CHASE NURSERY CO.

INCORPORATED

CHASE, ALABAMA

OUR 35TH YEAR IN ALABAMA

CHASE, ALABAMA,

October 1st, 1925.

To the Trade:

Two years have passed since our rather radical change in our business—the discontinuing of fruit trees and heavy shade trees—and we still live. Not only do we live but we get a heap more satisfaction out of life because by concentrating our efforts on Ornamentals Exclusively we have focused our organization on the doing of fewer things and doing them better. We are not overburdened with a multiplicity of endeavor; there is more time to think, to plan, to use such grey matter as we have in the betterment of our growing, grading, packing and shipping, time for the doing of the daily task a little better than ever before.

This is the day of specialists. Our specialty is the quantity production of Shrubs, Hedge Plants, Roses and Evergreens. We honestly believe that there is no better location in the United States for the growing of these special lines than right here on the red clay soils of North Alabama. This opinion is shared by scores of our customers who have used our products, many of them for more than a quarter of a century, and these older customers are scattered from Maine to Miami, from Yankton to Los Angeles, from Wilmington to Wenatchee. Throughout this Trade List are reproduced a few of the many expressions of satisfaction from these pleased customers.

We are by no means in the tropical South, our winters are just right for the hardening up and thoroughly ripening of the stock. The mercury at times drops to zero or below for short periods, but not too prolonged to interfere with almost constant digging and shipping from October to April. Our soil produces the best root system we have ever seen on these special lines, and enables us to make a good ball on Evergreens, a ball that stays put.

With side tracks to our packing house from two lines of railroads, telegraph, express and freight office, also the post office right at our doors, we can give you the quickest possible action on rush orders.

With deep appreciation for the fine business given us all these years,

Yours very truly,

CHASE NURSERY COMPANY, INC.

Our thirty-fifth year in Alabama.

## TERMS AND CONDITIONS

### SHIPMENTS

Please state how you want your shipments made, whether by freight or express; also route. Where no instructions are given, we will ship as we think best serves your interests without assuming responsibility.

The risk and cost of transportation belong to purchaser.

### CREDIT

Usual terms to parties of known responsibility. We will not accept orders until we believe the buyer is good for the account. Cash before shipment required from parties unknown to us, or references with sufficient time for investigation before shipment.

### PRICES

We quote prices, per 10, per 100, per 1,000, as our stock warrants, and will supply nurserymen and dealers at prices named regardless of the size of the order, except in cases of long assorted lists of small quantities, when an additional charge will be made to cover the extra labor involved. Prices are subject to market changes.

### GRADES

We grade liberally. All shrubs of specified sizes are well furnished and well rooted. Culls are as rigidly excluded from the lightest grades listed as from the heavier stock. Our rule is, "WHEN IN DOUBT, PUT IT IN THE LOWER GRADE." Detailed information as to our method of grading Hedge Plants and Roses is given elsewhere in this list.

### LIABILITY AND CLAIMS

We are not liable for injury to stock from frost, hail, fire, or other causes beyond our control, and book all orders with this understanding. While we use every means at our command to secure prompt delivery, we are not liable for delays in transit; our responsibility ends upon delivery in good order to railway company. Remedy for loss must lie between the buyer and the railway company, but we will gladly render all the aid we can. Any other claims must be made immediately after receipt of stock.

### NON-WARRANTY CLAUSE

We give no warranty, express or implied, as to description, quality, productiveness, or any other matter, of any nursery stock, seeds, bulbs or plants we sell.

---

Connecticut—"Your car has been received and unloaded. The stock was apparently in fine condition."

OUR OFFICE AT CHASE

### CODE WORDS—TELEGRAPHIC ORDERS

When more than one grade is listed, a code word is used. Much expense can be saved in telegraphic orders by using these code words.

### BOXING

Charges as low as possible for well-made boxes, paper-lined:

	7½ ft.	9½ ft.
30 x 30.....	\$3.50	\$4.00
24 x 30.....	3.25	3.50
24 x 24.....	3.00	3.25
18 x 24.....	2.50	2.75
18 x 18.....	2.25	2.50
15 x 15.....	1.75	-----
12 x 12.....	1.50	-----

On orders for roses, small shrubs, etc., we can frequently use dry goods cases or shoe boxes at lower cost, and shall endeavor at all times to make lowest possible charges.

Bales: 25 cents to \$3.50, according to size.

### REFERENCE

As to our standing and responsibility we refer to any bank or business house in Huntsville, Alabama, the Commercial Agencies, and the leading nurserymen of the United States.

We cannot undertake to supply long and much assorted lists of stock calling for only small quantities of each kind, save at an advance of 10 to 25 per cent above our printed rates.

---

Texas—"Received my bill of shrubs and invoice this morning. I believe I know something about nursery stock, and must say it's far beyond my expectations. I certainly appreciate the nice way you handled my little bill, and my customer says he has never bought such nice stock of its kind."

## **DIRECTIONS FOR FUMIGATING NURSERY STOCK WITH HYDROCYANIC ACID GAS**

The necessary equipment consists of an air-tight chamber (box or room), a glazed earthenware vessel, a measuring glass graduated to ounces, and a set of accurate scales. The necessary chemicals are either Cyanide of Potash (98%) or Sodium Cyanide (96-98%) and Sulphuric Acid (specific gravity 1.83). Care should be taken to secure either the 98% Cyanide of Potash or 96-98% Sodium Cyanide, otherwise an insufficient amount of gas would be generated. This chemical must be kept in air-tight containers and so packed will keep indefinitely. It is a deadly poison and should not be left where it will fall into the hands of children or careless persons, and should never be handled by a person having open sores, cuts or bruises on his hands. The gas is colorless and if inhaled in quantity is fatal; smaller amounts induce headache or dizziness.

The best commercial grade of Sulphuric Acid should be used. This acid must be kept in a glass or earthenware vessel tightly stopped with a glass or lead stopper. Be sure that your fumigating box or room is air-tight or gas-proof.

The standard formula for fumigating each 100 cubic feet of space contained in the fumigating house is as follows:

One ounce Cyanide of Potash (98%) or  $\frac{3}{4}$  of one ounce Sodium Cyanide (96-98%).

Two Fluid ounces Sulphuric Acid.

Four Fluid ounces Water.

The glazed earthenware vessel should be somewhat larger than is necessary to hold the chemicals. A one or two-gallon jar is perhaps the best container.

The trees as dug and brought from the field should be placed in the fumigating house, care being taken to see that they are free from any considerable quantities of mud or dirt. The trees should not be fumigated when they are wet, as it has been shown that in this condition they are likely to be injured by the gas. When the compartment is full of stock, close all openings except the door. Place the jar on the floor near the middle of the room, pour in the required amount of water, and then slowly pour in the acid. The cyanide, previously weighed and inclosed in a tight paper bag, is now dropped into the jar and the operator leaves immediately and closes the door tight. The steps in this operation should never be varied. If water is poured into the acid, a violent action takes place and may be the cause of injury to the operator. Inclosing the cyanide in a paper bag makes it convenient and safe to handle and retards the generation of the gas for a moment after being dropped, thus allowing time to leave the room and close the door securely.

Keep the door closed for forty minutes, at the end of which time the door and window should be thrown open, care being taken to avoid the outward rush of the gas. After fifteen minutes of airing, the room may be safely entered and the stock removed, being now ready for packing or heeling in. After fumigating the contents of the jar should be buried.

Buy chemicals of your local druggist if you can secure Merck's cyanide in unbroken, original packages, and sulphuric acid that has been kept in a glass-stoppered bottle.
