THE great distance of the gold and silver mines on the Pacific coast, and the difficulty of obtaining trustworthy information regarding them, prevented, for a long time, the establishment of a mining stock exchange in New York, or any of the other Eastern cities. It is true, that ever since the California gold fever of 1849, but, more especially, since the completion of the Pacific railroads and the trans-continental telegraph, more or less business has been done by eastern capitalists in mining stocks, purchases being made at first, however, in the San Francisco market. An effort was made to create a mining excitement in the east, as a forerunner to the establishment of a recognized mining exchange, but it met with only spasmodic success, and the investments that were made proved, as a rule, so unprofitable that the business fell into great disrepute, and few persons making any pretensions to financial acumen could be found bold enough to advocate dealings in mining securities, or admit that they were interested in mining properties. So great, indeed, was the distrust in securities of this class that it was a decided injury to a business man's financial standing to be known to be dealing in them, and mining stocks were generally classed with lottery tickets. The foisting of some worthless properties on a credulous public was the principal cause for this unsavory reputation. However, the wonderful product of the Comstocks, and the princely fortunes made by a few persons connected with the development of those and some other rich mines, were too great not to excite the envy of speculators in every part of the known world. Furthermore, from year to year, more trustworthy information regarding the mines in the far west was obtainable, and a more thorough knowledge as to the most profitable manner of working the mines was acquired by the managers. This has been followed recently by the discovery of some remarkably rich deposits in Colorado, and a better understanding as to the character and most economical means of developing true fissure veins, some of which have been discovered in various sections of the west, and proved to be very valuable. These discoveries and developments, coming at a time when there was an unusual amount of surplus capital in the country, which, in many cases, had been lying comparatively idle for a long time, and when the country was rallying from the sad effects of the panic of 1873, resulted, very naturally, in awakening an interest in gold and silver mining altogether unknown in the previous history of the eastern States, as is shown by the prominence which dealings in mining stocks have assumed at the exchanges in New York, and other Atlantic coast cities within the past three or four years. Prior to that time the transactions were not sufficient to be made a matter of record in the daily newspapers, or even in the usual forum of printed lists. During 1879, however, the total reported sales of mining stocks, at the New York Mining Stock Exchange, were 15,851,878 shares, being an average of over 50,000 shares a day for each business day of the year. In the month of March alone of that year the transactions amounted to more than 2,100,000 shares. In 1880, the sales at the two mining exchanges, (one of them being in operation only seven months), were 20,012,825 shares, and in 1881, they were 43,027,426 shares, while for the first six months of the current year (1882), they have aggregated 28,211,052 shares.

Mining Stock Exchanges.—Regular dealings in mining stocks through the medium of a recognized exchange were first established in New York in 1865, three years after the organization of the first mining exchange in San Francisco. At that time a number of prominent brokers, acting under an adopted constitution, began to deal in mining stocks in a part of the board room of the New York Stock

Exchange where the transactions in railroad, government and other securities took place. The sales of mining stocks were principally those of California and Nevada companies. Many members of the Stock Exchange belonged to the organization, and for a short time it gave great promise of success. It proved, however, to be short lived, owing to some of the unprofitable ventures that were made and the inability of its members longer to secure the patronage of the speculative public. Although its corporate existence was maintained, the calls of stocks were abandoned and no business was done for several years. It was, in fact, nearly ten years later before the subject of a mining board was again revived. In June, 1876, a card in the financial columns of the New York *Herald* invited gentlemen interested in mines and mining stocks to meet at the office of Mr. William Ward for the purpose of taking the necessary steps towards the formation of a mining exchange. The scheme met with unexpected favor, and on August 19, of the same year, the American Mining Board, as the new exchange was named, was formally organized, the constitution and by-laws (modeled after those of the New York Stock Exchange) were adopted and the following officers were elected: president, William Ward; first vice president, Lawrence P. Bayne; treasurer, Daniel Butterfield; secretary, H. J. Hubbard; and assistant secretary, Walworth Ward. At that time 112 applications for membership had been received and prominent among the members were William M. Burgoyne, Gabriel Netter, Francis B. Forster, John F. Scott, George P. Townsend, Joseph T. Thompson, John T. Daly, William Brandreth, N. P. Henderson, H. J. Hubbard, Calixte Harvier, Walter Browne, Jr., James Campbell, Joseph T. Rook, Samuel S. Rutzky, Henry Lohly and Francis H. Fogg. By October 1, the number of applications had reached 650, and 270 persons had been elected to membership, including some of the large and wealthy firms of New York, Philadelphia, Baltimore, Virginia City and San Francisco. Meanwhile the initiation fee had been raised from \$100 to \$250. The new board secured rooms at the corner of Nassau and Pine streets, where it began business on October 3, 1876, when forty-five stocks were called, nearly all of Nevada and California companies. Applications were received from many other companies for the placing of their stocks on the board list, but they were rejected by the Governing Committee.

Subsequently the name of the new organization was changed to "The American Mining and Stock Exchange," and a new constitution and by-laws were adopted on November 29, of the same year which provided among other things that the Exchange should deal in all mining, railway and miscellaneous securities which might be approved by the Committee on Securities. This was a direct blow at the old New York Stock Exchange which had a monopoly of the transactions in all active securities except those of mining companies, and as a number of the members of the Mining Exchange were also members of the New York Stock Exchange, it was not long before the Governing Committee of the latter board adopted a resolution prohibiting its members from belonging to any other board, except the old New York Mining Stock Exchange that was organized in 1865, and still retained its corporate existence, being regarded as a child of the New York Stock Exchange. The result was a consolidation of the two mining exchanges, which was effective on June 14, of the following year, the name adopted for the consolidated exchange being: "The New York Mining Stock Exchange." The union was recognized by the old Stock Exchange, it having been agreed that the Mining Exchange, would not deal in other than mining securities. At the time of the union there were nearly 500 members of whom 154 were also members of the New York Stock Exchange. On June 15, 1882, the membership in good standing numbered 465, and a seat commanded about \$1,000, while sales have been made within the past two years as high as \$3,000. The call room occupied by the board is on the ground floor at No. 62 Broadway, and it extends through to New street (No. 23,) the room being 35x 130 feet, a portion of which is set apart for visitors. The first president of the consolidated exchange was George B. Satterlee, who served from July 20, 1877 until June 1880, when he was succeeded by S. V. White who still retains the position. The present officers, who were elected June 12, 1882 are as follows: President, S. V. White; Vice President, C. F. Woods; Treasurer, J. M. Stanton; Secretary, R. H. Gallaher, Jr., and Chairman, A. W. Peters. The following are the Committees:

GOVERNING COMMITTEE.

To serve one Year.

P. K. Dickinson, R. M. Shaw,
George B. Satterlee, F. B. Whitfield,
J. A. Macpherson, Louis Haight,
A. L. Seton, W. W. Hawly,
P. P. Robinson.

To serve two years.

R. M. McJimsey, J. H. Tucker,
E. P. Mitchell, W. C. Budd,
John F. Scott, George F. Mann.
C. F. Woods, W. E. Cox,
E. S. Munroe.

To serve three years.

R. K. Cooke, H. Dunham,
A. L. Faris, E. L. Clarkson,
L. J. Werner, A. Lexon,
C. H. Badeau, George W. Hoagland,
T. L. Watson.

GRATUITY FUND TRUSTEES.

To serve one year.........................R. M. Shaw.
To serve two years ....C. O. Morris.
To serve three years.........................George Phipps.
To serve four years.........................E. S. Munroe.
To serve five years..........................R. M. McJimsey.
And the President and Treasurer.

FINANCE COMMITTEE.

Louis Haight, A. L. Seton,
George F. Mann,
And the President and Treasurer.

COMMITTEE ON MEMBERSHIP.

R. M. Shaw, Louis Haight,
J. A. Macpherson, H. Dunham,
R. K. Cooke, E. L. Clarkson,
C. H. Badeau.

COMMITTEE ON ARRANGEMENTS.

R. K. Cooke, T. L. Watson,
F. B. Whitfield.

COMMITTEE ON SECURITIES.

G. F. Mann, J. F. Scott,
W. W. Hawly, L. J. Werner,
P. P. Robinson, J. A. Macpherson.
A. L. Faris.

ARBITRATION COMMITTEE.

George B. Satterlee, R. M. Shaw,
E. S. Munroe, W. E. Cox,
G. W. Hoagland, C. F. Woods,
A. Lexon.

LAW COMMITTEE.

S. V. White, George B. Satterlee,
J. H. Tucker, John Stanton,
R. M. McJimsey.

COMMITTEE ON COMMISSIONS.

R. K. Dickinson, H. Dunham,
W. C. Budd.

COMMITTEE ON MISCELLANEOUS SECURITIES.

E. L. Clarkson, A. Lexon,
H. Dunham. G. W. Hoagland,
J. F. Scott

The present Constitution and By-Laws of the New York Mining Stock Exchange are as follows:

CONSTITUTION.

ARTICLE I.—*Title*—The name and title of this Association shall be "The New York Mining Stock Exchange," and its business shall be limited to furnishing facilities to its members for the purchase and sale of the stocks and other securities of Mining, Manufacturing and Insurance Companies, and also the stocks and other securities of companies not listed on the New York Stock Exchange.

ARTICLE II.—*Officers.* Section 1.—The whole government of the Association shall be vested in a Governing Committee, composed of the President and Treasurer of the Association and twenty-seven (27) members, divided into three classes of nine (9) each, who shall be elected in the manner hereinafter provided.

Section 2.—There shall also be elected annually, a Chairman, Secretary and Assistant Secretary, who shall receive such compensation as the Governing Committee may determine.

Section 3.—The Governing Committee at their first meeting after the annual election shall choose from their own members a Vice-President of the Association.

ARTICLE III.—*Elections.*—Section 1.—The President, Treasurer, Chairman, Secretary, and Assistant Secretary shall be elected by ballot on the second Monday in June in each year There shall be elected at the same time nine (9) members of the Governing Committee, to fill the vacancies occasioned by the expiration of the term of the out-going class, and also members to fill any vacancy or vacancies in the other classes for the unexpired term. The candidate or candidates receiving the largest number of votes shall be declared elected.

Section 2.—In case a vacancy shall occur in either of the offices of President, Treasurer, Chairman, Secretary, or Assistant Secretary, a new election by ballot shall be held to fill such vacancy. In case a vacancy shall occur in the Governing Committee, by resignation or otherwise, it shall be filled by said Committee until the next annual election. In case a vacancy shall occur in the office of Vice President the same shall be filled by the Governing Committee at their next meeting.

Section 3.—No person shall be eligible to any office in this association who shall not be, at the time of his election, a member in good standing.

ARTICLE IV.—*Governing Committee.*—Section 1. All powers necessary for the goverment of the Association shall be vested in the Governing Committee. They shall have power to try all offences under or against the laws of the Association, and all charges against members, and their decision shall be final. They shall have power to fix the amount of salary that shall be paid to any officer of the Association and shall have power to terminate the contract of the Association with any such salaried officer by a vote of two-thirds of their number,

Section 2.—The Governing Committee may, at any time during the pendency of a case before any of the Standing Committees, ask for such information and give such instructions as they may deem proper.

Section 3.—Any member of a Standing Committee, before which a case may be pending, shall have the right, during the consideration of such case, or within two days after a decision has been made thereon, to demand, a reference of the same to the Governing Committee, for final adjudication; and the Chairman of the Standing Committee shall notify the President of the Governing Committee of such reference at the next regular meeting. No member of the Governing Committee shall participate in the adjudication of a case in which he is personally interested.

SECTION 4.—The President may call a meeting of the Governing Committee at any time. He shall call a meeting at the request of five (5) members. In the absence of the President, any five (5) members of the Governing Committee may call a meeting by announcement from the rostrum.

A majority of all the members of the Governing Committee, or of any sub-committee shall be necessary to constitute a quorum.

Section 5.—Any member of the Governing Committee, who, except in case of illness or leave obtained from the Presiding officer, shall absent himself from the meetings of the Committee during three consecutive regular meetings, shall, *ipso facto*, cease to be a member of the Governing Committee, and the vacancy so occurring shall be filled as provided in Art. III of the Constitution.

ARTICLE V.—*Standing Committees.*—As speedily as possible after each annual election, the Governing Committee shall appoint from their own members the following Standing Committees for the year.

1st.—A Finance Committee of three (3), in addition to which the President and Treasurer shall be members, *ex officio*.

2d—A Committee on Membership, to consist of seven (7).

3d—A Committee of Arrangements to consist of three (3).

4th—A Committee on Securities to consist of seven (7).

5th.—An Arbitration Committee to consist of seven (7).

6th.—A Law Committee to consist of five (5).

7th.—A Committee on Commissions, to consist of three (3).

8th.—A Committee on Miscellaneous Securities, to consist of five (5).

Should special exigencies require, the President shall have the right to appoint Committees *ad interim*, to act until the regular appointments are made.

ARTICLE VI.—*Duties of Standing Committees. Finance Committee.*—Section 1.—It shall be the duty of the Finance Committee to supervise the finances of the Association, to audit the accounts of the Treasurer, and to direct the investment of any surplus funds in his hands, as they may deem advisable for the interests of the Association.

Committee on Membership.—Section 2.—The Committee on Membership shall have jurisdiction over all admissions to membership in the Association. All applications for membership should be addressed to the Chairman of the Committee and must be seconded by at least two members of the Association. The name of the applicant and the names of his endorsers shall be conspicuously posted in the business room of the Association, with a notice requesting the members to inform this Committee, in writing, of any objections they may have to the person named, such communication to be duly considered in Committee and to be held confidential. The Committee shall make diligent inquiry as to the qualifications of the applicant, and if at the expiration of not less than ten (10) business days, five (5) members of said Committee shall be in favor of admission, they shall so report to the Governing Committee, and unless further inquiry is demanded by said Committee, the President, or in his absence, the Chairman, shall declare the said applicant duly elected a member of this Association, provided that within ten (10) business days after being elected, he shall sign the Constitution, and pay the initiation fee, and the contribution to the Gratuity Fund provided in Art. 23, Sec. 2, otherwise his election shall be null and void. Whenever any member of said Association shall desire to discontinue his membership and to nominate a successor, he shall send a written communication to the Chairman of the Committee on Membership stating the fact, with an official nomination of a successor, who shall pay to the Chairman of the Committee the amount of consideration for said nomination. The Committee shall then cause a notice to be posted in the business room of the Association which shall state the name of the member desiring to withdraw and invite the filing of claims against said member, and if after the expiration of ten (10) days from the first posting of such notice the nominated successor shall have been elected to membership in the manner prescribed in the preceding section of this article, the money deposited with the Chairman shall be distributed by him in the following manner, i. e.:

1st.—To this Association to the extent of any money due it.

2d.—In payment, *pro rata*, of claims filed by members and adjudicated as valid.

3d.—The remainder, if any, to the retiring member, or his legal representatives. And on the first posting of the notice of withdrawal of such member, he shall discontinue active membership and the making of new contracts with members, and when the successor shall be admitted to membership the prior membership shall cease and be void, but if the nominee shall be rejected or fail to qualify, the member may name another successor, or may resume active membership, provided that there shall be no claims against him.

No minor shall be eligible to membership.

Committee of Arrangements.—Section 3.—It shall be the duty of the Committee of Arrangements to enforce all rules and regulations necessary for good order and the comfort of the members.

They shall determine the number, duty and pay of all employees other than the officers and shall have a general supervision of all the Departments of the Exchange.

Committee on Securities.—Section 4.—The Committee on Securities shall examine and report upon all stocks or other securities entered, or to be entered upon the lists of the Association, and all applications to place securities upon the lists shall be made to them.

Arbitration Committee.—Section 5.—It shall be the duty of the Arbitration Committee to take cognizance of, and exercise jurisdiction over, all claims and all matters of difference between members of the Association, and their decision shall be binding; provided, however, that an appeal from the judgment of the Arbitration Committee may be taken to the Governing Committee in any case involving one thousand dollars or over, upon the condition that notice shall be given by the appellant to the appellee within one week of the rendition of the verdict of the Arbitration Committee of his intention to appeal the case.

The Chairman of the Arbitration Committee shall have power, and it shall be his duty, to call meetings of that Committee, for the settlement of differences or disputes between members, and he shall preside thereat, and he shall be entitled to a fee of ten (10) dollars for every case tried, which shall be paid by the losing party.

Law Committee.—Section 6.—It shall be the duty of the Law Committee to consider all questions of law affecting the interests of the Association, and report to the Governing Committee.

Committee on Commissions.—Section 7.—It shall be the duty of the Committee on Commissions to see that the rules relating to commissions are complied with and report to the Governing Committee any violation thereof.

Call of Meetings.—Section 8.—In the absence of the Chairman of any committee except the Governing Committee, the Secretary of the Association may call a meeting of the committee at the written request of two of its members, and a quorum present may choose a chairman *pro tem.*

ARTICLE VII.—*Duties of Officers.—Duties of the President and Vice-President.*—Section 1.—It shall be the duty of the President to see that the several provisions of the Constitution and By-Laws are enforced, and to have a care of the general interests of the Association.

He shall be entitled to preside over the Association during debate or whenever he may elect so to do, and he shall be a member and President of the Governing Committee.

The Vice-President shall, in the absence of the President, assume all the functions and powers, and discharge all the duties of President.

In case of the temporary absence or inability to act of both the President and Vice-President, the Governing Committee may choose from their own number an acting President of the Association.

Duties of the Treasurer.—Section 2.—The Treasurer shall receive and take charge of the moneys due the Association and shall hold the same subject to the order of the Finance Committee. He shall on the second Monday in June in each year, render to the Association a detailed account of the receipts and expenditures of the Association since the date of the last account rendered by him, and also report to the Governing Committee at any other time that they may direct. He shall specify particularly from what source or sources the receipts have been derived and for what purpose or purposes the expenditures have been incurred. He shall also state the balance then in the treasury, and how the same is invested. He shall invest the surplus funds of the Association in such securities and at such times as the Finance Committee shall direct.

Duties of Chairman and Vice Chairman.— Sec. 3.—It shall be the duty of the Chairman to preside over the association whenever it shall be assembled for business; to call the Stocks and Bonds, maintain order, enforce the rules, and perform such other duties as the Governing Committee may regard as properly pertaining to the office. The Secretary of the Association shall be Vice-Chairman, and in the absence of the Chairman shall assume all his duties and functions.

Neither the Chairman nor the Vice-Chairman shall be permitted to operate in Stocks during the period he is presiding. In the absence of both, the President may appoint, or the members present may choose, a Chairman *pro tem.*, with full powers.

The Presiding Officer shall determine all questions of order.

Duties of the Secretary. Sec. 4.–It shall be the duty of the Secretary, or his Assistant, to record all purchases or sales made at the business sessions of the Association, and to prepare a report of the same for the press; also to keep a faithful record of all proceedings of the Association in a book of minutes prepared for the purpose; also carefully to keep and preserve all books and papers of the Association, and of the several committees thereof, not properly belonging to the department of the Treasurer.

He shall prepare and keep a record of all the members of the Association, the place of business of each, and the name of the firm, if any, to which each belongs; and shall also record and charge all fines, dues, and fees which may be imposed, and report to the treasurer on the first day of each month the amount charged against each member for the preceding month. He shall also, during the first week in each month, collect and pay over daily to the treasurer, all fines, and if any member shall refuse or neglect to pay the fines, dues or fees charged to him, he shall report the same to the Treasurer, who shall, after giving reasonable notice to the delinquent, report the fact to the President of the Association who shall at once suspend such member until such dues, fees, or fines are paid.

He shall also act as Secretary to the Governing Committee when required so to do, and discharge such other duties as the Governing Committee may regard as properly pertaining to the office.

Duties of the Assistant-Secretary.—Section 5.—In the absence of the Secretary, the Assistant Secretary shall perform all the duties pertaining to that office; and at times such other duties as the Governing Committee may assign to him.

ARTICLE VIII. (See Amendments.) *Applications for Membership, Eligibility, Initiation Fee, &c.*—Section 1.—All applications for membership must be made in accordance with the provisions of Article 6, Sec 2.

Section 2.—Any member of the New York Stock Exchange in good standing shall be eligible to membership in this Association, and the fact of such membership in the New York Stock Exchange shall be equivalent to the approval of the applicant by the Committee on Membership.

Section 3.—The initiation fee of the members admitted by election shall be one thousand dollars, and that for successors of members shall be two hundred and fifty dollars, but the Governing Committee may change the amount of the initiation fees from time to time.

ARTICLE IX.—*Misstatements of Applicants.*—Whenever it shall appear to a majority of the Committee on Membership that a wilful misstatement upon a material point has been made to them by an applicant for admission or re-admission, they shall report the case to the Governing Committee, who may, by a two-third vote of the members present, deprive the offending party of his membership, or declare him forever ineligible for admission, as the case may be.

ARTICLE X.—*Withdrawal of Members.*—Any member shall have the right to withdraw from the Association and to nominate a successor by complying with the provisions of Article 6, Section 2.

ARTICLE XI.—*Nomination of Successors.*—Section 1.—When a member dies his right to nominate a successor shall be disposed of by the Committee on membership within a period of twelve months; and after satisfying the claims of the members of the Association, they shall pay any balance to the legal representatives of the deceased.

Section 2.—In every case where a member is deprived of his membership, or declared ineligible for re-admission by the Governing Committee, by reason of any offense against or under the laws of the Association, his right to nominate a successor shall be disposed of by the Committee on Membership and the proceeds thereof distributed in accordance with the preceding section.

ARTICLE XII.—*Partnerships.*—Whenever a member shall form a partnership with any other member or person he shall immediately give notice thereof to the Secretary. In like manner, notice must be given of any dissolution of partnership, and it shall be the duty of the Secretary to keep a record of all partnerships and dissolutions. No member of this Association shall be allowed to take as partner any suspended member thereof, during the period of his suspension, or to form a partnership with any insolvent person.

ARTICLE XIII.—*Expulsion for Fraud.*—Should any member of this Association be guilty of obvious fraud—of which the Governing Committee shall be judge—he shall, upon conviction thereof, by a vote of eighteen (18) of the members of said Committee be expelled.

In event of charges of fraud or false pretense being preferred before the Governing Committee or in the Courts, the Committee, if the evidence "*prima facie*" seems to a majority to warrant such action, may suspend the member at their discretion, pending the adjudication of the charges.

ARTICE XIV.—*Obligations of Members in Signing the Constitution.*—The signing of the Constitution of this Association shall be construed as an obligation and pledge of each member to abide by the same, and also by all By-laws, Rules or Regulations which may be hereafter adopted; and any member refusing to comply with the Laws of the Association, shall be reported to the Governing Committee and may have a hearing, and if said Committee decide, by a vote of eighteen (18) of their number that the complaint is proven, they may declare him no longer a member of the Association.

The property, leases, contracts, etc., paid for by this Association shall be held by the President and Treasurer of the Association—for the joint usage and interests of the Association as a whole, but no member shall have any individual or separate usage in, or of, the same, apart from his privileges while an active member under the rules of the Association, nor shall he have any devisable interests in, or claim to the said assets, excepting as to the members, at the time being, in case of any dissolution and sale of the proceeds of such property.

The payment of the initiation fee shall be an absolute contribution to the Association for the privilege of membership under the rules. and shall confer no right of property except to members at the time of any dissolution, but a membership not forfeited to the Association, shall confer the right to nominate a successor, subject to the arbitrary election of such successor to membership in the Association.

ARTICLE XV.—*Suspended Members, Re-Admission, Claims of Creditors, Etc.*—Section 1.—Any member who may fail to comply with his contracts or who shall become insolvent, shall be suspended until he has settled with his creditors.

Such member shall immediately inform the President in writing, that he is unable to meet his engagements; and it shall be the duty of the presiding officer, thereupon to give notice, from the chair, of the suspension of such member. The Secretary shall record the failure of such member in a book kept for that purpose. In default of giving such information, the party, on application for re-admission, shall not be entitled to a reference of his case to the Committee on Membership, unless two-thirds of the members of the Governing Committee present shall vote in favor of such reference.

Section 2.—When a suspended member applies for re-admission, he shall be required to furnish to the Chairman of the Committee on Membership, a list of his creditors and a statement of the amounts owing, and the nature of his settlement in each case. The Committee shall give notice, for three consecutive days through the presiding officer of the Association or by posting the same on the bulletin board provided for that purpose, of the time and place of meeting to consider the application of the suspended member and the claims of creditors. Upon the applicant presenting satisfactory proof of his settlement with all his creditors the Committee shall proceed to ballot for him, in accordance with its prescribed rules and regulations. Failing of a re-election the applicant shall be entitled to be balloted for at any five subsequent regular meetings of the Committee, to be designated by himself. Provided, however, that the six ballotings to which the applicant shall be entitled shall be within one year from the time of his first application for readmission. If after six ballotings as aforesaid, the candidate is rejected he may appeal, within sixty days thereafter, to the Governing Committee, whose action in the case shall be final. If rejected by the Governing Committee, he shall cease to be a member of the Association, and his name shall forthwith be stricken from the roll, and his right to nominate a successor shall be disposed of by the Committee on Membership. The question on appeal, however, shall not be taken unless at least twenty-one members of the Governing Committee are present, and it shall require an affirmative vote of at least seventeen members to re-instate the applicant.

Section 3.—If any suspended member shall fail to settle with his creditors and apply for re-admission within one year from the time of his suspension, his membership shall cease and the nomination of a successor shall be disposed of by the Committee on Membership and the proceeds paid *pro rata* to his creditors in the Association. The Governing Committee may, by a vote of two-thirds of the members present, extend the time for settlement and for application for re-admission, of such suspended member. No claims growing out of transactions between partners shall be admitted to share in the proceeds of the membership of one of such partners until after the claims filed by other creditors who are members of the Association shall have been satisfied.

Section 4.—Any creditor failing to file with the Secretary of the Committee on Membership a written statement of his claim against a member, prior to the transfer of the right to nominate a successor of such member shall forfeit all right to a distributed share of the proceeds of the sale of such right.

Section 5.—No member of the Association shall be allowed to take as partner any suspended member thereof, during the period of his suspension, or to form a partnership with any insolvent person or with any person who may have previously been a member of the Association, and against whom any member may hold a claim arising out of transactions made during the time of such membership, and which has not been settled or released in accordance with the laws of the Association.

ARTICLE XVI.—*Elections, Quorums, Members of a Firm Voting, etc.*—Section 1.—Any member of the Association shall be entitled to vote at an election for Officers.

Section 2.—The members present at the daily sessions of the Association shall constitute a quorum for the settlement of disputes growing out of the purchase and sales made during such sessions. When the Association shall be assembled to vote on questions other than the above, a majority of all the members of the Association shall be necessary to a quorum.

Section 3.—Only one member of a firm shall be allowed to transact business in the same security, at the same time, or vote on the questions of dispute referred to in Sec. 2.

ARTICLE XVII.—*Annual Dues.*—Each member of this Association shall pay semi-annually the sum of fifteen dollars to the Treasurer of the Association on or before the first Monday in January and July. Any member neglecting or refusing to make this payment at the time named, unless for some reason that may be satisfactory to the Governing Committee, may be suspended from the privileges of this Association.

ARTICLE XVIII.—*Commissions.*—The rates of Commissions shall be such as may be fixed from time to time by the Governing Committee. Any member doing business for less than the rates so fixed shall be liable to suspension by the Governing Committee for a period of ninety days, and for the second offense may be expelled by the vote of a majority of the Governing Committee. Provided, however, that nothing in this article shall prevent members from doing business for one another without restriction as to commissions.

ARTICLE XIX.—*Fictitious Sales.*—No fictitious sales shall be made by any member of this Association, and any member contravening this Article, shall, upon conviction, be suspended for such term as the Governing Committee shall declare in his case.

ARTICLE XX.—*Deposits may be Called.*—On all contracts other than cash, either party may call at any time during the continuance of the contract for a mutual deposit of twenty per cent. on the contract price.

Whenever the market price of the stock shall change from contract price, either way, the party in whose favor the change occurs may call on the other party for "marginal" deposits from time to time, to secure the contract to the market price, as in cases of borrowed stocks; the "marginal deposits to be made with the caller, unless the payer shall elect to deposit with an agreed third party.

In cases where deposits are called for before 2 o'clock, they shall be made, at, or before half past 2 o'clock of the same day; if called after 2 o'clock they shall be made before noon of the next day.

In case either party should fail to comply with a demand for a deposit, in accordance with the provisions of this Article, it shall be at the option of the other party to elect whether to close in the manner provided in Article 22 of this Constitution, or to continue said contract, and if no deposit shall have been made previously on the contract, he may even elect to annul the contract, which election shall be announced to the Association in open session, and a minute made thereof in the records.

Whenever there is a difference between contractors as to the place of deposit, it shall be made in the Union Trust Company.

Whenever the seller of a stock shall deposit in the Union Trust Company a margin equivalent to one hundred per centum of the contract price and a further deposit is called, it shall be at his option either to deliver the stock, or to make further deposit. Or the seller may deposit the stock covered by the contract in lieu of all deposits on his behalf to guarantee its delivery by him.

In the calling of deposits on stock, also dealt in on the San Francisco Stock and Exchange Board the prices at this exchange shall be first appealed to, but if offers and bids do not approximate to furnish a market price, then the prices at said San Francisco Exchange shall be taken and a rate for this market for such purpose be officially established therefrom, as this Association may provide.

ARTICLE XXI.—*Where Contracts are not Fulfilled.*—Should any member refuse to fulfill his contract on the day it becomes due, the party contracting with him, may employ the presiding officer to buy or sell the stock, as the case may be, at the business room of the Association during the open session, and he shall in all cases, where the stocks are bought or sold under this rule, but in such manner as in his judgment will secure the stock at the lowest price; and when instructed to sell stock under the rule, to sell in such a manner as will in his judgment secure the highest price, provided that such contracting party shall first have notified the other party personally or by leaving written notice at his office, of the intended time of sale or purchase; accounting to the member in default for any surplus or charging him with any deficiency.

If such party has no office and cannot be found after suitable search, then such stock may be bought or sold without notice.

"In cases of default in delivering stocks sold for 'the account,' and which are also dealt in at the San Francisco Stock and Exchange Board," the seller may elect, instead of being "bought in" at this Exchange to settle the difference at the market price of the stock on the said San Francisco Exchange, adding such commission, expense and penalty as may be established by this Association the hour and method of fixing such price to be also so established.

"Puts" and "Calls" shall be recognized in the same manner as other contracts; but bids or offers on them during the call are prohibited.

ARTICLE XXII.—In order to provide for the families of deceased members of this Association a special fund is hereby established, to be styled "The Gratuity Fund of the New York Mining Stock Exchange," which fund shall be maintained and administered in the manner hereinafter provided.

Section 1.—The management and distribution of the said fund, and the execution of the provisions of this Article, shall be under the charge of a Board of Trustees, to be known as "The Trustees of the Gratuity Fund," and to consist of the President and Treasurer of the Association and of five other Trustees, who shall (except in the first instance) hold office for five years, and one of whom shall be elected by the Association at each annual election.

In case any vacancy should occur in the Board of Trustees, the Governing Committee shall fill the same until the next annual election, when the members of the Association shall fill the said vacancy for the unexpired term.

It shall be the duty of the Trustees of the Gratuity Fund to keep securely invested, in accordance with the Laws of the State of New York regulating Trust Funds, all moneys paid to them for the Fund, together with the annual interest and accretions arising from the same. They shall have power to choose their own chairman, and adopt such by-laws as may be needful, subject to the approval of the Governing Committee, and they shall make an annual report to the Association of the condition of the Fund.

Section 2. Every member of this Association shall be subjeet to the conditions and entitled to partake of the benefits of the Gratuity Fund hereby established, and upon the adoption of this Article the sum of Five Dollars shall be charged against each member as the first contribution to said fund, and shall be paid to the Treasurer of the Association, and paid by him to the Trustees of the Gratuity Fund. Upon the death of any member of the Association, there shall be levied and assessed against each surviving member the sum of Ten Dollars, which shall thereupon become due from him to the Association, and charged against the membership of such surviving member, to be collected as other fines and dues are, or may then be collected, and paid over to the Trustees of the Fund.

Every person who shall become a member of the Association after the adoption of this Article, shall pay into said fund the sum of Ten Dollars before he shall be admitted to the privileges of membership.

Section 3. The Trustees of the said Gratuity Fund shall, within one year after proof of death of any member, pay out of the money so collected, the sum of Four Thousand Dollars, or so much thereof as may have been collected to the persons named in this section, as herein provided, which money shall be paid as a gratuity from the surviving members of the Association, free from all debts, charges or demands whatever.

Should the member die leaving a widow and no children, then the whole sum shall be paid to such widow for her own use.

Should the member die leaving a widow and children, then one-half shall be paid to the widow for her separate use, and one-half to the children for their use, share and share alike, provided that the share of minor children shall be paid to their guardian, and that the issue of any deceased children shall be entitled to receive the share which said deceased child would have received, if living; if of age directly, or if minors, through his, her or their guardian or guardians.

Should the member die leaving children and no widow, then the whole sum shall be paid to the children as directed in the preceding section to be done with the moiety.

Should the member die leaving neither widow or children, then the whole sum shall be paid to the next of kin of the deceased.

In all cases, a certified copy of the proceedings before a Surrogate or Judge of Probate shall be accepted as proof of the rights of the claimants, be deemed ample authority to this Association to pay over the money, shall protect the Association in so doing and shall release the Association from all further claims or liability whatsoever.

Section 4. Nothing herein contained shall ever be taken or construed as a joint liability of this Association or its members, for the payment of any sum whatever; the liability of each member, in law or equity, being limited to the payment of Ten Dollars only, on the death of any other member, and Five Dollars upon the adoption of this article, the liability of the Association being limited to the payment of the sum of Four Thousand Dollars (or such part thereof as may be collected,) after it shall have been collected from the members, and not otherwise.

Section 5.—Nothing herein contained shall be construed as constituting any estate *in esse*, which can be mortgaged or pledged for the payment of any debts, but it shall be construed as a solemn agreement of every member of this Association to make a voluntary gift to the family of each deceased member, and of the Association to collect and pay over to such family the said voluntary gift; it being understood and hereby expressly declared, that the provisions of this article 23 of the Constitution, shall only be in force in, and applied to cases of death, which shall take place after its adoption.

Section 6.—Whenever the surplus funds invested by the Treasurer under the direction of the Finance Committee, amount to the sum of One Hundred Thousand Dollars, then and thereafter, one-half of the surplus income of the Association shall be paid over to the Trustees of the Gratuity Fund, either to increase individual insurance, or to reduce the assessment levied upon the death of each member as may then be determined by the Governing Committee.

Whenever the number of deaths of the members of the Association shall exceed seven in any one year, it shall be the duty of the Trustees of the Gratuity Fund to pay out of the Fund to the credit of the surviving members, in reduction of their payments to the Gratuity Fund for that year, such sums as may be requisite to limit the total payments of each member, under this article, in any one year, the sum of Seventy Dollars, provided, however, that the Fund in the hands of the Trustees shall never be thus reduced below the sum of Four Thousand Dollars; and that the liability of each member to make payments in excess of Seventy Dollars, (after the money so authorized to be paid by the Trustees is exhausted), shall not thereby be impaired, but on the contrary shall remain in full force.

Whenever the accumulations of the Gratuity Fund shall amount to One Hundred Thousand Dollars, the Trustees shall divide the annual income thereof, among the members, in reduction of their payments under this Article.

Section 7.—The provisions of this Article shall not extend to any member who shall not have severed his connection with the Association by the transfer of his membership, whether the same is made voluntarily or involuntarily, nor to any member who now is, or hereafter may be expelled by the Governing Committee; but shall extend to suspended members.

After the decease of a member, and until a successor to his membership is admitted, the Treasurer shall pay the contribution of Ten Dollars on all other deaths occurring during such interim, deducting the same from proceeds of the sale of the nomination to the successor.

Nothing herein contained shall apply to the associate members of this Association, it being hereby understood that this article shall apply to actual membership only, and not to associate members.

ARTICLE XXIII.—*By-Laws.*—For the purpose of maintaining order on the floor, and establishing rules for conducting business between members, the Governing Committee shall make such regulations and orders as they may deem proper, which shall be known as the "By-Laws" of the Association, and may be altered or amended from time to time at the discretion of the Governing Committee.

ARTICLE XXIV.—*Legal Interference with Officers or Committees.*—Any member of this Association who shall himself or whose partners shall apply for an injunction or legal process restraining any Officer or Committee of the Association from performing his or their duty under the Constitution and By-Laws, shall, by that act, cease to be a member of the Association.

ARTICLE XXV.—*Other Stock Boards.*—No member of this Association shall be a member of any other association or organization whose members deal in stocks, bonds, etc., in this city, and any member uniting, directly or by partner, with such an organization, shall cease to be a member of this Association.

This rule shall not apply to the New York Stock Exchange.

ARTICLE XXVI.—*Constitution may be Amended.*—This Constitution shall be amended only by the affirmative vote of a majority of the Governing Committee and any member of the Association, may propose an Amendment in writing at a business session of the Association which amendment shall be referred by the presiding officer to the Governing Committee without debate, and it may, at the option of said Committee, be reported back to the Association, amended or otherwise, and whenever the Governing Committee shall report an amendment of the Constitution passed as aforesaid it shall stand as the Law of the Association, unless within one week, it shall be disapproved of by a majority of the members, exclusive of those residing in the States west of the Mississippi, but no alteration of the Article now known as Article 23 shall ever be made which shall impair, in any essential particular, the obligation of each member to contribute as therein provided to the provision for the families of deceased members.

BY-LAWS.

ARTICLE I.—*Hours for Business.*—Section 1.—The Exchange or business room of the Association shall be open for dealings on every business day between the hours of 10 o'clock A.M. and 3 o'clock P. M., unless otherwise ordered by the Governing Committee.

Section 2.—No member of this Association shall be permitted—directly or indirectly—to make any transactions in the Stocks or other securities on the lists of the Association either in the Exchange or its vicinity during the hours in which the same shall be closed, under such a penalty as the Governing Committee may impose.

Section 3.—1st—First call of the regular list of stocks, at 10.30 A.M.

2d—Miscellaneous business.

3d—Calls of the regular or special list of stock, as may be from time to time established by the Association.

ARTICLE II.—*Offers and Bids.*—Section 1.—All offers to buy or sell securities shall be binding and no member may withdraw an offer, except in an audible voice to the presiding officer; but a sale shall take all offers off the floor. No offer or bid shall be recognized between partners or members of one firm.

All offers to buy or sell shall be per share; and at such percentages of difference as the Governing Committee shall fix for the dealings in the various stocks, and, when not otherwise stated, shall be considered as made for the regular way, and for lots of one hundred shares.

Section 2.—Offers to buy or sell shall be entitled to precedence in the following order:

1st.—Bids "seller three days" and offers to sell "buyer three days," shall take precedence of "cash" and "regular."

2d.—"Cash" and "regular" bids and offers may be made simultaneously, as being essentially different propositions.

3d.—Offers to buy or sell on longer options than three days, may be made at the same time with offers to buy or sell "buyer" or "seller three."

4th.—In offers to buy on seller's option or to sell on buyer's option, the largest option shall have precedence.

5th.—In offers to buy on buyer's option or sell on seller's option, the shortest option shall have precedence.

No other bids or offers shall be permitted, or have any standing upon the floor.

No contracts beyond sixty days shall be made.

Section 3.—No party to a contract shall be compelled to accept a principal other than the member offering to contract, unless the name proposed to be substituted shall be satisfactory, or shall be declared at the time of making the offer.

ARTICLE III.—*Interest.*—All contracts over three days shall bear interest at the rate of six per cent. per annum, except when bought or sold "flat."

All other contracts shall bear no interest.

The word "flat" shall be understood to mean free of interest only, and shall have no reference to dividends or assessments.

ARTICLE IV.—*Deliveries.*—Section 1.—All securities shall be delivered before quarter past two o'clock P. M.; and when deliveries are not made by that time the contract may be closed under the rule, after due notice to the defaulting party, in the manner provided in Art. 22 of the Constitution. Such notice, however, must be given not later than half past two o'clock, and the contract must be closed, without delay, unless the time for so doing be extended by mutual consent. In absence of any notice or agreement the contract shall continue without interest until the following day.

This rule shall apply to the receipt and delivery of borrowed securities, and any party failing to perform his contract in such securities, shall be liable for the damage that may accrue. All contracts over three days shall require one day's notice, at or before two o'clock.

Section 2.—All contracts maturing during the regular closing of the transfer books, shall be delivered by power and certificate, in lots of not over one hundred shares.

Section 3.—All purchases and sales shall be settled on the next business day, unless expressed to the contrary; and all contracts falling due on Sundays, or on such holidays as are observed by the Banks shall be settled on the preceding day.

Section 4.—When two holidays occur on consecutive days, as when Sunday immediately precedes or follows a legal holiday, contracts falling due on the first of such holidays, shall be settled upon the business day immediately preceding, and those maturing upon the second of such holidays shall be settled upon the business day next following the same.

Section 5.—Deliveries shall be made either by transfer, or by power and certificate of stocks, when more than one transfer a day is allowed on the same stock. On stocks when only one transfer a day is allowed, deliveries shall be made by power and certificate only, and in lots of not over one hundred shares.

Section 6.—In delivery of stock by power and certificate, the receiver shall have the right to demand that the certificates shall be in the name of, witnessed or guaranteed by a member of the Association, excepting as to stocks admitted from the California market, which have no transfer offices in this city. In such cases, the stock shall stand in the name of such persons as may be approved of and designated by the Governing Committee.

Section 7.—Powers of Attorney; or substitution, signed by Trustees, Guardians, Executors, Administrators or Attorneys, shall not be a good delivery. This rule shall not apply to mining and manufacturing shares in the name of a trustee. Detached powers of attorney, or substitution, must be attested by a notary public under seal.

Section 8.—In the delivery of any security dealt in at the Exchange, the seller may require payment in a duly certified check on a city bank, or in lawful money upon delivery.

Section 9.—Reclamations for irregularities in deliveries of stocks, when such irregularities do not affect their validity, but only currency in the market, will not be considered unless made within ten days from the day of delivery.

Section 10.—All corporations whose stock is dealt in at this Exchange shall be required to give thirty days notice in writing, prior to any increase in the capital stock of such company or the creation of any mortgage or deed of trust on its property, said notice to be read publicly by the presiding officer and posted within the Exchange Room; and no increased stock shall be a good delivery upon contracts made previous to such notice, and the stock of any company violating this provision shall be striken from the list of stocks, at the discretion of the Governing Committee.

ARTICLE V.—*Dividends.*—Section 1.—On the day of closing the transfer books of any stock for a dividend, transactions in such stock for *cash* shall be "dividend on" up to the time officially designated for the closing of the books; all transactions other than for cash shall be "dividend off" after a quarter past two P. M. or after the closing of the books, should they close before that hour.

Section 2.—When a dividend is declared on a security, during the pendency of a contract, the seller shall collect, hold, allow interest on, and pay the same to the buyer on the settlement of the contract.

Section 3.—Members may charge one per centum for collecting and paying dividends. But when a scrip or stock dividend has been declared by a company, the one per cent. shall be upon the *market* value, and not upon the par value of the scrip or stock.

Section 4.—No offer to buy or sell dividends on stocks shall be made publicly at the Exchange.

ARTICLE VI.—*Defaults.*—Section 1.—In all cases where an officer may be directed to buy or sell securities, under the provisions of Article 22 of the Constitution, the name of the member defaulting as well as that of the member giving the order shall be announced.

Section 2.—No order for the purchase or sale of securities, under the rule, shall be executed, unless made out in writing over the signature of the party giving the order, who shall state the reason therefor, and it shall be the duty of the officer who executes the order to endorse thereon the name of the purchaser or seller, the price and the hour at which the contract is closed, and hand the same to the Secretary of the Association, who shall, within twenty-four hours ascertain whether the party for whose account the order was given has paid the difference, if any, arising from the transaction. If not paid the Secretary shall report the default to the President. The duty devolving upon the officers of the Association under this rule, shall be performed without charge.

Section 3.—No party shall be permitted to supply offers to buy or sell securities closed for his account under the rule.

Section 4.—When a contract is closed under this rule, any action of the defaulter, direct or indirect, by which the prompt fulfillment of such contract is delayed, hindered or evaded, to the detriment of the other contracting party, shall subject the offending party to suspension for not less than thirty days, or expulsion from the Association, in the discretion of the Governing Committee, by a vote of two-thirds of the members present at a meeting.

Section 5.—Should any stock thus sold not be delivered until the next day, the contract shall continue, but the party defaulting shall be liable to pay such damages as may be assessed by the Arbitration Committee.

Section 6.—The same rule as to notice, time and place, that governs defaults in other contracts, shall apply to borrowed securities, which, on non-delivery or receipt, must be borrowed or loaned in open market except in case of actual default in receiving or delivering, after notice to close the loan, then the same are to be bought or sold, as the case may be, for account of the defaulter, in the manner provided in Article 22 of the constitution.

Section 7.—In case of a failure of a creditor to close the contract as above, the price shall be fixed by the price current at the time such contract ought to have been closed under the rule.

ARTICLE VII.—*Contested Claims.*—Section 1.—The Presiding Officer shall decide all contested claims for sales or purchases, when he has sufficient cognizance of the transaction to form an intelligent opinion; but an appeal from his decision shall be entertained, provided it be seconded by a disinterested member, and the question shall be for sustaining or reversing the decision of the Chair. If the presiding officer has not sufficient knowledge of the transaction to decide the case, he shall take the vote of the members present.

Section 2.—During the settlement of disputes as to claims of purchases and sales, only claimants shall be allowed to speak without consent of the presiding officer, and all others who may interrupt shall be fined.

ARTICLE VIII.—*President may inflict penalties.*—Section 1.—No member shall use indecorous language to the presiding officer or to any fellow member; nor shall any member interrupt the presiding officer while performing the duties of the Chair, or any other member while speaking.

Section 2.—As a means of preserving order, the presiding officer may inflict a fine not to exceed Five Dollars for all cases of infraction of this rule, or of disorder of any kind, from which there shall be no appeal; and no member shall be permitted to consume the time of the Association by questioning the propriety of the fines inflicted.

Section 3.—It shall be the duty of every member, by the practice of order and decorum, to do all in his power, to facilitate the transaction of business; and any member who shall habitually violate this duty, and indulge in acts of insubordination and unseemly conduct, to the injury of the interests of the Association, shall be admonished before the Association by the President, of the necessity of a reformation, and if, after that, he shall continue the obnoxious conduct, the Governing Committee may suspend him from the privileges of the Exchange for a period not exceeding one year.

