Patents expired during the year.....	11,687
Patents withheld for non-payment of final fee.....	2,981

In inventiveness the State of Connecticut led the list with one patent for every 820 inhabitants; the District of Columbia came next, with one for every 830 inhabitants; and Massachusetts was third with one for every 944 inhabitants. North Carolina was least inventive, only one inhabitant out of 25,450 securing a patent. In total patents issued New York was first with 3,634, which, however, only represented one to 1,398 inhabitants, giving her the eighth place in inventiveness. Among foreign countries England as usual has the best record, 523 American patents being issued to her citizens; Germany is next with 355 patents; and France is third with 131 patents; Brazil, the Canary Islands, China, Newfoundland, Queensland, Turkey, and Wales have one patent apiece.

The year 1888 in number of patents issued ranks fifth; it is surpassed in numbers by the years 1885 (24,233 patents), 1886 (22,508 patents), 1883 (22,383 patents), and 1887 (21,477 patents). The immense increase in business is shown by an examination of the records of past years. In 1837 only 436 patents were issued, and in 1855 for the first time the number exceeded two thousand (2,012 patents).

Commissioner's Report.—This document, dated Jan. 31, 1889, is published in the "Official Gazette" of the United States Patent-Office of Feb. 12, 1889. In addition to the usual interesting statistical tables, it contains various recommendations for legislation, among other changes suggesting the repeal of section 4887 of the patent laws. This is the section limiting the duration of an American patent to the shortest term of a foreign patent granted for the same invention to the same inventor. In the decision of the United States Supreme Court in "*Bate vs. Hammond*" noted below, some limitation of the scope of this statute was laid down.

Proposed Legislation.—One most important modification in the operation of the patent laws has been the subject of much agitation among those interested in patents, and involves the establishment of a new court, to be termed the Court of Patent Appeals. The fact is undoubted that the docket of the United States Supreme Court is overloaded with matter, much of which is appealed patent suits, in which the action is carried up from the United States circuit courts. The Supreme Court of the District of Columbia is the recipient of appeals from the Commissioner of Patents. The new body is to take the place of both these courts to a certain extent. It is to have jurisdiction over appellate cases coming from the circuit courts, the Supreme Court of the District, and the Commissioner of Patents. It is not proposed to make it of last resort. If a sufficient amount is involved cases can be carried up from it to the United States Supreme Court.

Litigation.—An important decision was rendered by Judge Kekewich, of London, in the English suit brought to annul the Ganlard and Gibbs patent on transformers; it declared the patent to be invalid. He so decided, concluding that the invention was not a fitting subject for a patent, as well as that the parties named were not the first inventors. The "transformer" as essential to the newly developed system of alternate current lighting has within the last year acquired much importance. Attention is called to a corresponding American decision (*Westinghouse vs. Sun Electrical Company*, see below). In England also Justice Kay declared the Edison "carbon filament," patent 4,576 of 1879, invalid, this being one of the basic patents on incandescent electric lamps.

One of the great patent suits reached an accounting during the last part of the year. It was brought by the Webster Loom Company against the Higgins Carpet Company. It re-

ferred to the famous Webster patent upon one feature of weaving Brussels carpet. The patent was granted in 1872, and a special company with a capital of \$200,000 was formed to litigate it. The present suit occupied four years, 1874 to 1878, before the final hearing in the United States Circuit Court was reached, where the patent was decided to be invalid. On appeal the United States Supreme Court upheld the patent and ordered an accounting. Two years were devoted to it, and two tons of books and documents were eventually produced. The claim presented by the Webster Loom Company was \$28,750,000. On cross-examination of the president of the company the claim was reduced to \$1,500,000. His testimony embraced nearly 6,300 questions and extended over two years. In the final argument before the master eleven days were occupied and over 1,000 pages of briefs were handed him. His decision practically threw out the patent in suit as an element of damages. The Webster Company were awarded nothing. The most eminent counsel were retained in the case, which passes into history as one of the most famous patent litigations of America.

The Bell telephone patent at last reached the Supreme Court on appeal, five cases being consolidated into one for the purposes of the hearing. The court upheld the patent in its broadest scope, so that all electric speaking telephones are covered by it. A minority opinion representing the views of three out of seven judges was delivered as against the patent, in favor of the claims of priority of Daniel Drawbaugh. Meanwhile the suit brought by the Government for the cancellation of the Bell telephone patent of 1876 is slowly progressing. On a demurrer it reached the Supreme Court, and the Government's right to bring such a suit was upheld (see "Official Gazette" of the United States Patent-Office" xlv, 1,311).

A very important decision of the U. S. Supreme Court was rendered in the suit entitled Bate Refrigerating Company against George H. Hammond & Co. A United States patent had been awarded to John J. Bate for a process of preserving meat, and previous to the issue of his American patent he had taken out a Canadian patent for five years. Although by due payment of fees he had kept the Canadian patent alive for fifteen years, it not having as yet expired, it was claimed that the American patent was limited in duration to the first period of five years of the Canadian patent. The Supreme Court decided otherwise, and held that as long as the Canadian patent was extended it was without effect upon the American franchise. It did not state, however, that if the Canadian fees had not been paid, and the foreign patent had expired after five years, that such expiration would not have limited the American patent. It left it to be inferred that it would have had that effect.

Foreign Laws.—For changes or new legislation in, or recent publication of foreign patent

laws, the following references to the "Official Gazette" of the United States Patent-Office are given: The Congo Free State, xlii, 202; Guatemala, xlii, 830; Germany, xliii, 889; British India, xliii, 1,588; South African Republic, xlv, 1,507; South Australia, xlv, 1,510; Switzerland, xlv, 233 and 1,070; New South Wales, xlv, 128.

Court Decisions.—Abstracts of some of the more important points decided in the Federal courts are given below, the references being to volume and page of the "Official Gazette."

The mere fact that a person sells an article to which a patented device may be attached does not make him an infringer, provided the article is not so constructed that the patented device and no other can be used with it. *Bliss et al. vs. Merrill et al.*, xlii, 97.

Where one patentee has invented a combination for a particular purpose, the field is open to another to invent a combination of the same parts differently arranged and affecting the same result by a different mode of operation. *Railway Register Manufacturing Company vs. Third Avenue Railway Company et al.*, xlii, 379.

The omission of one step of an old process with an improved result constitutes a new process. *Lawther vs. Hamilton et al.*, xlii, 487.

Where the new process requires greater care, or even greater skill, on the part of the workmen than formerly, it does not change its character as a process or materially affect its utility. *Ibid.*

A patent sufficiently describes a process when by the aid of the knowledge derived from the state of the art the same may be carried out from the description in the patent by those skilled in the particular manufacture. *Ibid.*

A claim for a process consisting of several steps may be limited by the state of the art and the description in the patent to the instrumentalities or their equivalents as thus described, which are essential in the carrying out of the process claimed. *Ibid.*

In claims for combinations it is unnecessary to include any element except such as are essential to the peculiar combination and affected by the invention. *Rapid Service Store Railway Company vs. Taylor et al.*, xlii, 721.

A reconstruction of a machine so that a less number of parts will perform all the functions of the greater may be invention of a high order; but the omission of a part with a corresponding omission in function, so that the retained parts do just what they did before in the combination, can not be other than a mere matter of judgment, depending upon whether it is desirable to have the machine do all or less than it did before. *McClain vs. A. Ortmayer & Sons et al.*, xlii, 724.

Where notice is not given in the answer of a specified prior use of the invention described in the patent, it can not be set up as an anticipation of such invention; but, as exhibiting the state of the art, the evidence is competent to aid the court in putting a proper construction on the patent. *Stevenson vs. Magowan et al.*, xlii, 1,063.

A fraudulent surreptitious purchase or construction or use of an invention prior to the application for a patent probably would not affect the rights of the patentee under this section of the act of 1839. *Andrews et al. vs. Hovey*, xlii, 1,285.

After a patent has been granted for an article described or made in a certain way the inventor can not afterward obtain a valid patent on an independent application for the method or process of making the article in the way described in the earlier patent. *The Mosler Safe and Lock Company vs. Mosler, Bahmann & Company*, xliii, 1,115.

It is not material whether the foreign patent is granted to the inventor who made the application in this country or to some other person to whom he has

caused the invention to be patented, nor that the inventor who makes the application here is one of our citizens. *Edison Electric Light Company vs. United States Electric Lighting Company*, xliii, 1,456.

It is difficult to find invention in mixing or putting together, in a dry state, two materials, it being old to mix the same materials during the process of manufacturing or brewing. *Geis vs. Kimber*, xlv, 108.

Where a patent has been found to be valid by a circuit court at an earlier date upon the same evidence as now exhibited, and since that date the Supreme Court has defined more strictly the line between mere mechanical skill and the exercise of invention, it is no longer the duty of the last circuit court to follow and adopt the adjudication of the former court. The *Rubber and Celluloid Harness Trimming Company vs. The India-Rubber Comb Company*, xlv, 343.

For several important points in this connection, see *Russia Cement Company vs. Le Page*, xlv, 833.

The inventor's consent to or allowance of the public use or sale of his invention is not requisite to invalidate a patent. *Campbell vs. The Mayor*, etc. of New York, xlv, 1,185.

Three things are requisite to the acquisition of a title to a trade-mark. First, the person desiring to acquire the title must adopt some mark not in use to distinguish goods of the same class or kind already on the market; second, he must apply his mark to some article of traffic; third, he must put his article marked with his mark on the market. Mere adoption of the mark and a public declaration that the mark so adopted will be used to distinguish goods to be put on the market at a future time, create no right, no title arises until the thing is actually on the market marked with the particular mark. *Schneider et al. vs. Williams* xlv, 1,400.

A "sale," to invalidate a patent, must have been completely effected more than two years before the application for the patent. *Campbell vs. The Mayor*, etc. of New York, xlv, 345.

For limitation of the Ganlard and Gibbs converter system of distributing electric energy, see *Westinghouse Electric Company vs. The Sun Electric Company*, xlv, 710.

PECULIAR PEOPLE. The sect of Peculiar People was established in Essex, England, about half a century ago; and, while members of the body have removed to London and other parts of the United Kingdom, and some have emigrated to the colonies, it still exists in its greatest strength in that county, and chiefly at Prittlewell. The name of the body is taken from the Scripture, and the particular tenet for which they are principally known is founded on these words of St. James: "Is any sick among you? let him call for the elders of the Church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save the sick, and the Lord shall raise him up." They argue that this text proves that medical aid is needless, and when a member of the body falls sick, the elders pray over him and anoint him, and then leave nature to take its course. Their steadfast adherence to this belief and practice has many times brought them in conflict with the laws which require a certain amount of care and attention to be given to children and the sick. Members of the sect have been prosecuted for neglect of those dependent upon them in not calling medical aid to their relief; and, in cases where the patients died, prosecutions for manslaughter have been instituted

against those responsible for their care. Conviction in the latter kind of cases is, however, difficult, because medical men are not able or willing to declare positively that if called in they would have advised measures that would have saved life. Hence only one conviction is recorded against them for this offense. Aside from this idiosyncrasy the Peculiar People are reputed to be exemplary in the social virtues. While none among them are wealthy and few are above the condition of laborers, they never permit one of the "brethren" to become chargeable to the poor-rates. They are faithful and careful in their family relations, always make full provision of wholesome food, are strict abstainers from intoxicating drinks, are neat and cleanly, and are orderly citizens, no instance being known of any of them having been brought before the courts, except in connection with their single peculiarity. Their Church polity is of a very simple character. They recognize a single head or bishop, who is at present Mr. Samuel Harrod, from whose decisions there is no appeal. Their worship is marked by earnest singing of easy tunes, usually without the aid of musical instruments. For the most part their meetings are held in barns and other buildings of that character; but they have erected a few special places of worship, to which members of congregations are often drawn from considerable distances.

PENNSYLVANIA. State Government.—The following were the State officers during the year: Governor, James A. Beaver, Republican; Lieutenant-Governor, William T. Davies; Secretary of State, Charles W. Stone; Treasurer, William B. Hart; Auditor-General, A. Wilson Norris (who died on May 21); Secretary of Internal Affairs, Thomas J. Stewart; Attorney-General, W. S. Kirkpatrick; Superintendent of Public Instruction, E. E. Higbee; Insurance Commissioner, J. M. Forster; Chief-Justice of the Supreme Court, Isaac G. Gordon; Justices, Edward M. Paxson, John Trunkey, James P. Sterrett, Henry Green, Silas M. Clark, and Henry W. Williams. Justice Trunkey died on June 24, and the Governor appointed Alfred Hand to fill the vacancy, his commission dating from July 31 and continuing till the first Monday of January, 1889.

Finances.—The Legislature of 1887 made appropriations amounting to nearly \$17,000,000, but the revenues were about two millions less, and several important public works were necessarily postponed, including the remodeling of the legislative building, and the enlargement of the House of Refuge in Philadelphia. The revenues have also been crippled by the decision of the Supreme Court of the United States, that what was known as the "gross-receipts tax" is unconstitutional so far as it is a tax on interstate commerce. The loss in revenue from this source in 1888 was about \$800,000, but owing to the thorough collection of claims due the State, little embarrassment was experienced. The receipts for the

year amount to \$8,694,060.42, of which \$5,920,504.06 belong to the general fund and \$2,773,556.36 to the sinking-fund, the former being applicable to general purposes, and the latter to the redemption of the principal and the payment of the interest on the public debt. The principal items of the receipts were: Taxes on corporations, \$2,398,405.44; tax on bank stock, \$456,102.76; tax on personal property, \$1,014,823.20; tax on collateral inheritances, \$713,434.11; tavern and liquor licenses, \$1,017,807.57; tax on foreign insurance companies, \$428,816.41; commutation of tonnage tax, \$460,000. The principal items of disbursement during 1888 were: Expenses of State Government, \$790,535.30; judiciary, \$560,611.01; payment of loans and interest, \$1,884,322.26; charitable institutions, \$1,063,077.91; penitentiaries, \$244,686.25; reform schools, \$226,242.16; common schools, \$1,614,276.58; National Guard, \$354,446.37; Soldiers' Home, \$151,850; soldiers' orphans' schools, \$336,419.22; second geological survey, \$50,000; State College, \$59,500. The balance in the treasury Dec. 1, 1888, was \$3,687,035.65, against \$2,380,841.47 on the same date in 1887. Of this balance, only \$1,318,691.92 is applicable to general expenses, the sinking-fund absorbing the rest.

The State debt on Nov. 30, 1888, was as follows: Non-interest bearing debt, \$134,821.28; $3\frac{1}{2}$ -per-cent. bonds, \$1,857,900; 4-per-cent. bonds, \$7,798,700; 5-per-cent. bonds, \$4,430,500; 6-per-cent. Agricultural College bond, \$500,000; 6 per cent. on proceeds of sale of experimental farms, \$17,000; making an aggregate indebtedness of \$14,738,921.28.

The 5-per-cent. loan may be paid in accordance with its terms in 1892. The available funds are more than sufficient to pay this balance now, and the commissioners have endeavored to purchase these bonds at a reasonable premium, but many holders refuse to sell. The larger part of the balance of the debt, funded at $3\frac{1}{2}$ and 4 per cent., is not due until 1912. The net reduction in the debt for 1888 was \$496,794.90.

Education.—The State is divided into thirteen normal-school districts. There are normal schools in eleven districts, and a twelfth has recently been erected at Centerville, leaving only one district (the fourth) without a school. The Central State Normal-School buildings at Lock Haven have recently been burned. There has been a strong movement to secure industrial training as part of the public-school system, and in 1887 the Legislature authorized the Governor to appoint a commission to investigate the subject. The commission report strongly in favor of the system. Isaiah V. Williamson, a wealthy citizen of Philadelphia, toward the end of 1888, conveyed to trustees property valued at several million dollars for the establishment of a "Free School of Mechanical Trades." The State College has had a year of prosperity, there being ninety students

in the college and seventy-seven in the preparatory department, with nineteen professors.

Soldiers' Orphans' Schools.—The Legislature of 1887 provided for the closing of these schools on June 1, 1890. The Governor recommends the repeal of this law, and calls attention to the fact that, at the time set for closing the schools, there will be 1,549 children in them under the age of sixteen, all orphan children of deceased soldiers of the Union. There are at present in these schools 2,249 children, the schools having been established in 1864. By the same act, the schools were closed to further applicants June 1, 1887, yet many applications have been made.

Insurance.—The last annual report of the insurance commissioner gives the following statement of the business done in the State in 1887: Premiums for life insurance, \$10,855,456.37; premiums for fire and marine insurance, \$9,305,172.21; total paid for insurance, \$20,160,628.58. This aggregate is \$1,880,550.16 greater than the total sum paid for insurance in 1886. The total losses paid in 1887 were as follow: Paid by fire and marine companies, \$5,400,637.34; paid by life companies, \$4,357,188.36; total losses paid, \$9,757,825.70.

National Guard.—The last annual report of the adjutant-general gives the total strength of the guard at 7,788 enlisted men and 601 officers. In twenty-three counties no military organization exists, while in the two counties of Allegheny and Philadelphia there are fifty-four companies. The annual appropriation for the guard has been increased from \$220,000 to 300,000, and the term of enlistment reduced from five to three years.

State Institutions.—The last Legislature provided for the erection of an Industrial Reformatory at Huntington. The buildings have been erected and equipped, but, owing to the fact that no appropriation had been made for maintenance, the institution is not open. The courts have discretion to send convicts to this reformatory instead of to the State penitentiaries. Work on the Western Penitentiary approaches completion. The Eastern Penitentiary continues what is known as the solitary or confinement plan. The House of Refuge in Philadelphia is about to make an important departure. Through the liberality of two individuals, large funds have been given for the purchase of a farm and the erection of new buildings. The five insane asylums of the State contain 4,265 inmates, of whom 1,568 are at Norristown, 676 at Warren, 843 at Danville, 618 at Dixmont, and 560 at Harrisburg. The number has largely increased by reason of the legislation requiring the removal of insane in county homes to the State institutions.

Decision.—Late in December the State Supreme Court rendered a decision declaring the act of 1887, dividing the cities of the State into seven classes, unconstitutional and void, on the ground that the act was in the nature of local and special legislation. This decision brings

into force again the act of 1874, dividing cities into three classes, which the same court has already decided to be valid.

Harbor at Philadelphia.—The Governor says in his message to the Legislature in January, 1889:

Smith's and Windmill Islands, which constitute a formidable obstacle to navigation and lie directly in the harbor, must be purchased and entirely removed, and 140 acres of Petty's Island cut away. It is proposed to give to the harbor of Philadelphia a channel from the upper part of the city to Delaware Bay 600 feet wide and 26 feet deep at mean low water. The entire cost of this work, when completed, will exceed \$6,000,000. An appropriation for \$500,000 for beginning the work has already been made by Congress with this proviso: "That no part of this sum shall be expended until the title to the lands forming said islands shall be acquired and vested in the United States without charge to the latter, beyond \$300,000 of the sum herein appropriated." Proceedings to condemn these islands for public use have been already commenced. It is believed that the amount necessary to pay for them will equal \$700,000 to \$800,000.

Political.—The Republican State Convention met at Harrisburg on April 25, and nominated delegates to the National Convention and a candidate for Judge of the Supreme Court to succeed Chief-Justice Gordon. For the latter office James T. Mitchell secured the nomination, after several ballots, over the Chief-Justice and several other contestants. Resolutions were passed demanding legislation by Congress to secure fair elections, protesting against placing wool on the free list, reiterating the doctrine of protection and continuing:

We recognize the strength of the sentiment in this commonwealth relative to the evils and abuses of the sale of liquor; and we favor all laws looking in this respect to the elevation of the moral condition of the people. We, therefore, repeat our pledge to submit the question of prohibition to a popular vote.

We earnestly protest against the passage by Congress of the "Dunn Free-Ship Bill" which has been reported to the House by the Democratic majority of the Committee on Merchant Marine, or any other similar measure, as calculated to work an injustice to American labor by imperiling the livelihood of the large number of workers in wood, metals, and other materials, who are engaged in American ship-building industries and who should have home protection the same as other wage-workers.

We have the enactment of a law that will allow the laborer an exemption to the amount of \$300 from levy and sale upon execution.

We recommend such a revision of the revenue laws of the State as will impose upon corporations taxation equal in amount to that from which they have been exempted by judicial decisions recently rendered.

On May 23 the Democratic Convention at Harrisburg nominated J. B. McCollum for Judge of the Supreme Court, and selected delegates to the National Convention and electors-at-large for the State. The delegates to the National Convention were instructed to vote for the renomination of President Cleveland. The platform included the following:

We denounce the prevalent abuse of corporate power, the formation and operation of trusts, combinations, and monopolies, all of which interfere with and limit the natural and inalienable rights of the individual; and we pledge ourselves to secure remedies and to apply the same, with due regard for all interests of the people.

The Republican party is justly responsible for the failure of the late Legislature to give relief to the taxpayers by the enactment of an equitable and judicious revenue law; and the scandal connected with the failure of the revenue bill to become a law should work a forfeiture of all claims of that party to legislate for the people of the commonwealth.

The present State administration is to be condemned for its failure to enforce the provisions of the Constitution against the consolidation of corporations and other encroachments and abuses of corporate power; it has failed and refused to redeem the pledges of its own party; and the action of the last Republican Legislature in the defeat of the bill for the relief of the producers and refiners of oil, known as the Billingsley Bill, was in the interest of monopoly and opposed to the interests of the people of that large section of the State for whose relief the bill was intended.

On May 3, the Prohibitionists at Harrisburg selected delegates to their National Convention, and nominated James Black for Supreme Judge. The Union Labor party nominated John B. Young for the same office.

The death of Auditor-General Norris, on May 21, rendered necessary the election of a successor at the November election, and candidates were nominated by the executive committees of the various parties. By the Republicans, Thomas McCamant was made the candidate; by the Democrats, Henry Meyer; by the Prohibitionists, Milton S. Marquis; by the Union Labor party, J. M. Green. A vacancy on the Supreme Court bench, caused by the death of Judge Trunkey, on June 24, made it necessary to choose two judges of that court in November; but, in consequence of a peculiar provision of the State Constitution, that when two judges are to be chosen at one election, each voter is limited to vote for only one, no further party nominations were necessary. At the November election, therefore, both the Republican and Democratic nominees for this office were elected, being the two highest candidates. Mitchell received 523,585 votes; McCollum, 444,327; Black, 20,708; and Young 3,877. For Auditor-General, McCamant received 523,581 votes; Meyer, 443,438; Marquis, 20,262; and Green, 3,575. The Republicans elected 34 members of the State Senate, and the Democrats 16; of the Lower House, 114 members are Republican, and 60 Democratic. In the Third, Eighth, Ninth, Thirteenth, Seventeenth, Nineteenth, and Twenty-eighth Congressional Districts, Democratic candidates were elected; in the remaining 21 districts the Republicans were successful. This is a gain of one district for the Republicans.

PERSIA, an empire in Central Asia. The government is an unlimited monarchy. The present ruler is Nassreddin, who was born July 18, 1831, and succeeded his father Mohammed Shah, in September, 1848. The heir-apparent, called Valiahd, is his son Muzaffereddin, born March 25, 1853. The Shah has the entire revenue of the country at his disposal, and has amassed a private fortune said to amount to \$35,000,000, most of it in the form of precious stones. The governors-general of the provinces, who possess a large measure of authority, are

mostly sons or relatives of the Shah. The priests are a powerful body, exercising a strong restraining influence over the acts of the Shah, and opposing all ideas of progress coming from Europe. The chief priest is the Mujtahad, who resides at Kerbela, near Bagdad.

Legal Reform.—Justice is administered by the governors and their representatives, who follow the *Urf* or common law, and by the priests and Sheikhs-el-Islam, who are guided by the *Shar*, or sacred written law. The Shah and his governors are unrestricted in their powers, and have abused their authority to enrich themselves in a way to check production and material progress. In May, 1888, the Shah issued an edict promising to the people equal justice and protection against extortion and oppression. He declared that henceforward every Persian shall have the complete disposal of his property, and shall be at liberty to enter into financial associations for the construction of public works, or for other purposes.

Russian and English Rivalry.—Russian influence has for a long period been preponderant at the Persian court, more especially since the Russian possessions in Turkistan have been extended so as to encompass Persian territory on the northeast and east. A Belgian company has recently begun, under Russian auspices, a railroad 200 miles long, connecting Teheran, the Persian capital, with Resht, near the Caspian Sea, which will probably be extended to Baku, where it will join the Russian system of railroads. The first section of the railroad was opened in June, 1888. Sir Henry Drummond Wolff, the present English Minister to Persia, has endeavored to regain the influence that Great Britain formerly had in Teheran, and has encouraged the Shah to take a more independent stand in dealing with Russian demands, by holding out hopes of the political and financial support of Great Britain. The edict promising protection to companies was suggested by the British representative, who pressed for a concession to a British company to construct a railroad from Teheran to the Persian Gulf, as a counterpoise to the Russian railroad. Instead of this, he obtained for foreign merchant steamers of all nations the right to navigate Karun river as far as Ahvaz, 125 miles from its mouth. This river, which enters the estuary of the Euphrates after many windings, is one of the few navigable waterways in a country devoid of roads. The Russian Government assumed a threatening attitude toward Persia on account of this concession and other anti-Russian proceedings that took place during the absence of Prince Dolgorouky, the Czar's representative in Teheran. The Shah's proclamation was communicated to the powers in a circular note dated Oct. 30, 1888. Sir H. Drummond Wolff, the son of a German missionary who once visited Persia and Turkistan, found the Shah fully alive to the danger of Russian proximity on the east, especially to the rich province of Khorassan, whose inhabitants have twice rebelled. En-

couraged by signs of English support, the Shah refused the Russian application for the right to establish a consulate at Meshed, and forbade the exportation of grain from Khorassan into Turkistan at Lutfabad. The vigorous representations of the Russian Government led the Shah afterward to retreat from the bold position he had been encouraged to take, and to undo most of the advantages that England had gained while the Russian minister was away from his post. The refusal of the *exequatur* to the Russian consul at Meshed was held by Russia to be a violation of the treaties of peace, commerce, and navigation; and when the Persian Government replied that no other power had a consul in that place, it was pointed out that Gen. Macleod, the British agent to supervise the Afghan frontier, has his headquarters at Meshed. The Shah not only gave way on this point, but issued in December a second note as an appendix to his circular throwing open the Karun to international navigation, in which he greatly limited the privileges to British commerce and enterprise that were supposed to have been granted. The later note forbids Persian subjects to undertake works of any kind with the help of foreign capital, declaring that all irrigation-works, roads, and other undertakings must be carried out by Persian subjects with Persian capital. The proclamation that Sir Henry Drummond Wolff induced the Shah to issue in May, encouraging the formation of companies and promising them protection, was supposed to grant to foreigners the right to embark in speculations in Persia, and to give foreign governments a claim to interfere in behalf of companies or capitalists, and it was so construed by the British Under-Secretary for Foreign Affairs, who affirmed in Parliament the right to appeal to the proclamation, since it had been formally communicated to the foreign representatives in Teheran, as well as to the most-favored-nation clause as a guarantee of the rights of British companies for the construction of railroads and carriage-roads from the Persian Gulf.

PERU, a republic in South America. (For details relating to area, population, etc., see "Annual Cyclopædia" for 1883.)

Government.—The President (since June 3, 1886) is Gen. Andres Avelino Cáceres. The Cabinet is composed of the following ministers: President of the Council and Minister of the Interior, Don Pedro A. del Solar; Minister of Justice, Señor Zagarra; Minister of Foreign Affairs, Don Isaac Alzamora; Minister of Finance, Señor Urigoyen; Minister of War, Señor Torrico. The United States Minister at Lima is Charles W. Buck. The American Consul at Callao is Henry May Brent. The Peruvian Minister at Washington is Don Felix Cipriano C. Zagarra. The Peruvian Consul at New York is Don Francisco Perez de Vilasco.

Finances.—The home debt of Peru included, October, 1888, \$39,235,947 of bonded debt, inclusive of accumulated interest; \$10,000,000

of floating debt; \$77,469,923 of paper money in circulation (\$1,530,077 having been burned and replaced by silver coin in April, 1888); and \$9,541,000 of Inca notes outstanding; together, \$136,246,870. Of the proceeds of the alcohol tax, 70 per cent. are to be applied to paying the interest on the bonded debt, and 30 per cent. to the gradual withdrawal of the paper money.

As a measure of economy, the salaries of Peruvian consuls have been discontinued by decree of Aug. 25, 1887; by way of compensation, they are to be allowed to retain a part of the consular fees.

Army and Navy.—The strength of the permanent army, rank and file, is 7,371 men, including a police force of 3,371, of whom 843 are mounted. The fleet has been reduced to two steam transports, registering 1,300 tons each. In January, 1888, it was resolved to reorganize the national forces by enrolling all Peruvians between the ages of twenty-one to thirty years in the active National Guard, in which they are to serve for five consecutive years, and a sufficient number of them drawn annually to be incorporated in the permanent army for the remainder of their term of service.

In May a decree was issued organizing the naval militia, under the law of Oct. 30, 1886. A naval school was founded at Callao in February, 1888.

New Treaty.—A treaty of amity and commerce between the United States and Peru was proclaimed on Nov. 7, 1888.

Communications.—The number of post-offices in 1886 was 230, which forwarded during the year 2,254,434 items of mail matter, the receipts being 741,551 francs, and the expenses 798,976 francs.

In addition to the 2,600 kilometres in running order, the Government, by decree, in November, invited tenders for the construction and exploitation of a line from Lima to Pisco. This line will open communication between the capital and the fertile region extending between Ica and Islay, and will also intersect the nitrate fields. A branch line is to connect Islay with Arequipa.

A decree of January 26 invited tenders for the organization of communication by telephone throughout the republic, the exclusive privilege to extend fifteen years.

In May, 1888, a new steamship line was established between Antwerp and Chilean and Peruvian ports. It is called the "Anglo-Belgian Pacific Line."

Commerce.—The trade between Peru and the leading maritime nations has of late years been as follows:

COUNTRIES.	Import from Peru.	Export to Peru.
United States (fiscal year 1887)	\$461,726	\$717,968
England (calendar year 1886)...	8,103,311	4,204,933
France (calendar year 1885)....	4,155,708	1,399,492
Germany (calendar year 1885)..	1,408,434	293,930
Spain (calendar year 1885).....	147,425	15,250

The American trade with Peru presents these figures:

FISCAL YEAR.	Import from Peru.	Domestic export to Peru.
1886.....	\$963,480	\$798,577
1887.....	461,726	717,963
1888.....	309,040	865,160

Before the war, Peru produced annually 60,000 tons of sugar; in 1888 the production had decreased to 30,000 tons, half of the fine machinery on the sugar-estates having been destroyed during the war, and little of it replaced for lack of funds in the present impoverished condition of the country. The export of silver from Callao during the first six months of 1888 amounted to 4,936,876 kilogrammes, the bulk of which was shipped to Hamburg. Hitherto argentiferous lead bullion has been shipped to Germany, but now a German company is smelting on the spot.

A decree was issued in September, by virtue of which coal is to enter Peru duty free. The same privilege is extended to personal effects the property of foreign diplomatic agents; steam fire-engines and all fire-extinguishing apparatus; articles imported for hospital use and asylums; clerical church garments and sacred vessels; school and university books and apparatus.

PETROLEUM (Latin, *petra*, a rock, and *oleum*, oil), rock-oil, is that form of bitumen which has an oily or etherial consistence. The lighter varieties are sometimes called naphtha (Persian, *nafta*). It rises with the water of springs and through artesian borings. (The history of the petroleum industry, down to 1875, is given in the "American Cyclopædia," vol. xiii.)

An examination of the relative position of many of the most successful wells led C. D. Angell to the opinion that the strata of sand-rock in Pennsylvania, from which the oil issued, extended northeast and southwest on certain parallel lines of moderate lateral extent. This led to the sinking of "wild-cat" or prospective wells upon such lines, run by compass for long distances in both directions over the hills of that region, and resulted in the discovery and development, about 1875, of the Butler and Clarion County fields; later, in an opposite direction, to the Bradford or McKean County field; still later, to that of Warren County, Pa., and Allegany County, N. Y. The enormous volumes of inflammable gas that often accompanied petroleum led, in 1885, to the drilling of wells for natural gas over an area extending from Michigan to Alabama, and from the Alleghany to the Rocky mountains. Not only gas but petroleum was discovered in several localities where it had not been known to exist. Most notable among these is the region around Washington, in southwestern Pennsylvania; and in northwestern Ohio, around Lima, Findlay, and North Baltimore, in Hancock, Wood, and Auglaise Counties. Attempts had been made as early as 1860, and again in

1865, to obtain oil in commercial quantities in southern California. But little success attended these efforts until about 1880. Several wells have been successful at or near Los Angeles, also near Newhall and in the Sespé Cañon, and on the Ojai Ranch. These last-mentioned localities lie along the Santa Clara valley, east of San Buenaventura, in Ventura County. The oil is chiefly used as fuel.

Distribution.—Petroleum, as well as other forms of bitumen, is one of the most widely distributed substances in nature; but its occurrence in commercial quantities is limited to comparatively small areas. Besides the petroleum regions of the United States, the only region that furnishes petroleum to commerce is Galicia and Roumania and the Apsheron peninsula of the Caspian Sea, which really form one region, extending from central Austria along the line of the Transylvanian Alps and the Caucasus to the shores of the Caspian and farther east into Central Asia. Other localities of less importance, together with the "oil regions" of the United States, form an ellipse around the Cincinnati anticlinal, which is in general an uplift of Silurian rocks sloping in all directions, and extends from central Kentucky to Lake Erie. Starting at Great Manitoulin Island, in the northern part of Lake Huron, and passing southwesterly to Chicago, petroleum is encountered at several points in eastern Michigan, near Chicago in limestone, in northwestern Ohio, at Lima, rarely in Indiana, and in Illinois, Kentucky, and Tennessee, as far south and east as Chattanooga, where the line of outcrop turns north and appears in Cumberland and Johnson Counties, Kentucky, and in West Virginia, southeastern Ohio, Greene and Washington Counties, Pa., and all through the valley of the Alleghany into New York. The oil-fields of Canada complete the ellipse. In Kansas, Missouri, Louisiana, and Texas, springs of petroleum occur, but few wells have proved productive. Farther west, in Wyoming, Utah, and Colorado, several localities produce petroleum for local uses. Along the mountain-range from Alaska to Patagonia petroleum has been found at intervals, and it has been produced in commercial quantities in California and Peru. In Cuba and the Windward Islands, including Trinidad, and on the mainland in Venezuela, and southward into Bolivia, the outcrops of bitumen of various forms are of marvelous extent, especially the famous Pitch Lake of Trinidad. An area fifteen hundred miles long and of unknown breadth extends from the Saskatchewan northward along the valley of Mackenzie river to its mouth. On the Eastern Continent petroleum has been observed in insignificant quantities in the British Islands, along the Pyrennees, in central France, in the valley of the Rhône, in the Tyrol, Italy, Sicily, Dalmatia, and the Ionian Islands; in Egypt along the Red Sea; in Morocco. At various points in China, and in Japan, oil-springs have been known from time

immemorial, and oil-wells have occasionally been productive.

Beginning on the Lüneburger heath, south of Hamburg, a line of outcrops extends through Germany and Austria-Hungary, through the principalities north of the Danube, the Crimea, Kertch, the Caucasus, through Armenia and the mountains that surround the plateau of Iran, along the valleys of the Euphrates and the Tigris, eastward through the Punjab, through the Burman peninsula, and into Java. In Austria-Hungary the production has been of moderate commercial importance for many years. In the Caucasus and at Baku wells have poured forth enormous quantities and are now rivaling those of the United States. In Armenia and Persia, the Punjab and Burmah, and the Assyrian valley, the use of petroleum and other forms of bitumen for local purposes has been continuous from remote antiquity, but the amount produced is nowhere of commercial importance. A careful study of all the localities mentioned will show them to be intimately connected with the principal mountain-chains of the world.

Geological Relations.—Petroleum occurs in, or issues from all geological formations, but this statement alone would be misleading. There have been two bitumen-producing eras in geological history, viz., the series older than the carboniferous, especially the Silurian, and the older Tertiary. The vast accumulations along the principal axis of occurrence in North America are found in Silurian and Devonian rocks; the most productive axis of occurrence in the Eastern Hemisphere lies in the Eocene and Miocene of the Carpathians, Transylvanian Alps, and the Caucasus. In England the small quantities obtained have sprung from the Coal-Measures; in the valley of the Rhône from Jurassic limestones. The little that is known concerning the geology of the oil-bearing strata in Persia, the Punjab, and Burmah, leads to the conclusion that they are of the same age. At Great Manitoulin Island, in Canada, and in northwestern Ohio the oil is found in the Trenton limestone; at Chicago and Terre Haute, Ind., in the Niagara limestone; both of which are Silurian. The Great Devonian black shale is considered to be the source of the oil in Kentucky. At Glasgow the oil is found saturating sandstone; near Burkesville in crevices in a sort of marble; near Nashville, Tenn., it is often found in geodes in the Silurian rocks of that region; in Johnson County, Ky., it lies in the Subcarboniferous sandstones, often above the drainage-level of the country. In West Virginia the so-called "oil-break" yields oil from several strata of sandstone that lie within the Coal-Measures. Throughout the oil regions of Pennsylvania and New York the "oil-sands" are found beneath the Coal-Measures, in the Upper Devonian. "Petroleum exists in the Cretaceous rocks which extend along the eastern slope of the Rocky mountains from British Columbia to Mexico, and in many of the

interior valleys." The bitumen of California is Miocene, while that of Mexico, the West India Islands, and Peru, is Eocene.

It will be seen that there is an area, estimated at 200,000 square miles in the Mississippi valley, the formations of which are nowhere later than the Coal-Measures, which yields petroleum at many points and often in vast quantities. Another area yielding bitumen, of vast extent, reaching from California to Bolivia is everywhere Tertiary; while on the Eastern Continent a belt of corresponding age, so far as is known, extends from the North Sea to Java. At present, the greatest volume of petroleum issues from rocks older than the Carboniferous, while the greater number of localities producing bitumen are Eocene. In Canada and West Virginia it rises from sandstone strata beneath the crowns of anticlinals, as also in northwestern Ohio, where the rock is the Trenton limestone. In Pennsylvania the so-called "oil-sands" appear to lie in the inclosing rocks in long narrow belts or sheets, far beneath superficial erosion, like sand-bars in a flowing stream. They run through a vast accumulation of sediments, from the lower Devonian to the Upper Carboniferous, and lie conformably with the inclosing rocks dipping gently to the southwest. The Bradford field—at a depth of about 1,800 feet, 100 square miles in extent, by from 20 to 80 feet in thickness—lies with its lowest southwestern edge submerged in salt water, and its northeastern edge filled with gas, originally under an enormous pressure. In Galicia the sandstones that hold the oil are implicated in the folds of the Carpathians and much distorted; while at Baku the sands appear to be lenticular masses inclosed in a stiff blue clay.

Chemistry.—The first analyses of petroleum were ultimate, and showed that it consists of carbon and hydrogen, with occasional small quantities of sulphur and nitrogen appearing as impurities. There are, however, several varieties of petroleum, to some extent dependent upon the age of the rocks from which they issue. All, or nearly all, Trenton limestone petroleum contains sulphur and more or less nitrogen. The Upper Devonian and Subcarboniferous petroleum of Pennsylvania is a very pure hydrocarbon, and, along with the Eocene petroleum of Galicia, contains paraffine. The Miocene petroleum of California appears to be a mixture of unstable fluids, compounds of carbon and hydrogen, containing a notable amount of nitrogen. These, with the Mexican and South American oils, do not contain paraffine, and readily oxidize into asphaltum. There are many other petroleum of this class, and others still have been little examined chemically. The proximate examinations that have been made show that petroleum from different localities are quite unlike. The petroleum of Pennsylvania, eastern Ohio, and West Virginia, contains a large number of the paraffine series in varying proportion, in mixture with a smaller

and indefinite proportion of the olefine series. Other petroleum of nearly identical composition contain small quantities of the benzole series with an increasingly large proportion of unstable compounds that oxidize into asphaltum. Those of Galicia are of this description. Those of California have been little examined, but appear to be almost entirely confined to unstable, easily oxidized oils. The Russian oils from Baku consist of the additive compounds of the benzole series, which have the same percentage composition as the olefines, and contain less hydrogen than the paraffines. Burmese petroleum contains a notable proportion of the benzole series. All of the compounds derived from petroleum absorb oxygen when exposed to light, and become colored and viscid. The residues from the distillation of petroleum have remarkable fluorescence. It is not supposed that these substances are present in the natural oil, although it is not impossible that they are.

Origin.—The theory that petroleum is the product of chemical reactions still in progress in the earth's crust was originally put forward by Bertholet, and has since been continued on the same line by Mendeljeff, the eminent Russian chemist. Their theories are based on the results of laboratory experiments, and assume the existence in the earth's crust of powerful deoxidizing agents, such as the alkali metals, cast-iron, spiegeleisen, etc., which in contact with steam and carbonic acid set free the hydrogen and carbon, causing them to unite in the nascent state and produce mixtures of hydrocarbons resembling petroleum. These theories require conditions nowhere proved to exist in nature.

Petroleum is, without a reasonable doubt, primarily derived from a partial decomposition of animal or vegetable remains. In the Trenton limestone and other Silurian rocks it has probably been produced by the transformation of low forms of animal life. The petroleum issuing from the Miocene shales of southern California is also of animal origin. The first of these oils is often found hermetically sealed in the cavities of large fossils and in geodes in limestones rich in animal remains. These older oils are rich in sulphur, and those of California are comparatively rich in nitrogen also. They are dark, fetid, and in many instances, particularly those of California, they rapidly change on exposure to the air to a black, viscid mass, which finally becomes solid asphaltum. The California oils undergo changes due to a sort of putrefactive process, as pools of oil have there been observed to become infested with maggots, like a pool of blood when similarly exposed. These fetid animal oils are difficult to refine, and are chiefly used as fuel.

The Devonian oils of eastern Ohio, Pennsylvania, New York, and West Virginia are with equal certainty derived by spontaneous distillation from the deposits of shales that underlie the oil-sands, and, where exposed along

the shores of Lake Erie, exhibit such an extraordinary accumulation of fucoids as to suggest to Dr. J. S. Newberry the idea that a "sargasso sea" existed at that point in the primeval ocean. The oil-sands overlie more than 1,000 feet of the Devonian shales, and are themselves overlaid by beds of shale containing so much silica as to form an impervious shell that holds down the oil and gas under such a pressure that much of the material that is gaseous when it reaches the surface, is doubtless liquid while within the oil-sand. These "shells," being impervious over wide areas, prevent the escape of the oil except from minute fissures, where oil or gas springs are produced. This fucoidal shale has been subjected to destructive distillation at a low temperature, and has yielded fifty gallons to the ton of an oil resembling petroleum. In like manner, other shales, coal, peat, wood, or animal matter, either recent or fossil, will yield petroleum-like oils, and the lower the temperature and slower the distillation the more nearly will the product resemble the natural oil. In the light of these facts, with the added weight of laboratory experiments that have confirmed them, the French chemical geologists have maintained that all forms of bitumen are the product of metamorphism, or of those physical agencies that, through the combined action of heat, steam, and pressure exerted through indefinite periods of time, have produced such changes as those that have converted the sedimentary rocks of the Eastern States, New York, and Pennsylvania into crystalline schists, and the coal into anthracite. These agencies, acting with less violence upon the strata forming the gentle western slope of the Alleghanies, have left in undisturbed repose the strata that underlay and inclosed the oil-sands, while the superficial have been subject to erosion through immense cycles of geological time. Under these conditions, no arbitrary line could mark the point at which such agencies ceased to act, and the natural process of distillation going forward through indefinite periods of time and of necessity at the lowest possible temperature, must result in the accumulation of distillates in any overlying strata porous enough to act as a reservoir. No additional evidence seems to be required to render this an adequate origin for petroleum as it occurs in Pennsylvania and Galicia. Petroleum occurs at many points along the entire western slope of the Appalachian System, from Point Gaspie on the St. Lawrence river to northern Alabama, and is most abundant where there is the greatest accumulation of organic remains. These sediments were deposited in a current whose course was from northeast to southwest. The facts that concern petroleum are found in the undisturbed and nearly level position in which the rocks containing it lie like sand-bars in a flowing stream, and the further evidence they afford that the metamorphic action that has altered nearly all the formations of the eastern

border of the Appalachian System became extinct along a plane that descended deeper and deeper, in many instances far below the surface formations and the coal that they inclose. In Galicia and Transylvania, the metamorphic core of the Carpathians is flanked by beds of fucoidal shale rich in the remains of marine animals, intercalated with the sandstone strata holding the oil. If petroleum is a product of metamorphism, the production is long since completed, and the vast natural reservoirs, when once emptied of their contents, are as completely removed from future consideration as a worked out bed of coal.

Throughout the world petroleum is obtained by means of artesian wells. Dug wells were used in Japan for many centuries, and other primitive methods were employed in other regions; but the so-called American method is now employed universally where petroleum is handled in commercial quantities. The wells are drilled like other artesian wells. Sometimes the oil pours forth in an artesian torrent that flows without control until partial exhaustion renders it possible to stop the flow. Such wells have been of frequent occurrence in the United States and at Baku. When brought within control, the oil is conducted into a tank. Here it accumulates until the tank is nearly filled when an agent of the pipe-line appears and gauges the tank. The oil is then run from the tank into the pipes of a pipe-line, and the tank is gauged again. The difference between the first and second gauging is the measure of the oil run. When a well ceases to flow, a pump is introduced. Often several wells are so connected as to be pumped by one power. At present it is usual to stimulate the flow of wells of moderate productiveness by torpedoes. The torpedo consists of several long cylinders of tin, into which nitro-glycerin is poured, and the whole is carefully lowered to that point in the well at which it is desired to quicken the flow of oil. To the last section a cap is attached, upon which a mass of iron, called a "go-devil," is allowed to descend. The charge is from twenty-five to one hundred quarts of nitro-glycerin, and the result of its explosion is usually the projection of a column of oil, resembling a geyser, above the top of the derrick, often one hundred feet in height. After a few minutes, the fountain gradually subsides, and the flow continues uninterruptedly in increased volume until the well is exhausted. The effect upon the oil-sand is, first, an enormous pressure in all directions, driving the oil and gas back into the rock until a point of maximum tension is reached, when the reaction sends everything before it out of the rock and into the air. The oil-rock is thus effectually cleared, and the flow of the oil unimpeded.

As soon as the flow of oil is established and connection has been made with the pipe-line, the action of the well goes on uninterruptedly, often for months. The pipe-lines converge

from many wells to trunk-lines which have pumping-stations at which powerful pumps force the oil through sections of pipe about forty miles long. Trunk-lines of six-inch pipe run out of the oil regions to Baltimore, Philadelphia, and New York, Buffalo, Cleveland, and Pittsburg. Small quantities of crude oil are transported in tank-cars, and a very little is still transported in barrels, from localities of small production that are remote from the trunk pipe-lines.

The methods employed in transporting oil in pipe-lines have made possible a vast amount of speculation in crude petroleum. When a run of oil is made from a well-tank to a trunk-line, the owner of the oil receives a certificate for each 1,000 barrels run, which, when properly indorsed by the officers of the pipe-line, becomes negotiable paper, after the manner of an accepted draft or a certified check. These certificates may be sold and resold many times daily without any reference to the oil that they represent. But if a person wishes to use the oil, he purchases the certificates and, taking them to the nearest pipe-line station, demands the delivery of the oil. From 1870 until 1884 the production of oil was each year greatly in excess of its use for all purposes; consequently, oil accumulated above-ground. In August, 1884, this accumulated oil reached the enormous maximum amount of 39,083,464 barrels, since which period it has been reduced to less than 30,000,000 barrels. The storage of these vast accumulations of inflammable material was at first managed by private individuals and corporations; but it was finally undertaken by the pipe-lines acting together as the United Pipe-Lines. In the hands of this great corporation the storage of oil has been carried on with remarkable success and safety. Besides the vast quantity of oil required to fill the nearly 1,000 miles of six-inch pipe of which the trunk-pipe lines consist, the United Lines provide storage-tanks. The usual size of these tanks is ninety-five feet in diameter and twenty-nine feet high, having a working capacity of 35,000 barrels. They are constantly menaced with destruction from lightning, and are occasionally struck and fired. In the Caucasus a pipe-line extends from Batoum to Poti on the Black Sea, 600 miles.

Transportation of both crude and refined oil across the ocean has been carried on in barrels, for northern ports, and in cases, each containing two tin cans holding five gallons. This case oil goes to all equatorial countries and the far East. Since 1880 experiments have been in progress for carrying bulk cargoes of oil across the ocean. Steamers fitted with tanks in such a manner that the liquid cargo is comparatively motionless have successfully transported Russian oil from ports on the Black Sea to England, Adriatic ports, Germany, and Russian ports on the Baltic. Such cargoes have also been carried from Philadelphia to English ports.

Statistics.—The following table shows the amount of oil exported from 1864 to 1887:

YEAR.	Gallons.	Value.
1864.....	12,791,518	\$6,764,411
1865.....	12,722,005	9,520,957
1866.....	34,255,921	13,626,141
1867.....	62,686,657	22,509,466
1868.....	67,969,961	19,977,870
1869.....	84,403,892	27,636,137
1870.....	97,902,505	29,864,193
1871.....	102,608,955	34,138,736
1872.....	122,539,575	30,506,108
1873.....	153,102,414	37,195,735
1874.....	217,220,504	37,560,995
1875.....	191,551,933	27,030,361
1876.....	204,314,673	28,755,638
1877.....	262,441,844	55,401,132
1878.....	289,214,541	41,513,676
1879.....	331,586,442	35,999,862
1880.....	367,325,823	31,783,575
1881.....	332,283,015	34,317,695
1882.....	438,213,033	41,588,854
1883.....	419,821,018	36,926,574
1884.....	415,615,639	33,195,349
1885.....	453,243,192	40,074,827
1886.....	469,471,451	40,634,331
1887.....	480,845,811	37,303,907

The following table shows the amount of oil produced from 1859 to 1886 inclusive, with the average price per barrel for each year. The apparently large price in 1864 was due to the condition of the currency, a paper dollar being worth less than fifty cents in gold:

YEAR.	Barrels.	Price.
1859.....	2,000	\$20 00
1860.....	200,000	9 60
1861.....	2,110,000	2 73
1862.....	3,055,000	1 05
1863.....	2,610,000	3 15
1864.....	2,130,000	9 57½
1865.....	2,721,000	6 59
1866.....	3,732,000	3 74
1867.....	3,583,000	2 41
1868.....	3,716,000	3 62½
1869.....	4,351,000	5 63½
1870.....	5,371,000	3 89
1871.....	5,531,000	4 34
1872.....	6,357,000	3 64
1873.....	9,932,000	1 83
1874.....	10,883,000	1 17
1875.....	8,300,000	1 35
1876.....	9,015,000	2 56½
1877.....	13,043,000	2 42
1878.....	15,367,000	1 19
1879.....	19,827,000	85½
1880.....	26,043,000	94½
1881.....	27,233,000	85½
1882.....	30,460,000	78½
1883.....	24,300,000	1 05½
1884.....	23,500,000	83½
1885.....	20,900,000	88
1886.....	26,150,000	71½
Total.....	310,942,000

With the consumption of Galician oil confined to Austria-Hungary, Russian oil is the only competitor with the United States in the markets of the world. From insignificant proportions, this competition has grown year by year until all Europe and Eastern Asia are feeling its influence. The low price and superlative quality of American petroleum alone permit it to maintain its superiority in many localities not yet seriously invaded by Russian oil. For the past ten years oil at one dollar or more a barrel has been predicted along with the partial exhaustion of every new pool that

has been opened and gradually declined in production; yet, during that period, prices have been for the most part much below that figure. While it can not be disputed that the present production is less than the consumption, it is equally true that a permanent advance in price from present prices to one dollar a barrel would lead to an abandonment of the use of petroleum for many purposes, and, at the same time, would stimulate production in many localities where oil is known to exist over a very wide area.

Petroleum Products.—The extent to which substances manufactured from petroleum have become necessities places them among the most important products of modern technology. First in importance among these products is illuminating oil or kerosene, both in respect to the vast bulk of the commodity and also the large proportion of the human race dependent upon it for artificial light. When compared with the methods in use half a century ago, illumination by means of this material has prolonged human life over half the habitable globe, and it is the cheapest and most perfect illuminating agent yet discovered.

Next in importance in the list of products are lubricating oils, which, when prepared of various grades and qualities for different purposes, have nearly superseded all other oils devoted to similar uses.

The lighter products begin with righolene, which boils at 65° Fahr., and is the lightest of all known fluids. This is prepared by condensing in a mixture of ice and salt that portion of the distillate from petroleum that at ordinary temperatures would be gaseous. It evaporates so rapidly that it will reduce the temperature to -19° Fahr. in twenty seconds. It was originally prepared, and is still used for producing local anæsthesia in surgical operations. A similar but not so volatile fluid has been prepared in commercial quantities under the name of cymogene. It has been used in ice-machines to produce a very low temperature by its evaporation. The next least volatile product is gasolene, the most volatile commercial product of petroleum when no unusual means are taken to condense the vapors. It is used in automatic gas-machines to saturate air with the volatile vapor, and, by thus carburetting the air, to produce an inflammable gas. It has been found extremely useful for this purpose, and is also used as a fuel in a so-called "gasolene-stove"—a very dangerous utensil. A, B, and C naphthas are fluids of different volatilities, taken off between gasolene and illuminating oil. They are used in mixing paint, printing oil-cloths, dissolving resins, and for other similar uses. Illuminating oils are of different grades and qualities. Lubricating oils are also of very various quality, from the most delicate strained oils used on spindles to heavy mixtures of residuum and crude oil used on railroad axles. Filtered petroleum residues, under the name of petroleum oint-

ment, cosmoline, vaseline, etc., have been widely introduced into medicine, having been admitted to the United States Pharmacopœia, and very extensively used as a domestic remedy. Lastly, the solid product of petroleum, paraffine, has become of immense importance in the arts, for candles, water-proofing cloth and paper, insulating electrical conductors, and many other uses.

Technology.—The general technology of petroleum is simple in its details, and is adapted to the handling of vast quantities of material in the most rapid and economical manner. The oil is received at the refineries from the wells through one of the trunk-pipe lines, and is allowed to settle in huge tanks, in order that the small amount of water that invariably accompanies the oil, with any other impurities, may be completely separated. From these storage-tanks the oil is thrown by powerful steam-pumps into the stills, at the rate of 2,000 to 3,000 barrels an hour. The stills are either low, upright cylinders, heated by several fires around their circumference, or plain cylinders set horizontally in banks, similarly to steam-boilers. The stills hold about 1,200 barrels each. In the refineries recently constructed they are not inclosed in a building, but are entirely exposed to the atmosphere, excepting a sheet-iron jacket, which prevents too great radiation. The vapors from the stills are conducted through a series of pipes immersed in cold water, in which they are condensed. The distillates at first are gaseous, but they gradually increase in density and pass through a great variety of fluids, from cymogene to solid paraffine. The fluids are separated and discharged into different tanks by means of a complicated system of stop-cocks. A system of traps in these discharge-pipes also enables the operator to send the gaseous distillates beneath the stills, where the gas may be consumed as fuel.

The crude naphtha is first run off, and in a subsequent operation, often at another establishment, is by redistillation converted by fractionation into gasolene and A, B, and C naphthas. From crude naphtha the distillate is run off until it becomes too dense for the preparation of illuminating oil. This distillate forms the "high-test" illuminating oil, having a fire-test of 120° to 150° Fahr. The residue in the still is then in a condition for "cracking." This process consists of a slow distillation, during which the vapors are constantly being condensed upon the upper portion of the still, from which they flow or drop down upon the heated oil. The oils are thus repeatedly heated to a temperature above their boiling-points, producing destructive distillation, and resulting in the disengagement of a permanent gas, the deposition of carbon in the still, and the production of an oil of a specific gravity suitable for illumination. But this so-called "cracked oil," is not identical in quality or in composition with the illuminating oil first distilled from the

crude petroleum. There are, therefore, three distillates possible and in a general way three qualities of illuminating oil. They consist of oils that are pure distillates, oils that are cracked, and mixtures of the two. Whatever the distillate may be, about 1,200 barrels are pumped into a tank 40 feet high and 12 feet in diameter, called an agitator, which rests upon a base of timber; 6,600 pounds of strong oil of vitriol are then forced into the tank from a closed cistern into which the carboys are emptied. The cistern is closed, and air is forced into it until the pressure is sufficient to drive the acid into the tank. The distillate and acid are then thoroughly mixed by air forced into the bottom of the tank. After the acid has been drawn off, the oil is washed with water, then with a solution of caustic soda, again with water, and lastly with caustic ammonia, which is supposed to remove the last traces of sulphur compounds. The oil is then discharged into settling-tanks through a perforated perpendicular pipe, in a fine spray, which causes any remnant of very volatile oil to be evaporated and removed. In these settling-tanks, beneath skylights, the last traces of water settle and leave the oil clear and almost colorless. It is then pumped into tank-cars or into storage tanks.

The residue in the still is worked over by distillation and mixture into lubricating oils and paraffine. Lubricating oils are prepared by a great variety of processes for as great a variety of purposes. For lubricating the interiors of steam cylinders oils are deprived of their more volatile constituents by exposing them to the sun on the surface of water in shallow tanks. Sometimes the water is heated by a steam-coil. For the same purpose, oils are deprived of their naphtha and illuminating oil in a still, and the residue, called "reduced oil," is then run out of the still. Sometimes the reduced oil is filtered through animal charcoal or other material, and deprived of much of its odor and color. Other oils of less density—which in the ordinary distillation of petroleum "without cracking" come off between illuminating oil and the heavy oils next to residuum—are treated in a still by means of superheated steam in such a manner as to remove the volatile cracked products invariably resulting from the first distillation, leaving in the still an oil of high boiling-point, almost entirely without taste or odor. These oils are called "neutral lubricating oils." The oils that are distilled from them after treatment have been called "mineral sperm," and are distinguished from ordinary illuminating oils by their very high boiling-point and fire-test.

Another class of petroleum products of superior quality has been prepared by distilling the crude oil in a vacuum apparatus, by which the effects of cracking are prevented. These oils have been largely used in treating leather. When crude petroleum is carefully distilled without cracking until the residue in the still

has the consistence of jelly at ordinary temperatures, and the residue while hot filtered through animal charcoal, the product is an amorphous paraffine of a semi-transparent pale-brown color. This substance has been widely introduced into pharmacy as petroleum ointment, and is used as a basis for medicated ointments, being found greatly superior to preparations of lard and spermaceti on account of its freedom from rancidity. The same preparation is also widely consumed under the names of cosmoline, vaseline, petrolina, etc.

The use of petroleum prior to the past thirty years for illuminating, though centuries old, was confined to various rude attempts to burn the crude oil in the regions in which oil-springs occurred in greatest abundance. In Burmah, the Rangoon tar was burned in earthen lamps of the simplest construction possible. In Persia pencils of dried camel's dung, which served as a wick, were immersed in the oil, in vessels that were placed in niches in the houses, the niches communicating with the open air. In Italy the fluidity of the oil made possible its combustion in street-lamps. In the valley of Oil Creek in Pennsylvania the crude petroleum was used in a vessel resembling a tea-kettle, the wick protruding from the nozzle, for lighting salt-well derricks and saw-mills, long before the introduction of coal-oil had suggested the refining of the crude oil.

Since 1854, when petroleum was first refined in Pittsburg, Pa., refined petroleum has penetrated the most remote regions of the habitable globe, until it has superseded almost every other illuminating agent except coal-gas and electricity. Under many conditions of place and purpose, one serious objection lies against its use, which has been found to require constant legal and sanitary supervision. The vapors of the more volatile constituents of petroleum, when mingled with air in proper proportion, form mixtures that burn with great explosive violence. If these light oils, even in very small proportion, are allowed to mingle with illuminating oil, the mixture becomes unsafe under the ordinary conditions of domestic life, and frightful disasters have followed a careless disregard of these facts. To insure public safety, nearly all civilized countries and most of the States of the American Union have enacted laws intended to compel the use of oils properly prepared. Their safety is determined through tests designed to ascertain the temperature at which any given specimen of oil will give off a sufficient amount of vapor to burn explosively when mingled with air. The instruments and methods vary, but a sufficient uniformity follows their use to insure a generally uniform result, and in the main protect the public from unsafe oils.

For many and obvious reasons, petroleum can not generally compete with coal as a fuel. There are localities, notably the Caspian region and the Pacific Coast of North America, where petroleum of inferior quality is abundant and

cheap, while other fuel is scarce and dear, and large quantities of petroleum are consumed as fuel. Elaborate experiments have been made, not only by private individuals but by the governments of the United States, Great Britain, and other countries, to ascertain the most practical methods of burning petroleum as a steam fuel. The result has been in every respect satisfactory, especially in the Caspian region, where stationary, marine, and locomotive engines are being run, not only by means of the crude oil, but also by means of the "astalki" or residuum that results in much larger proportion from the manufacture of Russian than American petroleum. Crude petroleum and naphtha have been successfully used in the manufacture of iron, and one of the purposes for which the fetid oils of northwestern Ohio have been lately introduced by pipe-line to Chicago is to provide fuel for the extensive steel-works in the southern suburb of that city. High-test oils are largely used as a fuel in so-called kerosene-stoves.

PHARMACY. The advance in this art has been manifested by the recognition that it has received from the proposed formation of a section on pharmacy and materia medica by the American Medical Association. This was suggested early in the year, and at the subsequent meeting of that association an amendment to its constitution providing for such a section was introduced, but, according to the rules, an amendment can not be acted on till the next annual meeting. At the meeting of the International Medical Conference in Washington Dr. F. E. Stewart, of Wilmington, Del., in a paper that he read before the section on therapeutics and materia medica, advocated the establishment of a national laboratory for pharmacological investigation. The duties of such an institution would include the scientific examination of new therapeutic agents, with an expression of opinion as to their value. With such a bureau, the public would no longer be at the mercy of dealers of nostrums who widely advertise their preparations, claiming that they contain new drugs having wonderful curative properties. A bill was introduced into Congress by Samuel J. Randall providing that the Government undertake the preparation of a national pharmacopœia, its execution to be charged on a detail of officers from the various governmental medical departments, who are to invite three representatives from the American Medical Association, and a like number from the American Pharmaceutical Association, to aid in the work. This bill has not as yet become a law. According to a recent compilation, there are in the United States and the Dominion of Canada 32,244 druggists (proprietors of stores) and drug firms. Of this number there are 315 strictly wholesale, 310 wholesale and retail, and 31,619 retail drug establishments in the two countries. In the Dominion the number of establishments of all kinds is placed at 1,199. New York contains

2,897 drug-stores, and leads the list in this country, which ends with Nevada, that contains only 80. The other States that contain over 1,000 drug-stores are Pennsylvania, 2,536; Illinois, 2,284; Ohio, 1,902; Missouri, 1,753; Indiana, 1,549; Kansas, 1,442; Massachusetts, 1,388; Iowa, 1,372; Maryland, 1,219; and Texas, 1,156.

Colleges.—The faculty of the Michigan College of Medicine in Detroit have organized a school of pharmacy in connection with their college. Two lectures each on chemistry, materia medica, and practical pharmacy are delivered every week, in the evening. It is reported that a department in pharmacy had been organized at the Denver University, Col., the first session of which was to take place in September.

Legislation.—In Louisiana an act was passed, on July 11, to regulate the practice of pharmacy; the sale of compounded medicines and drugs, preparations and prescriptions; the sale of poisons; to create a State board of pharmacy, and to regulate the fees and emoluments thereof; to prevent the practice of pharmacy by unauthorized persons; and to provide for the trial and punishment of violators of the provisions of this act by fine or imprisonment. The amendment to the Kentucky law, that went into effect on March 3, requiring druggists to obtain certificates, has given general satisfaction, and it is the desire of the pharmacists that it be extended so as to include those doing business in cities of less than one thousand inhabitants. In Massachusetts, the law concerning the sale of poisons has been amplified so as to include some thirty more substances. The new law provides that whoever sells any of the poisonous articles named without the written prescription of a physician, shall affix to the bottle, box, or wrapper containing the article sold a label of red paper upon which shall be printed in large black letters the word "poison," and also the word "antidote," if there be one, and the name and place of business of the vender. The States of Arkansas, California, Florida, Indiana, Mississippi, Nevada, Oregon, Tennessee, Texas, and Vermont still lack proper legislative measures to regulate the practice of pharmacy. An interesting legal decision was rendered during the year to the effect that "acid phosphate," claimed by the Ruinford Chemical Works as a trade-mark, was decided against that corporation. The matter is now before the higher courts, and a definite decision has not yet been reached.

Pharmacopœial Revision.—During the coming year delegates for this purpose will be chosen, and the present committee have issued an appeal to the several State pharmaceutical associations for aid in gathering information concerning the drugs and preparations actually in use by physicians in this country. They desire that analyses of the prescriptions of physicians in all parts of the United States be made by any who have the time and inclination, and

offer to supply to societies, at cost price, printed blanks to facilitate the work. This will be a collective investigation of great importance. The committee also desire to obtain from societies, and presumably also from individuals, expressions regarding the question of weights or measures in the pharmacopœial formulas.

Associations.—The thirty-sixth annual meeting of the American Pharmaceutical Association was held in Detroit, Mich., on September 3-7, under the presidency of John U. Lloyd. Delegates from five alumni associations, eight colleges, and five local and twenty State associations were formally recognized. The scientific section was presided over by James M. Good, and the following papers were presented: "Artificial Salicylic Acid," by Albert B. Prescott and Erwin E. Ewell; "Calycanthus Seed," by R. G. Eccles; "The Masking of Quinine," by Luther F. Stevens; "Adulterating Peppermint Oil," by Alviso C. Stevens; "Acacia Catechu and Uncaria Gambier," by Henry Trimble; "Nomenclature of Pharmaceutical Preparations," by C. S. Hallberg; "The Loco Weed," by L. E. Sayre; "Artificial and Natural Mineral Waters," by Enno Sanders; "Phosphomolybdic Acid for the Quantitative Estimation of Alkaloids," by H. W. Snow; "Is the Precipitated Sulphate of Iron of Constant Composition? and does it contain the same Proportion of Water of Crystallization as the Large Crystals," by Henry Trimble; "Pepsin Testing," by Frank A. Thompson; "Notes on the Morphometric Assay of Opium," by Joseph F. Geisler; "Sponges," by Rosa Upson; "Assay of Powdered Ipecacuanha," by John E. Pennington; "A New Method of preparing Mercurous Iodide," by Edward Soetje; "Arsenic in Medicinal Bismuth Salts," by R. E. Hawkes; and "Cream of Tartar," by Charles V. Boetcher. This section discussed very fully the recently issued "National Formulary" published under the auspices of the association. It was the result of the labors of a committee appointed in 1885 to prepare a list of unofficial preparations, so that when a prescription calling for a compound generally recognized but not in the "United States Pharmacopœia," was presented to the druggist a reliable and uniform article of standard quality could be made. The volume which contains 435 titles was published in July, and means tending toward its periodical revision were discussed, but it was decided to leave the matter open.

The commercial section discussed, under the chairmanship of A. H. Hollister, various trade measures, notably a resolution calling on the National Wholesale Druggists' Association to abolish the rebate system, and the questions "Is substitution going on?" and "Should we practice substitution?" referring to the treatment of drugs by the jobbers, also the very important "liquor question." Earnest protest was made against the present laws which, it was claimed, "placed the pharmacy and the grog-shop on the same level." The education

and legislative sections held brief meetings at which pertinent topics were considered. The special object of the legislative section was to consider how best "to secure a uniform standard of requirement for graduation through the States, so that the certificates of all State boards of pharmacy will be received as *prima-facie* evidence of competency."

At the business meeting 154 new members were admitted, and at the close of the sessions the total membership was 1,411. The financial condition of the Association was found to be excellent. The receipts were \$12,656.49 and expenditures \$10,280.42, showing a cash balance, and \$11,347.82 were invested in United States bonds. Considerable discussion as to the next place of meeting prevailed, but ultimately San Francisco, Cal., was chosen and the date left to the council. Maurice W. Alexander, of St. Louis, Mo., was elected president, and John M. Maisch, of Philadelphia, Pa., continued as secretary. Various local associations were organized during the year, among which was that of the drug clerks of Newark.

Trade Associations.—The fourteenth annual meeting of the National Wholesale Druggists' Association, under the presidency of E. Waldo Cutter, was held at Saratoga Springs, N. Y., beginning on September 11 and continued for three days. The proposition of extending the rebate plan to the retailers was discussed and its impracticability decided upon. The committee on legislation reported its failure to secure the repeal of the excise tax on all spirits, and urged that efforts be made toward the total repeal of all revenue taxes; also the repeal of the tax on spirits to 50 per cent. and the removal of the druggists' license tax. The committee on proprietary goods reported that the annual sales of these goods by the members of the association was estimated at \$37,500,000. Reports of the committees on fraternal relations; on paints, oils, and glass; on Paris green; on transportation; on boxes and cartage; and on commercial travelers were presented and referred to the board of control. A deficiency of \$465.93 in the Druggists' Mutual Fire Insurance Company was shown, and concerning it a resolution was passed from which the following is taken:

"An important feature of this company is its advance premium fund. This fund, of \$100,000, is intended to furnish the company with substantial assets; and in addition to the premiums paid on policies, it is fair to suppose, with the care exercised in the selection of risks, that prosperity will follow.

"Of this fund \$55,000 has been subscribed and paid. It is earnestly hoped that the members of the National Wholesale Druggists' Association, who have not already subscribed to this fund, will avail themselves of the opportunity now offered. These certificates are issued in sums of \$500 or more—30 per cent. payable at time of subscription, and the balance payable in monthly installments of 10 per

cent. for seven months. Six per cent. interest per annum is allowed on installments until all are paid; and after that, 6 per cent. per annum on amount of certificate; and in addition thereto a further participation in the profits of the company, at the rate of 10 per cent. per annum. After the expiration of one year from the date of the certificate, the amount subscribed may be used in the payment of premiums on accepted insurance.

"The policies of insurance of the company are not assessable."

The secretary reported a total membership of 341, and the treasurer showed a balance of \$1,639.50 on hand. George A. Kelly, of Pittsburgh, Pa., was chosen president, and A. B. Merriam, of Indianapolis, Ind., continued as secretary. The next annual meeting will be held, beginning on September 10, at Indianapolis. A supplementary meeting was held of the Western members in St. Louis, Mo., on October 18 to consider various trade matters in which they dissented from the resolutions adopted at the Saratoga meeting. The wholesale druggists of Chicago, St. Louis, Peoria, and Indianapolis met in Chicago on December 4 and organized a "Central Drug Exchange," having for its object the promotion of friendly relations, the correction of any mercantile abuses in the trade, and the maintenance of the high standard in the quality of goods handled. P. Singer, of Peoria, was elected president; Peter Van Schaak, of Chicago, vice-president; and C. Walbridge, of St. Louis, treasurer and secretary.

The Association of Manufacturers and Dealers in Proprietary Articles held its annual meeting at Saratoga Springs, N. Y., on September 14. About twenty members were present. Several communications were received and referred to committees for consideration, after which R. V. Pierce, of Buffalo, N. Y., was elected president, and Henry E. Bowen, of New York city, as secretary. The Association then adjourned subject to the call of the president. A National Paint, Oil, and Varnish Association was organized at Saratoga Springs on September 11, and Charles Richardson, of Boston, Mass., was chosen president, and G. H. Vrooman, of Chicago, Ill., secretary.

Literature.—The books of the year include: "The Art of Dispensing" (London); "The National Formulary" (Philadelphia); "Pictorial History of Ancient Pharmacy," translated from the German by Dr. William Netter (Chicago); "Organic Analysis," by Prof. Albert B. Prescott (New York); "The Beginnings in Pharmacy," by R. Rother (Detroit); "An Introductory Treatise on the Practical Manipulation of Drugs," by R. Rother (Detroit); "The Prescription, Therapeutically, Pharmaceutically, and Grammatically Considered," by Otto A. Wall (St. Louis); "Price and Dose Labels," by Hans M. Wilder (New York); "Toilet Medicine," by Edwin Wooton (New York); also new editions of "The Dispensary of the

United States," 16th edition (Philadelphia); "Pharmacology, Therapeutics, and Materia Medica," by T. Lauder Brunton (Philadelphia); "Prescription Writing," by Frederick H. Gerish (Portland, Me.); "Chemical Lecture Notes," by H. M. Whelpey (St. Louis); "Therapeutics: its Principles and Practice," by Dr. Horatio C. Wood (Philadelphia). The pharmaceutical journals have been active in the exposure of the objectionable character of various proprietary medicines. "The Druggists Circular" deserves credit for its analysis of "Scotch Oats Essence," which it showed to be a preparation of morphine. Samples of the widely advertised "Recamier Balm" proved on analysis to consist of one drachm of oxide of zinc and two grains and a quarter of corrosive sublimate in four ounces of water. The original cost of the mixture could hardly have exceeded three cents yet it finds a ready sale at \$1.50 a bottle. The "Vita Nuova" owes, according to the same journal, its wonderful properties to a small quantity of cocaine dissolved in alcohol; still it is advertised as "free from alcohol" and as not being a "wine of coca."

"The Rocky Mountain Druggist," edited by J. L. T. Davidson, made its appearance in Denver, Col., in June, and is the first distinctively pharmaceutical journal to be issued west of the Mississippi. "The New England Druggist," of Boston, Mass., edited by J. W. Colcord, began publication later in the year.

PHYSIOLOGY. The Nervous System.—The researches of Profs. Victor Horsley and Schäfer go to show that, as the result both of ablation and excitation, the motor region of the brain cortex may be mapped out into a series of main areas, each being connected with the movements of a particular part—such as the head, trunk, leg, arm, and face areas—and these, again, present subdivisions concerned with more specialized movements; there are, however, no sharp lines of demarkation between the several areas, but they overlap one another. Brown-Sequard has made another contribution to the discussion of this subject, in which he suggests that each function, each property of the central-nerve system, is strongly localized in certain nerve-cells, but these cells are not localized in restricted areas or microscopic centers, but are distributed through many parts of the central nervous system. This dissemination, he considers, explains the fact that there is no single spot or region in the whole of the central nervous system the destruction of which is followed with absolute certainty by either paralysis or anæsthesia.

A distinction has been made by some writers between cranial and spinal nerves; and, although efforts have not been wanting to bring both groups under the same system, they have failed, on account of some misconceptions and confusions that are pointed out in a paper by W. H. Gaskell. This author has made a new study of the subject, from the results of which he concludes that both of the groups to which he

assigns these nerves—a foremost, which in man are entirely efferent, and a hindmost group of nerves of a mixed character—are built upon the same plan as the spinal nerves, both with respect to the structure, function, and distribution of their nerve-fibers, and as far as the arrangement of the centers of origin of those nerve-fibers in the central nervous system is concerned; and he thinks it probable that the reason for the deviation of the cranial nerves from the spinal-nerve type is bound up with the changes which occurred at the time when a large portion of the fibers of the foremost group of cranial nerves lost their functional activity.

Dr. Marckwald has brought forward evidence to show that, although the respiratory centers in the medulla oblongata are automatically active, as well as excitable by reflex action, yet the automatically active center can only liberate respiratory spasms, but no regular rhythmic respiratory movements.

Dr. Gersung, of Vienna, has successfully performed the novel operation of transplanting a portion of the nerve of a rabbit to the thumb of a patient, Prof. Von Fleischl. The transplanted nerve not only united with the human nerve upon which it was ingrafted and performed its functions normally, but the operation resulted in curing a tendency to neuro-matous degeneration with which the original thumb nerve had been affected. The case is further interesting from the light which it casts upon the existence of a practical identity between the nerves of different species of animals.

A remarkable case is described by Mr. Sutton in which the divided ends of a median nerve that had been severed ten weeks previously were dissected out, revived, and after five days began to recover function. Mr. Barwell, discussing Mr. Sutton's paper, mentioned a case in which recovery of a function occurred when the parts were brought together six months after division.

Special Senses.—The experiments of Herr Urbanschitsch, of Vienna, on the reciprocal influence of organs of sense lead to the general conclusion that any sense-excitation results in an increase of the acuteness of other senses. Thus, sensations of hearing sharpen the visual perceptions. If colored plates are placed at such a distance that one can hardly distinguish the colors, and various sounds are then produced, the colors become generally more distinct the higher the sounds. Similarly, one can, while a sound affects the ear, read words which he could not read before. The ticking of a watch is better heard when the eyes are open than when they are closed. Red and green increase the auditive perceptions, while blue and yellow weaken them. Several musicians, however, were agreed that red, green, yellow, and blue caused an intensification of sound of about one eighth, while violet had a weakening effect. Taste, smell, and touch are

under like laws. Light and red and green colors increase their delicacy, while darkness, blue, and yellow diminish it. Under the influence of red and green, taste extends from the anterior border of the tongue to the whole surface; on the other hand, a strengthening of smell, taste, or touch, exalts the other sensitive perceptions. The reciprocal influence of touch and the sense of temperature is specially interesting. If we tickle the skin with a hair, and plunge the hand in hot water, the tickling ceases; but, if the hand be placed in cold water and a part of the body is tickled, the temperature is felt more vividly.

From a purely physical point of view, Prof. S. P. Langley has concluded that the time required for the distinct perception of an excessively faint light is about half a second. A relatively very long time is, however, needed for the recovery of sensitiveness after exposure to a bright light, and the time demanded for this restoration of complete visual power appears to be the greatest when the light to be perceived is of a violet color. The visual effect produced by any given constant amount of energy varies enormously according to the color of the light in question. It varies considerably between eyes which may ordinarily be called normal ones; but, letting 1 represent the amount of energy required to make us see light in the crimson of the spectrum near A, the average will give the following proportionate results for the wave-lengths corresponding approximately to the six colors: Violet, 1,600; blue, 62,000; green, 100,000; yellow, 28,000; orange, 14,000; red, 1,200. Since we can recognize color still deeper than crimson, it appears that the same amount of energy may produce at least 100,000 times the visual effect in one color of the spectrum that it does in another. The absolute measure of energy represented by the sensation of crimson light is 0.000,000,000,000,3 horse-power.

Dr. Koenig has made some experiments for testing Holmgren's statement that very small colored dots can be seen only of one of the primary colors of Young and Helmholtz's theory—red, green, or violet. The statement was not confirmed when the necessary precautions were taken, and it was found that small dots of any color, even yellow and blue, were perceived as possessing their own objective color. This had also been observed by Hering. Isaacksen had, further, investigated the power which the eye possesses of distinguishing between minute dot-like lights which are so small that their image on the retina only falls on one cone, and found that it was as fully developed as for the colors of large surfaces.

The attention of anatomists was first directed to the papilla foliata of mammals as an organ of taste by Van Wyss in 1869-'70, and Engelmann in 1872. The investigations have been carried on by other observers—as to man, by Krause, Ajtai, and Lustig. Boulart

and Pilliet examined the tongues of a large number of mammals with special reference to the presence or absence of the papillæ foliatæ. They found them existing in marsupials, edentates, insectivora, rodents, proboscideæ, and swine; and wanting in cetacea, chiroptera, perissodactyla, ruminantia, and many carnivora. Frederick Tuckerman observes that there are probably many groups of existing animals whose remote ancestors possessed foliate areas, which have long since disappeared from their present representatives. An exception is met in the swine, which have undergone fewer structural modifications from the primitive type than most of the other mammals since the Eocene period. According to this author, this organ in the pig is now and then rudimentary, is usually more or less atrophied, and very frequently shows a want of symmetry between the two papillæ. With a single exception all the specimens of swine's tongues examined had well-developed foliate areas. The papilla foliata consists of four or five rather irregular folds, with slightly rounded crests, separated by furrows varying much in breadth, and slightly in depth. Occasionally the bottom of a furrow is invaginated upward into a ridge, which may or may not bear taste-bulbs. Serous glands and ducts are very abundant at the base of the folds and occupy a large space within them. Some of the ducts of these glands are very tortuous, and several millimetres in length. They usually open between the folds at the bottom of the furrows. Glands of the mucous type are sparingly scattered through this region. Each fold carries at its upper part many secondary papillæ, the depressions between which are filled by the epithelium. The taste-bulbs of this gustatory region are a little smaller on the average than those of the circumvallate area, and are estimated to number 2,400 for each papilla. Dr. Tuckerman quotes from Dr. Luigi Griffini, of Modena, on his experimental study of the reproduction of the gustatory papillæ and regeneration of the taste-bulbs in the rabbit and dog. Destruction, partial or complete, of the organs of taste appears to be effected by the direct removal from the animal of the papillæ themselves, or by division of the glosso-pharyngeal nerves. The process of reproduction is described in the memoir. Griffini rejects the theory of direct continuity between nerve-fibers and epithelial cells, and asserts that reproduction of the papillæ after their partial or complete removal always takes place. He has also made an experimental study of the organ of smell, the motorial end-plate of the muscle-fiber, and the retina of the lower animals, the results of which have not been published. Dr. Tuckerman has added to his contributions in this branch studies of the tongue and gustatory organs of *Fiber Zibetheus*, and of the gustatory organs of *Putorius Vison*.

In the experiments of E. H. S. Bailey and E.

L. Nichols upon the delicacy of the sense of taste as to different classes of substances, quinine, cane-sugar, sulphuric acid, sodium bicarbonate, and common salt were employed as severally representing, typically, the bitter, sweet, acid, alkaline, and saline tastes. The tests were made upon 82 men and 46 women. The average results were as follow :

- I. Quinine :
Male observers detected 1 part in 890,000 parts of water.
Female observers detected 1 part in 456,000 parts of water.
- II. Cane-sugar :
Male observers detected 1 part in 199 parts of water.
Female observers detected 1 part in 204 parts of water.
- III. Sulphuric acid :
Male observers detected 1 part in 2,080 parts of water.
Female observers detected 1 part in 8,250 parts of water.
- IV. Bicarbonate of soda :
Male observers detected 1 part in 98 parts of water.
Female observers detected 1 part in 126 parts of water.
- V. Common salt :
Male observers detected 1 part in 2,240 parts of water.
Female observers detected 1 part in 1,950 parts of water.

The authors conclude that the sense of taste is much more delicate for bitter substances than for the others included in the list (the relative delicacy for quinine and sugar being very nearly 2,000 : 1); that, taken in the order of their effect upon the organs of taste, the classes of substances must stand in the order — bitters, acids, saline substances, sweets, and alkalies; that the sense of taste is, as a rule, more delicate in women than in men (in the case of all the substances tried excepting salt); that the ability to detect a dilute bitter is very generally accompanied by inability to detect a dilute sweet, and *vice versa*; and that the long-continued habitual use of a substance does not seem to influence in any marked way the delicacy of the sense of taste for that substance. While these conclusions represent the average results, the tests brought out some astonishing individual peculiarities. Thus there were persons who could detect with certainty 1 part of quinine in 5,120,000, while others failed to notice 1 part in 160,000.

A device for measuring the acuteness of the sense of smell has been invented by M. Zwaardemaker, of Utrecht. It consists of two tubes, a smaller one of glass and a larger one of India-rubber or gutta-percha, sliding over the former in such a way that the air breathed in by the nostrils at the free end of the glass tube may pass through a desired length—short or long—of the odor-bearing tube. The length is read off in centimetres, which it is required to give to the passage in the odor-bearing tube to produce a definite olfactory impression upon the nose.

Circulation.—The changes in the volume of the heart and the amount of blood propelled by it under varying conditions of pressure have been studied by Prof. Roy and J. G. Adami. A slight compression of the abdomen of a dog caused an increase in the volume of the heart and in the amount of blood passing through it in a given time. The phenomenon is explained by the fact that the abdominal vessels are capable of containing more than all the blood in the

body. Slight compression of the abdomen will, without disturbing the arterial supply, drive out a large amount of blood which will be of use for other regions of the body, where it may be applied to the augmentation of their functional activity. The front and side abdominal walls are, furthermore, formed of soft, elastic tissues, which, in health, exert an adequate pressure upon the abdominal contents and blood-vessels. If, however, the muscles lose their tone, the walls become flaccid, the veins dilate and become reservoirs for more blood than is needed there, depriving the rest of the body of a part of the fluid requisite for its due nutrition. Here, then, we have an explanation of the office of the waist-belts worn by active peoples and athletics. They help to maintain a due pressure on the abdominal vessels to prevent a useless storing of the blood there, and to secure an adequate supply for the parts of the body where it will be demanded. Hence some form of moderate pressure upon the abdomen may be beneficial to persons leading sedentary lives and to women. But if the pressure is made extreme, it will prevent instead of aiding exercise and activity, will affect the arteries also, and disturb the blood-supply of the abdomen and lower extremities.

