked with dull spots at the bigger end, and is thought to be good food, the white never growing lard with boiling. While the female is sitting, the male is constantly on the wing, and supplies her with food: during this time they are so tame as to suffer themselves to be shoved off the nest while their eggs are taken from them ; but their chief destruction arises from the hawk, whicl, the moment the female gets off the nest, darts thereon, and flies away with the egg. The albatross itself likewise has its enemy, being greatly persecuted while on the wing by the dark gray gull, called skua. This bird attacks it on all sides, but particularly endeavours to get beneath, which is only prevented by the first settling on the water; and indeed they do not frequently fly at a great distance from the surface, except obliged so to do by high winds or other causes. As soon as the young are able to remove from the nest, the penguins take possession, and hatch their young in turn. It is probable that they pass from one part of the globe to another according to the season; being now and then met with by different voyagers at various times in intermediate places. The food is supposed to be chiefly small marine animals, especially of the molluscæ or blubber class, as well as flying fish.

DION, the son of Hipparinus, a Syracusan, famous for his power and abilities. He was related to Dionysius, and often joined with the philosopher Plato (who at his request had come to reside at the tyrant's court), in advising him to lay aside the supreme power. His great popularity rendered him odious in the eyes of the tyrant, who banished him to Greece. There he collected a numerous force, and resolved to free his country from tyranny. This be easily effected on account of his popularity. He entered the port of Syracuse with only two ships ; and in three days reduced under his power an empire which had already subsisted for fifty years, and which was guarded by 500 ships of war, and above 100,000 troops. The tyrant fled to Corinth, and Dion kept the power in his own hands, fearful of the aspiring ambition of some of the friends of Dionysius : but he was shamefully betrayed and murdered by one of his familiar friends called Callicrates, or Callippus, 354 years before the Christian era.

Dion Cassius, a native of Nicæa in Bithynia. His father's name was Apronianus. He was raised to the greatest offices of state in the Roman empire by Pertinax, and his three successors. He was naturally fond of study, and he improved himself by unwearied application. He was ten years in collecting materials for a history of Rome, which he published in eighty books, after a laborious employment of twelve years in composing it. This valuable history began with the arrival of Æneas in Italy, and was carried down to the reign of Alexander Severus. The first thirty-four books are totally lost ; the twenty fol-
lowing, that is from the thirty-fifh to the fiftyfourth, remain entire; the six following are mutilated; and fragments are all that we possess of the last twenty. In the compilation of this extensive history, Dion proposed Thucydides for a model, but he is not perfectly happy in his imitation. His style is pure and elegant, and his narrations are judiciously managed, and his reflections learned; but, upon the whole, he is credulous, and the bigoted slave of partiality, satire, and flattery. He inveighs against the republican principles of Brutus and Cicero, and extols the cause of Cæsar. Seneca is the object of his satire, and he represents him as debauched and licentious in his morals.

DIONEA, in botany, a genus of sensitive plants lately discovered. It belongs to the order monogynia, in the decandria class. There is but one genus as yet known: viz. D. muscipula, or Venus's fly-trap. Every one skilled in natural history knows, that the sensitive plants close their leaves, and bend their joints, upon the least touch (see Mimosa); but no design of nature has yet appeared to us from these surprising motions: they soon recover themselves again, and their leaves are expanded as before. But the dionæa shows that nature may have some view towards its nourishment, in forming the upper joint of its leaf like a machine to catch food; upon the middle of this lies the bait for the unhappy insect that becomes its prey. Many minute red glands that cover its inner surface, and which discharge a smell of carrion, tempt the poor animal to taste them; and the instant these tender parts are irritated by its feet, the two lobes rise up, grasp it fast, lock the two rows of spines together, and squeeze it to death. And lest the strong efforts for life, in the creature thus taken, should serve to disengage it, three small erect spines are fixed near the middle of each lobe among the glands, that effectually put an end to all its struggles. Nor do the lobes ever open again, while the dead animal continues there. The plant, however, cannot distinguish an animal from a general substance; for, if we introduce a straw or a pin between the lobes, it will grasp it full as fast as if it was an insect. It grows in North America, in about \(35^{\circ}\) lat. N., in wet shady places, and flowers in July and August. The largest leaves are about three inches long, and an inch and a half across the lobes, the glands of those exposed to the ses are of a beautiful red color; but those in the shade are pale, and inclining to green. The roots are squamous, sending forth but few fibres, and are perennial. The leaves are numerous, inclining to bend downwards, and are placed in a circular order; they are jointed and succulent; the lower joint, which is a kind of stalk, is flat, longish, two edged, and inclining to heart-shaped. In some varieties they are serrated on the edges near the top. The upper joint consists of two lobes; each lobe is of a semi-oval form, with its margins furnished with stiff hairs like eye-brows, which embrace or lock in each other when they close. The upper surfaces of the lobes are covered with small red glands; each of which appears, when highly magnified, like a compressed arbutus-berry. If the fly, enclosed in
these lobes, can be forced out so as not to strain the lobes, they expand again; but if force is used to open them, so strong has nature formed the spring of their fibres, that one of the lobes will generally snap off rather than yield. The stalk is about six inches high, round, smooth, and without leaves ; ending in a spike of flowers. The flowers are milk-white, and stand on footstalks, at the bottom of which is a little painted bractea or flower leaf. The soil in which it grows, as appears from what comes about the roots of the plants when they are brought over, is a black, light mould, intermixed with white sand, such as is usually found in our moorish heaths. Being a swamp plant, a northern aspect will be properest for it at first, to keep it from the direct rays of the sun; and in winter, till we are acquainted with what cold weather it can endure, it will be necessary to shelter it with a bell glass, such as is used for melons. -This should be covered with straw or a mat in hard frosts. By this means several of these plants have been preserved through the winter in a very vigorous state. Its sensitive quality will be found in proportion to the heat of the weather, as well as the vigor of the plant. Our summers are not warm enough to ripen the seed; or possibly we are not yet sufficiently acquainted with the culture of it. To try further experiments on its sensitive powers, some of the plants might be placed in pots of light moorish earth, set in pans of water, in all airy stove in summer; where the heat of such a situation, being like that of its native country, will make it surprisingly active.

DIONYSIA, in Grecian antiquity, solemnities in honor of Bacchus, sometimes called by the general name of Orgia; and by the Romans Bacchanalia and Liberalia.

DIONYSIACA, in antiquity, a designation given to plays and all manner of sports acted on the stage: because play-houses were dedicated to Dionysius; or Bacclus, one of the deities of sports.
DIONYSLUS I. from a private secretary became general and tyrant of Syracuse and all Sicily. He patronised learning and men of letters, and made his court the resort of many of the greatest philosophers of Greece. He was also himself a poet; and having, by bribes, gained the prize for tragedy at Athens, he indulged himself so immoderately at table from excess of joy that he died of the debauch, A.A.C. 386. Some authors, however, say he was poisoned by his physicians.

Dionysius II., his son and successor, was a greater tyrant than his father: his subjects were obliged to fly to the Corinthians for succour; and Timoleon their general having conquered the tyrant, he fled to Athens, where he was obliged to keep a school for subsistence. He died A.A.C. 343.

Dronysies, surnamed Halicarnasseus, or the Halicarnassian, a celebrated historian, and one of the most judicious critics of antiquity. He was born at Halicarnassus; and went to Rome after the battle of Actium, where he staid twenty-two years in the reign of Augustus. He there conposed in Greek lis History of the Roman Antiquities, in twenty books of which the first eleven
only are now remaining. There are also still extaut several of his critical works. The best edition of the works of this author is that of Oxford, in 1704, in Greek and Latin, by Dr. Hudson.

Dionysius, surnamed Periegetes, a learned geographer, to whom is attributed a Periegesis, or Survey of the Earth, in Greek verse. Some suppose that he lived in the time of Augustus; but Scaliger and Saumasius place him under the reign of Severus, or Marcus Aurelius. He wrote many other works, but his Periegesis is the only one we have remaiuing; the best and most useful edition of which is that improved with notes and illustrations by Hill.

Dionysius, the Areopagite, was born and educated at Athens. He went afterwards to Heliopolis in Egypt; where, if we may believe some writers of his life, he saw that extraordinary eclipse which happened at our Saviour's passion, and was urged by some uncommon impulse to cry out, Aut Deus Nature patitur, aut cum patiente dolet: 'Either the God of Nature suffers, or condoles with him who does.' At his return to Athens he was elected into the court of Areopagus, whence his title. About A. D. 50 , he embraced Christianity (Acts xvii. 34); and, some say, was appointed first bishop of Athens by St. Paul. He is supposed to have suffered martyrdom; but whether under Domitian, Trajan, or Adrian, is uncertain. We have nothing remaining under his name, but what there is great reason to believe spuriots.

DJOOJOCARTA, a considerable town and European settlement of the island of Java, situated on a navigable stream. It is the capital of the sultan of Mataram, who has a palace here three miles in circuit, surrounded by a broad wet ditch with draw-bridges, and defended by 100 pieces of cannon: Within its precincts is a lake, on which stands an ancient mansion, which is entered by a loug and spacious passage under the water. A guard of 300 Amazons, daughters of petty chieftains, are said to be trained here both to a military and domestic life. They are armed with spears, and are excellent equestrians. This place was taken by a coup de main, by the British, in 1812.

DIOPHANTINE Problems, in mathematics, certain qucstions relating to square and cube numbers, and right-angled triangles, \&c., the nature of which was determinined by Diophanus.
DIOP'TRIC, adj. \(\begin{gathered}\text { Gr. } \delta \text { ©nтоиat. Af- }\end{gathered}\) Diop'trical, adj. Gording a medium for the
Diop'trics, n.s. \(\int\) sight; assisting the sight in the view of distant objects; a branch of the science of optics.

Being excellently well furnished with dioptrical glasses, he had not been able to see the sun spotted
Boyle

View the asperities of the moon through a dioptrick glass, and venture at the proportion of her hills by their shadows.

More's Antid. against Atheism.
Dioptrics ; of \(\delta l a\), through, and \(9 \pi \tau о \mu a t, \mathbf{J}\) see ; sometimes called also Anaclastics, the doctrinc of refracted vision. A branch of the science of optics. The ancients treated distinctly of direct and reflected vision; but of refracted vision
their knowledge was very imperfect. An early treatise on refraction, in nine wooks, was written by J. Baptista Porta; but Kepler was the first who elucidated this subject in any great degree, having demonstrated the properties of spherical lenses very accurately, in a treatise published anno 1611. After Kepler, Galileo introduced the doctrine into his Letters; as also an Examination of the Preface of Johannes Pena upon Euclid's Optics, concerning the use of Optics in astronomy. Des Cartes also wrote a treatise on Dioptrics, commonly annexed to his Principles of Philosophy, one of his best works: in which the true doctrine of vision is more distinctly explained than by any former writer, and in which is contained the law of refraction, discovered by Snell, though the name of the inventor is suppressed. Here are also laid down the properties of elliptical and hyperholical lenses, with the practice of grinding glasses. Dr. Barrow has treated on Dioptrics in a brief but very elegant manner, in his Optical Lectures, read at Cambridge. There are also Huygens's Dioptrics, an excellent work of its kind. Molyneux's Dioptrics, a heavy and dull work. Hartsoeker's Essai de Dioptrique, Cherubin's Dioptrique Oculaire, et De Vision Parfaite, David Gregory's Elements of Dioptrics, Traber's Nervus Opticus, and Zahn's Oculus Artificialis Teledioptricus. Dr. Smith's Optics is a complete work of its kind. Wolfius's Dioptrics are contained in his Elementa Mathesens Uuiversalis. Harris's Optics, Bouguer's Optics, aud the second volume of Haüy's Natural Philosophy, inay also be advantageously consulted. The Treatise on Optics, and the Optical Lectures of Newton, contain an account of inestimable experiments and reasonings in this science : and Mr. Dollond's discovery of achromatic glasses, by which colors are obviated in refracting telescopes, has been of great importance to this branch of optics. See Optics.

DIORTHO'SIS, n.s. Gr. סוop \(\theta \omega \sigma \iota\), of \(\delta \iota \rho \rho o o \omega\) to make straight. A chirurgical operation, by which crooked or distorted members are restored to their primitive and regular shape.

DIOSCOREA, in botauy, a genus of the hexandria order and diœcia class of plants; natural order eleventh, sarmentaceæ. Male cal. sexpartite: cor. none. Fercale cal. sexpartite : styl. three: caps. trilocular and compressed ; and there are two membranaceous seeds. There are fifteen species, of which the only remarkable one is the D. bulbifera, or the yam. It has triangular winged stalks, which trail upon the ground, extend far, and frequently put out roots from their joints as they lie upon the ground, by which the plants are multiplied. The roots are eaten by the inhabitants of both the Indies; and, in the West India islands, make the greatest part of the negroes' food. The plant is supposed to have been brought from the East to the West Indies; for it has never heen observed to grow wild in any part of America; but, in the island of Ceylon, and on the coast of Malabar, it grows in the woods, and there are in those places many different species. It is propagated by cutting the root in pieces, observing to preserve an eye in each, as in planting pota-
toes. One plant will proluce three or four large roots. The skin of these roots is prenty thick, rough, unequal, covered with many stringy fibres or filaments, and of a violet color, approaching to black. The inside is white and of the consistence of red beet. It resembles the potatoe in its mealiuess, but is of a closer texture. When raw, the yams are viscous and clammy ; when roasted, or boiled, they afford very nourishing food; and are often preferred to bread by the inhabitants of the West Indies, on account of their lightness and facility of digestion. When first dug out of the ground, the roots are placed in the sun to dry; after which, they are either put in sand, dry garrets, or casks; where, if kept from moisture, they may be preserved whole years without being spoiled or diminished in their goodness. The root commonly weighs two or three pounds; though some yams lave been found upwards of twenty pounds weight.

DIOSCORIDES, a physician of Anazarba, in Cilicia, who lived in the reign of Nero. He was originaliy a soldier; but afterwards he applied liimself to study, and wrote a book upon Medicinal Herbs., See Botany.

DIOSCURI, in antiquity, a name given to Castor and Pollux, as кoveot, the children, \(\Delta\) wos, of Jupiter. They are often borne on the medals of the Roman consuls, and generally appear, as in the annexed diagram, on horse-back, armed with spears, and with helmets surmounted
 with stars.
DIOSCURIA, סiooxovpıa, in antiquity, a festival in honor of Castor and Pollux. It was observed by the Cyreneans, but more especially by the people of Sparta, the birth-place of these heroes. The solemnity was full of mirth, heing at a time wherein they shared plentifully of the gifts of Bacchus, and diverted thenselves with sports, of which wrestling matches made a part.
DIOSMA, African spiræa, a genus of the monogynia order and pentandria class of plants: cor. pentapetalous; nectarium crown-shaped, above the germen: caps. five, coalited: seeds hooded. There are nine species, of which the most remarkable are,
1. D. hirsuta, with narrow hairy leaves; a very handsome shrub, growing to the height of five or six feet. The stalks are of a fine coral color, the leaves come out alternately on every side of the branches; the flowers are produced in small clusters at the end of the shoots, and are of a white color. They are succeeded by starry seed-vessels, having five corners; in each of which corners is a cell, containing one smooth, shining, oblong, black seed; these seed-vessels abound with a resin which emits a grateful scent, as does also the whole plant.
2. D. oppositifolia, with leaves in the form of a cross. It rises to the height of three or four feet; the branches are slender, and produced from the stem very irregularly; the flowers are produced at the ends of the brancles, between the leaves; the plants continue long in flower, and make a fine appearance, intermixed with other exotics in the open air.

DIOS Nombre De, a town of Mexico, on the road from the mines of Sombrerete to Durango. It contains 6800 inhabitants.

DIOSZEGII, a large market town of Hungary, in the county of Bihar, thirty miles S.S.W of Zathmar.

DIOSPOLITES Nomos, a division of Thebais, or the Higher Egypt, to distinguish it from another of the Lower Egypt, or the Delta; south of the Nomos Thinites, on the west side of the Nile.

DIOSPYROS, the Indian date-plum, a genus of the diæcia order and polygamia class of plants; natural order eighteenth, bicornes. cal. hermaphrodite and quadrifid: cor. urceolated and quadrifid; stam. eight: styl. quadrifid: berry octospermous. There are two species, viz.
1. D. lotus, which is supposed to be a native of Africa, from whence it was transplanted into several parts of Italy, and also into the south of France. The fruit of this tree is supposed to be the lotus with which Ulysses and his companions were said to have been enchanted, and which made those who eat of it forget their country and relations. In the warm parts of Europe this tree grows to the height of thirty feet.
2. D. Virginiana, pinshamin, persimon, or pichumon plum, is a native of America, lut particularly of Virginia and Carolina. The seeds of this sort have been frequently imported into Britain, and the trees are common in many nurseries about London. It rises to twelve or fourteen feet; but generally divides into many irregular trunks near the ground, so that it is very rare to see a handsome tree of this sort. Though plenty of fruit is produced on these trees, it never comes to perfection in this country. In America the inhabitants preserve the fruit till it is rotten, as is practised with medlars in England, when they are esteemed very pleasant. Both species are propagated by seeds, and the plants require to be treated tenderly while young; but when theyare grown up, they resist the greatest cold of this country.
DIP, v.a., v.n. \& n.s. \()\) Goth.doppen; Sax.
Dip'chick, \(n\).s. S dopen; Dutch doopene; Teut. tauffen; Hindoo duba, from Gr. òvate. To imnierse; put into a liquid; wet; and, figuratively, to be deeply involved in any affair, and to engage as a pledge. As a neuter verb to sink; enter; immerge: as a substantive it is applied by miners to the direction of coalshafts and minerals (see p. 268), and by scientific men to the depression of a part of the horizon, the needle of the compass, \&\&c. Dip-chick the example explains.

> Who, dipping all his faults in their affection, Work like the spring that turneth wood to stone, Convert his gyves to graces. Dipchick is so named of his diving and littleares. Carcw. And though not mortal, yet a cold shuddering dew Dips me all o'er, as when the wrath of Jove Speaks thunder.

To be baptized, is to be dipped in water; metaphorically, to be plunged in affictions.

Poole's Continuators.

In Richard's time, I doubt, he was a' little dipe in the rebellion of the commons. Dryden. Fables.

Be careful still of the main chance, my son ; Put out the principal in trusty hands,
Live on the use, and never dip thy lands
Id. Persius.
When men are once dipt, what with the encouragements of sense, custom, facility, and shame of departing from what they have given themselves up to, they go on till they are stifled.

L'Estrange.
So fishes, rising from the main,
Can soar with moistened wings on high ;
The moisture dried, they sink again,
And dip their wings again to Ay.
Suift.
The kindred arts shall in their praise conspire, Onc dip the pencil, and one string the lyre. Pope.

The vulture dipping in Prometheus' side,
His bloody beak with his torn liver dyed.

\section*{Granville.}

The persons to be baptised may be dipped in water; and such an immersion or dipping ought to be made thrice, according to the canon. Ayliffe's Parergon.

Crowd round her baths, and, bending o'er the side, Unclasped their sandals, and their zones untied, Dip with gay fear the shuddering foot undressed, And quick retract it to the fringed vest. Darwin.

In nautical observations it is necessary to know the depression or \(d i p\) of the sea, to correct the apparent altitude of an observed object.

Dr. A. Rees.
DIPET'ALOUS. adj. \(\Delta t s\) and \(\pi \varepsilon r a \lambda o \nu\). Having two flower leaves.

DIPIIT'HONG, n. s. Fr. diphthongue; Ital. and Span. diftongo; Lat. diphthongus; Gr. \(\delta_{\iota \phi} \theta_{0} \gamma{ }^{\prime}\) s, from irs, double, and \(\phi \theta\) ory \(\eta\), a sound.

We see how many disputes the simple and ambiguous nature of vowcls created among grammarians, and now it las begot the mistake concerning diphthongs; all that are properly so are syllables, and not diphthongs, as is intended to be signified by that word.

Holder's Elements of Speech.
Make a diphthong of the second eta and iota, instead of their being two syllables, and the objection is gone.

Pope.
Diphthongs are distinguished by some authors into those that regard the eye, and those that regard the ear; but a more accurate distinction was long ago made by that eminent grammarian, Mr. Ruddiman, into proper and improper. A third class, however, seems to exist in the English language, which may be styled neutral. 1. Improper diphthongs, are those wherein only one of the vowels is sounded, the other heing sunk; as æ and œ in the Latın, and ea, ei, eo, ie, ou, oe, ue, and ui, in the English language. The Latins pronounced the two vowels in their diphthongs ae or \(æ\), oe or \(£\), much as we do; only that the one was heard much weaker than the other, though the division was made with all the delicacy imaginable. 2 . Neutral diphthongs are those combinations of vowels, wherein either a new sound, different from that of both, takes place, or neither of them is sounded; for instance, the sound of eo in people, is quite different from that of eo in jeopardy, or of either of the vowels separate; and the apparent diphthong, or diphthong of the eye, as others style it, ue, in rogue, vogue, \&ce.
is surik altogether. Among the former of these classes may be ranked ee and oo, wherein the original sound of the vowels, instead of being lengthened, like that of aa, is clanged to that of \(i\) and \(u\). The diphthong oe, in shoe, also belongs to this class, with many others. 3 . Proper diphthongs, are such as include the sound of both the component voweis, though still in one syllable; such as au , eu, and ei, in Latin; and ai, au, ay, eu, ey, oi, and ou, in English.
DIP'LOE, n.s. The inner plate or lamina of the skull.

Diploe, in anatomy, the soft meditullium, or medullary substance, which lies between the two lamine of the bones of the cranium.

DIPLO'MA, n. s. Fr. diplome; from Gr. \(\delta \iota \pi \lambda \omega \mu \alpha\). See the article following.

In 1728 he received from Edinburgh and Aberdeen an unsolicited diploma. Academical henours would have more value, if they were always bestowed with equal judgment.

Johnson's Life of Watts.
Diploma is peculiarly used for an instrument or licence, given by colleges, societies, \&c., to clergymen or physicians, to exercise their respective professions, after passing examination, and being admitted to a degree.

DIPLOMATICS, the science of diplomas, or of ancient literary monuments, public documents, \&cc. It does not, however, nor can it, absolutely extend its researches to antiquity ; but is chiefly confined to the middle age, and the first centuries of modern times. For though the ancients were accustomed to reduce their contracts and treaties into writing, yet they graved them on tables, or covered them over with wax, or brass, capper, stone, or wood, \&c. And all that in the first ages were not traced on brass or marble, have perished by the length of time, and the destructive events, that have taken place. The word diploma signifies, properly, a letter, or epistle, folded in the middle, and not open. But, in more modern times, the title has been given to all ancient epistles, ietters, literary monuments, and public documents, and to all those pieces of writing which the ancients called syngrapha, chirographa, codicilli, \&c. In the middle age, and in the diplomas themselves, these writings are called literæ, præcepta, placita, chartæ indiculæ, sigilla, and bullæ; as also panchartæ, pantochartæ, tractorix, descriptiones, \&c. The originals of these pieces are named exemplaria, or autographa, chartæ authenticæ, originalia, \&c.; and the copies, apographa, copix, particulx, \&c. The collections that have been made of them, are called chartarix and chartu'x. The place where these papers and documents were kept, the ancients named scrinia, tabularium, or ærarium, words that were derived from the tables of brass, and, according to the Greek idiom, archeium, or archivum. To understand the nature of these ancient papers, diplomas, and MSS., and to distinguish the autlientic from the counterfeit, it is necessary to observe, that the paper of the anclents came from Egypt, and was formed of thin leaves, or membranes, taken from the branches of a tree named Papyrus, or Biblum

Eggypticcum, and which were pasted one over the other with the slime of the Nile, and were pressed and polished with a pumice stone. This paper was very scarce; and it was of various qualities, forms, and prices, which they distinguished by the names of charta hieratica, luria, augusta, amphitheatrica, saitica, tanirica, emporetica, \&c. They cut it into square leaves, which they pasted one to the other, in order to make rolls of then!; from whence an entire book was called volumen, from volvendo; and the leaves of which it consisted, paginæ. Sometimes, also, they pasted the leaves all together by one of their extremities, as is now practised in binding; by this method they formed the back of a book, and these the learned called codices. They rolled the volume round a stick, which they named umbilicus; and the two ends which came out beyond the paper, cornua. The title, written on parchment, in purple characters, was joined to the last sheet, and served it as a cover. They made use of all sorts of strings or ribands, and even sometimes of locks, to close the book; sometimes, also, it was put into a case. It is easy for those, who apply themselves to this study, to distinguish the parchment of the ancients from that of the moderns, as well as their ink and various exterior characters; but that which best distinguishes the original from the counterfeit, is the writing or character itself; which is, in most cases, very distinctly different from one century to another. There are two works which furnish the best lights on this matter, and which may serve as sure guides in judging of what are called ancient diplomas. The one is the celebrated Treatise on the Diplomatic, by F. Mabillon; and the other, the first volume of the Chronicon Gotvicense. We shall here only add, that all the diplomas are written in Latin, and consequently the letters and characters have a resemblance to each other; but there are certain strokes of the pen which distinguish not only the ages, but also the different nations; as the writings of the Lombards, French, Saxons, \&c. The letters in the diplomas are usually longer, and not so strong ds those of MSS. There has been also introduced a kind of court hand, of a very disproportionate length, and the letters of which are called, Exiles littere, crispæ ac protractiores. The first line of the diploma, the signature of the sovereign, that of the chancellor, notary, \&c., are usually written in this character. The signature of the diploma consists either of the sign of the cross, or of a monogram, or cipher, composed of the letters of the names of those who subscribed it. The initial letters of the name, and sometimes also the tittes, were placed about this cross. By degrees, the custom changed, and they inventel other marks. They sometimes added also the date and epoch of the signature, the feasts of the church, the days of the kalendar, \&c. The successive corruption of the Latin language, the style, and orthography of each age, as well as their different titles and forms; the abbreviations, accentuations, and punctuation, and the various methods of writing the diphthongs; all these matters united, form so many characters and marks, by which the authenticity of a diploina
is to be known. The seal annexed to a diploma was anciently of white wax, and artfully imprinted on the parchment itself. It was afterwards pendent from the paper, and enclosed in a box or case, which they called bulla. There are some also that are stamped on metal, and even on pure gold.

DIPONDIUS, a coin, of very little value, mentioned by St Luke, xii. 6. ()ur translation of the passage is, Are not five sparrows sold for two farthings? In St. Matthew, x. 29, it runs, Are not two sparrows sold for a farthing? The Greek has assarion instead of as, which some say was worth half an as, i.e. four French deniers and one-eighth; and, according to others, two deniers and five-sixteenths. Dipondius scems rather to signify half an as.-Calmet. Dr. Arbuthnot, however, says, that this coin was at first libralis, or of a pound weight ; and, even when diminished, it retained the name of libella ; so that dipondius denotes two asses.

DIPPEL (John Conrad), a German physician, born at Darmstadt in 1672. He studied theo\(\operatorname{logy}\) at Giessen, and afterwards read medical lectures at Strasburgh, but took his doctor's degree at Leyden in 1711. He was much addicted to the study of alchemy, and; among other secrets, pretended to have discovered the philosopher's stonc. After rambling from place to place, he at last settled at Hamburgh; but having used some indiscreet freedoms with the administration of Denmark, he was given up to the government of that country, by whom he was sentenced to perpetual imprisonment in the island of Bornholm. He, however, obtained his liberty at the end of seven years; and about the same time was invited to Sweden, to attend the king, who was dangerously ill, but through the intluence of the clergy, whom he had ridiculed, he was obliged to leave the kingdom in 1727 . Ile afterwards weut to Germany, and in 1733 gave out publicly that he should not die till 1808, hut next year he was found dead in his bed. IIe denied the inspiration of the Scriptures, and wrote a number of wild enthusiastic books, under the name of Christianus Demecritus. His works were published in 5 vols. 4 to. 1747. We are indebted to him for the discovery of the Prussian blus, and he invented a useful oil, which is called after him.

Dipping, among miners, signifies the interruption, or breaking off the veins of ore; an accident that gives them a great deal of trouble before they can discover the ore again. A great part of the skill of the miners consists in the understanding of this dipping of the veins. In Cornwall they have this general rule to guide them in this respect: most of their tin-loads, which run from east to west, constantly dip towards the north. Srmetimes they underlie; that is, they slope dow \({ }^{1}\) towards the north three feet in height perpendicular. This must carefully be ohserved by the miners, that they may exactly know where to make their air-shafts when occasion requires; yet, in the ligher mountains of Dartmaer, there are some considerable loads which run north and south; these always underlie towards the east. Four or five loads may run nearly parallel to each ther in the same hill;
and yet, whinch is rare, they may meet all togethe: in one hatch, as it were a knot, and so separate again, and keep their former distances.

The Dipping Needle, or Inclinatory Needle, is defined, hy Dr. Hutton, 'a magnetical needle, so hung, as that, instead of playing horizontally, and pointing out N. and S., one end dips or inclines to the horizon, and the other points to a certain degree of elevation ahoveit. It is used for observing the quantity of inclination towards the earth assuined by the magnetic needle. The inventor of the dipping needle was Robert Norman, a compass-maker, at Ratcliffe, about 1580. This is not only testified by his own account, in his New Attractive, but also by Mr. Whiston, Dr. Gilbert, Mr. William Burrowes, Mr. Henry Bond, and other writers of that period. The occasion of the discovery he himself relates, viz. that it being his custom to finish, and haug the needles of his compasses, before he touched them, he always found that, immediately after the tonch, the N. point would dip or decline downwards, pointing in a direction under the horizon; so that, to balance the needle again, he was always forced to put a piece of wax on che \(S\). end, as a counterpoise. The constancy of this effect led him at length to observe the precise quantity of the dip, or to measure the greatest angle which the needle would make with the horizon. This, in 1576, he found at London to be \(71^{\circ} 50\).

It is not quite certain, however, whether the dip varies, as well as the horizontal direction, in the same place. Mr. Graham made many experiments with the dipping needle in 1723, and found the dip between \(74^{\circ}\) and \(75^{\circ}\). Mr. Nairne, in 1772 , found it somewhat above \(72^{\circ}\). And, by many observations made since that time at the Royal Society, the medium quantity is \(72 \frac{1}{2}^{\circ}\). The trifling difference between the first observations of Norman, and the last of Mr. Nairne and the Royal Society, has led some philosophers to the opinion that the dip is unalterable; and yet it may be difficult to account for the great difference between these and Mr. Graham's numbers, considering the well-known accuracy of that ingenious gentleman. Philosophical Transactions, vol. xlv. p. 279 ; vol. lxii. p. 476 ; vol. lxix. Ixx. lxxi. From a comparison of Mr. Gilpin's observations of the dip in August, 1805, when he found it \(70^{\circ} 20^{\prime}\), with these of Mr. Cavendish, in 1775 , its annual decrease, on a mean, appears to have been \(4 \cdot 3^{\prime}\); and its progressive aniulual decrease, on a mean, in the above-mentioned period of thirty years, to have been \(14^{\prime}\). It is certain, from many experiments and observations, that the dip is different in different latitudes, and that it increases in going northward. It appears from a table of observations, made with a marine dipping needle of Mr. Nairne's, in a voyage towards the north pole in 1773, that
\[
\begin{aligned}
& \text { in lat. } 60^{\circ} 18^{\prime} \text { the dip was } 75^{\circ} 0^{\prime} \text {, } \\
& \text { in lat. } 70^{\circ} 45^{\prime} \text { the dip was } 77^{\circ} 52^{\prime} \text {, } \\
& \text { in lat. } 80^{\circ} 12^{\prime} \text { the dip was } 81^{\circ} 52^{\prime} \text {, and } \\
& \text { in lat. } 80^{\circ} 27^{\prime} \text { the dip was } 82^{\circ} 2 \frac{1}{2}^{\prime} \text {. }
\end{aligned}
\]

See Phipps's Voyage, p. 122. See also the Observations of Mr. Hutchins, made in Hudson's Bay and Straits, Philosophical Transactions, vol. lxv. p. 129.' Messrs Burrowes, Gilbert, Ridley,

Bond, \&c. endeavoured to apply this discovery of the dip to the finding of the latitude; and Bond first proposed finding the longitude by it ; but for want of observations and experiments, he cculd not conduct his reasoning to any length. Mr. Whiston, being furnished with the farther observatinns of colonel Windham, Dr. Halley, Mr. Pond, Mr. Cunningham, M. Noel, M. Feuilte, and his own, made great improvements in the doctrine and use of the dipping needle, brought it to more certain rules, and endeavoured to find the longitude by it. For this purpose, he observes: 1. That the true tendency of the N . or \(S\). end of every magnetic needle is not to that point of the horizon to which the horizontal needle points, but towards another directly under it, in the same vertical, and in different degrees under it, in different ages, and at different places. 2. That the power by which the horizontal needle is governed, and all our navigation usually directed, it is proved, is only one quarter of the power by which the dipping needle is moved; which should render the latter by far the more effectual and accurate instrument. 3. That a dipping needle of a foot long will plainly show an alteration of the angle of inclination, in these parts of the world, in one-eighth of a degree, or seven and a half geographical miles; and a needle of four feet, in two or three miles; i. e. supposing these distances taken along, or near a meridian. 4. A dipping needle four feet long, in these parts of the world, will show an equal alteration along a parallel, as another of a foot long will show along a meridian, i. e. that will, with equal exactness, show the longitude, as this the latitude. This depends on the position of the lines of equal dip, in these parts of the world, which, it is found, do lie about \(14^{\circ}\) or \(15^{\circ}\) from the paralkels. Hence he argues, that as we can have needles of five, six, seven, eight, or more feet long, which will move with strength sufficient for exact observation; and since microscopes may be applied for viewing the smallest divisions of degrees on the limb of the instrument, it is evident that the longitude at land may thus be found to be less than four miles. And as there have been many observations made at sea with the same instrument by Noel, Feuille, \&c., which have determined the dip usually within a degree, sometimes within a half, or one-third of a degree, and this with small needles of five or six, or, at the most, nine inches long; it is inferred that the longitude may be found even at sea, within less than one-eighth of a degree.
The phenomena of the dipping needle are:That about the equatorial parts of the earth it remains in an horizontal position, but depresses one end as we recede from these ; the north end, if we go towards the north, and the south end, if we proceed towards the south pole. The farther north or south that we go, the inclination becomes the greater; but there is no place of the globe hitherto discovered where it points directly downwards, though it is supposed that it would do so in some part of it very near the pole. Its inclination is likewise found to vary very considerably at different times in different places of the Parth, and by some changes of situation, in such 3 manner as must appear at first sight very unac-
countable. Of all those who have atternpted the investigation of this obscure snbject, none have been more successful than M. Cavallo, who, in his. Treatise on Magnetism, has given particular attention to all the phenomena, and accounts for them upon plain and rational principles, in the following manner:--The dip of the magnetical needle, in general, may be understood from the following easy experiment: Lay an oblong magnet horizontally upon a table, and over it suspend another smaller magnet (a sewing needle to which the maguetic virtue has been communicated will answer the purpose), in such a mauner as to remain in an horizontal position when not disturbed by another magnet. Now, if this last small magnet or sewing needle, suspended by the middle, be brought just over the middle of the large one, it will turn itself in such a manuer that the south pole of the small magnet will point towards the north pole of the large one; and if at an equal distance from both, will remain in an horizontal position. But if we move it nearer to one of the poles than the other, it will be readily understood that the corresponding end of the needle will be attracted by the pole to which it approaches, and of consequence inclined downwards; the contrary end being proportionably elevated. It is likewise evident, that this inclination will be greater or less according to the distance at which the small magnet is placed from the pole of the large one; the attraction of the nearest pole having always the greatest effect upon it. And it is equally plain that, when brought directly over one of the poles of the large magnet, it will turn its own contrary one directly towards it, and thus lie exactly in the axis of the large one. The application of this experiment to the phenomena of the dipping needle is obvious, as nothing more is requisite for solving the whole mystery, than to suppose the earth itself to be the large magnet, and the magnetic needle, or any other magnetic body, the small magnet in the experiments: for admitting that the north pole of the earth possesses a south magnetism, and that the opposite pole is pussessed of a north magnetical polarity; it appears, and the theory is confirmed by experiment, that when a magnet is suspended properly in the equatorial parts of the world, it must remain in an horizontal position ; but when removed nearer to one of the poles, it must incline one of its extremities, viz. that which is possessed of the contrary magnetic polarity; and that this inclination must increase in proportion as the magnet or magnetic needle recedes from the equator of the earth; and, lastly, when brought exactly upon either of the poles of the earth, it must stand perpendicular to the ground, or in the same direction with the axis of the earth. The only difficulty in this explanation arises from the attributing a south magnetism to the north pole of the earth; but by this our author meaus only that its magretism is contrary to that end of the magnetic needle which turns towards it; and in the same sense it must be understood, that the south pole of the earth has a north magnetic polarity. If the extremities of the axis of the earth, or the poles about which it performs its diurnal revolution, coincided with its magnetic poles, or even if the inagnetic poles
were always at a certain distance from them, the inclination of the needle would be always the same at equal distances from the equator, and might be very useful for determining the latitudes. But it would seem, that these poles are perpetually shifting their places, since both the inclination and horizontal direction of the needle are continually varying even in the same place: so that its quantity of inclination cannot be exactly calculated. Two general remarks may be made upon this subject. 1. That the inclination of the needle does not alter regularly in going from: N. to S. or from S. to N. in any meridian. 2. That its alteration in the same place, and at different times, is but small. Thus, in London, about the year 1576 , the dip was \(70^{\circ} 50^{\circ}\) below the horizon, and in 1775 it stood at \(72^{\circ} 3^{\prime}\); the alteration in nearly 200 years, scarce amounting to three quarters of a degree, which may be attributed to the errors of the instruments; as these were at first exceedingly erroneous, and even yet are far from being perfect.
The general method of constructing dipping needles is, to pass an axis quite through the needle itself, and to let the extremities of the axis rest upon two supports, like the beam of a pair of scales, that the needle may move vertically round; and hence, when placed in the magnetic meridian, it will naturally assume that position which is called the magnetic line, viz. the two ends nearly north and south, and one of them inclined considerably to the horizon. The degrees of this inclination are shown upon a graduated circle; and when the instrument is made use of at land it has a stand, but at sea a ring is necessary to suspend it. When furnished with a stand, it has also a spirit-level; and the stand has three screws, by which the whole is adjusted in such a manner as to let the centre of motion in the needle, and the mark of \(90^{\circ}\) on the lower part of the divided circle, be exactly in the same line perpendicular to the horizon. The greatest imperfections attending this instrument are the balancing of the needle itself, and the difficulty of knowing whether, after being made magnetic, it be properly balanced or not. The inaccuracy here indeed can be but very small, as arising only from dust or moisture. The method recommended by Mr. Cavallo, to obviate these inconveniences, is first to observe the dip of the needle, then to reverse its magnetism by the application of magnets, so that the end of it which before was elevated above the horizon may now be below it; and, lastly, to observe its dip again; for a mean of the two observations will be pretty near the truth, though the needte may not be perfectly balanced. See Magnetism, and Magnetical Needle.

In order to determine the law that regulates the inclination or dip of the needle, Biot, in a memoir delivered by himself and Humboldt to the French National Institute, on the Variations of the Terrestrial Magnetism in different Latitudes, supposed in the axis of the magnetic equator, and at equal distances from the centre of the earth, two centres of attractive forces, the one austral and the other boreal, so as to represent the two opposite magnetic poles of the earth : he then calculated the
effect which ought to result from the action of these centres upon any point of the earth's surface, assuming the attractive force in the reciprocal ratio of the squares of the distances; he found that his results approximated more and more to the truth in proportion as the distance between the magnetic poles was assumed less; and, indeed, by supposing those two poles or centres to coincide, or the inclination of the magnetic needle to be produced by an indefinitely small magnet placed in the centre of the earth, his theorem gave the same numbers as had been observed by Humboidt both in Europe and in America, as well as what had been observed in Russia, Lapland, and various other places in both hemispheres: the results of theory being classed with those of observations in a comparative table, which clearly evinces their near coincidence. Let \(u\) be the angle included between a radius drawn from the earth's centre to any assumed point on its surface and the magnetic axis, \(\beta\), the angle comprehended between the liue coinciding with the real position of the needle and the said magnetic axis, and I the inclination of the needle with the horizon of the place; then we have
\[
\text { I. } \quad \tan \beta=\frac{\sin .2 u}{\cos 2 u+\frac{1}{2}} \text { : }
\]
whence \(\beta\) is readily determined; and then we shall have the inclination by means of the following:
II. \(\quad \mathrm{I}=90^{\circ}+u-\beta\).

Still it must be observed, that though these formulæ, given by Biot, furnished in general results very near the truth; yet when he attempted to represent the inclinations in different latitudes by the supposition of a magnet infinitely small, very near the centre of the earth, and perpendicular to the magnetic equator, he did not pretend to consider the hypothesis as any thing real, but solely as a mathematical abstraction.

DIPSACUS, teasel, in botany, a genus of the monogynia order, and tetrandria class of plants: cal. is polyphillous, proper above; the receptacle paleaceous. There are four species : the most remarkahle is the D. carduus fullonum, which grows wild in many parts of England. It is of singular use in raising the knap upon woollen cloth. For this purpose the heads are fixed round the circumference of a large broad wheel, which is made to turn round, and the clot 1 is held against them. In the west of England, great quantities of the plant are cultivated for this use. It is propagated by sowing the seeds in March, upon a well prepared soil. About one peck of seed is sufficient for an acre, as the plants must have room to grow; otherwise the heads will not be large enough, nor in great quantity. When the plants come up, they must be hoed in the same manner as is practised for turnips, cutting down all the weeds, and thinning the plants to about eight inches distant ; and as they advance, and the weeds begin to grow again, they must be hoed a second time, cutting out the plants to a wider distance, so that they may finally stand a foot distant from each other. The second year they will shoot up heads which may be cut about the beginning of August. They are then to be tied up in bunches, and set in the sun
if the weather is fair: or, if not, in rooms to dry them. The common produce is about 160 bundles or staves upon an acre, which are sold for one shilling each. The leaves of the common wild teazel, dried, and given in powder or infusion, are a very powerful remedy against flatuses and crudities in the stomach. There is also another, though somewhat whimsical, use for which this plant is famous among the country people in England. If the heads are opened longitudinally, about September or October, there is generally found a small worm in them: one of these only is found in each head, whence naturalists have named it the vermis solitarius dipsaci. They collect three, five, or seven of these, always observing to make an odd number; and sealing them up in a quill, give them to be wornas an amulet against the ague. This superstitious remedy is in much higher repute than the bark, in many parts of England.
DIP'SAS. n.s. Lat. from \(\delta \psi \psi \alpha\), to thirst. A serpent whose bite produces the sensation of unquenchable thirst.

Scorpion, and asp, and amphisbcena dire,
Cerastes horned, hydrus, and ellops drear,
And dipsas.
Milton.
DIPTERA, from \(\delta t s\) and \(\pi \tau \varepsilon \rho 0 \nu\), wing, in entomology, an order of insects, which have only two wings, and under each wing a style or oblong body, terminated by a protuberance, and called a balancer.
DIP'TOTE, n.s. AıTт \(\quad\). A noun consisting of two cases only.
DIP'TYCH, n. s. Lat. diptycha (two leaves folded together). A register of bishops and martyrs.
The commemoration of saints was made out of the diptychs of the church, as appears by multitudes of places in St. Austin.