ARTICLE IX.—*Rules.*—Section 1.—Every member while dealing in stocks, shall remain within the area appropriated to members; and no member, except officers on duty, shall be permitted on the Rostrum during any session of the Association.

Section 2.—Any member bidding for or offering stock while on the Rostrum, shall be fined, at the discretion of the presiding officer, not to exceed One Dollar for each offense.

Section 3.—Any member smoking in any part of the Exchange, where the Committee of Arrangements may decide to prohibit the same, shall be fined not less than One Dollar or more than Five Dollars.

Section 4.—No persons, other than regular members of the Association, shall be allowed to buy or sell stocks or other securities within the Exchange at any time.

No persons other than members shall at any time be admitted within the area, without consent of the presiding officer, or Chairman of the Committee of Arrangements.

ARTICLE X.—*Dealing with Non-Members.*—Any member of this Association, dealing with a person not a member, in the rooms of the Exchange, shall be subject to the penalty of suspension for not less than sixty days, nor more than twelve months.

ARTICLE XI.—*Commissions.*—Section 1.—Any member doing business for less than the rates fixed by the Governing Committee, shall be liable to suspension by the Governing Committee for a period of thirty days, and for a second offense, may be expelled by a vote of a majority of the Governing Committee.

Provided, however, that nothing in this Article shall prevent members from closing business for one another without restriction as to commissions.

Section 2.—The Governing Committee shall hear all cases of alleged violation of this Article and determine as to the truth of the charge from the evidence brought before them.

ARTICLE XII.—*Transacting Business through other Exchanges.*—Any member of this Association trading directly or indirectly in any other organization in N. Y. City where mining stocks are dealt in, shall be subject to the penalty of suspension for sixty days for the first offense, and expulsion for the second offense, provided that eighteen members of the Governing Committee find him guilty. This rule shall not apply to the N. Y. Stock Exchange.

ARTICLE XIII.—*Places of Business.*—Section 1.—Every member must have in the vicinity of the Exchange, a place of business other than the Exchange, where comparisons may be made upon the day of the transaction and where all notices may be served; and it shall be the duty of every member to keep filed with the Secretary a written notice, designating such place of business, and similarly to give notice of any change thereof.

Section 2.—Any member neglecting to comply with this rule, may be considered in default on his contracts and such contracts may be closed out under the rule.

Following are the names of the stocks listed at the New York Mining Stock Exchange and called regularly:

American Flag	Eureka Con.	Quicksilver, Pfd,

A NEW MINING STOCK EXCHANGE.

THE decline in the business about the San Francisco stock exchanges following the failure of the Comstocks, as dividend paying mines, and legislation averse to the interests of the brokers on those exchanges; at a time, too, when the East was beginning to awaken to the influences of the "boom" in all classes of securities that had started, drove many of the San Francisco operators to New York. While a very few of them had amassed large fortunes, a large majority of the Pacific Coast speculators who found their way to the East, were little more than adventurers—persons of some Pine street experience, but very little money. In the spring of 1880 the Mutual Trust Company was organized, for the avowed purpose of fostering speculation in mining securities and a new mining exchange was established under the auspices of the Trust Company, most of the active members of which were Californians. The name adopted for the new board was: "The American Mining Stock Exchange." It was formally opened at No. 63 Broadway on June 2, 1880, at which time the membership numbered one hundred and sixty-nine, and the listed stocks thirty-one. George W. Smiley, formerly chairman of the San Francisco Stock and Exchange Board of San Francisco, was made Chairman of the American Board, and E. D. Barnes, another Californian, Secretary. Among the prominent members of the Board at the time of its organization, were C. T. Christensen, Mark L. McDonald, Augustus Ebert, William Belden. A. E. Reynolds, L. M. Lawson, S. M. Blatchford, George Chapman, Lewis Leland, John Gray, Joseph Aaron, and John J. Marvin. The Board has suffered for want of heavy capitalists interested in its operations, and of persons who were able to secure a large patronage from the public. At times, however, its reports of transactions have made a very creditable showing for a new organization. Within the past year an effort was made to infuse increasd life into the dealings by calling railroad stocks and other securities, but the plan failed, for the same reason that a larger business was not done in mining stocks—want of sufficient capital. At present there are two hundred members, and the market value of the seats is about two hundred dollars; this includes a certificate of stock in the Mutual Trust Company for $1,000. In April, 1882, Mr. Smiley was elected the first president of the Exchange. The officers now are: President, George W. Smiley; Chairman, John R. Mullany; Secretary, W. J. Osborn, and Recording Secretary, John Robb. Unlike the other Board, a record of the purchases and sales is kept, and read at the close of each call. Following is the Governing Committee. C. G. Wilson, Geo. W. Smiley, J. R. Mullany, W. J. Osborn, Samuel M. Blatchford, J. H. Gafney, O. C. Frost, R. M. Mitchill, Jr,, C. E. Orvis, W. S. Warner, R. F. Handy, J. R. LaTouviette, C. S. Sternberger, H. H. Marks, Thomas Marshall, W. E. Leavitt, H. W. Nichols, R. S. Masterton.

The By-Laws and rules and regulations governing the American Mining Stock Exchange are as follows:

BY-LAWS.

ARTICLE I.—*Title of Association.*—The title of this Association is the "American Mining Stock Exchange."

ARTICLE II.—*Membership.*—Sec. 1. All applications for membership shall be made to the Secretary of the Exchange, who shall refer the same to the Committee on Admissions.

The name of the applicant must be posted ten days before action can be taken by said committee.

Sec. 2. Every applicant for membership must be at least twenty-one years of age.

Sec. 3. When it shall appear to the majority of the Committee on Admission that a willful mis-statement upon a material point has been made to them by an applicant for admission or re-admission, they shall report the case to the "Governing Committee," who shall, by a two-thirds vote of the members present, deprive the offending party of his membership or declare him forever ineligible for admission, as the case may be.

Sec. 4. In every case where a member is deprived of his membership, or declared ineligible for readmission by the Governing Committee, by reason of any offense against or under the laws of the Exchange, his membership, in case there are any claims against the member, shall be disposed of forthwith by the Committee on Admissions, and after satisfying the claims of the members of the Stock Exchange and Mutual Trust Company, they shall pay any balance to said member or to his legal representatives.

In no case shall any transfer of membership be permitted until all dues to the Mutual Trust Company and to the Stock Exchange shall have been paid in full, said dues being hereby declared a prior lien upon the proceeds, to be satisfied in full before any distribution shall be made.

Sec. 5. When a member dies his membership may be disposed of by the Committee on Admissions by and with the consent of his legal representatives, and after satisfying the claims of the Trust Company and the members of the Stock Exchange, they shall pay any balance to the legal representatives of the deceased.

Sec. 6. Any member shall have the right to transfer his membership under the provision of Section 1, providing he has no uncanceled contracts with members of the Exchange or the Trust Company.

Sec. 7. All fees for admission and membership shall be paid to the Mutual Trust Company, and the name of an original member or a transferee shall not be placed on the Exchange Roll until such payment has been made.

ARTICLE III.—*Elections, Officers, etc.*—Sec. 1. The officers of the Exchange shall consist of a Chairman and Secretary, to be elected at their annual election.

Sec. 2. The whole internal government of the Exchange shall be vested in a Governing Committee consisting of twenty members, five of whom shall be elected annually, by ballot, on the second Monday of April in each year, to serve four years.

Sec. 3. In case any vacancy shall occur in the Governing Committee by resignation or otherwise it shall be filled by said Committee until the next annual election, when the Stock Exchange will fill the vacancy for the unexpired term.

Sec. 4. This committee shall have power to try all offenses under or against the laws of the Exchange and all charges against members, and their decision shall be final.

Sec. 5. The Governing Committee may, at any time during the pendency of a case before any of the Standing Committees, ask for such information and give such instructions as they may deem proper.

Sec. 6. Any member of a standing committee before which a case may be pending, shall have the right, during the consideration of such case, or within two days after a decision has been made thereon, to demand a reference of the same to the Governing Committee for final adjudication; and the Chairman of the standing committee shall notify the Chairman of the Governing Committee of such reference at the next regular meeting. No member of the Governing Committee shall participate in the adjudication of a case in which he is personally interested.

Sec. 7. The Chairman of the Governing Committee may call a meeting of said Committee at any time. He shall call a meeting at the request of five members of the Exchange. In the absence of the Chairman, any five members of the Governing Committee may call a meeting by written announcement from the rostrum.

Sec. 8. Any member of the Governing Committee who (except in case of illness or leave obtained from its presiding officer) shall absent himself from the regular meetings of the committee, shall pay a fine of $1, and if absent three consecutive regular meetings, shall, *ipso facto*, cease to be a member of the Governing Committee, and the vacancy so occurring shall be filled as provided in Article II. of the By-Laws.

ARTICLE IV.—*Standing Committees.*—Sec. 1. As speedily as possible after each annual election, the Governing Committee shall appoint from its own members the following standing committees for the year:

First. A Committee on Management and Arrangements, consisting of three members, to whom shall be referred the enforcement of all rules and regulations necessary to good order and the comfort of the members. They shall determine the number and duty of all employees other than the officers, and shall have a general supervision of all the departments of the Exchange.

Second. A Committee on Arbitration, consisting of five members, to whom shall be referred all claims and matters of difference between members of the Exchange, arising from transactions in stocks or other securities, or from any transactions in money. Provided, however, that the Arbitration Committee shall, on the application of either one of the parties, or at their discretion, have the power to dismiss the case and refer the parties to their legal remedy. They shall also adjudicate such claims arising from differences, as aforesaid, as may be preferred against members by non-members, when such non-member shall agree to abide by the rules of the American Mining Stock Exchange in such cases provided. (*Vide* Rules and Regulations, Art. XXV.) The decision of this Committee shall be final in all cases, unless an appeal be taken by a member of the committee, as provided in Section 2 of this article, or in cases involving a sum of $1,500 or over, when either party may appeal within ten days to the Governing Committee for a final adjudication.

The members of the Arbitration Committee present shall receive Five Dollars each for hearing a case that shall be heard and decided at one meeting. For all cases occupying the attention of the committee at more than one meeting, Ten Dollars. No compensation to be paid any member absent from the meetings of the committee. The losing party in all adjudicated cases to pay the expenses.

Third. A Committee on Admissions, consisting of five members, to whom shall be referred all new applications for membership, and also of suspended members for re-admission. But no application for admission or re-admission of a person who has ceased to be a member of the Exchange through violation of its By-laws or Rules and Regulations shall be referred to said committee unless he has first obtained the consent of two-thirds of the members of the Governing Committee present when such application is considered.

They shall determine the manner and form in which their proceedings shall be conducted. Two-thirds of the committee approving, the candidate shall be declared elected or re-elected to a membership in the Exchange.

The Chairman of the committee, after ratification by the Governing Committee, shall inform the presiding officer of the Exchange of the admission or re-admission of any applicant, and the said presiding officer shall announce the same to the Exchange.

It shall also be the duty of this committee to consider and dispose of all applications for the transfer of membership under Article XI. of the By-Laws of this Exchange.

Fourth. A Committee on Stock List and Securities, consisting of seven members, to whom shall be referred the arrangement of the calls of Stocks, Bonds, etc., and all the applications for placing Stocks, Bonds, etc., on the list dealt in at the Exchange.

They shall have referred to them for adjudication all disputed questions as to the regularity of Stock Certificates, Bonds, etc., dealt in at the Exchange.

Fifth. A Law Committee, consisting of three members.

Sec. 2. The action of all standing committees shall be final, unless some member of said committee should not concur in any decision made by any standing committee; then, and in that event, an appeal may be made in writing to the Governing Committee, excepting the Admission and Stock List Committee, whose action shall be reported to the Governing Committee for approval or disapproval.

ARTICLE V.—*Provision for the Families of Deceased Members.*—Every member of the American Mining Exchange shall be subject to the conditions, and entitled to partake of the benefits of the plan providing for the families of deceased members hereinafter set forth.

First. By and with the concurrence of the Mutual TrustCompany, an additional number of seats, not to exceed thirty, shall be sold for the sum of Two Hundred Dollars each, the proceeds of the same, after deducting the necessary expenses attending the sale of the said seats, shall be received by the Trustees of the Insurance and Gratuity Fund, and be deposited in the Mutual Trust Company to the credit of the Trustees of the Insurance and Gratuity Fund of the American Mining Exchange; the said funds, together with the annual interest and accretions arising from the same, and all fines that may be collected from members of the Exchange, all transfer fees, if any, and, in fact, any revenue that may be collected by said Trustees, to be invested from time to time by said Trustees, in accordance with the laws of the State of New York regulating trust funds.

Second. The management and distribution of the Insurance and Gratuity Fund, and the execution of the provisions of this article, shall be under the charge of a Board of Trustees, to be known as the Trustees of the Insurance and Gratuity Fund of the American Mining Exchange, and to consist of five members, the first three to serve one year, and the other two to serve two years, selected by the Governing Committte. In case of any vacancy occurring, the same shall be filled by the Governing Committee for the unexpired term.

Third. The said Trustees shall have power to adopt such by-laws as they may think proper, subject to the approval of the Governing Committee, and shall make an annual report to the Exchange of the condition of the fund, and shall, at any time when called upon by the Committee, make a report of condition of said fund to the Governing Committee.

Fourth. Upon the death of any member of the Exchange, there shall be levied and assessed against each surviving member the sum of Ten Dollars, which thereupon becomes a due from him to the Exchange, and charged against the membership of such surviving member, to be collected as other fines and dues are or may then be collected.

Fifth. The faith of the American Mining Exchange is hereby pledged to pay, within three months after proof of death of any member, out of the money so collected, the sum of Fifteen Hundred Dollars, or so much thereof as may have been collected, to the persons named in the next section, as therein provided, which money shall be paid as a gratuity from the surving members of the Exchange, free from all debts, charges or demands whatever.

Sixth. Should the member die leaving a widow and no children, then the whole sum shall be paid to such widow for her own use.

Should the member die leaving a widow and children, then one-half shall be paid to the widow for her separate use, and one-half to the children for their use, share and share alike; provided, that the share of minor children shall be paid their guardian, and that the issue of any deceased child shall be entitled to receive the share which said child would have received if living; if of age, directly, or if minors, through his, her or their guardian or guardians.

Should the member die leaving neither widow nor children, the whole sum shall be paid to the next of kin of the deceased.

In all cases a certified copy of the proceedings before a Surrogate or Judge of Probate shall be accepted as proof of the rights of the claimants, be deemed ample authority to the Exchange to pay over the money, shall protect the Exchange in so doing, and shall release the Exchange forever, from all further claim or liability whatsoever.

Seventh. Nothing herein contained shall ever be taken or construed as a joint liability of the Exchange or its members for the payment of any sum whatsoever; the liability of each member at law or in equity being limited to the payment of Ten Dollars only on the death of any other member, and the liability of the Exchange being limited to the payment of the sum of Fifteen Hundred dollars (or such part thereof as may be collected), after it shall have been collected from the members, and not otherwise.

Eighth. Nothing herein contained shall be construed as constituting any estate *in esse* which can be mortgaged or pledged for the payment of any debts; but it shall be construed as the solemn agreement of every member of the Exchange to make a voluntary gift to the family of each deceased member, and of the Exchange to collect and pay over to such family the said voluntary gift; it being understood and hereby expressly declared, that the provisions of this Article shall only be in force in, and apply to, cases of death which shall take place after its adoption.

Ninth. The provisions of this Article shall not extend to any member who shall have severed his connection with the Exchange by the transfer of his membership, whether the same is made voluntarily or involuntarily, nor to any member who now is, or hereafter may be, expelled by the Governing Committee.

Tenth. The membership of a deceased member from the date of his death until sold, shall be subject to the same assessments, under the provisions of this Article, as the memberships of the surviving members during that period.

Eleventh. Upon the death of any member, if more than Fifteen Hundred Dollars shall be called from the members by assessment of Ten Dollars on each survivor, then the surplus shall be added to the Insurance and Gratuity Fund and invested by the Trustees as before mentioned.

Twelfth. On and after November 1st, 1881, any one becoming a member of the American Mining Exchange by transfer shall pay to the Trustees of the Insurance and Gratuity Fund of the Exchange the sum of Twenty-Five Dollars before he shall be admitted to the privileges of membership, but this provision shall not apply in cases of sale or transfer of delinquent seats.

ARTICLE VI.—Sec. 1.—At 10 o'clock precisely the presiding officer shall announce from the rostrum that the Exchange is opened for the transaction of business, and it shall remain open for such purpose until 3 o'clock, P. M., when the presiding officer shall similarly announce it closed.

Sec. 2.—It shall be the duty of the Chairman to preside over the Exchange whenever it shall be assembled for business, and to remain in the chair during business hours, to call stocks, maintain order, enforce the rules, and perform such other duties as the Governing Committee may regard as properly pertaining to the office. In the absence of the Chairman, the members present may choose a Chairman *pro tem.*, with full powers.

The presiding officer shall determine all questions of order.

Duties of the Secretary.—Sec. 3.—It shall be the duty of the Secretary to keep complete minutes of the proceedings of the Exchange, and to take charge of the books and papers of the Association. He shall conduct the correspondence of the Exchange, and keep a record of the closing and opening of the transfer books for dividends, elections, etc., of the various corporations whose stocks are dealt in at the Exchange, the amount of such dividends, and when payable, and shall post the same on the bulletin board. He shall also keep a book containing the names of all the members, with date of admission, by purchase or otherwise, and all transfers of membership; also a list of suspended members.

ARTICLE VII.—*Suspended Members, Re-admission, Claims of Creditors, etc.*——Sec. 1.—Any member who fails to comply with his contracts, or who becomes insolvent, shall be suspended until he has settled with his creditors. Such member shall immediately inform the presiding officer, in writing, that he is unable to meet his engagements; and it shall be the duty of the presiding officer thereupon to give notice from the chair of the suspension of such member. The Secretary shall record the failure of such member in a book kept for that purpose.

In default of giving such information, the party, on application for re-admission, shall not be entitled to a reference of his case to the Committee on Admissions, unless two-thirds of the members of the Governing Committee present shall vote in favor of such reference.

Section 2.—When a suspended member applies for re-admission he shall be required to furnish to the Chairman of the Committee on Admissions a list of his creditors and a statement of the amounts owing, and the nature of his settlement in each case.

The committee shall give notice, for three consecutive days, through the presiding officer of the Stock Exchange, and by posting the same on the bulletin board provided for that purpose, of the time and place of meeting to consider the application of the suspended member and the claim of creditors. Upon the applicant presenting satisfactory proof of his settlement with all his creditors, the committee shall proceed to ballot for him in accordance with its prescribed rules and regulations. Failing of a re-election, the applicant shall be entitled to be balloted for at any five subsequent regular meetings of the committee, to be designed by himself. Provided, however, that the six ballotings to which the applicant shall be entitled shall be within one year from the time of his first application for readmission. If, after six ballotings, as aforesaid, the candidate is rejected, he may appeal, within sixty days thereafter, to the Governing Committee, whose action in the case shall be final.

The question on appeal, however, shall not be taken unless at least sixteen members of the Governing Committee are present, and it shall require an affirmative vote of at least thirteen members to reinstate the applicant.

If rejected by the Governing Committee, he shall cease to be a member of the American Mining Stock Exchange, and his name shall forthwith be stricken from the roll, and his membership shall be disposed of by the Committee on Admissions.

Section 3.—If any suspended member fails to settle with his creditors within one year from the time of his suspension, his membership shall be disposed of by the Committee on Admissions, and the proceeds paid, *pro rata*, to his creditors in the Trust Company and Exchange. The Governing Committee may, by a vote of two-thirds of the members present, extend the time for settlement of such suspended member.

No claims growing out of transactions between partners shall be admitted to share in the proceeds of the membership of one of such partners until after the claims filed by other creditors who are members of the Exchange shall have been satisfied.

Section 4.—Any creditor failing to file with the Secretary of the Committee on Admissions a written statement of his claim against a member, prior to the transfer of the right of membership of such member, shall forfeit all right to a distributive share of the proceeds of such membership.

Section 5.—No member of the Exchange shall be allowed to take as partner any suspended member thereof during the period of his suspension, or to form a partnership with any insolvent person, or with any person who may have previously been a member of the Exchange, and against whom any member may hold a claim arising out of transactions made during the time of such membership, and which has not been settled or released in accordance with the laws of the Exchange.

Section 6.—No claims made against members of this Exchange by others than the Trust Company and members of the Exchange shall be recognized, nor shall any cognizance of the same be taken unless the said claim is made on account of stock transactions made on the floor of the Exchange.

ARTICLE VIII.—*Elections, Quorum, Members of a Firm Voting, etc.* Section 1.—Any member of the Exchange in full standing shall be entitled to vote at an election for officers.

Section 2.—The members present at the daily sessions of the Exchange shall constitute a quorum for the settlement of disputes growing out of the purchases and sales made during such sessions.

When the Exchange shall be assembled to vote on questions other than the above a majority of all the members of the Exchange shall be necessary to a quorum.

Section 3.—But one member of a firm shall be allowed to transact business in the same security at the same time, or vote on the questions of dispute referred to in Section 2.

ARTICLE IX.—*Fictitious Sales, Bids and Offers.*—Section 1.—No fictitious sales shall be made. Any member contravening this section shall, upon conviction, be expelled.

Section 2.—Any member who shall make fictitious or trifling bids or offers shall, upon conviction, be subject to suspension or such other penalty as the Governing Committee shall impose.

ARTICLE X.—*Payments and Deliveries in Certain Cases to be Simultaneous.*—In all deliveries of stocks, bonds, etc., the party delivering shall have the right to require the purchase money to be paid at the time and place of delivery.

ARTICLE XI.—*Regulating Commissions.*—Sec. 1. The commission on Mining Stocks selling in the market shall be as follows:

Stocks selling under 50c. p. sh., com. 50c. p. 100 shs.
" at 50c p. sh. and under $1.00 com. $1 00 p. 100 shs.
" at $1.00 " " 2.00 " 2.00 "
" at 2.00 " " 5.00 " 3.00 "
" at 5.00 " " 10.00 " 5.00 "
" at 10.00 " " 20.00 " 6.25 "
" at 20.00 " and over, " 12.50 "

When one member merely buys or sells for another (giving up his principal on the day of the transaction), and does not receive or deliver the stock, his commission shall be one-half the above rates.

On all stocks selling at $1 and under, bids and offers must not be less than one cent apart.

On all stocks selling over $1 and under $5, bids and offers must not be less than five cents apart.

On all stocks selling above $5, bids and offers must not be less than one-eighth apart.

ARTICLE XII.—*Members Guilty of Obvious Fraud.*—Should any member be guilty of obvious fraud, of which the Governing Committee shall be the judge, he shall upon conviction thereof by a vote of two-thirds of the members of said committee present, be declared by the Chairman of the Exchange to be expelled and his membership shall be disposed of, and after paying all dues and claims due members and the Mutual Trust Company, the balance, if any, shall be paid to the expelled member or his representatives.

ARTICLE XIII.—*Obligation to Abide by the By-laws and Rules of the Exchange.*—Sec. 1. Any member reported to the Governing Committee for refusing to comply with the laws of the Exchange, or for any violation thereof, shall be allowed an opportunity of being heard before them; and if said committee decide that the complaint is proved, they shall inflict such penalty as may be prescribed by the By-laws or Rules and Regulations; or where no penalty is specified, such as they may deem proper, according to the gravity of the offense.

Sec. 2. No expulsion or suspension of a member shall affect the rights of creditors as hereinbefore provided.

ARTICLE XIV.—*Legal Interference with Officers or Committees.*—Any member of the American Mining Stock Exchange who shall himself, or whose partner or partners shall apply for an injunction or legal instrument restraining any officer or committee of the Trust Company or Exchange from performing his or its duties under the By-laws, shall by that act cease to be a member of the Exchange.

ARTICLE XV.—*Fee for Placing Mining Stocks on the Regular List.*—The fee for placing mining stocks on the list shall be deposited with the Mutual Trust Company when the application is made, and returned in case the same is not approved. All stocks remaining on the list over one year shall pay an annual fee of fifty dollars in advance.

The Exchange reserves the right to suspend the calling of any stock, at any time, by a two-thirds vote of the members present.

ARTICLE XVI.—*Dues and Fines.*—Section 1.—The dues of all members of the Exchange shall be $50 per annum, exclusive of fines, and shall be paid to the Mutual Trust Company quarterly, in advance, on the 1st days of May, August, November and February.

Section 2.—Any member who shall neglect to pay dues or fines for ten days after they become payable shall be suspended for twenty days; thereupon, after three days' notice by mail to his last registered address, he shall no longer be considered a member and his membership shall be forthwith disposed of by the Committee on Admissions, except in the case of non-residents, who shall have thirty days' notice.

Section 3.—All fines collected shall be placed to the credit of the Insurance and Gratuity Fund of the American Mining Exchange, subject to the control of Trustees elected by and from the Governing Committee.

ARTICLE XVIII.—These By-laws may be changed by the Governing Committee at any regular meeting, notice having been given in writing at least one meeting previously of the proposed change, subject, however, to ratification by the Mutual Trust Company of all matters affecting finances directly or indirectly, except such as relate to the Insurance and Gratuity Fund.

RULES AND REGULATIONS OF THE AMERICAN MINING STOCK EXCHANGE.—ARTICLE I.—*Hours of Business.*—Section 1.—The Exchange shall be opened for the entrance of members upon every business day, at ten minutes before ten o'clock, A. M.

At ten o'clock precisely the presiding officer shall announce from the rostrum that the Exchange is opened for the transaction of business, and it shall remain open for such purpose until three o'clock, P. M., when the presiding officer shall similarly announce it closed.

Dealings shall be limited throughout the entire year to the interval between the hours named, unless otherwise ordered by the Governing Committee, and a fine of fifty dollars for each offense shall be imposed upon any member who shall, directly or indirectly, make any transaction publicly in stocks or bonds before or after these hours in the Exchange or its vicinity.

Section 2.—The Exchange shall not be closed at any time between the hours above named, except by order of the Governing Committee. While so closed, the same penalty shall apply to dealings outside of the Exchange as during the regular time of closing.

ARTICLE II.—*Calls.*—Section 1.—The regular calls shall be at ten A. M., eleven A. M., twelve M. and 2 P. M., and the order of business at such regular calls shall be as follows, viz.:

1. Calling the regular list of stocks or bonds.
2. Calling stocks or bonds at the request of members.
3. Reverting to stocks or bonds at the request of members.

Section 2.—After the call, any security may be recalled once without a fine, and afterwards by the payment of a fine of twelve and one-half cents each time.

ARTICLE III.—*Bids and Offers.*—Section 1.—All offers made and accepted shall be binding; and in case there are two or more claimants for the purchase or sale, the presiding officer shall decide the same, or he may appeal to the Exchange for their decision.

Section 2.—In all offers to buy or sell, the offer shall be accompanied with some specific number of shares, and where no number is named, the bid or offer shall be considered to be for one hundred shares of stock.

Section 3.—Offers to buy or sell shall be entitled to the floor in the following order:

1. Bids, "seller three days," and offers to sell, "buyer three days," shall take precedence of cash and regular.
2. "Cash" and "regular" bids and offers may be made simultaneously, as being essentially different propositions.
3. Offers to buy or sell on longer options than three days may be made at the same time, with offers to buy or sell, "buyer or seller three."
4. In offers to buy on seller's option, or to sell on buyer's option, the longest option shall have precedence.

5. In offers to buy on buyer's option, or sell on seller's option, the shortest option shall have precedence.

No other bids or offers shall be permitted, or have any standing upon the floor.

Members violating the provisions of this section may be fined by the presiding officer, and on repeating or persisting in the offense, may be cited to appear before the Governing Committee, who may, in their discretion, suspend the offender for a period of not more than ten days.

Section 4.—No party to a contract shall be compelled to accept a principal other than the member offering to contract, unless the name proposed to be substituted shall be satisfactory, or shall be declared at the time of making the offer.

Section 5.—No sale of securities shall be made on which a deposit shall be offered as the limit of liability.

ARTICLE IV.—*Interest.*—Section 1.—No purchase or sale at the option of the buyer or seller, for three days, or "at three days," shall bear interest. All purchases and sales beyond that time shall be with interest, unless otherwise agreed.

Section 2.—In all time bargains, the rate of interest shall be six per cent. per annum, to be calculated by days, according to bank usage.

Section 3.—The accrued interest on all stocks and bonds shall go to the purchaser.

ARTICLE V.—*Applications to Place Stocks, etc., on the List.*—All applications for placing stocks on the list shall be made to the Committee on Stock List and Securities, who shall report on the same to the Governing Committee within ten days, with a full statement of capital, number of shares, resources, etc. No stock or bond shall be placed on the list of stocks called at the Board except by a vote of a majority of members of the Committee on Stock List and Securities present, or by order of the Governing Committee.

ARTICLE VI.—*Registry of Stocks.*—Section 1.—The Exchange will not call or deal in any active speculative stock of any company, a registry of whose stock is not kept in some responsible bank, trust company or other satisfactory agency, and which shall not give public notice, at the time of establishing such registry, of the number of shares so entrusted to be registered, and shall not give at least thirty days' notice through the newspapers, and in writing to the presiding officer of the Exchange, of any intended increase of the number of shares, either direct or through the issue of convertible bonds, and shall not at the same time give notice of the object for which such issue of stock or bonds is about to be made.

Section 2.—All certificates of California and Nevada mining stocks which are not registered and which have no transfer office in the city standing in the following names:

E. A. Richardson, *Trustee*, Bank of California, S. F.;
E. R. Grant, *Trustee*, Agency Bank of California, S. F.,
Nat. Stein, *Trustee*, Wells, Fargo & Co., S. F.;
H. B. Parsons, *Trustee*, Wells, Fargo & Co., N. Y.;
G. B. Bayley, *Trustee*, Nevada Bank, S. F.;
Jas. Coffin, Jr., Nevada Bank;
C. Minzesheimer & Co., *Trustees*, N. Y.;

which names can be verified at the respective agencies in New York, shall constitute and be considered a good delivery on this Exchange.

ARTICLE VII.—*Settlement of Contracts.*—Section 1.—All purchases and sales shall be settled for on the next business day, unless expressed to the contrary, and except in the cases referred to in the following section:

Section 2.—All contracts falling due on Sundays, or on such holidays as are observed by the banks, shall be settled on the preceding day.

But where two holidays occur on consecutive days, as where Sunday immediately precedes or follows a legal holiday, contracts falling due upon the first of such holidays shall be settled upon the business day immediately preceding; and those maturing upon the second of such holidays shall be settled upon the business day next following the same.

ARTICLE VIII.—*Hours for the Delivery of Securities.*—Section 1.—All deliveries of securities must be made before 2.15 o'clock, P. M.; and in cases where a broker fails to make his deliveries within fifteen minutes after that time, his contracts may be closed under the rule after due notice to him (the defaulting party), in the manner provided in Article XVII.

Section 2.—This rule shall apply to borrowed and loaned securities.

Section 3.—"Due notice" is hereby defined to be, a notice in writing delivered at the office of the broker, or if he has no office, then at the post-office, addressed to the address last given by him to the Secretary.

Section 4.—In case of borrowed and loaned securities, wherever notice is given to the borrower before 11.30 A. M. for the return of the stock, such stock must be delivered before 12.45 P. M. of the same day.

ARTICLE IX.—*Settlement of Disputes as to Purchase or Sale of Securities.*—Section 1.—In any disagreement between members, growing out of the purchase and sale of stocks, as soon as the same is ascertained if not settled by mutual agreement, the money difference shall be established forthwith by purchase or sale by an officer of the Exchange.

ARTICLE X.—*Contracts Maturing during closing of Transfer Books; Due Bills.*—All contracts in stocks falling due during the regular closing of the transfer books of any company, shall be settled at maturity by the delivery of a certificate and power of attorney, as defined in article XI.; and contracts, at the option of the buyer of seller, may be notified for settlement, as if the books were open; and in case the books are closed for a dividend, the party entitled thereto shall receive a due bill therefor, signed or endorsed by the seller or the stock; but the party entitled to the dividend shall have the right to require a deposit in a trust company, payable to the joint order of the purchaser and seller of the amount of each due bill.

ARTICLE XI.—*How Deliveries shall be made when Transfer Books are closed by legal Impediment.*—Whenever the transfer books of any company shall be closed by any legal impediment, so as to render their being open again uncertain, then the deliveries of stock of such company, in satisfaction of contract, shall be made by certificate, and power of attorney irrevocable, with notarial acknowledgment and seal, and containing assignment and bill of sale satisfactory to the recipients, or passed upon by the Committee on Stock List and Securities.

ARTICLE XII.—*Deliveries of Stock by Certificate and Power.*—Sec. 1. In the delivery of stock of which but one transfer in a day is allowed, the receiver shall have the option of receiving said stock by certificate and power irrevocable, in the name of, witnessed or guaranteed by a member of the Exchange, or a firm represented at the Exchange, resident or doing business in New York, or by transfer thereof.

Section 2.—In all transactions exceeding one hundred shares, where the delivery is by certificate and power, the purchaser shall have the right to require the delivery in certificates of not more than one hundred shares each.

Section 3.—Powers of attorney, or substitution, signed by Trustees, Guardians, Infants, Executors, Administrators or Attorneys, shall not be a good delivery.

Detached powers of Attorney, or substitution, must be attested by a notary public under seal.

ARTICLE XIII.—*Contracts.*—Section 1.—No contracts for the purchase or sale of securities beyond sixty days shall be made in the Exchange.

Section 2.—In all contracts on time over three days, made at the option of the buyer or seller, one day's notice shall be given before securities can be delivered or demanded, and such notice shall be given at or before two o'clock, P. M.

ARTICLE XIV.—*Dividends.*—Section 1.—On the day of closing the transfer books of any stock for a dividend, transactions in such stock for *cash* shall be "dividened on" up to the time officially designated for the closing of the books; all transactions other than for cash shall be "dividend off" after a quarter past two o'clock, P. M., or after the closing of the books, should they close before that hour.

Section 2.—When a dividend is declared on a security, during the pendency of a contract, the seller shall collect, hold, allow interest on, and pay the same to the buyer on the settlement of the contract.

Section 3.—Members may charge one per centum for collecting and paying dividends. But when a scrip or stock dividend has been declared by a company, the one per cent. shall be upon the market value, and not upon the par value, of the scrip or stock.

Section 4.—No offers to buy or sell dividends on stocks shall be made publicly at the Exchange.

ARTICLE XV.—*Payment and Transfer.*—In all sales of stocks, transferable in this city, either party shall have the right to require the purchase money to be paid at the time and place of transfer.

In the delivery of stocks not transferable in this city, the purchaser shall have the right to require the deposit of the purchase money in some local bank, to be agreed upon by the contracting parties, or named by the presiding officer of the Exchange; such money to be held in trust until official notification of the transfer shall have been received.

ARTICLE XVI.—*Mutual Deposits on Contracts.*—Section 1.—In any contract, either party may call, at any time during the continuance of the same, for a mutual deposit of twenty per cent. And whenever the market price of the securities shall change, so as to reduce the margin of said deposit either way below ten per cent., the party whose margin is so reduced shall, upon notice in writing, deposit sufficient to restore the margin to twenty per cent., and this may be repeated as often as the margin may be so reduced. Such additional marginal deposit to be made with the caller unless the payer shall elect to deposit with an agreed third party or with the Mutual Trust Company.

The seller of the stock may, if he so desire, deposit the stock sold called for by the contract, which shall be in full for all margins.

In all cases where deposits are called before two o'clock, P. M., they shall be made at or before two and a half o'clock, P. M., the same day. If called after two o'clock, P. M., they shall be made at or before eleven o'clock, A. M., of the following day.

Section 2.—In case either party shall fail to comply with a demand for a deposit, in accordance with the provisions of this article, the party calling, after having given due notice, may report the default to the presiding officer of the Exchange, who shall purchase or resell the security forthwith in the Exchange, and any difference that may accrue shall be paid over to the party entitled thereto.

Section 3.—Where there is a difference of opinion as regards the place of deposit, for the security of purchases and sales, the same shall be made in the Mutual Trust Company.

Section 4.—No assignment of any contract made between members of this Exchange will be recognized by the Exchange, except made by mutual consent endorsed on the memorandum of contract.

ARTICLE XVII.—*Default-Contract, Closing under the Rules.*—Section 1.—Should any member neglect to fulfil his contract on the day it becomes due, the party or parties contracting with him shall, after giving notice, as required by Section 2 of the preceding article, employ an officer of the Exchange to close the same forthwith in the Exchange, by purchase or sale, as the case may require, unless the price of settlement has been agreed upon by the contracting parties.

In case of a failure of a creditor to close the contract as above, the price shall be fixed by the price current at the time such contract ought to have been closed under the rule.

In all cases where an officer may be directed to buy or sell securities under this rule, the name of the member defaulting, as well as that of the member giving the order, shall be announced.

No order for the purchase or sale of securities, under this rule, shall be executed unless made out in writing over the signature of the party giving the order, who shall state the reason therefore; and it shall be the duty of the officer who executes the order to endorse thereon the name of the purchaser or seller, the price and the hour at which the contract is closed, and hand the same to the Secretary of the Exchange, who shall, within twenty-four hours, ascertain whether the party for whose account the order was given has paid the difference, if any, arising from the transaction. If not paid, the Secretary shall report the default to the presiding officer of the Exchange. The duty devolved upon the officers of the Exchange under this rule shall be performed without charge.

No party shall be permitted to supply offers to buy or sell securities closed for his account "under the rule."

When a contract is closed under this rule, any action of the defaulter, direct or indirect, by which the prompt fulfilment of such contract is delayed, hindered or evaded, to the detriment of the other contracting party, shall subject the offending party to suspension for not less than thirty days, or expulsion from the Exchange in the discretion of the Governing Committee, by a vote of two-thirds of the members present at a meeting.

When contracts are closed out under the rule, any member applying the bid or offer, and not duly receiving or delivering the stock, as the case may be, renders himself liable to prosecution under this article.

Should any stock thus sold not be delivered until the next day, the contract shall continue; but the party defaulting shall be liable to pay such damages as may be assessed by the Arbitration Committee.

Section 2.—The same rules as to notice, time and place that govern default in other contracts, shall apply to *borrowed* securities, which, on non-delivery or receipt, must be borrowed or loaned in open market, except in case of actual default in receiving or delivering after notice to close the loan; then the same are to be bought or sold, as the case may be, for account of the defaulter, in the manner provided in this article.

ARTICLE XVIII.—*Access to the Minutes.*—No person shall have access to the minutes of the Exchange except the members.

ARTICLE XIX.—*Communications Influencing the Market.*—No communications having a tendency to influence the market shall be read to the Exchange without the consent of the Chairman or presiding officer.

ARTICLE XX.—*Indecorous Language, Disorderly Conduct, etc.—Punishment.*—Section 1.—Any member who shall, during the session of the Exchange, use indecorous language to another member or who shall be guilty of conduct subversive of good order and decorum, or of any act or acts whereby the personal comfort or safety of other members is seriously interfered with, may be fined at the discretion of the presiding officer, in a sum not exceeding ten dollars.

Section 2.—Any member interrupting the presiding officer while calling stocks, by speaking, or otherwise, shall pay a fine of not less than twenty-five cents for each offense, at the discretion of the presiding officer, from which there shall be no appeal.

The levying of all fines shall rest exclusively with the presiding officer.

ARTICLE XXI.—*Special Meetings.—Ayes, Noes, etc.*—Section 1.—Except by unanimous consent, no business shall be transacted previous to the first call of stocks.

Section 2.—When any special meeting of the Exchange shall be appointed, the fine for non-attendance may, by a vote of two-thirds of the members present, be fixed at a sum not exceeding five dollars.

Section 3.—No notice will be taken of any resolution or resolutions, unless submitted in writing.

Section 4.—No member shall speak more than twice on any question under discussion by the Exchange, without permission from the presiding officer, nor shall any member interrupt another while speaking.

Section 5.—The presiding officer shall not participate in any discussion arising in the Exchange, while occupying the chair.

Section 6.—The ayes and noes shall not be called for upon any question, excepting at the request of one-fifth of the members of the Exchange present. When the ayes and noes are ordered, a ballot-box shall be placed on the Secretary's desk, and kept open for the reception of votes from 10.30 A. M. until 2 P. M. The vote shall be taken by the deposit of a ballot, endorsed by the member voting, and containing his vote, aye or no. Said ballot shall be placed on file in alphabetical order, and preserved for fifteen days. The votes shall be entered upon the roll, opposite to the names of the members who have voted, and such roll shall be placed on the Secretary's desk for the inspection of members.

ARTICLE XXII.—*Smoking Forbidden.*—Any member smoking in the business rooms of the Exchange, or any other part of the building where the Committee on Management and Arrangements may prohibit the same, shall be fined five dollars.

ARTICLE XXIII.—*Injuring Property of the Exchange Employees, etc.*—Section 1.—If a member injures or destroys the property of the Exchange, it shall be repaired or replaced under the direction of the Committee on Management and Arrangements, and the expense charged to such member, in addition to any fines which may be imposed by the presiding officer for the offense, under Article XX.

Section 2.—If any employee of the Exchange shall deface the building or injure the property of the Exchange, he shall be discharged forthwith; and if any employee of a member of the Exchange, or if any visitor or subscriber shall deface or destroy the property of the Exchange, or be guilty of rude or improper conduct, he shall be excluded from the rooms of the Exchange.

ARTICLE XXIV.—*Dealings with Non-Members.*—Any member of the Exchange dealing with a person not a member, in the rooms of the Exchange, shall be subject to suspension for not less than sixty days, nor more than twelve months.

ARTICLE XXV.—*Arbitration of Claims of Non-members.*—Any person shall have the right to bring a claim against a member of the Exchange before the Arbitration Committee, arising from transactions in bonds, stocks or other securities, on the conditions following, and not otherwise:

The person making such a claim shall execute a full release of his claim against said member, duly signed, sealed and stamped, and shall deliver the same to the Chairman of the Arbitration Committee, to be held in trust, to abide the event of the suit before the said committee.

FORM OF RELEASE.—*Know all Men by these Presents:* That I, ——————, for and in consideration of the sum of one dollar, to me in hand paid by——————, the receipt of which is hereby acknowledged, have remised, released and forever discharged, and by these presents I do hereby remise, release and forever discharge the said——————of and from any and all demands heretofore existing and due and owing to me, and the said——————is hereby fully released and discharged from the same.

Sealed with my seal, and dated at New York this————day of ————, 18—

The Chairman of the Arbitration Committee shall keep the said release in trust, to abide the result of said suit, and shall deliver the same to the defendant in either of the three following cases:

1st. In case the claimant shall not present his claim to the Arbitration Committee within twenty days after executing said release.

2d. In case judgment shall be rendered for said defendant by the Arbitration Committee.

3d. In case the defendant shall pay, or offer to pay, to such claimant the amount of judgment rendered in favor of said claimant.

In case judgment shall be rendered against any member of the Exchange which he is unable or unwilling to pay, then such release shall be cancelled and returned to such claimant.

ARTICLE XXVI.—*Regarding Suspension of Members and Legal Proceedings.*—In all cases where, and in accordance with the provisions of Article XXV., a judgment has been or shall be rendered against any member of the Exchange by the Exchange, such member shall, without further action of the Exchange, stand suspended from the time of the rendition of such judgment until the same is fully paid or satisfied, or tendered, or refused.

Whenever any creditor of a member of this Exchange, or any person asserting a claim against a member of this Exchange, has voluntarily or shall voluntarily resort to any legal tribunal, or has voluntarily instituted or shall voluntarily institute any legal proceedings against such member concerning his claim, such claim shall not be recognized or enforced by this Exchange.

ARTICLE XXVII.—*Assessments.*—In all sales of stocks, whether on time or for cash, the buyer shall pay any assessments levied and not delinquent at time of sale; provided, that the levying of such assessment by any company shall have been previously announced by the presiding officer in open Exchange; but no assessment, whether payable instanter or otherwise, shall be considered delinquent until *thirty* days from the day on which it is levied, excepting on California stocks, which shall become delinquent here fifteen days earlier than in California.

Where an assessment is levied on a stock and made payable monthly, or in different periods in installments, each payment shall be governed by this article, and become delinquent as follows: The first payment in thirty days from this levy; the second in thirty days from the day on which it is made payable; the third the same, and so on. The day on which an assessment is levied is not counted as one of the thirty days.

ARTICLE XXVIII.—*Limitations for Reclamation for Assessments of Stock.*—No reclamation for unpaid assessments upon stock sold by members of this Exchange, the transfer office of which is in this city, shall be allowed, unless the same is presented within five days from the date of delivery; and when the transfer office is out of the city, the demand must be made within twenty days from the date of delivery.

In the event of stock which has been sold for assessment being delivered in error, the broker receiving it shall be entitled, within five days from the date of delivery, to demand transferable stock in lieu thereof; and in case such demand is not made within five days, then the broker who delivered the stock may settle with him by returning the amount which he paid for the stock.

No reclamation for any stock delivered shall be made after the expiration of thirty days, if the transfer office is in the city; and not after sixty days if the transfer office is out of the city.

ARTICLE XXIX.—*Rescinded Assessments.*—On all time sales of stock, after an assessment becomes delinquent, and is thereafter rescinded, the buyer may, upon delivery, deduct the amount of said assessment from the contract price of said stock.

ARTICLE XXX.—*Black List.*—Each and every member shall report publicly to the Exchange the name of every person who shall violate his engagements with him as a broker, after employing him to execute business on commission, or who shall have refused satisfactory settlement of any contract made with or by said broker on his account; and it shall be the duty of the Secretary to keep a book for the purpose of registering the name of every person reported as a defaulter (together with his address), and the name of the broker who shall complain, there to remain until the debt that may have accrued through the medium of the member, in his capacity as a broker, be liquidated. So long as the name of said defaulter or defaulters continues registered upon the books of the Exchange, no member shall execute, or cause to be executed, any business for him or them, under pain of immediate suspension.

Suspended members who have not settled are subject to above penalties.

The stocks listed and called regularly at the American Mining Stock Exchange are as follows.