Dr. John A. McWilliam has found that the rule of behavior of the cardiac muscle of cold-blooded animals under the influence of single stimuli—that the minimum stimulation is at the same time maximal—holds also with the mammalian heart. There occurs a rhythmic rise and fall in the excitability of the organ; a fall immediately succeeding the occurrence of an effective stimulation, followed by a gradual rise, and this again by subsidence into the phase of quiescence. The facts indicate that all parts of the organ are endowed with independent rhythmic power, but not in equal degree; and if one portion of the heart possesses a higher power of spontaneous rhythm than the rest of the organ, its rhythm will supersede the inherent rhythm of the other parts, and determine the rate of contraction in the whole organ. The causes determining rhythm are to be sought for at the venous end of the organ, and ultimately in the molecular changes occurring deep in the tissue. The propagation of the contraction from auricles to ventricles is mainly effected through the nerves that pass between those parts.

Dr. E. W. Carlier has explained a method by which human blood may be withdrawn from the body and its fluidity preserved. The finger from which the blood is obtained is greased and plunged into castor-oil before the puncture is made, while every precaution is taken to prevent the blood coming in contact with the air or with solid matter. In this way the blood may be preserved in a fluid state for a considerable time. As the drops of blood settle slowly in the oil, the corpuscles are seen to fall to the lower part of the drops, while the clear plasma remains above. Prof. Haycraft and Dr.

Carlier believe that the human blood plasma has never before been demonstrated in an unaltered condition, except microscopically. Coagulation eventually occurs, because the blood necessarily comes in contact with the sides of the wound made in the finger.

Continuing his researches on the coagulation of the blood, Dr. Wooldridge endeavors to show that the antecedents of the fibrin are not pure albumens, but fibrinogens consisting of albumen and lecithin; and he attributes great importance to lecithin in the process of coagulation. The experiments of Prof. Haycraft and Dr. Carlier in the same line tend to show that the white corpuscles play an important part in the process.

The distribution of the blood-vessels in the valves of the heart has been investigated by M. Darier, who finds that both in the fœtus and the adult, in health, there are no vessels in the purely fibro-elastic portion of the auriculo-ventricular valves, and that there are none in the chordæ tendinæ attached to these valves. The aortic segment of the mitral valve, however, presents at its upper part a vascular area of small extent, not exceeding one sixth of the whole height of the valve; and in the fœtus a few muscular fibers accompanied by vessels penetrate the auriculo-ventricular valves, but never extend to the lower fourth of these valves. The semi-lunar valves of the aorta and pulmonary arteries are always destitute of vessels; when vessels are found, therefore, in those non-vascular parts, they may always be regarded as pathological.

Researches on the blood-vessels of the carnivora, made by Bellarminoff under the direction of Dr. H. Virchow, show that the blood-vessels of the eye have a tendency to form rings, from which a large number of fine branches pass posteriorly, and that the arrangement is very different in different classes of animals; thus, for instance, the course of the arteries in the eye of a dog, as compared with that of a rabbit, is such that the dog's eye must be turned through an angle of 180° in order to make the course of its arteries correspond with that of the rabbit's eye.

Respiration.—A simplified method of measuring the gaseous interchange during respiration is described by Prof. Zuntz. In it breathing is carried on, the nose being closed, through a mouth-piece, which is connected by very mobile valves with gasometers, which thus measure the volume of the inspired as well as of the expired air. Samples of the expired air can be collected at any desired intervals of time, and the amount of oxygen and carbonic acid in them determined. Dr. Loewy has carried out some experiments with this apparatus in order to determine the influence of digestive activity on the process. The respiratory interchange of the patients was determined in the morning, while they were fasting and in a quiescent condition; they were then given Glaubers'-salt; as soon as the action of the salt had manifested

itself painfully, and increased peristaltic action had set in, the respiratory interchange was again determined. In all cases the gaseous interchange was increased by from 7 to 30 per cent. more than the normal. The several persons behaved very differently in this respect, and the same person showed marked differences in the increase of respiratory interchange at different times, after equal doses of salt. As a rule, the increase was proportional to the amount of discomfort experienced by the patient in the lower parts of the body.

Dr. Marcet, in the investigation of normal respiration, directs attention to the occlusion of a proportion of the air inspired, and insists on the importance of considering the proportion of it to the carbonic acid expired.

Digestive System.—Later studies by Dr. J. N. Langley on the physiology of the salivary secretion relate to the effect of atropine upon the supposed varieties of secretory nerve-fibers. Heidenhain supposes that there are two kinds of secretory fibers, one proper secretory causing a flow of liquid, and the other trophic causing an increase in solubility in the stored-up gland substance. The author had already shown that on the assumption of the existence of different kinds of secretory fibers, there is ground for supposing that there is a third variety—anabolic fibers—causing the formation of fresh substance by the cells. The effects of atropine having been observed only on the proper secretory fibers, Dr. Langley's observations were extended to the other fibers, with the result that the drug was found to paralyze the trophic, anabolic, and secretory fibers simultaneously. Hence, the author concludes, the various changes caused in the gland-cells by nerve stimulation are all affected by atropine, and to approximately equal extents. When paralysis of the chorda occurs, it is a paralysis of the whole of its function with regard to the gland-cells. In other words, the phenomena of atropine poisoning give no indication of the existence of more than one kind of secretory nerve-fiber in the chorda tympani.

G. Sticker concludes, from his observations, among which were special experiments upon living persons, that the supposition that the salivary secretion plays no part in gastric digestion is erroneous; and that, on the contrary, the presence of saliva in the stomach has a direct effect in promoting the secretion of gastric juice.

Dr. Poulet has found evidence that the acid of the gastric juice in man, as ascertained by the process of dialysis during the first period of digestion, is exclusively the hippuric, while during the close of digestion there is a mixture of hippuric and tartaric acids. In the fasting state tartaric acid is alone present.

In experiments to determine the effect of cooking on the digestibility of starchy foods, Dr. N. Butiagin, of St. Petersburg, found that the activity of the saliva does not differ much among healthy persons, but that when people

are badly nourished and weak, and especially when they are also suffering from disease, their saliva has a diminished power of dissolving starch. When starchy substances are subjected to prolonged cooking they become more easily digestible; and in this way compensation may be provided for the inactivity of the saliva of weakly persons. Thus, rice and peas were found to require three hours' cooking in order to render them as easily digested in the saliva, possessing only 88 per cent. of the normal activity, of a badly nourished, hysterical woman, as they were with a single hour's cooking by the saliva of healthy persons; and generally it was found that in the case of weakly or diseased persons starchy food must be cooked twice or thrice as long, in order that it may be equally acted upon, as in the case of healthy persons. Again, when starch has been cooked for a long time there is less difference between the effects of healthy and unhealthy saliva upon it; this is especially remarkable in the case of millet, which after one hour's cooking showed a difference of 12.89 per cent. in favor of the saliva of healthy as against that of diseased persons, but after three hours' cooking a difference of only 5.77 per cent.

From a series of experiments still going on, Drs. Vincent D. Harris and Howard H. Tooth have obtained evidence in support of the generally accepted belief that micro-organisms need not take any part in gastric digestion. In regard to the formation of leucin and tyrosin in pancreatic digestions, although their experiments were inconclusive, they have been led to believe that the formation of these substances depends, in part at all events, on bacteria. It seems to them likely that the formation of indol and its allies in the alimentary canal below the stomach is a mode of excreting nitrogen, like the production of leucin and tyrosin, and that the former substances are not formed from the latter, but directly from pectone.

The researches of Drs. Henry Leffmann and William Beam on the action of antiseptics in perishable articles of food upon the organism and their effect on the nutritive or medicinal value of any articles with which they may be associated were based on the estimation of the sugar formed in presence of a large excess of starch, arrow-root starch being selected for the purpose of the experiments. It was found that salicylic acid prevents the conversion of starch into sugar under the influence of either diastase or pancreatic extract, but does not seriously interfere with peptic or pancreatic digestion of albumen. Saccharin holds about the same relation as salicylic acid. Sodium acid, sulphite, and boric acid are practically without retarding effect. Beta-naphthol interferes decidedly with the formation of sugar by diastase, but not with the action of pancreatic extract on starch. Peptic and pancreatic digestions of albuminoids were almost prevented by this agent. The authors conclude that the indis-

criminate use of these agents is to be regarded as objectionable and a proper subject of sanitary inspection.

Nutrition.—The results of an investigation of the effect of the Russian bath on nitrogenous metabolism have been published by Dr. Makovetski, of St. Petersburg. The subjects were four student friends in perfect health. The baths were given daily for five days; perspiration in a hot chamber was induced with the usual amount of shampooing, but without the use of steam. It was found that the assimilation of the nitrogenous parts of the food was diminished, while the nitrogenous metabolism was increased. The loss by the lungs and skin was increased to a marked degree, but the urine was diminished; and the uric acid was diminished during the days when the baths were given. The baths have the effect of strengthening the muscular and nervous systems, and of increasing secretion when there is much muscular work, especially when the food is deficient in nitrogen, when there is a large amount of nervous and mental activity, and when there is deficient action of the secretory organs in consequence of preceding hypersecretion, or morbid conditions, such as chronic catarrh of the bronchi, stomach, intestines, or genito-urinary tract, chronic hepatic, renal, or splenic affections. In these cases, together with the baths, fat and hydrocarbons are required in the food. As contra-indications, theory would lead us to conclude all conditions where the nitrogenous metabolism is diminished, and also those where artificially induced diminution of it appears to act prejudicially.

After an investigation of the qualities of vegetable albumens, Dr. Rutgers concludes, in the "*Zeitschrift für Biologie*," that they are capable of supplying the place of the ordinary albumens which we are accustomed to consume as food, without causing any disturbance in the nitrogenous balance of the economy; that beans and peas overcharge the alimentary tract, because both of their solids and of their disposition to develop gas, while meat and rice cause no disturbance. There are consequently various contra-indications as to an exclusively vegetable diet. The acidity of the stomach and of the urine are much less upon a wholly vegetable than upon an ordinary mixed diet.

Dr. R. Schneider has experimented upon the absorption of iron and on its occurrence as oxide in the organs and tissues of animals. All the animals examined—whether living in water, mud, or underground—contained oxide of iron. It was detected by employing ferrocyanide of potassium and dilute hydrochloric acid. Among vertebrates, oxide of iron was found in the alimentary canal, in the liver and spleen, occasionally in the kidneys and teeth; and in the proteus it occurred throughout the whole skeleton. Among the invertebrates it was found in the cells of the liver and intestine, in the respiratory organs, the shells, and the chitinous envelopes. It occurred chiefly in

the protoplasm of the cells, but also frequently in the nuclei.

Muscular System.—The researches of Profs. Horsley and Schäfer (see "*Annual Cyclopædia*," for 1886) on the character of certain muscular contractions are supplemented by observations of Mr. W. Griffiths, to determine the influence of strain in modifying the number and character of the waves seen in the myogram of a voluntarily contracting muscle. The author concludes that the waves seen in the myogram represent contraction and not vibration waves; that the number of these per second varies in different individuals; that the number of muscular responses per second in a voluntarily contracting muscle varies with the weight lifted, increasing with the weight up to a certain maximum, beyond which a decrease takes place; that the number of responses varies with the time during which the muscle is made to contract; a similar course is observed with increased activity to that described in connection with increased weight; and that the number of responses per second presented by an unweighted muscle and the same muscle in a state of dead strain is fairly constant, and is the lowest number of muscular responses obtained from a voluntarily contracting muscle.

The experiments of Horsley and Schäfer have led them to conclude that the normal muscular rhythm is about ten per second. Charcot, studying the differences in the rates of muscular movements in different forms of tremor, has determined tremors of slow rhythm—four or five per second—in paralysis agitans and multiple sclerosis; and of rapid rhythm—eight or nine per second—in alcoholic and mercurial tremors and the tremor of exophthalmic goitre. Drs. R. N. Wolfenden and Dawson Williams urge that these distinctions must be taken with reserve, and maintain that the rate of the normal tremor is preserved in pathological conditions, but with variations in amplitude. While the apparent rate is five or six per second in the tremors of old age, a careful study of the curves will show that the apparent single vibrations are really made up of two, and that the slow tremor is therefore one of normal rate in which every other vibration is imperfect.

An attempt has been made by Dr. G. F. Yeo to settle the doubt which had arisen in regard to the duration and significance of the latent period of excitation in muscle contraction. He finds that as the intensity of stimulation increases up to the injurious point, the duration of latency decreases, but beyond this point the latent period becomes longer. Also that if the weight with which the muscle is loaded be suspended by an elastic band from the axle of the lever belonging to the apparatus, difference of tension no longer seems to influence the duration of latency. He has not recorded less than .004 of a second as the normal time of latency, and no reliable measurement (without heating) of a less duration can

be found in ordinary records. From these and other results he concludes that there is a period of some .005 of a second (net latency) during which certain molecular changes, necessary for its energy to become visible, take place in muscle. The influence of the elasticity of muscle or the rate of propagation of the wave of contraction can only come into operation after this period.

The study of the action of caffeine upon voluntary muscle is one of especial interest, because different observers have often obtained very different results. In taking the subject up again for investigation, Drs. T. Lauder Brunton and J. Theodore Cash have kept in view the facts that the action which a substance is alleged to have upon a living organism may vary according to the nature of the drug; according to the nature of the organism; and according to the conditions (of temperature, duration of observation, dose, etc.) under which the experiments are made. So far as described in their paper, the experiments of the authors have been directed to the amount of caffeine producing rigor, and to the effect of certain acids and alkalies on caffeine rigor.

Whatever view may be entertained as to the nature of the electric currents present in an injured muscle or nerve, whether they be regarded as pre-existing in the uninjured condition or as being developed through injury, such currents exist in the injured condition. They have been made the subject of investigations, with improved apparatus, by Drs. Henry C. Chapman and Albert P. Brubaker, who have sought to demonstrate their presence in muscle and nerve, and to determine their electro-motive force. The method of these authors has been applied to the gastrocnemius muscle and the sciatic nerve of the frog, and they have determined that the electro-motive force of the muscle is more than three times as great as that of the nerve.

John Campbell, of Johns Hopkins University, has found that when curarized muscles are moderately weighted and stimulated with electricity, the stimulus starts from only one electrode—viz., the cathode on closing and the anode on opening the current; while with insignificant weights the muscle is stimulated at both anode and cathode, with equal and simultaneous stimuli.

Poisons.—An investigation has been undertaken by Dr. Weyl of the toxic or non-toxic properties of the coloring matters derived from coal-tar, including especially those that might be employed for the coloration of food-materials. The author first tested the nitroso and nitro derivatives of benzol and phenol, and, taking phenyl green as a typical representative, found the first to be non-poisonous. The nitro-derivatives which he examined—namely, picric acid, dinitro-kresol, and Martin's yellow—he found to be poisonous; the sulpho-compounds of the last-named matter were harm-

less; two of these—naphthol yellow and brilliant yellow—are articles of commerce. The difference points to a relationship between the chemical constitution and physiological action of these bodies.

The general physiological action of carbonic monoxide was well illustrated in a case of fatal poisoning by that gas at Troy, N. Y., of which Prof. W. P. Mason gave an account before the American Association. Owing to a break in the mains, a quantity of fuel-gas passed beneath the frozen crest of the earth and escaped into the adjoining houses. Three deaths and a number of serious illnesses resulted. The fuel-gas contained about 40 per cent. of carbon monoxide and was practically odorless. Very searching autopsies were made with the result of finding nothing abnormal except the bright, cherry-red color of the tissues and the vivid redness of the blood. The physician making the autopsies was seized with giddiness and great oppression in the chest, calling strongly to mind the symptoms described by Sir Humphry Davy when he so rashly experimented upon himself with carbon monoxide. The presence of carbon monoxide in the blood was shown by the spectroscope, the characteristic absorption bands being strongly marked. Although now twenty months since the time of its removal from the body, the blood still preserves its brilliant redness and gives the carbon monoxide bands as distinctly as ever.

The toxic milk ptomaine, tyrotoxin, according to Braithwaite's "Retrospect," is, chemically speaking, diazo-benzole. It is developed in milk by the growth of a micro-organism which multiplies rapidly under favorable conditions. These are principally the exclusion of air, entirely or to a great extent, and a temperature approaching 36°. It is observed under these conditions if milk, as it is drawn from the cow, is placed in cans and they are tightly closed.

It is shown in a memoir by MM. Roux, and Chamberland, to which M. Pasteur has called attention in the French Academy of Sciences, that the septic vibriion, a living ferment analogous to the butyric vibriion, develops soluble chemical products, which gradually act as an antiseptic on the organism itself. These products, introduced in sufficient quantities into the body of the guinea-pig, confer absolute immunity from the attacks of the virus, to which that animal is specially susceptible.

Experiments by Dr. R. H. Chittenden have shown that uranium is an irritant poison tending to destroy the life of the intestinal and renal tissues. Enteritis, or acute catarrhal inflammation, was easily induced by the administration of small doses of its salts. In toxic doses it causes absolute anuria; in smaller doses, merely acute parenchymatous nephritis; in minute doses it has a diuretic effect. Oxalate of lime crystals in the urine, and glycosuria were constantly noted in cases of poisoning by uranium.

There are a number of substances, according to Prof. Liebrich, which, when injected subcutaneously, give rise to anæsthesia in the immediate neighborhood of the place where they are injected. Antipyrine, sal-ammoniac, salts of tannin, resorcin, chloride of iron, and other substances have this action, although there is no chemical or physiological similarity between them. They possess, however, the property in common that they all have a corrosive action on the tissues—the expression being understood to imply any kind of alteration of molecular structure. The alkaloids, in the cases where they possess a local anæsthetic action, act in the same way, as, for instance, erythrophœin. Cocaine alone is an exception to the rule, inasmuch as it is a local anæsthetic, but does not corrode the tissues. When applied subcutaneously to man, the substances named produce either no localized anæsthesia, or one which is very imperfect. When testing the action of anæsthetics on the eye, it is essential to take into account the difference in sensitiveness of the conjunctiva and cornea, as Claude Bernard has pointed out.

PORTUGAL, a constitutional monarchy in Southwestern Europe. The crown is hereditary to both sexes in the house of Braganza. The present sovereign is Luis I, born Oct. 31, 1838, the son of Queen Maria II and Prince Ferdinand of Saxe-Coburg, who succeeded his brother Pedro V, Nov. 11, 1861, and married in 1862, Pia, youngest daughter of King Vittorio Emanuele of Italy.

The *Carta de Ley*, or Constitution, granted in 1826, and altered in 1852, was further modified by the law of July 24, 1885, which abolishes hereditary peerages by a gradual process. These become extinct on the death of the immediate successors of the peers now living. In the place of the hereditary peers, there will be 100 peers appointed for life by the King, and 50 elective peers. The Chamber of Peers consists of 162 members, and the Chamber of Deputies since 1884 has had 173 members. The present Cabinet, constituted on Feb. 20, 1886, is composed as follows: President of the Council and Minister of the Interior, Luciano de Castro Pereira Corte Real; Minister of Justice, F. A. da Veiga Beirao; Minister of Public Works, E. J. Navarro; Minister of Finance, M. Cyrillo de Carvalho; Minister of War, Col. Viscount San Januario; Minister of Marine and the Colonies, H. de Barros Gomes, who is also Minister of Foreign Affairs *ad interim*.

Finances.—The public debt on June 30, 1887, amounted to 490,493,599 milreis. The interest discharged during the year was 14,907,479 milreis, and the interest in default that was added to the debt was 5,237,420 milreis.

Communications.—The main lines in 1888 had the total length of 1,761 kilometres, while 382 kilometres were in course of construction. Of subsidiary railroads, there were 144 kilometres completed and 109 kilometres building.

The number of letters sent through the mails

in 1887 was 20,219,712; post-cards, 3,056,279; circulars and newspapers, 16,944,182.

The length of the Government lines at the beginning of 1885 was 4,978 kilometres, with 11,732 kilometres of wire. The receipts were 220,684 milreis.

Commerce.—The values of the imports and exports of the various classes in 1887 are given, in milreis, in the following table:

CLASSES.	Imports.	Exports.
Cereals.....	6,199,000	317,000
Fruits and vegetables.....	1,058,000	1,714,000
Colonial produce.....	3,363,000	90,000
Wines and spirits.....	162,000	11,422,000
Animals and animal products.	4,644,000	2,521,000
Minerals.....	2,463,000	1,063,000
Metals.....	7,765,000	161,000
Hides and leather.....	2,844,000	232,000
Timber.....	1,177,000	17,900
Textiles.....	6,305,000	140,000
Various manufactures.....	5,246,000	373,000
Drugs and chemicals.....	400,000	468,000
Total merchandise.....	42,018,000	21,244,000

The imports of precious metals amounted to 4,771,000 milreis, and the exports to 5,000 milreis.

The countries participating in the foreign commerce of Portugal in 1886 and the value of the trade with each, in milreis, are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	12,174,000	6,722,000
France.....	5,130,000	9,491,000
Brazil.....	2,014,000	4,575,000
Germany.....	4,695,000	1,313,000
United States.....	4,978,000	647,000
Spain.....	2,594,000	1,155,000
Portuguese possessions.....	1,532,000	557,000
Belgium.....	1,537,000	349,000
Italy.....	799,000	164,000
Sweden and Norway.....	741,000	213,000
Russia.....	471,000	296,000
Other countries.....	238,000	430,000
Total.....	37,326,000	26,123,000

The merchant marine in 1888 consisted of 48 steam-vessels of the aggregate capacity of 16,260 cubic metres, and 421 sailing-vessels of 32,310 cubic metres.

The Army.—The effective strength of the army on the peace footing, Aug. 31, 1888, was 2,073 officers and 28,534 men, with 2,852 horses and 768 mules. The war strength was 3,862 officers and 125,057 men, with 7,821 horses, 4,870 mules, and 264 guns. These figures do not include the colonial forces, consisting of a regiment of infantry 1,193 strong, and 7,633 colonial troops of the first line, besides numerous native troops of the second and third lines.

The Navy.—The fleet in 1888 numbered 42 steamers with 126 guns, and 13 sailing-vessels with 41 guns. The steam navy included 1 iron-clad corvette, the "Vasco de Gamo"; 6 other corvettes; 18 gun-boats; 7 other steamers; and 6 torpedo-vessels.

Colonies.—In Macao, Portuguese sovereignty over which has recently been acknowledged by China in return for the co-operation of the

colonial authorities in suppressing opium-smuggling, great excitement was produced in September by the conduct of the Governor in dissolving the Senado or municipal council, owing to a difference of opinion between himself and its members. This body has existed for three hundred years, managing all the internal affairs of the colony, regulating trade, administering finances, and performing all duties of an administration except the control of troops. The Portuguese Government notified to the powers in 1888 the abandonment of the protectorate that it assumed over the Kingdom of Dahomey in August, 1885, being unwilling to bear the international responsibility for the actions of the Sultan. On the African coast farther south the Government has made extraordinary efforts to extend and consolidate its authority. The Governor of the Congo territory, in February, 1888, took peaceable possession of Ambrizette. New export duties for the Portuguese Congo, copied from those of the Congo Free State, went into force on March 1. The Portuguese occupation interfered in no way with trade, though the natives complained of having to pay duties to the native chief in addition to the new import duties imposed by the Portuguese authorities. Kinsembo was also occupied, but not without a struggle. The Portuguese military posts have been advanced into the interior, and Portuguese emissaries and traders have penetrated toward Kassai river and into the Congo Free State. In East Africa the colonial authorities have been active in extending Portuguese influence, though with less success. The cause of this unusual activity is the desire to preserve the regions where Portugal has her colonies and the belt extending through the interior from shore to shore, as a field for colonization and a commercial outlet for Portuguese manufactures. Portugal obtained from France, in her treaty of May 12, 1886, an acknowledgement that the territories between Angola and Mozambique were within her sphere of influence. Germany, in the treaty signed on December 30 of the same year, likewise promised not to encroach upon this territory. Great Britain, however, made no such agreement, but in 1888, in order more especially to hem in the Transvaal Boers, announced that the country of Lobengula and all the territory west of the Portuguese possessions and south of the Zambesi river, would henceforth be regarded as within the sphere of British influence. This includes Mashonaland, where the most important of the gold-fields are situated. An English company having obtained from Lobengula the exclusive right to mine for gold in Mashonaland, the Portuguese consul at Cape Town, in the name of his Government, repudiated the pretended rights of Lobengula to Mashonaland and the adjacent territories, over which Portugal claims sovereignty. A project for a transcontinental railroad has been adopted, and the first section of two hundred miles from the west coast has been begun. In order to

link the two colonies together, a line of steamers between Loango and Mozambique has been established, while the Portuguese subsidy has been withdrawn from the British line running between Mozambique and Bombay, which is the chief outlet for the products of the Portuguese possessions on the east coast. Portugal has undertaken to preserve peace and order on the shores of Lake Nyassa, where English missionaries and traders are established, having abolished the transit-dues for goods passing to Lake Nyassa in 1884, thus making a financial sacrifice in order to obviate any claim of Great Britain to interfere in that region.

PRESBYTERIANS. I. Presbyterian Church in the United States of America.—The following is the General Summary of the statistics of this Church, as they are published with the "Journal" of the General Assembly for 1888. The statistics for 1874, 1880, and 1887 are also given for comparison, and to show the growth of the Church during the past fifteen years:

ITEMS.	1874.	1880.	1887.	1888.
Synods.....	35	38	28	28
Presbyteries....	174	177	201	202

* To be known hereafter as Sunday-school work.
 † Includes part of Centenary fund.

The receipts of the Board of Home Missions for the year had been \$783,627, the largest ever returned, and also the largest, it was claimed, that had ever been contributed to this cause in a single year by any evangelical denomination in America. Fourteen hundred and eighty-six missionaries had been employed, in all but six States, in the Union; under whose labors 170 churches had been organized, 371 Sabbath-schools established, 119 houses of worship built, and 10,182 church-members added on profession of faith. The Woman's Board had maintained 29 schools, with 115 teachers, among the Indians; 24 schools, with 48 teach-

ers, among the Mexicans; and 38 schools, with 81 teachers, among the Mormon population. Its receipts of money for the year had been \$226,092. The committee of the Centenary fund reported that the receipts from less than one half of the churches of the denomination to May 19 had been \$419,000 in cash and \$140,000 in pledges. The Board of Aid for Colleges and Academies had received \$40,000. The General Assembly invited contributions for it for the coming year of \$100,000. The Committee on Theological Seminaries, of which there are eight, returned the aggregate value of the property of those institutions as \$7,216,000, and the whole number of students attending them as 607. The contributions of the churches to the funds of the Board of Publication had amounted to \$73,000, giving an increase from the previous year more than sufficient to pay off its debt. Twenty-three new volumes and eleven tracts had been added to its book-list; 10,000 books and 3,000,000 lesson helps and papers had been granted; and 73 mission schools had been organized during the year. The debt of the Board of Education had been reduced from \$15,000 to \$3,800, and the number of students for the ministry had increased. The trustees of the General Assembly returned the whole amount of its trust funds on the 31st of March, 1888, at \$467,390. The treasurer of the General Assembly had received \$62,986, and had expended \$44,324. The Board of Missions for Freedmen reported that its receipts for the year had been \$131,653 or \$35,132 more than for the previous year. It had employed 26 white and 81 colored missionaries, 48 white and 106 colored teachers, and 10 catechists, and sustained 235 churches, with 16,661 members, and 226 Sabbath-schools, with 14,555 members. Thirteen churches had been organized, and 1,210 members added on examination.

The total receipts of the Board of Foreign Missions had been \$901,181, or \$117,023 more than those of the previous year.

The one hundredth General Assembly met in Philadelphia, May 17. The Rev. Charles L. Thompson, D. D., was chosen moderator. The Committee of Conference with the Southern Presbyterian Church presented its report, relating the correspondence and negotiations that had passed between it and the similar committee of the Southern Church in relation to organic union. The committees had held a conference in Louisville, Ky., in December, 1887. The Southern committee indicated four points on which it desired to know the mind of the Northern Church. These points were: 1. The spirituality of the Church, referring especially to its attitude in regard to "political deliverances"—concerning which the declaration of the previous Northern General Assembly would be satisfactory if the Southern Church was assured its interpretation of it was correct. 2. The relation of the Church in the Southern States to the colored people—a matter concern-

ing which the alternative plans were suggested of organizing these people into churches of an entirely separate existence, or into separate churches, presbyteries, and synods, with representation in the General Assembly, and in the expectation that an independent organization would ultimately be effected. 3. The powers and responsibilities of the various boards of the Northern Church and to what extent they are under the control of the General Assembly. 4. "Touching those portions of the Confession of Faith which more specifically involve the great system of truth known as the Calvinistic, and particularly whether there is traceable any distinct tincture of such Pelagian and semi-Pelagian heresies as were matters of controversy in 1837." The Northern committee replied to these questions, February 2, that the reunited General Assembly has no other doctrine on the subject of political deliverances than is declared in its expression of May, 1887 (see "Annual Cyclopædia" for 1887), which is in the language of the Confession of Faith and is equally binding on both Churches. Having asserted that the Northern Church is not in favor of setting off its colored members into a separate organization, the committee expressed the belief that the religious work to be done among this people could only be fully done by the Church reunited as one; that a careful supervision of their churches and a well-defined system of moral and scriptural education of them was demanded; that while their evangelization should be continued under the direction of the General Assembly, the General Assembly had recognized that it was best accomplished by the education of colored ministers and the organization of churches composed of colored members and of those connected with this work, and had organized such churches with presbyteries and synods, with representation in the General Assembly. The committee added, on this point:

We are of the opinion that our Assembly will agree to a basis of organic union, by which the present boundaries and constituencies of presbyteries and synods in the South shall remain *in statu quo*, to be changed only with the consent of the parties interested; and that all the new churches and all new presbyteries hereafter established, shall be organized by and received into connection with presbyteries and synods respectively, as the interested parties may mutually agree.

The ecclesiastical boards were described to be agents of the General Assembly and subject to the government and control of the Church. On the fourth point, the committee declared that no heresy existed in the Northern Church and no doctrinal question was agitating it. In conclusion, while it was hoped that such substantial unity of belief was disclosed as would encourage the continuance of the committees with powers for a full conference on organic union, and such union was favored by the Northern Church, it would not be desirable unless it could be consummated with mutual confidence in the doctrinal soundness of both parties.

The Assembly, while declaring that it would be premature and improper to consider the report as furnishing a definite and formal basis of union, inasmuch as that subject was not properly before it, approved of the general principles enunciated in the replies of the committee to the inquiries of the Southern brethren, as furnishing substantially a reflection of its views touching the subjects to which they relate; expressed the conviction that the most effective form of co-operation could be secured only by an organic union of the two Churches; and declared itself ready to enter upon negotiations looking to that result whenever in the judgment of the Southern Assembly it might be deemed desirable. The committee was continued and enlarged, with instructions to confer with a committee of the Southern General Assembly, if one should be appointed, in devising such methods for conducting the common work as should "open the door to the fullest and heartiest co-operation." A committee was appointed to visit the Presbytery of Rio Janeiro and be present at the organization of the Synod of Brazil. A conference was held by his desire with President Cleveland, by a committee of the Assembly, on Indian affairs, particularly with reference to the modification of certain orders affecting missionary work among the tribes. A committee was appointed to act with committees of other evangelical church organizations in the United States as a National Sabbath Committee. A committee was appointed to inquire into the duties of the Presbyterian Church toward the immigrant population, with special reference to the Germans, Scandinavians, Bohemians, and French. Provision was made for the revision of the proof texts of the Church standards, and the suggestion of such changes as may be found desirable; also for drawing up a plan for the systematic instruction and training of young persons and others, with a view to their admission to the Lord's table. A resolution was passed deprecating the prevalence of improper advertisements in religious newspapers, and particularly disapproving all such advertising "as involves the essential principle of a lottery": as promises or encourages investors to expect improbable returns from capital invested; and "all those advertisements of patent medicines which are prejudicial to the refinement, modesty, and purity of home life." In view of "the unsettled condition of public opinion" regarding the Revised Version of the Scriptures, it was decided to be inexpedient to authorize its use in public worship. A plan was ordered prepared for bringing together unemployed ministers and vacant churches. The Assembly, "while disclaiming all connection with or relation to political action or measures," declared itself "unequivocally in favor of the entire suppression of the traffic in intoxicating liquors as a beverage"; and cautioned the sessions against admitting as members persons who are engaged in it. It also, regarding the introduc-

tion of the traffic by civilized nations into heathen lands with "shame, horror, and apprehension," declared itself ready to unite with other Churches in an effort to induce Christian governments to abolish and prevent it. A resolution recognizing "Decoration Day," and the value of the services of Union soldiers, was supplemented by a declaration that it was not intended to contradict the great principles of the spirituality of the Church as laid down in the Confession of Faith. A case of discipline came before the Assembly in which the question of the legality of responsive services in the Presbyterian Church was involved. The action of the Assembly, without deciding the issue, virtually reiterated the decision of the Assembly of 1876, which declined to make responsive readings a subject of discipline.

II. Presbyterian Church in the United States (Southern).—The following is a summary of the statistics of this Church as they were reported to the General Assembly in May:

Number of synods.....	13
Number of presbyteries.....	63
Number of candidates.....	285
Number of licentiates.....	55
Number of ministers.....	1,129
Number of churches.....	2,280
Number of churches organized.....	47
Number of ruling elders.....	7,110
Number of deacons.....	5,228
Number added on examination.....	10,173
Number of communicants.....	156,249
Number of adults baptized.....	3,482
Number of infants baptized.....	5,155
Number of baptized non-communicants.....	33,444
Number of teachers in Sunday-schools and Bible-classes.....	12,201
Number of pupils in Sunday-schools and Bible-classes.....	101,700

Amount of contributions:

For sustentation.....	\$47,291
For evangelistic fund.....	48,388
For invalid fund.....	12,687
For foreign missions.....	72,389
For education.....	35,226
For publication.....	9,092
For Tuscaloosa Institute.....	6,028
Presbyterial.....	13,581
For pastors' salaries.....	625,321
Congregational.....	705,658
Miscellaneous.....	97,826

The Executive Committee of Education had received during the year \$15,879, and had aided 150 candidates in the total sum of \$13,887.

The Committee of Publication had received from churches, Sabbath-schools, and individuals, \$8,119; and from royalties, \$2,824. The whole amount of its grants had been \$3,494. The business of the Book Depository had increased by nearly 20 per cent. The balance-sheet of the Publishing House showed an excess of arrears amounting to \$73,243. All of the 4-per-cent. bonds issued by the concern had been redeemed except four representing \$300. The Tuscaloosa Institute for colored ministers had been attended by 26 students.

The receipts of the Committee of Home Missions had been \$64,455; of which \$28,406 were in the Department of Sustentation, \$14,769 for the Evangelistic fund, \$15,117 for the Invalid fund, and \$6,105 for the Colored Evangelistic

fund. From the Sustentation fund \$2,595 had been appropriated in aid of the erection of 20 church-buildings, and \$19,509 in aid of 122 ministers supplying 500 feeble churches; from the Evangelistic fund, \$12,387 in aid of the support of 61 evangelists; from the Invalid fund, \$11,957 in aid of 109 ministers and widows and children of ministers; and from the Colored Evangelistic fund, \$3,446 for Tuscaloosa Institute, and \$2,689 in the support of 22 ministers. Loans of \$650 had been made in aid of the erection of 6 church-buildings.

The Committee of Foreign Missions had received \$88,040, or \$3,967 more than in any previous year. The missions—in Brazil, China, Mexico, Greece, Italy, Japan, and among the American Indians—returned 66 missionaries, men and women; 38 stations; 89 out-stations; 897 communicants, of whom 423 had been added during the year; 15 ministers, ordained or licensed; 29 other native helpers; 1,238 pupils in Sunday-schools; 891 pupils in day schools; and \$5,087 of contributions by the native churches. Nine missionaries had been added to the number in the field, and 4 new stations opened.

The General Assembly met in Baltimore, May 17. The Rev. J. J. Bullock, D. D., was chosen moderator. The "Committee of Inquiry," which had been appointed to confer with a committee of the Northern General Assembly with reference to organic union, made its report relating to the conferences and correspondence which it had held with the committee of the Northern General Assembly.

On consideration of this report, the Assembly declared itself unable to discover that the obstacles to organic union heretofore existing between the two General Assemblies had been to any considerable extent removed; therefore, in view of all the interests involved, it continued established in the conviction that it would be best for it to remain distinct. In reply to the communications of the Northern General Assembly, it declared a desire to forget as far as possible all past dissensions and to cultivate the most friendly relations. A committee was appointed to confer with a committee of the Northern General Assembly "in reference to all such modes of fraternal co-operation in Christian work, both at home and abroad, as may be considered practicable and edifying," and report to the next General Assembly. The case of the Rev. James Woodrow, D. D., against the Synod of Georgia, came up for adjudication. This case has been, in one shape or another, before the Presbyterian courts for several years. It originated in the removal of Dr. Woodrow from his professorship in Columbia Theological Seminary for holding and teaching the doctrine of evolution. In 1886 charges were presented against him before the Presbytery of Augusta for holding and teaching views contrary to the word of God as interpreted in the standards of the Church in respect to the probable animal origin of Adam's body. The

Presbytery found a verdict of "not guilty." A complaint was made to the Synod of Georgia against this verdict as contrary to the law and evidence. The synod sustained the complaint and annulled the verdict. Dr. Woodrow complained to the General Assembly against this action, and it decided not to sustain the complaint. The minute formally expressing the action of the Assembly declared that:

It is the judgment of this General Assembly that Adam's body was directly fashioned by Almighty God of the dust of the ground, without any natural animal parentage of any kind. The wisdom of God prompted him to reveal the fact while the inscrutable words of his action therein he has not revealed.

Therefore the Church does not propose to teach, handle, or conclude any question of science which belongs to God's kingdom of nature; she must by her divine constitution see that these questions are not thrust upon her to break the silence of Scripture and supplement it by any scientific hypothesis concerning the mode of God's being or acts in creation which are inscrutable to us. It is, therefore, ordered that this complaint in this case be not sustained and the judgment of the Synod of Georgia be, and the same is hereby, in all things, affirmed.

The Rev. T. C. Whaling, of the Synod of South Carolina, then offered the following protest, which is to go on record alongside the minute presented by Dr. Smoot:

We, whose names are undersigned, desire to enter our solemn protest against the decision of this General Assembly refusing to sustain the complaint of the Rev. James Woodrow, D. D., against the Synod of Georgia, for the following reasons:

1. The second specification in the indictment against the Rev. James Woodrow, D. D., is expressly excluded by the constitution of our Church, inasmuch as "nothing ought to be considered by any court as an offense, or admitted as a matter of accusation, which can not be proved to be such from Scripture as interpreted in the standards."

2. In the view of your protestants, the Holy Bible does not reveal the form of the matter out of which, the time in which, or the mode by which God created the body of Adam, and therefore the hypothesis of evolution as believed by Dr. Woodrow can not be regarded as in conflict with teachings of the Sacred Scriptures.

3. The Westminster Standards simply reproduce, without interpretation, the statements of the Scriptures in reference to the creation of Adam's body, and as the views of the complainant are not in conflict with the statements of the Scripture, so neither can they be with the teachings of the standards.

4. The action of the Assembly in refusing to sustain this complaint is equivalent to pronouncing as certainly false the theory of evolution as applied by Dr. Woodrow to Adam's body, which is a purely scientific question entirely foreign to the legitimate sphere of ecclesiastical action. Your protestants, therefore, are unwilling that this General Assembly should express any opinion whatever respecting the hypothesis of evolution or any other scientific question.

A committee was appointed to prepare and report to the next General Assembly on the intemperate use of intoxicating drinks, for the instruction of the churches respecting their duty in suppressing the evil, with the reservation by the Assembly that it was to decide no political question connected with the subject. Provision was made for the representation of the General Assembly on the National Sabbath Committee proposed by the General Conference of the Methodist Episcopal Church.

Centennial of the General Assembly.—The centennial anniversary of the organization of the General Assembly in America was celebrated in Philadelphia during the session of the Northern General Assembly by special popular meetings in behalf of the several benevolent enterprises of the Church and by a series of meetings throughout the day of May 24, in which both the Northern and Southern General Assemblies participated. The Southern General Assembly had been invited by the Northern body to join with it in the celebration, and was met by it May 23 at Overbrook, on the Baltimore Railroad, where both bodies were addressed by President Cleveland. The meetings of May 24 were held in the morning, afternoon, and evening at the Academy of Music and Horticultural Hall, and were presided over severally by the Moderator of the Southern General Assembly, Justice William Strong, of the United States Supreme Court, Gov. A. M. Scales, of North Carolina, the Moderator of the Northern General Assembly, the Hon. J. L. Marye, of Fredericksburg, Va., and Gov. J. A. Beaver, of Pennsylvania. Addresses were delivered by the Rev. T. L. Cuyler, D. D., on the "History of Presbyterianism"; Rev. T. D. Witherspoon, D. D., on "The Work of Presbyterianism for the Future"; Hon. J. R. Tucker, on "The Adaptation of Presbyterianism to the Masses"; Rev. S. J. McPherson, D. D., on "Presbyterianism and Education"; Hon. J. S. Cothran, M. C., on "Calvinism and Human Progress"; Hon. S. J. McMillan, on "Presbyterianism and Republican Government"; Rev. G. P. Hays, D. D., LL. D., on "Home Missions"; Rev. M. H. Houston, D. D., on "Foreign Missions"; Rev. C. J. Thompson, D. D., on "Historic Presbyterian Characters"; Rev. W. C. P. Breckinridge, on "Calvinism"; Rev. Howard Crosby, D. D., LL. D., on "Presbyterianism and Biblical Scholarship"; Rev. John Hall, D. D., and Mr. M. K. Jessup, on "The Necessity of City Evangelization"; Rev. M. O. Hodge, D. D., on "The Methods of City Evangelization"; Rev. Samuel J. Nicolls, D. D., on "Preaching to the Masses"; Hon. B. H. Young, on "Lay Effort among the Masses"; Rev. W. W. Moore, D. D., on "Home Missions"; Rev. C. S. Pomeroy, D. D., on "The Work of the Presbyterian Church in Foreign Fields"; and the Rev. W. P. Breed, D. D., closing the proceedings.

Committees on Organic Union.—The committees appointed by the Northern and Southern General Assemblies of 1888 to consider the question of fraternal co operation in Christian work met in New York city, December 28, and, after several conferences, they adjourned to meet again in Atlanta, Ga., April 24, 1889.

Presbyterian Synod of Brazil.—A Synod of Brazil was organized at a meeting of the three missionary presbyteries of the Presbyterian Church in the United States, which was held in Rio Janeiro for that purpose, in the last

week in August and the first week in September. The Rev. Dr. Alexander L. Blackford, the oldest missionary, was chosen moderator, and a native minister was made stated clerk. The Westminster Confession and Catechism and the Book of Order of the Southern Presbyterian Church, with slight modifications, were adopted as standards. Fraternal delegates from the Northern Presbyterian Church were present, and greetings were received from the Council of the Presbyterian Alliance in London and the General Synod of the Reformed Church in America. The subjects of revising the Portuguese translation of the Scriptures and of forming an alliance with all other English-speaking missionary churches were referred to special committees. The new synod has 50 churches, 19 missionaries, 12 native ministers, 22 church schools, 2 high-schools, 13 women teachers and missionaries, 30 native assistants, and 3,000 communicants. A society of national missions already existed in two of the presbyteries. The next meeting of the Synod was appointed to be held in 1891.

United Christian Church of Japan.—Negotiations have been conducted for the constitution of the "United Christian Church of Japan," by the union of the Presbyterian, Reformed, and Congregational Mission Churches in that country. The doctrinal basis of this Church will consist of the Apostles' Creed and the Nicene Creed, with which are associated the special Confessions of the Presbyterian, Reformed, and Congregational Churches, all being held subordinate to the Bible. In the system of government the Presbyterian elder and the Congregational committee-man are equally recognized, to be ordained for a definite time as the congregation may designate; the elders recommend candidates for admission, who are to be received or dismissed by a vote of the Church; and specified powers are delegated to bodies corresponding with the presbytery and assembly or conference and national council. The new Church organization will include about 11,000 members.

III. United Presbyterian Church in North America.—The statistics of this Church, presented to the General Assembly in May, show that it includes 10 synods, 61 presbyteries, 753 ministers, 3,580 elders, and 98,992 members. The contributions of Sunday-school and missionary societies for the year amounted to \$1,019,937.

The General Assembly met in Cedar Rapids, Iowa, May 23. The Rev. Dr. W. T. Maloney was chosen moderator. The Committee on Union with the Reformed Presbyterian Church reported that the negotiations on that subject had been without result, and that union as yet appeared impracticable. The point of difference on which the negotiations broke was the toleration of participation by members of the Church in political action under a government which does not recognize the headship of Christ—to which the Reformed Presbyterian Church is opposed, while the United Presby-

terian Church leaves it to the individual member to determine conscientiously what his action shall be. A proposition to instruct presbyteries to refuse to license candidates for the ministry who are addicted to the use of tobacco was rejected, on the ground that the Assembly has no right to make such a rule.

IV. Reformed Presbyterian Church (Synod).—This body includes eleven presbyteries, with 121 congregations, 116 ministers, 503 elders, 325 deacons, 10,970 communicants, and 12,574 members of Sabbath-schools. The number of baptisms returned during the year was 462. The contributions were: For foreign missions, \$18,247; for home missions, \$3,767; for the Southern mission, \$3,632; for the Chinese mission, \$1,493; for the Theological Seminary, \$3,222; for education, \$5,177; for sustentation, \$2,156; for church erection, \$21,648; for pastors' salaries, \$78,190; for national reform, \$4,650.

The Central Board of Missions, besides "domestic missions" in the States and Territories, supports a school at Selma, Ala., and a mission among the Chinese of the Pacific coast, and contemplates a mission among the Indians. The Board of Foreign Missions returns at Latakiah and Tarsus, in Syria, 11 missionaries, 57 teachers and other agents, 209 native communicants, 1,165 pupils in schools, 23 baptisms during the year, and \$465 of contributions.

The Synod met at Allegheny City, Pa., May 29. The Rev. J. W. Sproull was chosen moderator. The Committee on Union with the United Presbyterian Church reported as the result of its conferences with the committee of that Church that the difference between the bodies in their doctrines and practices on the subject of civil government and their attitude toward the Government of the United States had proved to be irreconcilable, although the two bodies were in full accord on other fundamental principles. The Synod, approving the course of its committee, reaffirmed its conviction that—

The Constitution of the United States is a virtual agreement or compact to administer the Government without reference to Christ or the Christian religion, and that incorporation with the Government on the basis of this Constitution is therefore an act of disloyalty to Christ. With this conviction in our hearts, we can not do otherwise than maintain to the end the discipline we have maintained in the past.

While expressing itself desirous for the restoration of the unity of the Church, it declared that—

Partial unions on the basis of compromise, for the purpose simply of forming a larger sect, involves for us the abandonment of our testimony and unfaithfulness to the special work which the Lord, as we believe, has called us to do.

The Synod resolved, on the subject of jury-service that it recognized—

But one supreme law in civil and in ecclesiastical courts, and this is God's revealed Word. If any of our members be summoned to serve on juries, it shall be the duty of such member to state in open court his

determination to make God's law, as we understand it, the basis of all decisions involving moral considerations, and that he shall take the juror's oath—such oath being otherwise unobjectionable—only on this condition being definitely accepted by the court. In case any member shall be no censure visited on a member sitting on a jury, since the court, in accepting him on this condition, has, so far as he is concerned, accepted God's law as the basis of judicial action. In case any member acts as a juror, he may be required, by the session of the congregation to which he belongs, to furnish proof that he has complied with the conditions laid down above.

A special service was held in commemoration of the second century after the revolution of 1688, when addresses were made upon the principles for which the Covenanters contended, the character and spirit and the influence of the Covenanters and their struggles on American history.

V. Cumberland Presbyterian Church.—The following is a summary of the statistical reports that were made to the General Assembly in May: Number of ministers, 1,584; of licentiates, 246; of candidates, 262; of congregations, 2,648; of communicants, 151,929; of members of Sunday-schools, 85,890. These statistics do not include the Colored Cumberland Presbyterian Church, which numbers about 15,000 communicants.

The Publishing House returned a profit of \$8,272 on the business of the year. It had freed itself from debt, and had declared a dividend of \$5,000 in favor of the Board of Ministerial Relief. The latter board had received \$5,826, and had relieved 59 families of ministers. The Board of Missions had received \$13,071 for home, and \$9,418 for foreign missions; while the Woman's Board of Foreign Missions returned an income of \$11,212.

The fifty-eighth General Assembly met at Waco, Tex., May 17. The Rev. W. H. Black was chosen moderator. The Board of Missions was directed to take immediate steps toward establishing a theological training-school in Japan. Satisfaction was expressed at the movement toward organic union among the mission forces and native Christians of different denominations of Christians in that country, and a willingness that the Cumberland Presbyterian Missions should enter the "United Christian Church" upon the basis of the exceptions to the Westminster Confession that are set forth in the Declaratory Act of the United Presbyterian Church of Scotland.

VI. Presbyterian Church in Canada.—This Church comprises 5 synods, 43 presbyteries, 783 pastoral charges, with 1,831 churches and stations supplied, 145,640 communicants, 78,649 families and 1,326 single persons connected with the Church, and 12,976 teachers and 112,940 pupils in Sabbath-schools and Bible-classes. The number of members admitted during the year on profession of faith was 12,471; number of baptisms, 10,144 of infants and 1,148 of adults. Amount of contributions to the schemes of the Church, \$22,490; amount raised for all purposes, \$1,730,252. The

Church and Manse Building scheme, which was started to raise a fund of \$100,000 for the purposes implied in its name, had received in 1888, \$115,499. Under it, 109 buildings, valued at \$127,700, had been aided to the extent of \$48,897. A large increase was reported in the income for Foreign Missions. One hundred and sixty-nine missionaries and assistants were laboring in Central India, Formosa, Trinidad, Demarara, the New Hebrides, and among the Indians of the Northwest. A new mission was to be begun in the province of Honan, China.

The General Assembly met at Halifax, N. S., June 13. The Rev. W. T. McMullen was chosen moderator. An *ad-interim* act, passed at the previous General Assembly, on marriage with a deceased wife's sister was re-enacted, and the proposal to alter that part of the Confession of Faith bearing on the subject, was sent down to the presbyteries.

VII. Church of Scotland.—The report to the General Assembly of the Committee on Presbyterian Superintendence gave the total number of communicants in 1887 as 579,002, showing an increase of 7,973. Since 1873, communicants had been added to the roll of the Church at the rate of 1·8 per cent., while the annual increase of the population was only 1·1 per cent.

The income of the Colonial Committee had risen from £4,176 in 1886 to £4,859 in 1887, the increase being solely due to legacies. The income of the Jewish Mission Committee had been £6,400, and the expenditure £5,045, while the adverse balance had been reduced to £1,323. There were 1,792 children in the schools, 950 of whom were Jewish. Four baptisms had taken place. The contributions to the Aged and Infirm Ministers' fund had been £2,737, 836 parishes contributing. The capital now stood at £24,182, showing an increase of £2,213. The sum of £1,362 had been dispensed on nine grants.

The total revenue of the Committee on Home Missions had been £10,395 or £1,855 more than the revenue of the previous year. Seventy-two mission churches were returned, with 15,124 worshipers, of whom 10,263 were communicants. The total of collections and contributions reported for 1887 to the Committee on Statistics of Christian Liberality amounted to £385,506 as compared with £407,212 in 1886.

The receipts of the Committee on Foreign Missions had been £24,481, while a deficit of nearly £1,500 had been incurred. Toward the special fund of £10,000, £4,700 had been received. Fifteen mission stations were returned in Africa and India, with, in Africa, 30 European missionaries and 110 native agents, and 2,932 native Christians, 733 of whom were communicants; while in India there were about 3,000 baptized Christians connected with the mission, and 827 had been baptized during the year.

The General Assembly met in Edinburgh,

May 24. The Rev. Dr. W. H. Gray was chosen moderator. A question arose concerning the commissioners from Edinburgh, whose town council had refused by a majority to send representatives to the Assembly, leaving action on the subject to be taken by the minority. A legal opinion having been read, to the effect that it was the duty of the town council to send representatives to the Assembly, the commissioners were received. A hearing was given in the case of an appeal concerning a petition which had been refused by the Committee on Bills for the removal of certain "images" from St. Giles's Cathedral. The petitioners complained that the laws of the Church of Scotland were being set at defiance, and that "the superstitions of Rome" were being brought in again. If they were true to the historic teaching of their Church, they would see that the "images" were swept away. It was argued against the petition that the time had passed for occupying attention with such matters; and that hardly any persons now seriously believed that there was anything superstitious or idolatrous in the erection and maintenance of such images. The Assembly refused to sustain the appeal. An overture declaring that any person found guilty of carrying on simoniacal practices to procure a benefice or office should be deprived of his license if a probationer, and deposed if a minister, having been approved by a majority of the presbyteries, was converted into a law of the Church. A resolution was passed approving the leading features of the "Universities Scotland Bill" which was then pending in Parliament. The report of the Committee on Church Interests represented that the course of events had afforded proof of the artificial character of the agitation which had been "created from time to time" against the connection between Church and State in Scotland, and intimated that the agitation might have had no existence except where it had been created or stimulated for sectarian purposes. There was no evidence that the majority of the people of Scotland were opposed to the Established Church. With the report was adopted a renewed expression of the desire of the Assembly to maintain toward the other Churches of Scotland an attitude of earnest watchfulness for any opportunity for kindly co-operation and intercourse. The report of the Committee on the Subscription of Office-Bearers of the Church suggested that it was desirable that in the case of ministers and licentiates, the Church should revert to the formula contained in the act of Parliament of 1693, entitled "An act for settling the quiet and peace of the Church"; and in the case of elders to an act of 1690 requiring simply approbation of the Confession of Faith. The report was adopted as an overture to be sent down to the presbyteries. Sunday, the 4th, and Monday, the 5th, of November, were appointed as days for celebrating throughout the Church the bicentenary of the revolution of 1688. The employment of dea-

conesses and the opening of city churches on week days were approved. Satisfaction was expressed at the results of the bill for the early closing of liquor-saloons in Scotland; and the committee of the Assembly was authorized to approach the Government with reference to the drink-traffic among native races.

VIII. Free Church of Scotland.—The total contributions of the year for the Sustentation fund of this Church had been £168,657, showing a decrease from the previous year of £3,476. In the report on colonial missions it was claimed that some of the most prosperous settlements in the colonies had originated through the efforts of these missions. A favorable report was made of the condition of the Jewish missions. The financial statement of the Foreign Mission Committee showed a charge amounting to £51,908. The discharge showed a balance in favor of the scheme of £8,674. The increase in contributions from associations had been higher than ever before in the history of the Church. It was reported that the desire had spread among the Hindoo population at Madras, India, for the foundation of a national Hindoo college, in which religion should be taught as an inseparable portion of the curriculum.

The General Assembly met at Inverness, May 24. The Rev. Dr. Gustavus Aird, was chosen moderator. The report on the state of religion and morals, represented that while peculiar hardships affected some of the Highland ministers, in general adequate organization existed among the churches. The belief was expressed that intemperance was on the decrease; but in many places tourists were doing much to lower the tone of Sabbath observance. A congratulatory address was voted to the Presbyterian Churches of the United States on the occasion of their friendly meeting in Philadelphia, and of the centenary of Presbyterianism in the United States. An active debate on the question of disestablishment terminated in the adoption of a resolution declaring that the maintenance of a Church Establishment in Scotland was unjust, inexpedient, and a hindrance to the welfare of the Presbyterian churches of the land. A resolution was adopted recognizing the grievances of the crofters, and asking for suitable legislation for the relief of their distress. An overture, concerning federal relations with the Presbyterian Church in England, having been approved by a majority of the presbyteries, was passed into a standing order of the Church. A petition to Parliament was approved against the bill for legalizing marriage with a deceased wife's sister, otherwise known as the marriage affinity bill. A committee was directed to consider whether the benefits of the Widow's fund may not be extended to the widows and orphans of missionaries.

IX. United Presbyterian Church (Scotland).—The statistical reports of this Church, made to the Synod in May, gave the following results:

Number of congregations, 565; of members, 182,170, showing an increase during the year of 107; number of baptisms, 9,374; of Sabbath-schools, 887, with 12,075 teachers and 97,475 pupils. The total congregational income amounted to £320,698.

The income for foreign-mission purposes had been £56,534, the largest amount ever received in one year. The eight mission fields returned 60 ordained European missionaries, with 56 other trained agents, 95 native evangelists, 301 native teachers, and 100 other native helpers. The 87 congregations and 155 out-stations had an aggregate membership of 13,497, with 2,074 candidates for admission. The Sabbath-schools, exclusive of those in China and Japan, returned 11,418 pupils, and the day-schools 13,676 pupils. The Board of Missions was empowered by the Synod to discontinue the Spanish mission, and to take steps to form, along with other Protestant agencies in Spain, a native Spanish Protestant Church.

X. Presbyterian Church in England.—The entire income of this Church for the year was returned at £219,585. The Home Mission reported that two congregations had been added. The Jewish Mission reported concerning its labors in London. The receipts for foreign missions had been £15,800. The Synod had in China 15 European ordained missionaries, 6 medical missionaries, 13 women missionaries, supported by the Women's Association, and a number of native evangelists and pastors. Some of the native churches were self-supporting, and were themselves undertaking mission work. The income of the Women's Missionary Association had been £2,336, showing an increase during the year of £600. Additions having been made to the capital of the Aged and Infirm Ministers fund, the minimum annuity had been raised from £45 to £50. The minimum ministerial dividend had been retained at £200 a year.

The Synod met in Newcastle-on-Tyne, April 30. The Rev. Dr. Oswald Dykes was chosen moderator. The Committee on the Church's Relations to the Confession of Faith, which had been engaged for three years in the revision of the creed, reported; the declaratory statement, setting forth the sense in which the Church received the Westminster Catechism, was held in abeyance, as legal difficulties might arise in view of certain clauses in the trust-deeds, were it adopted. The new articles were to be regarded in the light of a summary of the Confession in which the language of that document was simplified, while the Confession itself would remain the standard by which they held their respective properties. To the new creed as reported was appended a list of illustrative passages in support of the various clauses, drawn from the Apostle's and Nicene Creeds, and various confessions of the Reformation period. The creed consists of twenty-three articles, of which the article on the creation declares:

We believe that Almighty God for his own holy and loving ends was pleased at the beginning to create the heaven and the earth, through the Son, the eternal Word, and through progressive stages to fashion and order this world, giving life to every creature, and to make man after his own image, that he might glorify and enjoy God, occupying and subduing the earth, and having dominion over the creatures, to the praise of his Maker's name.

That on the fall of man :

We believe and confess that our first father Adam, the representative head as well as common ancestor of mankind, transgressed the commandment of God through temptation of the devil, by which transgression he fell, and all mankind in him, from his original state of innocence and communion with God; and so all men have come under just condemnation, are subject to the penalty of death, and inherit a sinful nature, degenerate in every part, estranged from God, and prone to evil; out of which condition we acknowledge that no man is able by any means to deliver himself.

Concerning the salvation of men, the belief is avowed

In the Holy Spirit, the Lord and Giver of life, who worketh freely as he will, without whose gracious influence there is no salvation, and who is never withheld from any who truly ask for him; and

That every one who, through the quickening grace of the Holy Spirit, repents and believes the Gospel, confessing and forsaking his sins, and humbly relying upon Christ alone for salvation, is freely pardoned and accepted as righteous in the sight of God, solely on the ground of Christ's perfect obedience and atoning sacrifice.

The doctrine of election is also reiterated in the article :

We humbly own and believe that God the Father, before the foundation of the world, was pleased of his sovereign grace to choose a people unto himself in Christ, whom he gave to the Son that he might bring them unto glory; and to those who were thus chosen we believe that the Holy Spirit imparts spiritual life by a secret and wonderful operation of his power, using, as his ordinary means, where years of understanding have been reached, the truths of his Word in ways agreeable to the nature of man; so that, being born from above, they are the children of God, and his new creation in Christ Jesus.

Concerning the Holy Scriptures, it is declared :

We believe that it has pleased God, in addition to the manifestation of his glory in creation and providence, and especially in the spirit of man, to reveal his mind and will to man at successive periods and in various ways; and that this revelation has been, so far as needful, committed to writing by men inspired of the Holy Spirit, and is contained in the Scriptures of the Old and New Testaments, which are therefore to be devoutly studied by all; and we reverently acknowledge the Holy Spirit speaking in the Scriptures as the Supreme Judge in questions of faith and duty;

and concerning the final judgment :

We believe the Lord will judge the world in righteousness by Jesus Christ, before whom we must all appear, who shall separate the righteous from the wicked, make manifest the secrets of the heart, and render to every man according to the deeds which he hath done in the body, whether good or evil, when the wicked shall go away into eternal punishment, but the righteous into eternal life.

The document was accepted by the Synod, and sent down by it to the presbyteries for consideration.

The Committee on the Revision of the Westminster Directory of Worship reported progress, having completed the morning service and the evening service, and the service of the administration of baptism. The last will be in two parts, the first for the baptism of adults, of which no notice is taken in the Westminster Directory, and the second for the baptism of children. The committee adheres to the plan of a directory as against a prescribed liturgy.

XI. Presbyterian Church in Ireland.—The statistical reports of this Church, made to the General Assembly in June, give the number of congregations as 557; of families, 79,971; of communicants, 103,499; of stipend-payers, 67,965; and of Sabbath schools, 1,099, with 9,119 teachers and 103,607 pupils.

The General Assembly met at Belfast, in June. The Rev. R. J. Lynd was chosen moderator. The amount of capital invested in the various departments of the work of the Church was represented in the reports on the subject to be £893,640. The proceeds of the invested funds for the year had been £35,542. The donations and bequests had been for missions, £6,808; for the Orphan Society, £1,508; for the Sustentation fund, £767; making in all, £9,083. The annual income of the Church from all sources was therefore £205,106. The Sustentation fund had made substantial progress, the total increase being £768, and the dividend having increased by £1 to each minister. In the mission in India, the first two native pastors had been ordained over congregations of converts from heathenism. The report of the Jewish Mission showed progress in Syria. The report of the Committee in Correspondence with the Government showed that, while the claims of Presbyterians for civil appointments had in some measure been successful, they were still suffering from religious disabilities. Resolutions were adopted approving of the most decided legislation in behalf of temperance.

XII. Welsh Calvinistic Methodist Church.—The General Assembly of the Welsh Calvinistic Methodists met at Merthyr Tydvil, June 4. The Rev. Owen Thomas, D. D., served as moderator. The statistical reports showed that the number of members in Wales and England was 130,617, or 1,159 more than in the previous year, and the highest number ever reached by the denomination; the number of hearers was 281,073. The whole amount of collections was returned at £198,948. Eight foreign missionaries had gone out during the year from South Wales. There were 119 churches and preaching-stations in the mission on the Khassia Hills, India, with 4,401 members, 5,899 children in the Sunday-schools, and 6,499 in the day schools.

XIII. Presbyterian Alliance.—The fourth General Council of the Alliance of Reformed Churches holding the Presbyterian system, met in London, July 3. About three hundred

delegates were present, representing more than twenty-five countries and colonies in all the quarters of the earth. Statistical reports were presented showing that the family of churches represented in the definition of the Alliance represented 78 branches, having 1,392 presbyteries, 209 synods, 3,603,209 communicants; with 500 brethren at work in the missionary field, and more than 60,000 communicants gathered from among the heathen; that the aggregate contributions of free-will offerings in these churches amounted to \$30,000,000 a year; that the newly organized women's associations had been the means, during the past year, of contributing nearly \$500,000 to the cause of missions. A different chairman was chosen for each of the several sessions of the Council. The following topics were discussed during the meetings of the Council, which continued through nine days: "How to work the Presbyterian System—as directing the Eldership and the Deaconship in their Various Lines of Influence and Work, and as promoting Co-operation and fostering Activity, Harmony, and Spiritual Life in Congregations," by Drs. Andrew Thomson and J. B. Drury and Principals Rainy and Caven; "Some Elements of Congregational Prosperity," "Prayerfulness," "Self-sacrifice," and "Organized Christian Work," by Pastor Theodore Monod, E. R. Craven, D. D., A. T. Pierson, D. D., and Principal Cairns; "The Duties of the Church with Reference to Present Tendencies of a more Intellectual Kind, bearing on Faith and Life," the subject comprehending the "Originality of Christianity," "The Speculative Tendencies of the Age," "How Far is the Church responsible for Present Unbelief?" "Responsibility for Belief," and "Historical Research and Christian Faith," by Rev. E. de Pressense, D. D., Rev. Dr. Ellinwood, Rev. Marcus Dods, D. D., Pastor Monod, Rev. G. F. Moore, D. D., and Principal Edwards; "The Duty of the Church with Reference to Social and other Tendencies bearing on Faith and Life," including "The Pressure of Commercial Life," "Rich and Poor," "The Church in Relation to the Socialistic Drift of the Times," and "Christ's Method of reconciling Social Antagonisms," by Dr. Marshall Lang, Principal McVicar, Prof. W. G. Emslie, and Rev. Dr. Moses Hoge; "Co-operation in Foreign-Mission Work," after the discussion of which the Council approved of measures for the union of mission churches in heathen lands, such as is proposed in Japan; "Woman's Work," by Dr. Charteris, at whose suggestion a resolution was passed favoring organizations of women for Christian work; "Church Worship," "Aggressive Work in Cities," "Church Work on the European Continent and the Progress of the Colonial Churches," "The Desiderata of Presbyterian History," by Prof. Mitchell; "Commemoration of the Revolution of 1688," by Rev. Dr. Philip Schaff; "Sabbath-schools and the Church's Duty to the Young," by Rev. Dr. Horton, of California,

Prof. Ellis Edwards, Rev. Dr. John Hall, Rev. J. M. C. Holmes, D. D., and Rev. John McNeil. A resolution was adopted urging international action to repress the liquor-traffic in Western Africa, and to prevent the sale of fire-arms to uncivilized peoples. The next meeting of the Council was appointed to be held in Toronto, Ont., in 1892.

PRINCE EDWARD ISLAND, PROVINCE OF. The estimated population in 1888 was 120,000. The Lieutenant-Governor is Andrew A. Macdonald; Executive Council, W. W. Sullivan, Premier and Attorney-General; D. Ferguson, Provincial Secretary, Treasurer, and Commissioner of Public Lands; G. W. W. Bentley, Commissioners of Public Works; John Lefurgey, Neil McLeod, Samuel Prowse, I. O. Arsenault, Archibald J. Macdonald, and James Nicholson. Thomas W. Dodd is President of the Legislative Council; John A. Macdonald, Speaker of the House of Assembly; Edward Palmer, Chief-Justice of the Supreme Court; I. H. Peters and Joseph Hensley, Assistant Judges.

Finances.—In Prince Edward Island the Provincial Government defrays the cost of education, the maintenance of public works, the expense of local legislation, and the administration of justice. The revenue in 1887 was \$241,637.26; the expenditure, \$287,700.17. On July 1, 1887, \$20,000 was added to the annual subsidy paid to Prince Edward Island by the Dominion Government, which now amounts to \$193,537.20. There is no provincial taxation. The school system is non-sectarian. The Provincial Government is Liberal-Conservative.

Communications.—The want of winter communication, hitherto one of the most serious disadvantages of this province, has to some extent been supplied by the steel steamship "Stanley," built in 1888. This steamship has been procured by the Dominion Government at a cost of \$150,000, and is especially designed for the arduous service of navigating the Strait of Northumberland in winter. The hull and engines are of superior strength and power; the registered tonnage is 1,000 tons. In open water she can steam twenty knots an hour, and she has been known to go through ice from two to four feet thick, at the rate of five miles an hour.

Summer.—As a summer resort, Prince Edward Island is rapidly gaining favor. Visitors are pleased with the delightful, clear, sunny atmosphere. Fair hotel accommodation is provided at Rustico, Malpeque, Tracadie, and on the north side of the island, and also in several towns throughout the province. The farmers have comfortable homes, where many tourists find accommodation.

Fisheries.—The north shore of Prince Edward Island is one of the best fishing-grounds in North America. Here mackerel of the finest quality are caught. Eighty-six American fishing-vessels visited those waters in 1888,

and hundreds of Canadian fishermen also were employed in this business. The coast-line was patrolled by Canadian cutters, but no seizures were made.

PROCTOR, RICHARD ANTHONY, astronomer, born in Chelsea, England, March 23, 1837; died in New York city, Sept. 12, 1888. He received his early education at home, being a sickly child, and then attended the academy in Wilton-on-Thames. The death of his father unsettled his school life, the patrimony became involved in

RICHARD ANTHONY PROCTOR.

a chancery suit, and in 1854 he entered the London Joint-Stock Bank as a clerk. In 1855 he began studying at King's College, London, and a year later went to St. John's, Cambridge, where he took a high stand in mathematics, and was graduated in 1860 among the wranglers. For three years he devoted his time to historical and literary studies, when the bank in which his money was deposited failed. He had begun the study of astronomy, and in December, 1863, published in the "Cornhill Magazine" a paper on "Double Stars." In 1864 he began a series of investigations in regard to the great ringed planet of the solar system, the fruits of which were ultimately embodied in his treatise of "Saturn and its System" (London, 1865). In preparing this work he had to make many maps, and from these grew his "Gnomonic Star Atlas" (1866), which in turn suggested his "Hand-Book of the Stars" (1866). Thereafter his literary industry was very great, and he published in quick succession "Constellation Seasons, Sun-Views of the Earth" (1867); "Half-hours with the Telescope" (1868); "Half-hours with Stars" (1869); and "Other Worlds than ours; the Plurality of Worlds, studied under the Light of Recent Scientific Researches," with a

large star-atlas (1870). The last-named was one of the most popular works ever published on astronomy, and after its publication he was regarded as perhaps the most fertile popular writer on astronomical subjects of his day. His original work included numerous researches on the stellar system, the law of distribution of stars and the nebulae, and the general constitution of the heavens. In 1869 he advanced a theory of the solar corona, which has since been generally accepted, and also that of the inner complex solar atmosphere, which was afterward advanced by Prof. Charles A. Young. He was active in the transit-of-Venus expeditions of 1874 and 1882, and became involved in a dispute with the Astronomer Royal of England as to the best methods of observation. In 1873-'74 he visited the United States and lectured on popular phases of astronomy. Again, in 1875, he came to this country, and during a stay of seven months delivered 142 lectures. In 1879 he left England for America and Australia, and lectured in all of the principal towns of Victoria, New South Wales, South Australia, and New Zealand. His first wife died in 1879, and in 1881 he married Mrs. Robert J. Crawley, of St. Joseph, Mo., and for some years made that city his home. In October, 1887, he removed to Orange Lake, Fla., and there established his residence and observatory; but, early in September, 1888, he set out for London to fill a lecture engagement. On reaching New York he was taken ill and died of hemorrhagic malarial fever. Prof. Proctor was appointed an Honorary Fellow of King's College, London, in 1873, and became a Fellow of the Royal Astronomical Society in 1866. He was appointed honorary secretary of that society and editor of its proceedings in February, 1872, but resigned these offices in November, 1873. In 1881 he founded "Knowledge," a weekly scientific journal, but changed it to a monthly in 1885, and continued its editor until his death. His productiveness and versatility were remarkable. In the same issue of his journal he would appear in several rôles at once: as the editor and as Richard A. Proctor, writing on astronomy and mathematics; as Thomas Foster, criticising and carrying to its logical conclusions Dickens's unfinished novel of "Edwin Drood"; and then anonymously criticising and refuting the said Thomas Foster; as the whist editor and the chess editor and every other sort of editor demanded by the occasion. At the same time he was writing articles for other periodicals and newspapers, and he wrote well on every subject he handled. Besides those already mentioned, he published "Light Science for Leisure Hours" (three series, 1871, 1873, and 1883); "Elementary Astronomy" (1871); "Orbs around us" (1872); "Elementary Geography" (1872); "School Atlas of Astronomy" (1872); "Essays on Astronomy" (1872); "Familiar Science Studies" (1872); "The Moon" (1873); "Borderland of Science" (1873); "Expanse of Heaven" (1873); "The Universe and Com

ing Transits" (1874); "Transits of Venus" (1874); "A Treatise on the Cycloid" (1878). He edited the "Knowledge Library," consisting of a series of works made up of papers that appeared in his own journal, among which were several of his own, notably "How to Play Whist" (1885) "and "Home Whist" (1885). After becoming an American citizen, he published "Chance and Luck" (1887); "First Steps in Geometry" (1887); "Easy Lessons in Differential Calculus" (1887); and "Old and New Astronomy," which at the time of his death was being issued in parts.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES. This Church has moved on steadily in its appointed course during 1888. It is true, it has been roused to more than ordinary effort in order to test and examine its liturgy and services by the proposed plan for enrichment and flexibility, whereby congregations are urged to use fully and freely the Church's provisions for worship and growth in spirituality and the higher Christian life. This matter will come up for final adjustment at the General Convention in October, 1889. The sources of information in preparing this article are the published journals of conventions, reports and documents of Church societies and corporations, Pott's "Church Almanac," and Whittaker's "Protestant Episcopal Almanac." The following table presents a summary of statistics of the Church during 1888:

DIOCESES.	Clergy.	Parishes.	Baptisms.	Confirmations.	Communicants.

Missionary Society.—In accordance with the canon, this society comprehends all persons who are members of the Protestant Episcopal Church. The Board of Missions consists of all the bishops of this Church, the members for the time being of the House of Deputies of the General Convention, the delegates from the missionary jurisdictions, and the Board of Managers. The Missionary Council comprises all the bishops, an equal number of presbyters, and an equal number of laymen. It meets annually (except in the years when the Board of Missions meets), and is charged with taking all necessary action in regard to the missionary work of the Church which shall not conflict with the general policy of the board. The Council met in Washington, D. C., November 13, and continued in session for two days. It was largely attended by bishops, clergy, and laity, and disposed of its work with promptitude and hearty zeal. The annual report of the Board of Managers was received, with accompanying documents; careful attention was given to the Commission for Work among

the Colored People; also to the Woman's Auxiliary, and to the important work of the Church Building-Fund Commission. Appropriate action was freely discussed and tolerably clearly outlined, and the subject of increasing the interest of Church people in behalf of missions was urgently pressed upon all who were present. The Board of Missions divides its work between a domestic committee and a foreign committee, which have headquarters in New York city.

Domestic Missions.—From Sept. 1, 1887, to Sept. 1, 1888, there were: Missionaries (16 missionary jurisdictions and 30 dioceses): Bishops, 13; other clergy (white, colored, Indian), 490; teachers, other helpers, etc., 75; total, 578. The financial condition was as follows: Cash in hand (September, 1887), \$25,468.92; offerings, etc., \$156,240; legacies for domestic missions, \$51,009.43; legacies for investment, \$53,500; legacy for endowment of missionary episcopate, \$100,000; specials, \$23,478.01. Total, \$409,691.36. Expenditures (16 missionary jurisdictions and 32 dioceses), \$108,658.98; missions among Indians and colored people, \$62,059.41; specials, \$27,905.80; missionary episcopate endowment (paid over), \$100,000; legacies, etc. (paid over), \$55,127.80; office and other expenses, \$17,732.23; balance in hand, \$38,207.14. Total, \$409,691.36.

Foreign Missions.—From Sept. 1, 1887, to Sept. 1, 1888, the number of missionary bishops was 3; the number of other clergy (white and native) 50; teachers, physicians, helpers, etc., 173; total, 223. The financial condition was as follows: Cash in hand (September, 1888), \$44,974.38; offerings, legacies, general fund, \$163,519.45; legacy for investment, \$9,550; specials for China, Japan, etc., \$16,863.22; total, \$234,907.05. Expenditures on account of missions, etc., in West Africa, China, and Japan (including Hayti and Mexico), \$132,795.12; legacies, etc. (paid over), \$10,169.63; specials, \$21,209.99; salaries, rent, printing, etc., \$17,732.22; balance in hand, \$53,001.09; total, \$234,907.05. The mission property at foreign stations is estimated to be worth much the same as last year, viz., in Africa (about), \$22,000; in China (about), \$170,000; in Japan (about), \$50,000; and others making nearly half a million dollars.

Woman's Auxiliary to the Board of Missions renders important and efficient aid in all the departments by means of parochial, city, county, and diocesan associations of ladies, formed for the purpose of raising money, preparing and forwarding boxes to missionaries and mission stations, and in various other ways giving help to the missionary work of the Church. Money raised for domestic, foreign, and other mission work, \$100,985.33; boxes for the same (3,246 in number), value, \$175,168.77; total, \$276,154.10.

American Church Missionary Society (also auxiliary to the Board of Missions) has employed during the year in 17 dioceses and missionary

jurisdictions 38 missionaries. The financial condition was as follows: For general work, domestic missions, \$33,456.91; for general work, foreign missions, \$680.05; specials, \$5,958.85; Ely professorship, Griswold College, \$7,000; balance to new account (\$7,350 being trust fund not yet invested), \$31,873.33; total, \$78,969.14. The society holds in securities, property, etc., \$102,675. Boxes of clothing were sent to the missionaries, in value about \$4,000.

Church Work in Mexico.—Aid in this work was continued by the reappointment for another year of the presbyter sent out in 1887. His duty remains the same, viz., that of "counseling and guiding presbyters and readers in Mexico who have asked for the fostering care of this Church to be extended to them as a mission." An advisory committee for the work in Mexico has in charge all offerings made through the Board of Missions. "The Mexican League" is still actively at work as an independent association, consisting of ladies, for aid in missionary work in Mexico. It has no further connection with the Board of Missions.

Church in Hayti.—This Church, though independent, is not strong, and seeks aid from the Protestant Episcopal Church in the United States. A commission of bishops has it in charge, and it receives help from the Domestic and Foreign Missionary Society. Aid was extended to the amount of \$6,551.73. Statistics: Bishop, 1; other clergy, 13; teachers, 2; catechists, 16; mission stations, 23; baptisms, 58; communicants, 370; day scholars, 552; Sunday-school scholars, 221; contributions, \$647; mission property, estimated value, \$17,470.

Protestant Episcopal Churches in Europe, under the charge of a bishop of the American Church: In France, 2; in Germany, 1; in Italy, 2; in Switzerland, 1.

American Church Building-Fund Commission, established in 1880, continues its very useful and important work. It aims to create a fund of not less than \$1,000,000, so as to be enabled to give effective aid in all parts of the United States toward building chapels and new churches. Thus far the permanent fund has reached to \$103,408.83; but, as the matter becomes better understood, there is good reason to expect that the fund will be raised to the desired amount. During the year forty-seven applications for aid were responded to and loans were voted in sums from \$200 to \$3,000, the average being about \$1,000 to each church. The total amount was \$46,500.

Society for Promoting Christianity among the Jews (auxiliary to the Board of Missions) reports quiet and steady progress. The society has missionaries in seven of the large cities as well as in numerous large towns. There are five missionary schools, five industrial schools, and two branch schools, and 252 of the parochial clergy kindly co-operate in local activities. The entire work is such as to reach the Jews in 254 cities and towns in the United States.

Of publications 35,556 copies have been issued, and Bibles, Testaments, Scripture portions, and prayer-books have been distributed in the English, German, and Hebrew tongues. Balance in hand (Sept. 1, 1887), \$7,846.95; contributions, specials, etc., \$12,188.43; total, \$20,035.38. Expenditures for schools, salaries, publications, etc., \$12,752.52; real-estate account, \$518.20; balance to new account, \$6,764.66; total, \$20,035.38.

Changes in the Clergy.—During the year four of the bishops have died, viz., Bishop Edward

R. Welles, of Milwaukee, Bishop J. H. H. Brown, of Fond du Lac, Bishop S. S. Harris, of Michigan, and Bishop G. K. Dunlop, Missionary Bishop of New Mexico and Arizona. Three presbyters have been consecrated bishops, viz., J. S. Johnston, Missionary Bishop of Western Texas; A. Leonard, Missionary Bishop of Nevada and Utah; and L. Coleman, Bishop of Delaware. Three are on the list of retired bishops, viz., H. Southgate, C. C. Penick, and S. I. J. Schereschewsky. Over seventy of the clergy died in 1888.

Q

QUEBEC, PROVINCE OF. Finances.—The Treasurer of the province, in his budget speech on June 18, 1888, shortly before the close of the fiscal year, announced that the ordinary receipts up to April 1 amounted to \$3,024,981.65, and the ordinary expenses to \$2,259,960.14.

An act was passed authorizing the Government to issue debentures bearing interest at not more than 4 per cent. to the amount of the whole existing debt of the province. As the act left the creditors of the province no option but to accept the lower rate of interest or to terminate their debentures, it was severely criticised in London as well as in Canada, as amounting to a partial repudiation of the province's liability to its creditors. Presumably in deference to freely expressed public opinion, the Government refrained from carrying out the scheme of conversion.

District Magistrates Act.—This act, of little importance in itself, gave rise to no little public excitement through being disallowed by the Dominion Government as *ultra vires* of the Quebec Legislature. The purport of the act was to abolish the Circuit Court of Montreal and substitute therefor a court with practically the same jurisdiction, to be called the District Magistrates Court. Under the British North America Act, the provincial legislatures enjoy the power to make laws in relation to the administration of justice in the province, including the Constitution, maintenance, and organization of provincial courts both of civil and criminal jurisdiction; but the appointment of judges to the superior, district, and county courts in each province appertains to the Governor-General in Council. The appointment of magistrates rests with the provincial governments. Consequently, the practical effect of the act was simply to change the name of the court and of its presiding officer, and to confer upon the Quebec Government the power of appointing that presiding officer, which power of appointment is by the British North America act of the Imperial Parliament expressly conferred upon the Dominion Government. The Quebec Government appointed two district magistrates under the act, and the friends of the local government, in mass meet-

ing assembled, protested against the disallowance as an unwarrantable interference with provincial rights. Some justification for the Quebec Legislature straining the interpretation of the British North America Act in order to authorize the appointment of the judges by the Provincial Government, is to be found in the persistent neglect of the Dominion Government to appoint new judges, although the work in the courts was notoriously in arrears.

The Jesuits' Estates Settlement.—An act passed by the Legislature during the session of 1888, destined to arouse considerable dissension throughout the Dominion, was the act respecting the settlement of the Jesuits' estates. At the time of the suppression of the Society of Jesus throughout the world by the Pope in 1774, the Jesuits owned large estates in Canada, which had been bestowed upon them chiefly for educational purposes. According to a schedule made in 1787, their properties included: 1, Six superficial arpents, on which the Quebec college and church are erected, given for the instruction of the inhabitants; 2, the two Lorettes or Seigniorship of St. Gabriel; 3, the peninsula of Lavacherie; 4, Sillery, near Cape Rouge; 5, Belair; 6, Cap de la Magdelaine, near Three Rivers; 7, Batiscan; 8, the Island of St. Christophe, near Three Rivers; 9, Laprairie de la Magdelaine; 10, a piece of ground at St. Nicholas; 11, eleven arpents of ground at Pointe Levis; 12, the Isle of Reaux, below the Island of Orleans; 13, six arpents at Tadousac; 14, the Fief Pacherigny, near Three Rivers; 15, another lot at the same place; 16, a remnant of ground extending to a small river near Lake St. Peter; 17, a number of lots in Quebec city, now built upon, and many used as public streets; 18, the ground used by the church and mission house of Montreal, etc. Altogether the Jesuits owned 48,000 acres in the district of Montreal, 439,000 in the district of Three Rivers, and 129,500 in the district of Quebec—valued at from \$2,000,000 to \$3,000,000. In 1791 the society was suppressed as a body corporate by King George III, and all its lands were declared to be vested in the crown. Provision was made

out of the revenues of the property for the surviving members of the order, the last of whom died in 1800. It is contended that, even if the lands had not been already confiscated, they would then have escheated to the crown for want of other heirs. The revenues of the estates were applied to educational purposes. The estates were transferred to the old Province of Canada, and at the time of confederation (1867) a large portion of them was ceded to the Province of Quebec. From time to time the ecclesiastical authorities have demanded the transfer of the Jesuits' estates to the Roman Catholic Church. In 1878 it was claimed that the bishops were the rightful heirs to the suppressed order. In 1887 the Quebec Legislature passed an act incorporating the Jesuits, and the Quebec Government entered into negotiations with the Jesuits and with the Holy See for a settlement of the long-disputed claims. In these negotiations the Premier, the Hon. Honoré Mercier, refused to recognize any civil obligation, but merely "a moral obligation," on the part of the Government. The Jesuit fathers were authorized by the Pope to treat with the Government, on condition that the money received be depos-

ited and left at the free disposal of the Holy See. Finally an agreement was made and ratified by the Legislature, at this session, in the act respecting the settlement of the Jesuits' estates. Under this act the Government of the Province pays \$400,000 to the Society of Jesus, and also transfers Laprarie Common to it, and pays \$60,000 to the Protestant Committee of the Council of Public Instruction for the purposes of higher education. The society—in its own behalf, for its suppressed predecessor, for the Pope, and for the Roman Catholic Church generally—accepts the grant as a full settlement.