Stilingfleet.
Diptyeh, or Diptycha, in antiquity, was a public register, wherein were written the names of the consuls, and other magistrates, among the heathens; and of bishops, and living as well as dead brethren, among the Christians. The word is Greek, \(\delta \iota \pi \tau v x a\), the plural of \(\delta \iota \pi \tau v \chi 0 \nu\), q. d. a book folded in two leaves; though there were some in three, and others in four or five leaves. This name is supposed to have been first given them to distinguish them from the books that were rolled, called volumina. There'were profane diptycha in the Greek empire, as well as sacred ones in the Greek church.
DIPUS, Gr. \(\begin{aligned} & \text { itrsc, i. e. two-footed, in zoology, }\end{aligned}\) the jerboa, a genus of quadrupeds, belonging to the order of glires, in the class mammalia. These animals were ranked by Linnæus under the genus mus; but Gmelin has, with great propriety, distributed the numerous and very different species of that genus, into nine new divisions, forming so many distinct genera, of which the dipus is one. The characters are these: there are two fore-teeth in each jaw ; the tail is long, and tufted at the end; but the most striking characteristic of this genus is the enormous length of the hind feet, and extreme shortness of the fore paws. From this conformation, instead of walking or running on all fours, they leap or hop on the hind feet like birds, making prodigious bounds, and only use the fore paws for burrowing, or for
carrying their food to the mouth like squirrels. 1. D. cafer, or the Cape jerboa, has four toes on the hind feet and five on the paws; the tail is very hairy, and tipt with black. This species inhabits the Cape of Good Hope, and is fourteen inches long; the tail fifteen, the ears three. It is called aerdmannetje, or little earth man, and springen haas, or leaping hare, by the Dutch at the Cape. It has a grunting voice; is very strong, and leaps twenty or thirty feet at one bound. It burrows with its fore feet ; and sleeps sitting on its hind legs, with the knees separated, the head between, and holding its ears with the fore paws over its eyes. It is eaten by the natives; and is caught by pourng water into its hole, which compels it to come out. 2. D. jaculus, the common jerboa, or leaping mouse of Linnæus, has four toes on all the feet, and a claw in place of a thumb or fifth toe on each fore foot. The body is somewhat more than seven inches long, and the hind legs and thighs are longer than the body. The upper parts are of a pale tawny color, and the under parts white: the ears and feet are flesh-colored. The female has eight teats distantly placed. These animals inhabit Egypt, Arabia, Calmuck Tartary, and southern Siberia. They frequent firm hard ground, and fields covered with grass and herbs, where they form burrows of several yards long in a winding direction, leading to a large chamber about half a yard below the surface; and from this a second passage is dug to within a very little of the surface; by which they can escape when threatened with danger. When at rest, they sit with their hind legs bent under their belly, and keep the fore legs so near the throat as hardly to be perceptible. They eat grain and herbage like the hare. Their dispositions are mild, and yet they can never be perfectly tamed. This animat is roasted and eaten by the Arabs, who call it the lamb of the children of Israel. It has been particularly described by Mr. Bruce in his Abyssinian Travels. 3. D. sagitta, the Arabian jerboa, the mus \(\delta i \pi x\) of the Greeks, and unus bipes of the Romans, has three toes on the hind feet, and no thumb or fifth toe on the fore paws. It is only abolut six inches long, and the tail rather shorter than the body; the soles of the hind feet and bottom of the toes are covered with a very thick coat of hair; the head is more rounded than that of the jaculus, and the ears are nuch longer than the liead. It inhabits Arabia, and near the 1 rtish in Siberia, where it frequents the saudy plains. 4. D. Canadensis, or Canadian jerboa, is thus described by general Davies: 'As I conceive there are very few persons, however conversant in natural history, who may have seen or known that there was an animal existing in the coldest parts of Canada of the same genus with the jerboa, hitherto confined to the warmest climates of Africa, I take the liberty of stating the following particulars. With respect to the food, or the mode of feeding, of this animal, I have it not in my power to speak with any degree of certainty, as I could by no means procure any kind of sustenance that could induce it to eat; therefore, when cauglit. it lived only a day and a half. The first I was so fortunate as to catch, was taken in a large fipld near the Falls of Montmorenci, and, by its having
strayed too far from the skirts of the wood, allowed myself, assisted by three other gentlemen, to surround it, and after an hour's hard chase, to get it unhurt, though not before it was thoroughly fatigued, which might in a great measure accelerate its death. During the time the animal reroained in its usual vigor, its agility was incredible for so small a creature. It always took progressive leaps of from three to four, and sometimes of five yards, although seldom above twelve or fourteen inches from the surface of the grass; but I have observed others in shrubby places, and in the woods, among plants, where they chiefly reside, leap considerably higher. When found in such places it is impossible to take them, from their wonderful agility, and their evading all pursuit, by bounding into the thickest part of thecovert they can find. With respect to the figure given of it, in its dormant state, I have to observe, that the specimen was found by some workmen, in digging the foundation for a summer-house in a gentleman's garden, about two miles from Quebec, in the end of May, 1787. It was discovered enclosed in a ball of clay, about the size of a cricket-ball, nearly an inch in thickness, perfectly smooth within, and about twenty inches under ground. The man who first discovered it not knowing what it was, struck the ball with his spade, by which means it was broken to pieces, or the ball would have been presented to me. How long it had been under ground it is impossible to say; but, as I could never observe these animals in any part of the country after the beginning of September, I conceive they lay themselves up some time in that month, or beginning of October, when the frost becomes sharp. Nor did I ever see them again before the last week in May or beginning of June. From their being enveloped in balls of clay, without any appearance of food, I conceive they sleep during the winter, and remain for that term without sustenance. As soon as I conveyed this specimen to my house, I deposited it as it was, in a small chip box in some cotton, waiting with great anxiety for its waking, hut that not taking place at the season they generally appear, I kept it until they found it begin to smell; I then stuffed it, and preserved it in its torpid position. I am led to believe its not recovering from that state arose from the heat of my room during the time it was in the box, a fire having been constantly burning in the stove, and which in all probability was too great for its respiration.'
DIRE, the general name of the three furies in the Pagan mythology. They were so called as being quasi Deorum irx, the ministers of Divine vengeance in punishing guilty souls after death. Tliey were the daughters of Acheron and Night.
DIRCA, in botany, a genus of the monogynia order and octandria class of plants : cal. none: cor. tubular, with the limb indistinct: stay. longer than the tube : ber. monospermous. Species one, a Virginian shrub.
\begin{tabular}{|c|c|}

\end{tabular}

But yet at last, whereas the direful fiend She saw not stir, off shaking vain affright,

She nigher drew, and saw that joyous end;
Then God she prayed, and thanked her faithfu knight. Fuerie Queene. Direful hap betide that hated wretch That makes us wretched by the death of thee.

Shakspeare. Direness, familiar to my slaughterous thoughts, Cannot once start me. Shakspeare. Macbeth. Hydras, and gorgons, and chimæras dire.

Milton.
\(\mathrm{O}_{\mathrm{r}}\) what the cross dire-looking planet smites,
\(O_{r}\) hurful worm with cankered venom bites. Id.
The voice of God himself speaks in the heart of men, whether they understand it or no ; and by secret intimations gives the sinner a foretaste of that direful cup, which he is like to drink more deeply of hereafter.

South.
Discord ! dire sister of. the slaughtered power,
Small at her birth, but rising every hour;
While scarce the skies her horrid head can bound,
She stalks on earth, and shakes the world around.
Pope.
Achilles' wrath, to Greeks the direful spring,
Of woes unnumbered, heavenly goddess! sing. Id . Ah me! the dire effect
Of loitering here, of death defrauded long ;
Of old so gracious, and let that suffice,
My very master knows me not.
I've been so long remembered I'm forgot. Young.
Unnumbered maladies his joints invade, Lay siege to life, and press the dire blockade ; But unextinguished avarice still remains
And dreaded losses agravate his pains.
Johnson. Vanity of Human Wishes
\(\Lambda\) brave man knows no malice, but at once
Forgets in peace the injuries of war,
And gives his direst foe a friend's embrace.
Cowper.

Fr. diriger: Spar, and Ital. dirizzur ; Port. dirigir, from Lat. dirigo, directus, a de and rego, to govern. To aim or project in a straight line ; to order, regulate, prescribe: a directer, or director, he who orders or commands; also a rule or ordinance, as well as any instrument that guides an operation, as in surgery: direction is having the power to guide or rule; directly is, rectilineally; in a straight course or line; apparently; immediately. Directness, straightness; plainness of conduct. See the following articles for particular uses of directory.

The nobles of the people digged it, by the direction of the lawgiver.

Numb. xxi. 18.
It is not in man that walketh to direct his steps.
Jer. x. 23.
Infidels, being clean without the church, deny directly, and utterly reject, the very principles of Christianity, which hereticks embrace erroneously by misconstruction.

Hooker.
They are glad to nse counsellors and directors in all their dealings of weight, as contracts, testaments.

Id.
A law, therefore, generally taken, is a directive rule unto goodness of operation.

Even now
I put myself to thy direction. Shakspeare. Macbeth.

There be, that are in nature faithful and sincere, and plain and direct, not crafty and involved.

Bacon.
Men's passiuns and God's directions seldom agree. King Charles.
The liker any thing is to wisdom, if it be not plainly the thing itself, the more directly it becomes its opposite.

Shaftesbury.
Two geomantick figures were displayed
Above his head, a warrior and a maid, One when direct, and one when retrograde. Dryden's Fables.
The spear flew hissing thro' the middle space, And pierced his throat, directed at his face.

Id. Aneid.
I am her director and her guide in spiritual affairs. Dryden.
He that does this, will be able to cast off all that is superfluous; he will see what is pertinent, what coherent; what is direct to, what slides by, the question. Locke.
All that is in a man's power, is to mind what the ideas are that take their turns in his understanding; or else to direct and sort, and call in such as he desires.

Id.
Such was as then the state of the king, as it was no time by direct means to seek her. And such was the state of his captivated will, as he would delay no time of seeking her.

Sidney.
On the directive powers of the former, and the regularity of the latter, whereby it is capable of direction, depends the generation of all bodies.

Grew.
His work directly tends to raise sentiments of honour and virtue in his readers. Addison. Freeholder.

If the refracted ray be returned directly back to the point of incidence, it shall be refracted by the incident ray.

Newton's Optics.
The direction of good works to a good end, is the only principle that distinguishes charity. Smalridge.

The manner of opening with a knife, is by sliding it on a director, the groove of which prevents its being misguided.

Sharp's Surgery.
They argued from celestial causes only, the constant vicinity of the sun, and the directness of his rays; never suspecting that the body of the earth had so great an efficiency in the changes of the air. Bentley.

No particle of matter, nor any combination of particles, that is, no body, can either move of itself, or of itself alter the direction of its motion. Cheyne.

\section*{Common forms were not designed}

Directors to a noble mind.
Swift.
No reason can be assigned, why it is best for the world that God Almighty hath absolute power, which doth not directly prove that no mortal man should have the like.

Id.
Two eagles from a mountain's height,
By Jove's command, direct their rapid flight.
All nature is but art unknown to thee,
All chance, direction which thou canst not see.
Id.
Nor visited by one directive ray,
From cottage streaming, or from airy hall.
Thomson.
That revelation, which God hath been pleased to make of his will to mankind, was designed rather to fit us for the future happiness, and direct our way to it, than open to us the particular glories of it, or distinctly show us what it is.

Mason.
It is better to fail, if fail we must, in the paths of direct and manly, than of low and crooked wisdom.

Burke.

Call your light legions, tread the swampy beath, Pierce with sharp spades the tremulous peat beneath; With colters bright the rushy sward bisect, And in new veins the gushing rills direct. Darwin.

Direction, in mechanics, signifies the line or path of a body's motion, along which it endeavours to proceed according to the force impressed upon it.

Direction, Islands or, four small islands at the west entrance of the straits of Magellan, in the South Pacific Ocean. Long. \(77^{\circ} 19^{\prime}\) W., lat. \(52^{\circ} 27^{\prime} \mathrm{S}\).

Directors, in commercial polity, are considerable proprietors in the stocks of their respective companies, being chosen by plurality of votes from among the body of proprietors. The Dutch East India Company has sixty such directors; that of France, twenty-one; the British East India Company has twenty-four, including the chairman, who may be re-elected for four years successively. These last have salaries of \(£ 150\) a year each, and the chairman \(£ 200\). They meet at least once a week, and commonly oftener, being summoned as occasion requires. The directors of the Bank of England are twenty-four in number, including the governor and deputygovernor.

Director, in surgery, a grooved probe, to direct the edge of the knife or scissars, in opening sinuses or fistulæ, that the adjacent vessel, nerves, and tendons, may not be hurt.

The Directory of Public Worship was a celebrated book drawn up by the assembly of divines at Westminster, and established by an ordinance of parliament in 1644, repealing the statutes of Edward VI. and of Elizabeth, for uniformity in the common prayer. The Directory set aside the use of the liturgy, and allowed of no church-music besides that of singing the Psalms. The Directory was so called, in part, because it only points out certain topics of prayer, on which the minister might enlarge. The whole apocrypha was rejected; and both private baptism and lay baptism, with the use of godfathers and godmothers, and the sign of the cross. In the sacrament of the Lord's supper, 110 mention is made of private communion or administering it to the sick. The altar with rails was changed into a communion table, about which the people might stand or sit; kneeling not being thought so proper a posture. Lightfoot, Selden, and others, were for open communion, to which the parliament also most inclined, in opposition to those presbyterians who were for granting powers of admission or rejection to the ministers and elders, and to the independents who were for committing them to the whole brotherhood; but it was agreed, that the minister, before the communion, should ' warn, in the name of Christ, all such as are ignorant, scandalous, profane, or that live in any sin or offence against their knowledge or conscience, that they presume not to come to that holy table, showing them, that he that eateth and drinketh unworthily, eateth and drinketh judgment to himself.' The prohibition of marriage in Lent, and the use of the ring, were laid aside. In the visitation of the sick no mention is made of private confession, or authoritative absolution.

No service is appointed for the burial of the dead. All particular vestments for priests or ministers, and all saints'days, were discarded. It has been remarked, as a considerable omission, that the Directory does not enjoin the reading of the apostles' creed, and the ten commandments. However, these were added to the assembly's confession of faith, which was published a year or two afterwards. This Directory continued in use till the restoration of king Charles II., when, the constitution heing restored, the old liturgy took place again; the ordinance for its repeal having never obtained the royal assent. The revolution, thus occasioned in the form of public worship, did not take place for a considerable time over the whole kingdom. In some parts of the country the churchwardens could not procure a Directory; and in others they despised it, and continued the old commoh prayer book; some would read no form, and others used one of their own. In order to enforce the use of the Directory, the parliament, hy au ordinance, dated August 23 rd, 1645 , called in all common prayer books, and imposed a fine upon those ministers who should read any other form than that contained in the Directory. By the same ordinance, which continued till the Restoration, to preach, write, or print any thing in derogation or depraving of the Directory, subjected the offender, upon indictment, to a discretionary fine, not exceeding \(\mathfrak{f}_{50}\).

Directory, in a more modern sense, was used as the title of the supreme executive power, according to the new constitution, formsed by the French convention after the fall of Robespierre, and presented to the primary assemblies for acceptance in August, 1795. By this constitution the legislative body was composed of what they called a Council of Ancieuts and a Council of Five Hundred. The whole of this fabric, it is well known, was overturned by the successful ambition of Napoleon: but as it directed the energies of a numerous, if not a great, people for a considerable period, we nuay here perpetuate its forms. The executive power was entrusted to a Directory of five menbers, nominated by the legislative body as follows:-1. The Council of Five Hundred formed a list by ballot of three times the number to be nominated, and presented it to the Conncil of Ancients, which chose out of this list by ballot. 2. The members of the Directory were to be forty years of age at least. 3. After the ninth year of the republic, they were to be chosen only frum among those citizens who had been members of the Legislative Body, or the Administration, or General Agents of Execution. 4. Members of the legislative body could not be elected members of the Directory, either during the continuance of their legislative functions, or during the first year after their expiration. 5. The Directory was partially renewed by the annual election of a new member. 6. No cidevant director could be re-elected till after an interval of five years. 7. The ascendant and descendant in the direct line; the brother, uncle, and nephew; connexions by marriage in the same degrees, and cousins in the first degree, could not be members of the Directory at the
same time, nor succeed one another in it, till after an interval of five years. 8. In case of death, removal, or resignation of a member of the Directory, his successor was elected within ten days. The Council of Five Hundred were obliged to propose the candidates within the first five days, and the Council of Ancients to complete the election within the last five. The new member could only continue in office for the remaining period of the person he succeeded, unless it did not exceed six months, in which case, he continued five years and a half in office. 9 . Each director was to preside in rotation for three months only. 10 . The president was to sign and keep the seal. 11. The laws and acts of the legislative body were addressed to the Directory, in the person of its president. 12. The Directory could not deliberate unless three members were present. 13. A secretary was chosen (not one of its members), who countersigned despatches, and drew up deliberations, in a register, wherein each member might also enter his opinion, with his reasons. 14. The Directory could deliberate without the aid of the secretary, and one of the directors might record its resolutions in a particular register. 15. The Directory provided for the security of the public according to the laws, issued proclamations; \&cc. It disposed of the armed force; but none of its members could command it, either while they continued in office, or for two years after. 16. The Directory, upon hearing of any conspiracy against the repnblic, might order the supposed authors or accomplices to be apprehended, and interrogate them; but were bound, under the penalty of arbitrary imprisonment to remit them to an officer of police, within two days, to proceed with them according to law. 17. The Directory nominated the generals, hut could not choose them among the relations of its members, within the degrees above-mentioned. 18. It superintended the execution of the laws by commissaries of its nomination. 19. It nominated the general agents of execution, but not of its own members, and recalled them at pleasure. 20. It determined their number and functions. 21. It nominated all receivers of direct taxes. 22. As well as the superintendants of indirect contributions, and the administration of national domains. 23. It superintended the coinage of money, and nominated the officers charged with it. 24. No Director could go out of the territory of the republic, till two years after he was out of office; but was obliged to certify his place of residence during that interval to the legislative hody. 25. The Directory was responsible for the non-execution of laws, and for the abmses which it did nut dellounce. 26. Its agents were respectively responsible for the non-execintion of the laws, and orders of the directory. . 27 . Its members might be tried by the legislative body for acts of treason, corruption, embéżzlement of public money, and all capital crimes as to theirofficial conduct. 28. They were subject to the jurisdiction of the tribunals for ordinary and private offences; hut they could not be arrested except in the case or flagrans delictnm, or bronght to trial without the authority of the legislative hody.

Every denunciation against the Directorv, or
any of its members, was addressed to the Council of Five Hundred. If, after deliberation, the Council admitted the denunciation, it declared it in these terms : the denunciation against-for the fact of-dated-signed by-is admitted. The party was then cited, and heard in the interior place of the Council of Five Hundred; who declared whether there was ground for examining his conduct. He was then heard by the Council of Ancients at the bar; and, if he was deemed culpable, the Council proceeded to accusation, which was followed by suspension, when the accused was sent before the High Court of Justice, which was to proceed to trial without delay. If the party was acquitted, he resumed his functions.

The Legislative Body could not cite the Directory, nor any of its members, except in the case above specified. The accounts and information demanded of the Directory by the Legislative Body were furnished in writing. On the opening of a session of the Legislative Body, the Directory were obliged to present to it an estimate of expenses, the state of the finances, pensions, \&c., with the abuses that had come to its knowledge. It might invite the Legislative Body to take a subject into consideration; but could not propose legislative dispositions, except with regard to peace and war. No member of the Directory durst be absent more than five days, nor remove above four myriametres, or ten leagues, from his usual residence, without being authorised by the Legislative Body. The members of the Directory could only appear in an appropriate dress. They had a constant guard of 120 infantry and 120 cavalry, who attended them in public processions, in which they had always the first rank. Each member was attended out of doors by two guards; and was entitled to the superior military honors from every post of armed force. The Directory resided in the same cominune with the Legislative Body, at the expense of the republic. The salary of each was fixed at the value of 50,000 myriagrammes, about 10,000 quintals of wheat.
DIREPTION, n.s. Lat. direptio. The act of plundering.

DIRGE, n.s. This is from the Teutonic dyrke, laudare, to praise and extol, says Dr. Johnson, after Verstegan, 'whence it is possible their dyrke, and our dirge, was a laudatory song to commemorate and applaud the dead. Bacou apparently derives it from dirige.' A mournful ditty; a song of lamentation.

The imperial jointress of this warlike state Have we, as 'twere, with a defeated joy, With mirth in funeral, and with dirge in marriage. In equal scale weighing delight and dole, Taken to wife.

Shakspcare. Hamlet.
Meanwhile, the body of Richard, after many indignities and reproaches, the diriges and obsequies of the common people towards tyrants, was obscurely buried.

Bacon.
All due measures of her mourning kept,
Did office at the dirge, and by infection wept.
Dryden.
What though no sacred earth allow thee room, Nor hallowed dirge be muttered o'er thy tomb, Yet shall thy grave with rising flowers be drest, And the green turf lie lightly on thy breast. Pope.

Betrothed beauty bending o'er his bier Breathes the loud sob, and sheds the incessant tear ; Pursues the sad procession, as it moves Through winding avenues and waving groves; Hears the slow dirge amid the echoing aisles, And mingles with her sighs diseordant smiles.

Darwin.
DIRIBIT()RES, among the Romans, officers appointed to distribute tablets to the people at the comitia. See Comitra.

DIR'IGENT, adj. Lat. dirigens.
The dirigent line in geometry is that along which the line deseribent is earried in the generation of any figure.

Harris.
DIRK, n. s. Gioth. dorg; Sax. dork; Isl. turric. A kind of dagger used in the Highlands of Scotland.

In vain thy hungry monntaineers
Come forth in all their warlike geers,
The shield, the pistol, dirk, and dagger, In which they daily wont to swagger. Tickell.
And in the fire his recent rags they scatterea,
And dress'd him, for the present, like a Turk, Or Greek-that is, although it not mueh mattered, Omitting turban, slippers, pistols, dirk.

> Byron. Don Juan.

DIRKE, v.a. To spoil ; to ruin. Obsolete.
Thy waste bigness but eumbers the ground, And dirkes the beauties of my blossoms round.

Spenser.

DIRT, n.s.
Dirt'ily, adv.
Dirtiness ne Islandic, dirt. Mud;
\(\mathrm{DiRt}^{\prime} \mathrm{y}, v . a . \& a d j\). that sticks to the or body; any thing mean.

For whom I made all thingis peyrement and I deeme as dyrt, that I wyne Crist.

Wiclif. Filipensis, 3.
Their fell contention still inereased more, And more thereby increased furor's myght, That he his foe has hurt and wounded sore, And him in blood and dirt deformed quight. Spenser. Faerie Quecne.
Or were it such gold as that wherewithal. Almighty chimiques from each mineral, Having by subtile fire a soul out-pulled, Are dirtily and desperately gulled, Donne.
Thy Dol and Helen of thy noble thoughts Is in base durance, and contagious prison, Hauled thither by meehanic, dirty hands.

Shakspeare.
Such employments are the diseases of labour, and the rust of time, which it contracts not by lying still, but hy dirty employment. Taylor's Holy Living.

Marriages would be made up upon more natural motives than mere dirty interests, and increase of riehes without measure or end.

Temple.
Numbers engage their lives and labours to heap together a little dirt that shall bury them in the end.

Wake.
Pound an almond, and the clear white colour will be altered into a dirty one, and the sweet taste into an oily one.

Lecke.
They come at length to grow sots and epieures, mean in their discourses, and dirty in their praetiees

South.
Is yellow dirt the passion of thy life,
Look but on Gripus, or on Gripus' wife. Pope.
Ill company is like a dog, who dirts those mosi whom he loves best.

Swiji.

The god of day
A triped gives, amid the crowded way, 'ro raise the dirty foot, and case his toil. Gay.

The lords Strutts lived generously, and never used to dirty their fingers with pen, ink, and counters.

Arbuthnot.
DIRUPTION, n.s. Lat. diruptio. The act or state of bursting or breaking.

DIS, in mythology,' a god of the Gauls, the same as Pluto, the god of hell. The ancient inhabitants of Gaul supposed themselves descended from that deity.

DISA, in botany, a genus of the diandria order and gynandria class of plants. The spatha is univalvular; the petals three; the third smaller than the rest, bifid, and gibbous, at the base. Species four, all Cape plants.
DISA'BLED, v.a. \} Of dis, and Able, Disabilitty, n.s. \(\}\) which see. To deprive of force or power; to disqualify; impair; to declare deficient. Disability is the want of power, aptitude, or legal right to do a thing.

Our consideration of creatures, and attention unto scriptures, are not in themselves things of like disability to breed or beget faith.

Hooker.
Many withdrew themselves nut of pure faintness, and disability to attend the conclusion.

Raleigh.
I have disabled mine estate,
By shewing something a more swelling port
Than my faint means would grant continuance.
Shakspeare.
Farewell, Monsieur Traveller; lock you lisp, and wear strange suits; disable all the benefits of your own country.

Id.
The invasion and rebellion did not only disable this king to be a conqueror, but deprived him both of his kingdom and life.

Davies's Ireland.
I will not disable any for proving a scholar, nor yet dissemble that I have seen many happily forced upon the course to which by nature they seemed much indisposed.

Wotton.

\section*{Nor so is overcome.}

Satan, whose fall from heaven, a deadlier bruise Disabled not to give thee thy death's wound.

Milton.
A Christian's life is a perpetual exercise, a wrestting and *arfare, for which sensual pleasure disables him, by yielding to that enemy with whom he must s:rive.

Taylor's Holy Living.
I have known a great fleet disabled for two months, and thereby lose great occasions by an indisposition of the admiral.

Temple.
Your days I will alarm, I'll haunt your nights, Abed worse than age disable your delights. Dryden.
He that knows most of himself, knows least of his knowledge, and the exercised understanding is conscious of its disability.

Glanville.
The ability of mankind does not lie in the impotency or disabilities of brutes.

Locke.
This disadvantage which the dissenters at present lie under, of a disability to receive church preferments, will be easily remedied by the repeal of the test.

Swift.
A suit is commenced in a temporal court for an inheritance; and the defendant pleads, in disability, that the plaintiff is a bastard. Ayliffe's Parergort.

Foiled, bleeding, breathless, furious to the last, Full in the centre stands the bull at bay,
Mid wounds, and clinging darts, and lances brast, And foes disabled in the brutal fray. Byron.

Disability, in law, is when a man is disabled, or made incapable to inherit any lands, or take that benefit which otherwise he might have done. This may happen four ways: 1st, by the act of an ancestor: 2d, of the party : 3d, by the act of God : or, 4th, of the law. 1. Disability by the act of the ancestor is where the ancestor is attainted of high treason, \&c., which corrupts the blood of his children, so that they may not inherit his estate. 2. Disability by the act of the party is where a man binds himself by obligation, that, upon surrender of a lease, he will grant a new estate to a lessee; and afterwards he grants over the reversion to another, which puts it out of his power to perform it. 3. Disability by the act of God is where a man is non sanæ menoriæ, whereby he is incapable to make any grant, \&c. So that, if he passes an estate out of him, it may, after his death, be made void; but it is a maxim in law, 'that a man of full age shall never be received to disable his own person.' 4. Disability by the act of the law is where a man, by the sole act of the law, without any thing by him done, is rendered incapable of the benefit of the law; as an alien born, \&c.
I. ISABUSE', v.a. Dis and Abuse, which see. To deliver from mistake or delusion.

The imposture and fallacy of our senses impose not only os common heads, but even more refined mercuries, tho have the advantages of an improved reason to disabuse you.

Glanville's Scepsis.
Those teeth fair Lyce must not show,
If she would bite : her lovers, though
Like birds they stoop at seeming grapes,
Are disabused when first she gapes. Waller.
If by simplicity you meant a general defect in those that profess angling, I hope to disabuse you.

Walton's Angler.
Chaos of thought and passion, all confused;
Still by himself abused or disabused.
Pupe.
DISACCOMMODA'TION, n.s. Dis and accommodation. The state of seing unfit or unprepared.

Devastations have happened is some places more than is others, according to the accommodation or disaccommodation of them to such calamities.

Hale': Origin of Mankind.
DISACCUS'TOM, v.a. Dis and accustom. To destroy the force of habit by disuse, or contrary practice.

DISACKNOWL'EDGE, v.a. Dis and acknowledge. Not to acknowledge.

The manner of deuying Christ's deity here prohibited, was, by words and oral expressions verbally to deny and disacknowledge it.

South.
DISACQUAIN"TANCE, \(n s\). Dis and acquaintance. Disuse of familiarity.
- Conscience, by a long neglect of, and disacquaintance with itself, contracts an inveterate rust or soil.

South.
DISADVANTAGE, v.a. \& n.s.? Dis and
Disadvan'tageable, adj.
advantage.
Disadvantágeous, \(u d j\). \(\quad\) To injure;
Disadvantágeously, adv. impair.

Loss ; injury to interest ; diminution of any thing desirable; a state of weak defence.

No fort can be so strong,
Ne fleshly breast can armed be so sound,
But will at last be won with battery long;
Or unawares at disadvantage found.
Faerie Queene.
In clearing of a man's estate, he may as well hurt himself in bcing too sudden, as in letting it run on too long; for hasty selling is communly as disadvantageable as interest.

Bacon.
Chaucer in many things resembled Ovid, and that with no disadvantage on the side of the modern author. Dryden.
A multitude of eyes will narrowly inspect every part of an eminent man, consider him niccly in all views, and not be a little pleased when they have taken him in the worst and most disadvantageous lights. Addison's Spectator.
Their testimony will not be of much weight to its disadvantage, since they are liable to the common ohjection of condemning what they did not understand.

Swift.
An approving nod or smile serves to drive you on, and make you display yourselves more disadvantageously.

Government of the Tongue.
Mr. Pope's bodily disadvantages must incline him to a more laborious cultivation of his talent, without which he foresaw that he must have languished in obscurity.

Shenstone.
Methinks I am like a man who, laving struck on many shoals, and having narrowly cscaped shipwreck in passing a small firth, has yet the temerity to put out to sea in the same leaky weather-beaten vessel, and even carries his ambition so far as to think of compassing the globe under these disadvantageous circumstances.

Hume on Human Nature.
DISADVENTUROUS \(a d j\). Dis and adventurous. Unhappy; unprosperous.

Now he hath left you here,
To be the record of his rueful loss,
And of my doleful disadventurous death.
Faerie Queene.
DISAFFECT', \(\boldsymbol{v . a}\).
Dissffec'red,part.adj.
Dis and affect.
Disaffectredly,adv. To fill with discon-

Disaffec'teuness, n.s. tent; to discontent; to make less faithful
Disaffećtion. or zealous.
They had attempted to disaffect and discontent his majesty's late army.

Clarendon.
In making laws, princes must have regard to the public dispositions, to the affections and disaffections of the people; and mast not introduce a law wits. public scandal and displeasure.

Taylor's Rule of Holy Living.
By *enying civil worship to the cmperor's statues, whicin the ccistom then was to give, they were proceeded against as disaffected to the emperor.

Stillingfteet.
The disease took its original merely from the disaffection of the part, and not from the peccancy of the humours.

Wiseman.
DISAFFIR'MANCE, n.s. Dis and affirm. Confutation; negation.

That kind of reasoning which reduceth the opposite conclusion to something that is apparently absurd, is a demonstration in disefirmance of any thing that is affirmed.
dialc.

To DISAFFOR'EST, v. a. Dis and forest. To throw open to common purposes; to reduce from the privileges of a forest.
The commissioners of the treasury moved the king to disafforest some forests of his, explaining themselves of such forests as lay out of the way, not ucar any of the king's houses. Bucon.
How happy's he, which hath due place assigned
To his beasts; and disafforested his mind! Dunue.
DISAGREE', v. \(n\).
Disagreéable, adj.
Dis and agrec.
To differ; to be
Disagreéably, adv. inopposition: dis-
Disagreéableness, \(n\).s. agreeable is, unDisagrefíment. \(\quad\) suitable; displeasing. Disagreement, dissimilitude; diversity of sentiment; quarrel.

They seemed one to cross another, as touching their several opinions about the necessity of sacraments, whereas in truth their disagreenent is not great.

> Hooker.

It containeth many improprieties, disagreeiny almost in all things from the true and proper description.

> Browne.

Why both the bands in worship disagree,
And some adore the flower, and some the trec.

> Dryden.

A father will hug and embracc his beloved son, for all the dirt and foulness of his cloaths; the dearness of the pcrson easily apologizing for the disagreeubleness of the habit.

South.
The mind clearly and infallibly perceives all ristinct ideas to disagree; that is, the one not to be the other.

Locke.
To make the sense of esteem or disgrace sink the deeper, and be of the more weight, either agreeable or disagreeable things should constantly accompany these different states.

Id.
Strange it is, that they reject the plainest sense of scripture, because it scems to disagree with what they call reason.

Atterbury.
Some demon, an enemy to the Greeks, had forced her to a conduct disagreeable to her sincerity.

\section*{Broome.}

Do you not sometımes find dull disagreeablé idcas anncxed to certain places, seasons, or employments, which give you a secret aversion to them? Mason.

DISALLOW', v.a. \& n.s. \(\boldsymbol{T}_{\text {D }}\) Dis and allow. Disallow'able, adj. To deny in res-
Disallow'ance, n.s. \(\quad\) pect to authority, legality, or propriety; to refuse permiss̉ion. Disallowance is prohibition.

God doth in converts, being marricd, allow continuauce with infidels, and yet disallow that the faithful, when they are free, should enter into bonds of wediock with suca.

Hooker.
Ncutrality is always a thing dangerous, and disallowable.

Raleigh.
When, said she,
Were those first councils disallowed by me?
Or where did I at sure tradition strike,
Provided still it were apostolic?
Dryden's Hind and Panther.
God accepts of a thing suitable for him to receive, and for us to give, where he does not declare his refusal and disallowance of it. South.
It was known that the most eminent of those who professed his own principles, publickly disallowed his proceedings.

Swift.
DISAN'CHOIR, v. a. From dis and anchor. To drive a ship from its auchor.

DISAN'IMATE, v.a. \(\}_{\text {Dis }}\) Dimate.
Disañimation, n.s. \& To deprive of life; to discourage; deject.
The presence of a king engenders love amongst his subjects and his loyal friends, as it disanimates his enemies.

Shakspeare. Henry VI.
They cannot in reason retain that apprehension after death, as being affections which depend on life, and depart upon disanimation.

Browne's Vulgar Errours.
To call the pearly drops from Yity's eye, Or stay Despair's disanimating sigh, Whether, O friend of art! the gem you mould Rich with new taste, with ancient virtue bold.

Darwin.
DISANNUL', v.a. , Dis and annui. This
Disannul'ling, n.s. \(\}\) word, as Dr. Johnson observes, is formed, contrarily to analogy and by the needless use of the negative particle. It nught therefore to be rejected, as ungrammatical and barbarous. To annul; to deprive of authority; to vacate; to make void.
The covenant that was confirmed before of God in Christ, the law which was four hundred and thirty years after, cannot disannul, that it should make the promise of none effect.

Gal. iii. 17.
The Jews ordinances for us to resume, were to check our Lord himself, which hath diannulled them.

Hooker,
That gave him power of disannulling of laws, and disposing of men's fortunes and estater, and the like points of absolute power, being in themselves harsh and odious.

Bacon.
Wilt thou my judgments disannul? Defame
My equal rulc, to clear thyself of blame?
Sandys.
DISAPPEAR', v.n. Fr. disparoitre. To be lost to view; to vanish out of sight; to fly; to go away.

She disappeared, and left me dark! I waked
To find her, or for ever to deplore.
Milton.
When the night and winter disappear, The purple morning rising with the ycar Salutes the spring.

Dryden.
If at your coning princes disappear, Comets! come every day-and stay a year.

Dr. Johnson's Poems.
DISAPPOINT', v.a. ? Old Fr. desa-
Disappoint'ment, n.s. \(\}_{\text {pointer. To }}\) defeat expectation; to delude ; cheat ; deprive; taking of before the thing lost by disappointment.

Our comfortable expectations in earthly thinge do not seldom disapraint us. Bp. Hall. Contemplations.
The superior Being can defeat all his designs, and disappoint all his hopes.

Tillotson.
If we are disafpointed, we are still no worse than the rest of our fellow mortals; and if we succeed in our expectations, are eternally happy. Burnet.
How many disappointments have, in their conscquences, saved a man from ruin! Spectator.

Whilst the champion, with redoubled might, Strikes home the javelin, his retiring foe Shrinks from the wound, and disappoints the blow. Addison.
There's nothing like parprising the ragues! How will they be disappointe?, when they hear that thou rast prevented thifir =venge!

Arbuthnot's Hist. of John Bull.

Disapporntment Islands, a cluster of small islands in the South Pacific Ocean, discovered by commodore Byron in 1765, who gave them this name from the shores affording no anchorage for his ships. This obliged him to quit them withcut landing, or procuring any refreshments for his crew. The inhabitants appeared on the beach armed with spears full sixteen feet long; and they every where discovered hostile intentions. These islands abound with cocoa trees, and turtles are plentiful on the coast. Long. \(145^{\circ} 4^{\prime}\) W. lat. from \(14^{\circ} 5^{\prime}\) to \(14^{\circ} \mathrm{S}\).

Disappointment Island is also a name given by captain Wilson in 1797 to an island in the South Sea, one of the Duff's group, in E. long. \(167^{\circ}\), and S. lat. \(9^{\circ} 57^{\circ}\). See Duff.

DISAPPROVE', v. a. \} Fr. desapprouver.
Disapproba'tion, n. s. STo dislike; to censure; expressive of dislike.

I reasoned much, alas ! but more I loved;
Sent and recalled, ordaincd, and disapproeed.
Priur.
Without good breeding truth is disapproved;
That only makes superior sense beloved. Pope.
He was ubliged to publish his letters, to shew his disapprobution of the publishing of others. Id a

DISARM', v. a. Fr. desurmer. To spoil or divest of arms; to deprive of arms.

An order was made by both houses, for disarming all the papists in Engl-ud.

Clarendon.
I am sofl the same,
By differtnt ways still moving to one fame;
And by disarming you I now do more
To save the town, than arming you before.
Dryden.
Then, where Nemea's howling forests wave, He drives the lion to his dusky cave;
Seized by the throat the growling fiend disarms,
And tears his gaping jaws with sinewy arms.
Darwin.
DISARMING, in law, the prohibiting people to wear arms. It is an offence by the common law of England for persons to go or ride armed with dangerous and uncommon weapons: though gentlemen may wear common armour, according to their quality. It is also ordained by statute, that no persons shall come before the king's justices with force of arms, on pain of imprisonmeut, \&c. We have noticed the introdaction of the celebrated disarming act of Scotland into the Highlands, under the article Clan.

DISARRAY', v.a.\& n.s. Dis and array. To undress any one; to divest of clothes; undress; disorder.

So, as she bad, the witch they disarrayed.
Faerie Queene.
He returned towards the river, to prevent such danger as the disairay, occasioned by the narrowness of the bridge, might cast upon them.

Hayward.
Disarray and shameful rout ensue,
And force is added to the fainting crew.
Dryden's Fables.
Phrase that time hath fung away,
Uncouth words in disarray,
Tricked in antique ruff and bonnet,
Ode, and elegy, and sonnet.
Dr. Johnson's Poems.

DISASSIDU'ITY, n.s. Absence of care or attention.

The Cecilians kept him back; as very well knowing that, upon every little absence or disassiduity, he sbould be subject to take cold at his back.

Wotton.
DISAS'TER, v.a.\& n.s. 7 Fr. and Span. desas-
Disas'trovs, adj. tre; Ital. desastro;
Disas'trously, adv. Ifrom Lat. dis, adverse, and astra, the stars, under adverse stars. Misfortune; grief, calamity: disastrous is, unfortunate; portending disaster.

Stars shone witb trains of fire, dews of blood fall ; Disasters veiled the sun; and the moist star,
Upon whose influence Ncptune's empire stands, Was sick almost to doomsday with eclipse.

Shakspeare.
These are the holes where eyes should be, which pitifully disaster the cheeks.

The moon,
In dim eclipse, disastrous twilight sheds
On half the nations.
Milton.
Ah, chaste bed of mine, said she, which ncver heretofore couldst accuse me of one defiled thought, how canst thou now receive that disustered changcling?

Sidney.
Immediately after his return from this very expedition, such disastrous calamities befel his family, that he burnt two of bis children himself.

South.
This day black omens threat the brightest fair, That e'er deserved a watchful spirit's care; Some dire disaster, or by force or slight ; But what, or where, the fates have wrapt in night. Pope.
In his own fields, the swain
Disastered stands.
Thomson.
DISAVOW', v.a. \(\quad\) Dis and avow. To dis-
Disavow'al, n. s. \}own; to deny knowledge
Disavow'ment. Sof; to deny concurrence in any thing, or with any person : denial.

But being aged now, and weary too,
Of warres delight and worlds contentious toyle, The name of knighthood he did disavow.

Spenser. Faerie Queene.
A man that acts below his rank, doth but disawow fortune, and seemeth to be conscious of his own want. in worth, and doth but teach others to envy him

Bacon.
As touching the Tridentine history, his holiness will not press you to any disavowment thereof.

Wotton.
He only does his conquest disavow,
And thinks too little what they found too much.
Dryden.
We are reminded by the ceremony of taking an oath, that it is a part of that obcdience which we learn from the gospel, expressly to disavow all evasions and mental reservations whatsoevcr.

Addison's Freeholder.
An earnest disavowal of fear often proceeds from fear.

Clarissa.
To DISAU"THORIZE, v.a. Dis and authorize. To deprive of credit or authority.
The obtrusiou of such particular instances as these, are insufficient to disauthorise a note grounded upon the flnal intention of nature. Wotton.
DISBAND', v. a. \& v.n. Old Fr. desbander. To dismiss from military service; to retire; be dismissed ; broke up.

Our navy was upon the point of disbanding, and many of our men come ashore.

Bacon. War «nith Spain.

The ranged powers
Disband, and wandering each his several way
Pursues.
Milton.
The common soldiers, and inferior officers, sbould bc fully paid upon their disbanding.

Clarendon.
Pythagoras bids us in our station stand,
Till God, our general, shall us disband. Denham.
I am content to lead a private life;
Disbond my army to secure the state.
Drydcn's Aurengzebe.
Were it not for some small remainders of picty and virtue which are yet left scattered among inankind, human society would in a short space disband and run into confusion, and the earth would grow wild and become a forest. Tillotson.

Bid bim disband his legions. Addison's Cato.
Some inagine that a quantity of water, sufficient to make such a deluge, was created upon that occasion; and, when tbe business was done, all dishanded again, and annihilated.

Woodward.
DISBARK', v. a. Fr. debarquer. To land from a ship; to put on shore.

Together sailed they, fraught with all the things To service done by land that might belong,
And, when occasion served, disbarked them.
Fairfax
The ship we moor on these obscure abodes;
Disbark the sheep an offering to the gods.
Pupe's Odyskey.
DISBELIEVE', v.a. ) From dis and be-
Disbeliev'er, n.s. ; lieve. Not to credit; one who refuses belief; one who denies any position to be true.

The thinking it impossible his sins should be for given, though he should be truly penitent, is a \(\sin\), bnt rather of infidelity than despair; it being the disbelieving of an eternal truth of God's.

Hammond's Practical Catechism.
Our belief or disbelief of a thing does not alter the nature of the thing.

Tillutson.
Such who profess to disbelieve a future state, are not always equally satisfied with their owu reasonings.

Atterbury.
An humble soul is frightened into sentiments, because a man of great name pronounces heresy upon the contrary sentiments, and casts the disbeliever out of the church.

Watts.
DISBENCH', v.a. Dis and bench. To drive from a seat.

> Sir, I hope

My words disbenched you not?
-No, Sir; yet oft,
When blows have made me stay, I fled from words.
Shakspeare.
DISBRANCH', v. a. Dis and branch. To separate, or break off, as a branch from a tree.

She that herself will sliver and disbranch
From her maternal sap, perforce must wither,
And come to deadly use. Shakspeare. King Lear.
Such as are newly planted need not be disbranched till the sap begins to stir, that so the wound may be healcd without a scar. Evelyn's Kalendar.

DISBUD', v. a. With gardeners. To take away the branches or sprigs newly put forth, that are ill placed.

DISBUR'DEN, v. a. Dis and burden. To ease of a burden; to unload.
The river, with ten branches or streams, disburdens himself within the Persian Sea.

Peacham on Drawing.

We shall disburden the piece of those hard shadowings, which are always ungraceful.

\section*{Dryden's Dufresnoy.}

They removed either by casualty and tempest, or by intention and design, eithcs out of lucre of gold. or for the disburdening of the countries surcharged with multitudes of inhabitants.

\section*{Hale's Origin of Mankind.}

Disburdened Heaven rejoiced.
Milton.
Lucia, disburden all thy cares on me,
And let me share thy most retired distress.
Addison's Cato.
To DISBURSE', v.a. Fr. debourser; dis and burse. To spend or lay out money.

The queen's treasure, in so great occasions of disbursements, is not always so ready, nor so plentiful, as it can spare so great a sum together.

Spenser's Ireland.
Nor would we deign him burial for his men,
Till he disbursed ten thousand dollars. Shakspeare.
As Alexander received great sums, he was no less generous and liberal in disbursing of them.

Arbuthnot on Coins.
DISC, in antiquity, a quoit made of stone, iron, or copper, five or six fingers broad, and above a foot long, somewhat of an oval figure. It was hurled like a bowl to a vast distance, by the help of a leathern thong, tied round the thrower's liand and put through a hole in the middle According to Ovid, Met. 10, Apollo laid down his divinity, and abandoned the charge of his oracle at Delphi, to go to Sparta to play at the discus, where he mortally wounded his favorite Hyacinthus. Pausanias gives the invention of the game to Perseus, the son of Jupiter and Danae, who had the misfortune to kill his maternal grandfather Acrisius with his disc.
The game of discus was in practice at the time of the Trojan war. The myrmidons of Achilles practised it, during their leader's inaction, on the sea-shore, while burning with ire against Agamemnon. Homer also records it as among the gymnastic sports given at the funereal obsequies of Patroclus, with an iron discus.

Disc, in astronomy, the face of the sun and moon, as they appear to us on the earth; or the face of the earth as it appears to a spectator in the moon.

Drsc, in optics, the wideness of the aperture of a telescopic glass, whether plain, convex, concave, or of any other form.

DISCAL'CEATED, adj. \(\}\) Lat.discalceatus.
Discalceátion, n.s. <Stripped of shoes: the act of pulling off the shoes.

The custom of discalceation, or putting off their shoes at meals, is conceived to have been done, as by that means keeping their beds clean.

Browne's Vulgar Errours.
DISCAN'DY, v. n. From dis and candy. To dissolve; to melt.

\section*{The hearts}

That spanieled me at heels, to whom I gave Their wishes, do discandy, melt their sweets On blossoming Cæsar.

Shakspeare.
DISCARD', v. a. Dis and card. To throw out of the hand such cards as are useless : hence to dismiss or eject from service or employment.

Their captains, if they list, discard whom they please, and send a way such as will perhaps willingly be rid of that dangerous and hard service.

Spenser's State of Ireland.

These men being certainly jewels to a wise man, considering what wonders they were able to perform, yet were discarded by that unworthy prince, as not worthy the holding.

Sidney.
And laughter where it reigns unchecked.
Discards and dissipates respect. Shenstone.
Should we own that we have a very imperfect idea of substance, would it not be hard to charge us with discarding substance out of the world?

Locke.
Justice discards party, friendship, kindred, and is always therefore represented as blind.

Addison's Guardian.
DISCAR'NATE, \(a d j\). Dis and caro, carnis, flesli; Ital. scarnuto. Stripped of flesh.
'Tis better to own a judgment, though but with a curta supellex of coberent notions; than a memory, like a sepulchrc, furnished with a luad of broken and discarnate bones.

Glanville.
To DISCASE', v. a, Dis and case. To strip; to undress.

Fetch me the hat and rapier in my cell : I will discase me, and myself present. Shakspeare. Tempest.

DISCERN', v. a. \& v. \(n\).
Discerner, n.s.
Discern'ible, adj..
Discern'ibleness,
Discernífly,
Discerníng, part. adj.
Discerningly, adv.
Discern'ment. - discover; distinguish ; judge: as a neuter verb to make distinction. Discerning is knowing; discreet; wise. The meaning of the other derivatives seems plain.