Durango,		

The Mining Stock Market.—Notwithstanding the prejudice that existed a few years ago among Eastern capitalists against all gold and silver mining enterprises, circumstances combined to aid the persons engaged in promoting the development of this great industry in bringing about a change in public sentiment two or three years ago, and it is not to be denied that that prejudice was very quickly and very thoroughly removed from the minds of a large number of the monied men of the country, and a more cordial and welcome support was extended to the mining business. Millions upon millions of dollars rapidly found their way not only from the bank accounts of wealthy capitalists and speculators, but, as is well known by those who are familiar with the inside history of the offices of the Eastern mining corporations, large amounts in the aggregate came from the old stockings and the little savings bank accounts of a much poorer class of people, who were induced by the wonderful stories that were told them to try their luck in this wheel of chance. But how has the confidence thus bestowed been requited? The history of the mining stock market in New York and other eastern cities for the past two or three years, is not what it might have been; is not what it should have been, and not what good judgment and shrewd business foresight on the part of a few leading operators would have made it. The practice of killing the goose in order to get possession of all the golden eggs at once has been repeated so often by persons who were intimately acquainted with the real condition of the bird and of its capabilities while living, that their course is wholly incomprehensible. Certain it is that better opportunities were never offered to business men in this country. The result of the course that was followed is shown by the present condition of the stock market at the mining stock exchanges in this city. The year 1880 opened full of promise. The possibilities of the future were not to be measured, but there were hosts of sanguine believers in a genuine "boom" that was to last for years. Persons who in the past could not have been induced to admit that they had ever seen a certificate of mining stock or gazed into the mysterious depths of a mining shaft, were found advocating earnestly the investment of hard-earned savings in mining shares; conservative bank presidents gave ear to the statements of the promoters and funds to the coffers of mining enterprises; mining stocks made rapid advances at the exchanges, and poor men became rich—on paper. Thus the gold and silver mines of the far west were suddenly transported to the Atlantic coast. Had the properties floated upon the eastern market been good dividend paying mines, and had the statements put forth in regard to them been within reasonable distance of the truth, all might have been well. Unfortunately both these conditions were wanting. The first shock to a market that was gaining day by day the confidence of the public came with the failure of Little Pittsburg. It had been a property paying very large dividends, but it had been grossly misrepresented and wilfully so, as was glaringly apparent at a later date to the suffering stockholders, who had bought at high figures the very stock of those who deceived them.

The development of the Little Pittsburg management was the first disclosure of a policy that seems to have been adopted by a few persons early in the introduction of mining properties to the eastern market, and since carried out with only the ordinary variations common to stock jobbery and with a persistency that is at once startling on account of its audacity, and marvelous when the cupidity of the public in furnishing the necessary assistance to its fulfilment is considered. The most serious result of this policy was not, however, the loss sustained in the purchase of the manipulated stocks at unreasonable prices, although this loss amounted to many millions of dollars. It was necessary to the complete success of the manipulations that the stocks should be listed on the mining stock exchanges and the numerous "deals" that have been made there during the past two years in the stocks of properties about which the most positive assurances from what appeared to be eminently trustworthy sources were given, as to their great value, none of which, however, were realized, and the disposition of all stocks, good and bad, to sympathize with the course of the market in its ups and downs, have led to the impression, which has become general, that there are no good stocks listed at the exchanges, or, at least, that it is unsafe to purchase stock so listed. The latter may be true, if the purchase is for speculation only, but it will not do to adopt such a rule, if mining stocks are to be bought for investment. The product of the mines, as shown elsewhere, many of which are listed on one or more of the stock exchanges of the country, furnishes the most positive confirmation of this statement. It is true, nevertheless, that the large transactions reported daily at the mining stock exchanges, consist principally of purchases and sales of non-dividend paying mines for speculative purposes. This is illustrated by the fact, which is cited only as an illustration, that the sales of the stock of the Standard mine of Bodie at the two New York exchanges last year were only 3,320 shares and the dividends paid amounted to $975,000; while the sales of the Amie were over 2,000,000 shares and it paid no dividend.

The total number of all stocks dealt in at the two New York exchanges last year, was 191 and the total number of shares reported sold was 43,027.426, but of this amount 28,-636,688 shares or more than 66 per cent. were divided among 24 stocks, leaving the business done in the remaining 167 stocks at only 14,390,738 shares, in no case in which were the aggregate sales for the year equal to 500,000 shares. The transactions in 12 stocks exceeded 1,040,000 shares each, and in four stocks, 2,000,000 shares each, while the sales of Robinson Consolidated amounted to over 3,178,000 shares. Of these 24 properties, only four paid dividends during the year to their stock holders, ($1,000,000) although the dividends paid during this year by companies whose stock were dealt in at the exchanges were about $9,000,000. The following table exhibits the closing price on December 31, 1880, the highest and lowest prices at which the stock sold during 1881, and the closing price on December 31, 1881, together with the number of shares of each stock sold during the year at the two New York Mining Exchanges of the 24 stocks above referred to:

" " " " " 1880					20,012,825
Increase in 1881					23,014,601

During the early part of the year prices were pretty well maintained, as compared with final quotations of the preceding year, with a good demand for the better class of securities. The Leadville stocks were then the leading speculative fancies, and a wonderful future was predicted for them, especially for Hibernia. This was followed by a heavy decline in the prices of these stocks and subsequently by the listing in April of the State Lines and Oriental and Miller, which soon absorbed a large portion of the speculative transactions. It was undoubtedly due in a great measure to the remarkable manipulation of those stocks and the succeeding decline, that the mining stock market became so greatly unsettled during the latter part of the year. Stocks of all kinds, good and bad alike, steadily and persistently declined. This drooping of prices was further aided by the announcement that the Robinson Consolidated mine, of Leadville, was exhausted. The fluctuations in that and other stocks are indicated in the table given above. A large percentage of the business reported in the Robinson Consolidated stock was done during the latter part of the year after the damaging reports about the property began to be circulated. Assurances had been overwhelming that the stock was one of the safest on the list, when in November the manager of the mine telegraphed that there was neither money nor ore with which to pay the next dividend. At first it was believed by many stockholders to be a stock jobbing canard and the price actually advanced; but it soon became apparent that the telegram contained only the truth and only a part of that, and this was followed by a scramble to unload. The Comstocks were feverish and unsettled throughout the year, being affected by the repeated promises of a "boom" and although the promise was not fulfilled, the fluctuations were less violent and the declines not so marked as in many other stocks. The business at the exchanges throughout the year was well distributed, the smallest number of sales being in February and the largest number in December. The following table shows the number of shares sold at the two exchanges during each month of the year 1881:

January	3,277,800	July	2,932,384
February	2,782,209	August	3,645,194
March	4,105,241	September	2,890,220
April	4,125,022	October	3 591,245
May	4 020,501	November	3,550,705
June	3,536,365	December	4,570,540

The number of shares reported sold from month to month at the New York Board was nearly twice as large as the reported transactions at the American Board. The total transactions in all stocks dealt in at the two exchanges are shown by the following table which exhibits the closing prices on December 31, 1880, the highest and lowest prices at which the stocks sold during the past year, and the closing prices on December 31, 1881, together with the number of shares of each stock sold during the year at the two mining exchanges:

Considerable business has also been done in mining stocks at the old New York Stock Exchange, which is devoted principally, however, to dealings in railroad stocks and bonds, government, state, and other securities. An earnest effort was made to secure the listing of the leading mining stocks on that exchange, where, it was claimed, there was sufficient capital to insure a good business. Some of the old, conservative members of that exchange, nevertheless, always opposed the revival of dealings in mining stocks and the members of the New York Mining Stock Exchange, or at least those who were not members of the New York Stock Exchange, did not, of course, favor the movement, as it would necessarily interfere with the business of the Mining Exchange. Following the disastrous results of investments in Little Pittsburg, Leadville, Robinson Con., and, in fact, almost everything on the list, a mutual understanding was finally arrived at by which, while future transactions in mining stocks at the old New York Exchange were not forbidden, most of the orders now given to its members for the purchase and sale of mining stocks are executed at the New York Mining Board. When sales are made at the old exchange by persons who are not members of the mining exchange, the prices are necessarily about the same as those at the New York Mining Exchange. There are also occasional transactions in the stocks of coal companies at the New York Exchange, these stocks not being listed at the mining exchange.

The following table exhibits the closing prices in December, 1879 and 1880, the range of prices and closing quotations at which sales were made in 1881, together with the number of shares sold in 1881 of the mining stocks dealt in at the New York Stock Exchange:

	Closing Dec.		Range prices in 1881.		Closing Dec. 1881	No. Shares sold in 1881.

The New York Stock Exchange—The whole government of the New York Stock Exchange is vested in a Governing Committee, composed of the president and treasurer of the Exchange and of forty members, one-fourth of whom are elected annually for four years. The members of the Governing Committee, together with the vice-president and secretary, are the officers of the Exchange. Various committees are appointed annually by the Governing Committee among which are the following: A Committee on Finance; Arrangements; Admissions; Securities (other than those of the United States Government), Government Securities; Stock List; Arbitration; Law; Printing; Commissions, and Insolvencies.

Every member must have a place of business in the vicinity of the Stock Exchange and other than the Stock Exchange where comparisons may be made at any time during the day, after the expiration of one hour from the time of the transaction, and where all notices may be served. Article XIV of the constitution provides for suspended members, re-admissions, claims of creditors, &c., as follows:

Section 1.—Any member who fails to comply with his contracts, or who becomes insolvent, shall be suspended until he has settled with his creditors. Such member shall immediately inform the President, in writing, that he is unable to meet his engagements; and it shall be the duty of the presiding officer thereupon to give notice, from the chair, of the suspension of such member. The Secretary shall record the failure of such member in a book kept for that purpose. In default of giving such information, the party, on application for re-admission, shall not be entitled to a reference of his case to the Committee on Admissions, unless two-thirds of the members of the Governing Committee present shall vote in favor of such reference.

Section 2.—When a suspended member applies for re-admission, he shall be required to furnish to the Chairman of the Committee on Admissions a list of his creditors and a statement of the amounts owing, and the nature of his settlement in each case. The Committee shall give notice, for three consecutive days, through the Presiding Officer of the Stock Exchange, and by posting the same on the bulletin-board provided for that purpose, of the time and place of meeting to consider the application of the suspended member and the claims of creditors. Upon the applicant presenting satisfactory proof of his settlement with all his creditors, the Committee shall proceed to ballot for him, in accordance with its prescribed rules and regulations. Failing of a re-election, the applicant shall be entitled to be balloted for at any five subsequent regular meetings of the Committee, to be designated by himself. Provided, however, that the six ballotings to which the applicant shall be entitled shall be within one year from the time of his first application for re-admission. If, after six ballotings, as aforesaid, the candidate is rejected, he may appeal, within sixty days thereafter, to the Governing Committee, whose action in the case shall be final.

If rejected by the Governing Committee, he shall cease to be a member of the New York Stock Exchange, and his name shall forthwith be stricken from the roll, and his membership shall be disposed of by the Committee on Admissions. The question, on appeal, however, shall not be taken unless at least thirty-five members of the Governing Committee are present, and it shall require an affirmative vote of at least twenty-nine members to reinstate the applicant. Whenever the Governing Committee shall determine upon the report of the Committee on Insolvencies, that the failure of a member has been caused by his doing business in a reckless and unbusiness-like manner, he may be declared ineligible for re-admission, by a majority vote of the entire Governing Committee.

Section 3.—If any suspended member fails to settle with his creditors within one year from the time of his suspension, his membership shall be disposed of by the Committee on Admissions, and the proceeds paid, *pro rata*, to his creditors in the Stock Exchange. The Governing Committee may, by a vote of two-thirds of the members present, extend the time for settlement of such suspended member.

No claims growing out of transactions between partners shall be admitted to share in the proceeds of the membership of one of such partners until after the claims filed by other creditors who are members of the Exchange shall have been satisfied.

Section 4.—Any creditor failing to file with the Secretary of the Committee on Admissions a written statement of his claim against a member, prior to the transfer of the right of membership of such member, shall forfeit all right to a distributive share of the proceeds of such membership.

Section 5.—No member of the Exchange shall be allowed to take as partner any suspended member thereof, during the period of his suspension, or to form a partnership with any insolvent person, or with any person who may have previously been a member of the Exchange, and against whom any member may hold a claim arising out of transactions made during the time of such membership, and which has not been settled or released in accordance with the rules of the Exchange.

The rate of commission that the members are required to charge persons or firms who are not members of the exchange, is ⅛ of one per cent. of the par value of stocks and bonds, bought or sold, and the constitution provides that "any member violating this article, directly or indirectly, shall, upon conviction, cease to be a member of the Stock Exchange, and his membership shall escheat to the Exchange."

Should any member be guilty of obvious fraud, of which the Governing Committee shall be the judge, he shall, upon conviction thereof by a vote of two-thirds of the members of said Committee present, be declared by the President to be expelled, and his membership shall escheat to the Exchange.

The Exchange is open from 10 o'clock A. M. to 3 P. M. on every business day between which hours dealings by members within the vicinity of the Exchange are limited. The by-laws provide that "all applications for placing securities on the regular or free list shall be made to the Committee on Stock List, who shall report the same to the Governing Committee, with a full statement of capital, number of shares, resources, &c."

The Stock Exchange will not call or deal in any active speculative stock of any company a registry of whose stock is not kept in some responsible bank, trust company, or other satisfactory agency, and which shall not give public notice at the time of establishing such registry of the number of shares so entrusted to be registered, and shall not give at least thirty days' notice through the newspapers, and in writing to the President of the Stock Exchange, of any intended increase of the number of shares, either direct or through the issue of convertible bonds, and shall not at the same time give notice of the object for which such issue of stock or bonds is about to be made. All delivery of securities must be made before 2·15 P. M., and where deliveries are not made by that time the contract may be closed under the rule; such notice must be given, however, by 2·30 P. M., and the contract must be closed without delay, unless the time is extended by mutual consent. The by-laws contain the following provisions respecting the deliveries of stock by certificate, the closing of transfer books, &c.:

In the delivery of stock of which but one transfer in a day is allowed, the receiver shall have the option of receiving said stock by certificate and power irrevocable, in the name of, witnessed or guaranteed by, a member of the Exchange, or a firm represented at the Exchange, or by *transfer* thereof.*

In all transactions exceeding one hundred shares, where the

* In the case of Powers of Attorney, or substitution, not executed, or witnessed by a member of the Exchange, or a firm represented at the Exchange, the endorsement of a member or such a firm is to be considered a guarantee of the correctness of the signature of the party executing the same.—*Resolution Gov. Com., May* 24, 1872.

delivery is by Certificate and Power, the purchaser shall have the right to require the delivery in Certificates of not more than one hundred shares each.

Powers of Attorney, or substitution, signed by Trustees, Guardians, Infants, Executors, Administrators or Attorneys, shall not be a good delivery. Detached Powers of Attorney, or substitution, must be attested by a Notary Public under seal.

Whenever the transfer-books of any company shall be closed by any legal impediment, so as to render their being open again uncertain, then the deliveries of Stock of such company, in satisfaction of contracts, shall be made by Certificate and Power of Attorney irrevocable, with notarial acknowledgment and seal, and containing Assignment and bill of sale, the papers to be satisfactory to the recipients or passed upon by the Committee on Securities.

Reclamations for irregularities in deliveries of Stocks or Bonds, when such irregularities do not affect their validity, but only currency in market, will not be considered unless made within ten days from the day of delivery.

All purchases and sales shall be settled for on the next business day, unless expressed to the contrary, and except in the cases referred to in the following section,

All contracts falling due on Sundays, or on such holidays as are observed by the Banks, shall be settled on the preceding day. But where two holidays occur on consecutive days, as where Sunday immediately precedes or follows a legal holiday—contracts falling due upon the first of such holidays shall be settled upon the business day immediately preceding, and those maturing upon the second of such holidays shall be settled upon the business day next following the same.

All contracts in Stocks falling due during the regular closing of the transfer-books of any Company, shall be settled at maturity by the delivery of a Certificate and Power of Attorney, as defined in Article IX, of the By-Laws; and contracts, at the option of the buyer or seller, may be notified for settlement, as if the books were open; and in case the books are closed for a dividend, the party entitled thereto shall receive a due-bill therefor, signed or endorsed by the seller of the stock; but the party entitled to the dividend shall have the right to require a deposit in a Trust Company, payable to the joint order of the purchaser and seller, of the amount of such due-bill.

No contracts for the purchase or sale of Securities beyond sixty days, shall be made in the Stock Exchange.

In all contracts on time over three days, made at the option of the buyer or seller, one day's notice shall be given before Securities can be delivered or demanded, and such notice shall be given at or before 2 o'clock, P. M.

In any contract, either party may call, at any time during the continuance of the same, for a mutual deposit of ten per cent. And whenever the market price of the Securities shall change, so as to reduce the margin of said deposit either way below five per cent., either party may call for a deposit sufficient to restore the margin to ten per cent., and this may be repeated as often as the margin may be so reduced. In all cases where deposits are called before 2 o'clock P. M., they shall be made at or before 2½ o'clock P. M., the same day. If called after 2 o'clock P. M., they shall be made at or before 11 o'clock A. M., on the following day.

In case either party shall fail to comply with a demand for a deposit, in accordance with the provisions of this article, the party calling, after having given due notice, may report the default to an Officer of the Exchange, who shall repurchase or resell the Security forthwith in the Exchange, and any difference that may accrue shall be paid over to the party entitled thereto This notice shall be either personal or shall be left in writing at the office of the party to be notified, or in case he has no office, then by public announcement whenever the Exchange may be in session. Where there is a difference of opinion as regards the place of deposit, for the security of purchases and sales, the same shall be made in the New York Life and Trust Company.

Should any member neglect to fulfill his contract on the day it becomes due, the party or parties contracting with him shall, after giving notice, as required by Section 2, of the preceding Article, employ an Officer of the Board to close the same forthwith in the Exchange by purchase or sale, as the case may require, unless the price of settlement has been agreed upon by the contracting parties. In case of a failure of a creditor to close the contract as above, the price shall be fixed by the price current at the time such contract ought to have been closed under the rule. In all cases where an Officer may be directed to buy or sell Securities under this rule, the name of the member defaulting, as well as that of the member giving the order, shall be announced.

Any member uniting, directly or by a partner, with any organization where Stocks, Bonds, &c,, are dealt in, shall cease to be a member of this Exchange. This rule shall not apply to the N. Y. Mining Stock Exchange while its transactions are limited to the class of Securities at present dealt in at that Exchange. Any member of the Exchange dealing with a person not a member, in the rooms of the Exchange, shall be subject to the penalty of suspension for not less than sixty days, nor more than twelve months.

No communications having a tendency to influence the market shall be read to the Exchange without the consent of the President or Presiding Officer.

No member shall introduce a stranger on the floor of the Exchange unless by permission of the President or Presiding Officer.

Following are the forms usually adopted by dealers in privileges:

"PUT."

NEW YORK, ... 18

FOR VALUE RECEIVED, the Bearer may DELIVER ME . . . . . . Shares of the . . . . Stock of the . . . . Company, at . . . . per cent., any time in . . . . days from date.

The undersigned is entitled to all dividends or extra dividends declared during the time.

Expires 18
. . . . M.

"CALL."

NEW YORK 18

FOR VALUE RECEIVED, the Bearer may CALL ON ME for . . . . Shares of the . . . . Stock of the . . . . Company, at . . . . per cent., at any time in . . . . days from date.

The bearer is entitled to all dividends or extra dividends declared during the time.

Expires 18
. . . . M.

"STRADDLE."

NEW YORK, ... 18

FOR VALUE RECEIVED, the Bearer may CALL on the undersigned for . . . . Shares of the . . . . at . . . . per cent., any time in . . . . days from date.

OR, THE BEARER MAY, at his option, DELIVER the same to the undersigned at . . . . per cent., any time within the time named.

ALL DIVIDENDS OR EXTRA DIVIDENDS declared during the time are to go with the stock in either case, and this instrument is to be surrendered upon the stock being either called or delivered.

Expires . . . .

The present officers of the New York Stock Exchange are—

President. F. N. Lawrence.	*Vice President.* F. K. Sturgis.
Chairman. James Mitchell.	*Vice Chairman.* Alexander Henriques.
Secretary. B. O. White.	*Treasurer.* D. C. Hays.

* Non-assessable. † The Deadwood has previously paid.

Little more need be said of the mining stock market for the first six months of 1882, than that it was a continuation of the transactions of the preceding year. There were further heavy declines in nearly everything on the list, with very active trading in a few of the speculative favorites, the prices of which in some cases went practically out of sight. There were few new properties introduced, and with one or two exceptions the active business was confined to the manipulation of stocks listed prior to the first of last January. The total sales reported for the six months under review, reached the unprecedented figures of 28,211,052 shares, but of this business 20,262,838 shares were distributed among 29 stocks and over one-half the latter number among three stocks. The sales of State Line Nos. 2 and 3 alone were over 5,000,000 shares, and of South Pacific, over 4,000,000 shares, which is much the largest business in any single stock that has ever been reported for a whole year in the previous history of the mining exchanges. It must not be inferred, however, that these figures represent the purchases made for the public. Never before since the revival of dealings in mining securities on the eastern coast have the purchasers for investors and non-professional speculators, been as light as during the past six months. There were many sales of some of the active stocks made for the account of deluded investors who listened to the flattering reports that were circulated about those properties during the past year, and, by their purchases then, furnished the promoters of those gigantic swindles with an opportunity to market their stocks at high figures, but the purchases at the reduced quotations have been made principally by the professional manipulators. A large percentage of the reported transactions is also to be credited to "washed" sales, or dealings between brokers for the purpose of advancing or forcing down prices, without holding each other responsible for the differences thus established.

Perhaps the best history of the market is furnished by giving the course of prices of a few of the most active stocks, for the rest, good and bad alike, followed those leaders, nor was it possible in many cases to arrest the downward tendency of the stocks of the old and regular dividend paying properties. The State Lines which played a very active part in the market during a considerable portion of 1881, were still prominent, especially Nos. 2 and 3, at the opening of the current year. After closing last year at $1.70, Nos. 2 and 3 by the middle of February was down to 66 cents from which there was a slight rally, and it did not break again below 65 until the latter part of March when it sold at 58 cents, and on April 1st, at 50 cents and the next day at 39 cents. Again it rallied to 69 and then 71, and with sales for the month of over 1,700,000 shares it hovered between 60 and 70 cents until April 24th, when the quotations were 64 @ 39 @ 43 cents with sales of 152,000 shares for the day; before the month closed it touched 32 cents, and on April 1st, 29 cents. It then took another stand at 30@33 cents until May 19th, when it sold at 22 cents. Another drop came on May 26th, when it fell to 18 cents. On June 4th it touched its lowest price—13 cents, and it has since rallied to 34 cents and closed on June 30th at 30 cents. It was the evident policy of the manipulators of this stock, instead of letting it down gradually to force it lower suddenly, a step at a time, and then furnish the support necessary to hold it there long enough to induce, if possible, the unwary fish to bite again, in the hope of recovering some of that which had been lost. It is not probable, however, that they were ordinarily successful in their operations. State Line Nos. 1 and 4 followed closely in the wake of Nos. 2 and 3, but reached its lowest point—05 cents—in the latter part of May, and has since sold at 15 cents, closing at 10 cents.

Another wild speculative stock has been South Pacific which closed last year at $4.25, and during the early part of 1882, was marked up to $8.25. The stock was extremely feverish, undergoing wide fluctuations from day to day, and by the middle of February was selling at $2.45; it did not go below $2.35 until March 14, when the quotation was $2 35 @ $1.30, and on the day following it fell to $1.00. After selling at 98 cents, it rallied by the close of the month to $1.45, but early in April it fell back again to 99 cents, and was tolerably, or at least comparatively, steady at about $1.00 until April 19, when it sold at $1.05 @ 70 cents. At this decline it again halted until May 3, when the transactions were reported at 65 @ 20 cents, from which it fell later to 07 cents, and closed at 09 cents on June 30. The sales for the six months were over 4,000,000 shares. It is not known that the stock has any intrinsic value.

Robinson Con., which proved to be an unusual disappointment to a great many people last year, including some prominent members of the old New York Stock Exchange, took an upward turn during the latter part of February, advancing to $3.65, and on March 6 it sold at $4.50, from which it declined spasmodically, having frequent, sudden fluctuations, until on May 31, it was down to $1.05, and on June 4, to 84 cents. It has since fluctuated between the price last mentioned and $1.05. Moose has served on several occasions as the tool of stock-brokers in manipulating a "corner." In March and April it advanced from 95 cents to $1.80. On May 7 it touched $2.00, and then stood at $1.90 @ 2.00, until May 11, when it sold at $2.85, and at 50 cents, closing at 60 cents. The "corner" was broken, and, also, as it subsequently proved, the leading operator in the stock. On May 12 it sold at 80 @ 28 cents, and it has been dull since that time, and as low as 11 cts., but closed at 20 cents. Moose Silver fell from 30 cents to 01 cent on May 11, and has since recovered to 30 cents. North State has gone out of sight, declining to 01 cent in May, and passing June without sales, but the reported transactions for the last six months foot up 243,300 shares, and during that time the stock sold at 14 cents; last year it was as high as 54 cents.

Among the more recent fancies are Decatur, Quartz Creek and Navajo. The stock last mentioned was dull until about the middle of March, when it sold at 18 cents. On March 28 it was up to 57 cents, and on March 30 to $1.10. It then went back suddenly to 65 cents, and remained dull again between that price and $1.00, until the latter part of April, when it rose quickly to $2.00, and for some time was extremely feverish between $1.35 and $2.00. On May 18 it sold at 2.45, from which it persistently advanced to $4.75, at which it sold on June 29, and at $4.20 on June 30. The sales have not been as large as of some of the other prominent stocks, amounting only to 118,110 shares; Decatur took its position on the stock board in March, selling at 90 cents, from which it rose to $2.50, by June 6, but two days later it was selling again as low as 60 cents, and most of the time since that date it has fluctuated between $1.00 and 90 cents. The dealings in Quartz Creek have been confined to the American board, where it sold in February and March at 20 @ 15 cents. It then took an upward course under the influence of unadulterated manipulation, reaching 50 cents by May 18, and 85 cents on June 11; it has since sold at 50 cents and at 65 cents; during May and June the reported transactions amounted to 285,000 shares.

As an illustration of how little business has been done in the stocks of the strong dividend paying mines that are known to be A1, it is only necessary to cite the sales of Ontario, which, for the six months under review, were 60 shares at an advance of 25 cents; Standard, 5,400 shares, during which the price declined from $19,25 to $13.50, following the stoppage of the works for a short time for repairs. The regular dividend was not stopped, however, and the stock closed at $18.50, a net decline of 50 cents; Copper Queen, 400 shares at $6.50 @ 5.25, closing at $5.50, a decline of $1.00, and La Plata, 50 shares at $10.00, a gain of 62 cents. With a very few exceptions the lowest prices were reached in May or the early part of June, since which time, if there was any life left in the stock, there has been an apparently healthy improvement. For the last two or three weeks in June, brokers report more inquiry from the public, and there is something more than a faint hope that the "bottom" has been reached. During the past six months the dealings at the mining exchanges have been confined to 156 stocks against 191 stocks traded in last year. A few stocks are now in the list that were not there at the close of 1881, and a number of stocks included in last year's list have been dropped. Of the 156 stocks referred to 105 show declines, as compared with December 31, 1881, ranging from .01 cent to $41.66, and 38 stocks are higher than they were six months ago, the greatest advance being $3.63. Taking the past six months, the largest business was done in May and the smallest in January.

A comprehensive idea of the market may be obtained from the following table, showing the closing prices at which sales were made last year, the highest, lowest and final prices for the first six months of the current year, the advances or declines, and the number of shares reported sold of each stock dealt in during those six months:

	Final sale 1881.	RANGE OF PRICES. *Jan. 1, to July 1, 1882*			*Changes six months, ending July 1.*	*No. shares Sold.*

THE PHILADELPHIA MINING STOCK EXCHANGES AND THE PHILADELPHIA MARKET

PHILADELPHIA is the metropolis of the most extensive coal and iron producing region in the world, and a history of the mining interest centering in Philadelphia would be coincident with a history of the material progress of Pennsylvania. William Penn, the founder of the commonwealth was interested in the production of iron in England, and early gave of his time and means to the promotion of mining industries; the first record of his moving in the matter being dated the year following his landing, namely in 1683. The development of the mineral resources of Pennsylvania attracted the capital and enterprise of the Penn colonists from the first, and very early in the eighteenth century the foundations were laid of the several allied industries that have since given the commonwealth so large a measure of manufacturing and commercial importance. It is a noteworthy fact that Philadelphia names identified with these interests from the beginning are still prominent in current records. The old families connected with the first attempts to mine iron ore and to set up iron furnaces in 1715 to 1770 have representatives in various departments of the vast iron industries of 1882; the Rutters, Potts, Thomas, Logans, Morris, Nutts, Bransons, Taylors and Walkers who made the initial ventures having direct descendants among the leading iron masters of to-day.

The conversion of nature's mineral treasures into available wealth being a leading factor of Philadelphia's prosperity, mines and mining have always received marked attention, and ventures in this direction have been hospitably entertained and favorably considered. The lead deposits of Galena, the copper veins of Lake Superior and the gold fields of the Carolinas give evidence of the intelligent liberality of Philadelphia capital and the persistence of Philadelphia enterprise. The finding of gold in California awakened an immediate excitement in that city, before the importance of the discovery was realized elsewhere. Among the Argonauts and Forty-niners were considerable numbers of Philadelphians, and it is not too much to say that these furnished a large proportion of the worth and respectability of the first emigration. Men of character and means went out and became leaders in bringing order and civilized society out of the chaotic condition which obtained when the "diggings" were first opened. They early occupied the field of business too—Philadelphia stocks of goods making prompt appearance whenever new camps were formed.

Returned Californians, nearly all of them successful and prosperous, have for many years constituted a noticeable element in Philadelphia society, and have aided in sustaining an animated interest in the production of the precious metals. This interest has been conspicuous in the development of that vast silver production beginning with the opening of the Comstock Lode in 1859 and extending since then through half-a-dozen of our Rocky Mountain Territories, which has made this country a larger contributor to the world's annual output of silver than all other countries together. In Nevada, Idaho, Montana, Arizona, Utah, Colorado and New Mexico, Philadelphia skill, energy and money have accomplished their full share in bringing forth the hidden riches of the earth. President Lincoln characterized the Rocky Mountains as the strongbox of the nation. In unlocking this depository and devoting the precious contents to the service of commerce and the arts, no people in the country have been more active and successful than the quiet denizens of the Quaker City.

Gold mining in the early days of gulch and placer finds was carried on by individual enterprise, the miners' labor, pick and pan constituting the only capital invested, and his buckskin belt retaining all the dividends. In the White Pine district silver also gave good returns to the individual miner for a time, but silver deposits are generally too refractory to be dealt with by private means. To mine silver successfully has required the use of large capital and the force of corporate organizations, and the business has therefore been carried on by joint stock companies from the beginning. Since the exhaustion of the placer diggings, gold mining has been conducted in the same manner, so that it may now be said that the production of the precious metals is practically in the hands of corporate companies.

On the discovery of a new mine, the claim is frequently sold as an integral property, thereafter it usually passes into the possession of a company, and transfers of ownership are made by the purchase and sale of the company's stock. Beside representing the fee of the property in stock, these companies commonly issue stock also for development purposes and for working capital. In railroad construction, which is also carried on almost invariably by corporate companies, capital is commonly obtained in these days by issuing bonds secured by mortgage; the stock frequently representing only the equities in the properties and good will of the business, so to speak, that is, the capacity of the road to earn dividends after meeting the bonded interest; but in the development and working of mines, the issue of bonds is seldom resorted to, as a mortgage on a mine could hardly be made an attractive security, and the periodic payment of interest might at any time become an onerous burden even on the biggest of bonanzas hidden underground. The fee of the property, the cost of development and working capital of all mining enterprises are therefore represented by stock.

The production of silver has increased very rapidly, as above indicated within the past twenty years. The Centennial Exhibition brought to Philadelphia not only an immense collection of ore samples of all grades and descriptions but also a large number of prospectors and property holders, each with a project or two on hand, promising rich returns on comparatively small investments; and this gave an additional impetus to mining enterprise, so that within the past six years, especially, an important interest in bullion has grown up here. Mining companies have been formed literally by the hundreds and thousands of people have invested money in them. In 1880 there were nearly 100 companies, mostly silver companies, either organized in Philadelphia, or brought there for investment, and the number started in other years has been correspondingly large, so that within the period embraced between July 1876 and July 1882 not less than 300 companies have been either formed or introduced in Philadelphia.

The dealings in the stocks of these companies were for a long time confined to private hands, but as the shares were more widely distributed throughout the community, the need of some centre of trade where those who wished to buy and those who wished to sell could meet on common ground became more and more clearly defined. The auction rooms served this purpose in a not altogether satisfactory manner for a time, and finally the dealings attained sufficient importance to attract the notice of the Philadelphia Stock Exchange. Most of the leading brokers were dealing in Mining shares to some extent as early as 1878 and 1879, and in the spring of 1880 application was made to the stock exchange to place certain mining stocks on the sales list, and in course of that year, *Girard*, *Iowa Gulch*, *Orion* and one or two others were listed.

There are about 150 stocks, beside a long list of bonds, regularly dealt in at the Board and the brokers who buy and sell these representations of value are obliged to keep themselves informed as to the condition and prospects of each property and business named on the list. These stocks and bonds are for the most part railroad issues, and to follow the fortunes of a railroad is an undertaking involving a good deal of skill, attained by long practice, and constant attention to daily details of business. Mining matters embrace a range of facts of an entirely different character, and after mining stocks had been dealt in at the Board for a time, it was evident that brokers who would give them undivided attention could handle them to better advantage than could those who were mainly occupied with railroad investments. The desirability of a separate exchange for transactions in mining stocks became plainly apparent, and during the summer of 1879 propositions were discussed among parties interested in such transactions for the establishment of a Mining Stock Board.

The Philadelphia Mining and Stock Exchange.—About the middle of August preliminary steps were taken which resulted in the organization of the PHILADELPHIA MINING AND STOCK EXCHANGE. On the 15th of that month, Frederick Schuellermann, a gentleman largely interested in Mining venture, invited several others, similarly situated, to meet in conference respecting the matter, and at that meeting Mr. Schuellerman, in co-operation with Mr. L. Emig and Mr. G. W. Powell, drew up a prospectus which served as a basis for the new undertaking. Subscribers to the number of fifty were immediately found and a compact organization was effected under the title above given. A constitution and by-laws similar to those of other Mining Exchanges were adopted, and the following officers elected:

President, William M. Capp; First Vice-President, Edward A. Green; Second Vice-President, Fred. Schuellermann; Treasurer, Samuel W. Powell; Secretary, Geo. A. Q. Miller; Clerk, Geo. W. Powell.

Governing Committee, Samuel W. Powell, William N. Viguers, Chas. Kane, Fred. Schuellermann, Lawrence Emig and Chas. Gladding.

Standing Committee, Samuel M. Capp, William Davis, Sparta Fritz, William Wilson and Samuel Gladding.

The Board was ready for business by the 1st of September, but owing to the difficulty of securing suitable premises, the opening of the exchange was seriously delayed. The most desirable location to be considered was the rotunda of the Commercial Exchange Building, and as this room was practically vacant at the time, negotiations were at once entered into for a lease. Sundry and various obstacles arose to prolong these negotiations, until, after nearly two months of uncertainty, the purpose of leasing the rotunda was finally abandoned. The building No. 310 Chestnut street was then rented, and, being on the main thoroughfare, near the Stock Exchange and the financial centre of the city, the location proved to be a very advantageous selection. The place had been used for banking purposes, and required alterations involving further delay. Possession was taken in November, and on the 4th of December, 1879, the first mining stock exchange in Philadelphia was formally opened for business.

The stocks traded in were the *Argent*, *Orion*, *Iowa Gulch*, *Rara Avis*, and others. The business done did not at first meet the expectations that had been formed, but after the first of the year 1881, a noticeable improvement set in and the members of the Exchange soon found ample reason to be satisfied with their venture. New stocks were added to the list, the membership increased nearly one half during the spring, and the trade in mining stocks assumed quite an important aspect as a factor of the city's commerce.

During the summer of 1880 some new groups of mines in Arizona and in Colorado were brought before the Philadelphia community with a good deal of *éclat* about the time that interest in mining was fully awakened here. Several of the leading business men of the city invested in these properties and took an active part in the formation of companies upon them. City politicians of prominence also became identified with new ventures in the regions above mentioned. The production of the precious metals took on quite a marked "boom," and stock operations in connection with extending developments were stimulated to animated activity. As often happens, the success of the new Exchange resulted in the springing up of a factional feeling, some of the later comers being ambitious and wanting more control than their position gave them. The disturbing element joined hands with the Arizona and Colorado interests above alluded to, and resolved to organize another exchange in which they could exercise the sway which they considered they were entitled to by virtue of the magnitude of their operations and the extent of the prospective mineral wealth they represented. Toward the close of 1880, the plans of the faction were matured, and the purpose to withdraw was publicly announced. The movement was made with a decided show of vigor, and several gentleman of high repute in the community were induced to take part in it. The name of the National Mining Exchange was adopted and nearly three-quarters of the members of the old Board went over to the new.

The National Mining and Stock Exchange.—The National Mining and Stock Exchange was finally organized January 3d, 1881, at a meeting held in the Continental Hotel. The subscribing roll numbered 54 names, and the organization was perfected by the election of the following officers: president, Samuel Disston; vice president, William B. Dalton; treasurer, Joseph W. Thompson; secretary, G. A. Q. Miller; trustees, T. Henry Ashby, W. J. Cheney and Charles Disston. Subsequently the following committees were appointed; auditing committee, J. K. Vallance, F. S. Bond, W. R. Hunt, Thomas J. Stewart and Andrew Hazlet; listing committee, Julius Hirshfield, L. S. Ganz and William Wilson; membership committee, H. Burgen, John Tracy, Charles Kane and L. Gilbough. The subscription price of seats in the National Exchange was fixed at $750, but as the membership rapidly increased the price was advanced to $1000, when the list numbered 75 members. The rotunda of the Commercial Exchange Building, at Third and Walnut streets, was leased for business, at $3000 per year. This chamber was used for many years previous to 1876 by the old established Board of Brokers, and is admittedly one of the finest exchange rooms in the country. The National organization expended a considerable sum in fitting up the place in the best manner for the uses intended, and opened it for business on Tuesday, the 1st of February, 1881, celebrating the event with appropriate ceremonies. Business started off in a very encouraging manner, and it was hoped that the National Exchange was destined to attain a position of permanent importance. The Philadelphia Exchange having recruited its membership, however, still held the largest share of the trade, and, subsequently, when the Mining Annex was opened, it was found that with three Richmonds in the field the trade was very seriously cut up. Overtures were made for a consolidation with the Philadelphia Exchange, or rather were made to each of the Exchanges, by gentlemen who had joined the new organization, while still retaining their seats in the old one. Some difficulty was experienced at first in bringing the members to agreement, personal feeling and rivalry standing in the way, but eventually the impediments were all removed, the differences adjusted and the National Board united with the Philadelphia, taking the title of the latter, and removing to the "old stand," No. 310 Chestnut street. This union was effected in July, 1881, leaving the Philadelphia Exchange and the Mining Annex to compete for the trade.

The Mining Annex.—The organization of a special mining exchange encountered a good deal of opposition from the members of the regular stock exchange, and there was, furthermore, a noticeable sentiment of hostility, always more or less active among the conservative habitués of Third street. It was held that trade in stocks, if legitimate, could be, and should be carried on at the regular Board, and if not legitimate should be altogether discountenanced. The more successful and important the Mining Exchange became, the more decided were the expressions of opinion that the regular Board ought to bring the business under its own cognizance and control. With this view, a Mining Annex was opened in connection with the stock exchange, about the middle of March, 1881. Business was opened in the basement of No. 310 Chestnut street, immediately under the Philadelphia Mining Exchange. The brokers resorted there occasionally, whenever they had mining stocks to buy or sell, but with two other exchanges in operation the annex did not flourish very abundantly, and no great impression was made, either on mining stock traders, or on the public. The annex was, however, the acknowledged authority in the business, fixing prices, and giving character to stocks; the other exchanges adopting the annex quotations, and the public looking with distrust upon those stocks not listed there. Many influential members of the independent exchanges freely admitted that it would be an advantage if the purview of the annex could be extended with sufficient liberality of administration to cover their dealings without restricting them to narrower limits than they could work in. After the Philadelphia and the National Exchanges were united, the question of consolidating with the annex was discussed with freedom, and during the spring of 1881 active measures were taken looking to practical results. Committees were appointed on each side, conferences were held, and reports made, and after several months of negotiating, the consolidation was finally consummated in October, 1881.

The staid, conservative and reputable old Philadelphia Board of Stock Brokers, the oldest exchange in America, took the entire business of handling mining stocks into its care, retaining the title of its branch, the Mining Annex, and submitting the business to regulations established by its governing committee. The members of the independent exchanges were admitted to membership in the annex on satisfactory terms, the honor of belonging to the Philadelphia Board of Brokers probably being a valued though not an expressed consideration. The business was moved again to the rotunda of the Commercial Exchange Building, which desirable location the Annex still occupies.

By-Laws for the Mining Annex.

Article I.—*Membership.*—Section 1.—Every applicant for membership must be at least twenty-one years of age, and a citizen of the United States.

Section 2.—The initiation fee of members admitted by election shall be one thousand dollars; and of those admitted by purchase, fifty dollars. In all cases where initiation fees shall not be paid within five days after the election, and proper notification by the Secretary (except in cases of sickness or absence from the city), such election shall be void.

Section 3.—Any member wishing to sell his membership, shall have the right to do so, provided he has no unsettled contracts with, or claims against him, by any member of the Stock Exchange or Mining Annex, for transactions arising in or relating to the business of banking, or a stock or exchange broker; but where the Arbitration Committee shall determine that any claims or contracts exist, the Governing Committee may, except in cases of insolvency, refuse to permit the seat to be sold, until such claims or contracts are in its opinion satisfactorily settled.

The proceeds of the seat, if sold, shall, after deducting all charges (determined, in case of controversy, by the Arbitration Committee to be) due to the Stock Exchange or Mining Annex, belong to its owner's creditors, being members of the Stock Exchange or Mining Annex, in proportion to the amount of their respective claims, determined by the Arbitration Committee. The claims of members, so ascertained, shall be paid in full; and what remains, if anything, shall be paid to the owner.

Section 4.—When a member dies, his seat shall, within one year thereafter, be sold or transferred; and the proceeds thereof, after deducting all charges (determined, in case of controversy, by the Arbitration Committee to be) due to the Stock Exchange and Mining Annex, shall belong to its owner's creditors, being members of the Stock Exchange or Mining Annex, in proportion to the amount of their respective claims. The claims of members, so ascertained, shall be paid to them in full; and what remains, if anything, shall be paid to the legal representatives of the deceased. The seat of a deceased member shall be liable for all assessments which may be made, by the Governing Committee, from the day of his death until such times as his seat is sold and transferred.

Section 5.—In case any member shall have begun legal proceedings against the Stock Exchange or Mining Annex, and shall not have prosecuted the same to a successful termination, all expenses incurred by the Exchange or Mining Annex, in and during the prosecution of the suit, including counsel fees, costs of Court, printing, etc., shall constitute a charge against the seat of said member, the collection of which shall be enforced in the same manner as that now provided for the collection of fines; and upon the sale of the member's seat, during his lifetime, or after his death, the said charge shall, in all respects, be treated as an ordinary fine.

Section 6.—No member of the Stock Exchange or Mining Annex shall be allowed to take as partner any suspended member, during the period of his suspension, or to form a partnership with an insolvent person.

ARTICLE II.—*Elections*.—Section 1.—All elections for members of the Mining Annex shall be held by the Governing Committee of the Philadelphia Stock Exchange.

Section 2.—No rejected candidate shall be eligible for membership, for six months after his rejection, without the unanimous consent of the Governing Committee.

ARTICLE III.—*Insolvency*.—Section 1.—Any member who fails to comply with his contracts, or who becomes insolvent, shall immediately inform the President of the Stock Exchange, or Chairman of the Annex, of the fact, whose duty it shall be to give notice forthwith of the failure of such member to the Stock Exchange and Mining Annex; and such notice shall forthwith work a suspension of the insolvent from the privileges of the Annex, unless a settlement is made as hereinafter provided. In case of the neglect of the insolvent to make such report to the President or Chairman, it shall be the duty of any member having knowledge of the fact, to report the same forthwith to the Governing Committee, or to the President, or Chairman, who shall thereupon appoint a committee of three members to inquire into the fact, and report thereon without delay to the Mining Annex; and if said committee report the charge to be true, and no appeal from the said report be taken within seven days; or, where an appeal having been taken, the report shall have been confirmed by the Governing Committee, said member shall from that time be held to be suspended, and notice be posted in the Stock Exchange and Mining Annex. In case of the insolvency of any member, he shall within three (3) days make good to the full amount thereof all friendly loans of cash or stocks from members, or any overdraft on any bank; but seven (7) days shall be allowed him in which to settle stock contracts.

Section 2.—Members holding securities deposited by the insolvent, as margins on his contracts, are authorized, upon the application of the creditor or creditors, for whose benefit such margin has been deposited, to sell the same; and, after satisfying the claim of such creditor or creditors, to pay over the remainder, if any, as directed by the Governing Committee. Such securities as are saleable at the Stock Exchange or Mining Annex, must be sold by the presiding officer, at a regular session of the Stock Exchange or Mining Annex; and all other securities under the direction of the Governing Committee. When a difference becomes due by a sale of collaterals which had been held to secure a loan, the difference so created shall be treated as an unsettled contract, and not as a friendly loan of cash, and seven (7) days shall be allowed to settle the same. On the failure of a member of the Annex, all claims existing against him must be reported in writing to the Secretary; and it shall be his duty to record the same in a book kept for that purpose. The terms of all settlements must be reported to the Stock Exchange and Mining Annex when made. Any settlement made with a member unable to meet his contracts, and not, at the time, reported to the Stock Exchange and Mining Annex, shall, in case of a further failure, debar such creditor from any claim on the seat of the debtor until all subsequent claims are settled in full.

Section 3.—Any member who shall be declared a bankrupt, shall, *ipso facto*, be suspended from the Mining Annex; but a suspended member, presenting a certificate of discharge under the United States Bankrupt Law, becomes eligible under the rules for re-instating suspended members.

Section 4.—If any suspended member fails to settle with all his creditors within one year from the time of his suspension, his membership shall be sold by the Secretary, and the proceeds, after deducting all charges (determined, in case of controversy, by the Arbitration Committee to be) due to the Stock Exchange or Mining Annex, shall belong, and be paid *pro rata* to his creditors in the Stock Exchange or Mining Annex. The amount due said creditors shall be determined by the Arbitration Committee.