The passage of the act gave great offense to Protestants, and the Dominion Government was urged to exercise its power of disallowance; but the Dominion Government took the ground that, wise or unwise, the legislation was within the competence of the Provincial Legislature. Some politicians were unkind enough to say that the act was passed in the hope that it would be disallowed, in which case the Quebec ministry would have appealed to the electorate upon an issue that would have greatly strengthened their weak majority.

R

REFORMED CHURCHES. The following table of comparative statistics of the Reformed Churches

is published in the "Almanac for the Reformed Church in the United States" for 1889:

No.	NAMES OF CHURCHES AND COUNTRIES.	Synods.	Ministers.	Congregations.	Communicants.	Adherents.
*1	Reformed Church in the Province of Austria	1	4	4	6,388	8,144

* These four organizations compose the General Synod of the Reformed Church in Austria.
 † Estimated. ‡ In United Church of Japan.

I. Reformed Church in the United States.—“The Almanac of the Reformed Church in the United States” for 1887 gives the following statistics of this denomination: Number of districts synods, 8; of classes, 54; of ministers, 823; of congregations, 1,512; of members, 190,527; of unconfirmed members, 111,416; of persons communing during the year, 152,274; of baptisms, 13,743 of infants and 1,500 of adults; of confirmations, 10,542; of Sunday-schools, 1,464, with 129,713 pupils; of students for the ministry, 207. Amount of contributions for benevolent purposes, \$147,297; for congregational purposes, \$841,291.

Eight colleges and universities, 9 academi-cal schools and institutes, and 2 theological seminaries are conducted and 4 orphan homes are maintained under the patronage of the Church. The publishing enterprises passed into private hands on the last day of 1887, and are now carried on at Philadelphia under the style of the “Reformed Church Publication House.” Home missions are carried on under the care of Boards of the General Synod and of three district synods. Fifty-six missions are returned, with 5,430 communicants, who contributed during the year \$38,724 for congregational, and \$3,500 for benevolent purposes. The General Board had received during the fiscal year 1887-’88, \$16,738, and asked for \$20,000 for the en-uing year. The Board of Foreign Mis-sions received \$20,000. The missions of the Tokio and Sendai districts in Japan returned 8 organized churches, 4 of which were self-supporting; 7 preaching-stations; 482 bap-tisms of adult converts; 8 baptisms of children; 1,202 members; 3 schools, with 209 pupils; 16 Sunday-schools, with 719 pupils; 1 theo-logical school, with 9 pupils; 7 native minis-ters; 4 other agents; and \$1,950 of contribu-tions.

II. Reformed Church in America.—The follow-ing is a summary of the statistics of this Church as they were reported to the General Synod in June, 1888: Number of classes, 34; of church-es, 546; of ministers, 555; of licentiates, 9; of families, 47,520; of communicants, 87,015; of baptisms during the year, 4,751 of infants and 1,230 of adults; of members admitted on confession, 4,949; of baptized non-commu-nicants 34,070; of catechumens, 31,814; of Sunday-schools, 750, with 96,019 members. Amount of contributions for religious and be-nevolent purposes, \$284,902; for congregational purposes, \$970,856.

The Board of Education reported to the Gen-eral Synod that it had received \$9,070, while its debt had been increased by \$450; had 80 students under its care; and had aided 5 paro-chial schools. Its permanent funds amounted to \$41,665. The Widows’ fund had been in-creased by \$3,000, and was now \$73,971. It had aided 31 annuitants in the amount of \$4,661. It was, however, able to pay only 75 per cent. of the maximum annuity. The income of the Disabled Ministers’ fund had been \$9,199.

Appropriations had been made on its account to 16 ministers, 21 ministers’ widows, and to guardians of ministers’ children. The invest-ments in its behalf were returned at \$53,817. The Theological Seminary at New Brunswick possessed scholarship endowments amounting to \$113,110. The treasurer of the General Synod gave the whole amount of its funds in his hands as \$768,173.

The receipts of the Board of Domestic Mis-sions for the year had been for the Mission-ary Department, \$47,472; for the Church Building fund, \$19,584. The expenditures had been in the Missionary Department, \$32,293; from the Church Building fund, \$16,255. The board had aided 108 churches and stations, served by 90 pastors, and com-prising 4,802 families and 6,947 members, in which 756 members had been received on con-fession; with 108 Sunday-schools having an average attendance of 9,349 pupils. These sta-tions had contributed \$1,672 to home missions and \$4,474 to other objects.

The Board of Foreign Missions had received \$109,946. From the missions—in China, In-dia, and Japan—were returned 11 stations; 123 out stations and preaching-places; 25 or-dained and 3 unordained missionaries; 30 assistant-missionaries; 26 native ordained missionaries; 220 native helpers; 4,559 com-municants; 7 seminaries for boys, with 308 pupils; 5 seminaries for girls, with 300 pupils; 4 theological schools or classes, with 32 stu-dents; and 106 day schools, with 2,612 pupils. The contributions of the native churches amounted to \$8,324. One ordained missionary and one assistant missionary were under ap-pointment.

The eighty-second General Synod met in Catskill, N. Y., June 3. The Rev. M. H. Hut-ton, D. D., was chosen moderator. The Com-mittee on Conference with the Reformed Church in the United States presented a re-port of progress, and was continued. The committees had held a preliminary joint meet-ing in the city of New York, in December, 1887, and a meeting and conference of minis-ters and laymen in Philadelphia, April 3 and 4, 1888. At the latter meeting, papers which had been previously arranged for were read, on “The Historical and Doctrinal Relations of the Two Churches,” by Dr. E. T. Corwin and Prof. J. H. Dubbs; “The Canons of Dort,” by Dr. Van Gieson; “The Present Condition of the Two Denominations,” by Dr. Van Horne; “Church Union for the Evangelization of the World,” by Dr. E. B. Coe; “The Obsta-cles to Union, and Methods of overcoming them,” by Profs. Mabon and Williams; and “The Advantages of Union,” by the Rev. Messrs. C. Cleaver and Peter Moerdyke. Three alternative forms of union were sug-gested: 1. the return of the Reformed Church in the United States to the articles of the Synod of Dort which conform to the Heidelberg standard catechism; 2, with the retention by

each body of its own standard; or, 3, on the basis of a common formula in which both Churches could unite. The Conference expressed its judgment that "a closer union between these two bodies, the only ecclesiastical organizations of the Reformed Church, of Continental origin, in America, is desirable, and at this juncture of the religious issues of our land specially important and, if the object is pursued in Christian wisdom and love, undoubtedly practicable. Besides, there is good reason for the opinion that, if judicious efforts in behalf of a closer union be conducted by the two committees, present obstacles will gradually disappear, and the end in some form just and acceptable to both branches may, without much delay, be attained." The ministers of the two organizations were advised to inform themselves more fully on the history of the Reformed Churches in Europe and in this country, "particularly in its bearing on the present movement, and, as occasion may arise, to promote, by preaching and otherwise, among all our congregations better knowledge of the Christian propriety and practical worth of the proposed union." Whatever action may be taken on the subject will have to wait for ratification by the General Synod of the Reformed Church in the United States, which will not meet till 1890.

A committee was appointed to make such additions to the liturgy of the Church "as may make it more available and comprehensive for service and worship," and report at the next meeting of the General Synod. A resolution protesting against the toleration of the traffic in intoxicating liquors on the Congo was passed and telegraphed by cable to the International Missionary Conference sitting in London. The Synod also recorded its pleasure at the growing public interest in efforts that are being made to diminish the evils growing out of the liquor-traffic, and declared that these evils constitute one of the greatest obstacles to the religious progress of the nation, and should be "energetically opposed" by all who love the Lord Jesus Christ. The Committee on Systematic Benevolence recommended the substitution of the term "offering" for "collection" in ordinary usage, and the revival of the idea of worship in making offerings of money to the Church. A minute was adopted recognizing the efforts of the Evangelical Alliance, particularly as they are directed to the preservation of the public schools in their integrity, and against efforts to divert public moneys to the advantage of particular denominations. The committee appointed to prepare a manual of instruction for young children presented a catechism which, after examination, was recommitted to a committee enlarged by the appointment of two women upon it.

III. Reformed Churches in the Netherlands.—The Christian Reformed Church of the Netherlands originated in a secession in 1835 from the state Church as established by the law of

1815. It consists of eleven provincial synods, each of which sends four delegates to the General Synod meeting every three years.

A more recent movement within the state Church has resulted in the organization of an orthodox or conservative party, strictly adhering to the old ways and faith, as distinct from the other parties which are more ready to follow the modern tendencies of criticism and questioning thought, under the lead of Dr. A. Kuyper, of the Free University of Amsterdam. This party came to an issue with the authorities of the state Church in 1886, on a question of the admission of persons denying the divinity of Christ to full membership in the Church at Amsterdam. The Consistory refusing to consent to their admission, the orthodox majority—being eighty in number, and including Dr. Kuyper—were suspended, and afterward deposed. After this exclusion, a correspondence was begun with reference to a union with the Christian Reformed Church, and two meetings of a satisfactory character were held between representatives of the two parties. The General Synod of the Christian Reformed Church, at its meeting held at Assen in August, took action demanding that the orthodox party recognize that Church as the real Church of the Netherlands, and declare more openly than it had done that it had broken with the established Church and its representative bodies.

The first synodical meeting of the orthodox body was also held in August at Utrecht, when 180 churches, forming twelve classes, were represented by twenty-four delegates, besides five general advisers of the Synod.

RHODE ISLAND. State Government.—The following were the State officers during the year: Governor, John W. Davis, Democrat, succeeded by Royal C. Taft, Republican; Lieutenant-Governor, Samuel R. Honey, succeeded by Enos Lapham; Secretary of State, Edwin D. McGuinness, succeeded by Samuel H. Cross; General Treasurer, John G. Perry, succeeded by Samuel Clark; State Auditor and Insurance Commissioner, Elisha W. Bucklin, succeeded by Almon K. Goodwin; Attorney-General, Ziba O. Slocum, succeeded by Horatio Rogers; Railroad Commissioner, James H. Anderson; Commissioner of Public Schools, Thomas B. Stockwell; Chief-Justice of the Supreme Court, Thomas Durfee; Associate Justices, Pardon E. Tillinghast, Charles Matteson, John H. Stiness, and George A. Wilbur.

Legislative Sessions.—The General Assembly met at Providence on January 17, and remained in session till March 23, adjourning on that day to meet at Newport on May 29. The most important work of the session was the passage of the so-called Bourn amendment to the State Constitution, abolishing the property qualification for electors, which had been approved by the preceding Legislature. The proposed amendment provides that—

Every male citizen of the United States of the age of twenty-one years who has had his residence and

home in this State for two years and in the town or city in which he may offer to vote six months next preceding the time of his voting, and whose name shall be registered in the town or city where he resides on or before the last day of December in the year next preceding the time of his voting, shall have a right to vote in the election of all civil officers and on all questions in all legally organized town or ward meetings; provided, that no person shall at any time be allowed to vote in the election of the city council of any city, or upon any proposition to impose a tax or for the expenditure of money in any town or city, unless he shall within the year next preceding have paid a tax assessed upon his property therein, valued at least at \$134.

Section 2 provides that—

The assessors of each town and city shall annually assess upon every person, who, if registered, would be qualified to vote a tax of one dollar, or such sum as with his other taxes shall amount to one dollar, which tax shall be paid into the treasury of such town or city and be applied to the support of public schools therein; provided that such tax, assessed upon any person who has performed military duty, shall be remitted for the year he shall perform such duty; and said tax, assessed upon any mariner for any year while he is at sea, or upon any person who, by reason of extreme poverty, is unable to pay said tax, shall upon application of such mariner or person be remitted. The General Assembly shall have power to provide by law for the collection and remission of this tax.

Provision was made for the submission of this amendment to the electors at the April election.

Another act provides for the establishment of a State Agricultural School, and appropriates \$5,000 therefor. Any sums received from the Federal Government under the Hatch act, for the aid of agriculture, are placed at the disposal of the governing board of the school. The sum of \$26,000 was appropriated for enlarging and improving the Hospital for the Insane.

Other acts of the session were as follow:

To prevent discriminations by life-insurance companies.

Providing for an examination, by the State Board of Health, of the sanitary condition of hotels and boarding-houses.

Requiring savings institutions to report to the State Auditor every five years a list of unclaimed deposits remaining in such banks for twenty years, and to publish said list.

Requiring railroad corporations to draw cars, passenger and merchandise, of any other railroad corporation connecting with it over its road, for a reasonable compensation, and to furnish suitable depot accommodations therefor; in case of failure to agree upon a compensation, commissioners appointed by the Supreme Court shall decide.

The General Assembly elected in April convened at Newport on May 29, and after a session of four days adjourned to June 12. The following acts were passed during the session:

To establish a board of registration in dentistry.

Authorizing the city of Pawtucket to issue \$300,000 of bonds to obtain money for public improvements.

Authorizing the redemption of the franchise and property of railroad corporations from sale on execution.

Approving and confirming the lease of the Boston and Providence Railroad to the Old Colony Railroad Company.

Appropriating \$50,000 for a new almshouse at the State farm in Cranston.

At the adjourned session, which occupied only two days, United States Senator Jonathan Chace was re-elected, receiving 29 votes in the Senate and 59 in the House. Ex-Gov. John W. Davis received 4 votes in the Senate and 8 in the House, and Charles H. Page 1 vote in each body.

The most important act of Legislation provides for the incorporation and establishment of the city of Woonsocket.

Finances.—The State debt on the last day of the year consisted of bonds of 1863, payable in 1893, to the value of \$584,000; and bonds of 1864, payable in 1894, to the value of \$699,000; total, \$1,283,000. This is a reduction in the total debt during the year of \$58,000. At the same time the securities in the sinking-fund have increased by \$66,192.69, and now amount to \$757,641.18, reckoning these securities at par. The net debt, less the sinking-fund, on December 31 was therefore \$525,358.82. One year before it was \$639,495.60. The treasury statement for the year is as follows: Balance in the treasury, Jan. 1, 1888, \$135,458.16; receipts for the year ending Dec. 31, 1888, \$822,903.74; payments for year ending Dec. 31, 1888, \$895,648.22; balance in treasury Jan. 1, 1889, \$62,713.68.

The excess of expenditure over the revenue for 1888 was only about half that of the preceding year, in consequence of an act of March, 1888, increasing the tax on ratable property of the State from twelve to fourteen cents on each \$100 of valuation. By this increase the treasury received \$65,703.11 above that received from taxes the previous year. For 1889 the excess will be still further reduced by an act, also of March, 1888, reducing for 1889 and subsequent years the amount of annual payment into the sinking-fund from \$100,000 to \$50,000.

Banks.—The deposits in savings-banks of the State amounted on December 31, to \$57,699,884.94, an increase of \$2,336,601.61 for the past year. The number of depositors is 123,102, an increase of 2,958, being an average of \$468.07 to each depositor.

Education.—The last report of the Commissioner of Public Schools, covering the school year ending in April, 1887, presents the following statistics: Number of children of school age, 63,199; number attending public schools, 42,798; number attending Catholic schools, 6,852; number attending select schools, 1,745; total registration in public schools, 49,507; average attendance, 32,632; length of school year in months, 9½; male teachers employed, 190; female teachers employed, 1,120; average wages per month, male teachers, \$82.67; average wages per month, female teachers, \$44.38; number of evening schools, 38; number of public-school houses, 465; value of public-school property, \$2,404,031; total school expenditures for the year, \$798,465. These figures show a slight decrease in the average attendance over the preceding year, but an increase in the total enrollment, in the number

and salary of teachers, in the number of school-houses, and in the value of school-property.

The number of students enrolled in the Normal School since its reorganization in 1871 is 1,226. A large proportion of these have taught in the schools of Rhode Island. The whole number of graduates, including the latest class, is 446. The attendance during the second half of the year was 149, the largest in the history of the institution.

Charities.—The State Home and School, providing a home and education for homeless children; had an average attendance for 1887 of 57; and for 1888 of 80; there were remaining in the Home at the close of the year 87 children, an increase of 9 over that of a year ago. This increase in members calls for an increase in the annual appropriations. The expenses for conducting the Home and School for the year were \$12,179.94, against \$9,816.32 for 1887. At the beginning of 1888 there were 28 pupils at the State School for the Deaf, supported at the expense of the State.

Prohibition.—The Governor said in his annual message in January, 1889: "The operation of the laws prohibiting the manufacture and sale of intoxicating liquors is, as yet, very far from being satisfactory. Until the advent to office of the present Attorney-General, the litigation arising under the law had not been prosecuted with the zeal and energy necessary to demonstrate whether the system itself, properly administered, was effective or not."

The opponents of the law introduced a measure into the Legislature during the year providing for the resubmission of the prohibitory amendment to the people, while its friends urged the passage of a bill similar to the Kansas injunction law to secure a more effective enforcement. The sentiment of the Legislature was in favor of a further trial of prohibition, but action upon the injunction bill was deferred from the May and June sessions to the following January. The Chief of State Police, who is charged with the duty of enforcing the law, reports that great difficulty is found in the failure of the local police, especially in Providence, to co-operate with him. The former, with only ten men at his command at any one time, made during the first four months of the year 465 seizures of liquors, entered 13 complaints for illegal keeping, 22 for illegal selling, and 8 for common nuisances; while in the same time the Providence Chief of Police, with 200 men under him, made only 165 seizures, 78 complaints for illegal selling, and 8 for common nuisances. During the remaining eight months of the year the State police made 1,258 seizures, 26 complaints for illegal selling, 141 for illegal keeping, and 30 for common nuisances. In the same period the Providence police made only 241 seizures and 3 complaints for illegal keeping.

The total number of seizures by local officers as distinct from the State police during the first four months of the year were 325, complaints

for illegal keeping 123, for illegal selling 26, for common nuisances 16; during the remaining eight months the seizures were 535, complaints for illegal selling 42, for illegal keeping 16, and for common nuisances 15.

The Bourn Amendment.—The vote cast for this amendment in April was not opened and officially counted till late in November, when the announcement of its adoption was made by the Governor's proclamation. Questions at once arose as to the validity of the existing registry acts under the new provision of the Constitution, and these questions were submitted by the Governor to the Supreme Court. The Court decided that such parts of those acts as were not inconsistent with the amended Constitution should be allowed to stand; that the statutory provisions relating to the assessment and payment of a registry tax must be considered as null and void; but that the method of registration by town and ward clerks was still in force as before. It is estimated that the increase of the voting-lists under this amendment will be over twenty thousand names.

Political.—On February 22 a State Convention of Prohibitionists met at Providence and nominated a ticket as follows: For Governor, George W. Gould; Lieutenant-Governor, H. D. Scott; Secretary of State, F. A. Warner; General Treasurer, A. B. Chadsey; Attorney-General, John T. Blodgett. The usual prohibitory resolutions were adopted, and also the following:

We declare our belief that the laws governing the right of suffrage in our State should be so amended as to bring them into harmony with the laws of other States upon this subject. We further believe that the registry tax has been a great source of corruption and that it should be abolished.

We believe that gross corruption prevails through the use of open ballots, and we declare ourselves in favor of a secret ballot, as most likely to prevent intimidation of voters, and some adaptation of the "Australian system," as providing best against facilities for bribery.

The Republicans met in State Convention at Providence, March 15, and nominated: For Governor, Royal C. Taft; Lieutenant-Governor, Enos Lapham; Secretary of State, Samuel H. Cross; General Treasurer, Samuel Clark; Attorney-General, Horatio Rogers. The platform includes the following:

We believe that all proposals to divide the present surplus among the States or to distribute it by extraordinary expenditures are indefensible, but we favor sufficient appropriations for building the navy, for constructing coast-defenses adequate for the protection of our homes and property, which are now exposed to the attacks of a foreign enemy, and for pensions.

We heartily indorse the action of the Republican members of the General Assembly in securing the submission to the people of the State of a proposition for an extension of the right of suffrage, and we again express ourselves in favor of the abolition of the registry tax as a prerequisite for voting.

On March 19 the Democratic State Convention met at Providence, and renominated Governor Davis, Secretary of State McGuinness,

Treasurer Perry, and Attorney-General Slocum. Lieutenant-Governor Honey declined a renomination, and was succeeded on the ticket by Howard Smith. The resolutions included the following :

The constantly increasing surplus in the National Treasury (estimated at nearly \$100,000,000 annually) which arises from unjust and unnecessary taxation of the people, threatens to paralyze trade and commerce by the withdrawal from their channels of the money which is needed in their operations; reduction of taxation is therefore an imperative duty, and should be made first upon those articles which can be classed as necessaries to the whole people—men, women, and children. The industries of Rhode Island will be most efficiently fostered and protected by the introduction into our ports free of duty of such raw materials as enter into or are used in connection with our manufactures; we designate wool, lumber, and coal as among the most important of such raw materials.

We pledge ourselves :

1. To secure for the people of this State a constitutional convention, to the end that the many reforms needed may be accomplished and that the abuses and irregularities now existing, which have been bred and fostered by the ruling element of the Republican party of this State, may be abolished.

2. To abolish the registry tax, which has for another year continued to be a source of unmitigated evil and fraud on the native-born voters of this State, and again making money instead of intelligence and capacity a qualification for office.

3. To abolish the property qualification which is unjustly imposed upon naturalized citizens of the United States as a prerequisite for voting.

At the election, in April, the Republican ticket was elected by a plurality of over 3,000 votes. For Governor, Taft received 20,744 votes; Davis, 17,556; Gould, 1,326. The Legislature elected at the same time was composed of 31 Republicans and 8 Democrats in the Senate, and 61 Republicans, 10 Democrats, and 1 Prohibitionist in the House. At the same time the Bourn amendment to the State Constitution, passed by the Legislature in January, was submitted to the people and approved by a vote of 20,068 in its favor and 12,193 against it. Three fifths of the total vote cast being necessary for its adoption, it secured only 711 votes more than the requisite number.

ROMAN CATHOLIC CHURCH. The two most important events in the history of the Catholic Church during the past year were the celebration of the Papal Jubilee—the fiftieth anniversary of the ordination of Leo XIII to the priesthood—and the visit of the Emperor William to the Sovereign Pontiff. The first event, which occupied the end of 1887 and the first days of 1888 was most elaborately celebrated. All the rulers of the world, including the Sultan, sent gifts to the Pope. King Humbert was the only exception. The gift of President Cleveland was particularly appropriate. It was a copy of the Constitution of the United States. Brazil, in honor of the festival, freed several thousand slaves. Later in the year the Pope issued an encyclical to the bishops of Brazil on the subject of slavery, one of the most remarkable documents of his pontificate. In connection with this unre-

served throwing of the influence of the Church against the owning of human beings, the cordial approval of the Holy Father to Cardinal Lavigerie's project for the suppression of the African slave-trade makes in itself an epoch in the annals of the Church which has from the beginning regarded liberty as the most beautiful of all things. The visit of the Emperor William to the Sovereign Pontiff, though apparently deprived of all political significance by the rules of papal and royal etiquette, had no effect in clarifying the Roman question. The Emperor seems to have avoided committing himself by any verbal promise to the amelioration of the Pope's position. Mr. Gladstone's letter to the Marquis de Riso, quoted in the "Osservatore Romano," which created a sensation during his visit to Naples, seems to show that public opinion in Europe was, late in 1888, not averse to the submission of the Roman question to an international tribunal. But, taking Mr. Gladstone's later explanation of that letter, it becomes evident that the Marquis de Riso was mistaken. The position of the Pope still remains, in his own phrase, "intolerable."

The abolition of slavery in Brazil, brought about by the entire sympathy of Dom Pedro and his people on the subject and the counsels of the bishops of Brazil, urged on by the Pope, occasioned His Holiness to send the golden rose—sent to some royal personage each year on Lætare Sunday—to the Princess-Regent of Brazil. The new Archbishop of Carthage—a see created by the Pope to revive the past glory of the African Church is Cardinal Lavigerie. The cardinal is nearly sixty-four years of age, but he believes that he will be enabled to lead a new crusade against the slave-trade in Africa with as much success as if he were half his present age. In London, Paris, Naples, Madrid, and Brussels, he has gained the enthusiastic sympathy of all who heard him. At Rome, he aroused the intensest interest in the heart of Leo XIII. He is forming a defensive force for the protection of defenseless tribes against the slave-traders. He believes that less than a thousand well-drilled soldiers would be sufficient to abolish slavery from Albert Nyanza to the south of Tanganika; with an American regiment at his command, he would guarantee to wipe out the bloody marks which the Arabs and mulattoes make each recurring year. It is computed that, out of the five hundred thousand men, women, and children stolen and sold every year, fifty thousand die under the oppression of their captors. Human life is held very cheap in the interior of Africa.

The deaths during 1887-'88 were unusually numerous in ecclesiastical circles. The Most Rev. Francis X. Leray died Sept. 23, 1887. The death of the Rev. John Bapst, S. J., occurred on November 4 of the same year; Father Bapst was the hero of an outburst of un-American fanaticism in 1854, and of Miss

Tincker's well-known novel "Grapes and Thorns." The death of the Rev. John J. Riordan, the rector of the Irish Emigrants' Mission at Castle Garden, a great loss to the poor, was followed by that of Dom Bosco in Italy, who died on March 28, and that of Father Drumgoole, in New York—both apostles of poor boys of the streets. On February 13, the Most Rev. John B. Lamy, the first Bishop of Santa Fé, departed this life; he had resigned his see in 1885; March 9, Cardinal Czacki died; March 31, Cardinal Martinelli; April 14, the Most. Rev. Joseph Sadoc Alemany, O. P., first Archbishop of San Francisco, who had resigned his see to spend his last days with the Brothers of his Orders in Valencia, Spain; May 10, Archbishop Lynch, of Toronto; and on June 29, the Rev. Francis X. Weninger, S. J., famous as a preacher of missions.

The death of the Very Rev. I. T. Hecker, C. S. P., took place on December 20. Father Hecker, born in 1819 and received into the Church in 1845, had long been a prominent figure in the annals of the Catholic Church. The conversion of Father Hecker, who had been seeking in various religious organizations the peace he desired, introduced a new element into the Church in this country. He saw the necessity of making, as he himself expressed it, the synthesis between the Catholic Church and the American Republic more apparent. He had been a member of the Brook Farm Community, he had studied for the Protestant Episcopal ministry, he had paused awhile in Congregationalism. Entering the Catholic Church, he brought with him a great experience, gained entirely from contact with American social life. He became a Redemptorist in Belgium. As one of this famous religious congregation, which in this country devotes itself to the preaching of missions, he performed his priestly duties scrupulously for several years. It then occurred to him that a similar association, composed of American priests, might be very useful in the United States. He went to Rome and secured the approbation of the Pope for his project. The Congregation of St. Paul (C. S. P.) was founded and reached a class of Catholics and searching non-Catholics more effectually than any other organization within the Church. Father Hecker's "Aspirations of Nature" and "Questions of the Soul," are in every complete religious library. He founded "The Catholic World," now conducted by the Rev. Walter Elliott, and justly regarded a foremost exposition of Catholic thought. He was succeeded by the Very Rev. Augustine Hewit, C. S. P., the present Superior of the Congregation.

On May 24, the corner-stone of the Divinity Building, near Washington, D. C., was laid by Cardinal Gibbons. The sermon was delivered by the Right Rev. J. Lancaster Spalding, Bishop of Peoria. A gold medal sent by the Pope was presented to Miss Mary G. Caldwell, whose generous contribution has made the

university possible. Among those present were the Misses Drexel, who had founded a chair of Divinity. The Right Rev. Bishop Keane, having resigned the see of Richmond, was made Titular Bishop of Jasso and rector of the new university. Having formulated the statutes he departed for Rome to consult the Holy Father further on the affairs of the great school.

The University of Notre Dame, Indiana, celebrated on Aug. 15, 1888, the fiftieth anniversary of the ordination of the Very Rev. Edward Sorin, its founder, to the priesthood. The Very Rev. E. Sorin is the founder of the university and the Superior-General of the Congregation of the Holy Cross. His Eminence Cardinal Gibbons, several archbishops, many priests, and a great assemblage of other distinguished gentlemen visited Notre Dame on this occasion. The Very Rev. Father Sorin was born in France, Feb. 6, 1814; he came to this country in 1844. Notre Dame did not exist then; Indians lived in the wilderness of wood and prairie which then occupied its site; now magnificent buildings containing over five hundred students give the place the appearance of a large and handsome university town.

Another important celebration occurred on September 20, in honor of the twenty-fifth anniversary of the ordination of the Most Rev. Archbishop Corrigan. The ceremony, at which were present all the priests of his diocese not on duty and an immense congregation, was one of the most imposing ever held within the cathedral. The principal episcopal sees filled during the year were that of New Orleans by the Most Rev. Francis Janssens; that of Belleville, Ill. (newly created); and that of Alton, Ill., filled by the Right Rev. John Janssen and the Right Rev. James P. Ryan; Vancouver Island by the Rev. John N. Lemmens, succeeding Archbishop Seghers; Detroit by the Rev. Dr. John S. Foley, who succeeded Bishop Borgess, resigned. The Right Rev. Leo Haid, O. S. B., was consecrated Vicar Apostolic of North Carolina, and Rev. Andrea Hintenbach, O. S. B., made Archabbot of St. Vincents, in Westmoreland County, Pa.

At Rome, in March, 1888, the Pope made a vigorous speech to the cardinals on the necessity of his temporal independence and a pronouncement on the attitude of the Church toward the Knights of Labor, whose association is not condemned, provided their statutes contain nothing communistic or tending to oppose the right of holding property. In Prussia a law was passed restoring to a large number of religious orders the rights abrogated by the Kulturkampf. At Baden, the Chambers refused to admit the excluded religious congregations.

At Rome, in May, the Pope received a great crowd of Spanish Catholics headed by Mgr. Catala. Arrangements were made with Prussia on the question of the veto—the Government agreeing not to oppose for political reasons a nomination of a bishop by the Pope. The new Italian penal laws were protested

against by the Neapolitan episcopate. Herr Windhorst's jubilee was celebrated.

In June, at Rome, a *triduum* was held in honor of the Blessed de la Salle, founder of the Institute of the Christian Brothers. The success of the Catholic Belgians in the legislative elections gave great pleasure to the Holy Father. Cardinal Manning, in London, issued a pastoral letter on the progress of the Church in England.

The Holy Father issued an encyclical on liberty and license.

At Rome, in July, the Italian Counsel of State explained that the law of the guarantees did not confer on the Pope extraterritorial rights or privileges. The Pope protested. An encyclical letter to the bishops of Ireland was issued which had a good effect on the minds of the Irish people, made anxious by the exaggerated rumors about the Papal rescript condemning the Plan of Campaign and boycotting. The schism of the Armenians ended; an encyclical letter was addressed by the Pope to Mgr. Azarian and the other Armenian bishops.

In September the Prussian bishops met at Fulda and expressed their loyalty to the Pope and their desire for the restoration of Rome. The Catholic Congress of Fribourg, which expressed similar sentiments, was held.

In October the Pope gave the decree *Tolerari posse* on the Knights of Labor; this decree was interpreted by Cardinal Gibbons in a letter printed in the Baltimore "Mirror."

The Holy Father ordered a universal mass of requiem on the last Sunday in October for the repose of the souls of all the faithful departed. The Italian penal laws which force students studying for the priesthood into the army were protested against by assemblages held in nearly every city of the Continent. An important encyclical letter *exeunte jam anno* appeared in December as the finish of the jubilee. It is a protest against unbelief and the ostentation of the rich. In France Mgr. Treppel made an attempt to revive the French laws against dueling. The year was closed by a universal mass, ordered by the Pope in thanksgiving for the graces of the jubilee.

ROUMANIA, a constitutional monarchy in Eastern Europe. The reigning sovereign is Carol I, born April 20, 1839, of the family of Hohenzollern, being the brother of the present Prince of Hohenzollern-Sigmaringen. He was elected Domnul or Lord of Roumania by a Constituent Assembly on April 20, 1866, and proclaimed King on March 26, 1881. The heir-presumptive is his nephew Prince Leopold of Hohenzollern-Sigmaringen. The Constitution voted by the Constituent Assembly of 1866 was amended in 1879 and 1884. The Senate consists of 112 members elected for eight years and 8 bishops. The Chamber of Deputies numbers 185 members elected for four years.

Finances.—The financial accounts for the year ending March 31, 1887, show 131,329,693 lei of receipts and 127,045,614 lei of expenditures.

The capital of the public debt at the close of the fiscal year 1888-'89 is 788,732,489 lei. It was increased by the emission of new bonds for 100,000,000 lei in July, 1888. In a period of seven years the funded debt has been increased by the sum of 218,000,000 lei, and the annual charge of the debt has grown from 41,000,000 to 54,500,000 lei.

The Army.—The effective strength of the permanent army in time of peace is 1,430 officers and 33,714 rank and file, with 6,969 horses and 370 guns. The strength of the active territorial army is 1,350 officers and 29,679 men, with 11,742 horses. The country is divided into 4 territorial districts, each of which can furnish a *corps d'armée* of 28,000 troops, not reckoning the active division of troops belonging to the separate territorial division of the Dobrudja. The Government possesses 1 torpedo-cruiser, 6 gun-boats, and 5 torpedo-boats for the defense of the Danube. The Prime Minister declared in Parliament, in March, 1888, that Roumania in case of war could put 300,000 soldiers into the field. Fortifications at Focshani, commanding the river Sereth and the railways leading to Galatz and Bucharest, and at Barbosh, near Galatz, where the largest bridge spans the Sereth, were completed in 1888, and others were begun on the Russian frontier that are designed to bar the passage of Russian troops toward the lower Danube.

Commerce.—The values of the imports and exports in 1886, in lei or francs, and their distribution among commercial nations are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	71,407,000	116,627,000
Austria-Hungary.....	9,518,000	84,678,000
Germany.....	73,340,000	2,618,000
France.....	14,495,000	29,134,000
Belgium.....	14,496,000	15,240,000
Russia.....	9,645,000	12,897,000
Italy.....	3,153,000	16,663,000
Turkey and Bulgaria.....	8,985,000	5,993,000
Greece.....	3,400,000	2,713,000
Switzerland.....	2,559,000	68,000
Other countries.....	1,499,000	18,916,000
Total.....	296,497,000	255,547,000

The imports of textiles amounted to 117,000,000 lei; metals and metal goods, 53,800,000 lei; hides and leather, 23,200,000 lei; timber, 12,000,000 lei. The exports of cereals were valued at 184,200,000 lei; fruits, pulse, etc., 21,000,000 lei; wines, 12,800,000 lei.

Railroads.—The state lines in 1888 had a total length of 2,235 kilometres, or 1,390 miles. There were 224 kilometres, or 140 miles, belonging to companies. The railroads in course of construction or in contemplation will add 457 kilometres, or 287 miles, to the network.

Post-Office.—The number of letters and postal-cards, circulars, and newspapers carried in the mails during 1887 was 19,084,914; the number of packets, 533,556.

Telegraphs.—The length of the telegraph lines in 1887 was 5,396 kilometres, or 3,350 miles,

with 11,911 kilometres, or 7,397 miles, of wire. The paid internal messages transmitted in 1887 numbered 830,829; private international messages, 281,264; total number of dispatches, private and official, 1,256,696. The receipts from the postal and telegraph service amounted to 5,049,218 francs, and the expenses to 3,702,567 francs.

The European Commission of the Danube.—The International Danube Commission, created by the Treaty of Paris in 1856 and confirmed by the Treaty of Berlin in 1878, exercises certain sovereign powers over the Danube river below Galatz. When the powers deputed to the commission expired by limitation of time, on March 13, 1883, a new commission was constituted. The financial statement for 1885 shows a total expenditure for the year of 1,805,824 francs, and receipts amounting to 2,627,358 francs, of which 1,430,958 francs were obtained from tolls, and the remainder from special sources. The number of steamers that passed the Sulina mouth of the Danube on the outward voyage in 1886 was 872, of 866,763 tons, of which 564, of 622,201 tons, were British; 61, of 63,140 tons, Greek; 81, of 62,826 tons, Austrian; 49, of 55,772 tons, French; 26, of 20,585 tons, Italian; 60, of 19,736 tons, Russian; and 28, of 22,493 tons, were Norwegian, German, Dutch, and 1 of them Spanish. The Greek sailing-vessels numbered 201, of 39,459 tons, and the Turkish 257, of 33,001 tons, while 49, of 11,344 tons, belonged to other countries. The grain exports from the ports of the lower Danube in 1886 were 6,461,889 quarters, as against 6,070,157 quarters in 1885, and 4,441,039 quarters in 1884.

Political Crisis.—The Conservative ministry of Lascar Catargio, constituted in 1871, made the first attempt to create a Government party and set the national needs and interests above personal and sectional rivalries. Lacking the courage of an energetic initiative, Catargio failed to unlock new financial resources for the growing requirements of the state until he was confronted by a deficit of 80,000,000 lei, and had no money in the treasury to pay salaries and other current expenses. The Conservatives succumbed to the attacks of the Liberals, who, owing to their French sympathies, had been under a shadow since the Franco-German War. Joan Bratiano, the most prominent among those Liberals to whom the King would intrust the Government, formed a ministry in 1876, and with the exception of a few weeks in the spring of 1881, he has guided the policy of the Government for twelve years with the aid of his colleague, Demeter Sturdza. By securing to the state the revenues of the salt and tobacco monopolies, establishing the banking and credit system of Roumania, and completing the railroads, he placed the finances on a solid basis, and developed the economical resources of the country. On the eve of the Russo-Turkish conflict he obtained from Russia the recognition of Roumanian independence, telling

Gortchakoff that without a treaty Russian troops could not march through Roumania except over the bodies of the Roumanians, and in May, 1876, he issued the proclamation of Roumanian independence. He adopted, in opposition to the Radical section of his party, the policy of subservience to German and Austrian wishes to gain protection against Russian aggression, and through this course and the successes of his internal administration drew to his side some of the ablest of the Moderate Conservatives, and built up the National Liberal party, which was supported by the great majority of the voting population. Gradually, however, the reluctance of Bratiano to embrace new reforms, and still more the dictatorial methods of personal government into which his energetic character betrayed him, alienated the strongest men in the Liberal party. Some retired from public life and others formed a Liberal Opposition, of which the brother of the Prime Minister was one of the leaders. These politicians joined forces with the Junimini or Young Conservatives, a group that sprang from a literary society founded in 1867 by Theodor Rosetti, P. Carp, and T. Majoresco, which had for its object the cultivation of German ideas in opposition to the French tendencies of the Liberals. The Young Conservatives were equally removed from the ideas of class rule represented by the Old Conservative or Boyar party, which disappeared from the political field to a great extent after the advent of the Liberal Cabinet. They contributed their money and efforts when the United Opposition was formed, and to their aid was added that of Russian intriguers, who paid liberally for assaults on the German prince and his Philo-German Cabinet. Such was the unbridled license of the Opposition press and orators that a revolutionary spirit pervaded the community in the early part of 1888. There were strong grounds for the charges made against Bratiano's administration that undermined his popularity. Deserted by the best of his fellow-workers, he was obliged to rely more and more on servile and selfish instruments, with no one to aid him in watching and checking abuses and corruption. When the Opposition grew strong enough to threaten the continuance of the ministry, the officials resorted to oppressive expedients to control the elections. The attacks of the press led them to take unusual measures for silencing criticism. Thus the editor of the "*Lupta*" was sentenced and imprisoned for *lèse majesté* until the Government was constrained by popular clamor to pardon him in February, 1888. The chief accusation against the official clique that Bratiano had gathered about him, with more regard to ability than to uprightness, was that they enriched themselves at the public expense by all kinds of corrupt methods. No suspicion of personal dishonesty attached to Bratiano himself; but against officers, high and low, in various departments charges were made in the press, and were generally believed. At

length Col. Maican-Dumitresco, director of the Military School and president of a commission for the trial of weapons, was arraigned before a court-martial for demanding a bribe of 40,000 lei for recommending a revolver from Capt. Dimancea, its inventor. As the investigation proceeded it was found that the go-between in this transaction, the English commercial agent Broadwell, who represented the firm of Sir William Armstrong, had paid the brother of the culprit, Gen. Maican, commander of the flotilla, a heavy bribe while he was secretary of the Ministry of War, and thus induced him to reveal the sealed bids for two new cruisers. While the trial of the two officers was pending, the Chambers met in February, 1888, and members of the United Opposition gave notice of interpellations affecting the personal character of many men connected with the Government. Bratiano had emerged from the parliamentary elections with a majority of full two thirds. The new Chamber of Deputies was composed of 126 Ministerialists, 49 members of the United Opposition, 7 Independents, and 1 Socialist. Although Bratiano obtained a vote of confidence of two to one, the situation was such that he offered his resignation on March 2, 1888, and Prince Ghika attempted to form a coalition Cabinet. He failed because the leaders of the Opposition imposed unacceptable conditions, and the Bratiano Cabinet was reconstructed, Ministers Raduchihai, Statesco, and Gheorghian, of the Departments of the Interior, Justice, and Domains and Commerce, retiring. The Cabinet as reconstituted was composed as follows: President of the Council and Minister of War, Joan C. Bratiano; Minister of Foreign Affairs, M. Pherekyde; Minister of Public Instruction and Worship, C. Naku, who assumed provisionally the portfolio of the Interior; Minister of Public Works, P. S. Aurelian; Minister of Commerce, M. Gane; Minister of Justice, M. Giani. The troubles of the Bratiano-Sturdza ministry were precipitated by the revelations of bribery in the War Department, from which Gen. Angelesco had retired some time before the attacks in the Chamber impelled Bratiano to carry out his frequently declared intention of resigning. When he was, nevertheless, induced to resume the helm, and the same ministry, with slight changes, returned to power, the Opposition redoubled its attacks, and in the press wholesale charges of maladministration and corruption were brought. The Russian minister at Bucharest, Hitrovo, spurred on the malcontents. The Opposition, not content with the violent scenes that they enacted in the Chambers, arranged popular demonstrations and mass meetings. The Government attempted to put a stop to these by issuing a police regulation forbidding public gatherings. Several meetings were broken up by the military, who wounded many persons. This suppression of the right of assemblage was the occasion of a stormy sitting in the Chamber on March 26. It had the

approval, however, of a large section of the trading community of Bucharest, and they offered a dinner to the Prime Minister, who was hooted by the people on his way to the saloon. In the evening the deputies of the Opposition went to the royal palace, and, while a mob gathered in front shouting for the dismissal of the ministry, they demanded an audience with the King in order to lay before him the wishes of the people. King Carol sent word to the spokesman, Lascar Catargio, the ex-Premier and leader of the Old Conservative party, that he would not receive him before morning. The street before the palace was cleared by the military, and finally the deputation of legislators left the palace. On the following day an appeal that was signed by all the Opposition members of the Senate and Chamber was distributed from the office of the "Epoca" newspaper, and in accordance therewith the members marched with bared heads through the streets to the legislative hall, in order thus to express their grief at the bloodshed that had occurred. The guards were unable to keep out the crowd that followed, and in the struggle many revolver-shots were fired, some of them by deputies. One of the doorkeepers was killed. Troops were sent on the demand of Gen. Lecca, President of the Chamber, and many persons were arrested, among them two deputies, Nicholas Fleva, ex-Mayor of Bucharest, and M. Philipesco, and the editors of the "Epoca" and the "Indépendance Roumaine." Opposition politicians meanwhile made incendiary addresses to the people on the streets. In the judicial inquiry evidence was brought to show that many of the Radical deputies were armed, and that from the direction of the shots the intention was to kill Bratiano, who happened to be absent in audience with the King. On the 31st a vote of want of confidence in the ministry, coupled with a demand for the liberation of the imprisoned deputies, was lost by 90 against 42 votes, and a simple motion for the release of the deputies by 83 against 45 votes, after which the Government party carried, by a majority of 87 against 36, a vote of confidence based on the charges against the Opposition of disturbing the peace of the land and jeopardizing its political position by intemperate speeches and shameless newspaper attacks, and finally violating the privacy of the King and the independence of Parliament, when every member was free to exercise the fullest liberty of criticism. The personal questions that had been brought up made it impossible for the Cabinet to remain in office, and Bratiano was determined not to head another ministry, whatever might be its composition. The King appealed to Prince Demeter Ghika, the President of the Senate, and when he for the second time declined, turned to the Young Conservatives because the leaders of the Liberal Opposition and of the Old Conservatives had made themselves impossible by their connection with the recent disturbances. Theodor

Rosetti, President of the Court of Cassation and a member of the Senate, was invited to form a Cabinet, which was constituted on April 2 as follows: President of the Council and Minister of the Interior, T. Rosetti; Minister of Foreign Affairs, P. P. Carp, formerly Minister Plenipotentiary to Vienna; Minister of Education and Provisional Minister of Commerce, J. Majoresco; Minister of Justice, A. Marghiloman; Minister of Finance, M. Ghermani; Minister of Public Works, Prince A. B. Stirbey; Minister of War, Gen. C. Barossi, Adjutant-General of the King. Prince Stirbey and Ghermani belong to the Old Conservative party. The first act of the new ministry was to release the imprisoned deputies and journalists. The majority promised to vote the budget and observe an expectant attitude if the new elections were postponed till the autumn, whereas the minority demanded that they should take place soon. The ministry promised to hold the elections as soon as the agitated state of public feeling subsided, and on April 15 the regular session was closed.

Peasant Insurrection.—Just before the closing of Parliament the new Cabinet had to deal with an outbreak of agrarian discontent which began in the sub-prefecture of Urticeni in the Jalomitza district, and spread into the neighboring districts of Prahova and Iloof. In the sub-prefecture of Panteleimon in the Iloof district, which reaches to the city-bounds of Bucharest, the entire peasantry rose against the local authorities, the landlords, and the tenant farmers, and stoned the military that were sent out to restore order, but commanded not to use their weapons. In the village of Stefanesci, near the capital, the mayor was shot by the insurgents. In many places they attacked unpopular estate stewards and extortionate farmers, and in others the local officials, whom they accused of keeping back the money that the Government had given to relieve their distress. The occurrence of disturbances in various other sections of the country showed that agencies had been at work to foment trouble, and the fact that hawkers of Russian pictures of saints and of the Czar had told the peasants of many villages to demand land of the Government, and said that if it were refused Russian troops would come to their aid, as well as the story of large sums left for each village by the Russians, which was spread among the gypsy communes of Shindrelita, indicated the source of the agitation. Premier Rosetti declared in the Chamber that the instigators of the disturbance were not Roumanians. The Government adopted severe measures to put down the disturbances. Bands of peasants who were marching to Bucharest to present their grievances to the Government were fired into by detachments of soldiers, and many were shot. The territorial militia was first called out, but it showed open sympathy with the rioters, and was replaced by regular soldiery. The important town of Kalarasch

was on April 17 entirely in the power of the insurgents, until a detachment of troops arrived, and in the encounter that took place killed a large number of peasants. At Perish, north of Bucharest, the insurgents attacked the railroad station. At Budescht the troops killed or wounded more than 100 peasants.

The troubles had their root in the same conditions that have caused uprisings in the Russian peasantry. When serfdom was abolished there were 72,108 peasants possessing two yoke of oxen, to whom were allotted 11 *pogon*, or 13½ acres, each; 199,791 who had a single team, and received 7 *pogon*, or 8½ acres; and 134,995 without draught-animals, whose share was 4 *pogon*, or 5 acres, for each family. The right to pasturage and wood, which they had enjoyed as serfs, was taken away from them, and the land that was assigned to them was usually selected by the land-owner from the poorest or the most inaccessible part of his estate. The peasants, who were made to pay in installments the price of good land, often found their allotments measured out in worthless bogs or rocky hills. The boyars have always lived away from their estates as a rule, the smaller landlords entering the professions or the Government service. Since the emancipation of the serfs they have been accustomed to lease their estates, usually for three or five years, to speculative farmers, Jews, Greeks, and Bulgarians, whose rent depends not so much on the extent or quality of the land as on the number of peasants living on the property. The peasants are kept in a condition of practical serfdom by these tenant farmers, who exact so many days' labor for fuel and fodder that the peasants are compelled to purchase on the farmers' terms. Advances of money the peasants likewise contract to repay in work. The peasants are forbidden by law to alienate their allotments, and are thus prevented from acquiring one from another enough land to make them independent of the land-owners and farmers. The boyars will not sell land to peasants on any terms, although a considerable part of their estates must remain idle for want of labor to cultivate it. The peasants' allotments, originally much too small because the villages possess no common pastures, have been divided by inheritance. In the gypsy villages there are large numbers of cottiers who have no land. The peasants often rent land, usually the poorest that there is, from the farmers or landlords, paying a third of the produce crop and in addition agreeing to work for their landlords, who often exact so much labor that the peasants are unable to attend to their own crops. A deficient maize and fodder crop in 1887 was followed by a severe winter. The peasants were compelled to sell the cattle that they could not feed, and were in consequence reduced to extreme misery. The Government took measures to relieve distress, but the aid did not reach the sufferers soon enough, and was altogether insufficient. The insurrec-

tion was put down in a few weeks, and the peasantry were appeased by promises. The plan of distributing crown lands among them was taken into consideration. When no effective practical measures were taken to relieve the distress, new outbreaks occurred sporadically during the summer and autumn. An attempt on the life of the King, although without serious political significance, was a sequel of the peasant uprising. In the evening of May 7 a former police-officer named Preda Fontanaro fired two shots at the palace, one of which entered the window next to the room where the King was. The perpetrator of the murderous attempt, a dissipated man, was clothed in the dress of the peasantry, and, when questioned as to his motive, said that he desired to avenge the many peasants who had been shot by the military during the disturbances. The total area of Roumania is about 30,000,000 acres, of which 5,000,000 acres are forest. The emancipated serfs received something over 3,250,000 acres, and the free communes, which always existed in the mountainous part of the country, possess an equal amount. The remaining 18,500,000 acres are divided between the state, which has confiscated the extensive possessions of the monasteries, charitable corporations, and the landed nobility. Some of the boyars own 25,000 acres. Yet as a rule the large estates range from 1,250 to 4,000 acres, and the small ones from 125 to 625 acres.

General Election.—The ministry, refusing the demand of the Radicals for speedy elections on the ground of the excited state of the country, did not dissolve the Chamber and order new elections till September 20. The old Conservative or Boyar party profited by the delay and put forth its whole strength, while attempts to reunite the party of Demeter Bratiano with the Liberals who had adhered to his brother came to naught. The Old Conservatives were victorious in the elections, returning a clear majority that was able to dictate the policy of the Junimist ministry, or to overturn it at any time. The ministry was reconstituted on November 24, after the election of Lascar Catargio to the presidency of the Chamber. Rosetti remained Minister President, but without a portfolio, while the Conservative Prince Stirbey, son of a former hospodar of Wallachia, succeeded him as Minister of the Interior, giving up the portfolio of Public Works to Marghiloman, who gave place in the Ministry of Justice to a new member of the Cabinet, Vernesca, the possessor of great wealth, and one of the leaders of the Conservative party. Gen. Barossi, who owned no party ties, was succeeded in the Ministry of War by a Conservative, Gen. Mano. The portfolio of Agriculture, Commerce, and Domains, which was held *ad interim* by Carp, was intrusted to Alexander Lahovary, one of the bitterest of the assailants of Bratiano's Cabinet and the leader of a movement to protest against the crown domains, which

were declared to be a robbery of state property. With others of his family, he has taken the lead in the pro-Russian and anti-dynastic opposition within the Conservative party. The results of the general election were the return of 51 Conservatives, 39 Junimists, 31 Independent Liberals, 5 partisans of Joan Bratiano, 4 Socialists, and 42 Ministerialists. Ex-Premier Bratiano lost his seat. The success of the Boyar party compelled the Government to abandon its project of dividing a part of the public domains among the landless peasantry in lots of from four to eight acres. The Conservatives, under threats of a dissolution, agreed to allow the ministry to proceed with its bills for establishing a national bank and a gold currency, and making the higher judiciary irremovable except for cause, and promised not to oppose the foreign policy of the Cabinet. The compromise ministry, nevertheless, could not stand, and on December 31 the Parliament was dissolved, and new elections were appointed for Feb. 4, 1889.

ROUTLEDGE, GEORGE, an English publisher, born in Brampton, Cumberland, Sept. 23, 1812; died in London, Dec. 13, 1888. He served as an apprentice to Charles Thurnam, in Carlisle, in

GEORGE ROUTLEDGE.

1827-'33, and then entered the employ of Baldwin and Cradock, at a salary of £60 a year. At first his special duty was to collect books from other publishers for the country booksellers for whom that house was agent, and later he was given charge of the bindery. In September, 1836, he began business on his own account in Ryder's Court, Leicester Square, as a retail bookseller and purchaser of books at sales, supplying new books as they were ordered. His first book, "The Beauties of Gilsland Spa" (1836), proved a failure, as it depended upon local sale entirely. In November, 1837, he was given charge of the documents in the Tithe Office, where he remained for four years, be-

ginning with a salary of £80 a year. Meanwhile he continued his publishing-house, also doing some stationery business, which proved profitable and increased his capital for other ventures. He removed to Soho Square in 1843, and began the publication of Barnes's "Notes on the Old and New Testaments," in twenty-one volumes. In 1848 he began the "Railway Library," with "The Pilot," by J. Fenimore Cooper, and the series is still continued, now numbering upward of a thousand volumes. It includes the "Colleen Bawn," of which 30,000 copies were sold, and "The Romance of War," of which more than 100,000 copies have been sold. Another series, called the "Popular Library," comprising travels, biography, and miscellaneous works, was begun about the same time. In 1852 he removed to Farringdon Street, and there published an edition of "Uncle Tom's Cabin," of which over 500,000 copies were sold, also a companion volume, called "The White Slave," of which 100,000 copies were sold. Of Miss Warner's "Wide, Wide World" and "Queechy" enormous editions were disposed of. These editions of American books were all "pirated," no compensation being given to the authors. In 1853 Mr. Routledge entered into an engagement with Sir Edward Bulwer, to pay him a sum of £20,000 for a term of ten years, to republish nineteen of his novels in the "Railway Library." Ultimately he paid this author in all £40,000 for his works. Mr. Routledge came to New York in 1854, and established an agency. Later, he was the first to publish an edition of Oliver Wendell Holmes's poems in England, and in 1855 issued Longfellow's poetical works, illustrated by John Gilbert, whose drawings were engraved by Dalziel Brothers. In 1857 he began the publication of Shakespeare's works in monthly parts, illustrated by Gilbert. This edition was edited by Howard Staunton, and the outlay, exclusive of printing and binding, was £10,000. Another important work issued by him was the Rev. J. G. Wood's "Natural History," for which the plant cost £16,000. In 1868 he issued Longfellow's "New England Tragedy," and later his translation of Dante. He began in 1883 the "Universal Library," edited by Henry Morley, comprising standard works of the best old authors. In all, Mr. Routledge published more than 5,000 volumes during the fifty years that he was in business, an average of two a week. He retired from business in 1887, and at that time a public dinner was given him. Mr. Routledge was a justice of the peace in Carlisle, and deputy lieutenant of Cumberland County.

RUSSIA, an empire in Northeastern Europe. The supreme legislative, executive, and judicial authority resides in the Emperor, who is assisted by the Council of the Empire, which examines every project of law; the Senate, which promulgates every new law and is the high court of justice for the empire; the Holy Synod, which superintends ecclesiastical affairs

and decides religious questions; and the Committee of Ministers.

The reigning Emperor is Alexander III, born Feb. 26, 1845, who succeeded to the throne at his father's death by assassination, March 13, 1881. The heir-apparent is the Grand Duke Nicholas, born May 18, 1868, eldest son of the Czar and of the Czarina Maria Dagmar, a daughter of King Christian IX of Denmark. The Czar's Cabinet of Ministers is composed as follows: Minister of the Imperial Household, Gen. Count Vorontzoff-Dashkoff; Minister of Foreign Affairs, Nicholas Carlovich de Giers; Minister of War, Gen. Vannofsky; Minister of Marine, Vice-Admiral Shestakoff; Minister of the Interior, Count Tolstoi; Minister of Public Instruction, M. Delyanoff; Minister of Finance, M. Vyshnegradsky; Minister of Justice, M. Manasein; Minister of Domains, M. Ostrofsky; Minister of Public Works and Railroads, Admiral Possiet; Comptroller-General of the Treasury, M. Solsky. The Grand Dukes Michael and Constantine are also members of the Committee of Ministers, the President of which is M. Bunge, ex-Minister of Finance.

Area and Population.—The area of the geographical divisions of the Russian Empire, in square miles, and their population in 1885 are given in the following table:

DIVISIONS.	Area.	Population.
Russia in Europe.....	1,902,092	81,725,185
Kingdom of Poland.....	49,157	7,960,304
Grand Duchy of Finland.....	144,255	2,232,373
Caucasus.....	182,505	7,284,547
Siberia.....	4,824,570	4,313,650
Central Asia.....	1,320,387	5,327,098
Sea of Aral.....	25,768
Caspian Sea.....	169,670
Sea of Azov.....	14,421
Total.....	8,632,925	108,843,192

The population of Russia in Europe and Poland together is 89,685,480, consisting of 44,524,239 males and 45,161,250 females. The population of the Caucasus consists of 3,876,868 males and 3,407,679 females; that of Siberia of 2,146,411 males and 2,002,879 females; that of Central Asia into 2,448,085 males and 2,207,563 females. The following cities in European Russia contained more than 100,000 inhabitants in 1885: St. Petersburg, 861,303; Moscow, 753,469; Warsaw, 454,298; Odessa, 240,000; Riga, 175,332; Kharkov, 171,416; Kiev, 165,561; Kasan, 139,915; Saratov, 122,829; Kishinev, 120,074; Lodz, 113,413; Vilna, 102,845. The largest cities of Russia in Asia are Tashkend, with 121,410 inhabitants, and Tiflis, the capital of the Caucasus, with a population of 89,551. The population of St. Petersburg on June 27, 1888, was 842,883, of which number 488,990 were males. This shows a falling off of 85,133 as compared with 1881, and even this does not measure the entire decline, because the former census was taken in the winter, and does not include workmen from the provinces engaged in building, who figure for 41,696 in the returns for 1888.

Finances.—The financial account for 1887 makes the total ordinary receipts 829,661,000 rubles, and the extraordinary receipts 144,543,000 rubles. Of the ordinary receipts 41,102,000 rubles were derived from the land and forest taxes, 28,862,000 rubles from patents, 11,677,000 rubles from the income-tax, 257,624,000 rubles from the tax on drink, 24,093,000 rubles from the tobacco-tax, 23,162,000 rubles from the sugar-duty, 107,425,000 rubles from customs duties, 18,242,000 rubles from stamps, 10,282,000 rubles from registration fees, 24,417,000 rubles from various indirect imposts, 29,397,000 rubles from the post-office, telegraphs, and royalties, 51,298,000 rubles from railroads, forests, and mines, 88,957,000 rubles from payments for land redemption, and 108,727,000 rubles from other sources. The total expenditures for ordinary purposes in 1887 amounted to 835,850,000 rubles, and the extraordinary expenditures to 95,093,000 rubles. Of the ordinary expenditures, 280,908,000 rubles were for the public debt, 210,953,000 rubles for military purposes, 109,067,000 rubles for financial administration, 40,359,000 rubles for the navy, 72,576,000 rubles for the Interior Department, 25,834,000 rubles for highways, 20,684,000 rubles for public instruction, 20,443,000 rubles for the judiciary, 22,350,000 rubles for domains, 10,999,000 rubles for the Holy Synod, and 10,560,000 rubles for the court.

The gold value of the paper rouble in the spring of 1888 fell to 45 per cent. below par, a lower point than it had yet reached. Only 20 per cent. of the depreciation is due to inflation, the remaining 25 per cent. being accounted for by the fall in silver. The exchange market for the rouble is in Berlin, where Russian currency has become an object of speculative manipulation, which interferes seriously with the foreign trade of Russia, and has lately caused distrust of the paper rouble in Russia, although it has hitherto passed freely from hand to hand amid all fluctuations. The exchange rates are raised or lowered on the Berlin Bourse by corners and false rumors in connection with enormous speculative dealings in the Russian internal loans. The metallic rouble in March was worth 1·80 paper rouble, against 1·67 in 1887, and 1·50 in 1886. The Government in 1881, and again in 1887, decreed the redemption of all paper currency not guaranteed by a metallic reserve, and has repeatedly declared its intention to recall and destroy the 266,000,000 rubles of paper money that were issued during the Turkish war. In February, 1888, the new Minister of Finance presented a project for establishing a metallic standard. On July 20 the minister was empowered by an imperial ukase to issue 15,000,000 rubles of additional paper currency against deposits of gold, merely as a temporary measure to facilitate the large export movement of grain. Another issue of credit-notes of the same amount was decreed in October.

The internal debt, payable in paper rubles, amounted on Jan. 1, 1888, to 3,104,899,764 rubles. In addition, the Government owed at that date 391,505,969 metallic rubles, 66,068,000 Dutch florins, £122,271,720, and 552,081,000 francs. There were in circulation 780,032,238 rubles of paper money, of which 211,472,495 rubles were protected by a reserve. A new loan contracted in 1887 yielded 81,068,000 rubles, of which 45,093,000 rubles were applied to the construction of railroads and harbors. A 4-per-cent gold loan of 500,000,000 francs for the conversion of old 5-per-cent. debts was offered in Paris on December 10, and found subscribers for six times the required sum.

The Army.—The peace strength of the Russian army in the beginning of 1887 was 659,274 men. The war effective of the regular army is about 1,689,000 combatants, including 36,600 officers, with 3,776 guns and 204,390 horses. The Cossack troops, a great part of which have been incorporated in the regular army, have a peace strength of 47,150 men, and a war strength of 140,033 men, inclusive of 3,644 officers. The irregular forces, comprising Tartars, Georgians, and Turkomans, number 5,769 men, of whom 1,420 are infantry and 4,349 cavalry. The *opol'tchenie* or militia, which is about equal in numbers to the rest of the armed forces, brings up the total military strength of the empire to nearly 4,000,000 men.

In accordance with an imperial ukase published on July 13, the recruit of the army for 1888 was 250,000 men, an increase of 15,000 over the previous year. A second law fixes the duration of military service at eighteen years, of which five are spent in the active army, and the remainder in the two classes of the Landwehr, the second of which can only be called into active service by a proclamation of the Czar. Although the legal period of service in the active army is shortened by a year, the actual term of service with the colors will probably be a year longer than under the old law, when the men were furloughed on the average two years out of the six. The entire period of military service is made three years longer, increasing the strength of the regular army on the war footing by 750,000 men nominally, and in reality by not less than 400,000.

In the latter part of 1887 the movement of Russian troops toward the western frontiers and unprecedented activity in building barracks, fortifications, and military railroads created alarm in Austria and Germany, and necessitated the strengthening of the frontier garrisons in Prussia and Galicia. The Russian Government explained the dislocation of troops as the execution of a plan that had been in existence for a long time, and while Prince Bismarck accepted this assurance with equanimity, M. Tisza declared in the Hungarian Chamber in January, 1888, that measures would be taken by the Austro-Hungarian Government for contingencies that might imperil the security of the frontiers. The Russian forces on the west-

ern frontier at that time numbered 123,275 men, with 24,198 horses and 274 field-cannon. In March re-enforcements of about 100,000 men arrived. Works were begun at Libau which will transform it by 1890 into a military port, with a harbor formed by two breakwaters. There were 96 barracks erected along the frontier of Austria and Germany, and about 100,000 cavalry were held in readiness to cross the frontier at a moment's notice. Two branch lines of the Ivangorod-Dabrova Railroad running to the Austrian and Prussian frontiers were opened in the spring. At Rovno, Ivan-gorod, and other places in the western districts new fortifications were constructed.

The Navy.—Russia in 1888 had 32 iron-clads, 39 armed steamers, 59 other steamers, 8 sailing-vessels, and 95 torpedo-boats in the Baltic Sea; 7 iron-clads, 27 armed steamers, 59 unarmed steamers, and 16 torpedo-boats in the Black Sea; 12 armed and 4 unarmed steamers in the Caspian Sea; 6 steamers in the Lake of Aral; and 8 armed steamers, 13 unarmed steamers, and 6 torpedo-boats on the Pacific coast. The most powerful vessels are the "Tchesma" and "Catherine II," which were launched in the Black Sea in 1886, and the "Sinope," which was launched in June, 1887, each of which has a displacement of 10,180 tons, and carries six 12-inch and seven 6-inch guns. The armor at the water-line is 16 inches thick. The guns are mounted in a casemated, pear-shaped redoubt. The "Alexander II" and the "Nicholas I," 2 barbette cruisers of 8,440 tons, have 14 inches of armor above the belt, and are armed with two 12-inch, four 9-inch, and eight 6-inch guns. These vessels—the latter of which was launched on the Neva in October, 1888—are of the same type as the English "Imperieuse," but heavier and more powerfully armed. The "Pamiat Azoff," which was launched in the Baltic on June 1, 1888, is an iron-clad frigate of 6,000 tons displacement, carrying 14 heavy long-range guns, 15 machine-guns, and 3 torpedo-guns.

Commerce.—The values in rubles of the imports and exports of merchandise in 1886 and the shares of the different countries in the foreign commerce of Russia are exhibited in the following table:

COUNTRIES.	Imports.	Exports.
Germany	135,354,000	119,210,000
Great Britain.....	110,071,000	143,934,000
France.....	12,274,000	30,292,000
Austria-Hungary.....	16,996,000	25,316,000
Netherlands.....	3,998,000	36,795,000
Turkey.....	16,901,000	16,583,000
China.....	30,016,000	1,615,000
Italy.....	7,731,000	21,947,000
Belgium.....	8,894,000	18,190,000
United States.....	26,774,000	332,000
Sweden and Norway.....	5,632,000	14,569,000
Persia.....	10,256,000	6,129,000
Greece.....	845,000	9,103,000
Denmark.....	1,175,000	5,378,000
Roumania.....	2,461,000	4,014,000
Other countries.....	48,838,000	35,077,000
Total ..	438,206,000	488,484,000

The imports by way of the Baltic ports in 1886 were of the value of 152,400,000 rubles; the exports, 144,500,000 rubles. The value of the imports from European countries brought by railroad was 150,400,000 rubles, and that of the exports by way of the land frontiers was 114,100,000 rubles. The imports at the ports of the Black Sea were valued at 78,800,000 rubles, and the exports at 172,300,000 rubles. The imports passing by way of the White Sea were 1,300,000 rubles in value, and the exports 5,600,000 rubles. The imports from Finland amounted to 9,900,000 rubles, and the exports to Finland to 16,600,000 rubles. The imports across the Asiatic frontiers amounted to 45,400,000 rubles, and the exports to 35,400,000 rubles.

The imports of alimentary products in 1887 across the European frontiers were valued at 50,397,000 rubles; exports, 350,640,000 rubles; imports of materials, raw or partly manufactured, 224,404,000 rubles; exports, 193,262,000 rubles; imports of live animals, 498,000 rubles; exports, 11,991,000 rubles; imports of manufactured articles, 57,940,000 rubles; exports, 12,627,000 rubles; total merchandise imports in 1887, 333,239,000 rubles; total exports, 568,520,000 rubles.

The overland exports to China in 1887 consisted of 2,353,502 rubles worth of Russian merchandise, 251,914 rubles worth of other European products, 2,924,085 rubles of the precious metals, and 309,860 rubles of paper currency. The principal articles of Russian produce were grain, hogs, sugar, cotton goods, Russia leather, sheepskins, and furs. During the same year China exported to Russia 26,456,557 rubles worth of merchandise, in which total the single article tea stands for 24,097,679 rubles.

Agriculture.—The grain belt in European Russia stretches from the government of Teher-nigoff, on the middle Dnieper, to the Ural mountains. North of it is the zone containing the industrial cities, between which and the tundras of the Arctic Circle the great forests extend from Poland and the western governments northeastward to the Ural. In the southern part of the wheat belt is the "black-earth" country, a vast plain extending from Kremen-tchug on the Dnieper to the other side of the Volga. Herds of horses and sheep cover the steppes farther south. The productive land in Russia amounts to 70·4 per cent. of the entire surface, 20·4 per cent. being occupied by farms and gardens, 11·9 per cent. by pastures, and 38·1 per cent. by forests. The number of persons employed in agriculture in Russia, exclusive of Poland, is about 48,000,000. The economical condition of this population has in some respects become worse since the emancipation of the peasants from serfdom. The insufficiency of the land transferred to the peasants, their drunkenness, which has been actually fostered by the Government in order to swell the revenue from excise duties, and their indolence, which is a consequence of the commu-

nistic *mir* system, have reduced the whole class to poverty and debt. The nobility, owing to their lavish way of living and their ignorance of practical affairs, are in still worse case. Russians say that there is hardly an estate outside of the "black-earth" region that is not mortgaged for its full value. More blighting even than the vices of the people is the corruption of the officials, who embezzle the funds that are raised for public improvements and draw blackmail from every private enterprise. The grain-crop in 1886 was poor, and in 1887, though the harvest was abundant, prices were very low. Protective duties in Germany and other countries have seriously injured the export trade in Russian cereals. In 1888 the reported yield of autumn wheat, excluding Poland, was 11,445,000 quarters, being 39 per cent. above the average; of spring wheat, 18,480,000 quarters, or 3 per cent. better than the average; of rye, 85,400,000 quarters, 9 per cent. more than a normal crop; of oats, 63,160,000 quarters, exceeding the average by 4 per cent.; of barley, 16,284,000 quarters, which was 6 per cent. above the average. Count Tolstoi in 1888 proposed a bill prohibiting peasant proprietors from selling their land. The peasants have in recent years purchased largely of the nobles, whose land was unremunerative in their own hands. The transfers have been facilitated by the Peasants' Credit Bank, established under Government patronage, which during 1887 made 5,000 loans, 4,300 of them to *mir*s or rural associations containing in all 590,000 members. The sum of the loans was 50,000,000 rubles, with which 3,400,000 acres were bought. More recently the Government has founded a Nobles' Bank to prevent the lands of the hereditary proprietors from passing into the hands of commercial men and usurers. The question of constructing grain-elevators was considered in 1888 by a special commission, which recommended building with Government means elevators at the export ports and on the lines of railroad with capacity for 600,000,000 kilogrammes, the amortization of the required capital of 20,000,000 rubles being provided for by an export tax of half a copeck per pood, yielding 1,500,000 rubles on a minimum export of 300,000,000 poods. This improvement will tend to place it out of the power of traders to control and dictate prices as they do, paying sometimes only half as much for one farmer's grain as for that of his astuter neighbor.

Navigation.—There were 5,373 vessels entered and 5,329 cleared at the ports of the Baltic during 1886; 647 entered and 625 cleared at Archangel, on the White Sea; 4,483 entered and 4,481 cleared in the ports of the Black Sea and the Sea of Azov; and 1,087 entered and 1,005 cleared at the ports of the Caspian Sea. Of the 11,590 vessels entered at all ports, 7,204 were steamers; and of 11,440 cleared, 7,122 were steamers. Of the total number, 2,485 were Russian vessels, 2,828 English, 1,439 German, 1,397 Swedish and Norwegian, 757 Greek, 637

Turkish, 776 Danish, 639 Austrian, and 185 Dutch. The number of coasting-vessels entered was 37,656, of which 14,708 were steamers. The merchant navy in 1886 numbered 2,157 sailing-vessels of 469,098 tons, and 218 steamers of 108,295 tons. The Russian marine in the Caspian is rapidly increasing, 10 new iron steamboats having been finished in 1888, making a total of 70 steamers, besides many sailing-vessels. The Government has granted an annual subsidy of 111,000 rubles to a new line of steamers between the Russian Pacific ports and the ports of Corea, Japan, and China, which in time of war will be at the disposal of the Government.

Railroads.—The railroad network completed at the beginning of 1888 had a total length of 26,964 kilometres, or 16,745 miles, exclusive of the railroads of Finland and the Transcaspian line of 660 miles. The amount invested in railroads at the end of 1885 was 2,800,000,000 rubles, and the net revenue they produced was 87,400,000 rubles. The Transcaspian Railroad to Samarcand was opened with public ceremonies on May 27, the anniversary of the Czar's coronation. When Gen. Skobelev took command of the Transcaspian territory in 1880 it was with the condition that Kysil Arvat should be connected with the Caspian Sea by a narrow-gauge railroad. After the conquest of Merv the railroad, on which camels were used instead of locomotives, was extended to the Akhal-Tekke oasis. Gradually the plan expanded, and the tramway was converted into a broad-gauge steam-railway, and carried across the newly acquired Turkoman districts into the Turanian khanates on the other side of the Oxus. The ukase authorizing this railroad was issued on May 20, 1885, and within three years the line was built to Samarcand which is destined to play an important part in the commercial development of Central Asia, as well as in furthering the political and strategical plans of Russia by enabling the Government to store reserves and supplies at Merv, Sarakhs, Penjdeh, Chardjui, and Kerki, and in a short space of time to concentrate an army of 100,000 men on the Asiatic frontier. The railroad is expected to give Russian manufacturers a great advantage over their English and French competitors in the markets of Central Asia, and to lead to a large development of the material resources of the Russian dominions in that part of the world, especially of the cotton-culture in Turkistan, Ferghana, and Samarcand. The cost of the line, which has a total length of about 1,000 miles, was \$43,000,000 rubles. The embankments and stations are nearly all, however, of a temporary character, and must be replaced by permanent works at a cost of many more millions. The Transcaspian line connects all the trade-routes converging in the Black Sea with Central Asia, and will be joined with the Indian system if English fears will allow. A new railroad from the Vladikavkas line through the Kuban valley to Novorossi,

on the Black Sea, was opened to traffic on March 27, 1888. The communications of the Transcaucasus will be greatly improved by the Suram Tunnel, which is nearly completed between Tsipa and Malita. The route of the projected Siberian railroad has been surveyed as far as Irkutsk. It will start from Tomsk, and pass through Marjinsk, Krasnojarsk, Irkutsk, Verkne, Oudinsk, Chita, Stretensk, and Nikol'skoi, to Vladivostock, on the Pacific coast. A branch line will be constructed to the Transbaikal province between Lake Baikal and the Chinese frontier. The European connection of the Siberian line will be with a railroad from Samara running through Omsk, which was completed as far as Ufa, in Astrakhan, in September, 1888, and is being extended to Stastusk. A private capitalist has undertaken to build a railroad from the river Obi to the Bay of Chainuder, an accessible port in the Arctic Ocean, in order to compete in the wheat, cattle, fish, fur, and timber trades of western Siberia, with the English company that made an unsuccessful attempt in 1888 to take a freighted steamer through the Sea of Kara.

Post-Office.—The number of ordinary letters forwarded in 1886 was 150,348,689; of postal-cards, 15,333,686; of registered letters, 13,087,881; of letters containing valuables, 11,017,635; of journals, 106,100,275; of sealed packets, 20,986,078. The receipts in 1886 were 67,694,516 francs, and the expenses of the postal and telegraph service 99,852,560 francs.

Telegraphs.—The length of the state telegraph lines in 1886 was 107,574 kilometres; length of wires, 204,043 kilometres. Including railroad and private lines, the Anglo-Indian line, and military and police lines, there were 116,692 kilometres of telegraph lines in the empire, with 267,414 kilometres of wire. The number of internal dispatches in 1886 was 8,371,187; international dispatches sent, 559,754; received, 568,815; dispatches in transit, 130,202; official dispatches, 660,833; total, 10,290,791. The receipts in 1886 were 35,869,680 francs.

Foreigners in Russia.—Statistics compiled by the Ministry of the Interior show that the yearly average of foreigners arriving in Russia has been 800,000, and of those who leave the country 750,000. During the ten years ending with 1881 there were 9,458,132 arrivals and 8,025,198 departures. Among the number entering the country were 4,871,571 Germans, 1,305,133 Austrians, 255,207 Persians, 122,771 French, 70,387 Turks, 41,878 Roumanians, Bulgarians, and Servians, 20,691 English, 17,359 Italians, 14,885 Greeks, and 120,638 of other nationalities. Stringent passport regulations and restrictions on the enterprise of foreigners have been the rule during the past three years. In 1887 all foreigners were prohibited by an imperial ukase from holding or leasing lands. This is a reversal of the policy the Government has followed steadily since the year 1815.

Russification of the Baltic Provinces.—The Government has ordained that instruction in the gymnasia and secondary schools in Revel, Dorpat, Goldingen, Libau, Birkenrub, and Fellin shall henceforth be given in the Russian, instead of in the German language. When the Esthonian and Livonian nobility protested against the banishment of their mother-tongue from the schools in which their sons are educated the Minister of Education replied that the only alternative would be to abolish the schools and demand the restitution of the sums contributed by the Government to their erection and endowment. The Directing Senate in April rejected a complaint against a decree of the Governor of Livonia according to which no report or document in the German language will be received by the courts or the municipal authorities. The Senate also decided that no part of the local revenues of the Baltic provinces can henceforth be diverted to ecclesiastical purposes, which will deprive many Protestant religious institutions of a considerable portion of their income. A proposition of Count Tolstoi, made at the suggestion of the Procurator of the Holy Synod, whereby the Minister of the Interior shall have the power to remove Evangelical pastors in the Baltic provinces after they have been suspended by the Governor, was approved by the Council of the Empire, but encountered such opposition on the part of influential statesmen that the Czar ordered the matter to be reconsidered, with the result that a majority of 28 against 16 voted against the proposition. Afterward the Czar, yielding to Panslavist arguments, changed his own mind, and confirmed the decision of the minority. The Swiss branch of the Evangelical Alliance addressed a petition to the Emperor which was answered by Procurator-General Pobedonostzeff. The reason for clothing the Minister of the Interior with powers that the Czars never assumed in former times is found in the return to the Protestant faith of many of the Letts and Esths who have lately been induced to enter the Orthodox Church. This movement the Russian Panslavists expect to check by deposing every Protestant pastor who exerts himself to undo the extraordinary proselyting work of the Russian clergy among the Slav peasantry of the German provinces of Russia.

Closing of the Universities.—Toward the close of 1887 students' riots occurred in many of the universities and other educational institutes. The disturbances began in Moscow, where the inspector of the university excited the ill-will of the students, who became so disorderly that the troops were called out. There were similar occurrences at Kiev, Odessa, Kasan, and other universities, all of which were closed. The students hoped by uproarious demonstrations to compel the Government to rescind the recent regulations which curtail the liberty of students by various vexatious restrictions, limit the period in which they are allowed to remain at the universities, and exclude whole

classes from the gymnasia and universities on account of lack of means or social station. In St. Petersburg the arrest of many of the students who engaged in a demonstration against the rector was followed by a stormier outbreak, during which the authorities shut the rioters in the building. In January the Minister of Education announced that the universities of St. Petersburg, Moscow, Kasan, Kharkov, and Odessa would not be opened at the beginning of the term. The Kiev and Moscow universities were the first ones reopened, before the end of January. Several hundred students were sent to Siberia or to prison; but eventually some of the obnoxious university statutes were altered, and complaints of the students ceased. A Siberian university was opened in August at Tomsk with the establishment of a faculty of medicine to supply the need of doctors, who now number only twenty-two for the whole of Siberia.

Commemoration of the Introduction of Christianity.

—The nine hundredth anniversary of the adoption of Christianity under Vladimir the Great was celebrated throughout Russia on July 27, 1888. The principal festivities were held at Kiev, the mother of Russian cities and the first seat of the Russian Church.

The Political Situation.—With Count Tolstoi at the head of the Ministry of the Interior, Pobedonostzeff in charge of ecclesiastical affairs, and a high Protectionist directing the finances, the Nationalists, Panslavists, and Old Conservatives have controlled the internal politics of Russia during the reign of Alexander III, and have even influenced the Czar to sometimes act in foreign affairs at variance with the officially declared policy of his Government, although they have not succeeded in displacing M. de Giers from the Foreign Office. The Greek Orthodox propaganda has been carried on by the aid of Government encouragement and intervention. Poland is governed as though it were a part of Old Russia. The state schools of the Baltic provinces have been Russified, and the separate police system of Livonia, Esthonia, and Courland has given place to Russian institutions conducted by Russians. The provincial and district autonomy granted by Alexander II has been shorn of one feature after another, the independence of the courts has been reduced to the smallest limits, and ecclesiastical and civil bureaucrats rule with power as unrestricted as in the time of the Emperor Nicholas. Early in 1888 Count Tolstoi brought forward a project for the transformation of the Semstvos or representative bodies of the governments and districts established by the law of January 13, 1864. These councils, in which land-owners, manufacturers, merchants, and rural communes are proportionally represented, have the disposal of the local revenues and of a part of the imperial revenue that is devoted to local purposes, and are empowered to legislate in matters relating to the erection and maintenance

of schools, churches, poor-houses, jails, roads, and bridges; to sanitation, and the prevention of epidemics and cattle-plagues; to public charities, mutual insurance, and the encouragement of commerce and industry; and to satisfying the requirements of the civil and military authorities and the post-office. The governor can protest against acts of the Semstvo; but the decision rests with the Directing Senate. The Semstvo elects an executive committee from among its members, and fixes the salaries of the committeemen. Tolstoi proposed to change the basis of representation by having each 8,000 acres of land held by the nobility, each 450,000 rubles of commercial capital, and each 4,000 adult male peasants represented by one delegate in the council, thus giving the nobles a great preponderance. Even then he would give the governor an absolute veto over the decisions of the Semstvo, while the standing committee which prepares the legislation would be appointed by the Government, not necessarily from the members of the Semstvo, and the rate of salary would be determined by the Government. There was much opposition in several of the ministries to this plan, which practically extinguishes the right of local self-government, and the question was therefore postponed till another year. A proof of the strength of Panslavism was the appointment in April, 1888, to the chief place in the Department of the Interior, next to that of the minister, of Gen. Bogdanovich, whom a year before the Czar had dismissed from the army in disgrace because he had entered into secret dealings with Gen. Boulanger with the object of bringing about an alliance between Russia and France. Gen. Ignatieff was elected president of the Slavonic Benevolent Society, which is the chief agency of Panslavic agitation in the Balkan Peninsula on the eve of the anniversary of Russia's conversion to Christianity. The organs of Liberal opinion and Western ideas have all been suppressed in Russia, except one monthly.

Central Asia.—Col. Alikhanoff on the Afghan frontier has succeeded in bringing nearly all the Turkomans under the Russian ægis. The Afghan authorities at the instigation of Col. Maclean, the British political agent in that region, have sought to prevent by force the migration of Turkomans into Russian dominions, and on April 15, 1888, a collision took place between Afghan troops and Salor Turkomans. According to the British account, Alikhanoff entered Afghan territory, as he had done before, in order to protect a band of 168 emigrant Salors in their flight over the border, while the Russians say that the Afghan troops pursued the fleeing Salors 36 versts (about 20 miles) on Russian territory; and on overtaking them fired at them and received their fire in return, which caused them to recross the frontier, carrying with them their dead and wounded comrades before Alikhanoff and his cavalry appeared on the scene.

S

SALVADOR, a republic in Central America. Area, 18,720 square miles; population, Jan. 1, 1888, 664,513, an increase for 1887 of 13,383.

Government.—The President is Gen. Francisco Menendez, whose term of office will expire in 1891. In April, 1888, the Legislative Assembly appointed vice-presidents, and to succeed one another in the order in which their names are given: Don José Larreynaga, Don Manuel Delgado, and Don José Antonio Quirós. The President's Cabinet is composed of the following ministers: Public Instruction and Charitable Institutions, Dr. Hermogenes Alvarado; Finance, Señor E. Perez; Foreign Affairs, Justice, and Public Worship, Dr. Manuel Delgado; Interior, Dr. Rafael Reyes; and War, Señor Arriola. The United States Minister to the Central American republics is Hon. Henry C. Hall, residing at Guatemala. The American Consul at Salvador is Thomas T. Tunstall; the Salvadorian Consul at New York is Don Mariano Pomáres.

Finances.—Instead of owing any money abroad, Salvador has lodged money in London for the completion of its railroad. The home indebtedness of \$5,000,000 involves an annual interest charge of \$369,777. The Government's expenditure in 1887 of \$2,106,508 was met by an income of equal amount. The liquor-tax produced \$818,040 in 1887.

Army.—A decree issued in August fixed the strength of the military forces at 24,000, including the militia, to be drawn by lot, all Salvadorians between the ages of eighteen and forty-five capable of bearing arms to be subject to enrollment, with the exception of the clergy. The Minister of War has procured several infantry and artillery officers from the Spanish army to drill the national recruits and instruct Salvadorian cadets.

Communications.—In addition to the 1,231 miles of wire that were in operation in Salvador prior to 1888, there were laid 180 miles during the year, the number of offices being increased from 68 to 74.

In July, 1888, the Government made a contract with Stanley McNider for the establishment of a telephone plant and service in the cities of San Salvador and Santa Tecla. The concession covers a term of twenty-five years.