And behold among the simple ones, I discerned among the youths a young man void of understanding.

Prov. vii. 7.
You shall be ruled and led
By some discretion, that discerns your state
Better than you yourself. Shakspeare. King Lear.
Does any here know me? This is not Lear :
Does Lear walk thus, speak thus? Where are his eyes?
Either his motion weakens, or his discernings
Are lethargied.
'Twas said they saw but one; and no discerner
Durst wag his tongue in censure.
Id. Henry VIII. They follow virtue for reward to-day; To-morrow vice, if she give better pay: We are so good, or bad, just at a price; For nothing else discerns the virtue or vice.

Ben Jonson.
It discerneth of forces, frauds, crimes various of stellionate, and the inchnations towards crimes capital, not actually perpetrated.

Bacon.
Consider what doctrines are infused discernibly amongst Christians, most apt to obstruct or interrupt the christian life.

Hammond.
He was a great observer and discerner of men's natures and humours, and was very dexterous in compliance, where he found it useful.

Clarendon.
All this is easily discernible by the ordinary discourses of the understanding.

South.
To discern such buds as are fit to produce blossoms, from such as will display themselves but in leaves, is no difficult matter .

Boyle.

What doth better become wisdom than to discern what is worthy the loving?

Sidney.
The custom of arguing on any side, even against our persuasions, dims the understanding, and makes it by degrees lose the faculty of discerning between truth and falsehood.

Locke.
These two errours \(\mathbf{O v i d}\) has most discerningly avoided. Garth.
It is indeed a sin of so gross, so formidable a bulk, that there needs no help of opticks to render it discernible, and therefore I need not farther expatiate on it.

Government of the Tongue.
A reader that wants discernment, loves and admires the characters and actions of men in a wrong place.

Freeholder.
Safe in his power, whose eyes discern afar
The secret ambush of a specious prayer;
Implore his aid, in his decisions rest,
Secure, whate'er he gives, he gives the best.
Johnson. Vanity of Human Wishes.
DISCERP', v.a. \({ }^{\prime}\) Lat. discerpo. To
Discerp'tible, adj. ; tear in pieces; to break; to destroy by separation of its parts.

What is most dense, and least porous, will be most coherent and least discerptible.

Glanville's Scepsis.
Matter is moveable, this immoveable; matter dis. cerptille, this indiscerptible.

More.
DISCHARGE', v. a., v., n., \& n.s. ?
Dis and
Discharg'er, n.s.
\} charge, or
Fr. descharger. To disburden, throw off, deliver from a load, a debt, crime, or obligation; hence to perform duty, as well as to dismiss from office, or employ; to emit. As a neuter verb, to explode. As a substantive, discharge is emission, or explosion ; matter emitted ; disruption; dismission, or release, from duty or punisliment. Performance of duty.

There is no discharge in that war, neither shall wickedness deliver those that are given to it.
\[
\text { Eccles. viii. } 8 .
\]

They wanted not reasons to be discharged of all blame, who are confessed to have no great fault, even by their very word and testimony, in whose eyes no fault of ours hath ever hitherto been esteemed to be small.

Hooker.

\section*{Infected minds}

To their deaf pillows will discharge their secrets.
Shakspeare. Macbeth.

> If he had

The present money to discharge the Jew,
He would not take it. Id. Merchant of Venice.
Trial would also be made in herbs poisonous and purgative, whose ill quality perhaps may be discharged, or attempered, by setting stronger poisons or purgatives by them.

Bacon.
The cloud, if it were oily or fatty, would not discharye.

Bacon's Natural History.
The galleys also did oftentimes, out of their prows, discharge their great pieces against the city.

\section*{Knolles's History.}

\section*{A grateful mind}

By owing owes not, but still pays; at once
Indebted and discharged.
Milton.

\section*{He warns}

Us, haply too secure of our discharge
From penalty, because from death released
Sone days.
Id.
To abate the bom:ilation of punpowiler, a way is promised by Porta, by borax and butter, which he says
wilt make it so go off, as scarcely to be heard by the discharger.

Broxine.
They are imprudent enough to discharge themselves of this blunder, by laying the contradiction at Virgil's door. Dryden.

Had I a hundred tongues, a wit so large
As could their hundred offices discharge.
Dryden's Fables.
The text expresses the sound estate of the coriscience, not barely by its not accusing, but by its nor condemning us; which word imports properly an acquittance or discharge of a man upon some precedent accusation, and a full trial and cognizance of his cause.

South.
If one man's fault could discharge another man of his duty, there would be no place left for the common offices of society.

L'Estrange.
When foreign trade imports more than our commodities will pay for, we contract debts beyond sea; and those are paid with money, when they will not take our goods to discharge them.

Locke.
As the heat of all springs is owing to subterraneous fire, so wherever there are any extraordinary disclarges of this fire, there also are the neighbouring springs hotter than ordinary.

Woodward.
The man who builds, and wants wherewith to pay, Provides a house from which to run away.
In Britain what is many a lordly seat
But a discharge in full for an estate? Young.
We discharged a pistol, and had the sound returned upon us fifty-six times, though the air was foggy.

Addison on Italy.
Soon may kind heaven a sure relief provide;
Soon may your sire dischurge the vengeance due,
And all your wrongs the proud oppressors rue.
Pope's Odyssey.
The matter being suppurated, I opened an inflained tubercle in the great angle of the left eye, and discharged a well concocted matter. Wiseman's Surgery.

The hromorrhage being stopped, the next occurrence is a thin serous discharge. Sharp's Surgery.

DISCINCI', adj. Lat. discinctus. Ungirded; loosely dressed.

DISCLND', v.a. Lat. discindo. To divide; to cut in pieces.

We found several concretions so soft, that we could easily discind them betwixt our fingers. Boyle.

DISCI'PLE, v.a. \& n.s. \(\}\) Fr. disciple;
Discípleship. Span. and Yort. discipulo ; Lat. discipulus, from disciplina. One who submits himself to discipline as a scholar. See Discipline. Discipleship is the state of being a disciple.

So that the disciplis weren named at Antioche cristen men.

Wiclif. Dedis. 11.
She, bitter penance ! with an iron whip
Was wont him to disciple every day. Spenser.
He did look far
Inte the service of the time, and was
Discipled of the bravest.
Shakspeare
That to which justification is promised, is the giving up of the whole soul intirely unto Christ, undertakicg discipleship upon Christ's terms.

Hammond's Pract. Catech.
He rebuked disciples who would call for fire from heaven upon whole cities, for the neglect of a few.

King Charles.
A young disciple should behave hinsself so well, as to gain the affection and the ear of Lis instructor

Watts.

Fur, as Christians, we are the disciples, the followers, and the servants of Christ, redcemed by him.

Mason.
Yea, a disciple, that would make the Founder Of your belief renounce it, could he see Such proselytes.

Byron.
Disciple, in a more restrained sense, is the designation applied to those who were the immediate followers and attendants on Christ's person, of whom there were seventy or seventy-one. The termas disciple and apostle are often used 'synonymously in the gospel history; but sometimes the apostles are distinguished from disciples, as persons selected out of the number of disciples, to be the principal ministers of his religion : of these there were only twelve. The Latins kept the festival of the seventy or seventy-two disciples on July 15 th, and the Greeks on January 4 th.

DIS'CIPLINE, v. a. \& n.s. Dis'ciplinable, adj.
Diściplinableness, \(n\). s.
Disciplina'rian, n. s. \& adj. Diściplinary.

Fr. discipline; Lat. Span. Port. and It. disciplina, from disco, to learn, because discipline is necessary to teaching. To educate, instruct, with power to punish; to advance by instruction. As a substantive discipline is, instruction; rule; any thing taught ; system of government; mortification ; punishment. Disciplinable is, docile; capable of discipline. Disciplinarian, relating to, and as a substantive one zealous for, discipline. Disciplinary, pertaining to discipline.

If ony vertue, if ony preisyng of discipline, thenke ghe these thingis, that also ghe han lerned.

Wiclif. Filipensis 4.
He had charge my discipline to frame,
And tutors nouriture to oversee.
Spenser.
As we are to belleve for ever the articles of evangelical doctrine, so the precepts of discipline, we are, in like sort, bound for ever to observe. Hooker.

The cold of the northern parts is that which, without aid of discipline, doth .make the bodies hardest, and the courage warmest.

Bacon.
This opens all your victories in Scotland, Your discipline in war, wisdom in peace. Shukspeare.

The law appeared imperfect, and but given With purpose to resign them in full time Up to a better covenant, disciplined From shadowy types to truth, from flesh to spirit.

Milton.
These are the studies wherein our noble and gentle youth ought to bestow their time in a disciplinary way.

Id.
The love of God makes a man chaste without the laborious arts of fasting and exterior discipline; he reaches at glory without any other arms but those of love.

Taylor.
Art may be said to overcome and advance nature in these mechanical disciplines, which, in this respect, are much to be preferred.

Wilkins.
\(w^{\prime}\). nut in animals, especially some of them, as loxes, 'iogs, apes, horses, and elephants, not only perception, phantasy, and memory, conmon to most, if not all animals, but something of sagacity, providence, and disciplinableness.

Hale.
Let crooked steel invade
The lawless troops which discipline disclaim,
Anu their superfluous growth with rigour tame.

What eagerness in disciplinarian uncertanties, when the love of God and our neighbour, evangelical unquestionables, are neglected! Glan. Scepsis.

The most perfect, who have their passions in the best discipline, are yet obliged to be constantly on theiguard.

Rogers.
They look to us, as we should judge of an army or well-disciplined soldiers at a distance.

\section*{Derham's Astro-Theoogy.}

They were with care prepared and disciplined for confirmation, which they could not arrive at till they were found, upon examination, to have made a sufficient progress in the knowledge of Christianity.

Addison on the Christian Religion.
They draw those that dissent into dislike with the state, as puritans, or disciplinarians.

\section*{Sanders. Pax Eccl.}

Those canons in behalf of marriage were only disciplizary, grownded on prudential motives.

Bp. Ferne.
It is by the assistance of the eye, and the car especially, which are called the senses of disciptine, that our minds are furnished with various parts of knowledge,
Watts.

The passions may be humoured till they become our master, as a horse may be pampered till he gets the better of his rider ; but early discipline will prevent mutiny, and keep the helm in the hands of reason.

Cumberland.
In colleges and halls in ancient days,
When learning, virtue, piety, and truth,
Were precious and inculcated with care,
There dwelt a sage called Discipline.
Cowper.
Discipline, Ecclesiastical, consists in putting those laws in' execution by which the church is governed, and inflicting the penalties enjoined by them against the several sorts of offenders. The primitive church never pretended to exercise discipline upon any but sucl as were within her pale in the largest sense, by some act of their own profession: and even upon these she never pretended to exercise her discipline so far as to cancel or disannul their baptism: all that she pretended to was, to deprive men of the benefits of external communion, such as public prayer, receiving the eucharist, and other acts of divine worship. The church discipline was confined to the admonition of the party, and to the lesser and greater excommunication. As to the objects of ecclesiastical discipline, they were all such delinquents as fell into great and scandalous crimes after baptism. Discipline, in a more peculiar sense, is used for the bodily punishments inflicted on a religious of the Romish church who has been found a delinquent; or even for that which the religious voluntarily undergo or inflict on themselves, by way of mortification.

Discipline, tie Book of, in the history of the church of Scotland, is a common Order, drawn up by the assembly of ministers in 1650 , for the reformation and uniformity to be observed in the discipline and policy of the church. In this book the government of the church by prelates is set aside, kirk sessions are established, the observation of fast days and saints' days is condemned, and other regulations for the government of the church are determined. This book was approved by the privy council, and is called the First Book of Discipline.

DISCLAIM \({ }^{\prime}\), v.a. \(\}\) Dis and claim. To
Disclai'mer, n.s. disown ; to deny any \(^{\text {d }}\) knowledge of; to retract any union with; to abrogate : a disclaimer is both one that disclaims, disowns, or renounces, and a legal or other plea containing an express denial or refusal.

You cowardly rascal! nature disclaims all share in thee: a taylor made thee. Shakspeare. King Lear.

He calls the gods to witness their offence;
Disclaims the war, asserts his innocence.
Dryden's Eneid.
We find our Lerd, on all occasions, dischaiming all pretensions to a temporal kingdom. Rogers.

Very few, among those who profess thenselves Shristians, disclaim all concern for their souls, disown :he authority, or renounce the expectations, of the gospel.

Id.
DISC'LOSE, v.a.
Disćloser, n.s.
To uncover; to
Discíutsions, n. s. Disclusion is emission.
There may be a reconciliation, except for upbraiding, or pride, or disclosing of secrets, or a trcacherous wound; for from these things every friend will depart.

Ecclus.
The producing of cold is a thing very worthy the mquisition, both for the use and disclosure of causes.

Bacon.
He that proportioned wonders can disclose, At once his fancy and his judgment shows. Waller.
- Judge what a ridiculous thing it were, that the continued shadow of the earth should be broken by sudden míaculous eruptions and disclusions of light, to prevent the art of the lanthorn-maker. More.
Then earth and ocean various forms disclose.
\(D_{\text {ryden. }}\)

\section*{If I disclose my passion,}

Our friendship's at an end ; If I conceal it,
The world will call me false. Addison's Cato.
Ten brother youths with light umbrellas shade, Or fan with busy hands the panting maid; Loose wave her locks, disclosing, as they break, The rising bosom and averted cheek. Darwin.

\section*{Angiolina.}

Ah! why
Do you still keep apart, and walk alone,
And let such strong emotions stamp your brow,
As not betraying their full import, yet
Disclose too much ?
Doge. Disclose too much?--of what? What is there to disclose.

Byron.
DISCOL'OUR, v.a. \} Lat. decoloro. To
Discolouration, \(n\).s. \(\}\) change from the natural hue; to stain. The change produced, or art of changing, is discoloration.

All in a kirtle of discoloured say
He clothed was, ypaynted full of eies.
Spenser. Faerie Queenc.
Many a widow's husband grovelling lies, Coldly embracing the discoloured earth.

Shakspeare. King John.
Drink water, either pure, or but discoloured with malt.

Temple.
Suspicions, and fantastical surmise,
And jealousy, with jaundice in her eyes,
Discolouring all she viewed.
Dryden.
Have a care lest some beloved notion, or some darling science, so prevail over your mind as to discolour all your idcas.

Watts.
In a depravation of the humours from a sound state to what the physicians call by a general name of a cacochymy, spots and discolorations of the skin are signs of weak fibres.

Arbuthnot.

DISCOMFIT, v.a. \& n.s. ) Fr.desconfire; Discom'fiture, n.s. \(\quad\) Ital. sconfiggere. from Lat. disconfigere. To defeat; to conquer; overpower; subdue.
Joshua discomfitsa Amalek and his people with thic edge of the sword.

Exodus.
The pillowes dide hir besinesss and cure,
After the bataille and discomfiture.
Chaucer. Cant. Tales.
For in this world there ne is \(n 0\) creture
Walking, alas! in more discomfiture
Than 1, ne that more sorrowe doth endure.
Donre.
Fight against that monstrous rebel, Cade, Whom, since, I heard to be discomfited.

Shakspeare.
Fly you must : incurable discomfit
Rcigns in the hearts of all our present party. Id.
Dagon must stoop, and shall ere long receive Such a diccomfit, as shall quite despoil him Of all these boasted trophies. Milton's Agonistes.

While my gallant countrymen are employed in pursuing rebels half discomfited through the consciousness of their guilt, I shall improve those victories to the good of my fellow subjects.

Addison.
DISCOM'FORT, v.a.\&n.s. \(\quad\) Dis and com-
Discom \({ }^{\prime}\) fortable, \(a d j\). fort. To grieve; sadden; deject: as a substantive, uneasiness; sorrow ; melancholy.

Therefore whanne ye seen the abomynacioun of discounfort, that is seid of Danyel the profcte stondynge in the hooly place, he that redith undirstonde he.

Wiclif. Matt. 24.
This himself did foresee, and therefore armed his church, to the end they might sustain it without discomfort.

Hooker.
Discomfort guides my tongue,
And bids me speak of nothing but despair.
Shakspeare.
Discomfortable cousin, knowest thou not
That when the searching eye of Heaven is hid
Behind the globe, it lights the lower world? Id.
It is no discomfort for a man to flee, when his conscience pursucs him not.

> Bp. Hall. Contemplations.

What! did that help poor Dorus, whose eyes could carry unto him no other news but discomfortable?

Sidney.
In solitude there is not only discomfort, but weakness also.

South.
DISCOMMEND', v.a. Dis and com-
Discommen'dable, adj. mend. To
Discommen'dableness, n.s.
Discommenta'tion, n.s.
Discommen'der. blame; to censure: discommendable is blameable, deserving censure: discommendation, censure: discommender, he who expresses or bestows it.

Absolutely we cannot discommend, we cannot absolutely approve, either willingness to live, or forwardness to die.

Hooker.
Now you will all be wits : and he, I pray,
And you, that discommend it, mend the play.

> Denham.

Neither do I discommend the lofty style in tragedy, which is naturally pompous and magnificent.

\section*{Dryden.}

Pusillanimity is, according to Aristotle's morality a vice very discommendable. Ayliffe's Parergon.

Tully assigns three motions, whereby, without any aiscommendation, a man might be drawn to become an accuser of others.

DISCOMMODE', v. a. Fr. dis and com-
Discommod'ious, adj. mode. To put to
Discommódity, n.s. Sinconvenience; to molest; to incommode. The adjective and substantive follow this meaning.

So many thousand soldiers, unfit for any labour, or other trade, must either seek service and employment abroad, which may be dangerous; or else employ themselves here at home, which may be discommodious.

Srenser's State of Ireland.
We speak now of usury, how the discommodities of it may be best avnided, and the commodities retained : or how, in the balance of commodities and discommodities, the qualities of usury are to be recunciled.

Bacon.
It is better that a ship should be preserved with some discommodity to the sailors, than that, the sailors being in health, the ship should perish. Hayward.

DISCOMPOSE', v. a. ? Fr. dêcomposer.
Discompósure, n. s. STo disorder; to unsettle : hence to offend; vex; irritate. Discomposure is the effect thus produced.

Though he was a dark prince, and infinitely suspicious, he never put down or discomposed a counsellor or near servant.

Bacon.
He threw himself upon his bed, lamenting with much passion, and with abundance of tears ; and continued in this melancholick discomposure of mind many days.

Clarendon.
No more, dear mother: ill in death it shows, Your peace of mind by rage to discompose. Dryden.
Men who possess all the advantages of life, are in a state where there are many accidents to disorder and discompose, but few to please them. Swift.

DISCONCERT, v. \(a\). Dis and concert. To unsettle; discompose ; disturb a scheme.
You need not provoke their spirits by outrages : a careless gesture, a word, or a look, is enough to disconcert them.

Collier.
DISCONFOR'MITY, n. s. Dis and consormity. Want of agreement ; inconsistency.

Lyes arise from errour and mistake, or malice and forgery ; they consist in the disagreement and disconformity betwixt the speech and the conception of the mind, or the conceptions of the mind and the things themselves, or the speech and the things.

Hakewill on Providence.
DISCONGRU'ITY, n.s. Dis and congruity. Disagreement ; inconsistency.

There is want of capacity in the thing, to sustain such a duration, from the intrinsical discongruity of the one to the other.

Hale's Origin of Mankind.
DISCON'SOLATE, adj. \(\quad\) Dis and console.
Discon'solately, adv. \& Void of comfort;
Discon'solateness, n. s. hopeless; sorrowful ; melancholy.

See Cassius all disconsolate,
With Pindarus his bondman on this hill.
Shakspeare.
In his [God's] absence, there is nothing but dolour, disconsolateness, and despair. Bp. Hall.
If patiently thy bidding they obey, Dismiss them not disconsolate.

Were dropping wet, disconsolate and wan, And through their thin array received the rain.

Dryden
The moon reflects the sunbeams to us, and so, by illuminating the air, takes away in some measure the disconsolate darkness of our winter nights. Ray.

I am first affrighted and confounded with that forlorn solitude in which I am placed by my philosophy, and fancy myself some strange uncouth monster, who, not being able to unite and mingle in society, has been expelled all human commerce, and left utterly abandoned and disconsolate.

\section*{Hume. On the Human Understanding.}

DISCONTENT \(\left.{ }^{\prime}, n . s . \& a d j.\right) \quad D \omega\) and Con-
Discontent'ed, part. adj.
Discontent'ediy, adv. TENT, which Discontent'edness, n.s. \(\quad \begin{aligned} & \text { see. } \\ & \text { ness; dissatis- }\end{aligned}\) Discontent'ment. ness; dissatisfaction with one's present state. Discontentment is an old word, expressing the same meaning.
These are the vices that fill them with general discontentment, as though the bosom of that famous church, wherein they live, were more noisome than any dungeon.

Hooker.

\section*{I see your brows full of discontent,}

Your hearts of sorrows, and your eyes of tears.
Shukspeare.
The politick and artificial nourishing and entertaining of hopes, and carrying men from hopes to hopes, is one of the best antidotes against the poison of discontentment.

Bacon.
The misery which is supposed to follow poverty, arises, not from want, but from peevishness and discontent.

Burton.
Pride is ever discontented, and still seeks matter of boasting in her own works.

Bp. Hall. Contemplations.
The rest were seized with sullen discontent,
And a deaf murmur through the squadrons went.
Dryden.
These are, beyond comparison, the two greatest evils in this world; a diseased body, and a dizcontented mind.

Tillotson.
A beautiful bust of Alexander the Great casts up his face to heaven with a noble air of grief, or discontentedness, in his looks.

Addison's Travels.
As a man inebriated only by vapours, soon recovers in the open air; a nation discontented to madness, without any adequate cause, will return to its wits and allegiance, when a little pause has cooled it to reflection.

Johnson.
DISCONTIN'UE, v. a. \& v.n. \} Fr. dis-
Discontinu'ity, n.s.
§continuer. To leave off; to cease; break off; interrupt : as a neuter verb, to lose cohesion, or any established right.

Thyself shall discontinue from thine heritage that I give thee, and I will cause thee to serve thine enemies.

Jer.
Twenty puny lies I'll tell,
That men shall swear I have discontinued school
Above a twelvemonth.
Shakspeare.
Examine thy customs of diet, sleep, exercise, apparel, and the like; and try, in any thou shalt judge hurtful, to discontinue it by little and little; but so, as if thou find any incunvenience by the change, thou come back to it again.

Bacon.
There is that property, in all letters, of aptness to be conjoined in syllables and words, through the voluble motions of the organs from one stop or figure to another, that they modify and discriminate the voice, without appearing to discontinue it.

Holder's Elements of Specch.

The ladies and the knights, no shelter nigh,

Let us consider whether our approaches to hin are sweet and refreshing, and if we are uneasy under any long discontinuance of our conversation with him.

Atterbury.
Upon any discontinuation of parts, made either by bubbles, or by shaking the glass, the whole mercury falls.

Newton.
That discontinuity of parts is the principal cause of the opacity of bodies, will appear by considering that opaque substances become transparent by filling their pores with any substance of equal, or almost equal, density with their parts.

Id.
The effect of discontinuance of possession is, that a man may not enter upon his own land or tenement alienated, whatsoever his right be unto it, or by his own authority; but must seek to recover possession by law. The effect of discontinuance of plea is, that the instance may not be taken up again, but by a new writ to begin the suit afresh.

Cowell.
DISCONVE'NIENCE, n.s. Dis and convenience. Incongruity; disagreement; opposition.

Fear ariseth many times out of natural antipathies of nature; but, in these disconveniencies of nature, deliberation hath no place at all.

\section*{Bramhall's Answer to Hobbes.}

DIS'CORI, v. n.\&n.s.
Discoridance, n.s.
Discor'dancy,
Discor'dant, adj.
Discor'dantly, adv. Derse heart. To heart; an adverse heart. To disagree; not to accord with. As a substantive, disagreement; opposition; jangling; contrariety of, or ill agreement between, sounds. Discordance and discordancy both seem synonymons with discord.

These things doth the Lord hate, the false witness hat speaketh lies, and he that soweth discord amnng brethren.

Proverbs.
See what a scourge is laid upon your hate,
That heaven finds means to kill your joys with love ! And I, for winking at your discords too, Have lost a brace of kinsmen.

Shakspeare. Romeo and Juliet.
It is sound alone that doth immediately and incorporeally affect most; this is most manifest in music, and concords and discords in music : for all sounds, whether they be sharp or flat, if they be sweet, have a roundness and equality; and if they be harsh, are unequal : for a discord itself is but a harshness of divers sounds meeting.

Bacon.

> This is the slowest, yet the daintiest sense;
> For even the ears of such as have no skill
> Perceive a discord, and conceive offence ;
> And knowing not what's good, yet find the ill.
> Davies.
> How doth music amaze us, when of discords she Peacham. maketh the sweetest harmony!
> Hither conscience is to be referred; if by a comparison of things done with the rule there be a consonancy, then follows the sentence of approbation; if discordant from it, the sentence of condemnation.

Hale's Origin of Mankind.
Two strings of a musical instrument being struck together, making two noises that arrive at the ear at the same time as to sense, yield a sound differing from either of them, and as it were compounded of both; insomuch, that if they be discordantly tuned, though each of them struck apart would yield a pleas-
ing sound, yet being struck together they make * harsh and troublesome noise. Boyle on Colours.

Hiscord, like that of music's various parts,
Discord that makes the harmony of hearts;
Discord that only this dispute shall bring, Who best shall love the duke and serve the king.

Drydes.
All nature is but art unknown to thee ; All chance, direction which thou canst not see ; All discord, harmony not understood; All partial evil, universal good.

Pope.
Discord, in music, every sound which, joined with another, forms an assemblage disagreeable to the ear; or, rather, every interval whose extremes do not coalesce. Now, as there are no other concords, or consonances, except those which form amongst themselves, and with their fundamental sound, perfect chords, it follows that every other interval must be a real dissonance or discord: even the third and sixth were reckoned such among the ancients, who excluded them from the number of consonant chords. The term dissonance, which is synonymous with discord both in a literal and metaphorical sense, signifies disagreement or disunion. In reality, that which renders dissonances grating is, that the sounds which form them, far from uniting in the ear, seem to repel each other, and are heard each by itself as two distinct sounds though produced at the same time. This repulsion or violent oscillation of sounds is heard more or less as the vibrations which produce it are more or less frequently coincident. When two vocal strings are gradually tuned, till they approach a consonant interval, the pulsations become slower as the chord grows more just, till at last they are scarcely heard, if heard at all ; whence it appears certain that the pleasure, produced in us by harmony, results from the more or less exact and frequent coincidence of vibrations; though the reason why this coincidence should give pleasure, more than any other modification or combination of sounds, appears to us inscrutable. The agreeable effects of dissonance, in harmony, are no objection to this theory : since it is allowed that the sensations excited by discord are not in themselves immediately and necessarily pleasing, but only please by auricular deception. The ear is surprised with the shock it receives; and, in proportion as it is harsh and grating, we feel the pleasure of returning harmony enhanced, and the disappointment of being artfully and insensibly extricated more agreeable. The name of dissonance is given sometimes to the interval, ard sometimes to each of the sounds which form it. But, though two sounds equally form a dissnnance between themselves, the name is most frequently given to that sound in particular which is most extraneous to the chord. The number of possible dissonances is indefinite; but as in music we exclude all intervals which are not found in the system received, the number of dissonances is reduced to a very few : besides, ir practice, we can only select from those few such as are agreeable to the species, and the mode, in which we compose; and from this last number we must exclude such as cannot be used consistently with the rules prescribed. But what are these rules? Have they any foundation in nature
ol are they nerely arbitrary? This is what Rousseau has endeavoured to irvestigate and to deduce, with more ingenuity than success, from principles purely mechanical.
 light; make plain or visible.
He discovereth deep things out of darkness, and bringeth out to light the shadow of death.
\(J_{o b}\) xii. 22.
When we had discovered Cyprus, we left it ou the eft hand.

Aets.
Let that man with better sense advise,
That of the world least part to us is read; And daily how through hardy enterprize
Many great regions are discovered.
Spenser. Faeric Queene.
The utter waulls of it yet stond. The kepe is exceaing fair and strong; and in the waulles be certein strong towers. The lodgings that were within the area of the castelle be discoverel and faul to ruine.

Leland.
Here stand my lords, and send discoverers forth,
To know the numbers of our enemies. Shakspeare.
What, must I hold a candle to my shame?
They in themselves, good suoth, are too, too light.
Why 'tis an office of discovery, love,
Aud I should he ohscured. Id. Merchant of Venice. Some high climhing hill,
Which to his eye discovers unaware
The goodly prospect of some foreign land,
First seen, or some renowned metropolis
With glistering spires and hattlements adorned.
Milton.
Man with strength and frce will armed Complete, to havc discovered and repulsed
Whatcver wiles of foe or seeming friend. Id.
They were deceived by Satan, and that not in an invisible situation, hut in an open and discoverable apparitiou, that is, in the form of a serpent.

Browne's Vulgar Errours.
If more be found out, they will not recompense the discoverer's pains, hut will be fitter to be cast out.

Holder.
The cover of the coach was made with such joints, that as they might, to avoid the weather, pull it up -lose, so they might put each end down, and remain as discovered and open-sighted as on horsehack.

Sidney.
Of all whe since have used the open sea,
Than the hold English none more fame bave won;
Beyoud the year, and out of heaven's high way,
They make discoveries where they see no sun.
Dryden.
Things that appeared amiahle hy the light of this world, appcar of a different odious hue in the clear discoveries of the next.

South.
An old maiden gentlewoman is the greatest discoverer of judgments; she can tell you what sin it was that sct such a man's house on fire.

\section*{Addison's Spectator.}

It is concluded hy astronomers, that the atmosphere of the moon hath no clouds nor rains, hut a perpetual and uniform serenity; because nothing discoverable in the lunar surface is ever covercd and absconded hy the interposition of any clouds or mists.

Bentley.
Places receive appellations, according to the language of the discoverer, from observations made upon the people.

Broome.
Revelation may assert two things to he joined, whose connection or agrecment is not discoverable by reason.

Watts.

DISCOUN'SEL, r. a. Dis and counsel. To dissuade; to give contrary advice. Obsolete.

But him that palmer from that vanity
With temperate advice discounselled. Spenser.
DIS'COUNT, v. a. \& n.s. From dis and count. To count back; to pay back again. Interest so counted after a principal given.

My father's, mother's, brother's death I pardon : My prayers and penance shall discount for these, And heg of heaven to charge the bill on me.

Dryden.
The farmers, spitefully combined, Force him to take his tithes in kind; And Parvisol discounts arrears By bills for taxes and repairs.

Swift.
His whole intention was, to huy a certain quantity of copper noney from Wood, at a large discount, and sell them as well as he could.
\(1 d\).
Discount, in commerce, a ierm among traders, merchants, and bankers. It is used by the two former on occasion of their buying commodities on the usual time of credit, with a conditoon that the seller shall allow the bnyer a certain discount, at the rate of so much per cent. per annum, for the time for which the credit is generally given, upon condition that the buyer pays ready money for such commodities, instead of taking the time of credit. Traders and merchants also frequently taking promissory notes for moneys due, payable to them or order at a certain time, and sometimes having occasion for money before the time is elapsed, procure these notes to be discounted by bankers before the time of payment. Bills of exchange are also discounted hy bankers; and in this consists one article of the profits of banking. See Bank.

DISCOUN"TENANCE, v. a.\& , From dis
Discoun'tenancer, n.s. [n.s. \(\}\) and countenance. To discourage by cold treatment : one who discourages.

Rumours of scandal and murmurs against the king and his government, taxed him for a great taxer of his people, and discountenancer of his nobility,

\section*{Bacon.}

He thought a little discountenance upon those persons would suppress that spirit.

Clarendon.
He came, and with him Eve, more loth, tho' first To offend ; discountenanced both, and discomposed.

Milton.
The truly upright judge will always countenance right, and discounten ance wrong. Atterbury.

In expectation of the hour of judgment, he patiently hears all the difficulties of duty, and the discountenance he meets with from a wicked and prophane world.

Rogcrs.
Prcsent time and future may be considered as rivals; and he who solicits the onc, must expect to be discountenanced hy the other. Sir Joshua Reynolds.

\section*{IISCOUR'AGE, v. a. \(\quad\) Fr. décourager. \\ Discotir'ager, n.s. Dis and courage. \\ Discour'agement. To depress; deprive} of confidence ; dastardise; deter; taking, from : discouragement is the cause of depression, or fear.

Wherefore discourage ye the neart of the children of Israel from going over into the land? Numbers.
I might neither encourage the rebels' iasolence. uor discourage the protestants' loyalty and patience.

King Charles.

You may keep your beauty and your health, unless you destroy them yourself, or discourage them to stay with you, by using them ill.

Temple.
To things we would have them learn, the great and only diecouragement is, that they are called to them.

Locke.
The apostle with great zeal discourages too unreasonable a presumption. Rogers.
The books read at schools and colleges are full of incitements to virtue, and discouragement from vice.

Suift.
Most men in years, as they are generally disconragers of youth, are like old trees, which, being past bearing themselves, will suffer no young plants to flourish beneath them.

Pope.
The obscurity of the prophecies, great as it is in some parts, is not such as should discourage the Christian Laic from the study of them, nor such as will excuse bim under the neglect of it.

> Bp. Horsley.

DISCOURSE', v.a., v.n. \&
Span. and
Discourser', n. s.
[n.s. Fr. discourir ; Discours'ive, \(u d j\). It. discorrere; Lat. discurrere, dis and curro, to wander about; because in discourse the mind travels from object to object. To treat of by speech or writing; to discuss: as a neuter verb, to talk; relate; converse; reason.

By reason of that original weakness in the instruments, without which the understanding part is not able in this world by discourse to work, the very conceit of painfulness is a bridle to stay us. Hooker.

Sure he that made us with such large discourse, Looking before and after, gave us not
That capability and godlike reason
To rust in us unused.
Shakspeare.
Go with us into the abbey here,
And let us there at large discourse ail our fortunes.
The tract of every thing
Would by a good discourser lose some life,
Which action's self was tongue to.
Id.
He waxeth wiser than himself, more by an hour's discourse, than by a day's meditation. Bucon.

Brutes do want that quick discoursing power.
Davies.
In thy discourse, if thou desire to please,
All such is courteous, useful, new, or witty ;
Usefulness comes by labour, wit by ease,
Courtesy grows in court, news in the city.
Herbert.

\section*{The soul}

Reason receives, and reason is her being,
Discoursive, or intuitive; discourse
Is oftest yours, the latter is most ours. Milton.
Philologers and critical discoursers, who look beyoud the obvious exteriors of things, will not be angry at our narrower explorations.

Browne.
The tict of the mind which connects propositions, and derluceth conclusions from them, the schools call discourse; and we shall not miscall it, if we name it reason.

Glanville.
Of various things discoursing as he passed, Anchises hither bends.

Dryden.
The discourse here is about ideas, which, he says, are real things, and seen iu God.

Locke.
The general maxims we are discoursing of are not known to children, ideots, and a great part of mankind.

Flowers of rhetoric in sermons and serious d \(\mathrm{s}_{\mathrm{s}-}\) courses are like the blue and red flowers in corn, pleasing to those who come only for amusement, but prejudicial to him who would reap profit from it.

> Pıpe.

When a man's capacity does not enable him to entertain or animate the company, it is the best he can do to render himself inoffensive, and to keep his teeth clean; but the person who has talents for discourse, and a passionate desire to enliven conversation, ought to have many improprieties excused, which in the other were unpardonable.

Shenstone.
DISCOUR'TEOUS, \(a d j\). Dis and courteous. Uncivil; uncomplaisant ; defective in good manners.

DISCOUR'TESY,n.s. \} Dis and courtesy.
Discotréteous, adj, \(\}\) Incivility; rudeness ; act of disrespect.

Becalm in arguing; for fierceness makes
Error a fault, and truth discourtesy. Herbert.
As if chearfulness had been tediousness, and good entertainment had been turnedto discourtesy, he would ever get himsclf alone.

Sidney.
He made me visits, maundering as if I had done him a discourtesy.

Wiseman.
He resolved to unhorse the first discourteous knight he should meet .

Motteux's Don Quixote.
DIS'COUS, adj. From Lat. discus. Broad; flat; wide. Used by botanists to denote the middle, plain, and flat part of some flowers, such as the flos solis, \&c.

DISCRED'IT, v. a. \& n. s. Fr. décrediter. To deprive of credibility ; to make not trusted; to disgrace; distrust : as a substantive, reproach; disgrace; lower degree of infamy; imputation of fault; ignominy.

He, like a privileged spy, whom nothing can
Discredit, libels now 'gainst each great man. Donne.
You had left unseen a wonderful piece of work, which not to have been blest withal, would have discredited you.

Shakspeare.
Had I been the finder out of this secret, it would not have relished among my other discredits.

Shakspeare.
Idlers will ever live like rogues, and not fall to work, but be lazy, and then certify over their country to the discredit of a plantation.

Bacon.
He is commended that makes a saving voyage, and least discredits his travels, who returns tbe same man he went.

Wotton.
'Tis the duty of every Christian to be concerned for the reputation or discredit his life may bring on his profession.

Rogers.
Alas, the small discredit of a bribe
Scarce hurts the lawyer, but undoes the scribe.
Pope.
Reflect how glorious it would be to appear in countenance of discredited duty, and by example of piety revive the declining spirit of religion.

Id. DISCREET, adj. Fr. discret; Span. Discreet'ly, adv Port. and Ital. dis-
Discreet'ness, id.s. Discrétion,
Discrétionary, adj.) creto; Lat. discretus, ous; sober; modest. Discretion and discreetness are synonymous substantives. Discretionary means unlimited, except by discretion.

But now parfourme ghe in dede, that as the discrecioun of wille is redi so be it also of parfourmyng of that that ghe han.

Wiclif. ii Cor. 8.

The greatest parts without discietion, as observed by an elegant writer, may be fatal to their owner.

Hume.
Honest, discreet, quiet, and godly learned men, wil \({ }_{1}\) not be withdrawn by you.

Whitgifte.
Nothing then was further thought upon for the manner of governing ; but all permitted unto their wisdom and discretion which were to rule.

Hooker.

\section*{Less fearful than discreet,}

Yon love the fundamental part of state,
Mere than you doubt the charge of 't. Shakspeare.
It is not good that children should know any wickedness : old folks have discretion, and know the world.

Id.
Discretion is the victor of the war,
With lenity, and our directions followed
With cheerfulness, a prosperous end must crown Our works well undertaken.

Massinger.
Poets lose half the praise they should have got, Could it be known what they discreetly blot.

Waller.
The labour of obedience, loyalty, and subjection, is no more but for a man honestly and discreetly to sit still.

South.
The major being a person of consummate experience, was invested with a discretionary power. Tatler.

It is the discreet man, not the witty, nor the learned, nor the brave, who guides the conversation, and gives measures to society.

Addison's Spectutor.
There is no talent so useful towards rising in the world, or which puts men more cut of the reach of fortune, than discretion, a species of lower pradence. Swift.
The dullest brain, if gently stirred, Perhaps may waken to a humming bird; The most recluse, discreetly npened, find Congenial object in the cockle kind.

Pope's Dunciad.
A deacon may have a dispensation for entering into orders before he is twenty-three years of age ; and it is discretionary in the bishop to admit him to that order at what time he thinks fit.

Ayliffe's Parergon.
Dear youth, by fortune favnred, but by love, Alas! not favoured less, be still as now Discreet.

Thomson.
To Jeffrey go, be silent and discreet,
His pay is just ten sterling pounds per sheet :
Fear not to liz, 'twill seem a lucky hit,
Shrink not from blasphemy, 'twill pass for wit.
Byron.
DISCREP'ANCE, n.s. \(\}\) Lat. discrepantia.
Discref'ant, adj. Difference; contrariety; disagreement.

Diversity of education, and discrepancy of those principles wherewith men are at first imbued, and wherein all our after reasonings are founded.

Lord Digby to K. Digby.
DISCRE'TE, v.a. \& adj. ) Lat. discretus. Discrétive, adj
f To separate; to discontinue; distinct; disjoined. For discretive, see the instance.

As for its diaphaneity, it enjoyeth that most eminently; as having its earthly and salinous parts so exactly resolved, that its body is left imporous, and not discreted by atomical terminations.

Browne.
Discrete quantity, or different individuals, are measured by number without any breaking continuity ; that is, in things that have continuity, as continued gaantity and motion.

Hale's Origin of Mankind.

Discretive propositions are such wherein varıous, and seemingly opposite, judgments are made, whose variety or distinction is noted by the particles but, though, yet, \&cc. as, travellers may change their climate, but not their temper; Job was patient, though his grief was great.

Watts.
Discrete, or Disuunct, Proportion is that in which the ratio between two or more pairs of numbers is the same, and yet the proportion is not continued, as the ratio between \(3: 6\) is the same as that between \(8: 16\), and therefore the numbers are proportional; but it is only discretely or disjunctly, for 3 is not to 6 as 6 to 8 ; that is, the proportion is broken off between 8 and 3, and is not continued as in the following continual proportionals :-
\[
3: 6:: 12: 24
\]
 tinguished by tokens; select; separate. As an adjective, distinguished by marks. Discriminable is distinguishable. Discriminous is an obsolete word for critical, hazardous.

Oysters and cockles and muscles, which move not, have no discriminate sex.

Bacon.
Take heed of abetting any factions, or applying any publick discriminations in matters of religion.

King Charles.
There are three sorts of it differing in fineness from each other, and discriminated by the natives by three peculiar names.

Boyle.
Discriminative Providence knew before the nature and course of all things.

More's Antidote against Atheism.
There may be ways of discriminating the voice; as by acuteness and gravity, the several degrees of raising and falling from one tone or note to another.

Holder.
Any kind of spitting of blood imports a very discriminous state, unless it happens upon the gaping of a vein opened by a plethory.

Harvey.
There is a reverence to be shewed them on the account of their discrimination from other places, and separation for sacred uses.

Stillingfleet.
The right hand is discriminated from the left by a natural, necessary, and never to be confounded distinction.

South.
The only standing test and discriminative characteristici of any metal or mineral, must be sought for in the constituent matter of it.

Woodward.
By that prudent discrimination made between the offenders of different degrees, he obliges those whom he has distinguished as objects of mercy. Addison.

DIS'CROWN, v. a. From dis and crown. To deprive of a crown.

Through storm and darkness yawns the rending ground,
The gulf is thick with phantoms, but the chief
Seems royal still, though with her head discrowned, And pale, but lovely, with maternal grief
She clasps a babe, to whom her breast yields no relief.
Byron.

DISCU'BITORY, adj. Lat. discubitorius. Fitted to the posture of leaning.

After bathing they retired to bed, and refreshed themselves with a repast; and so that custom, by degrees, changed their cubiculary beds into discubitory.

Browne's Vulgar Errours.
DISCUM'BENCY, n.s. Lat. discumbens. The act of leaning at meat, after the ancient manner. See Accubation.
The Greeks and Romans used the custom of discumbency at meals, which was upon their left side; for so their right hand was free and ready for all service.

Browne's Vulgar Etrours.
DISCUM'BER, v. a. Dis and cumber. To disengage from any troublesome weight ; to disengage from impediment.

His limbs discumbered of the clinging vest,
He binds the sacred cincture round his breast,
Pope.
DISCURE', v. a. Fr. decouvrir. To discover; to reveal.

I will, if please you, it discure, assay
To ease you of that ill.
Faerie Quene.

DISCUR'SIVE, adj. Fr. discursif; from
Discursively, adv. \(\}_{h}\) Lat. discurro. Moving Discur'sory, adj. here and there; roving; desultory; as a corruption of discoursive. Proceeding by gradation from premises to consequences; and thus discursory is argumentative.

Some noises help sleep; as the blowing of the wind, and the trickling of water: they move a gentle attention; and whatsoever moveth attention, without too much labour, stilleth the natural and discursive motion of the spirits.

Bacon.
There is a sanctity of soul and body, of more efficacy for the receiving of divine truths, than the greatest pretences to discursive demonstration.

More's Divine Dialogues.
TEere hath been much dispute touching the knowledge of brutes, whether they have a kind of discursive faculty, which some call reason.

\section*{Hale's Origin of Mankind.}

We have a principle within, whereby we think, and we know we think; whereby we do discursively, and by way of ratiocination, deduce one thing from another.

Id.
DIS'CUS, n. s. Lat. A quoit; a heavy piece of iron thrown in the ancient sports. See Disc.

From Elatreus' strong arm the discus flies,
And sings with unmatched force along the skies.
Pope.
DISCUSS', v.a. Fr. discuter; Span. and Discus'ser, n.s. Port. discutir; Ital. and Discus'sive, adj. Lat. discutere, dis and quaDiscus'sion, n. s. tio, to shake down or attack by battering. To examine, or clear by disquisition; to ventilate; to clear up; to disperse matter or humors of the body.

Many arts were used to discuss the beginnings of new affection.

Wotton.
Consider the threefold effect of Jupiter's trisulk, to burn, disccuss, and terebrate.

Browne's Vulgar Errours.
Truth cannot be found without 'some labour and intention of the mind, and the thoughts dwelting a considerable time upon the survey and discussiom of each particular.

South.

His usage was to commit the discussing of causes privately to certain persons learned in the laws.

Ayliffe's Parergon.
If by the liberty of the press, we understand morely the liberty of discussing the propriety of public aneasures and political opinions, let us have as much of it as you please.

Franklin.
DISCU"TIENT, n.s. Lat. discutiens. A medicine that has power to repel or drive back the matter of tumors in the blood. It sometimes means the same as carminative.

The swellings arising from these require to be reated, in their beginning, with moderatc repcllents and discutients.

Wiseman.
Discutients, in surgery, are such external remedies as, by their subtilty, dissolve or disperse a stagnating or coagulated fluid in any part of the body.
 and dignor.) To esteem unworthy. As an active verb it signifies to scorn: as a substantive, contempt; scorn; indignation united with contempt. Disdainfulness is synonymous with disdain.