Section 5.—Hereafter, all claims against the proceeds arising from the sale of the membership of insolvents, must be presented to the Treasurer within thirty (30) days from day of notice, which will be given on three (3) successive days, by the Chairman. After the expiration of said thirty (30) days, all claims, not presented, will be debarred.

Section 6.—On an application for re-admission, a suspended member may be restored to his membership, provided his name shall have been acted upon by the Committee on Admissions, and re-elected, as provided for in Article on Elections. The applicant must, at the request of the committee, give full explanations on any disputed or unsatisfactory transactions, and free access to his books and papers for that purpose.

Section 7.—A suspended member shall, before he is re-instated, pay all fines due at the time of suspension.

ARTICLE IV.—*Hours of Business*.—Section 1.—The Mining Annex shall be open for the entrance of members on every business day, at ten minutes before 10 o'clock A. M. At 10 o'clock, precisely, the presiding officer shall announce, from the rostrum, that the Annex is open for the transaction of business, and it shall remain open for such purpose until 3 o'clock P. M., when the presiding officer shall similarly announce it closed.

Section 2.—Dealings shall be limited, throughout the entire year, to the interval between the hours above named, unless otherwise ordered by the Governing Committee of the Stock Exchange, and a fine of $50 for each offence shall be imposed, without excuse or appeal, upon any member who shall directly or indirectly make or offer to make any transactions in stock, before or after those hours, in the Mining Annex.

Section 3.—The Mining Annex shall not be closed at any time between the hours above named, except by orders of the Governing Committee of the Stock Exchange. While so closed, the same penalty shall be imposed as in Section 2.

ARTICLE V.—Section 1.—At 11 o'clock A. M., the first regular session shall commence, when the Chairman shall call the regular list. While the call is progressing, the members may call up the various stocks on the regular list of the Mining Annex. A charge of ten cents will be made for all calls.

Section 2.—The second regular session shall commence at 12½ P. M. The third regular session shall commence at 2 P. M., and close at 2.30 P. M. At these sessions, the Chairman shall call such stocks as the members may request in writing, without charge, and such as are requested orally, at a charge of ten cents.

Section 3.—At the last sessions, the oral request shall in all cases have precedence.

ARTICLE VI.—*Commissions*.—Section 1.—On the shares of Mining Companies:

Selling under $1.00 per share—one cent per share.

Selling at $1.00 and up to $2.00 per share—two cents per share.

Selling at $2.00 and up to $5.00 per share—three cents per share.

Selling at $5.00 and up to $10.00 per share—five cents per share.

Selling at $10.00 and over—twelve and a half cents per share; and no charge of less than twenty-five cents shall be made on any one transaction.

Section 2.—Commissions in conformity with the above rates must be charged on all purchases and sales for non-members, and on all transactions for joint account, in which a non-member is a co-partner; and no arrangement having in view, directly or indirectly, a rebate upon the regular rates hereby established, shall be allowed. Any member who shall transact business for a less commission than the rates set forth as above, (except in cases provided for,) shall, for the first offence, be fined one hundred dollars, and shall be suspended at the pleasure of the Governing Committee of the Exchange; and for the second offence, he shall be fined five hundred dollars and suspended for a period not less than one year. But nothing in the foregoing section shall be construed to apply to full business partners of members of the Stock Exchange. But members may transact business for charitable objects without charge.

Section 3.—Commissions may be halved with banks and bankers, having their place of business as such outside of the limits of the city, also with members of Stock Exchanges of other cities; and with stock and exchange brokers in cities where there is no Stock Exchange, also with brokers whose names are on the half-commission list.

ARTICLE VII.—*Record of Sales*.—Section 1.—No person is permitted to enter sales in the books of record, except the Chairman, the Clerks, or a member acting as such, under the authority of the Chairman. No alteration in the record shall be made, except with the consent of the members present, while the Annex is in session; and whenever any objection to the record is made, the objection shall be held in abeyance, if either of the principals to the transaction be absent.

Section 2.—The record of sales shall be kept in a book provided for that purpose. Sales between members, made out of the Annex, may be recorded in this book, unless objected to by a majority of the members present.

Section 3.—In all time sales, it shall be the duty of the seller to furnish the contract.

Section 4.—Any member altering or tampering with the book of record of sales, shall be fined one hundred dollars, and be suspended at the pleasure of the Governing Committee.

ARTICLE VIII.—*Bids and Offers.*—Section 1.—During the session of the Mining Annex, bids and offers may be made either for cash, or for the next business day (commonly termed the regular way), or for any number of days, not exceeding sixty.

Section 2.—From the moment the Chair calls any one stock, until he passes to another, all bids and offers remain in full force, unless a member audibly announces that he is *out* of the market. In case of a doubt, whether a member is out or not, the concurrent testimony of five members, that they heard him call *out* in time, is sufficient to establish the fact. It is understood, that only the last bid or offer of a member is binding upon him, as superseding former ones; but a bid does not supersede an offer, nor *vice versa.*

Section 3.—Any member calling a stock, is entitled to the market on that particular stock, on the terms and time *first* proposed by him, if he makes a prompt bid or offer, or both, although, in the first moment, he may have been anticipated. This preference, however, is lost the moment he varies his bid or offer in any way.

Section 4.—Bids and offers on all stocks selling at twenty-five cents or under, one cent per share; from twenty-five cents to five dollars per share, two and one half cents; from five dollars to ten dollars, five cents per share; from ten dollars and upward, twelve and a half cents.

Section 5.—A member making several sales, need not report until he has finished selling on that call.

Section 6.—In all offers to buy or sell during a session, whenever the words "the most," "the lowest," "all I have," "all I want," or others of *the same import* are used, they remain binding on the member, while the stock remains before the Annex. Any variance from his terms applying to amount, or price, but not to time, subjects a member to a fine of one dollar; and any transaction made with him, in consequence of his original declaration, or which may be affected by his subsequent change from it, may be cancelled at the option of the other party. This rule applies, when a bid or offer is made for another member.

Section 7.—Any member who shall, either in or out of the Annex, buy, or sell, or offer to buy or sell, any amount of stock at a certain price, and any other amount of the same stock at another price, making one purchase or sale depend on the other, shall be fined five dollars.

Section 8.—Any member guilty of dealing with a person in the room, not a member of the Annex, shall be fined one hundred dollars, without excuse or appeal; and for a repetition of the offence, shall be suspended at the pleasure of the Governing Committee of the Stock Exchange. It shall be the duty of any member, having a knowledge of the violation of this rule, to report the same, without delay, to the Chairman, or to the Governing Committee of the Stock Exchange.

Section 9.—Any member bidding for, or offering to sell stocks any number of days over three, flat, shall be fined five dollars.

Section 10.—No fictitious purchase, sale, or contract, shall be made, under a penalty of suspension at the pleasure of the Governing Committee of the Stock Exchange.

ARTICLE IX.—*Transactions on Time.*—Section 1.—Sales and purchases "on time" are not to be made over sixty days, Sundays to be counted in the same manner as in promissory notes; contracts maturing on Sunday, or on a legal holiday, must be settled the day previous, interest to be charged to the date of payment only.

Section 2.—No purchase or sale of stock, except beyond three days, shall bear interest. Sundays and legal holidays being counted.

Section 3.—All purchases and sales of stocks beyond three days, shall be *with interest. All* days, whether working days or not, being counted.

ARTICLE X.—*Notifying for Delivery.*—Section 1.—In contracts made, *buyer's* or *seller's option*, a notification for delivery, by the party having the option, must be given on the preceding business day, before the first regular session. When the option is without notice, notification must be given before the first regular session on the day of delivery.

Section 2.—A contract made before the first session, buyer or seller three days without notice, may be notified for the same day. A contract with interest must run at least one day.

Section 3.—On a contract, where the buyer or seller's option is *after* a certain number of days, the option commences only *after* the specified number of days has elapsed; for instance, on a contract, sixty days buyer after ten, the buyer cannot claim the stock until the twelfth day: if, however, the contract is without notice, he can claim it on the eleventh day.

Section 4.—Every member must have, in the vicinity of the Annex, a place of business other than the Annex, where all notices must be served; and it shall be the duty of every member, to keep filed with the Secretary of the Stock Exchange, a written notice designating such place of business, and also to give notice to the Secretary of any change thereof. A failure to comply with these requirements, for thirty days after notice by the Secretary, shall subject the member to suspension.

ARTICLE XI.—*Contracts in Stocks not Fully Paid.*—In all contracts on time for stocks not fully paid up, the seller shall charge any instalment that may be called for, and paid between the day of sale and that of delivery, with interest from the day on which said instalment has been required to be paid.

ARTICLE XII.—*Contracts Due when Books are closed.*—In the event of contracts for the delivery of an even hundred or hundreds of shares of stock maturing during the closing of the transfer books, the delivery shall be made by certificate and power at the maturity of the contract. But contracts for the delivery of odd amounts of stocks, so maturing, may be extended, at the request of either party, until the opening of the transfer books; the terms, in all cases, remaining the same as in the original transactions.

ARTICLE XIII.—*On Dividends.*—Section 1.—All dividends declared on stocks go to the purchaser, until regularly announced at the Annex, or by due notice in public papers. When a contract for the delivery of stock becomes due on the day on which a dividend has been officially announced, or between that day and the day on which the dividend is made payable, the seller shall deduct said dividend from his bill, or deliver his due bill for the same, at his option. Members have the right to demand security on such due bills.

Section 2.—Any member reporting as the dividend of any Mining Stock Company, a rate of percentage which proves erroneous, shall be fined twenty-five dollars.

ARTICLE XIV.—*Certificate and Power.*—Section 1.—All stocks sold in hundreds, may be delivered certificate and power, in certificates of not more than one hundred shares each, and the seller must guarantee the power, when requested to do so. Either party may demand a transfer.

Section 2.—Whenever the transfer books of any company shall be closed by any legal impediment, so as to render their being open again uncertain, then the deliveries of stock of such company, in satisfaction of contracts, shall be made by Certificate and Power of Attorney irrevocable, the papers to be satisfactory to the recipients or passed upon by the Arbitration Committee.

ARTICLE XV.—*Irregularities of Deliveries.*—Reclamations for irregularities in deliveries of stocks, when such irregularities do not affect their validity, but only currency in the market, will not be considered unless made within five days from the day of delivery.

ARTICLE XVI.—*Payments and Transfers.*—Section 1.—Stocks must be delivered before 2.30 P. M., or the buyer may demand that they shall lie over until the next day without interest. When a sale has been made for cash after 2 P. M., the seller shall have until 3 P. M. to make his delivery.

Section 2.—Payments may be demanded in current bank notes, or a due bill of one of the associated banks.

ARTICLE XVII.—*Of Borrowing Stocks, etc.*—Section 1.—Stocks borrowed against money shall be considered the same as stock contracts.

Section 2.—Stocks borrowed without an equivalent, shall be considered as friendly loans.

Section 3.—Where money is borrowed upon stocks, the collateral cannot be used by the holder.

ARTICLE XVIII.—*Operating for Another Member.*—Section 1.—A member bidding for, or offering stocks for another member, must mention his name with the bid or offer, or be responsible for the contract. The party accepting the name must compare with the principal before 4 P. M. on the same day, or else all claim on said principal shall be forfeited.

Section 2.—Members have the privilege of trading for members suspended for insolvency, at any rate of commission they may choose to charge or agree upon, for *three* months from the date of their suspension. Full commission must be charged to all other suspended members.

Any member who shall execute any order for the purchase or sale of stocks for any person in the employ of another member, without first obtaining the consent of the employer, shall, for the first offence, be fined one hundred dollars, and for the second, shall be suspended at the pleasure of the Governing Committee of the Stock Exchange.

ARTICLE XIX.—*Of Deposits.*—Section 1.—At any time while a contract is pending, a mutual deposit may be called by either party to secure the same. No additional deposit can be required, except from the party against whom the contract rules. The deposit of the stock on the part of the seller shall, in all cases, be considered sufficient security. In case of dispute, as to the amount, character of security, or place of deposit, the matter shall be referred to the Arbitration Committee of the Stock Exchange, whose decision shall be final.

Section 2.—Where deposits are called before half-past 10 o'clock A. M., they shall be made before 1 o'clock P. M., the same day; if called before 2 o'clock, they shall be made before quarter of 3 o'clock P. M., the same day; if called after 2 o'clock, they shall be made on or before half-past 10 o'clock A. M., the following day.

Section 3.—Should the call not be responded to, within the prescribed time, the Chairman shall, upon proper notification from the member making the call, forthwith close the contract upon which the deposit has been called.

Section 4.—Parties depositing margins shall name the security deposited, designating the amount and market value of the same, that the party to be secured may be able to accept or to reject such security.

Section 5.—Any deposit of money as a margin is strictly a trust, and cannot be used by the party receiving it in his business, except by special agreement.

ARTICLE XX.—*Advertising Stocks, etc.*—Section 1.—No member shall have the right to advertise, by circular, or in the papers, any particular loans, stocks, or bonds (Government securities excepted) which are current at the Stock Exchange or Annex, under a penalty of one hundred dollars for the first offence, and for the second, suspension, at the pleasure of the Governing Committee of the Stock Exchange.

Section 2.—Special permission may be given to members of the Annex, by the Stock List Committee of the Exchange, to advertise any new loan or series of bonds received, or to be received, from any mining company issuing the same; the decision of that committee to be subject to an appeal to the Governing Committee of the Stock Exchange. And parties obtaining such permission, shall sell to members of the Annex at least one-quarter per cent. cheaper than they sell to the public. Penalties for violating, same as Section 1.

ARTICLE XXI.—*Application to have Stocks, Bonds, or Loans Placed upon the List.*—Section 1.—Application to have a stock, bond, or loan placed upon the list, must be made to the Stock List Committee of the Stock Exchange, in writing, and signed by at least five members of the Annex.

Section 2.—If a stock, the application must state the amount of authorized capital, par value of the shares, whether assessable, amount paid in, whether dividend paying, and if so, time and place of dividend, address of transfer office, amount of funded and floating debt, all of which must be certified to by the officers, with the seal of the company attached. In each case, a listing fee of two hundred dollars must accompany the application; to be returned if the application is refused.

Section 3.—If a bond or loan, the application must state the amount authorized, the amount outstanding, when due, percentage of interest, when and where payable, whether taxable, whether guaranteed, and by whom, and name of trustee, if any.

Section 4.—If the List Committee approve the application, they shall report to the Governing Committee of the Stock Exchange for final action.

ARTICLE XXII.—*Against uniting with other organizations.*—Section 1.—No member shall be directly or indirectly (through a partner or clerk) connected with any other organization in this city, where mining stocks, bonds, etc., are dealt in. The penalty, for the first offence, shall be a fine of one hundred dollars, and suspension by the Governing Committee, for a period of not less than sixty days. For a repetition of the offence, a fine of five hundred dollars, and suspension for at least six months.

Section 2.—Any member giving or accepting orders to be executed at any other such organization in this city, shall be subject to the same penalties as in Section 1; this rule not to apply to sales of stocks or bonds made at public auction, in the reading room of the Merchants' Exchange.

ARTICLE XXIII.—*Fines for Disorder, etc.*—Section 1.—Any member guilty of indecorous language or conduct towards the presiding officer or a member, while in the Annex, shall be fined five dollars, without excuse or appeal, and for a repetition of the offence, shall, by a vote of two-thirds of the Governing Committee of the Stock Exchange, be suspended for not less than one month, nor for a longer period than three months.

Section 2.—Any member interrupting the presiding officer while calling stocks, by speaking or otherwise, shall pay a fine of not less than twenty-five cents for each offence, at the discretion of the presiding officer, from which there shall be no excuse or appeal.

Section 3.—In all cases where a fine is inflicted by the presiding officer for loud talking, the member so fined shall not be excused by simply denying it, unless he denies *talking*, the presiding officer being the judge whether or not the session is disturbed.

Section 4.—Any member who shall be guilty of an act or acts, which shall endanger the person of a member, shall be subject to a fine of not less than ten dollars, or more than one hundred dollars.

Section 5.—Any member having his coat off in the Annex shall be fined fifty cents.

Section 6.—No member shall smoke in the Annex, until after the last regular session, under a penalty of five dollars, except in a special room, provided by the Committee on the Building.

Section 7.—Any member who shall, *at any time*, in the Annex, be guilty of conduct subversive of good order and decorum, shall be fined, at the discretion of the presiding officer, in a sum not exceeding five dollars.

Section 8.—When a member is fined for an alleged violation of the rules, and he denies it, and the offence is proven by the testimony of others, the fine shall be doubled.

Section 9.—Any member who shall inquire of the presiding officer what he was fined for, in a case involving a simple fine, shall be fined double, unless he denies the commission of the offence.

Section 10.—No fine can be ordered to be taken off by the presiding officer, except while the Annex is in Session.

Section 11.—A fine of one dollar shall be imposed on any member carrying a cane or umbrella about the room, unless said member is lame.

Section 12.—Any member who shall stand upon, or put his foot upon the furniture, recline upon a lounge, or in any way injure the furniture, shall be subject to a fine of not less than one dollar, nor more than five dollars, without excuse or appeal, and shall be charged with the cost of all necessary repairs.

Section 13.—A fine when no special mention is made of the sum, means ten cents, without appeal.

Section 14.—Any member swearing, or using profane-language in the Annex, shall be fined five dollars.

ARTICLE XXIV.—*Of Appeals.*—Section 1.—On an appeal from a fine, *no debate* is allowed. No motion to excuse a member from a fine can be entertained by the Chair, after an appeal has been made by the member, and decided in the negative. When the Chair has once declined fining a member, no appeal from that decision to the Annex shall be entertained.

Section 2.—A member may, upon a motion, be excused from his fines, by a vote of two-thirds of the members present.

ARTICLE XXV.—*Yearly Dues.*—Section 2.—In case the revenue of the Mining Annex shall be insufficient to meet the current expenses for the year, the Governing Committee shall levy an assesment of one-half on members of the Annex, other than members of the Philadelphia Stock Exchange.

ARTICLE XXVI.—*Non-Payment of Fines and Dues.*—Any member neglecting to pay his fines or assessments for the period of three months, shall be notified by the Secretary of the Stock Exchange; and continuing in his neglect for one month thereafter, shall be suspended until the payment of the same.

ARTICLE XXVII.—*Rules in Force at all Times.*—Rules for the behavior of members during the sessions of the Annex are in force in the buildings *at all times*, whether the Annex is in session or not; and it shall be the duty of the Chairman to enforce them without waiting for a formal complaint against the offender.

ARTICLE XXVIII.—*Admission of Strangers and Non-Members.*—No member shall introduce a stranger or non-member in the inclosure of the Annex, unless by permission of the Chairman, or a member of the Governing Committee. The clerks of brokers are not permitted to enter the inclosure at any time.

ARTICLE XXIX.—*Dissolution and Change of Firms, etc.*—It shall be the duty of every member of the Annex, to notify the Secretary of the Stock Exchange at once of any change in the constitution of the firm, and upon failure to comply with the provision of this article for a period of ten days, shall be fined twenty-five dollars.

The Philadelphia Mining Board of Trade.—After the consolidation of Mining Exchange with the Stock Exchange, in the Mining Annex, it was found that a good deal of business was left without a local habitation, so to speak, by the exclusive restrictions of the Annex rules. Corporate companies carrying on legitimate undertakings of various kinds, not only mining, but manufacturing and commercial, whose stocks were handled on the street, were not listed at the Exchange, and the parties interested in them were therefore constantly subjected to more or less inconvenience, the dissatisfaction arising from these circumstances suggested the idea of forming another Exchange for the trading in railroad, mining and miscellaneous stocks. The brokers who were opposed to the merger of the Mining Board with the Annex, took an active interest in this suggestion, and in the autumn of 1881, a plan was formulated for the new venture. A number of gentlemen associated and applied for a charter in November, and early in December the instrument was obtained, the grant being made to The Philadelphia Mining Board of Trade. This is believed to be the only instance on record in Pennsylvania of a charter grant to a commercial body of this description. The provisions of the charter are very liberal and permit the Board to trade in anything and everything coming within the scope of legitimate enterprise. Upon receipt of the charter, the association was regularly organized under the above title, and the following officers were elected: President, James B. Anderson; Vice-President, A. L. Garver; Secretary, A. H. Woodman; Treasurer, W. B. Keen; Chairman of Calls, Edwin Faxon; Clerk, James W. Mulford. Listing Committee, H. S. Twining, C. H. Woodruff, W. J. Radcliff. Room Committee, E. M. Harris, J. W. Mulford, S. H. Jenkins. Committee on Membership, Charles I. Fireno, W. H. Wade, K. H. Wilson. Committee on Finance, W. B. Keen, A. L. Garver, T. H. E. Gruel. Directors, James B. Anderson, C. I. Fireno, A. L. Garver, E. M. Harris, W.

B. Keen, W. H. Wade, J. W. Mulford, A. H. Woodward, F. J. Moody, W. J. Radcliff, W. S. Turner, C. H. Woodruff, H. S. Twining, K. H. Wilson.

The premises No. 239 Chestnut street were leased and fitted up as an Exchange, the place affording pleasant and suitable accommodation in an accessible location. Formal possession was taken December 27th, 1881, and the Exchange was open for business, after addresses by the President and other officers. The Exchange opened with 63 members, and the original subscription fee was $25. The membership has steadily increased, numbering 103, July 1st, 1882; and the fee has been advanced to $75. Any stocks of whatever description can be listed and dealt in at this Board, provided they represent valid enterprises with bona fide business and can pass the Listing Committee's examination as to capital, responsibility and character of management. The purpose is to rigidly exclude all wild cat corporations, and the concerns whose resources consist mainly of a desk and chair, but to extend liberal facilities to sound companies of good standing whether listed in other Exchanges or not. The business done during the first six months has been mostly in mining shares, though other stocks have also been handled. Trade has been growing in volume slowly, but on the whole satisfactorily, and the promoters of the enterprise are convinced that it is gradually attaining a position of assured permanency. On the 1st of July, 1882, the Board was found to be in excellent financial condition, and future prosperity looked fairly promising.

The Philadelphia Stock Market.—The several Mining Stock Exchanges have afforded facilities rather more than ample, for the buying and selling of mining stocks, and in this have rendered the public valuable service. Furthermore, they have enabled the promotion of mining enterprises to bring their properties and projects before the public and to solicit investments therein. A method commonly pursued in getting a mining company under way is to reserve a portion of the stock for working capital. This stock, called "treasury stock," is sold at the best price that can be obtained, and the avails supply the means for carrying on the undertaking until it can be made self-sustaining. This is the theory, and although it has not been found to work satisfactorily in practice, it is still defensible as a theory, and is generally followed in the promotion of mining companies. The Stock Exchanges have been used as agencies for the distribution of "treasury stock" among investors, and it must be plainly said that in the performance of this office, public confidence has been outrageously abused. It is true that the Exchanges have established rules and regulations looking to the exclusion of fraudulent concerns and abortive undertakings, and it is true also that no wisdom can provide against the misfortunes to which mining ventures are proverbially liable, but, after all allowance is made, the fact remains that through the Mining Exchanges of Philadelphia a vast amount of utterly worthless stock has been foisted on the public. An astonishing number of companies have sprung up whose principal and often only resources have resided in their "treasury stock," and the palming off of this stock has been the sole business contemplated. Even in cases where the companies have been honestly based on good properties in the beginning, the facility with which the public could be fleeced by operations in the stocks on 'change, has again and again tempted the managers to convert bona fide undertakings into schemes for swindling. The history of dealing in mining shares during the past three years is largely a history of the decline and extinction, so far as market price is concerned, of stocks originally issued with a flourish of trumpets at anywhere from a dollar to five dollars per share. Not less than $60,000,000 of nominal capital has been wiped out of the market during this time, and there are unquestionably still further reductions to be made. What actual loss investors have been subjected to it is of course impossible to estimate, and it is also impossible to determine what part of the loss has been due to misfortune and the actual exhaustion of mineral deposits, but it is certain that an appallingly large proportion is attributable directly to fraud. It is to be noted too that unavoidable business losses are met with fortitude in mining as in any other branch of human affairs, while the wholesale swindles here referred to have resulted in desperate depression, insanity and suicide.

The Share Market for 1881.—During the early months of 1881 business in mining stocks was carried on both at the stock exchange and at the mining exchanges. Of the companies listed at the stock exchange only *Tombstone*, *Girard*, *Orion* and *Iowa Gulch* showed much activity. Prices remained fairly steady on limited transactions at the Mining Exchange. The active stocks at the beginning of the year were *Fairview consolidated*, *Iowa Gulch*, *Rara Avis*, *Buena*, *Dauntless*, and *Argent*. The daily dealings at the Mining Exchange averaged 20,000 to 30,000 shares, gradually growing lighter towards the close of January. The variations in prices were not important except in the case of Iowa Gulch, which opened for the year at $1.00 at $1.10 and dropped to 35 during the last week of January, returning to 85 early in February.

On Tuesday, February 1st, 1881, the National Mining and Stock Exchange was opened in the rotunda of the Commercial Exchange Building, the chamber formerly occupied by the Philadelphia Stock Exchange. The occasion was marked by an entertainment tendered by the members of the New Exchange to the brokers, leading business men, distinguished citizens and the press. Speeches were made by Colonel A. Lowden Snowden, Director of the Mint, General Hartranft, Collector of the Port, Governor Safford of Arizona, and others, and, through press reports, the proceedings attracted a good deal of public attention. With this send off, business in mining shares took on increased activity and received more general notice both from speculators and from inventors. There were in February three Boards dealing in mining shares, namely, the popular old established stock exchange, the Philadelphia Mining Exchange and National Mining and Stock Exchange. The total dealings during February ran from about 120,000 to 200,000 shares daily. Of this aggregate the new National Exchange contributed from about 40,000 to 100,000 shares. Besides the stock listed elsewhere, the National traded actively in the shares of several new companies, the *Homestake* and the *Standard* being the most prominent. Toward the beginning of March the general market began to manifest noticeable weakness and prices showed a declining tendency, *Iowa Gulch*, the most sensitive stock, returning to 37½.

As the spring advanced trade improved in character, though not in volume, and the higher priced stocks were now freely handled. *Tombstone*, a regular dividend payer at this period, became a favorite, *Gunnison Improvement* was bought out and commanded respectable figures, and *Denver City consolidated* presented quite a substantial appearance as compared with the long list of trashy stocks selling at a few cents per share.

The market continued fairly active and without special feature requiring notice here, until after the middle of April, the fluctation in prices not being very important, the general tendency being slowly downward. During the third week in April *Tombstone* began to break off, slightly at first and subsequently with alarming rapidity. As the *Tombstone* company was the most solid and reputable corporation of its kind in Philadelphia, and as the stock had always stood at the head of the market, this break excited marked attention not only in mining circles but throughout the community. It was attributed to a disagreement among the managers of the company. The general market was a good deal demoralized by the weakness of *Tombstone*, and growing distrust was reflected in lighter dealings and lower quotations. The close of the spring season, however, found the market improving again. A change having been made in the management of *Tombstone*, the stock revived somewhat and though never fully recovering its former place was yet in fair investment demand at a range 20 to 30 per cent. lower than in its palmy days. The managers of this company were men of high standing in the community and a great many investors were satisfied to put money into the stock merely on the strength of the well known names at the head of it. The early summer trade was characterized by apathy and inertia, throughout. The general tendency of prices was steadily toward lower figures, and, many of the stocks of more speculative than actual value, slowly sank out of sight, their places on the share list knowing them no more. *Iowa Gulch*, heretofore cited as an illustration of the market and admittedly one of the most important stocks so far as traffic is concerned, wavered irregularly downward, and in July ranged from 35 to 45 cents per share. *Tombstone* held steady during this period at the lower range of $5.00 to $5.50. The Mining Annex of the old established stock exchange was opened at this season, but comparatively little trading was done then.

About the end of July and beginning of August there was a mid-summer access of activity, and with heavier dealings prices generally improved. The low grade stocks however continued to droop and the list of two cent stocks would have grown longer but that the poorest of them dropped below a cent a share and so out of the market. The improvement in the market was attributed in part to the consolidation of the Mining Stock Exchange with the Mining Annex of the Philadephia Stock Exchange which took place July 11th. The effect of this consolidation was to give the trade in mining stocks an appearance of greater stability and importance, and transactions in "100 shares at three cents buyer 60," no longer made such a noticeable not to say ridiculous feature of the sales reports. The stock sales at the Mining Annex, as the consolidation continued to be called, amounted to a daily average of over 150,000 shares. The receipts of bullion from Arizona especially were large and continuous, and the solid metal coming in large quantities had a stimulating effect on mining investments. There was a good demand for stocks in fair repute and Philadelphia claimed the credit for the moment of the best mining share market in the country.

Late in September and during the first weeks of October, investment traffic declined and speculation followed suit, the dealings at the Annex falling off to 75,000 or 80,000 shares daily. Prices drooped and though rallying fitfully at times did not at any moment recover the August range. During October and part of November the market exhibited signs of improvement. The commission trade, which is the basis of stock dealing, was larger and prices occasionally reached an almost buoyant character. Several of the older companies that had been in difficulties owing to incompetent management, effected salutary changes during the autumn and presented more hopeful prospects; and rumors of the decline of other companies, the *Tombstone* for example, were held to be disproved by continued dividends. The improvements did not hold through December, the market resuming its gravitating course, turning very dull and ruling heavy toward the holidays. Distrust of *Tombstone* was again manifested and although the 20th monthly dividend was paid in December, the stock dropped $2.00 per share. *Iowa Gulch* fell to 30 cents and the entire list was decidedly lower. The year came to a close with the market in a weak and yielding state. The result of the dealings for 1881 may be summed up in the statement that some 20 companies were wiped out of the market and the range of prices was let down 25 to 30 per cent.

The Share Market in 1882.—An important event in the opening of 1882 was the watering of the stock of *Iowa Gulch*. This was important, not only to the company and to the parties immediately interested, but to the entire mining community. *Iowa Gulch* occupied a prominent position in the share market, and the proposal to increase the stock attracted general attention. There had been a strong disposition manifested during the latter part of 1881 to protest against the capitalization of mining companies at absurdly inflated figures, and against the abuses incident to the issue of "Treasury stock." The capital of *Iowa Gulch* was already 500,000 shares, and this proposal was to put out 100,000 shares more. The issue was professedly proposed for the purpose of procuring more working capital; that is to say, it was another issue of "Treasury stock." It was hoped that the shareholders would refuse to sanction the project, but there was very little opposition, and the addition of 20 per cent. to the nominal capital was duly made. It is not too much to say that this instance of persistence in demoralizing practices tended seriously to injure the mining share market, as it unquestionably gave an impetus to the subsequent decline in the stock of this company. This decline during January reached 27 cents per share from a range of 35 to 45.

During the first month of the year, reports began to be heard that the deposit on which the prosperity of *Tombstone* had been based was exhausted. Furthermore, it was admitted that the company had a large floating debt to be provided for instead of a considerable surplus fund as previously claimed. An important law suit threatened to terminate adversely to the company, and altogether the model company of Philadelphia seemed to be in a bad way. The January dividend was, however, paid on time, and the stock which had been down to $3.80 rallied to $4.50 before the close of the month. Outside of the regular market, the *Gunsight* company, a Philadelphia concern, with a promising property in Pima county, Arizona, began to attract investments. The *Lake Valley* mines, Dona Ana Co., New Mexico, owned by Philadelphians, and since attaining wide celebrity as wonderfully rich properties, on which the *Sierra* companies have been located, also came conspicuously before the public, early in the year.

The general market was very quiet during the late winter and early spring, in sympathy with stock speculation of every description. Beside this reason for lighter dealings, the decline of prices for a number of stocks on the list to very low figures tended to check operations. There is very little inducement to trade in a stock after it has sunk to a range of 3 or 4 cents a share. In February and March *Tombstone* made its regular dividends, and maintained its price at about the same figures, although it was tolerably evident that large blocks of stock were being distributed on the market. The *Sierra* mines were not listed, but were selling outside at about $2.50 for *Sierra Apache*, $3.00 for *Sierra Bella*, and $6.00 for *Sierra Grande* and *Sierra Plata*. *The Philadelphia Mining and Smelting Company* and the *Little Wood River Mining and Smelting Company* are also Philadelphia organizations, whose stock, though unlisted, attracted increasing attention during the spring months. The stocks sold during the spring at $5.00 to $6.00 per share. An incident of the month of March occasioning a noticeable excitement was the arrest of the ex-secretary of the *Grand Union Gold and Silver Mining Company*, together with two mining stock brokers on charges of conspiracy to defraud by over issues and bogus transfers to the extent of 135,000 shares of the *Grand Union Company's* stock. This event occasioned the more commotion as it was a matter of common report that the stock of other companies had been tampered with in similar ways. The first attempt to bring punitive measures to bear on wild cat stock operations had the effect of putting a check on the bringing out of "paper" companies, and hastened the retirement of others already on the market. It also awakened attention to the desirability of making the registration of stock compulsory on all listed companies. There was some discussion of a proposal for compulsory registration among the brokers during the spring and early summer, but up to present writing nothing practical has come of it.

The *Tombstone* April dividend was paid as usual, but the annual statement of the company showed a discouraging state of affairs, the conditions revealed being even more hopeless than the street gossips anticipated. From a range above $4.00 per share the stock fell below $2.00 before the close of April, and predictions were freely ventured that no further dividends could be made. During this period, *Iowa Gulch* declined below 25 cents per share and was in consequence relegated to a place among the "penny shares," after having been for a considerable period at the head of the list. The general market continued very dull and the sagging tendency above noted ruled through the list, with two or three exceptions. The unlisted stocks were in better demand in April and May and it became evident that a better business was growing up in these stocks than the regular call could command. Prices for the *Sierras* and *Little Wood River* companies shares remained firm at about the same figures. In May the dealings on 'change declined still further, the average amounting to about 60,000 shares daily; sometimes dropping to half that volume, and, moreover, a large proportion of the transactions were in the "penny" stocks. Of the higher priced shares, *Tombstone*, and *Girard* a neighboring concern, furnished more than half the business. On the 26th of May a great fire occurred in the *Tombstone* settlement and *Tombstone* stock fell to 1.27½. The rest of the list seemed to be gradually wearing out the respect and even the patience of the community. With one or two exceptions, prices were at figures so low that shares had to be handled by the basketful to make any show of business, and even the most persistent operators showed evidences of weariness and disgust with the old list of worn, frayed-out, and too often worthless "penny" shares. The principal listed companies at the close of June, 1882, are *Tombstone*, selling at $1.02½ to $1.10; *Denver City*, at .30; *Silver Cord*, at 62½; *Iowa Gulch*, at .22; *Girard*, at .33; *Gunnison*, at .95; *Argent*, at .20; *Pembina*, at $1.02½; *Rara Avis*, at $1.45; *Governor's Group*, at .24; *Buena*, at .11; *Penn Breckenridge*, at .40; *Compromise*, at .27½; *Cincinnati*, at .13. Beside these there are 66 other companies listed, in various stages of decline, from 25 cents to 1 cent per share. The principal unlisted companies are the *Philadelphia Mining and Smelting*, selling at about $6.00; the *Little Wood River*, at $5.50; *Sierra Grande*, at $6.50; *Sierra Platte*, at $5.75; *Sierra Bella*, at $2.25; and *Sierra Apache*, at $1.70.

The amount of live Philadelphia capital in gold and silver mining at this date is estimated at $50,000,000, though the considerable number of private ventures making no public exhibit whatever, renders the extent of investment somewhat uncertain. The receipts of bullion from the mines owned here are larger than ever before and are gradually increasing. The prospects of valid enterprises are in most cases very favorable, and their stocks, nearly all of which are unlisted, are likely to meet with fair investment demand. But as to the trade in the list now handled at the Mining Annex, no one can deny that it seems to be "peetering out." Unless a radical improvement is made very soon, the Mining Annex will become as moribund as some of the old stocks it still clings to.

THE BOSTON MINING AND STOCK EXCHANGE.

THE deep interest taken in Boston and throughout New England in the revival of the mining interest on the Eastern coast, led in Sept. 1880, to the organization of a separate exchange in Boston for dealings in mining securities. The name adopted was the "Boston Mining and Stock Exchange," a number of the younger and active brokers of the city joined the exchange, and for a time the board was very popular and the business transacted was large. The repeated disappointments of the public brought about by misplaced confidence in the managers of mining schemes, have finally had their decided effect upon this exchange, however, and the business transacted on it from day to day is much smaller than formerly. Following are the constitution and by-laws of the exchange revised to March of the current year:

CONSTITUTION OF THE BOSTON MINING STOCK EXCHANGE.—The subscribers associate themselves together for the purpose of establishing at Boston a place where mining and other stocks may be bought and sold, after the manner usual in a stock exchange; and to this end we hereby adopt the following Constitution:

ARTICLE I.—*Name.*—The name of the association shall be "The Boston Mining and Stock Exchange."

ARTICLE II.—*Annual and Special Meetings.*—The annual meeting of the members shall be held on the third Tuesday of September, at twelve o'clock noon, in the rooms of the Exchange at Boston.

Notice of the time and place of meeting shall be mailed to each member at his place of business by the Secretary, not less than seven days prior thereto.

Special meetings may be called whenever the President or Standing Committee deem expedient, and shall also be called upon the written request of not less than ten members, addressed to the Secretary, stating the object of the meeting.

Notice of special meetings shall be given by the Secretary in manner aforesaid, not less than two days prior thereto, and shall state the object of the meeting. All meetings may be adjourned from time to time for the purpose of acting upon unfinished business, but no business shall be transacted at any adjourned meeting which would not have been in order at the meeting originally called.

ARTICLE III.—*Quorum.*—Fifteen members shall be necessary to constitute a quorum for the transaction of any business; except that in the regular daily sessions for the buying and selling of stocks, no quorum of members shall be requisite.

ARTICLE IV.—*Votes and Proxies.*—At all meetings each member shall be entitled to one vote.

Voting by proxy shall be allowed only at the annual election of officers.

ARTICLE V.—*Officers.*—At each annual meeting, there shall be chosen by ballot from among the members a President, Vice-President, Treasurer, Secretary, Chairman of the Exchange, a Standing Committee, Finance Committee, and a Committee on Securities; each of the said committees to consist of five persons. The President and Vice-President shall be members *ex-officio* of the Standing Committee; the President and Treasurer shall be members *ex-officio* of the Finance Committee; and three members shall be chosen at large as aforesaid, upon such committees, to complete their number. The Committee on Securities shall be chosen at large from the members.

Any vacancy occurring in any of the foregoing offices from death, resignation, permanent absence, disability, or otherwise, shall forthwith be filled by election by ballot, at a special meeting of the members of the Exchange to be called for that purpose.

ARTICLE VI.—*Duties of the President.*—The President shall preside at all meetings of the members except at the regular daily sessions for buying and selling stocks. He shall have the custody of the Treasurer's bonds; he shall be *ex-officio* chairman of the Standing and Finance Committees, and preside over their meetings; he shall have a casting vote in case of tie; and his decision upon points of order shall be final unless, upon an appeal being taken, he is overruled by a two-thirds vote of the members present and voting.

ARTICLE VII.—*Duties of the Vice-President.*—It shall be the duty of the Vice-President to perform the duties of the President in the absence of the latter. And in case of the absence or disability to act, of the President or Vice-President, the Chairman of the Exchange shall preside at all meetings regularly called, excepting the annual meeting, and shall be possessed in this particular of all the powers now vested in the President or Vice-President, excepting that of casting a vote in case of a tie.

ARTICLE VIII.—*Duties of the Treasurer.*—The Treasurer shall have charge of the money and funds of the Exchange, shall deposit the same apart from all other money in his name as Treasurer, or in the name of the association, as shall be determined by the Finance Committee, in some bank to be designated by said committee, and shall pay the current bills of the Exchange upon the approval of the Finance Committee. He shall keep accurate books of account, showing the receipts, expenditures, and funds of the Exchange, which shall upon all reasonable times be open for the inspection of all the other officers and members. At each annual meeting he shall render a statement in writing, showing the financial condition of the Exchange. He shall give such bonds for the faithful performance of his duty as the Finance Committee may by vote require. He shall perform such other duties as the Finance Committee shall from time to time assign him.

ARTICLE IX.—*Duties of the Secretary.*—The Secretary shall give notice of all annual and special meetings of the Exchange in the manner aforesaid, and shall keep a correct record thereof, which shall at all reasonable times be open for the inspection of any member, and shall keep a list of fines, recording all sales and purchases made at the Exchange, and such other transactions between members as may be reported to him in writing by the parties respectively interested, and shall perform such other duties as may from time to time be assigned him by the Standing Committee.

ARTICLE X.—*Duties of the Chairman.*—Section 1.—It shall be the duty of the Chairman of the Exchange to preside during the daily sessions, to call stocks at the hours which may be fixed from time to time by the Exchange, to settle all questions of order and enforce the by-laws, rules and regulations during such session; and to this end he is authorized in his discretion to impose reasonable fines, from which there shall be no appeal. The Chairman shall be a member of the Exchange, *ex-officio*.

Section 2.—No member shall speak more than twice on any question under discussion by the Exchange without permission from the presiding officer; nor shall any member interrupt another while speaking, except when raising a point of order.

ARTICLE XI.—*Duties of the Standing Committee.*—The Standing Committee shall define the powers and duties and shall fix the salaries of all the officers and servants of the Exchange. They shall have the general management of all the business of the Exchange, except as herein otherwise provided; they shall keep minutes of their proceedings, and shall, when required, submit the same for examination at any meeting of the Exchange; to them shall be referred all applications for membership, for such recommendations to the Exchange as they shall see fit to make thereon. They shall hold monthly meetings, and in addition thereto shall meet at any time upon the call of the Chairman or any member whose grievances are laid before them. Any action of the Standing Committee may be reversed by vote of a majority of the members present at any regular or special meeting.

ARTICLE XII.—*Duties of the Finance Committee.*—The Finance Committee shall have general charge of the finances of the Exchange, shall determine the bank and manner in which the Treasurer shall deposit its funds, and the method of checking out the same. They shall also invest any surplus which may accumulate from time to time not needed for the payment of expenses, at their discretion, in the name and for the benefit of the Exchange, unless otherwise ordered by a three-fourths vote at a meeting called to act upon the disposal of the surplus fund, and no appropriation exceeding the sum of one hundred dollars shall be made (except for ordinary expenses) without three days' notice being given, unless by the vote of a majority of the members of the Exchange present at any regular or special meeting.

They shall keep minutes of their doings, which when required shall be submitted to the Exchange for examination; they shall also require from any officer or servant such bonds as they shall see fit.

ARTICLE XIII.—*Duties of the Committee on Securities.*—The Committee on Securities shall examine and report upon all stocks and other securities entered or to be entered upon the regular list of the Exchange, and all applications to place securities upon the list shall be made to them; and on a favorable report by a majority of the committee, such stocks and securities shall be placed upon the regular list. Every company on making application shall pay a fee of one hundred dollars at the time of application, to be retained by the Exchange, whether the stock is accepted or rejected. The committee shall also designate what stocks or bonds shall be placed upon the *free* and *fine* lists, with power to revise the same whenever in their judgment it shall be deemed advisable, subject, however, to the approval of the Exchange.

ARTICLE XIV.—*Election of Members.*—The number of members of the Exchange is limited to one hundred and fifty; election of membership shall be by ballot; and no person shall be eligible thereto who is not a stock broker or dealer in stocks at the time of application, except as hereinafter provided. The application must be indorsed by at least two members of the Exchange, and receive the approval of the Standing Committee, after which the name of the applicant and parties indorsing him shall be conspicuously posted in the Exchange Room at least five days before election; and six black balls shall exclude. After such rejection of any person, no new application for his election shall be entertained within thirty days, nor be voted upon within ten days from the date of the new application. Whenever it shall be made to appear to a majority of the Standing Committee that a wilful misstatement upon a material point has been made to them by an applicant for admission or readmission, they shall report the case to the Exchange, and the offending party shall be deprived of his membership, or declared forever ineligible for admission, as the case may be, by a vote of two-thirds of the members present.

ARTICLE XV.—*Fees.*—Every person admitted by election to membership, before doing business at the Exchange, shall pay an initiation fee of not less than two hundred dollars; and all members admitted by transfer shall pay a fee of twenty dollars. In all cases where the initiation or transfer fee shall not be paid within five days after the admission of a member and his notification by the Secretary, such admission shall be declared void. Every member shall pay annual dues of not less than fifty dollars, payable quarterly in advance. These dues may be advanced by a majority vote of members of the Exchange, at a meeting specially called to consider the subject of such advances, or the same may be reduced, but not below the figures before stated, by a like vote, at a meeting specially called to consider the subject of such reduction: *provided, however*, that no such advance or reduction shall take place until the next following year or quarter, as the case may be. Non-payment of quarterly dues continuing over fifteen days shall subject the member to pay an additional amount of ten per cent. to be added to his bill; and at the expiration of thirty days the Secretary shall notify such delinquent member that if his dues are not paid within five days from the date of such notice, his membership will be terminated, and he shall not be reinstated unless he can furnish some reasonable excuse for non-payment of said dues.

ARTICLE XVI.—*Transfer of Membership.*—Section 1.—Whenever any member wishes to transfer his membership, the name of the party to whom he proposes to transfer shall be submitted to the Standing Committee, and his election shall be made by ballot, as provided in Article 14; but no transfer shall be made provided the member transferring has unsettled contracts with any member of the Exchange.

Section 2.—If any suspended member fails to settle with his creditors, and apply for readmission within three months of the time of his suspension, his membership shall be disposed of by the Standing Committee, and the proceeds paid *pro rata* to his creditors in the Exchange.

Section 3.—In every case where a member is deprived of his membership or declared ineligible for readmission by reason of any offence against or under the laws of the Exchange, his membership may be disposed of forthwith, and the proceeds covered into the treasury of the Exchange.

Section 4.—Any creditor falling to file with the Secretary a written statement of his claim against a member, prior to the transfer of the right of membership of such member, shall forfeit all right to a distributive share of the proceeds of such membership.

Section 5.—When a member dies, his membership may be disposed of by the Standing Committee; and, after satisfying the claims of the members of the Exchange, they shall pay any balance to the legal representatives of the deceased. The Standing Committee shall have full power to determine the price at (not less than the market price) which the seat of the deceased shall be sold.