Commerce.—The trade of Salvador has developed of late years as follows:

MOVEMENT.	1883-'84.	1884-'85.	1885-'86.
Imports.....	\$2,646,628	\$2,134,095	\$3,460,047
Exports.....	6,065,799	5,716,428	7,597,688

During the last fiscal year named the trade was distributed as follows, reduced to thousands of dollars:

COUNTRIES.	Import.	Export.
England.....	1,524	1,578
France.....	441	1,198
Germany.....	269	1,101
Italy.....	48	909
Spain.....	49	517
United States.....	781	1,928
Central America.....	348	366
Total.....	3,460	7,597

The chief products exported were as follow: Coffee, \$5,024,283; indigo, \$1,603,952; silver, in bars, \$263,457; Peruvian balsam, \$115,856; sugar, \$108,139; brown sugar, \$107,356. There entered Salvadorian ports in 1886, 380 vessels, 317 being steamers.

The American trade exhibits these figures:

FISCAL YEAR.	Import into the United States.	Domestic export to Salvador.
1885-'86.....	\$1,261,275	\$470,541
1886-'87.....	1,059,341	477,125
1887-'88.....	1,478,430	645,302

The increase during the last fiscal year is due to the advance in coffee.

Mining.—The Chamber of Deputies, in their last session, made a decision of great importance to mine-owners, by abolishing the taxes upon transfers of mine property, which formerly amounted to five per cent. of the purchase price. They have also removed the duties upon all kinds of imported mining machinery and implements.

Education.—On July 1 was inaugurated, at the University of Salvador, the Academy of Sciences and Fine Arts, Don José María Francés y Rosillo occupying the chair, and Don David Guzman delivering the inaugural address. The National Library was inaugurated on March 15 at the capital.

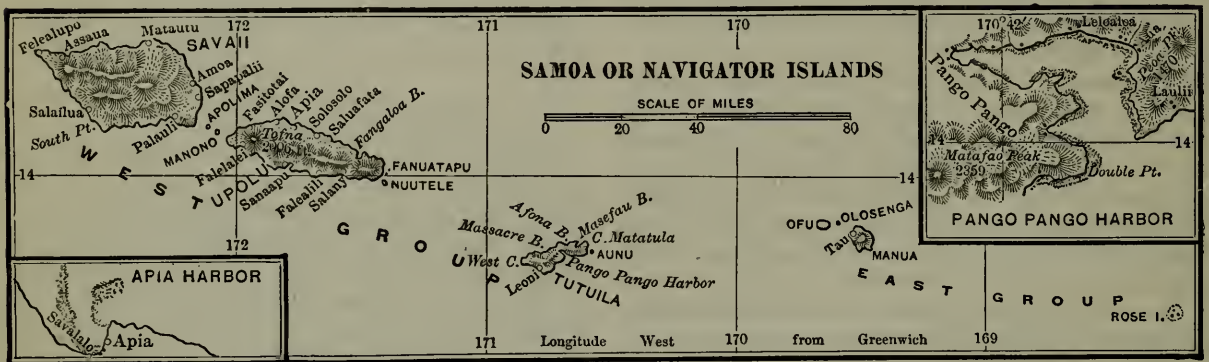

Agriculture.—In April an agricultural school was created in Salvador, with a model farm and experimental station, to which are to be admitted, at the expense of the state and municipalities, at least two apprentices for every department into which the republic is divided, and as many paying pupils as may apply.

Waterworks.—The Government has made a contract with Señor Patricio Branon to provide the city of San Salvador with drinking-water, by means of steam machinery, at the rate of 2,500 gallons an hour. The Government contributes toward the work the sum of \$15,000, advancing the *cessionnaire* \$6,000.

Charitable Institutions.—During the fiscal year ended June 30, 1888, the expenditure in Salvador toward entertaining hospitals, work-houses, and orphan asylums, and for pensions, reached the sum of \$142,217, toward which the Government contributed direct \$41,915.

SAMOA, a kingdom in the western Pacific, occupying the Samoan Islands, formerly known as the Navigator Islands.* The group of twelve islands, two of which are uninhabited, has an area of 1,000 square miles, and contained in 1874 a population of 34,265 natives, of whom 16,568 lived on the island of Upolu, 12,530 on Savaii, 3,746 on Tutuila, and 1,431 on the other islands. There are about 300 whites and 1,000 imported Polynesian laborers employed on the plantations. The cocoanut plantations, the incipient cotton and coffee cultures, and the trade in copra, which is the chief article of export, are conducted mainly by Germans, who have their commercial headquarters in this part of the Pacific at Apia. The principal imports are cotton goods, hardware, arms, ammunition, building-material, coal for steamers, provisions, beer, and tobacco. The total value of the imports in 1885 was \$468,000; of exports, \$369,000. The share of Germany in the imports was \$355,000, and in the exports \$295,000. Of 88 vessels, with an aggregate tonnage of 22,003, that were engaged in 1886 in the for-

Godeffrois in a scheme to acquire the administration of the finances and the political control of the country, instigated Malietoa to make war on Tupua, and by means of fire-arms supplied by the German company in exchange for grants of land the former made himself sole King, and chose Steinberger for his Prime Minister, dismissing and banishing him, however, as soon as he discovered his real purposes. The Germans then furnished the adherents of the rival dynasty with war material, and Malietoa was forced to abdicate; but the majority of the people remained true to him, and he fought his way back to power. His position was strengthened by the official recognition of the United States Government, which was anxious to secure the confirmation of the cession of the port of Pango Pango for a naval and coaling station, which had been made in 1872 by the then sovereign chief of the part of Tutuila in which it is situate. A treaty was signed at Washington on Jan. 17, 1878, and the ratifications exchanged on February 13, by which the right to establish at Pango Pango a

eign and coastwise trade, 37, of 14,588, carried the German flag. The house of Godeffroi and Son, Hamburg merchants, since succeeded by the German Trading and Plantation Company, took the lead in developing the copra-trade in the Samoan Islands. The imports of this company in 1885 were valued at \$306,000, and its exports at \$532,000.

History.—Formerly there were ten independent chiefs on the island of Tutuila, while the remaining islands were governed from time immemorial by the two royal houses of Malietoa and Tupua. In 1873, at the suggestion of foreign residents, a House of Nobles and a House of Representatives were established, with Malietoa Laupepa and the chief of the royal house of Tupua as joint Kings. The islanders had been converted to Christianity by American and French missionaries, and the commerce was divided between the Americans and the English until the cocoanut culture and the exportation of copra grew to large proportions in the hands of the Germans. Steinberger, who went to Samoa in 1875, nominally as a special agent of the United States Government, but in reality as the secret agent of the

station for coal and naval supplies, freedom of trade, commercial treatment as a favored nation, and extra-territorial consular jurisdiction were secured to the United States. On Jan. 24, 1879, King Malietoa made a perpetual treaty of amity and commerce with Germany, and by a special clause confirmed the grants of all lands acquired by Germans, and debarred himself from future interference with regard to their lands, plantations, wharves, and houses. Soon afterward civil war broke out again, and at the end of the fighting Malietoa was firmly established upon the throne. This fact was recognized in a proclamation that was signed by the American, British, and German consuls, which was issued by the British Commissioner for the Western Pacific, Sir Arthur Gordon, who, on Aug. 27, 1879, made a treaty with Malietoa securing to England most-favored-nation treatment, extra-territorial jurisdiction, and the right to select a harbor for a naval station and coaling depot. On Sept. 2, 1879, a convention was agreed upon between the United States, Germany, Great Britain, and Samoa, by the terms of which the administration of the town and district of Apia was assumed by the consular authorities for three years, at the end of which

* For another map, showing some of the islands on a larger scale, see the "Annual Cyclopædia" for 1886, page 793.

it should revert to Malietoa's government. Malietoa Laupepa a few days later was succeeded by his nephew Telavao. The new Malietoa refused to ratify the treaty with Germany, in the belief that it confirmed land titles that were in dispute, and acknowledged all kinds of land transfers made to Germans, and maintained his objections until the British Commissioner for the Western Pacific assured him a year later that this was not the case. In July, 1881, in order to put an end to the warfare that continued between the two dynastic parties, an agreement was made between the United States, Great Britain, and Germany, whereby it was arranged that all Samoa should be ruled by Malietoa as King, and Tupua as Vice-King. In 1882 the joint administration of the three foreign powers in Apia was continued by a new convention until such time as the internal state of the island should admit of the district being placed again under the native government. Germans continued to barter rifles and powder for land at the price of about thirty-seven cents and a half an acre, and on Nov. 10, 1884, Dr. Stübel, the acting German consul, by threats compelled Malietoa to sign a treaty creating a State Council consisting of the German consul, two Germans designated by him, and two Samoans, one to be appointed by the King and the other by the Vice-King. This Council should have power to make laws on all subjects affecting the interests of Germans or persons in their employ, and especially laws in regard to crimes committed by Samoans against the persons or property of Germans. The King bound himself furthermore to appoint a German of the consul's selection who should advise him on all subjects relating to German residents and their interests, and act as judge in cases in which Germans were interested. The German officer in the Samoan Government should also have supervision of the prisons, and command of a police force for the prison service and for the security of the German plantations. On Dec. 29, 1884, Malietoa sent a protest to the German Kaiser, complaining that the treaty was wrung from him by intimidation, and that the former German consul, Weber, was continually stirring up rebellion, giving arms and money to Samoan chiefs, and encouraging them to rise against their sovereign. Soon after this Malietoa, Tupua, and fifty-two chiefs petitioned for British annexation. The King had offered the sovereignty of the islands to Great Britain about a year previously, and also offered it to the United States, in order to escape German domination. The British Government supported German encroachments, in accordance with a secret understanding, and the municipal administration at Apia passed entirely into the control of the Germans.

Tamasese, before he was set up as King by Germany, never had a large party at his back. Malietoa had been able to crush the rebellion at any time, but did not, because he knew that

any attempt to enforce his authority against Tamasese would be resented by the Germans, and probably treated as a *casus belli*. The Hamburg Commercial and Plantation Company was the earliest of the enterprises that have led to the formation of a German colonial empire. Prince Bismarck was willing to extend financial Government aid when the company had become embarrassed through interfering with Samoan politics, but the opposition in the Reichstag was too strong. The naval forces, however, were employed to further the political purposes of the company, in which some of the Chancellor's personal friends were interested. In the spring of 1886 Admiral Knorr went with a squadron to Samoa, with the evident intention of creating a state of affairs that would lead to German annexation. He treated Malietoa, the King, with open contempt and indignity, visited the camp of Tamasese in his flagship, landed with his officers and band of music, and feasted with the rebel chief. The flag that the Germans had given Tamasese was saluted, instead of the royal ensign. Malietoa consulted with his English and American friends, and, by their advice, appealed to Consul Greenebaum to proclaim an American protectorate temporarily by virtue of the supposed promise of the United States to extend protection in the event of difficulties with foreign powers. The fifth article of the American treaty was so construed by the consul, who acted on this supposition, although, whatever its covert intent, it did not indeed promise more than the good offices of the United States. The bold action of Greenebaum and the attitude of the English deterred the German admiral from carrying out his intentions. He held no further communication with the rebels, and in a few days left Apia just as a British war-ship entered the harbor. Malietoa had been assured by English consuls and by the captains of English men-of-war that, if he refrained from putting down the rebellion by force, England would not only give him advice but protection. At length the German Government determined to depose Malietoa, and notified the English and American Governments that, since the German representatives in Apia did not enjoy the expected support from their colleagues, it would be obliged to protect German interests by independent action, and therefore found it necessary to declare war and refuse to recognize Malietoa. In a dispatch to the German minister at Washington, dated Aug. 7, 1887, the German Chancellor wrote that Germany was unable to renounce her demand for immediate reparation for the insults to the Emperor and to the national honor of which the partisans of King Malietoa had been guilty, and must obtain a guarantee that German interests would be protected.

In August, 1887, four German war-vessels arrived at Apia, and on the 23d, after the

mail-steamers had left, the German consul made a demand on the King for the immediate payment of \$12,000 as damages for cocoanuts that had been stolen during the previous four years and \$1,000 for an injury sustained by a German in a street fight. King Malietoa asked for three days to consult with his chiefs; but on the next morning a detachment of marines seized the Government House, affixed a declaration of war signed by Heusner, the German commodore, raised the German flag, and searched the town for Malietoa, who had escaped to his residence at Afanga, eight miles distant, from which he fled just before the arrival of a German man-of-war. On the 25th the Germans proclaimed as King the rebel chief, Tamasese, who took possession of the Government House and hoisted his flag. Once before the Germans had raised the rebel flag of their *protégé*, but had been obliged to take it down again. The American consul-general, Harold M. Sewall, who had succeeded Greenebaum when the latter was recalled for proclaiming on his own authority an American protectorate over Samoa on the occasion of the former German attempt to depose Malietoa, now was joined by the British pro-consul in a declaration that the American and British Governments would not recognize Tamasese, but would continue as heretofore to recognize Malietoa as King. Malietoa was hunted by the Germans until he finally gave himself up, on the promise that his life would be spared, and was taken as a state prisoner first to German New Guinea, then to Cameroons, and in August, 1888, to Hamburg. A large number of his chiefs and principal followers were likewise banished to distant islands. When the German squadron was sent to carry out this intention, Malietoa was disposed to resist, and was only deterred by the proclamation of the British and American consuls advising submission to the inevitable, and declaring that their Governments would never acknowledge Tamasese as King.

The Germans, on landing from their war-vessels, endeavored to provoke disturbances that would afford a pretext for carrying out the warlike intentions that Germany had notified to the other interested powers through diplomatic channels. They first set up a target for rifle-practice, and fired through the principal street of Apia. When this arrogant proceeding led to no result, they regaled the natives with intoxicants, which was a breach of the law, and bullied them into a fight in which a German's nose was broken. This also led to nothing, because the German magistrate before whom the matter was taken refused to hold the accused persons, for lack of evidence. It was only then that they fell back upon the thefts of cocoanuts, for which the courts created under German auspices had failed to bring the guilty parties to justice, and, proceeding on the novel theory that the King was responsible for the pilferings of his subjects,

made a sudden demand for a money indemnity, which Malietoa could not at once satisfy, or would not without a decent interval for consideration.

The German naval authorities declared and enforced martial law. Some natives tore down the proclamations to this effect, whereupon the village of Sapapaha was bombarded and burned. The German consul refused to recognize the municipality of Apia, which, under the convention of 1879, had been administered by the foreign consuls. The American consul protested. The British consul issued a proclamation to British residents saying that he had received no instructions to recognize the existing Government, and that British subjects would be under the jurisdiction and protection of the consulate. The British Government took no action until Feb. 24, 1888, when orders were sent to the acting British consul that since the continuance of the municipal board had been found impracticable, the convention should be considered as suspended and the district as having passed under the control of the *de facto* Samoan Government as provided by the terms of the convention in case of its termination. The Government of the United States refrained from any official communications with Tamasese's Government, and would not recognize him. The English Government, however, in spite of the pledges made to Malietoa by the British consul, recognized Tamasese as the King *de facto*, and entered into diplomatic relations with his Government.

The Samoan Conference.—The convention of 1879, the renewal of it in 1883, and the previous acts of the three foreign powers in relation to Samoa, were based on a definite understanding and express assurances of a mutual guarantee of its neutrality and independence. In 1884 a treaty was entered into between Germany and Great Britain to respect the independence of Samoa. The action of the German consul in forcing Malietoa in November of that year to sign a treaty giving Germany a virtual protectorate, and the events of 1886, made it desirable for the United States Government to have the diplomatic understanding attested in a solemn treaty. The powers were therefore invited to a conference, which was held at Washington in the summer of 1887. At the conference the German minister proposed to commit the actual control of the islands for a term of five years to a foreign adviser of the King, who should be appointed by the power having the preponderant commercial interests in the islands, the other powers having the right to approve or disapprove the nominee. At the end of the quinquennial term the control should be renewed on the same conditions. Mr. Bayard proposed, instead, to place the executive authority in the hands of a council composed of the King and Vice-King of Samoa and three foreigners designated respectively by the three treaty powers, but under the commission and pay of the na-

tive Government, which would make them as free as possible from the control of the Governments to which they owed their original appointment. In a dispatch to Minister Pendleton at Berlin, the Secretary of State afterward explained that his opposition to the German plan was not due to the fact that under it the appointment of the actual governor of the islands would be given to Germany, but to the union of complete political control with commercial preponderance supplanting instead of aiding the native Government, and tending to diminish rather than to develop the capacity of the natives to manage their own affairs.

In 1886 the British Government, following Prince Bismarck's principle of *quid pro quo*, which had previously led to the clandestine surrender of the best shores of Papua behind the backs of the Australians, and which involved the Samoan question in combinations affecting European politics and the British position in Egypt, in South Africa, on the Niger, in Zanzibar, and in other parts of the world, had entered into a secret bargain with the German Government to give it practically a free hand in its dealings with Samoa. The United States Government has for a long period regarded Samoa, as well as Hawaii, as a country possessing a frame of government admitting of permanent treaty relations, and in whose independence the United States have for military reasons a supreme interest. In 1877 Secretary Evarts declared that the desire of the United States in respect to Samoa was to see a stable, independent native Government established. In 1880 President Hayes, in his annual message, spoke of the diplomatic agreement subsisting between the three treaty powers as the best security for harmony in their relations to the native Government. When the rumor was circulated that in May, 1886, Germany intended to annex Samoa, as well as the Marshall and Gilbert Islands, Secretary Bayard, in communicating his views of the policy of the United States in the Pacific for the guidance of the ministers at London and Berlin, said that the concern of the United States Government in Samoa differs from that in regard to distant groups of islands, and that we have established treaty relations with Samoa, with which relations Germany disclaims any intention to interfere.

Mr. Bayard refused to consent to the German proposals, and, when it became evident that the English minister had entered the conference instructed to support the scheme of the German Government implicitly, he broke off the negotiations. The conference was not concluded, but suspended. The question passed out of the diplomatic stage when, ten days after the adjournment, the German fleet sailed for Samoa to carry out the purposes to which the American Government had refused its consent. The correspondence with the German Government was closed by a letter from Mr. Bayard in January, 1888, in which he

declares that, while willing to accept the explanation that the action of the German Government in Samoa was influenced by a desire to protect the people, he can not bring himself to believe that its course has been proper.

Tamasese's Government.—No sooner had the German forces overthrown the legitimate King than they began to compel the puppet whom they had placed on the throne to carry out the scheme of transferring into German possession all the productive resources of the islands. Through land titles and mortgages the German speculators, with the aid of the new Government, held the natives entirely under their control. Herr Brandeis, who had been connected with the German consulate, was made the chief adviser of Tamasese, and practically directed all acts of government. The German squadron, which consisted of the flagship "Bismarck," the "Olga," the "Carola," and the "Sophie," sailed away as soon as the new Government seemed to be established. Yet, when the war-vessels left, the position of the usurper at once became precarious. He deeply offended the people when, at the suggestion of his German Prime Minister, he assumed the hereditary name of Malietoa. When he was further misled into imposing a poll-tax, his followers dwindled to a mere handful of men, and the country openly rebelled against the tax, which he was unable to collect. Influential chiefs called the people together and urged them to resist the tax; and, when Tamasese was induced by the German agent to propose the suppression of these assemblages, chiefs of his own party grew angry and threatening. Many of the influential men of the islands remained away from the Legislature when it met, and many who attended were hostile to the Government. The Germans introduced the registration of title-deeds and mortgages, an elaborate judicial system, and regulations for village councils and assemblies of chieftains. The authority of the Government was recognized in parts of the districts of Aana and Atua at the western and eastern extremities of Upolu, while the middle district of Tuamasanga, the birthplace of the Malietoas, as well as the other islands, were hostile. The American gunboat "Adams" arrived at Apia on Oct. 19, 1887, before the departure of the German squadron. The German cruiser "Adler" and the gunboat "Eber" were subsequently stationed in Samoa. An English war-vessel, the "Lizard," was also sent to observe. Mr. Sewall, the American consul, returned to the United States on leave, a deputy, Mr. Blacklock, being left to look after American interests. The Germans in Apia subjected Americans to injustice and hostility, and American and British trade suffered greatly. The American residents, and some of the English, encouraged the spirit of resistance, which became so strong and determined that the entire country, except his own clan and political dependents, was ready to rise against Tamasese.

Civil War.—Mataafa, a near relative of Malietoa, was the chief of the loyalist party, and its candidate for the throne as the legitimate successor of the exiled King. The enemies of Tamasese were supplied with arms by American and English traders. The crisis was precipitated by a conflict, on August 31, between Tamasese's people and five chiefs of the Tuamasanga district, which occurred on the occasion of a division of mats. The chiefs were summoned on the following day to appear before the royal court of justice at Matianu. Refusing to obey, they raised the flag of revolt, and called on Mataafa, who was chief of Faleula, fifteen miles from Apia, to lead them against Tamasese. The King gathered his military forces, fortified Matianu, a point of land jutting into the Bay of Apia, where the kings had from ancient times held their court, and occupied two forts at Matantu. Warriors from Upolu and Savaii streamed into Mataafa's camp at Faleula. On Sept. 9 the representative of the old dynasty proclaimed himself King of all Samoa, under the title Mataafa Malietoa II. On Sept. 12 Mataafa led his forces around Apia to the neighborhood of Matantu, where a battle took place that lasted from noon till evening. There were about two thousand combatants on either side, Tamasese's men having the greater number of breech-loading rifles. According to their wont, the Samoans fired without aim, discharging about thirty thousand shots, many of which passed through the houses of Europeans and struck the shipping, killing Capt. Bisset, of an English merchant-schooner, who was in the English consulate, and wounding a sailor on the "Adler." The killed on neither side numbered more than half a dozen; but after the battle many heads were cut off from the wounded as trophies of victory. Conquered by noise and the consciousness of a failing cause, the soldiers of Tamasese fled from their forts, and escaped by swimming to Matianu, while Mataafa took up his position in Matantu. On the morning after the battle an officer of the "Adler," with forty men, occupied the strip of land giving access to Matianu, to prevent the victors from attacking Tamasese's demoralized army.

At the proposal of the German and English consuls, Mataafa declared the neutrality of Apia. The conqueror was elected King in meetings that were held all over the country, and was proclaimed as such in Apia, where he took possession of the Government property. The English and American consuls were anxious to have the foreign parts of the district of Apia declared neutral, but the German consul insisted on extending neutrality to all German land throughout the island, including the promontory where Tamasese's army lay encamped, and similar places of refuge everywhere, in which he could gather his forces and prepare his attacks without molestation. Mataafa would not agree to this, and, in order to remove the scene of conflict from the vicinity of the

Europeans, Tamasese established himself at Saluafata, where he was supplied with arms and ammunition by a German schooner which made many trips between Apia and his camp. Brandeis, who had served in the German artillery, became his military adviser. An English merchant named McArthur and an American named Moores supplied Mataafa with munitions of war. Mataafa's authority as King was acknowledged all over the islands, except in a few villages. The American vice-consul, Blacklock, in replying to the notification of Mataafa's election by the people, said that he thought it was in accordance with the wishes of the three powers. The English consul simply informed Mataafa that the party of Tamasese, as he was assured by the German consul, would respect the territory declared neutral if Mataafa would also do so.

Mataafa gathered together an army of five thousand men, while Tamasese's force at Saluafata did not exceed seventeen hundred warriors from the Ituatane district of Savaii and the Aana and Atua tribes. The main body of all these tribes, with the Tumasasas and the Mononos who fight in canoes joined Mataafa's standard. On Nov. 5 Mataafa moved from the village of Laulii on the formidable works at Saluafata. These consisted of stockades in the forest, parapets on the mountain-side leading up to the fort, from which the timber had been cleared to afford a free rifle-range, and the big fort built of stones and baskets filled with sand, in three sections, with narrow passage-ways between them. The fort stood on a hill at the eastern extremity of the Bay of Apia. Mataafa's position was likewise fortified. The fighting lasted many days. About one hundred and twenty men were killed, and one hundred and fifty wounded. Both parties took the heads of their enemies. Tamasese's outposts in the bush were driven from their principal stockade on Nov. 6, and retreated up the side of a steep hill, where they hastily made a clearing and threw up a stockade. The Tumasaga warriors of Mataafa's army stormed the height, pulling themselves up by bushes in the face of the enemy's fire, drove the Tamasesans from the stockade, and forced them to retire farther up the mountain, where they made another stand. By Nov. 9 the Tumasaga men had fought their way to a good position in the mountains, and built a stockade within twenty-five yards of a Tamasese stockade. The wounded of Mataafa's army were taken to Apia, where they were bandaged by the surgeons of the "Adams" and "Lizard," and cared for under the directions of Col. H. de Coëtlogon, the British consul, Vice-Consul Blacklock, and the commanders of the American and British men-of-war. The German naval surgeons dressed the wounds of Tamasese's men. On Nov. 10 the German steamer "Lübeck" arrived with Dr. Knappe, who relieved Consul Becker.

The new German consul, on the arrival of the "Adler," ordered Mataafa to leave his en-

campment, on account of alleged violations of German neutral territory and depredations on the plantations, which Mataafa denied, saying that he would not stop fighting nor forego the advantage that he had gained, and only desired foreigners to leave the Samoans to settle the war for themselves. The second day after this the three consuls held a meeting, at which Vice-Consul Blacklock proposed that the three consuls should assume the government jointly, until they received definite instructions from their Governments. The British consul said that the only peaceable solution was to deprive Tamasese and Brandeis of all power; but Dr. Knappe replied that he must continue to recognize Tamasese. On the next day, Nov. 16, the British consul issued a proclamation, assuming jurisdiction over British subjects, and directing them to pay taxes to him in trust for the Samoan Government, whenever it should be properly established.

On Nov. 19 the Monono and Savaii men of Mataafa's army made an attack by water on Saluafata in thirty-eight canoes and three of the Samoan naval vessels, which consist simply of two large canoes lashed together, holding a stockade, on which small ancient cannon are mounted. Two other ports were taken. The German gunboat "Eber" and the "Nipsic," which had come to relieve the "Adams," anchored off Saluafata. The German authorities warned Mataafa to keep away from German ground. They obtained an agreement from him to this effect, but he renounced it when he learned that international law imposed no such obligation, ascertaining that such was the view of the American and British consuls, and made his military dispositions without regard to the ownership of the soil.

On the arrival of the "Olga" the Germans decided to make an attempt to disarm the natives. Marines were landed from the "Olga" on Dec. 17 and 18. An American newspaper correspondent, John C. Klein, acted as military adviser to Mataafa. The Samoans fired at the German boats, but a landing was made, and the party already on shore cut their way through the natives and joined the others at Bailele. The Germans, one hundred and fifty in number, took their position in the houses on the plantation and held their own against thousands of natives for two hours, at the end of which they were re-enforced by a detachment from the "Eber." The Germans then advanced and drove the Samoans before them, burning their villages. Several hundred natives were killed, while the German losses were fifteen killed and thirty-seven wounded. The Germans bombarded and destroyed eighteen villages.

After these events the German authorities proclaimed martial law, and assumed complete authority in Apia. All vessels were searched, American goods were not allowed to land unless sent to German warehouses for examination, the English newspaper was suppressed,

the confiscation of all fire-arms was ordered, houses were searched, and several English and American residents were roughly handled. Capt. Mullan, of the "Nipsic," received Klein on board, and refused to give him up to be tried before a military tribunal on the demand of Capt. Fritze, the German naval commander. These events led to fresh correspondence between the Governments of Germany and the United States. The firmness of the latter caused the Berlin authorities to check the high-handed proceedings, which could only lead to German annexation. Consul Knappe and Vice-Consul Brandeis were recalled, while the State Department at Washington ordered Consul Sewall not to return to Samoa. At the proposal of Prince Bismarck it was decided to re-open in Berlin the conference that was suspended at Washington on July 26, 1887.

SANDS, HENRY BERTON, surgeon, born in New York city, Sept. 27, 1830; died there, Nov. 18, 1888. He was graduated at the College of Physicians and Surgeons in 1856, and then studied abroad. On his return he became demonstrator of anatomy in that college until

HENRY BERTON SANDS.

1866, and in 1869 he was called to the chair of Anatomy, which he held for ten years, when he accepted that of the Practice of Surgery, which he filled until his death. Dr. Sands had been connected with various hospitals as consulting and attending surgeon, but had gradually withdrawn from such relations to devote his entire time to private practice. From 1860 till 1870 he was in partnership with Dr. Willard Parker. He was a member of many medical societies, including the New York Academy of Medicine, and in 1883 was chosen a corresponding member of the Society of Surgery of Paris. In 1866-'67 he was President of the New York County Pathological Society, in 1874-'76 of the County Medical Society, and in 1883 of the New York County Surgical Society. For many years he had been recog-

nized as the foremost surgeon in New York city, astute in diagnosis, sound in judgment, and dextrous as an operator. He was called for consultation in President Garfield's case, and also in ex-President Grant's illness, and he attended Roscoe Conkling in his last illness, performing the operation on his head. Dr. Sands was too busy to devote much time to publishing his results, but among the descriptions of operations that he contributed to medical literature are "Case of Cancer of the Larynx successfully removed by Laryngotomy" (1865); "Aneurism of the Sub-Clavian, treated by Galvano-Puncture" (1869); "Case of Traumatic Brachial Neuralgia, treated by the Excision of the Cords which go to form the Brachial Plexus" (1873); "Case of Bony Anchylosis of the Hip-Joint, successfully treated by Subcutaneous Division of the Neck of the Femur" (1873); "Esmarch's Bloodless Method" (1875); "Treatment of Intussusception by Abdominal Section" (1877); "The Question of Trephining in Injuries of the Head" (1883); and "Rupture of the Ligamentum Patellæ and its Treatment by Operation" (1885).

SANTO DOMINGO, a republic, occupying the eastern portion of the West Indian island of that name, the western portion being Hayti. The population of the republic, by the census of 1887, is 504,000.

Government.—The President is Gen. Ulysses Heureaux. His Cabinet is composed of the following ministers: Interior and Police, Gen. Wenceslao Figueredo; Foreign Affairs, Don Manuel Maria Gautier; War and Navy, Gen. Miguel A. P. Pichardo; Finance and Commerce, Gen. Julio J. Juliá; Justice, Public Works, and Instruction, Don Juan Tomás Mejía; Public Works, Señor P. M. Garrido. The United States *Chargé d'Affaires* is John E. W. Thompson, resident at Port-au-Prince, Hayti. The American Consul at Puerto Plata is Thomas Simpson. The Dominican Consul at New York is Don Leoncio Juliá.

Finances.—The public indebtedness on July 1, 1888, included an internal debt of \$1,650,000, a balance of \$234,250 of foreign debt (which is being paid off by an extra 2-per-cent. import duty), and the old 6-per-cent. English-Santo Domingo loan of 1869, of which £750,700 is still held in London. The republic in July, 1888, made a loan in London and on the Continent to the amount of £770,000, bearing 6 per cent. interest, to be paid off within thirty years, the amount to be applied as follows: First, £142,860 for canceling the Hartmont loan of 1869; second, £151,660 toward canceling the internal debt, the remaining £475,480 to bear interest dating from July 1, 1888. This debt is to be paid off at par by sixty half-yearly drawings, the first of which is to be made on June 15, 1889. This loan was placed at 83½.

Communications.—There is in operation a line from Sanchez to La Vega, 115 kilometres. Besides the telegraph running along the San-

chez and La Vega Railroad, there is one connecting the capital with Puerto Plata. Santo Domingo has been connected with the world's telegraph system since April, 1888, by the submarine cable connecting Mole St. Nicolas (Hayti), Puerto Plata, and Santo Domingo with Santiago de Cuba.

Commerce.—The imports in 1887 amounted to \$2,057,928, and the exports to \$2,660,471. The chief articles of export were tobacco, sugar, coffee, honey, wax, mahogany, and cabinet and dye woods. Guano exportation has been resumed on a large scale. The American trade exhibits the following figures:

FISCAL YEAR.	Import from Santo Domingo.	Domestic export to Santo Domingo.
1886.....	\$1,656,131	\$1,017,235
1887.....	1,380,126	1,014,414
1888.....	1,459,392	792,560

SAVAGE, JOHN, author, born in Dublin, Ireland, Dec. 13, 1828; died in Spragueville, Pa., Oct. 9, 1888. He was educated in the Jesuit college at Colougoues, and took a course in the art school of the Dublin Society, where he gained several prizes. While studying art he began to contribute patriotic articles and poems to John Mitchell's Dublin newspaper, and when that was seized by the British Government, and its editor sent to Australia, he joined several friends in establishing another

JOHN SAVAGE.

newspaper devoted to the popular cause. He gave much aid with his pen to the revolutionary movement of 1848, and the suppression of his newspaper led him to undertake more active and personal work. At the outbreak of the revolt he organized and commanded a body of armed peasantry in the south of Ireland, and at their head captured several British garrisons. On the failure of the movement, he came to New York city and secured employment as a proof-reader in the "Tribune" office. While so engaged he contributed frequently to newspapers and periodicals, wrote

several dramas and poems, planned historical works, and painted pictures. Subsequently he held editorial appointments on the New York "Citizen" and on newspapers in New Orleans and Washington, besides writing regularly for the "Democratic Review" and the "American Review." While in Washington he became editor-in-chief of Stephen A. Douglas's political organ "The States," and afterward its proprietor. When the civil war broke out he was assistant editor of the New York "Irish News," but he resigned his appointment, aided Gen. Thomas Francis Meagher in organizing the famous Irish brigade, and served in the war as his aide, though on the roll of the Sixty-ninth New York Regiment. He first became connected with Irish politics in the United States in 1868, when he was chosen head center of the Fenian Brotherhood, and through the solicitations of John O'Mahony, his friend and the founder of the order, reluctantly accepted the office. He applied himself with vigor to the reconciliation of the antagonistic factions within the order, and, though a man of great popularity and influence in Irish and Roman Catholic circles, was unsuccessful. During the presidential canvass of 1864 he had rendered the Republican party much service as an orator, and on the conclusion of peace his friends urged upon President Johnson the propriety of appointing him to a foreign office, and the President tendered him the United States consulship at Leeds, England. He felt deeply grieved at this action, because he was widely known as an expatriated man, and was convinced that the British Government would never recognize him officially. Still, believing he might be of some service to the Fenian prisoners confined in England, he went to Paris, and there, through the aid of Gen. John A. Dix, the American minister to France, began negotiations with the British Government which resulted in the release of some of the prisoners. Returning to New York city, he engaged in literary work, bought a summer home, "Laurelside," at Spragueville, Pa., and made his winter quarters in Fordham, N. Y. He was an accomplished scholar, and as an orator and lecturer was in great demand with Roman Catholic colleges and societies. St. John's College, Fordham, N. Y., gave him the degree of LL. D. in 1875. His published works include "Lays of the Fatherland" (1850); "Ninety-eight and Forty-eight; the Modern Revolutionary History and Literature of Ireland" (1856); "Our Living Representative Men" (1860); "Faith and Fancy," poems (1863); "Campaign Life of Andrew Johnson" (1864); "Life and Public Services of Andrew Johnson" (1868); "Fenian Heroes and Martyrs" (1868); "Poems; Lyrical, Dramatic, and Romantic" (1870); and "Picturesque Ireland" (1878-'83).

SCHOFIELD, JOHN McALLISTER, an American soldier, born in Chautauqua County, N. Y., Sept. 29, 1831. He was graduated at West Point Military Academy in 1853, Philip H.

Sheridan, James B. McPherson, and John B. Hood, being among his classmates. McPherson was at the head of the class, Schofield was No. 7, Sheridan No. 34, and Hood No. 44. The whole number was 52. On his

JOHN McALLISTER SCHOFIELD.

graduation, Schofield was assigned to the First United States Artillery, and served for two years in South Carolina and Florida; and from 1855 to 1860 he was Assistant Professor of Natural Philosophy at West Point, after which, on leave of absence, he was for one year Professor of Physics in Washington University, St. Louis, Mo. He had been commissioned first lieutenant, United States Army, in August, 1855, and captain, in May, 1861. At the outbreak of the civil war he became major of the First Regiment of Missouri Volunteers, and on April 26, 1861, was made chief-of-staff to Gen. Nathaniel Lyon, with whom he served in the Missouri campaign. He was appointed brigadier-general of volunteers in November, 1861, and soon afterward brigadier-general of Missouri militia, and he commanded in that State until April, 1863. He was made major-general of volunteers in November, 1862, and from May, 1863, till February, 1864, he commanded the Department of the Missouri. He was next assigned to the command of the Department and Army of the Ohio, which formed a part of the army that Gen. William T. Sherman organized for his Georgia campaign against the Confederate army under Gen. Joseph E. Johnston.

In that great campaign, Gen. Schofield participated in the battles of Resaca, Dallas, Kennesaw mountain, and Atlanta. After the capture of Atlanta, when Sherman was preparing for his march to the sea, Schofield, in command of the Twenty-third Corps, was sent back to Nashville, where he joined the army of Gen. George H. Thomas. When the Confederate army, of about 40,000 men, under Hood, defeated by Sherman at Atlanta, turned back to attack Thomas, it was first confronted by Schofield's force of about 25,000. Schofield made a skillful retreat as far as Franklin, on the Harpeth river, eighteen miles from Nashville, where he intrenched a line with both flanks resting on the stream. Here he was at-

tacked on the afternoon of Nov. 30, 1864. The brigade forming Schofield's rear guard, instead of falling back quickly to the main line as ordered, so as to permit the whole fire to be directed on the advancing enemy, attempted to withstand the onset alone. It was soon borne back in confusion, and the enemy followed it over a part of the intrenchments. A portion of the line thus seized was recaptured after hard fighting; but the remainder could not be retaken, and Schofield established a new line a few rods in the rear, where the battle was continued until dark. Meanwhile he had got his artillery and trains across the stream, and at midnight he followed with his whole force and retreated to Nashville. In the battle of Franklin, Schofield lost 2,500 men; Hood, about 6,000. For this action, Schofield was made brigadier-general and brevet major-general in the regular army. He participated with his corps in the battle of Nashville, Dec. 15 and 16, 1864, in which Thomas destroyed Hood's army.

In January, 1865, Gen. Schofield, with 15,000 men, was detached from Thomas's army and sent by rail to Washington, and thence by transports to the mouth of Cape Fear river, when Schofield was given command of the Department of North Carolina. He captured Wilmington on Feb. 22, 1865, fought the battle of Kinston on March 8-10, and on March 22 joined at Goldsborough the army of Gen. Sherman as it moved northward after its march to the sea. When Gen. Johnston's army surrendered to Sherman's, April 26, Gen. Schofield had charge of the details.

In June, 1865, he was sent to Europe on a mission relating to the French occupation of Mexico, whence he returned in May, 1866; and in August of that year he was assigned to the command of the Department of the Potomac. From June 2, 1868, till March 12, 1869, he was Secretary of War. He was then commissioned major-general in the United States Army and ordered to the Department of the Missouri. He commanded the Division of the Pacific from 1870 till 1876, and again in 1882-'83. He was superintendent of the Military Academy at West Point from 1876 till 1881, commanded the Division of the Missouri from 1883 till 1886, and was then transferred to the Division of the Atlantic. On the death of Gen. Philip H. Sheridan, in August, 1888, Gen. Schofield became the ranking officer of the United States Army. He was president of the board that in 1870 adopted the system of tactics now in use in the army, and was also president of the board that investigated the Fitz John Porter case in 1878.

SERVIA, a monarchy in Southeastern Europe, which gained its independence in 1829, after a war with Turkey lasting fourteen years, and was erected into a kingdom in 1882. The executive authority is vested in the King, who is assisted by a council of eight ministers. The legislative body is the Narodna Skupshtina, or

National Assembly, a single house composed of 208 members, of whom one fourth have been nominated hitherto by the King. No member of the legal or the military profession is eligible. A Great National Assembly of four times the number of members in the ordinary Skupshtina is sometimes convoked to consider matters of vital national importance.

The Radical Ministry.—The Radicals in Servia, whose opinions coincide with the ideas of constitutional liberty prevalent in Europe, with a tincture of the socialistic theories of Russian nihilism, have for many years represented the prevailing sentiment of the Servian people. The official class and the merchants are, to a great extent, Progressists or Conservatives, and the liberal professions contain many Liberals; but the peasantry, almost to a man, belong to the Radical party. The King, sustained by the pro-Russian Liberals under Ristich or the pro-Austrian Progressists who followed the lead of Garashanin, has repressed the demand for a more popular form of government, annulled the victories of the Radicals at the polls, and imprisoned or banished their leaders, who were driven by persecution to conspire the violent overthrow of despotic power. The Bulgarian war was a desperate resort to restore the King's prestige, and when this failed, and Garashanin retired, King Milan called Ristich to the head of the Administration in June, 1887, and attempted to govern with a coalition Cabinet. The Radicals gained another victory in the autumn elections. The King was constrained to accept their programme. A commission was appointed to devise a scheme of constitutional revision. He was unwilling to intrust the Government to a party which had been hostile to him and was distrusted abroad on account of its revolutionary tendencies. The Radicals had, however, a majority of four over the elected and appointed ministerial deputies, and after a preliminary agreement on their part to continue the foreign policy of the King, and to accept the financial programme of the retiring ministry, at least in regard to the issuance of a loan of 20,000,000 dinars for the payment of the floating debt, the King sent for Col. Gruich, who, on Jan. 1, 1888, formed a new ministry of Radical complexion, made up as follows: Premier and Minister of War, Sava Gruich; Minister of Foreign Affairs, Franassovich; Minister of Communications, Velimirovich; Minister of Finance, Vujich; Minister of the Interior, Milosavlyevich; Minister of Commerce, Stefan Popovich; Minister of Justice and Education, Gershich. Col. Gruich had been Minister of War under Ristich. Col. Franassovich was Minister of Foreign Affairs in Garashanin's Cabinet. The new Minister of Justice was a Professor of International Law who was sentenced to death in 1883 for participating in the revolution of Alexinat, and Dr. Vujich, the Minister of Finance, was expelled from Russia in 1884 for suspected complicity in the Nihilistic conspiracies.

After voting the new loan, which was raised in Vienna at 6 per cent., the Skupshtina, on January 3, adjourned till the end of the month. The chiefs of the Radical party, whose demand for a general amnesty to political offenders was granted, sent an address expressing fidelity to the King. In a circular note to the powers the Minister of Foreign Affairs unfolded the scheme of political reforms. Personal and civil liberties should be extended, though not at the expense of order, by enlarging the self-government of the communes, restricting official interference in elections, liberalizing the laws governing the press, associations, and public meetings, and modifying the criminal code and laws relating to security of person and property, and the civil service.

The Radical Cabinet, existing only by the King's sufferance, endeavored to carry out their pact, and to prove the capability of their party to conduct the Government. But in the new Chamber elected in February and convened on March 31, in which the Radicals secured 129 seats out of 142, the Prime Minister was unable to control the majority, which was composed largely of men educated in France, holding Republican and Socialistic opinions. King Milan, in an angry message to the Chamber, warned the ministers that they could not continue in office if they allowed the Radical Club to control their decisions, and if they could not forward legislative business within acceptable lines. Resolutions of revolutionary tendency were voted, such as one in favor of taxing luxuries, another to make 3,000 dinars the uniform salary of officials of all grades, a third abolishing bishoprics, and others reducing the pay of military officers, making officers of the militia elective, and introducing new direct and indirect taxes, some of which were contrary to existing treaties. One deputy proposed to dismiss all foreigners employed in the railroad service, and another demanded to know if there was a secret treaty with Austria. The bill on the government of communes took away from the central authorities the right to interfere with the ordinances or the acts of the local authorities within their province, and the powers to remove mayors and to dissolve communal councils. The only other act that was passed, a bill on the reorganization of the army, contained provisions for abolishing about half of the standing army, and replacing it with a militia. Both these bills the King refused to sanction. At a conference with the ministers on April 26, he persisted in his refusal to sign the bill on communal representation, and said that he considered the agreement which he had made with the Radical majority in the winter no longer binding for either party, whereupon the ministry resigned in obedience to the demand of the Radical Club. The King determined to call to his aid the moderate men of the Conservative party, and therefore invited Nikola Christich, who had thrice performed a similar task, to select a neutral ministry.

The Christich Ministry.—The new Council of Ministers, constituted on April 27, was made up as follows: Premier and Minister of the Interior, Christich; Minister of Foreign Affairs, Miyatovich; Minister of Public Instruction and Ecclesiastical Affairs, Vladan Djorjevich; Minister of Justice, Georg Pantelich; Minister of Agriculture and Commerce *ad interim*, Vladan Djorjevich; Minister of Finance, Dimitrije Rakich; Minister of Public Works, Michaiel Bogitchevich; Minister of War, Costa Protich. The new Minister of Foreign Affairs held the same portfolio in the Pirotschanatz Cabinet, which first entered into the Austrian alliance, and has since been several times Minister of Finance. The present Minister of Finance is a young man prominent in the councils of the Progressist party, who has been chief of sections in the department over which he was called to preside and in the Ministry of Foreign Affairs. The Minister of Justice, an eminent jurist who was a member of the Christich Cabinet in 1883 is free from party ties, as are also Dr. Djorjevich, an author and scientist who has done much for sanitary reform, and Gen. Protich, a distinguished military administrator. The Minister of Public Works held the same office in Garashanin's last Cabinet, and in 1883 under Christich.

The Skupshtina was dissolved on April 29 without having voted the budget. The leaders of the Radicals published assurances that they would countenance no revolutionary disturbances, and would act within constitutional limits. Gen. Gruich, on account of a statement made to a foreign newspaper correspondent, in which he ascribed the dismissal of the Radical Cabinet to Austrian pressure, was placed on the retired list of the army. The arrears of taxes were collected more strictly than under Ristich and Gruich, who spared their party followers. The Government attempted again to break the spirit of Radicalism by tyrannical repression. Many politicians were arrested and thrown into jail. The financial situation was difficult, but, by means of the new loan, the Government in June redeemed the tobacco *régie*, which had been sold to a foreign corporation. Besides suppressing insurrectionary movements in Serbia, especially in the Saitchar department, the authorities, after a frontier raid of political brigands into Bulgaria had taken place in the Trn district, dismissed the prefects of Pirot and Nish, and took measures to prevent the recurrence of such disturbances.

The Royal Divorce.—King Milan married Natalie, Princess Sturdza, born May 14, 1859, daughter of a Russian nobleman, Col. de Keshko de Pulcherie, on Oct. 17, 1875. Their only child, the Crown-Prince, was born in 1876. Domestic differences arose between them; the opponents of the King all sympathized with Queen Natalie, and even those who plotted to overthrow Milan desired to preserve the throne for her son, except some

of the Panslavist Liberals, who dreamed of the restoration of the Servian Empire, embracing all the South Slavs, under Russian auspices, with Prince Karageorgevich or Prince Nikola of Montenegro on the throne. The Queen thus became identified with the party having Russian leanings. In 1887 the King insisted on Natalie's leaving Servia, and compelled her to sign articles of separation and take up her residence abroad. The Queen under this arrangement was given the custody of her son. In May, 1888, Natalie announced her intention to return to Belgrade. The King forbade her to do so, and, meeting her at Vienna, directed her to go to Wiesbaden. While she was there, he sent a proposal for a new agreement, declaring that the former one was impracticable. She rejected the new proposition, whereupon King Milan applied to the Synod of the Servian Church for a divorce. The Queen made a compromise more difficult by addressing indignant protests to the Synod, the Consistory, and the Council of Ministers. Ex-Minister Pirotshanatz became her advocate. She denied the competence of the Synod to try the case. The Synod, consisting of the Metropolitan, three bishops, and seven clergymen, asserted its jurisdiction; but, after the King had transferred the case to the Belgrade Consistorial Court, consisting of three delegates of the Consistory, the bishop agreed that this was the proper tribunal. The Queen purposed appearing in person before the Consistory, but was forbidden by the King, who demanded that the Crown-Prince be given into his custody, and sent Gen. Protich to Wiesbaden to bring him to Belgrade. Queen Natalie refused to give up her child, but the German authorities interfered, and took him by force from his mother.

The ground given for the petition of divorce was "irreconcilable mutual antipathy." The Servian law gives to the ecclesiastical authorities alone the power of divorce, which can only be granted after the parties have been brought face to face and a formal attempt has been made to reconcile their differences. Bishop Dimitrije, of Nish, a friend of the Queen, was sent by the Synod to Wiesbaden to arrange a reconciliation, if possible, on the terms proposed by the King, allowing Natalie to retain all the rights and privileges of Queen on condition that she should not return to Servia except at the King's invitation. The Queen scornfully refused to accede to these conditions, but afterward, when Milan showed a determination to proceed with his application for an absolute divorce, she pressed for a compromise on these very terms. After being robbed of her child and expelled from Wiesbaden by order of the German Government, she demonstratively identified her cause with the political designs of Russia by going to that country in order to interest the people and the Czar in her wrongs. Subsequently she went to the house of her brother-in-law, Prince

Ghika, in Bucharest, and waited for permission to answer the summons of the ecclesiastical tribunal in Belgrade. Her cause was espoused by the Liberal and Radical Opposition, and even the leaders of the Progressist party disapproved the divorce proceedings. Gen. Horvatovich, for championing the Queen, was placed on the retired list. The Cabinet could not approve the King's course, and the ministers wished to retire. So determined was Milan to punish his consort that he contemplated recalling the Russian party to power on condition of its upholding the divorce proceedings; but Ristich declined to take office if the suit were not dropped. Milan's temper became so moody and violent that he sent into exile his old and devoted friend Garashanin for advising him to withdraw his application for absolute divorce.

The Court of the Consistory ruled that the King and Queen must both be heard in person. The ministers decided that there was no law to prevent the Queen from entering Servia, yet held that they could prohibit her sojourn in any particular town as likely to produce political disorders. When King Milan found the Consistorial Court determined to treat him as a private person, he suspended its action, requesting an adjournment for three months to allow the Queen time to prepare an answer. While the matter remained in abeyance in the Consistorial Court and before the Holy Synod, Milan applied to the Metropolitan Theodosije, and on Oct. 24 obtained from him a decree of absolute divorce, granted in his capacity as autonomous head of the Servian Church. The law gives the Metropolitan no authority to grant divorces independently of the Synod; and, even if he had the right, the title of Archbishop Theodosije to his office is doubtful, since many religious persons look upon the deposed Metropolitan Michael as the rightful head of the Church. Milan took this irregular way to accomplish his purpose, because he expected an adverse decision in the Consistorial Court. To prevent hostile action of the Synod, the King suspended Bishops Dimitrije and Nicato, on the ground of contumacy.

Revision of the Constitution.—King Milan followed up his divorce with a bid for popular favor, ordering elections for a Grand Skupstina, to be held on December 2, and summoning the Assembly for December 25. The manifesto ends with an assurance that the elections should be free. A commission for the revision of the Constitution, consisting of 85 members, chosen from the three political parties, met in Belgrade, under the presidency of the King, on November 3. The King brought about a fusion in the revision commission between the Progressists and the Liberals, whose political alliances have heretofore been made only with the Radicals. The preliminary elections were by no means free. The police interfered everywhere, and a great many persons were arrested or maltreated.

Notwithstanding this, the Radicals were generally victorious. The King then annulled the elections, and ordered new ones to be held, under the supervision of three royal commissioners in each of the 430 circumscriptions. In these the Radicals achieved still greater successes. The Liberals did not maintain the alliance with the Progressists at the polls, but aided the Radicals. In the final elections, which were postponed till December 16, nearly three quarters of the seats went to Radicals. The Liberals elected about 100 of the 628 members of the Great Assembly, and the Progressists not more than 60. Before convoking the Assembly, the King required every member to give a written promise that he would vote for the Constitution as drafted by the commission. The Radicals, under the lead of Gen. Gruich, stood out especially for the relinquishment by the King of the right to conclude alliances and military conventions without the consent of the Skupshtina, and when he yielded on this and some other points, the bulk of the party agreed to accept the compromise Constitution. The session of the Grand Skupshtina was opened on December 30. A royal ukase declared that no discussion would be allowed, and no amendment proposed, but that the Constitution must be accepted or rejected as a whole. The Radicals were inclined to insist on having the Skupshtina meet annually, without requiring the King's summons. They also wished to take away from the King the power to declare war, and many were pledged to vote for the abolition of the standing army, and wished at least to obtain a considerable reduction in the military establishment. The King had already surrendered the right to allow foreign armies to cross Servian territory without the consent of the Assembly. The limitation of the time that was allowed to the King to continue provisionally the budget of the previous year without convoking the Skupshtina to three months, was likewise a concession on the King's part, as the old Constitution allowed a full year. The Radicals objected particularly to the electoral system in the new Constitution, which provides that in the 10 *zupanias* into which the country is divided the deputies shall be elected by *scrutin de liste*, in the proportion of one to every 4,500 tax-payers, that voting shall be by ballot, and that three members from each *zupania* must be graduates of universities. Notwithstanding the objectionable features, fewer than 100 of the Radical deputies proved irreconcilable, and voted against the Constitution, which was adopted.

The direct active franchise under the new Constitution is given to all citizens paying 15 dinars in direct taxes, and the passive franchise to persons whose taxes amounted to 30 dinars. Every elector is eligible to the Skupshtina. All parties approved the removal of the disqualifications of advocates and state pensioners, including ex-ministers who, under

the old Constitution, were not allowed to sit in the Chamber. In the place of deputies appointed by the King, a class of official deputies is created, consisting of the members of the Council of State, the bishops, generals on the retired list, and the presidents of the Courts of Cassation and Appeal. The Skupshtina has the initiative in legislation. A significant article provides for a regency of the King's selection in case of his abdication, showing the earnestness of King Milan's desire to retire from his difficult position before involving his dynasty in his fall. The Great Skupshtina will hereafter consist of double the number of deputies in the ordinary Assembly, and its functions will comprise the consideration of questions affecting the throne, the election of a regent in a case of its vacancy, and constitutional revision. The Council of State will consist of eight members nominated by the King and an equal number chosen by the Skupshtina for life, whose duties will be to draw up bills and administrative decrees, and nominate candidates for judges of the Supreme Court and the Courts of Cassation and Appeal. Courts are declared absolutely independent, and judges irremovable. The *zupanias* are to have autonomous organization for matters relating to roads and communications, sanitary and financial requirements, and schools. The Servian Church is declared independent and autocephalous, and its head shall bear the title of Patriarch. All religions are free. The liberty of the press is guaranteed, and newspapers may be founded without a deposit of caution money. No citizen shall be arrested or have his house searched without a warrant. Foreigners may possess any kind of property in Servia and may be employed in the state service. Public instruction is gratuitous and compulsory. No titles of nobility may be borne by Servian citizens. No pensions may be granted without a special act of the Skupshtina. While he retains the right of declaring war and making peace, the King can not conclude negotiations involving the payment or exaction of a war indemnity or the cession or acquisition of territory without summoning the Skupshtina.

SEVENTH-DAY BAPTIST CHURCH. The statistics of this Church as presented to the General Conference in August were incomplete. They gave the whole number of members as 8,337, but the returns of the contributions for the several purposes of the Church were defective and unsatisfactory. Seventy-five Sabbath-schools returned 5,754 members, including officers and teachers and pupils. The revenue and expenditure of the Education Society were balanced at \$46,557. It received reports from Albion (Wisconsin) Academy and Normal Institute; Milton (Wisconsin) College, and Alfred (New York) University. The last two of these institutions have endowment funds amounting together to \$148,000. Young men and young women are admitted on an equal footing to all

the institutions. The society at its meeting recommended that the English language and literature should hold a more prominent place in both preparatory and higher courses of instruction. The American Sabbath Tract Society had received \$6,543. Three journals in the English language, one in Dutch (in Holland), one in Swedish (in Sweden), and one Hebrew journal are published under its care. The receipts of the Missionary Society had been, from all sources, \$12,039. The society had supported a mission in China, with three American missionaries, two native preachers, and eight other native laborers, with which a dispensary was connected; a mission in Holland; a mission to the Jews, home missions, and a Scandinavian mission, in the United States, in which twenty-six laborers were employed. The whole number of additions by baptism during the year in all the missions was ninety-one.

The Seventh-Day Baptist General Conference met at Leonardsville, N. Y., August 22. The Rev. L. A. Platts presided. A record was entered of the organization of a new association—the South Western—of eight churches at Texarkana, Ark. Four other churches in the South were admitted to the Conference. The Memorial Board reported that the amount of the memorial fund, excluding original notes for \$14,148 and certain real estate not estimated, was \$111,924. Provision was made for the more complete collection of materials for the history of the denomination and its churches through the action of individual churches, pastors, and families. In view of the movement of the Women's Christian Temperance Union for promoting the observance of Sunday as the Sabbath, the Woman's Executive Board was authorized to present a memorial to that body explaining the reasons why the women of this Church could not join in its effort; and a resolution adopted by the Conference declared all legislation "against rightful business on Sunday" unwarrantable from a religious point of view, and protested, "in the name of religious liberty, against all infringement upon the rights and duties of Sabbath-keepers by such legislation." Another resolution declared that "total abstinence from the use of all intoxicating beverages is the imperative duty of every individual, and the suppression of the manufacture and sale of such beverages, by law, is the duty of the state." A committee was appointed to consider and develop a proper method for bringing about united action by the young people of the denomination in denominational work.

SOUTH CAROLINA. State Government.—The following were the State officers during the year: Governor, John P. Richardson, Democrat; Lieutenant-Governor, William L. Mauldin; Secretary of State, William Z. Leitner, who died early in the year and was succeeded by J. F. Marshall by appointment of the Governor; Treasurer, Isaac S. Bamberg; Comptroller-General, J. S. Verner, elected by the Legislature in December, 1887, to fill out the

unexpired term of William E. Stoney, who resigned; Attorney-General, Joseph H. Earle; Superintendent of Education, James H. Rice; Commissioner of Agriculture, A. P. Butler; Chief-Justice of the Supreme Court, W. D. Simpson; Associate Justices, Henry McIver and Samuel McGowan.

Finance.—The revenues for the year ending Oct. 31, 1888, amounted to \$1,163,218.21, not including the balance from the previous year of \$104,385.05, and were derived from the following sources: Direct taxes, \$582,611.78; phosphate royalty, \$187,064.12; deficiency bonds and stock, \$322,367.46; Department of Agriculture, \$31,562.14; railroad assessment, \$8,139.62. The annual interest charge on the State debt was \$356,126.81. For all purposes the total expenditures were \$1,190,482.63, leaving a balance in the treasury, Nov. 1, 1888, of \$77,120.63. The personal property in the State was assessed for the year at \$41,407,412, the real estate at \$84,261,348, and railroad property at \$16,317,394, aggregating \$141,986,154. The State tax of five mills on this valuation yielded \$709,734.91. The poll-tax is not uniformly collected, as the returns show only 1,576 polls in Charleston, while there were 6,089 in Spartansburg.

State Debt.—The deficiency bonds and stocks, which became due and payable on July 1 and amounted to \$420,692.26, have been settled as follow: \$20,962.26 were bought up and canceled by the Sinking-Fund Commission; \$177,913.79 were exchanged for 4½-per-cent. bonds, under the act of the last General Assembly; and \$216,898.48 was redeemed for cash realized from the sale of the 4½-per-cent. bonds, as authorized by the act, leaving a balance of \$5,187.73 of bonds and stock yet to be redeemed in cash. The remaining portion of the State debt, which has been funded under the consolidation acts of 1873, 1878, and 1879, consists of consol. stocks, \$2,161,140.26; consol. bonds, \$3,841,000; and the Agricultural College stock, a permanent fund of \$191,800. These amounts added to the 4½-per-cent. stock of \$183,000 and 4½-per-cent. bonds of \$217,000, together with the \$5,187.73 deficiency bonds and stocks to be redeemed, makes the total funded debt \$6,599,127.99. The 4½-per-cent. bonds, known in the State as "blue bonds," were advertised for sale in New York and London, but no bid having been received, the entire issue was purchased, in some cases at a premium, by citizens of South Carolina. The bonds redeemable in 1893 are selling at a premium.

Legislative Session.—The Legislature elected in November met on the 27th of that month. On Dec. 12 it re-elected United States Senator Matthew C. Butler. The pension act of 1887, which had proved so expensive to the State, was revised and amended, the annual sum available for pensions was limited to \$50,000, and each pensioner allowed only \$3 a month. An act to establish a home for disabled soldiers was defeated.

The railroad law was amended so as to give the railroad commissioners power to establish fares and rates, under certain limitations.

The State tax for general purposes was fixed at 5½ mills for the ensuing year; a regular 2-mill tax for schools is also levied.

Almost contemporaneously with the opening of the session, the State Supreme Court, in the case of *Floyd vs. Perrin*, rendered an important decision, which nullified all acts theretofore done by townships in issuing bonds and assessing taxes for their payment to aid in the construction of railroads. The court decided that the act of 1882, and acts amendatory thereto, by which counties and townships were authorized to subscribe to the stock of railroad corporations, and for that purpose were declared to be bodies politic and corporate with necessary powers to carry out the provisions of the act, were in violation of that clause of the State Constitution which permits the grant to the corporate authorities of townships of the authority to assess taxes for corporate purposes. By this decision the liability of townships for over \$900,000 of bonds issued by them was destroyed. As it was evidently unjust that these bonds, purchased in good faith by the bondholders, should be repudiated, several measures were introduced into the Legislature to restore the liability of the townships. After considerable discussion and much opposition, the Legislature finally passed an act declaring that where the railroad had already been constructed, the principal sum of the township bonds issued should be a debt of the township issuing them, for the payment of which with interest a tax might be levied. An important act to regulate and protect primary elections, based upon the New York law, was passed. The sum of \$77,250, received from the United States for rent of and damage to the State Military Academy building by United States troops, was appropriated to public uses.

Education.—The total enrollment of school children for 1887-'88 was 193,434, an increase of 18,417 over the previous year. Of these children 103,334 were colored and 90,100 were white. The average attendance for the year was 139,557, an increase of 14,036 over 1886-'87. There were 4,203 teachers employed, receiving \$381,837.31 in salaries—a gain of 209 in the number of teachers over the previous year, but a decrease of \$3,419.41 in salaries; 2,611 teachers were white and 1,592 were colored; 2,242 were men and 1,961 women. In one county, Georgetown, there were no public schools during the year; twenty-one counties report an increase in the number of public schools and ten report a decrease. Eighty-six new school-houses were erected during the year at a cost of \$31,486.22, so that the total number of school-houses is 3,280, valued at \$435,455.36; 757 are log buildings, 1,856 frame buildings, and 33 brick or stone. The statement of receipts for school purposes dur-

ing the year were \$466,619.78; the expenditures, \$430,669.28.

The last session of the university was the first under the new system requiring payment of tuition fees. The attendance was large (170), and the number withdrawing during the year was smaller than ever before. At the end of the year 221 students were enrolled. Sixty-eight have asked for a remission of tuition fees. The university has 28 teachers. The expenses for 1887-'88 amounted to \$50,230, of which \$41,500 was paid in salaries.

Clafin College, devoted to the education of colored people, had an enrollment of 946, a large gain over any previous year, with 55 teachers and superintendents. The State appropriates \$5,000 annually to this institution.

Militia.—Companies have been organized in every county in the State but three, and interest in military affairs is everywhere increasing. There are now 92 companies in the State, with 341 officers and 4,743 men. A movement has been made to uniform the troops with the regular United States Army uniform, which is furnished free by the General Government. Twelve companies have been so uniformed.

State Institutions.—The Penitentiary contained at the close of the year 894 convicts, of whom 843 were colored and 51 white. Of these 217 are at work on phosphate-mines near Summerville, 199 are employed on shoe and hosiery contracts inside the prison, and the others are at work on the farms connected with the institution. All the convicts are now being worked under the sole control and supervision of the officers of the Penitentiary, and are paid for by the contractors at a stated price per capita per day. The prison is on a self-supporting basis, and there was an excess of receipts over expenditures for the year of \$3,444.23.

The State Lunatic Asylum has 680 inmates, an increase of 31 over 1887, of which 393 are white and 287 are colored. The present buildings are crowded. It is proposed to build a separate hospital for the colored insane.

There are 102 pupils in the Institution for the Deaf, Dumb, and Blind. Here, too, a separate school for colored children is proposed.

Pensions.—Under the act of 1887, providing a pension of five dollars a month for disabled Confederate soldiers and the widows of those killed in the Confederate service, an unexpectedly large number of claimants appeared. Up to September 30, 2,623 applications had been filed, of which the pension-board had approved 2,025, 1,492 being in favor of widows and 533 in favor of soldiers. In the payment of these approved claims the annual appropriation of \$50,000 was not only expended, but the Governor, in accordance with the law, borrowed \$50,000 additional, which was nearly exhausted at the close of the year.

Political.—A Republican State Convention met at Columbia on May 1, nominated delegates to the National Convention, and adopted a platform containing the following:

We declare the work and achievements of the Republican party are such as to commend it to the continued favor of the nation, and its mission will not be completed until all American citizens are protected at home as well as abroad, and a full ballot and a fair count make a solid South no longer possible.

We denounce the methods employed by the Democratic party in carrying elections in this State, and charge them as being responsible for the violence and intimidation which has suppressed the Republican vote.

While registration laws are usually intended to prevent fraud and to secure the free expression of the will of the people, the registration law of this State is plainly designed to facilitate fraud and suppress the will of the majority, and is on its face one of the most disgraceful acts ever placed upon the statutes of this or any other State.

We invoke the aid of the National Government to relieve us of this obnoxious law and demand of Congress to enact such legislation as shall secure a fair election at least for members of Congress and presidential electors.

On May 17, at the same place, the Democrats elected delegates to the St. Louis Convention, and adopted a short series of resolutions, approving the National Administration, the renomination of President Cleveland, tariff reform, and the message of the President on that subject, but omitting any reference to the Mill's Bill, the provisions of which relative to rice were not approved. A second Democratic State Convention met at Columbia on September 6 to nominate candidates for State officers. The renomination of Gov. Richardson was opposed by a considerable number of delegates, who united upon Attorney-General Joseph H. Earle as a candidate, but the Governor obtained nearly two thirds of the convention on the first ballot, and his nomination was made unanimous. The other State officers were also renominated. The resolutions reaffirm the National Democratic platforms of 1884 and 1888, without adverting to State issues. No nominating convention was held by the Republicans, and no State ticket supported by them, so that the Democratic ticket received the entire vote cast at the election in November. The Democrats elected every member of the State Senate (35 in all) and 121 out of 124 members of the Lower House, the three remaining members being Republicans. The Democratic national ticket was successful, and Democrats were elected in the seven congressional districts. In the Third, Fourth, and Fifth Districts there was no opposition to the Democratic candidate; in the First District the vote stood, Democratic 8,540, Republican 1,296; in the Second District, Democratic 10,704, Republican 1,405; in the Sixth District, Democratic 8,586, Republican 327; and in the Seventh District, Democratic 8,358, Republican 7,003.

The people voted at the same election upon two constitutional amendments—one extending the term of probate judges from two to four years, which was adopted by a vote of 26,806 yeas to 20,543 nays; the other abolishing the election of county school commissioners, which was rejected by a vote of 15,125 yeas to 33,457 nays.

SPAIN, a constitutional monarchy in South-western Europe. The present King is Alfonso XIII, posthumous son of Alfonso XII, born May 17, 1886. Queen Maria Christina, mother of the King, is Regent during the minority of her son. She was an Austrian princess, daughter of the late Archduke Karl Ferdinand.

The following ministers were in office at the beginning of 1888, having been appointed Nov. 27, 1885: Prime-Minister and President of the Council, Praxedes Mateo Sagasta; Minister of Foreign Affairs, Segismundo Moret; Minister of Finance, Joaquin Lopez Puigcerver; Minister of the Interior, José L. Albareda; Minister of Justice, Manuel Alonso Martinez; Minister of Agriculture and Public Works, Carlos Navarro Rodrigo; Minister of War, Manuel Casola; Minister of Marine, Rafael Rodriguez de Arias; Minister of Colonies, Victor Balaguer.

The Army.—The peace establishment of the Spanish army was fixed by the resolution of the Cortes of April 14, 1887, at 131,400 men, of whom 100,000 were for service in the peninsula, 19,000 for Cuba, 8,700 for the Philippine Islands, and 3,700 for Porto Rico. The number of horses provided for is 16,495; the number of guns, 416. The war effective is 869,353 men, with 23,467 horses and 484 guns.

The Navy.—The fleet on Jan. 1, 1888, comprised 3 iron-clad frigates, 9 unarmored frigates and cruisers, 12 gun-boats, 6 avisos, 1 torpedo-catcher, 12 torpedo-boats, and 71 other vessels. There were under construction 1 armored frigate, 3 belted cruisers, 3 unarmored cruisers of the first class, 8 of the third class, and 2 torpedo-boats. A credit of 171,000,000 pesetas to be spent on the navy in the space of nine years was made conditional on all the ships being built in Spain from Spanish material. The Government in 1888 ordered 3 armored cruisers, of 7,000 tons each, and 3 torpedo gun-boats.

Commerce.—The total value of the imports in 1886 was 855,206,950 pesetas, against 764,758,000 pesetas in 1885; the value of the exports was 727,349,885 pesetas, against a total of 698,003,000 pesetas for the preceding year. The principal articles of import and their values were the following: Cotton and cotton goods, 73,136,042 pesetas; spirits, 63,614,684 pesetas; cereals and flour, 53,233,645 pesetas; tobacco, 43,133,521 pesetas; timber, 37,625,930 pesetas; sugar, 32,625,930 pesetas; wool and woolen goods, 27,606,381 pesetas; fish, 27,520,010 pesetas; hides and skins, 26,061,640 pesetas; coal, 26,033,681 pesetas; machinery, 20,902,194 pesetas; cattle, 20,409,521 pesetas; silk and silk goods, 18,186,885 pesetas; iron and manufactures of iron, 17,290,616 pesetas; hemp and flax, and their manufactures, 17,888,335 pesetas; chemicals, 15,851,813 pesetas; cocoa, 14,023,433 pesetas; all other articles, 320,629,218 pesetas. The principal exports and their values in 1886 were as follow: Wine, 334,816,652 pesetas; minerals, 61,849,023 pesetas; fruits, 59,520,923 pesetas; lead, copper, iron, and zinc

48,194,270 pesetas; cattle, 22,069,928 pesetas; cork, 17,671,091 pesetas; wool, 16,094,946 pesetas; oil, 14,358,312 pesetas; all other articles, 152,774,740 pesetas. Of 162,623,472 gallons of wine exported, 130,313,000 gallons went to France and 4,785,800 to England.

Railroads, Posts, and Telegraphs.—The total length of the railroads open to traffic at the beginning of 1887 was 9,309 kilometres, or 5,780 miles.

The number of letters forwarded in 1886 was 90,345,607; postal-cards, 332,054; samples and printed inclosures, 10,054,974; registered articles and letters, 1,243,537; money letters, 62,148. These figures do not include the international service, in which 11,955,213 letters, 38,461 postal-cards, 7,794,370 registered letters, and 13,356 money letters were sent or received. The receipts of the post-office were 16,577,417 francs; expenses, 9,515,468 francs.

The length of telegraph lines in 1887 was 18,419 kilometres, or 11,512 miles; length of wires, 46,187 kilometres, or 28,870 miles. The number of dispatches in 1886 was 3,549,860, of which one fourth were international.

Political Crisis.—The Sagasta ministry found itself compelled in 1888, to do something to redeem its pledges in regard to the long-promised political reforms, lest it should be overturned by the Democrats, although at the imminent risk of defeat through the defection of the Ministerial Right. The Minister of Justice accordingly brought in a bill to introduce trial by jury. Canovas del Castillo met it with a proposition to raise the grain duties, asserting that the agricultural crisis demanded the first attention. The Conservative bill to impose a supplementary duty on cereals was defeated in Congress on January 9, by 133 votes against 60. In February the party in power was upheld by Castelar, the leader of the Possibilists or Conservative Republicans, in a great speech in which, without formally renouncing Republicanism, he accepted the existing frame of government, including the union of Church and state, as the most suitable for Spain, and declared that as soon as the ministry had carried out its scheme of Democratic reforms he would bid farewell to public life and devote his remaining years to a "History of Spain." The official corruption and despotic misrule of the colonies, especially Cuba and Porto Rico, afforded Gen. Salamanca—whose appointment as Governor-General of Cuba had been canceled—and the opponents of the Government an opportunity to charge the ministers with apathy, weakness, and indifference to official immorality, and to condemn as futile a commission that was appointed to investigate colonial administrations; yet the discussion of colonial wrongs awakened, as ever, very little interest. The Protectionist agitation caused the greatest difficulties that the ministry had to contend with. The commercial and agricultural crisis was made use of by politicians, who organized an Agrarian League, at the

head of which stood the Liberal ex-Minister of the Colonies Gamazo. This movement divided the ministerial majority, attracted Reformists like Romero y Robledo and Montillo, was supported by Canovas, Villaverde, and the rest of the Conservatives, and even obtained the support of Muro and other Republicans. The Cabinet met the demands of the Agrarian League with partial concessions, agreeing to take off 18,000,000 pesetas of the land-taxes, whereas the agriculturists asked for a reduction of 50,000,000 pesetas, promising to secure lower rates on the railroads for agricultural and mineral produce, and accepting the proposition to spend large sums on public works. The main demand for higher duties, however, the Premier declared, could not be granted without a violation of national faith, because the slight reductions of which Spanish manufacturers and farmers complained were made in pursuance of treaty obligations entered into with twenty different nations in the course of the last twenty years. The Reformist party which contested the succession to the tottering Sagasta ministry with the Conservatives, was disrupted in the spring by the secession of Lopez Dominguez, the founder of the party, and of his powerful military following, leaving its parliamentary leader, Romero y Robledo, at the head of a remnant that was no better than a political group. Gen. Lopez Dominguez organized a new group, called by the name of Monarchical Democrats, to advocate the old programme which Romero y Robledo had not faithfully observed.

The ministerial crisis had lasted almost a year when the resignation of the Cabinet took place as the result of a trivial question of military etiquette. The Queen had left Madrid for an excursion to Valencia, which the Minister of Justice insisted on her making according to the published arrangement, lest the postponement should be construed as a sign of fear of the Zorillist Republicans, who had convoked a mass meeting in the same city. The Infanta Isabel, who was left to represent her, decided to take a journey also, and informed Gen. Martinez Campos that her sister, the Infanta Eulalie, would give out the military watchword. The Military Governor of Madrid replied that the married infanta was not legally competent to perform that office, and that it was impossible, according to military rules, for him to receive the parole from her husband, Prince Antonio, Duc de Montpensier, who was only a captain in rank. The Minister of War, who was not on good terms with the Captain-General, sent a brusque telegram ordering him to receive the pass-word from the Princess Eulalie, whereupon Gen. Campos offered his resignation. All attempts to accommodate the quarrel failed, and as the majority of the Cabinet sided with the Captain-General, Gen. Casola and the ministers who had supported his view resigned their portfolios. Señor Sagasta handed in the resignation of the entire Cabinet

to the Queen Regent, who requested him to form a new ministry. In the reconstructed Cabinet the Marques de la Vega de Armijo, who was Minister of the Exterior in 1881-'83, resumed that office, Señor Moret, who had held the portfolio, exchanging it for that of the Interior. Señores Puigcerver, Martinez, and Rodriguez, remained at the head of the Ministries of Finance, Justice, and Marine. Señor Ruiz Capdepon entered the Cabinet as Minister of the Colonies, and Señor Canalejas y Mendez as Minister of Commerce. Gen. Cassola was succeeded as Minister of War by Gen. O'Ryan, the director of infantry, who had never before held a political office.

The question of military reform brought the generals again to the front in Spanish politics, destroying the discipline which had been cultivated since the accession of Alfonso XII. A Democratic reform of the army was the demand of the progressive wing of the Ministerial party, which was led by Martos, President of the Chamber, and represented in the Cabinet by Moret, Puigcerver, Capdepon, and Canalejas. For fiscal, as well as for political and military reasons, it was desirable to reduce the peace establishment which has an officer for every half-dozen soldiers. Gen. Cassola elaborated a plan which was under discussion for a full year. It met with such opposition that he was driven from office before the Cortes could come to a decision. Gen. Lopez Dominguez and Gen. Martinez Campos had other plans of reform. The Government created a dangerous situation by announcing just before the separation of the Cortes in July the intention of enacting reforms by royal decree during the recess. Gen. O'Ryan who was expected to carry out Cassola's scheme, inclined rather to that of Martinez Campos, which was a virtual abandonment of army regeneration. The army officers divided into parties supporting Cassola, Campos, Lopez Dominguez, and the Government respectively. The friends of Gen. Cassola, who had never led a political group before his dismissal, subscribed money to have his reform project printed as a testimonial, and arranged political demonstrations which the Government attempted to suppress, placing officers under arrest for such breaches of discipline. Gen. Cassola entered into a coalition with Gen. Lopez Dominguez, whose persistent agitation for army reform had compelled Sagasta to promise such a measure, and who had demanded a more radical reform than was embodied in the bills of Gen. Cassola and his predecessor, Gen. Castillo. The Democratic members of the Cabinet urged the promulgation of reform measures by Executive orders, but were defeated in a Cabinet council on October 21, when it was decided to call the Cortes together in November, and re-submit the project for legislative action. After the opening of the Cortes, a conference was held with all interested parties, at which it was decided to withdraw the military reform bill,

and bring the matter before the Cortes in a revised form. But immediately afterward the Premier was goaded by the Opposition into an announcement that Cassola's bill and all other unfinished legislation would be revised. Gen. O'Ryan tendered his resignation. At the election of the Budget Committee, the dissentient Liberals and Protectionists who follow the lead of Gamazo and Montero Rios, carried two fifths of the seats, and were only prevented from gaining a majority by groups of the regular Opposition, notably the followers of Castellar and Romero y Robledo, who came to the support of the ministry. Señor Sagasta, in consequence of this moral defeat, on December 8 placed the resignations of all the members of the Cabinet in the hands of the Queen, who invited him to constitute another ministry. Gen. O'Ryan and Señores Moret, Alonso Martinez, and Puigcerver, were determined not to resume office. The Minister of Marine, who had sustained the course of Gen. O'Ryan, also retired. The list of the new ministry was published on December 10. The Marques de la Vega de Armijo, retained the portfolio of Foreign Affairs, and Señor Canalejas remained Minister of Commerce. Señor Ruiz Capdepon took the portfolio of the Interior, being succeeded as Minister of the Colonies by Señor Becerra. The other new Ministers were Venancio Gonzalez, of the Department of Finance; Count Xiquena, Minister of War; Gen. Chinchilla, Minister of War; and Admiral Arias, Minister of Marine.

Legislation.—Among the reforms promised by the Sagasta ministry were trial by jury, civil marriage, and universal military service. The bill introducing jury trials was passed, and was signed by the Queen-Regent in March, 1888. The civil-marriage law, which was framed with the design of meeting all the objections of the Clericals, fails entirely to satisfy the Radicals. The sanction of the clergy is as necessary as before for mixed marriages, and free-thinkers of Catholic birth are still required to go through the religious ceremony in order to be legally married, since the new law prescribes that every Catholic must be married in church, and that this marriage is valid in all civil relations. The latter provision annuls the only innovation in the new law, which provides that a Government official shall be present at the ceremony, whose duty it is to have the marriage properly registered, because the marriage is legal even if the registration is for any reason evaded. The principle of the bill was agreed upon in negotiations between the Government and the Vatican before it was presented to the Cortes, and when a paragraph was added to the effect that marriages of Spanish subjects abroad could be contracted according to the custom of the country in which they take place the Vatican objected, and it was stricken out.

The bill introducing trial by jury was agreed to by both Houses on March 26. The jury law withholds for the present from the juries about

thirty crimes and punishable offenses, or two thirds of the entire number on the statute-books. The election of jurors was fixed for January, 1889, and the juries will begin their functions throughout the kingdom in the following April. The establishment of trial by jury is regarded with great satisfaction by the majority of Spaniards because the administration of justice by judges who are the creatures of politicians has been often scandalously partial and has brought the law and the courts into contempt.

In the financial legislation for 1888, Señor Puigcerver was called upon to obtain a larger revenue, and at the same time to remit a part of the land-tax in order to relieve the agricultural depression caused by the fall in the prices of grain and diminished exports of cattle. Heavy taxes on imported spirits met the approval of all the chambers of commerce, as they served the double purpose of increasing the receipts of the treasury and of discouraging the manufacture of artificial wine, and thus promoting vine-culture. The spirits used in imitation and fortified wines are mostly German potato brandy. The new tax is a consumption duty on all spirits, foreign and domestic, ranging from 80 pesetas per hectolitre for qualities containing less than 60 per cent. of pure alcohol to 120 pesetas for these above 80 per cent. The wine-growers demanded the prohibition of imports, and in their interest the Cortes passed a law against the manufacture of spurious wines, in pursuance of which many factories were closed and the manufactured stock was destroyed. In attempting to collect the new tax on spirits the revenue officials encountered in all the large towns the resistance of the distillers, who organized indignation meetings and appointed a committee to arrange with the Government for changes in the law. At Tarragona, where there are large distilleries, the populace rose against the police and revenue collectors, stoned them, and raised barricades. To prevent serious disturbances the Government suspended the collection of the duties. The largest distillery in that town is a Swedish concern on behalf of which the Swedish Government raised a protest. In Saragossa, Barcelona, and Madrid, the manufacturers, liquor merchants, and retailers refused to pay the tax on their stock in trade, and threatened to close up their establishments if the Government insisted on the payment. The Minister of Finance finally yielded and agreed with the deputations from Tarragona, Barcelona, Reus, and other cities that the tax on pure alcohol should be collected, but not on manufactured wines; that the tax on spirits of all kinds should be remitted if the municipal authorities of any town demand it; and that the cost of excise licenses should be graduated according to the density of population.

Elevation to a Great Power.—Germany has gone out of her way to show diplomatic courtesies to monarchical Spain, and aimed to be the sponsor who would help Spain to regain her former

place in the European councils, partly with the object of attracting the good will of Spain and of gaining her moral support or definite adhesion to the Central European league, and partly in order to enable her to assert her pretensions to Morocco, and thus prevent the French and English from establishing themselves in that country, and gaining control of the road to the Suez Canal. In 1881 Germany invited Spain to take part in the conference of the great powers for the regulation of the Suez Canal. Spanish pride and antipathy, especially on the part of the Liberals, toward the "hereditary foe of the Latin nations" defeated the purpose of the patronizing courtesies. The consequences of the indiscreet nomination of Alfonso XII to the colonelcy of the Uhlan regiment in Strasburg, and, the feeling roused by the Caroline Islands dispute, caused the Government to abandon the purpose of raising the Berlin legation to the rank of an embassy after the visit of the German Crown-Prince in 1885, although the permission of the Cortes had been obtained, lest it should be construed as a sign of a political treaty. The allied monarchical powers are especially interested in preventing the establishment of a republic in Spain, and since 1885 a secret agreement for this end has subsisted between them. The matter of raising the rank of ministers to that of ambassadors was allowed to rest until 1887, when Spain called the Morocco conference, where it was desirable that she should appear as a great power. The authorization of the Cortes was obtained, and by the royal decree of Dec. 27, 1887, the ministries at Berlin, London, Vienna, and Rome were changed into embassies. In January, 1888, the representatives of these four great powers at Madrid presented their credentials as ambassadors.

It was the opposite of a *rapprochement* with Germany that Señor Moret and his colleagues had in view when they invested Spain with the outward rank of a great power. They hoped to see their country take the lead in the Latin League, comprising Spain, France, Belgium, and Italy, with the Spanish republics of South and Central America, over which the supremacy of the mother-country would again be asserted when Spain, strengthened by the acquisition of Morocco, should be restored to a leading position among the powers of Europe. The alliance, which is the dream of Spanish statesmen, is to be directed against Germany's predominance in Europe and the expansion of the Germanic races in all parts of the world. Count Benomar, the Spanish ambassador at Berlin, disclosed to Prince Bismarck communications of Anti-German tenor, intended only for his own instruction, revealing this secret aim of Spanish policy, and for this offense was abruptly recalled in the autumn of 1888.

Labor-Riots.—The farmers and land-owners in the province of Huelva, adjacent to the mining district of Rio Tinto, complained that the process of roasting copper-ore in the open

air was injurious to the health of the people, as the sulphurous fumes poisoned the air for a wide distance. The mines had been sold in 1873 for 92,800,000 pesetas by the Government to an English company, which had developed an industry that gave employment to 12,000 work-people. The Government appointed a commission, and at the request of the local officials issued a provisional edict forbidding the open-air process of calcination pending the investigation. The mining company entered a protest, which was supported by the English ambassador, and when the Government declined to rescind the order the managers cut down wages and discharged a part of the force of laborers. This led to a general strike and tumultuous demonstrations. The miners demanded not only the restoration of the old scale of wages, but the shortening of the hours of work in their deadly occupation as a preventive of mortality. The Government ordered out the military, and in a collision on February 4 the troops were ordered to fire, and poured a volley into the unarmed crowd. There were 230 persons hit, and 50 were killed, whose blood "sprinkled the ministerial bench." Romero Robledo declared in moving a vote of censure, which received only 19 votes against 176. A royal decree was issued in accordance with the conclusions of the commission on March 1 for the gradual abolition before 1891 of open-air calcinations. This decision, contravening the contract with the company and the law of Dec. 17, 1873, it is feared will ruin the industry and give cause for claims against the Government.

