

BOTANICAL REPORT OF MEXICAN BIOLOGICAL EXPEDITION, 1935
 CERRO POTOSI, NUEVO LEON, MEXICO
 HARRY HOOGSTRAAL, Sponsor; R. SCHWEIDER, Assistant

Amudala 1250

"The collection is a most valuable one and represents a number of new species and considerable extension of ranges in many cases. A number of the new species are in manuscript by Curator Standley and marked with "Ined". in present list. A few of the collections which are named only to represent new species which will be described by Assistant Curator Steyermark and names will be furnished you later. Three specimens of Senecio and one specimen of another composite have been sent to specialists for determination since they probably represent new species in their respective groups."
