

Lacking is Enough when you're at your Best

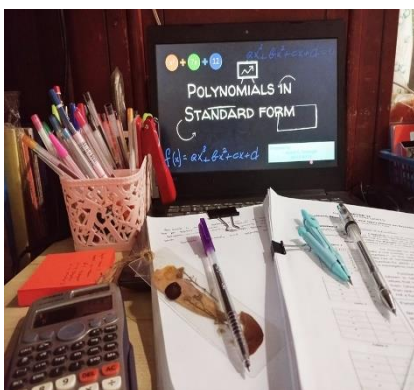

by: Analie C. Cabangal

Teaching is a marvelous job. I teach not because it is not just my responsibility because I take an oath for it. I teach because this is me, this was my destiny it may cliché but for its true for me. I am not a super teacher who has already set their name in the pedestal of teaching, honestly, I may not even reach the one percent of teaching but I think a good teacher is not about experience it is about how you teach.

I remember when I am doing my student teaching in a certain high school, I am a new to field I got ravage to know that I will be teaching multiple sections with a bunch of students on it. The teaching resources was minimal and limited we cannot even use projectors to teach concepts and cannot use technology generated activities. All I do is to print out all the materials distribute to the students and write in a manila paper paste on board to use it in presenting my lesson to my student. This is a sad reality in teaching you have the passion to teach but there are circumstances that hinder to the teach.

The image shows handwritten notes on a yellow background. The first section is titled "Inter-quartile Range" and contains the text: "are compromises between the crudeness of the range and over-sensitivity of the standard deviation." Below this is the formula $IQR = Q_3 - Q_1$. A second box contains the formula $IQR = Q_3 - Q_1$ with a note: "where Q₃ = 3rd Quartile, Q₁ = 1st Quartile". The third box contains the formula $Q_k = \left[\frac{k}{4}n + \left(1 - \frac{k}{4}\right) \right]^{th}$. The second section is titled "Quartile Deviation" and contains the formula $QD = \frac{(Q_3 - Q_1)}{2}$. Below this is an example: "Given the data below solve for the interquartile range and Quartile deviation." followed by a table:

Quartile																				
X	12	25	27	29	36	38	40	43	50	54	62									

If I to have a power to address these needs; First I would probable proposed to have at least a projector in every department in every school for the teacher to use it when teaching. Secondly, I will take the advantage the advancement of the technology the fact that most of our students have cellphones we can use it as our way to introduce concepts there are a lot of educational apps that we

can explore and use now a days. The use of ICT and integrating it in education is our weapon to have meaning and have competitive education.