ARTICLE XVII.—*Commissions.*—No member shall charge a less commission on sales than the rate established by the Exchange, nor make nor cause to be made any purchase or sale whatever for any person who is not a member of the Exchange, without charging full commission. A division of commissions, however, may be made with members of any other Stock Exchange offering a like privilege. Any member violating this article shall be fined twenty-five dollars for his first offence, and shall be deprived of the privilege of membership until his fine is paid; for any subsequent violation he shall be suspended from the Exchange for three months, and shall pay a fine of fifty dollars.

ARTICLE XVIII.—*Contracts.*—When the principals on time contracts are surrendered and accepted, it shall be done in writing. No party to a contract shall be compelled to accept a principal other than the member offering to contract, unless the name proposed to be substituted shall be declared at the time of making the offer.

ARTICLE XIX.—*Insolvency.*—Any member who fails to comply with his contracts or becomes insolvent shall be suspended until he shall have settled with all his creditors. On his application for readmission, a special committee of five members shall be appointed to investigate his conduct and the cause of his failure, who shall report the same to the Exchange; and if, after three days' notice, two-thirds of the members present in voting are in favor of re-instating him, he shall be again entitled to his seat: *provided, however*, that, after a second failure, a vote of three-fourths of the members present and voting shall be required for his readmission, the votes in each case to be taken by ballot; and no person after his suspension shall be allowed to take his seat at the board until all of his dues accruing during his suspension shall have been paid.

ARTICLE XX.—*Fictitious Sales.*—No fictitious sale or contract shall be made at this Exchange; and any member violating this article shall be suspended during the pleasure of the Exchange upon a majority vote of members present and voting.

ARTICLE XXI.—*Indecorous Conduct.*—Any member of the Exchange who shall be guilty of indecorous language or conduct toward another member while the Exchange is in session shall be suspended by a majority vote of members present and voting, for not less than one week nor more than one month; repetitions of the offence shall subject the party so offending to expulsion upon two-thirds vote of members present and voting by ballot, after which he shall not be re-admitted except upon a like two-thirds vote.

ARTICLE XXII.—*Powers to make By-laws.*—The Exchange shall have power to make such by-laws, rules and regulations not repugnant hereto, as its members, by two-thirds vote of those present and voting, shall from time to time deem requisite for the orderly and efficient conduct of its affairs. No such by-law, rule or regulation shall be altered, amended or repealed, except upon a like two-thirds vote; nor shall the proposition to pass, alter, amend, or repeal any by-law, rule or regulation be acted upon, except at a meeting specially called for the purpose by the Secretary of the Exchange, upon motion of five members.

ARTICLE XXIII.—*Signing the Constitution.*—This Constitution shall be signed by each member before transacting business at the Exchange; and each one thereby pledges himself to be governed by the provisions thereof, and to keep and obey such by-laws, rules, and regulations as may from time to time be adopted by the Exchange.

ARTICLE XXIV.—*Refusal to Comply with the Constitution, By-laws, etc.*—Any member charged with violating any article of this Constitution, or any by-law, rule or regulation of the Exchange, shall be entitled to a hearing by the Exchange; and if he be found guilty of the offense, the penalty for which or the vote imposing which is not herein specifically provided for, he shall be fined, suspended, or expelled, as shall be determined by two-thirds of the members present and voting by ballot.

ARTICLE XXV.—*Non-Liability of Members.*—Nothing in this Constitution shall be construed as creating between members a partnership in any stock transaction, nor as imposing on them any pecuniary liability whatever for each other's contracts in buying, selling or delivering any stock; but the entire liability of each and every member is hereby declared to be expressly limited to his proportionate share of the necessary current expenses of maintaining and conducting the Exchange.

ARTICLE XXVI.—*Changing the Constitution or By-laws*—Any article in the Constitution or By-laws may be altered, amended or repealed by a two-thirds vote of the members present and voting at a special meeting to be called for the purpose, on notice mailed by the Secretary to each member at his place of business, not less than seven days prior thereto, and stating the object of the meeting.

ARTICLE XXVII.—*Gratuity Fund.*—Upon the death of any member of the Exchange there shall be levied and assessed against each surviving member the sum of ten dollars, and the amount collected from such assessment shall be paid as a gratuity to the representatives of the deceased, on the conditions as follows:

First.—Should the member die leaving a widow and no children, the whole amount collected shall be paid to such widow for her own use.

Second.—Should the member die leaving a widow and children, then one half of the sum collected shall be paid to the widow for her separate use, and one half to the children for their use, share and share alike, provided that the share of minor children shall be paid to their guardian.

Third.—Should the member die leaving children and no widow, then the whole sum collected shall be paid to the children, as directed in the preceding section.

Fourth.—Should the member die leaving neither widow nor children, then the whole sum collected shall be paid to such person or persons as he may especially designate; and in case of his decease without any special designation as to the amount, it shall be paid to his heirs-at-law.

Fifth.—Nothing herein contained shall ever be taken or construed as a joint liability of the Exchange, or its members, for the payment of any sum whatever, beyond the amount collected, as heretofore stated, it being distinctly understood that the amount paid is a gratuity. All payments and assessments shall be charged against each member of the Exchange, and shall be collected in the same manner and have the same priority as all other fines, assessments and dues.

BY-LAWS.

ARTICLE I.—*Opening of the Exchange.*—The Exchange shall be open every business day at 10 o'clock A. M., and continue open until 3.30 o'clock P. M. The regular calls for stocks and bonds shall be at 11 o'clock A. M. and 2 o'clock P. M., which hours may be changed by the vote of a majority of the members present. One or both of the sessions may be omitted at any time by a like vote; *provided, however,* that the Exchange shall not adjourn for more than one day, without the consent of two-thirds of the members present.

ARTICLE II.—*Calls.*—The order of business at the regular calls shall be as follows:

First.—Call of the regular list of stock or bonds.
Second.—Call of the free list.
Third.—Call of the fine list.
Fourth.—Call of the stocks or bonds at the request of members.
Fifth.—Reverting to stocks at the request of the members.

ARTICLE III.—*All Offers Binding.*—All offers made and accepted shall be binding, whether reported by the Chairman or not.

No offers to buy and sell privileges, to take or deliver securities, shall be made publicly at the Exchange.

No bids or offers shall be allowed on stocks selling under one dollar per share of less than one per cent. per share, and on stocks selling at one dollar and under two dollars of less than two and a half cents per share, and on stocks selling over two dollars of not less than five cents per share.

ARTICLE IV.—*Offers to Buy or Sell must state Amount.*—Any member offering to buy or sell stocks or other securities at the Exchange shall state the number of shares or the amount: and no one shall be allowed to withdraw an offer which he has made, unless it be done in an audible voice. All previous offers shall be considered as withdrawn after a sale, or when the Chairman has passed to another stock. Any sale or purchase made when the amount was not stated shall be considered for one hundred shares. Any member offering stock who refuses to name the amount shall be fined, and the bid offered shall not be entertained by the Chairman.

ARTICLE V.—*When Offers are not Allowed.*—No offer allowed while the Chairman is reporting sales.

After a sale has been made and while the Chairman inquires the terms, no member shall propose a new bargain until the Chairman has actually stated the result for the purpose of record by the Secretary; and when any stock is under consideration after the list has been regularly called, no member shall be allowed to call any other stock until the Chairman has said, "Any other stock?"

ARTICLE VI.—*Claimants for Purchase or sale of Stocks.*—In case there are two or more claimants for the purchase or sale of stock, the Chairman shall decide the same, or he may appeal to the Exchange for their decision; if an appeal is made from the decision of the Chairman, and the appeal is seconded by five members, the question shall be put to vote.

ARTICLE VII.—*Settlements.*—All purchases and sales shall be settled on the next business day unless expressed to the contrary; and all contracts falling due on Sunday, or such holiday as is observed by the banks, shall be settled on the preceding day; or when two holidays occur on consecutive days, as when Sunday immediately precedes or follows a holiday, a contract falling due on the first of such holidays shall be settled upon the business day immediately preceding, and those maturing upon the second of such holidays shall be settled upon the business day next following, together with whatever interest may be due to the day of settlement; and whenever the Exchange shall adjourn for a day, all contracts maturing on that day shall be settled on the day following. In all sales or contracts for stock between members of the Exchange, the party who has to receive the same shall not be bound to take it after 1.30 o'clock, P. M., but may postpone payment, without being charged interest, to the following day.

ARTICLE VIII.—*Rights to take or Deliver.*—When a contract is made for the right to take or deliver stock on or before a certain day, the right shall cease at 2 o'clock on the last day; but the settlement shall be made on the next day; and the usual grace is to be allowed on such contracts, if at one month or more, as in ordinary sales on time. Contracts for "the right to take or deliver" bear no interest, but shall, if consummated be regarded in all other respects as regular contracts on time, and be governed by the same rules.

ARTICLE IX.—*Notices for the demand or delivery on Time Sales.*—In all contracts on demand or on time, at the option of the buyer or seller, one day's previous notice shall be given before the stock can be demanded or delivered; and such notice must be given at or before 2 o'clock P. M.

ARTICLE X.—*Payments and Transfer of Stocks.*—On the sales of stocks which are transferable in Boston, either party shall have the right to require the purchase money to be paid at the time and place of transfer, and of stocks transferable elsewhere, at the time of delivering the certificates, in the name of satisfactory parties, with powers of attorney or other necessary documents.

ARTICLE XI.—*Contracts maturing during the close of Transfer Books.*—Contracts for stock which may arrive at maturity while the transfer books are closed shall be extended until the opening; and where interest has been allowed, it shall continue until the opening of the transfer books. Contracts to be settled at the opening shall carry interest, unless the books are opened within three days. Margins may be called on such sales or purchases as in time contracts.

ARTICLE XII.—*How deliveries shall be made when Transfer Books are closed by Legal Impediment.*—Whenever transfer books of any company shall be closed by any legal impediment, certificates properly indorsed shall constitute a delivery.

ARTICLE XIII.—*Dividends.*—Section 1.—On the day of closing of the transfer books of any stock for the purpose of dividend, any such stock sold for cash shall be "dividend on" previous to the time officially designated for the closing of books. All transactions shall be "dividend off" after the day of closing the books.

Section 2.—When a dividend is declared during the pendency of the contract, the seller shall collect, hold, allow interest on, and pay the same to the buyer at maturity of the contract.

Section 3.—And when new stock shall be created in any existing corporation, the stock of which has been sold on time, or where shares shall be entitled to similar privilege, the purchaser of any stock entitled to such new stock or other privilege may take such new stock and pay for it, unless the seller's security would be thereby impaired; in which case the purchaser shall give additional security, or make some other satisfactory arrangement, it being understood that a sale on time gives to the purchaser all the collateral advantages, and that said purchaser assumes all responsibilities which he would have had if he had actually taken delivery of the stock, the seller being considered as holding it as security for the payment of the purchase money.

Section 4.—When any assessment shall become due on stock sold on time, the seller shall pay such assessment, which shall be refunded by the buyer on settlement of the contract.

ARTICLE XIV.—*Time Contracts.*—Sales made on three days or less carry no interest; sales of over three days carry interest; sales of less than thirty days carry no grace; sales on thirty and sixty days shall be considered as one and two calendar months; sales of thirty days and over carry grace, and also interest to the day of settlement.

ARTICLE XV.—*Tendering of Stocks.*—In all time contracts it shall be the duty of the seller to tender stocks sold at the expiration of the contract; and, in case of neglect so to do it shall be the duty of the buyer to notify the seller the following day, and if such notification is not given within three days, no further liability shall be attached to either party.

ARTICLE XVI.—*Notification on time sales of Stocks.*—Buyers of stocks on time shall be entitled to one day's notice, said notice to be given before 2 o'clock on the day previous. Borrowers and lenders of stocks shall be entitled to the same notice for the return of the stocks; and any failure to respond to such notice shall be considered a violation of contract.

ARTICLE XVII.—*Proxies.*—In all sales on time, the seller shall have the option to give proxies or not, as be may elect.

ARTICLE XVIII.—*Bids for turning Stock.*—When a party bids for regular stock "for the turn," the sale of the regular stock shall not cut off the buyer bid on the Exchange.

ARTICLE XIX.—*Clerk shall read Sales.*—At the close of any call where there have been several transactions, the clerk shall read such sales at the request of any member.

ARTICLE XX.—*No Bids or Offers received while Members are Seated.*—No bids or offers shall be received from members while seated; a fine of twenty-five cents shall be imposed upon any member making such bids or offers; but bids and offers may be made from any part of the floor by members while standing.

ARTICLE XXI.—*Sales to be Reported.*—All sales made at the Exchange shall be reported unless objected to by three members; and such objection is sustained by a majority of the members present.

No person shall have access to the records of the Exchange except members, their partners or clerks, and no member shall inform any one, except other members, their partners or clerks, or for the purpose of notifying principals, by whom any sale, or offer to buy or sell, has been made at the Exchange, under a penalty of twenty-five dollars for each offence.

ARTICLE XXII.—*Fine for Smoking.*—Any member smoking in the rooms of the Exchange during the sessions of the board shall be subject to a fine of one dollar for each offence.

ARTICLE XXIII.—*Stocks quoted "Self to Self."*—When any member quotes stock as bought or sold "self to self," it shall cut off his bids, but shall not affect any other bids or offers on the board at the time.

ARTICLE XXIV.—*Deposits on Contracts.*—On all contracts for stocks or bonds sold on time, either party may require a deposit of thirty per cent. of the contract price; and in case of variation in the market price of the securities bought or sold, a further deposit shall be made if called for by either party to keep the thirty per cent. good during the existence of the contract. In case of default by either party to make any additional deposit which may be required, or in case of non-fulfillment at expiration, the contract may be closed, by purchase or sale, as the case may be, on the following day. The seller shall always have the privilege of depositing the whole amount of the stock sold, in lieu of the cash; in which case the margins shall be paid to him by the buyer, and the amount credited on the contract, and bear the same rate of interest as specified in the contract. Margins called before half past twelve o'clock P. M. shall be deposited before two o'clock of the same day; if called after half past twelve o'clock P. M., shall be deposited before eleven o'clock the next morning. All margins shall be placed in the "American Loan Trust Company," when requested by either party.

ARTICLE XXV.—*Default.—Closing Contracts under the Rule.*—Should any member neglect to fulfil his contract on the day it becomes due, the party or parties contracting with him shall, after giving notice, employ an officer of the Exchange to close the same before half past twelve o'clock P. M. on the following day in the Exchange, by purchase or sale, as the case may require, accounting with the member in default for any surplus, or charging him with any deficiency.

In case of a failure of a creditor to close the contract as above, the price shall be fixed by the price-current at the time such contract ought to have been closed under the rule.

In all cases where an officer may be directed to buy or sell securities under the rule, the name of the member giving the order shall be announced. No order for the purchase or sale of securities under this rule shall be executed unless made out in writing, over the signature of the party giving the order, who shall state the reason therefore; and it shall be the duty of the officer who executes the order to indorse thereon the name of the purchaser or seller, the price, and the hour at which the contract is closed, and hand the same to the Secretary of the Exchange, who shall, within twenty-four hours, ascertain whether the party for whose account the order was given has paid the difference, if any, arising from the transaction. If not paid, the Secretary shall report the default to the Chairman, whose duty it shall be to announce the facts to the board at the next regular session. The duty devolving upon the officers of the Exchange, under this rule, shall be performed without charge.

When a contract is closed under this rule, any action of the defaulter, direct or indirect, by which the prompt fulfilment of such contract is delayed, hindered or evaded, to the detriment of the other contracting party, shall subject the offending party to suspension for not less than thirty days, or he may be expelled from the Exchange by a vote of two thirds of the members present at any meeting. When contracts are closed out under the rule, any member supplying the bid or offer, and not duly receiving or delivering the stock, as the case may be, renders himself liable to prosecution under this article.

Should any stock thus sold not be delivered until the next day, the contract shall continue; but the party defaulting shall be liable to pay such damages as may be assessed by the Standing Committee.

The same rules, as to notice, time and place, that govern defaults in other contracts shall apply to borrowed securities, which, on non-delivery of receipt, must be borrowed or loaned in open market, except in case of actual default in receiving or delivering after notice to close the loan; then the same are to be bought or sold, as the case may be, for account of the defaulter, in the manner provided in this article.

ARTICLE XXVI.—*Dealings with Non-members.*—Any member dealing with a person not a member in the rooms of the Exchange, without demanding of him the name of a member of the Exchange who shall act as his broker in the transaction, shall be subject to a suspension for not less than sixty days, nor more than twelve months.

ARTICLE XXVII.—*Calling Stocks.*—Any member shall be allowed to call any stock regularly listed or called at any other stock board; and the caller of any stock shall be entitled to the first bid or offer.

ARTICLE XXVIII.—*Fine List.*—Any stock placed upon the fine list by the Committee on Securities and dealt in at the Exchange, shall subject the seller to one fine of twenty-five cents for all sales he may make in such stock during the session of the board. All fines shall be due and payable monthly.

ARTICLE XXIX.—*Dispute or Disagreement among Members.*—In case of dispute or disagreement between members of the Exchange, or in which a member of the Exchange is a party in interest, the matter in question shall be referred to a committee of three persons, two of whom shall be selected by the respective parties, and the third chosen by the two thus selected; and the decision of this committee, if unanimous, shall be final and binding upon the parties, otherwise the committee shall report the case to the Exchange for their decision.

ARTICLE XXX.—*Failure.*—In case of the failure of any member of the Exchange, a committee of three members (if so requested by said member or by any creditor) shall be appointed to take into consideration any or all of his unsettled contracts, and to adjust the same in such manner as may appear to said committee to be equitable, unless the insolvent party shall, within three days of the time of failure, give satisfactory security for the fulfilment of his contract or contracts at maturity.

The insolvent member shall not, however, be precluded from an appeal from the decision of the committee, nor shall the committee be allowed to surrender the settlement of said member's affairs into his hands without authority from the Exchange; and all balances collected by said committee shall be paid over to the Treasurer of the Exchange, to be held by him as a fund, separate and distinct from all other money in his hands, until such time as the Standing Committee may deem it safe and proper to distribute the same, when it shall be returned by the Treasurer to the chairman of the first-named committee, to be paid by him, after deducting the necessary expenses, to the respective parties entitled thereto.

ARTICLE XXXI.—*Neglect to Pay Fines.*—Any member who shall neglect to pay his fines for fifteen days after they become payable, shall, after due notice, pay an additional amount of ten per cent., to be added to his bill; and if not paid at the end of thirty days, he shall no longer be considered a member, and his membership may be disposed of by the Standing Committee.

ARTICLE XXXII.—*Annual Assessments.*—The annual assessments on each member shall be fifty dollars, payable in advance installments, Jan. 1, April 1, July 1, Oct. 1.

ARTICLE XXXIII.—*Rescinded Assessments.*—On all time sales of stock, after an assessment becomes delinquent, and is thereafter rescinded, the buyer may, upon delivery, deduct the amount of of said assessment from the contract price of said stock.

ARTICLE XXXIV.—*Commissions.*—Stocks selling under fifty cents per share, the commission shall be fifty cents per hundred shares.

Stocks selling at fifty cents and under one dollar, commission shall be one dollar per hundred shares.

Stocks selling at one dollar per share and under two dollars, commission shall be two dollars per one hundred shares.

Stocks selling at two dollars and under five dollars per share, commission shall be three dollars per hundred shares.

Stocks selling at five dollars and under ten dollars, commission shall be five dollars per hundred shares.

Stocks selling at and over ten dollars per share, commission shall be ten dollars per hundred shares.

Lots of less than one hundred shares of stocks selling at and under five dollars per share, commission shall be same as for one hundred shares.

These commissions may be changed at any time by the vote of two-thirds of the members present at a meeting called for that purpose.

ARTICLE XXXV.—*Members not Bound to Sell other than Specified Lot Offered.*—When a specific lot of stocks is offered for sale or purchase, the member offering the same shall not be obliged to sell or buy any part, although the amount in the aggregate should equal the amount of his bid or offer.

ARTICLE XXXVI.—*Conditional Bids Not Allowed.*—No sale of securities shall be made on which a deposit shall be offered as the limit of liability.

ARTICLE XXXVII.—*Partnerships.*—No member of the Exchange shall be allowed to take as partner any suspended member thereof during the period of his suspension, or to form a partnership with any insolvent person, or with any person who may have previously been a member of the Exchange, and against whom any member may hold a claim arising out of transactions made during the time of such membership and which has not been settled or released in accordance with the laws of the Exchange.

ARTICLE XXXVIII.—*Claims between Partners.*—No claims growing out of transactions between partners shall be admitted to share the proceeds of the membership of one of such partners, until after the claims filed by other creditors who are members of the Exchange shall have been satisfied.

ARTICLE XXXIX.—*Length of Time Contracts Limited to Sixty Days.*—No time contracts longer than sixty days shall be allowed at the calls of the Exchange.

ARTICLE XL.—*Suspension of By-Laws.*—Any one of these By-Laws may be temporarily suspended by the unanimous consent of all the members present.

OTHER MINING STOCK EXCHANGES.

FOLLOWING the "boom" in mining securities, several leading brokers opened commodious offices in Chicago and other large cities where quotations were furnished visitors gratuitously, by recording them on a blackboard, and, in some instances, private wires connecting with the New York market were under the control of the brokers. Some of the Chicago capitalists became large holders of mines and mining securities, and finally it was decided that Chicago should have an exchange of its own. A charter was granted to the "Chicago Mining Exchange" on April 7, 1882, and by-laws, rules and regulations were adopted. At present, there is one call per day, extending from 11.00 to 12.30, which is held in the room of the Provision, Grain and Stock Board on Calhoun street. The membership is limited to 250, and there are already 215 members enrolled. The first 100 seats were sold at $50 each; the next 50 seats, $100 each, and then 50 seats at $250 each. The price of the last 50 seats (of which 15 have been sold) was fixed at $500 each. Some seats have been resold at from $100 to $250 each. The charge for examination and listing the stock of a company is $50 per annum. The stocks of the following companies have been listed:

Ætna, Col.	Amie, Col.
Abington, Col.	Anglo-American, Col.
Barcelona, Col.	Breece, Col.
Baskin, Col.	Buckeye, M. & T. Co Col. preferred.
Camp 61, Col.	Chrysolite, Col.
California, Cal.	Cerro Gordo, Utah.
Central, Arizona.	Central, Colorado.
Columbia, Col.	Dunkin, Col.
Durango, Col.	Denver City, Col.
Dyer, Col.	Fiskdale, Col.
Frisco Con. Utah.	Globe Copper, Arizona.
Golden Comet, Arizona.	Girard, Col.
Hailstorm.	Hayden.
Hooker, Col.	Horn Silver, Utah.
Hibernia, Col.	Iron Silver, Col.
Iron Mountain, Col.	Iowa Gulch, Col.
Joslyn Con., Col.	Kokomo, Col.
Little Chief, Col.	Leadville and Gunnison, Col.
Laxey (Iron) Mining Co., Mich.	New York Hematite (iron), Mich.
Minnehaha, Col.	Ocean Wave, Col.
Palmyra, Col.	Quartz Creek, Col.
Quartz Mountain, Cal.	Rice and Wheeling, Col.
Robinson Con., Col.	Rara Avis, Col.
Stormont, Utah.	Silver Cliff, Col.
Sutro Tunnel, Nevada.	Silver Cord, Col.
Silver Group, Cal.	38 Stars, Col
Treasury, Col.	Tombstone, Arizona.
Vernon, Arizona.	Vandewater, Utah.
Wisconsin and San Juan, Col.	Whalen Con. (copper), Nevada.

The officers are as follows: Geo. R. Vernon, President; Erwin E. Wood, Treasurer, and Edward M. Greene, Secretary.

St. Louis Mining and Stock Exchange.—According to the announcement made by circular letter under date of August 10, 1880, the growing importance of Mining and Stock interests of this country, and the intimate relations of St. Louis and St. Louis Capital to them, are among the reasons that have led to the formation of this Board at this center of trade. The St. Louis Mining and Stock Exchange is a stock company organized under the laws of the State of Missouri; and the stock is all owned by St. Louis men. The organization was recently completed by the election of the following Board of Directors:

G. W. Chadbourne.	J. W. Noble.	W. R. Allen.
Chas. F. Orthwein.	D. P. Roland.	D. R. Francis.
Frank T. Iglehart.	Thomas Richeson.	James Baker.
J. W. Paramore.	E. S. Chester.	Jno. E. Ennis.
	T. W. Heman.	

The officers and committees were as follows:

James Baker—*President.* T. W. Heman.—*Secretary*
Thomas Richeson—*Vice President.* Frank T. Iglehart.—*Treasurer.*

Executive Committee.

Thomas Richeson. G. W. Chadbourne.
Jno. W. Noble. Theo. W. Heman.
D. P. Rowland.

Finance Committee.

W. R. Allen. D. R. Francis.
Jno. E. Ennis.

Membership Committee.

D. P. Rowland. F. T. Iglehart.
D. R. Francis.

Stock Committee.

J. W. Paramore. E. S. Chester.
Chas. F. Orthwein. F. T. Iglehart.
T. W. Heman.

The charges to mining companies for listing their stocks on the exchange were $150 each.

Application was made by mail to the officers of the St. Louis Exchange for fuller and later information in regard to its affairs and standing, but no response whatever was received from them.

The Rico Mining Exchange.—There is a mining exchange at Rico, Colorado, known as the "Rico Mining Exchange" which was incorporated March 13, 1882. Following are the officers: Julius Thompson, President; J. W. Winkfield, Vice-President; Harry Calm, Treasurer; F. R. Lewis, Secretary; B. F. Klee, Corresponding Secretary, and Charles A. Jones, Assistant Corresponding Secretary.

Denver Stock Exchange.—A mining stock exchange has also been established at Denver, Colorado, at which regular calls of listed stocks, which number about twenty, are made daily, and a fair amount of business is transacted.

THE MINING INTERESTS OF THE WEST.

FROM statements published in the San Francisco *Mining and Scientific Press*, during the early part of the current year, the following statistics of the mining interests of the west, and comments upon the output and business of the past year, are taken:

Never before in the history of the country has there been a year so marked for advance in the mining industry as that of 1881. This is not so much noticeable in the bullion product, for 1881 only exceeds 1880 by $4,366,481; but in the increase of area of the territory under process of development. Idaho, Montana, Arizona and New Mexico are all widening their fields of labor. Some of the camps in these regions have very much increased in importance within the year, noticeably, Tombstone, Butte and Wood River. Up to within the past few years the states of California and Nevada have overshadowed all others in the mining interests. Now these two states are by no means so much ahead of others. Colorado heads the list, California coming second and Nevada third.

The Bullion Product.—The Superintendent of the U. S. Branch Mint at San Francisco furnishes the following, showing the bullion product for the *fiscal* year ending June 30, 1881:

	Gold.	*Silver.*	*Total.*
California	$17,986,323	$757,525	$18,743,848
Nevada	2,534,792	7,706,818	10,311,610
Arizona	554,517	7,796,306	8,350,823
Idaho	1,541,652	1,068,916	2,620,568
Oregon	753,613	79,671	823,284
Washington	90,000	. . . . . .	90,000
Alaska	1,900	. . . . . .	1,900
Total	$23,462,797	$17,579,236	$40,942,033

A peculiar significance of this table lies in the fact that it is made up of figures from the actual returns made by mine owners to the Superintendent of the U. S. Mint. It is, therefore, free from the "estimates," which may be more or less carefully made.

The following returns of the bullion product of 1881 are furnished by Mr. John J. Valentine, General Superintendent of Wells, Fargo & Co.:

Statement of the Amount of Precious Metals Produced in the States and Territories West of the Missouri River, including British Columbia (and Receipts in San Francisco by Express from the West Coast of Mexico), during the Year 1881.

States and Territories	*Gold Dust and Bullion by Express.*	*Gold Dust and Bullion by other conveyance.*	*Silver Bullion by Express.*	*Ores and Base Bullion by Freight.*	*Total.*
California	$16,349,216	$817,480	$548,582	$305,421	$18,020,679
Nevada	95,492	.....	7,855,574	3,896,498	11,847,564
Oregon	560,931	580,000	48,684	.....	1,189,615
Washington	67,309	33,654	.....	.....	100,963
Alaska	.....	13,000	.....	.....	13,000
Idaho	1,046,548	410,000	370,540	1,007,386	2,834,474
Montana	1,136,290	227,258	2,305,723	689,800	4,359,071
Utah	99,959	10,336	3,563,610	3,637,363	7,311,288
Colorado	1,907,160	.....	2,820,000	18,230,000	22,957,160
New Mexico	32,944	.....	77,000	705,000	814,944
Dakota	3,225,950	325,000	.....	.....	3,550,950
Arizona	396,697	132,232	6,278,895	1,390,942	8,198,766
Mexico (west coast)	343,127	.....	1,699,216	391,000	2,433,343
British Columbia	757,600	115,000	.....	.....	872,600
	$26,019,223	$2,663,940	$25,567,824	$30,253,430	$84,504,417

Compared with the report of the same authority for 1880, California shows a decrease in gold of $579,069, and an increase in silver of $323.582. Nevada shows a total falling off of $3,184,057; the yield from the Comstock being only $1,726,162, as against $5,312,592 in 1880, a decrease of $3,586,430. The product of Eureka district is $4,127,265, as against $4,639,025 in 1880, a decrease of $511,760. Utah shows an increase of $860,335. Colorado shows an increase of $1,672,171; and Arizona $3,726,395 over the report of last year.

The following table shows, with the authorities, the total yield of precious metals in California from 1848 to January 1, 1882:

Precious Metals in California.

Year.	*Amount.*	*Year.*	*Amount.*
1848 } 1849 }	$15,000,000	1865	28,500,000
		1866	25,500,000
1850	44,000,000	1867	25,000,000
1851	75,000,000	1868	22,000,000

	Gold.	*Silver.*
1848 to 1857, Garnett	$548,100,000	.....
1858 to 1870, Raymond	424,800,000	.....
1871 to June 30, 1881, Valentine	190,096,076	$14,914,452
	$1,162,992,076	$14,914,452
	14,914,452	
Total	$1,177,906,528	

This makes an aggregate of nearly 1178 millions.

Of Nevada County the San Francisco *Transcript* says:

"The quartz mining interests of Nevada County are in a most encouraging condition. In this district, by which we mean Nevada township, nearly 200 stamps are dropping, and the number is being increased from month to month. The numerous live enterprises, old and new, that are adjacent to Grass Valley, are mostly prospering, and several new producers will be opened there also before many months. In all other parts of the county, where auriferous quartz deposits abound, the same indications of activity in this branch prevail. Even the Meadow Lake country is gradually passing from under the cloud that has hung over it so long, and before long, we hope to chronicle that the ores there, which have heretofore proved so rebellious, are yielding up their treasure at the touch of science. The drawbacks that beset the hydraulic mining will be removed soon, we trust. The scarcity of water this winter is not satisfactory, but our people are hopeful, and find consolation in turning their faces towards the near future, which is bright with hope.

"In this county is the representative gold mine of this State—the Idaho mine. For something over thirteen years the mine has been paying regular monthly dividends, having in that time disbursed to stockholders $3,101.550, out of a gross product of $6,780,295.60; the total number of dividends being 148, in value to 1000½ per cent. upon the capital stock. The past year has been one of great prosperity with the mine, being the best since 1874, and the third best since the mine commenced paying dividends. In 1873, the product was $1,010,612.20; in 1874, $669,023.03, and in 1881, $640.-107.58. The product of 1881 was $199,761.59 greater than the yield of 1880, showing the improved condition of the mine in its deepest workings, which have extended down to the 12th level, over 1,500 feet on the incline, and over 1,300 feet in perpendicular depth. At these depths the ledge has continued to hold its average width, and has decidedly improved in quality as shown by the yield of the ore for 1881, the average per ton being $22.95¾, as against $15.82 per ton for 1880: while the average cost per ton for mining and milling has but slightly increased, being 9.29½ per ton in 1880, and 9.51 1-9 per ton in 1881. All the profitable ores of the mine for the past year have been from the No. 11 and the No. 12 levels, and the stopes connected therewith, as the levels above are nearly exhausted. The history of the mine is sufficient to demonstrate the value of the mineral resources of the district."

Bodie district, in Mono County, vies with Nevada County in bullion yield. As to the yield of bullion, the *Free Press* of the 10th inst. said: The bullion shipments from Bodie during the year just closed were the largest of any year since the revival of the district. They amounted to the sum of $3,173,000. This is an increase of more than $100,000 over those of 1880, of more than $600,000 over those of 1879, and of more than $1,000,000, over those of 1878, which was the year of greatest excitement in Bodie mines. The shipments for the five years ending December 31, 1881, have been as follows:

1877	$979,022 80
1878	2,129,732 58
1879	2,556,847 58
1880	3,063,699 13
1881	3,173,000 00
Total	$11,952,302 09

Before the middle of the present month Bodie district will have made the grand record of $12,000,000 added to the permanent wealth of the world. We are of the opinion that the yield of the present year will be fully equal to that of 1881, and there is a good reason to anticipate that it will be larger. The prospects of opening up a new bonanza are exceedingly good, particularly in the south end of the camp. Outside

Annual Products of Lead, Copper, Silver and Gold in the States and Territories West of the Missouri River, 1870–81.

Year.	*Products as per W. F. & Co.'s Statements, including amounts from British Columbia and West Coast of Mexico.*	*Products after deducting Amounts from British Columbia and West Coast of Mexico.*	*The net product of the States and Territories west of the Missouri River, exclusive of British Columbia and West Coast of Mexico, divided, is as follows:*			
			Lead.	*Copper.*	*Silver.*	*Gold.*
1870	$54,000,000	$52,150,000	$1,080,000	.....	$17,320,000	$33,750,000

1879	75,349,501	72,688,888	4,185,769	.....	37,032,857	31,470,262
1880	80,167,936	77,232,512	5,742 390	$898,000	38,033,055	32,559,067
1881	84,504,417	81,198,474	6,361,902	1,195,000	42,987,613	30,653,959

districts in the neighborhood of Bodie are attracting much attention, and more activity than usual is anticipated in Homer district during the coming seasons, where several new combinations of capital will enter into mining operations. The Sweetwater mines, about twenty miles north of Bodie in an air line, it is confidently predicted, will create a furore of excitement during the present season. The Aurora mines will have an opportunity of making a stir under the impetus of milling facilities, as the Humboldt mill will be in operation before the end of the present month. Altogether, there is every probability of an unusually brilliant year in mining in Bodie and the surrounding country.

The Georgetown *Gazette* says of El Dorado County: "The mining outlook is certainly brighter than it has been for years, particularly quartz mining. No less than 30 quartz locations have been recorded in this district alone during the past year, and locations are still being made. The California W. & M. Co. continues to carry forward its great work of permanent improvements upon its ditch property. Kelsey, Garden Valley, Greenwood and Volcano districts are all making progress in the quartz mining industry. These districts have all added new mills, and started up idle ones within the past year, and we hear of more mills and mining machinery which are to be added to all of those mining districts within the next six months. The mines of Spanish Dry Diggings continue to hold their own. Georgetown district is not behind, in fact, present indications are that this district will stand ahead of any in the county before the close of 1882." The *Mountain Democrat*, of the same county, says: "The mining industry is greatly revived. More quartz mills and hoisting works have been put up within the past year than within any other year since the county was organized, and the number of new mining enterprises started within the year is without a precedent."

In his testimony before the Superior Court of Sacramento County, in the case of the People vs. the Gold Run Ditch and Mining Co., J. B. Hobson, a miner of Iowa Hill, testified in reference to the extent of the mining operations in that district, and the yield to date of various Iowa Hill mines as follows: "There has been mined into the North Fork, above Rice's bridge 3,585,800 cubic yards of material from the Iowa Hill mines—about 31 acres. At the mine on Independence Hill, during the three seasons, we worked 278 days, and used 500 inches of water. We took out $66,529. The expenses of the mine were $35,450, and the net proceeds $30,977. The following amounts have been taken out of that vicinity: North Star and Weisler claim at Iowa Hill proper, $2,000,000; Wolverine mine at Roach Hill, $800,000; Shelby, $105,000; Columbus, $100,000; Dayton, $156,000; Phillips, $80,000; Morning Star mine at Morning Star Hill, $250,000; Bird's Flat mines, $200,000; Strawberry Flat, $100,000; Wisconsin Hill, $550,000; Grizzly Flat mines, $350,000; Sucker Flat, $250,000; total from Independence Hill mines, $100,000; Mountain Gate at Damascus, $1,500,000; total, $6,541,000. The production of the Mountain Gate mine at present varies from $3 to $5 per load—about $40,000 per acre."

Nevada. The yield of Nevada last year, $11,847,564, shows a total falling off of $3,184,057; the yield from the Comstock being only $1,726,162, as against $5,312,593 in 1880, a decrease of $3,586,430. The product of Eureka district is $4,127,265, as against $4,639,025 in 1880, a decrease of $511,760.

In 1880 the Consolidated Virginia mine alone yielded $1,756,536, which is more than all the mines in the lode turned out in 1881; in addition, California produced $880,515, the two mines yielding an aggregate of $2,647,151. This is the second year only when Nevada has not been the leader in bullion product for many years, and it is even now third, following California and being over three millions and a half ahead of Arizona, which comes next to it.

The great need of Nevada at present is a means of working low-grade ores. There are thousands of tons of such ores all over the state, and more particularly on the Comstock, but by processes at present known it is impossible to work them at a profit. They contain, however, sufficient metal for a profit if worked at a low price.

The sources of the Nevada yield are indicated in the following table, which shows the results of mining product for twelve months, ending September 30, 1881, and is that from which the tax levy is based:

Counties.	Quantity worked. Tons.	Quantity worked. Lbs.	Gross Yield or Value.	Net Yield on which Taxes are Levied.
Ores.				
Elko	3,333	1,473	$221,906.08	$64,344.35

1877. Grand total ores	728,810	194	$42,295,076.05	$23,738,726.79
1878. Grand total ores	134,382	1,444	6,257,225.57	3,194,032.70
1879. Ores, tailings, salt.	183,220	1,338	5,112,175.12	2,161,961.34
1880. Ores, tailings, salt.	560,579	1,643	13,655 967.86	4,496,738.91

Eureka this year takes the lead. The *Sentinel* points, with gratification, to what has been done in the two mines that have been most prominent in the history of Eureka district so far. The Eureka Con. has disbursed in dividends $4,705,000. The payment of dividends was suspended November 1, and the surplus funds on hand retained to pay for improvements that are being made—the sinking of a new shaft, and the erection of new, extensive and costly works. The Richmond Company has paid dividends up to the present, aggregating $3,564,000. This company has also a substantial reserve fund to meet all demands.

On the Comstock, the great bonanza mines, as they are called, found no extensive or rich bodies of ore either in 1880 or 1881. Vigorous prospecting has been carried on, however, not only in these two mines, but in the other more prominent ones on the lode. To show the expensive nature of the work going on, it is only necessary to quote from the report of one or two mines for the year.

The famous California mine for the year ending December 31, 1881, turned out 6,175 tons of ore, yielding bullion to the value of $122,107.26, or an average of $19.77 per ton, milling 79 per cent. of assay value. There was gold in bullion to the value of $82,146,10, and silver to the value of $39,961.16. There were raised 13,299 tons of waste rock. All the work done was of a preparatory nature. The following figures show receipts and expenditures of the mine:

Receipts.

Bullion on hand at last annual statement	$ 34,359.03
Cash on hand at last annual statement	903.42
Samples on hand at last annual statement	65.91
Gross product of mine for 1881	122,182.32
Assessment No. 1	162,000.00
Overdraft Jan. 18, 1882, at Nevada Bank	74,630.25
Total	$394,140.93

Disbursements.

Overdraft at last annual statement	$ 9,804.50
Salaries and wages	55,580.76
Supplies	30.381.47
Hoisting	16,006.63
Compressed air	6,097.50
Sutro tunnel royalty	3,058.30
Suction fan	3,706.11
Assaying account	745.58
Team account	148.75
Taxes	2,856.14
Pumping expense	755.00
Bullion freight	465.20
Virginia City expense	1,330.08
C. and C. joint shaft	126,200.00
Real estate Virginia City	1,325.00
Interest and exchange	6,027.02
Legal expense	11.923.80
Advertising	4,657.25
Discount on bullion	10,104.91

Refining charges on bullion	997.74
San Francisco office expense	3,767.96
Books and stationery	580.20
Cash on hand	1,174.52
Samples on hand	14.36
Total	$394,140.94

The Consolidated Virginia mine turned out 6,435 tons of ore in the year, yielding $144,064.10 or $21.13 per ton. There were also 8,307 tons of waste rock taken out. The receipts and expenditures were:

Receipts.

Dec. 31, 1880, cash on hand	$1,569 60
Samples on hand	154.40

One-half royalty to Sutro Tunnel Co	3,134.00
Interest and exchange	1,373.66
Transportation and hauling	1,458.85
Best and Belcher joint winze	777.35
Suction fans	15,675,41
Samples shipped	258.87
Compressed air	2,069.60
Cash on hand, Dec. 31, 1881	1,980.87
Total	$367,792.98

As to the cost of sinking deep shafts on the Comstock, it will be well to note the cost of the C. & C. shaft during the year. This was in January, 1880, about 194 feet below the 2300 level, and had been sunk (the first of January 1882) 33 feet below the 2500 level. A large sump drift has been run out a distance of 50 feet from the bottom. Stationary double plunger pumps have been put in at the 2400 level and 2500 level, with the necessary balance bobs and tanks to complete the main pumping system to that level. To do this work cost $377,200, as will be seen by the following record of disbursements for this shaft for the year:

Office supplies and repairs	$1,418 19
Miscellaneous supplies	28,460 33
Candles	6,736 70
Powder, caps and fuse	18,977 50
Timber	19,890 24
Wood	106,671 99
Oils	4,364 68
Ice	24,724 85
Water	9,600 00
Wire cable	2,373 44
Salaries	1,800 00
Wages	112,125 34
Real estate	750 00
Team expense	77 00
Contribution account	90 00
Interest and exchange	333 86
Taxes	4,073 58
Pumping	10,037 60
Surveying	1,800 00
Legal expenses	20,410 50
Transportation and hauling	3,027 10
Balance cash on hand	457 70
Total	$377,200 05

The following, from the White Pine *News*, shows that the bullion shipment from Cherry Creek, Nevada, through Wells, Fargo & Co.'s office for the year ending December 31, 1881, the December shipment being pretty closely approximated:

January	$ 23,020	August	27,150
February	33,072	September	25,465
March	23 040	October	21,950
April	39,490	November	31,367
May	41,685	December	33,000
June	39,757		
July	32,700	Total	$375,680

Of this amount the Star shipped $363,031.91, the balance coming from the Exchange, Teacup, Silver Cañon, and Shellburn.

The shipments of Tuscarora bullion for the year 1881, as furnished by the books of Wells, Fargo & Co. at that place, are given as follows:

January	$ 25,025 04	August	69,972 96
February	39,224 76	September	14,091 00
March	97,590 06	October	9,146 01
April	81,276 13	November	37,207 14
May	20,747 43		
June	24,028 28	Total	$387,196 34
July	16,8388 6		

With the December shipments already made, and those to come, it is estimated that the amount will reach a total of $422,396.

Colorado.—Colorado ranked all the States and Territories last year as a bullion producer. The Denver *Tribune* presents a statement of the bullion product of Colorado by counties for the year 1881, showing a grand total of $22,680,-909, an increase of $859,000 over 1880. Lake county, in which the famous Leadville district is located, is credited with $13,502,000 by that paper, while Clear Lake county is credited with $2,205,000, Gilpin county $2,150,700, and Summit county $1,820,000. Fourteen other counties figure in the list, the three most noteworthy being Bowlder, Custer and Gunnison, the aggregate yield of which was $1,670,300, about equally divided. The product of Leadville is given by the Leadville *Herald* at $13,170,600, in quarterly statements, as follows:

First quarter	$3,097,800	Second quarter	$3,404,000
Third quarter	3,170,300	Fourth quarter	3,498,500
		Total	$13,170,600

Last year the *Democrat* reported the coin value of gold, silver and lead produced by the Leadville mines at $15,095,-200. The decrease of $2,000,000 for the past year is not encouraging. The yield of the Leadville camp has been remarkable. The total for the past five years has been as follows:

In 1877	$ 655,300	In 1878	$ 3,152,900
In 1879	10,189,500	In 1880	16,095,200
In 1881	13,100,800		
		Total	$42,093,700

The camp has only come into prominence during the past four years. Up to the close of 1876 the total yield has only been a little over $6,000,000. The product for the past two years has exceeded that of any other mining camp in the whole country.

The list by Colorado counties is as follows:

County.			Total.
Bowlder	$535,482.88	Chaffee	$100,000.00
Clear Creek	2,204,980.00	Custer	608,549.37
Dolores	125,000.90	Fremont	14,535.50
Gilpin	2,105,700.00	Grand	10,000.00
Gunnison	635,033.00	Hinsdale	187,375.00
Lake	13,502,029.00	La Plata and San Juan	40,000.00
Ouray	78,000.00	Park	350,000.00
Pitkin	120,000.00	Rio Grande	251,000.00
Saguache	40,000.00	Summit	1,828,000.00
		Grand Total	$22,680,685.00

These figures include gold, silver, copper and lead.

Following is a statement of the business from Colorado smelting works for 1881:

Boston and Colorado Works, Argo.

Counties.	*Gold.*	*Silver.*	*Copper.*	*Total.*
Gilpin	398,000	$ 76,000	$ 89,000	$ 563,000
Clear Creek	29,000	518,000	13,000	660,000
Bowlder	48,000	23,000	1,000	72,000
Park	3,000	128,000	3,000	134,000
Lake	....	220,000	.....	220,000
Chaffee & Gun	....	72,000	5,000	77,000
Summit	....	728,000	.....	728,000
Custer	63,000	16,000	.....	79,000
San Juan	4,000	33,000	.....	37,000
Montana	11,000	388,000	174,000	673,000
New Mexico				
Utah, etc	12,000	14,000	12,000	38,000
Total	$568,000	$2,216,000	$297,000	3,081,000

Moore Mining and Smelting Co., Golden.