Children being haughty, through disdain and want of nurture, do stain the nobility of their kindred.

Ecclus.

> A proud disdainfulness of nther men.

\section*{Ascham.}

His angry steede did chide his foaming bitt, As much disdayning to the curbe to yield:
Full jolly knight he seemed and faire did sitt,
As one for knightly giusts and fierce encounters fitt. Spenser. Faerie Queene.
There will come a time when three words, uttered with charity and meekness, shall receive a far more blessed reward, than three thousand solumes, writtea with disdainful sharpness of wit.

Hooker.
The queen is obstinate, Stubborn to justice, apt to' accuse it, Disdainful to be tried by 't. Shakspeare.

Either greet him not,
Or else disdainfully, which shall shake him more.
\(I d\).
Can I forget, when they in prison placing her,
With swelling heart, in spite and due disdainfulness, She lay for dead, till I helped with unlacing her. Sidncy.
The disdainful sou: came rushing through the wound.

Dryden.
It is not to insult and domineer, to look disdain fully, and revile imperiously, that procures esteem from any one.

South.
Tell him, Cato
Disdains a life which he has power to offer.
Addison.
But against you, ye Greeks, ye coward train, Gods? how my soul is moved with just disdain !

Pope's Odyssey.
But no one ever heard her speak or shriek,
Although her paroxysm drew towards its close : Hers was a phrensy which disdained to rave,
Even when they smote her, in the hope to save.
Byron.

Vol.. VII.

DISDIACLASTIC Crystal, in natural history, a name given by Bartholine and some others to the pellucid fossil substance, more usually called, from the place whence it was first brought, Iceland crystal ; though properly it is no crystal at all, but a tine pellucid spar, called by Dr. Hill from its shape parallelopipedum.

DISEASE' v. a. \& n.s. \(\} \quad\) Dis and ease. To
Diseas'edness, n.s. \}afflict with illness; to torment with pain or sorrow; to make morbid; infect: as a substantive, the malady, sickness, \&c., endured.

In the world ghe schuler haue disese, but triste ghe, I haue ouercome the world. . Wiclif. Jon xvi.

And Asa, in the thirty and ninth year of his reign, was diseased in his feet, and his disease was exceeding great; and in his disease he sought not to the Lord, but to the physicians.

Chron.
Full of diseases was his carcas blew,
And a dry dropsie through his flesh did flow, Which by misdiet daily greater grew.

Spenser. Faerie Qucene.
We are all diseased,
And with our surfeiting and wanton hours
Have brought ourselves into a burning fever.
Shakspeare.
Food improperly taken, not only produces original diseases, but affords.those that are already engendered both matter and sustenance; so that, let the father of disease be what it may, intemperance is certainly its mother.

Burton.
A lazar-house it seemed, wherein were laid Numbers of all diseased, all maladies Of ghastly spasm, or racking, torture.

Milton.
Authority is a disease and cure,
Which men can neither want nor well endure.
Butler.
We cannot be too jealous, we cannot suspect ourselves too much to labour under the disease of pride, which cleaves the closer to us by our belief or confidence that we are quite without it.

Clarendon.
Though great light be insufferable to our eyes, yet the highest degree of darkness does not at all disease them.

Locke.
This is a restoration to some former state; not that state of indigency and diseasedness. Burnet's Theory.

\section*{Then wasteful forth}

Walks the dire power of pestilent disease.
Thomson's Summer.
But he was phrenzied,-wherefore, who may know ? Since cause might be which skill could never find; But he was phrenzied by disease or woe, To that worst pitch of all, which wears a reasoning show.

Byron.
Disease has been variously defined by physicians, almost every founder of a new system having given a definition of disease, differing in some respects from his predecessors. See Medicine and Nosology. Of all animals, man is subject to the most diseases ; and of men, the studious and speculative are most exposed to them. Other animals have their diseases; but they are in small number, because they live more according to nature: nor are plants without them; though their known maladies are few. The ancient Hebrews, who were versed in the study of natural philosophy, and not much accustomed to recur to physical causes, and con-
sult physicians, when they were sick, imputed their diseases generally to evil spirits, the executioners of divine vengeance.

Diseases of Dogs. See Dog and Hydrophobia.

Diseases of Horses. see Farriery.
DISEDG'ED, adj. Dis and edge. Blunted, obtunded; dulled

\section*{I grieve myself}

To think, when thou shalt be disedged by her Whom now thou tirest on, how thy memory Will then be panged by me.

Shakspeare. Cymbeline.
DISEMBARK', v. \(a . \& v . n\). Dis and embark. To carry to land; to go on land. I must unto the road, to disembark Some necessaries.

Shakspeare. Two Gentlemen of Verona. There disembarking on the green sea-side, We land our cattle, and the spoil divide.

\section*{Pope's Odyssey.}

DISEMBITTER, v.a. Dis and embitter. To sweeten; to free from bitterness; to clear from acrimony: an unusual word.
Encourage such innocent amusements as may disembitter the minds of men, and make them mutually rejoice in the same agreeable satisfactions.

Addison's Frecholder.
DISEMBODTED, \(a d j\). Dis and emboried. Divested of the body; discharged from military service.
Disembodied spirits are generally creatures of the imagination, and of old wondering wit. Thomas.

DISEMBOGUE', v. a.\& v.n. Old Fr. disem-boucher.-Skinner. To pour out at the mouth on a river; to vent: to gain vent; flow.

> Rivers

In ample oceans disembogued, or lost.
Dryden. Ovid.

By eminences placed up and down the glohe, the rivers make innumerable turnings and windings, and at last disembogue in several mouths into the sea.

Cheyne.
Rolling down, the steep Timavus raves,
And through nine channels disembogues his waves.
Addison.
DISEMBOS'OMED, part. adj. Dis and embosom. Taken from the bosom.

He -
Who, disembosomed from the Father, bows
The heaven of heavens to kiss the distant earth.
Young.
DISEMBOW'ELLED, part. adj. Dis and embowel. Taken from out the bowels.

So her disembowelled web Arachne in a hall or kitchen spreads,
Obvious to vagrant flies.
Philips.
DISEMBROIL', v. a. Fr. debrouiller. To disentangle; to free from perplexity; to reduce from confusion.
Then earth from air, and seas from earth were driven,
And grosser air sunk from etherial heaven;
Thus disembroiled, they take their proper place.
Dryden.
The system of his politicks is disembroiled, and cleared of all those incoherences and independent matters that are woven into this motley piece.

Addison's Whig Examiner.
DISENA'BLE, v. a. Dis and enable. To deprive of power; to disable; to sink into weakness ; to weaken.

Now age has overtaken me; and want, a more insufferable evil, through the change of the times, has wholly disenabled me.

Dryden.
DISENCHANT' v. a. Dis and enchant. To free from the force of an enchantment; to deliver from the power of charms or spells.

Muse, stoop thy disenchanted wing to truth.
Denham.
Alas! let your own brain disenchant you. Sidney.
Haste to thy work; a noble stroke or two
Ends all the charms, and disenchants the grove.
Dryden.
DISENCUM'BER, v.a. ? Dis and encum-
Disencum'brance, n.s. \(\zeta\) ber. To discharge from encumbrances; free from impediment or obstruction; disburden.
Dim night had disencumbered heaven.
Milton.
It will need the actual intention, the particular stress and application of the whole soul, to disencumber and set it free, to scour off its rust, and remove these hindrances which would otherwise clog and check the freedom of its operations.

Sprat.

\section*{The disencumbered soul}

Flew off, and left behind the clouds and starry pole. Dryden.
Dreams look like the amusements of the soul, when she is disencumbered of her machine; her sports and recreations, when she has laid her charge asleep.

Spectator.
There are many who make a figure below what their fortune or merit entitles them to, out of mere choice, and an elegant desire of ease and disencumbrance. Id.

The church of St. Justina, designed by Palladio, is the most handsome, luminous, disencumbered building, in the inside, that I have ever seen. Addison on Italy.
DISENGAGE', v. a. \& v.v. \(\quad\) Dis and enDisengagen', part. adj. gage. To reDisengaged'ness, \(n\). s. \(\quad\) lieve from duty Disengagément. or obligation ; to withdraw from duty, obligation, or engagement. Hence disengagement, and disengagedness, are applied to any state of freedom or vacancy.

When our mind's eyes are disengaged and free, They clearer, farther, and distinctly see. Denham.

Some others, being very light, would float up and down a good while, before they could wholly disengage themselves and descend.

Burnet's Theory.
Providence gives us notice, by sensible declensions, that we may disengage from the world by degrees.

Collier on Thought.
In the next paragraph, I found my author oretty well disengaged from quotations.

Atterbury.
The consideration that should disengage our fondness from worldly things, is, that they are uncertain in their foundation; fading, transient, and corruptible in their nature.

Rogers.
It is very hard for the mind to desengage itself from a subject on which it has been long employed.

Addison.
The great use of light to vegetation would appear from this theory to be by disengaging vital air from the water which they perspire, and thence to facilitate its union with their blood exposed beneath the thin surface of their leaves.

Darwin.

A man purposes his schemes of life in a state of abstraction and disengagement, exempt from the enticements of hope, the solicitations of affection, the importunities of appetite, or the depressions of fcar.

Johns \(n\).
DISENTAN'GLE, v. a. Dis and entangle. To unfold or loosen the parts of a thing ; to free from impediment or perplexity; separate; distinguish

Though in concretions particles so entangle one another, that they cannot in a short time clear themselves, yet they do incessantly strive to disentangle themselves, and get away.

Boyle.
Till they could find some expedient to explicate and disentangle themselves out of this labyrinth, they made no advance towards supplying thei1 armies.

Clarendon.
The welfare of their souls requires a better judgmen than their own, either to guide them in their duty, or to disentangle them from a temptation.

\section*{South,}

Neither can God himself be otherwise understood by us than as a mind free and disentangled from all corporeal mixtures.

Stillingfleet.
Wherever I turned my view, there was perplexity to be disentangled, and confusion to be regulated.

> Johnson. Preface to Dictionary.

DISENTER', v. a. Dis and Fr. enterrer. To unbury; to take out of the grave.

Though the blindness of some fanaticks have savaged on the bodies of the dead, and have been so injurious unto worms as to disenterre the bodies of the deceased, yet had they therein no design upon the soul. Browne's Vulgar Errours.

DISENTHRAL', v. a. Dis and enthral. To set free; to restore to liberty; to rescue from slavery.

If religion were false, bad men would set the utmost force of their reason on work to discover that falsity, and thereby disenthral themselves. South.

But God my soul shall disenthral;
For I upon his name will call.
Sandys.
DISENTHRONE', v.a. Dis and enthrone. To depose from sovereignty; to dethrone.

Either to disenthrone the King of heave--
We war, if war be best; or to regain
Our own right lost.
Milton.
DISENTRANCE', v a. Dis and entrance. To awaken from a trance, or deep sleep. Ralpho, by this time disentranced,
Upon his bum himself advanced. Hudibras.
DISESPOUSE', v.a. Dis and espouse. To separate, after faith plighted.

Such was the rage
Of Turnus, for Lavinia disespoused. Milton.
DISESTEEM', v.a.\&n.s. \(\rangle\) From dis and Disestimátion, n.s. \(\quad\) esteem. To disregard, or regard slightly : slight regard.

But if this sacred gift you disesteem,
Then cruel plagues shall fall on Priam's state.

\section*{Denham.}

When any one, by miscarriage, falls into disesteem, he will fall under neglect and contempt.

Locke.
I would not be thought to disesteem or dissuade the study of nature.

Id.
Should Mars see't,
That horrid hurrier of men, or she that betters him, Minerva, never so incensed, they could not disesteem.

DISFA'VOR, v. a. \& n.s. Dis and favor. To discountenance; withhold, or withdraw kindness: discountenance; slight regard; unfavorable circumstance; an unfavored state.

It was verily thought, that had it not been for four great disfavourers of that voyage, the enterprize had succeeded.

Bacon.
While free from sacrilege, he was at peace, as it were, with God and man; but after his sacrilege he was in disfavour with both.

Spelman.
Might not those of higher rank, and nearer access to her majesty, receive her own commands, and be countenanced or disfavoured according as they obey?

Swift.

\section*{DISFIG'URE, v.a. \\ Disfigura'tion, n.s. \} Dis and figure. To deform; to change any thing to a worse form; \\ Disfig'urement.} to mangle.

You are but as a form in wax
By him imprinted, and within his power
To leave the figure, or disfigure it. Shakspeare. Abject is their punishment,
Disfiguring nut God's likeness, but their own,
Or, If his likeness, by themselves defaced.
AIilton.
A nose flatter, or a month wider, could have consisted, as well as the rest of his figure, with such a soul and such parts as'made him, disfigured as he was, capable to be a dignitary in the church.

Locke.
That understanding, in which, though little is written, yet nothing is blotted ; that which is not disfigured by ill impressions, is a subject most capable of the best.

Sprat.
Nor would his slaughtered army now have lain, On Afric's sands, disfigured with their wounds,
To gorge the wolves and vultures of Numidia.

> Addison's Cato.

The disfigurement that travel or sickness has bestowed upon him, is not thought great by the lady of the isle.

Suckling.
Our foot half sunk in hillocks green and soft, Raised by the mole, the miner of the soil.
He , not unlike the great ones of mankind,
Disfigures earth.
Cowper.
DISFOR'EST, v.a. Dis and forest. To reduce land from the privileges of a forest to the state of common land.

DISFRAN'CHISE, \(v . a\).\(\} \quad Dis and fran-\)
Disranchisément, n. s. \}chise. To deprive of privileges or immunities.
DISFU'RNISH, v.a. Dis and furnish. To deprive ; to unfurnish; to strip.

My riches are these peor habiliments,
Of which if you should here disfurnish me,
You take the sum and substance that I have.
Shakspeare.
He durst not disfurnish that country either of so great a commander, or of the wonted garrisons. Knolles's History.
DISGAR'NISH, v. a. Dis and garnish. To strip of ornaments; to take guns from a fortress.

DISGLO'RIFY, v.a. Dis and glorify. To deprive of glory; treat with indignity.

So Dagon shall be magnified, and God,
Besides whom is no god, compared with idors,
Disglorified, blasphemed, and had in scorn.
Milton.

DISGORGE, v.a. Fr.aegorger, from gorge the throat. To discharge by the mouth; vomit. pour out violently.

So, so, thou common dog, didst thou disgurge Thy glutton bosom of the royal Richard?
And now thnu wouldst eat thy dead vomit up.
Shakspeare.
The deep-drawing barks do there disgorge
Their warlike fraughtage.
Ia.
They move along the banks
Of four infernal rivers that dizgorge
Into the burning lake their baleful streams.
Milton.
Countries much annoyed with earthquakes have volcanoes; and these are constantly all in flames, whenever any earthquake happens; they disgorging that fire which was the cause of the disaster.

\section*{Derham.}

From the distant shore they loudly laught, To see his heaving breast disgorge the briny draught. Dryden
DISGRACE', v. a. \& n.s. Fr. disgrace. Disgra'cer, Disgracéful, adj.
Disgracéfully, adv. Disgracéfulness, Disgrácious. Jordisfavor. Disgraceful is, shameful ; dishonorable: disgracious, unpleasing.

We may not so in any one special kind admire her, that we disgrace her in any other; but let all her ways be according unto their place and degree adored.

Hooker.
Like a dull actor, now
I have forgot my part, and I am out
Even to a full disgrace.
Shakspeare.
I do suspect I have done some offence,
That seems disgracious in the city's eye.
The senate have cast you forth
Disgracefully, to be the common tale
Of the whole city. Ben Jonson's Catiline.
Masters must correct their servants with gentleness, prudence, and mercy; not with upbraiding and disgraceful language, but with such only as may express and reprove the fault, and amend the person.

Taylor's Rule of Living Holy.
And he whose affluence disdained a place,
Bribed by a title, makes it a disgrace. Browne.
To such bondage he was for so many courses tied by her, whose disgraces to him were graced by her excellencc.

Sidney.
And is it not a foul disgrace,
To lose the boltsprit of thy.face ?
Baynard.
Men's passions will carry them far in misrepresenting an opinion which they have a mind to disgrace.

Burnet.
I have given good advice to those infamous disgracers of the sex and calling.

Svift.
To retire behind their chariots, was as little disgraceful then, as it is now to alight from one's horse in a battle.

Pope.
Grant me, kind heaven, to find some happier place, Where honesty and sense are no disgrace.

Dr. Johnson's Poems.
 usual guise, or dress : the dress worn in disguise . disguiser, he who wears it.

How might we disguise him?
Alas ' I know not : there is no woman's gown big enough for him. Shaksp. Merry Wives of Windsor.

We see we've burnt our cheeks; and mine own tongue
Splits what it speaks: the wild disguise hath almost Antickt us. Id. Antony and Cleopatra.

Death's a great disguiser.
Shakspeare.
The marquis thought best to dismask his beard, and told him, that he was going covertly to take a secret view of the forwardness of his majesty's fleet : this did somewhat handsomely heal the disguisement.

Wetton.
Disguised he camo; but those his children dear Their parent soon discerned through his disguise. Milton.
Under that disguisement I should find opportunity to reveal myself to the owner of iny heart. Sidney.

Since I in Arcite cannot Arcite find,
The world may search in vain with all their eyes,
But never penetrate through this disguise.
Dryden's Fables,
I hope he is grown more disengaged from his intent. ness on his own affairs, which is quite the reverse to you, unless "you are a very dexterous disguiser.

Swift.
I have just left the right worshipful, and his myrmidons, about a sneaker of five gallons; the whole magistracy was pretty well disguised before I gave them the slip.

Spectator.
They generally act in a disguise themselves, and therefore mistake all outward show and appearances for hypocrisy in others.

Addison.
Hence guilty joys, distaste, surmises,
False oaths, false tears, deceits, disguises.
Pope.
This discovers ourselves to us; pierces into the inmost recesses of the mind; strips off every disguise; lays open the inward part; makes a strict scrutiny nto the very soul and spirit.

Mason.
And is it thus Demetrius meets his friend,
Hid in the mean disguise of Turkish robes?
Johnson. Irene.
My temper is naturally open ; and it ought, assuredly, to be without disguise to a manwhom I wish no .onger to look upon as an antagonist, but a friend.

Bp. Watson.
DISGUST,v.a.\&n.s. \(\} \quad\) Fr. degouter; Lat. Disgust'fux, adj. \}degusto. To raise aversion in the stomach: hence, to cause distaste, or dislike generally. Disgustful is nauseous.

Pleasure is no rule of good; since, when we folLow pleasure, mcrely, we are disgusted, and change from one sort to another; condemning that at one time, which at another we earnestly approve.

Shaftesbury.
The manner of doing is of more consequence than the thing done, and upon that depends the satisfaction or disgust wherewith it is received.

Locke.
Jf a man were disgusted at marriage, he would never recommend it to his friend.

Atterbury.
What disgusts me from having to do with answerjobbers is, that they have mo conscience. Swift.

I have finished the most disgustful task that ever I undertook.
\(\boldsymbol{I} d\).
Those unenlarged souls are disgusted with the wonders which the microscope has discovered. Watts.

Thence dark disgust and hatred, winding wiles,
Coward deceit, and ruffian violence. Thomson.
Paltry affectation, strained allusions, and disgusting finery, are casily attained by those who chuse to wear them.

Goldsmith.

DISH, n.s. \& v. a. Saxon, disch; Goth Dish-clout, n. s. (disk; Erse. dysc; Wel Di'siring, part. adj. (dysgel; 'Teut. tisch, fron Dish-washer. Gr. סıoxos; Lat. discus. (3 \(\delta \leqslant \omega\), to hurl) a round plate of iron, or other metal. hurled in the games. See Discus. A broad vessel used for setting food on a table, or to contain liquids : hence the food contained in a dish, and a measure of quantity; and, as a verb, to place in a dish, or dishes; to serve up. Dish. clout, the useful cloth for cleaning dishes. Dishing, of a hollow, dish-like shape. Nish-washer, the name of a bird; mergus.

And sche bifore warnid of hir modir seide give thou to me heere the head of Jon Baptist in a dische.

Wiclif. Matt. 14.
The earth's face is but a table; there are sct Plants, cattle, men, dishes, for death to eat.

> Denne.

Let 's kill him boldly, but not wrathfully;
Let's carve him as a dish fit for the gods,
Not hew him as a carcass fit for hounds.
Shakspeare.
For conspiracy,
I know not how it tastes, though it be dished For me to try.
A dish-clout of Jaquenetta's be wears next his heart for a favor. Id.

They measure block-tin by the dish, which containeth a gallon.

Carcw.
Who would rob a hermit of his weeds,
His few books, or his beads, or maple dish;
Or do his grey hairs any violence? Milton.
Many people would, with reason, prefer the griping of an hungry belly, to those dishes which are a feast to others.

Locke.
A ladle for our silver dish,
Is what I want, is what I wish. Prior.
Send them up to their masters with a dish-clout pinned at their tails. Swift's Directions to the Cook.

For the form of the wheels, some make them more dishing, as they call it, than others; that is, more concave, by setting off the spokes and fellies more outwards.

Mortimer.
'Tis not the meat, but 'tis the appetite,
Makes eating a delight;
And if I like one dish
More than another, that a pheasant is. Suckling.
The same care and toil that raise a dish of peas at Christmas, would give bread to a whole family during six months.

Hume.
Suppose the ancient luxury of a dish of peacocks' brains were to be revived, how many carcasses would be left to the poor at a cheap rate! and as to the rout that is made about people who are ruined by extravagance, it is no matter to the nation tha some individuals suffer.

Johnson.
DISHABILLE', n.s. \& adj. Fr. deshabillé. Undress; loose, or negligently dressed.

Quecns are not to be too negligently dressed or dishabille.

Dryden's Dufresnoy.
A woman, who would preserve a lover's respect to her person, will be careful of her appearance before him when in dishabille.

Clarissa.
DISHAB'IT, v. a. To throw out of place; to drive from their habitation.

But for our approach those sleeping stones
By the compulsion of their ordinance,

By this time from their fixed beds of lime Had been dishabited, and wide havock made.

Shakspeare. King Lear.
DISHAR'MONY, n.s. Dis and harmony. Contrariety to harmony.

DISHEART'EN, v.a. Dis and hearten. To discourage ; to deject; to terrify; to depress.

To dishearten with fearful sentences, as though salvation could hardly be hoped for, is not so consonant with Christian charity.

Hooker.
- Be not disheartened then, nor cloud those looks That wont be more chearful and serene. Milton.

Yet neither thus disheartened nor dismayed,
The time prepared I waited.
Id.
Shortly, some harsh and unpleasing answer so disheartened me, that I resolved to embrace the first opportunity of my remove.

Bp. Hall's Account of himself.
It is a consideration that might dishearten those who are engaged against the common adversaries, that they promise themsclves as much from the folly of enemies, as from the power of therr friends.

Stillingfleet.
Men cannot say, that the greatness of an evil and danger is an encouragement to men to run upon it; and that the greatness of any good and happiness ought in reason to dishearten men from the pursuit of it.

Tillotson.
A true christian fervour is more than the alliances of our potent friends, or even the fears of our dis. heartened enemies.

Atterbury.
DISHER'IT, v. a. \(\}\) See Disinherit.
DISHEV'EL, v.a. Fr. decheveler. To spread the hair disorderly; to throw the hair of a. woman negligently about her head.

> A gentle lady all alone,

With garments rent and hair dishevelled,
Wringing her hands, and'making piteous moan.
Spenser.
A troop of Trojans mixed with these appear, And mourning matrons with dishevelled hair.

Dryden's AEneid.
You this morn beheld his ardent eyes,
Saw his arm locked in her dishevelled hair. Smith.
Headlong he rushes through the affrighted air With limbs distorted, and disheveled hair, Whirls round and round, the flying crowd alarms, And death receives him in his sable arms !-

Darwin.
Had you touched a hair
Of those dishevelled locks, I would have thinned
Your ranks more than the enemy.
Byron.
DISHON'EST, \(a d j\). \(\quad D i s\) and honest.
Dishon'estly, adv. \}Void of probity: void of faith; faithless; wicked; fraudulent.

A wisc daughter shall bring an inheritance to her husband; but she that liveth dishonestly is her father's hcaviness.

Ecc. xxii. 4.
Mrs. Ford, the honest woman, the modest wife, the virtnous creature, that hath the jealous fool to her husband! I suspect without canse, mistress, do I ?Heaven be my witncss you do, if you suspect me in any dishonesty.

Shakspeare.
I protest he had the chain of me,
Tho' most dishowestly he doth deny it. Id.
Dishonest with lopped arms the youth appears,
Spoiled of his nose, and shortened of his ears.
Dryden.

He lays it down as a principle, that right and wrone, honest and dishonest, are defined only by laws, and not by nature.

Locke.
Justice then was neither blind to discern, nor lame to execute. It was not subject to be imposed upon by a deluded fancy, nor yet to be bribed by a glozing appetite, for an utile or jucundum to turn the balance to a false or disfonest sentence.

South.
Their fortune depends upon their credit, and a stain of open public dishenesty must be to their disadvantage.

Swift.
She saw her sons with purple death expire,
Her sacred domes involved in rolling fire ;
A dreadful series of intestine wars,
Inglorius triumphs, and dishozuest scars. Pope.
DISHON'OR, v.a. \& n.s. \()\) Dis and ho-
Dishon'orer. \(\quad\) nor. To disgrace; to bring shame upon; to blast with infamy: a dishonorer is he who treats another witin indignity.

He that is honoured in poverty, how much more in riches! and he that is dishonourable in riches, how much more in poverty!

Ecclus. x. 31.
Let not my jealousies be your dishonours,
But mine own safeties. Shakspeare. Mucbeth.
It is no vicious blot, murther, or foulness, No nnchaste action, or dishonoured step,
That hath deprived me of your grace and favour.
Id.
Preaching how meritorious with the gods It would be, to ensnare an irreligious Dishonourer of Dagon.

Milton.
Take him for your husband and your lord ;
Tis no dishonour to confer your grace
On one descended from a royal race.
Dryden's Fables.
He was pleased to own Lazarus even in the dishonours of the grave, and vouchsafed him, in that despicable condition, the glorious title of his friend.

Boyle's Seraphick Love.
To pay for, personate, and keep in a man's hands a greater estate than he really has, is of all others, the most unpardonable vanity, and must in the end reduce the man who is guilty of it to dishonour.

Steele.
It is a mighty shame and dishonour to employ exsellent faculties and abundance of wit, to humour and to please men in their vices and follies.

Sir. R. Blackmore.
But what is most dishonourable of all is, for a man at once to discover a great genius and an ungoverned mind.

Mason.
Doge. Would'st thou repeat them?
Would'st thou repeat them-thou, a Faliero,
Harp on the deep dishonour of our house,
Dishonoured in its chief-that chicf the prince
Of Venice, first of cities? To the sentence.
Byron.
DISHORN', v.a. Dis and horn. To strif of horns.

We'll dishorn the spirit,
And mock him home to Windsor.
Shakspeare.
DISHU'MOR, n. s. Dis and humor. Peevishness; ill humor; uneasy state of mind.

Speaking impatiently to servants, or any thing that betrays inattention or dishumour, are also criminal.

Spectator.

DISIMPRUVE'MENT, n.s. Dis and improvement. Reduction from a better to a worse state; the contrary to melioration ; the contrary to improvement.

The final issue of the matter would be, an utter neglect and disimprovement of the earth. Norris.

I cannot see how this kingdom is at any height of improvement, while four parts in five of the plantations, for thirty years past, have been real disimprovements.

Swift.
DISINCAR'CERATE, v.a. Dis and incarcerate. To set at liberty; to free from prison.

The arsenical bodies being now coagulated, and kindled into flaming atoms, require dry and warm air, to open the earth for to disincarcerate the same venene bodies.

Harvey.
DISINCLI'NE, v. a. \(\quad D i s\) and incline.
Disinclina'tion, n.s. \}To produce dislike to; to make disaffected; to alienate affection from. Want of affection or alienation.
; They were careful to keep up the fears and apprehensions in the people of dangers and designs, and to disincline them from any reverence or affection to the queen, whom they begun every day more implacably to hate, and consequently to disoblige. Clarendon.

Disappointment gave him a disinclination to the fair sex, for whom he dues not express all the respect possible.

Arbuthnot and Pope.
What are those duties which we read or hear of from the word of God, to which we find ourselves most disinclined? This, in all likelihood, will help us to detect some of our peculiar sins of omission.

Mason.
DISINGENU‘ITY, n. s. From disingenuous. Meanness of artifice ; unfairness.
They contract a habit of ill-nature and disingenuity necessary to their affairs, and the temper of those upon whom they are to work.

Clarendon.
DISINGEN'UOUS, \(a d j\).
Dis and ingenu-
Disingeńuously, adv. ous. Unfair; meanDisingen'uousness, n.s. Sly artful; subtle; sly; illiberal.
'Tis disingenuous to accuse our age
Of idleness, who all our powers engage
In the same studies, the same course to hold,
Nor think our reason for new arts too old.
Denham.
It was a disingenuous way of proceeding, to oppose a judgment of charity concerning their church, to a judgment of reason concerning the nature of actions.

Stillingfleet.
There cannot be any thing so disingenuous and misbecoming any rational creature, as not to yield to plain reason, and the conviction of clear arguments.

Locke.
I might press them with the unreasonableness, the disingenuousness of embracing a profession to which their own hearts have an inward reluctance.

Government of the Tongue.
DISINHER'TT, v. a. \(\quad\) All from dis and inDisinherison, n.s. herit. To cut off he-

\section*{Disher'tt, \(\quad\). \(a\).}

Disher'ison, n.s. reditary succession or Dro two words are only the older mode of spelling.
He tries to restore to their rightful heritage such good old English words as have been long time out of use, almost disherited.

Spender.

If he stood upon his own title of the house of Lavk caster, inherent in his person, he knew it was a title condemned by parliament, and generally prejudged in the common opinion of the realm, that it tended directly to the disinherison of the line of York.

Bacon's Henry VII.
The chief minister of the revenue was obliged to prevent, and even oppose, such disinherison.

\section*{Clarendon.}

In respect of the entects and evil consequences, the adultery of the woman is worse, as bringing bastardy into a family, and disinherisons or great injuries to the lawful children.

Taylor.
Is it then just with us to disinherit
The unborn nephews for the father's fault?
Davies.
Unmuffle, ye faint stars; and thou, fair moon, Stoop thy pale visage through an amber cloud, And disinherit chaos that reigns here
In double night of darkness, and of slander. Milton.
Of how fair a portion Adam disinherited his whole posterity by one single prevarication! Scuth.
Nor how the Dryads and the woodland train, Disherited, ran howling o'er the plain.

Dryden's Falles.
DISINTER', v. a. From dis and inter. To unbury; to take as out of the grave.
The philosopher, the saint, or the hero, the wise, the good, or the great man, very often lie hid and concealed in a plebeian, which a proper education might have disinterred. Addison.
DIS IN"TERESSED, adj. Dis and Fr. interessé. Written disinterested generally, and more properly. Without regard to private advantage; not biassed by particular views ; impartial.

Not that tradition's parts are useless here,
When general, old, disinteressed, and clear.

> Dryden.

DISIN"TERESSMENT, n. s. Dis and Fr. interessement. Disregard to private advantage; disinterest ; disinterestedness. This word is merely a Gallicism.

He has managed some of the charges of the kingdom with known ability, and laid them down with entire disinteressment.

Prior's Postscript.
DISIN"TEREST, n.s. \()\) Dis and interest.
Disin'terested, adj. What is contrary to
Disin'terestedly, \(a d v\). (one'sinterest, desire,
Disin'terestedness,n.s.) or prosperity; that which any one is concerned to prevent : indiffer. ence to one's own advantage.

These expressions of selfishness and disinterestedness have been used in a very loose and indcterminate manner.

Browne.
They judge it the great disinterest to Rome.
Glanville.
As disinterested as you appear to the world, no man is more in the power of that prevailing favourite passion than yourself.

Swift.
It is usual with persons who mount the stage for the cure or information of the crowd about them, to make solemn professions of their being wholly disinterested in the pains they take in public good. Steele.

DISINTITLED, part. adj. Dis and intitled.

\section*{Not entitled.}

Yet J. S. and his little convention of four or five brothers of the tradition have clearly disintitled them. selves to any use of these (the Scriptures, \&ce.)

Bp. Taybor

DISI'NTRICATE, v. a. \(D_{i s}\) and intricate. To disentangle.

DISJO'IN, v. a. Fr. disjoindre; dis and joir. To separate; to part from each other; to disunite; to sunder.

Never shall my harp thy praise
Forget, nor from thy father's praise dizjoin.

\section*{Lest different degree}

Disjoin us, and I then too late renounce
Deity for thee, when fate will not permit.
Id.
Happier for me, that all our hours assigned
Together we had lived; even not in death disjoined. Dryden.
Never let us lay down our arms against France, till we have utterly digjoined her from the Spanish monarchy.

DISJOI'NT, v. a., v., n., \& part. Dis and joint. To put out of joint. As a neuter verb, to fall in pieces.

Young Fontinbras,
Holding a weak supposal of our worth,
Thinks by our late dear brother's death
Our state to be digjoint and out of frame.
Shakspeare. Hamlet.
The constancy of your wit was not wont to bring forth such disjointed speeches.

Sidney.
Be all their ligaments at once unbound,
And their digjointed bones to powder ground.
Sandys.
Yet what could swords or poison, racks or flame, But mangle and disjoint the brittle frame?
More fatal Henry's words : they murdered Emma's fame. Prior.
I asked a gentleman the other day that is famous for a good carver (at which acquisition he is out of countenance, imagining it may detract from some of his more essential qualifications) to help me to something that was near him; but he excused himself, and blushing told me, of all things he could never carve in his life; though it can be proved upon him that he cuts up, digjoinss, and uncases, with incomparable dexterity.

Spectator.
Rotation must disperse in air
All things which on the rapid orb appear ;
And if no power that motion should controul,
It must disjoint and dissipate the wholp. Blackman.
Mouldering arches, and disjointed columns. Irene.
Rocks reared on rocks in huge disjointed piles
Form the tall turrets, and the lengthened aisles;
Broad ponderous piers sustain the roof, and wide
Branch the vast rainbow ribs from side to side.
Darwin.
DIS̉JU'DICATION, n. s. Lat. dijudicatio. Judgment; determination: perhaps only mistaken for dijudication.

The disposition of the organ is of great importance in the disjudications we make of colours.

\section*{Boyle on Colours.}

DISJUNCT', adj.
Lat. disjunctus. Dis-
Dissunctition, n. s. \}joined; separate: dis-
Dissunc'tive, adj. Sunion; incapable of union.

\section*{You may}

Enjoy your mistress now, from whom you see There's no disjunction to be made, but hy

Your ruin.
Shakspeare. Winter's Tale.
There is a great analogy between the body natural and politic, in which the ecclesiastical or spiritual
part justly supplies the part of the soul ; and the violent separation of this from the other, does as certaiuly infer death and dissolution, as the disjunction of the body and the soul in the natural.

South.
Such principles, whose atoms are of that digjunctive nature, as not to be united in a sufficient number to make a visible mass.

Grew.
A disjunctive proposition, in logic, is when the parts are opposed to one another by disjunctive particles. The truth of disjunctives depends on the necessary and immediate opposition of the parts. Watts's Logick.

There are such words as disjunctive conjunctions.

\section*{Id.}

What he observes of the numbers digjunctively and apart, reason suggests to be applicable to the whole body united.

Causes of the Decay of Piety.
DISK, n. s. Lat. discus. A quoit. The face of the sun, or any planet, as it appears to the eye.

The disk of Phœbus, when he climbs on high,
Appears at first but as a Blood-shot eye. Dryden.
The crystal of the eye, which in a fish is a bali, in any land animal is a disk or bowl ; being heroby fitted for the clearcr sight of the object.

Grew.
It is to be considered, that the rays, which are equally refrangible, do fall upon a circle answering to the sun's disk.

Newton.
In areas varied with mosaic art,
Some whirl the disk, and some the jav'lin dart.
Pol.e.
Mercury's disk
- Can scarce be caught by philosophic eye,

Lost in the near effulgence.
Thomson.
Where finds philosophy her eagle eye
With which she gazes at yon burning disk
Undazzled, and detects and counts his spots.
Cowper.
DISKIND'NESS, n.s. Dis and kindness. Want of kindness or benevolence; injury; malignity.

This discourse is so far from doing any diskindness to the cause, that it does it a real service.

Woodward.
DISLIKE', v.a.\&n.s. \(\quad\) Dis and like. To Dislikéful, adj. \} disapprove; to regard without affection ; to regard with ill will or disgust.

He then them took, and tempering goodly well, Their contrary dislikes with loved means,

Did place them all in order, and compel
To keep themselves within their sundry reigns,
Tngether linked with adamantine chains. Spenser.
I think it best, by an union of manners and conformity of minds, to hring them to be nne people, and to put away the dislikeful conceit of the one and the other.

Id. Ireland.
What most he should \(\sigma_{3 s l i k e, ~ s o e m s ~ p l e a s a n t ~ t o ~}^{\text {a }}\) him;
What like, offensive Shakspeare. King Lcar. Your dislikes, to whom I would be pleasing,
Do cloud my joys with danger and with sorrow.
Id.
God's grace, that principle of his new birth, gives him continual dislike to sin.

Hammond's Practical Catechism.
True love to the person cannnt long agree with dislike of the religion. Bp. Hall's Contemplations.

This said Aletes, and a murmur rose
That shewed dislike among the Christian peers.
Fairfax.
Whosnever dislikes the digressions, or grows weary of them, may throw them away.

Temple..

Sorrow would have been as silent as thought, as severe as philosophy. It would have rested in inward senses, tacit dislikes.

South.
The jealous man is not angry if you dislike another; but if you find those faults which are in his own character, you discover not only your dislike of another, but of himself.

Addison.
There is a point, which wboever can touch, will never fail of pleasing a majority, so great that the dislikers will be forced to fall in witb the herd.

Swift.
DISLIK'EN, v. a. Dis and liken. To make unlike. Unusual.

> Muffle your face,

Dismantle you; and, as you can, dizliken. The truth of your own seeming.

Shakspeare. Winter's Tale.
DISLIKE'NESS, n. s. Dis and likeness. Dissimilitude; not resemblance; unlikeness.

That which is not designed to represent any thing but itself, can never be capable of a wrong representation, nor mislead us from the true apprehension of any thing by its dislikeness to it ; and such, excepting those of substances, are all our own complex ideas.

Locke.
DISLIMB', v.a. Dis and limb. To dilaniate; to tear limb from limb.

DISLIMN', v.a. Dis and limn. To unpaint ; to strike out of a picture.

That which is now a horse, even with a thought The rack dislimns, and makes it indistinct As water is in water.

\section*{Shakspeare. Antony and Cleopatra.}

DI'SLOCATE, v.a. \} Lat. dis and locus. To
Disloca'tion, n.s. \(\}\) put out of the proper place: a luxation.

\section*{Were't my fitness}

To let these hands obey my boiling blood, They 're apt enough to dislocate and tear Thy flesh and bones. Shakspeare. King Lear.
The posture of rocks, often leaning or prostrate, shews that they had some dislocation from their natural site.

Burnet.
It might go awry either within or without the upper, as often as it is forcibly pulled to it, and so cause a dislocation, or a strain. Grew's Muscum.

After some time the strata on all sides of the globe were dislocated, and their situation varied, being elevated in some places, and depressed in others.

Woodward.
She neither broke nor dislocated any bones; but received such a contusion below the hip, as crippled her completely. Cowper. Private Correspondence.

DISLODGE', v.a. \& n. Dis and lodge. To remove from a place; to go away.

The ladies have prevailed,
The Volscians are dislodged, and Marcus gone.
Shakspeare.
Soon as midnight brougbt on the dusky hour, Friendliest to sleep, and silence, he resolved With all his legions to dislodge.

Milton.
These senses lost, behold a new defeat,
The soul dislodging from another seat.
Dryden's Juvenal.
The shell-fish which are resident in the deptbs live and die there, and are never dislodged or removed by storms, nor cast upon the shores; which the littorales usually are

Woodward.

DISLOY'AL, adj.) Fr. desloyal, dis and Disloy'ally, adv. loyal. Not true to alleDisloy'alty, n.s. giance; faithless; false to a sovereign; disobedient.

When that tumultuous rage and fearfull deene
Of northerne rebels ye did pacify,
And their disloiall powere defaced clene,
The record of enduring memory. Spenser. Sonnets.
The lady is disloyal.
Disloyal! The word is too grod to paint out her wickedness.

Shakspeare.
There shall appear such seeming truths of Hero's disloyalty, that jealousy shall be called assurance.
\[
I d .
\]
\(I d\).
Let the truth of that religion I profess be represented to judgment, not in the disguises of levity schism, heresy, novelty, and disloyalty.

King Charles.
Foul distrust and breach
Disloyal ; on the part of man, revolt
And disobedience.
Milton
Disloyal town!
Speak, didst not thou
Forsake thy faith, and break thy nuptial vow?
Dryden.
DIS'MAL, adj. \(\quad\) Lat dies malus, an evil
Dis'mally, adv. day. Sorrowful; dire;
Dis'mainess, n.s. Shorrid; melancholy; uncomfortable; unhappy; dark.

The thane of Cawder 'gan a dismal confict.
Shakrpeare.

\section*{He hears}

On all sides from innumerable tongues
A dismal universal hiss. Milton.
Nor yet in horrid shade or dismal den,
Nor nocent yet; but on the grassy herb
Fearless, unfeared, he slept.
The dismal situation waste and wild, A dungeon horrible!

Id.
Such a variety of dismal accidents must have broken the spirits of any man.

Clarendon.
On the one hand set the most glittering temptations to discord, and on the other view the dismal effects of it.

> Dreadful gleams, Dismal screams.

Dismal, Great, or Dismal Swamp, a large swamp, or bog, extending from north to south nearly thirty miles, and from east to west, at a medium, about ten miles, partly in Virginia and partly in North Carolina. No less than five navigable rivers, besides creeks, rise out of it ; two of which run into Virginia, viz. the south branch of Elizabeth, and the south branch of Nansemond river, and three into North Carolina,- namely, North River, NorthWest River, and Perquimons. All these hide their heads, properly speaking, in the Dismal, there being no signs of them above ground. There must, for this reason, be plentiful subterraneous stores of water here, or else the soil is so replete with this element, poured down from the high lands that surround it, that it can abundantly afford these supplies. " This is, perhaps, most probable, as the ground of the swamp is a mere quagmire, trembling under the feet of those who walk upon it, and every footstep being instantly filled with water. The skirts of the swamp, towards the east, are overgrown with reeds, ten or twelve feet high, interspersed with strong bamboo briars. Among these grow
here and there a cypress or white cedar, commonly mistaken for the juniper. Towards the south end of it is a large tract of reeds, which, being constantly green and waving in the wind, is called the Green Sea. In many parts, especially on the borders, grows an ever-green shrub. very plentifilly, called the gall-bush. It bears a berry which dies a black color like the gall of an oak, whence its name. Near the middle of this swamp the trecs grow much thicker, both cypress and cedar, and, being always green and loaded with very large tops, are much exposed to the wind and easily blown down. Neither beast, bird, insect, nor reptile, approach the heart of this horrible desert; perhaps deterred by the evcrlasting shade, occasioned by the thick shrubs and bushes, which the sun can never penctrate to warm the earth: nor indeed, on account of the noisome exhalations, do any birds fly over it. These noxious vapors infect the air all around. On the west border is a pine swamp, above a mile in breadth, great part of which is covered with water, knee-deep; the bottom, however, is firm, and the pines grow very tall. With all these disadvantages Dismal Swamp is, in many places, pleasing to the eye, though disagreeable to the other senses. It was judged impassable, till the line, dividing Virginia from North Caroina, was carried through it, in lat. \(36^{\circ} 28^{\prime}\) N., in 1728, by order of king George II. Although this was undertaken in a very dry season, the men who were employed were ten whole days before they could accomplish their work. In the middle is a lake about seven miles long, called Drummond's Pond, whose waters run south into Pasquotank River, which falls into Albemarle Sound; and on the north into Elizabeth and Nansemond Rivers, which fall into James River. A navigable canal has, with immense labor, been cut through this swamp, connecting the waters of the Pasquotank, which fall into Albemarle Sound, and those of the Elizabeth, which is connected by means of James River with Chesapeak Bay. As the Dismal Swamp lies so near Norfolk, where there is a constant demand for shingles, staves, \&c., for exportation; and as the best of these articles are made from the trees growing upon the swamp, it is on this account a valuable property. It chiefly belongs to two companies, the Virginia Company, who possess 100,000 acres of it, and the North Carolina Company, who possess 49,000.

DISMAN"TLE, v.a. Dis and mantle. To deprive of a dress; to strip; to denude.

\section*{This is most strange!}

That she, who even but now was your best object, Dearest and best, should in this trice of time Commit a thing so monstrous, to dismantle So many folds of favour. Shakspeare. King Lear.

It is not sufficient to possess our own fort, without the dismantling and demolishing of our enemies.

Hakewill.
His eyeballs, rooted out, are thrown to ground ; His nose dismantled in his mouth is found; His jaws, cheeks, front, one undistinguished wound.

Dryden.
He that makes his prince despised and undervalued, and beats him out of his subjects' hearts, may casily
strip him of his other garrisons, having already dispossessed him of his strongest, by dismantling him of his honour, and seizing his reputation. South.

Sees dancing slaves insult his martial plains
Parts with chill stream the dim religious bower
'Time-mouldered bastion, and dismantled tower.
Darwin.
DISMA'SK, v.a. Dis and mask. To divest of a mask ; to uncover from concealment.

Fair ladics masked are roscs in the bud, Or angels veiled in clouds ; are roses blown, Dismasked, their damask sweet commixture shewn. Shakspeare. The marquis tbought best to dismask his beard ; and told him that he was going covertly.

