cable. The telephone lines do not approach the house at this time and it is assumed that the electrical poles will be used to carry the telephone wires due to the length of line needed. There are two three-pair beige telephone cables extending out of the house near the electrical cable entry, indicating possibly two telephones will be installed unless some type of alarm system is contemplated.

The house has a complete intercom system of the type using a radio receiver. Electrical service has been run into the house through the construction of a new line.

It is contemplated that two microphones will be installed, if possible, one to cover the vault area and one to cover the area of the small bar located in the living room. The MITE or MOUSE units will be used and this will be done prior to occupancy by the DIEZ family. The family has already moved in some personal belongings, and from the progress of the construction it is presumed they could move in completely within the next week or two. The survey indicates that misur coverage can be instituted with full security and an FD-142 will be submitted requesting authority to install.

The locks on the house are National "EZ-Set" locks and the Bureau is requested to immediately forward to Tampa any master or skeleton=type keys that might be of assistance in opening these locks.