Counties.	*Tons.*	*Ozs. Gold.*	*Ozs. Silver.*	*Value.*
Gilpin	3,906	5,739	59,250	$183,377

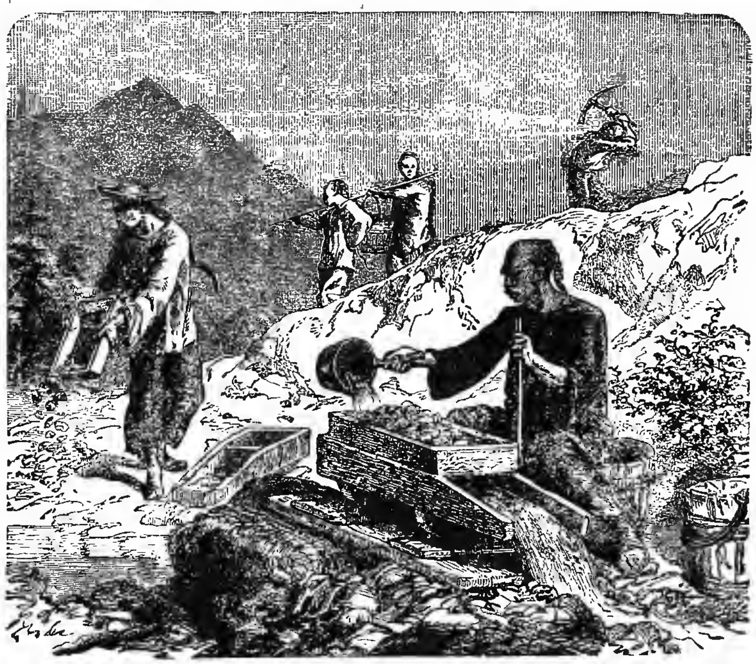
Other sources	449.36	2,088.98	782.40	3,320.74
				$664,906.35

Total No. of tons, 8,081.
Tons bought in 1880—5,012; value, $586,044.26.
Tons bought in 1879—3,006; value, $310,062.69.

The following table represents the amount of ore purchased by the Miners' Smelting and Reduction Co. since commencing business in May, 1881. In a few weeks their furnace capacity at Golden will be doubled:

County.	*Gold.*	*Silver.*	*Copper.*	*Total.*
Gilpin	$ 58,833.61	$ 11,734.00	$7,663.00	$ 78,230.61
Clear Creek	35,305.00	184,006.85	11,600.00	230,911.85
Other sources	6,159.00	7,100 00	12,436.00	25,695.00
Totals	$100,297.61	$202,840.85	$31,699.00	$334,837.46

According to the figures given above of bullion production by counties the total is $500,000 short of last year. Lake falls short $1,500,000; Clear Creek, $800,000; Gilpin, $500,000; Bowlder, $250,000; Custer, $200,000, and Park $50,000. Summit has gained $1,400,000; Gunnison and Pitkin, $900,000; Chaffee, $50,000, and San Juan country, $700,000. The total output of the mines falls short of expectations, yet the results are very satisfactory. A number of the once heavy producing mines of Lake, Gilpin and some other counties have taken out very little ore for various reasons.



THE ROCKER.

Oregon.—The state of Oregon is credited with a yield for 1881 of $1,189,615, all of which was gold, except $48,684. Oregon in 1880, produced $1,059,644.

Eastern Oregon is just in a transition stage from a placer mining section to a quartz producing region. It comprises, says the *Oregonian*, the five counties of Union, Grant, Baker, and Wasco, all containing quartz ledges of various importance, and Umatilla, which has no mining except the Chinese rocker claims along the Columbia. Baker county has produced the largest value of bullion; Grant next, while Union and Wasco are known to have ledges of argentiferous galena, which have not yet been sufficiently developed to determine their value. Those of Union lie in the Eagle Creek range, which divides Wallowa valley from that of the Grande Ronde, while those of Wasco are on the head waters of the Ochoco. Baker county has placer gold diggings on Burnt and Powder rivers and their tributaries, chief among which is Auburn creek, which at one time gave employment to over 2,000 miners. Strange to say, no quartz ledges of any width or specific value have been discovered on the headwaters of that stream. On Burnt river, about 30 miles from Baker City, is a new ledge, owned by Capt. J. C. Ainsworth, of Oakland, Cal., and Theodore Wygant and Capt. Joseph Myrick, of Portland, the latter gentleman being Superintendent. The Conner Creek mine is located on that stream, about 50 miles from Baker City, and is owned by S. G. Reed and John Faull, the latter being Superintendent.

The celebrated Virtue mine, formerly called the Rockfellow, is also located in Baker county, but has produced no bullion for several years, and its shafts are full of water. It has always been an expensive mine to run for that reason. The Rye Valley mine, at one time owned by Fiske & Thielsen, of this city, but now the property of a Boston company, is under the supervision of J. D. Locke, but we have no date of its output. Grant county contains a greater diversity of valuable minerals than any other county in the State, though the production of bullion is below that of Baker. The chief placer mines are on Canyon and Prairie creeks, both of which have paid enormously in the past 20 years. These diggings were struck by a party of prospectors from Yreka, Cal., who were bound to Boise Basin. Two or three of the wealthiest firms in San Francisco got their start in Canyon City, the diggings of which extend a distance of two miles down to John Day town. Every foot of this ground has paid enormously, and some of it has been worked half a dozen times over. Near Prairie City, on the opposite side of John Day valley, irregular bodies of auriferous quartz have been found, easy to work and free from rebellious sulphurets. Over on Granite creek are several small ledges of antimonial silver, the best of which is the "Beagle," situated about three miles from the "Monumental," famed for its dividends of the Fenian persuasion. All this rock is cased in granite, which does not speak well for its durability, but the grade of ore is very high. Down in the John Day river, below the South Fork, are deposits of red manganese, which is used in the manufacture of gold and silver ware as a polishing agent. Carbonates of lead, carrying a small portion of silver, are also found in the extreme north end of the county, but no thoroughly developed ledge as yet exists. Small deposits of cinnabar have been found in the southern end of the county.

Southern Oregon Mines.—In southern Oregon mining is the great special industry. All the mines operated in Jackson county are placers, and in the winter they present the unsightly appearance of scars upon the country, very much resembling abandoned brickyards. There are several fine quartz ledges in the county, but to operate them mills must be employed, and none have yet been put in. The dust is used as a circulating medium among the miners; part of it is sold at the Jacksonville bank, part is traded at the stores, part is shipped by registered packages, part is shipped by express, and part is carried out by the miners themselves. Fully one-half of the men engaged in mining are Chinese and one of the principal mining bosses and proprietors is a Chinaman. The mining season commences in November or December, with the winter rains, and lasts till May, the miners generally making enough during these months to keep them the rest of the year. Every process of water mining, from the old-fashioned rocker to the most approved hydraulic methods, are employed in these mines.

Mining is the great and almost the only industry of Josephine county. They are similar to the mines of Jackson. The annual gold production of the various districts in Josephine is estimated at $192,500. The number of men engaged in these diggings is about five hundred, more than 250 being Chinamen. The various hydraulic methods are in use. The mines of Douglas county are mostly quartz, and are undeveloped.

For more than thirty years black sand mining has been carried on along the beach south of Coos Bay. The Lane mine was first worked sixteen years ago, and is now under the management of Mr. Baily, to whom it is leased. The works represent an investment of $25,000, and employ sixteen men. The Eagle company spent $50,000 in building works, etc., and after conducting a failing business for some time sold out for $40,000 to a California company, which spent $25,000 more and then abandoned the claim. First and last a good deal of gold was taken out of the Eagle, but the business never was profitable. Miners working by hand along the beach have always made good wages, and some few have picked up fortunes. "Big Mac" took $100,000 out of the sand in a few weeks, spent it in a few months, and is now keeping a hotel in Crescent City.

Arizona.—The Yuma *Sentinel*, of Arizona, speaking of bullion product, says: From her small output of less than $400,000 of gold and silver in 1875, Arizona's yearly output has been steadily augmenting until it has reached, in 1881, over $9,000,000. The output for 1880, up to June 30th, was $2,400,000, of which $2,000,000 was silver. The gain from this last date to June 30, 1881, was $5,950,823, of which $5,796,306 was silver. These amounts are authorized estimates, which of course, do not include segregated small amounts not statistically reported. From one stamp mill in 1868, the increase has been to 55, of from 1 to 100 stamps each, aggregating 785 stamps, besides some 10 others that are now being put up.

The Arizona *Star*, in summing up the bullion product, says: The output of the precious metals in 1880 from Arizona did not exceed $4,000,000. For the year 1881, so far as heard from, the output has been $9,101,179.66. This does not include the output north of the Tiptop mine, nor that of the 80 stamp mill of the Vulture; nor Silver King concentrations, and the large quantity of high-grade ores shipped out of the Territory, all of which will, at a conservative estimate, add at least $1,000,000 to the total amount.

Tabulated, the statement is as follows:

Tombstone	$5,149,120.53
Silver King	1,800,000.00
Harshaw Co	779,500.00
Ore from Harshaw District	46,000.00
Yuma and Mohave gold	64,000.00
" " silver	103,000.00
Tiptop	293,512.32
Dos Cobezas	27,862.81
Globe District via Casa Grande	726,000.00
Total product of Pima county gold dust	40,159.00
Silver bullion, Pima	51,516.00
Galeyville	15,500.00
Making a total of	$9,101,179.66
To which add a value of copper	1,563,011.40
And from all other sources	1.000,000.00
And we have a total of	$11,664,191.00
The total product of Harshaw Co	$1,155,154.00
Total of Tiptop	1,212,022.60

TOMBSTONE MINES.

T. M. & M. Co	$2,704,936.00	Corbin Mill	40,000.00

Vizina	60,000.00
Total	$3,135,000.00

To show the yield per ton, etc., and yield of ore from two or three prominent mines, the following is given:

The Contention Con. property from March 8, 1880, to Dec. 31, 1881, produced bullion to the value of $2,678,327, and paid dividends to the amount of $1,475,000, and all resulting from a total ore product of 38,720 tons, which is a trifle over the rate of $59 per ton.

The Grand Central ore output for the eight months and thirteen days of 1881, foots up a total 22,115 tons, and from its reduction resulted $1,061,875, being at the rate of $48 per ton. Its declared dividends foot up $300,000, besides the $300,000 refunded to those who advanced them for the construction of the mill and hoisting works and the opening of the mine, making thus $600,000 in all paid by this very profitable mining venture.

The Head Center mine, from April 15, 1881, to Dec. 31, 1881, yielded 7,450 tons of ore, from the reduction of which resulted $206,853, being at the rate of $27.66 per ton.

The Virginia Con. Co., up to Jan. 1, 1882, produced 5,887 tons of ore and shipped $547,886, in bullion as the result, giving at the rate of $93 per ton.

Pioneer district, where the famous Silver King is, demands more than passing notice. Pinal *Drill* says: Pioneer district stands pre-eminent to-day in our young Territory. We have risen, within the last couple of years, from a perfect *terra incognita* to a shining mark amongst our sister districts. Pioneer district is the first bullion-producing district in the Territory. With us mining is a sober, steady business, and no farming community in the country is more free from crimes and misdeeds. Solid, substantial development, regular and permanent production and profit, mark the onward progress of Pinal. The Silver Queen, the Mount View, the Wide Awake, the Pinal Con., the Eastland, the North King, the Oxford and Dover, the Lewis, the Goodenough, the Specie Paying, the Arizona and Massachusetts, the Hudson and the Hastings Con., are all incorporated companies in addition to the Silver King. Besides these incorporations, individual owners of mines have, during 1881, expended large sums of money, and done much work. The contiguous camps on Mineral Hill, Belle Air, Silver King, Queen Creek, Happy Camp, Peachville, Rogers, Cole and Randolph districts, all centering at Pinal, are of immense value.

New Mexico.—New Mexico is credited by Wells, Fargo & Co., with a production of $814,944 for the year 1881. The year before it produced $711,300

Very little has been done in the way of developing the mineralogical resources, as may be seen from the following table, which affords a close estimate of the yield since New Mexico became a portion of the territory of the United States:

1848 to 1868	$2,500,000
1868	250,000
1869	500,000
1870	500,000
1871	500,000
1872	500,000
1873	500,000
1874	300,000
1875	325,000
1875 to 1880	2,200,000
1880	711,300
1881	814,944
Total	9,601,244

It has been very difficult to get correct statistics of production of New Mexico. Even as late as 1880, there was a great difference in the estimate of production made by Wells, Fargo & Co., and the director of the mint. The latter puts the product for calendar year 1880 at $555,000, of which $425,000 is silver. Wells, Fargo & Co., fix the figures at $711,300.

New Mexico expects before long to exceed all other regions as a copper producing country. The New Mexico *Mining World* says: An investigation of the copper resources of New Mexico leads to the belief that the depreciation in the value of copper, which will follow in the development of the New Mexican mines, will practically exclude the other mines in the United States, if not, indeed, the most of those in the world, from competing with the Territory. One of the richest deposits is at Clifton, 93 miles almost due west from Silver City, and between 60 and 65 miles from Coronada. The ore seems almost unlimited in quantity—in fact there is a solid mountain of copper. To prove this, the first development was by tunnel at the base, and from which drifts were carried in all directions, shafts in the meantime being sunk from above, the ores from the top showing fully as rich as those at the bottom. In Silver City, Grant county, there are four stamp mills and two smelters now in operation. At the Lake valley mines a $100,000 plant for reducing the vast quantities of ores of the Philadelphia companies is to be erected. At Socorro the Torrence stamp mill is now in operation. The mine has nearly 700 ft. of levels and 430 ft. of shafts, with considerable bodies of free mining ore in sight. The La Joya and New Orleans smelter at this point is completed and has made several successful runs of ore from the adjacent districts already.

The Los Cerillos Reduct on and Mining Co., are buying ores with great diligence in all parts of the Territory, especially in the Magdalens, where their agent is daily making contracts. In the Cerillos, the Duryea furnace and other reduction works are almost ready to turn out bullion. White Oaks has a 10-stamp mill, and the Homestake company has a large plant on the ground, to be erected and working in a few weeks.

The San Pedro and Canyon del Aqua companies, in the placers, are doing a great deal of work, and will doubtless ship a large amount of bullion in the coming year.

The Black range is a section which has attracted great attention. It is situated in Socorro county, in the southwestern part of the Territory, and constitutes a portion of the main Rocky mountain chain, dividing the drainage of the Cuchilla, Negra and Gila rivers. The more elevated portion is densely timbered with pine and juniper, and presents in the distance that somber appearance, which first suggests the name. The most important mines are on the eastern slope of the mountains, or Wild Horse, Turkey, Dry, Mineral and Chloride gulches. The district is 65 miles from San Marcial, on the Atchinson, Topeka and Santa Fe railroad.

Utah.—Utah Territory, made last year a good showing in its bullion product, having turned out $7,311,288 as against $6,450,953, in 1880. The following table is taken from the Salt Lake *Tribune*.

Wells, Fargo, & Co.'s Statement of the Mineral Product of Utah for 1881.

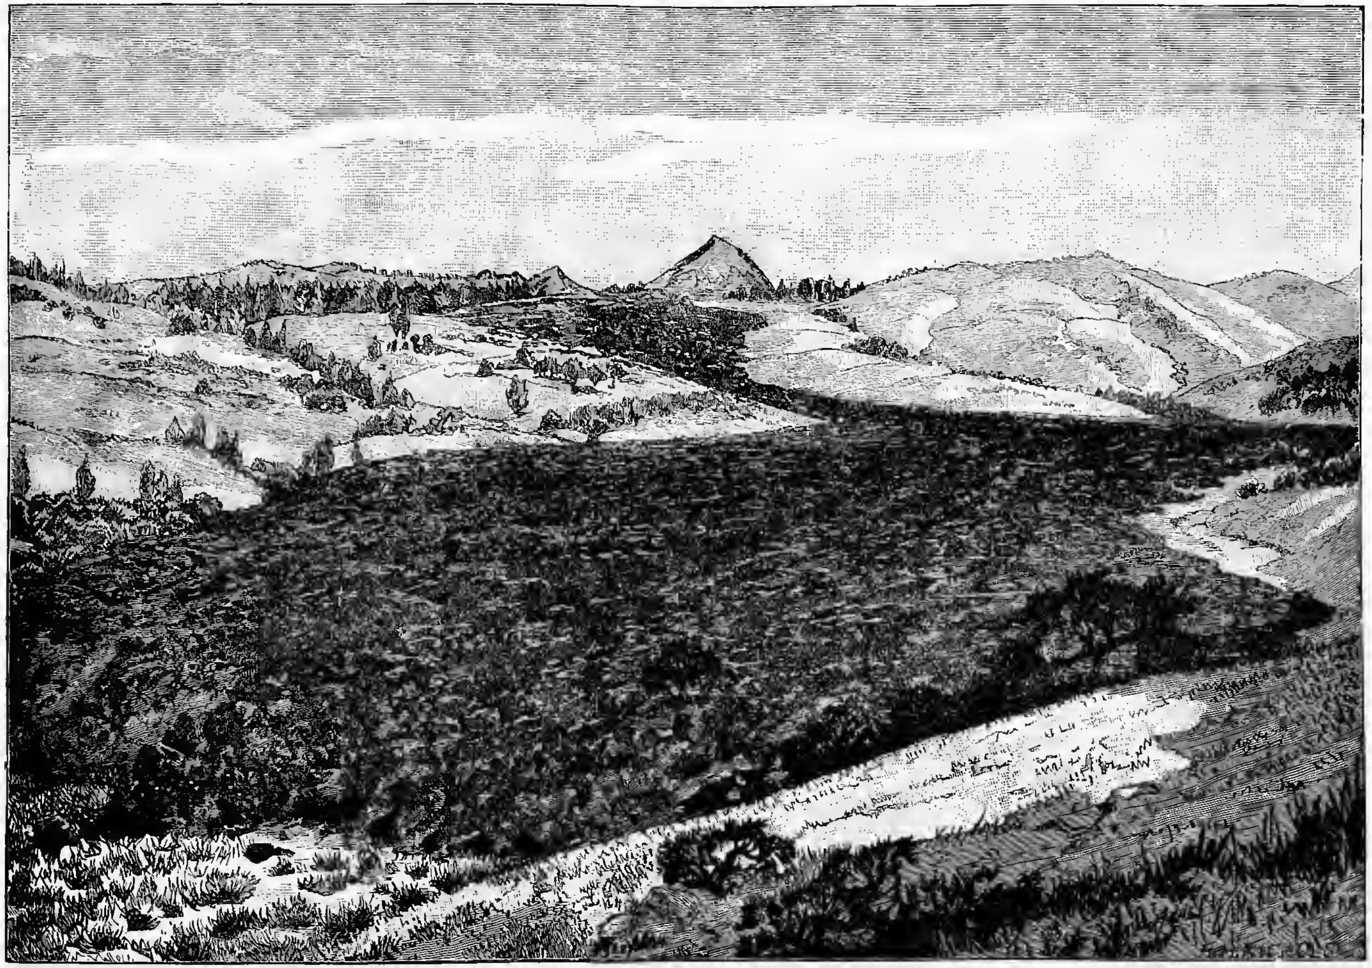
RECAPITULATION.

2,645,373 lbs. Refined Lead, at 5½c per lb	$ 145,495 51
42,191,626 lbs, Unrefined Lead, at $50 per ton	1,054,790 67
5,400,191 ozs. Silver, at $1.11	5,994,212 01
7,958 ozs. Gold, at $20	159,160 00
Total Export Value	$7,353,658 19

The above includes the ores received from Idaho, Montana and Nevada, aggregating 3,969,440 lbs. lead, 441,846 ounces of silver, and 976 ounces of gold. Computing the gold and silver at the Mint valuation, and lead at its value at the seaboard, it would increase the value of the product to $9,401,475.56. The Ontario mine produced the past year 1,909,870 ounces silver; in 1880 it produced 1,439,542, an increase of 470,228 ounces, or $521,953.08. A gross production for this mine of $2,119,955.70 during the year 1881 is considerably in excess of the yield of any other single concern. Its yield, moreover, is pure silver.

The great Horn Silver comes next in volume of production. In 1881 it produced 16 343,995 lbs. of lead, and 1,259,903 ounces of silver, or a total export value of $408,600 for lead, and $1,398,492,33 for silver, an aggregate produc-



WESTERN SCENERY-RECENT LAVA STREAM ON THE UINKARET—GRAND CAÑON DISTRICT.

SEE PART X. —FROM U. S. GEOLOGICAL SURVEY REPORT.

tion of $1,807,092.33. This is an increase in valuation of $942,290.93 over 1880, or more than 100 per cent. In all these reckonings the value of lead is computed at $50 per ton for each year, but the value of silver was computed at $1.10 in 1880, and $1.11 in 1881. The Germania smelter has made a remarkable increase. Its production of unrefined lead rose from 1,722,865 lbs. in 1880, to 3,687,284 lbs. in 1881; of silver, from 162,909 ozs. to 234,260 ozs., and of Dore bars from 36,422 oz. to 115,219 ozs. Its production of fine lead fell from 2,892,498 lbs. in 1880, to 2,645,373 lbs. in 1881. Its production for 1881 represents a value of $145,495.51 of refined lead, $92,200 of unrefined lead, $260,028.60 of silver, and $127,893.09 of Dore bars—an aggregate production the past year to the volume of $725,617.20 against $364,394.80 in 1880, being very close to an increase of 100 per cent. The Mingo smelter also made a surprising gain. It produced 11,977,649 lbs. of lead and 437,176 ozs. of silver in 1881, as against 6,464,382 lbs. of lead and 272,832 ozs. of silver in 1880. The export value of the product of 1881 is $784,705.36 against a value of $461,715.20 in 1880. The Mingo smelter is the only one which shows an increased gold product in 1881 over 1880. For 1881 it produced 832 ozs. of gold as against 675 the year before.

The Frisco smelter produced 3,023,213 lbs. of lead in 1881, and 221,846 ozs of silver, against 2,017,991 lbs. of lead and 125,722 ozs. of silver in 1880. Value of product in 1881, $321,799.06; value in 1880, $190,570.20. The Hanauer smelter (last year Morgan smelter) produced in 1881, 3,015,229 lbs. of lead and 176,320 ounces of silver, as against 2,733,782 lbs. of lead in 1880, and 157,374 ounces of silver. Value of the product of 1881, $271,095.20; in 1880, $236,451.40. The most remarkable increase in any one item is in that of "lead, silver and gold in ores shipped," which jumped from 831,600 lbs. lead, 24,024 ounces silver and 23 ounces gold to 2,895,026 lbs. lead, 276,141 ounces silver and 560 ounces gold. The Silver Reef mines fell off in production on account of the strike, which caused a long torpor in the Stormont, and perhaps from other causes, from 846,062 ounces silver, in 1880 to 614,368 ounces in 1881. The Tintic M. & M. Co. made a handsome increase from 41,923 ounces silver in 1880 to 73,031 ounces in 1881.

Montana.—Montana stands credited for the past year with a total yield of $4,359,071, against $3,822,379 in 1880. This increase is mainly from the large and growing camp of Butte, the bullion output of which, as shown by the books of the Pacific Express Co., for the year 1881, was as follows:

	Weight.	*Value.*
January	8,441	$71,535.82
February	11,252	112,400.35
March	13,036	131,483·01
April	12,835	129,292.24
May	11,738	106.599.47
June	10,409	99,988.93
July	9,873	98,613.41
August	13,556	129,966.17
September	9,015	78,520.11
October	11,035	94,239.28
November	9,951	82,491.13
December	10,641	94,050 14
	131,787	$1,229,180.06

To this amount, says the *Miner*, must be added $500,000, which was shipped through other sources. The output of the smelters is not given in the above table. It is reasonable to suppose that it will bring the grand total up to $3,000,000, as the product of the mines of Butte for the year 1881. The following is a list of the mills, smelters and arastras in Butte and vicinity:

Alice—new mill	60 stamps
Alice—old mill	20 "
Moulton	40 "
Silver Bow	30 "
Dexter	15 "
Lexington	10 "
Centennial	10 "
Gagnon	10 "
Burlington	10 "
Clipper	10 "
Grove Gulch	5 "
McMinn's	1 "
Total	221 stamps

SMELTERS.

	Capacity.
Montana Copper Co.	50 tons
Colorado and Montana	40 "
Parrot	80 "
Bell	50 "
Total daily capacity	220 tons

ARASTRAS.

Suprenant's.	Smith & Keasler's.

Three million, five hundred thousand pounds of ore and matte, and 2,000,000 pounds of bullion were shipped out of Montana during the year 1881 by the Utah & Northern railway.

The following table shows the value of gold and silver bullion deposited at the U. S. Assay Office, Helena, Montana, during the year ending Dec. 31st, 1881.

	Gold.	*Silver.*
January	$ 28,093 05	$ 4,364 86
February	23,354 63	3 878 04
March	19,733 12	10,395 11
April	22,844 93	14,348 24
May	41,614 17	4,715 29
June	61,361 02	3,427 60
July	104,792 02	10,685 02
August	63,654 59	6,443 87
September	64,732 59	4,190 47
October	63,828 28	9,310 32
November	59,528 23	13,955 22
December	17,000 00	13,000 00
Total	$570,536 63	$98,714 04

SUMMARY.

Year ending Dec. 31st.	*Gold.*	*Silver.*
1877	$379,481 18	$241,197 12
1878	298,681 77	404,667 98
1879	512,809 15	175,732 93
1880	495,155 19	97,924 60
1881	570,536 63	98,714 04
Total	$2,256,663 92	$1,018,136 67

There is shown a very great discrepancy in the figures of production from this district. The *Inter-Mountain* gives the following:

The total amount of silver, copper and gold product in the Butte district in 1880 reached $1,428,088.26. An intelligent idea of the rapid rate at which the mining industry of the Butte district has increased since that time can be obtained from the following table of production during the year 1881:

Alice Company	$1,120,937 50
Montana Copper Company	1,042,640 00
Colorado Company	864 000 00
Silver Bow Company	600,000 00
Lexington Mill	147,000 00
Dexter Mill	76,293 00
Centennial & Clipper (estimated)	25,000 00
Copper ore shipped	197 000 00
Gold shipped through banks	102,280 20
Total	$4,075,150 70

To this amount should be added the value of 5,000 tons of copper-silver ore extracted during the year and now at the Colorado smelter awaiting reduction. Estimating the value of this ore at an exceedingly low figure—say $55 per ton—we have $275,000 as its cash valuation. At the Alice mine is an extracted reserve of 4,000 tons which, at $40 per ton is worth $160,000. On many other mines of the district many hundreds of tons of high and low grade ore have accumulated, and the most conservative statistician would not estimate the value of the unworked ore extracted during the past year at less than $600,000, which added to the above tabulated statement of silver-copper matte and gold production gives as the value of the total output of the Butte district for the year $4,675,150.70. There are at least, 300 good mines being worked at Butte. The silver creek mines, where placer mining is still carried on, have now 146 stamps at work on quartz The Drum, Lummon, Belmont, Cotter and Hickey, Whippowill and Gloster are the principal ones. Ten-Mile district is stituated on the west side of Red mountain, on the upper portion of Ten-Mile creek, and in the southwest corner of Lewis and Clarke county. The district embraces an area of about 16 miles, and is about 20 miles distant from Helena. The main cluster of mines of this camp forms a network along the western slope of Red mountain.

Idaho.—Idaho bullion returns foot up according to Wells, Fargo & Co. $2,834,474, against $1,894,747 in 1880. During 1881 the Wood river country made rapid advances. The region attracted more attention than other and older regions of the Territory. Up to last year ores were shipped to Salt Lake City, and even in 1881 there have been shipped to Salt Lake City from Eastern Idaho, 5,728,741 lbs. of ore during the season of 1881. This contained 3,851,807 lbs. lead, 361,811 ozs. silver, and 645 ozs. gold. The base bullion product of Eastern Idaho, from local smelters, was 796,319 lbs., containing 80,856 ozs. silver and 112 ozs. gold.

A large portion of the ores in Saw Tooth and Smiley districts are milling and of high grade. In the districts on Wood river below Galena City, galena and carbonate ores predominate, the general average of which is about 100 ounces per ton of silver and 60 per cent. lead. The experience of smelting on Wood river proves the fact that there is no difficulty in reducing raw ores of the section with water-jacket furnaces. Lime and iron are the principal fluxes needed, of which there are plenty to be had, of the best quality.

Dakota.—Dakota sends for 1881, $3,550,000, as against $4,123,081 in 1880, a marked decrease in view of the total sum. This is almost entirely from the Black Hills region.

Dividend and Assessments.—Before giving any figures it is well to state that though they serve as a basis for comparison between one year and another, they are by no means to be considered as reliable indications of the state of the mining industry. There are hundreds of mines in every direction which neither advertise their assessments nor their dividends, and the figures from these mines are therefore never made public. In California particularly there are hundreds of mines which are paying their owners good profits, but which are never heard of by outsiders, and which make no figure at all in the dividend returns as published. Mines which are owned by incorporated companies, or which have stock which is quoted on the boards are those which appear in the list of dividends and assessments. The following tables will, however, give a good idea of this branch of the subject. The total assessments levied for the year amount to $7,497,510, of which at least two-thirds have been levied by companies operating on the Comstock lode. On the other hand, the dividends for the year foot up $15,047,068.

Following is a list of assessments for the year:

Nevada.

Storey County.

The Comstock, 54 mines			$5,355,800

Elko County.

Argenta	$40,000	Howe	$10,000
Belle Isle	25,000	Independent	35,000
Blue Belle Con	20,000	Navajo	45,000
Grand Prize	115,000	Tuscarora	30,000
Total			$320,000

Esmeralda County.

Equator	$25,000	Mt. Potosi Con	$10,000
Holmes	26,000	Real del Monte	75,000
Juniata Con	2,000	Tilden	10,000
Lodi	15,000	Vanderbilt	10,000
Metallic	12,500		
Total			$179,500

Eureka County.

Albion Con	$202,500	Phenix	$5,000
Total			$207,500

Humboldt County.

Paradise Valley			$7,000

Lander County.

Betty O'Neal			$75,000

Lincoln County.

Day	$30,000	Meadow Valley	48,000
Hillside	100,000		
Total			$178,000

Lyon County.

Silver City			$6,310

Nye County.

Alexander	$150,000	Gila	$25,000
Belmont	25,000	Liguria	25,000
Total			$225,000

White Pine County.

Martin White	$45,000	Ward Beecher	$20,00
Star	40,000		
Total			$105,000

California.

Mono County.

Addenda	$10,000	Maybelle	$36,000
Bechtel	25,000	McClinton	3,000
Belvidere	30,000	Mono	175,000
Blackhawk	15,000	Noonday	75,000
Boston Con.	50,000	North Noonday	75,000
Con. Pacific	55,000	Oro	73,400
Champion	25,000	Red Cloud	200,000
Defiance	5,000	South Bulwer	25,000
Double Standard	25,000	Spaulding	10,000
Goodsaw	80,000	Syndicate	25,000
Jupiter	16,000		
Total			$808,400

Arizona.

Head Center	$30,000	San Pedro	$10,000
Northern King	25,000		
Total			$65,000
Grand Total			$7,497,510

THE DIVIDENDS.

Following is the dividend record for the year, embracing the copper mines of Lake Superior and the mines of Colorado:—

Arizona.

Copper Queen	$150,000	Tombstone	$600,000
Grand Central	250,000	Vizina	40,000
Silver King	300,000	Western	775,000
Tiptop	120,000		
Total			$2,265,000

California.

Black Bear	$45,000	Plumas Eureka	$135,469
Bulwer Con.	10,000	Plumas W. & M. Co.	7,501
Gold Stripe	65,500	Quicksilver Mining Co.	525,395
Great Western, Q. S.	25,000	Rising Sun	25,870
Green Mountain	100,000	Sierra Buttes	76,250
Idaho	263,500	South Yuba	82,500
Inyo Con	35,000	Spring Valley	50,000
Magalia	15,000	Standard	975,000
Napa Con., Q. S.	90,000	Yuba	8,000
New York Hill	100,000		
Total			$2,636,985

Colorado.

Bonanza Develop. Co.	$135,000	Leadville Con.	$20,000
Catalpa	180,000	La Plata	180,000
Chrysoline	600,000	Morning Star	50,000
Dunkin	110,000	Moore M. S. Co.	36,000
Evening Star	425,000	Polonia	12,000
Gem	3,750	Robert E. Lee	50,000
Glass-Pendery	25,000	Robinson	450,000
Hibernia	150,000	Silver King	50,000
Iron Silver	400,000		
Total			$2,776,750

Dakota.

Deadwood Terra	$900,000	Homestake	$360,000
Father de Smet	130,000		
Total			$1,390,000

Georgia.

Con. Gold			$28,000
Total			$28,000

Mexico.

Jocuista			$200,000
Total			$200,000

Michigan.

Horn Silver	300,000	Stormont	20,000
Total			$1,194,000
Grand Total			$15,662,068

THE SAN FRANCISCO MINING STOCK MARKET AND EXCHANGE.

ACTIVE trading in mining securities in San Francisco began almost immediately after it became known that a bonanza had been discovered in the Comstock Lode. At that time purchases and sales were made by feet and inches, the value of a mine being measured by the depth of the shaft sunk. Although there was a Board of Brokers prior to 1862, the principal business transacted at it was in gas and water stocks, bonds and other similar securities. There were no headquarters for transactions in mining stocks, but some of the large mine-owners were in the habit of meeting early in the day, at which prices for the day were agreed upon. Necessarily such a crude system was open to great deception and fraud and this was further aided by the practice of issuing additional stock from time to time as the depth of a mine increased. The first effort, however, to organize an exchange for dealings in mining securities was not successful, some of the large mine-owners regarding this movement as prejudicial to their interests, as it would open the speculative field to a much larger number of operators and would also more readily expose their unwarrantable transactions in marketing worthless properties. The first meeting was attended by only five persons, but the promoters of the movement were in earnest and finally the signatures of twelve subscribers to preliminary articles of agreement were obtained, the plan of organization proposed being similar to that of the New York Stock Exchange. Among the most active promoters of the enterprise were J. B. E. Cavallier, R. C. Page, Joseph Grant, Samuel Bruce, Franklin Lawton, Theodore C. Sanborn, E. J. Santa Marina, Henry Schmeidell, John Perry Jr., and T. W. Teacle. Following is a copy of the first agreement, and the names of the signers obtained previous to the organization:

SAN FRANCISCO, Sept. 1, 1862.

For the purpose of facilitating the purchase and sale of stock, and mutual security, we, the undersigned, propose to organize a San Francisco Stock Exchange, on the plan of the New York Stock Exchange Board. In futherance of which object we do each agree to pay into the hands of the Treasurer, when chosen, the sum of $100: J. Perry Jr., T. C. Sanborn, S. Heydenfeldt, Geo. R. Barclay, H. C. Logan, Robert C. Page, C. H. Wakelee, Joseph Grant, J. B. E. Cavallier, S. C. Bruce, P. C. Hyman, Henry Critcher, P. B. Cornwell, N. A. Watson, Wm. L. Higgins, E. J. de Santa Marina, Simon Mayer, Franklin Lawton, D. C. Williams, Henry Schmeidell, H. P. Wakelee, E. W. Teacle, O. Abbott, R. E. Brewster, A. Marnis Chapelle, E. Dupre, A. J. Shipley, R. H. Sinton, T. A. Talbert, Wm. Wilson Lawton, Frank M. Pixley, David Henriques, Wm. H. Parker, Wm. R. Garrison, J. Downe Wilson, A. Van Lokeren, Chas. K. Smith.

The first meeting called for the purpose of organizing the new board was held Sept. 8th, 1862, at 428 Montgomery street, at which time temporary officers were elected, as follows: Henry Schmeidell, Chairman; and Frank Lawton, Secretary. The following committee was also chosen to draft a constitution and by-laws: John Perry, Jr., Theodore C. Sanborn, Henry Critcher, Robert C. Page, David Henriques and Frank Lawton. At the next meeting, which was held three days later (Sept. 11th, 1862,) the committee reported a constitution which was adopted by the meeting. The name adopted for the new board was the *San Francisco Stock and Exchange Board*, and permanent officers were elected as follows:

President, J. B. E. Cavallier; Vice President, E. W. Teacle.

Secretary, Frank Lawton; Treasurer, Henry Schmeidell.

On the following day the by-laws were adopted. At the time of the organization the admission fee was $100, only $50 of which was then collected. A small room was rented in Montgomery Block for the use of the board which was furnished with a plain table, in horse-shoe form and desks for the president, secretary, &c. The members were at first inexperienced in dealing in stocks on an exchange, and for a time business was very dull. The following statement taken from the records of the board at that time, and showing the transactions for the first five days, illustrates how few were the transactions at the beginning:

			Friday, September 26, 1862.	
Perry	Logan	$500	Starr	377½
Marina	Sanborn	10 feet	Chollar	185
Perry	Pixley	50 shares	Mt. Davidson	8
			Saturday, September 26, 1862.	
Perry	Logan	5 shares	Cal. Navigation	39½
			Monday, September 29, 1862	
Perry	Logan	3000	S. F. Bonds	70½
Wilson	Perry	6 feet	Esmeralda	50
			Tuesday, September 30, 1862.	
Logan	Cavallier	50 feet	Desert	12½
Sanborn	Cavallier	10 feet	Potosi	187
			Wednesday, October 1, 1862.	
Marina	Cavallier	15 feet	Chollar	175
E. H. Wakelee	Mayer	10 feet	Sierra Nevada	140
Perry	Shipley	20 shares	Mt. Davidson	6½
Logan	Perry	10 feet	Meredith	20
Logan	Hyman	36½ feet	Meredith	20
Perry	Sanborn	7 shares	Bensley Water Co.	35

It was not long, however, before there was a large increase in the purchases and sales from day to day, and the fresh applications for membership were also numerous. It was decided to increase the number of members, which was originally forty, and at the same time the membership fee was raised to $250; later it was further increased to $500, and finally to $1,000. The number of members was limited to eighty until about six years ago when it was increased to one hundred. It was not long until the room originally occupied in Montgomery Block was found to be entirely too small to accommodate the members and the board moved to the opposite side of the street to the building belonging to Michael Reese. Again a few months later it removed to a room over the Metropolitan Theatre. About the same time the Bank of California moved to the new building on California street, and other monied institutions followed, thus making that locality the financial centre of the city. When the Merchants Exchange building on California street between Montgomery and Sansome street was constructed, it was therefore arranged that the mining stock board should occupy a portion of it, and the board contributed to the erection of the building to the extent of $20,000. After occupying the rooms set apart for the board, the location and accommodations were found to be unsatisfactory, and once more it sought new quarters, this time in Duncan's Building at No. 411½ California street. The final move of the board was made on Oct. 1st, 1877, when it left the place last above named for the San Francisco Stock and Exchange Building on Pine street.

For some time after the board was organized no charge was made for listing and calling mining stock, but as the business increased and the number of mining stocks seeking the benefits to be derived from the exchange was greatly enlarged, it became necessary to exact a fee for the listing of stocks. The amount charged at present is $1,000.

Mr. J. B. E. Cavallier who was elected president of the board at the time of its organization Sept. 11th, 1862, was re-elected from year to year and continued to serve in that capacity without interruption, until Jan., 1872, when E. P. Peckham was elected for one year. The succeeding presidents have been as follows: William Burling, two years—1873 and 1874; J. R. Keene, from Jan. to August, 1875 when he resigned and was succeeded by Coll Deane; John W. Coleman, one year, 1876; E. P. Peckham, three years, 1877, 1878 and 1879, and since the last date mentioned, G. T. Mayre, Jr.

The present officers and standing committees of the board are as follows:

President, Geo. T. Marye, Jr. *Vice-President*, S. B. Wakefield. *Chairman*, B. H. Cott. *Secretary*, Chas. S. Neal. *Treasurer*, J. M. Shotwell.

STANDING COMMITTEES.—*Executive Committee.*—Homer S. King, H. L. Van Wyck, M. Herman, Geo. C. Hickox, A. F. Coffin.

Finance Committee.—Geo. I. Ives, E. E. Dewey, J. H. Mahony, Jr.

Stock List Committee.—M. J. McDonald, Joseph Marks, W. E. Hale, L. T. Lazure, D. Z. Yost.

Committee on Commissions.—R. C. Hooker, H. H. Noble, C. A. Kenney.

Committee on Membership.—Samuel Dixon, M. P. Hall, Jno. Scott Wilson, C. H. Stoutenborough, C. W. Fox, O. V. Walker, S. B. Boswell.

CONSTITUTION.

ARTICLE I.—*Title of the Association.*—The title of this Association shall be "The San Francisco Stock and Exchange Board."

ARTICLE II.—*Number of Members.*—The number of members of this Board is limited to one hundred.

ARTICLE III.—*Title to property of the Association, and effect of suspension of a member on his interest in the same.*—The legal title and ownership of all property, effects, and assets of the Association, shall vest in the officers named in Article IV, in trust for the benefit and enjoyment of its members.

Whenever a member shall be suspended from or deprived of the privileges of membership, such suspension or deprivation of the privileges of membership, until removed by the action of the Board, shall operate as a full release of all his right, title and interest in and to the property and assets of the Association.

No member, under any circumstances, shall be deemed to have, or claim, or possess any individual right, title or interest in the property or assets of the Association, except when the same shall be finally dissolved and its affairs wound up by its then remaining members.

ARTICLE IV.—*Officers, Elections, etc.*—The officers of this Association shall consist of a President, Vice-President, Chairman, Secretary, and Treasurer, who shall be elected by ballot, annually, on the second Monday in January; and in case of any vacancy, a new election shall be held forthwith for the unexpired term.

Any officer may be removed by a vote of two-thirds of the members of this Association.

ARTICLE V.—*Duties of the President and of the Standing Committees and Officers appointed by him.*—It shall be the duty of the President to see that the several provisions of the Constitution and By-Laws are enforced, and have a care of the general interests of the Board. He shall appoint all committees, and preside at all meetings except the calling of stocks; and he shall be, *ex-officio*, a member of all committees.

He shall, at each annual election, appoint the following committees,* viz: An Executive Committee of five members, to whom shall be referred all applications for donations, and all matters affecting the interests of the Board not otherwise specially provided for in the Constitution and By-Laws.

A Finance Committee of three members, to have the general supervision, management and control of all financial affairs of the Board; to whom shall be presented all bills and demands against the Board, and by whom the same shall be audited and approved before payment; to whom shall be reported by the Secretary, all moneys collected, and the sources from which they are collected; to whom shall be reported by the Treasurer, the amount of money received, and from what sources; to whom shall be reported by the Roll-Keeper, all fines; and a record of whose proceedings and of said bills, demands, collections, dues and fines shall be kept by the Secretary of the Board, acting as Secretary of the Committee. Said Committee shall meet on the first Monday of every month, and at other times when business may require. The Secretary, Treasurer, and Roll-Keeper shall report, as herein required, on the first Monday of every month, and at other times when required by the Committee. The Committee shall make at least quarterly statements to the Board.

A Stock List Committee of five members, to whom shall be referred all applications of companies to be placed on the regular list.

He shall appoint such Assistant Secretaries as may be required, at such salaries as may be fixed upon by the Board.

A Roll-Keeper, at a salary not to exceed two hundred dollars per month, whose duty it shall be to record all fines, and report monthly to the Secretary the amount levied upon each member.

A Sergeant-at-Arms, and such other assistants as may be required.

All appointments made by the President shall be subject to the approval of the Board.

ARTICLE VI.—*Duties of the Vice-President.*—In the absence of the President the Vice-President shall perform all the duties pertaining to the office of President.

ARTICLE VII.—*Duties of the Chairman.*—The Chairman shall call stocks at such hours as the Board may from time to time direct, maintain order and enforce the rules. He shall receive such salary as may be fixed upon by the Board: it being stipulated that, before entering upon the duties of the office, he shall bind himself by a solemn pledge to the Board, through its President, not to act as a broker, or be interested, directly or indirectly, in the purchase or sale of stocks. In the absence of the Chairman the members present may choose a Chairman *pro tem.*

ARTICLE VIII.—*Duties of the Secretary, Record of Transactions, List of Delinquent Members, etc.*—It shall be the duty of the Secretary to keep a full and faithful record of the purchases and sales—which record shall be considered binding on the members; to keep complete minutes of the proceedings of the Board, and to take care of the books and papers of the Association; to collect all moneys due, and pay the same weekly into the hands of the Treasurer, and to perform such other duties as the Board may direct. He shall also furnish, on the first of each month, to the members of the Board, a list of all parties delinquent to them.*

ARTICLE IX.—*Duties of the Treasurer.*—It shall be the duty of the Treasurer to take charge of all the moneys belonging to the Association, subject to such regulations as the Board may from time to time determine.

ARTICLE X.—*Proposals for Membership.*—Any member proposing the name of an applicant for membership in this Board, shall, at the time of his nomination, state in open Board the name of the person to whose seat said applicant desires to succeed.

ARTICLE XI.—*Election of Members—Committee on Membership—no Member to belong to any similar Organization.*—At each annual election a committee of seven members shall be elected, five of whom shall constitute a quorum, who shall be known as the Committee on Membership, to whom shall be submitted all proposals for membership, and who shall scrutinize all objections to applicants. The Committee shall decide by ballot the question of admissibility; and if the whole or a majority of the Committee report in favor of the applicant, he shall be balloted for, and not otherwise, at the next executive session of the Board; *provided*, that five days shall have elapsed between the day of nomination and the submission of their report to the Board. Should the Committee report in favor of the candidate, twenty negative votes shall exclude.

The name of the applicant shall be conspicuously posted in view of the members, at the desk of the Secretary, from the day of nomination to the day of election. No election shall be valid unless fifty votes are cast.

If any member of the Committee on Membership shall be for any reason incapacitated from serving for the period of one month continuously, his office shall become vacant, and the President shall immediately appoint his successor, subject to confirmation by the Board.

At the election, the ballot-box shall be placed in charge of three tellers, who shall be appointed by the President, one of whom shall be the member proposing the candidate, or his seconder. The Secretary shall then call the roll, and each member as his name is called shall deposit his ballot in the box. The poll shall remain open until the conclusion of the executive session. The tellers shall then count the ballots, and the President shall declare the result. Any member who was not present at roll-call, may vote before the close of business by announcing his intention to the Secretary.

Should any discrepancy be discovered between the tallies and the number of ballots in the box, a special meeting of the Board will be held after the next business session, when a new ballot shall be taken.

No member of this Board shall belong to any similar organization in this State, under penalty of immediate expulsion; and any member of this Board who joins or belongs to any similar organization elsewhere than in this State, shall forfeit all the rights and benefits given him by Article XXII of this Constitution and the right to share in any dividends paid by the Board during the period of his connection with such other organization; he shall remain at all times subject to all assessments, dues, or claims, including those contemplated by Article XXII of the Constitution which may accrue against him by reason of his membership in this Board.

ARTICLE XII.—*Suspended Members—Re-election, etc.*—Any member failing to meet his engagements in the Board shall be suspended until he has settled with his creditors.