Wotton.
DISMAY', v. a. \& n. s. \(\boldsymbol{z}\) Sp. desmayer; old Fr.
Dismay'edness, \(n\).s. \}esmayer. Minsheu after Sebastian, a Spanish etymologist, says, fancifully enough, 'from the moneth of Maye, for in that moneth the fiowers of the field hang their hcads and fade away :' to discourage; divert of self-possession; terribly.

He will not fail thee; fear not, neither be dismayed. Deut.
Nought could she say,
But suddeine catching hold, did her dismay
With quaking hands, and other signes of feare.
Spenser. Faerie Queene.
Their mighty strokes their habexjeons dismayed.
Spenser.
Enemics would not be so troublesome to the western coasts, nor that country itself would be so often dismayed with alarms as they have of late years been.

Raleigh's Essays.

\section*{All sate mute,}

Pondering the danger with deep thoughts ; and each In others countenance read his own dismay.

Milton.
The valiantest feels inward dismayedness and yet the fearfullest is ashamed fully to shew it. Sidney.

Nothing can make him remiss in the practice of his duty; no prospect of interest can allure him, no fear of danger dismay him.

Atterbury.
DI'SME, n.s. Fr. A tenth; the tenth part; tythe.

Since the first sword was drawn about this question, Every tithe soul 'mongst many thousand dismes,
Hath been as dear as Helen.
Shakspeare. Troilus and Cressida.
The pope began to exercise his new rapines by a compliance with king Edward, in granting him two years disme from the clergy. Ayliffe's Parergon.

DISMEM'BER, v. a. Dis and member. To divide member from member; to dilacerate; to cut in pieces.

Mim booteth not resist, nor succour call, His bleeding hart is in the venger's hand,

Who strcight him rent in thousand pieces small, And quite dismembred hath.

Spenser. Faerie Queene.
I am with both, each army hath a hand; And in their rage, I having hold of both, They whirl asunder and dismember me.

Shakspeare.
A state can never arrive to its period in a more deplorable crisis, than when some prince lies hovering, like a vulture, to devour or dismember its dying carcass.

Swift.
Fowls obscene dirmembered his remains, And dogs had torn him on the naked plains.

Pope's Odysacy.

Those who contemplate only the fragments or pieces of science dispersed in short uncounected discourses, can never survey an entire body of truth, but must always view it as deformed and dismembered.

Watts.
DISMISS', v.a. \} Lat. dimissus. To send Dismis'sion, n.s. \(\}\) away; despatch.

He dismissed the assembly. Acts, xix. 41.
We commit thee thither,
Until his army be dismissed from him.
Shakspeare. Henry IV.
You must not stay here longer; your dismission Is come from Cæsar. Id. Ant. and Cleop.
Not only thou degrad'st them, or remit'st
\(\dot{T}_{0}\) life obscure, which were a fair dismission;
But throw'st them lower than thou didst exalt them high.

Milton's Agonistes.
If our young Iülus be no more,
Dismiss our navy from your friendly shore.

\section*{Dryden's Virgil.}

Dismiss, as soon as may be, all angry and wrathful thoughts. These will but canker and corrode the mind, and dispose it to the worst temper in the world.

Mason.
Puff not your cheeks, fond youths! dismiss the flute!
Hushed be the harp, the soft guitar be mute:
Such signs of passion in contempt I hold :-
But there's substantial proof of love-in gold. Sheridan.
Dismission of a Bill, in chancery. If the plaintiff does not attend on the day fixed for the hearing, his bill is dismissed with costs. It may be also dismissed for want of prosecution, which is in the nature of a nonsuit at law, if he suffers three terms to elapse without moving forwards in the cause.
DISMORTGAGE, v.a. Dis and mortgage. To redeem from mortgage.

He dismortgaged the crown demesnes, and left behind a mass of gold. Howel's Vocal Forest.
DISMOUNT', v.a. \& v.n. Fr. demonter. To throw off a horse, or from an elevation: to alight from a horse; to descend.

The champion stout
Eftsoones dismounted from his courser brave,
And to the dwarfe awhile his needless spere he gave.
Spenser. Faerie Queene.
From this flying steed unreined, as once
Bellerophon, though from a lower clime,
Dirmounted, on the Aleian field I fall. Milton.
The Turks' artillery, planted against that tower, was by the Christian cannoneers dismounted with shot from the tower, and many of the gunners slain.

Knolles.
When be came within sight of that prodigious army at Agincourt, he ordered all his cavalry to dismount, and implore upon their knees a blessing.

Addison's Freeholder.
DISNATURALIZE, v.a. Dis and naturalize. To alienate; to make alien; to deprive of the privileges of birth.

DISNATURED, \(a d j\). Dis and ñature. Unnatural ; wanting natural tenderness; devoid of natural affection. Unusual.

If she must teem,
Create her child of spleen, that it may live,
And be a thwart disnatured torment to her.
Shakspeare, King Lear.

DISNEY (John), an English divine and magistrate, born at Lincoln, in 1677. He received the early part of his education at the grammar school in his native city, after which, his father being a dissenter, he was sent to an academy of that persuasion. From this he removed to the Middle Temple, where he studied the law, though he never followed it as a profession; but when he retired to his paternal estate, he distinguished himself greatly as an active magistrate, particularly in the laudable but unpopular measures he took for the suppression of vice and immorality, for which he repeatedly received the thanks of the judges on the circuits. When about forty-two years of age he took orders in the church, and was presented to the vicarage of Croft, and the rectory of Kirby-Super-Baine, in Lincolnshire. In 1722 he was preferred to the living of St. Mary, in Nottingham, where he died in 1730. He published, 1. Two Essays upon the Execution of the Laws against Immorality and Profaneness, 8vo. 2. Primitix Sacre, the Reflections of a devout Solitude, 8vo. 3 . Flora, prefixed to a Translation of Rapin's Poem on Gardens. 4. Remarks upon a Sermon preached by Dr. Sacheverell. 5. A View of ancient Laws against Immorality and Profaneness.
DISOBEY', v.a. Dis and obey. To
Disobe'dience, n.s. break commands, or
Disobe'pient, adj. \(\}\) transgress prohibiti-
Disobédiently, udv. ons; move out of order, or cease to follow a previous impulse.
The man of God was disobedient unto the word of the Lord.

1 Kings xiii. 26.
The offence is holy that she bath committed;
And this deceit loses the name of craft,
Of disobedience, or unduteous title.

\section*{Shakspeare.}

Disobedient children, if preserved from the gallows, are reserved for the rack, to be tortured by their own posterity. One complaining, that never father had so undutiful a child as he had; Yes, said his sonne, with less grace than truth, my grandfather had.

> Fuller.

Of man's first disobedience, and the fruit
Of that forbidden tree, sing heavenly muse.
Milton.
Murder, adultery, or disobedience to parents, have a general notion antecedently to laws. Stillingfleet.

She absolutely bade him, and he durst not know how to disobey.

Sidney.
He's loth to disobey the god's command,
Not willing to forsake this pleasant land.
Denham.
This disobedience of the moon will prove
The sun's bright orb does not the planets move.
Blackmore.
This disobedience of the fibres of age to their usual stimuli, has generally been ascribed to repetition or habit, as those who live near a large clock, or a mill, or a waterfall, soon cease to attend to the perpetual noise of it in the day, and sleep during the night undisturbed.

Darwin.
DISOBLIGE', v. a.
Disoblíging, part. adj.
Disoblígingly, adv.
Disoblígingness, \(n\).s.
Disobliga'tion.
low this sense.

Astley had been removed from that charge, and was thereby so much disobliged, that he quitted the king's party. Clarendon.
There can be no malice, and consequently no crime or disobligation.
\(L\) 'Estrange.
Those, though in highest place, who slight and dusoblige their friends, shall infallibly come to know the value of them, by having none when they shall most need them.

South.
If a woman suffers ber lover to see she is loth to disoblige him, let her beware of an encroacher.

Clarissa.
My plan has given offence to some gentlemen, whom it would not be very safe to disoblige.

Addison's Guardian.
We love and esteem our clergy, and are apt to lay some weight upon their opinion, and would not willingly disoblige them.

Swift concerning the Sacramental Test.
Peremptoriness can befit no form of understanding : it renders wise men disobliging and troublesome, and fools ridiculous and contemptible.

Government of the Tongue.
DISORB'ED, adj. Dis and orb. Thrown out of the proper orbit.

Fly lixe chidden Mercury from Jove, Or like a star disorbed.

Shakspeare. Troilus and Cressida.
DESOR'DER, v.a.\& n.s.) Fr. desordrc. Disoridered, adj.
Disor'deredness, \(n\), s.
Disor'derly, adv.
Dis and order. To disturb; throw out of arrangement; ruffle; discompose.

We behaved not ourselves disorderly among you.
2 Thess.
By that disorderedness of the soldiers, a great advantage was offered unio the enemy. Knolles.

Here do you keep a hundred knights and squires Men so disordered, so debauched and bold, That this our court, infected with their manners, Shews like a riotous inn. Shakspeare. King Lear.

Naked savages fighting disorderly with stones, by appointment of their commanders, may truly and absolutely be said to war.

Raleigh.
He is one that seldome takes care for old age, because ill diet and disorder, together with a consumption, or some worse disease, taken up in his full career, have onely chalked out his catastrophe but to a colon.

Micrologia, 1629.

\section*{Eve,}

Not so repulsed, with tears that ceased not flowing, And tresses all disordered, at his feet Fell humble.

Milton.
- .Those obsolete laws of Henry I. were but disorderly, confused, and general things; rather cases and shells of administration than institutions.

Hale.
Let him be stript, and disordered; I would fain see him walk in querpo, that the world may behold the inside of a friar.

Dryden's Span. Friar.
Pleasure and pain are only different constitutions of the mind, sometimes occasioned by disorder in the body, or sometimes by thoughts in the mind.

\section*{Locke.}
- A disorderly multitude contending with the body of the legislature, is like a man in a fit under the conduct of one in the fulness of his health and strength.

Addicon.
From vulgar bounds with brave disorder part, And snatch a grace beyond the reach of art. Pope.

The incursions of the Goths, and other barbarous nations, disordered the affairs of the Roman empire.

Arbuthnot.
Many a brave fellow, who has put his enemy to fight in the field, has been in the utmost disorder upon making a speech before a body of his friends at home.

Hughes.
DISORD'INATE, \(a d j . ? \quad D i s\) and ordinate.
Disord'inately, adv. \}Not living by rules of virtue; inordinate.

These not disordinate, yel causelcss suffer
The punishment of dissolute days.
DISO'RIENTATED, adj Milton. Agonistes.
Turned from the east ; turned frond orient. direction; thrown out of the proper place.

Andrew Marvel uses the word disoccidentated instead of disorientated: 'Geneva had disoccidentated our geographer.'

Dr. A. Rees.
DISO'WN, v.a. Dis and own. To deny; not to allow; renounce.

Then they, wbo brother's better claim disown, Expel their parents, and usurp the throne.

Dryden's AEneid.
When an author has publickly disowned a spurious piece, they have disputed his name with him.

Swift.
DISOR'GANIZE, v. a. \(\quad\) Fr. desorganiser,
Disor'ganization, n.s. \(\}\) dis and organize. To derange a system in its parts; subversion of system or order. A modern word altogether.

These disorganixing principles spread rapidly, and, had not the contagion been interrupted by the war with France, the consequences would have been far more serious to England.

Thomas.
DISPA'ND, v.a. ? Lat. dispando. To dis-
Dispa'nsion, n.s. play; spread abroad; the act of displaying or spreading.

DISPAR'AGE, o. a. \()\) Ital. dispareggiare,
Dispar'ager, n. s. from Lat. dispar, un-
Dispar'agement. fit , and agere, to do; Minsheu. To match or compare for the sworse; to depreciate by comparison; to treat contemptuously.

\section*{Gentle knight,}

That doth against the dead his hand uprear,
His honour stains with rancour and despight,
And great disparagerzent makes to his former might.
Spenser.
Yet doe not sdeigne to let thy name be writt
In this base poem, for thee far unfitt ;
Nought is thy worth disparaged tbereby.

\section*{Id. Sonnets.}

She was much affectionate to her own kindred, which did stir great envy in the lords of the king's side, who counted her blood a disparagement to be mingled with the king's.

Bacon.
In a commonwealth, much disparagement is occasioned, when able spirits, attracted by a familiarity, are inflamed with faction.

Wotton.
It is no disparagement for greater persons to begin treaties of peace. Bp. Hall's C'ontemplations.

Ahaz, his sottish conqueror, he drew
God's altar to disparage and displace,
For one of Syrian mode.
Milton's Paradise Lost.

\section*{They wrll defy}

That which they love most tenderly;
Quarrel with minced pies, and disparage
Their best and dearest friend, plum-poridge.
Huilibras.

Tis no disparagement to philosophy, that it cannot deify us.

Glanville.
It is a hard and nice subject for a man to speak of himself; it grates his own heart to say any thing of disparagement, and the reader's ears to hear any thing of praise from him.

Cowley.
You wrongfully do require Mopsa to so great a disparagement, as to wed her father's servant.

Sidney.
The play was never intended for the stage; nor, without disparagement to the author, could have succeeded.

Dryden.
Reason is a weak, diminutive light, compared to revelation, but it ought to be no disparagement to a star that it is not a sun.

South.
His religion sat easily, naturally, and gracefully upon him, without any of those forbidding appearances which sometimes disparage the actions of men sincerely pions.

Atterbury.
DISPA'RATES, r.s. \} From Lat. disparata. Dispárity, \(n . s\). \(\}\) Things so unlike that they cannot be compared with each other ; inequality.

Between Elihu and the rest of Job's familiars, the greatest disparity was but in years.

Hooker.

\section*{Among unequals, what society}

Can sort, what harmony or true delight?
Which must be mutual, in proportion due
Given and received; but in disparity,
The one intense, the other still remiss, Cannot well suit with either, but soon prove Tedious alike. Milton.
There was as great a disparity between the practical dictates of the understanding, then and now, as there is between empire and advice, counsel and command.

South.
Men ought not to associate and join themselves together in the same office, under a disparity of condition.

Ayliffe's Parergon.
DISPARK', v.a. Dis and park. To throw open a park.

To set at large; to release from enclosure.
You have fed upon my signiories,
Disparked my parks, and felled my forest woods.
Shakspeare.

\section*{They were supposed}

By narrow wits to be enclosed;
Till his free muse threw down the pale,
And did at onee dispark them all. Waller.
DISPART', थ. a. Dis and part. Fr. departir; Lat. dispertior. To divide in two; to separate; to break; to burst; to rive.

Hard is the doubt, and difficult to deem, When all three kinds of love together meet, And do dispart the heart with power extreme, Whether shall weigh the balance down.

Spenser.
The rest to several places
Disparted, and between spun out the air.
Milton.
Disparted Britain mourned their doublful sway, And dreaded both, when neither would obey.

Prior.
The pilgrim oft,
At dead of night, mid his oraison hears Aghast the voice of Time, disparting towers, Tumbling all precipitate down-dashed,
Rattling around, loud thunderin to the moon.
Dyer.

Dispart, in gunnery, is the mark set upror the muzzle ring of a piece of ordnance, so that a sight-line, taken upon the top of the base ring against the touch-hole, by the mark set on or near the muzzle, may be parallel to the axis of the concave cylinder. The common way of doing this is, to take the two dianneters of the base-ring, and of the place where the dispart is to stand, and divide the difference between them into two equal parts, one of which witl be the length of the dispart, which is set on the gun with wax or pitch, or fastened these with a piece of twine or marline. Hy means of an instrument it may be done with great nicety.

DISPA'SSION, n.s. \(>\) From dis and pas-
Dispa'ssionate, adj. Ssion. Freedom from
Dispássionated, adj. mental perturbation; exemption from passion.

Wise and dispassionate men thought he had been proceeded with very justly.

Clarendon.
What is called by the Stoicks apathy, or dispassion, is ealled by the Scepticks indisturbance, by the Molinists quietism, by common men peace of conscience.

Temple.
You have, as all dispassionated men may judge, fulfilled the poet's definition of madness.

Dr. Maine.
DISPEL', v. a. Lat. dispello. To drive by scattering; to dissipate.

If the night
Have gathered aught of evil, or concealed,
Disperse it, as now light dispels the dark.
Milton.
When the spirit brings light unto our minds, it dispels darkness; we see it, as we do that of the sun at noon, and need not the twilight of reason to shew it.

Locke.
DISPENCE', n.s. Fr. dispence. Expense; cost; charge; profusion.

It was a vault ybuilt for great dispence,
With many ranges reared along the wall,
And one great chimney, whose long funnel thence The smoke forth threw.

Faerie Queene.
DISPEND', w. a. Lat. dispendo. To spend; to consume: to expend.

Of their commodities they were now scarce able to dispend the third part. Spenser's State of Ireland.

DISPENSE', v. a. \& n.s.) Fr. dispenser;

Dispens'ary, n.s.
Dispensa'tion,
Dispensa'tor,
Dispen'satory. Span. despensar; Ital. and Lat.dis\(\int\) diversely, and por to weigh out money. To deal out; distribute by rule or measure : hence to excuse, or suspend compliance with a rule; and to set free from obligation. A dispensary is, strictly, a place where medicines are weighed or dealt out; a dispensatory a book prescribing them; dispensation, a rule of dealing between God and man; distribution: hence, permission to do what may have been forbidden.

So a man gesse us as mynystris of Crist, and dispenderis of the mynysteries of God. Now it is sought among the dispenderis that a man be foundun trwe.

Wiclif. i. Cor. 4.
One loving howre
For many years of sorrow can dispence.
Spenser. Faerie Queenc.

Hast thou nit sworn allegiance unto me?
Canst thou disponse woith heaven for such an oath ?
Shakspeare.
How few kingdoms are there, wherein, by dispensing with oaths, absolving subjects from allegiance, and cursing, or threatening to curse, as long as their curses were regarded, the popes have not wrought innumerable miscbiefs.

Raleigh.
As her majesty hath made them dispensators of her favour towards her people, so it behoveth them to shew themselves equal distributers of the same. Bacon.
The description of the ointment is found in the chymical dispensatory.

Id. Natural History.
God deligbts in the ministries of his own choice, and tbe methods of grace, in the economy of heaven, and the dispensations of eternal happiness.

Taylor's Worthy Communicant. Royal bounties
Are great and gracious, while they are dispensed With moderation.

Massinger.
Those now that were dispensed
The burden of many ages, on me light
At once by my foreknowledge.
Milton.
Then reliques, beads,
Indulgences, dispenses, pardons, bulls, Tbe sport of winds.
At lergth tbe muses stand restored again,
While you dispense tbe laws, and guide the state.
Dryden.
To thee the loved dispensary I resign. Garth.
Neither are God's metbods or intentions different in his dispensations to each private man. Rogers.

Do thou, my soul, tbe destined period wait, When God shall solve the dark decrees of fate; His now unequal dispensations clear,
And make all wise and beautiful appear. Tickell.
Our materia medica is large enough; and, to look into our dispensatories, one would think no disease incarable.

Baker.
A dispensation was obtained to enable Dr. Barrow to marry.

Ward.
I could not dispense with myself from making a voyage to Caprea. Addison on Italy.
Those to whom Christ has committed the dispensing of his gospel.. Decay of Piety.
This perpetual circulation is constantly promoted by a dispensation of water promiscuously and indifferently to all parts of the earth.

\section*{Woodward's Natural History.}

Those wbo stand before earthly princes, who are the dispensers of their favours, and conveyors of their will to others, challenge high honours. Atterbury.

His peculiar doctrines are not like any thing of human contrivance. -Never man spake like this man.' One of the first names given to that dispensation of things which he came to introduce, was 'the kingdom,' or the reign, ' of heaven.'

Beattie.
Dispensary, a kind of charitable institution, of late years very prevalent in Britain. They are designated the General Dispensary, the Universal Dispensary, the Dispensary of particular counties or districts, \&c. They are supported by voluntary subscriptions, having each one or more physicians and surgeons, whose business is to attend at stated times, to prescribe for the poor; and, if necessary, to visit them at their own habitations. It is in this latter respect, that the patients of a dispensary differ from those called out-patients at an hospital. The poor are supplied gratis with medicine, and
many of these institutions also afford grataitous assistance to lying-in women. Formerly there were three dispensaries established in London, for selling medicines to the poor at prime cost, under the direction of the College of Physicians. InChina the medicines are not dispensed gratis, but money is given to the poor to purchase them. The Chinese have a stone, ten cubits high, erected in the public squares of their cities : on this stone are engraved the names of all sorts of medicines, with the price of each; and when the poor stand in need of any relief from physic, they go to the treasury, where they receive the price each medicine is rated at.

Dispensations are most generally dispensed by the pope, who claims the office jure divino, and has extended it to every thing. See Indulgences. His power to grant a dispensation for any thing contrary to the divine law, or the law of nature, has, however, been denied by the more moderate of the Romanists, who confine him to what is contrary to positive laws, or to things relating to facts, marriages, holding several benefices, \&c.; and who limit him even in these things. The archbishop of Canterbury has a power, by statute, of dispensing in any cause wherein dispensations were formerly granted by the see of Rome, as well to the king as his subjects; and, during the vacancy of the archbishop's see, the guardian of the spiritualities may grant dispensations. Every bishop of common right has the power of instituting to benefices, and of dispensing in common cases, \&cc. A dispensation of the king makes a thing prohibited, lawful to be done by the personathat has it, though a thing evil in itself will not admit of a dispensation. And where the subject has an immediate interest in an act of parliament, the king cannot dispense with it; but may, if the suit be the king's own, only for the breach of a penal law that is not to the damage of a third person. There is a dispensation by non obstante, which is where a statute tends to restrain some prerogative incident to the person of the king, as the right of pardoning, or commanding the service of the subjects for the benefit of the public, \&c., each of which prerogatives is inseparable from the king, and therefore, by a clause non obstante, such statute may be dispensed with.

DISPE'OPLE, v. a. ? Dis and people. To
Dispéopler, n.s. \}depopulate; to empty of people: he who depopulates, or wastes.

The Irish, banished into the mountains, where they lived only upon white meats, seeing their lands so dispeopled and weakened, came down into the plains.

Spenser.
Conflagrations and great droughts, do not merely dispeople, but destroy.

Bacon.
His heart exalts him in the harm
Already done, to bave dispeopled heaven. Milton.
Nor drain I ponds the golden carp to take ;
Nor trowle for pikes, dispeoplers of the lake. Gay.
Kings, furious and severe,
Who claimed the skies, dispeopled air and floods,
The lonely lords of empty wilds and woods. Pope.
DISPE'RGE, v. a. Lat. dispergo, To sprinkle; to scatter.

DISPERSE,\(v . a\).
Dispers'edly, adv.
Dispersédness, n.s.
Disperse'r, Dispers'ion. ; dissipate into parts ; distribute.
And I scattered them among the heathen, and they were dispersed through the countries. Ezek, xxxvi. 19.

The exquisite wits of some few, peradventure, are able, dispersedly here and there, to find now a word, and then a sentence, which may be more probably suspected, than easily cleared of errour.

Hooker.
Soldiers, disperse yourselves.
Shakspeare.
Noah began from thence his dispersion. Raleigh.
Being a king that loved wealth, he could not endure to have trade sick, nor any obstruction to continue in the gate vein which disperseth that blood. Bacon.

Dispersed love grows weak, and fewness of objects useth to unite affection. Bp. Hall's Contemplations.

\section*{If the night}

Have gathered aught of evil, or concealed,
Disperse it, as now light dispels the dark. Milton.
The torrid parts of Africk are by Piso resembled to a libbard's skin, the distance of whose spots represent the dispersedness of habitations or towns in Africk.

\section*{Brerewood on Lanyuages.}

Those who are pleased with defamatory libels, so far as to approve the authors and dispersers of them, are as guilty as if they had composed them.

Spectator.
After so many dispersions, and so many divisions, two or three of us may yet be gathered together.

Pope.
Those minerals are either found in grains, dispersedly intermixed with the corpuscles of earth or sand, or else amassed into balls or nodules. Woodward.

They have built
More Babels without new dispersion, than
The stammering young ones of the flood's dall ooze, Who failed and fled each other. Byron.
Dispersion of Inflammation, in medicine and surgery, is the removing the inflammation, and restoring the inflamed part to its natural state

The Dispersion of Mankind, in the early history of the world, was occasioned by the confusion of tongues, and took place in consequence of the overthrow of Babel at the birth of Peleg; whence he derived his name. It appears by the account given of his ancestors, Gen. xi. 1016 , to have happened in the 101st. year after the flood, according to the Hebrew chronology, and by the Samaritan computation in the 401 st . However, various difficulties have been suggested by chronologers concerning the true era of this event. Sir John Marsham and others, to reconcile the Hebrew and Egyptian chronologies, maintain a dispersion of mankind before the birth of Peleg. Others, unable to find numbers sufficient for the plantations of colonies in the space of 101 years, according to the Hebrew computation, fix the dispersion towards the end of Peleg's life, thus following the computation of the Jews. Petavius assigns the 153d year after the flood: Cumberland the 180th; and Usher, though he generally refers it to the time of Peleg's birth, in one place assigns the 131st after the flood for this event. Mr. Shuckford supposes the dispersion to have been gradual, and to have commenced with the separation of
some companies at the birth of Peleg, and to have been completed thirty-one years after. According to the calculation of Petavius, the number of inhabitants on the earth at the birth of Peleg amounted to 32,768 . Cumberland makes them 30,000 . Mr. Mede states them at 7,000 men, besides women and children : and Mr. Whiston, who supposes that mankind now double themselves in 400 years, and that they doubled themselves, between the deluge and the time of David, in sixty years at a medium, when their lives were six or seven times as long as they have been since, by his computation, produces about 2,389 ; a number much too inconsiderable for the purposes of separating and forming distinct nations. This difficulty induced Mr. Whiston to reject the Hebrew, and to adopt the Samaritan chronology, as many others have done; which, by allowing an interval of 401 years between the flood and the birth of Peleg, furnishes, by the last mentioned mode of computation, more than 240,000 persons. As to the manner of the dispersion of the posterity of Noah from the plain of Shinar, the sacred historian informs us that they were divided in their lands, every one according to his tongue, according to his family, and according to his nation. Gen. x. 5. 20.31: and thus, as Mr. Mede observes, they were ranged according to their nations, and every nation by its families; so that each nation had a separate lot, and each family in every nation. The following abstract will serve to give a general idea of their respective settlements :-Japhet, Noah's eldest son, had seven sons, viz. Gomer, whose descendants inhabited those parts of Asia which lie upon the Ægean Sea and Hellespont northward, containing Phrygia, Pontus, Bithynia, and a great part of Galatia. The Galatians, according to Josephus, were called Gomeræi; and the Cimmerii, according to Herodotus, occupied this tract of country: and from these Gomerians, Cimmerii, or Celts, Mr. Camden derives our ancient Britons, who still retain the name Cymro, Cymru, or Cumbri. See Britain. Magog, the second son of Japhet, was probably the father of the Scythians on the east and north-east of the Euxine Sea. Madai planted Media, though Mr. Mede assigns Macedonia to his share. Javan was the father of the Grecians about Ionia, whose country lies along the Mediterranean Sea; the radicals of Javan and Ionia being the same, ינ. To Tubal and Meshech belonged Cappadocia and the country which lies on the borders of the Euxine Sea; and from them, migrating over the Caucasus, it is supposed the Russians and Muscovites are descended. And Tiras occupied Thrace. The sons of Shem were five ; Elam, whose country lay between the Medes and Mesopotamians, and was called by the Gentile writers Elymais; and Josephus calls the Elamites the founders of the Persians; Ashur, who was driven out of Shinar by Nimrod, afterwards settled in Assyria, and there built Nineveh and other cities; Arphaxad, who gave name to the country which Ptolemy calls Arraphacitis, a province of Assyria, though Josephus makes him the father of the Chaldees, Lud, who inhabited and gave name to the country of Lydia about the river Mæander, remarkable for its windings, in Asia Minor; and Aram,
the father of the Syrians. Ham, the youngest son of N cah, had four sons, viz. Cush, whose posterity spread into the several parts of Arabia, over the borders of the land of Edom, into Arabia Felix, up to Midian and Egypt ; Mizraim, the father of them who inhabited Egypt and other parts of Africa; Phut, to whom Bochart assigns the remaining part of Africa, from the lake Tritonides to the Atlantic Ocean, called Lybia; and Canaan, to whom belonged the lanu of Canaan, whence the Phœenicians derived their origin. Dr. Bryant has advanced a new hypothesis on this subject, and supported it with his usual acuteness and learning. He maintains that the dispersion, as well as the confusion of tongues, was local, and limited to the inhabitants of the province of Babel; that the separation and distribution recorded to have taken place in the days of Peleg, Gen. x. \(25,31,32\), which was the result of Divine appointment, occasioned a general migration ; and that all the families among the sons of men were concerned in it. The house of Shem, from which the Messiah was to spring, was particularly regarded in this distribution ; the portion of his children was near the place of separation; they in general had Asia to their lot, as Japhet had Europe, and Ham the large continent of Africa. But the sons of Cush would not submit to the divine dispensation; they went off under the conduct of Nimrod, and seem to have been for a long time in a roving state. They, however, at lastarrived at the plains of Shinar; and having ejected Ashur and his sons, seized his dominions, and laid there the foundation of a great monarchy. But afterwards, fearing lest they should bedivided and scattered abroad, they built the tower of Babel as a land mark to which they might repair; and probably to answer the purposes of an idolatrous temple, or high altar, dedicated to the host of heaven. Here they were punished with the judgment of confounded speech through a failure in labial utterance, and with the dispersion recorded in Gen. x. 8, 9: in consequence of which they were scattered abroad from this city and tower, without any certain place of destination.
'Various, however,' as Dr. Kippis remarks, ' have been the opinions concerning the confusion of tongues at Babel. Some have thought that the change produced by it was of so total a nature, as to oblige men to speak in languages fundamentally different. But this is not probable, as, in that case, the whole set of their ideas, and the very organs of their speech, mut have been altered. Neither is this hypothesis agreeable to experience, since most of the languages we are acquainted with have a certain degree of affinity. They either appear to be materially related, as sister languages, or show that they were originally derived from the same source.
'Other persons therefore, with greater reason, suppose that the change was only partial, and brought about in a gradual manner. Dr. Gr. Sharpe is of opinion, that the confounding of the speech, or lip, does not relate to language, properly so called, but to a confusion of design, counsels, and purposes; so that the builders of Babel could not agree together, to carry on the undertaking they had begun.'

This last writer fairly enough observes-' The number of people at Babel before the dispersion is not known, and of the miraculous division of languages there is not one word in the Bible. In Psalm lv. 9, David says, ' Destroy, O Lord, and divide their tongues, for I have seen violence and strife in the city;' where he certainly does not mean that God would make them speak new languages: for to divide their tongues is to divide their counsels, and to scatter dissension and animosity, not new-made words, amongst them. However, in Genesis xi. their language is not even said to be divided; but God says, 'Let us go down and confound their language, that they may not understand one another's speech. So the Lord scattered them abroad from thence upon the face of all the earth, and they left off to build the city. Therefore is the name of it called Babel (or confusion), because the Lord did there confound the language of all the earth.'

He thus concludes-' It is said that they (the whole earth) were together in the plain of Shinar, and that the language of all the earth was there confounded. No person is excepted. However, it is not presumed that Noah consented to the building, much less that he assisted in the work, or that he was 'ignorant that men were to be dispersed, and the world peopled by their dispersion, or that he did not oppose the raising an edifice to prevent their dispersion, which, from the natural increase of men and cattle, must in time have happened without a miracle. But it is apprehended, that there could be no occasion for a lofty fortress to defend the whole earth; for what enemies had the whole earth, against whom it was necessary to build a high tower? There is a like difficulty in assigning any reason for making themselves men of name or renown; for who were to esteem them men of name or of renown? Or where and when where they to be famous, before there were any human inhabitants but themselves?'
The Cushites seem afterwards to have invaded Egypt or the land of Mizraim in its infant state, seized the whole country, and held it for some ages in subjection: they extended themselves likewise to the Indies and Ganges, and still farther into China and Japan. From them the province of Cushan or Goshen in Egypt probably derived its name. Here they also obtained the appellation of 'royal shepherds;' and when they were by force driven out of the country, after having been in possession of it for 260 or 280 years, the land which they had been obliged to quit was given to the Israelites, who were also denominated shepherds, but should not be confounded with the former or the antecedent inhabitants of Goshen. See Egypr.
Dispersion, Point of, in dioptrics, the point from which refracted rays begin to diverge, where their refraction renders them divergent.
DISPI'RIT, v.a. \(\quad\) Dis and spirit. To
Dispr'ritedness, n.s. \(\}\) discourage; deject; depress; intimidate; exhaust.

Certain it is, that the poor man appeared so dispirited, that he spoke but few words after he came upon the scaffold.

Clarendon.
The providence of God strikes not in with them,

Lut dashes, and even dispirits, all their endeavours, and makes their designs heartless and ineffectual.

South.
Steady to my principles, and not dirpirited with my aflictions, I have overcome all difficulties.

Dryden.
Amidst all the honours that are paid him, he feels nothing in himsclf but a poor, weak, dispirited mortal, yielding to the laws of corruption. Rogers.

He has dispirited himsclf by a debauch, and drank away his good humour.

Collier.
I cannot bring myself to belicve that the King was either the first projector or the principal actor in the sorry farce of neglecting a man whom they could not dishonour, of distressing a man whom they could not dispirit, which has been playing at Court for near twenty-six years.

Bp. Watson.
DISPIT'EOUS, adj. Dis and pitcous. Unpitying.

The Knight of the Red Crosse, when him he spide, Spurring shote with rage dispiteous, Gan fairely couch his speare.

Spenser. Faerie Queene.
DISPLA'CE, ช. a. Dis and place. To put ont of place, state, office, or trust.

You have displaced the mirth, broke the good mecting,
With most admired disorder.
Shakspeare.
One then may be displaced, and one may reign; And want of merit render birthright vain. Dryden.

A rcligion, established by God himsclf, should not be displaced by any thing, under a demonstration of that divine power that first introduced it.

South.
Whose arch or pillar meets me in the face, Titus or Trajan's? No-'tis that of Time: Triumph, arch, pillar, all he doth displace Scoffing; and apostolic statues climb To crush the imperial urn, whose ashes slept sublime. Byron.
DISPLA'CENCY, n.s. Lat. displicentia Incivility; any thing unpleasing.

The displacencies that he receives, by the consequences of his excess, far outweigh all that is grateful in it.

Decay of Piety.
DISPLANT', v.a. \(\}\) Dis and plant. To
Displantation, n.s. \(\}\) remove a plant; hence to drive a people from their place of residence.

All those countries, which, lying near nnto any mountains, or Irish desarts, had been planted with English, were shortly displanted and lost. Spenser.

I may justly account new plantations to be the children of former kingdoms: I like a plantation in a pure soil; that is, where people are not displanted.

Bacon.
The Fdenites were garrisoned to resist the Assyrians, whose displantation Senacherib vaunted of.

Raleigh.
I)ISPL.AY', v.a. \& n.s. Fr. .déployer, from Lat. dis (privative) and piico, to fold. To unfold; to exhibit, spread open to view.

His glistring armor made
A little gloomy light, much like a shade,
By which he saw the ugly monster plaine,
Halfe like a serpent horribly displaide.
Spenser. Facrie Queene.
You speak not like yourself, who ever yet
Have stood to charity, and displayed the effects
Of disposition gentle.
Shakspeare.
Our enobled understandings take the wings of the morning to visit the world above us, and have a gloVol. VII.
rious display of the highest form of created excellen. cies.

Glanville.
Thou heaven's alternate beauty can'st displuy,
The blush of morning, and the milky way.
Dryden.
The works of nature, and the words of revelation, display truth to mankind in characters so visible, that those who are not quite blind, may read. Locke.

It is a noble and great thing to cover the blemishes, and to excuse the failings of a friend; to draw a curtain before his stains, and to display his perfec. tions.

South.
He carves, displays, and cuts up to a wonder.
Spectator.
So the gay lady, with expensive care,
Borrows the pride of land, of sea and air;
Furs, pearls, and plumes, the glittering thiug displays, nazzles our eyes, and easy hearts betrays. Gay.

The storm the dark Lycæan groves displayed, And first to light exposed the sacred shade.

\section*{Pope's Statius.}

DISPLEA'SANCE, \(n . s\). Dis and please.
Displea'se, v.a. \& n.s. To offend; make
Displeásing, \(n\). \(s\).
Displea'singness, n.s.
Displea'sure, v.a. \& n.s.) angry or sad: as a neuter verb, ) to disgust; make averse. Displeasingness is the ruality of giving offence ; displeasure the offence given.

God was displeased with this thing.
1 Chron. xxi. 7.
Cordell said, she loved him as behoved :
Whose simple answer, wanting colours fair
To paint it forth, bim to displeasance moved.
Faerie Queene.
True repentance may be wrought in the hearts of such as fear God, and yet incur his displeasure, the deserved effect whereof is eternal death. Hooker.

He should beware that he did not provoke Soly. man's heavy displeasure against him. Knolles.

Oft our displeasures, to ourselves unjust,
Destroy our friends, and after weep their dust.
Shakspeare.
When the way of pleasuring or displeasuring lieth by the favourite, it is impossible any other should be over great.

Bacon.
Undoubtedly he will relent, and turn
From his displeasure.
Milton.
What to one is a most grateful odour, to another is noxious and displeasant ; and it were a misery to some to lie stretched on a bed of roses. Glan. Scepsis.

It is a mistake to think that men cannot change their displeasingness or indifferency, that is in actions, into pleasure and desire, if they will do but what is in their power.

Locke.
On me alone thy just displeasure lay ;
But take thy judgments from this mourning land.
Dryden.

Nothing is in itself so pernicious to communities of earned men, as the displeasure of their prince.

Addison's Freeholder.
DISPLOI)E', v. a. \(\rangle\) Lat. displudo. To dis-
Displósion, n.s. perse with a loud noise; to vent with violence: a sudden bursting forth.

Stood ranked of seraphim another row,
In posture to displode their sccond tire
Of thunde
Milton.
DISPORT, v.n.\& n.s. Dis and sport. To
play; sport: pastime; diversion; amusement.
She list not hear, but her disports pursued;
And ever bade him stay, till time the tide renewed.
Spenser.

He often, but attended with weak guard, Comes hunting this way to disport himself.

> Shakspeare.

His disports were ingenuous and manlike, whereby he always learned somewhat.

Hayward on Edward VI. Fresh gales and gentle airs
Whispered it to the woods, and from their wings Flung rose, flung odours, from the spicy shrub Disporting!

Milton.
Loose to the winds their airy garments few ; The glittering textures of the filmy dew Dipt in the richest tincture of the skies, Where light disports in ever mingling dyes. Pope.

DISPOSE', v.a.,v.n., \&n.s.) Fr. disposer;

Dispos'er, n.s.
Disposi'tion,
Disposítive, adj.
Dispos'itively, adv.
Dispo'sure, n.s. pusui, to place, à Gr. \(\pi \omega \nu \omega\), to labour. To employ; place ; order; give an impulse; taking to: to make Git; taking for ; to transfer, put away, conduct: as a neuter verb, to make terms or a bargain: as a substantive, it signifies power; right or management; taking at or to ; distributive : dispositive is distributive. The other substantives follow the verb, dispose, in their meaning.

The tabernacle of witnessyng was with oure fadris in desert as god disposide to hem and spak to moises, that he schulde make it aftir the fourme that he saigh.

Wiclif. Dedis. vii.
The lot is cast into the lap; but the whole disposing thereof is of the Lord.

Proverbs.
These when the knights beheld, they 'gan dispore Themselves to court, and each a damsel chose.

Spenser.
But if thee list unto the court to throng,
And there to haunt after the hoped prey,
Then must thou thee dispose another way.

> Hubberd's Tale.

Touching musical harmony, whether by instrument or voice, it being of high and low, in due propurtionable disposition, such notwithstanding is the force thereof, and so vcry pleasing effects it hath, in that very part of man which is most divine, that some have been thereby induced to think, that the soul itself by nature is, or hath in it, harmony.

Hooker.
As she is mine, I may dispose of her:
Which shall be either to this gentleman,
Or to her death.
Shakspeare.
When she saw you did suspect
She bad disposed with Cæsar, and that your rage
Would not be purged, she sent word she was dead.
Id.
I have suffered more for their sakes, more than the villanous inconstancy of man's disposition is able to bear.

He earries on the stream of his dispose
Without observance or respect of any,
In will peculiar. Id. Troilus and Cressida.
I crave fit disposition for my wife,
Due reference of place and exhibition,
As levels with her breeding.
Id. Othello.
Suspicions diopose kings to tyranny, husbands to jealousy, and wise men to irresolution and melancholy.

Bacon.
They must receive instructions how to dispose of thenselves when they come, which must be in the nature of laws unto them.

It. to Villiers.

They remained in a kind of wartike disposure, or perhaps little better. Wotton.
Whilst they murmur against the present disposure of things, they do tacitly desire in them a difformity from the primitive rule, and the idea of that mind that formed all things best.

\section*{Browne's Vulgar Errours.}

That axiom in philosophy, that the generation of one thing is the corruption of another, although it be substantially true, concerning the form and matter, is also dispositively verified in the efficient or producer.

Id.
How sweetly doth God dispose of all second causes, that, while they do their own will, they do his!

Bp. Hall. Contemplations.
Tax not divine disposal; wisest men
Have erred, and by bad women been deluded.
Milton.
All is best, though oft we doubt
What the' unsearchable dispose
Of highest wisdom brings about,
And ever best found in the close.
Milton. Agonistes.
He knew the seat of Paradise;
And, as he was disposed, could prove it
Below the moon, or else above it. Hudibras.
The memory of what they had suffered, by being without it, easily disposed them to do this.

Clarendon.
I think myself obliged, whatever my private apprehensions may be of the success, to do my duty, and leave events to their disposer.

Boyle.
Would I bad been disposer of thy stars,
Thou shouldst have had thy wish, and died in wars.
Dryden.
Of all your goodness leaves to our dispose, Our liberty's the only gift we chuse.

> Id. Indian Emperor.

Under this head of invention is placed the disposition of the work, to put all things in a beautiful order and harmony, that the whole may be of a piece.

Id. Dufresnoy, Preface.
In his disposure is the orb of earth,
The throne of kings, and all of human birth.
Sandys.
This may dispose me, perhaps, for the reception of truth ; but helps me not to it.

Locke.
We shall get more true and real knowledge by one rule, than by taking up principles, and thereby putting our minds into the disposals of others.

Id.
Disposition is when the power and ability of doing any thing is forward, and ready upon every occasion to break into action.

Id.
All the reason of mankind cannot suggest any solid ground of satisfaction, but in making that God our friend, who is the absolute disposer of all things.

Sonth.
Although the frequency of prayer and fasting may be of no efficacy to dispose God to be more gracious, yet it is of great use to dispose us to be more objects of his grace.

Smalridge.
They require more water than can be found, and more than can be disposed of, if it was found. Burnet.

Of what you gathered, as most your own, you have disposed much in works of public piety.

Spratt.
Thus, whilst she did her various power dispose, The world was free from tyrants, wars, and woes.

Prior.
I have disposed of her to a man of business, who will let her see, that to be well dressed, in good
mamour, and chearful in her family, are the arts and scrences of female life. Tatler.
If mere moralists find themselves disposed to pride, lust, intemperance, or avarice, they do not think their morality concerned to check them.

Swift.
I take myself to be as well informed as most men in the dispositions of each people towards the other.
\(I d\).
Refrangibility of the rays of light is their disposition to be refracted, or turned out of their way, in passing out of one transparent body or medium into another.

Newton.
Are not the blessings both of this world and the next in his disposal?

Atterbury.
The love we bear to our friends is generally caused by our finding the same disposition in them which we feel in ourselves.

Pope.
Bleeding is to be used or omitted according to the symptoms which affect the brain; it relieves in any inflammatory disposition of the coat of the nerve.

Arbuthnot on Diet.
There is a sort of masonry in poetry, wherein the pause represents the joints of a building, which ought in every line and course to have their disposition varied.

Shenstone.
Under his fatherly rebukes then let us be ever humbie and submissive. Such now is the true filial disposition.

Mason.
DISPOSSE'SS, v.a. Dis and possess. To put out of possession ; to deprive; to disseize.

The children went to Gilead, and took it, and dispossessed the Amorite which was in it.

Numbers xxxii. 39.
The blow from saddle forced him to fly;
Else might it needs down to his manly breast
Have cleft his head in twain, and life thence dispossest.
Spenser. Faerie Queene.

\section*{I will chuse}

Mine heir from forth the beggars of the world,
And dispossess her all. Shakspeare. Timon.
Let us sit upon the ground, and tell
How some have been deposed, some slain in war,
Some haunted by the ghosts they dispossessed.
Id. Richard II.
In thee I hope; thy succours I invoke,
To win the crown whence I am dispossessed;
For like renown awaiteth on the stroke, To cast the haughty down, or raise the' oppressed.

Fairfax.

> They arrogate dominion undeserved Over their brethren, and quite dispossess Concord and law of nature from the earth.

Milton.
This inaccessible high strength, the seat
Of Deity supreme, us dispossessed,
He trusted to have seized.
Id.

\section*{No power shall dispossess}

My thoughts of that expected happiness.
Denham.
0 fairest of all creatures, last and best
Of what heaven made, how art thou dispossessed
Of all thy native glories!
Dryden. State of Innocence.
Nothing can create more trouble to a man than to endeavour to dispossess him of this conceit. Tillotson.

It will be found a work of no small difficulty to dispossess and throw out 2 vice from that heart, where long possession begins to plead prescription. South.

DISPRA'ISE, v. a., \& n.s.) Dis and praise. Disprais'er, n.s. (To blame; cenDispra'isible, \(a d j\). \(\quad\) sure; dishonor: Dispraísingly, adv. Jone who blames another : dispraisible is, unworthy of commendation.