The Barcelona Exhibition.—An international industrial exhibition, opened on April 7, 1888, was planned on a large scale, and proved moderately successful notwithstanding the large number of similar exhibitions that were held in Europe, and the critical economical and political conditions existing in Spain.

When Queen Christina visited the National Exhibition at Barcelona in May, the naval powers of Europe united in a demonstration in her honor in the harbor, where the greater part of the Spanish fleet was also assembled. The Italian navy was represented by the "Italia," "Duilio," and other great ships; the French by the "Colbert," "Amiral Dupret," "Courbet," and other formidable iron-clads; Great Britain by the Mediterranean squadron under the command of the Duke of Edinburgh; Austria-Hungary by an imposing detachment; Germany by the "Kaiser"; and the United States, Russia, the Netherlands, and Portugal by representatives from their respective fleets.

Colonies.—The colonial possessions of Spain comprise Cuba, with 118,833 square kilometres of territory and 1,521,684 inhabitants; Porto Rico, with an area of 9,620 square kilometres and 754,313 inhabitants in 1880; the Philippine Islands, having an area of 293,726 square kilometres and 5,559,020 inhabitants; the Sulu Islands, 2,456 square kilometres in extent, and

containing a population of about 75,000; the Mariana Islands, with an area of 1,140 square kilometres and a population of 8,665; the Carolines, 700 square kilometres in extent, with 22,000 inhabitants; the Palaos Islands, 750 square kilometres in extent, with a population of about 14,000 souls; Fernando Po, Elobey, Annobom, and the territory of San Juan, on the coast of Guinea, having an aggregate area of 2,203 square kilometres and 68,656 inhabitants; and the Western Sahara, between Cape Bojador and Cape Blanco, with the territory of Ifni and other districts on the west coast of Africa. The extent and population of these latter possessions are not known, except in the case of the barren Saharan, where her coastline is 1,300 kilometres, and her claim extends 400 kilometres into the interior. The territory at Coresco Bay, on the French Gaboon, is 24,960 square kilometres in extent. Spain also claims the little district of Spri, at Cape Nun. The strip of coast in Assab Bay, between Ras Garibal and Ras Maçama, on which there is a commodious harbor, has been leased from Italy as a coaling-station for fifteen years.

In March extensive districts in the Sulu Archipelago were occupied, but not without a sharp conflict, during which many of the natives and several Spaniards were slain.

SUNDAY LEGISLATION. The Roman Empire established religion by entering into a contract with the gods through its official representatives. Worship, therefore, consisted of ceremonies, prayers, sacrifices, and games, through which the people fulfilled their part of this contract. The state maintained colleges of sacred lore, which determined all matters connected with religion. The most important of these was the College of Pontifices. The Emperor stood at the head of this as *Pontifex Maximus*, and had full power to decide "what days were suitable for the transaction of business, public or private, and what were not." The Oriental sun-worship cultus, Mithraicism, was widely prevalent and extremely popular in the Roman Empire about the beginning of the Christian era. It was for a long time a dangerous and a well-nigh successful competitor for the controlling religious influence throughout the empire. The evidences of this worship are still associated with the ruins of all the principal military stations that sprung up in the course of the Roman conquest of Europe. The division of days into judicial and non-judicial was an established custom under the original pagan cultus of the empire. This custom was enlarged and intensified by the influence of Mithraicism, in which the sun's day occupied a prominent place. Even before the age of Augustus the number of days on which no trials could take place at Rome, because of reverence to the gods to whom these days were consecrated, had become a means by which wealthy criminals evaded justice; and Suetonius sets it down as a praiseworthy act on the part of Augustus that he rejected

thirty days from that number in order that business might not be impeded and crime might not go unpunished. The ferial system also included the forbidding of various kinds of labor on the days consecrated by religious observances. This system and these practices antedate Christianity.

Constantine, like his predecessors, was a devotee of the sun god, and he favored all influences and used all measures to establish himself as supreme ruler. While he was thus struggling for the supremacy, Sunday legislation first appeared (321 A. D.). The pagan character of this first legislation is shown by the law and its associations. There is nothing in contemporaneous history to indicate that such legislation was desired or sought by the people of the empire or by any class thereof. On the contrary, everything shows that these edicts sprung from the will of the Emperor alone. In 386 A. D. legislation was renewed, forbidding shows and litigation on Sunday, and then, for the first time, the term "Lord's Day," was used as the counterpart of Sunday.

In the middle ages almost all questions of religious duty and of ecclesiastical organization were subject to civil control. The ecclesiastico-civil authority claimed the prerogative of legislating on religious questions, after the manner of the Jewish theocracy. Hence there are several points of analogy between the Sunday legislation of the middle ages and the Sabbath legislation of the Mosaic period. Legislation fixed sacred time from noon on Saturday until sunrise on Monday; and during the latter part of the middle-age period those who dared to disobey such requirements were coerced by additional commands, which, it was claimed, were furnished by direct interposition of Heaven.

The Saxon legislation was much like the middle-age legislation of Southern Europe. It began as early as 688 A. D. under Ina, King of Wessex. It divided the punishment for working on Sunday between the slave, the master who required work of him, and the freeman who worked from his own choice. The sacred time sometimes began with sunset on Saturday and ended with sunset on Sunday, known as "Monday eve." In some instances, as under Edgar, 959-975 A. D., it extended from noon on Saturday until daylight on Monday.

The English Sunday laws were a continuation and expansion of the Saxon laws, and, like these, were the product of the original Roman legislation. In 1281, under Edward I, an attempt was made to eliminate the Jewish theocratic idea. The showing of wool in the market was forbidden under Edward III in 1354. Islip, Archbishop of Canterbury, in 1359 enlarged the prohibitions and requirements with reference to Sunday and other church-appointed days. Marketing, and fairs for the sale of goods, which seem to have been held in and about church-buildings and cemeteries, were forbidden on Sunday and other

festivals, under Thorsby, Archbishop of York, in 1357 A. D.; while "unlawful games on Sundays and other festivals" were prohibited under Henry IV in 1409 A. D. Fairs and markets, which evidently increased rather than diminished, were especially inveighed against under Henry VI in 1448. The sale of goods by "cobblers and cordwainers in the city of London," excepting in certain localities, was forbidden "on Sunday and other festivals," in 1464. In 1547, under Edward VI, more stringent regulations concerning religious worship on Sunday were introduced. In 1552 he issued "an act for the keeping holy days and fast days," which included a large number of days and made many strict prohibitions. The "Injunctions of Elizabeth" created a stricter legislation, and made special provision for the appointment of "discreet men to see that all the parishioners duly resort to their churches upon Sundays and all holy days," and to punish neglect thereof. The spread of the Puritanic element in England, which urged this stricter legislation, was opposed by the "Book of Sports," first published by James I in 1618, and republished by Charles I in 1633. This declaration set aside much of the stricter legislation that preceded it, and favored the ruder and irreligious habits of the masses.

The Sunday legislation in England that was peculiarly Puritanic, dates from 1640 to 1660. The Sunday laws passed during the Puritan supremacy, were at once civil enactments and theological treatises. In strictness of requirement, extent of application, special features, regulations, and provisions, these laws are in strong contrast with nearly all that preceded them. They form a curious and interesting epoch in the history of Sunday legislation. They are prefaced by the complaint that Sunday was little regarded as a sacred day, and was wickedly desecrated by business and recreation. They forbade all secular business, traveling, and recreation, in careful detail. They specified minutely in all particulars, and instituted a rigid system of police supervision and of punishment. The dates of the long and prominent laws under Cromwell are 1644, 1650, and 1656. In connection with these laws, and in the more stringent laws enacted before and after the Cromwellian supremacy, excise regulations concerning drinking-shops were prominent.

Sunday legislation in Scotland appeared under James I in 1424; the main feature of the first law being a requirement that all men practice themselves in archery in connection with their attendance upon parish churches on "holy days," under penalty of fine. This was in the interest of military service. In 1469, under James III, special legislation forbade moving, collecting of rents, etc., on holy days. Next came the forbidding of fairs and markets, in 1503. From this time Sunday legislation increased in strictness, being in its general characteristics like that of England, and allied

to that of the Cromwellian period. This legislation also included "legal fast days," as early as 1693. Many of these Scotch laws are still in force.

The first Sunday law in America was enacted in Virginia, previous to 1623. It punished absence from church service on Sunday, without excuse, by the forfeiture of fifty pounds of tobacco. But the representative and most important type of Sunday legislation during the colonial period, appeared in the New England colonies. The early government of these colonies was theocratic, after the Jewish model; and all Sunday legislation was analogous to, or identical with, the Mosaic legislation concerning the Sabbath (Saturday). This legislation began in the Plymouth Colony as early as 1650, previous to which time the common law of England was regnant in the colonies. All this colonial legislation was emphatically religious. The usual punishments were fine, imprisonment, whipping, caging, and setting in the stocks. This legislation forbade servile work, and even the simplest forms of recreation, not excepting "walking in the streets or fields after sunset on Saturday night, and before sunset on Sunday." It also required attendance on such public worship as was legally established, and forbade all other. Police regulations were rigidly enforced. Sunday exercise legislation began in the Plymouth Colony as early as 1662. By a law enacted in that year at Plymouth, those having occasion to travel, "in case of danger of death, or such necessitous occasion," were to receive a ticket from one appointed for that purpose, without which the traveler was liable to arrest by any person. Servile work and sports were also forbidden on days of public fasting, prayer, and thanksgiving. In 1665, in the Plymouth Colony, sleeping in church was forbidden, under penalty of being admonished for the first offense, set in the stocks for the second, and being reported to the court for further punishment if this did not reclaim. In 1669 sleeping and playing outside the building, and near the meeting-house, were also forbidden, under penalty. A fine of twelve-pence was inflicted upon "any person or persons that shall be found smoking of tobacco on the Lord's Day, going to or coming from the meetings, within two miles of the meeting-house."

The first Sunday legislation in the Massachusetts Bay Colony was in 1629. This ordered the cessation of all labor on "every Saturday throughout the year, at three of the clock in the afternoon," and the spending of the rest of that day in "catechizing and preparation for the Sabbath, as the ministers shall direct." In 1644, among the answers of the reverend elders to certain questions propounded to them, they agreed that "any sin committed with a high hand, as the gathering of sticks on the Sabbath-day, may be punished with death, when a lesser punishment might serve for gathering sticks privily and in some need."

The first draft of certain laws for this colony made "profaning the Lord's Day, in a careless or scornful neglect or contempt thereof," a capital crime. This form of the law was erased from the code as finally adopted. In 1679 the General Court at Boston set a special guard "from sunset on Saturday night until nine of the clock or after, between the fortification and the town's end," with instructions not to permit any cart, footman, or horseman to pass out of the town, except upon such necessity as the guard deemed sufficient. Those who disregarded the challenge of the guard were proceeded against as "Sabbath-breakers."

Sunday legislation in the New Haven Colony began in 1647. It forbade all work from sunset to sunset, with punishment according to the judgment of the court. About this time, also, profaning Sunday, "either by sinful, servile work, unlawful sports, or careless neglect, was punished by fine, imprisonment, or whipping," and upon evidence that the "sin was proudly, presumptuously, and with a high hand committed, against the known authority of the blessed God, such a person therein disobeying and reproaching the Lord shall be put to death, that all others may fear and shun such provoking and rebellious courses." In the colony of Connecticut there were at first no special statutes concerning Sunday. The code of 1650 punished burglary or theft, "in the fields or in the house, on the Lord's Day," by the loss of one ear for the first offense, and the second ear for the second offense. For the third offense, "he shall be put to death." These requirements were often repeated, being enlarged or changed in minor particulars.

Sunday legislation in the colony of Rhode Island was less severe than in those already noticed; but there was a general prohibition of labor, gaming, shooting, drinking, etc. In the colony of New Netherlands (New York) in 1647, the dictator issued a proclamation against "Sabbath-breaking, brawling, and drunkenness." In the colony of Pennsylvania the early Sunday legislation was much more lenient than in New England. Virginia led in Sunday legislation, although that legislation never reached such extreme features as were common in New England. The Sunday laws of New England were not a dead letter; many examples of punishment for "Sabbath-breaking" are on record, while the majority of cases were tried in the lower courts, concerning which no record remains.

The Sunday laws of the colonial period passed into the legislation of the States, but in most instances were considerably modified. Naturally the Eastern States, where colonial influences had been strongest, retained more of the rigid features of the earlier laws. The influences connected with the Revolutionary War diminished religious regard for Sunday in no small degree, and the stricter features were gradually eliminated from subsequent legislation. The Sunday laws of the Western and

Southwestern States are slight in extent and mild in requirements, when compared with earlier legislation. This is still more marked in the Territories. Arizona has no Sunday laws, and Colorado and Wyoming scarcely more than fragments; while the former law of California, though mild, was wholly repealed in 1883. Louisiana had no Sunday law until 1886, and the original law of Massachusetts was so amended in 1887 as to make it extremely liberal. In general, the Sunday laws forbid ordinary employment—works of necessity and mercy excepted—and in a greater or less degree, sporting, gaming, fishing, and hunting. But the legal status of Sunday in the States is very different from the actual. For many years past, the Sunday laws have been nearly or quite inoperative. Aside from excise legislation, little is done to enforce existing laws. All serious efforts to do so, even against liquor-selling, have, in most instances, been checkmated by the attempt to enforce the provisions against traveling, and other secular occupations that have become almost universal. Thus opposed, those who have sought to enforce the law in one particular have soon desisted, and the execution of the law has failed. The history of this practical decline in the execution of our Sunday laws shows a marked change in the public opinion concerning the religious status of the Sunday; nor can any one seeking to analyze the causes that have produced the history here outlined, make such analysis successfully without a careful and extended consideration of the religious features of the case.

For more than twenty years past preparation has been made for an epoch in the history of Sunday legislation in the United States, which has appeared, definitely, within the current year. The National Reform Association, organized to secure a recognition of the name and authority of God and Christ in the national Constitution, has included in its mission the work of reviving and securing the better enforcement of existing Sunday laws, and the enactment of more stringent ones. The National Women's Christian Temperance Union has lately entered into this movement with great zeal; and, still later, individuals in religious circles have joined in the movement, by organizing "The American Sabbath Union." In May, 1888, a bill was introduced into Congress by Senator Blair, of New Hampshire, proposing national legislation which forbids all secular business and work on Sunday, in all places under the control of Congress, such as the postal service, the army and navy, the Territories, and in interstate commerce. At the present writing this bill is in the hands of a committee which has granted two public hearings to the advocates of the bill, in one of which the opponents of the bill were also recognized. This movement is a radical departure from the historical policy of the United States concerning Sunday legislation. The friends of the bill claim that it is necessary,

since State legislation is of little value, while the nation, in its corporate capacity through the Post-Office Department and otherwise, continues "to be the greatest Sabbath-breaker"; that State laws against commerce and traveling are insufficient, and hence Sunday legislation must continue to be a failure, unless Congress assumes control of all such matters, under the general provisions of the interstate commerce act. The history of this movement includes two prominent features. It involves more extended efforts, and more nearly national organization in its favor, among the religious people of the United States than any similar movement in the history of the nation. Through their efforts, the "the workingmen," so-called, and especially representative organizations in which these are combined, are petitioning Congress for the passage of the bill. The friends of this movement claim that the Roman Catholics of the United States have united with Protestants in support of the Blair Bill. Those who advocate its passage on religious grounds, insist that they do not wish to deal with religion directly, but desire the passage of the law for its indirect effect. Nevertheless, the bill avows a distinctly religious character, as is shown by its title: "A bill to secure to the people the enjoyment of the first day of the week, commonly known as the Lord's Day, as a day of rest, and to promote its observance as a day of religious worship." The history of this movement also includes an unprecedented interest and agitation on the part of the people in the various phases of the Sunday question. The Blair Sunday-Rest bill expired in the hands of the Committee, in March, 1889.

It is impossible to trace the results of Sunday legislation in detail in different periods; but some general results appear in the successive laws. Prominent among these is the fact that legislation has not secured religious regard for Sunday. Neither has legislation been strictly enforced and sustained in any period when there was not high religious regard for Sunday. The general effect has been, rather, the development of Sunday as a holiday; the character of this holiday varying with the state of civilization, refinement, and general culture. The verdict on this point, as shown in the results connected with the stringent legislation of the Puritan period, both in Great Britain and in the United States, is emphatic and important. Such legislation has always been lightly regarded by the irreligious. In spite of all stringent legislation, the strictness required under the Puritan *régime* declined rapidly in England, and steadily, though perhaps a little less rapidly, in the New England colonies, where such legislation passed through a searching historic test. In many instances the history of Sunday legislation shows that enforced abstinence from legitimate business has increased objectionable holidayism on the part of the irreligious. Another fact is clearly set forth in the history of

this legislation, especially in modern times, viz., that the more carefully men have studied the history of such legislation and its philosophy, the less eager have they been in its support; if, indeed, they have not wholly discarded it. The discussions of the past few years, and in some instances the decisions of courts, have sought a new basis for Sunday legislation in the needs of society and of individuals, apart from religious considerations. Many now deny the right of the civil law to touch Sunday in any way as a religious institution, and admit only the right to consider it as a legal holiday, on hygienic and economic grounds. See Irmischer's "State and Church Ordinances concerning the Christian Observances of Sunday" (Erlangen, 1839), and Lewis's "Critical History of Sunday Legislation from 321 to 1888" (New York, 1888).

SURGERY. While the advance in the science of surgery during the past three years has been great, it has not been due to the addition of many new ideas, but rather to the development of some already suggested and partly tested.

Bacteriology.—The study of bacteria, or the germs of disease, has been pursued vigorously. Many troubles belonging to the domain of surgery are directly caused by these organisms, and by their exclusion or destruction prevention or cure is accomplished. The following surgical diseases are proved to be due to microbes, and their peculiar forms of bacteria are so well known that the diagnosis can be made from them alone: The various forms of tuberculosis or scrofula, septicæmia or pyæmia, anthrax or malignant pustule, suppurative inflammation (abscess), gonorrhœa, glanders, and hydrophobia. Many other diseases are presumed to have the same origin, but we must wait for proof positive. Cancer and syphilis are among these latter. While there can be little doubt that their peculiar bacteria have been discovered, that fact has not yet been placed beyond a question. The antiseptic method is founded on the germ theory, and neglect of it on the one hand, or strict observance on the other, will furnish ample proof of the correctness of the theory.

Anæsthetics.—Many new substances have been tested, but a good anæsthetic has not been added to the list. Cocaine has been extensively experimented with, and has proved very valuable. It has aided greatly in the study and treatment of diseases of the eye and the throat. It is extremely useful in small surgical operations and in dressings. For instance, abscesses, felons, small tumors, etc., may be operated upon painlessly by its aid, and irritable wounds may be dressed without discomfort. When it can be employed it possesses a great advantage, as its effect is local and transient, and we can have the intelligent co-operation of the patient.

Antiseptics.—In general, our methods of securing an aseptic condition have not changed. By aseptic is understood freedom from germs of disease that cause inflammation, blood-

poisoning, and similar conditions. It is chemical and microscopic cleanliness. The weak solution of corrosive sublimate ($\frac{1}{2000}$), carbolic acid, and heat (for the instruments and dressings), are the chief agents employed. A new substance called creoline is being tested, and has shown excellent results. It is a coal-tar product. The advance in this connection has been a more general knowledge of its importance and a more universal adoption of its use.

Abdomen.—In surgery of the abdomen the greatest advance in medical science has been made. By the careful use of antiseptic measures the operation known as laparotomy, or opening the abdominal cavity, is so free from danger that the patient is put to scarcely any risk, and we are therefore able to treat successfully and safely many diseases and accidents that formerly would have been hopeless. The past three years have added little that is entirely new in this connection, but there has been great improvement in operative technique, and consequently much better statistics as to results.

The most important operations are: 1. Gastrotomy, or opening the stomach for the removal of foreign bodies. 2. Gastrorrhaphy, or sewing wounds of the stomach-wall. 3. Digital dilatation of the intestinal end of the stomach, done by forcing the finger through the opening to the intestine without cutting (except the laparotomy). The intestine is inverted over the end of the finger, and the constriction is dilated. This is done in cases of stricture due to cancer or to scar following ulceration. 4. Gastro-enterostomy, or joining the intestine to the side of the stomach and making a communication between them, so that the food shall pass through the new opening. This is done for cancer at the lower end of the stomach or at the upper end of the bowel. 5. Removing intestinal obstruction, which may be due to any one of several causes, such as twisting or knotting of the bowel, telescoping of a portion of the intestine within itself, constriction due to matting together of the bowels by inflammation, impaction of foreign bodies, often gall-stones, etc. 6. Resection or removal of a diseased portion of the intestine in cases of cancer, gangrene, extensive wound, typhoidal ulceration causing peritonitis, etc. 7. Enterorrhaphy, or sewing of wounds of intestine. 8. Entero-enterostomy, or making a direct communication between two portions of the intestine, so that their contents shall pass through the new opening and avoid the intervening diseased part of the bowel. This is done in case of cancer. 9. Abscesses or cystic tumors of the liver may be opened and cured. The laparotomy is done, and the wall of the abscess or cyst is sewed to the abdominal wall, and not opened till the third day. By that time firm union takes place, and there can be no leakage into the abdominal cavity. 10. The gall-bladder may be opened (cholecystotomy), and accumulated

gall-stones removed. Peritonitis is treated surgically. Laparotomy is performed, and the cause removed. A frequent cause of peritonitis, and one that is often cured, is perforation of the vermiform appendix, due to ulceration or gangrene. The diseased appendix is removed, then the abdominal cavity is disinfected by washing, carefully dried, and closed. This is also done in peritonitis from other causes. Hæmorrhage from an abdominal organ, following disease or accident, may be arrested. Laparotomy is performed, and the bleeding vessel ligated. Tumors of many of the organs may be removed, especially those of the uterus and ovaries. The uterus and ovaries may be removed when diseased. All the above-named operations are done frequently and with good results. An important innovation in this connection is the device known as Senn's absorbable plates, used for the various sewing operations on the intestines. They consist of flat rings of bone, from which the mineral elements have been removed by acid and are used as follows: To each circular plate four threads are attached and passed through needles. One plate is then placed in each end of the intestine that is to be united, and the needles passed through the intestine from the interior about a quarter of an inch from the margin. The corresponding threads are then tied tightly together, bringing the outer layer of the intestines firmly in contact, pressed together between the two rings of bone. Nature causes adhesion to take place in a few hours, which gradually becomes a complete union. The bone plates are softened, and, after a few days, are discharged through the bowels. This is a complete and rapid method of connecting the parts. The old method of sewing the ends together required from one to two and a half hours, while this process can be completed in about half an hour.

Hernia is cured by operation, with little or no risk. The proportion of permanent cures has greatly improved, owing to better methods and to the increased experience of individual surgeons.

But little has been added to our possibilities in surgery of the kidneys and bladder. An ingenious instrument has been perfected, known as the cystoscope, which enables us to explore the interior of the bladder visually and renders our means of diagnosis much more perfect and extended. It consists of a tube, at the end of which is a small but powerful electric lamp which illuminates the bladder. The tube is passed into the bladder, as a catheter would be, and the current turned on, the bladder having first been filled with water. The entire interior of the bladder is seen, part at a time, in a small mirror at the end of the tube. A telescope in the tube magnifies the image to about the actual size. Tumors, ulcerations, encysted stones, etc., can be seen, which could not be detected otherwise without opening the bladder. By watch-

ing the urine enter the bladder, we can tell which kidney is the source of hæmorrhage or of pus.

Enlargement of the prostate gland, obstructing the flow of urine from the bladder, has of late been successfully treated by operation. Operations on the kidney are not new, but the results are much better than formerly. The removal of a stone from the kidney has become a comparatively common operation, and is quite free from danger. Floating or movable kidneys are replaced and retained by sutures; and in case of destruction of a kidney by disease, as diffuse abscess or cystic degeneration or tubercular disease, the unhealthy organ may be removed, the other kidney carrying on the work.

The Brain and the Nervous System.—The brain has become much more a field for operative surgery, and mortality from its diseases and injuries has been diminished considerably, many cases being saved by an operation which formerly would have been lost. A most important advance in this direction is our enlarged and improved knowledge of what is known as cerebral localization, i. e., determining, by paralysis and other nervous phenomena in a given part of the body, exactly what part of the brain or spinal cord is affected, and to about what extent. So exact has our knowledge become that abscesses, tumors, inflammatory changes, bullets, hæmorrhage, old fractures causing pressure on the brain, etc., can be successfully located and operated upon. Many parts of the brain may be cut into quite freely without producing ill effects. This has been shown by experiments on animals and by some remarkable cases of head-injury. By removing diseased conditions, many cases of epilepsy, constant headache, neuralgia, and paralysis have been cured. The interior of the skull is reached by removing a button-shaped piece of bone with a trephine. Tumors have been removed from the spinal cord, and some cases have been successfully treated where the bone has been pressed upon the nerve substance by fracture of the spinal column. It has been known for a long time that a nerve accidentally divided may be sewed together and regain its full power. This practice was at first confined to recent cases, but lately cases of local paralysis of long standing are cured by this operation.

Respiratory Organs.—The most important addition to the treatment of diseases of the larynx is known as intubation of the larynx (O'Dwyer). It is especially useful in cases of obstruction of the larynx due to diphtheria and membranous croup. It is now universally employed, and has greatly reduced the death-rate. It is a substitute for the operation of tracheotomy, consisting in placing a very perfectly shaped and sized tube in the larynx, through the natural opening. This forms a metallic lining to the larynx, through which the patient breathes. The tube can be retained several days, and is not removed until the disease has subsided.

Tumors of the larynx are frequently removed by making an incision through the front of the organ, which is afterward closed. Complete removal of the larynx for cancer has been done successfully in a sufficient number of instances to prove it to be a justifiable operation in exceptionally favorable cases. The death-rate from the operation is very high, but in considering this point we must remember that the disease is fatal, and that, without the operation, the patient's life can be but short. We are limited in our ability to operate on the lungs. The attempt has been made to cure localized consumption by excision; but, with our present skill, the undertaking is too dangerous. Some very brilliant results, however, have been obtained in the treatment of abscess of the lungs by surgical means.

The Eye.—Here, also, has been a steady advance, though little that is entirely new has been done. Since the last writing some successful transplantations of animals' eyes have been made on human subjects. The object is to furnish a living artificial eye. It is hoped, in young patients, that the eye (of a young animal) will cause the orbital cavity to continue to grow as does the unaffected one, so that there shall be but little difference in size at the time of maturity.

SWEDEN AND NORWAY, two kingdoms in the north of Europe united in one sovereignty by the act promulgated Aug. 6, 1815. They have a common diplomacy, which is directed by a Council of State composed of Swedes and Norwegians. The reigning sovereign is Oscar II, born Jan. 21, 1829, who succeeded to the throne in 1872.

SWEDEN.—The Diet consists of two chambers, both elective. The First Chamber has 143 members, elected by the provincial and municipal bodies for nine years. The Second Chamber contains 222 members, of whom 76 represent the towns and 146 the rural districts, elected for three years. The King, in the exercise of the executive power, in making appointments to office, in concluding treaties, and in legislating on matters of political administration, acts under the advice of a Council of State, which was composed, in 1888, of the following members: Oskar R. Themptander, Minister of State; Count Albert Carl Lars Ehrensvärd, Minister of Foreign Affairs; Nils Henrik Vult von Steyern, Minister of Justice; Gen. Knut Axel Ryding, Minister of War; Baron Carl Gustaf von Otter, Minister of Marine; Julius Edvard von Krusenstjerna, Minister of the Interior; Baron Claes Gustaf Adolf Tamm, Minister of Finance; Carl Gustaf Hammarskjöld, Minister of Education and Ecclesiastical Affairs; Johan Henrik Lovén; and Johan Christer Emil Richert.

Finances.—The budget for 1889 makes the ordinary receipts 18,929,000 kronor, and the extraordinary receipts 65,280,000 kronor, giving a total sum, with 3,472,000 kronor remaining in the treasury from the previous year, of

87,681,000 kronor. The ordinary receipts are made up of 4,435,000 kronor from land-taxes, 2,700,000 kronor from farmed domains, 1,600,000 kronor from forests, 1,200,000 kronor from tonnage dues, 6,000,000 kronor net receipts from railways, 1,200,000 kronor from telegraphs, and 1,794,000 kronor from other sources. The customs revenue, amounting to 36,000,000 kronor, the postal receipts of 6,580,000, the stamp-tax, yielding 3,500,000 kronor, the spirit duty, amounting to 15,000,000 kronor, the income tax, reckoned at 3,600,000 kronor, and the sugar duty and other receipts, amounting to 600,000 kronor, constitute the extraordinary receipts. The ordinary expenditures are estimated at 65,493,411 kronor. The capital of the public debt, which was contracted exclusively for the construction of railways, was 245,967,703 kronor on Jan. 1, 1888.

The Army.—The Swedish army in 1888 numbered 9 general officers, 38 officers on the staff, 974 officers and men in the engineer corps, 4,520 in the artillery, 4,974 in the cavalry, 27,468 in the infantry, and 303 in the transport service, making a total of 38,289 inclusive of civil employés. The enlisted troops, counting only rank and file, numbered 9,423, and the cantoned troops 26,657. Including the *beväring*, or militia, the forces of the kingdom had a total strength of 194,577 officers and men, with 246 cannon and 6,178 horses.

The Navy.—The naval force in 1887 comprised 15 armored gunboats, 16 sloop gunboats, 1 school-ship, 1 frigate, 3 corvettes, 3 avisos, 1 torpedo school-ship, 18 torpedo-boats, 6 transports, and 6 sailing-vessels.

Commerce.—The imports in 1886 were of the total value of 301,366,000 kronor as compared with 340,003,000 kronor in 1885 and 325,817,000 kronor in 1884. The value of the exports was 228,398,000 kronor, as compared with 246,271,000 kronor in 1885 and 238,612,000 kronor in 1884 (1 krona = 27 cents). Nearly one third of the imports in 1886 came from Germany, one fourth from Great Britain, and one seventh from Denmark, while of the exports nearly one half went to Great Britain, and one third were divided between Denmark, Germany, and France. The imports of textile manufactures in 1885 were valued at 53,929,186 kronor, and those of textile materials and yarn at 29,686,080 kronor. Grain and flour were imported to the amount of 46,813,719 kronor, while the exports amounted to 28,544,414 kronor. The imports of groceries amounted to 41,535,545 kronor; of coal, 25,000,000 kronor; of metal goods and machinery, 28,682,618 kronor. The imports of live animals and animal food-products were valued at 22,490,777 kronor, and the exports at 33,772,438 kronor. The timber exports were 107,215,793 kronor in value, and those of raw metals 34,751,320 kronor.

Communications.—There were in operation at the end of 1887 2,496 kilometres of state rail-

roads and 2,892 kilometres of lines belonging to companies, making altogether 7,388 kilometres, or 4,588 miles.

The Post-Office in 1886 forwarded 52,022,-864 letters and postal-cards, 9,462,185 circulars and samples, and 39,664,046 journals. The receipts were 6,106,476 kronor, and the expenses 5,896,960 kronor.

The state telegraph lines in 1887 had a total length of 8,345 kilometres, with 21,304 kilometres of wires. The dispatches sent during the year numbered 539,273 for the interior and 489,146 in the international service, besides 161,287 in transit. The receipts were 1,229,-860 kronor, and the expenses 1,241,978 kronor.

Politics.—The old Agrarian party gave place to a new one of protectionist leanings, which achieved an unexpected victory in the elections for the Rigsdag that met in January, 1888. In Stockholm there was a disputed election, which was decided by awarding the 22 seats to the Protectionist candidates, giving the party a majority in the House of 112 against 110. Prime Minister Themptander offered his resignation to the King, and advised him to send for Archbishop Sundberg; but the latter was unwilling to take the responsibility of broaching a decided protective policy with a chance majority that was not proved to represent the actual majority of electors in the country. As the King would not agree to an immediate dissolution of the Diet, the ministers retained their portfolios until, on February 6, a compromise Cabinet was formed by Baron D. A. G. Bildt, in which Count Ehrensvärd, J. von Krusenstjerna, and Baron Otter, the Ministers of Foreign Affairs, the Interior, and Marine, were retained in office. The new members of the Cabinet were as follow: Bergström, Minister of Justice; Maj.-Gen. Baron N. A. H. Palmstjerna, Minister of War; Baron E. von Essen, Minister of Finance; and Dr. G. Wennerberg, Minister of Ecclesiastical Affairs. Of the two Associate Ministers, Lovén and Lönegren, the former served in the Themptander Cabinet. The elections for the First Chamber in September placed beyond a doubt the preponderance of the protectionist sentiment in the country. The Chief of the Department of Justice retired from the ministry, and was replaced on September 28 by C. G. A. Orbom, and on the same date Baron A. L. E. Akerhielm succeeded State Councilor Lönegren. Krusenstjerna and Count Ehrensvärd, two pronounced Free-Traders, offered their resignations, but were induced to withdraw them.

The grain tariff was passed by a majority of 117 against 96 in the Second Chamber and 73 against 42 in the First Chamber, and went into force on February 14. The duties are 2.50 kronor per 100 kilogrammes on wheat, rye, barley, maize, peas, and beans; 4.30 kronor on flour; 3 kronor on malt; and 1 kronor on oats. The import duties on spirits were made much higher, although the budget committee

considered that the grain duties would add enough to the revenue to make the accounts balance. The Diet, which had a considerable Protectionist majority even in the joint session of both houses, proceeded to impose a series of protective duties calculated to yield 15,000,000 kronor annually, while the ministers remained entirely neutral. The new tariff went into force on July 1, except the duties on raw iron, which were postponed, pending negotiations with France in regard to the free importation of Swedish iron. Ships were declared free of duty if purchased by Swedes before July 1 and brought into the country before the end of the year. The surplus revenue obtained by the new duties is to be applied, in accordance with the desire of the King, in establishing accident insurance and old-age pensions for workingmen; for the reduction of local taxes, especially those for the support of churches and public charities; for the reduction of the land-tax; for the equipment and maintenance of the military forces; and for the encouragement of the shipping industry. In accordance with King Oscar's suggestion, a commission was appointed to draw up plans for the application of the surplus revenue from the protective duties in the manner proposed for the relief of the working and farming classes. The increased revenue for 1889 and 1890 will be required to cover the deficits for 1886 and 1887, so that three years must pass before there will be means available for these objects.

The new tariff places a duty on raw iron, in which there is no foreign competition, but could not be made to protect manufacturers of machinery and iron wares, because these articles are embraced in the commercial treaty with France, which will not expire till Feb. 1, 1892. The treaty of 1874 with Norway renders illusory many of the new duties, and diverts the benefit to Norwegian producers. This treaty provides for free trade between the two countries, not only in the products of the countries themselves, but in all articles that have been subjected to a manufacturing process made from materials imported in a raw or partly finished state from other countries. The Norwegians, in competing with Swedish manufacturers, have the advantage of free materials for iron manufactures and ship-building. The Swedish duties on live animals, in like manner, benefit Norwegian stock-raisers, who can abundantly supply the demand for sheep, hogs, cattle, and horses.

The new ministry was attacked by the Advanced Liberals not only for its protective policy, which threatened to shut out foreign commerce with tariff barriers, but for its reactionary political tendencies, manifested especially in an administrative order to the police to watch and, if necessary, to close political meetings. This was designed to put an end to the meetings of Social Democrats and their agitation for universal suffrage. The Themptander Cabinet appointed a commission after

the first manifestations of Socialistic activity in Sweden to consider measures for improving the condition of the working-classes. This commission, in September, 1888, reported projects of laws embracing measures for the protection of the life and health of workmen, the insurance of laborers and seamen against accidents, and a state insurance establishment.

NORWAY.—The legislative power is vested in the Storting, consisting of 114 members, which, on assembling, divides itself into the Odelsting and the Lagthing. All legislation originates in the Odelsting, which is thrice as numerous as the Lagthing. The smaller body adopts or rejects the bills that come from the other House. Bills that are rejected by the Lagthing can be passed by a vote of two thirds of the entire Storting sitting together. The King can veto a measure twice, but, if it is passed by three successive Storthings, it becomes law. The executive authority is exercised by the King through a Council of State, consisting of a Minister of State in Christiania, another minister residing in Stockholm near the King, and at least seven Councilors of State, of whom two reside in Stockholm. The Council of State at Christiania in the beginning of 1888 was composed as follows: Minister of State, Johan Sverdrup; Department of Education and Ecclesiastical Affairs, Dr. Elias Blix; Department of Justice, Hans Georg Jakob Stang; Department of the Interior, Sofus Anton Birger Arctander; Department of Public Works, Birger Kildal; Department of Finance and Customs, Baard Madsen Haugland; Department of Defense, Johan Sverdrup; Department of the Revision of Accounts, Jakob Liv Rosted Sverdrup. The delegation of the Council of State at Stockholm was composed of Ole Richter, Minister of State, and Aimar August Sørenssen and Hans Rasmus Astrup, Councilors of State.

Finances.—The receipts of the treasury for the year ending June 30, 1887, were 42,977,000 kronor, of which sum 19,495,600 kronor were derived from customs, 6,038,400 kronor from railways, 2,594,400 kronor from the brandy-tax, 2,276,700 kronor from the postal service, 2,165,700 kronor from invested capital, and smaller amounts from the malt duty, domains and forests, and other sources. The total expenditure was 43,145,400 kronor, of which 7,951,300 kronor were for railroads, bridges, and other public works, 9,026,800 kronor for the administration of the finances, 5,280,100 kronor for posts, telegraphs, and other services under the charge of the Interior Department, 4,310,300 kronor for education and worship, 4,131,400 kronor for sanitary service, police, and prisons, 6,654,100 kronor for the army, and 2,601,900 kronor for the navy. The amount of the state debt on June 30, 1887, was 108,427,600 kronor, and of active capital 139,207,700 kronor.

The Army.—By virtue of the laws of 1866, 1876, and 1885, the military forces are divided

into troops of the line, *landværn*, and *landstorm*. The troops of the line are limited to 800 officers and 18,000 men. The other bodies are destined for the defense of the country within its borders.

The Navy.—The fleet of war in 1887 consisted of 4 monitors, 2 frigates, 2 corvettes, 30 gun-boats, 9 torpedo-boats, and 7 other vessels, having a total armament of 163 guns.

Commerce.—The total value of the imports in 1887 was 133,691,000 kronor, as compared with 135,169,000 kronor in 1886; the value of the exports was 106,628,000 kronor, as compared with 102,844,000 kronor. The average value of the imports for the five years preceding was 152,272,000 kronor, and of the exports 111,215,000 kronor. The imports from Great Britain in 1887 were 35,368,000 kronor in value; from Germany, 34,950,000 kronor; from Sweden, 16,873,000 kronor; from Russia, 14,873,000 kronor. The exports to Great Britain were valued at 34,588,000 kronor; to Sweden, 14,455,000 kronor; to Germany, 13,817,000 kronor. The value of the imports from the United States was 7,185,000 kronor, and of the exports to the United States 1,108,000 kronor. The imports of cereals and flour in 1886 were of the value of 26,891,000 kronor, the most important article being wool, of the value of 9,328,000 kronor, after which came coffee, coal, sugar, butter and cheese, and cotton goods. Fish was exported of the value of 31,153,000 kronor, and timber of the value of 29,275,000 kronor. Other articles of export are wood-pulp, train-oil, butter, woolen and cotton goods, skins and hides, and matches.

Communications.—The length of railroads open to traffic in 1888 was 1,562 kilometres, or 970 miles.

There were 21,722,315 letters and 21,332,664 newspapers carried in the mails during 1887. The receipts of the Post-Office were 2,366,288 kronor; expenses, 2,439,355 kronor.

The state telegraph lines at the end of 1887 had a length of 7,494 kilometres, with 13,087 kilometres of wires. The number of internal dispatches was 442,660 in 1887; of foreign dispatches, 172,621 sent and 214,215 received. The receipts were 838,528 kronor; expenses, 1,030,487 kronor.

Politics.—The dissatisfaction of the Radicals with the Cabinet led to their secession from the party in the beginning of the year on the refusal of the Premier to dismiss his nephew, Jakob Sverdrup, and admit the Democratic leaders, Steen and Qvam, into the ministry. The Storting was opened on February 2. The Odelsting did not re-elect Qvam as president, but Daae, a Moderate. The left formally dissolved itself, and a group of the Pure Left was constituted under the leadership of Rector Steen. The Radical ministers, Arctander, Astrup, and Kildal, retired, and their resignations were accepted on February 16 by the King, whom the crisis brought to Christiania. Two weeks later the Minister of Education and

Worship, Dr. Elias Blix, resigned. The Opposition mustered 51 in the Storthing on a vote of censure emanating from the Radical Left, the Government being supported by 30 Moderates and 31 men of the Right. In June Ole Richter, the Minister of State, representing the Government at Stockholm, and Aimar A. Sörenssen, of the same section of the ministry, handed in their resignations, and Hans G. J. Stang and Baard M. Haugland were transferred to their posts. Richter's resignation was the consequence of an attack on the Prime Minister by Björnson Björnstierna, the real leader of the Radical party, who accused Sverdrup of falsehood and violation of his word on the authority of his colleague in Stockholm. Richter denied having made the accusation, but the evidence was so strong that, after his return to Stockholm, he shot himself in despair on June 15. The ministry as finally reconstituted was made up as follows; Minister of State at Christiania and Minister of National Defense, Johan Sverdrup; Chief of the Department of Justice and Police, W. S. Dahl, appointed March 5, 1888; Chief of the Department of Revision of Accounts, L. K. Liestøl, appointed March 5, 1888; Chief of the Department of Education and Ecclesiastical Affairs, Jakob Liv Rosted Sverdrup; Chief of the Department of Public Works, O. Jakobsen, appointed March 5, 1888; Chief of the Department of Finance and Customs, O. J. Olsen, appointed July 19, 1888; Minister of State at Stockholm, Hans Georg Jakob Stang; Councilors of State at Stockholm, Baard Madsen Haugland, previously Chief of the Department of Finance, and P. O. Schjøtt, appointed March 5, 1888. The Ministry of the Interior, formerly held by Sofus A. B. Arntander, was left vacant.

The Storthing rejected a scheme of protective duties on wheat, butter, and other agricultural products, agreeing only to an impost of 4 öre per kilogramme, equal to $\frac{1}{3}$ cent a pound, on oleomargarine, and to duties on fresh fruit ranging from 4 to 7 öre per kilogramme. On June 25 an act was passed reducing the salaries of members of the State Council from 12,000 to 10,000 kronor, and taking away the additional allowances of the councilors residing in Stockholm. The Storthing separated on July 7, after rejecting, by 64 against 50 votes, a motion of the Radicals declaring want of confidence in the ministry.

A law was passed on April 21, 1888, in relation to state citizenship, declaring that Norwegians who become citizens of foreign states lose their rights of citizenship in Norway, and likewise those who reside permanently abroad, unless they record their intention to remain as such in the Norwegian consulate within a year, and renew the declaration every ten years.

General Election.—Johan Sverdrup, when he formed a Radical ministry, was regarded as a true representative of the Norwegian Democracy, of which party he was a leader of many

years' standing. In office, however, he abandoned the principles of popular sovereignty and national independence, and made one compromise after another with the monarchist reaction that has spread through the Scandinavian lands, owing to the example and influence of Germany, until he stood on the platform of the Constitutional Right, from which his chief support now came, and was surrounded by ministerial colleagues taken from that party. The electoral contest that took place in the autumn of 1888 was embittered by the accusations of faithlessness brought against the minister. The suicide of Richter was laid to his door. Councilor Stang, the leader of the Constitutionalists, sought to make the issue one of principles, asserting that his party was the defender of the historic rights of the crown, of the connection between Church and state, and of the Union against destructive "European" innovations, foreign to the national character. The Conservatives and Ministerialists, while preserving separate party organizations, formed an electoral alliance against the Radicals. The Radical leaders, Qvam, Steen, and Konow, lost their seats, and were shut out from the next Storthing, as the law requires every candidate to be a resident of the district that he seeks to represent. The new Storthing consists of 54 members belonging to the Right, 38 adherents of the Pure Left, and 22 who belong to the ministerial group.

SWITZERLAND, a federal republic in Central Europe. The central Legislature is composed of the State Council, in which each of the twenty-two cantons is represented by two members, and the National Council, containing one deputy for every twenty thousand of the population, elected by direct universal suffrage. The executive body is the Federal Council, which was composed, in 1888, of the following members: President, W. F. Hertenstein; Vice-President, B. Hammer; members, Dr. A. Schenck, Dr. E. Welti, L. Ruchonnet, Dr. N. Droz, and Dr. A. Deucher. (For area and population, see the "Annual Cyclopædia" for 1887.)

Finances.—The federal revenue in 1887 amounted to 59,586,972 francs, of which 24,632,285 francs were derived from customs and 21,103,869 francs from the Post-Office. The expenditures amounted to 56,829,996 francs, the principal items being 21,157,204 francs for military administration and 19,571,324 francs for the post-office. The debt of the federation on Jan. 1, 1888, was 38,984,982 francs, and the capital assets were 78,002,798 francs.

The Army.—The Swiss army consists of the regulars, called Bundesanzug, and the Landwehr. Men between the ages of seventeen and fifty, not belonging to either of these forces, are enrolled in the Landstrum. The strength of the regular army in 1888 was 123,031 officers and men, and that of the Landwehr 80,248. The Landstrum comprises 4,922 former officers, 5,652 non-commissioned officers,

and 287,069 men, of whom 40,247 have served in the regular army. The Federal Council has divided the Landstrum into the armed and the auxiliary forces. The active army has 20,000 horses, and is armed with the Vetterli repeating rifle with ten charges, 280 Krupp field-guns, and 22 mountain-guns. The cost of the army has nearly doubled in ten years. The Swiss Government has fortified the entrances to the St. Gothard Tunnel, and to other tunnels of the international railroad lines, and has prepared the means of blocking them instantly by filling them with stones precipitated with the aid of electricity.

Commerce.—The special imports in 1887 were valued at 792,284,000 francs; the exports at 641,918,000 francs. The imports of precious metals were 44,751,000 francs, and the exports 29,175,000 francs. Switzerland has a foreign trade of 510 francs *per capita*, which exceeds that of every other country except Holland. The commerce for three years past has increased 3 per cent. per annum, almost the entire growth having been in imports.

Railroads.—The railroads in operation in 1886 had a total length of 2,912 kilometres, exclusive of 63 kilometres belonging to foreign companies. The total capital was 1,050,608,170 francs. The receipts were 75,392,588 francs, and the expenses 41,084,353 francs. A mountain railroad over the Brünig Pass, connecting Lucerne with the Bernese Oberland, was opened in June, 1888.

The Post-Office.—The number of domestic letters and postal-cards forwarded in 1887 was 61,001,268, exclusive of 6,880,115 official letters; the number of printed inclosures, 16,292,656; of packets, 8,828,127; of postal money-orders, 2,488,221, of the total value of 275,410,943 francs. The number of international letters and postal-cards was 30,651,127; of printed inclosures, 13,576,430; of journals, 65,805,033; of packets, 2,649,474; the value of money-orders, 33,653,038 francs.

Telegraphs.—The length of the telegraph lines in 1887 was 7,060 kilometres; the length of wires, 17,102 kilometres. The number of dispatches was 3,331,155, of which 1,816,524 were internal, 1,008,097 international, 396,037 in transit, and 110,497 official. The receipts were 3,531,598 francs; expenses, 2,893,992 francs.

The Alcohol Law.—In order to check the spread of drunkenness, the Swiss Legislature made the sale of spirits a state monopoly in 1887, except such as are used in industrial processes, which must be rendered unfit for drinking. A commission of experts decided what substances should be used in denaturalizing alcohol to be used in the various industries, and fixed the proportions of the admixture in each case.

Emigration.—In 1886 the National Council passed an act to license and supervise emigration-agents, the provisions of which were made stricter by a bill approved in April, 1888. Agencies are required to give bonds in the

sum of forty thousand francs, and to pay an annual license-fee of fifty francs. Sub-agents can be employed on conditions subject to the investigation of the cantonal authorities, but an additional bond of three thousand francs is required for each. No colonial enterprise can be undertaken by companies, individuals, or agencies, without the approval of the Federal Government. When agencies undertake to forward money to emigrants in foreign lands they must deliver the full sum without deduction. A special bureau was created for the purpose of supervising emigration-agencies and furnishing information to intending emigrants, and protection to Swiss citizens in foreign countries.

Anti-Socialist Proceedings.—The German Government has brought pressure to bear on the Federal authorities continuously for several years past, to secure the suppression of the German Socialists who make Zürich their headquarters, and the Swiss rulers have done everything to please Germany except abrogating the right of asylum. Four German Anarchists, named Schopen, Metzler, Haupt, and Von Ehrenberg, were expelled from Zürich in January, 1888. Against a German, named Bürger, who had become a naturalized Swiss citizen, and acted as a spy and *agent provocateur* in the pay of the Berlin police, the cantonal authorities brought criminal proceedings. On March 20 the Bundesrath voted a credit for the establishment of a political police, which was asked for on the ground that the relations with Germany necessitated measures to prevent a disturbance of the friendship between the two countries and abuse of the right of asylum. In introducing the bill, Federal Councilor Droz said: "The majority of the Swiss people are determined that our house shall be respected by all who dwell in it. The air we breathe is the air of healthy liberty. We will not allow it to be vitiated by the miasma of anarchism. Neither shall our house be a refuge whence assaults can be directed with impunity against the repose of other countries." The chief object of the German Government was to suppress the Socialistic journals and pamphlets that are smuggled into Germany, notwithstanding the vigilance of the post-office police authorities, and, especially the "Social Demokrat" newspaper, which is the organ of the German Parliamentary Socialist party, and has a circulation of from 10,000 to 12,000 copies. Several urgent notes from the German Government demanded the suppression of this organ of moderate Socialism, which continued to spread through Germany the views that no one there dared to utter except from the tribune of the Reichstag, and was more obnoxious to the German Chancellor than the revolutionary "Rothe Teufel" and the Anarchistic *brochures* that were also issued by thousands in Zürich for circulation in Germany, because it helped to keep alive the Parliamentary party. The Fed-

eral authorities sent a warning to the editor, to which he replied in the next issue of the paper, "*Sit aut est, aut non sit.*" Yet he was careful not to print anything that could give occasion for interference. The German authorities were not satisfied, and fresh representations from Berlin made it a point that Switzerland should prevent Germans from using the right of asylum to carry on a political agitation in their own country. At length the Federal Council decided on April 16 to issue a decree of expulsion against four Germans connected with the paper: Bernstein, the editor, who came from Berlin; Schlütter, the publisher, a native of Schleswig-Holstein; Tauscher, the business manager, a naturalized American, who once lived in Chicago; and Motteler, formerly editor of a journal in Saxony, and an ex-member of the German Parliament, who was the agent for circulating the paper. The printing-office was not suppressed, because it was carried on under the firm name of a Swiss citizen, although the managers and the printers were all Germans. New editors and business agents at once stepped into the places of those who were expelled, and the journal continued to appear and to find its way into Germany just as before. In the beginning of June the Bundesrath ordered the expulsion of Ulrich Wübbeler and Martin Eller, two Germans who had been enticed into sending a box of dynamite to an agent of the Berlin police named Schröder, in Zürich. In July the Bundesrath directed the cantonal authorities to have all Socialistic meetings watched by the police. The Swiss Socialists united into a single Social-Democratic party, and arranged to hold a Labor Assembly in October. The Swiss Government was at last induced to take measures to suppress the exportation of forbidden literature into Germany. The Bavarian, Franz Troppmann, a correspondent of the Chicago Anarchists, was expelled in September, and the evidence taken in the case of ex-Captain von Ehrenberg, of the German army, was delivered up to a military tribunal in Baden. Many Socialists joined the Swiss Grütli Association, which rejected a proposition to exclude foreigners from membership. The "Social Demokrat" was finally driven in September to change its place of publication to London. A Swiss "Social Demokrat" was established during the summer, and announced the programme of a Swiss Socialistic party, embracing obligatory education up to the age of fifteen; assistance for capable poor students who wish to complete their education in the higher institutions of learning; election of the Bundesrath by the people; a Federal code of criminal law; obligatory sick and accident insurance, gratuitous medical service, and Federal trade laws; the acquisition by the state of railroads, and management by the Government of banking and the grain-trade; the recognition in the Constitution of the right of all citizens to labor, and of the duty of the authorities

to provide every one who asks, with work corresponding to his abilities and justly compensated either in the service of the public or of private persons who are willing to furnish the employment; and the gradual naturalization of commerce, transportation, industry, and agriculture, with the distribution among the producers, as equally as is expedient, of the proceeds over and above the working expenses, and a sum was set aside for insurance, justice, military, civil administration, etc.

Commercial Treaties.—Negotiations for a new commercial treaty with Germany were suspended, pending the settlement of commercial and railroad regulations between Germany and Austria. The German treaty with the Swiss Confederation was concluded on Nov. 15, 1888, and a Swiss-Austrian treaty on November 23. The latter embodies substantial reductions in the tariff on both sides. Switzerland obtained the same duties as Italy on silks, machinery, and other manufactures, and in return lowered the duties on grain, flour, cattle, and timber.

The Institute of International Law.—The annual meeting of the Institute of International Law was opened at Lausanne on Sept. 3, 1888. The principal subjects of discussion were the exceptions to the rule determining the capacity of persons for entering into binding contracts on foreign soil or with foreigners; the law of collisions at sea; extra-territoriality of consulates; and the obligations toward neutral powers incurred through territorial annexations. The Institute in its meeting at Oxford decided that the nationality of parties entering into contracts ought to be the test of their capacity. At Lausanne a resolution was adopted to the effect that in commercial matters, if the person seeking to escape the obligations of his contract on the ground of legal incapacity had deceived the other party in this particular, or if there were a combination of grave circumstances showing fraudulent intent, the judge should follow the law of the country in which the contract was made. The liability for negligence in maritime collisions the Institute would place upon the vessel that was the cause of the accident, except where both ships were negligent, in which case the one chiefly offending should pay its just share of the loss to the other vessel, while damages to passengers and cargoes should be divided between them. The question of the inviolability of consulates was brought up by a French member, in connection with the seizure of papers relating to a will case, by order of an Italian magistrate, in the French consulate at Florence. The consul had placed the documents among the consular archives, and warned the Italian authorities not to search the consulate, as a special article in the Treaty of 1862 between France and Italy guarantees the inviolability of the archives. The Institute decided to deal with the subject of extra-territoriality as a whole, and appointed a committee to report on the subject comprehensively. Among the other questions discussed were con-

licts of law in connection with public companies; the limitations of the right of Governments to expel foreigners; railways, telegraphs, and telephones in time of war; and the theory of the Berlin Conference on the occupation of territory. The Institute adopted resolutions in respect to the assertion of properly asserted

rights in newly annexed territory in the uncivilized parts of the globe; to the protection of vested interests of citizens of civilized nations; to freedom of access and settlement without regard to nationality; to the prohibition of slavery; and to the proper treatment of natives.

T

TEACHERS' ASSOCIATIONS. The oldest living educational association in this country is the American Institute of Instruction, organized in Boston, in 1830. The earliest educational association in this country was formed at Middletown, Conn., in 1799, under the name of "Middlesex County Association for the Improvement of Common Schools." The existence of this society was due to the efforts of the Rev. William Woodbridge, of Middletown, Conn., a famous teacher. Although this effort was premature, it gave a great impulse to the cause of education, and its recommendation was considered one of a teacher's best testimonials. There is no record of any other continuous associated movement until 1826, when Josiah Holbrook organized in Connecticut the "lyceum," which had for its main object "the association of teachers for mutual improvement." One of the first societies of this kind was organized in Windsor County, Conn., by Mr. Holbrook himself, assisted by the Rev. Samuel J. May. Twenty of these lyceums were in active operation as late as 1838. In 1827, a "Society for the Improvement of Common Schools" was formed in Hartford, and in 1830 a general convention of teachers and friends of education was held in that city, of which Noah Webster was president. This meeting was largely attended, and addresses were delivered by President Humphrey, of Amherst College, Noah Webster, and W. A. Alcott. In 1839 a State convention was held at Hartford, at which addresses were delivered by Prof. Calvin E. Stowe, Thomas Cushing, Alexander H. Everett, and Mrs. Lydia H. Sigourney. In the autumn of the same year the first teachers' institute in this country was held in Hartford, under the invitation and arrangement of the secretary of the Connecticut Board of Education. The expenses of this institute were paid by the Hon. Henry Barnard. During the same year, a plan for a State association was drawn up by Dr. Barnard, which was the first decisive movement of this kind in Connecticut, and, perhaps, in the country, although there were voluntary conferences in Massachusetts for discussing educational questions at a much earlier date. For instance, in August, 1636, "a general meeting of the registered inhabitants of the town of Boston" was convened, and money was subscribed "toward maintaining a free school-master for the youth with us." This was not distinctively an association of teachers, but it

was the beginning of conferences that led to the formation of organized efforts, as well as teachers' associations at a later date. These voluntary meetings led to the general organization of the State, and afterward to the formation of Bible, Educational, Tract, and Sunday-school societies. In 1812 the first successful effort was made to bring the teachers of Boston and vicinity into an association for their own professional improvement. The name of this was "The Associated Instructors of Youth in the Town of Boston and its Vicinity." Meetings were held for several years, and in 1835 it was reorganized under the name of "The Association of the Masters of Boston Grammar-Schools," and came before the public in the memorable controversy of the "thirty-one Boston masters" with Horace Mann, in 1844-'45. The lyceum movement mentioned above, led to the formation of the Boston Mechanics' Institute in 1827, the Boston Infant-School Society in 1828, and the Boston Society for the Diffusion of Useful Knowledge the same year, and to State educational conventions in 1829 and 1830. One result was the organization of the American Institute of Instruction, Aug. 21, 1830, annual meetings of which have been held until the present time. It was proposed to call this society "The New England Association of Teachers"; but as several of the Middle, Southern, and Western States were represented in its first conventions, and many persons not teachers were desirous of membership, a more comprehensive name and plan were adopted, although it has continued to be an association of New England teachers. Its presidents from 1830 to 1856 were Francis Wayland, William B. Calhoun, James G. Carter, George B. Emerson, Gideon F. Thayer, Thomas Sherman, and John Kingsbury. Through the efforts of James G. Carter in 1835, then a member of the Massachusetts Legislature, an appropriation of \$300 a year, for five successive years, was made in aid of the association, and this grant was from time to time renewed. Year after year the institute has held its meetings, usually in one of the principal cities or towns of New England, each session occupying three or four days in lectures, reports, and discussions. The day meetings have been attended by hundreds of teachers, school-officers, and friends of education, and the evening sessions by thousands of people.

The first national educational association was the American Association for the Advancement of Education, organized in Philadelphia in December 1849, under the leadership of Horace Mann, Alonzo Potter, Joseph Henry, Henry Barnard, Charles Northend, John S. Hart, John Griscom, Joseph Chandler, Nathan Bishop, Alexander D. Bache, Samuel S. Randall, and others. The early presidents were Horace Mann (1849), Eliphalet Nott (1850), Right Rev. Alonzo Potter (1851-'52), Joseph Henry (1853), Alexander D. Bache (1854), and Henry Barnard (1855). The credit of suggesting and originating the formation of the present National Educational Association is probably due to William Russell, who was born in Glasgow, Scotland, in 1798, and was educated in the Latin School and University of that city. He began his life work as a teacher in Georgia, and was the author of an admirable address setting forth the nature and objects of an organization that should include all the professional teachers in this country. This address was read to a convention held in Philadelphia, Aug. 27, 1857, and resulted in a formal organization of the National Teachers' Association, with Zalmon Richards as president. The first anniversary of the association was held in Cincinnati on Aug. 11-13, 1858. Its successive presidents were: Andrew J. Rickoff, J. W. Bulkley, John D. Philbrick, W. H. Wells, S. S. Green, J. P. Wickersham, J. M. Gregory, L. VanBokelen, and Daniel B. Hagar. This association was merged into the National Educational Association, at Albany, N. Y., in 1870. The successive presidents have been: J. L. Pickard (1871), E. E. White (1872), B. G. Northrop (1873), S. H. White (1874), W. T. Harris (1875), W. F. Phelps (1876), M. A. Newell (1877), John Hancock (1879), J. Ormond Wilson (1880), John H. Smart (1881), G. J. Orr (1882), E. T. Tappan (1883), Thomas W. Bicknell (1884), F. Louis Soldan (1885), N. A. Calkins (1886), W. E. Sheldon (1887), Aaron Gove (1888), and A. P. Marble (1889). These meetings have been held in most of the principal cities of our country, the last being in San Francisco. The meeting for 1889 is to be held in Nashville, Tenn. An historical sketch of the organization of the associations in each of the States would fill a large volume, but the following outline will indicate a few facts concerning their early history. In some instances the records of the first meetings have been lost, but the dates as given below are thought to be correct:

Arkansas—Teachers' Association, 1860.
 Alabama—State Educational Association, 1856.
 California—Education Society, 1854.
 Connecticut—State Association, 1839.
 District of Columbia—Association of Teachers, 1849.
 Delaware—State Convention, 1853-'56.
 Florida—Education Society, Tallahassee, 1831.
 Georgia—Teachers' Society, 1831.
 Iowa—State Teachers' Association, 1854.
 Indiana—State Teachers' Association, 1854.
 Illinois—State Education Society, 1841.
 Kansas—State Teachers' Association, 1863.

Kentucky—State Teachers' Association, 1857.
 Louisiana—Institute for the Promotion of Education, 1838.
 Mississippi—Teachers' Association, 1858.
 Maine—State Teachers' Association, 1846.
 Maryland—Institute of Education, 1843.
 Massachusetts—State Association, 1835.
 Michigan—State Education Society, 1852.
 Minnesota—State Teachers' Association, 1853.
 Missouri—Teachers' Association, 1848.
 New York—State Teachers' Association, 1845.
 New Jersey—State Teachers' Association, 1853.
 New Hampshire—State Teachers' Association, 1843.
 North Carolina—Institute of Education, 1830.
 Oregon—State Educational Association, 1863.
 Ohio—State Teachers' Association, 1853.
 Pennsylvania—State Teachers' Association, 1852.
 Rhode Island—Institute of Instruction, 1844.
 South Carolina—State Teachers' Association, 1849.
 Texas—Literary Institute, 1846.
 Tennessee—Association of Professional Teachers, 1837.
 Vermont—State Teachers' Association, 1850.
 Virginia—State Teachers' Association, 1856.
 West Virginia—State Teachers' Association, 1865.
 Wisconsin—Teachers' Association, 1853.

The National Educational Association, as now organized, is divided into the following departments: General Association; National Council of Education; and Departments of Kindergarten Work, Elementary Education, Secondary Education, Higher Education, Normal Education, Superintendence, Industrial Education, Art, and Music. The National Council of Education holds its meetings the week previous to the sessions of the General Association. During its meetings, the General Association occupies the forenoon and evening of each day, while the departments meet at assigned places in the afternoons.

Questions bearing directly upon the work of education in all parts of our country, and in all its relations, are discussed by able educators, whose papers and remarks are published in an annual volume of "Proceedings." The volume for 1888 contains 944 pages; that of 1887, 829 pages; and the volumes of several years preceding 1887 contained from 400 to 550 pages. The attendance at these meetings during the past few years has been very large. The membership attendance at Madison, 1884, was over 8,000; at Topeka, 1886, 5,000; at Chicago, 1887, about 10,500; at San Francisco, 1888, about 4,500.

Among the principal subjects discussed at the San Francisco meeting were: "The Place of Literature in Common-School Education," "The Best Discipline to Prepare Law-Abiding Citizens," "Current Criticism of Public Schools," "The Relation of the State to School Supplies," "The American Schools and the American Library," "Waste in Elementary Education," "The Business Side of City School Systems," "The University and the High-School," "The Normal School and the Academy," "The Ethics of School Management," "Industrial Training and General Culture," "Elementary Music in Public Schools." As an example of the scope and value of these discussions, we refer to the papers on the relation

of the State to school-supplies. This subject, during the past few years, has been exciting considerable attention, and it was given a large place in the discussions of the California meeting. The question at issue was, Should the State raise by taxation a fund sufficient to furnish to all pupils in the public schools text-books and other supplies free of cost? In other words, should the State become a public corporation, publishing text-books and manufacturing supplies for the schools under its care? Superintendent R. W. Stevenson, of Columbus, Ohio, in discussing this question, said: "The principle underlying free text-books is wrong, and must result in evil. That government is the best which gives the people the power and the opportunity to do the most for themselves. There can be no co-operation without interest. To be interested in anything, the person must have a share in its use that costs something to secure—even in education. There are, therefore, limitations beyond which the State, for its own safety, should not go. The State that supplies those wants of its people which, by common industry and economy they can supply for themselves, encourages idleness and dependence. No good will come from a system of free text-books, but, on the contrary, great dangers. The taxation of the Northern States for school purposes is now as heavy as the people will bear. The plan of free text-books means higher taxes, or the attraction of the money now raised from more useful purposes."

Hon. L. S. Cornell, of Denver, Col., in discussing this question, said: "The members of the State board of education and text-book commissions, however constituted, are usually men whose time is fully occupied with official and private duties. They are not, as a rule, connected with the work of the common schools, and are unable to make the best selections. Books that have been adopted by such persons with the greatest confidence in their merits, have frequently been found very defective when practically tested in the school-room. The power to decide what books should be used by every child in the State, and to give some publishing-house or dealer a monopoly of the school-book trade, is too great to place in the hands of any board or commission. The record of the past in many States will testify to great danger in this direction. It is not desirable for the State to enter the field as a publisher or manufacturer on the ground of economy. No one will claim that the State will make better books than those issued by some private houses, nor that it can do the work more cheaply than they. A first-class book is a thing of growth; it can not be made to order in a few weeks or a month." The testimony of the superintendent of a Western State was given in the following words: "It has been the misfortune of our common schools that they have been forced to use books, by authority of law, which none would

prefer, while independent and special districts have been at liberty to choose for their children the best and freshest in the markets."

It was urged during the discussion that the tendency of our school systems is to make them machines that grind out all the individuality from children; that the manufacture of text-books by State authority, and the forcing of these books upon the districts, is a species of literary tyranny that is contrary to the free character of our institutions, and would intensify the "machine" in education; that there is no more sense in requiring all schools to use the same geography or history or grammar than there would be in requiring all farmers' wives to use the same kind of flour or sugar or potatoes. It was urged with great force that States attempting to adopt the system of manufacturing school-books had failed to carry with them the sympathy of the people, and thus the plan had fallen into disrepute from the evident unfairness of its requirements. It was also said by the Hon. E. E. Higbee, of Pennsylvania, that a legalized State monopoly and a uniform system of text-books by State authority would create a tyranny; that the large publishing-houses command the best skill in workmanship and the best experience of learned men and professional teachers, which the State would fail to do; that the competition now existing is itself a guarantee that prices will not be excessive, and that also the highest degree of perfection will be obtained.

In opposition to these arguments it was urged by Thomas Tash, of Portland, Maine, that it is wise to furnish text-books at public expense on account of convenience and economy. Much confusion, especially in rural districts, results from the ownership of wrong and unsuitable books. In such schools pupils do not pursue all the studies they should, or such as they ought, on the plea that they have not the books. With an ample supply of books a school can be more easily and promptly classified. There is no waiting for slow-moving fathers. Reducing the grade of scholars or loss of time or neglect of study vanish when text-books are furnished by the State. Parents criticise the classification of their children far less than under the old voluntary system. Where text books are supplied by the State, supplementary books may be furnished in any study without increase of cost—two sets of readers lasting six years costing no more than one set lasting three years.

The picture of the State establishing its own shops, gathering its material, constructing its various machines, fixing prices, enforcing the use of its books, establishing its depots of supplies and its numerous agents of distribution, its collectors, and accounts, were presented in such a forcible manner as to lead to the general verdict that such a course would be the death-knell of our inventive genius in the direction of text-book making; would cripple all self-developing enterprise on the part of

the people, and tend to destroy the chief inducements to individual impulse and activity.

The discussion of this question gives a fair example of the subjects considered by the National Association from year to year. In State and county meetings the topics discussed are generally more technical, relating to subjects usually taught in elementary village and country schools. Teachers' institutes are in some respects modified teachers' associations.

TENNESSEE. State Government.—The following were the State officers during the year: Governor, Robert L. Taylor, Democrat; Secretary of State, John Allison; Treasurer and Insurance Commissioner, Atha Thomas; Comptroller, P. P. Pickard; Attorney-General, B. J. Lea; Superintendent of Public Instruction, Frank M. Smith; Commissioner of Agriculture, Statistics, and Mines, B. M. Hord; Chief Justice of the Supreme Court, Peter Turney; Associate Justices, W. C. Folkes, W. C. Caldwell, B. L. Snodgrass, and W. H. Lurton.

Finances.—The receipts of the State Treasury for the biennial period ending Dec. 20, 1888, were \$3,694,996.37, of which \$916,002.10 is a temporary loan. Deducting this and \$22,942.50 for accidental receipts, there remains \$2,756,052.13. The total disbursements during the two years were \$3,408,761.69, of which \$373,114.43 represents Bank of Tennessee certificates paid by the State, and \$262,500 of the temporary loan repaid, leaving \$2,773,147.26 as the actual expense for ordinary purposes. This is greater than the ordinary revenue by \$17,095.33.

The assessed valuation of the State for 1888 was \$297,205,054, divided as follows: Land, \$165,479,717; town lots, \$88,646,633; personal property, \$43,078,704. The increase in valuation over 1887 is \$57,654,973. Railroad property is assessed for the year at \$32,290,302.10. There are 2,224 miles of railroad in the State.

Education.—The last annual report of the State Superintendent, for the year ending June 30, 1887, presents the following public-school statistics: Scholastic population between six and twenty-one years, white males, 248,112; white females, 230,509; total white, 478,621; colored males, 81,006; colored females, 80,387; total colored, 161,393; grand total, 640,014. Number of teachers employed: White males, 3,906; white females, 1,833; colored males, 1,075; colored females, 565; total, 7,379. Number of schools: White, 5,101; colored, 1,506; total, 6,607. Number of pupils enrolled during the year, 380,625; average daily attendance, 252,248.

The State University has undergone, during the year, a thorough reorganization; a new president and almost an entirely new faculty have been selected. Commodious buildings have been erected and the older ones improved.

Charities.—The School for the Blind, on December 20, had 84 pupils, 73 being white and 11 colored, an increase of 13 since December,

1886. The total number in the school during the past two years was 120, and the expenditures during that period were \$31,906.62.

At the School for the Deaf and Dumb the attendance at the close of the year had increased to 115.

Mills and Manufactories.—The following figures for 1888 are taken from the annual report of the State Commissioner of Statistics: Woolen-mills, 19; pounds of scoured wool used, 2,113,000; of which 837,500 pounds were Tennessee wool; hands employed, 879; cotton-mills, 23; spindles, 100,161; bales of cotton consumed, 37,610; hands employed, 2,677; iron manufactories, 13; hands employed, 5,510.

Coal.—The product for 1886 in short tons was as follows: First District, coal, 188,424; coal coked, 260,082; total, 448,506. Second District, coal, 438,917; coal coked, 311,259; total, 750,176. Third District, coal, 515,608. Total, 1,714,290 tons. The product for 1888 in short tons was: First District, coal, 332,715; coal coked, 304,700; total, 637,415. Second District, coal, 309,973; coal coked, 374,000; total, 683,973. Third District, coal, 645,909. Total for the three districts, 1,967,297 tons.

Political.—A Democratic State Convention met at Nashville on May 9, for the purpose of electing delegates at large to the St. Louis Convention, nominating presidential electors, and selecting a candidate for Governor. The two former objects were easily accomplished, but a prolonged contest arose over the gubernatorial nomination, which required a session of four days and forty ballots. Gov. Taylor was a candidate for renomination, but was opposed by a large minority of the delegates, whose support was divided between four aspirants—T. M. McConnell, W. M. Daniel, Julius A. Trousdale, and W. P. Caldwell. On the first ballot, Taylor received 649 votes, McConnell 241, Daniel 226, Trousdale 100, and Caldwell 114. A two-third vote of the 1,334 delegates was necessary for a choice. The contest was marked with so great excitement and bitterness that more than one third of the minority refused to vote at all on the decisive ballot, in which 1,081 votes were cast for Taylor, with 214 scattering votes. The nomination was then made unanimous. The resolutions included the following:

We favor such reform in our penal system as will separate minor convicts and offenders of low grade from hardened criminals, and will reduce to a minimum the competition between convict and free labor.

We are opposed to all monopolies and "trusts."

On May 16 the Republicans met at Nashville and selected delegates to the Chicago Convention, but postponed the nomination of a gubernatorial candidate till the meeting of a subsequent convention on July 18. This convention selected Samuel W. Hawkins. The platform included the following:

We favor an exemption from taxation of \$1,000 worth of property in the hands of every head of a family who is a citizen of the State, without regard to its character, in lieu of the present law exempting \$1,000 worth of personal property.

We oppose the present system of assessing and equalization of values of the taxable property of the State, and favor such revision of the assessment laws as will secure a more just and equal assessment and equalization, to the end that the burdens of taxation will fall equally upon all the tax-payers of the entire State.

We are opposed to the taxation of the agents of the agricultural organizations of our State, and will favor the enactment of such laws as will secure to the farmers equal rights and privileges with all other secular occupations and professions in the State.

We again denounce the system of leasing the convicts in our Penitentiary to be worked in the mines in competition with the free labor engaged in developing our wonderful mineral resources.

Late in July the Prohibitionist State Executive Committee announced the name of J. C. Johnson as the candidate of its party. At the November election, Taylor received 156,799 votes, Hawkins 139,014, Johnson 6,893. The Legislature elected at the same time will contain 23 Democrats and 10 Republicans in the Senate, and 73 Democrats and 26 Republicans in the House. Cleveland electors were chosen, and Democratic Congressmen elected in all of the ten districts except the First, Second, and Third. In the Third District the contest was close. Upon the face of the returns, it appeared that Evans, the Republican candidate, had a majority of 228 votes; but the friends of Creed F. Bates, the Democratic candidate, claimed that fraud in two of the election districts could be shown, sufficient to justify the canvassing board in rejecting the returns from those districts. In the event of such rejection, the Democratic candidate would have a majority of one vote. On the representation of these facts, the Governor, as the head of the board of canvassers, prepared, at the suggestion of Bates's friends, a certificate of his election prior to the meeting of the board, in order that, if it should find that he had been duly elected, the certificate might be instantly issued before an injunction could be obtained by the Republican candidate. The certificate was signed and sealed and delivered by the Governor to the Secretary of State, with orders that it was not to be considered as issued, and was not to be entered or copied into the records, until further directions were given. When the canvassing board met, it was found that the facts would not justify the exclusion of the votes in the two districts referred to, and the Governor destroyed the first certificate and prepared another in favor of Evans. But the Secretary of State disagreed with him in his conclusions regarding the frauds, and refused to attest his signature to the second certificate. He was also enjoined from issuing and delivering the certificate to Evans. The investigation of the returns not only showed that Evans was elected, but, even if the amended returns were accepted and the two districts thrown out, still Evans was elected, because an amendment from Bradley County increased his majority by four votes, thus overcoming Bates's majority of one and leaving Evans a clear majority of three.

Arguments in the injunction case were made before Chancellor Allison in December, the Governor appearing by counsel and denying that the court had any jurisdiction to control the Executive in the exercise of what he claimed was the discretionary power of his office. The Chancellor decided in favor of the Governor, and an appeal was taken to the State Supreme Court.

TEXAS. State Government.—The following were the State officers during the year: Governor, Lawrence S. Ross, Democrat; Lieutenant-Governor, T. B. Wheeler; Secretary of State, J. M. Moore; Treasurer, Frank R. Lubbock; Comptroller, John D. McCall; Attorney-General, James S. Hogg; Superintendent of Public Instruction, Oscar H. Cooper; Commissioner of the General Land-Office, R. M. Hall; Chief-Justice of the Supreme Court, Asa H. Willie, who offered his resignation, to take effect March 3, and was succeeded by Associate Justice John W. Stayton; Associate Justices, John W. Stayton, promoted as above, R. R. Gaines, and Alexander H. Walker, appointed in March to succeed Justice Stayton.

Legislative Session.—A special session of the Legislature was called to meet on April 16. The more important reasons for this were, first, the existence of a large and growing surplus in the revenue account of the treasury, amounting at that time to over \$1,500,000, exclusive of the net indemnity claim of \$922,541.52, recently received from the General Government; second, a large deficiency in the school revenues, amounting to \$400,000 for the year 1886-'87 and \$250,000 for 1887-'88; third, the completion of the new State Capitol. The existence of a large surplus revenue gave rise to various extravagant measures for its expenditure, but the action of the Legislature in making appropriations was on the whole moderate, though its reduction of the tax-rate from 25 cents to 10 cents for 1888, and 20 cents for each year thereafter, proved to be ill-advised. For the purpose of reducing the school-revenue deficiency a bill was passed transferring \$254,000, or so much of it as should be needed, to pay outstanding warrants held by the counties against the available school-fund, from the general revenue fund to the school-fund; and the further sum of \$250,000, which was appropriated out of the treasury as a sinking-fund to pay such part of the bonded debt payable in 1890 and 1891 as should be held by individuals, was loaned to the school-fund without interest till the maturity of said bonds. The sum of \$504,000 was thus made available for the use of the school-fund. Among the other appropriations of the season was \$150,000 for the erection of two wings, for the accommodation of 400 patients, at the North Texas Insane Asylum, in Terrell; \$140,000 for furnishing the State Capitol and grading and fencing the grounds; \$50,000 for the expenses of the session; \$125,000 as a loan to the University of Texas, without interest, payable in 1910, of which \$50,000 is

to be used in the construction of a medical department at Galveston; \$18,500 for enlarging the Asylum for the Blind; \$20,000 for a new dormitory and hall at the Agricultural and Mechanical College; \$25,890 for additions and improvements at the State Reformatory; \$18,000, \$25,000, and \$15,000 for similar purposes at the Deaf and Dumb Asylum, Prairie View Normal School, and State Orphan Asylum at Corsicana, respectively. The total appropriations of the session amounted to \$1,241,471.17.

With regard to the State Capitol, the Legislature passed a bill appointing the Governor, Treasurer, Comptroller, and Commissioner of the General Land-Office, a board for the purpose of accepting or rejecting the building, and another bill creating a Capitol-furnishing board of three members, appointed by the Governor, to superintend the expenditure of the above-named appropriation for furnishing and grading the grounds. Other acts were:

Providing that the Commissioner of Agriculture shall cause a geological and mineralogical survey of the State to be made, and appropriating \$15,000 therefor.

Amending the general incorporation law so as to permit the incorporation of mercantile companies to purchase and sell goods, wares, and merchandise, and agricultural and farm products.

Requiring the assessment of property for taxes that may be removed from the State before January 1 to evade taxation, provided it be returned to the State before the tax-rolls are completed for the year.

To establish a tax-lien upon property assigned or levied upon by creditors.

Providing that the county or district attorney or Attorney-General may procure issuance of the writ of injunction to prohibit, prevent, or restrain the violation of any revenue or penal law of the State.

Requiring suits to be instituted by order of commissioners' courts to recover taxes due on unrendered personal property.

The session adjourned on May 15.

Finances.—At the close of the fiscal year, August 31, there was a balance in the treasury of \$1,261,000 to the general revenue and \$83,000 to the available school fund. The general revenue surplus, one year previously, was \$888,970.44. By the reduction of the tax-rate at the special session to 10 cents, it is estimated \$750,000 of annual revenue will be cut off, while the extraordinary appropriations of the special session will further reduce the surplus, so that, according to the Comptroller's estimate, only about \$70,000 will remain in the treasury on Aug. 31, 1889. The balance of \$83,000 in the school-fund is produced by addition to the fund of \$504,000 loaned to it by act of the special session. The actual deficiency of the fund is, therefore, about \$420,000.

The total bonded debt of the State, on August 31, was \$4,237,730, of which \$3,017,100 is held by the State in its various special funds, and \$1,220,630 by individuals. The only bonds falling due in 1890 and 1891 are \$200,000, of revenue 6-per-cent. deficiency bonds, none of which are held by individuals.

Education.—The report of the State Superintendent shows the total scholastic population

of the State, for the school year 1886-'87, to have been 489,795, an increase of 37,117 in one year; 364,953 being white and 124,842 colored. Of this number, 295,510 white and 113,150 colored children, or 408,660 in all, were enrolled in the public schools, an increase of 5,349 over 1885-'86. There were 6,911 schools for white children and 2,076 for colored children maintained during the year, a total increase of 267. In the white schools 8,232 teachers were employed at an average monthly salary of \$43.27 in the counties and \$69.32 in the cities; in the colored schools 2,891 teachers were employed at a monthly salary of \$38.65 in the counties and \$49.78 in the cities. The average school term in the counties was 5.07 months; in cities, 7.92 months. During the year the amount of the school-fund apportioned to counties was \$2,362,226.25 or \$4.75 per capita. This apportionment was \$400,000 in excess of the school-fund revenue for the year. For 1887-'88 the total school apportionment was \$2,285,551, \$4.50 for each child.

Charities.—The State Orphan Asylum established by the Legislature in 1887 was located by commissioners at Corsicana, on a tract given by that city. Buildings were in process of erection at the close of the year for the accommodation of 200 children.

The Institute for Deaf, Dumb, and Blind Colored Youth, established at Austin by the same Legislature, was completed during the year, and many of beneficiaries were received.

Prisons.—The report of the State Penitentiary for the two years ending in November is as follows: Convicts, Nov. 1, 1886, 2,859; convicts, Nov. 1, 1888, 3,302; increase 442. Highest number at any time, on July 25, 1888, 3,396; average number daily, 3,129. Cash receipts, \$1,256,795.44; cash disbursements, \$1,226,212.10; cash balance, \$30,583.34. The number of deaths for the period, 223, is high.

The State Reformatory, established by the Legislature of 1887, was located by commissioners in Coryell County, near Gatesville, on a farm of 696 acres purchased for \$10,000. They expended \$62,157 for buildings, which were completed and transferred to the State on November 10. The institution was opened, and the youthful prisoners transferred thereto by proclamation of the Governor of Jan. 1, 1889.

Statistics.—The following figures for the year ending Jan. 1, 1888, are taken from the annual report of the Commissioner of Agriculture:

Population.....	2,015,082
Cotton: Acres planted ..	3,269,972
Bales made.....	1,123,237
Value of crop.....	\$45,127,676
Wheat: Acres planted.....	520,219
Bushels made.....	5,174,454
Value of crop.....	\$3,768,672
Corn: Acres planted.....	2,920,267
Bushels made.....	55,775,745
Value of crop.....	\$25,849,692
Oats: Acres planted.....	561,021
Bushels made.....	13,490,925
Value of crop.....	\$4,453,682

There are 422 saw-mills, with a capital of \$3,147,633; 17 cotton-seed oil-mills, with a

capital of \$12,045,000; 36 marble-shops, with a capital of \$123,360; 76 carriage and wagon factories, with a capital of \$336,988; 136 flour-mills, with a capital of \$1,316,110; 8 coal-mines, with a capital of \$135,840; the woolen-mills, with a capital of \$650,000; and 40 foundries and machine-shops, with a capital of \$702,760.

Decision.—On October 29 the United States Supreme Court rendered a decision declaring unconstitutional the State law making it a misdemeanor for any person to do business as a commercial traveler without having first paid an occupation-tax. The law was held to be a regulation of interstate commerce by the State.

State Capitol.—This building was so far completed in May that the government occupied it early in the month, and the closing meetings of the special session were held in it. On May 16, the day following the adjournment of the session, exercises in dedication of the building were held. At this time it had been accepted by the construction commission only conditionally. Some further improvements were made, and it was finally accepted by that commission on September 20 and delivered over as complete to the receiving commission created at the special session to receive the property in behalf of the State. But, finding manifest defects in the roof and elsewhere, this commission refused to accept the report of the construction commission or to receive the building. It was then agreed that an expert be engaged to examine the work; the contractors made such changes as he suggested, and it finally became the property of the State late in the year.

Political.—A Republican State Convention met at Fort Worth on April 24, and selected delegates to the Chicago Convention, and appointed a committee of thirty-three, who should meet at Austin, on August 28, and nominate a State ticket. Among the resolutions were the following:

We recognize the importance of sheep husbandry in this State, and the danger threatening its future prosperity, and we therefore repeat the demands of this important agricultural interest for a full and adequate protection of her product.