If he applies for re-admission within six months of his failure in the Board, a committee of three members shall be appointed by the President to inquire into the causes of his failure, who shall report before his seat is forfeited by limitation, and on their presenting a favorable report, announcing that he has settled with his creditors, he may resume his seat in the Board, upon the assent, by ballot, of two-thirds of the members then present.

ARTICLE XIII.—*Sale of Seat upon Retirement, Death or Delinquency of a Member—Members of the Board preferred Creditors.*—In case of retirement of a member in good standing, he shall have the right to dispose of his privileges in the Board, and to nominate a successor to fill the vacancy occasioned by his retirement; *provided*, that no nominee of a retiring member shall acquire any right or privilege until elected in the manner and form prescribed by this Constitution, it being distinctly understood and agreed between the Board and each member thereof that the Board reserves the right to reject any nominee.

In the event of the death of a solvent member, the Board will dispose of the vacant seat to the best advantage for the benefit of his widow and children, or those persons who shall be designated by him in his last will and testament. But no person shall be designated as, or permitted to become successor to the privileges of membership in the Board by virtue of any instrument in the nature of a will.

Any member who has been suspended for six months, and who has not made a satisfactory settlement of his contracts in the Board during that time, shall be deprived of all privileges of membership, and his seat shall revert to the Board, and be appropriated to satisfy his creditors in the Board as follows.

Whenever any member shall have been deprived of all privileges of membership, pursuant to this article, or shall voluntarily surrender his membership for the benefit of his creditors in the Board,

* See also Article XXXIV of By-Laws.

* See also Article XLIII of By-Laws.

the President of the Board shall call a meeting of the creditors in the Board, of such person, who shall thereupon present to him their several claims against the delinquent, and the President in all such cases shall be *ex-officio* a trustee for such person and for his creditors in the Board, and the said trustee shall be vested with all the rights and privileges formerly held by such person in the Board, and shall dispose of the same in the same manner that a person retiring in good standing may dispose of his seat and privileges. The proceeds of any such disposition so made shall be devoted by the trustee to discharging the obligations due by such person to members of the Board, and any surplus remaining shall, after having satisfied all other claims against him, be delivered to the delinquent or to any person authorized to receive the same. If the amount received by said trustee shall be insufficient to discharge all the obligations in the Board of such person in full, then the trustee shall apportion it ratably among the creditors in the Board, paying to each creditor in the Board such proportion of moneys realized by him as the claim of each creditor bears to the total amount of claims proved by the creditors in the Board against such person.

The Board may, however, by a vote of two-thirds of the members present, extend the time for settlement of any suspended or delinquent member for a period not exceeding thirty days.

ARTICLE XIV.—*Delinquents may Voluntarily Surrender Seats.*—Any delinquent member may waive his right of redeeming his privileges in the Board. He may do so by notifying the President in writing that he is unable to meet his engagements with members of the Board, upon contracts for the sale or purchase of stocks, and requesting him to call a meeting of his creditors in the Board, stating them; the President shall thereupon take such action as is required by Article XIII., to be taken by him in respect to one deprived of all privileges of membership pursuant to said Article, and the like proceedings for the sale of his seat and distribution of proceeds shall be had as in a case arising under said Article XIII.

ARTICLE XV.—*Sales of Seats for Account of Delinquent Members—Members of the Board Preferred Creditors.*—In sales of seats for account of delinquent members, pursuant to Article XIII. of this Constitution, the proceeds shall be applied to the benefit of the members of the Board exclusive of outside creditors, unless there shall be a balance after the claims of members are paid in full. And the seat and privileges of every member shall be deemed and taken to be, from the time of his admission and as long as he remains a member, a continuing security to all members of the Board with whom he may deal, according to its rules, for the performance of his contracts and the fulfillment of his engagements.

ARTICLE XVI.—*Quorum.*—In all cases a majority of the Board shall be necessary to do business, except the calling of stocks.

ARTICLE XVII.—*Maximum Rates of Commission*—The rates of commission charged by members of the Board shall not be higher than the following:

Legal Tender Notes on par	½	per cent.
Funded Debt on par	1	" "
Bank Stocks	1	" "
Insurance Stocks on par	1	" "
Wharf Stocks on par	1	" "
Railroad Stocks on par	1	" "
Gas Stocks on par	1	" "
Steamboat Company Stocks on par	1	" "
Telegraph Company Stocks on par	1	" "
Water Company Stocks on par	1	" "
Bills of Exchange on net amount	1	" "
Mint Certificate on net amount	1	" "
Specie on net amount	1	" "
Mining Shares over $500	1	" "

ARTICLE XVIII.—*Fictitious Sales.*—No fictitious sales or contracts shall be made at this Board. Any member or members concontravening this Article may, upon conviction thereof, be suspended.

ARTICLE XIX.—*Payment for and Delivery of Stock.*—In all sales of stocks transferable in this city, either party shall have the right to require the purchase-money to be paid at the time and place of transfer. In the delivery of stocks not transferable in this city, the purchaser shall have the right to require the deposit of the purchase-money in some local bank, to be agreed upon by the contracting parties, or named by the President of the Board; such money to be held in trust until official notification of the transfer shall have been received.

ARTICLE XX.—*Penalty for Non-compliance with Constitution or By-laws.*—Any member refusing to comply with any Article of this Constitution or of the By-laws, may have a hearing before the Board, and if he shall persist in refusing, two-thirds of the members present may declare him no longer a member, and he shall thereupon lose all the rights and privileges given by this Constitution.

ARTICLE XXI.—*Altering Constitution or By-laws.*—No motion for altering the Constitution or By-laws shall be acted upon until at least five days after the motion has been submitted in writing, unless by the unaminous consent of the Board, and none shall be made except by the consent of two-thirds of the members present. In all cases the Article proposed to be altered or amended shall be stated.

ARTICLE XXII.—*Donation in case of Death of Member.*—Upon the death of a member of the Board, the Finance Committee may pay, from the funds of the Board, to such person or persons as may have been designated in writing by such deceased member, the sum of ten thousand dollars, in United States gold coin. In case there be no such written disposition made, then to the widow of such deceased member the sum of ten thousand dollars in United States gold coin. In case there shall be no widow, and a child or children of such member, then to such child or children equally, share and share alike. If there shall be neither widow, child or children surviving such deceased member, entitled to receive said money, nor any disposition made of the same, as herein above provided, then there shall be no payment or provision made under this article.

The payments herein provided for shall be deemed absolute donations to the persons, or for the object to which the same are made or applied, free from all claim or control from any other source or persons.

In case the Finance Committee shall not have sufficient funds or moneys to meet the donations herein provided for, as the same shall be needed, the deficit shall be made good at once, by assessments, *pro rata*, upon the members of the Board, and collected in like manner and under the same penalties as other dues or fines.

ARTICLE XXIII.—*Manner of Acquiring Right to Participate in Benefits of Article XXII.*—No member of this Board admitted after this date (June 8, 1875) shall have any claim or interest in the privileges and benefits provided by Article XXII. of this Constitution, until he shall have filed with the Secretary a certificate from the Medical Examiner attesting his fitness to be accepted by this Board as a participant in such benefits, and no member admitted since June 8, 1875, and who had not filed his Medical Certificate before August 2, 1876, as hereinbefore provided, shall be deemed to have acquired any claim or interest under the provisions of Article XXII. of the Constitution, excepting under the following conditions:

A duly qualified physician shall be appointed by the President as Medical Examiner of the Board, who shall be considered as an appointee thereof, and whose fees shall be paid out of the general fund in like manner as other ordinary expenses. The candidate for admission to the benefits of Article XXII. of the constitution must submit to such examination as may be required by said Medical Examiner, who shall transmit to the President a sealed report containing a detailed statement of the physical state of health of said candidate, as well as his opinion concerning the fitness of said applicant to become a participant in the advantages of said Article XXII. of the Constitution.

The President shall, upon receipt of said report, immediately call a meeting of the Executive Committee, and shall refer the same to them for their consideration. The said Committee shall thereupon decide by ballot whether the Board is justified in admitting the said member to such benefits, and the decision of said Committee shall be reported to the Board at its next ensuing executive session. *Provided*, that the application of such member to participate in such benefits shall not be considered to have been admitted or rejected until the affirmative or negative action of the Executive Committee upon the same shall have been approved and ratified by this Board.

BY-LAWS.

ARTICLE I.—*Order of Business.*—The Board shall meet daily, Sundays and legal holidays excepted, and excepting also a summer vacation, not to exceed five days, at and including the Fourth of July adjournment; the duration of said vacation, within the five days limit above stated, and the time of its commencement, to be determined by a vote of two-thirds of the members, after five days' written notice of intention to move such adjournment.

The hours of business shall be: Morning session at 11 o'clock; afternoon session at 3 o'clock—except on Saturday, when there shall be held but one session, commencing at 11 o'clock A. M. The order of business shall be as follows:

1. Reading the minutes of the preceding day, other than purchases and sales, if called for by two members.
2. Notices of Election.
3. Calling the regular list of stocks.
4. Calling stocks at the request of members.

The hour for business at the 3 o'clock afternoon session may be postponed fifteen to thirty minutes, according to the judgment of the Chairman, and when publicly announced by him to the Board at its preceding session.

ARTICLE II.—*Stocks to be Called—Application to Place Stock on List.*—No stock or bond shall be placed on the list of stocks, etc., regularly called at the Board, except by a vote of a majority of the members present; and application for the placing of stocks on the regular list shall be made directly to the Board by parties interested, subject to all rules and regulations of the Board, with full statement of the capital, number of shares, resources, etc., certified to and signed by said parties; but the stock of no company or corporation shall be placed on said list unless first referred to the Stock List Committee.

ARTICLE III.—*Fees for Placing and Keeping Mining Stocks on the List.*—The fee for placing mining stocks on the regular list shall be five hundred dollars each. This Board reserves the right to suspend the calling of any stock, at any time, by a two-thirds vote of the members present. All mining stocks remaining on the list over one year shall pay one hundred dollars per annum in advance. And the said annual fee shall become due on the first day of January, and any stock upon which said fee shall remain unpaid on the third Tuesday in February, shall be stricken from the list by a majority vote; and no stock so stricken from the list shall be replaced, except by a two-thirds vote.

ARTICLE IV.—*Stocks may be called up when on the list.*—After the regular list has been once called over by the Presiding Officer, any stock upon the list may be called up, the party calling having the privilege of making the first offer.

No bid or offer for the purchase or sale of shares of stock shall be entertained for fractions of a dollar of less than one-quarter where the value of the same is $25 and over; of less than one-eighth where the value is $5 and less than $25; and of less than one-twentieth where the value is under $5. The above rules shall govern the informal as well as the regular sessions of the Board.

ARTICLE V.—*All offers binding—The presiding officer's decision final—Recording sale not made on call.*—All offers for stock, etc., made and accepted, shall be binding whether called by the Presiding Officer or not; and in case there are two or more claimants for the purchase or sale, the Presiding Officer shall decide the same, or he may appeal to the Board for their decision. No sale shall be recorded unless made on the call, except by unanimous consent.

ARTICLE VI.—*Specific Number of Shares to be Offered.*—In all propositions to buy or sell, the offer shall be accompanied with some specific number of shares, the par value of which, other than mining stocks offered, shall not be less than five hundred dollars.

ARTICLE VII.—*Reading the Minutes.*—After the call of each stock, if any transactions have been made, the record of purchases and sales may be read, which reading shall confirm the same.

ARTICLE VIII.—*Fine for interrupting the Presiding Officer.*—Any member interrupting the Presiding Officer while calling stocks, by speaking or otherwise, shall pay a fine of not less than twenty-five cents, and not more than five dollars for each offense, at the discretion of the Presiding Officer, from which there shall be no appeal. The levying of all fines shall rest exclusively with the Presiding Officer.

ARTICLE IX.—*Informal Sessions.*—Section 1.—No assembly of members of this Board outside of the Board-rooms, for the transaction of stock business, shall at any time be allowed, and the said rooms shall remain open for the holding of Informal Sessions between 10 and 10.30 A. M., and between 2 and 2.30 P. M., excepting on Saturday, when only the morning informal session shall be held. All transactions made during such informal sessions shall be recorded in a book kept for the purpose, and shall be binding in the same manner as those of the Regular Sessions. Any adjournment of the Board shall affect its Informal, as well as its Regular Sessions, and the Board-rooms shall remain closed during the whole time of such adjournment.

Section 2.—The Chairman of the Board shall preside at its Informal as well as its Regular Sessions, for the preservation of order and decorum—by the imposition of fines, for the settlement of disputes, and for the supervision of the records to be kept of the transactions made.

Section 3.—The Assistant-Secretary shall be in attendance during the Informal Sessions of this Board, to record all transactions at the request of members, under direction of the Presiding Officer.

ARTICLE X.—*Contracts Falling due on Holidays.*—All sales made at this Board shall be settled the following day, unless expressed to the contrary, and all contracts falling due on such holidays as are observed by the banks, shall be settled on the preceding day. All stocks falling due on Sunday will be carried over until Monday.

ARTICLE XI.—*Hour before which Stocks can be Called for or Delivered.*—In all sales of, or contracts for stocks between members of the Board, the party to receive the same shall not be bound to take them after 2.30 P. M., but may postpone the same, without the charge of interest, to the following day; and any member having a right to call on another for stock, shall demand the same before the hour above specified, or be subject to a continuance of the contract until the following day.

ARTICLE XII.—*Notice on Time Contracts.*—In all contracts on time, made at the option of buyer or seller, one day's notice shall be given before stocks can be delivered or demanded before maturity, and such notice shall be given at or before 3 o'clock P. M.

ARTICLE XIII.—*No Contracts to be made over Ninety Days.*—No contracts, for the receipt or delivery of stock, etc., beyond ninety days, shall be made at this Board.

ARTICLE XIV.—*A Deposit on Contracts may be Required.*—On all time transactions made at the Board, either of the contracting parties may require a deposit of twenty per cent. on the amount of purchase money, as security for the fulfilment of the contract. Should the stock contracted for vary in price to within five per cent. of the margin of said deposit, either party may call for an additional deposit of ten per cent., and may continue to do so as often as the latest deposit may be exhausted by change of price; it being fully understood that either party may draw down any excess of twenty per cent. that may be in his favor.

When the seller deposits his stock, the deposit paid by the buyer shall go to the seller.

When a member of this Board neglects or refuses to put up the usual deposit on time contracts, after due notice of requirement, it shall be at the option of the opposite contracting party to close the same by purchase or sale through the Presiding Officer, with some other member, on his account; the defaulting party to be held responsible for any differences. When any member neglects or fails to meet his contracts upon which deposits are made and in bank, the said deposits of money or stock shall be due and payable to the other party, upon the signature of the President or Vice President of the Board.

ARTICLE XV.—*Right of Broker to demand further Deposits—Sales of Delinquent Stock of Non-Members.*—Where stocks are bought or sold on time, or where money is advanced on stocks by a broker, he may call on his principal for an additional deposit, *sufficient to maintain the original margin*, but in the event of the margin at any time being reduced to within twenty per cent. of the market price of the stock, then the broker shall have the right to sell out or buy in such stocks, through the Presiding Officer, with or without notice to his principal.

The Secretary shall make a record in a book kept for the purpose of all such sales or purchases, with the name of the broker and principal for whose account they were made.

All sales of delinquent stock made on account of any person not a member of this Board, and without the order of such person, shall be made by the Presiding Officer in the Board-room, at public auction, immediately after the adjournment of any session, and all persons (irrespective of membership) shall be at liberty to bid for the same.

Upon all purchases so made, a deposit of twenty per cent. shall be made at the time, and failing such deposit, the stock shall be re-sold forthwith.

ARTICLE XVI.—*Place of Deposit on time Sales.*—When deposits are made on time sales, the seller shall have the privilege of designating the banking-house in which the deposits shall be made. The seller shall be responsible for the money deposited, and for the delivery of the stock. Should the purchaser object to the place of deposit, the President of the Board shall designate some other place of deposit, in which case the responsibility shall be mutual, as between buyer and seller.

ARTICLE XVII.—*Limitation of Contracts.*—This Board will take no cognizance of contracts that remain unsettled five days after they become due, unless continued by mutual consent.

ARTICLE XVIII.—*Outside Contracts.*—This Board will not recognize or enforce any time contracts made by members outside of the Board, unless the same shall be reduced to writing within three days: and any member of this Board having stock transactions with a party not a member, must, for his own protection, ask for a broker, otherwise the transaction must stand on its own basis, and the Board will not take any action in the matter.

ARTICLE XIX.—*Assignment of Contracts.*—No assignment of any contract made between members of this Board will be recognized by the Board, except made by mutual consent, indorsed on the memorandum of contract.

ARTICLE XX.—*Payments.*—All payments shall be gold coin of the United States, unless otherwise agreed to by the Board.

ARTICLE XXI.—*No Stock to be Called when Transfers are not allowed in the usual hours.*—No stocks shall be called at the Board, the transfer of which is not allowed to be made within the usual hours of business as frequently as may be desired by the stock-holders.

ARTICLE XXII.—*How Stocks are to be Delivered when the Transfer Books are Closed.*—Whenever the transfer books of a company shall be closed by any legal impediment, so as to render the time of their being open again uncertain, then the deliveries of stock of such company, in satisfaction of contracts, shall be made by notarial power-of-attorney, irrevocable, containing assignments, and bill of sale, and certificate; the papers to be satisfactory to recipient, or passed upon by the Board.

ARTICLE XXIII.—*Stock Privileges.*—When any member agrees to pay a sum of money for the privilege of receiving or delivering stock at his option, the premium bid for the privilege shall be paid on the next business day. No member of the Board shall be allowed to bid for or offer privileges on any stock during the session of the Board.

ARTICLE XXIV.—*In case of failure, contracts closed at the Market price of the Day.*—In case of the failure of any member of the Board, the President shall adjust all outstanding contracts with him at the average prices of the day he failed, if the failure is announced before 2 o'clock P. M.; and if not, then at the average prices of the ensuing business day.

ARTICLE XXV.—*Default must be reported within forty-eight hours and Claims filed within Thirty Days Thereafter.*—In cases where a member of the Board shall fail to comply with his stock contracts, it shall be the duty of his creditors to report said default to the President of the Board within forty-eight hours after said defalcation becomes known to them. No claim or contract, unless so reported, shall ever after be recognized or enforced by this Board. During the suspension of a member, no such report shall be required.

All claims of members and non-members against said delinquent member, must be filed with the Secretary of the Board within thirty days after he has been reported, and must be accompanied with a detailed statement of the account.*

No claims, unless so filed, shall ever after be recognized or enforced by this Board.

ARTICLE XXVI.—*Preferred Indebtedness.*—When a member of this Board fails, and is re-admitted to his seat, all subsequent accruing indebtedness shall be considered preferred.

ARTICLE XXVII.—*Sale of Dividends not Allowed.*—No purchases or sales of dividends will be permitted at the Board.

* See also Article 45 of the By-laws.

ARTICLE XXVIII.—*Dividends declared and interest accrued after Sale. Script Dividends.*—In all sales, dividends declared after the sale and before the payment and delivery shall go to the purchaser.

When the seller draws the dividend on stocks sold on time contracts, the amount of said dividend shall be deducted from the price of said stock, and the deposits made accordingly.

Should a stock upon which a dividend has been declared be delivered whilst the transfer books of the Company are closed, the purchaser shall have the right to deduct the dividend.

When mining companies make stock or scrip dividends, the stock or scrip so divided shall go with the original stock for ninety days from date of distribution.

The accrued interest on all stocks and bonds, not especially excepted in the By-Laws, shall go to the purchaser.

ARTICLE XXIX.—*Assessments, when delinquent, and by whom paid.*—In all sales of stocks, whether on time or for cash, the buyer shall pay any assessments levied and not delinquent at time of sale; *provided*, that the levying of such assessment by any company shall have been previously announced by the Presiding Officer in open Board; but no assessment, whether payable instanter or otherwise, shall be considered delinquent until thirty days from the day on which it is levied.

Where an assessment is levied on a stock and made payable monthly, or at different periods, in installments, each payment shall be governed by this article, and become delinquent as follows: the first payment in thirty days from the date of levy; the second, in thirty days from the day on which it is made payable; the third, the same, and so on. The day on which an assessment is levied is not counted as one of the thirty days.

ARTICLE XXX.—*Rescinded Assessments.*—On all time sales of stock after an assessment becomes delinquent, and is thereafter rescinded, the buyer may, upon delivery, deduct the amount of said assessment from the contract price of said stock.

ARTICLE XXXI.—*Charges on Stock advertised for Assessments.*—The seller of stock shall pay all the charges for advertising delinquent assessments, etc., pending the settlement of time contracts.

ARTICLE XXXII.—*Limitations of Claims for unpaid Assessments, and of other Demands.*—No reclamation for unpaid assessments upon stock sold by members of this Board, the transfer office of which is in this city, shall be allowed, unless the same is presented within five days from the date of delivery; and when the transfer office is out of the city, the demand must be made within twenty days of the date of delivery.

In the event of stock which has been sold for assessment being delivered in error, the broker receiving it shall be entitled, within five days from the date of delivery, to demand transferable stock in lieu thereof; and in case such demand is not made within five days, then the broker who delivered the stock may settle with him by returning the amount which he paid for the stock.

No reclamation for any stock delivered shall be made after the expiration of thirty days, if the transfer office is in the city; and not after sixty days, if the transfer office is out of the city.

ARTICLE XXXIII.—*No Appropriations except by Ballot.*—No appropriation of any moneys for any person or object whatever, other than ordinary expenses of the Board, as provided by the Constitution and By-Laws, shall be made, unless two-thirds of the members present shall, by vote, concur therein. Notice of any such appropriation shall be made in writing, and shall lie over one day, and vote thereon shall be by ballot.

ARTICLE XXXIV.—*Establishing a uniform rate of Commission.*—No member of this Board shall transact any business as a stock broker upon commission at a less rate than one-half (½) of one per cent; *provided*, that upon each and every transaction* in any one stock not exceeding in amount $200, the commission shall not be less than one dollar, except for another member, when the commission shall not be less than ⅛ of one per cent. Nor shall any member be permitted to avoid the effect of this By-law in either of the aforesaid cases by means of any rebate, deduction, or allowance; not charging commission on joint-stock transactions, or on all purchases or sales in every account, whether on behalf of members or non-members, or in any other manner whatever, susceptible of proof to the satisfaction of the Board, of an intention, either directly or indirectly, to evade its provisions; *provided*, that no member shall be compelled to charge commission where the occasion of, or the service rendered is of an exceptional or casual nature.

Whoever shall violate this by-law shall be subject to the following penalties, and there shall be no power in the Board or its officers to modify or remit any part thereof, except by a vote of two-thirds of the members present: For the first offense, a fine of five thousand dollars in United States gold coin shall be imposed, the amount thereof to be equally divided between the complainant and the general fund. The party convicted shall be suspended from all the privileges of the Board until the fine be paid. If the fine shall be not paid within one week from the date of its being imposed, the suspended member shall be considered as delinquent to the Board in the amount thereof, and subject to all the provisions of Article XIII of the Constitution, and Article XXV of the By-Laws, respecting suspended members and the filing of claims against the same, and the amount of said fine shall be deemed as preferred indebtedness over any and all claims which may be presented against the seat of said delinquent.

Upon all second or more convictions under this by-law, in addition to the penalty already prescribed as aforesaid, and which shall be similarly applied, the offending member, if the said fine be paid at any time before his seat shall have reverted to the Board, shall be suspended for one month after such payment, from all his rights of membership. No member, however, shall be deemed to have lost the right of participating in the benefits of Article XXII of the Constitution, by reason of any conviction or penalty imposed under this by-law, until the forfeiture of his seat shall have been accomplished through the operation of Article XIII of the Constitution.

The President shall appoint a committee of three members to whom complaints for infringement of this by-law shall be made. Said committee shall investigate the same under oath, and decide by ballot as to the guilt or innocence of the accused, and report the result of said investigation to the Board.

ARTICLE XXXV.—*No Business before Calling Stocks.*—Except by unanimous consent, no business shall be transacted previous to calling stocks.

ARTICLE XXXVI.—*Communications having a Tendency to Influence the Market.*—No letters or communications having a tendency to influence stocks shall be read publicly at the Board, without first being presented to the President.

All communications addressed to the Board, affecting the state of the mines or mining stocks, shall be read instanter.

ARTICLE XXXVII.—*Receipts and Deliveries must be Made between Members.*—All receipts and deliveries required by the purchase and sale of shares of stock must be made directly between the members of this Board; and any member who shall, in completion of such stock transactions, either receive the certificates from or deliver them to any person other than a member of this Board, shall be fined five hundred dollars for the first offense, and for the second shall be expelled.

ARTICLE XXXVIII.—*Penalty for Employment of non-Members.*—No member of this Board shall employ, directly or indirectly, a non-member to buy and sell mining stocks dealt in at the Board, under a penalty of one thousand dollars for each offense.

ARTICLE XXXIX.—*Indecorous Language or Conduct—Smoking—Punishment.*—Any member who shall be guilty of indecorous language or conduct during the session of the Board, shall be fined not less than five nor exceeding one hundred dollars, or shall, by a vote of two-thirds of the members present, be suspended from his seat for not less than one week nor more than one month; and a repetition of the offense shall subject the party so offending to expulsion, and he shall not again be admitted unless by consent of two-thirds of the members present.

A fine of five dollars shall be imposed upon any member who shall stand upon the desks or chairs in the Board-room, either during the session of the Board or after.

Smoking shall not be allowed in the Board-room. Any member violating this rule shall be fined twenty-five dollars.

ARTICLE XL.—*Fine for non-attendance at a Special Meeting.*—When a special meeting of the Board shall be called, the fine for non-attendance may, by a vote of two-thirds of the members present, be increased to a sum not exceeding five dollars.

ARTICLE XLI.—*Neglect to Pay Fines for Three Months—Penalty.*—Any member who shall absent himself from the Board, and omit to pay his fines for the period of three months, may be declared no longer a member. A list of members delinquent for fines shall be furnished the Sergeant-at-Arms, and he is ordered to refuse admittance to the Board-room to all members who fail to pay their bills before the 21st of each month. The Secretary shall notify delinquent members to this effect.

ARTICLE XLII.—*Access to the Minutes.*—No person shall have access to the minutes of the Board except the members and their clerks.

Clerks admitted to the business sessions of the Board are prohibited making abstract and duplicate lists of sales for other than their employer.

ARTICLE XLIII.—*Black List.*—Each and every member shall report publicly to the Board the name of every person who shall violate his engagements with him as a broker, after employing him to execute business on commission, or who shall have refused satisfactory settlement of any contract made with or by said broker on his account; and it shall be the duty of the Secretary to keep a book for the purpose of registering the name of every person reported as a defaulter (together with his address), and the name of the broker who shall complain, there to remain until the debt that may have accrued through the medium of the member, in his capacity as a broker, be liquidated. So long as the name of said defaulter or defaulters continue registered upon the books of the Board, no member shall execute, or cause to be executed, any business, for him or them, either as principal or agent for any other person, under pain of immediate suspension.

Suspended members, who have not settled, are subject to above penalties.

ARTICLE XLIV.—*Arbitration of Claims of Non-members.*—Any person not a member of the Board shall have the right to bring a claim against a member of said Board arising from any transaction

*This provision of Article XXXIV of the By-laws has received the official construction of the Board in executive session, and it was then held that the commission should be *not less than one dollar* on every order in each stock. See minutes of Executive Session of May 12th, 1880.

in stocks, or money loaned during his membership, on the conditions following, and not otherwise:

The person making such claim shall execute a full release of his claim against said member, duly signed, and shall deliver the same to the President, to be held in trust to abide the event of the suit before said Board.

The President shall keep the said release in trust, to abide the result of said suit, and shall deliver the same to the defendant on the happening of either of the three following events:

1st. In case the claimant shall not present his claim to the Board within twenty days after executing said release.

2d. In case judgment shall be rendered for said defendant by the Board.

3d. In case the defendant shall pay, or offer to pay, to such claimant the amount of judgment rendered in favor of said claimant.

In case judgment shall be rendered against any member of the Board, which he is unable or unwilling to pay, then such release shall be canceled and returned to such claimant.

FORM OF RELEASE.—*Know all Men by these Presents:*—That I, ————————for and in consideration of the sum of one dollar, to me in hand paid by————————, the receipt of which is hereby acknowledged, have remised, released and forever discharged, and by these presents I do hereby remise, release and forever discharge the said————————of and from any and all demands heretofore existing and due and owing to me, and the said————————is hereby fully released and discharged from the same.

Sealed with my seal, and dated at San Francisco, this———— day of————, 18—.

ARTICLE XLV.—*Regarding Suspension of Members and Legal Proceedings.*—In all cases where and in accordance with the provisions of Article XLIV. of the By-laws, a judgment has been or shall be rendered against any member of the Board by the Board, such member shall, without further action of the Board, stand suspended from the time of the rendition of such judgment until the same is fully paid or satisfied, or tendered and refused.

Whenever any creditor of a member of this Board, or any person asserting a claim against a member of this Board, has voluntarily or shall voluntarily, resort to any legal tribunal, or has voluntarily instituted, or shall voluntarily institute any legal proceedings against such member concerning his claim, such claim shall not be recognized or enforced by this Board.

ARTICLE XLVI.—*Prohibiting Connections and Transactions with Similar Organizations.*—All members of this Board shall cease all partnership connections in any way with members of any similar organization. And also cease executing orders, either directly or indirectly, through clerks or otherwise, in any similar organization, under penalty of suspension.

ARTICLE XLVII.—*Providing a Safeguard between Brokers and their Clerks.*—First. All clerks and employees of the members of this Board shall be registered in a book provided for that purpose by this Board; said book to be open to the inspection of members only.

Second. Any member of this Board trading with a clerk or employee of any other member of this Board, after said clerk or employee has been registered, in accordance with section one of this by-law, and not reporting his transactions with said clerk or employee to his employer before the next session of the Board, shall, for the first offense, by a majority vote of the members of this Board, be suspended from and deprived of all his rights and privileges as a member of this Board for the period of thirty days, and fined in the sum of five thousand dollars ($5,000), and said suspension to continue until the fine is paid. And for the second offense, under this rule, he shall be expelled.

Third. Like penalties shall be imposed on any member of this Board doing business for any other member of this Board suspended under this resolution.

Fourth. All fines collected under this resolution shall be placed to the credit of the general fund of this Board.

Fifth. It shall be the duty of all members of this Board to report immediately all changes in the clerical department of their business.

Sixth. The Secretary of the Board shall furnish each member with a printed copy of said book in which the names are registered, and shall report to the members all changes in the clerical force as reported to him.

Seventh. Brokers' clerks shall not be allowed to trade on the floor of this Board.

ARTICLE XLVIII.—*Amounts due the Board for Moneys paid on Death of Members.* The amounts due to the Board by the forfeited and suspended seats of members for assessments levied in the manner prescribed by Article XXII. of the Constitution, shall be paid out of the general funds, and charged to each seat respectively.

ARTICLE XLIX.—*Investigation of Claims by Arbitrating Committees.*—All differences, investigation of claims, or settlement of accounts between members, or between members and non-members, shall be referred to the President, unless otherwise ordered, to Committees of Arbitration, consisting of at least three members. Said committees shall report in writing within fifteen days from date of appointment, unless further time be granted; and their report, if adopted, shall stand as the award of the Board.

ARTICLE L.—*Bids and Offers Confined to Members.*—The bids or offers for the purchase or sales of shares of stock shall, during all sessions of the Board, be exclusively confined to members thereof, and anything contained in these By-laws conflicting herewith is hereby rescinded.

ARTICLE LI.—*Tickets of Admission.*—Section 1.—Tickets of admission of visitors of this Board shall have the following printed on the backs of said tickets:

"This ticket is issued on condition that the holder thereof will abide by all rules and regulations of the San Francisco Stock and Exchange Board, and for any violation thereof the Board reserves the right to cancel the same, and deny the holder admission to the rooms of the Board."

Section 2. None but ticket-holders shall be admitted to the Board-room, and no person whatever, excepting members or employees of the Board, shall be permitted to enter within the railings on the floor of the same during any of its sessions.

Free admission for ladies and their escorts to the galleries of the Board-room shall only be granted by cards issued by members.

ARTICLE LII.—*Authority of Treasurer to Pay Drafts.*—The Treasurer is hereby authorized to pay all drafts signed by the President and Secretary.

RESOLUTIONS AND MICELLANEOUS RULINGS.

Resolution Adopted May 7, 1872.

Resolved, That the written record, after being correctly copied immediately after the adjournment of the Board, from the phonographic report, and certified to by the Secretary and Assistant Secretaries, be, and is hereby acknowledged as the official record.

Resolution Adopted October 3, 1877.

Resolved, That mining companies that have been stricken from the list for non-payment of annual dues, can only be reinstated by paying the usual fee of five hundred dollars.

Resolution Adopted February 13, 1878.

Resolved That the secretaries of all mining companies be requested to inform this Board of all dividends declared on their capital stock, at the time of their declaration.

Ruling of President Regarding Liability of Partners Adopted as a Rule of the Board, August 25, 1880.

"Under the Constitution and Rules of the Board, the seat of every partner member of the Board is responsible for every check signed and given by his partner or partners in business, in payment or satisfaction of any contract or transaction made by him in the Board."

Ruling of the Chair, September 14, 1881; *Adopted as a Rule of the Board.*

That where a transaction is claimed to have been made during any regular or informal session of the Board, and on the call of the stock alleged to have been dealt in, and the transaction should have been recorded, but has not been, through the error or omission of the parties, or through the omission of the recording officer of the Board, and the omission of the Recording officer has not been corrected or sought to be corrected at the time of the reading of the record, the parties to the transaction, or the one who afterwards demands its performance, must compare, or seek to compare it before leaving the Board-room after the expiration of the session, or the Board will not enforce the transaction.

This ruling does not apply to cases where the record has been correctly read, but the recording officer has afterwards made a mistake in filling it out.

Other California Exchanges.—It was not to be expected that a close corporation like the San Francisco Stock and Exchange Board whose membership was limited to eighty and with a remarkably prosperous business, could exist for a great length of time without more or less dissatisfaction among those who could not secure admission, and without an effort to create a rival exchange. This was not accomplished, however, until in January, 1872, nearly ten years after the organization of the first mining board. Just after the development of the bonanza in the Crown Point and Belcher mines had been made, it was decided by a number of "outsiders" to organize a new board, the forty charter members of which were as follows: John Middleton, T. J. L. Smiley, Jackson McKenty, S. Barrell, S. Hyneman, W. W. Lawton, M. D. Townsend, W. H. Wright, H. S. Fitch, Charles L. Weller, E. L. Smith, A. C. Chick, Joseph Klopenstine, Joseph de Sta. Marina, H. C. Logan, M. Rudesdale, J. P. Cantin, W. H. Brown, Wm. Jay Smith, T. J. Poulterer, T. C. Sanborn, J. F. Crossett, A. Diffot, R. F. Kent, F. Wolf, E. S. Tibbey, R. Broderick, E. J. Baldwin, C. C. Harvey, W. J. Williams (since deceased), J. B. Bourne, J. R. Maxwell, Louis Lacour and J. Tilden. The name selected was the "California Stock Exchange Board," and at the organization T. J. Poulterer was elected President; T. J. L. Smiley, Vice-President; W. W. Lawton, Secretary; E. J. Baldwin, Treasurer; James Tilden, Caller; and John Gray, W. J. Williams, and Joseph Tilden, members of the Executive Committee.

The first session of the new board was held on February 1, 1872. The number of members authorized by the Constitution was seventy, and the remaining thirty seats were quickly taken; subsequently, however, the limit was reduced to sixty-two, at which it remained for a long time. The market value of a seat in this exchange in the early part of 1875 was fully $2000, but the organization of a third board about that time, caused twenty-six of its most active members to withdraw, and others followed. However, the vacancies were filled by new members and the board continued to do business. When the Bank of California suspended, it was the only board to continue its daily sessions during the trying times which followed, and this fact gave it considerable prestige. It was compelled to succumb, however, in 1880.

In the spring of 1875 a movement was made to organize a mining exchange which should include among its members all the leading and at that time very rich operators on the Pacific coast. The plan also embraced a scheme for the loaning of money on mining securities as collateral. An agreement was signed by forty persons, among whom were such prominent stock operators and brokers as E. J. Baldwin, Wm. M. Lent, H. J. Booth, Capt. James M. McDonald, Geo. S. Dodge, Andrew J. Moulder, George C. Hickox, Henry P. Wood, M. D. Townsend, Gen. Thomas H. Williams, George Hearst, George W. Grayson, Paul Moroney, Philip S. Fay, John F. Boyd, Gustave Sutro. The name selected was the Pacific Stock Exchange. In May, 1875, the forty charter members completed their organization by selecting forty other members, a number of whom were prominent brokers in the California Board, as above mentioned. The eighty members forming the organization paid in $5,000 each, thus creating a cash capital of $400,000. The movement was very popular, as much as $10,000 being offered for a seat, before the last forty members were chosen, and the applications for membership were twice as many as the vacancies to be filled. The permanent organization of the exchange was effected on May 6, 1875, by the election of the following officers: President, E. J. Baldwin; Vice-President, Geo. S. Dodge; Secretary, Andrew J. Moulder; Chairman, Joseph Tilden; Treasurer, Geo. C. Hickox. On May 24, William M. Lent, H. J. Booth and James M. McDonald were elected a Trust Fund Committee, which was one of the features of the new exchange, the committee being entrusted with all its funds which were to be loaned to members on stock collaterals. The first meeting for the purchase and sale of stocks was held on June 7, 1875, in the large hall in the Halleck building, on the corner of Sansome and Halleck streets. In recognition of their services in promoting the great mining interests of the Pacific coast, the following gentlemen were elected honorary members at that meeting: Wm. Sharon, J. C. Flood, Jno. W. Mackay, Wm. S. O'Brien, James G. Fair, Robt. F. Morrow, J. D. Fry, Jno. P. Jones.

It was necessary that a company should be incorporated under the laws of the State for the purpose of holding and managing the property of the Pacific Stock Exchange, and for this purpose the "Pacific Exchange" was incorporated on Oct. 5, 1875, the first directors being: E. J. Baldwin, George S. Dodge, George C. Hickox, William M. Lent, George W. Grayson, T. J. L. Smiley, and J. L. Hunt. After the organization was completed, T. J. L. Smiley, C. L. Weller and J. L. Hunt were appointed a Building and Finance Committee. Meanwhile, the Pacific Stock Exchange had purchased (on May 24, 1875) the property now occupied by it on Montgomery street for $325,000 gold, on which, under the direction of the Building and Finance Committee, the present building was erected. The new hall has a frontage of fifty-two feet on Leidesdorff street, running back 100 feet, and communicating with an exquisitely ornamented rotunda, and that with a spacious vestibule, elaborately decorated, opening upon Montgomery street.

The Constitution and By-Laws of the Pacific Stock Exchange are substantially the same as of the San Francisco Stock and Exchange Board. The charges for placing a mine on the list of the Pacific Stock Exchange are $500, and an annual fee for renewal of $100.

Dealings in the Comstock Shares.—As has been stated, the excitement in mining shares on the San Francisco market, and for that matter, throughout the financial world, rose to fever heat about the time of the discovery of the Comstock bonanza. Respecting the Comstock properties the San Francisco *Bulletin* has the following:

"Mining property is about the most uncertain kind of a possession. Its value depends on circumstances entirely beyond the control of the owners. This is especially true where the mines have become stock-jobbing enterprises. The value is fixed without much regard to laws or analogies. It is often the case that the shares are rated below what the assets would bring, independent of the mine; and it is just as often that they are rated at fabulous figures. There is a wonderful amount of sympathy between contiguous mines. What sends the value of shares in one to a high or low figure has a corresponding influence on adjacent claims without the least regard to merit. Because one good body of ore is found in a certain locality, it is taken for granted that equally good discoveries are certain in all contiguous mines for miles around. This is contrary to all precedent, and yet the influence still exists. Good mines do not go in schools like fish, nor graze in groups like sheep. The Comstock has never had more than one or two good mines in operation at the same time. The same is true of other sections in that State and other States and Territories. The one mine of Utah is the Ontario, and the one mine of Dakotah is the Homestake.

"It is now nearly five years since it was whispered that the Consolidated Virginia would pass its dividend. Such an event had been anticipated by those on the inside for some months previously, but to the great majority of operators in stocks the news was a surprise and a disappointment. It naturally had a depressing effect on values. The mine had been paying continuously for thirty-two months, and for the last twenty-two months at the rate of $1,080,000 per month. Besides, for the last eight months, its companion, the California, had been paying at the rate of $1,080,000. Many believed that those disbursements could be kept up for a long period. But when January, 1877, passed, and no dividend from the Consolidated Virginia, faith in the perpetuation of a bullion product from the Comstock Lode was very much shaken. The fact that California kept up its dividends softened the disappointment, but it did not entirely heal the breach. Consolidated Virginia resumed dividends in May, 1877, and kept them up until June, 1878. It also paid dividends of 50c. per share in 1879, and two of the same kind in 1880.

"California commenced paying in May, 1876, and kept up its dividends monthly until August, 1878, though the last two were at the rate of $1 per share. It subsequently paid two of the same amount in December, 1878, and January, 1879, and four others at 50c per share at irregular intervals in 1879. The last dividend by the California was in December, 1879, and the last by the Consolidated Virginia was in August, 1880. These two mines have been the mainstay of the Comstock for the past nine years, during which they have produced over $100,000,000 in gold and silver and paid $74,250,000 in dividends. The note of warning sounded in the ears of the public by the passage of the dividend of the Consolidated Virginia in January, 1877, and the subsequent irregularity of its disbursements and those of the California have had an important influence on Comstock values in the past four years.

"The leading Comstock mines have been steadily depreciating in value for the past three years or more; and at times they have appeared to be unusually depressed. Some think that even now they are at bed rock prices. But take them right through they are not so low as they have been this year and in previous years. Considering the limited amount of bullion produced by them during the past year and their present condition, it is, perhaps, remarkable that values should have been kept up as well as they have. In November, 1870, according to the rating of shares in this market, $4,696,700 would have purchased all the leading mines on the Comstock from Utah on the north to Alta on the south, a section of nearly two miles of mining claims. A little more than four years later on, say in January, 1875, a check for $271,000,000 for the same mines would doubtless have been refused. In May, 1877, these mines fell to $27,658,900. A year later they were worth $36,261,000, and in September, 1878, they were rated at $114,260,000. This was during the excitement in Sierra Nevada and Union.

"The highest and lowest prices of twenty-nine of the principal claims for this interval are given in the annexed tables:

Highest Prices of Comstock Shares in Four years.

Mines.	1878.	1879.	1880.	1881.
Utah, per share	$56 00	$32 00	$18 75	$14 25

"The highest prices in 1878 occurred during the month of September. The cause for that advance was the reported discovery of a body of ore in Union Consolidated and Sierra Nevada that was as much larger and richer than that found in Consolidated Virginia in 1874 as that was larger and richer than that found in Belcher in 1871. That reported discovery was one of the gravest mistakes ever made in the history of mining in that section, or it was one of the most stupendous frauds. Either horn of this dilemma is far from being flattering to those who fabricated the one or perpetrated the other. The history of that affair now reads like a fairy tale, which no one is expected to believe. Experts tested the assays and with diamond drills pierced the immense ore body, the dimensions of which could only be conjectured. In the height of the excitement a private sale of 5,000 shares Union Consolidated was closed at $200 per share, and the buyer actually paid $1,000,000 to the purchaser, presumably for the above stock.

"Over three years have since elapsed, and no bonanza has been developed in either Sierra Nevada or Union Consolidated, and there is no show that any such body of ore exists there, and there is less reason to believe that one will be found. Still, in mining, all things are supposed to be possible. The completion of the Sutro Tunnel upwards of a year ago, and the facilities it affords for working at great depths, ars having a fair trial in these north end mines. Heat and water are great obstacles in the way of success, and expenses increase with depth. But a large body of ore averaging as high as that in the Consolidated Virginia would offset all these difficulties. The question simply lies in the finding of such an ore body. Experience rather favors the theory that there is considerable pay ore in the Comstock Lode that has not yet been penetrated. It is because of this faith and the mystery surrounding the location of the deposit that interest in the work of development is kept up and money advanced.

"It will be noticed that all attempts to restore values to the high plane of September, 1878, have failed. The best general average for 1879 was considerably below the best ratings in 1878. In 1880 the scale was still lower, and in 1881 a still lower level was reached. The cost of a single share in each of the foregoing mines, if purchased at the highest rating of each this year, would have been only $184.75. It would have taken twice that amount of money to have made a similar purchase on the same basis in 1880. In 1879, double the sum for 1880 would have been needed to accomplish the same end, while for 1878 the difference was still greater. The same law applies to the minimum rates for each year, though not to the same extent. The minimum rates for 1881 are on a lower level than for any time in several years, though the difference between this year and last year, in this respect, is not so very great.

"The number of shares of stock in the twenty-nine companies above mentioned, and the highest and lowest value of each as measured by the market price in San Francisco of those shares during the year 1881, was as follows:

	Shares.	*Highest.*	*Lowest.*
Utah	20,000	$ 285,000	$100,000
Sierra Nevada	100,000	2,900,000	485,000
Union Con	100,000	1,975,000	637,500
Mexican	100,800	1,486,800	683,200
Ophir	100,800	1,008,000	312,480
California	540,000	1,161,000	189,000
Con. Virginia	540,000	2,546,000	540,000
Best & Belcher	100,800	1,083,600	604,800
Gould & Curry	108,000	1,012,500	243,000
Savage	112,000	515,200	84,000
Hale & Norcross	112,000	854,000	184,800
Chollar	112,000	476,000	123,200
Potosi	112,000	564,100	112,000
Julia Con	110,000	77,000	11,000
Bullion	100,000	250,000	25,000
Exchequer	100,000	210,000	75,000
Alpha Con	30,000	172,500	69,000
Con. Imperial	500,000	150,000	60,000
Confidence	25,000	162,500	50,000
Yellow Jacket	120,000	900,000	180,000

"If each of the above mines had been sold at its highest market value this year, the sum of $20,000,000 would have been sufficient to have taken them all in, while if purchased at their lowest valuation, a check for $5,000,000 would have been nearly sufficient. A variation of over $14,000,000 has been the incentive to business."

THE SAN FRANCISCO SHARE MARKET IN 1882.