In praising Antony, I've dispraised Cæsar, Shakspeare.
If I can do it
By aught that I can speak in his dispraise, She shall not long continue love to him. Id. Michael Cassio!
That came a wooing with you: many a time, When I have spoke of you dispraisingly, Hath ta'en your part. Id. Othel!o.
Nothing is here for tears, nothing to wail Or knock the breasts; no weakness; no contempt, Dispraise, or blame.

Milton's Agonistes.
I need not raise
Trophies to thec from other men's dispraise.
Denham.
Looks fright not men : the general has seen Moors With as bad faces; no dispraise to Bertran's.

Dryden.
The criticks, while they like my wares, may dispraise my writing. Spectator.

My faults will not be hid, and can be no dispraise to me that they will not; the clearness of one's mind is never better proved than in discovering its own faults.

Pope.
DISPREAD', v.a. \(\} \quad\) Dis and spread. To
Dispread'er. \(\}\) spread different ways. in this word, and a few others, says Johnson truly, dis has the same force as in Latin composition, and means different ways.

As morning sun her beams dispreaden clear, And in her face fair truth and mercy doth appear

Spenser.
Over him art, striving to compare
With nature, did an arbour green dispread,
Framed of wanton ivy, flowing fair,
Through which the fragrant eglantine did spread
His pricking arms, entrailed with roses red. Id.
Above, below, around, with art dispread,
The sure enclosure folds the genial bed.

> Pope's Odyssey.

DISPRO'EIT, n.s. Dis and profit. Loss; damage; detriment.

DISPRO'OF, n.s. Dis and proof. Confutation; conviction of error or falsehood.

His remark contains the grounds of his doctrine, and offers at somewhat towards the disproof of mine. Atterbury.
I need not offer any thing farther in support of one, or in disproof of the other. Rogers.

DISPROP'ERTY, v.a. Dis and property. To dispossess of any property.

DISPROPOR'TION, v.a.\&n.s.
Dis and
Dispropor'tionable, adj.
Dispropor'tionableness, n.s.
DISPROPOR'TIONABLY, \(a d v\).
Dispropor'tional, adj.
Dispropor'tionally, adv.
Dispropor'tionate, adj.
Dispropor'tionately, \(a d v\).
Dispropor'tionateness, n.s. disproportionable is unsuitable in the parts, or in comparison: disproportional and disproportionate seem to express the same idea, and the adverbs follow these adjectives in their mearing.

There sits deformity to mock my body, To shape my legs of an unequal sizc,
To disproportion me in every part. Shakspeare.
Had the obliquity been greater, the earth had not been able to endure the disproportionable differences of scason.

Browne.
Musick craveth your acquaintance: many are of such disproportioned spirits, that they avoid her company.

Peacham.
We on earth, with undiscording.voice,
May rightly answer that melodious noise ;
As once we did, till disproportioned sin
Jarred against nature's chime.
Miton.
Perhaps, from greatness, state and pride,
Thus surprised, she may fall:
Sleep does disproportion hide,
And, death resembling, equals all. Waller.

\section*{For their strength,}

The disproportion is so great, we cannot but
Expect a fatal consequence. Denham's Sophy.
We have no reason to think much to sacrifice to God our dearest intercsts in this world, if we consider how disproportionably great the reward of our sufferings shall be in another.

Tillotson.
We are apt to set ton great a value on temporal blessings, and have too low and disproportionable esteem of spiritual. Smalridge.
None of our members are crooked or distorted, or disproportionate to the rest, either in excess or defcct.

\section*{Ray.}

It is plain that men have agreed to a disproportionate and unequal possession of the earth.

Locke.
Distance and men's fears have so enlarged the truth, and so disproportioned every thing, that we have made the little troop of discontents a gallant army, and already measured by the cvening shadow.

Suckling.
There is no wine of so strong a body as to bear such a disproportionable quantity of water as sixty.

Broome.
That we are designed for a more exalted happincss than can be derived from the things of this life, we may infer from their vast disproportion to the desires and capacities of our soul.

Rogers.
DI'SPROVE, v.a. \(\quad\) Dis and prove. To
Di'sprover, n.s. \}confute; to convict of error or falsehood. A disprover, as well as expressing this sense, seems corruptly used by Wotton for disapprover.

This exposition they plainly disprove, and shew by manifest reason, that of David the words of Navid could not possibly be meant.

Hooker.
This Westmoreland maintains,
And Warwick shall disprove it.
Shahspeare.
The single example that our annals have yieldcd of two extremes, within so short time, by most of the same commenders and disprovers, would require no slight memorial.

Wotton.
It is easier to affirm than to disprove.
Holder.
The traitor's odious name
I first return, and then disprore thy ciaim. Dryden's Fables.
That false supposition \(I\) advanced in order to disprove it, and by that means to prove the truth of my doctrine.

Atterbury.
The cit-a common-council-man by place
Ten thousand mighty nothings in his face,
By situation as by nature great,
With nice precision parcels out the state;

Proves and disproves, affirms and then denics Objects himself, and to himsclf replies.

Churchill.
DISPU’NISHABLE, adj. Dis and punist. able. Without penal restraint.

No leases of any part of the said lands shall ever be made, other than leases for years not exceeding thirty-one in possession, and not in reversion or remainder, and not dispunishable of waste.

\section*{Swift's Last Will.}

DISPURGE', v.a. Dis and purge; dis being used expletively. To cleanse or purge.

Thou, then, that hast dispurged our score,
And dying wert the death of death,
Be now, whilst on thy name we call,
Our life, our strength, our joy, our all!
Wotton.
DISPU'RSE, v.a. Dis and purse. To pay; to disburse. 'It is not certain that the following passage should not be written disburse,' says Johnson.

Many a pound of my own proper store,
Because I would not tax the necdy commons,
Have I dispursed to the garrisons,
And never asked for restitution.
Shakspeare. Henry I'I.
DISPUTE', v. a., v. n. \& n.s.) Disput'able, adj.
Dis'putant, n.s. \& adj.
Disputa'tion,
Disputátious, adj.
Dispu'tative, adj.
Disputéless, adj.
Dispu'ter, n.s.
Fr. disputer; Spanish and Portug. disputar;Ger. and Dutch disputercn; Ital. and Lat. disputare,
from dis (diversely) and puto, to think. To contend for; discuss: as a neuter verb, to debate; argue ; controvert : as a noun, contest ; controversy; quarrel. Disputable means both liable to be contested, and fond of disputation. Disputatious and disputative have a similar sense to this last. Disputer and disputant are synonymous; and disputeless means incontrovertible.

Things were digputed before they came to be determined: men afterwards were not to dispuste any longer, but to obey.

Hooker.

> Dispute it like a man.
-I I shall do so;
But I must also feel it as a man.
Shakspeare. Macbeth.
Now was I called to public disputations often, with no ill success. Bp. Hall's Account of himself.
Thou there wast found
Among the gravest rabbies, disputant
On points and questions fitting Moses' chair.
Well do I find, by the wise knitting together of your answer, that any disputation I can use is as much too weak as I unworthy.

Sidney,
So dispute the prize,
As if you fought before Cydaria's eyes.
Dryden's Indian Emperor.
The questinn being about a fact, it is begging it, to bring as a proof an hypothesis which is the very thing in dispute.

Locke.
Notwithstanding these lcarned disputants, it was to the unscholastick statesman that the world owed their peace, defence and liberties.
\(1 d\).
If they are not in themselves disoutable, why are they so much disputed ?

South.

Both are vehement disputers against the heathen idolatry. Stillingfleet.

The atheist can pretend no obligation of conscience, why he should dispute against religion. Tillotson.

Our disputants put me in mind of the skuttle fish, that, when he is unable to extricate himself, blackens ail the water about him till he becomes invisible. Spectator.
A man must be of a very disputatious temper, that enters into state controversies with any of the fair sex. Addison.
Until any point is determined to be a law, it remains disputable by every subject.

Swift.
The earth is now placed so conveniently, that plants thrive and flourish in it, and animals live; this is matter of fact, and beyond all dispute. Bentley.

Did not Paul and Barnabas dispute with vehemence about a very little point of conveniency? Atterbury.

These conclusions have generally obtained, and have been acknowledged even by disputers themselves, till with labour they had stifled their convictions.

Rogers.
Perhaps this practice might not so easily be perverted, as to raise a cavilling disputative, and sceptical temper in the minds of youth.

\section*{Watts's Improvement of the Mind.}

There is nothing displays a genius (I mean a quickness of genius) more than a dispute; as two diamonds encountering, contribute to each other's lustre. But, perhaps, the odds is much against the man of taste, in this particular.

Sherstome.
As to the capacity of sitting in parliament, after all the capacities for voting, for the army, for the navy, for the professions, for civil officers, are conceded, it is a dispute de lana caprina, in my poor opinion, at least on the part of those who oppose it. Burke.

She breathes! Bat no, twas nothing, or the last. Faint flutter life disputes with death.

Byluin
DISQUA'LIFY, v. a. \} Dis and qualify.
Disquálification, n. s. \}To make unfit; to disable by a natural or legal impediment.

Such persons as shall confer benefices on unworthy and disqualified persons, after a notice or correction given, shall for that turn be deprived of the power of presenting unto such benefices. Ayliffe's Parergon.

I know no employment for which piety disqualifies. Swift.
My common illness utlerly disqualifies me for all conversation; I mean my deafness.

Id.
The church of England is the only body of Christians which disqualifies those, who are employed to preach its doctrine, from sharing in the civil power, farther than as senators.

Id. on the Sacramental Test.
It is recorded as a sufficient disqualification of a wife, that, speaking of her husband, she said, God forgive him.

Spectator.
The power of a member of parliament is uncertain and indirect; and if power rather than splendor and fame were the object, I should think that any of the principal clerks in office, (to say nothing of their superiors) several of whom are disqualified by law for seats in parliament, posscss far more power than nine-tenths of the members of the House of Commons. Burke.

DISQUA'NTITY, v. a. Dis and quantitv. To lessen ; to diminish. Not used.

\section*{Be entreated}

Of fifty to disquantity your train;
And the remainders, that shall still depend,
To be such men as may besort your age. Sluakpeare.

DISQUI'ET, v. a., n. s., \& adj.)
Disquíeter, n.s.
Disquíetly, adv.
Disquíetness, n.s. Disquíetude.

\section*{DIS}
fret. The substantives are synonymous.
Why art thou so vexed, 0 my soul? and why art thou so disquieted within me.

Psalm.
All otherwise, said he, I riches rede,
And deem them root of all disquietness.

> Faerie Queene.

Arius won to himself both followers and great dofenders; whereupon mach disquietness ensued.

Hooker.
I pray you, husband, be not so disquiet;
The meat was well if you were so content.

> Shakspeare.

Treachery, and all ruinous disorders, follow us disquietly to our graves.

Id. King Lear.
If we give way to our passions, we do but gratify nurselves for the present, in order to our future disquiet.

Tillotson.

> Thou happy creature, art secure
> From all the torments we endure;
> Despair, ambition, jealousy,

Lost friends, nor love, disquists thee.
Roscommon.
Contentment produces, in some measure, all those effects which the alchymist usually ascribes to what he calls the philosopher's stone; and if it does not bring riches, it does the same thing by banishing the desirc of them. If it cannot remove the disquietudes arising froin a man's mind, body, or fortune, it makes him eary under them.

Addison.
I had rather live in Ireland than under the frequent disquiets of hearing you are out of order.

Swift.
He rested disquietly that night ; but in the morning 1 furud tim calm.

Wiseman.
DISQUISI'TION, n. s. Lat. disquisition Examination; disputative enquiry.

God hath reserved many things to his own resolytion, whose determinations we cannot hope from flesh; but with revercnce must suspend unto that great day, whose justice shall either condemn our curiosity, or resolve our disquisitions.

Browne.
The royal society had a good effect, as it turned many of the greatest geniuses of that age to the disquisitions of natural knowledye. Addison's Spectator.
\({ }^{\prime}\) Tis indeed the proper place for this disquisition concerning the antediluvian earth.

Woodward's Natural History.
The nature of animal diet may be discovered by taste, and other sensible qualities, and some general rules, without particular disquisition upon every kind.

Arbuthnot.
I am apprehensive that I shall not be able to find leisure for making all the disquisitions and experiments which would be desirable on this subject. [Swimming.] I must, therefore, content myself with a few remarks.

Franklin.
DISRA'NK, a. a. Dis and rank. To degrade from his rank

DISREGA'RD,v.a.\&n.s.) \(D i s\) and reDisrega'rnful, \(u d j\). \(\begin{aligned} & \text { gard. To treat } \\ & \text { with slight no- }\end{aligned}\) Disrega'rdfully, \(a d v\). with slight notice or neglect ; contempt.

Since we are to do good to the poor, to strangers, to enemies, those whom nature is too apt to make us
despise, disregard, or hate, then undoubtedly we are to do good to all. Sprat.

Those fasts which God hath disregarded hitherto, ke may regard for the time to come. Smalridge.
Studious of good, man disregarded fame, And useful knowledge was his eldest aim. Blackmore.
DISRE'LISH, v. a. \& n. s. Dis and relish. To make, or feel a distaste : bad taste; nauseousness.

\section*{Oft they assayed,}

Hunger and thirst constraining; drugged as oft
With hatefullest diselish, writhed their jaws
With soot and cinders filled.
Millon. Fruits of taste to please
True appetite, and not disrelish thirst
Of nectarous draughts between, from milky stream.
Id.
Bread or tobacco may be neglected, where they are shewn not to be useful to health, because of an indifferency or disrelish to them.

Locke.
The same anxiety and solicitude that embittered the pursuit, disrelishes the fruition itself.

Rogers.
The world is become too busy for me : every body is so concerned for the publick, that all private enjoyments are lost, or disrelished.

Роре.
DISREP'UTE, n. s. \} Dis and reputation.
Disreputa'tion, n.s. \(\}\) Disgrace; dishonor; want of reputation.

I will tell you what was the course in the happy days of qucen Elizabeth, whom it is no disreputation to follow.

Bacon.
The king fearing lest that the bad success might disconrage his people, and bring disreputation to himself, forbad any report to be made.

Hayward.
Gluttony is not of so great disreputation amongst men as drunkenness. Taylor's Holy Living.
How studiously did they cast a slur upon the king's person, and bring hî̀ governing principles under a disrepute.

South.

DISRESPECT \({ }^{\text {, }}\) n.s.
Disrespect'ful, adj.
Disrespect'fully, adv. ence; rudeness.

Any disrespect to acts of state, or to the persons of statesmen, was in no time more penal. Clarendon.

Aristotle writ a methodical discourse concerning these arts, chusing a certain benefit before the hazard that might accrue from the vain disrespects of ignorant persons.

Wilkins.
What is more usual to warriours than impatience of bearing the least affront or disrespect? Pope.

We cannot believe our posterity will think so disrespectfully of their great grandmothers, as that they made themselves monstrous to appear amiable.

Addison's Spectator.
DISRO'BE, v.a. Dis and robe. To undress; to uncover ; to strip.

The holy saints of their rich vestiments He did disrobe, when all men carelesse slept, And spoiled the priests of their habiliments.

Spenser. Faerie Queene. Kill the villain straight,
Disrobe him of the matchless monnment, Thy father's triumph o'er the savages.

Shakspeare. King John.
These two great peers were disrobed of their glory, the one by judgment, the other by violence. Wotton.

Who will be prevailed with to disrobe himself at once of all his old opinions, and pretences to know-
ledge and learning, and turn himself ont stark nated in quest afresh of new notions?

Locke.
When the trees are all bare, not a leaf to be seen, And the meadows their beauty have lost;
When Nature 's disrobed of her mantle of green, And the streams are fast bound with the frost.

Brerewood.
DISRU'PTION, n. s. Lat. disruptio. The act of breaking asunder : the breach made.

This secures them from disruption, which they would be in danger of, upon a sudden stretch or contortion.

Ray.
The agent which effected this disruption, and dislocation of the strata, was seated within the earth.

Woodward.
If raging winds invade the atmosphere,
Their force its curious texture cannot tear,
Nor make disruption in the threads of air.
Blackmore.
DISSA'TISFY, \(v . a\).
Dissatisfáction, n.s. Dis and satisfy. To displease; disDissatisfa'ctory, adj. content; fail to Dissatisfáctoriness, n.s. please: dissatisfaction is the state of being dissatisfied : dissatisfactory, and dissatisfactorinesss, express inability to give satisfaction.

He that changes his condition, nut of impatience and dissatisfaction, when he has tried a new one, wishes for his old again.

L'Estrange.
I still retain some of my notions, after your lordship's having appeared dissatisfied with them.

Locke.
The ambitious man has little happiness, but is subject to much uneasiness and dissatisfaction.

Addison's Spectator.
In vain we try to remedy the defects of our acqui. sition, by varying the object : the same dissutisfuction pursues us through the circle of created goods.

Ragers.
The advantages of life will not hold ont to the length of desire ; and, since they are not big enough to satisfy, they should not be big enough to dissatisfy.

Collier.
If we see a universal spirit of distrust and dissatisfaction, a rapid decay of trade, dissensions in all parts of the empire, we may pronounce. without hesitation, that the government of that conntry is weak, distracted, and corrupt.

Junius.
DISSECT', v. a. \(\quad\) Fr. disséquer ; Lat. dis
Dissection, n. s. \}secare, from dis and seco,
Dissect'or, n.s. Sto carve or cut. To divide an animal body into its parts: applied also figuratively.

Let no man say, the world itself being dead,
'Tis labour lost to have discovered
The world's infirmities, since there is none
Alive to study this dissection.
Donne.
She cut her up; but, upon the dissection, found her just like other hens.

L'Estrange.
No mask, no trick, no favour, no reserve;
\(D\) issect your mind, examine every nerve.
Roscommon.
Critics to plays for the same end resort,
That surgeons wait on trials in a court :
For innocence condemned they've no respect,
Provided they've a body to dissect. Congreve.
Such strict enquiries into nature so true and so perfect a dissection of human kind, is the work of extraordinary diligence.

Grantille.

Following life in creatures we dissect, We lose it in the moment we detect. Pope.
With strict propriety their care's confincd To weigh out words, while passion halts behind : To syllable-dissectors they appcal,
Allow their accent, cadence,-fools may feel.
Churchill.
I shall enter upon the dissection of a coquet's heart, and communicate that curious piece of anatomy.

Addison.
DISSEISE', v. a. From Fr. dessaisiı, i. e. action; de saisir an action concerning seizing. To dispossess; deprive of legal right. See the following articles on Disseisin and Dissersor.

He so disseized of his griping gross,
The knight his thrillant spear again assayed, In his brass-plated body to emboss.

Faeric Queene.
If a prince should give a man, bcsides his ancient patrimony which his family had been disseized of, an additional estate, never before in the possession of his ancestors, he rould not be said to re-establish lineal succession.

Locke.
DISSEISIN, in law, an unlawful dispossessing a man of his land, tenement, or other immoveable and incorporeal right. It is a species of injury by ouster, or a privation of the freehold, consisting in a wrongful putting out of him that is seised of the freehold. It differs from abatement and intrusion, which denote a wrongful entry where the possession was vacart, by its being an attack upon him who is in actual possession, and turning him out of it. The former were an ouster from a freehold in law, this is an ouster from a freehold in deed. Disseisin may be effected either in corporeal inheritances, or incorporeal. Disseisin of things corporeal, as of houses, lands, \&c., must be by entry and actual dispossession of the freehold (Co.Litt. § 181); as if a man enters either by force or fraud into the house of another, and turns, or at least keeps, him or his servants out of possession. Disseisin of incorporeal hereditaments cannot be an actual dispossession ; for the subject itself is neither capable of actual bodily possession, nor dispossession; but it depends on their respective natures and various kinds; being, in general, nothing more than a disturbance of the owner in the means of coming at, or enjoying them. With regard to freehold rent in particular, our ancient law-books (Finch. L. 165,166 . Litt. § \(237, \& c\).) mention five methods of working a disseisin thereof:-1. By enclosure; where the tenant so encloseth the house or land, that the lord cannot come to distrain thereon, or demand it. 2. By forestaller, or lying in wait; when the tenant besetteth the way with force and arms, or by menaces of bodily hurt, affrights the lessor from coming. 3. By rescous; that is, either by violently retaking a distress taken, or by preventing the lord, with force and arms, from taking any at all. 4. By replevin; when the tenant replevies the distress at such time when his rent is really due. 5. By denial ; which is, when the rent being lawfully demanded, is not paid. All, or any of these circumstances amount to a disseisin of rent; that is, they wrongfully put the owner out of the only possession, of which the subject matter is capa-
ble, namely, the receipt of it. But all these disseisins of hereditaments incorporeal, are only so at the election and choice of the party injured; if, for the sake of more easily trying the right he is pleased to suppose himself disseised. (Litt. § 588,589 .) Otherwise, as there can be no actual dispossession, he cannot be compulsively disseised of any incorporeal hereditament. Thus also, even incorporeal hereditaments, a man may frequently suppose himself to be disseised, when he is not so in fact, for the sak of entitling himself to the more easy and commodious remedy of an assise of novel disseisin, instead of being driven to the more tedious process of a writ of entry. (4 Burr. 110.)

The true injury of compulsive disseisin seems to be that of dispossessing the temant, and substituting one's self to be the tenant of the land in his stead; in order to which, in the times of pure feodal tenure, the consent or connivance of the lord, who, upon every descent or alienation, personally gave, and who, therefore, alone could change the seisin or investiture, seems to have been considered as necessary. But when, in process of time, the feodal form of alienations was off, and the lord was no longer the instrument of giving actual seisin, it is probable that the lord's acceptance of rent or service, from him who had dispossessed another, might constitute a complete disseisin. Afterwards, no regard was had to the lord's concurrence, but the dispossesser himself was considered as the sole disseisor; and this wrong was then allowed to be remedied by entry only, without any form of law, or against the disseisor himself; but required a legal process against his heir or alienee. And when the remedy by assise was introduced, under Henry II., to redress such disseisins as had been committed within a ferv years next preceding, the facility of that remedy induced others, who were wrongfully kept out of the freehold, to feign, or allow themselves to be disseised, merely for the sake of the remedy. Blackst. Comm. book iii. ch. 10.

If a feme sole be seised of lands in fee, and is disseised, and then taketh husband; in this case the husband and wife, as in right of the wife, have right to enter, aud yet the dying seised of the disseisor shall take away the entry of his wife after the death of the husbarid. (Co. Lit. 246.) If a person disseises me, and, during the disseisin, he or his servants cut down the timber growing upon the land, and afterwards I re-enter into the land, I shall have action of trespass against him; for the law, as to the disseisor and his servants, supposes the freehold to have been always in me: but if the disseisor be disseised by another, or if he makes a feoffment, gift in tail, lease for life or years, I shall not have an action against the second disseisor, or against those who come in by title: for all the mesne profits shall be recovered against the disseisor himself. (11 Rep. 52. Keilw. 1.)

By Magna Charta, 9 Henry III., c. 29, no man is to be disseised, or put out of his freehold, but by lawful judgment of his peers, or by the law of the land; and by stat. 32 Henry VIII. c. 33 , the dyıng seised of any disseisor of, or in any lands, \&cc., having no right therein, shall not
be a descent in law, to take away an entry of a person having lawful title of entry, except the disseisor hath had peaceable possession five years, without entry or claim by the person having lawful title.
According to some writers, disseisin is of three sorts, viz. simple disseisin, committed by day, without force and arms: and disseisin by force, and fresh disseisin. Assises are called writs of disseisin, which lie against disseisors in any case: whereof some are termed little writs of disseisin, as being vicontial, that is, suable before the sheriff in the county court, because determinable by him without assise.

DISSEISOR is he who disseiseth, or puts another out of his land : as the disseisee is he who is put out. If a disseisor, after he has expelled the right owner, gains peaceable possession of the lands five years without claim, and continues in possession, so as to die seised, and the land descends to his heirs, they will have a right to the possession till the owner recovers at law; and the owner shall lose lis estate for ever, if he doth not prosecute his suit within the time limited by the statute of limitations.
And if a disseisor levy a fine of the land whereof he is disseised unto a stranger, the disseisor shall keep the land for ever; for the disseisor against his own fine cannot claim, and the conusee cannot enter, and the right which the disseisor had, being extinct by the fine, the disseisor shall take advantage of it. (2 Rep. 56.) But this is to be understood, where no use is declared of the fine by the disseisee; when it shall enure to the use of the disseisor, \&c. (1 Lev. 128.) A disseisor in assize, where damages are recovered against him, shall recover as much as he lath paid in rents chargeable on the lands before the disseisin. (Jenk. Cent. 189.) But if the disseisor or his feoffee sows corn on the land, the disseisee may take it before or after severance. (Dyer 31. 173. 11 Rep. 46.) Where a man hath a house in fee, \&c., and locks it, and then departs; if another person comes to his house, and takes the key of the door, and says that he claims the house to himself in fee, without any entry into the house, this is a disseisin of the house. (2 Danv. Abr. 624.) If the feoffor enters on the land of the feoffee, and makes a lease for years, \&c., it is a disseisin; though the intent of the parties to the feoffment was, that the feoffee should make a lease to the feoffor for life. (2 Rep. 59.) If lessee for years is ousted by his lessor, this is said to be no disseisin. (Cro. Jac. 678.) A man who enters on another's land, claiming a lease for years, who hath not such lease, is a disseisor; though if a man enters into the house of another by his sufferance, without claiming any thing, it will not be a disseisin. (9 Henry VI., 21, 31. 2 Danv. 625.) If a person enters on lands by virtue of a grant or lease, that is, void in law, he is a disseisor. (2 Danv. 630.) As the king in judgment of law can do no wrong, he cannot be a disseisor. (1 Ed. V. 8.) A disseisur is to be fined and imprisoned; and the disseisee restored to the land, \&c., by stat. 20, Henry III. c. 3. Where a disseisor is disseised, it is called disseisin upon dissersin.

DISSE'MBLE, v.a. \& v.n. Disse'mbler, n.s.
Disse'mbling, n.s.
Dissémblingly, adv.
Fr. dessimuler; Span. and Port. dissimular; Ital. and Latin, dissimulare, from dis privative, and simulare, signifying to 'feign that not to be which is.' Minsheu.

Ye dissembled in your hearts when ye sent me unto the Lord your God, saying, Pray for us.

Jeremiah xlii. 20.
Your son Lucentio
Doth love my daughter, and she loveth him, Or both dissemble deeply their affections.

Shakspeare.
I that am curtailed of this fair proportion, Cheated of feature by dissembling nature, Deformed, unfinished. Id. Richard III.
Such an one, whose virtue forbiddeth him to be base and a dissembler, shall evermore lang under the wheel.

Raleigh.
The French king, in the business of peace, was the greater dissembler of the two. Bacon. Henry VII.

She answered, that her soul was God's; and touching her faith, as she could not change, so she would not dissemble it.

Hayward.
Man is to man all kind of beasts; a fawning dog, a roaring lion, a thieving fox, a robbing wolf, a dissembling crocodile, a treacherous decoy, and a rapacious vulture.

Cowley.
Thy function too will varmish \(0^{\prime}\) er our arts, And sanctify disembling.

\section*{Rowe's Ambitious Stepmother.}

If the show of any thing be good for any thing, I am sure sincerity is hetter; for why does any man dissemble, or seem to be that which he is not, but because be thinks it good to have such a quality as he pretends to ?

Tillotson.
In vain on the disembled mother's tongue
Had cunning art and sly persuasion hung;
And real care in vain, and native love,
In the true parents panting breast had strove.
Prior.
Men will trust no farther than they judge a person for sincerity fit to be trusted : a discovered dissembler can achieve nothing great and considerable. South.

It is true indeed that we should not dissemble and flatter in company; but a man may be very agreeable, strictly consistent with truth and sincerity, by a prudent silence where he cannot concur, and a pleasing assent where he can.

Spectator.
They are the happiest, who dissemble best Their weariness; and they the most polite
Who squander time and treasure with a smile,
Though at thicir own destruction.
Cowper.
DISSE'MINATE, v. a. From Lat. disse-
\(\left.\begin{array}{l}\text { Dissemina'tion, } \\ \text { D.s. } .\end{array}\right\}\) mino, dis diversely,
Dissemina'tor. To diffuse, or scatter, as seed. The act of sowing or diffusing.

Ill uses are made of it many times in stirring up seditions, rebellions, in disseminating of heresies, and infusing of prejudices.

Hammond.
Though now the greatest distance from the beginning of errour, yet we are almost lost in its aissemination, whose ways are bouudless, and contess no circumscription.

Rrowne.
There is a nearly uniform and constant fire of heat disseminated throughout the body of the earth.

Woorluard.

The Jews are so disseminated through all the trading parts of the world, that they are become the instruments by which the most distant nations converse with one another, and by which mankind are knit together in a general correspondence.

Spectator.
By firmness of mind, and frecdom of speech, the gospel was disseminated at first, and must still be maintained.

Atterbury.

DISSENT', v. a. \& n.s.
DISSEN'SIon, \(n . s\).
DISSEN'SIous, \(a d j\).
Fr. dissenter; It. and Lat. dissentire; from dis (diversely) and sentio, to perceive or discern.
to differ; applied To disagree in judgment; to differ; applied
particularly to a difference of opinion with the particularly to a difference of opinion with the
established church of England. Dissension is disagreement in any degree: dissensious, quarrelsome.

We han founden this wicked man stirynge dissensioun to alle iewis in alle the world, and auctour of dissencioun of the secte of Nazarcns.

Wiclif. Dedis. 24.
Either in religion they have a dissensious head, or in the communwealth a factious head.

Ascham's Schoolmaster.
We see a gencral agrcement in the sccret opinion of men, that every man ought to embrace the religion which is true, and to shun, as hurtful, whatever dissenteth from it, but that most which doth farthest dissent.

Hooker.
You dissensious rogues.
That rubbing the poor itch of your opinion, Make yourselves scabs. Shahspeare. Coriolanus.

Friends now, fast sworn,
Whose hours, whose bed, whose meal, whose exercise,
Are still together; who twine, as 'twere in love Unseparable, shall within this hour,
On a dissension of a doit, break out
To bitterest enmity.
Id.
Let me not be any occasion to defraud the publick of what is best, by any morose or perverse dissentings. King Charles. How will dissenting brethren relish? What will malignants say?
In wealth and multitude, factious thcy grow; But first among the priests dissension springs. Milton.
Debates, dissensions, uproars are thy joy ; Provnked without offence, and practised to destroy.

Dryden.
In propositions, where though the proofs in view are of most moment, yet there are grounds to suspect that there is proof as considerable to be produced on the contrary side; there suspense or dissent are voluntary actions.

Locke.
They will admit of matter of fact, and agree with dissenters in that; but differ only in assigning of reasons.

Id.
There are many opinions in which multitudes of men dissent from us, who are as good and wise as ourselves.

Addison:
What could be the reason of this general dissent from the notion of the resurrection, secing that almost all of them did believe the immortality of the soul?

Bentley's Sermons:
Dissenters. Of the comprehensiveness of this term as designating, in strict language, all who differ in opinion from the Established Church, few of our readers can be altogether ignorant. Mr. Justice Blackstone considers a
cognate legal term, non-conformists, as embracing all who absent themselves from the public worship of the Church, whether, 1 . Through total irreligion, they attend the service of no other persuasion; or, 2. Through a mistaken zeal, ' weakness of intellect,' or 'perverseness and acerbity of temper, whicn,' he adds, ' is often the case,' they unite in worship with other communities, 'herding with a party.' 'This !ater class of dissenters is divisible again, according to the same learned authority, in.o 'the papists,' who divide from the national church, 'upon ma terial though erroneous reasons,' and the Pro testant Dissenters, many of whom divide from it ' upon matters of indifference; or, in other words, upon no reason at all.'

These terms in fact, then, though constantly used to describe large bodies of religionists, are neither of them, religious terms : they simply express the political relation of a heterogeneous multitude of their fellow-subjects to the established church ; a multitude including the wide extremes of the devout catholic and the avowed unbeliever; the Painite and the Southcottite; the ultra-Calvinist and the rational Unitarian. They are terms too, which, unlike the vast majority of those in our Lexicon, we trust, will be found to vary in their neeaning according to that particular part or subdivision of our common, happy country in which these observations may meet the eye of our readers. In England, for instance, his majesty's good and acute subjects of the kirk of Scotland, in common with the other Presbyterians, are dissenters ; in Scotland, the Episcopalian of the ever-loyal church of England is a dissenter ; in Canada, the Protestant of whatever denomination; all of them in their respective situations, in the places 'aforesaid,' and for reasons by them deemed ' material' or ' no reason at all,' dividing from the established church.

We can only, therefore, in this place affix to so vague a term its more common and popular meaning. Connected necessarily with no religion, as we, after Mr. Justice Blackstone, contend, it has still too much of the savour of piety about it to be affiliated by the unbeliever; on the other hand it has too little of antiquity and dignity to be acknowledged by the consistent Catholic; to the Protestant dissenters, therefore, whatever the sages of the law may determine, and whatever may be its unhappy or discreditable associations, it seems, at last to belong: they are The Dissenters of common parlance; and we propose, therefore, to offer to our readers in this paper, 1st, Some account of their existing legal situation and rights; 2dly. Of the principles common to this body as separatists from the establishment ; and, 3dly. Of their political history.
1. Of the legal situation of Dissenters.-The basis of the existing law of England, on the subject of separatists, is still to be found in the statutes of 1 Eliz. c. 2. §. 14.; 23 Eliz. c. 1.; and 29 Eliz.c. 6. The first of these enacts, that every person, not having reasonable excuse, shall resort to his parish church or chapel, or upon reasonable let thereof to some usual place where common prayer shall be used, on every' Sunday and holiday,' on pain of punishment by the censures
of the church, or of forfeiting, for every offence, 12 d . The second, that every person above the age of sixteen, who shall not repair to some church or chapel, or usual place of common prayer, shall forfeit for every month \(£ 20\); and if he shall forbear for twelve months, he shall be bound to the good behaviour till he conform. The third, that every offender in not repairing to church, having been once convicted, shall, without any other indictment or conviction, pay half yearly into the exchequer \(£ 20\) for every month afterwards till he conform; which if he shall onit to do, the king may seize all his goods, and two parts of his lands. And by 3 Jac. I. c. \(4, \S\). 11, the king may refuse the \(£ 20\) a month, and take two parts of the land at his option.

By the 3 Jac. I. c. 5, no recusant, not repairing to church, being convicted thereof, shall enjoy any public office; or shall practise law or physic, or be executor, administrator, or guardian. And by the 35 El . c. 1., if any person refusing to repair to church, shall be present at any assembly, meeting, or conventicle, under pretence of any exercise of religion, he shall be imprisoned till he conform; and if he shall not conform in three months, he shall abjure the realm, which if he shall refuse to do, or after abjuration shall not go, or shall return without license, he shall be guilty of felony, without benefit of clergy. And whether he shall abjure or not, he shall forfeit his goods and his lands during life.

These severe injunctions and penalties are suspended, but not repealed, by the celebrated Toleration Act, 1 W. \& M. st.1. c. 18, 'for exempting their majesty's protestant subjects, dissenting from the church of England, from the penalties of certain laws;' which is confirmed by stat. 10 An. c. 2, and declares that neither the laws above-mentioned, nor any other penal laws made against popish recusants (except the corporation and test acts), shall extend to any dissenters, other than papists, and such as deny the Trinity : provided, 1. That they take the oaths of allegiance and supremacy (or make a similar affirmation, being Quakers-see stat. 8 Geo. I.c. 6 ); and subscribe the declaration against popery. 2. That they repair to some congregation certified to, and registered in, the court of the bishop or archdeacon, or at the county sessions. 3. That the doors of such meeting-house shall be unlocked, unbarred, and unbolted; in default of which the persons meeting there are still liable to all the penalties of the former acts.

The offence of non-conformity is therefore not to be considered as legally abrogated, although it ' ceases to exist,' as Blackstone says, ' with regard to protestant dissenters, during their compliance with the condition imposed by the act of toleration : and, under these conditions, all persons, who will approve themselves no papists or oppugners of the Trinity, are left at full liberty to act as their consciences shall direct them in the matter of religious worship. And if any person shall wilfully, maliciously, or contemptuously disturb any congregation, assembled in any church or permitted meeting-house, or shall misuse any preacher or teacher there, he shall (by virtue of the same statute), be bound over to the sessions of the peace, and forfeit \(£ 20\) But by statute 5 Geo. I. c. 4 , no mayor or principal
magistrate must appear at any dissenting meeting with the ensigns of his office, on pain of disability to hold that or any other office; the legislatur: judging it a matter of propriety, that a mode o: worship set up in opposition to the national, when allowed to be exercised in peace, should be exercised also with decency, gratitude, and humility. Neither doth the act of toleration extend to enervate those clauses of the statutes 13 and 14 Car. II. c. 4, and 17 Car. II. c. 2, which prohibit (upon pain of fine and imprisonment), all persons from teaching school, unless they be licensed by the ordinary, and subscribe a declaration of conformity to the liturgy of the church, and reverently frequent divine service established by the laws of the kingdom.'
Since the time of Blackstone, by stat. 53 Geo. III. c. 160 , so much of 1 W. \& M. c. 18 , as excepts persons denying the Trinity, from the benefit of that act, and so much of stat. 9 and 10 W. III. c. 32, as imposes penalties on persons denying the Trinity, are repealed; 57 Geo. III. c. 70 , also repeals the like provisions of the Irish act 6 Geo. I.c. 5 .
So far, therefore, has our statute-book been cleared of all that directly or practically imposes penal restrictions on Protestant dissenters in the exercise of their religion. But important barriers are still placed around them in regard to what they consider as their civil rights. The statute 13 Car. 2, st. 2, c. 1, usually called the Corporation Act, disqualifies for offices relating to the government of any city or corporation, such as have not, within a twelvenonth before their election, received the sacrament of the Lord's Supper, according to the rites of the church of England (enjoining also the oaths of allegiance and supremacy); and the 25 Car . II. c. 2, commonly called the Test Act, directs all officers civil and military, to take the oath, and make the declaration against transubstantiation six montlis after their admission, and also within the same time to receive the sacrament of the Lord's Supper, according to the usage of the church of England. If, without taking the sacramental qualification within the time prescribed by the act, a person continues to occupy a civil office, or to hold a military commission, and is lawfully convicted, then he is disabled from thenceforth, for ever, from bringing any action in course of law, from prosecuting any suit in any court of equity, trom benng guardian of any child, or executor or administrator of any person, as well as from receiving any legacy. Such is the legal situation of the dissenting laity.

Dissenting teachers in order to be exempted from the penalties of the statutes 13 and 14 Car . II. c. 1 ; 15 Car. II. c. 6 , must subscribe the articles of religion mentioned in stat. 13 Eliz. c. 12 (which only concern the confession of the true Christian faith, and the doctrine of the sacraments); with an express exception of those relating to the government and powers of the church, and to infant baptism; or, if they scruple subscribing the same, are to make and subscribe the declaration prescribed by 19 Geo. III. c. 44, professing themselves to be Christians and Protestants, and that they believe the Scripture to contain the revealed will of God, and to be the rule of doctrine and practice.
'And the justices at the sessions where any Protestant dissenting minister shall live, are required to tender and administer the said lastmentioned declaration to such minister, upon his offering himself to make and subscribe the same, and thereof to keep a register; for the registering of which he shall pay 6 d . to the officer of the court, and no more; and \(6 d\). for a certificate thereof signed by such officer.'

By stat. 10 Ann. c. 2, § 9. Any preacher or teacher of any congregation of dissenting protestants, duly qualified according to the act of W. \& M., shall be allowed to officiate in any congregation, although the same be not in the county where he was so qualified; provided that the place of meeting hath been duly certified and registered: and such teacher or preacher shall, if required, produce a certificate of his having so qualified himself, under the hand of the clerk of the peace where he was qualified; and shall also, before any justice of such county or place where he shall so officiate, make and subscribe such declaration, and take such oaths as aforesaid, if required.

And by 1 W. \& M. c. 18. § 11., and 19 Geo. III., c. 44. § 1. Every such teacher and preacher, that is a minister, preacher, or teacher of a congregation, having taken the oaths, and subscribed as aforesaid, shall from thenceforth be exempted from serving on any jury, or from being chosen or appointed to bear the office of churchwarden, overseer of the poor, or any other parochial or ward office, or other office, in any hundred of any shire, city, town, parish, division, or wapentake, and by 42 Geo. III., c. 90 , and 43 Geo. III., c. 10, from serving in the militia, either personally or by substitute, if he be a licensed teacher of any separate congregation, and has been licensed twelve montlis previous to the yearly general meeting appointed to be held in October, \&c.: and by 43 Geo. III., c. \(96, \S 12\), from serving under the army of reserve act, If he be a licensed teacher of any separate congregation in holy orders, or pretended holy orders, and not carrying on any other trade, or exercising any other occupation for his livelihood, except that of a schoolmaster.

By stat. 52 Geo. III., c. 155, § 2, no congregation of Protestants for religious worship, where more than twenty persons shall be present besides the preacher's family, shall be permitted (unless registered under former acts) until duly certified to the bishop, \&c., or to the sessions, and a due return shall be made thereof once a year to the bishop or archdeacon, and registered in the court of the bishop, \&c., on penalty of f20 on every person allowing any such congregation, to meet in any place occupied by him. Persons preaching in any place without consent of occupiers, are liable to a penalty of \(£ 30\).

And by § 4. Every person who shall teach or preach at, or officiate in, or shall resort to any congregation or assembly for religious worship of protestants, whose place of meeting shall be duly certified according to the provisions of this act, or any other act or acts relating to the certifying and registering of places of religious worship, shall be exempt from all such pains and
penalties under any act or acts relating to religious worship, as any person who shall have taken the oaths and made the declaration prescribed by or mentioned in the \(1 \mathrm{~W} . \& \mathrm{M}\). or any act amending the said act, is by law exempt. And by § 6, it is provided, that no person shall be required by any justice to go to any greater distance than five miles from his own home, or from the place where he shall be residing at the time of such requisition, for the purpose of taking such oaths as aforesaid.
§ 7. Any of his majesty's protestant subjects may appear before any one justice, and produce to such justice a printed or written copy of the said oaths and declaration, and require such justice to administer such oaths, and to tender such declaration to be made, taken, and subscribed by such person; and thereupon such justice sliall administer such oaths, and tender such declaration to the person requiring to take and make and subscribe the same; and such person shall take and make and subscribe such oaths and declaration in the presence of such justice accordingly; and such justice shall attest the same to be sworn before him, and shall transmit or deliver the same to the clerk of the peace for the county, \&c., for which he shall act as such justice, before or at the next general or quarter sessions of the peace for such county, \&c. And for the making and signing of which certificate, where the said oaths and declaration are taken and made on the requisition of the party taking and making the same, such justice shall be entitled to demand and have a fee of \(2 s .6 d\). and no more: and such certificate shall be conclusive evidence that the party named therein has made and taken the oaths and subscribed the declaration in manner required by this act.

Dissenters chosen to any parochial or ward offices, and scrupling to take the oaths, may execute the office by deputy, who shall comply with the law in this behalf. Stat. 1 W. \& M. st. 1, c. 18.-But it appears that they are not subject to fine on refusing to serve corporation offices. For where a freeman of London was elected one of the sheriffs, but refused to take the office on account of his being a dissenter, and, as such, not having received the sacrament according to the rites of the Church of England, within a year before his election, an action was brought in the Sheriff's Court, for the. penalty incurred by such refusal, and a judgment recovered; which judgment was affirmed in a writ of error brought in the court of Hustings. But the defendant having obtained a commission of errors, the judges' delegates reversed both judgments; and, on a writ of error in parliament, this judgment of reversal was affirmed; the judges being (except one) of opinion that the defendant was at liberty to object to the validity of his election, on the ground of his own nonconformity.
And thus the reader has before him a summary view of the existing legal situation and rights of the Protestant Dissenting body.
2. Of the principles common to thes body as separatists from the establishment, we know of no general authentic summary : but dissenters at large are very familiar with those arguments for
the liberty of conscience, the right of private judgment, and final obedience to God alone in religion, which they consider as involving the right and duty of the course they adopt. They are also not without respectable publications on the subject, by learned individuals of their hody. It will be sufficient to mention those of Doddridge, Watts, Dr. John Taylor, Neal, Delaune, Palmer, and Towgood, all of whom have produced able defences of the dissenting system.

The celebrated Richard Baxter declared, what is truc, perhaps, of a majority of the existing dissenters, that the Non-conformists of his day agreed with the doctrines of the thirty-ninc articles, and differed only from the church in the form of government. He says, that the Independents, as well as Presbyterians, offered to subscribe to the articles, except as to prelacy and ceremony. 'We are one,' lie adds, ' with the church of England in all the necessary points of faith and Christian practice.'

Yet these men departed from the church of England, at the expense of all their earthly comforts; and some of them braving persecution, 'even to death;' laid the foundation of the existing dissent, by denying the authority of any body of fallible men to 'decree rites and ceremonies' in the church. They contended, as do the modern dissenters, that what was left indifferent by the only lawgiver of his church, should not be made important and peremptorily enjoined upon his followers. They revoltcd, particularly, at subscribing to the principle of 'a power in the church to decree rites and ceremonies, and to have authority in matters of faith,' as so indefinite and extensive, that under the shadow of it, all the enormous usurpations and superstitions of the church of Rome might be and have been included. If the church of England, it is moreover said, claims and exercises this power, and obliges all its ministers to subscribe to articles of faith, which it hath authoritatively decreed, and to use in rcligious worship ceremonies and rites, which it hath authoritatively enjoined; hath not the church of France, or the church of Spain, the same authority and power? It cannot be an exclusive privilege of any one church. And if it be allowed that the church of Rome has this prerogative, such a claim would overthrow the Reformation and the foundatious of the church of England itself. They say, with a modern divine of the church of England, 'Whenever useless rites and cercmonies are imposed, corruptions are passed into a law, and the terms of communion arc such as are not authorised by the law of Christ, then it becomes a duty to dissent, and they are the separatists who compel others to divide, not they who deplore the necessity of so doing.'