We demand of our General Government at Washington to make ample provision for the construction of a first-class deep-water harbor on our Gulf coast, at such point as may be designated by the Government engineers, and that Congress concentrate the appropriations of money for that purpose.

On the following day the Prohibitionists met in convention at Waco, selected delegates to their National Convention, and nominated the following ticket: For Governor, Marian Martin; Lieutenant-Governor, F. E. Yoakum; Superintendent of Public Instruction, F. O. McKinzey; Treasurer, W. D. Jackson; Comptroller, C. R. King; Commissioner of the General Land-Office, J. C. Rathburn; Attorney-General, J. B. Goff. The resolutions included the following:

We favor the repeal of the United States internal revenue laws, and the repeal of all revenue laws, State

and national, by which taxes are collected on the manufacture or sale of intoxicating liquors.

That such public lands as remain to the State of Texas be reserved as homesteads for citizens, and the school lands be sold only to actual settlers in quantities not exceeding 320 acres.

That the State convicts should be confined within prison walls, and the contract system abolished.

On May 15, delegates from the State Alliance, Knights of Labor, and Union Labor party met at Waco in a semi-political convention. Their common interests were discussed, and a platform adopted which included these paragraphs:

The national banks should be abolished and their bank-notes retired from circulation, and in lieu thereof we advocate a legal-tender money and a direct loan of the same to the people at a low rate of interest on real-estate security.

The means of transportation and communication should be owned or controlled by the people, as is the United States Post-Office, and equitable rates everywhere established.

No aliens should be permitted to hold or own real estate in the United States, and that no further grant of public lands be made to corporations.

We demand that an amendment be submitted to Congress making the President and Vice-President eligible by a direct vote of the people.

We demand a free ballot and a fair count, and that tampering with the ballot-box shall constitute one of the greatest of crimes.

The Democrats selected delegates to their National Convention on May 22, at Fort Worth. At the same place, on July 3, the Independent party, organized at Waco on May 15, held a second State Convention, and nominated a State ticket as follows: Evan Jones for Governor; H. S. Broiles for Lieutenant-Governor; Ward Taylor for Superintendent of Public Instruction; C. W. Geers for Comptroller; J. M. McFadin for Treasurer; J. P. Philpot for Land Commissioner; William Chambers for Attorney-General; J. C. Kearby for Chief Justice; J. T. Nugent and W. K. Homan for Associates; Hal. W. Greer and William H. Burkhardt for Court of Appeals. The resolutions included these:

We demand the immediate payment of the national debt at its face value.

We are in favor of free and unlimited coinage of silver.

We demand a graduated income-tax.

We favor the passage of compulsory arbitration laws by which a just and speedy settlement of differences can be had between corporations and their employes.

We demand that all real estate held for speculative purposes be taxed to the full amount at which it is offered to purchasers.

A committee was appointed to confer with a State Convention distinctively of the Union Labor party, which should meet on the following day at the same place, and to secure its adoption of the Independent ticket. In this object they were successful, and the two parties were practically united. But the ticket was unfortunately constructed. The candidates for Governor, Lieutenant-Governor, Chief-Justice, and one of the Associate Justices, soon sent in their declinations. On August 24 the

committee selected in their places Marion Martin as its candidate for Governor, W. A. Moers for Lieutenant-Governor, and H. F. O'Neal for Chief-Justice.

The Democratic State nominating convention met at Dallas on August 15, and renominated Gov. Ross by acclamation. The Lieutenant-Governor, Treasurer, Comptroller, Attorney-General, Superintendent of Public Instruction, and Superintendent of the General Land-Office were also renominated. For Chief-Justice of the Supreme Court, John W. Stayton of that court was nominated, and R. R. Gaines was renominated as Associate Justice. For the third member of the court John T. Henry was selected. For Judges of the Court of Appeals, John P. White, J. M. Hurt, and Samuel A. Wilson were the nominees. The platform includes the following:

We favor the enactment of prudent and efficient mining and irrigation laws to develop the agricultural and mineral resources of our State.

We favor the enactment of such laws as shall restrict the freight charges of railway and express companies, so that they may only yield a fair interest on the money actually invested in them, and at the same time to prevent discrimination in charges against any points within the State.

That the next Legislature shall pass laws defining trusts, pools, and all illegal combinations in restraint of trade, and imposing severe penalties.

The Republican Executive Committee, instead of nominating a State ticket, according to the vote of the Fort Worth Convention of April 24, called a second convention at the same place for September 20, at which the question of nominating a ticket was earnestly discussed, and where it was finally determined to support the Prohibition-Independent-Union-Labor ticket headed by Marion Martin. At the November election the Democratic national ticket was successful by a large majority, and Gov. Ross was re elected.

TURKEY, an empire in eastern Europe and western Asia. The Government is an absolute monarchy. The Sultan is recognized as Khalif or Vicar of the Prophet in most Mohammedan lands. The legislative and executive power is exercised, under the direction of the Sultan, by the Sheikh-ul-Islam, who is the head of the religious and judicial departments of the Government, and the Grand Vizier, who is the chief in civil and administrative affairs. With these are associated heads of departments corresponding to ministers of state in European Governments. The present Sheikh-ul-Islam is Ahmed Essad Effendi. The Grand Vizier is Kiamel Pasha. The Cabinet in 1888 was as follows: President of the Council, Aarifi Pasha; Minister of Foreign Affairs, Said Pasha; Minister of War and Grand Master of Artillery, Ali Saib Pasha; Minister of Marine, Hassan Pasha; Minister of the Interior, Munir Pasha; Minister of Justice, Djevdet Pasha; Minister of Finance, Zihni Pasha; Minister of Public Works, Commerce, and Agriculture, Agob Pasha Kaziazin; Minister of

Public Instruction, Munif Pasha; Ekval-Naziri or Intendant of Religious Property and Revenues, Mustafa Pasha. The reigning Sultan is Abdul Hamid Khan, born Sept. 21, 1841, the thirty-fourth sovereign of the family of Osman. He succeeded his brother Murad V on Aug. 31, 1876. (For area and population see "Annual Cyclopædia" for 1887.)

Finances.—The receipts of the Sultan's treasury for the year 1887-'88 are estimated at 17,500,000 Turkish liras. The debt, on March 13, 1887, amounted to 104,458,706 pounds sterling. Agob Pasha gave place in the Ministry of Finance, in the beginning of 1888, to Mahmoud Djelal-ed-Din Pasha, who promised to extricate the Government from its financial difficulties by an extensive scheme of improvements, and especially by unlocking new sources of revenue through the development of fisheries, mines, forests, and new industries. German capital was embarked in these enterprises, but the minister failed in accomplishing his task. The salaries of officials remained, and only at the Bairam festival was the Sultan able to pay an installment of the sums due to civil and military officers. The Minister of Finance was detected in discounting the salaries of the suffering officials at 60 per cent., and in the summer was dismissed from his post. Agob Pasha, an Armenian Christian, would not undertake the task of establishing the finances of the Empire on a sound basis, but was induced to resume the administration of the department provisionally. Eventually Zihni Pasha was appointed to the post. The Deutsche Bank, representing the group of German financiers who obtained the concession for the Asiatic Railroad to the Euphrates, negotiated a loan of 1,350,000 Turkish pounds. The unpaid creditors of the Porte clamored for the payment of their claims out of this sum, which the Minister of Finance reserved to carry out his projected reforms. The Ottoman Bank, which encashes the funds for the payment of the public debt, objected to the infringement of the monopoly of all loan transactions given to it by law. The Government, having been unable to obtain a loan from this institution except on exorbitant terms, answered that it had failed to fulfill its part of the bargain. The Russian Government made a pressing demand in June, 1888, for the payment of the arrears for two years of the war indemnity. The amount that Turkey undertook to pay was fixed by the treaty of February, 1879, at 802,500,000 francs. By a subsequent convention, dated May 14, 1882, it was settled that the payments should be effected in annual installments of 350,000 Turkish pounds, the proceeds of the sheep-tax and the tithes of certain vilayets being assigned for that purpose. The revenues on which the payment of the indemnity was secured failed owing to a famine in these districts. In November the Minister of Finance reported a deficit in the treasury of 1,500,000 liras, and informed the Sultan that

no means would be available to provide against it without severe economy and the reorganization of certain departments. By an imperial irade, promulgated on November 6, machinery and apparatus of public utility imported into Turkey were declared free of duty for ten years. A commercial treaty was negotiated with Germany in the autumn.

The Navy.—The Turkish naval force, at the beginning of 1887, comprised 15 iron-clads, of which 7 were frigates and 8 corvettes; 50 wooden vessels—viz., 3 frigates, 8 corvettes, 18 gun-boats and avisos, 3 imperial yachts, and 18 transports; and 12 torpedo-boats, including 2 submarine boats of the Nordenfeldt pattern.

Commerce.—The value of the imports into Turkey for the year ending March 12, 1888, was 21,025,953 Turkish pounds (equal to \$91,988,000), against 20,703,231 pounds for the previous year. The exports were valued at 11,287,300 Turkish pounds, against 12,707,295 in 1886-'87. The trade in tobacco, which is administered by the Régie, is not included in these figures, nor are articles free of duty. The exports of tobacco amount to about 10,000,000 kilogrammes per annum. The values of the principal imports in 1886-'87 were, in Turkish pounds, as follow: Sugar, 1,473,226; cotton thread, 1,278,312; cotton prints, 1,171,217; linen goods, 441,177; cotton and linen stuffs, 288,361; sheeting, 533,253; cashmere, 242,717; cloth, 463,990; muslin, 296,688; coffee, 768,045; flour, 693,506; wheat, 529,538; live animals, 447,961; petroleum, 429,744; leather, 340,386; iron, 314,581; carpets, 278,458; skins, 255,932; chemicals and drugs, 203,266; butter, 192,346; coal, 178,574; glass, 127,895; timber, 177,408. The principal exports were of the following values: Raisins, 1,828,895; other fruits, 844,190; opium, 798,181; raw silk, 792,233; cocoons, 338,896; wheat, 765,447; cotton, 528,911; valonia, 512,660; wool, 500,280; coffee, 490,067; skins, 366,913; wines, 311,509; chemicals and drugs, 274,996; sesame, 272,614; olive-oil, 266,949; beans and lentils, 191,606; carpets, 145,930; soap, 138,761; minerals, 121,391; seeds, 109,217; confectionery, 108,264; gum tragacanth, 49,042.

The merchant navy in 1886 numbered 416 vessels of over 50 tons burden, with an aggregate tonnage of 69,627, and 17 steamers of 100 tons or above, having an aggregate tonnage of 7,297.

Railroads.—The length of railroads open to traffic in 1888 was 788 kilometres in European Turkey, and in Asia Minor 660 kilometres, viz., four lines in the vicinity of Smyrna of the total length of 462 kilometres, the line from Scutari to Ismid, 93 kilometres in length, the line of 38 kilometres from Modania to Brussa, and one of 67 kilometres between Mersina and Tarsus. The international railroads of European Turkey, which have been in contemplation for twenty years, were completed in 1888. The line from the Servian frontier to Larissa

was opened to traffic in the spring, and the line through Servia and Bulgaria to Constantinople by way of Adrianople, affording rail communication with all the capitals of Europe, was opened on August 12. A concession, which English and French applicants have sought, was given to a German syndicate in September, 1888, to extend the Scutari-Ismid line to Angora, and eventually to Bagdad.

Posts and Telegraphs.—There were 408 post-offices in European Turkey in 1886 and 746 in Asiatic. The state telegraph stations numbered 233 in Europe, 438 in Asia, and 12 in Africa. The European governments have maintained separate post-offices for their citizens doing business in Turkey. The arrangement was not protected by treaty, and when the international railroad was completed the Turkish Government determined to suppress the foreign post-offices. Although prompt and efficient service was promised, the governments refused to part with the privilege that had grown up by custom, and which yielded some profit in addition to the power and prestige connected with it. The Austrian Government took the lead, and was able to compel the Turkish authorities to abandon the system of an international postal service that they had carefully organized, by refusing to deliver or forward official correspondence of the Ottoman Government.

Fortifications.—To supply the loss of Kars, the Turkish engineer, Gen. Chahab Pasha, has converted Erzerum into a fortress of the first rank, by building fifteen forts on the side fronting the road from the Russian frontier. The Russian Government, supported by the English, remonstrated with the Porte in August, 1888, against the erection of fortifications at El Arab, near the confluence of the Tigris and the Euphrates. Adrianople has been fortified, and the Government has decided to establish a military port at Chinkin or St. Juan de Medua on the Albanian coast, opposite Italy. The defenses of the Bosphorus and the Dardanelles have been strengthened since the war under the superintendence of German officers.

The Macedonian Question.—Jealousies between the Christian nationalities inhabiting European Turkey involved Turkey, in 1888, in a dispute with Greece, and created a ferment throughout the peninsula. The Greeks once counted all the Christians as of their nationality, and confidently expected to extend the limits of the Hellenic kingdom to the Danube. The language of the Church, of the schools, of business, and of educated society was Greek. The rise of the Balkan nationalities and their development as independent states has destroyed this dream of a greater Greece, and now the only hope the Hellenes have of advancing their boundaries into Macedonia is in preserving the predominance of the Greek language with the help of the Phanariot in Constantinople. The creation of the independent Exarchy of Bulgaria made this difficult in respect to the Bul-

garians of Macedonia. Very recently the Roumanians and Albanians on the borders of the Greek kingdom have begun to cultivate their separate nationalities, encouraged probably by Austria. The Roumanian Government and an educational society founded for the purpose in Bucharest have aided the Wallachian peasantry of Epirus to maintain schools in their own language. In the districts of Salonica and Clissura the Greeks used every means to check the Roumanian nationalist movement, and began to form political conspiracies for the annexation of these districts to Greece. The Patriarch refused the request of the Roumanians for a liturgy in their national language, and when the Bulgarian Exarch requested the Turkish Government to install Bulgarian bishops in certain districts of Macedonia, the Porte refused, acting at the instigation of the Russian ambassador. Many Bulgarians were arrested in the autumn for refusing to recognize the jurisdiction of the Greek clergy.

The Armenian Agitation.—The Turkish authorities took vigorous measures in 1888 to suppress the national movement that has for its

object the re-establishment of the ancient Kingdom of Armenia. The local authorities searched the houses, and even the churches and convents, in the districts of Van, Harpoot, Diabebir, and Erzerum. In Van a great number of persons who possessed arms or compromising documents were imprisoned, and some were subjected to torture in order to extort confessions. Armenian teachers and merchants in Constantinople were placed in confinement or banished to Tripoli. Sir William White, the English ambassador at Constantinople, addressed an inquiry to the Grand Vizier concerning the arrests, and was informed that the Government possessed documentary proofs of an insurrectionary conspiracy. The British Government, which the Armenians have considered their special protector, refused to interfere, saying it had no right to do so under the Treaty of Berlin, unless it did so in conjunction with the other signatory powers. The Armenian Patriarch, Harioutioun Vehabedian, who had sought in vain to allay the revolutionary spirit, was forced to resign by his compatriots.

U

UNITARIANS. The "Year-Book of the Unitarian Congregational Churches" for 1889 gives lists of 392 Unitarian Societies and 488 ministers in the United States and Canada, and 365 Unitarian churches and others in fellowship and habitual association with them in Great Britain, Ireland, and Australia.

American Unitarians.—The American Unitarian churches and their associations and benevolent societies are represented in the National Conference of Unitarian and other Christian churches, a body that imposes no authoritative tests of membership, which meets for consultation and discussion every two years. The American Unitarian Association, organized in 1825, is the most active agency through which work for the extension of the principles of the societies is carried on. Its objects are to collect and diffuse information respecting the state of Unitarian Christianity in America; to promote union, sympathy, and co-operation, publish and distribute books and tracts, supply missionaries when they are needed, and to promote its purposes by such other measures as may be expedient. These purposes are also furthered by a number of local organizations in virtual co-operation or affiliation with this society. The sixty-third annual meeting of the American Unitarian Association was held in Boston, Mass., May 29. The Hon. George S. Hale presided. The receipts for the year had been, from societies and individuals, \$50,291, and from the income of invested funds and all other sources, except legacies, \$28,922. The expenditures had amounted to \$103,989 showing a deficiency of \$24,775, the amount of which

had to be withdrawn from the general fund. The general fund, after accounting for the addition of \$69,000 to it from legacies and for the amounts that had been withdrawn from it, stood at \$139,609. The trustees of the Church-Building Loan fund had received \$3,650 in contributions and \$3,075 from payments on loans, and had on hand \$5,266. The association gives aid in Southern education at the Hampton Institute, Va., Tuskegee, Ala., Palatka, Fla., and the Highland Academy, N. C., and supports an industrial school for Indian children at the Crow Reservation, Montana. The mission in Hindustan has been discontinued since the death of the Rev. C. H. A. Dall. A mission has been begun in Japan, in the conduct of which the British and Foreign Unitarian Association co-operates. The Woman's Auxiliary Conference, which was formed in 1880 to aid the Association and supplement its work, had, since that time collected and applied \$31,887, the contributions of its last financial year having amounted to \$6,000.

The Unitarian Sunday-School Society, incorporated in 1885, seeks to promote moral and religious instruction in Sunday-schools. It publishes text-books and "Lesson-Helps for Sunday-Schools," and an illustrated Sunday-school paper, and has a missionary work of increasing scope and importance. The Meadville Theological School, Meadville, Pa., and the Divinity School of Harvard University are under Unitarian influence.

Unitarians in Great Britain.—The third Triennial National Conference of Unitarian and other non-subscribing or kindred congregations met

at Leeds, April 24. Papers were read by the Rev. T. W. Freckelton and Mr. John Dendy, Jr., on the best means of commending free Christianity to public favor. Propositions were made for building chapels at Oxford and Cambridge to hold Unitarian students to their faith. An address on "The Organization of our Churches," by Dr. Martineau, attracted much attention. The speaker was not satisfied with the Congregational system, or with the Unitarian name. He proposed a Presbyterian organization, and the name English Presbyterian. A committee was appointed to consider the questions raised, and call a special conference to consider its report.

The British and Foreign Unitarian Association met in London, May 23, and was opened with a sermon by Prof. Estlin Carpenter, who urged that theology be based on the broadest human experience. The Unitarian churches of the United States, the Reformed Church of France, and the Sadharan Brahmo Somaj of India were represented by visiting delegates. Mr. Harry Rawson, J. P., of Manchester, presided. A diminished income was reported. Papers were read on "Some Special Difficulties of Unitarianism To-day, and how to overcome them," in which the character of the religious services in the chapels was discussed. The autumnal meeting of the association was held in Newcastle in October. A paper unfavorable to the scheme of church organization which had been presented by Dr. Martineau, was read by Dr. Glendining.

The council of the Association issued a protest against the proposals of the Education Commission, in which it was affirmed that the only satisfactory scheme of national education is one placing the management of the schools under the control of those who are compelled to contribute to their support. Since the last report till October, 1888, 12,000 tracts had been sent out, and 86 copies of Channing's works, with other books, had been presented in answer to applications.

The Unitarian Sunday-School Association in Great Britain includes 251 schools, with 32,244 pupils and 3,989 teachers. It returned an income for the year of £1,067.

Unitarians in Continental Europe.—The number of Unitarian churches in Hungary—where Unitarianism was introduced into Transylvania in 1563—is 110, and the number of registered Unitarians is 57,000. The head of the organization is Bishop Joseph Ferencz, who has under him eight rural deans and an ecclesiastical council of 350 members. The higher education is provided for by the college at Klausenburg, where there are five theological and nine ordinary professors, with assistant professors and teachers; and the middle schools at Thoroda and Szekely Keresztur. The Church has a considerable religious literature, including a periodical organ, "The Christian Seed-Sower."

The American "Year-Book" mentions several organizations in other European countries

outside of the British Empire and Hungary, which, without taking the Unitarian name, are in substantial agreement with the Unitarian faith. A considerable number of the 225 Protestant churches in Austria are liberal in their theology. The Protestanten Verein of Germany has about 40 branches and 27,000 members, and supports two missionaries in Japan. The Free Christian Association in Switzerland is active in the Protestant cantons. The Protestant Union of Holland has 13,000 members. A minority of the Protestants of France hold liberal views. The Spanish Evangelical Church includes a few liberal congregations. The Liberals in Sweden, while having societies similar to the Protestant unions, retain their membership in the state church. Services of a Unitarian type are held in Rome and Brussels. The Unitarian faith is represented in Salem, Madras, and Calcutta, India. A missionary is supported in Tokio, Japan, by the American Unitarian Association, the British and Foreign Unitarian Association co-operating.

UNITED BRETHERN IN CHRIST. The following is a summary of the statistics of this Church, as they are given in the "United Brethren Year-Book" for 1889: Number of bishops, 6; of organized churches, 445; of itinerant preachers, 1,490; of local preachers, 560; of members, 204,517; of Sunday-schools, 3,509, with 32,026 officers and teachers and 219,846 pupils; of church edifices, 2,609, having a total value of \$3,757,161; of parsonages, 493, valued at \$401,959. Total amount of contributions, \$1,036,086; of which \$474,591 were for preachers' salaries, \$366,258 for church expenses, \$3,566 for bishops, \$3,566 for preachers' aid, \$91,134 for missions, \$1,964 for church erection, and the remainder for Sunday-school and educational purposes. The property of the Publishing-House at Dayton, Ohio, is valued at \$252,987 above indebtedness; its receipts from business for the year ending April 1, 1888, were \$156,198. The educational institutions include 9 colleges, 6 academies and seminaries, and 1 Biblical seminary. The United Brethren Home, Frontier, and Foreign Missionary Society received during its fiscal year \$66,238. It operates missions in West Africa, Germany, Canada, and the United States, with a station among the Chinese at Walla Walla, Washington Territory, and gives aid to eighteen conferences. The two missions in Africa returned 27 stations, reaching 328 towns; 12 organized churches, 6 American and 25 native missionaries; 4 ordained and 25 unordained preachers; 4,105 members; 14 Sunday-schools, with 33 teachers and officers and 564 pupils; 12 day schools, with 12 teachers and 500 pupils; 11 church-houses, 8 mission residences, and property valued at \$66,000. The German mission returned 720 members and 345 pupils in Sunday-schools. The society has an interest-bearing fund of \$85,264, and has expended since its organization in 1853, \$2,301,908.

UNITED STATES. The Administration.—On January 16 the United States Senate, after much discussion and delay, confirmed the nomination, made by the President, in December, of Lucius Q. C. Lamar to be a Justice of the United States Supreme Court, the vote standing 32 for confirmation and 28 against. Three Republican Senators (Stanford, Stewart, and Riddleberger) voted with the majority. The Republicans that voted against confirmation, based their objections upon the record of Mr. Lamar in the Confederacy. At the same time, the nominations of William F. Vilas to be Secretary of the Interior and D. M. Dickinson to be Postmaster-General were confirmed, and these officers qualified on the following day. On January 19 the appointments of the President to the Interstate Commerce Commission, made in the preceding March, were approved.

The most important change in the Government during the year was caused by the death of Chief-Justice Morrison R. Waite on March 23 (for sketch of Chief-Justice Waite see page 836; for portrait see the "Annual Cyclopædia" for 1882, page 126). The President made no appointment of his successor till April 30, when the name of Melville W. Fuller, of Chicago, was sent to the Senate (see page 359). This appointment was confirmed on July 20, by a vote of 41 to 20; but the new Chief-Justice did not take his seat until the October term of the court.

Strother M. Stockslager, of Indiana, was nominated on March 20, to be Commissioner of the General Land-Office, *vice* William J. Sparks, resigned; and Thomas J. Anderson, of Iowa, to be Assistant Commissioner, a former nomination by the President to the commissionership having been annulled. On May 21, Thomas J. Smith, of New Hampshire, was nominated as Solicitor of Internal Revenue, *vice* Charles Chesley. The resignation of Commissioner of Indian Affairs Atkins, in June, caused a vacancy, which was filled by the nomination of Civil-Service Commissioner John H. Oberly. Other nominations were: Carroll D. Wright, of Massachusetts, to be Commissioner of Labor for a second term; William L. Bancroft, of Michigan, to be General Superintendent of the Railway-Mail Service; John S. Bell, of New Jersey, to be Chief of the Secret Service Division of the Treasury Department; and Charles Cary, of New York, to be Solicitor of the Treasury Department. All of these nominations were confirmed. The President, on July 17, nominated as envoys extraordinary and ministers plenipotentiary: Lambert Tree, of Illinois, to Belgium; Robert B. Roosevelt, of New York, to the Netherlands; Rufus Magee, of Indiana, to Sweden and Norway; and Charles L. Scott, of Alabama, to Venezuela; also John E. Bacon, of South Carolina, to be Minister Resident at Paraguay and Uruguay. The Senate confirmed these nominations on August 14. Soon thereafter the resignation of George V. N. Lothrop from the Russian mission was received, and

the President, on September 11, nominated Lambert Tree, the recently confirmed Belgian minister, to the vacancy. Ten days later he nominated John G. Parkhurst, of Michigan, to the Belgian mission. These nominations, as also that of Perry Belmont, of New York, in December, to be minister to Spain, were confirmed. Ezekiel E. Smith, of North Carolina, was nominated and confirmed as Minister Resident and Consul-General in Liberia. On January 12 Edward S. Bragg, of Wisconsin, was confirmed as minister to Mexico.

On August 5 Gen. Philip H. Sheridan died, and on August 14 the President promoted Maj.-Gen. John M. Schofield to the command of the army (see page 737).

The Army.—At the date of the last consolidated returns, the army consisted of 2,188 officers and 24,549 enlisted men. The actual expenditures of the War Department for the fiscal year ended June 30, 1888, amounted to \$41,165,107.07, of which \$9,158,516.63 was expended for public works, including river and harbor improvements, and \$23,337,245.11 for the actual support of the army and the Military Academy. The only difficulty with the Indians that occurred was upon the Crow Reservation in Dakota, where a threatened outbreak was promptly suppressed by Gen. Ruger, and the ringleaders arrested and punished. All the States and Territories now have an active militia sufficient under the regulations to entitle them to receive ordnance and quartermaster's stores from the United States, excepting Arkansas, Arizona, Idaho, and Utah.

Postal Service.—For the fiscal year ending June 30, 1888, the total revenue was \$52,695,176.79, while the actual and estimated expenses were \$56,885,403.84, leaving an estimated deficiency of \$4,190,227.05. The actual deficiency for the fiscal year preceding was \$4,297,238.31, the total expenses \$53,134,847.70, and the total revenue \$48,837,609.39.

The number of post-offices on June 30, 1888, was 57,376; there were established during the year preceding 3,864 offices, and 1,645 were discontinued. The number of postmasters appointed during the year ended June 30, 1888, was 12,288, of which 6,521 were upon resignations and commissions expired, 1,244 upon removals, 659 to fill vacancies by death, and 3,864 on establishment of new post-offices. The free-delivery service was extended to 169 additional places, under the act of Jan. 3, 1887, making a total of 358 free-delivery cities. The volume of ordinary mail has largely increased, as shown by the increased revenue of the department from the sale of postage-stamps. The total number of pieces handled has doubled since 1883.

The number of money-order offices at the close of the year was 8,241, and the number of postal-note offices 311. The domestic orders issued numbered 9,959,207, of the aggregate amount of \$119,649,064.98, while the orders paid and repaid were in excess of that

sum by \$94,280.27. There were issued 6,668,006 postal notes, amounting to \$12,134,459.04, and the notes paid were only \$29,577.49 less in value. There were 759,636 orders drawn for payment in foreign countries, reaching the large total of \$11,293,870.05, while 236,992 orders of the value of \$1,169,675.64 were transmitted from abroad for payment in the United States.

Pensions.—The number of pensioners added to the rolls during the fiscal year ended June 30, 1888, is 60,252, and increase of pensions was granted in 45,716 cases. The names of 15,730 pensioners were dropped from the rolls during the year, and at the close of the year the number of persons of all classes receiving pensions was 452,557.

The Civil Service.—The fourth annual report of the Civil-Service Commission, covering the period between Jan. 16, 1886, and July 1, 1887, was transmitted to Congress in July. During the time covered by the report, 15,852 persons were examined for admission in the classified civil service of the Government in all its branches, of whom 10,746 passed the examination and 5,106 failed. Of those who passed the examination 2,977 were applicants for admission to the departmental service at Washington, 2,547 were examined for admission to the customs service, and 5,222 for admission to the postal service. During the same period 547 appointments were made from the eligible lists to the departmental service, 641 to the customs service, and 3,254 to the postal service.

Since the period covered by the report, the rules and regulations governing the violations of the law upon the subject have been completely remodeled in such a manner as to render the enforcement of the statute more effective and greatly increase its usefulness.

Indians.—Reports of Indian agents show that the total Indian population for the fiscal year 1887-'88 was 246,095, not including the Indians of Alaska. The entire extent of territory now in reservation for Indian purposes, including all portions of the Indian Territory, is 112,413,440 acres, being an average of 456 acres for each Indian, computed on the last reported number of the total population. The work of allotting lands in severalty which was begun in 1887 on seven reservations, the Yankton and Lake Traverse Reservations in Dakota Territory, the Winnebago Reservation in Nebraska, the Pottawatomie Reservation in the Indian Territory, the Crow Reservation in Montana, the Fond du Lac Reservation in Minnesota, and the Siletz Reservation in Oregon, was suspended early in 1888, because the funds had been exhausted.

In June Congress appropriated \$10,000, and with this money the work was resumed on three reservations, the Winnebago Reservation in Nebraska, the Crow Reservation in Montana, and the Fond du Lac Reservation in Minnesota. The allotment on the Lake Traverse Reservation is complete.

Alaska.—The Governor estimates the population of Alaska as follows: Whites, 6,500; creoles, 1,900; Aleuts, 2,950; civilized natives, 3,500; uncivilized natives, 35,000—a total of 49,850. The town of Juneau has doubled in population during the past year, owing to the development of valuable mining properties, and most of the towns in the southeastern section of the Territory show an increase. During the past year considerable progress was made in mining; the great stamp-mill on Douglas Island has now two hundred and forty stamps in operation, and it is the largest mill of the kind in the world, its output being at least \$150,000 a month. The ore at this mine is improving, and four undeveloped claims on this island were recently sold to Eastern and European capitalists for \$1,500,000. Mines are being opened and new discoveries made of promising ore-beds.

Coal seems to abound in the explored parts of the Territory. During the last year cannel coal was found. The United States steamer "Thetis" replenished her bunkers from a vein that measured thirty-two feet in thickness, and while on a cruise with this vessel the Governor saw all along the coast coal-veins from one to fifteen feet thick.

The following is a careful estimate of the market value of Alaskan products for the year: Furs, \$3,000,000; fish, oil, bone, and ivory, \$4,000,000; gold (bullion and dust), \$2,000,000; silver, \$50,000; lumber, \$50,000—total, \$9,100,000.

Foreign Relations.—On February 15 the commissioners appointed to negotiate a treaty between Great Britain and the United States with respect to the Canadian fisheries completed their work at Washington, and signed a proposed treaty, which was transmitted to the Senate, which on August 21 rejected the treaty by a strict party vote of 30 Republicans against 27 Democrats. The President thereupon sent a warlike message to Congress, saying that retaliatory measures were now the only ones to be adopted, and asking for greater powers to carry them into effect. The Republicans in Congress claimed that he already had sufficient authority for that purpose, and, regarding the message as an attempt to attract supporters in the pending political canvass, refused to take any action thereon.

On March 12 a treaty with China was signed at Washington. It provides for the absolute exclusion of Chinese laborers from this country for twenty years, and for a second period of twenty years unless notice to the contrary should be given by either party. The Senate ratified this treaty with some amendments on May 7, but it was rejected by the Chinese Government, whereupon a Chinese exclusion bill, having already passed the House, was adopted by the Senate on September 7 and signed by the President. Differences existing between the United States and Morocco were settled by an agreement made in May.

In November difficulties arose with Hayti in consequence of the seizure and detention of American vessels, especially the steamer "Haytian Republic," by the authorities temporarily in power in that island. A strife of factions had existed there for several months, and the President, without recognizing any settled government, had sent to Haytian waters a war-vessel for the protection of American people and interests. On being satisfied that the seizure of the "Haytian Republic" was wrongful, he dispatched Admiral Luce with the ships "Galena" and "Yantic" to demand a return of the vessel. The demand was promptly acceded to, the steamer was surrendered on December 22, and the former amicable relations between the two countries were restored.

A comprehensive treaty of amity and commerce with Peru was completed and ratified during the year, and became effective by proclamation of the President dated November 7.

Democratic Convention.—At a meeting of the Democratic National Committee in Washington, on February 23, it was voted to call the National Convention to meet at St. Louis on June 5. Some time before the date of the convention, President Cleveland's renomination was universally conceded; the only question was regarding the second place on the ticket. The convention organized by the choice of S. M. White, of California, as temporary chairman, and Congressman Patrick A. Collins, of Massachusetts, as permanent chairman. The name of President Cleveland was presented to the convention by Daniel Dougherty, of New York, and his nomination unanimously carried amid great enthusiasm. For the Vice-Presidency, Gov. Isaac P. Gray, of Indiana, and Ex-Senator Allen G. Thurman, of Ohio, were the only candidates formally before the convention.

Before the first ballot was completed, it was evident that Mr. Thurman would easily obtain a majority. The name of Gov. Gray was then withdrawn, and the Ex-Senator was unanimously nominated. Of the votes cast on this ballot, 690 were for Thurman, 105 for Gray, and 25 for John C. Black, of Illinois.

The platform is as follows:

The Democratic party of the United States in national convention assembled renews the pledge of its fidelity to Democratic faith and reaffirms the platform adopted by its representatives in the convention of 1884, and indorses the views expressed by President Cleveland in his last earnest message to Congress as the correct interpretation of that platform upon the question of tariff reduction, and also indorses the efforts of our Democratic representatives in Congress to secure a reduction of excessive taxation. Chief among its principles of party faith are the maintenance of the indissoluble union of free and indestructible States, now about to enter upon its second century of unexampled progress and renown; devotion to a plan of Government regulated by a written constitution strictly specifying every granted power and expressly reserving to the States or people the entire ungranted residue of power; the encouragement of jealous, popular vigilance directed to all who have been chosen for brief terms to enact and execute

the laws and are charged with the duty of preserving peace, insuring equality, and establishing justice.

The Democratic party welcomes an exacting scrutiny of the administration of the Executive power which four years ago was committed to its trust in the selection of Grover Cleveland as President of the United States, but it challenges the most searching scrutiny concerning its fidelity and devotion to the pledges which then invited the suffrages of the people. During a most critical period of our financial affairs, resulting from overtaxation, the anomalous condition of our currency, and a public debt unmaturing, it has, by the adoption of a wise and conservative course, not only averted disaster, but greatly promoted the prosperity of the people.

It has reversed the improvident and unwise policy of the Republican party touching the public domain, and has reclaimed from corporations and syndicates, alien and domestic, and restored to the people nearly 100,000,000 acres of valuable land to be sacredly held as homesteads for our citizens.

While carefully guarding the interests of the taxpayers and conforming strictly to the principles of justice and equity, it has paid out more for pensions and bounties to the soldiers and sailors of the republic than was ever paid before during an equal period.

It has adopted and consistently pursued a firm and prudent foreign policy, preserving peace with all nations while scrupulously maintaining all the rights and interests of our own Government and people at home and abroad.

The exclusion from our shores of Chinese laborers has been effectually secured under the provisions of a treaty, the operation of which has been postponed by the action of a Republican majority in the Senate.

Honest reform in the civil service has been inaugurated and maintained by President Cleveland, and he has brought the public service to the highest standard of efficiency, not only by rule and precept, but by the example of his own untiring and unselfish administration of public affairs.

In every branch and department of the Government under Democratic control the rights and the welfare of all the people have been guarded and defended; every public interest has been protected, and the equality of all our citizens before the law, without regard to race or color, has been steadfastly maintained. Upon its record thus exhibited and upon a pledge of a continuance to the people of these benefits, the Democracy invokes a renewal of popular trust by the re-election of a Chief Magistrate who has been faithful, able, and prudent. We invoke in addition to that trust the transfer also to the Democracy of the entire legislative power.

The Republican party, controlling the Senate and resisting in both Houses of Congress a reformation of unjust and unequal tax laws which have outlasted the necessities of war and are now undermining the abundance of a long peace, deny to the people equality before the law and the fairness and the justice which are their right. Thus the cry of American labor for a better share in the rewards of industry is stifled with false pretenses, enterprise is fettered and bound down to home markets, capital is discouraged with doubt, and unequal, unjust laws can neither be properly amended nor repealed. The Democratic party will continue with all the power confided to it the struggle to reform these laws in accordance with the pledges of its last platform, indorsed at the ballot-box by the suffrages of the people.

Of all the industrious freemen of our land the immense majority, including every tiller of the soil, gain no advantage from excessive tax laws, but the price of nearly everything they buy is increased by the favoritism of an unequal system of tax legislation. All unnecessary taxation is unjust taxation. It is repugnant to the creed of Democracy that by such taxation the cost of the necessities of life should be unjustifiably increased to all our people. Judged by Democratic principles, the interests of the people are

betrayed when, by unnecessary taxation, trusts and combinations are permitted to exist, which, while unduly enriching the few that combine, rob the body of our citizens by depriving them of the benefits of natural competition.

Every Democratic rule of governmental action is violated when, through unnecessary taxation, a vast sum of money far beyond the needs of an economical administration is drawn from the people and the channels of trade, and accumulated as a demoralizing surplus in the national Treasury. The money now lying idle in the General Treasury, resulting from superfluous taxation, amounts to more than \$125,000,000, and the surplus collected is reaching the sum of more than \$60,000,000 annually. Debauched by this immense temptation, the remedy of the Republican party is to meet and exhaust by extravagant appropriation and expenses, whether constitutional or not, the accumulation of extravagant taxation. The Democratic policy is to enforce frugality in public expense and abolish unnecessary taxation.

Our established domestic industries and enterprises should not and need not be endangered by the reduction and correction of the burdens of taxation. On the contrary, a fair and careful revision of our tax laws, with due allowance for the difference between the wages of American and foreign labor, must promote and encourage every branch of such industries and enterprises by giving them assurance of an extended market and steady and continuous operations. In the interests of American labor, which should in no event be neglected, the revision of our tax laws contemplated by the Democratic party should promote the advantage of such labor by cheapening the cost of necessities of life in the home of every workingman, and at the same time securing to him steady and remunerative employment. Upon this question of tariff reform, so closely concerning every phase of our national life, and upon every question involved in the problem of good government the Democratic party submits its principles and professions to the intelligent suffrages of the American people.

Resolution presented by Mr. Scott, of Pennsylvania:

Resolved, That this convention hereby indorses and recommends the early passage of the bill for the reduction of the revenue now pending in the House of Representatives."

Resolution presented by Mr. Lehmann, of Iowa:

Resolved, That a just and liberal policy should be pursued in reference to the Territories; that right of self-government is inherent in the people and guaranteed under the Constitution; that the Territories of Washington, Dakota, Montana, and New Mexico are by virtue of population and development entitled to admission into the Union as States, and we unqualifiedly condemn the course of the Republican party in refusing Statehood and self-government to their people."

Resolution presented by ex-Governor Abbett, of New Jersey:

Resolved, That we express our cordial sympathy with the struggling people of all nations in their effort to secure for themselves the inestimable blessings of self-government and civil and religious liberty, and we especially declare our sympathy with the efforts of those noble patriots who, led by Gladstone and Parnell, have conducted their grand and peaceful contest for home rule in Ireland."

Republican Convention.—The place and date of the Republican National Convention were fixed at a meeting of the National Committee held late in 1887, Chicago being the choice of a majority of the committee, and June 19 the time agreed upon. On February 12 a letter of James G. Blaine, from Florence, Italy, to Chairman B. F. Jones, of the committee, was published, in which Mr. Blaine said that, as personal reasons would prevent him from en-

tering the contest, his name "would not be presented to the convention." No serious efforts in behalf of any candidate had hitherto been made, except for Senator John Sherman, of Ohio, who had been recommended for the nomination by the Ohio State Convention in July, 1887, and who, during the autumn of that year, had delivered speeches in Southern cities. Other names were now mentioned, and as the various State conventions were held, in April and May, to select delegates to the National Convention, candidates were formally presented. The Indiana Convention recommended ex-Senator Benjamin Harrison; Iowa recommended Senator William B. Allison; Michigan, ex-Gov. Russell A. Alger; Wisconsin, Gov. Jeremiah M. Rusk. Judge Walter Q. Gresham, of Indiana, attracted earnest supporters in many parts of the country, and the Republican Convention of Illinois instructed its delegates to vote in his favor. In New York, Chauncey M. Depew was a popular candidate, although the delegation from that State was unpledged. Senator Joseph R. Hawley was the favorite of Connecticut, Congressman William Walter Phelps of New Jersey, and Senator John J. Ingalls of Kansas. The possibility that Mr. Blaine might finally be induced to accept the nomination was a disturbing element, which apparently prevented many of the delegates from earnestly supporting any other candidate. On May 30 a second letter from him was published, which set at rest all reasonable doubts. In this letter, dated at Paris, France, he said, unequivocally, that he could not accept a nomination without showing bad faith toward those candidates who, relying on his former letter, were already in the field, and therefore he could not accept at all. No one of the candidates was assured of the support even of one third of the delegates. The convention organized by choosing John M. Thurston, of Kansas, for temporary chairman and M. Estee, of California, for permanent chairman. Three days were occupied in the work of organization, in the preparation and adoption of a platform, and in the presentation of candidates. Nominating speeches were made in favor of Gresham by Leonard Swett, of Illinois; in favor of Harrison by ex-Gov. Albert G. Porter, of Indiana; for Allison by William P. Hepburn, of Iowa; for Alger by R. E. Frazier, of Michigan; for Depew by Senator Hiscock, of New York; for Sherman by Gen. Hastings, of Pennsylvania; for Rusk by Senator Spooner, of Wisconsin. The names of Senator Hawley and ex-Mayor Edwin H. Fidler, of Philadelphia, were also presented in brief speeches. On the first ballot 830 votes were cast, a majority being 416. Of these, Sherman had 229, Gresham 111, Depew 99, Alger 84, Harrison 80, Allison 72, Blaine 35, Ingalls 28, Rusk 25, Phelps 25, Fidler 24, Hawley 13, ex-Secretary Robert T. Lincoln 3, and Congressman William McKinley, of Ohio, 2. The vote of Senator Ingalls

came from Kansas and Arkansas, and sixteen of the Pennsylvania delegation voted for Fittler. The New York delegates voted unitedly for Depew, according to an agreement made in caucus on the preceding day. The State delegations not having favorites were very much divided.

Upon the second ballot, after the names of ex-Mayor Fittler and Senator Hawley had been withdrawn, the following vote was cast: Sherman 249 votes, Alger 116, Gresham 108, Depew 99, Harrison 91, Allison 75, Blaine 33, Rusk 20, Phelps 18, Ingalls 16, McKinley 3, Lincoln 2. On the third ballot Kansas ceased to vote for Ingalls, and nearly all the New Jersey delegates abandoned Phelps. Sherman received on this ballot 244 votes, Gresham 123, Alger 122, Harrison 94, Depew 91, Allison 88, Blaine 35, Rusk 16, McKinley 8, Phelps 5, Lincoln 2, and Mr. Justice Miller 2. The convention adjourned after this ballot, and on its reassembling, Mr. Depew made an address, withdrawing his name. Col. Robert G. Ingersoll, then being asked to address the convention, attempted to advocate the nomination of Gresham, but the convention refused to hear him. The convention again adjourned without balloting. When it reassembled on the fifth day Congressman McKinley protested against the use of his name, but without effect. On the fourth ballot Wisconsin transferred her vote from Rusk to Harrison, and 59 votes from New York went to the same candidate. Sherman received 235 votes, Harrison 217, Alger 135, Gresham 98, Allison 88, Blaine 42, McKinley 11, Gov. Foraker, Lincoln, and Fred. Douglas one each. The fifth ballot resulted as follows: Sherman 224, Harrison 213, Alger 142, Allison 99, Gresham 87, Blaine 48, McKinley 14. The convention then adjourned to the following Monday.

It had become evident that Sherman, although still leading, could not command a following sufficient to nominate him, and the strength of Harrison appeared to have reached its highest point. A conference committee of friends of the various candidates met on Saturday evening and during Sunday, but without uniting upon a candidate. When the convention came together, Congressman Boutelle, of Maine, announced the receipt of two telegrams from Mr. Blaine, at Edinburgh, in which he earnestly requested his friends to respect his Paris letter and to refrain from voting for him. This was accepted as a finality, although the California delegation and a few others still voted for their favorite. On the sixth ballot Sherman received 244 votes, Harrison 231, Alger 137, Gresham 91, Allison 73, Blaine 40, and McKinley 12. The seventh ballot resulted as follows: Harrison 278, Sherman 231, Alger 120, Gresham 91, Allison 76, McKinley 16, Blaine 15, Lincoln 2, Foraker 1. The decisive point was now reached, when Congressman Henderson, of Iowa, arose and withdrew the name of Senator Allison, whose strength was

at once transferred to Harrison. Friends of the other candidates joined to swell the winning column, and at the end of roll-call, on the eighth ballot, Harrison had obtained 544 votes, or over 100 more than were necessary for a choice. Sherman received on this ballot 118 votes, Alger 100, Gresham 59, Blaine 5, McKinley 4. The nomination was then made unanimous.

For Vice-President, William O. Bradley, of Kentucky; William Walter Phelps, of New Jersey; and Levi P. Morton, of New York, were placed in nomination. Mr. Morton was nominated on the first ballot by the following vote: Morton 561, Phelps 119, Bradley 93, Blanche K. Bruce, of Mississippi, 11. The nomination was made unanimous.

The platform adopted by the convention is as follows:

The Republicans of the United States, assembled by their delegates in National Convention, pause on the threshold of their proceedings to honor the memory of their first great leader, the immortal champion of liberty and the rights of the people—Abraham Lincoln—and to cover also with wreaths of imperishable remembrance and gratitude the heroic names of our later leaders who have been more recently called away from our councils—Grant, Garfield, Arthur, Logan, Conkling. May their memories be faithfully cherished!

We also recall with our greetings and with prayer for his recovery the name of one of our living heroes, whose memory will be treasured in the history both of the Republicans and the republic, the name of that noble soldier and favorite child of victory, Philip H. Sheridan.

In the spirit of those great leaders and of our own devotion to human liberty, and with that hostility to all forms of despotism and oppression which is the fundamental idea of the Republican party, we send fraternal congratulations to our fellow Americans of Brazil upon their great act of emancipation which completed the abolition of slavery throughout the two American continents.

We earnestly hope we may soon congratulate our fellow-citizens of Irish birth upon the peaceful recovery of home rule for Ireland.

We reaffirm our unswerving devotion to the national Constitution and to the indissoluble union of the States, to the autonomy reserved to the States under the Constitution, to the personal rights and liberties of citizens in all the States and Territories in the Union, and especially to the supreme and sovereign right of every lawful citizen, rich or poor, native or foreign born, white or black, to cast one free ballot in public elections and to have that ballot duly counted.

We hold a free and honest popular ballot and just and equal representation of all the people to be the foundation of our republican Government, and demand effective legislation to secure the integrity and purity of elections, which are the fountains of all public authority.

We charge that the present Administration and Democratic majority in Congress owe their existence to the suppression of the ballot by a criminal nullification of the Constitution and the laws of the United States.

We are uncompromisingly in favor of the American system of protection; we protest against its destruction as proposed by the President and his party. They serve the interests of Europe; we will support the interests of America. We accept the issue and confidently appeal to the people for their judgment. The protective system must be maintained. Its

abandonment has always been followed by general disaster to all interests except those of the usurer and the sheriff.

We denounce the Mills Bill as destructive to the general business, the labor, and the farming interests of the country, and we heartily indorse the consistent and patriotic action of the Republican representatives in Congress in opposition to its passage.

We condemn the proposition of the Democratic party to place wool on the free list, and we insist that the duties thereon shall be adjusted and maintained so as to furnish full and adequate protection to that industry.

The Republican party would effect all needed reduction of the national revenue by repealing the taxes upon tobacco, which are an annoyance and burden to agriculture, and the taxes upon spirits used in the arts and for mechanical purposes, and by such revision of the tariff laws as will tend to check imports of such articles as are produced by our people, the production of which gives employment to our labor, and release from import duties those articles of foreign production except luxuries the like of which can not be produced at home. If there shall still remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of internal taxes rather than the surrender of any part of our protective system at a joint behest of whisky trusts and agents of foreign manufacturers.

We declare our hostility to the introduction into this country of foreign contract labor and of Chinese labor alien to our civilization and our Constitution, and we demand the rigid enforcement of existing laws against it and favor such immediate legislation as will exclude such labor from our shores.

We declare our opposition to all combinations of capital organized in trusts or otherwise to control arbitrarily the condition of trade among our citizens, and we recommend to Congress and State legislatures in their respective jurisdictions, such legislation as will prevent the execution of all schemes to oppress the people by undue charges on their supplies or by unjust rates for the transportation of their products to market. We approve the legislation by Congress to prevent alike unjust burdens and unfair discriminations between States.

We reaffirm the policy of appropriating the public lands of the United States to be homesteads for American citizens and settlers not aliens which the Republican party established in 1862 against the persistent opposition of the Democrats in Congress, and which has brought our great Western domain into such magnificent development. The restoration of unearned railroad land grants to public domain for the use of actual settlers which was begun under the administration of President Arthur should be continued. We deny that the Democratic party has ever restored one acre to the people, but declare that by joint action of Republicans and Democrats about fifty million acres of unearned lands, originally granted for the construction of railroads, have been restored to the public domain in pursuance of the conditions inserted by the Republican party in the original grant.

We charge the Democratic Administration with failure to execute the laws securing to settlers titles to their homesteads and with using appropriations made for that purpose to harrass the innocent settlers with spies and prosecutions under the false pretense of exposing frauds and vindicating law.

The government by Congress of the Territories is based upon necessity only to the end that they may become States in the Union; therefore, whenever the conditions of population, material resources, public intelligence, and morality are such as to insure stable local government therein, the people of such Territories should be permitted as a right inherent in them to form for themselves constitutions and State governments and be admitted into the Union. Pending the preparation for statehood, all officers thereof

should be selected from *bona-fide* residents and citizens of the Territory wherein they are to serve. South Dakota should of right be immediately admitted as a State in the Union under the Constitution framed and adopted by her people, and we heartily indorse the action of the Republican Senate in twice passing bills for her admission. The refusal of the Democratic House of Representatives, for partisan purposes, to favorably consider these bills is a willful violation of the sacred American principle of local self-government, and merits the condemnation of all just men. The pending bills in the Senate for acts to enable the people of Washington, North Dakota, and Montana Territories to form constitutions and establish State governments should be passed without unnecessary delay. The Republican party pledges itself to do all in its power to facilitate the admission of the Territories of New Mexico, Wyoming, Idaho, and Arizona to the enjoyment of self-government as States; such of them as are now qualified as soon as possible, and the others as soon as they become so.

The political power of the Mormon Church in the Territories as exercised in the past is a menace to free institutions too dangerous to be long suffered. Therefore we pledge the Republican party to appropriate legislation asserting the sovereignty of the nation in all Territories where the same is questioned, and, in furtherance of that end, to place upon the statute-books legislation stringent enough to divorce the political from the ecclesiastical power and thus stamp out the attendant wickedness of polygamy.

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

We demand the reduction of letter postage to one cent per ounce.

In a republic like ours, where the citizen is sovereign and the official the servant, where no power is exercised except by the will of the people, it is important that the sovereign—the people—should possess intelligence. The free school is a promoter of that intelligence which is to preserve us a free nation. Therefore the State or nation, or both combined, should support free institutions of learning sufficient to afford to every child growing up in the land the opportunity of a good common-school education.

We earnestly recommend that prompt action be taken by Congress in the enactment of such legislation as will best secure the rehabilitation of our American merchant marine, and we protest against the passage by Congress of a free ship bill, as calculated to work injustice to labor by lessening the wages of those engaged in preparing materials as well as those directly employed in our ship-yards.

We demand appropriations for the early rebuilding of our navy; for the construction of coast fortifications and modern ordnance, and other approved modern means of defense for the protection of our defenseless harbors and cities; for the payment of just pensions to our soldiers; for necessary works of national importance in the improvement of harbors and the channels of internal, coastwise, and foreign commerce; for the encouragement of the shipping interests of the Atlantic, Gulf, and Pacific States, as well as for the payment of the maturing public debt. This policy will give employment to our labor, activity to our various industries, increase security of our country, promote trade, open new and direct markets for our produce, and cheapen the cost of transportation. We affirm this to be far better for our country than the Democratic policy of loaning the Government's money without interest to "pet banks."

The conduct of foreign affairs by the present Administration has been distinguished by its inefficiency and its cowardice. Having withdrawn from the Senate all pending treaties effected by Republican Administrations for the removal of foreign burdens and restrictions upon our commerce and for its extension into better markets, it has neither effected nor pro-

posed any others in their stead. Professing adherence to the Monroe doctrine, it has seen with idle complacency the extension of foreign influence in Central America and of foreign trade everywhere among our neighbors. It has refused to charter, sanction, or encourage any American organization for constructing the Nicaragua Canal, a work of vital importance to the maintenance of the Monroe doctrine and of our national influence in Central and South America, and necessary for the development of trade with our Pacific territory, with South America, and with the islands and further coasts of the Pacific Ocean.

We arraign the present Democratic Administration for its weak and unpatriotic treatment of the fisheries question, and its pusillanimous surrender of the essential privileges to which our fishing-vessels are entitled in Canadian ports under the treaty of 1818, the reciprocal maritime legislation of 1830 and the comity of the nations, and which Canadian fishing-vessels receive in the ports of the United States. We condemn the policy of the present Administration and the Democratic majority in Congress toward our fisheries as unfriendly and conspicuously unpatriotic, and as tending to destroy a valuable national industry and an indispensable resource of defense against a foreign enemy. The name of American applies alike to all citizens of the republic and imposes upon all alike the same obligation of obedience to the laws. At the same time that citizenship is and must be the panoply and safeguard of him who wears it and protect him, whether high or low, rich or poor, in all his civil rights. It should and must afford him protection at home and follow and protect him abroad in whatever land he may be on a lawful errand.

The men who abandoned the Republican party in 1834, and continue to adhere to the Democratic party, have deserted not only the cause of honest government, of sound finance, of freedom, of purity of the ballot, but especially have deserted the cause of reform in the civil service. We will not fail to keep our pledges because they have broken theirs, or because their candidate has broken his. We therefore repeat our declaration of 1884, to wit: The reform of the civil service, auspiciously begun under the Republican Administration, should be completed by the further extension of the reform system already established by law to all the grades of the service to which it is applicable. The spirit and purpose of the reform should be observed in all Executive appointments, and all laws at variance with the object of existing reform legislation should be repealed, to the end that the dangers to free institutions which lurk in the power of official patronage may be wisely and effectively avoided.

The gratitude of the nation to the defenders of the Union can not be measured by laws. The legislation of Congress should conform to the pledge made by a loyal people and be so enlarged and extended as to provide against the possibility that any man who honorably wore the Federal uniform shall become an inmate of an almshouse or dependent upon private charity. In the presence of an overflowing Treasury, it would be a public scandal to do less for those whose valorous service preserved the Government. We denounce the hostile spirit shown by President Cleveland in his numerous vetoes of measures for pension relief, and the action of the Democratic House of Representatives in refusing even a consideration of general pension legislation.

In support of the principles herewith enunciated we invite the co-operation of patriotic men of all parties, and especially of all workingmen, whose prosperity is seriously threatened by the free-trade policy of the present Administration.

The following addendum was adopted in the closing hours of the convention :

The first concern of all good government is the virtue and sobriety of the people and the purity of their

homes. The Republican party cordially sympathizes with all wise and well directed efforts for the promotion of temperance and morality.

Prohibition Convention.—The Prohibition National Convention met at Indianapolis on May 30, and organized by choosing H. C. Delano, of Connecticut, to be temporary chairman. The permanent chairman was Ex-Gov. John P. St. John, of Kansas. Gen. Clinton B. Fisk, of New Jersey, was nominated by acclamation for President, and John A. Brooks, of Missouri, for Vice-President. Considerable discussion arose regarding the platform, especially upon the subject of woman suffrage. The report of the majority of the Platform Committee was finally adopted in the following form :

The Prohibition party, in national convention assembled, acknowledging Almighty God as the source of all power in government, do hereby declare :

1. That the manufacture, importation, exportation, transportation, and sale of alcoholic beverages shall be made public crimes, and punished as such.

2. That such prohibition must be secured through amendments of our national and State constitutions, enforced by adequate laws adequately supported by administrative authority; and to this end the organization of the Prohibition party is imperatively demanded in State and nation.

3. That any form of license, taxation, or regulation of the liquor-traffic is contrary to good government; that any party which supports regulation, license, or tax enters into alliance with such traffic and becomes the actual foe of the State's welfare, and that we arraign the Republican and Democratic parties for their persistent attitude in favor of the licensed iniquity, whereby they oppose the demand of the people for prohibition, and, through open complicity with the liquor cause, defeat the enforcement of law.

4. For the immediate abolition of the internal revenue system, whereby our national Government is deriving support from our greatest national vice.

5. That, an adequate public revenue being necessary, it may properly be raised by impost duties and by an equitable assessment upon the property and the legitimate business of the country, but import duties should be so reduced that no surplus shall be accumulated in the Treasury, and that the burdens of taxation shall be removed from foods, clothing, and other comforts and necessaries of life.

6. That civil-service appointments for all civil offices, chiefly clerical in their duties, should be based upon moral, intellectual, and physical qualifications, and not upon party service or party necessity.

7. That the right of suffrage rests on no mere circumstance of race, color, sex, or nationality, and that where, from any cause, it has been held from citizens who are of suitable age and mentally and morally qualified for the exercise of an intelligent ballot, it should be restored by the people through the Legislatures of the several States, on such educational basis as they may deem wise.

8. For the abolition of polygamy and the establishment of uniform laws governing marriage and divorce.

9. For prohibiting all combinations of capital to control and to increase the cost of products for popular consumption.

10. For the preservation and defense of the Sabbath as a civil institution without oppressing any who religiously observe the same on any other day than the first day of the week.

That arbitration is the Christian, wise, and economic method of settling national differences, and the same method should, by judicious legislation, be applied to the settlement of disputes between large bodies of employes and employers; that the abolition of the saloon would remove the burdens, moral, physical, pecuniary, and social, which now oppress labor and rob it of its

earnings, and would prove to be the wise and successful way of promoting labor reform; and we invite labor and capital to unite with us for the accomplishment thereof; that monopoly in land is a wrong to the people, and the public land should be reserved to actual settlers, and that men and women should receive equal wages for equal work.

That our immigration laws should be so enforced as to prevent the introduction into our country of all convicts, inmates of other dependent institutions, and of others physically incapacitated for self-support, and that no person should have the ballot in any State who is not a citizen of the United States.

Recognizing and declaring that prohibition of the liquor-traffic has become the dominant issue in national politics, we invite to full party fellowship all those who, on this one dominant issue, are with us agreed, in the full belief that this party can and will remove sectional differences, promote national unity, and insure the best welfare of our entire land.

Union Labor and United Labor Conventions.—On May 15 a national convention of the Union Labor party, consisting of two hundred and seventy-four delegates, from twenty-five States, met at Cincinnati for the purpose of nominating presidential candidates. This party was formed on Feb. 22, 1887, at a convention held in the same city, to which delegates had been invited from the labor and farmers' organizations, including the Knights of Labor, the Agricultural Wheelers, the Corn-growers, the Homesteadry, Farmers' Alliances, Greenbackers, and Grangers. The party thus formed placed a State ticket in the field, in Ohio, in the autumn of 1887, and in Arkansas, Missouri, and nearly all the Western States during the canvass of this year. The convention nominated for President, Alson J. Streeter, of Illinois; and for Vice-President, Charles E. Cunningham, of Arkansas. The platform, after reciting the existing hardships of farmers and laborers, contains the following declarations:

We oppose land monopoly in every form, demand the forfeiture of unearned grants, the limitation of land ownership, and such other legislation as will stop speculation in lands and holding it unused from those whose necessities require it. A homestead should be exempt, to a limited extent, from execution or taxation.

The means of communication and transportation shall be owned by the people, as is the United States postal system.

The establishment of a national monetary system in the interest of the producer, instead of the speculator and usurer, by which the circulating medium in necessary quantity shall be issued directly to the people, without the intervention of banks, and loaned to citizens upon land security, at a low rate of interest, so as to relieve them from the extortion of usury, and enable them to control the money supply. Postal savings banks should be established, and while we have free coinage of gold we should have free coinage of silver. We demand the immediate application of all the money in the United States Treasury to the payment of the bonded debt, and condemn the further issue of interest-bearing bonds, either by the national Government or by States, Territories, or municipalities.

Arbitration should take the place of strikes and other injurious methods of settling labor disputes. The letting of convict labor to contractors should be prohibited, the contract system be abolished on public works, the hours of labor in industrial establishments be reduced commensurate with the increased produc-

tion by labor-saving machinery, employes protected from bodily injury, equal pay for equal work for both sexes, and labor, agricultural, and co-operative associations be fostered and encouraged by law.

We demand the passage of a service pension bill to every honorably discharged soldier and sailor of the United States.

A graduated income-tax is the most equitable system of taxation.

We demand a constitutional amendment making United States Senators elective by a direct vote of the people.

We demand the strict enforcement of laws prohibiting the importation of subjects of foreign countries under contracts.

We demand the passage and enforcement of such legislation as will absolutely exclude the Chinese from the United States.

The right to vote is inherent in citizenship, irrespective of sex, and is properly within the province of State legislation.

The paramount issues to be solved in the interests of humanity are the abolition of usury, monopoly, and trusts, and we denounce the Democratic and Republican parties for creating and perpetuating these monstrous evils.

The Union Labor party drew its support from the Greenbackers, the farmer organizations, and the older labor-reformers. In this it differed from the United Labor party, which was an outgrowth of the Henry George movement of two years ago in New York city. This latter organization supported Henry George in the canvass of 1887 for Secretary of State in New York, and, with the opening of the national canvass, placed in nomination its first national ticket. The National Convention, consisting of ninety delegates, representing nine States, was held at Cincinnati on May 16, one day after the Union Labor Convention, and nominated Robert H. Cowdrey, of Illinois, for President; and William H. T. Wakefield, of Kansas, for Vice-President. The national platform contains the following declarations:

We, the delegates of the United Labor party of the United States, in national convention assembled, hold that the corruptions of government and the impoverishment of the masses result from neglect of the self-evident truths proclaimed by the founders of this republic, that all men are created equal and are endowed with inalienable rights. We aim at the abolition of the system which compels men to pay their fellow-creatures for the use of the common bounties of nature, and permits monopolizers to deprive labor of natural opportunities for employment.

We see access to farming-land denied to labor, except on payment of exorbitant rent or the acceptance of mortgage-burdens, and labor, thus forbidden to employ itself driven into the cities. We see the wage-workers of the cities subjected to this unnatural competition, and forced to pay an exorbitant share of their scanty earnings for cramped and unhealthy lodgings. We see the same intense competition condemning the great majority of business and professional men to a bitter and often unavailing struggle to avoid bankruptcy, and that while the price of all that labor produces ever falls, the price of land ever rises.

We trace these evils to a fundamental wrong—the making of the land on which all must live the exclusive property of but a portion of the community. To this denial of natural rights are due want of employment, low wages, business depressions, that intense competition which makes it so difficult for the majority of men to get a comfortable living, and that wrongful distribution of wealth which is producing

the millionaire on one side and the tramp on the other.

To give all men an interest in the land of their country; to enable all to share in the benefits of social growth and improvement; to prevent the shutting out of labor from employment by the monopolization of natural opportunities; to do away with the one-sided competition which cuts down wages to starvation rates; to restore life to business and prevent periodical depressions; to do away with that monstrous injustice which deprives producers of the fruits of their toil while idlers grow rich; to prevent the conflicts which are arraying class against class, and which are fraught with menacing dangers to society—we propose so to change the existing system of taxation that no one shall be taxed on the wealth he produces, nor any one suffered to appropriate wealth he does not produce by taking to himself the increasing values which the growth of society adds to land.

What we propose is not the disturbing of any man in his holding or title; but, by taxation of land according to its value and not according to its area, to devote to common use and benefit those values which arise not from the exertion of the individual, but from the growth of society, and to abolish all taxes on industry and its products. This increased taxation of land-values must, while relieving the working farmer and small homestead owner of the undue burdens now imposed upon them, make it unprofitable to hold land for speculation, and thus throw open abundant opportunities for the employment of labor and the building up of homes.

We would do away with the present unjust and wasteful system of finance, which piles up hundreds of millions of dollars in treasury vaults while we are paying interest on an enormous debt; and we would establish in its stead a monetary system in which a legal-tender circulating medium should be used by the Government without the intervention of banks.

We wish to abolish the present unjust and wasteful system of ownership of railroads and telegraphs by private corporations—a system which, while failing to supply adequately public needs, impoverishes the farmer, oppresses the manufacturer, hampers the merchant, impedes travel and communication, and builds up enormous fortunes and corrupting monopolies that are becoming more powerful than the Government itself. For this system we would substitute Government ownership and control for the benefit of the whole people instead of private profit.

While declaring the foregoing to be the fundamental principles and aims of the United Labor Party, and while conscious that no reform can give effectual and permanent relief to labor that does not involve the legal recognition of equal rights to natural opportunities, we, nevertheless, as measures of relief from some of the evil effects of ignoring those rights, favor such legislation as may tend to reduce the hours of labor, to prevent the employment of children of tender years, to avoid the competition of convict labor with honest industry, to secure the sanitary inspection of tenements, factories, and mines, and to put an end to the conspiracy laws.

We desire also to so simplify the procedure of our courts, and diminish the expense of legal proceedings, that the poor may therein be placed on an equality with the rich, and the long delays which now result in scandalous miscarriages of justice may be prevented.

Since the ballot is the only means by which in our republic the redress of political and social grievances is to be sought, we especially and emphatically declare for the adoption of what is known as the Australian system of voting, in order that the effectual secrecy of the ballot, and the relief of candidates for public office from the heavy expenses now imposed upon them, may prevent bribery and intimidation, do away with practical discriminations in favor of the rich and unscrupulous, and lessen the pernicious influence of money in politics.

We denounce the Democratic and Republican parties as hopelessly and shamelessly corrupt, and by reason of their affiliation with monopolies, equally unworthy of the suffrages of those who do not live upon public plunder; we therefore require of those who would act with us that they sever all connection with both.

Unsuccessful attempts were made at this time to unite these two labor parties in the support of a single ticket, and on August 2 a conference of their leaders was held at Chicago for the purpose; but as the Union Labor representatives demanded the entire withdrawal of the United Labor ticket, no agreement was reached. The canvass of the latter party was, however, not pushed with enthusiasm, and except in New York and Illinois it polled only a scattering vote.

American Party Convention.—The National Convention of the American party was held at Washington, D. C., on August 14 and 15, delegates to the number of 126 being present. More than half of these were from the State of New York, and their disposition to rule the convention in their own interest early led to a withdrawal of about 25 members from other States, and a consequent division in the party councils. James L. Curtis, of New York, was nominated for President, receiving 45 to 15 for Abram S. Hewitt. The nominee for Vice-President was James R. Greer, of Tennessee, who later declined the honor. The resolutions adopted include the following:

Resolved, That all law-abiding citizens of the United States of America, whether native or foreign born, are politically equals (except as provided by the Constitution), and all are entitled to and should receive the full protection of the laws.

Resolved, That the Constitution of the United States should be so amended as to prohibit the Federal and State Governments from conferring upon any person the right to vote unless such person be a citizen of the United States.

Resolved, That we are in favor of fostering and encouraging American industries of every class and kind, and declare that the assumed issue "Protection" vs. "Free Trade" is a fraud and a snare. The best "protection" is that which protects the labor and life blood of the republic from the degrading competition with and contaminations by imported foreigners; and the most dangerous "free trade" is that in paupers, criminals, communists, and anarchists, in which the balance has always been against the United States.

Whereas, One of the greatest evils of unrestricted foreign immigration is the reduction of the wages of the American workingman and workingwoman to the level of the underfed and underpaid labor of foreign countries; therefore,

Resolved, That we demand that no immigrant shall be admitted into the United States without a passport obtained from the American Consul at the port from which he sails; that no passport shall be issued to any pauper, criminal, or insane person, or to any person who, in the judgment of the consul, is not likely to become a desirable citizen of the United States; and that for each immigrant passport there shall be collected by the consul issuing the same the sum of one hundred dollars (\$100), to be by him paid into the Treasury of the United States.

Resolved, That the present naturalization laws of the United States should be unconditionally repealed.

Resolved, That the soil of America should belong to Americans; that no alien non-resident should be per-

mitted to own real estate in the United States, and that the realty possessions of the resident alien should be limited in value and area.

Resolved, That no flag shall float on any public buildings, municipal, State, or national, in the United States, except the municipal, State, or national flag of the United States—the flag of the stars and stripes.

Resolved, That we reassert the American principles of absolute freedom of religious worship and belief, the permanent separation of Church and state; and we oppose the appropriation of public money or property to any church or institution administered by a church. We maintain that all church property should be subject to taxation.

Other Conventions.—The first presidential ticket of the year was nominated by a convention of the Industrial Reform party, at Washington, D. C., on February 22, and contained the names of Albert E. Redstone, of California, for President, and John Colvin, of Kansas, for Vice-President. The new party found only a few supporters, and had no appreciable influence in the election. Another ticket, equally without support at the polls, was nominated by the National Equal Rights party at Des Moines, Iowa, on May 15, bearing the names of Belva Lockwood, of Washington, D. C., for President, and Alfred H. Love, of Philadelphia, for Vice-President. The latter declined the nomination, and the name of Charles Stuart Wells was substituted. A demand for woman suffrage and equal rights of man and woman constituted the most important portion of the platform. On July 16 the Grand Council of the Independent Labor party met at Detroit, and, after discussion of the different parties and candidates, voted to support the Republican candidates. A call issued on August 16 for a national convention of the Greenback party, brought together only eight delegates at Cincinnati on September 12, who issued an address proclaiming the Greenback principles, but made no nominations. On July 25 a convention of colored Democrats was called to meet at Indianapolis to organize a movement to divide the negro vote. There were 64 delegates divided into two factions, each of which strove for control of the convention, and their quarrels tended largely to destroy the influence and effect of the movement. Resolutions supporting the Democratic ticket and approving Democratic principles were adopted. A large and enthusiastic conference of anti-saloon Republicans was held at New York on May 2 and the day following. Representatives were present from nearly every State, and the necessity of solving the liquor problem through the agency of the Republican party was discussed. Resolutions were adopted and a movement organized intended to arrest the growing defection of Prohibitionists from the Republican party.

Political Clubs.—An important feature of the political canvass of this year was the rapid growth of the political club system. Two powerful organizations, the Republican League of the United States and the National Association of Democratic Clubs, were formed, whose influence stimulated the formation of clubs over

the whole country, supplementing and in some cases practically superseding the regular party machinery.

Early in 1887 the Republican Club of New York city began the work of enlisting the Republican clubs already in existence into one compact body, and, by means of circulars and letters, the existence of about three hundred clubs was discovered. A national convention of these organizations was held in New York city, Dec. 15–17, 1887, with about 1,500 delegates in attendance from twenty-three States and Territories. Daniel J. Ryan, of Ohio, was temporary, and William M. Evarts permanent, chairman. A National Republican League was there organized, to be composed of State leagues, which in turn were to be made up of local clubs. James P. Foster, of New York, was elected president; Andrew B. Humphrey secretary; and J. S. Clarkson, of Iowa, chairman of the executive committee; the headquarters being in New York city. New clubs sprung up everywhere, and by August, 1888, 6,500 clubs were reported, with an estimated membership of one million voters. The work of forming clubs in the doubtful States was pushed rapidly. In West Virginia the number increased in six weeks from 4 to 118, and there were over 300 clubs in November. Before the election there were 1,100 clubs in Indiana, with a membership of 80,000, and 1,400 clubs in New York. State leagues were formed and State conventions of Republican clubs were held during the campaign in nearly all the Northern States. A great work was done by these organizations in the distribution of campaign documents, and especially in the enrollment of Republican voters.

The former work was aided and extended by the Home Market Club, of Boston, Mass., which was formed to spread the doctrine of protection. Its work was largely confined to the circulation of documents, nearly thirteen million being issued and distributed, to a great extent, by the local clubs of the Republican League.

In this movement the Democrats were scarcely less active than their opponents. The National Association of Democratic Clubs grew out of a suggestion of the Young Men's Democratic Club of New York to form a league of Democratic clubs to secure the adoption of the principles of tariff and civil-service reform. After much correspondence, several clubs united in a call for a conference, which was held in New York city, April 21, 1888, and was participated in by delegates from twenty-one clubs from fourteen States. This conference called a convention of Democratic clubs, which was held in Baltimore, July 4, 1888, and was attended by 2,400 delegates from 500 clubs. W. E. Russell, of Massachusetts, was chosen temporary, and John Winans permanent, chairman of the convention. The principles of the association were adopted, which henceforth became an organization for the success of the

party. Chauncey F. Black, of Pennsylvania, was elected president; Edward B. Whitney, of New York, secretary; and Robert Grier, of New York, chairman of the executive committee; and headquarters were opened in New York city. State organizations were formed in twelve States, and by November 3,009 clubs were reported from forty-two States and Territories, with an aggregate membership of 300,000. New York led the list with 430 clubs; Kentucky had 301; West Virginia, Pennsylvania, and Illinois more than 200 each; and seven other States more than 100 each. The National Association distributed about one million documents during the canvass, and the State leagues many times that number. The New York State League undertook a unique work in chartering a canal-boat, the "Thomas Jefferson," which, under the command of President Thatcher of the League, with a crew of speakers and a cargo of tariff documents, made a three weeks' voyage across the State, through the Erie and Champlin Canals, holding meetings and distributing documents. The State League of Pennsylvania opened the canvass with a thousand simultaneous meetings in all parts of the State.

Besides these party organizations, the tariff reform clubs throughout the country were active in the canvass, notably the Reform Club of New York, the Massachusetts Tariff Reform League, the New Haven Reform Club, and the American Tariff Reform League of Chicago.

The Presidential Canvass.—On August 6 the candidates of the Prohibition party made public their letters of acceptance. President Cleveland's letter accepting the Democratic nomination was published on September 10, and on the following day that of ex-Senator Harrison appeared. Mr. Morton's letter accepting the vice-presidential nomination appeared on October 2, and ex-Senator Thurman's on October 14. President Cleveland reiterated in his letter the strong views in favor of tariff reduction, and the danger of a surplus in the national Treasury, expressed by him in his message to Congress in December, 1887. The Republicans were not slow in taking up the tariff issue thereby presented, and that question became the absorbing topic of discussion in the canvass. The controversy became largely one between protection and free trade, the Republicans striving to show that the President's utterances and the Mills Bill committed their opponents to a free-trade policy, while they were themselves pledged to abolish the entire internal revenue system before destroying protective tariff rates. Civil-service reform, the Southern problem, the personal record of the candidates, and all other questions dwindled into comparative insignificance.

An incident of the later days of the canvass was the publication on Oct. 24 of a letter purporting to be written by one Charles F. Murchison, of Pomona, Cal., to the British

minister at Washington, asking advice in regard to the political situation, and of the reply of Minister West thereto. The writer said he was a naturalized citizen of the United States of English birth, but he still considered England the mother-land. He further said that the information he sought was not for himself alone, but to enable him to give assurances to many other persons in the same situation as himself, for the purpose of influencing their political action as citizens of the United States of English birth. The letter also contained gross reflections upon the conduct of the United States Government in respect to questions in controversy and unsettled between the United States and Great Britain, and both directly and indirectly imputed insincerity in such conduct. The British minister replied that "any political party which openly favored the mother-country at the present moment would lose popularity, and that the party in power is fully aware of that fact"; and that in respect to the "questions with Canada which have been unfortunately reopened since the rejection of the (fisheries) treaty by the Republican majority in the Senate, and by the President's message to which you allude, . . . allowances must be made for the political situation as regards the presidential election."

The President regarded this reply as an interference of Minister West in the politics of this country by giving political advice to American citizens, and notified the British Government of his conduct. No action being taken by that Government for his recall, the President, on Oct. 30, notified him that his presence as the representative of Great Britain was no longer agreeable to this Government, and his passports were delivered to him. The British Government, regarding this action as unduly hasty and discourteous, refused to fill the vacant mission during the remaining months of the Administration. The incident acquired unusual importance from the circumstance that it was a part of the Republican argument throughout the campaign to show that the Democratic party, in its tariff-reform and free-trade views, was adopting a course that would open our markets to British manufacturers, and was hostile to American interests.

The efforts of both parties were directed mainly to the doubtful States of Indiana, New York, New Jersey, and Connecticut. President Cleveland took no active part in the canvass, and Gen. Harrison confined his efforts to short addresses made to the numerous delegations that came to pay their respects to him at his home. Ex-Senator Thurman delivered a series of addresses in the West, and spoke also in New York city and at Newark, N. J. The central figure of the canvass on the Republican side, was Mr. Blaine, whose return in August from his European trip was signalized by a great demonstration in his honor in New York city. He took an active part in the Maine

canvass before the September election, and afterward made a tour of the West, speaking to large audiences.

At the election in November the Democrats carried all the Southern States, as usual, and the Northern States of New Jersey and Connecticut. In New York, while the State Democratic ticket was elected, their National ticket was nearly 15,000 votes behind the Republican ticket. Gen. Harrison was thus assured of 233 electoral votes, while Mr. Cleveland had 168. The popular vote, by counties, may be found in the article UNITED STATES, PRESIDENTIAL ELECTIONS IN. The accompanying table gives it by States.

A presidential candidate nominated by the Socialists of New York city received 2,068 votes.

The result of the Congressional elections was to give control of the popular branch of Congress to the Republicans by a small majority.

The Governor of West Virginia denied certificates of election to two Republicans who were elected to Congress upon the face of the returns and gave them to their Democratic opponents. Should the Republicans be finally seated, the Republican majority in the Fifty-first Congress will be increased from 3 to 7. The Democratic majority in the Fiftieth Congress was 19.

UNITED STATES, FINANCES OF THE. During the fiscal year ended June 30, 1888, the reve-

nues collected by the United States Government averaged more than \$1,000,000 a day, including all Sundays and holidays, or about \$379,000,000 for the twelve months. This aggregate is more by about eight million than for the preceding year, and is at the rate of a little more than six dollars per capita of population, about the average rate of the past fifteen years, and less than half the highest rate of Federal taxation per capita per annum of which the Government has record (\$15.73 per capita in 1866).

The expenditures for the year have been about \$268,000,000, or about the same as in 1887, and greater than in any previous year since 1875.

The surplus in the Treasury at the close of the fiscal year, over and above all accrued liabilities, was about \$103,000,000. It was about \$41,000,000 when the year began.

The average monthly surplus has been twice as great during 1888 as during 1887, and the highest amount has been nearly double the highest aggregate of the preceding year. The surplus at one time during the past year was greater by \$53,487,000 than the highest point previously reached, and has since declined to little less than half its greatest aggregate.

The National Bank depositary system, which has been the subject of much recent discussion, has just rounded out a quarter of a century of its existence. From the beginning of

the fiscal year 1864 to the close of the fiscal year 1888, it has been maintained by each successive Secretary of the Treasury under the discretionary authority conferred by law. The aggregate amount of public funds handled during the twenty-five years by this important adjunct to the Treasury has been nearly \$5,000,000,000, and the balance held has varied at different dates from \$6,000,000 to \$62,000,000. At the close of 1864 the balance was about \$40,000,000, and during the four years following declined steadily to \$23,000,000 in 1868. Since that year it has never risen to the latter figure except in 1873, when it exceeded \$62,000,000, and during the past fiscal year, when it again rose to this high sum, and has been maintained for several months at about \$60,000,000. From 1874 to 1887 the balance never exceeded \$15,000,000, and it is to-day nearly three times as large as it was two years ago. During the entire period the Government has never been subjected to the slightest loss except during the earliest stages, when the system was imperfect and the necessary safeguards had not yet been applied.

During the year just closed the number of depositaries was increased more rapidly than ever before. The system has proved itself to be an important monetary agency of the Government—safe, economical, efficient, and expeditious in the discharge of public business. The important changes of policy toward the depositaries during the past year have relieved the system of the suspicion of favoritism and have placed it upon a basis of better business principles. The undue expansion of the balance far beyond the amount necessary for the true scope and purpose of the depositary system is due exclusively to the present excessive tax laws, and whatever objection is justly made to this large balance will apply with greater force to any other disposition which the Treasury could have made of the money.

The holdings of public money by depositary banks were almost exactly the same at the close of the year as at its beginning, or about \$52,000,000.

The following tables exhibit in detail the revenue and expenditures of the Government for the fiscal year ending June 30, 1888:

REVENUE.	
Customs	\$219,091,173 63
Internal revenue	124,296,871 98
Sales of public lands	11,202,017 28
Profits on coinage	9,357,634 48
Consular, letters patent, and land fees	8,483,443 99
Tax on national banks	1,748,566 85
Customs fees, fines, etc.	1,097,448 20
Pacific Railroad sinking-fund	1,170,331 43
Pacific Railroad interest	681,696 95
Sales of Indian lands	850,087 43
Soldiers' Home fund	433,189 29
Sales of Government property	365,877 26
Tax on seal-skins	317,500 00
Immigrant fund	291,189 50
Surveying public lands	161,890 76
Deductions on mutilated notes, etc.	112,422 05
Sale of naval vessels	105,665 88
Revenues of District of Columbia	2,650,350 81
Miscellaneous	1,838,712 54
Total.....	\$379,266,074 76

EXPENDITURES.	
Civil list	\$22,852,334 03
Foreign intercourse	1,593,461 40
Indian service	6,240,807 57
Pensions	80,288,508 77
Military establishment	38,522,486 11
Naval establishment	16,926,437 65
Miscellaneous, including public buildings, lighthouses, and collecting the revenue	44,228,351 89
District of Columbia	4,278,113 43
Interest on the public debt	44,715,007 47
Total.....	\$259,653,958 67
Leaving a surplus of.....	\$119,612,116 09
Which was applied as follows:	
Purchase of bonds for the sinking-fund, including \$2,852,015.83 paid for premium....	\$46,577,165 88
Purchase of 4 and 4½ per-cent. bonds other than for the sinking-fund, including \$5,418,826.53 for premium	81,990,326 58
Redemption of 3-per-cent. loan of 1882	4,175,750 00
Redemption of other loans, fractional currency, etc.....	841,163 05
Total.....	\$53,054,405 51
Leaving a balance added to the cash in the Treasury of.....	36,527,710 58
Total.....	\$119,612,116 09

It will be seen from the foregoing that, of all the items in the national expenditure, pensions constitute much the largest, and exceed the total cost of administering the legislative, executive, and judicial branches of the Government, as well as the Indian and diplomatic and consular branches. The pension-roll costs the Government more than twice as much as its military establishment and engineering-works, and more than four times as much as the navy, even during these days of increased expenditure in naval construction. This item of pension payments is the only one that is growing in amount. It was \$5,000,000 more in 1888 than in 1887, and \$12,000,000 increase in 1887 over 1886, while the aggregate of other expenditures was no greater for 1888 than for 1887.

As compared with the fiscal year 1887, the revenues for 1888 increased \$11,041,749.38 in the following items: Internal revenue, \$5,473,480.76; customs, \$1,804,280.50; sales of public lands, \$1,947,730.81; profits on coinage, \$458,381.65; consular fees, \$161,426.40; deduction on mutilated notes, etc., \$112,422.05; sale of naval vessels, \$105,665.88; sale of Government property, \$103,044.94; customs fees, \$97,871.98; surveying public lands, \$67,601; immigrant fund, \$32,787; fees on letters patent, \$14,487.36; revenues of the District of Columbia, \$323,290.13; and miscellaneous items, \$339,278.92. There was a decrease of \$3,178,952.28, as follows: Soldiers' Home fund, \$793,070.18; tax on national banks, \$637,284.33; sales of old public buildings, \$624,882.20; sales of Indian lands, \$598,941.38; Pacific Railroad interest, \$233,096.18; Pacific Railroad sinking-fund, \$194,104.44; customs fees, \$50,373; land fees, \$44,111.93; and customs fines, penalties, and forfeitures, \$3,088.64; making a net increase of revenue for the year of \$7,862,797.10. There was a decrease in the expenditures of \$15,377,724.31, as follows: Civil expenses, \$12,312,564.79; interest on the public

debt, \$3,026,569.78; military establishment, \$38,589.74. There was an increase in the following: Pensions, \$5,259,406.98; naval establishment, \$1,785,310.85; Indian service, \$54,785.18; making a net decrease in expenditures of \$8,278,221.30.