But dissenters have further enquired, whe are the persons that are, in point of fact, invested with this authority and power? In other words, who are the church? 'This power to order the manner of God's worship, and to settle articles of faith, is not lodged in the bishops and clergy, who are usually denominated our spiritual pastors and guides, but entirely in the king and parliament of these realms, under whose direction and control the clergy are to act. Accord-
ingly, the dissenters allege, that the church of England is a parliamentary church; not properly an ally, but a mere creature of the existing government, depending entirely upon thic acts and authority of parliament for its essence and frame. The qualifications of its ministers, their power to officiatc, the manner in which they are to administer the sacraments, are all limited and prescribed by authority of parliament : and this authority, which at first made, can alone alter and new make it; can abolish, or add to, its articles or rites, according to its pleasure, even though the whole body of bishops and clergy ever so much dislike or ever so earnestly protest against it. Therefore, while some dissenters justify their dissent from the establishment, because, for example, they think that some ceremonies imposed, or the various orders of ministers, or the received suhjects of baptism, or the mode of administering baptism and the Lord's supper, or the state of her discipline, are incompatible with the scriptural pattern; others go farther, and attempt to prove, that every religious establishment is neither more nor less than a direct violation of some of the strongest injunctions of the great Head of the church.

These quote the words of Jesus Christ, 'My kingdom is not of this world,' as virtually forbidding all such attempted alliances between church and state, as every ecclesiastical establishment involves. They say that such a systenı debases Christianity into an enginc of state, secularises its ministers and institutions, argucs a concealed distrust of the apostolic weapons of faith, prayer, and 'the words of truth and soberness, and is, in its influence on the conduct of the dominant party towards those who differ from them, essentially persecuting.

In confirmation of this view of the subject, they adduce the existing state of the laws with regard to dissenters. They argue that, every man has a right to the common privileges of the society in which he lives; and among these common privileges is a legal capacity for serving his sovercign and country; a right, so important, that the forfeiture of it is made the punishment of some of the greatest crimes. No man who does not forfeit that capacity' of serving his sovereign and country, which is his natural right, as well as the honor and emoluments that may happen to be connected with it, by overt-acts, ought to be deprived of them; and disabilities that are not thus incurred, are unjust penalties, implying both disgrace and privation. Punishment, without the previous proof of guilt, cannot be denied to be an injury; and injuries inflicted, on account of religion, are undoubtedly persecutions.

The dissenters, therefore, contend, that the subjection to higher powers, and obedience to magistrates, which the Scriptures enjoin on Christians, relates only to civil, not at all to religious matters ; and that so far is Christianity from enjoining, that it actually forbids obedience to civil governors in things of a religious nature. It commands us to 'call no man upon earth father or master,' Matthew xxiii. 8, 9, i.c. to acknowledge no authority or jurisdiction of any in matters of religion, but to remomber that
'One only is our master' and lawgiver, even Christ; and that all Christians are brethren, Matthew xx. 25.

We cannot follow out the dissenting system into its numerous separate lines of divergence from the established church. Under the particular names of each of their well-known denominations will these be fully discussed. But many pious and excellent men, we may add, have divided from the church of England, on account of her laxity in discipline; others from the evident disagreement, as they allege, between the doctrines of the desk, or liturgy, and those of the pulpit ; and while the major part of dissenters, as we have stated, profess agreement with her doctrinal articles, a respectable minority would object to several of them. The entire system of Wesleyan Methodism, a species of modern dissent, has grown out of the first of these complaints against the church. We do not feel ourselves called upon to add more as to the general principles of this body. See Methodists.
3. Their history, dissenters, of course, contend, corninences with the persecutions of that early sect of our religion with whose affairs the book of the Acts of the Apostles is occupied : but, in this country, they consider themselves the successors of the Wicliffites and Lollardites of the fourteenth century. Of John Wicliff Mr. Gilpin says, 'The authority claimed by the church he strenuously opposed. It was a scandal, he would say, to the Christian church, that any of its members should set up their own authority against that of their Saviour. The great argument of that day (which was indeed a subtle one) for the authority of the church, was this. Many persons, besides Mathew, Mark, Luke, and John, wrote gospels; but the church rejected them all, excepting these four : and this it did by its own proper authority. It might, by the same authority, have rejected those four gospels, and lave received others. It follows, therefore, that the authority of the church is above that of any gos-pel.-To this Wicliff replied, that the evidence for the received gospels was so strong, and that for the rejected ones so weak, that the church could not have done otherwise thanit did, without doing violence to reason. But the best argument, he said, if it were proper to avow it, for supporting the authority of the church, was the necessity of it to support the tyranny of the pope. This was what made it worth defending at the expense of truth. In another place, speaking on the same subject, he says, that the pope would not submit lis actions to the same criterion, by which Christ was contented to have his actions tried. If I do not, says Christ, the works of my father which is in heaven, believe me not. But the pope's authority, it seems, must be acknowledged, though he manifestly does the works of the devil. Thus, says he, Christians are in greater thraldom than the Jews under the old law; and that liberty, by which Christ hath made us free, is, by the wickedness of designing men, changed into the most absolute spiritual bondage. The days, says he, I hope, will come, when men will be wise enough to shake from their necks the dominion of human ordinances; and disdain
submission to any ecclesiastıcal injunctions, but such as are plainly authorised by the word of God.'

Early in the Reformation, a respectable party of the church of England contended for a more complete departure from the popish models of church government and discipline. Bishop Hooper, perhaps, led the way to the practical secession that afterwards took place, by refusing to be consecrated in the Roman pontificals. This was in the reign of Edward VI. On the persecutions that arose under queen Mary, a considerable number of the British exiles settled at Frankfort, and agreed to conduct their worship, without answering aloud after the minister, and without using the liturgy and surplice; to begin the public service with a general confession of sins, then to sing a psalm, after which the minister prayed for the divine assistance, and next proceeded to the sermon; after sermon, to use a general prayer for all estates, and particularly for England, at the end of which were subjoined the Lord's prayer, and a rehearsal of the articles of belief; then the people were to sing another psalm, and the minister to dismiss them with a blessing. Such was the order which they had unanimously adopted; and, having chosen a minister and deacons, they invited their dispersed brethren to join with them. In the year 1556 Dr . Cox joined them, with several of his friends; who interrupted the public service by answering aloud after the minister, and read the whole litany, in violation of the agreement upon which the congregation was formed. They out-numbered the first settlers, and, obtaining leave of the magistrates for the free use of king Edward's servicebook, performed divine worship according to the rites that had been authorised by that prince. The original party, upon this, left the city of Frankfort, and removed to Basil and Geneva. Here commenced the distinction of Puritans and Conformists, by which the two parties were ever afterwards known, the former being called Conformists, on account of their compliance with the ecclesiastical laws of Edward VI., and the latter, Nonconformists and Puritans, from their insisting upon a form of worslip of a purer kind, as they alleged.
On the accession of queen Elizabeth, the sclism became more important. Dr. Cox was appointed bishop of Ely; and the standard of orthodoxy, according to this divine, and the majority of the bishops, was 'the queen's supremacy and the laws of the land;' whilst the Puritans contended for ' the decrees of provincial and national synods,' allowed and enforced by the civil magistrate; for neither party, it must be allowed, was for admitting full liberty of conscience, and freedom of religious profession.

Ministers were now obliged to comply with an act for the uniformity of common prayer and service in the church and administration of the sacraments ; to subscribe a declaration of faith, issued by order of the archbishops and bishops, for the unity of doctrine; to take the oath of supremacy to the queen, \&cc. Tine question about habits was revived; and in 1566 these and several other ceremonies, imposed by law, compelled the puritans to an open separation. Ia
the following year they published other objections against the hierarchy and various ceremonies, for the use of which, they contended, there was no foundation in Scripture or antiquity. The leaders of this separation were chiefly beneficed persons of the diocese of London; who first assenbled, with such of their flocks as chose to follow them, in woods and private houses, subjecting themselves to a variety of legal penalties and frequent imprisonment. The adherence of the puritans to Calvinistic principles seems, in no small degree, to have urged the established clergy at this time to adopt the intricate distinctions of Arminius on the subject of grace, freewill, \&c. But several episcopal divines remained attached to the puritan system in the reign of James I.; and all these abettors of Calvinism, whether episcopal or presbyterian, were called doctrinal puritans. At length, according to Fuller (Church Hist. book ix. p. 97, book x. p. 100), the name was extended to stigmatise all those who endearoured in their devotions to acconpany the minister with a pure heart, or who were remarkably holy in their conversation.
Queen Elizabeth and James I. treated these early dissenters with that rigor which induced many of them to emigrate to the colonies. In the year 1629 they founded Massachusett's Bay. The colony of Connecticut was formed by emigrants of the same class in 1636, and that of New Heven by those who, in 1637 , fled from the persecution of Laud, and the oppressions of the star-chamber and high commission courts. The puritans were afterwards not allowed to transport themselves to New England; we have seen, in the article Croмwell, how singularly the future lord protector was then prevented expatriating himself; and many of them removed, with their families, to the Low Countries.
\(\mathrm{O}_{\mathrm{n}}\) the restoration of Charles II., in the year 1660 , the name of Puritans, says bishop Burnet, was changed into that of Protestant Nonconformists, who were subdivided into Presbyterians, Independents, Anabaptists, and Quakers. At this time a second Act of Uniformity was passed, by which all who refused to observe the rites, and subscribe the doctrines, of the cluurch of England, were entirely excluded from power. From this period until the reign of king William III. the Nonconformists were in a very precarious situation, sometimes involved in calamity and trouble, and at other times enjoying intervals of tranquillity, according to the varying temper of the court and ministry. But in the year 1689 the'memorable bill for the toleration of all Protestant dissenters from the church of England, except impugners of the Trinity, passed in parliament almost without opposition, and delivered those who could comply with the conditions it imposed from the penal laws to which they had been so long subjected.
Fluctuations have taken place in the political treatment of dissenters since this period, and in the close of the reign of queen Anne the act of Occasional Conformity, which was pushed forward by the high-church party, threatened the extinction of their new liberties. But the accession of the present illustrious House of Brunswick to the throne of these realms has confirmed and
enlarged them; and each of the successive monarchs has renewed and redeemed his pledge to keep the toleration act inviolate: and while the parties interested are still hopeful of the abrogation of all excluding statutes, on the subject of religion, they wait with patience the final conviction of the government and country as to the period of awarding their rights.

Dissentient; a word literally signifyirg they dissent or disagree, prefixed to protests, or rather to the reasons of dissent, given in by protesting peers, in the upper House of Parliament, to be entered on the journals of the house.

DISSERTA'TION, n. s. Lat. dissertatio. A discourse; a disquisition, a treatise.

Plutarch, in his dissertation upon the Poets, quotes an instance of Homer's judgment in closing a ludicrous scene with decency and instruction.

Broome on the Odyssey.
I have known a woman branch out into a long extempore dissertation upon the edging of a petticoat, and chide her servant for breaking a china cup in all the figures of rhetoric.

Addison.
The following relation is so curious and entertaining, and the dissertations that accompany it so judicious and instructive, that the translator is confident his attempt stands in need of no apology.

Johnson. Preface to Father Lobo's Voyage.
DISSE'RVE, v. a.
Dissérvice, n. s.
Dis and serve.
Dissénvice, 10 do injury to;
Disse rviceable, adj. (to damage; hirt.
Dissérviceableness, n.s.
Having never done the king the least service, he took the first opportunity to disserve him, and engaged against him from the beginning of the rebellion.

Clarendon.
All action being for some end, and not the end itself, its aptness to be commanded or forbidden, must be founded upon its serviceableness or disserviceableness to some end.

Norris.
We shall rather perform good offices unto truth, than any disservice unto relaters who have well deserved.

Browne.
Great sicknesses make a sensible alteration, but smaller indispositions do a proportionable disservice.

Cullier.
Desires of things of this world, by their tendency, promote or disserve our interests in another. Rogers.
- DISSETTLE, o.a. Dis and settle. Tounsettle; to unfix.

DISSEV'ER, v.a. Dis and sever. In this word the particle dis makes no change in the signification, and therefore, says Dr. Johnson, the word, though supported by great authorities, ought to be ejected from our language. To part in two ; to break ; divide; rend asunder ; disunite.

\section*{Dissever your united strengths,}

And part your mingled colours once again.
Shakspeare.
The dissevering of fleets hath been the overthrow of many actions.

Raleigh.
Shortly had the storm so dissevered the company, which the day before had tarried together, that most of them never met again, but were swallowed up.

Sidney.
The meeting points the sacred hair dissever From the fair head, for ever and for ever. Pope.

For surprise is only produced when any external irritations suddenly obtrude themselves, and dissever far passing trains of ideas.

Darwin.
DIS'SIDENCE.n.s. Lat. dissideo. Dis-
Dis'sident, jcord; disagreement. see the article Dissidents.

DISSI'LIENCE, n.s.) Lat. dissilio. The Dissílient, udj. Gact of starting asunDissíliation, n.s. \({ }^{\text {d }}\) der.
The air having much room to rereive motion, the dissilition of that air was great.

Boyle's Spring of the Air.
DISSIM'ILAR, adj. Dis and similar. UnDissimiliarity, n.s. \(\}\) like; heterogenenus:
Dissimilitude. Dissimilítude. Swant of similitude.
Thereupon grew marvellous dissimilitudes, and by reason thereof jealousies, heartburnings, jars, and discords.

Hooker.
Simple oil is reduced into dissimilar parts, and yields a sweet oil, very differing from sallet oil.

Bcyle:
The dissimiliturle between the Divinity and images, shews that images are not a suitable means whercby to worship God.

Stillingfleet.
As human society is founded in the similitude of some things, so it is promoted by some certain dissimilitudes.

Grew.
The light whose rays are all alike refrangible, I call simple, homogeneal, and similar; and that, whose rays are some more refrangible than others, I call compound, heterogeneal, and dissimilar. Newton.

If the principle of reunion has not its energy in this life, whenever the attractions of sense cease, the acquired prineiples of dissimilurity must repel these beings from their centre.

Cheyne.
Women are curious observers of the likeness of children to parents, that they may, upon finding dissimilitude, have the pleasure of hinting unchastity.

Pope's Odyssey, Notes.
Ideas of the same race, though not exactly alike, are sometimes so little different that no words can express the dissimilitude.

Johnson. Preface to Dictionary.
DISSIMULATION, n.s. 子 Lat. dissimulaDissim'ulating, n.s. \}tio. See Dissemble. The act of dissembling; hypocrisy; fallacious appearance or pretensions. See the extract from the Tatler.

Who coude tellen you the forme of daunces So uncouth, and so freshe countenances, Swiche subtil lokings and dissimulings,
For dred of jalous mennes appereeivings.
Chaucer. Cant. Tales.
Dissimulation is but a faint kind of policy; for it asketh a strong wit, and a strong heart, to know when to tell truth, and to do it.

Bacon.
He added not ; and Satan bowing low
His grey dissimulation, disappeared
Into thin air diffused.
Milton.
Dissimulution may be taken for a bare concealment of one's mind; in which sense we commonly say, that it is prudence to dissemble injuries. Soroth.

The learned make a difference between simulation and dissimulation. Simulation is a pretence of what is not, and dissimulation is a concealment of what is.
\[
\text { Tatler, } 213 .
\]

DISS'IPATE, o. a. \()_{\text {Fr. dissiper; Span. and }}\)
Dissíipable, adj. Portug. dissipur; Ital. Dissipa'tion. n.s. Sand Lat. dissipare, from
dis and seps, sepis, a venomous serpent, because whatever is bitten thereby, putrifies.--Minslieu To disperse ; scatter; destroy: dissipation is the act or habit of dispersing or wasting : applied figuratively also to the mind, and particularly the attention. Dissipable is an obsolete adjective for, easily dispersed, or liable to dispersion.

The heat of those plants is very dissipable, whict under the earth is contained and held in; but wheii it cometh to the air it exhaleth.

> Bacon's Natural IIistory.

Abraham was contemporary with Paleg, in whose time the famous dissipation of mankind, and distinction of languages, happened.

> Hale's Origin of Mankind.

It is covered with skin and hair, to quench and dissipate the force of any stroke, and retard the edge of any weapon.

Ray.
Gold is a wonderful elearer of the understanding ; it dissipatis every doubt and scruple in an instant. Addison.
I have begun two cr three letters to you by snatches, and been prevented from finishing them by a thousand avocations und dissipations.

Swift.
The parts of plants are very teuder, as consisting of corpuscles which are extremely small and light, and therefore the more easily dissipable.

Woodward's Natural History.
The circling mountains eddy in,
From the bare wild, the dissipated storm.
Thomson.
This slavery to his passions produced a lifc irrcgular and dissipated.

Johnson. Savage's Life.
Dissipation, in physics, an insensible loss or consumption of the minute parts of the body ; or that flux whereby they fly off and are lost.

Dissipation, Circle of, in optics, that circular space upon the retina, which is taken up by one of the extreme rays issuing from an object. When the distance of an object from the eye is too small or too great for perfect or distinct vision, the rays of each pencul, issuing from the object, cannot be united at a point on the retina; consequently, the rays of each pencil will occupy a circular space upon the retina, which circle is called the circle of dissipation, bcause the rays of a pencil, instead of being collected into a central point, are dissipated all over this circle.

DISSIDENTS, a denommation applied in Poland to those of the Lutheran, Calvinistic, and Greek professions. The kings of Poland engaged by the pacta conventa to tolerate them in the free exercise of their religion, bat they had ofter reason to complain of the violation of those promises. See Poland.

DISSO'CIATE, v. a. Lat. dissocio. To separate; disunite; part.

In the dissociating aetion, even of the gentlest fire, upon a concrete, there perhaps vanish some active aud fugitive particles, whose presence was requisite to contain the concrete under sueh a determiuate form.

\section*{Boyle.}

DIS'SOLUBLE, adj., Lat. dissolubilis. Ca-
Dissolubilitity, n.s. \& pable of separation; having one part separable from another. Disso lubility is liableness to dissolution.

Nodules, reposed in cliffs amongst the earth, being hard and not so dissoluble, are left behind.

Woodvard's Natural History.

Bodies seem to have an intrinsick principle of alieration, or corruption, from the dissolubility of their parts, and the coalition of several particles cndued with contrary and destructive qualities each to other.

Hale's Origin of Mankind.

\section*{DISSOLVE', v.a. \& n. ) Lat. dissolvere,} Dissolvent, n.s. \& adj. from dis, asunDissolv'er, \(\}\) der, and solverc,
Dissolvible, adj. \(\int_{\text {to loose. To dis- }}\) unite the parts of a thing by moisture or by heat; to melt; liquefy : hence, figuratively, to destroy a union, compact, or delusion, as well as to dissipate obscurity or doubt. Dissolvent is laving the power of dissolving; dissolver is synonymous with it as a substantive : dissol vible is, liable to liquefy or disperse by dissolution.

I haue a desier to be dissohsed and to be with Crist, it is mych more bettre.

Wiclif. Filipensis 1.
And I have heard of thee, thnt thou canst make interpretations and dissolve doubts.

Dan. v. 16.
If there be more, more woeful, hold it in ;
For I am almost ready to dissolve,
Hearing of this. Shakspeare. King Lear.
She and I, long since contracted,
Are now so sure that nothing can dissolve us. Id.
By the king's authority alone, and by his writs, parliaments are assembled; and by him alone they are prorogucd and dissolved, but each housc may adjourn itself.

Bacon to Villiers.
Down fell the duke, his joints dissolved asunder, Blind with the light, and stricken dead with wonder.

Fairfax.
Witness these ancient empires of the earth
In height of all their flowing wealth dissolved.
Milton.
Angels dissolved in hallelujahs lie. Dryden.
The commons live, by no divisions rent ;
But the great monarch's death dissolves the government.

Id.
In man and viviparous quadrupeds, the food, moistened with the spittle, is first chewed, then swallowed into the stomach, where, being mingled with dissolvent iuices, it is concocted, macerated, and reduced into a chyle.

Ray.
As wax dissolves, as ice begins to run
And trickle into drops before the sun,
So melts the youth, and languishes away.
Addison's Ovid.
Such things as are not dissolvable by the moisture of the tongue, act not upon the taste.

Nevton.
Spittle is a great dissolvent, and there is a great quantity of it in the stomach, being swallowed constantly.

Arbuthnot.
Fire, and the more subtle dissolver, putrefaction, by dividing the particles of substances, turn them black.
\(I d\).
The snow dissolved, no more is seen, The fields and wood, behold! are green.
Despotic love dissolves the bestial war. Johnson.
DIS'SOLUTE, adj. Fr.dissolu; Italian,
Dis'soluteey, adv. Span. and Port. disso-
Dis'soluteness, n.s. luto; Lat. dissulutus,
Dissolv'tion. from dis and solvere, solutus, to loose. Unrestrained by law or morals; debauched; luxurious. Dissolution is more generally applied in the literal sense, and to death. Dissoluteness, to behaviour or manners : yet both occur in the latter sense; and dissolution is used by lord Baçon for the substance formed by dissolving a body.

A giant huge and tall,
Who him disarmed, dissolute, dismayed, Unawares surprised.

Faerie Queene.
He determined to make a present dissolution of the world.
Hooker.

Such stand in narrow lanes,
And beat our watch, and roh our passengers; While he, young, wanton, and effeminate boy, Takes on the point of honsur, to support
So dissolute a crew. Shakspeare. Richard If.
I am as subject to heat as butter; a man of continual dissolution and thaw.

Id. Merry Wives of Windsor.
The life of man is always either increasing towards ripeness and perfection, or declining and decreasing towards rottenness and dissolution. Raleigh's History.

Weigh Iron and aqua-fortis severally; then dissolve the iron in the aqua-fortis, and weigh the dissolution.

Bacon.
Neither doth God say, I was the God of Abraham, Isaac, Jacob; but I am. The patriarchs still live, after so many years of dissolution.

\section*{Bp. Hall's Contemplations.}

Yet, I deny not, but dissolute men, like unskilful horsemen, which open a gate on the wrong side, may, by the virtue of their office, opea heaven for others, and shut themselves out.

Fuller.
- A longing after sensual pleasures is a dissolution of the spirit of a man, and makes it loose, soft, and wandcring, unapt for noble or spiritual employments.

Bp. Taylor.
We expected
Immediate dissolution, which we thought
Was meant by death that day.
Milton Paradise Lost.
They cooled in zeal,
Thenceforth shall practise how to live secure,
Worldly, or dissolute, on what their lords
Shall leave then to enjoy.
If we look into the common management, we shall have reason to wonder, in the great dissoluteness of manners which the world complains of, therc are any footsteps at all left of virtue.

Locke.
Is a man confident of wealth and power? Why let him read of those strange unexpected dissolutions of the great monarchies and governments of the world.

South.
The true spirit of religion banishes indced all levity of bchaviour, all vicious and dissolute mirth; but, in exchange, fills the mind with a perpetual serenity.

Addison's Spectator.
That mind is dissotute and ungoverned, which mast be hurried out of itself by loud laughter or sensual pleasure, or else be wholly inactive. Steele.

Would they have mankind lay aside all care of provisions by agriculture or commerce, hecausc possibly the dissolution of the world may happen the next moment?

Bentley.
In the next place, Sir, I am clear that the act of nnion, reciting and ratifying one Scotch and one English act of parliament, has not rendcred any change whatsoever in our church impossible, but by a dissolution of the union between the two kingdoms.

Burke.
A dissolution of all bonds ensued;
The curbs invented for the mulish mouth
Of headstrong youth were broken. Coroper.
Dissolution, in physics, a general name for all reductions of concrete bodies into their smallest parts, without regard either to solidity or fluidity; though in the usual acceptation of the word among authors, it is restrained to the reduction
of solid bodies into a state of fluidity; which is inore properly expressed by solution. See Chemistiny.

DIS'SONANCE, n.s. \(\}\) Er. dissonance; Ital.
Dis'sonant, adj. \}dissonanza; Lat. dissonantia, from dis, diversely, and sonans, sonantis, sounding. Harshness, or jargon of sounds; disagreement: dissonant is inharmonious; and hence incongruous; disagreeing; followed by from, and less correctly by to.

Though he nought fonde yet would he lie Discordaunt er fro armonie,
And dissonid fro melodie; Controve he would, and foule faile,
With hornpipis of Cornewaile.
Chaucer. Rumaunt of the Rose.
Still govern thou my song,
But drive far off the barbarous dissonance
Of Bacchus and his revellers.
Milton.
What can be more dissonant from reason and nature, than that a man, naturally inclined to clemency, rhould shew himself unkind and inhuman?

Hakewill on Providence.
With to ; less properly.
When conscience reports any thing dissonant to truth, it obliges no more than the falsehood reported by it.

South.
Dire were the strain, and disoonant, to sing
The cruel rapturcs of the savage kind. Thomson.
DISSUADE' v.a. \(\boldsymbol{F}^{\prime}\) Fr. dissuader;

Dissuadér, n.s.
Dissua'sion,
Dissua'sive adj \& \(n\) Lat. dissuadere: suadere, to persuade. To dehort; divert from, by persuasion: dissuader is he who endeavours to do this; and dissuasion the act or means of doing it.

We submit to Cæsar, promising
To pay our wonted tribute, from the which
We were dissuaded by our wicked queen.
Shakspeare. Cymbeline.
Not diffident of thee do I disuade
Thy absence from my sight.
Milton's Paradise Lost.
What is meant by disswading; it is making a man to change his opinion, and unfixing of the mind.

Bp. Taylor.
Endeavour to preserve yoorself from relapse by such dissuasions from love, as its votaries call invectives against it.

Boyle.
I'd fain deny this wish, which thou hast made; Or, what I can't deny, would fain dissuade.

Addison's Ovid.
What more powerful dissuasive from suspicion, jealousy, and anger, than the story of one friend murdered by another in a duel.

Bp. Horne.
DISSYĹLABLE, n. s. \(\Delta t \sigma \sigma v \lambda \lambda a \beta o s . ~ A ~ w o r d ~\) of two syllables.

No man is tied, in modern poetry, to observe any farther rule in tho feet of his verse, but that they be dyssyllables; whether spondee, trochee, or iambique, it matters not.

Dryden.
He (Shakspeare) seems to have been the very original of our English tragical harmony; that is, the harmony of blank verse, diversified often by dissyllable, and trissyllable terminations.

Denvis.
DIS'TAFF, n. s. Sax. dæstaff, from diege, the thigh, and staff, 'because fenvales while spinning fit it to the thigh.'-Minsheu. The staff from which the flax is drawn off in spinning: used as an emblen cir the sex.

Weave thou to end this web which I begin ; I will the distaff hold, come thou and spin.

Fairfax.
In some proud Boreas never ruled fleet, Who Neptune's web on danger's distaff spins, With greater power than she did make them wend Each way, as she that age's praise did bend.

Sidney.
See my royal master murdered,
Dryden.
His crown usurped, a distaff in the tbrone.
In my civil government some say the crosier, some say the distaff, was too busy.

Howel's England's Tears.
I can no more pardon a fair one for endeavouring to wield the club of Hercules, than I could him for attempting to twirl her distaff.

Goldsmith.
DISTA'IN, v.a. Dis and stain. To stain; to tinge with an adventitious color ; hence to blot or obliterate.

For certainly all these mowe out suffice
To' apperin with my ladie in no wise,
For as the sunne woll the fire distain,
So passith all my ladie soverain.
Chaucer. Legend of Women.
He understood,
That lady, whom I had to me assigned,
Had both distained her honourable blood,
And eke the faith whirh sle to me did bind.
Faerie Queene
The worthiness of praise distains his worth, If he that's praised bimself bring the praise forth.

Shakspeare.
Nor ceased his arrows, till the shady plain
Seven mighty bodies with their blood distain.
Dryden's Virgil.
Place on their heads that crown distained with gore, Which those dire hands from my slain father tore.

Pope.
DISTASTE', n.s. \(\quad\) Dis and taste. Dis-
Distaste'ful, adj. \}relish; aversion of the palate; disgust: the verb being derived from the noun, and both often applied figuratively.

Dangerous conceits are in their nature poisons, Which at the first are scarce found to distaste, But, with a little act upon the blood,
Burn like the mines of sulphur.
Shakspeare. Othello.

\section*{After distusteful looks,}

With certain half-caps, and cold moving nods, They froze me into silence. Id. Timon.
The king having tasted of the envy of the people, for his imprisonment of Edward Plantagenet, was doubtful to heap up any more distastes of that kind by the imprisonment of De la Pole also.

Bacon's Henry VII.
It is in the general behalf of society that II speak, at least the more judicious part of it, which seens much distasted with the immodest and obscene writing of many in plays.

Ben Jonson.
The ground might be the distasteful averseness of the Christian from the Jew.

Browne.
On the part of heaven,
Now alienated, distance and distaste,
Anger, and just rebuke.
Milton's Paradise Lost.
None but a fool distasteful truth will tell;
So it be new and please, 'tis full as well.
Dryden.
Distasteful humours, and whatever else may render the conversation of men grievous and uneasy to one another, are forbidden in the New Testament.

Tillotson.

I am unwilling to believe that he doth it with a design to play tricks, and fy-blow my words to make others distaste them.

Stillingfleet.
With stern distaste avowed,
To their own districts drive the suitor crowd. Pope's Odyssey.
DIS'TANCE, v.a. \& n.s. ) Fr. distance; Dis'tant, adj. § Span. distancia; Ital. distanza; Lat. distantia, from dis, asunder, and stans, stantis, standing. The extent of space between two standing bodies. The verb seems here derived from the noun. Distant is, remote in place, time, or nature; and in any degree: hence, not obvious; not intelligible.

We come to see fight; to see thy pass, thy stock, thy reverse, thy distance.

\section*{Shakspeare. Merry Wives of Windsor.}

Banquo was your enemy,
So is he mine; and in such bloody distance, That every minute of his being thrusts Against my nearest of life. Shahspeare.

Macbeth.
A good merchant never demands out of distance of the price he intends to take. If not always within the touch, yet within the reach of what he means to sell for.

Fuller.

\section*{This heaven which we behold}

\section*{Distant so high.}

Milton.
On the part of heaven,
Now alienated, distance and distaste,
Anger, and just rebuke, and judgment given. Id.
This was the horse that ran the whole field out of distance, and won the race.

L'Estrange.
We have as much assurance of these things, as things future and at a distance are capable of.

Tillotson.
That which gives a relievo to a bowl, is the quick light, or white, which appears to be on the side nearest to us, and the black by consequence distances the object.

Dryden's Dufresncy.

\section*{I hope your modesty}

Will know what distance to the crown is due.
Dryden.
Distance is space considered barely in length between' any two beings, without considering any thing else between them.

Locke.
It was one of the first distinctions of a well-bred man to express every thing obscene in modest terms and distant phrases.

Addison's Spcctator.
Cæsar is still disposed to give us terms,
And waits at distance till he hears from Cato. Addison.
If a man makes me kcep my distance, the comfort is, he keeps his at the same time.

Swift.
These dwell at such convenient distance,
That each may give his friend assistance. Prior.
I help my preface by a prescript, to tell that there is ten years distance between one and the other. Id.

Each daring lover, with adventurous pace,
Pursued his wishes in the dangerous race ;
Like the swift hind the bounding damsel flies,
Strains to the goal ; the distanced lover dies. Gay.
'Tis by respect and distance that authority is upheld.

\section*{Atterbury.}

The wondrous rock the Parian marble shone, And seemed to distant sight of solid stone. Pope.
The senses will discover things near us with sufficient exactness, and things distant also, so far as they relate to our necessary use.

Watts's Logizk.
The worse living authors fare now, the better they will succeed with posterity; for the critics love the
aport too well to hunt any but those who can stand a good chase ; and authors are the only objects in nature, which are magnified by distance, and diminished by approach.

Cumberland.
Be silent! How the soldiers' rough strain seems Softened by distance to a hymn-like cadence ! Listen !

Byron.
\(\left.\begin{array}{l}\text { DISTEM'PER, v. a.\& } n . s . \boldsymbol{l} \\ \text { Distem'perate, adj. } \\ \text { Distem'perature, } n . s .\end{array}\right\} \begin{aligned} & \text { Dis and tem- } \\ & \text { per. To dis- } \\ & \text { order; disease; }\end{aligned}\) disturb; render disaffected; to temper colors anew. As a substantive, it expresses disorder; disproportion; or disease of any kind; and has the same use among painters as the adjective. Distemperate is, immoderate ; and distemperature, habitual or extreme disorder ; violence.

Tell how the world fell into this disease, And how so great distemperature did grow:
Daniel.

Thy earliness doth me assure
Thou art uproused by some distemperature.
Shakspeare.
There is a sickness,
Wtich puts some of us in distemper ; but I cannot name the disease, and it is caught Of you that yct are well. Id. Winter's Tale.

Young son, it argues a distempered head, So soon to bid good-morrew to thy bed.

> Id. Romeo and Juliet.

Aquinas objecteth the distemperate heat, which he supposeth to be in all places directly under the sun.

Raleigh's History.
The true temper of empire is a thing rare, and hard to keep; for both temper and distemper consist of contraries.

Bacon.
I was not forgetful of those sparks, which some men's distempers formerly studied to kindle in parliament.

King Charles.
He distempered himself one night with long and hard study. Boyle's History of Fluids.

Distempered zeal, sedition, cankered hate,
No more shall vex the church and tear the state.
Dryden.
They heighten distempers to diseases.
Suckling.
Sin is the fruitful parent of distempers, and ill lives occasion good physicians.

South.
They were consumed by the discommodities of the country, and the distemperature of the air. Abbot.

When I behold a fashionable table set out in all its magnificence, I fancy that I see gouts and dropsies, fevers and lethargies, with innumerable other distempers, lying in ambuscade among the dishes.

Addison.
A night of fretful passions may consume,
All that thou hast of beauty's gentle bloom,
And one distempered hour of sordid fear
Print on thy brow the wrinkles of a year.
Sheridan.
Distemper, in painting, a term used for working up of colors with something besides water or oil. If the colors are prepared with water, that kind of painting is called limning; and if with oil, is called painting in oil, and simply painting. If the colors are mixed with size, whites of eggs, or any such proper glutinous or unctuous matter, and not with oil, then they say it is done in distemper. See Colour.

DISTEND', v. a.
Drstent', n.s. \& past.part. Fr. distendre;

Disten'tion, n. \(s\). Lat. distendere; and tendere, to stretch. To stretch breadth-wise

Some others were new driven and distent
Into great ingots and to wedges square,
Some in round plates witbouten moniment.
Spenser.
Those arches are the gracefullest, which, keeping precisely the same height, shall yet be distended one fourteenth part longer, which addition of distent will confer much to their beauty, and detract but little from their strength.

Wotton.
Thus all day long the full distended clouds
Indulge thcir genial stores. Thomson.
Wind and distention of the bowels are signs of a bad digestion in the intestines; for in dead animals, when there is no digestion at all, the distention is in the greatest extremity.

Arbuthnot.
DISTICH, n. s. Fr. distique; Ital. Span. and Port. disticho; Lat. distichon; Gr. \(\delta \iota 5 \neq \chi \circ \nu\), a song of two verses, i.e. \(\delta v \omega\) two, and sixos a verse, from stx \(\omega\) to step, because ancient verses were measured by the steps. A couplet; a couple of lines; an epigram consisting only of two verses.

The French compare anagrams, by themselves, to gems; but when they are cast into a distich, or epigram, to gems enchased in enamelled gold.

Camden's Remains.
The bard, whose distich all commend,
In power, a servant; out of power, a friend.
Pope.
DISTICHIASIS, in surgery, a disease of the eye-lids, when under the ordinary eye-lashes there grows another extraordinary row of hair, which frequently eradicates the former, and pricking the membrane of the eye, excites pain, and brings on a defluxion. It is cured by pulling out the second row of hairs with nippers, and cauterising the pores out of which they issued.

> DISTI'L v. a. \& v.n.
> Distilla'tion, n.s.
> Distil'latory, adj.
> Distíller, n. s.
> Distíllery, n.s.\& adj.
> Distílment. J To let fall in, or
> Fr. distiller; Sp. destilar ; Ital. destillure ; Lat. distillare, from stillo; Gr. \({ }_{5} \alpha \lambda a \zeta \omega\), to drop. r to, drops ; to extract spirit in drops by a peculiar process; to diffuse. As a neuter verb, to drop, or fall in drops; to flow gently; to use a still. Distillation is the art of distilling; distillatory, belonging to that art. Distiller, one who practises it: and distillery, the place of distilling; or, as an adjective, belonging to such a place. Distilment is used by Shakspeare for that which is produced by distillation.

They pour down rain, according to the vapour thercof, which the clouds do drop and distil upon man abundantly.

Have I not been
Thy pupil long; Hast thou not learned mchow
To make perfumes, distil, preserve? Shahspeare.
There hangs a vapourous drop, profound ;
I'll catch it ere it comes to ground;
And that, distilled by magick slights,
Shall raise up articial sprights.
Upor my secure hour thy uncle stole,
And in the porches of mine ears did pour
The leperous distilment.
Id.
he Euphrates distilleth out of the mountains of
enia, and falleth into the gulph of Persia.

Job.

Raleigh's History. ins obtained is found to have different properties to that from which it was derived, and it receives the name of spirit. This spirit consists of water, and a peculiar fluid called alcohol. Alcohol, in combination with more or less water, and flavored by the aroma of the different substances from which it is obtained, forms brandy, rum, geneva, and all the various descriptions of spirit known in commerce. The art of the distiller consists in selecting the most convenient mode of heating the fermented fluid, and of condensing the vapor it affords, while he prevents the intermixture with his products of whatever would injure their flavor. To accomplish these purposes, although they are apparently simple, it is found that great care and skill are required.

The distillations performed by the chemist, with the retort, the alembic, the lamp-furnace, the pneumato-chemical and Woulfe's apparatus, for obtaining gaseous and volatile products in general, are essentially the same as the distillations conducted for the commercial purpose of obtaining spirit; but the scale is different, the chemist having his whole apparatus so completely
under his eje that he can adjust the heat and other circumstances with much nicety. In nsing, for example, when he has vapor to condense, the lamp-furnace, a wet sponge placed on the beak of the retort will suffice : but the commercial distiller requires, for the purpose of condensation, a large convoluted tube, passing through an immense body of water, which must be constantly renewed: the difference of scale, therefore, requires more than a mere enlargement of the apparatus, and there has in fact been found ample scope for improvements in the art.

The quantity and excellence of the spirit produced by the French, in consequence of the alterations they have made in the old method of distilling (the most improved form of which, by Saintmarc, we shall presently describe), have decisively shown the value of the new plans, which may be adopted without the disadvantage of increasing the first cost or complexity of the apparatus. They consist in the application of Woulfe's apparatus to this purpose. Wine being put into the boiler, and into all the intermediate receivers between the boiler and the worm, the tube from the boiler plunges into the wine of the first receiver, to which it communicates sufficient heat to raise its contents in vapor: this vapor has the same effect on the wine of the next receiver; and after the continuation of the process through as many receivers as may be thought proper, the whole of the vapor finally extricated is condensed in the nsual way by passing through a worm. By thistruly ingenious apparatus, spirit of various degrees of conceutration may be obtained at one operation, according as the product of the first, the second, or any other receiver is taken; the consumption of fuel is extremely small, the product excellent, as well as greater in quantity than by any other means; and by using water instead of wine, in the boiler, the possibility of an empyreumatic taste is prevented.

In distilling from grain an oil is apt to come over, which injures the taste of the spirits; it is usual to keep it back by adding a little sulphuric acid to the wash.
The comparative salubrity of the spirit or geneva made in Holland is notorious, and it has been supposed that nothing like it can be produced in this country; out it appears to be entirely the result of the care they take in their processes. They use the most perfect grain, and use it only when perfectly malted, aware that a fourth part more spirit is obtained from such grain than from that of which the germination has been checked too soon, or suffered to continue too long. The best Hollands is prepared from wheat, which is the fittest grain for this use, and is more productive than barley; but rye yields about one-third more spirit than wheat, and is more extensively used in Holland. The fermentation is continued about three days: the first distillation is extremely slow, and the observation of this point is essential ; the second distillation or rectification is done with juniper berries. The most rigid cleanliness is ohserved, and the vessels are cleansed with lime-water instead of soap, which would give the liquor a urinous taste. They use the rye grown on a calcareous soil, and never, if they can avoid it, that of fat clayey
ground: 1 is Prussian rye they employ. A little malt added to rye improves the flavor, but not the quantity of the spirit.
The substances from which spirit is obtamed are usually barley, wheat, oats, rye, sugar, or molasses. In countries where the grape ripens in the open air, wine is distilled for this purpose : hence the superiority of the brandies of France; the spirit afforded by good wines containing the finest aroma of all products capable of yielding alcohol. When grain is used it is malted according to the usual process, like barley for brewing; and the fermentation is conducted in the same manner. After fermentation, the fluid intended to be distilled is called wash, and it is ready for the still.

A still consists of a boiler, which contains the wash; and a tube, in passing through which the vapors are condensed: the tube is convoluted, in order that it may have a great length in a moderate compass, and it is thence called the worm. The boiler formerly used was a cylinder, the height of which was in general one-half greater than its diameter; but the French, who have always been foremost in the improvements which this art has received, have introduced a much superior form. The height of the boiler has been considerably diminished, its width augmented, and instead of being cylindrical it widens upward gradually to within about three or four inches of the top; there the sides are curved into an arch, and become narrower. nence its form is in fact similar to that of a common tea-kettle : the mouth \(c d\), as is shewn in plate Distillation, is of the same diameter as the bottom \(a b\). To the boiler is fitted a conical head, in the interior of which, round the lower edge, is a channel, destined to recerve the liquid condensed against the sides, and which, instead of returning to the boiler, is conveyed into the worm. In the old construction the head communicated with the worm by an inclined tube of a very small diameter; but now the tube in this situation, at its base \(f g\), is as wide as the head, and diminishes in diameter as it approaches the worm, into which it opens. Another important difference, between the improved boiler and the old one, consists in the slape of the bottom: the old ones were flat; this is concave. By this means the heat received is nearly equal at every point directly exposed to the fire; and, as the bottom is convex within, the sediment from the wash falls round its edge, where, from its resting on the brick-work and not receiving the direct heat, it is not liable, from being burnt, to give an empyreumatic taste to the spirit. Two inches of the circumference of the bottom rest on brick-work, The boiler is filled by the aperture \(o\).

In the old construction of the furnace the heat was applied only to the bottom of the boiler; and a further loss was sustained by placing, as is still common in furnaces generally, the centre of the grate under the centre of the boiler: without reflecting that the stream of air towards the chimney always carries the heat and flame in an oblique direction towards the end of the boiler. At present the end of the grate next the chimney is not placed further back than the middle of the boiler, and the heated air is conducted round the
boiler before it passes off, by which the whole mass of fluid in the boiler is heated at once, and the heat may be maintained with great regularity, while a much less quantity of fuel will suffice. The brick-work surrounding the boiler reaches as high as the circle \(k k\).
The worm is generally made of tin or pewter, and is the same as that in common use, except that at the commencement \(l\), where it is connected with the beak of the head of the boiler, it is wider than they were formerly made, and tapers gradually towards the discharging extremity \(m\). The reason of this is evident, because vapor, only partly condensed, requires more room than where the whole is fluid. The refrigeratory, or vessel AB, is kept constantly filled with cold water; this is effected by a tube \(n\), which descends and opens nearly at the bottom of it, and brings a supply of cold water from a gr eater elevation; while another tube, \(r\), conveys the hot water with equal rapidity from the top. By this means the condensation is so complete, that the spirit discharged at \(m\) exhales little or no odor. As it is often not possible to have the water from a greater elevation than the refrigerator, without raising it by mechanical means, the following plan, by Alexander Johnston, is highly entitled to attention, as in it the syphon is applied to the worm-tube as a refrigerator; and water is conveyed in any quantity to a worm-tub of the largest dimensions, if perfectly air-tight ; it is represented at in the same plate A , is the feed pipe of cold water. B, the hot water, or waste pipe, the end of which must be about two feet below the feed pipe, to make it act with full effect.
When the work is commenced, the cocks must be shut, and the tub filled through a hole at the top, and of course, both pipes : and when full, the hole at the top is to be stopped, and the cocks opened together; the water will then commence running, and continue as long as the supply holds good, as it acts in every respect on the principle of a syphon. By this means pumps, horse-mills, and other machinery, are rendered unnecessary for that purpose. The application of this improvement is simple, and executed at a very little expense. The saving for the city of Dublin alone, is calculated at upwards of 100 horses per annum.