The revenue derived from the various objects of internal taxation during the past two fiscal years is shown in the following table:

OBJECT.	1887.	1888.
Spirits.....	\$65,829,821 71	\$69,306,166 41
Tobacco.....	30,108,067 13	30,662,481 52
Fermented liquors.....	21,922,187 49	23,824,218 48
State banks and bankers.....	4,288 37	4,202 55
Oleomargarine.....	723,948 04	864,139 88
Miscellaneous.....	249,488 32	165,816 48
Total.....	\$118,837,301 06	\$124,326,475 32

In 1888 the receipts from customs were \$219,091,173.63; from internal revenue, \$124,296,871.98.

State of the Treasury.—The following is a statement of the condition of the public Treasury on Dec. 31, 1887, and Dec. 31, 1888:

ITEMS.	Dec. 31, 1887.	Dec. 31, 1888.
<i>Assets:</i>		
Gold coin.....	\$182,618,963 88	\$227,854,212 88

Balance.....	94,226,168 81	84,370,060 32
Total.....	\$642,640,200 28	\$711,650,637 24

In the judicious management of the silver coinage and the careful fostering of gold resources, the administration of the Treasury Department has achieved greatest credit and accomplished the most important results. In March, 1885, the Treasury silver holdings, unrepresented by silver certificates in circulation, amounted to \$48,000,000, and in July, 1886, they had risen to \$97,000,000 (\$185,000,000 of standard dollars and bullion in the vaults being

offset by only \$87,500,000 of certificates outstanding). At the close of December, 1888, the net silver holdings were only \$12,900,000 (\$260,000,000 of dollars and bullion being offset by more than \$246,000,000 of outstanding silver certificates).

While thus successful in putting out silver, the Treasury has achieved equally good results in accumulating gold. The net gold fund when the administration began was \$125,700,000, and it soon fell to about \$110,000,000, a dangerously narrow margin, if gold payments were to continue. In little more than two years from that date it was nearly doubled. Three years from the beginning of the administration it reached \$218,800,000, and at the close of 1888 it was \$203,800,000, having doubled during the past decade. In 1878 the Government gold fund was \$100,000,000, and in October, 1887, it reached \$200,000,000. Since the latter date its highest amount has been \$218,000,000, and its lowest \$186,000,000; both extremes having been touched within the past year—the highest in March and the lowest in October. On Jan. 1, 1888, the gold fund was \$208,000,000. Since the amount of \$100,000,000 was reached in 1878, the Government gold holdings have never declined nearly to that limit, except in May, 1885, when the Treasurer resorted to the expedient of borrowing gold from the banks.

The Public Debt.—Two of the most striking features of our recent history have been the increase of population and the decrease of public debt, and these have operated together to cause a reduction of the debt per capita at a rate more rapid than is generally known. When our public debt was at its highest aggregate of nearly \$3,000,000,000, in 1865, and the population fewer than 35,000,000, the debt amounted to more than \$80 for each individual. At the close of the fiscal year 1888 the public debt unpaid and unprovided for, less cash in the Treasury, was about \$1,165,000,000, while the population was 61,394,000. The amount of debt per capita has thus been reduced from over \$80 to less than \$19. The period of less than a quarter of a century has witnessed a reduction of the debt by nearly \$2,000,000,000, and an increase of population by more than 26,000,000. In 1865, when the public debt per capita was over \$80, the Government revenues collected amounted to \$9.60 per capita. In 1888, with the debt at less than \$19 per capita, the revenues amounted to \$6.18 from each individual.

The operation of the present revenue laws, if all the collections could be applied to the payment of the public debt at par value, would cancel the entire amount in less than three years.

The following is a statement of the principal and interest of the national debt at the close of the calendar years 1887 and 1888. But this statement is exclusive of cash applicable to payment of the debt and of cash held by the

Treasury to offset outstanding gold, silver, and currency certificates:

CHARACTER OF DEBT.	Dec. 31, 1887.	Dec. 31, 1888.
Bonds at 4½ per cent.	\$230,544,600 00	\$181,152,300 00
Bonds at 4 per cent.	732,442,100 00	651,137,600 00
Refunding certificates at 4 per cent.	151,530 00	128,240 00
Navy pension fund at 3 per cent.	14,000,000 00	14,000,000 00
Interest accrued on the above loans.	10,053,105 86	9,102,128 19
Matured debt.	3,163,955 26	2,094,695 26
Interest on matured debt.	178,392 04	160,783 64
Bonds issued to Pacific Railway companies.	64,623,512 00	64,623,512 00
Interest unpaid thereon. .	1,948,695 32	1,948,215 32
Demand and United States notes.	346,738,121 00	346,737,823 50
Gold certificates.	96,734,057 00	120,888,448 00

brought to such a basis as no longer to present a practical question or difficulty as to the means of redemption on the one hand, nor to threaten any financial disturbance as a consequence of the eventual retirement and cancellation of these notes on the other.

Such are the daily operations of the coinage and currency laws that the Treasury could now, without the slightest difficulty, redeem and cancel the greenbacks as rapidly as they would be voluntarily surrendered. At the same time the increase in metallic money has been so rapid and so great, and the expansion of circulation of other forms of paper money has been so large that the greenbacks are no longer essential for the purposes of a convenient currency, and could be withdrawn and canceled in accordance with a conservative plan of gradual retirement without causing any popular inconvenience or injuriously affecting the circulating medium. A statement is given below of the actual paper-money circulation of the United States on Dec. 31, 1887 and Dec. 31, 1888, showing the year's changes in the four forms of note circulation.

The National Banks.—Although a contraction of \$27,700,000 has occurred during the past fiscal year in the national bank-note circulation, only \$11,800,000 of this amount has been due to the withdrawal during that period of bonds deposited with the Treasury as security. The larger amount, or \$15,900,000, came from the fund for the redemption of notes of banks that had before the beginning of the year surrendered this part of their circulation. In other words, the contraction of note-circula-

Currency Circulation.—The tendency of national financial operations for some time past has been to bring the legal-tender notes to a metallic basis, despite the fact that Congress has not apparently had that end in view, and to prepare the way for their cancellation, although their retirement has not yet been authorized. When the anxiety and apprehension with which these notes have at times been regarded are recalled and the doubts as to the ability of the Government to maintain their credit are remembered, it seems wonderful that, with little aid from statesmanship and financiering, the great problem has solved itself, and this legal-tender currency has been

tion has been much more largely due to the continued retirement of the notes originally based upon the 3-per-cent. bonds, for the redemption of which the banks furnished funds when the 3 per cents were redeemed than from the voluntary surrender of 4 or $4\frac{1}{2}$ per cent. bonds. Expensive as these bonds have become, and slight as is the inducement for holding them as a basis of note-circulation, here is another evidence that the banks surrender their circulation very slowly, and that the contraction which is in progress is more largely due to the compulsory surrender of the 3-per-cent. bonds, when they were being called, than to the subsequent voluntary sale of the high-priced bonds now held as the basis of circulation.

Despite the heavy burden that is now imposed upon bank-note circulation, and the unjust and illogical requirements of law, the banks adhere tenaciously to their bonds, and are making a desperate struggle for existence. The vitality of the system and the strength of its popular support are shown by the pertinacity with which the banks maintain their charters and continue to comply with the requirements, which are steadily becoming more severe as the prices of bonds advance. The analysis of the year's returns shows clearly that scarcely a bond has been surrendered except under the pressure of absolute necessity, and yet the relinquishment has proceeded more rapidly than it can continue without forcing many banks out of the national system.

Public sentiment has demanded the maintenance of the national banks in the great cities and small towns throughout the country, no matter how well established State or private banks may be. The returns show a steady reduction of the bond-deposits to the amounts which the law makes compulsory, and that the new banks organized have deposited less bonds for circulation than a similar number of banks have ever done before. The action of the old banks and the continued admission of new ones show the earnestness of the battle that the banking-system will make for self-preservation; but the returns show, in a manner equally conclusive, the necessity for a prompt reduction in the compulsory amount of bond-deposits.

One respect in which the year's returns will be disappointing is the failure of the banks to make any progress in the substitution of 4 for $4\frac{1}{2}$ per cent. bonds. As the former have several years longer to run, there has been general recognition among bankers of the importance of substituting the long-term for the short-term bonds, and thus securing the maintenance of the bank charters at least as long as the lease of life of the 4-per-cent. bonds. The two classes of bonds are nearly at a par when interest worth is computed; but the past two years have not witnessed any progress in this direction. Two years ago the national banks had on deposit, as security for circulation, about \$315,000,000 of 4-per-cent. bonds, and about \$57,000,000 of $4\frac{1}{2}$ per cents;

one year ago they had about \$116,000,000 4s and about \$70,000,000 $4\frac{1}{2}$ s; and now they have about \$105,000,000 of 4s and \$69,000,000 $4\frac{1}{2}$ s. It will thus be seen that the proportion of 4-per-cent. bonds has fallen instead of rising. This is partially offset by the fact that the national bank depositaries have furnished over \$37,000,000 of 4s and less than \$18,000,000 of $4\frac{1}{2}$ s as security for deposits; and this amount of 4-per-cents is, to some extent, owned by national banks, which can substitute these bonds for the $4\frac{1}{2}$ s now held as security for circulation.

The Comptroller has matured an elaborate plan for the issue of circulation based upon commercial paper and a small cash reserve, and regulated by national-bank unions in various cities, in which the banks as well as the Government will be represented.

The following statement shows the condition of the national banks on Dec. 12, 1888, as shown by reports from 3,150 banks then in operation:

The Coinage.—The gold deposited at the mints and assay-offices during the fiscal year 1888, not

including re-deposits, was 3,882,120.497 standard ounces, of the value of \$72,225,497.56 in the preceding year, an excess of \$4,002,424.69 over the fiscal year 1887. In addition there were re-deposits of the value of \$8,668,959.11. Of the re-deposits of gold, \$4,395,315.84 represents the value of imported bars, and \$4,273,643.27 of fine bars bearing the stamp of the assay-office at New York, sent in for coinage. The total deposits of gold during the fiscal year 1888, including re-deposits as above cited, were 4,348,077.049 standard ounces, of the value of \$80,894,456.67. The deposits and purchases of silver, not including re-deposits, were 35,518,839.97 standard ounces, of the coining value of \$41,331,014.66, against \$47,756,918.75 in the preceding year. In addition there were re-deposits of silver of the coining value of \$491,831.79, of which \$275,189.75 consisted of imported bars, principally of the minor assay-offices, and \$216,642.04 of fine bars. The total deposits and purchases of silver were 35,941,507.92 standard ounces, of the value (calculated at coining rate in standard silver dollars) of \$41,822,846.45. The value of both the gold and silver deposited and purchased at the mints and assay-offices during the fiscal year, not including re-deposits, was \$113,556,512.22, and including re-deposits, \$122,717,303.12. Of the gold received at the mints and assay-offices during the year, \$32,406,306.59 was classified as of domestic production, against \$32,973,027.41 in the preceding year. A reduction of a little over \$500,000 in the production of the United States is thus indicated. The foreign gold bullion deposited aggregated \$21,741,042.44, and the foreign gold coin \$14,596,885.03; a total of \$36,337,927.47, against \$32,467,840.98 in the year preceding. The value of the United States light-weight gold coin deposited for re-coining, was \$492,512.60. Old material was deposited in the form of jewelry, bars, plate, etc., containing gold of the value of \$2,988,750.90.

Of the silver bullion deposited and purchased, 32,135,165.79 standard ounces, valued at \$37,393,648.34, was classified as of domestic production; and 29,671,470.54 standard ounces of the coining value of \$34,526,803.02, consisted of fine bars bearing the stamp of well known private refineries in the United States, but the classification at the mints of silver bullion is inexact, for the reason that fine silver bars purchased from private refineries are all necessarily classified as of domestic production, while as a matter of fact they are to a large extent composed, as for several years they have been, of silver obtained from ore and bullion imported from Mexico. The silver bullion classified as foreign bullion received at the mints during the year was \$1,668,384.25. Foreign silver coins of the value of \$87,336 were melted during the year. United States silver coins, consisting almost entirely of worn and uncurrent subsidiary coins and old silver dollars, were melted, of the value, at coining rate in

standard silver dollars, of \$494,155.64. In addition, trade-dollars were received and melted of the coining value in silver dollars of \$1,060,174.11 (911,087.13 standard ounces). Old material, consisting of plate, jewelry, etc., was deposited, containing silver of the value of \$627,316.32.

The coinage during the fiscal year 1888 consisted of 109,030,547 pieces, of the value of \$63,719,242.32. The gold consisted of 2,350,534 pieces, of the value of \$23,364,170.50, of which \$16,301,740 was in double-eagles; \$8,998,260 in eagles; \$2,995,510 in half-eagles; \$34,098 in three-dollar pieces; \$15,682.50 in quarter-eagles; and 18,880 gold dollars. The silver coinage consisted of \$32,717,673; \$2,836.50 in half-dollars; \$194,668.25 in quarter-dollars; and \$1,219,917.50 in dimes. The subsidiary coinage amounted to 12,983,521 pieces, of the value of \$1,417,422.25. The minor coinage consisted of 15,207,173 five-cent nickel pieces, of the nominal value of \$760,358.65; 45,573 three-cent nickel pieces, of the nominal value of \$1,367.19; and 45,725,073 one-cent bronze pieces, of the nominal value of \$457,250.73; the total minor coinage amounting to 60,977,819 pieces, of the nominal value of \$1,218,976.57. The coinage of the fiscal year exceeded in number of pieces even the large coinage executed the preceding year, being 109,030,547 pieces in 1888 against 98,122,517 in 1887.

UNITED STATES NAVY. Since 1881, when the United States Navy had fallen into a condition of material decay, a great and successful effort has been made to restore the fleet to the position it occupied prior to 1861, when its ships were in general the best of their classes in the world. The movement began with the appointment, by Secretary William H. Hunt, of the first advisory board, in 1881, to determine the composition of the fleet required by the necessities of national policy. This board was composed of able officers, presided over by Rear-Admiral John Rodgers. Its report commanded general attention, and is still quoted in debates relating to naval construction. It reported that the fleet should be composed of twenty-one armored vessels, seventy unarmored cruisers of different types, five rams, five torpedo-gunboats, and twenty torpedo-boats, and that steel should be the material of which they should be built. The adoption by Congress, at the instance of Secretary William E. Chandler, of the principle that obsolete ships should not be rebuilt or repaired when the expenditure exceeded 20 per cent. of the original cost, was an important step in preparing the way for reconstruction. During Secretary Chandler's administration the "Chicago," "Boston," "Atlanta," and "Dolphin" were built by John Roach, on designs furnished by the second advisory board. In 1885, at a critical time in our naval reconstruction, the Navy Department came under the administration of William C. Whitney. During his administra-

IRON-CLAD "PURITAN."

ARMORED CRUISER "MAINE."

tion the department has maintained an intimate relation with the mechanical industries and ingenuity of the country; its requirements for vessels, guns, armor, torpedoes, and the munitions of war have been of the highest standard, and every suitable encouragement has been given to all ship-builders, manufacturers, and inventors whose efforts promised success. In 1885, forgings for guns of more than 6-inch caliber, armor, steel shafting, rapid-fire and machine guns, torpedoes, and torpedo-boats, could be procured only from abroad. Before the end of the present year (1889) the domestic manufacture of guns of 8-inch, 10-inch, 12-inch, and 16-inch caliber, steel armor of the highest character and greatest thickness, steel shafting for engines of enormous power, rapid-fire and machine guns and ammunition, dynamite-guns, torpedoes, torpedo-boats, and submarine boats will be fully established. As a result of Secretary Whitney's policy, the United States will soon be absolutely independent of foreign aid for the production of every component part of the modern war-ship.

The modern war-ship represents the highest effort of mechanical skill and ingenuity, and has become a machine of the costliest production—high-power guns, armor, machinery of the greatest power, torpedoes, torpedo-boats, and electric lights, all find places in its construction, and the battle-ship of to-day is, under the most favorable conditions, from three to five years in building, while its cost is more than double that of its prototype of twenty years ago. The sentiment throughout the country seems to be decidedly in favor of building a fleet capable of efficiently aiding in the defense of our coasts, and of maintaining our rights and interests abroad. Such a fleet must be composed of a variety of vessels, armored and unarmored, and can be created only at considerable expense, and the appropriations must be continuous and liberal if the object is to be speedily and economically accomplished.

The development of the fleet by new constructions authorized since 1882 is shown in the tables on pages 790 and 791, indicating the principal characteristics of each vessel.

Notes to the Tables.—In all cases, unless noted, boilers and machinery are placed in water-tight compartments; the material of which the vessels are built is steel, except the monitors, which are built of iron; the armor is steel, and will be furnished by the Bethlehem Iron Company, except that for the "Miantonomoh," which is compound armor, purchased in England; the hulls are divided into numerous water-tight compartments, and the bottoms of the larger vessels are double. All are twin-screw vessels, so far as designed, except the "Boston," "Atlanta," "Dolphin," and "Petrel." Rapid-fire and machine guns, forming what is known as the secondary battery, are mounted about the upper and superstructure decks, and in military tops. The main and secondary batteries are placed so as to secure all-round fire. Trial speeds given are for vessels at load draught. Where two amounts are given in the column "Coal Capacity," the first is the normal supply; the second the total bunker capacity. Coal is placed about machin-

ery and boilers for additional protection against gunfire. Boilers are of the horizontal tubular type, single or double ended.

The "Puritan" is a low free-board, double-turreted monitor, built of iron; armored with a steel belt extending the entire length of the vessel; and carrying four 10-inch breech-loading guns in two armored turrets, besides an efficient secondary battery. The motive power is furnished by two direct-acting horizontal engines. The armor on the turrets is 11½ inches thick. The side armor is 12 inches thick amidships, reduced to 8 inches at the ends. The conning-tower is 12 inches thick.

The "Miantonomoh," "Terror," "Amphitrite," and "Monadnock" are of similar type, though smaller than the "Puritan," but carry the same battery. The machinery of this class, except the "Monadnock," is of the compound type. The machinery of the "Monadnock" is of the triple-expansion type, of recent design, and of much greater power than that of the other vessels of this class. The armor on the turrets of the "Terror," "Amphitrite," and "Monadnock" is 11½ inches thick, and on the sides the armor-belt varies in thickness from 7 inches amidships to 5 inches at the extremities. The conning-tower is 9 inches thick. The "Miantonomoh" is similarly protected by compound armor, purchased in England in 1884.

The "Maine" is an armored cruiser, designed by the Navy Department, building at the Brooklyn Navy-Yard. The material for her construction is on hand, the keel has been laid, and several of the frames placed. The 10-inch guns are mounted in pairs, in two turrets placed *en échelon* on upper deck; two 6-inch guns are mounted in recessed bow ports; two are similarly placed in quarter ports, and two are on the superstructure deck in broadside. The engines are of the vertical triple-expansion type. The protection of the "Maine" consists of an armor-belt 180 feet long and 11 inches thick; the two forward ends are joined by a 6-inch armored athwartship bulkhead. Above the belt and below turret, oval redoubts carrying 10-inch armor protect turret-bases, loading-tubes, machinery, etc.; the turret-armor varies from 10.5 inches to 11.5 inches in thickness. The conning-tower is 10 inches thick, and a 4.5-inch tube runs down from it to the protective deck. The armored deck is 2 inches thick, except on the slope at the after end of the belt, where it is 4 inches.

The "Texas" is an armored battle-ship building at the Norfolk Navy-Yard on designs by William John, of England, submitted in competition in reply to proposals issued by the Navy Department. The material for its construction is now being received. The 12-inch guns are mounted singly in turrets placed *en échelon* on the upper deck. Four 6-inch guns are mounted on the lower deck, and two on the upper deck, near the 12-inch guns. The engines, driving twin screws, are triple expansion. For defense, the vessel has a water-line belt of 12-inch steel armor in wake of magazines, engines, and boilers. The ends are connected by athwartship <->-shaped, 6-inch armored bulkheads. An armored redoubt runs diagonally across the vessel on the main deck, inclosing and protecting bases of turrets and their machinery; this, as well as the turret and conning-tower, carries 12-inch armor. The ammunition-tubes and the tube from conning-tower down to protective deck carry 6-inch and 3-inch armor, respectively. The protective deck, 3 inches thick, covers the armor-belt and curves down forward and abaft it to stem and stern.

The Coast-Defense Vessel No. 1 is a formidable low free board, barbette, twin-screw vessel. The main battery assigned consists of one 16-inch 110-ton breach-loader in forward barbette; one 12-inch in after barbette; one 15-inch pneumatic dynamite-gun in bow; and six 33-pounder rapid-fire guns mounted on the light superstructure that joins the barbettes. The protection consists of an armor-belt extending the entire length of the vessel, sixteen inches thick along vital parts, reduced to six inches at the extremi-

UNARMORED VESSELS (Continued).

Cruiser No. 6, protected cruiser, authorized Sept. 8, 1888, displacement 5,300, speed 20-21. Cruisers Nos. 7 and 8, protected cruisers, authorized Sept. 8, 1888, displacement 3,000, speed 19-20. Cruisers Nos. 9, 10, and 11, protected cruisers, authorized Sept. 8, 1888, displacement 2,000, speed 18. Practice-vessel, authorized Sept. 8, 1888, displacement 800. Cruisers Nos. 12 and 13, authorized March 1, 1889, displacement 800 to 1200. In these cruisers, rapid-fire guns of 4-inch caliber, about 33-pounder, will be largely used in the main battery.

Ram....	Not determined.	Mar., '89.

ties; a complete armored deck three inches thick over the magazines, boilers, and all machinery, and two inches at the extremities; armor on barbettes, sixteen and fourteen inches, and on conning-tower ten inches. The shields over the barbettes are three inches thick. The engines are of the most approved triple-expansion type. The designs were made in the Navy Department, in conformity with conditions prescribed by Secretary Whitney.

The designs for the armored cruiser of 7,500 tons displacement are in preparation in the Navy Department. The vessel will be an important and formidable addition to the fleet.

Coast-Defense Vessel No. 2 is a vessel of novel type, capable of being submerged on going into action, by means of water-ballast admitted, three feet beyond the ordinary cruising-line of flotation, for the purpose of diminishing the target exposed and increasing the protection to vital parts. Two 12-inch breech-loading guns are mounted in a turret, at a height of eleven feet above the fighting water-line, one 6-inch breech-loader on the deck near the stern, one 15-inch dynamite-gun in the bow. Two torpedo-tubes in the bow. The armor on the turret is ten inches thick, and on the curved upper deck three inches on the crown and five inches on the sides, which extend four feet below the fighting water-line. On top of this armored deck, and between the turret and the stern gun, is a light superstructure, which affords quarters and a convenient working-deck.

The "Dolphin" is a single-screw dispatch-vessel, carrying but a light battery. The engine is of the compound vertical type. The design of the "Dolphin" affords no protection to boilers and machinery.

The "Boston" and the "Atlanta" are central superstructure, single-deck, partially protected cruisers. They are unquestionably very efficient. The design is a modification of the "Esmeralda" type, of which examples are found in several navies. The steel protective deck, over engines and boilers only, is 1½ inch thick. The main battery is mounted as follows: The 8-inch guns, in barbettes on main deck, are placed *en échelon* forward and abaft the superstructure; the 6-inch guns and rapid-fire and heavier machine guns are mounted within the central superstructure. The engines are three-cylinder, compound, horizontal, back-acting, driving a single screw. The "Atlanta" during a six-hour trial developed a mean speed of 15.43 knots and an indicated horse-power of 3,356. The maximum speed was 16.83 knots. The "Boston" during a six-hour trial developed a mean speed of 13.8 knots with a mean indicated horse-power of 3,780; but at this time the bottom was very foul, and under favorable conditions her speed should be greater than that of the "Atlanta."

The "Chicago" is a double-deck, partially protected cruiser. The protective deck is of the same thickness and extent as in the "Boston" and the "Atlanta." The main battery is thus distributed: Four 8-inch guns are mounted in sponsons on the spar-deck, twenty-four feet above the water-line; the eight 6-inch and two 5-inch guns are mounted on the gun-deck. There are two sets of two-cylinder, compound, overhead-beam engines, and fourteen horizontal return-tubular boilers, fitted with exterior furnaces lined with fire-brick. These boilers and engines are altogether unique in war-ships. During a continuous six-hour trial the ship developed a mean speed of 15.3 knots and a mean indicated horse-power of 5,083. The maximum speed for one hour was 16.3 knots. The bottom was foul, and the fire-rooms were not closed for forcing the draught.

The "Charleston" is a protected cruiser of an improved Esmeralda type. The protective deck extends the entire length of the vessel, two inches thick on flat, and three inches on inclined parts. The battery is distributed as in the "Atlanta," except that the 8-inch guns are on the middle line of the ship. The engines are of the two-cylinder compound horizontal type.

The "Newark" is a protected cruiser, designed in the Navy Department to meet the requirements of the Naval Board. The protective deck is complete, two to two and a half inches thick on flat, and three inches on inclined parts. The conning-tower is three inches thick. The battery is mounted on the spar-deck. The engines are of horizontal triple-expansion type, designed by Cramp & Sons.

The "Yorktown," "Concord," and "Bennington," are poop-and-forecastle, partially protected cruisers; designs from same source as those of the "Newark." The protective deck is complete, but only three eighths inch thick. The conning-tower is two inches thick. Two 6-inch guns are mounted on the fore-castle, two on the poop, and two amidships on the main deck. The engines are of the horizontal triple-expansion type.

The "Petrel" is a single-screw, poop-and-fore-castle, partially protected cruiser or gun-vessel; designs of hull and machinery made in the Navy Department. The protective deck extends over the boilers and machinery only, and is but three eighths to five sixteenths inch thick. There are two guns on each side, mounted in sponsons about four feet above the main deck and ten feet above the water-line, just abaft the fore-castle and forward of the poop.

The "Baltimore" is a poop-and-forecastle protected cruiser. The protective deck is complete, two and a half inches thick on flat, and four inches on inclined sides. The 8-inch guns are mounted on fore-castle and poop, and the 6-inch guns on the spar-deck. The designs for the "Baltimore" and "Charleston" and their machinery were purchased of Sir William Armstrong & Co., of England.

The "San Francisco" is like the "Newark," with the following modifications: Rig, fore and aft, three masts; the 6-inch guns nearest the extremities are mounted on fore-castle and poop; the engines are horizontal triple-expansion, designed in the Navy Department.

The "Philadelphia" is like the "Baltimore," modified as follows: Rig and distribution of battery same as in the "San Francisco"; the engines of the same type, but designed by Cramp & Sons.

The "Vesuvius" is a vessel of altogether novel type, of high speed, armed with three 15-inch pneumatic dynamite-guns placed abreast at a fixed angle of 16°, the muzzles projecting through the deck about thirty-seven feet from the bow. Thirty full-caliber projectiles are carried. The engines are of the four-cylinder triple-expansion type. On trial, in January, 1889, she ran twice over a measured course of 2.54 knots at a mean speed of 21.64 knots, developing 4,366 indicated horse-power. (For remarks concerning guns, see the following sections.)

For the Cruisers No. 6, 7, 8, 9, 10, 11, 13, 14, the designs are not yet completed. The table indicates the general character for each class.

Guns and Armor.—In 1885 the armament of United States war-ships consisted of smooth-bore guns, principally of 9-inch caliber, supplemented by a few converted 8-inch muzzle-loading rifles and converted 80 and 60 pounder breech-loading rifles. The 8-inch converted muzzle-loading rifles were 11-inch cast-iron, smooth-bore Dahlgrens, converted into rifles by the introduction of a wrought-iron tube (which was afterward rifled) into the cast-iron body, the latter being expanded by heat sufficiently to permit the tough wrought-iron tube to be pushed into place. On cooling, the cast-iron body held the tube securely in place. The 100-pounder and 60-pounder Parrotts were converted into 80 and 60-pounder breech-loaders in a similar manner by the introduction into the bore of a steel tube extending from

"CHARLESTON."

"BALTIMORE."

TWELVE-INCH BREECH-LOADING GUN.

the breech forward as far as the trunnions; the breech-closure used was of the present type. These converted guns were but make-shifts. It was impossible at that time to obtain forgings in this country

for built-up steel breech-loading guns of high power and approved type heavier than 6-inch caliber. The Midvale Steel Works, at Nicetown, Pa., had undertaken the manufacture of forgings for guns of 3-inch, 5-inch, and 6-inch caliber, and had turned out excellent material for these smaller guns. The Cambria Iron-Works, at Johnstown, Pa., also had made the smaller forgings. But the resources of the country for the production of gun-material in 1885 did not extend farther, and no manufacturers found it expedient to erect a suitable plant for the production of heavier forgings without the promise of such an order as would warrant the great outlay. The 8-inch guns for the "Chicago," "Boston," and "Atlanta," and the 10-inch guns for the "Miantonomoh," were built of forgings purchased in England. These guns were assembled (machined and put together) at the Washington Navy-Yard, at the South Boston Iron-Works, and at the West Point Foundry.

In 1883 the Gun-Foundry Board—Rear-Admiral Simpson, president—under the authority of Congress, visited the principal steel and gun establishments at home and abroad, for the purpose of determining the best methods for the manufacture of heavy ordnance adapted to modern warfare, and in 1884 recommended that steel forgings and material for guns be supplied by private industry, while

the Government should maintain gun-factories in which the material delivered by steel-works should be machined and assembled. The sites chosen for these Government factories were the Washington Navy-Yard for the naval gun-factory, and the Watervliet Arsenal (Troy, N. Y.) for the army. The report also urged an appropriation of \$15,000,000 for forgings, and \$2,000,000 for the plant of the two factories.

Up to this time the question of producing armor of domestic manufacture had received little consideration. In May, 1885, the Board on Fortifications, composed of civilians and officers of the army and navy, was convened, and in January, 1886, renewed the recommendations of the Gun-Foundry Board, and suggested steel as the preferable material for armor-plates. These suggestions and recommendations were also supported by Senator Hawley's select committee in February, 1886. Steel armor and gun-forgings are most economically produced if manufactured in a single establishment, much of the plant for the production of each being common to both, but the creation of such a plant involves an expenditure of about \$3,000,000. In order to make the creation of such an establishment practicable, Secretary Whitney secured, in August, 1886, an appropriation of \$4,000,000 for armor, and \$2,128,000 for guns for the vessels authorized, and immediately invited proposals for the supply of 6,700 tons of steel armor, and 1,220 tons of gun-forgings. In May, 1887, the contract for this was awarded to the Bethlehem Iron Company. The terms of the contract required the company to establish its plant within two and a half years, and begin the delivery of gun-forgings and armor-plates by February, 1890. The contract price of 1,221 tons of gun-forgings was \$851,513, and of 6,700 tons of steel armor-plates, \$3,610,707. The gun-plant is now in working order and producing forgings, and the armor-plates will be forthcoming within the year. When completed, the Bethlehem will be the finest establishment of its kind in the world; its plant includes Whitworth's liquid compression for making ingots; two hydraulic forging-presses, capable of forging the parts of guns up to 16-inch caliber; the heaviest steam-hammer in the world; and tools of the most approved type for machining armor-plates and rough-boring and turning gun-forgings.

The naval gun-factory has been in process of reconstruction since 1887; buildings have been erected, and contracts have been made for the supply of the necessary tools, cranes, etc. Since 1884 the old establishment has turned out two 5-inch, twenty-two 6-inch, four 8-inch, and three 10-inch guns. The yearly capacity of the enlarged factory will in another year be twenty-five 6-inch, four 8-inch, six 10-inch, and four 12-inch guns.

The high-power guns of all nations at the present day are of steel. In all the principle of initial tension is employed, which consists

in giving the exterior portion of the gun a certain initial tension, gradually decreasing toward the interior, and giving to the interior parts a certain normal state of compression by the shrinkage of the outer jacket and hoops. The tube or body of the gun is a single forging, extending almost the entire length of the gun. Over the rear portion of the tube is shrunk a jacket extending about two fifths of the length, and over the remainder of the tube and over the jacket is shrunk a series of hoops, all the parts being locked together so as to form an extremely strong structure. The breech-closure screws into the jacket. The tube and jackets are made from solid steel ingots, forged, tempered in oil, annealed, and bored and machined to the required dimensions. The hoops are forged upon a mandrel, and subsequently treated in the same manner as other forgings. To shrink the jacket on the tube, the latter is placed vertically in a pit, breech end up, and after heating the jacket to a temperature sufficient to expand its interior diameter to the required amount, it is lifted by a crane and dropped over the tube. The hoops are then shrunk on, and finally the trunnion-band is screwed on in place, which also assists in locking the parts together. The gun is then ready to be rifled, and afterward to have the breech-closure and sights fitted. The following are the requirements for material for 6-inch and 8-inch guns:

ELEMENTS.	Tubes.	Jackets.	Hoops.	Remarks.
Tensile strength...lbs.	80,000	85,000	100,000	Test-pieces
Elastic limit....."	38,000	40,000	50,000	2 inches
Elongation...per cent.	22	20	18	long, $\frac{1}{4}$ inch
Contraction of area.."	85	80	80	diameter.

The powder-pressure is usually about 15 tons to the square inch, but the guns may be safely fired under a pressure of 22 tons.

Recently manufacturers of steel have claimed that solid steel-cast guns are preferable to the built-up gun before described. In order to test the claims of these, Congress authorized the construction of three steel-cast guns—the first to be made of Bessemer, the second of open-hearth, and the third of crucible steel. Proposals were received from two firms—the Pittsburg Steel-Casting Company for the Bessemer gun, and the Standard Steel-Casting Company, of Thurlow, Pa., for the open-hearth gun. No proposals were received for the gun of crucible steel. The Pittsburg gun exploded on firing the first round under service conditions; the Thurlow gun successfully underwent the trial of ten service-rounds, fired as rapidly as possible. The test of material for the Pittsburg guns showed very poor characteristics; that of the Thurlow gun very fair characteristics. But a comparison of the weights of the steel-cast gun and the built-up gun shows their relative weight to be 13,000 to 11,000 pounds. No nation has yet adopted the steel-cast gun for the armament of vessels or forts, the material be-

ing considered too uncertain, and the increased weight objectionable.

Gunpowder.—In the improvement of gunpowder probably lies the principal field of development of gun-power. Great improvements have already been made, and study and experiment are being devoted to this question. The initial velocities of projectiles in 1870 ranged between 1,100 feet and 1,300 feet a second, while at present initial velocities of guns in service rise to 2,000 and 2,100 feet with a pressure of but 15 tons to the square inch, and powders recently fired in Germany and France have again raised this velocity to 2,400 and even 2,600 feet with the moderate pressure of 15 to 16 tons. Much attention is being directed to the production of a powder that shall give a high initial velocity with low pressure, and yet be comparatively smokeless. By the employment of gun-cotton and picric powders, much has been accomplished in Europe in this direction. But the new powders are less stable than the old, and doubtless deteriorate under influences of heat or moisture. The powders for United States naval guns (and each caliber has a powder whose exact quality is peculiar to itself) have been developed and manufactured by the Messrs. Dupont, near Wilmington, Del.

Projectiles.—Ordinary shells are still made of cast-iron, but armor-piercing projectiles are made of steel, forged and highly tempered. The manufacture of armor-piercing projectiles has been developed chiefly in France, and has introduced another important element in the relation between the resistance of armor and the capacity of the gun for penetration. So perfect is the manufacture of these projectiles that, when fired under service conditions, they perforate the best armor-plate of a thickness 30 per cent. greater than the caliber of the projectile, and remain practically undeformed. The bursting-charge even in ordinary shells is comparatively small—for 6-inch, 5 to 10 pounds; for the 16-inch (weighing 1,800 pounds), 179 pounds. This has given rise to a further development of the destructiveness of shell-fire by introducing high-explosive shells, whose bursting-charges are dynamite, explosive gelatine, gun-cotton, or melinite. Shells loaded with 500 pounds of dynamite and explosive gelatine are safely fired from the Zalinski dynamite-gun. Gun-cotton is used as a bursting-charge in Germany, while the French use melinite as a burster for shells fired from service-guns under service conditions. High-explosive shells, however, are quickly detonated if the surface hit offers fair resistance, and for this reason armor is coming much more into vogue and is being more distributed over the sides of vessels than has recently been the practice. Four inches of armor are said to be sufficient to cause the detonation of high-explosive shells. The ordinary side-plating of ships is not sufficient to detonate these, and the destructive effects of their explosion within a ship are appalling.

Rapid-Fire Guns.—Rapid-fire guns and revolving cannon have hitherto been procurable only from abroad, the principal type—that of the American inventor and manufacturer Hotchkiss—being made in Europe. In 1887 the Navy Department contracted with the Hotchkiss Ordnance Company for the supply of ninety-four rapid-fire guns and revolving cannon of domestic manufacture, at a cost of \$121,400, to include thirty 6-pounder rapid-fire guns, twenty-two 3-pounder rapid-fire guns, ten 1-pounder rapid-fire guns, thirty-two 37-millimetre revolving cannon. The material for these guns has been supplied by the Midvale Steel Company; the guns are made by Pratt & Whitney, Hartford, Conn.; and the ammunition by the Winchester Arms Company.

A new type of rapid-fire gun, the invention of two naval officers, known as the Driggs-Schröder gun, has been designed and manufactured in this country. It has been tried and favorably reported upon:

Rapid-fire guns are light guns using metallic ammunition, in which the operation of loading is performed wholly or in part by hand, although the empty cartridge is mechanically extracted, and the gun recovers automatically from recoil, if any is permitted. Aiming is done from the shoulder, and the guns, up to 6-pounder caliber, may fire about fifteen aimed shots in a minute. The largest gun of this type adopted for service is the 36-pounder (4.72 inches caliber), which in England has fired ten carefully aimed shots in a minute and thirty-eight seconds; its penetration in wrought-iron is seven inches. In machine-guns the operation of feeding, loading, and extracting the metallic ammunition are successively performed by a continuous action of the breech mechanism; no recoil is permitted. The rapidity of fire is great—60 rounds from Hotchkiss revolving cannon and up to 1,000 rounds from the Gatling gun.

Dynamite-Gun.—The dynamite-gun is the invention of Mr. Mefford, of Ohio, developed and made practicable by Capt. Edmund L. G. Zalinski, of the United States Army, and produced as a marketable weapon by the Pneumatic Gun Company, of New York. The original gun of this system was of 2-inch caliber (see "Annual Cyclopædia" for 1884, page 273). After experimenting with other guns of 4 and 8 inch caliber, the Pneumatic Gun Company has produced 15-inch guns for the "Vesuvius." These are 55 feet long, placed at a fixed angle of 16°, and throw projectiles containing from 500 to 600 pounds of explosive gelatine and dynamite one mile, or sub-caliber projectiles containing 100 or 200 pounds of explosive up to 4,000 yards. The projectiles are discharged by compressed air, at a pressure of about 1,000 pounds, which gives an initial velocity of about 800 feet a second. The trajectory is of course very much curved. The most valuable feature of the system is the electric fuse, which is entirely the invention of Capt. Zalinski, so constructed that the projectile may be exploded upon entering the water or by delayed action explode at any desired depth beneath the surface. The dynamite-gun is not intended to replace the service powder-guns; it is really a torpedo-gun affording a safe means of throwing shells, which are virtually torpedoes charged with a large amount of the highest explosives, through the air to a considerable range and with accuracy. If the chances of dropping its projectile at the desired spot are only fair, this, when successfully placed, will secure results that no other single projectile or torpedo can produce—the probable destruction of any vessel yet built.

Torpedoes.—There are no automobile torpedoes in the United States service. We here occupy an entirely unique position, and have been far in the rear in this, as in many other respects, of Brazil, Chili, Japan, and China. But contracts have been made with the Hotchkiss Ordnance Company to supply the Howell torpedo. This torpedo, the invention of Capt. J. A. Howell, of the United States Navy, is thought to be superior in most respects to the celebrated Whitehead. Its advantages over the Whitehead are comparative smallness, inherent directive force derived from the gyroscopic properties of its fly-wheel, and large explosive capacity. Its disadvantage lies in the fact that it requires an appreciable time to prepare it for discharge. Power is stored in a heavy fly-wheel, in the middle of the torpedo, which, in about thirty seconds, is spun up to a velocity of 10,000 turns a minute by means of a motor. This fly-wheel imparts its power to two propellers, which drive the torpedo. The submersion is automatically controlled by a horizontal rudder, actuated by a hydro-pneumatic cylinder, the piston of which moves with the varying pressures at different depths.

The contractors will furnish a torpedo whose size and performance are guaranteed to be within the following prescribed limits:

NO 1.—COAST DEFENCE.

"VESUVIUS."

"YORKTOWN."

"NEWARK."

Length.	Diam-eter.	Total weight.	Least weight of explosive charge.	Least speed for 400 yards	Total range.
12 ft.	14.2 in.	453 lbs.	80 lbs.	22½ knots.	1,000 yds
9 ft. 6 in.	14.2 in.	428 lbs.	75 lbs.	22½ knots.	800 yds

The Patrick torpedo, of the controllable type, is made of copper, fusiform, 40 feet long and 24 inches in greatest diameter. It is held at a depth of nearly 4 feet by means of a float 46 feet long and 18 inches in diameter, filled with cotton or lamp-black. The motive power is carbonic-acid gas, contained in liquid form in a flask near the center of the torpedo. From the flask the gas passes through pipes about which an intense heat is obtained by the action of sulphuric acid on quick-lime. The gas thus expanded passes to a six-cylinder engine, which drives the propeller. The range is one mile, and the explosive charge carried 200 pounds. The torpedo is controlled by an electric cable paid out as it runs. It has been tried by a naval board, and upon its report three torpedoes have been ordered by the Navy Department, at a cost of \$55,000. The contractor guarantees a speed of 20 knots. This torpedo is intended for harbor-defense, and is operated from the shore or from a stationary vessel. Undoubtedly it is the best of the controllable type. The French Navy Department has purchased it for coast-defense.

Torpedo-Boats.—The United States occupies a most singular position in regard to torpedo-boats. All nations agree that these are most efficient for coast and harbor defense, and all possess them in large numbers. England has 145; France, 131; Germany, 75; Italy, 120; Spain, 13; Brazil, 15; Chili, 10; Japan, 12; China, 26; the United States, 2.

The "Stiletto" is the single torpedo-boat (unworthy of the title) yet possessed by the United States, although a new first-class boat is being built by Messrs. Herreshoff, at Bristol, R. I. This boat will compare favorably, it is thought, with those built abroad (see table of ships for description). The Fortification Board placed the number of torpedo-boats at 150.

Submarine Boat.—The latest device in naval warfare is the submarine boat, intended to dive beneath the surface, to be there manœuvred and discharge torpedoes. Submarine boats have been used in naval warfare since 1776, but with unsatisfactory results. Recently they have again come into notice in Europe, and several have been built there. In 1888, the Navy Department published a circular containing its views of the requirements for a submarine boat, and invited proposals for the construction of such a boat under guarantees. After considerable delay in finding any one to undertake this, bids were received in February, 1889, from the Columbia Iron-Works, of Baltimore, in which a very good performance is guaranteed. The dimensions of the boat are: Length, 85 feet; greatest diameter, 10.9 feet; displacement, submerged, 120 tons, with com-

partments empty, 98 tons. The hull is to be of steel; the engine, triple-expansion, driving a single screw; the fuel, petroleum. Diving is to be effected by horizontal rudders. The greatest surface-speed guaranteed is 12 knots, and the speed submerged, 9 knots. The boat is cigar-shaped, and is capable of being operated under three different conditions; first, above the surface, with nearly half of the boat above water; second, awash, with only a few inches of the upper deck exposed; third, completely submerged. The armament consists of a tube placed in a horizontal axis, from which are discharged, either by pneumatic power or powder, 8-inch projectiles, giving a range of several hundred feet, or, if desired, some form of automobile torpedo may be used. In addition to this, there is another 8-inch tube fixed at an angle for over-water fire to a range of about 1,000 yards. The contract for the boat has not yet been awarded.

Personnel.—The *personnel* of the United States Navy consists of 7,500 enlisted men, 750 apprentices, and the following officers: Admiral, 1; vice-admiral, 1; rear-admirals, 6; commodores, 10; captains, 45; commanders, 85; lieutenant-commanders, 74; lieutenants, 250; lieutenants (J. G.), 75; ensigns, 181; medical directors, 15; medical inspectors, 15; surgeons, 50; passed assistant surgeons, 55; assistant surgeons, 23; constructors, 7; assistant constructors, 14; professors of mathematics, 12; civil engineers, 10; pay-directors, 13; pay-inspectors, 13; paymasters, 43; passed assistant paymasters, 23; assistant paymasters, 14; chief engineers, 70; passed assistant engineers, 78; assistant engineers, 68.

Besides these, there are allowed one naval cadet for each congressional district, and ten at large. The course for naval cadets is four years at the Naval Academy, Annapolis, and two years in cruising-ships. At the end of the six years a number of cadets pass into the service, equal to the number of vacancies in the line, engineer and marine corps; usually from 20 to 25, never fewer than 10. The marine corps is composed of 82 officers and about 1,900 enlisted men, under regimental organization, a colonel-commandant commanding. The number of enlisted men and apprentices allowed in the navy is too small, in view of the fact that the fleet is being rapidly increased.

Not more than 50 per cent. of the enlisted men are native or naturalized Americans, and the present small number of apprentices, who are American boys, is not sufficient to give the desired tone to ships' companies. The officers, as a body, are highly educated, well trained, and efficient; but slowness of promotion, by keeping them in subordinate grades to an advanced age, threatens seriously to impair their efficiency. Promotion in the navy is altogether by seniority. The system presents few advantages and affords no incentive to energetic effort and no reward for hard work or distinguished service.

UNITED STATES, PRESIDENTIAL ELECTIONS IN. The following tables, referring to presidential contests, include every county in each State of the Union, and reveal the political history of all sections during the past twenty years. Results are shown from 1872 to the election of 1888, the year in which each contest took place being indicated at the top of the column. The figures opposite each county represent the total vote and the plurality, and the capital letter R or D denotes whether the county plurality was Republican or Democratic. By this arrangement not only can the political history of every county be ascertained without difficulty, but increases and decreases can be readily observed and easily noted. Those interested in the political affairs of each State can ascertain, by running the eye down the columns or across the lines, how many counties were carried at each election during the past twenty years by each of the great political parties, and also how many counties have recorded an unwavering allegiance to one party or the other:

Summary.—The increase in the popular vote since 1872 is 4,921,873. The total vote cast in 1872 was 6,466,165; in 1888, 11,388,038. The increase in the electoral vote since 1872 is 35. Electoral vote in 1872, 366; in 1888, 401. The Republican party carried the States by a majority of 25 States in 1872, 4 States in 1876, a tie (of 19 States each), with majority of the popular vote, in 1880, and 2 States in 1888. The Democratic party carried the States by a majority of

2 States in 1884. The Republican party obtained a plurality of the popular vote as follows: 1872, 762,991; 1880, 7,018. The Democratic party obtained a plurality of the popular vote as follows: 1876, 250,935; 1884, 62,683; 1888, 100,476.

One new State (Colorado) has been admitted to the Union since 1872; 91 counties voted for the first time in 1876; 65 counties voted for the first time in 1880; 47 counties voted for the first time in 1884; 69 counties voted for the first time in 1888; 230 counties "changed sides" in 1888, placing a Republican plurality on record, against a Democratic plurality in 1884, or *vice versa*.

Alabama.—There has been an increase of 4,384 in the popular vote since 1872; the total vote in that year being 169,716, and, in 1888, 174,100. In the interval there was a falling off of nearly 20,000, the vote in 1880 being only 151,507, and 153,489 in 1884. The Republican party carried the State by a plurality of 10,828 in 1872. Since that time the record shows Democratic pluralities—1876, 33,772; 1880, 34,509; 1884, 33,829; 1888, 61,123. Three new counties have been formed, according to the returns, since 1872. There is no record of Baker County after 1872, nor of Sanford County after 1876. Five counties changed sides in 1888.

Arkansas.—The increase in the popular vote since 1872 is 76,668. Total vote in 1872, 79,300; in 1888, 155,968. The Republican party carried the State by a plurality of 3,446 in 1872. Since that time the record shows Democratic pluralities—1876, 19,113; 1880, 18,828; 1884, 22,032; 1888, 27,210. Eighteen new counties have been formed since 1872. Eight counties changed sides in 1888.

California.—The increase in the popular vote since 1872 is 155,533. Total vote cast in 1872, 95,806; in 1888, 251,339. The Republican party carried the State in every election except that of 1880, when the Democratic nominee received a plurality of 78. Eleven new counties have been formed since 1872. Seven counties changed sides in 1888.

Colorado.—The increase in the popular vote since 1880 is 38,266. Total vote in 1880, 53,532; in 1888, 91,798. The Republican party carried the State at every election—in 1880, plurality 2,803; 1884, 8,563; 1888, 13,207. Eleven new counties have been formed since 1880. Three counties changed sides in 1888.

Connecticut.—The increase in the popular vote since 1872 is 57,050. Total vote in 1872, 96,928; in 1888, 153,978. The Republican party carried the State by a plurality of 4,348 in 1872, and 2,656 in 1880; the Democratic party by a plurality of 1,712 in 1876; 1,284 in 1884, and 336 in 1888. Two counties changed sides in 1888.

Delaware.—The increase in the popular vote since 1872 is 7,979. Total vote in 1872, 21,808; in 1888, 29,787. The Republican party carried the State by a plurality of 422 in 1872. Since that time the Democratic pluralities have been—1876, 2,629; 1880, 1,033; 1884, 3,923; 1888, 3,441. One county changed sides in 1888.

Florida.—The increase in the popular vote since 1872 is 33,451. Total vote in 1872, 33,190; in 1888, 66,641. The Republican party carried the State by a plurality of 2,336 in 1872, and 926 in 1876. Since that time the Democratic pluralities have been—1880, 4,310; 1884, 3,738; 1888, 12,904. Six new counties have been formed since 1872. Eight counties changed sides in 1888.

Georgia.—A notable increase in the popular vote has been recorded twice since 1872, i. e., in 1876, when the total vote was 180,534 (increase over that of 1872, 37,628), and in 1880, when the total was 155,651 (increase over that of 1872, 12,745). The record for 1884 gives 143,543 (decrease since 1880, 12,108), and the figures given for 1888 show 142,939 (decrease since 1884, 604). The Democratic party carried the State at every election, the plurality being—in 1872, 9,806; 1876, 79,642; 1880, 49,874; 1884, 46,961; 1888, 60,003. One new county has been formed since 1872. Six counties changed sides in 1888.

Illinois.—The increase in the popular vote since 1872 is 317,746. Total vote in 1872, 429,940; in 1888, 747,686. The Republican party carried the State at every election, the pluralities being—in 1872, 53,948; 1876, 1,971; 1880, 40,716; 1884, 24,827; 1888, 22,195. Eight counties changed sides in 1888.

Indiana.—The increase in the popular vote since 1872 is 185,753. Total vote in 1872, 351,196; in 1888, 536,949. The Republican party carried the State by a plurality of 21,098 in 1872; 6,636 in 1880; and 2,348 in 1888. The Democratic party had a plurality of 5,505 in 1876, and 6,512 in 1884. One new county has been formed since 1872. Thirteen counties changed sides in 1888.

Iowa.—The increase in the popular vote since 1872 is 199,157. Total vote in 1872, 204,963; in 1888, 404,140. The Republican party carried the State at every election, the pluralities being—in 1872, 58,149; 1876, 50,191; 1880, 78,059; 1884, 19,773; 1888, 31,711. Eight counties changed sides in 1888.

Kansas.—The increase in the popular vote since 1872 is 230,558. Total vote in 1872, 100,614; in 1888, 331,172. The Republican party carried the State at every election, the pluralities being—in 1872, 33,482; 1876, 32,511; 1880, 61,731; 1884, 64,274; 1888, 79,190. Forty-four counties have been formed since 1872. One county changed sides in 1888.

Kentucky.—The increase in the popular vote since 1872 is 153,646. Total vote in 1872, 191,135; in 1888, 344,781. The Democratic party carried the State at every election, the pluralities being—in 1872, 8,855; 1876, 59,772; 1880, 43,449; 1884, 34,839; 1888, 28,666. Three new counties have been formed since 1872. Sixteen counties changed sides in 1888. There is no record of a vote in Josh Bell County in 1888.

Louisiana.—An increase of importance in the popular vote has only been recorded once since 1872, i. e., in 1876, when the record showed 145,643 (increase over that of 1872, 16,951). The vote of 1880 was 97,201 (decrease from that of 1876, 48,442), and that of 1884 was 109,234. The vote of 1888 was 115,744, an increase of 6,510 over that of 1884, but a decrease of 12,948 as compared with 1872. The Republican party carried the State by a plurality of 14,634 in 1872, and 4,627 in 1876. Since that time the Democratic pluralities have been—in 1880, 27,316; 1884, 16,199; 1888, 54,548. Eight counties have been formed since 1872. Twelve counties changed sides in 1888.

Maine.—The increase in the popular vote since 1872 is 37,741. Total vote in 1872, 90,509; in 1888, 128,250. The Republican party carried the State at every election, the pluralities being—in 1872, 32,335; 1876, 15,814; 1880, 8,868; 1884, 20,060; 1888, 23,253. Every county has recorded a Republican plurality since 1872.

Maryland.—The increase in the popular vote since 1872 is 76,455. Total vote in 1872, 134,466; in 1888, 210,921. The Democratic party carried the State at every election, the pluralities being—in 1872, 908; 1876, 19,756; 1880, 15,191; 1884, 11,118; 1888, 6,182. One new county has been formed since 1872. Three counties changed sides in 1888.

Massachusetts.—The increase in the popular vote since 1872 is 151,716. Total vote in 1872, 192,732; in 1888, 344,448. The Republican party carried the State at every election, the pluralities being—in 1872, 74,212; 1876, 40,423; 1880, 53,215; 1884, 24,372; 1888, 32,037. With one exception (Suffolk County, 1876-'88), every county has recorded a Republican plurality since 1872.

Michigan.—The increase in the popular vote since 1872 is 254,371. Total vote in 1872, 220,942; in 1888, 475,313. The Republican party carried the State at every election, the pluralities being—in 1872, 55,968; 1876, 15,542; 1880, 53,890; 1884, 3,308; 1888, 22,911. Fourteen counties have been formed since 1872. Nineteen counties changed sides in 1888.

Minnesota.—The increase in the popular vote since 1872 is 173,766. Total vote in 1872, 89,540; in 1888, 263,306. The Republican party carried the State at

every election, the pluralities being—in 1872, 20,694; 1876, 21,780; 1880, 40,588; 1884, 41,620; 1888, 38,106. Seventeen new counties have been formed in Minnesota since 1872. Three counties changed sides in 1888.

Mississippi.—The decrease in the popular vote since 1872 is 13,656. There was a conspicuous increase in 1876, when the total vote was 164,778 (increase over 1872, 35,315). The vote in 1880 (117,078) and in 1884 (120,019), compared with that of 1888 (115,807), shows a considerable decrease. The Republican party carried the State by a plurality of 34,887 in 1872. Since that time the Democratic pluralities have been—in 1876, 59,568; 1880, 40,896; 1884, 33,001; 1888, 55,375. Five new counties have been formed since 1872. Five counties changed sides in 1888.

Missouri.—The increase in the popular vote since 1872 is 250,143. Total vote in 1872, 273,050; in 1888, 523,198. The Democratic party carried the State at every election, the pluralities being—in 1872, 29,809; 1876, 54,389; 1880, 55,042; 1884, 33,059; 1888, 25,717. Four new counties have been formed since 1872. Ten counties changed sides in 1888.

Nebraska.—The increase in the popular vote since 1872 is 176,481. Total vote in 1872, 26,141; in 1888, 202,622. The Republican party carried the State at every election, the pluralities being—in 1872, 10,517; 1876, 10,326; 1880, 26,456; 1884, 22,512; 1888, 27,873. Thirty-two counties have been formed since 1872. Six counties changed sides in 1888.

Nevada.—The decrease in the popular vote since 1872 is 2,017. Total vote in 1872, 14,649. There was an increase in 1876, when the total vote was 19,691; but the total fell to 18,343 in 1880, again, to 12,797 in 1884, and again to 12,632 in 1888. The Republican party carried the State at every election except that of 1880, its pluralities being—in 1872, 2,177; 1876, 1,075; 1884, 1,615; 1888, 1,867. The Democratic plurality was 879 in 1880. One county has been formed since 1872. One county changed sides in 1888.

New Hampshire.—The increase in the popular vote since 1872 is 21,941. Total vote in 1872, 68,892; in 1888, 90,833. The Republican party carried the State at every election, the pluralities being—in 1872, 5,444; 1876, 2,954; 1880, 4,058; 1884, 4,063; 1888, 2,272. Three counties changed sides in 1888.

New Jersey.—The increase in the popular vote since 1872 is 134,999. Total vote in 1872, 168,742; in 1888, 303,741. The Republican party carried the State by a plurality of 14,570 in 1872. Since that time the Democratic pluralities have been—in 1876, 11,690; 1880, 2,010; 1884, 4,412; 1888, 7,149.

New York.—The increase in the popular vote since 1872 is 490,437. Total vote in 1872, 829,672; in 1888, 1,320,109. The Republican party carried the State by a plurality of 51,800 in 1872, 21,033 in 1880, and 13,002 in 1888. The Democratic party carried the State by a plurality of 26,568 in 1876, and 1,047 in 1884. Seven counties changed sides in 1888.

North Carolina.—The increase in the popular vote since 1872 is 120,610. Total vote in 1872, 164,863; in 1888, 285,473. The Republican party carried the State by a plurality of 24,675 in 1872. Since that time the Democratic pluralities have been—in 1876, 17,010; 1880, 8,326; 1884, 17,884; 1888, 13,118. Four new counties have been formed since 1872. Sixteen counties changed sides in 1888.

Ohio.—The increase in the popular vote since 1872 is 312,505. Total vote in 1872, 529,436; in 1888, 841,941. The Republican party carried the State at every election, the pluralities being—in 1872, 34,268; 1876, 2,747; 1880, 34,227; 1884, 31,796; 1888, 19,599. Four counties changed sides in 1888.

Oregon.—The increase in the popular vote since 1872 is 41,790. Total vote in 1872, 20,121; in 1888, 61,911. The Republican party carried the State at every election, the pluralities being—in 1872, 3,517; 1876, 547; 1880, 671; 1884, 2,256; 1888, 6,769. Seven new counties have been formed since 1872. Four counties changed sides in 1888.

Pennsylvania.—The increase in the popular vote since 1872 is 434,308. Total vote in 1872, 563,260; in 1888, 997,568. The Republican party carried the State at every election, the pluralities being—in 1872, 135,918; 1876, 17,964; 1880, 37,276; 1884, 81,019; 1888, 79,452. One new county has been formed since 1872. Seven counties changed sides in 1888.

Rhode Island.—The increase in the popular vote since 1872 is 21,772. Total vote in 1872, 18,994; in 1888, 40,766. The Republican party carried the State at every election, the pluralities being—in 1872, 8,336; 1876, 5,075; 1880, 7,410; 1884, 6,439; 1888, 4,438.

South Carolina.—The decrease in the popular vote since 1872 is 15,619. In 1876 the total vote was 182,776 (increase over that of 1872, 87,596). This total was reduced to 91,578 in 1884, and a great falling off was again apparent in 1888, the total for that year being only 79,561 (decrease, compared with the vote of 1884, 12,017). The Republican party carried the State by a plurality of 49,400 in 1872, and 964 in 1876. Since that time, the Democratic pluralities have been—in 1880, 54,241; 1884, 48,031; 1888, 52,089. Two new counties have been formed since 1872. Two counties changed sides in 1888.

Tennessee.—The increase in the popular vote since 1872 is 123,690. Total vote in 1872, 180,046; in 1888, 303,736. The Democratic party carried the State at every election, the pluralities being—in 1872, 8,736; 1876, 43,600; 1880, 20,514; 1884, 9,180; 1888, 19,791. Four new counties have been formed since 1872. Four counties changed sides in 1888.

Texas.—The increase in the popular vote since 1872 is 241,108. Total vote in 1872, 116,405; in 1888, 357,513. The Democratic party carried the State at every election, the pluralities being—in 1872, 16,595; 1876, 59,955; 1880, 98,333; 1884, 131,978; 1888, 146,461. Thirty-three counties have been formed since 1872. Nine counties changed sides in 1888.

Vermont.—The increase in the popular vote since 1872 is 10,439. Total vote in 1872, 53,001; in 1888, 63,440. The Republican party carried the State at every election, the pluralities being—in 1872, 29,961; 1876, 23,838; 1880, 26,909; 1884, 22,183; 1888, 28,404.

Virginia.—The increase in the popular vote since 1872 is 118,929. Total vote in 1872, 185,164; in 1888, 304,093. The Republican party carried the State by a plurality of 1,772 in 1872. Since that time the Democratic pluralities have been—in 1876, 44,112; 1880, 43,956; 1884, 6,141; 1888, 1,539. Six new counties have been formed since 1872. Fifteen counties changed sides in 1888.

West Virginia.—The increase in the popular vote since 1872 is 96,822. Total vote in 1872, 62,366; in 1888, 159,188. The Republican party carried the State by a plurality of 2,264 in 1872. Since that time the Democratic pluralities have been—in 1876, 12,384; 1880, 11,148; 1884, 4,221; 1888, 1,873. Two new counties have been formed since 1872. Seven counties changed sides in 1888.

Wisconsin.—The increase in the popular vote since 1872 is 162,306. Total vote in 1872, 192,308; in 1888, 354,614. The Republican party carried the State at every election, the pluralities being—in 1872, 17,686; 1876, 5,205; 1880, 29,763; 1884, 14,698; 1888, 21,321. Ten counties have been formed since 1872. Seven counties changed sides in 1888.

UNIVERSALISTS. The "Universalist Register" for 1889 gives statistics of this denomination of which the following is a summary: Number of parishes, 971; of families, 41,474; of preachers, 711; of churches, 721; of members, 38,780; of Sunday-schools, 657, with 53,205 members; of church edifices, 816; value of church property, \$7,915,756. The figures show an apparent loss from the previous year of 17 parishes, 9 church organizations, and 1,431 members of Sunday-schools. The loss

is partly accounted for by the dropping from the roll, by order of one of the State conventions, of 28 parishes which had long been inactive. Gains appear of 2,136 families, 973 communicants, 20 church edifices, and \$324,206 in valuation of church property. The twelve schools—four colleges and universities, three theological schools and departments, and five academical institutions—returned 114 teachers and professors, 1,284 students, and \$2,716,500 of property. The Universalist Publishing-House reports net assets of about \$70,000, and publishes and owns the copyrights of 150 volumes and six periodicals.

The funds of the General Convention, as reported upon at its meeting in October, 1888, amount in all to \$193,559, distributed as follows: Murray Centenary fund (in aid of theological students, the distribution of Universalist literature, Church extension, and missions), \$129,549; Theological Scholarship fund (for loans to theological students), \$29,925; Church Extension fund, \$4,149; Gunn Ministerial Relief fund, \$11,213; Ada Tibbetts Memorial fund (valuable property over and above the liens), \$9,500; three other special funds, \$13,223. The aggregate increase of these funds during the convention year 1887-'88 was \$15,833.

The Chapin Home, New York, has an endowment of \$145,000, and returns 56 inmates.

The Woman's Centenary Association reported to the General Convention that its receipts for the year had been \$3,147, and its expenditures \$2,240; and that it had a permanent fund of \$7,647.

The Universalist General Convention met in Chicago, Ill., October 24. The Hon. Hosea Parker presided. The resolution adopted by the General Convention of 1887 providing for holding the meetings of the body biennially instead of annually, was ratified as required by the provisions of the Constitution, to become operative from and after 1889. In connection with this action a proposition was considered for authorizing the trustees to call a Universalist Church Conference to be held in the years intervening between the sessions of the General Convention, for the discussion of questions relating to religion, morals, and education. The discussion of the creed which was proposed for adoption at the General Convention held in New York in 1887 was continued, and the subject was referred to a new committee which is expected to report upon it at a subsequent session of the General Convention. The publishers of the Sunday-school-lesson papers were requested to furnish, in connection with the ordinary papers, a serial exposition of the leading features of Christian doctrine as held by the Universalist Church. A resolution providing for calling an International Conference of Sunday-school workers was referred to a committee to report upon at the next meeting of the General Convention.

URUGUAY, a republic in South America. Area, 69,835 square miles. In 1886 the population was 596,463; that of the city of Montevideo was 115,462 in 1885.

Government.—The President is Gen. Máximo Tajes. The Cabinet is composed of the following ministers: Prime Minister and Interior, Dr. Herrera y Obes; Foreign Affairs, Dr. J. García Lagos; Finance, Dr. N. M. Marquez; Justice, Public Worship, and Instruction, Dr. M. Berinduague; War and Navy, Col. P. de Leon. The American Consul at Montevideo is Edward J. Hill. The Uruguayan Consul-General at New York is Don Enrique Estrázulas.

Army and Navy.—The standing army was increased in 1887 to about 4,000 men. There is also a police force of 3,200 men, and a National Guard of 20,000. The navy is composed of five small steamers and three gun-boats.

Finances.—On Dec. 1, 1887, the national indebtedness amounted to \$71,000,000, of which \$17,000,000 constituted the home debt and \$54,000,000 the foreign debt, the latter being represented by £10,865,300 five-per-cent. bonds and £4,255,360 six-per-cent. bonds. The conversion of the latter amount into four-per-cent. bonds was effected by issuing in London \$20,000,000 at 82½ per cent., in August, 1888.

South American Congress.—On July 18, 1888, at the invitation of the Argentine Republic and Uruguay, a congress of delegates from South American nations assembled at Montevideo for the purpose of forming a treaty to determine questions of international rights pending between South American nations. This congress is the first of its kind that ever assembled in South America.

Railroads.—On July 1, 1888, there were 553 kilometres of railway in operation. Early in 1888 a Government decree announced the intention of building a railway embracing the following lines: 1. From Montevideo to Rivera, with branch lines to Paysandú and Salto. 2. From Montevideo to Colonia. 3. From Agosto to Carmelo and Nueva Palmira. 4. From Montevideo to the northern frontier and Bazé. 5. From Montevideo eastward to Laguna and Merino. 6. From Salto to Santa Rosa, with a branch line from Peballo to San Eugenio. The Government offers to guarantee seven per cent. interest for forty years on a capital of £5,000 per kilometre.

In October the Central Uruguayan Extension Railway Company (limited) was formed, with a capital of £1,000,000, to build a line of railway from Paso de los Toros to Rivera (Santa Una) on the Brazilian frontier, 288 kilometres, the Government guaranteeing seven per cent. interest for forty years on a capital of £5,000 per kilometre.

Telegraphs.—The length of lines in operation in 1888 was 2,789 kilometres. The first submarine cable for telephone use was laid between Montevideo and Buenos Ayres in the autumn, and it does better service than the overland lines.

Commerce.—Uruguayan foreign commerce has developed as follows, reduced to millions of dollars:

	Imports.	Exports.
1883	20,3	25,2
1884	24,6	24,8
1885	25,3	25,3
1886	20,2	23,8

The following Uruguayan products were exports: Cattle, \$800,000; jerked beef, \$2,858,000; preserved beef in tins, \$37,000; extract of beef, \$894,000; hides, \$4,842,000; skins, \$816,000; tallow, \$1,237,000; wool, \$4,998,000; horse-hair, \$185,000; bones and bone-ashes, \$110,000; fertilizers, \$316,000; ostrich-feathers, \$54,000; grain, \$712,000.

The American trade exhibits the following figures:

FISCAL YEAR.	Imports into the United States.	Domestic export to Uruguay.
1886	\$4,925,848	\$1,110,545
1887	2,818,761	1,393,725
1888	2,711,521	1,337,430

Tariff Changes.—The revised customs-tariff became operative on April 1, 1888, the modifications being slight, ad valorem duties being raised from 30½ per cent. to 31 per cent.; goods under schedule No. 2, from 47 per cent. to 48 per cent.; and No. 3, from 43 to 44. On the other hand, the 6½ per mille was abolished, and the number of articles entering duty free notably increased.

Viticulture.—Under the provision of an act of the Uruguayan Congress of 1889, gold medals were awarded to Pascal Harriague, a Frenchman, and F. Vidiella, a Uruguayan, as the first and most successful viticulturists in the republic. The growing of vines has been extending rapidly during late years in Uruguay, and is giving the best results. The Viticultural Society, founded in 1887, with a capital of \$100,000, has acquired lands along the Central Railway; vineyards have been laid out, and 100,000 vines were planted in 1888.

Earthquake.—During the night of July 4-5, 1888, there were, for the first time in forty years, two violent shocks of earthquake at Montevideo, the direction being from northwest to southeast, the shocks extending over fifty seconds. The shocks were felt at sea, the phenomenon coinciding with great cold and a terrific snow-storm in the Cordillera, at Uzpalata, and at Bahia Blanca in the province of Buenos Ayres, Argentine Republic, 39° south latitude, where for the first time a heavy snow-storm occurred.

UTAH. Territorial Government.—The following were the Territorial officers during the year: Governor, Caleb W. West; Secretary, William C. Hall; Treasurer *de facto*, James Jack; Auditor *de facto*, Nephi W. Clayton. (In January the Governor sent to the Council of the Legislature the nomination of Bolivar

Roberts to be Territorial Treasurer, and Arthur Pratt to be Territorial Auditor; but that body refused confirmation, on the ground that the Governor's right of appointment was in dispute in a case pending before the United States Supreme Court. Late in March, after the adjournment of the Legislature, the Governor again made the same nominations, he then having full power of appointment till the next meeting of the Legislature in 1890. The Governor had previously, in March, 1886, appointed the same persons to the same positions; but Treasurer Jack and Auditor Clayton, holding by election of the people, had refused to yield up their offices, and the litigation, which has not yet reached its end in the Supreme Court of the United States, resulted. The appointees of March, 1888, were again refused their offices by the *de facto* officials as before. About the same time they brought suit against the latter, demanding payment of salary from March, 1886, out of the appropriation made by the Legislature in January for the salaries of the Treasurer and Auditor. The determination of this suit will depend upon the decision of the United States Supreme Court case.) Commissioner of Schools, P. L. Williams; Chief-Justice of the Supreme Court, Charles S. Zane, succeeded by Elliott Sandford; Associate Justices, Jacob S. Boreman, and H. P. Henderson. During the year the Territory was allowed, by act of Congress, an additional judge, and John W. Judd was appointed to that position.

Legislative Session.—The Twenty-eighth Territorial Legislature assembled on January 9, and remained in session two months. One of the earliest measures passed was a deficiency appropriation bill, to meet expenses of the Government, for several years unpaid, owing to the veto of appropriation bills passed by the previous Legislature. Several new institutions were provided for—a Territorial Reform School in Weber County at a cost of \$75,000, an Agricultural College, and an agricultural experiment station in connection therewith, in Cache County, to cost \$25,000, and an Institution for Deaf-Mutes, in connection with the University of Deseret, to cost \$20,000. The sum of \$85,451 was appropriated for the completion of buildings at the University of Deseret and to pay debts of the institution previously incurred. For the purpose of meeting these extraordinary expenditures a board of commissioners was established and directed to negotiate a loan not exceeding \$150,000. The bonds for this loan were all taken by a Denver bank at a small premium.

A gift of land from Salt Lake City as a site for Capitol buildings was accepted at this session, and a commission appointed to submit to the next Legislature plans and estimates for a new Capitol building.

The general election for members of the Legislature was fixed in August, 1889, and biennially thereafter, the first meeting of the

Legislature to be on the second Monday of the following January.

An act to prevent crimes against the elective franchise provides penalties for fraudulent registration, fraudulent voting or attempts to vote, tampering with ballot-boxes, forgery or alteration of election returns, or other means used to defeat the purpose of the voter.

Other acts of the session were as follow :

Providing for a compilation of the laws of the Territory.

Raising the age of consent to thirteen years.

Providing that a married woman may join in a deed by her husband, and release her right of dower in the property therein conveyed or encumbered.

Designating May 31 as the time at which new laws shall go into effect, unless otherwise provided in such laws.

Exempting from taxation for six years the property, capital stock, and bonds or mortgages of any company in the Territory engaged in the production and manufacture of sugar from products raised in the Territory.

To prevent the sale or giving away of intoxicating beverages on election-days.

Regulating the business of life insurance.

Regulating marriage in the Territory, prohibiting, among other things, marriage between a negro and a white person, or between a Mongolian and a white person.

Providing that occupying claimants shall not be evicted by process of law till they have been paid the full value of improvements made by them, or unless they refuse to pay upon demand to the successful claimant the full value of his share or claim in the property.

Establishing a uniform system of county governments.

Accepting from Salt Lake City a gift of lands for Agricultural Fair Grounds, and appropriating \$20,000 for the erection of suitable fair buildings.

Railroads.—The railroad system of the Territory at the beginning of the year was as follows: Union Pacific Railroad and branches, 581 miles; Denver and Rio Grande Western and branches, 368 miles; Central Pacific, 154 miles; and San Pete Valley, 34 miles; total, 1,140 miles. Two new roads were in course of construction during the year—the Salt Lake and Fort Douglas and the Salt Lake and Eastern. The former of these, 24 miles in length, was practically completed at the end of the year; on the latter, construction was not far advanced.

Agriculture.—The wheat-crop of the Territory for 1888 is estimated at 3,000,000 bushels; oats, 1,500,000 bushels; barley, 750,000 bushels; rye, 50,000 bushels; corn, 750,000 bushels. There were also produced about 200,000 bushels of apples, 150,000 bushels of peaches, and 75,000 bushels of pears. The hay-crop is estimated at 500,000 tons.

Mining.—Mining for the precious metals began about twenty-five years ago, but was carried on only in a small way until after the completion of the first Pacific Railroad. This gave a market, and from 1871 to 1887, both inclusive, the value of the output was as follows: Gold, \$3,065,692.72; silver, \$73,201,966.51; lead, \$33,799,599.17; copper, \$3,003,889.21; total, \$113,071,147.61. The product

for 1887 is summarized as follows: Copper, \$124,566; refined lead, \$111,750; unrefined lead, \$1,196,788.77; fine silver, \$5,976,884.89; fine gold, \$227,740; total export value, \$7,637,729.66.

Prison.—The report of the United States Penitentiary at Salt Lake City, for the year ending June 30, is as follows: Number in prison July 1, 1887, 197; number received from July 1, 1887, to June 30, 1888, 299; total number in prison during the year, 496; number discharged from July 1, 1887, to June 30, 1888, 315; number remaining in prison July 1, 1888, 181. The Forty-eighth Congress appropriated \$50,000 for the construction of a new prison building, which was completed early in the year, and will accommodate 240 prisoners, by placing two in a cell.

Confiscation of Church Property.—In the suits begun in 1887, under the provisions of the Edmunds-Tucker act, to secure the forfeiture of the property held by the Mormon Church corporation and by the Perpetual Emigrating Fund Company, in which suits a receiver had been appointed to collect and take possession of such property pending the suit, an appeal from the order of the court making such appointment was prayed for by the defendants late in that year, but refused by the Territorial Supreme Court in January, on the ground that the order was merely interlocutory and not final. The receiver during the year instituted numerous investigations and heard witnesses with the view of ascertaining property of the Church and company, took possession of such personal and real property as he could find, and began suits for the rest. The real estate received by him during the year included the Temple Block in Salt Lake City, the Gardo House and grounds, the Tithing-Office and grounds, the Historian's Office and grounds, the Church farm of 1,108 acres, and one undivided half of the Church coal-mines in Summit County. For the escheat and forfeiture of this property, except the Temple Block, a proceeding was begun during the year by information in the Third District Court of the Territory. Before October the receiver had also secured possession of money of the defendants, amounting to \$237,666.15; about 30,000 head of sheep, 4,732 shares of the Deseret Telegraph Company, 300 shares of the Salt Lake City Gas Company, and a few other securities. As to this personalty, and on the legal standing of the defendants generally since the Edmunds-Tucker act, the Supreme Court of the Territory rendered a final decree on October 9, a part of which is as follows:

That on the 3d day of March, 1887, the corporation of the Church of Jesus Christ of Latter-Day Saints became and the same was dissolved; and that since said date it has had no legal corporate existence. And it is furthermore adjudged that all and entire the personal property set out in this decree as having belonged to said corporation has, by reason of the dissolution of said corporation as aforesaid, on account of the failure or illegality of the trusts to which it

was dedicated at its acquisition, and for which it has been used by said late corporation and by operation of law, become escheated to and the property of the United States of America, subject to the costs and expenses of this proceeding, and of the receivership by this court instituted and ordered. It is furthermore ordered and adjudged that there is not now, and has not been, since the 3d day of March, 1887, any person legally authorized to take charge of, manage, preserve, and control the personal and real property hereinbefore set out, except the receiver appointed by this court; and it is therefore ordered that the receivership hereinbefore established by this court is continued in full force and effect, and that the said receiver shall continue to exercise all and entire the powers and authority conferred upon him by the decree appointing him.

The Temple Block was excepted from this decree, and the receiver was ordered to surrender possession of it to trustees already appointed for the use of the Mormon Church as a house of worship. An appeal from this decree was taken to the United States Supreme Court, the principal ground therefor being the

constitutionality of the act under which the decision was rendered. No decree had been made at the close of the year by the District Court as to the escheat of the other realty.

Political.—Late in September a call was issued by the Utah Democratic Club for a meeting of representatives at Salt Lake City, on October 6, to form an independent Democratic Territorial organization, the object being to include in the organization all anti-Mormon Democrats of the Territory. This convention accomplished the object for which it was called, and nominated S. R. Thurman as its candidate for delegate to Congress. The People's party (Mormon) held its Territorial Convention at Salt Lake City on October 8, and renominated Delegate John T. Caine. The Republicans, Labor men, and other opponents of Mormonism, joined in supporting Mr. Baskin for delegate. At the November election Caine received 10,127 votes, Baskin 3,484, and Thurman 511.

V

VENEZUELA, a republic in South America. Area, 1,539,398 square kilometres; population in 1886, 2,198,320.

Government.—The President, elected on July 5, 1888, is Don Pablo Rojas Paúl. His term will expire on Feb. 20, 1890. The Vice-President is Dr. S. Pacheco. The Cabinet was formed of the following ministers: Interior, Dr. Nicanor Borges; Treasury, Don Vicente Coronado; Public Credit, Don Bermudes Grau; Public Instruction, Don Santiago Gonzalez Guinan; Public Improvements, Don Nicolas Gil; Public Works, Señor Muñoz Lebar; and Foreign Affairs, Don Agustin Teturiz. The United States Minister Resident at Carácas is Charles L. Scott; the American Consul at Ciudad Bolivar is George F. Underhill. The Venezuelan *chargé d'affaires* at Washington is Don Francisco Antonio Silva. The Consul-General at New York is Dr. Pedro Vicente Mijares.

Finances.—By virtue of a convention concluded on Nov. 24, 1888, between the financial agent of the republic in Europe and the council of foreign bondholders, the debt of the republic was consolidated, making £3,753,420, for which amount 4-per-cent. bonds were issued, bearing interest from Jan. 1, 1889. Part of the customs receipts is to be regularly set aside in pledge for payment of both the principal and the interest. Aside from this conversion, the Government floated an additional loan for £457,000, to which a similar pledge of duties for payment attaches.

Army and Navy.—The effective strength of the permanent army is 2,000 men. The navy is composed of 3 steamers, 1 schooner, and 1 school-ship.

Postal Service.—There are 162 post-offices, which forwarded 2,734,576 items of mail-matter during the fiscal year 1885-'86.

Railroads.—There were in operation, on Jan. 1, 1888, 286 kilometres of railway; in course of construction, 353; authorized, 1,982. Since that time several other lines have been chartered. The railway between Puerto Cabello and Valencia was opened in February, 1888.

Telegraphs.—The length of telegraph lines in Venezuela is 4,462 kilometres, with 80 offices. Communication was opened in 1888 between Carácas, La Guayra, and Colombia, and simultaneously by cable with Hayti.

Steamship Line.—In May, 1888, a new line of steamers was established, the Royal Dutch West Indian Mail Steamship Company, whose steamers ply between New York, Port-au-Prince, Curaçoa, Puerto Cabello, La Guayra, Trinidad, Demerara, and other West Indian ports. Three steamers were placed on the line to begin with.

Commerce.—Venezuela imported in 1887 from England \$2,194,237 worth of merchandise; from France, \$678,441; from Spain, \$148,267. She exported to those countries in the same year goods to the amount of \$705,044, \$3,500,421, and \$707,016, respectively. The American trade was as follows:

FISCAL YEAR.	Import into the United States.	Domestic export to Venezuela.
1886	\$5,791,621	\$2,695,488
1887	8,261,236	2,827,010
1888	10,051,250	3,008,336

The Anglo-Venezuelan Imbroglío.—Early in 1888 there was excitement once more about the frontier dispute between Venezuela and British

Guiana, and the United States was appealed to not to allow Great Britain and her colony to retain Barimas Point, together with the disputed territory in the gold-mines. The Venezuelans insisted that the Monroe doctrine was opposed to such encroachments. The matter was rather coolly received in the United States, both in and out of Congress, in view of the long-pending claim against Venezuela for the seizure of the Venezuelan Steam Transportation Company's steamers in 1871, when there chanced to be a revolution in that country. Meanwhile this dispute about the Guiana border remains in abeyance, England declining to submit to international arbitration.

VERMONT. State Government.—The following were the State officers during the year: Governor, Ebenezer J. Ormsbee (Republican), succeeded by William P. Dillingham (Republican); Lieutenant-Governor, Levi K. Fuller, succeeded by Urban A. Woodbury; Secretary of State, Charles W. Porter; Treasurer, William H. Dubois; Auditor, E. Henry Powell; Superintendent of Education, Justus Dartt; Inspector of Finance, Savings-Banks, and Trust Companies, Carroll S. Page, succeeded by L. O. Greene; Chief Judge of the Supreme Court, Homer E. Royce; Assistant Judges, Jonathan Ross, Wheelock G. Veazey, H. Henry Powers, John W. Rowell, Russell S. Taft, and James M. Tyler, appointed in September, 1887, to succeed William H. Walker, resigned. The Secretary of State and Treasurer are, *ex officio*, Insurance Commissioners.

Legislative Session.—The Legislature met at Montpelier on October 3, and remained in session till November 28. One of the most important acts of the session was the passage of a new law for the government of the public schools. It provides for a State Superintendent of Education, to be chosen by the Legislature; for a County Board of Education, composed of one member from each town, chosen at its annual meeting; and for a County Supervisor of Schools, to be chosen every two years, in May, by the County Board of Education. These county boards have cognizance of all matters of education in their respective counties, including the selection of text-books. The Supervisor is a salaried administrative officer, who examines teachers, grants certificates, visits the schools, advises school-district officers, gives instruction to teachers, and otherwise stimulates the interests of education. The school-district system is still maintained, and the Prudential Committee of the district has still the financial management of the schools in his district, and the selection or dismissal of teachers therefor. Women have the same right to vote as men in school-district meetings. Numerous changes in the details of school management were made.

The Legislature was more liberal than many of its predecessors in the matter of appropriations. The sum of \$1,125,000 was appropriated for 1889 and 1890, for State expenses, and the

Treasurer was authorized to borrow \$500,000 in addition, if necessary. The construction of a State Insane Asylum was authorized, and \$100,000 was appropriated for that purpose. Liberal provision was also made for the Burlington and Middlebury Colleges, and for the Soldiers' Home. In consequence of these appropriations, it became necessary to levy a State tax for 1889 of twenty cents on each \$100 of taxable property in the State.

Amendments to the prohibitory acts were made, in order to secure better enforcement of prohibition, and an act making the payment of a United States special tax as a liquor-seller *prima facie* evidence of liquor-selling was passed. The existing status of the Normal Schools was continued till 1900. Other acts of the session were as follow:

Providing for the sale of leased property for taxes.

Empowering the Railroad Commissioners to authorize the running of through trains on Sunday.

Giving the Railroad Commissioners the power to prescribe the method of heating cars, provided that they shall not prohibit the heating by steam from the engine.

Requiring all railroads to issue uniform mileage-tickets in books containing coupons for not more than one thousand miles.

Providing that no personal property shall be exempt from attachment on a suit brought to recover the purchase-money for the same.

Creating a Board of Supervisors of the Insane.

Providing for the care of habitual drunkards at institutions in the State established for their treatment.

To prevent the adulteration of milk and the false branding of butter and cheese.

Providing for the appointment of a commissioner to investigate the agricultural and manufacturing interests of the State, and to devise means for developing the same.

To prohibit discrimination in life or endowment insurance policies.

Fixing the standard weight for a bushel of salt at seventy pounds.

Prohibiting the sale or gift of tobacco to persons under sixteen years of age.

Providing that every person who shall make, alter, or repair any article of personal property, shall have a lien thereon for his just and reasonable charges therefor, and may retain possession of such property till the charges are paid, and may sell the same at public auction after three months, if the value of the article is not over \$100.

To suppress "bucket-shops" and gambling in stocks, bonds, petroleum, cotton, grain, and provisions.

Punishing, by a fine, persons who bet on the result of any election.

Changing the fiscal year so that it shall end on June 30.

Finances.—For the year ending July 31, the State Treasurer reports receipts amounting to \$710,052.20; cash on hand at the beginning of the year, \$21,476.77; total, \$731,528.97. The expenditures during the same period were \$643,466.67, leaving a balance of \$88,062.30 on July 31. The assessment of a special property-tax of twelve cents on each \$100 increased the revenue for the year by \$210,017.84, and enabled the Treasurer to pay off a floating debt of \$225,165. The tax on corporations yielded a revenue of \$239,003.61. From convict-labor the sum of \$13,037.50 was derived, and \$61,-

027.83 from the courts and Judges of Probate. Regarding expenditures the Auditor says in his report: "A comparison of the figures for some years back will show a steady increase in State expenses, and that, as a whole, they exceed for the last biennial term the expenses of any two years preceding. This change is wrought principally by more liberal legislation of late years in the matter of special appropriations, increase of salaries and fees, and the transfer to the State of expenses heretofore borne by the counties and towns." The funded debt of the State remains unchanged, consisting of \$135,500 of 6-per-cent. bonds, held by the State Agricultural College fund.

Education.—The following statistics exhibit the condition of the public schools for the school year ending March 31, 1888: Districts, 2,144; schools, 2,547; pupils enrolled, 68,453; average daily attendance, 46,061; male teachers, 479; female teachers, 3,517; total revenue for school purposes, \$628,157.47; total expenditure, not including supervision, \$640,274.07. The enrollment of pupils shows a decrease of nearly 3,000 from the figures of the previous year, and is smaller than has been reported for ten years. The percentage of attendance, based upon the number enrolled, is smaller in Vermont than in any other New England State. "Another two years of experience in the common schools of the State," says the State Superintendent, "has still more fully convinced me of the utter inefficiency of our plan of district management."

At the State Normal School, in Castleton, there were 185 students in attendance during the school year, against 217 for the year 1886-'87; at the Randolph Normal School there were 115; and at the Johnson School about the same number.

Savings-Banks.—The whole number of depositors in all the savings banks and trust companies in the State, June 30, 1888, was 57,520, an increase during the year of 3,710. There was to the credit of such depositors \$16,602,067.76, showing an increase during the year of \$1,015,016.83. Of the total amount of deposits in the different savings-banks and trust companies, \$13,888,186.65 belong to depositors living in the State, being an increase of \$885,642.96 as compared with 1887. The average amount of each deposit is \$288.63, a decrease of \$1.04 as compared with 1887.

Railroads.—There are now 932 miles of railroad in the State. During the year there were constructed and put in operation 12.8 miles of new road—viz., by the Central Vermont Railroad, from Barre to Williamstown, 7.8 miles; by the Clarendon and Pittsford Railroad Company, in Rutland, West Rutland, and Proctor, 5 miles. The Montpelier and Wells River Railroad Company has begun the construction of a road from Montpelier to Barre, which will be completed early in 1889. Returns made to the Railroad Commissioners and the Commissioner of State Taxes for 1888 show the following

railroad earnings for the year ending June 30, 1888: Gross income, \$4,884,372; operating expenses, \$3,319,964; net income, \$1,564,408.

Political.—A Democratic State Convention met at Montpelier on May 10, and nominated the following candidates for State offices: For Governor, Stephen C. Shurtleff; Lieutenant-Governor, Thomas C. O'Sullivan; Treasurer, William E. Peck; Secretary of State, William B. Mayo; Auditor, George M. Dearborn. The platform contained the following:

We reassert our belief that property should be the principal subject of taxation, and that this burden should fall proportionately upon the property taxed, and we demand such legislation as will make the list of each taxable poll one dollar instead of two dollars, and will adjust taxes upon mortgaged property equitably between mortgagor and mortgagee.

We recognize the necessity of controlling by law the traffic in intoxicating liquors, and are in favor of the enforcement of existing laws enacted for that purpose while they remain in force. But we believe a stringent license law with local option would produce better results than the present law, and would increase the revenue rather than burden taxation.

The Republican party in the State has repeatedly professed itself to be in favor of prohibition, and has enacted prohibitory laws; but, although in power, it has neglected to enforce those laws and has left them mainly to such enforcement as has been prompted by greed of gain, revenge, or malice.

Candidates of the Prohibition party were nominated at a convention held at Montpelier on June 12. They were: For Governor, Henry M. Seeley; Lieutenant-Governor, George E. Crowell; Secretary of State, Archibald O. Ferguson; Treasurer, Armentus B. Bixbey; Auditor, Charles S. Parker.

The Republicans held a State Convention on April 4 for the choice of delegates to the Chicago Convention, and a second convention on June 27, at which William P. Dillingham was nominated for Governor and Urban A. Woodbury for Lieutenant-Governor. The Secretary of State, Treasurer, and Auditor were re-nominated. The following are the more important resolutions adopted:

That the railroads of Vermont were chartered and endowed with certain powers and privileges, primarily for the benefit of all the people, and that their services should be open to all upon the same relative terms and conditions, without discriminations or favoritism in any form or degree; that, in justice to their owners and paying patrons, the practice of issuing free passes to persons other than their officers, employés, and officers and employés of other railroads, ought to be promptly discontinued. We especially deprecate the issuing to and acceptance for use of free passes by State officers, members of the Legislature, and all others whose official acts may concern the rights and interests of the railroads as demoralizing in intent and tendency, and demand that such practices be prohibited by law. We believe that justice between man and man, as well as the obvious interests of the State, require that the principles embodied in what are known as the "long-and short-haul" provisions of the interstate commerce law and the laws of several of our sister States should find a place in the Statutes of Vermont, and that our State Railroad Commission should be clothed with ample power to exact obedience to such laws and to their own judgments and decrees.

This convention reaffirms the devotion of the Re-

publican party to the temperance legislation of the State as enacted by the Republican party, and its determination that no retrograde steps shall be taken, but that the lines shall be advanced until the saloon shall cease to be a power in the land.

The election occurred early in September, and resulted in an unusually large majority for the Republican ticket. For Governor, Dillingham received 48,522 votes; Shurtleff, 19,527; Seeley, 1,372. Of the Legislature chosen at the same time, the Republicans elected the entire 30 members of the Senate, and 219 members of the House; of the remaining 21 members of the House, 19 were Democrats and 2 Independents. At the national election in November, Republican presidential electors were chosen and two Republican Congressmen elected.

VIRGINIA. State Government.—The following were the State officers during the year: Governor, Fitzhugh Lee, Democrat; Lieutenant-Governor, John E. Massey; Secretary of State, H. W. Flournoy; Treasurer, A. W. Harmon; Auditor, Morton Marye; Second Auditor, Frank G. Ruffin; Attorney-General, Rufus A. Ayers; Superintendent of Public Instruction, James L. Buchanan; Commissioner of Agriculture, Thomas Whitehead; Railroad Commissioner, James C. Hill; President of the Supreme Court, Lunsford L. Lewis; Judges, T. T. Fauntleroy, Robert A. Richardson, Benjamin T. Lacy, and Drury A. Hinton.

Legislative Session.—The Legislature, which was in session at the beginning of the year, adjourned on March 5. Among the important bills that became laws were those providing for the establishment of a board of agriculture and further defining and enlarging the duties of the Commissioner of Agriculture; abolishing the compulsory inspection of flour and fish; and inaugurating a system of pensions for Confederate soldiers and appropriating therefor \$65,000 per annum. The pension act is a substitute for a law that has been in force for several years, appropriating \$70,000 annually "for the relief of Confederate soldiers," and establishes a better method of distributing the appropriation than that therein provided. About February 1 a fire at the State Penitentiary in Richmond destroyed the shoe-shops, involving a loss of \$20,000 to the State. To restore this building an appropriation of \$30,000 was made. The appropriation for the State University was reduced from \$40,000 to \$35,000, and that of the Virginia Military Institute from \$35,000 to \$30,000. On the question of selling the State's interest in the Chesapeake and Ohio Railroad, amounting to about 17,621 shares, of the par value of \$100 a share, it was decided to authorize the sale, although the present value of shares was but \$2.50 or \$3. An act was also passed providing for submitting to the voters, at the November election, the question whether a convention should be called to revise the State Constitution. A memorial to Congress was adopted, asking the Federal Government to

assist the State in paying its debt. Other acts of the session were:

To provide for the removal of obstructions from Chickahominy river.

Appropriating money for furnishing the new addition to the Central Lunatic Asylum, and for the support of more inmates.

To prevent the pollution of drinking-water.

To incorporate the Foreign Mission Board of the Southern Baptist Convention.

Authorizing the Governor to hire convicts to the Abingdon Coal and Iron Railroad Company.

To provide for the purchase of certain property, an additional improvement for the State Normal School, and to make appropriation therefor.

To give the assent of the State of Virginia to the provisions of an act of Congress approved March 2, 1887, in relation to an agricultural experiment station.

To authorize clerks of circuit courts to take acknowledgments to deeds and other writings and to certify the same.

Amending the oyster laws and further protecting the oyster interest of the State.

The State Debt.—No settlement of the controversy between the State and its foreign bondholders regarding the State debt was reached during the year. When the conference of 1887, between representatives of the Legislature and of the bondholders, failed to agree upon a compromise adjustment of the liability of the State, the contest reverted again to the courts where the question regarding the right of the State to refuse debt-coupons in payment of taxes was at issue. The act requiring persons offering coupons for taxes to surrender them, file a petition to prove their genuineness, and produce in court the original bond from which they were taken as proof, before such coupons would be received, had been made practically non-enforceable by the decision of the United States Supreme Court declaring the tender of genuine coupons for taxes to be payment, without further proceedings by the tax-payer. The Legislature of 1887 then passed the "coupon-crusher" act, by which, on tender of the coupons, the State was to take the initiative by bringing suit against the tax-payer to compel him to prove his coupons, requiring as proof the production of the original bond. In all these cases the production of the original bond, which was held by the owner in Europe, was of course impossible. The action of the bondholders in obtaining from the Federal Circuit Court an injunction against the State officers from enforcing this act proved abortive, as the United States Supreme Court, late in 1887, declared such a proceeding to be contrary to that clause of the Constitution which forbids suits against a State by foreign citizens. The constitutionality of the "coupon-crusher" act itself was not in issue in this case; but the counsel of the bondholders at once took measures to bring that question before the State courts, to secure a decision, and to obtain an appeal therefrom to the United States Supreme Court. Early in December, 1888, this preliminary procedure had been completed and writs of error were obtained from the State Supreme

Court in four cases, involving all the mooted questions. Later, the United States Supreme Court fixed the second Monday of October, 1889, for a hearing of the cases.

The bondholders adopted another method of forcing coupons upon the State, believing that if they overwhelmed the treasury with these, the State, in order to escape bankruptcy, would be compelled to meet the terms offered by them for settling the debt. They decided to take as much advantage as possible of the existing legislation of the State, and established a central agency at Richmond, with subagencies throughout the State, for the purpose of facilitating and stimulating the use of coupons in paying taxes. Bondholders were urged to send over their bonds to these agencies, that they might be produced in court under the requirements of the "verification" and "coupon-crusher" acts. Tax-payers were urged voluntarily to file petitions under the former act for verification of their coupons, although it had been decided that the State could not compel them to do so; the bonds were produced in court by the agents of the bondholders, and in this way a large and constantly increasing number of coupons were forced upon the State. In Richmond alone, the number of tax-payers filing petitions for verification increased from 231 in 1887 to 720 in 1888. So numerous had these petitions become, that early in 1889 Gov. Lee and others organized a movement to rouse popular sentiment upon the matter and, by

holding public meetings in the six cities and seven counties from which the tender of coupons exclusively came, urged the citizens, as a matter of patriotic duty, to sign resolutions pledging themselves to pay all their taxes hereafter in money, in order to save the State from bankruptcy. Many signatures to such resolutions were obtained.

Political.—There was no election for State officers during the year. State conventions of the various political parties were held, to select delegates to the national nominating conventions and to nominate presidential electors. The Democratic Convention met at Norfolk on May 16, and the Republicans at Petersburg on the following day. The Petersburg Convention witnessed a factional contest between followers of ex-Senator William Mahone and John S. Wise, which resulted in the withdrawal of the latter and the holding of a second convention by his followers. Each faction selected delegates to the Chicago Convention. A resolution was passed by the Mahone Convention, opposing the proposed constitutional convention. At the November election the Democratic presidential electors were chosen. Republican congressmen were elected in the First and Second Congressional Districts, and Democrats in the remaining eight districts.

On the question whether a convention should be called to revise the Constitution, the vote was overwhelmingly in the negative—3,698 yeas to 63,125 nays.

W

WAITE, MORRISON REMICK, jurist, born in Lynn, Conn., Nov. 29, 1816; died in Washington, D. C., March 23, 1888. He was the eldest of eight children of Henry Matson Waite, Chief-Justice of Connecticut, was graduated at Yale College in 1837, in the class that also included William M. Evarts, Edwards Pierrepont, Daniel B. Coe, and Benjamin Silliman, Jr., and immediately began studying law with his father. Soon afterward he removed to Maumee City, Ohio, where he finished his studies, was admitted to the bar in 1839 and began practicing in partnership with Samuel Young. In 1850 the firm removed to Toledo, and in 1854 a new partnership was formed by Mr. Waite and his brother Robert. Though a Whig till 1856 and a Republican thereafter, and possessing wide repute for his legal acumen and success at the bar, he was loath to accept public office based on politics. In 1849 he was elected a member of the State Legislature, and in 1862 was an unwilling and defeated candidate for Congress. He was frequently tendered but always declined a seat on the bench of the Supreme Court of Ohio, preferring to remain at the bar. The office of member of the Legislature was the only one to which he was ever elected as a political preferment. In

1871 he was appointed by President Grant one of the three counsel of the United States before the Geneva Court of Arbitration which passed upon the "Alabama" claims, his associates being his old classmate, William M. Evarts, and Caleb Cushing. Besides his general arguments before that court, he made a special one, on the liability of the British Government for permitting the Confederate steamers to take in supplies of coal in British ports, which attracted much attention in legal and diplomatic circles. He returned to Toledo in November, 1872, and resumed his practice. In 1873 he was unanimously elected by both parties as a member of the Ohio Constitutional Convention, and at its organization was chosen president. On Jan. 19, 1874, he was nominated by President Grant to be the seventh Chief-Justice of the United States, to succeed Salmon Portland Chase, after the United States Senate had rejected the nominations of George H. Williams and Caleb Cushing. After a discussion of one hour the Senate indorsed the nomination, and two days afterward confirmed it, every Senator present, 62, voting in his favor. For his share of circuit labor he took the States of Maryland, West Virginia, Virginia, North Carolina, and South Carolina. In 1876 he was

urged by many friends to permit the use of his name as a candidate for the presidency, but declined in a characteristic letter, in which he declared that no man ought to accept the chief-justiceship unless he took a vow to leave it as honorable as he found it, and expressed the opinion that in the interest of impartial justice the Constitution might wisely have prohibited the election of a Chief-Justice to the presidency. He received the degree of LL. D. from Yale in 1872. (For a portrait of Chief-Justice Waite, see "Annual Cyclopædia" for 1882, page 126.)

WASHINGTON TERRITORY. Territorial Government.—The following were the Territorial officers during the year: Governor, Eugene Semple; Secretary, N. H. Owings; Treasurer, T. M. Ford, succeeded by Frank I. Blodgett; Auditor, T. M. Reed, succeeded by J. M. Murphy; Superintendent of Public Instruction, J. C. Lawrence, succeeded by J. H. Morgan; Chief-Justice of the Supreme Court, Richard A. Jones, who died on August 19, and was succeeded by Charles E. Boyle, by appointment of the President. Chief-Justice Boyle entered upon his duties in November, but died on December 15, after scarcely a month's service. Thomas Burke was then appointed Chief-Justice, entering upon his duties in the last week of the year. Associate Justices, Frank Allyn, William G. Langford, and George Turner, succeeded by Lucius B. Nash. The office of Attorney-General, created by the Legislature in January, was filled by the appointment of J. B. Metcalfe.

Legislative Session.—The Legislature, which was in session at the beginning of the year, adjourned on February 2. An important feature of its work was the passage of an act granting to women over twenty-one years old, otherwise qualified by residence, etc., the right of suffrage in all elections for Territorial or local offices. It is substantially the same act that was passed in 1886 and declared unconstitutional by the Territorial Supreme Court. The law that imposes a tax on the gross earnings of railroads was repealed, and an act taxing railroad property was substituted therefor. A new organization and new rules for the militia were adopted. An annual tax of one fifth of a mill is to be levied for its support, to be kept as a separate fund for militia purposes exclusively. At each general election a brigadier-general and adjutant-general are to be elected. In time of peace the National Guard shall consist of not more than twelve companies of infantry and one company of cavalry, the infantry companies to consist of not fewer than twenty-four or more than sixty men. License-fees for the sale of liquors were fixed at not less than \$300 and not more than \$1,000, 10 per cent. of the fee to be paid into the Territorial treasury, the remainder to be applied for school and local purposes. The county commissioners in counties outside of cities, and the governing authorities in cities,

have sole power to grant licenses and to fix the amount of the fee. The appropriations include \$173,490 for a new building at the Penitentiary and for the purchase of machinery to manufacture grain-sacks therein; \$30,000 for buildings at the School for Defective Youth at Vancouver; \$60,000 for erecting a new hospital for the insane at Medical Lake; \$10,600 for the Territorial University; and \$75,000 for the support of the Insane Asylum for two years. Congress was memorialized to admit the Territory into the Union with North Idaho annexed. Other acts of the session were as follow :

Changing the time of meeting of the Legislature, so that the next session shall begin on the second Monday of January, 1889.

Providing for the commutation of the sentence of prisoners as a reward for good behavior.

Directing the Governor to appoint four lawyers, two from each of the great political parties, as commissioners to codify the laws.

Authorizing organized counties to issue bonds to refund their indebtedness.

An elaborate act in relation to coal-mines, providing for their inspection, regulation, and ventilation, and for escapement-shafts and other appliances for the safety and health of miners.

Regulating the location and recording of quartz-mining claims, and providing for assessment-work done thereon.

Providing a mode of garnishment in civil actions.

Regulating the practice of dentistry by requiring every practitioner to obtain a diploma from some regularly chartered dental college, or a certificate from the Territorial Board of Dentistry created by this act.

Declaring Sundays, New-Year's Day, Fourth of July, Twenty-second of February, Christmas, Thanksgiving, Memorial Day, and days on which general or special elections for delegate or county officers are held, legal holidays.

Abolishing the use of seals upon deeds, and providing that the word "heirs," or other technical terms, shall not be necessary to convey an estate in fee simple.

Providing a penalty for the careless use of firearms.

Prescribing a short form of mortgage and acknowledgment.

Authorizing telegraph and telephone companies to exercise the right of eminent domain in constructing their lines.

A new fish and game law.

To punish the giving of false pedigrees of animals.

Revising the procedure in civil actions.

Making it larceny for a bailee to appropriate goods of another in his possession.

To prevent the introduction or spread of contagious diseases among sheep, and providing for the appointment of a county inspector of sheep.

Prohibiting corporations from paying their employes otherwise than in lawful money of the United States.

Authorizing a married man to deed property directly to his wife, and the wife to her husband.

Creating the county of Okanagan out of the western half of Stevens County.

Authorizing county commissioners to levy a tax not exceeding three tenths of a mill to create a fund for the relief of indigent soldiers and sailors and their families, to be expended under the direction of the Grand Army posts.

Declaring it arson for the owner to set fire to an unoccupied building.

Development.—Estimates made by the Governor place the population of the Territory, on Sept. 30, 1888, at 167,982 persons, an increase

of 24,213 over the census returns of 1887. The assessed valuation of the Territory for 1888 exhibits an increase of \$23,058,443 over 1887, the total valuation being \$84,621,182. This large increase is partially due to the assessment of railroad property for *ad-valorem* taxation for the first time. During the year 137 miles of new railroad have been constructed, the total mileage in October being 1,197 miles.

Coal.—For the year ending Sept. 30, the total coal-product of the Territory is estimated at 1,133,801 tons, against 525,705 tons for the year preceding. The mines having the largest yield are as follow: Roslyn, 234,201 tons; Carbon Hill, 203,702 tons; Black Diamond, 186,522 tons; Franklin, 182,921 tons; Newcastle, 158,134 tons.

Charities.—A small appropriation was made by the Legislature of 1885-'86 for the maintenance of a school for defective youth, and a small class of unfortunates that had been assembled at Tacoma were removed to Vancouver and adopted as wards of the Territory. Through the liberality of citizens of Vancouver, a farm was purchased and some buildings erected thereon for the accommodation of this school, and the small appropriation was made to serve. By a bill approved Jan. 26, 1888, an appropriation of \$30,000 was made for a building for this school, and an act approved Jan. 28, 1888, appropriated \$12,000 for maintenance. The building was in process of construction during the year.

Militia.—By the militia act of this year, above referred to, the National Guard of the Territory was placed upon a secure basis. The troops have been provided with uniforms and armories, and the regiments with colors, and the service thus being made more attractive, the companies were immediately recruited up to the maximum. The force now consists of two regiments of infantry and a troop of cavalry, in all 750 officers and men.

The Chinese.—How strong a feeling exists in the Territory against Chinese labor was shown by an incident in Pierce County. The hop-fields in this county are extensive, and when the season for gathering the crop came, it was found that the labor of Indians and others heretofore employed in this work could not be obtained. It was proposed by some of the hop-growers to import Chinese laborers from Portland, Oregon. Rumors of the fact at once created excitement, especially in the city of Tacoma, where a large public meeting was held to consider the situation. Among the resolutions adopted by this meeting were the following:

That the public-school board is most respectfully requested to grant applicant children leave of absence to enable them to go to the hop-fields.

That a committee of five members be appointed in each ward and precinct to take applications, both from employers and employes, to facilitate exchange between both parties.

That under no consideration nor in any emergency will we consent to the reintroduction of Chinese into Pierce County, and that we will use every legal means to prevent the same.

The immediate result was that white people, who had hitherto considered hop-picking as fit only for Indians and foreigners, readily offered their services to the growers, and the crop was gathered without the aid of Chinese.

Local Option.—The Supreme Court of the Territory rendered a decision in January, declaring that the local-option law passed in 1886 was unconstitutional and void. Two of the judges based their opinion on the ground that it delegated legislative power to local bodies, while a third, rejecting this reason, decided that the authority given by the act had by its terms been granted to no legally constituted local officials or bodies. The fourth judge dissented from these views.

Woman Suffrage.—In August the Territorial Supreme Court unanimously decided that the woman-suffrage law of 1888 was unconstitutional, as it had two years before decided regarding a similar law of the Legislature of 1886. The decision recites that the Legislature of the Territory has only such power as is given it by the organic act and other acts of Congress, and the question, therefore, turns upon the construction of the word "citizen" in that act. The court finds that the use of that term was to indicate males only. Section 1,859 refers to "male citizens" and the court reasons that in all places where the mere word citizen is used it means "male citizen." They find that the Constitution of the United States and all laws of Congress were made with the purpose and intention of males alone exercising the right of franchise.

Political.—On Sept. 4 a Democratic Territorial Convention met at Spokane Falls, and re-nominated Delegate Charles S. Voorhees for Congress. J. J. Hunt was nominated for Brigadier-General of the Territorial militia, and Hilory Butler for Adjutant-General. The platform adopted contains the following:

That we are opposed to the un-American policy of interfering with or destroying any now legally existing private or public business interests, by sumptuary laws or otherwise, without just compensation and due process of law.

The Republican Territorial Convention met at Ellensburg on Sept. 11, and nominated John B. Allen for Delegate, A. P. Curry for Brigadier-General, and R. G. O'Brien for Adjutant-General. Its platform contains the following:

We arraign the Democratic Administration for its failure to place an adequate force on the frontier of Washington Territory to prevent the unlawful entry of Chinese.

We heartily advocate the forfeiture of all unearned land grants within our Territory, and their restriction to the use of actual settlers, and we demand the immediate passage of the Dolph Bill declaring forfeiture of that portion of the grant to the Northern Pacific Railway Company between Wallula and Portland.

We are in favor of legislation establishing the eight-hour system for the working of mines, and prohibiting the employment of child labor therein, and we disapprove of the introduction of armed men for the purpose of intimidating and humiliating laborers in mines, mills, etc.

We believe that the charges of transportation, warehouse, and elevator companies are subjects to be regulated by law, and we favor the enactment of such laws as, while assuring to capital a fair return for its use, will fully protect the people from unjust or discriminating charges or tariffs.

When the Territory of Washington is admitted into the Union, we ask that the boundaries be extended to include North Idaho.

A Prohibition ticket was also in the field. At the November election the Republican candidates were successful, changing a Democratic plurality of 2,200 in 1886 to a Republican plurality of over 7,300. For Delegates, Allen received 26,291 votes; Voorhees, 18,920; and Roger S. Greene (Prohibition), 1,137. At the same election, members of the Territorial Legislature for 1889 were chosen. The Republicans elected 11 of the 12 members of the Council, and 21 of the 24 members of the Lower House.

WEST INDIES. British. Bahamas.—The Bahamas are a chain of islands lying between 20° 42' and 27° 34' north latitude, and 72° 40' and 79° 5' west longitude, composed of about twenty inhabited islands and an immense number of islets and rocks, comprising altogether 4,466 square miles. The principal island is New Providence. The population in 1886 was 47,278. The town of Nassau has about 5,000 inhabitants. The Governor is H. A. Blake. The commercial relations of the colony are mainly with the United States. Considerable quantities of pineapples, oranges, and bananas are exported. The public debt amounts to £83,126. The revenue in 1886 was £43,920; the expenditure, £44,629. The imports in 1886 were valued at £189,410, and the exports at £150,390. The total tonnage entered and cleared in the same year was 209,996.

Barbadoes is in latitude 13° 4' north, longitude 59° 7' west, and is the most windward of the Caribbee Islands. It is nearly 21 English miles long by 14 in breadth. The population of the island is 180,000. The Governor is Sir Charles C. Lees. Almost the sole productions are sugar and molasses. In 1886 the island exported 45,768 hogsheads of the former and 33,218 puncheons of the latter. The public debt does not exceed £29,800. The revenue in 1886 was £136,286, and the expenditure £136,628. The total imports reached £863,491; the exports, £739,911. The aggregate tonnage of vessels entered and cleared in 1886 was 916,242.

Bermuda.—The "Bermudas" form a group of about 300 small islands in the western Atlantic Ocean, in latitude 32° 15' north and longitude 64° 51' west. The Governor is Lieut.-Gen. Thomas Lionel John Gallwey. The population in 1886 was 15,177; that of Hamilton, the capital, 2,100. The public debt in 1886 was £2,714; the revenue, £30,518; and the expenditure £28,432. The chief products are early potatoes, onions, tomatoes, and beets, which are sent to New York. The imports in 1886 were valued at £279,190; the exports, £78,546. The total tonnage entered and cleared in the same year was 281,528.

British Guiana.—This colony is on the South American Continent, extending from east to west about 200 miles. It includes the settlements of Demerara, Essequibo, and Berbice. Its area is about 109,000 square miles. About 130 square miles are under cultivation. The Governor is Charles Bruce. The capital is Georgetown, with 52,000 inhabitants. The chief product is sugar, there being, in 1886, in active operation, 105 sugar-estates, cultivating 76,203 acres. The population of the colony in 1886 was 274,311, of whom 74,026 were aborigines; 94,782 East Indians; 3,346 Chinese; 11,847 Portuguese; and 4,231 negroes. The public debt, on Dec. 31, 1886, was £446,700. The revenue in 1886 was £446,025 and the expenditure £476,964. The imports in 1886 were valued at £1,436,297; exports, £1,842,585. The tonnage of shipping entered and cleared in 1886 was 627,845.

Jamaica, an island in the Caribbean Sea, southward of the eastern extremity of Cuba. The Cayman Islands are dependencies of Jamaica, and have an area of 89 miles. The population of Jamaica in 1886 was 620,000, the number of whites not exceeding 15,000. The population of Kingston, the capital, is 38,566. The Governor is Gen. Sir H. W. Norman. The chief crops are sugar, coffee, ginger, and pimento; and the exports comprise, in addition to those products, rum, dye-woods, and fruit. There are 150 acres of Government cinchona-plantations. The number of sugar-estates in operation is 198. The public debt amounts to £1,552,543. The revenue in 1886 was £564,375; the expenditure, £582,735. The imports in 1886 were valued at £1,325,603; the exports at £1,280,118. The amount of shipping entered and cleared in 1886 was 881,516 tons.

Trinidad.—This island is about sixteen miles eastward of Venezuela, and is separated from the continent by the Gulf of Paria, into which fall the northern mouths of the Orinoco. The colony will henceforth include Tobago. The population in 1886 was 178,270; that of Port of Spain, the capital, being 31,858; of San Fernando, 6,335. The total length of railroads in operation, all Government property, is 51½ miles. There are 63 miles of telegraph. The public debt amounts to £571,880. The revenue in 1886 was £453,407; the expenditure, £443,503. The imports in the same year were valued at £2,503,514; the exports at £2,509,140. The amount of shipping entered and cleared in 1886 was 1,196,076 tons.

British Honduras, a colony on the eastern coast of Central America, bounded north by Yucatan, west by a straight line drawn from the rapids of Gracias-á-Dios on the river Sarstoon to Garbutt's Falls on the river Belize, and thence due north to the Mexican frontier. The area is 7,562 square miles. The population does not exceed 30,000; that of the chief port, Belize, being 5,767. The Governor is K. T. Goldsworthy. The public debt amounts

to \$268,750. The revenue in 1886 was \$271,810; the expenditure, \$302,775. In the forests and wilds are found the cedar, rose-wood, bullet-tree, faustic, lignum-vitæ, sapodilla, Santa Maria, iron-wood, red and white pine, India-rubber, and gutta-percha trees. The coconut flourishes, as do also the cahoon-plant and the ground-nut. The cultivation of fruit (bananas and plantains) and its shipment to New Orleans, are extending and proving remunerative. Arrangements are being made to ship fruit to the European markets, in steamers fitted with refrigerating apparatus. The chief industry is wood-cutting, now 200 years old; 3,000,000 feet of mahogany and 17,000 tons of logwood are on an average exported annually. There are 61 sugar-mills and large fruit-plantations. The chief exports are logwood, mahogany, sugar, fruit, India-rubber, tortoise-shell, and sarsaparilla. The imports in 1886 were valued at \$1,179,813; the exports at \$1,400,234. The shipping entered and cleared in 1886 was 237,254 tons.

French.—*Guadeloupe* and its dependencies have an area of 1,870 square kilometres; the population numbering 182,619. The Governor is M. Le Boucher. The public indebtedness is 1,001,000 francs; the budget for 1886 estimated the income at 4,158,000 francs, and the outlay at the same sum. The home Government spent on the colony, in the same year, 2,118,000 francs. The imports of merchandise in 1886 amounted to 17,500,000 francs; the exports to 16,300,000. There entered the harbors 417 sea-going vessels. During the fiscal year 1887 the colony exported 45,646 tons of sugar in crystals, and 2,269 tons of brown sugar; during 1888 the amounts were respectively 40,878 and 1,690 tons. The rum exportation was 2,904,166 litres in 1887, declining to 2,636,322 in 1888. The molasses importation declined from 832,280 litres in 1887 to 184,926 in 1888. In January, 1889, the General Council of Guadeloupe passed a law favoring importation into the colony of certain manufactures of the mother-country, by fixing higher duties on articles made outside of France. Thus the duty on foreign cotton goods is doubled, the duties on shoe-leather and boots and shoes are materially raised, as are also those on butter, wines, and codfish. By way of reciprocity, the home Government is urged to reduce the duties now levied in France on coffee, cocoa, vanilla-beans, and pimento, of colonial growth.

Martinique covers 988 square kilometres, and the population is 175,755. The Governor is Albert Grodet. The island chiefly produces sugar, the yield of which in 1888 was 50,000 tons. The public debt does not exceed 435,000 francs; the budget for 1886 showed expenditures to the amount of 4,584,000 francs. The home Government, in 1886, spent on the colony 2,187,000 francs. The import of merchandise reached 23,700,000 francs in 1886, while the export amounted to 20,400,000 francs. The

number of sea-going vessels entering in the same year was 897.

French Guiana is still a penal colony. The climate being considered unhealthful, it attracts but little immigration, in spite of its exuberantly fertile soil and manifold resources, among which placer and quartz gold are prominent. The population (exclusive of the wild Indians) is only 26,905. The Governor is M. Gerville-Réaché. The colony has no public debt. The budget for 1886 showed an outlay of 2,123,000 francs, the home Government at the same time spending on the colony 3,266,000 francs. The import of merchandise was 7,200,000 francs; the export, 4,700,000 francs. There entered, in the same year, the port of Cayenne, 86 sea-going vessels.

Spanish.—*Porto Rico* is the lesser of the Spanish Antilles. (For area and population, see "Annual Cyclopædia" for 1885.) The Governor and Captain-General is L. Tabán. The American Consul at St. Johns is Edward Conroy. The island is in a remarkably prosperous condition, and continually attracts immigration from Spain, the Canary Islands, and the other West Indies. The population of the leading cities is as follows: Ponce, 37,545; San German, 30,146; Mayagüez, 26,446; Arecibo, 25,457; Naguabo, 24,912; St. Johns (the capital), 23,414. A railroad is to be built to connect the above-named ports and thus encircle the entire island. It will measure 546 kilometres. The cost is estimated at 50,000,000 francs, on which the Government guarantees an annual interest of 8 per cent. In 1888 there were in operation 833 kilometres of telegraph, the number of offices being 35. The colonial budget for 1888-'89 fixes the expenditure at \$3,973,491, and the revenue at \$3,863,100. The peninsula and foreign trade movement in 1886 was: Imports, \$11,116,543; exports, \$10,293,544. The chief articles exported were: Sugar, 59,333 tons; coffee, 16,761 tons; molasses, 20,086 tons; tobacco, 2,053 tons. In 1887 the export of sugar increased to 81,355 tons. The number of vessels entered Portorican ports in 1886 was 1,374, with a tonnage of 96,855. The American trade with Porto Rico has been as follows:†

FISCAL YEAR.	Imports into the United States.	Domestic exports from the United States
1886	\$4,594,544	\$1,676,929
1887	4,661,690	1,701,241
1888	4,412,483	1,920,358

The Spanish Transatlantic Steamship Company began on Oct. 30, 1888, a new steamship service between New York and Porto Rico.

WEST VIRGINIA. State Government.—The following were the State officers during the year: Governor, E. Willis Wilson, Democrat; Secretary of State, Henry S. Walker; Treasurer, William T. Thompson; Auditor, Patrick F. Duffey; Attorney-General, Alfred Caldwell; Superintendent of Free Schools, Benjamin S. Morgan; President of the Supreme

Court of Appeals, Okey Johnson; Judges, Thomas C. Green, Adam C. Snyder, and Samuel Woods.

Finances.—The following statement shows the operations of the State treasury for the biennial period ending Sept. 30, 1888; Receipts for the fiscal year ended Sept. 30, 1887, \$1,316,020.58; balance at the end of the preceding year, \$368,001.80; making a total of \$1,684,022.38; disbursements during the same period, \$1,324,116.55; balance at the end of 1887, \$359,905.83. Receipts during the year ended Sept. 30, 1888, \$1,205,119.71; balance at the end of preceding year, \$359,905.83; making a total of \$1,565,025.54; disbursements during the same period, \$1,227,288.98; balance at the end of 1888, \$337,736.56.

The balance in the State fund on Sept. 30, 1888, was \$52,974.80; in the general school fund, \$279,811.16; and in the school fund, \$4,950.60.

During the two years 1887 and 1888 it became necessary, in order to meet unusually large appropriations, to borrow \$143,000, of which sum \$125,000 was borrowed from banks and \$18,000 from the board of the school fund, all of which amounts have since been paid, and in addition thereto the sum of \$67,545.46, on account of claims filed by sheriffs prior to 1885. There has also been paid \$7,000 on account of the \$59,000, which was borrowed from the board of the school fund during 1885 and 1886.

There was expended on account of criminal charges during the fiscal year ending in September, 1887, \$117,632.46, and for the year ending in September, 1888, \$65,882.87.

The assessment of property in the State for 1887, was as follows: Real property, \$118,181,936; personal property, \$43,978,803; railroad property, \$15,185,650. For 1888 the assessment was: Real property, \$119,414,434; personal property, \$44,469,225; railroad property, \$15,501,670. The past six years have shown an increase in the wealth of the State, especially in railroad property, which has grown in value from \$8,458,904 to \$15,501,670. Real property has increased from \$106,958,137, and personal property from \$39,637,735.

Education.—The number of youth in the State between six and twenty-one years, according to the enumeration of 1887, was 249,178; according to that of 1888, 256,360. The number enrolled in the free schools for 1887 was 179,507; for 1888, 189,251. For 1887 the average daily attendance was 108,293, and for 1888 122,020. There were 4,603 schools of all grades in 1887, and 4,816 in 1888, an increase of 216; 5,089 teachers were employed in 1887, and 5,238 in 1888. The number of school-houses in 1887 was 4,465; in 1888, 4,567. The average length of the school year increased from four months and nineteen days in 1887 to five months and two days in 1888. The average salary per month paid teachers holding number one certificates for 1887 was \$31.52; for 1888 it was

\$33. The same salary was paid males and females for the same grade of work. The State also supports six normal schools and a State University.

Immigration.—The first organized movement to promote immigration to the State was begun during the year. On February 29, at the invitation of the Chamber of Commerce of Wheeling, about 1,000 business men of the State met in that city and organized the West Virginia Immigration and Development Association, said association to have in each county a county auxiliary, to be organized as soon as practicable by the representatives of each county in this convention, the necessary steps to be taken to organize the counties not here represented.

Election Frauds.—The Governor says, in his biennial message to the Legislature, in 1889:

Reproach has been cast upon our State as never before by illegal, fraudulent, and corrupt voting in almost every county within its borders. This is so palpable that "he who runs may read." The capitations of 1884 were 133,522, and the entire vote, after the most active political campaign ever made in the State, 137,527. The capitations of 1888 were 147,408, and the vote 159,440. The difference in the capitations and the vote in 1884 was 4,065, in 1888 it was 12,032. This shows an increase of votes in four years of 21,853, which, if legitimate, would indicate a population of 900,000, and an increase in four years of much more than 100,000. It is certain that no such increase has taken place.

The Governor advises, among other remedies, the passage of a registration act, although its operation would seem to be limited, if not destroyed, by the following provisions of the State Constitution:

No citizen shall ever be denied or refused the right or privilege of voting at an election, because his name is not, or has not been registered or listed as a qualified voter.

The Legislature shall never authorize or establish any board or court of registration of voters.

Freshets.—On July 11 and 12, in consequence of heavy rains, an unusual rise and overflow of many of the rivers of the State occurred, inundating a large territory and sweeping away bridges, buildings, crops, and other property. The rise of the waters was in many streams greater than ever before known. Scarcely a week later, on July 19, the city of Wheeling and vicinity was visited by a storm of great fury, though scarcely of an hour's duration, which destroyed bridges in the city limits, eight people thereon being drowned, and caused great loss of property. On August 21, another destructive storm swelled the rivers and swept away bridges and property in the northern portion of the State. The homes and entire property of many were swept away, and whole villages were for a time dependent on the charity of their neighbors.

Political.—The earliest nominations for State officers were made by the Union Labor party, which met in convention at Charleston on May 3, and selected as candidates, S. H. Piersol for Governor; J. H. Burt for Auditor, who later

withdrew from the ticket and gave his support to the Republicans; S. P. Hawver for Treasurer; D. D. T. Farnsworth for Attorney-General; and O. D. Hill for Superintendent of Free Schools. The platform included the following:

We favor the enactment of such laws as will cause the operator to pay the miner for all merchantable coal.

In releasing the revenues necessary to carry on the State Government the property of corporations shall have no advantage over property owned by individuals.

We favor the enactment of such laws in general as shall so change our laws as to place them abreast of those of the most populous and prosperous States of the Union; that shall remove the last vestige of antiquated mossback laws that hamper commerce, retard development, depreciate capital, stand as a menace to immigration, and chain West Virginia and her destiny to the past, not the future.

The passage of the miners' bill at the last session of the Legislature, containing the conspiracy feature, is a blow to organized labor, and passed designedly for the purpose of overawing those who are connected therewith.

On July 31, the Prohibitionists met at Parkersburg and nominated a State ticket headed by Thomas R. Carskadon for Governor.

The Democratic State Convention was held at Huntington on August 16. Its nominees were: A. B. Fleming for Governor, Patrick F. Duffy for Auditor, W. T. Thompson for Treasurer, Alfred Caldwell for Attorney-General, B. S. Morgan for Superintendent of Free Schools, and Henry Brannon and J. T. English for Judges of the Supreme Court of Appeals.

The platform approved President Cleveland's message, and the Mills Bill, the present State Administration, and that of the United States; denied that the Democratic party was for free trade, and declared for the St. Louis platform.

On August 22, the Republicans held their State Convention at Charleston, and nominated Gen. Nathan Goff for Governor by acclamation. Other candidates upon the ticket were: For Auditor, George M. Bowers; for Treasurer, Hiram Lewis; for Attorney-General, William P. Hubbard; for Superintendent of Schools, F. B. McLure; for Judges of the Supreme Court of Appeals, John W. Mason and H. C. McWharter. The resolutions approve the Chicago platform, demand protection not only for manufactures but for raw materials and for all farm-products, demand a tax of \$200 or more on immigrants for the protection of American labor, and oppose the importation of contract or pauper labor.

The following were also a part of the platform:

Whereas, The passage of the miners' bill by the Democratic Legislature of 1887, containing the conspiracy feature, was a direct blow at organized labor, and was passed with the design and purpose of overawing those who are connected therewith; *Therefore, be it resolved*, We pledge our party to repeal so much of Chapter 50 of the Acts of 1887 as refers to conspiracy, and also provide that the inspector shall be a practical miner instead of a civil engineer, as is now required by law.

On September 12 a convention of about fifty delegates, calling themselves the "Colored In-

dependents," met at Charleston and placed in nomination presidential electors and a State ticket containing the following names: For Governor, W. H. Davis; Auditor, E. A. Turner; Treasurer, Alfred Whiting. The resolutions adopted denounce the Republican party, ask the Legislature to prevent discriminating branches of study in the public schools; oppose monopolies, corporations, trusts; oppose taking the revenue off whisky and tobacco, and ask that all necessities be placed upon the free list and that the tariff be reduced to prevent a surplus.

An address was issued to the colored voters, urging them to desert the Republican party and to stand together.

At the November election the contest was close, and the result remained in doubt until returns were received from the last election district. It then appeared that, while the Democrats had elected their candidates for presidential electors and nearly all their State ticket, the Republican candidate for Governor had a plurality of 106 votes on the face of the returns. As certified by the local officials, the vote stood: Goff, 78,904; Fleming, 78,798; Carskadon, about 1,000; and Piersol, about 1,400. The official vote for Treasurer was: Thompson, 78,969; Lewis, 78,127; Hawver, 1,399; and Bodley, 1,035. For Auditor: Duffey, 78,855; Bowers, 78,201; Sayre, 1,438; Bains, 1,027. For Attorney-General: Caldwell, 78,687; Hubbard, 78,520; Farnsworth, 1,579; Myers, 935. The Democratic candidates for Superintendent of Free Schools and for Supreme Judges were also elected. The Legislature chosen at the same time will contain in the Senate, 12 Democrats, 13 Republicans, and 1 Union Labor man, and in the House, 34 Democrats and 31 Republicans, giving the Democrats on joint ballot a majority of one vote. On the face of the returns, Democratic Congressmen were elected in the First and Second districts, and Republicans in the Third and Fourth, in each case by narrow pluralities. The Democratic candidate in the First District was elected by 16 votes, while in the Third the Republicans claimed only 13 more votes than their opponents. On December 26, Gov. Wilson issued certificates of election to the Democratic candidates in the First and Second districts, but refused to issue any for the other districts, alleging that, as there was a contest over the returns in those districts, he could not legally do so.

At the same election, three constitutional amendments were submitted to the people, and all of them were rejected. The most important one, prohibiting the manufacture and sale of liquor, failed of adoption by about 35,000 votes.

WILHELM I, Emperor of Germany, born in Potsdam, Prussia, March 22, 1797; died in Berlin, March 9, 1888. He was the second son of Friedrich Wilhelm, Crown-Prince of Prussia, and his wife Princess Luise, daughter of the Grand Duke of Mecklenburg-Strelitz.

Prince Wilhelm, as he was called (his full name being Friedrich Wilhelm Ludwig) was pronounced a weakly child by the physicians, and until he grew to manhood his health was a subject of solicitude. His father ascended the Prussian throne as Friedrich Wilhelm III when the prince was six months old. In his parents' retreat, at Paretz, Wilhelm was accustomed to simple living, and from the teachings of his philosophical father and the Rev. Dr. Delbrück, his tutor, he imbibed high notions of duty. In Berlin he was made familiar with another life, that of a luxurious and profligate aristocracy, inflated with pride and arrogance. After the defeat at Jena, on Oct. 14, 1806, the King and his family became exiles from Prussia. The two princes were taken to their mother at Schwedt, in Pomerania, and with her took their flight in an open carriage along the sea-shore in mid-winter to Stettin, Königsberg, and Memel. Wilhelm and the Queen both sickened with typhus fever before reaching Memel, whence they were obliged, six months later, to emigrate to Tilsit, where the unfortunate Queen, when forced to receive Napoleon, replied to his taunts that it was a pardonable error in the descendants of Frederick the Great to overrate their strength. From the day when the Prussian and Austrian armies were defeated by the "upstart" till she died of a broken heart in 1810, when the foe was still unexpelled, the proud and patriotic Luise never ceased to admonish her sons to revenge the humiliation of Jena when the opportunity came, and redeem the glory of Prussian arms. Friedrich Wilhelm III was restored by the grace of the victor to his reconstructed and diminished kingdom in 1809.

Wilhelm from his earliest childhood was interested in military forms and trappings. Having no outlook for the succession, he aspired to be a distinguished general. He was made a lieutenant in 1807, and Capt. Riepe, his military instructor, praised his rapid acquisition of technical details. In the war of the allies against Napoleon his father took him to the field for six weeks, saying that he was too weak in health for a longer campaign, and at Bar-sur-Aube, Feb. 27, 1814, sent him to the front to learn the name of a Russian regiment that was gallantly advancing. The prince's coolness under fire won for him the coveted Iron Cross and the Russian order of St. George.

Friedrich Wilhelm, the elder brother, was a philosopher and philanthropist, like his father, and a gay, companionable, and witty man. Wilhelm was not liked. He was narrow-minded and morosely set in his opinions, regarding politics and the state with the instincts of a "drill sergeant" from the standpoint of absolutism. On June 11, 1829, Prince Wilhelm married Augusta, daughter of the Grand Duke of Saxe-Weimar. The marriage was unhappy, because the prince was deeply attached to another woman, the Princess Radziwill, and was compelled by his father to marry the Weimar princess

against his inclination. In 1840 Friedrich Wilhelm IV came to the throne, and his soldierly brother, who was popular only among military men, was acknowledged as his heir.

As Prince of Prussia Wilhelm was accorded an important influence on the decisions of Government. He strengthened the Conservative resolutions of the King, but could not withhold him from granting a constitution in 1847. The irresolute monarch was induced by his brother and other Absolutist advisers to nullify the charter that he had signed, and to declare at the opening of the Diet that no sheet of paper should stand between him and his subjects. The revolution of 1848 followed, and the ruthless action of the military under Prince Wilhelm's orders could not avert the enactment of a genuine constitution. He would have "riddled Berlin with bullets" before yielding had he been king. The "cartridge prince," as he was nicknamed for that expression, was the special object of popular hatred and fury. "The Prince of Prussia was his murderer," cried a woman whose son had fallen at the barricades, walking through the streets beside the litter on which the corpse was borne to the burial-ground. "I will remember that," threatened the prince, when a stone aimed at his head crashed through his palace-window. The King left Berlin, against the strenuous protests of his brother, and the troops were then withdrawn. "No music while our sons are dying!" shouted the populace, when the band of the guards struck up a martial strain. The mob hunted the prince in his palace, and hung from the balcony the black, red, and gold flag, emblematic of German unity and liberty, while Prince Wilhelm and his wife slunk through the back streets of Berlin, cold and hungry, until they could reach the house of a friend. Disguised in the dirty clothes of a laborer, the prince made his way on foot to Hamburg, and escaped to England. The King cloaked his ignominious flight with the pretense of an important political mission. Soon afterward the reaction set in, and the prince, under the protection of a mandate for the National Parliament at Frankfort, went back to Germany, and appeared in the Assembly in his general's uniform. When he returned to Berlin the Prince of Prussia professed a conversion to constitutional principles, and promised to support his brother in the course in which the spirit and the necessities of the time had compelled him to embark. The royal pledges were violated, and the National Assembly was broken up by the military when it insisted on parliamentary government. The King then proclaimed a constitution devised by the upholders of divine right, giving Parliament only advisory powers in legislation and supervision of the finances, while it restricted individual liberty and extended the powers of the police. Prince Wilhelm openly sided with the King against the National Assembly, applauded the refusal of a parliamentary system, objected to

the conferring of any share in legislation on an assembly elected by universal male suffrage, and finally placed himself at the head of the Prussian army that was sent to disperse the Frankfort Parliament and put an end to popular government by defeating the national army in Baden. But the police *régime* under the Manteuffel, Westphalen, and Hinckeldey ministries found no favor in the eyes of the upright prince, and the abasement of Prussia before Russia and Austria so incensed him that he would have gone to war with Russia, though the Emperor Nicholas was his brother-in-law and the guardian of monarchical principles in Europe, rather than renounce Prussian supremacy in Germany and accede to the resuscitation of the old Bund, as was done in the treaty of Olmütz. When the Crimean War broke out, in 1854, he dissuaded his brother from making an alliance with the power that had so humiliated Prussia.

After the peace of Paris was signed in 1856, King Friedrich Wilhelm, who began to show symptoms of insanity, resigned the direction of public business into the hands of the Prince of Prussia. The decree was twice renewed, and when the King's condition grew worse, Prince Wilhelm was appointed Regent on Oct. 9, 1858. Disgusted with the "white terror," the Prince Regent determined to create a Liberal administration, to the head of which he called Prince Hohenzollern-Sigmaringen, by whom, with the aid of his colleague Rudolf von Auerswald and others of like opinions, police espionage and repression were abolished. When Napoleon III made war on Austria in 1859 the Emperor Franz Josef gave up the Italian provinces and hastened to conclude peace as soon as he heard of the proposal of Prussia in the Diet to mobilize the German armies and send them to the Rhine, preferring to suffer the diminution of his own territory rather than aid in the aggrandizement of his rival for military supremacy in Germany. On the death of Friedrich Wilhelm the Prince-Regent succeeded to the throne as William I, Jan. 2, 1861. He had already begun to prepare for the struggle with Austria, being aided in the development of his policy by the genius of Otto von Bismarck. The German people had no predilection for a military state, and in the Prussian and German Parliaments it was proposed to convert the armies into a militia with elective officers following civil occupations in time of peace, a scheme which the Prince of Prussia had opposed in an anonymous pamphlet. In 1860 Bismarck brought in a budget authorizing the doubling of the army. The minister had incurred great unpopularity by aiding Russia to suppress the Polish insurrection, and the Assembly rejected the military bill by a large majority, whereupon Bismarck declared that, as the House of Lords had accepted the budget rejected by the Chamber, there was no properly authorized budget, and the Government must therefore frame one to

suit the exigencies of the case. This singular interpretation of the Constitution was sustained by the supreme tribunal, packed for the purpose, and for four years the administration was carried on without a properly voted budget. The people protested against the collection of taxes, but did not openly resist the despotism of the Hohenzollern and his Prime Minister. The terror and dismay that hung over the country in this period was not dispelled by the successes of the Danish war and the acquisition of Schleswig-Holstein in 1864, and when Prussia went to war with Austria in 1866 for the retention of the duchies, the Prussian people mistrusted their rulers and feared a bargain with Napoleon for the cession of the Rhine frontier. The sudden and complete victory of the North German armies, paving the way to German unity, dissipated all doubts, and nearly reconciled the people to the usurpation of their liberties, since it had led to the triumph of their national ambition. Parliament at once voted an indemnity for all military expenditure. King Wilhelm and his counselors began forthwith to prepare for the greater war that must ensue from the refusal of the Emperor Napoleon's demand for the cession of Mayence and the Rhine frontier of 1814, as compensation for German unity and the baffling of his subsequent designs on Belgium and Luxemburg. King Wilhelm concluded secret offensive and defensive alliances with each of the South German states after the campaign of 1866, and therefore acceded without demur to the article placed in the Treaty of Prague to appease French susceptibilities, to the effect that those states should maintain "an international and independent position." The Franco-Prussian War of 1870 was planned by King Wilhelm, under the guidance of Count Bismarck, as the means of consolidating the power of Prussia and completing the political unification of Germany. Count Moltke, as early as the winter of 1868, elaborated a complete scheme for the invasion of France. Napoleon III more confidently and more hastily rushed into the war in the expectation of crushing the military power of Prussia and retrieving his political position at home. Both governments were eager to seize on the dispute about the candidacy of Prince Leopold of Hohenzollern for the Spanish throne, as a device for kindling popular enthusiasm in the war. King Wilhelm, accustomed from his youth to a soldier's fare, marched across the frontier with his armies at the age of 73, frequently exposed himself to the enemy's fire in the hottest battles, and by his presence inspired his troops with irresistible courage.

On Jan. 18, 1871, the 170th anniversary of the coronation of the first King of Prussia, the victorious monarch was acclaimed German Emperor by the princes of the German states and the commanders of the army, in the Hall of Mirrors at Versailles. As soon as the war was over, and the German Empire established

WILLIAM II, EMPEROR OF GERMANY

on a firm foundation, Prince Bismarck engaged his master in a conflict with the Catholic Church, considering the lately promulgated doctrine of papal infallibility a menace to the state, and the attitude of the clericals in the Reichstag an obstacle to the amalgamation of the various elements composing the Empire. When the era of the Kulturkampf was ended, and the force of Separatist resistance had spent itself, the republican and socialistic ideas that were an important element in the revolutionary movement of 1848 asserted themselves in the Social-Democratic agitation. A desperado named Hödel, inflamed with revolutionary passion and desire for notoriety, fired at the Emperor as he was passing along the avenue Unter den Linden, on May 11, 1878. The ministry presented a bill to suppress the Socialist movement, which the Reichstag rejected by a majority of nearly 200 votes. Dr. Nobiling, an educated Socialist, moved by the same impulses that actuated Hödel's attempt, fired with buckshot at the Emperor in his carriage on June 2, and wounded him severely. The Reichstag was at once dissolved, and a new one passed Prince Bismarck's anti-Socialist bill. The law expired in 1881, and has been repeatedly renewed and strengthened. The Social-Democratic party, by the unsparing use of repressive powers, was disorganized, but not destroyed. At length the Emperor and his Chancellor turned to constructive legislation, in order to promote contentment and avert the danger of revolution, devising a scheme of social reform that is intended to make the lot of the laboring-man easier and to secure him against want. The military system has been developed and extended on the lines approved by Wilhelm I. The creation of the Prussian army he considered the chief task of his life. His foreign policy was shaped so as to retain the acquisitions of the French war, and, to guard against a combined attack from France and Russia, a military alliance was entered into with Austria-Hungary and Italy.

The Emperor Wilhelm was a soldier in all his habits. He slept on a hard couch, ate simple food, drank sparingly of wine, and used no tobacco. He was pious and orthodox in his religious faith.

WILHELM II, Emperor of Germany, born in Berlin, Jan. 27, 1859. He is the eldest son of Frederick III of Prussia, the second Emperor of Germany, and of his wife Victoria, the Princess Royal of England. He early developed a liking for military affairs, and was encouraged in such tastes by his grandfather, learning many details of tactics, drill, and discipline before he could read. He imbibed also the old Emperor's monarchical ideas of government and his dislike for popular representative government. His earliest teacher was an English governess. He was sent to Bonn to study political science, jurisprudence, and mathematics, and in 1882, by his grandfather's directions, was placed with Dr. Aschenbusch,

president of the province of Brandenburg, to learn the practical details and the administrative routine of the civil service. He also had instruction from Prince Bismarck, whom he visited once a fortnight. In military matters he became as proficient as his grandfather. Prince Wilhelm (whose full name is Friedrich Wilhelm Victor Albrecht), married the Princess Augusta Victoria, daughter of Friedrich, Duke of Schleswig-Holstein, on Feb. 27, 1881. The family consists of five sons, of whom the eldest, the Crown-Prince Friedrich Wilhelm Victor August Ernst, was born on May 6, 1882. For portraits of the Emperor Wilhelm II and the Crown-Prince, see the "Annual Cyclopædia" for 1887, page 321.

WISCONSIN. State Government.—The following were the State officers during the year: Governor, Jeremiah M. Rusk, Republican; Lieutenant-Governor, George W. Ryland; Secretary of State, Ernst G. Timme; Treasurer, Henry B. Harshaw; Attorney-General, Charles E. Estabrook; Superintendent of Public Schools, Jesse B. Thayer; Insurance Commissioner, Philip Cheek; Railroad Commissioner, Atley Peterson; Chief-Justice of the Supreme Court, Orsamus Cole; Associate Justices, William P. Lyon, David Taylor, John B. Cassoday, and Harlow S. Orton.

Finances.—On Oct. 1, 1886, the balance in the treasury aggregated \$736,720.24; the total receipts for the succeeding biennial period were \$5,469,996.10, and the disbursements \$5,447,072.82, leaving a balance in the treasury on Sept. 30, 1888, of \$750,702.44. Of this balance, there was in the general fund \$304,139.09 and in the school fund \$151,241.85. The receipts of the general fund for the fiscal year 1886-'87 were \$1,805,122.76; and the disbursements \$2,171,201.79; for the year 1887-'88 the receipts were \$2,284,513.26, and the disbursements \$2,099,984.99. The receipts from the State tax for the former year were \$902,484.88; for the latter year, \$996,504.41. The tax on railroads yielded in the former year \$763,994.56; in the latter, \$1,068,632.96. The State debt on September 30 amounted to \$2,251,000, all of which is held by State funds.

Statistics.—The assessed valuation for 1888 is as follows: Personal property, \$125,922,683; city and village lots, \$152,545,964; other real estate, \$302,996,102; total, \$581,264,749. There were assessed 404,036 horses, 1,236,452 cattle, 723,639 sheep and lambs, and 540,231 swine.

Education.—The whole number of persons enrolled between the ages of four and twenty years, June 30, 1888, was 567,702, and of this number only 265,477 were reported as attending the public schools. The following amounts were paid by the State for educational purposes in 1888: Support of university, \$218,856.71; normal schools, \$99,229.58; common and high schools, \$3,509,786.75.

In 1885 the Legislature passed an act giving to women the right of suffrage in municipal elections, on all matters relating to schools.

The State Supreme Court, in January, interpreted this to allow women to vote for school-officers, but not for such other municipal officers, like the mayor, as only indirectly controlled educational matters.

Charities.—Wisconsin has a peculiar system for the maintenance and care of its insane. This system includes two exclusively State institutions and the Milwaukee County Asylum, which is both governed and maintained in part by the State. These institutions have a normal capacity for the care of 1,370 patients, and at the close of the fiscal year had 1,425 inmates.

In addition to these hospitals proper there are now 16 county asylums for the care of the chronic insane, with two others in process of erection. The combined capacity of these asylums will be sufficient to accommodate 1,505 inmates. These asylums, while they are maintained and managed by the counties exclusively in which they are situated, yet when conducted in a manner satisfactory to the State Board of Charities and Reform, become entitled to assistance from the State at the rate of \$1.50 a week for each inmate.

The School for the Deaf cost the State \$35,515.30 for 1887, and \$37,609.29 for 1888. The number of pupils in attendance in 1887 was 198; in 1888, 206. The School for the Blind maintained 73 pupils in 1887 at a cost of \$19,630.52, and 84 pupils in 1888 at a cost of \$20,365.41.

The last two Legislatures made provision for the establishment and maintenance of a State public school at Sparta. There has been expended for that institution \$95,000 for lands and buildings—\$30,000 in 1885, and \$65,000 in 1887. Five substantial cottages and one large main building have been erected, and surrounding these is a farm of 165 acres, nearly all under cultivation. The cost for current expenses in 1888 was \$20,128.48. The school was opened Nov. 13, 1886, and from that time to Sept. 30, 1888, 301 children were received. At the close of the present year there were 184 remaining in the school.

Prisons.—The average number of prisoners confined in the State prison in 1887 was 448; in 1888, 441. The total expense for the support of the prison for the past two years was \$59,325.53 for 1887, and \$61,073.87 for the fiscal year ending Sept. 30, 1888. Total for the two years, \$120,399.40. Of this amount \$99,187.96 was received from the prison-labor contractor. This leaves the net cost of the prison to the State for the two years, \$21,211.44.

The Industrial School for Boys cost the State for 1887, \$45,583.12; and for 1888, \$49,104.25. The average population of the school in 1887 was 334, and in 1888, 359.

Railroads.—At the close of 1888 the entire mileage of the State was 5,178 miles, an increase in two years of 400 miles. Of this, 340 miles were built in 1887 and 60 miles in 1888. The entire cost of the railroads of Wisconsin,

as reported on June 30, 1888, was \$208,867,606.27. The capital stock at the same date was \$97,393,515.86. The amount of debt, funded or unfunded, was \$117,547,909.35, or a total of capital stock and debt of \$214,941,425.21. There was earned on Wisconsin railroads for the year ending June 30, 1888, \$24,891,619.06, of which \$6,266,259.35 was for transportation of passengers, and \$17,165,959.24 for freight, and \$1,459,400.47 for mails, express, etc. There has been a decrease in the cost of freight carriage in ten years of over 50 per cent.

Fisheries.—The value of the catch of Wisconsin fishermen on the Great Lakes in 1888 was \$270,595.06; value of property, \$337,706; number of persons employed, 628. Fishing is assuming an important place among the State industries.

Militia.—The National Guard consists of three regiments, one battalion of infantry, one troop of cavalry, and one light battery, aggregating 2,282 officers and enlisted men. The expenses for 1887 were \$54,990.14, and for 1888, \$56,927.37.

Political.—Democratic and Republican State Conventions for the choice of delegates to the National Conventions were held on May 1 and 9 respectively. On May 23 the Prohibitionists, in State Convention at Madison, selected delegates to the Indianapolis Convention and nominated the following candidates for State offices: for Governor, E. G. Durant; Lieutenant-Governor, Christopher Carlson; Secretary of State, Nelson La Due; Treasurer, L. W. Hoyt; Attorney-General, Charles E. Pike; Superintendent of Public Schools, J. H. Gould; Railroad Commissioner, E. W. Drake; Insurance Commissioner, S. M. Bixby.

On July 24 a State Convention of the Union Labor party met at Oshkosh and nominated the following ticket: For Governor, D. Frank Powell; Lieutenant-Governor, Nelson E. Allen; Secretary of State, William M. Lockwood; Treasurer, Alfred Manheimer; Attorney-General, T. E. Ryan; Superintendent of Public Schools, E. W. Krackowitzer; Railroad Commissioner, John E. Thomas; Insurance Commissioner, Rittner Stephens. This ticket was changed before the election by the substitution of Kerellio Shawoan for Attorney-General, Joseph W. Stewart for Superintendent of Public Schools, and Frank J. Heines for Railroad Commissioner. Resolutions were adopted, demanding:

Taxation of all notes and mortgages.

All laws should be simplified so that there is but one law on one subject, and that worded in plain language, which will enable the people to understand the law without paying enormous fees to lawyers.

The one-man power has no place in a republic; hence all public officials, as far as practicable, should be elected by a direct vote of the people, and the voters be allowed to recall all unfaithful, inefficient, and dishonest officials.

A revision of the patent laws giving inventors a premium for their inventions and then giving the free use of such inventions to all the people, which will prevent the system of monopoly now existing, and

stop the robbery of both inventors and the people by heartless and greedy capitalists.

The Republican Convention for the nomination of State officers met at Milwaukee on Aug. 22, and on the first formal ballot chose William D. Hoard as candidate for Governor. All the other State officers were renominated. A very short platform was adopted, including the following:

With regard to the affairs of the State, they [the Republicans of Wisconsin] offer as the best guarantee of the future and the strongest claim to the continued confidence of the people, the record of the present Republican Administration and its predecessors. It is a record of the honest, economical, impartial and judicious application of sound business methods to the conduct of the various departments of the State Government.

The Democratic State Convention met at Milwaukee Sept. 5, and nominated James Morgan for Governor, Andrew Kull for Lieutenant-Governor, August C. Larson for Secretary of State, Theodore Kersten for Treasurer, Timothy E. Ryan for Attorney-General, Amos Squire for Superintendent of Schools, Herman Naber for Railroad Commissioner, and Evan W. Evans for Insurance Commissioner.

At the November election, Hoard received for Governor 175,690 votes; Morgan, 155,423 votes; Durant, 14,373; Powell, 9,196. The other candidates on the Republican ticket were also elected. The Legislature chosen at the same time will be composed as follows: Senate—Republicans 24, Democrats 6, Union Labor men 2, Independent 1; House—Republicans 70, Democrats 18, Independent 1. Democratic Congressmen were chosen in the Second and Fifth Districts, and Republicans in the remaining seven districts.

A proposed amendment to the Constitution, giving the Legislature power to prescribe the powers, duties, and compensation of the State Superintendent of Schools, was defeated, 12,967 votes in favor of it and 18,342 against it.

WYOMING TERRITORY. Territorial Government.—The following were the Territorial officers during the year: Governor, Thomas Moonlight; Secretary of Territory, Samuel D. Shannon; Auditor, Mortimer N. Grant; Treasurer, William P. Gannett, succeeded by Luke Voorhees; Attorney-General, Hugo Douzelman; Superintendent of Education, John Slaughter; Chief-Justice of the Supreme Court, William L. Maginnis; Associates, Samuel T. Corn and Jacob P. Blair, succeeded by M. C. Saufley.

Legislative Session.—The tenth Territorial Legislature was in session from Jan. 10 to March 9. Its most important legislation relative to public institutions and the Territorial finances is discussed below. The so-called "maverick" stock-law was repealed at this session, and in its stead an act was passed creating a board of live-stock commissioners, consisting of one member from each county, appointed by the Governor for two years. This board has the appointment of local stock-inspectors, who are to take up and sell estrays, mavericks, and oth-

erwise to carry out the provisions of the law, and has control of the funds derived from such sales. A law providing for a more strict observance of the Sabbath was passed. Three new counties were created—Converse from portions of Laramie and Albany Counties, Sheridan from a portion of Johnson County, and Natrona out of a portion of Carbon County. The two former were organized during the year. A law for the promotion of immigration makes the Secretary of the Territory a commissioner of immigration, and provides a small appropriation for his use in making known the advantages of the Territory. A rearrangement of legislative districts and a reapportionment of members of the Legislature was made necessary by the creation of new counties. Congress was memorialized to provide for the early admission of the Territory as a State. The bounty laws were repealed. Other acts of the session were as follow:

Authorizing the Governor to designate Arbor Day, and to encourage tree-planting.

Regulating the business of foreign mutual life-insurance companies in the Territory.

Requiring all banks (except national banks) to publish sworn statements once each quarter, regarding their financial condition, and providing penalties for receiving deposits when the bank is in an insolvent condition.

Describing lawful fences in the Territory, and providing for penalties when the provisions of the act are violated.

Making it a felony to sign any false certificate of acknowledgment or jurat.

Authorizing the semi-annual payment of interest on bonds.

Prohibiting the unauthorized wearing of the Grand Army badge and using the letters "G. A. R." for business purposes.

Requiring owners and operators of oil-lands to plug their wells so as to shut off all water from the oil-bearing rock, and to exclude the oil and gas from the water before abandonment.

Providing for the exercise of the right of eminent domain by railroad companies.

Providing for reports of Territorial officers and boards of public institutions.

Providing for the organization, management, and control of banks, banking institutions, savings-banks, and trust and loan companies.

To protect grazing lands of Wyoming from live-stock brought temporarily into the Territory from other States and Territories.

Creating the office of Territorial Engineer, and concerning appropriation of water.

Regulating the practice of pharmacy.

Providing for the release of dower by married women.

To make the mechanics' lien laws of Laramie County applicable to all parts of the Territory.

Providing a method for the taxation of live-stock on the open range.

Providing for the bonding of school districts.

Finances.—The Territorial debt at the beginning of the year was \$230, in the form of 6-per-cent bonds, issued to raise funds for the construction of necessary public buildings. It was increased to \$320,000 by the Legislature of this year, which authorized the issue of \$90,000 in 6-per-cent bonds payable in forty years. These bonds were sold at an average premium of 12 per cent.

The assessed valuation of the Territory is about \$31,000,000, or over \$1,000,000 less than in 1887. As the Legislature increased the bonded debt up to the prescribed limit of one per cent. of the valuation on the basis of the assessment for 1887, which was the latest then available, it follows that the Territorial indebtedness of \$320,000 now exceeds the one per cent. limit. The valuation of railroad property, included in the above total, was \$5,908,984, an increase of over \$150,000 above 1887. The tax-levy for Territorial purposes was increased this year from slightly over 3 mills in 1887 to $6\frac{21}{100}$ mills, apportioned as follows: General fund, $2\frac{1}{2}$ mills; Capitol-building fund,

\$30,000 this year for its completion and enlargement. For finishing and enlarging the new University building \$25,000 was appropriated. A Penitentiary building at Rawlins was also provided for by the Legislature of this year, \$30,000 being appropriated. The sum of \$5,000 was appropriated for a Poor Asylum building at Lander, which shall cost, when completed, not more than \$25,000. A building for the Deaf, Dumb, and Blind Asylum at Cheyenne has been erected, with the appropriation of \$8,000 made by the Legislature of 1886 for that purpose, but no provision has yet been made for the support or management of the institution, and the building is unused.

STATE HOUSE AT CHEYENNE.

$2\frac{1}{2}$ mills; university income-tax, $\frac{1}{2}$ mill; Territorial bond-tax, $\frac{6}{100}$ of a mill; insane asylum bond-tax, $\frac{1}{100}$ of a mill; stock indemnity fund, $\frac{1}{100}$ of a mill.

Public Buildings.—Prior to 1886 the Territory was almost without public buildings, but the Legislatures of that and the present year have provided liberally therefor. The Capitol-building, begun in 1886, was so far completed in January as to be occupied by the Legislature during the session, the sum of \$150,000 being expended in its erection. A further appropriation of \$125,000 was made this year for enlarging the building by the addition of wings. and an extra tax of $2\frac{1}{2}$ mills was imposed for 1888 and 1889 to raise this sum. The building already completed is a substantial structure of cut and dressed stone, provided with the latest modern conveniences.

The Insane Asylum building, for which \$30,000 was appropriated in 1886, received another

Education.—The latest report of the Territorial Superintendent, for the year ending with October, 1887, presents the following statistics: Number of school-houses, 124; schools, 197; male pupils, 2,890; female pupils, 2,732; teachers, 231. The average monthly salary of teachers was \$59.90. The first year of the University of Wyoming, which began on Sept. 1, 1887, was considered successful. An additional appropriation of \$25,000 for the completion of the University building at Laramie City was made by the Legislature this year, and the annual levy for its support was increased from one fourth to one half of a mill, providing an income for 1888-'89 of about \$15,500. The school and university public lands given by the Federal Government to the various States and Territories for educational purposes, do not by law become available until Statehood is attained, but, by a special law passed by Congress in August, the Territory of Wyoming is author-

ized to lease these lands for a term not exceeding five years, and a considerable increased revenue to both the school and university funds is expected from these leases.

Settlement.—The total number of acres of the public domain taken up in Wyoming, up to and inclusive of June 30, 1887, was 2,041,730; during the year ending June 30, 1888, 317,356; total, 2,359,086. This is scarcely one thirtieth of the area of the Territory.

Railroads.—The report of the Governor, dated in September, shows that 139 miles of new road were constructed during the preceding twelve months, making the total length of railroads 891 miles. The Wyoming Central has extended its road as far west as Fort Casper, or the old Platte Bridge, a distance of about 132 miles in the Territory, and for the present seems to rest there. The Cheyenne and Northern has completed the road to the Platte river in a north-westerly direction from Cheyenne, 125 miles. The Burlington and Missouri Railroad has in operation a line to Cheyenne from Sterling, on the South Platte river, 29 miles.

Coal.—Every county in the Territory has its deposits of coal, which are nowhere at such depth as to make mining expensive. No anthracite coal has been discovered. The largest mines are those operated by the Union Pacific Railroad Company. Returns from all the large companies show that the total product for 1887 was about 1,170,318 tons.

Political.—The Democratic Territorial Convention met at Cheyenne, on October 6, and nominated Caleb Perry Organ for delegate to Congress. The resolutions include the following:

The Democrats heartily favor the appointment of residents of the Territory to the Federal offices.

We desire to place ourselves on record as being emphatically opposed to the lavish use of money in our Territorial and local elections.

We believe the people of this Territory are law-abiding, and their sense of justice is sufficiently strong, with the aid of their local government, not only to maintain the public peace but to protect public and private property, and are therefore opposed to the importation of foreign police mercenaries.

On October 10 the Republican Territorial Convention met at Cheyenne, and renominated Delegate Joseph M. Carey. The platform contains the following:

The Republicans of Wyoming favor home rule, and will hail with delight the era of self-government. We now have the taxable wealth and the population necessary to support a State government, and, being therefore entitled to admission into the Union, we earnestly favor such Congressional legislation as will enable us to adopt a Constitution and secure the rights of Statehood.

We favor the adoption and enforcement of a liberal and honest policy relating to the deposition of the public lands, and we further urge the importance of securing Government aid in the construction of reservoirs in which the waters of Wyoming may be stored for the use of the people.

The Republican party is strenuously opposed to the use of money for the purpose of influencing votes, and heartily condemns this outrageous practice, which was so early introduced into our Territorial elections by the Democracy.

Both parties declare their strong opposition to Chinese immigration. At the November election, Carey received 10,451 votes, and Organ, 7,557. Members of the next Territorial Legislature were chosen as follow: Senate, Republicans, 5; Democrats, 7; House, Republicans, 17; Democrats, 7.

Y

YOUNG MEN'S CHRISTIAN ASSOCIATION. The "Year-Book" of the Young Men's Christian Association for 1888 gives lists of 1,250 associations in America, and 3,840 in the world. Of the American associations, 77 are engaged specially in work among railroad men, 10 among German-speaking young men, 273 in colleges, 29 among colored men, and 18 among Indians; 226 make mention in their reports of classes in from one to fifteen branches of study, 287 of special attention to physical culture through gymnasiums and other sports, 63 of special work among commercial travelers, 158 of organized boys' departments, and 435 of woman's auxiliaries. Among other special services spoken of are 398 Bible-classes, 367 Bible training classes, and 661 weekly prayer-meetings. The associations employ 752 men for their entire time as secretaries and assistant secretaries. The whole number of members in the American associations is 175,000, the buildings owned by them are valued at \$5,609,265, and their entire property at \$7,261,658. The expenditure in 1887 was \$1,181,338 in

local work, and \$104,949 in general work. From other countries there were reported to the International Conference at Stockholm:

COUNTRIES.	Associations.	Members.
Great Britain and Ireland . . .	601	51,518

The associations of the world are represented in an International Union, which has a Central Executive Committee composed of delegates from each nationality, with a president, secretary, and offices at Geneva. Through this committee are arranged the triennial World's Con-

ferences, of which the eleventh, in Stockholm, was opened Aug. 15. About 400 delegates attended; Bishop K. H. Gez von Scheele, of Visby, Sweden, was president. The review of the association work showed that it had increased largely in Germany, Switzerland, Holland, Norway, Sweden, and Paris. The following subjects were considered in formal written papers, with general discussions following them; "What the Bible says to the Young Men of Our Day," "What Means ought to be employed for the Spiritual Development of the Members and for the Conversion of Young Men in general," "The Mutual Duties of Members of the Young Men's Christian Association," "The Means which ought to be employed by the Association for the Moral Development of their Members," "Creation

and Organization of Associations," "Different Kinds of Young Men's Christian Associations," "The Real Source of Life for our Associations," "The Different Means employed for the Physical Development of Young Men," "The Young Men's Christian Association as compared with the True and False Socialism," and "The Association's Work in Non-Protestant Countries." Public meetings, held in the afternoon of each of the five days of the session of the Conference, were addressed by Messrs. Gustave Topfel, President of the Executive Central Committee; Krummacher, of Elberfeld; Scholt, of Drammen; Williams, of London; Frommel, court chaplain at Berlin; Hoskins, of London; Beck, of Denmark; Lyons, of France; Favre, of Geneva; Morse, of New York; Farwell, of Chicago, and others.

Z

ZANZIBAR, a monarchy on the eastern coast of Africa. The reigning Sultan or Seyyid is Khalifa, who succeeded his brother, Bargash ben-Said, on March 27, 1888. The island of Zanzibar has an area of 1,590 square kilometres, or 625 square miles. The Sultan's authority formerly extended along the coast of the mainland from Warsheikh to Delgado Bay, about 900 miles. In 1886 Germany established a protectorate over the interior, from the river Rovuma northward to Kilimandjaro. North of that mountain, as far as Tana river, England's sphere of influence extends, in accordance with an agreement between the two powers. Zanzibar's sovereign rights were limited to the coast between Kipini on the Ozi river and Cape Delgado, and to the garrisoned stations of Lamoo, Kismayu, Brava, Merka, Mukdusha, and Warsheikh. The population of the island of Zanzibar is about 200,000, half of whom live in the city of Zanzibar. The rulers are Arabs, and the subject population mostly negroes. The entire Arab population on the eastern coast of Africa and in the island of Zanzibar does not exceed 2,500; yet they own all the valuable soil, hold the bulk of the population in slavery, and monopolize the slave-trade. There are about 6,000 Indian traders and slave-owners in Zanzibar and on the coast, and 150 Europeans who reside in the towns.

War against Europeans.—The Arabs of Zanzibar and the interior of Africa, who, in spite of the convention made in 1873 between the Sultan of Zanzibar and the English Government, continue to supply Asia with negro slaves, organized an attack on the European settlements in the autumn of 1888, with the object of driving away the Germans, in order to keep open the caravan routes to the sea and avert the suppression of the slave-traffic. The Arab slave-traders in the vicinity of Lake Nyassa beleaguered the British missionary stations, which were on ground claimed by Portugal.

Soon afterward the Yaos, the northernmost branch of the Kaffirs, began to pour into the German settlements. On September 20, thousands of armed men from the south bank of the Rovuma appeared before Mikandini. At some of the harbors the natives refused to receive the German officials. The inhabitants finally took up arms and drove the Germans from all their establishments on the coast. When Ernst Volsen, the chief director of the German East African Company, attempted to land at Pangani on September 5, a line of Arabs along the shore fired at the Germans, declaring that they were banded together to make a stand against the oppression and insults of the company's officials. Herr Michahelles, the German consul-general, and Herr Vohsen, in an interview with the Sultan, contradicted the stories of German violence and tyranny. They admitted that they could not return to Pangani and Tanga for some time, and accepted the arrangement proposed by Seyyid Khalifa, to the effect that the Sultan was to appoint his own governors and garrisons, and administer justice; and that the Germans were to nominate natives to superintend customs, and not to attempt to land at the ports until the population was willing to receive them. The German flag was not to be re-hoisted. The coast population would not accept an arrangement that contemplated the reinstatement of the Germans. Gen. Matthews, commanding the troops of the Sultan, who was sent to reassert the Sultan's authority in Pangani, was defeated and driven away by the rebels. The German gun-boats thereupon shelled Pangani and other places.

Blockade of the Coast.—The English colonial project, which had been begun in order to prevent the Germans from acquiring dominion over all the lake-region and the trade-routes, suffered likewise. The Sultan had lost all authority on the mainland. More than 1,000

ZANZIBAR.

Indian subjects of Great Britain, engaged in trading and agriculture, had abandoned their possessions and fled to Zanzibar. British missionary settlements had been destroyed, and some of the missionaries who could not escape were besieged in their stations. Lord Salisbury, who had made the British Government a partner in the German scheme for the conquest of the most productive regions of the African Continent, accepted Bismarck's proposal to fight the slave-traders and restore European prestige by blockading the coast. Portugal, having important colonial interests to conserve, and Italy, ambitious of extending her influence in East Africa, were induced to promise assistance with their war-vessels in the naval blockade. France has no important colonial interests in this part of the continent, but she has some commerce with the African tribes, which must suffer by a blockade. The Arab dhows, when chased, have been accustomed to display the French flag, which usually has saved them from capture.

The slave trade fell away in consequence of the abolition of slavery in American countries, the co-operation of the Sultan of Zanzibar in the efforts to suppress the traffic, and the vigilance of the English patrol off the eastern coast of Africa. Recently, however, there has been an increase in the traffic. This fact has been ascribed to the establishments of the French in Madagascar and the Comoro Islands, owing to the increase of French shipping in these seas, and the facility thus given to slavers to escape under false colors. The slave-raids are now attended with more cruelty, destruction of life, and desolation than they were when the supply of slaves was more abundant and not so remote from the sea-coast. The export of slaves is variously estimated from 60,000 to 180,000 a year. At least ten lives are sacrificed in bringing one slave to market. A large proportion of the slaves that are taken die on the march or on shipboard, and the people who are not fit for slaves—the aged, the women, and the children—are either butchered by the raiders or left to starve. Large areas, once populous, have been stripped of inhabitants.

The English were not entirely sincere in their efforts to uproot slavery and put an end to the traffic in men, and the Germans were still less so, for the laws that the British Government had compelled the Sultan to enact, prohibiting the holding or hiring of slaves in the Zanzibar dominions, had, in the interest of Indian and British capitalists, been suffered to fall into desuetude, while the enterprise of the German East Africa Company was based upon slave-labor. The Belgian Government, through its consul at Zanzibar, recruited slaves for the Congo Free State, paying their masters their market value, while the slaves received an equal sum for the term of their indentures.

The French Government refused the request of the German and English Governments for

liberty to search French vessels, adhering to the principle of international law that the right of search can be exercised only in case of an effective blockade, which would require three times the naval force that the parties to the blockade were disposed to employ. M. Goblet subsequently yielded when the suppression of the slave-trade was represented to him as the object of the blockade, conceding the right to search ships and boats flying French colors that were suspected of carrying slaves, but still insisted that the search for contraband of war and its seizure should be conditional on the blockade being made effective. To show its sincerity in desiring to stop the slave-traffic, the French Government sent a vessel to co-operate in the blockade.

Admiral Deinhard, of the German blockading fleet, and Admiral Fremantle, of the co-operating English squadron, declared the blockade of the coast for the purpose of preventing the exportation of slaves and the importation of arms and munitions of war in a proclamation issued on December 2. The German fleet undertook to watch the coast south of the Wanga to Lindi, and the English fleet from the Wanga northward to the island of Lamu. The English East Africa Company conciliated the Arabs in Mombassa by paying for 1,500 runaway slaves who had been harbored by the missionaries. The German squadron, which bombarded the coast opposite Zanzibar before the vessels took up their stations in the blockade, consisted of the frigate "Leipzig," the corvettes "Carola" and "Sophie," the cruisers "Möwe" and "Schwalbe," and the dispatch-boat "Pfeil." The German land force at Bagamoyo was besieged by the Arab leader, Bushire. The Germans strengthened their position at that point and at Dar-es-Salaam by building stone forts, and prepared to recover the other harbors by force of arms under protection of the blockade. They recruited native soldiers, who were employed in ineffectual operations against the coast tribes at Sadani and elsewhere, thereby closing the caravan routes and bringing ruin upon the British Indians that they had induced to resume trade, many of whom were plundered by the black soldiers in the employ of the German company. Bushire, who had 2,500 men armed with breech-loaders, captured Bagamoyo, and cut off the retreat of the Germans, who were besieged in their block-houses till December 7, when the shells of the war-vessels compelled the Arabs to withdraw. The town was laid in ruins. The German vessels bombarded Lindi, Mikandini, Tanga, Pangani, and other coast towns, destroying much property belonging to East Indians, and causing the owners to be detained as prisoners by the Arabs. The Portuguese authorities on December 10 announced the extension of the blockade and the prohibition of the importation of arms from the Rovuma to Pomba Bay, in 13° of south latitude.