With respect to the usual mode in which distillation is conducted in the great public distilleries, the most interesting account that has been communicated to the public, is that contained in the deposition of James Forbes, of Dublin, who was for many years concerned in a large distillery. It is from the Appendix to the Fifth Report of the Commissioners of Enquiry into the Fees, \&c., received in the public offices of Ireland; which report was printed by order of the house of commons.
'The corn is first. ground, then mashed with water, and the worts, after being cooled, are set for fermentation, to promote which, a quantity of barm is added to them, and they become wash; the wash is then passed through the still, and makes singlings, and these, being again passed through the still, produce spirits; the latter part of this running, being weak, is called feints. When singlings are nut into the still, a small
quantity of soap is added, to prevent the stil! from running foul; a desert spoonful of vitriol well mixed with oil is put into a puncheon of spirits, to make them show a bead when reduced with water: this is only done with spirits intended for home consumption, and no vitriol is used in any other part of the process. In this distillery, the former practice was to use about one-fourth part of malt, and the remainder a mixture of ground oats and barley, and oatmeal; latterly the custom has been to use only as much as would prevent the kieve (mash-vat) from setting. He had found that malt alone produced a greater quantity of spirits, than the mixture of malt and raw corn of the same quality with that of which the malt had been made. He generally put from fifty to fifty-four gallons of water to every barrel of corn of twelve stone ( 14 lb . to the stone). Each brewing was divided into three mashings, nearly equal : the produce of the two first was put into the fermenting backs; and the produce of the last, which was small worts, was put into the copper for the purpose of being heated, and used as water to the next day's brewing, when as much water was added as would make, with the small worts of the brewing, fifty-four gallons to each barrel of the corn. The kieves were so tabulated, that he always knew the quantity of worts which would come off at each mashing. Their strength he ascertained by Saunders's saccharoneter, and at the above proportions he obtained, from a mixture of the two first worts, an increase of gravity from twenty pounds to twenty-two pounds per barrel, of thirty-six gallons, above water-proof, at a temperature of about \(88^{\circ}\). The small worts gained at the same temperature about six pounds. The grain, after the last worts were off, retained nearly the same bulk as when put into the kieve; the whole of the grain was put in at the first mashing; he never knew any grain to be alded to the second mashing. The worts of the first and second mashing were run through the mashkieve into the under-back, in which state they were ustally found to correspend with the computation made in the mash-kieve and underback, in the latter of which a correct gauge might be taken of them. He usually commenced brewing at six o'clock in the morning: the first worts were run off into the under-backs, and required from an hour to an hour and a half to be forced up into the cooler; the second worts came off at the end of two hours from the discharge of the first, and required about the same time to pass into the coolers. The small worts were generally let off late at night ; and being then, or early on the following morning, put into the copper to be used for the next brewing, were seldom shown on the coolers. He thinks that any decrease of the worts by evaporation whilst on the coolers, must have been very inconsiderable; and that a correct gauge of the worts may be taken in the coolers as well as in the underbacks. The quantity of wash in the backs was found to be nearly correspondent with that of the strong waters which had been on the kieve and in the cooler. The fert:entation of the worts was produced by means of yeast, and was in general so contrived as to be apparently kept
up for the full time allowed by law (six days): he has, however, usually had his wash ready for the still in twenty-four hours from the time in which it was set. Backs are renewed in two ways; either by additions made to them from other backs in the distillery, each supplying a certain portion of wash to the back which is next before it in the order of fermentation, while the newest and least fermented wash is replenished by worts, or, when the fermentation is down, by an entire substitution of worts. He has ordinarily, in the course of work, charged a 500 gallon still with wash, and run it off in twenty to twenty-three minutes: he has seen a 1000 gallon still charged and worked off in twenty-eight or thirty minutes. He understands that it is now the practice of some distillers, to heat the wash nearly to the state of boiling before the still is charged with it; by which means he believes the process to be accelerated by three or four minutes. He has seen a 1000 gallon still charged with singlings, and worked off in from forty to fifty minutes, and thinks a 500 gallon still requires nearly an equal time. Feints from potale (the name given to completely fermented wash) usually are run off in from six to seven minutes; making allowance for every delay, about six clarges of spirits may be run off from a still of 500 gallons' contents, each charge estimated at 150 gallons. The feints were always put back into the pot-ale receiver; twenty gallons of feints is the usual quantity run from a 500 gallon still charged with singlings; he thinks there is more spirit extracted from feints than from pot-ale; there was no delay between one charge of pot-ale and another, or between one of singlings and another; the still could be cleansed in less than a minute; it very rarely occurred that the ordinary accidents which happened to the still delayed the work to any considerable degree. The still is never charged with wash heyond about seven-eighths of the still, nor with singlings beyond about four-fifths, exclusive of the head. The estimated produce (according to which the duty may be charged) is one gallon of singlings from three gallons of wash, and one gallon of spirits from three gallons of singlings, but it is very frequently somewhat more. Previous to the regulation (of Excise) which took place in June, 1806, from a still of 540 gallons, which is charged with 2075 gallons of spirits weekly, he has frequently drawn 530 gallons in one week, and thinks 500 gallons to be a fair average. He usually made spirits about fourteen per cent. above proof, by Saunders's hydrometer. Spirits exported by him from twelve to fourteen per cent. above proof by Saunders' and Hyatt's hydrometer, were charged in London at from twenty-four to twenty-six gallons per cent. Before he sent them to the cus-tom-house, he either reduced them with water, or drew them at that strength from the still. To every six gallons of strong spirits, one gallon of water was added in the distillery, which reduced them to the strength usual for exportation. The reduced spirits are permitted to the king's warehouses, and the distiller given a credit for a decrease of stock equal to the quantity so permitted: by these means lie has one gallon of private
spirits to dispose of for every gallon of water mixed with the spirits exported; besides this, the distiller draws back the allowance given in lieu of the malt-duty on every gallon of water added : when lie warehoused spirits with the intention of afterwards using them for home consumption, he left them at their full strength.'

The absence of improvement in the process of distillation, as well as in the apparatus for effecting it, in this country, may be chiefly traced to the shackles which have proceeded from the regulations of excise, adopted and enforced for the protection of the revenue. Whether those regulations may have been indispensably requisite to that end, is, perhaps, very questionable; but it is quite certain that they have had the effect of restraining those extensive improvements in this branch of science and business, which have been almost universally accomplished, where the inventive genius of our countrymen lias had free scope in the application of its powers to practical results. This is especially visible on a comparison of the means employed in France for the improvement of this branch. With an unlimited supply of the grape, a material certainly calculated to afford one of the finest spirits, they are enabled, almost at will, to effect such improvements in its quality as result from changes of process, and the adoption of superior apparatus; since, although in some respects under certain revenue regulations, they are not enforced in a manner calculated to prejudice the exercise of talent, whether mechanically or chemically applied to the art.
In the English language, too, there scarcely exists a treatise of any value on this subject; and that which has been published is little more than translations from works in the French language. There the scientific investigations of such men as Lavoisier, Chaptal, Gay Lussac, and Thenard, have laid a sure foundation for the more practical illustrations of Macquer, Dubrunfaut, Dubuisson, and others of less note, who have sent forth to the world the result of their labors.

With names as high on the list of science as our countrymen Davy, Woollaston, Dalton, Heury, Thomson, Ure, and Black, and with some of the most important departments of the art of distillation, up to the point of fermentation, as well understood, and as extensively practised as in France, the pancity of information on the subject generally, in this country, is not a little sur prising. The French distillers have brought to notice several stills of curious constrnction, which have had for their object the saving of time and fuel, and the production of a spirit of superior streugth and good quality. In some of these perpetual distillation lias been aimed at, but it cannot be said with success. Indeed, it is difficult to conceive that the elements to be converted, and the practice necessary for their conversion, can be so nicely combined and adjusted as to bring about such a result, without a most elaborate and expensive series of machinery and vessels; costly in themselves, not easy of management, and leading to the risk of considerable loss, from some of those inconveniences and irregularities to which all complicated apparatus are subject.

A still has lately been brouglit forward, which
is stated to be coming into extensive use, and to comprise all the advantages of perpetual distillation without its disadvantages; uniting moderate cost, the employment alike of a single vessel and a single operation, and the most perfect facility of management, with great economy of time, fuel, and other items of expense; and, which must be a primary object with all distillers, with the production of a fine and potent spirit. It has been introduced by two French gentlemen, M. Alégre, and M. Saintmarc; and is patented in this country in the name of the latter.
On a view of the plans and descriptions of this apparatus, there seems little reason to doubt its powers and advantages, as described; and, assuming the truth of the facts stated with regard to those powers as proved in practice, the invention is entitled to great praise; and must effect an extensive revolution in distillation, both in this country and in its colonies.

The plate of Distillation presents a series of figures, exhibiting the construction and practical operation of this interesting combination of chemical and mechanical power.
Fig. 1 represents a sectional view of the still, with its furnace, and an elevation or outside view of the refrigerator, or worm tub. Figs. 2, 3, and 4, are plans of three portions of the still. Fig. 5 is a perspective view of one of the double tubes or pipes. Fig. 6 is an elevation of its front exterior, and fig. 7 is an elevation of its back exterior.

\section*{Figure I.}
A. The Fire-place or Furnace, above which the still is placed.
B. Eight Coppers or Boilers, surmounting each other, constituting the apparatus or still, in the form of a column or cylinder, and numbered 1 to 8 ; the different coppers or compartments being put together by flanches and bolts.
C. (videfig. 6 and 7), Openings or Manholes. tightly closed by screw boxes, or otherwise, calculated, when the still is of large diameter, to admit a person into the several coppers, No. 1 to 7 , for the purpose of cleaning or repairing them; or, when on a smaller scale, intended to admit a person's arm for the same object.
D. An exterior Vessel, or intermediate Wash charger, surrounding the upper compartment of the still; and calculated to contain a quantity of wash equal to the proper charge of one copper.
E. Supply Pipe communicating from the general wash charger, or vessel containing the liquid to be distilled, to the exterior vessel D ; and furnished with a cock for the purpose of turning the wash into that vessel.
F. A Plug or Valve fixed in the head of a pipe extending from the bottom of the vessel \(\mathbf{D}\) into the lower part of the copper, 7 ; which plug or valve is raised by the aid of
G. A Lever and Fulcrum for the purpose of discharging the wash contained in the vessel D into the copper 7; from whence, as it reaches the upper end of the pipes H, it flows down from copper to copper, until it reaches No. 2 ; a quantity being displaced from the surface of the liquor in each copper equal to that which is thrown in from the copper next above.

H1. Five Pipes, communicating from the copper, fig. 7 to fig. 6, and so on in succession, from vessel to vessel, down to fig. 2, extending from the level of the wash in one copper, marked by dotted lines to nearly the bottom of the copper below, in order to displace the warmest liquor, as shown in the description of G.
I. (Vide figs. 6 and 7), Six Pipforurnisued with Cocks, communicating respectively from one copper to that next below, by which all the wash in the several coppers, from fig. 7 downwards, may be conveyed into the lower coppers, and finally drawn off from the lowest vessel.
K. (Vide figs. 6 and 7), Small Trial Cocks \(i^{\text {in Coppers }} 1\) and 2, which, on being turned, indicate when those coppers are charged to the proper height, as denoted by the dotted lines on the same level as these cocks. They serve also as valves to admit air when the liquor is drawn off. A similar cock is likewise placed in copper, fig. 3, for the purpose last mentioned.
L. (Vide fig. 6), A small Proof Cock, placed vertically near the roof of the copper, No. 1, which, on being turned, determines by the application of a lighted taper or candle, whether or not there remains any portion of alcohol in this copper or boiler.
M. A Discharge Pipe and Cock to carry off the spent wash from the copper, fig. 1, when the spirit has distilled from it. This cock disclarges down to about one inch above the crown, or highest part of the copper; and, in consequence, it is not necessary to damp the fire when it is opened.
N. A Second Discharge Pipe and Cock in the lowest part of the bottom, which carries off the whole contents of the copper; and, when opened, will generally require the fire to be damped, to prevent burning the bottom.
O. Ten Double Tubes or Pipes, of which five are fixed on the roof of copper 1 , and five on that of 2 . These pipes are closed at the top, and have openings in the upper part of the inner, communicating with the outer one. The vapor produced from the wash in copper 1, passes through the five double tubes on the roof of that copper into the copper 2, by rising up the inner tubes, passing therefrom through the openings at the upper part thereof, and descending down the outer tubes, discharging itself into the liquid in copper No. 2, where it becomes condensed. In like manner the vapor produced in the last mentioned copper passes up the double tubes on the roof thereof, into the copper fig. 3. (For a better description of these double tubes, vide the perspective view of one of them in fig. 5 ; and for the plan of the coppers containing them, vide fig. 4 , and their respective explanations given below).
P.'Five Semispherical Vessels or Domes (in French, Calottes), constructed upon, and tightly jointed to, the centres of the roofs of the several coppers, No. 3 to 7, both inclusive. These domes, except the hignest, are surrounded with wash; but have internal communication only with each other, by means of pipes fixed on their centres, which nass into the pipes \(Q\), next described.
Q. Five Double Tubes or Pipes (of thesame
kind as those marked \(\mathbf{O}\).), which are tightly fixed on the centres of the roofs of the coppers Nos. 3 to 7 , and stand within the domes last described. The vapor described above ( \(O\) ) to have reached the copper No. 3, becomes condensed in the wash contained therein. The vapor generated in this copper passes through the double tube \(Q\) into the dome which encloses \(i t\), and so in succession, through the several tubes and domes above, until it reaches the dome on the roof of the copper No. 7, where it finally passes off into
R. A large Pipe, which conveys it to
S. A Worm Tub, or Refrigerator (of which an elevation or outside view only is given in the drawing), through
T. A Worm contained therein; and runs it off as alcohol, at the bottom thereof into
U. A Spirit Receiver. (For the plan of the coppers containing the domes P , and double tubes \(Q\), above described, as well as the reversed double tubes \(V\), and the safety pipes W , both hereafter described, vide fig. 4, and the explanations of it given below).
V. Five Reversed or descending Double Tubes or Pipes (constructed on the same principle as those already described, but of smaller diameter), which are suspended, reversed, from the roofs of the several coppers from No. 7, down to No. 3, both inclusive. Of these reversed tubes the four uppermost pass throngh the domes P , to which they are tightly fixed; and they serve to return to the lower domes in succession, the phlegms, or such results of the vapor, in a liquid form, as may have been condensed in its passage upwards through these several domes. These phlegms, or condensed liquids, are partially redistilled in their progress; and the remainder pass through the fifth, or lowest, of these reversed tubes, into the copper No. 3, where they become mixed with the wash contained therein, and are again distilled with it.
W. Four Safety Pipes, fixed in the roofs of the several coppers, Nos. \(4,5,6\), and 7 , which are intended to carry off such vapor as may rise from the wash in those coppers, and terminate in
X. A Pipe, which passes on to the worm-tub or refrigerator S , and by a separate worm
Y. of two or three coils only, runs off the small portion of spirit it produces into the spiritreceiver U .
Z. A Pips, communicating between coppers No. 1 and 2, having its upper end carried about four inches above the level of the liquor in copper No. 2, in order to admit of the increase of its volume by the condensation of the vapor which passes into it from the copper No. 1 by the tubes O. It also serves to return from copper No. 2 to the lower part of No. 1 whatever liquor may pass up the tubes \(\mathbf{O}\), by any sudden or excessive action of the fire

\section*{Figure II.}
a. A Pipe and Cock for the supply of cold water into the copper No. 8, for the purpose of additional condensation when the spirit is required of high proof.
b. A W aste Pipe, fixed near the top of the uppermost copper No. 8, to carry off the heated
water from the surface, in proportion as the pipe \(a\) furnishes cold water.
c. A Pipe and Cock placed in the bottom of the copper No. 8, for the purpose of entirely drawing off, at pleasure, the water which may have been employed for additional condensation.
d. A Pipe and Cock by which a stream of water may be thrown into the vessel D , and thence conveyed, by the valve or plug \(F\), and pipes I or H, into the lowest vessels, either to le used as an occasional condensing power, or for the purpose of washing the still.
\(e\). A Pipe and Cock, by which a stream of clear water may be thrown into the uppermost of the domes P , and thence descend through the other domes below, in order to cleanse them from impurities.
B. 8, Plan of the copper B. 8, as shown in section in fig. 1.
D. Plan of the exterior vessel D, fig. 1.
E. Plan of the charging pipe E, fig. 1 .
F. Plan of the valve or plug F, fig. 1.
G. Plan of the lever or fulcrum \(G\), fig. 1.
P. Plan of the dome P, fig. 1.
R. Plan of the pipe R, fig. 1.
X. Plan of the pipe X, fig. 1.

\section*{Figure III.}
(Referred to above, after the explanation of the spirit pipe T, fig. 1.)
B. Plan of the Coppers or Boilers from B, No. 4 to 7, as shown iǹ section in fig. 1.
h. Plan of the Pipes H, fig. 1, through which the liquor flows from copper to copper from No. 7 to No. 2, as it is displaced by the discharge from vessel D .
P. Plan or the Domes or semispherical vessels P, fig. 1, fixed in the centre of each copper
Q. Plan of the Double Ascending Tubes or pipes Q, fig. 1, fixed upon the centre of the domes \(P\).
V. Plan of the Double Reversed, or Descending Tubes or Pipes V, fig. 1, through which the liquor produced by condensation of the vapor in its passage through the domes, falls back into copper No. 3.
W. Plan of the Safety Pipes W, fig. 1, fixed upon the roofs of the coppers from No. 4 upwards, for the purpose of carrying off the little vapor generated in those coppers.

\section*{Figure IV.}
(Referred to above, after the explanation of the double tubes or pipes 0 , fig. 1.)
B. Plan of the Two Coppers of Boilers B, Nos. 2 and 3 , as shown in section in fig. 1.
O. Plan of the Five Double Tubes or Pipes O, fig. 1, standing within the coppers Nos. 2 and 3 respectively, but fixed tightly upon the roofs of the coppers Nos. 1 and 2; through which the vapor passes from copper No. 1 to No. 2, and from No. 2 to No. 3.

H and Z. Plan of the Pipes HI and Z, fig. 1, passing through the roofs of the coppers Nos. I and 2. The pipe II extends from the liquor level in copper No. 3 to nearly the bottom of No. 2, and the pipe Z extends from about four incles above the liquor level in No. 2 to nearly the bot-

fom of the lowest copper; as shown in section in fig. 1.

\section*{Figune V.}

Presents in perspective, on an increased scale, one of the tubes () or Q, fig. 1.

\section*{Figure VI.}

Presents a front elevation of the still, as fixed, exhibiting the mode of putting together the different compartments, constituting the several coppers B, No. 1 to 8, in fig. 1, which are secured by flanches and bolts.
A. The Fire-place or Furnace as shown in section in fig. 1.
D. The Exterior of the Vessel D, fig. 1.
F. The Plug or Valve F, fig. 1, with its pipe conveying the wash from the vesscl \(D\) to the copper No. 7.
G. The Lever and Fulcrum G, fig. 1, by which the valve or plug F is raised, to discharge the contents of the vessel \(D\) into the copper No. 7.
C. Manhole or Opening C, fig. 1, for the purposes there described. This figure only represents that in the copper No. 7; the remainder are shown in fig. 7.
I. Exterior Pipe I, fig. 1, for the purpose of drawing off the wash from one copper to another. This figure only represents that communicating from copper No. 2 to No. 1 ; the remainder are shown in fig. 7.
K. Small Trial or Gauge Cock, K, fig. 1, to show when the wash is clarged to the proper height, and to admit air when the liquor is drawn off. This figure only exhibits that in copper 1; those in Nos. 2, and 3, are shown in fig. 7.
L. Small Proof Cock, L, fig. 1, to determine, by the application of a light, when all the spirit has distilled from the wash in copper No. 1.
M. A Discifarge Pipe and Cock, M, fig. 1. for the purposc of discharging the wash above the crown or highest part of the copper.
N. A Second Discharge Pipe and Cock, N, fig. 1, for the purpose of discharging the wash entirely.

\section*{Figure VII.}

Presents a back elevation of the still, as fixed, exhibiting the manner in which the several remaining pipes \(I\), manholes \(C\), and cocks \(K\), referred to, but not shown in fig. No. 6, are arranged; the repetition of the description being considered unnecessary. The lowest manhole in this drawing is of a form different from the others; being on a scale to admit a person inside the vessel for the purpose of cleaning the bottom, the only part exposed to the action of the fire. The upper ones are of sufficient dimension to admit a person's arm to clean the coppers. But when the diameter exceeds materially that of the present view (which is in the original four feet two inches) it is necessary to have large manholes, the same as that in the lowest copper, to admit a person into them all. The command of all the pipes, cocks, and manholes is arrived at by means of a spiral staircase,
which makes a half revolution of the still, and is generally made of cast iron.

In this figure the various water pipes, described in fig. No. 2, are nut shown; as they could only be represented in a very indistinet way. For the same reason the discharge pipes M and N are not repeated; and the chimney is omitted, which would have given the figure an additional appearance of confusion; and is not necessary to make it intelligible. The foregoing explanations have the advantage of being perfectly clear and intelligible, a quality not common to descriptions of a mechanical nature; which are usually more adapted to the comprehension of scientific, than to the understanding of ordinary readers. Although in the description of the different parts of the apparatus, the separate uses of each are well defined, the general effect of the whole combination is left unexplained. It may therefore be nccessary to give an idea of the principles on which the advantages to be derived from it are founded.

The eight coppers, placed onc upon the other, of which the seven lowest are intended to hold the wash, and the upper one to rcceive water,distil in the following manner :-

The first three, of which the second and third alone are intersected by the double pipes, distil almost at the same time. The lowest, only, being submitted to the immediate action of the fire, is, consequently, the first whose wash entcrs into a boiling state. The vapor penetrates into the second, passing through the wash which is contained in it, by means of the above mentioned pipes, and is there condensed, yielding up its caloric to that liquid, which is thereby quickly brought into a boiling state; the vapor which proceeds from the wash in the second boilcr passes into the third, producing the same effects as in the preceding. The new vapor, necessarily stronger than the first, rises and passes into the fourth, where it is received under a semispherical dome (or calotte), which prevents it from communicating directly with the cold wash contained in that copper.

On arriving in this dome it is easily conceived that the most watery portion of the vapor is there condensed, giving up its caloric, which contributes to heat the wash that surrounds the dome. The most spirituous part, which passes into the dome of the fifth copper, cxperiences the same effect on coming in contact with a cold body. The same operation takes place from one dome to another up to the last. As the vapor which rises is exposed to a cold temperature it is condensed, ceding its caloric; and it is after a succession of sufficient condensations, that the spirit is divested of all weak and watery particles, which, thus liquefied, return from one dome to another, being partially re-distilled in their progress, according to their degree of gravity, until the least spirituous reaches the third copper, there to undergo a new distillation. It has been observed that the upper copper is reserved to contain cold water; it is by this means, and by renewing this water, keeping it in a higher or lower temperature, according to circumstances, that the distiller can obtain the spirit at the strength he desires.

To explain by what physical law the watery vapor is forced to return from dome to dome to the third copper, and is there found totally separated from the alcohol, which arrives at the worm pure and free from any empyreuma, we shall call to mind what all chemists and distillers are, doubtless, aware of. It is known that water cannot boil under a heat of \(212^{\circ}\) of Fahrenheit ; while alcohol hoils at about \(173^{\circ}\). It is evident, therefore, that whenever the watery and alcoholic vapors rise, and are successively received in one or more atmospheres of from \(174^{\circ}\) to \(190^{\circ}\) or \(200^{\circ}\), the watery vapor becomes separated from the alcoholic, and is condensed; and the last, only, passes out, and is received at the desired strength ; care being taken to regulate properly the temperature of the water contained in the uppermost copper, which is traversed by the strongest and most alcoholic vapor before it passes into the worm.
It may be affirmed that the advantages of this apparatus are the greatest that have, as yet, been obtained. There is a great economy in fuel, as well from the small surface exposed to the action of the fire, and productive employment of every portion of the caloric, as by the simplicity and rapidity of the operation. To the saving of fuel we shall shortly advert more particularly. It will be perceived that a large portion of the spirit is distilled by vapor; and it is, consequently, much purer than that obtained by the ordinary apparatus. It is to the immediate contact with the fire of the material to be distilled, that distillers owe the greater portion of those injurious flavors and qualities with which spirits are frequently impregnated. Those bad flavors are acquired chiefly by the length of time that the wash remains exposed on the bottom of the still ; for during the period requisite to bring it up from the cold state to that of ebullition, at which distillation commences, deposits of the heavier particles contained in the wash are made on the bottom, which, being rather absorbents than conductors, prevent that constant and uniform transmission of caloric which is essential to good and pure distillation. It is in the earlier stages of the application of fire that this effect is mainly produced; for, as the wash approaches a state of ebullition, the struggles, to reach the surface, of those parts of the wash which are impregnated with caloric, and consequently decreased in gravity, and which, in the first instance, are sluggish in their motion, gradually bring the mass into a state of ebullition, which counteracts the tendency to burn, or otherwise acquire injurious flavor. Once arrrived at the boiling point, the risk of this evil is almost entirely removed. But as, on the common principle of distillation, the still is every time charged with cold wash, so every distillation is equally exposed to the recurrence of the evil.

It is one of the peculiar merits of M. Saintmarc's still to have effectually provided against this disadvantage. In his apparatus, only the first charge of the lowest copper is entirely distilled by the direct action of the fire. The aqueous and alcoholic vapors, which rise together, on arriving in the second copper, become mixed with the wash contained in it and are re-distilled
before they pass into the third copper. A thrrd distillation takes place in that copper before it passes under the correcting influence of the succeeding vessels. Thus he effects one distillation by fire, which is immediately succeeded by two vapor distillations; and, subsequently, by five purifying processes, which divest the spirit of all its impurities; and it comes over, at one operation, of the strength of thirty-five per cent. over proof, according to Sikes's hydrometer, used by the Excise and English distillers; which is equivalent to bubble seventeen or eighteen in the commerce of the West India Planter, and about - 870 of the specific gravity of chemists. The strength at which M. Saintmarc brings over his spirit by a still of eight compartments, is limited to thirty-five or forty per cent. over pronf; that being the highest degree generally required for purposes of commerce. But, by the addition of two or three more coppers or compartments to his still, he would succeed in obtaining, by one operation, the pure alcohol of the chemist, of the gravity of 820 or 825 .
It has been observed, that only the first charge of the lowest copper is entirely distilled by the direct action of the fire; and that is the only portion of a distillation, however prolonged, which is exposed to the injury of burning. By making the first charge of the lowest copper water, instead of wash, even this small risk will be totally avoided; since the wash, when once heated, comes down invariably into the lowest copper in a boiling state; and during the short time that it remains there, being kept in a constant state of ebullition, it is not subject to the disadvantage of burning.
We speak of the shortness of the time during which the wash remains in the lowest copper. As soon as the whole of the spirit has distilled from the lowest copper, which is proved by the application of a light to the small proof cock \(\mathbf{L}\), fig. 6, already described, the wash is discharged from that copper and the cock I, communicating from copper No. 2 to No. 1, is immediately opened, which discharges the whole contents of No. 2 into No. 1, withont at all suspending the distillation. In order to replace the wash drawn from copper No. 2, that contained in the vessel D is discharged, by raising the valve or plug \(F\) by means of the lever andfulcrum G, which displaces the same quantity down the pipes H, until the copper No. 2 is replenished. A fresh charge of wash is then drawn by the pipe E into the vessel D , ready for the next supply.

It is easy to conceive, that, when the first copper has furnished all the alcohol it contains, the wash of the second is chiefly distilled; and, therefore, when brought down into the lowest copper, in a state of perfect ebullition, and thus far advanced in the process, it remains for so short a time in contact with the fire, that it not only does not acquire any bad taste in consequence, but its perfect distillation is completed within fifteen or twenty minutes; the depth of the liquor being no more than ten or twelve inches. The process may thus be carried on ad infinitum, or so long as wash is furnshed to feed the still. The supply displaced from the third
to the second copper has been already stated to be partly distilled; and the quantities contained in the copper with the domes have acquired a considerable degree of heat; graduated from a little below the boiling point in copper No. 4, down to \(160^{\circ}\) or \(170^{\circ}\) in copper No. 7. In imbibing the caloric brought by the vapor through the domes, which is continually renewed, the wash in the fourth and succeeding coppers becomes the first agent which contributes to divest the alcohol of the watery parts that rise with it.

It is among the advantages of this apparatus, that the continual and regular supply of wash, and the gradually advancing heat which it acquires in the manner just described, are calculated to prevent the occurretice of those accidents which arise in distilleries, chiefly from the mismanagement of the workmen employed: we mean by explosion or collapsion. When a large quantity of liquid, of a turbid and heavy nature, is collected in a body, and subjected to the action of a powerful fire, it happens, not unfrequently, that, before it arrives at the boiling point, it forms a strong head, which fills the space in the upper part of the still, and passes even down the worm; and, on some occasions, has caused an explosion of the still. The same result would follow the want of a proper outlet for the vapor. But the accident which more frequently occurs is collapsion. When a charge is worked off in the common still, it has frequently happened, that whilst it remains filled with vapor, a new charge of cold wash is thrown in for distillation, or of water for cleansing, without the precaution of opening the man-hole, or other aperture in the breast of the still, to admit air. A sudden condensation follows the admission of the cold liquor; and, a vacuum being formed, the stlll immediately collapses.

Against both these accidents, M. Saintmarc's still affords complete protection. If the wash acquire a head, which is only likely to happen with the first charge of the lowest copper, (and that may be prevented by using water for the first charge, as before stated), it can never penetrate further than the second copper; and is immediately returned by the pipe Z into the lower copper again. The pipes O and Q are ample security for the free passage of vapor which has to pass up them; and the safety-pipes W equally secure the coppers on which they stand, against all possibility of injury from the generation of vapor upon the surface of the wash in those coppers.

Against the risk of collapsion the same security seems to exist. The liquor brought down into the lowest copper being always at the boiling point, and that in the vessels above graduated below that point, the descent from vessel to vessel is accomplished without any material change in the temperature, which is acting upon the vapor within the domes; and, consequently, without, in any important degree, clanging the course of condensation which is going forward. From this observation, \({ }^{\circ} \mathrm{n}\) its strict sense, must be excepted the copper, No. 7; where a supply of wash being introduced from the vessel D , of a temperature considerably lower than that already existing in the copper, an additional condensing
power is acting in that copper for a few minutes; and the product in spirit, during that period, will be somewhat diminished in quantity, but of higher strength. One of the effects of discharging the wash from the vessel D into the bottom of the copper No. 7 is that, to a certain extent, an equalisation of temperature takes place, by the admixture of the two bodies, in the act of displacing, by the pipe II, a quantity equal to that admitted from above. The more immediate object of fixing the vessel D round the uppermost compartment of the still, rather than as a detached vessel, is also to encrease the temperature of its contents, by contact, during the period occupied in working off a charge below, with a body at a much higher degree than the wash which it contains. By the union of these two advantages, the diminution of temperature in copper No. 7, only produces a slight effect, as already observed; and nothing like a vacuum is, or can be, formed in consequence; which is further provided against by the connexion of the dome in copper No. 7, with those both below and above: and, through the latter, with the large pipe leading to the worm-tub. We have been thus particular in detailing these parts of the case, as it is of high importance in distilleries to be independent both of ignorance and carelessness on these points.

The first impression on our minds, on a view of the drawing of the still, was that it was complex in its nature and construction, and must be difficult to manage. It requires, however, but little attention to discover that such is not the case. On the contrary, it is entirely self-acting as to all its interior arrangements, and so simple and unerring in its principle and operation, that any person, whether previously conversant with distillation or not, will be quite competent to its management, with a few days' practice ; a point of great importance, where the indifference or ignorance of the parties employed to work the stills (as is the case, particularly in the West.Indies), renders all complexity unadvisable. The mere stirring of a fire, and the turning of two or three cocks, is the utmost extent of attention required to conduct its operations.

The construction of the still has been already spoken of, in the description of its various parts; and care seems to have been taken, in this respect, to meet all reasonable emergencies. The diameter of the still being small, in proportion to its powers, as compared with the common stills in use; and each compartment being separately manufactured, and finally put together by flanches and bolts, M. Saintmarc generally makes a spare lower compartment, precisely adapted to the higher part, which goes with the still; and especially to the West Indies. It does not appear that this still will be of less duration than any other in use, or require more repairs than the most simple ones. On the contrary, the lowest copper is the only one which is subnuitted to any severe action; and if, either by lapse of time or constant cse, or by any accident, to which carelessness equally exposes stills of all sorts, the bottom should be injured, a period of two or three days would suffice for taking away the lower compartment,
fixing the spare new one, and replacing the still in its position ready for work, as sound and perfect as when quite new. This must be of great importance to a West India planter, who, if the same thing were to happen with a common still, at the beginning of a crop, would, in all probability, be deprived of the means of working during the whole season; as the corsequence of such an accident to a common still is, generally, the necessity for a new one; so difficult and expensive is the repair. In like manner the principle of the construction of this still affords easy access to any copper or compartment, in the event of a little repair being necessary. But it would appear to be little liable to derangement in its upper compartments; the only action there being an equable and quiet transmission of vapor upwards, and of wash downwards; neither of them calculated to injure the interior works.

A question suggested itself to us, as to the power of introducing into the lower compartment of M. Saintmarc's still, the machinery employed in most malt distilleries, for disturbing the heavier ingredients in the wash, which may settle on the hottom. We have already shown that such a case may be prevented here; but, supposing our view of the nen-liability of the wash to be burnt should be erroneous, there does not appear any difficulty in introducing the chains, or other proper machinery, for that purpose. In the common still it is fixed vertically, through the upper pait of the still, and worked through a stuffing box. In this it would also be required to be worked through a stuffing box, but horizontally, through the side of the lowest copper, by the aid of a pair of bevil wheels in the interior.

A series of experiments and calculations have been made for the purpose of demonstrating the powers of M. Saintmarc's still, and proving the allegations with regard to its saving of fuel, water, and many other points of economy, advanced in its favor. These experiments and statements are of a sufficiently interesting character to induce us to add them to the preceding observations, as they are calculated to carry conviction to the mind, from the plain and simple manner in which they are advanced. They are made in a way likely to attract notice; the powers of the patent still being placed in juxtaposition or contrast, with those of the common still. As far as our means extend of judying of the correctness of the statement with regard to the powers of the old still, we should be inclined to think them not unfairly put. Thedata on which some of them rest are admitted by chemists, haviug been proved by the experiments of some of the ablest men in that branch of science, both in this country and in Frarice. The dednctions, therefore, are easy on those parts of the case. With regard to many points, such as cost and number of apparatus and vessels, space required, savings, and other considerations of a commercial nature, and some other points, they are not susceptible of check by any but practical persons.

It is of course, well known, that the ordinary process of distillation consists of three operations, and is usually performed in two stills of different dimensions; the larger one called a wash
still, being that in which the first operation takes place, of distilling the wash, the vapor proceeding froun which, being of a weak nature, the product is an imperfect body, of about half the strength of proof spirit, and technically called low wine. This product is then conveyed to the smaller still called the low wine still, where it is subjected to a second distillation, from which results a spirit. A portion, however, of this latter product is separated from the remainder, it being of a weak and impure character; it is denominated feints by the excise laws and by the distillers, and is either submitted to a third distillation per se, or is mixed with the wash of the next distillation; being, however, generally separately distilled. These constitute three distinct operations. By M. Saintmarc's still, all this is effected at one operation; the weaker vapor, which constitutes the low wine of the first, and the feints of the second, distillation, on the old plan, being strengthened and purified by the subsequent processes to which it is subjected in the higher parts of his still; and all the weak part of the vapor, which, if passed into the worm, and there condensed, would be in the state of low wines or feints, being condensed within the still, long before it reaches the summit, and returned into the lowest coppers. This is the basis of one of the important savings of the still. On the old plan, the vapor generated by the first distillation is passed off immediately to the refrigerator or worm-tub, and there condensed; the vapor of the second distillation, the result of a new application of fuel, is again sent to the worm-tub and there condensed; and the third distillation, by the aid of a third fire, is again treated in the same way. M. Saintmarc makes the first application of fuel to his still effect all these objects. The vapor of the first copper heats the second; that of the second heats the third ; that, agaitı, passes through the several upper compartments, disttributing a portion of its caloric to the wash in each of them, thus preparing then for distillation, in which process the vapor las the benefit of those condensing powers which each body of wash contains, for the separation, by liquefaction, of its aqueous or weaker, from its alcoholic or stronger, portions.

The advantages here described are demonstrated by experiments, showing the actual powers of a still on this principle, as compared with those of the two stills in use on the old plan, of equal powers of production; in which are slown the relative areas or superficies of each exposed to the action of the fire; the generation of vapor on both plans; and the quantity of water employed in condensing that vapor.

A still on M. Saintmarc's principle, containing 560 imperial gallons of wash, in seven coppers of eighty gallons each, estimated to work off thirty charges of one copper, amounting to 2400 gallons, will produce (supposing the wash to be attenuated sixty degrees, and, consequently, capable of yielding twelve percent. of proof spirit on the wash), 213 gallons of spirit at thirty-five per cent. over proof, equal to 288 gallons at proof in a day of twelve hours. A common still of the total contents of about 1700 imperial gallons (to contain a charge of 1200 gallons of wash), wil \({ }^{1}\)

\section*{DISTILLATION.}
work off twice in twelve lours; distilling 2400 gallons of the same gravity as above, into 960 gallons of low wine; and a low wine still containing a charge of 480 gallons, will produce, at twelve per cent. on the wash, the same quantity, or 288 gallons of proof spirit.

The cost of these two stills is described as double that of the new still.

Taking, next, the diameters and superfictes of the stills on both systems, it will be found that, on the old plan, a wash still to contain a charge of 1200 gallons, will have

A diameter of seven feet, and an area of about
And a low wine still of 480 gallons, will have a diameter of five feet, and an area of \(19 \frac{1}{2}\) feet
Making a total superficial area in the two stills of . . . . . . 58 feet
The diameter of a still to contain a charge of 560 gallons on the patent principle
will be about fifty incles, and its area will be about fifty inches, and its area
\(13_{2}^{1}\) feet

Being less than one fourth of the superficial area, exposed to the action of the fire, as compared with the two stills on the old plan.

The consequences of these diminished proportions, are -

First.-That the construction of the furnace for the patent still, does not cost above one-third, or one-fourth, that of the two furnaces on the old plan.

Secondly.-That the consumption of fuel is proportioned to the areas of the respective stills, combined with the quantities of liquid raised into vapor, and the economy of caloric, or heat, in that operation, resulting from their different principles of construction.

Of low wines . . . . 960 gallons
Of spirit, (at proof) . . . 288
Of feints, (one fourth) .

\section*{Making}

It may be shown that, from the union of these considerations, results the fact (proved in practice), that the patent still does not consume, in any case, nore than one-third, and, probably, less than one-fourth, of the fuel that is employed by the others. To present this more intelligibly (always bearing in mind the respective superficies of \(13 \frac{1}{2}\) and 58 feet), the different quantities of vapor passed through the worins, aud there condensed on the two plans, may be stated. For this purpose, taking the average volumes of vapor generated by the various liquids distilled, when entirely evaporated, to be in the proportion of 1500 to 1 , it will be seen that, by the old plan, there is produced :-

72
1320 gallons \(\times 1500=1,980,000\)
being the gallons of vapor passed through the refrigerator on the old plan.-On the patent principle there is produced :-
\[
\text { Of spirit, (35 over proof) . . . } 213 \text { gallons } \times 1500=319,500
\]
being the gallons of vapor passed through the refrigerator on that principle ; or less than onesixth of that produced by the principle now in practice.

In pursuing this enquiry to the consumption of water, which is necessatily proportioned to the quantity of vapor condensed, it is assumed, that the vapor necessary to produce one gallon of liquid will raise to the boiling point, in its condensation, five gallons of water-and taking \(50^{\circ}\) of Fahrenheit as the mean temperature vapor, equivalent to one gallon of liquid, will cominunicate to five gallons of water, caloric to the extent of \(162^{\circ}\); but as the temperature of water, for the purpose of condensation, will be in a great measure ineffectual, when raised above \(104^{\circ}\), it follows, that the absorption of caloric, by the water, to bring it to that point, is only \(54^{\circ}\), or one-third of \(162^{\circ}\)-and, therefore, three times five gallons, or fifteen gallons of water, will be necessary to condense the vapor, which will produce one gallon of liquid. of water, it will be found that 1500 gallons of

Thus, on the old plan, (as shown before) . . . \(1320 \times 15=19,800\)
And on the patent plan, (as shown before) . . . \(213 \times 15=3195\)
To which must be added, for the water consumed in the uppermost copper of the still

Making a total quantity of 3795

Which two sums of 19,800 and 3,795 are the respective numbers of gallons of water employed to nondense the vapor, on the two principles; or, in the same proportion for any increased or diminished consumption, arising either from employing the water at a lower or higher temperature, or from the repeated use of the standing contents of the worm-tub, in consequence of its becoming cool when not worked.

A variety of estimates are given, exhibiting the diminished size and cost of the necessary buildings, and the decrease, in number and expense, of the various descriptions of vessels, pumps, pipes, \&c., employed in une, as compared with the other, systeni. These, though essential to the distiller, are not necessary parts of our view of the question.

Another statement is given of the powers of
a still on M. Saintmarc's principle, which, were it not, as is stated, demonstrable in practice, would exceed belief.

A still of eight feet six inches diameter, containing 350 gallons of wash in each of the seven lower compartments, or a total charge of 2450 gallons, will run off in the day of twenty-four hours, at least 30,000 imperial gallons of wash, and produce between 3000 and 4000 gallons of spirit; a quantity unprecedented in the annals of distillation.

The results of some experiments are given, which were made in the presence of the officers of the board of excise in May 1826, by which, at one operation, some spirit was produced as high as fifty-eight per cent. over proof, and the mean strength of the whole day's distillation was fortythree per cent. over proof. The produce in quantity exceeded by ten per cent. what was required by the excise, according to the attenuation of the wash. A surplus to this extent, however, cannot be calculated upon; but it is manifest, that the evaporation and loss consequent upon one single distillation, is small as compared with that which results from three distillations, and two pumpings, or other removals from vessel to vessel, as hitherto practised. By experiments on this head made with the same wash, on the two modes of distillation, the result has shown a surplus product, in favor of M. Saintmarc's plan, varying, according to the delicacy of management, from three to six per cent.
M. Saintmarc and . M. Alégre, have also introduced into practise in distillation, some changes in the previous process of fermentation, which effect an improvement in the quality of the wash, and give an increase in the quantity of spirit. See article Fermentation.

They have likewise constructed an apparatus, secured by patent, for improving the rectification of raw or feint spirits, by which a greater degree of purity is attained than by the common rectifying stiil; and the fine flavors necessary for making compounds are employed more beneficially and delicately than by the existing process. For a description of this still, see article Rectification.

We have devoted a large space to the examination of this question. But the apparatus and process united, present too interesting a subject of enquiry and investigation, as compared with the existing systems, to admit of its being slightly passed over.

We shall conclude with a few observations of the proprietors of the patent, addressed alike to the interest of the British distiller and the West India planter. They say, when speaking of the advantages the still offers:- 'These advantages consist, shortly, in the comparatively low price of the still-the trifling expense of erecting the furnace-the small consumption of fuel and water-the diminished number, dimensions, and cost of the necessary vats, pumps, pipes, \&c., connected with the still-the limited space required for its erection-the saving of time in the process of distillation resulting from its use-its uniform applicability to every liquid that has undergone, or is susceptible of, vinous fermentation (as well as to numerous other branches of chemical
science), and, especially, in the production, by one operation from the wash, of a spirit, exceeding in strength and purity all those which have hitherto been obtained in this country, by any single process. To these important considerations, which are alike applicable to the united kingdom and the colonies, may be added, as especially so to the latter, the no less important points of the production of rum one-third higher proof than the average of what is now obtained in many of them; and the extensive saving in puncheons, freight, and charges, when shipped in that concentrated state.'
' It is unnecessary to go into details of the saving in puncheons, freight and charges, when rum is shipped at a high proof. It is a matter of too much importance, and too easily estimated by a planter, to require figures in confirmation of the statement. But the actual saving to him in these items, however considerable, is only a part of the advantage. The spirit thus obtained, from its greater purity, bears a value in the market much above that determined by the relative degree of strength, as compared with rum of a lower standard. And as this improvement in strength and quality is effected, not at an augmentation, but at a considerable diminution of expense, it is unquestionable, that, when employed for purposes of barter, according to the practice of the colonies, at a reduced strength, that reduction from the high strength at which it is brought over by this apparatus, may be made consistently with a preservation of its purity; and its value, as an article of barter, thus enhanced in a considerable degree.'

They conclude-
- It must be recollected that this is not an apparatus the principle of which is untried. For some years a still of the same kind-less perfect, it is true, but still embodying the main principle of this, has been used in France, by the inventor there (who is also one of the proprietors of the present patent), with the most entire success. This has, therefore, the great advantage of having corrected, in its construction, whatever defects were found in the original invention, from which no new invention is entirely exempt; suci corrections being founded on eighteen months' experience in France. And the opinion is warranted, that the apparatus constituting the subject of this patent, and of the present remarks, is, in its principle, the most sound and scientific, and the most sure and perfect in its operations, of any that has been adapted to the art of distillation in this country."

The practical uses of distillation in chemistry are too numerous to be mentioned. By it the volatile part of any substance is separated from that which is fixed, as in the distillation of turpentine, in which the essential oil rises and the rosin is left behind; the more evaporable is separated from the less evaporable, as in the preparation or rectification of ardent spirit; liquids are freed from foreign or accidental impurities, as in the distillation of common water: volatile substances are united iu an easy and commodious manner, as in preparing the odorous distilled waters of aromatic vegetables: bodies are decomposed and analysed, new compounds are formed, and a
knowledge is gained of the native and chemical properties of natural substances.

Common distillation of aromatic vegetables is a simple process, but gives room for some nicety of management, particularly in the regulation of the heat and the quantity of water, which can only be learned by experience. As an example, common peppermint water may be given, and is thus made : put a pound and a half of dry peppermint in a still, cover it with water, put on the capital, luting the joints with wet bladder or pasted paper; bring the liquor to boil quickly, and keep it just boiling till about a gallon of water lias run over. The residue in the still is then thrown away as useless. The water that comes over first is somewhat turbid, owing to the excess of essential oil that it contains, and in consequence is by much the strongest. By rest it becomes clear, and a fine pellicle of oil rises to the top.

The following circumstances are chiefly observable in common distillation:-The substance from which the distrllation is made in some cases requires previous treatment, in others none. The petals of flowers, such as roses and jasmine, may be used immediately, or only after the gentlest drying. The aromatic herbaceous vegetables, such as peppermint, may be used indiscriminately fresh or dry, observing, that as the plant is much more watery when fresh than when dry, more water may be added in the distillation of the latter than of the former. Hard woods should be rasped or bruised, and, as they are less easily penetrated by the water, they should be macerated in it without heat for from one or two days to as nany weeks, before distillation.