FROM Jan. 1st, to July 1st, 1882, there was little change in the condition of the market. In nearly every instance prices experienced a further decline and the business done was extremely light. To this rule, however, Bodie and Eureka Con. were exceptions, the former advancing $2.00 and the latter $2.25. But the closing prices on June 30th, were not generally the lowest for the six months. For some weeks prior to that date there was a better tone to the mining stock market in all parts of the country, including California, and, while the improvement was not sufficiently marked to cause any great changes in quotations, there seems to be reason for the hope, that bottom prices for good properties have been reached, and that the tendency for a time, at least, will be in the direction of higher figures.

The following is of interest as showing the highest prices at which some of the prominent mining stocks have sold in their history and their closing prices on June 30th, 1882, at the San Francisco stock exchanges:

Name of Company.	*Highest price at which stock was sold.*	*Closing price June 30, 1882.*
Alla	$26.00, August, 1878	.75c
Alpha	77.00, March, 1876	.60
Argenta	8.75, September, 1878	.20
Andes	16.00, January, 1875	.30
Bulwer	22.00, April, 1879	1.80
Belmont	16.00, January, 1875	.80
Benton	10.50, July, 1879	.30
Bodie Con	53.00, July, 1878	4.75
Best & Belcher	89.00, January, 1875	5.12½
Bullion	67,50, February, 1876	.35
California	780.00, January, 1875	.10
Crown Point	47.50, January, 1875	.40
Con. Virginia	700.00, January, 1875	.45
Chollar	165.00, March, 1876	.60
Confidence	59.00, January, 1875	.65
Eureka Con	74.00, May, 1875	14.75
Exchequer	425.00, January, 1875	.10
Grand Prize	21.00, November, 1877	.20

THE FUTURE FOR MINING SHARES.

NOTWITHSTANDING the very unsatisfactory condition of the mining stock market, as reflected by the dealings at the stock exchanges during the past eighteen months, the fact is not to be ignored that the public is deeply interested in the development of mining properties, and that investors are still to be found who are ready to put their money into mining schemes that give unmistakable promises of fair returns. Capital is continually finding its way into this channel. At present, the plan which is meeting with a good deal of favor is the formation of small syndicates, in which the contributors are, or are supposed to be, all favorably known to each other. The property is investigated by one or more of them, in whom the others have full confidence, and the work is done in the same way. Manipulation of stock is thus avoided, the motives for misrepresentation are much reduced, dishonest management is quickly detected, and, if the enterprise prove unsuccessful the probabilities are that the reasons for this failure are limited to those contingencies which each member of the syndicate understood to exist before investing his money, and there can be little or no fault finding. If, on the other hand, the investment proves successful, the profits are to be divided among a very few persons, and the chances are that the individual gains will thus be very large. Many properties are being quietly worked in this way, the results of which the public knows little or nothing about. It is also to be remembered that large sums of money were invested in prospective mines from two to three years ago, the distinct understanding then being that the development of the property would require considerable time. Dividends were not looked for immediately, and no one has been disappointed, but the work thus done has, to the present time, yielded no returns. A large amount of work of this kind was begun about the time that the "mining fever" first made itself manifest in 1879 and 1880. The bullion output, there is every reason to believe, will be largely increased, at no distant day, on account of this development work. In a number of instances it is known that the managers of such properties have continued the shafts and cross-cuts through rich ore without any stoping or the bringing of more ore to the surface than was necessary. Meanwhile stamps and other machinery have been erected, and the active production of bullion in large quantities must soon begin. The success which has attended this plan of developing the western mines has been so satisfactory that other similar associations are being continually formed among eastern capitalists, making manifest a determined disposition not to abandon again a field in which statistics demonstrate so much has been gained, and when the chances of large profits following careful, judicious management are so great as is afforded in the mining of gold and silver.

But persons who invest in the manner above described, seldom put their money into mining stocks dealt in at the stock exchanges. When investments are made at the latter places, the money generally comes from persons of limited means who are financially unable to form private associations or syndicates, but who are also the least able to suffer loss. It is safe to presume that this condition of affairs will continue just so long as the leading operators on the mining exchanges confine their transactions to manipulation of worthless stocks. As long as one-half the total reported sales at the mining boards from day to day are limited to one or two stocks, about which the public knows little or nothing, except from the stories furnished from the offices of the companies, a continuation of the present unsatisfactory condition of the stock exchange markets may be expected. There are some signs, however, of an improvement in the mode of managing the business at the exchanges. In a few instances, stocks known to be worthless have been stricken from the lists, and promises of further reform in this direction from persons prominent in the councils of the exchanges are not wanting. The pruning-knife will work wonders if dexterously applied. There is not any doubt whatever, that, for the perfect development of the mining interests of the country, mining stock exchanges are valuable adjuncts; are, in fact, necessary. It is only by such means that the masses are enabled to take a hand in the work—a work which under proper management promises returns as sure as that furnished by the soil to the agriculturist. But there must be a change in the management of those exchanges. The slight evidences of a movement in this direction are not the only assurances that a change may be brought about at an early day. To live, the mining broker must have customers—the public must buy and sell. Under the present condition of affairs the commissions fall within such narrow limits that necessity, the mother of inventive genius, will compel a resort to such a course as will re-establish public confidence, or an abandonment of the business. The fact that many of the brokers have given the subject sufficient attention to discover the cause of the present trouble, furnishes assurance that the remedy will be applied. The present condition of the crops, the relations existing between the managers of the principal railroads of the country, and other known conditions affecting the question, furnish a reasonably trustworthy indication of the course of the railroad stock market for some time to come. This is true, at least, within comparatively narrow limits. But who would dare forecast the course of any of the speculative mining stocks dealt in on the New York stock exchanges during the next six months, unless he possessed sufficient means to make the price by manipulation whatever he desired it to be? In the inscrutable wisdom (?) of the managers of the dealings in the stock of the Chrysolite company, it was made to sell at $40 a share, and honest investors paid that price for it, while to-day it is a foot-ball on the exchanges at less than one-fifteenth part of that quotation. And yet Chrysolite has a measureable, intrinsic value apart from all speculation. This serves as an illustration of the condition of many stocks on the exchange lists. The change, if it is to come, cannot be made too quickly, and it will be heartily welcomed by a host of honest and honorable brokers in mining stocks, as well as by the public.

THE NEW YORK IRON AND METAL EXCHANGES.

AN Iron and Metal Exchange was organized in New York, in June of the current year (1882), the object of which is set forth in the by-laws given in full below. It is proposed to hold daily sessions of the Exchange at which the standard manufactures of iron and other metals will be called. Already the promoters of the enterprise have received applications for membership, from considerably more than 200 persons. The officers and board of managers are as follows:

President.—Edward P. White, 55 Fulton street.

Vice-President.—Maurice B. Flynn, 624 E. Fourteenth street.

Treasurer.—T. Delafield, 95 Liberty street.

Board of Managers.—William W. Snow, Ramapo, N. Y.; Carl Mayer, 112 Pearl street; B. B. Leman, 64 Wall street; Henry A. Rogers, 19 John street; J. P. Robinson, Jr., 14 Coenties Slip; Allston Gerry, 68 Wall street; John D. Fraser, 109 Beekman street; Edward Hill, 101 Wall street; H. B. Moore, 70 Wall street; Geo. V. Tompkins, 22 Burling Slip; A. G. A. Harnickell, 83 Maiden Lane; J. H. Whitney, 32 Chambers street.

Secretary.—Edward J. Shriver.

STANDING COMMITTEES.

Executive.—T. Delafield, chairman; Geo. V. Tompkins, Maurice B. Flynn.

Finance.—Carl Mayer, chairman; Allston Gerry, B. B. Leman.

Floor.—Henry A. Rogers, chairman; A. G. A. Harnickell, Geo. V. Tompkins.

Law.—Maurice B. Flynn, chairman; John D. Fraser, J. H. Whitney.

Warehouse.—J. P. Robinson, Jr., chairman; H. B. Moore, A. G. A. Harnickell, Allston Gerry, T. Delafield.

Information and Statistics.—Carl Meyer, chairman; Edward Hill, Edward J. Shriver, J. A. Flynn, S. Mendel.

Trade.—B. B. Leman, chairman; Carl Mayer, John E. White, J. G. Sibbald, H. C. Marval.

The following by-laws have been adopted:—

Title.—Section 1.—The title of this association shall be the New York Iron and Metal Exchange.

Objects.—Sec. 2.—The objects of this association are to provide and regulate suitable rooms or premises for an Iron and Metal Exchange in the City of New York; to inculcate just and equitable principles in trade; to establish and maintain uniformity in commercial usages; to acquire, preserve and disseminate valuable business information, and to adjust controversies and misunderstandings between its members.

Members.—Sec. 3.—Any respectable person, on the proposal of one member, seconded by another, and on presentation of a written application stating the nature of his business and such other facts as the Board of Managers may require, after ten days' notice of such application has been conspicuously posted upon the Exchange, shall be admitted to membership if elected by the Board of Managers on the payment of the initiation fee, hereinafter mentioned, or on presentation of a certificate of membership duly assigned to him, and on the signing of an agreement to abide by the by-laws and rules of the Exchange, and all amendments that may be made thereto. The initiation fee for the first two hundred members shall be $100 each, and thereafter the initiation fee shall be $500.

Sec. 4.—Each member shall be entitled to receive a certificate of membership, bearing the signatures of the President and Secretary, which shall be transferable upon the books of the Exchange to any person eligible to membership, upon the payment of a transfer fee of $2, and any unpaid assessments due thereon. The certificate of a deceased member may be transferred by his legal representatives. In case of the absence of a member through sickness, or for any other urgent or proper reason, the Board of Managers may cause to be issued to his *bona fide* partner or clerk, a temporary ticket of admission to the Exchange, for the purpose of transacting said member's business only, the same to be canceled on the return of the member to the Exchange, or at the pleasure of the Board of Managers. The member shall be responsible for the violation by such representative of any by-law, or rule, in the same manner as for such violation by himself, and shall also be answerable for all acts and contracts of the representative.

Annual Election.—Sec. 5.—There shall be an annual election by ballot, held at the Exchange on the first Wednesday in May, for the Officers and Managers of the Association. The polls shall be opened at 11 o'clock and closed at 2 o'clock, and every person duly admitted a member, and holding in his own name a certificate of membership, shall be entitled to a vote thereat.

Sec. 6.—A majority of votes cast shall constitute a choice. No proxies shall be allowed.

Inspectors of Election.—Section 7.—The members of the Exchange, at their annual election, shall choose by ballot a Board of Inspectors of Election, to consist of three inspectors, whose duty it shall be to receive the votes at each election held during their term, to canvass them immediately after each election, and make a return thereof immediately to the President and Secretary, and such return shall be posted at once in the Exchange. The Inspectors shall send a certificate of election to each of the members elected to office.

Sec. 8.—Any vacancy that may occur among the Inspectors of Election, from any cause, or the temporary absence of any Inspector when such Inspectors are required to act as a Board, may be filled or supplied by the President, or, in his absence, by the remaining Inspectors present.

Board of Managers.—Sec. 9.—The property, affairs, business and concerns of the Exchange shall be vested in a Board of Managers, consisting of a President, Vice-President, Treasurer, and twelve Managers, who shall be elected in the manner provided in the by-laws, and be subject only to the provisions thereof. Any vacancies that may occur, from any cause, in the Board may be filled by the remaining members. The Board of Managers shall receive no pay for their services.

Sec. 10.—The Board of Managers shall provide and regulate suitable rooms for the Exchange, and cause them to be provided with such proper and useful things as, in, their judgment, will tend to promote the best interests of the Exchange. They shall appoint such clerks, counsel and other agents as they may deem necessary, and shall fix the compensation of same. They may also, at their discretion, require from any such appointee a good and sufficient bond for the faithful performance of his duties, such bond to be made payable to the President and his successors in office.

Meetings of the Board.—Sec. 11.—Regular meetings of the Board of Managers shall be held on the first Thursday of each month, except when the same shall fall on a legal holiday, in which case it shall be held on the following Tuesday, but the President may, when he deems necessary, or at the request of three members of the Board, call special meetings of the Board. Six members present at such meetings shall constitute a quorum for the transaction of business.

Sec. 12.—The following order of business shall be observed at all meetings of the Board of Managers, and no business shall be taken out of the regular order, except by unanimous consent, viz:

1. Calling of roll.
2. Reading minutes of preceding meeting.
3. Report of Treasurer.
4. Reports of standing committees.
5. Reports of special committees.
6. Unfinished business.
7. Resolutions, motions and notices.
8. Miscellaneous business.

Sec. 13.—If any member of the Board of Managers shall absent himself from two consecutive regular meetings of the Board without sending a communication to the President stating a good and sufficient reason for so doing, his seat in the Board may be declared vacant by the Board.

Sec. 14.—No officer or member of the Board of Managers shall contract any debt on behalf of the Exchange, or in any manner or to any extent render the association liable for the payment of any sum, unless the same shall first have been directed by the Board of Managers; and no debts shall be contracted, or money expended, either by the Board of Managers or by the Exchange, except for the legitimate business of the Exchange, as set forth in Sec. 2 of the by-laws, and no appropriation of money for any purpose shall be voted except by the Exchange.

Sec. 15.—Special committees, and all committees required by the rules and regulations made by the Board of Managers for the government of the trades carried on by the members of the Exchange, shall be appointed by the President, subject to the approval of the Board, unless directed to be chosen by ballot; and shall consist of such number as may be ordered at the time of their appointment, or provided by the rules and regulations before mentioned; which committees shall hold office at the pleasure of the Board.

Section 16.—Reports of committees shall be made in writing to the Board of Managers, and signed by a majority of the members thereof.

Minority reports may be submitted. A majority of any standing or special committee shall constitute a quorum for transaction of business, and a majority decision of such quorum shall be valid. Vacancies that occur in any of the committees shall be filled in the same manner that such committee was originally appointed or chosen.

President.—Sec. 17.—The President shall preside at the meetings of the Exchange and of the Board of Managers, and shall be a member *ex-officio* of all standing committees (except the arbitration committee). He shall also, at the annual meeting of the members of the Exchange, and at such other times as he shall deem proper, communicate to the Exchange or to the Board of Managers such matters as may, in his opinion, tend to promote the prosperity and welfare and increase the usefulness of the Exchange, and shall perform such other duties as are necessarily incident to the office of President of the Exchange.

Vice-President.—Sec. 18.—In case of the death or absence of the President, or of his inability from any cause to act, the Vice-President shall perform the duties of the President, and in case of the absence of both President and Vice-President, then the Board of Managers shall appoint one of their number to perform the duties of president for the time being.

Treasurer.—Sec. 19.—The treasurer shall receive all sums due to the Exchange, and, under the direction of the Board of Managers, shall invest, deposit and disburse the same. He shall not pay out any of the funds of the Exchange unless authorized by the Board, and then under the direction of the Finance Committee. All disbursements, amounting to $10 or more, shall be made by checks signed by the Treasurer and countersigned by the President, or some member of the Finance Committee. He shall keep regular books of accounts, and carefully preserve all vouchers for the payment of money, and all bonds and securities of every kind belonging to this association. He shall render a monthly account at each regular meeting of the Board of Managers, and an annual report to the Exchange at the annual meeting thereof, all of which reports shall be audited and approved by the Finance Committee before presentation. The funds, books, vouchers and securities in his hands, shall at all times be under the supervision of the Board of Managers, and subject to its inspection and control. He may be required by the Board to execute a bond, with two sufficient sureties, approved by the Board, in a penal sum to be fixed by the Board of Managers, for the faithful performance of his duties, and at the expiration of his term of office shall transfer all funds, books, papers and other property of the Exchange in his possession to his successor.

Secretary.—Sec. 20.—At the first meeting of the Board of Managers after their election they shall appoint a Secretary of the Exchange, who shall not be a member of the Board, and who shall hold office during its pleasure. He shall keep a record of the proceedings of the Board of Managers and of all meetings of the Exchange; shall immediately post conspicuously upon the bulletins of the Exchange all reports from the Inspectors of Election; shall conduct the correspondence of the association, and of the Board of Managers, under the direction of the President; and shall have custody of the seal of the association. He shall, under the supervision of the Executive Committee, have charge of the buildings or rooms occupied by the Exchange, and shall cause them to be supplied with the necessary stationery, and to be properly heated, cleaned, ventilated and kept in order and repair. He shall also have charge of the books and documents of the Exchange (except those pertaining to the Treasurer), and shall cause all information, statistics, and notices pertaining to the business of the Exchange to be posted upon the bulletins in a neat, correct and orderly manner. He shall, with the advice and consent of the Executive Committee, appoint such clerks, messengers, &c., as are requisite to the proper transaction of the business of the association; and shall perform such other duties incident to his office as may, from time to time, be required of him by the Board.

Committees.—Sec. 20.—At the first meeting of the Board of Managers after their election the President shall, subject to their approval by the Board, appoint the following committees, viz:

1. A Finance Committee, to consist of three members of the Board of Managers.

2. An Executive Committee, to consist of three members of the Board of Managers.

3. A Law Committee, to consist of three members of the Board of Managers.

4. A Floor Committee, to consist of three members of the Board of Managers.

5. A Complaint Committee, to consist of three members of the Board of Managers. One member of this committee shall retire at each regular meeting of the Board, and the President shall thereupon appoint another member of the Board in his place.

6. A Warehouse Committee, to consist of five members of the Board of Managers.

7. A Committee on Trade, to consist of five members, two of whom, including the chairman, shall be members of the Board of Managers. The other three to be selected from among the members of the Exchange who are not members of the Board.

8. A Committee on Information and Statistics, to consist of five members, to be composed and appointed in the same manner as the Committee on Trade.

These several committees shall hold office at the pleasure of the Board, and perform such duties as may be necessarily incident to the purposes of their appointments, as hereinafter prescribed, and such as may be required of them, from time to time, by the Board of Managers.

Finance Committee.—Sec. 21.—The Finance Committee shall audit all bills or claims against the Exchange; shall direct all payments, deposits and investments authorized by the Board of Managers, and shall audit the accounts of the Treasurer monthly, and also his annual account, before presentation to the Exchange.

Floor Committee.—Sec. 22.—The Floor Committee shall have general supervision over the rooms used by the Exchange during 'change hours; see that proper order is kept, and that no unauthorized persons are admitted on the floors of the Exchange. All applications for membership to the Exchange shall be referred to them, and they shall report on the same to the Board of Managers for their action.

Committee on Information and Statistics.—Sec. 23. The Committee on Information and Statistics shall, unless otherwise directed, have charge of all matters pertaining to supply of newspapers, market reports, and telegraphic and statistical information for the use of the Exchange; and it shall be the duty of said committee to organize plans for obtaining regularly, and at the earliest moment, such reliable information as may affect the value of articles dealt in by the members of the Exchange. They shall organize and maintain a system for recording, in books to be provided for that purpose, such statistics of the movement and prices of iron and other metals at the city of New York and other prominent points as may be of general interest to the members of the Exchange, or may have any bearing on the question of transportation as identified with the interests of the city and state of New York.

Law Committee.—Section 24.—The Law Committee shall have charge of all legislation that may be required by the Exchange, including the presentation of memorials to the city, to the State Legislature, or to the general government. They shall nominate to the Board for their approval suitable counsel to represent and protect the interests of the Exchange in any suits at law that may arise, or for the examinations of titles to real estate of which the Iron and Metal Exchange may become possessed, and to render general legal services. An amendment proposed to the By-laws shall be submitted to them for their consideration, and they shall report on the same to the Board.

Executive Committee.—Section 25.—The Executive Committee shall have, subject to the Board, general supervision of the property, business and affairs of the Exchange, and shall make such reports and recommendations as, in their judgment, will best promote its interests; shall have the direction and supervision of all appointed officers and employes in the discharge of their respective duties, and see that all rooms provided are suitably furnished and kept in good order for the accommodation of the Exchange, the Board of Managers and committees.

Warehouse Committee.—Section 26.—The Warehouse Committee shall examine into, and pass upon, all applications for licenses as warehousemen, weighers, inspectors, truck-owners and owners of lighters, and refer the same to the Board of Managers with their recommendation for their action; shall adopt such rules and regulations for the guidance of licensed parties as they may deem necessary, and shall report the same to the Board of Managers. Upon complaint of misconduct on the part of any person licensed by the Exchange (which complaint must be reduced to writing, and verified by the party making it), they shall summon the accused and accusers before them, and shall sit as a Court of Inquiry in such case or cases, take testimony, and submit the same, together with their recommendation, to the Board of Managers for its action. The committee may, in its discretion, suspend the license of any person or persons pending the final action of the Board.

Committee on Trade.—Section 27.—The Committee on Trade shall consider, and from time to time report to the Board of Managers for its action, such rules and regulations as to the purchase, sale, transportation and custody of iron and other metals as they may consider beneficial to the interests of the members of the Exchange. They shall, so far as practicable, establish relations with similar associations at leading commercial points in our own and other countries, to the end that uniformity of practice and usage may be attained in all matters of common interest.

Complaint Committee.—Section 28.—Any member of the Exchange who shall be accused of a wilful violation of the By-laws, or fraudulent breach of contract or of any proceeding inconsistent with just and equitable principles of trade, or of any other misconduct, shall, on complaint, be summoned before the Complaint Committee, when, if he desires, he shall be heard in his defense. Should the committee be unable to conciliate the disputants, or induce them to arbitrate, and the circumstances seem to warrant, the complaint should be referred to the Board of Managers, when both parties shall have an opportunity to be heard again in person, prior to final action in the case; and if, in the opinion of the board, the charge or charges against said defendant are sufficient and be substantiated, it may, by a vote of not less than two-thirds of all the members present, censure, suspend or expel such member from the Exchange.

Section 29.—All complaints which may be made against members of the Exchange shall be made in writing, and addressed to the chairman of the Complaint Committee, who shall cause a copy thereof to be transmitted to the member against whom the complaint shall have been entered, previous to his being summoned to appear before said committee, as provided for in section 28.

Section 30.—To reinstate an expelled member, it shall require the affirmative vote of three-fourths of the members of the Board of Managers present and voting at the meeting at which the application for such reinstatement shall be acted upon; but a suspended member may be reinstated by a majority vote at any meeting of the Board of Managers.

Settlement by and with Members who fail to meet their Contracts.—Section 31.—It shall be the duty of any member failing to meet his contracts with or to any other member of this Exchange, to immediately notify the president in writing of such failure, and the president shall thereupon cause the following notice to be posted on the official bulletin:

NOTICE:

" Members of this Exchange are hereby notified of the inability of to meet his (or their) mercantile obligations. All contracts with him (or them) must therefore be closed as provided in section 33 of the By-laws."

Section 32.—In case any member so failing shall notify the President, as thus provided, it shall be the duty of the Complaint Committee, upon satisfactory proof to them of such failure being made, to notify the President in writing, and the President shall thereupon immediately call a meeting of the Board of Managers, who shall proceed to investigate the case in the same manner as provided in cases of complaints in section 28 of these By-laws. In case of satisfactory proof of failure, the President shall be instructed by the Board of Managers to post the same notice as provided in section 31, and such member may be suspended or expelled at the same or any subsequent meeting of the Board of Managers by a vote of two-thirds of the members present.

Section 33.—All outstanding contracts between members so failing and other members of the Exchange, in cases where official notice of failure has been given, may be closed by settlement at the market price of any of the five business days next succeeding the day of such official notice of failure, upon at least one business day's notice in writing to said member so failing. In case no such notice is given to said member so failing, the settlement shall be made at the market price of the fifth business day succeeding the day of official notice of failure, provided, however, that no contract shall thereby be extended beyond its maturity. Disputes as to the market price of any of said days shall be finally determined by the Committee of Information and Statistics.

Annual Assessment.—Section 34.—For the purpose of defraying the expenses of the Exchange, the Board of Managers shall annually assess upon each certificate of membership such sum as it shall deem necessary, but not to exceed $25.

The amount of such assessment shall be payable at the office of the Exchange at such time as the board may designate; and any person who shall fail to pay the same after five days' written notice by the Treasurer so to do, shall be suspended from the privileges of the Exchange until the same shall have been paid.

If the amount of such assessment shall remain unpaid for the period of six months after a notice to pay the same, signed by the Treasurer, shall have been sent by mail to the last-known residence or place of business of the member in whose name such certificate shall stand on the books of the Exchange, he shall cease to be a member of the Exchange.

The Board of Managers shall thereupon direct such certificate, and all interests therein, to be sold at public auction at the Exchange, after notice of such sale, and of the time and place thereof, shall be published in two of the daily papers of New York City once in each week for four successive weeks, and posted on the bulletin of the Exchange four successive weeks, and a copy of such notice sent by mail at least twenty days before such sale to the last-known residence or place of business of the person in whose name such certificate stands.

In case the Exchange shall be notified of the death of the member or person in whose name such certificate shall stand, then such notices as before prescribed shall be sent by mail to his legal representatives, or either of them, with the same effect as if sent to such member or person if living. Any person may attend such sale, and if not a member, facility for attending shall be furnished him by the Board of Managers, but the purchase of such certificate shall not entitle the purchaser to membership in the Exchange, nor shall it be transferred upon the books of the Exchange, except to a person duly approved and entitled to membership, as provided in these by-laws.

The purchaser of such certificate shall, however, be entitled to a memorandum of such sale and purchase, signed by the Treasurer, and upon the presentation of such memorandum, duly indorsed by a person approved and otherwise qualified for membership, a new certificate shall be issued to him upon the payment of the transfer fee prescribed in these by-laws, and the certificate so sold shall, after such sale, be considered cancelled and shall be void.

From the proceeds of such sale the Treasurer shall pay the expenses of publishing said notices and of said sale, together with the assessments due on said certificate, and the balance shall be paid to the person in whose name the certificate so sold stood in the said books, or to whomsoever shall be entitled to receive the same.

Meetings of the Exchange.—Sec. 35.—The annual meeting of the members of the Exchange shall be held at their rooms on the first Wednesday in May, at half-past one o'clock, P. M., (of which at least one week's previous notice shall be given by the Secretary), for the purpose of receiving the reports of the Board of Managers and the Treasurer, and for the transaction of such other business connected with the affairs of the association as may be presented for consideration.

Sec. 36.—The President may, and upon the written request of a majority of the Board of Managers or 25 members of the Exchange shall, call special meetings of the members of the Exchange for the transaction of business directly connected with the affairs of the Association, of which at least twenty-four hours' notice shall be given by the Secretary. Such notice shall state explicitly the object of such meeting, and at such meeting such business only shall be transacted as shall have been mentioned in the call. Meetings for other important purposes may be called by the President upon the written request of a majority of the Board of Managers, similar notice being given and observed. The Board of Managers may, in their discretion, upon like notice, submit to the members for their approval by ballot any question directly connected with affairs of the Association not otherwise provided for in these by-laws, and a majority of the votes cast shall determine such question.

Sec. 37.—The President may, and at the request of the Committee of any trade, or upon a petition satisfactory to the President, shall call meetings of any of the several branches of the trade represented on the Exchange, to consider matters directly connected with the affairs of that trade. Such meetings shall be called at not less than twenty-four hours notice, setting forth the specific object of the meeting, and in case it is proposed to adopt a new rule, or modify any existing rule, not less than forty-eight hours notice shall be given of such meeting, stating the purport of the proposed new rule or amendment. These meetings shall be called to order in the same manner as provided for other meetings of the Exchange, but the meeting may be organized by the appointment of one its members as chairman, who shall certify to the record of its proceedings.

Sec. 38.—At all meetings of the members of the Exchange called under Sections 35 and 36, twenty-five members present shall constitute a quorum for the transaction of business, and at all meetings called under Section 37 the quorum shall consist of such number of members as shall be prescribed by the rules governing the respective branches of trade; but in either case a less number than the prescribed quorum shall have power to adjourn to a future time, which time shall be stated.

Exchange Open.—Sec. 39.—The Exchange shall be open for business daily, except Sundays and legal holidays, during such hours and under such rules as the Board of Managers may establish; but the Exchange may be closed for one day at any time, when the Boards of Managers shall direct a vote of the members to be taken thereon by ballot, of which, at least, twenty-four hours' notice shall be given by the President, provided two-thirds of all the votes cast shall be in favor of such closing.

Notices.—Sec. 40.—Notices of meetings of the Exchange, and of all other matters intended for the information of members, shall be given by posting the same conspicuously on the bulletin boards of the Exchange, and no notices shall be posted upon the Exchange except such as relate to the affairs of the Association, unless by consent of the Floor Committee.

Visitors.—Sec. 41.—No persons, except members and their temporary representatives, as provided for in Section 4 of the by-laws, shall be admitted on the floor of the Exchange for purposes of business. Members, however, may introduce their friends as visitors, by entering their respective names in a book kept for that purpose, and may obtain for such visitors a card of admission for seven consecutive days in each current year. This privilege shall not be extended, except with consent of the Floor Committee; and should any person so introduced violate the rules of the Exchange by the transaction of business, the member introducing such person shall become liable to pay a fine of not less than $25, nor more than $50, for each offense, at the discretion of the Board of Managers, and be subject to the same penalty for non-payment as provided for in Section 34 of the by-laws.

Rules.—Sec. 42—All rules adopted by the Board of Managers shall, after having been posted on the bulletin of the Exchange ten days, be in force and binding on the members; and the rules in force shall govern all cases to which they may be applicable, provided they do not conflict with any specific provisions of a contract.

Amendment of By-Laws.—Sec. 43.—These by-laws shall not be altered nor Amended, unless the proposed alteration or amendment has been approved by a vote of two-thirds of the Board of Managers and ratified by a majority vote of members voting by ballot, at a meeting held for the purpose, of which ten days' notice shall have been given, stating specifically the alteration or amendment proposed.

Code of Rules.

The following code of rules governing transactions in iron and steel on the floor of the New York Iron and Metal Exchange and between members, has been adopted:

Rules Governing Transactions in Pig Iron between Members of the New York Iron and Metal Exchange.

Committee on Pig Iron.—Rule 1.—At the first meeting of the Board of Managers after the election, the President shall (subject to the approval of the Board) appoint as a Committee on Pig Iron the members of the Exchange, who are known as manufacturers, dealers or brokers in pig iron. It shall be the duty of this committee to grade and classify pig iron, and to them shall be reported all cases of complaint against inspectors, and also any question or dispute in regard to the inspection, quality, grade or weight of pig iron. A majority of the committee shall constitute a quorum, and a decision of a majority present at any hearing shall be final and binding. They shall keep a record of their proceedings, and a fee of $9.00 shall be paid the committee for each reference case heard by them, to be paid by the party adjudged to be in fault, unless otherwise ordered by the committee.

Classification of Pig Iron.—Rule 2.—The kinds of pig iron to be dealt in shall be American, Scotch, English and spiegel iron; and as soon as practicable after their appointment the Committee on Pig Iron shall determine the classification, respectively, of No. 1, No. 2, Gray Forge, Mottled and White American Anthracite pig iron, and Nos. 1 and 3 Scotch and English pig iron, and shall, if deemed practicable, cause samples of each grade to be placed in the Exchange, which samples shall be the standard of comparison, as hereinafter provided for.

Deliveries.—Rule 3.—Foreign pig iron, "ex-store," shall be good delivery only (unless otherwise stipulated at time of sale) free to vessel or lighter from such warehouses as are designated by the Warehouse Committee of the New York Iron and Metal Exchange; when sold "on dock" it may also be delivered ex-ship, and free to vessel or lighter.

Rule 4.—American pig iron shall be good delivery, free to vessel or lighter, from warehouses designated by the Warehouse Committee of the New York Iron and Metal Exchange, or at the shipping ports of Perth Amboy, Elizabethport, Hoboken or Jersey City. When pig iron is sold g. m. b. (good merchantable brand), only such irons shall be good delivery as may, from time to time, be designated as such by the Committee on Pig Iron.

Rule 5.—Spiegel iron, to be a good delivery, shall, unless by special agreement average 20 per cent. of manganese, and shall be delivered, free to vessel or lighter, in the port of New York, ex-ship, or a warehouse designated by the Warehouse Committee of the New York Iron and Metal Exchange.

Rule 6.—When buyers are notified by sellers of proposed delivery of pig iron, it shall be the duty of buyers to immediately inspect such iron, and in case buyer claims that the iron is not of grade and quality called for in contract, he can demand an inspection, expense of such inspection to be borne by the party adjudged to be in fault; but buyer must give notice of his desire for inspection in time to allow seller to have said inspection made, so as not to postpone settlement contemplated under Rule 8 (general rules of iron and steel). The inspector to be licensed by the New York Iron and Metal Exchange. Inspector's fees shall be as follows: on 100 tons or less, $5; for every additional 100 tons or fraction thereof, 50 cents.

Rules Governing Transactions in Old Iron and Steel between Members of the New York Iron and Metal Exchange.

Committee on Old Iron and Steel.—Rule 1.—At the first meeting of the Board of Managers after their election, the President shall (subject to the approval of the Board) appoint as a Committee on Old Iron and Steel three members of the Exchange, who are known as manufacturers, dealers or brokers in old iron and steel, and to them shall be reported all cases of complaint against inspectors, and also any question or dispute in regard to the inspection, quality, grade or weight of old iron or steel. A majority of the committee shall constitute a quorum, and a decision of a majority present at any hearing shall be final and binding. They shall keep a record of their proceedings, and a fee of $9 shall be paid to the committee for each reference case heard by them, to be paid by the party adjudged to be in fault, unless otherwise ordered by the Committee.

CLASSIFICATION.—Rule 2.—As soon as practicable after their appointment, the Committee on Old Iron and Steel shall make a classification of scrap iron as "No. 1, No. 2 and No 3, New York Iron and Metal Exchange classification," and also a classification of old rails, old car wheels and old steel, and on all contracts under these rules only such iron and steel shall constitute a good delivery for the grade called for by the contract as shall fully comply with the official specification (unless by special agreement at time of sale), which specification shall be posted conspicuously on the Exchange, and copies thereof furnished to any member who may apply for them.

DELIVERIES.—Rule 3.—Deliveries of old iron and steel shall, unless by special contract, be ex-ship, or from a warehouse designated by the Warehouse Committee of the New York Iron and Metal Exchange, free to vessel or lighter. On contracts for delivery at Philadelphia or Baltimore, deliveries shall be made ex vessel or warehouse, and free to vessel or lighter.

INSPECTION.—Rule 4.—On all deliveries of old rails, scrap iron, old car wheels and old steel, inspection to be governed as in pig iron.

Rules Governing Transactions in Manufactured Iron and Steel Between Members of the New York Iron and Metal Exchange.

BAR IRON.—Rule 1.—Merchant Bar Iron, to be good delivery, must be in accordance with the Eastern Classification of Regular Sizes and Extras; must be of strictly neutral quality, neither cold or red-short. Bars must be of uniform lengths, from 15 to 17 feet long for sizes, 1 to 6 inches wide by ⅜ to 2 inches thick for flats, ⅜ to 4 inches rounds and squares (unless otherwise specified.) All flat and square bars to have good square edges. Round bars to be uniformly round. All bars to be free from defects, such as flaws, seams, cracks, &c., and practically straight, and rolled true to size. Other sizes than above specified to be manufactured and packed as buyers may desire. Any disputes as to quality or specification of bar iron shall be settled by a special committee of three, to be appointed by the president of the New York Iron and Metal Exchange.

STEEL BLOOMS.—Rule 2.—Steel blooms, to be a good delivery, shall, unless by special contract, be of good homogeneous steel, free from flaws, 7 inches square, and not more than 610 pounds, or less than 590 pounds in weight, and shall be delivered free to vessel or lighter in the port of New York, ex-ship, or a warehouse designated by the Warehouse Committee of the New York Iron and Metal Exchange, and delivery order must be accompanied by a certificate of analysis by an approved chemist at point of manufacture. Any disputes as to quality to be settled by a special committee of three, to be appointed by the president of the New York Iron and Metal Exchange.

General Rules Governing Transactions in Iron and Steel Between Members of the New York Iron and Metal Exchange.

CALLS.—Rule 1.—There shall be two public calls each day, at 11 A. M and 1.30 P. M., (except Saturdays, on which there shall only be the morning call,) on Scotch, English and American anthracite pig iron, Bessemer pig iron, spiegel iron, old rails, steel rail cross ends, scrap iron, old car wheels and steel blooms, to be conducted by the Secretary of the Exchange, or in his absence by a person to be selected by a majority of the members present. On pig iron, only such brands shall be called separately as may be designated from time to time by the Committee on Pig Iron. Spot shall be called first, and then the months in their order for each article. No offer to buy or sell shall be entertained at a less difference than 25 cents per ton on pig iron, old rails and scrap iron, or for a smaller quantity than 100 tons. The first offer to buy or sell at a price shall be accepted before subsequent offers at the same price may be placed. Subsequent offers to buy at a higher or sell at a lower price shall vacate prior offers to buy at lower or sell at higher prices. A transaction shall vacate all previous bids and offers. All disputes as to offers, acceptances or withdrawals shall be decided on the spot by the person presiding at the time, subject to an appeal to the members present. The appeal must be promptly taken, and a majority of the members present and voting shall settle the disputed point finally. The secretary shall immediately, after each call, cause to be posted on the bulletin of the Exchange the results of the call, setting forth the bidding and selling prices of the several articles dealt in. At the close of each call, settling prices of iron and steel shall be announced by the person conducting the calls, subject to the trade there assembled; and the prices so fixed shall govern all calls for margins. These prices shall also be used for settlements of contracts and of differences on deliveries under contracts in accordance with Section 34 of the By-Laws, and of Rule 5 of the general trade rules on iron and steel.

MARGINS.—Rule 2.—Either party to a contract, prior to or upon signing the same, shall have the right to call an original margin of $2.50 per ton on iron, and either party may call for margins to meet variations in the market. All margins on contracts shall be deposited in one of such trust companies, banks incorporated by the State or National Banks, as may have been designated for this purpose by the Finance Committee of the New York Iron and Metal Exchange. When margins are called before 12 o'clock M., they must be deposited before 3 o'clock P. M. the same day; if after 12 o'clock M., they must be deposited before 11 o'clock A. M. the next day.

Rule 3.—In case of failure to deposit as above, then the party calling the margins shall notify in writing the party on whom the margins were called of his or their failure to make the required deposit, and if the party in default fails to give the notice required in Section 32 of the By-laws the party collecting the margins shall have the right to cover his or their contract at discretion for account of party failing to respond to the call for margin, and if covered, give notice in writing to that effect to the party in default. In case of failure of any bank or trust company in which such margins have been deposited, it shall be the loss of the party or parties to whom it may be found to be due, taking the average price of like deliveries on the day such bank or trust company failed as a basis of settlement. When margins are called, original or for variations in the market, certified checks must be drawn to the order of the bank or trust company in which they are to be deposited. Checks must be sent to the Secretary of the New York Iron and Metal Exchange, who shall deposit them and get a certificate of deposit made payable on the order of Secretary of the New York Iron and Metal Exchange, and to the order of the buyer and seller. As soon as the Secretary has received the certificate, he shall send it to the party making the deposit, and an abstract of the same to the party calling the margin. In settlement, the Secretary shall ascertain the amount due each of the parties at interest, and shall indorse the amount due each one on the certificate over his own signature, as instructed by both parties. In case the two parties do not agree as to the amount due on a margin receipt, either of them may refer the matter to the Committee on Pig Iron or Old Iron and Steel, as the case may be, for decision, which shall be final. On the decision of said committtee, the Secretary of the New York Iron and Metal Exchange, on being informed thereof, shall promptly indorse to each party the amount each shall be entitled to by such decision. In case of the absence of the Secretary, the President of the New York Iron and Metal Exchange, or the Chairman of the Finance Committee, shall act in his stead under this rule.

Form of Contracts.—Rule 4.—The following shall be the form of contracts for pig iron and old iron and steel sold for future delivery:

Pig Iron Contract:—

New York,————188

In consideration of $1, in hand paid, the receipt of which is hereby acknowledged,————have this day sold to (or bought from)————————about————tons ————of————pig iron,——brand, at———— dollars per ton, deliverable at seller's option.

This contract is made in view of, and in all respects subject to the by-laws and rules established by the New York Iron and Metal Exchange, in force at this date,————.

Sale through————, Broker.

Old Material Contract:—

New York,————188

In consideration of $1, in hand paid, the receipt of which is hereby acknowledged,————have this day sold to (or bought from)————about————tons————of old ————at ——dollars per ton, deliverable at seller's option.

This contract is made in view of, and in all respects subject to the by-laws and rules established by the New York Iron and Metal Exchange in force at this date,————.

Sale through————, Broker.

The ton of iron or steel shall be 2240 pounds, avoirdupois weight. On all future contracts, 25 per cent., more or less, may be delivered, but any deficiency or excess greater than 10 per cent. must be settled for at the market price on day of delivery.

Settlement of Contracts.—Rule 5.—Contracts shall not be transferable, and any difference found to be due on settlement shall apply on account between the parties to the contract. Any party holding a contract against another, corresponding in all respects (except as to price) with one held by the other party against him, may close or cancel both by giving notice in writing to said party; and where it appears that several parties have contracts corresponding (except as to price), and that a "ring settlement" can be made, the party finding said "ring" shall notify all parties thereto, giving names, time of delivery, quantity, and settlement price (which price must be within twenty-five cents of the market), and get their acknowledgments, from which time the said "ring" shall be in force, and cannot be broken by the failure of any of the parties therein; and all parties thereto shall be compelled to settle their differences on said contract with each other on the basis of the settlement price. Where settlements of contracts for a specified month are made before maturity of said contracts, the legal rate of interest shall be allowed on the differences paid up to the first day of the maturing month. All offers to buy iron or steel openly, for future delivery, on the floor of the Exchange, must be open to the member first accepting such offer. Verbal contracts, when satisfactorily proven, shall have the same standing as written contracts; but the claim under such contracts must be made on the day of the alleged transaction, or on the next business day thereafter. Parties holding an option may, by giving the necessary notice or order, require the other party to receive or deliver on the first business day of the option, subject to the same conditions as on any other day covered by the contract.

Removal and Rejection of Goods sold on Contract.—Rule 6.—Iron and steel sold on contract must be removed by the buyer before 5 P. M. of day of delivery; if not so removed, all risk and expense must be assumed by buyer.

Rule 7.—When iron or steel is rejected under final appeal, if tendered on a seller's option, all expenses shall be paid by the seller, and it shall be held that no tender has been made. If under a buyer's option, the seller shall, within twenty-four hours, tender another lot to the buyer, and pay all damages that the buyer has, in the opinion of the proper special committee, sustained.

Rule 8.—The foregoing rules shall apply to all iron or steel sold by contract or to arrive. When specific lots are sold to arrive, however, rejections are not required to be replaced. When, under sales for future shipment of iron and steel, specific lots and vessels containing them are then named, sellers are released on such lots as may be rejected on arrival for cause.

Notice of Delivery.—Rule 9.—On spot sales of iron and steel, the buyer shall be allowed forty-eight hours, exclusive of Sundays and legal holidays, in which to make the proper inspection and remove the property. On contracts forty-eight hours' written notice for inspection and delivery shall be given, exclusive of Sundays and legal holidays. When sales are made to arrive, the seller shall give the name of the vessel or vessels as soon as known to him, and, on arrival, notice to be given buyer in writing. All such notices shall be given between the hours of 11 A. M. and 2 P. M. Payments shall be made on transfer of documents conveying title before 2 P. M. of the day on which delivery is to be made.

Private Arbitration.—Rule 10.—In case of disputes arising under any contract which are not otherwise provided for under the rules, unless the same shall be submitted to the Arbitration Committee of the Exchange, or any other provision made for their settlement, it shall be the duty of the parties thereto promptly to agree to the appointment of two arbitrators, and these shall appoint a third. The question in dispute shall be submitted to them, and their decision shall be final and binding. Said arbitrators shall be appointed from the branch of trade out of which the dispute may have arisen, and shall declare, before considering the question, that they know nothing of its merits from conversation with the principals, or otherwise; and they shall be paid $2 each for each hearing by the party adjudged by them to be in fault.

Inspectors.—Rule 11.—All inspectors and weighers of iron and steel for delivery on sale or contract, under the Rules of the Exchange, must be licensed by the Board of Managers, and must obligate themselves not to be interested in any parcel they are licensed to inspect or weigh. They shall be licensed only upon written application, stating the location of their place of business, which must be within the harbor of New York, or the cities connected therewith. Provided, however. that the certificate of inspection of those furnace companies, whose grading may be approved by the Board of Managers of the New York Iron and Metal Exchange, shall be valid for American pig iron, delivered at shipping port, and not stored. All licenses shall expire annually at such time as the Board of Managers may designate, and they may revoke said licenses at any time for cause. Fees of inspectors and weighers must be paid by the party employing them, or as under Rule 6 of Pig Iron Rules.

Rule 12.—The buyer of any article shall have the right to designate an inspector, but the seller shall have the right to appeal to the Committee on Pig Iron or Old Iron and Steel, as the case may be, whose decision shall be final and binding. All appeals from inspectors must be made before the property leaves the city or place of delivery. Weights and quality of iron and steel must be settled at place of delivery, unless otherwise agreed upon.

Payments.—Rule 13.—On sales of iron and steel, made for cash, seller shall have the right to demand payment at the time of passing title.

Maturity of Contracts.—Rule 14.—When a contract shall mature on Sunday, or a legal holiday, delivery on such contract shall be made on the preceding business day. On contracts maturing on any other day upon which the Iron and Metal Exchange does not hold a business session, deliveries shall be made on the following business day.

Brokerage.—Rule 15.—The brokerage on merchant bars and nails shall be 2½ per cent., and on all other articles of iron and steel 1 per cent., and shall be due and payable at the time of passing contracts.

Weighing.—Rule 16.—On all foreign iron and steel the United States Custom House weights shall be taken to decide quantity, whenever the entire lot shall be delivered as originally entered. On all other lots of iron and steel any sworn weigher's certificate at point of delivery (whose fees shall be paid by seller) shall be a good tender in proof of weight; but, in any case, either buyer or seller shall have the right to demand a reweight by a weigher licensed by the New York Iron and Metal Exchange, whose fee shall be paid by the party demanding such reweight.

Defaults.—Rule 17, Section 1.—In case iron or steel be not delivered at maturity of contract, the purchaser shall notify in writing the special committee on that kind of iron or steel of the failure to deliver, and the committee shall, at the next call, publicly read such notice, and buy in the property for account of the party directing the purchase; but no unreasonable price shall be paid, arising from manipulated or fictitious markets, or unusual detention in transportation. Any legitimate loss resulting to the buyer shall be paid by the party in default, and the property so bought in shall be a good delivery on defaulted contracts maturing that day.

Section 2.—In case iron or steel contracted for delivery be not received and paid for when properly tendered, it shall be the duty of the seller, in order to establish a claim on the purchaser, to sell it on the market at any time during the next 24 hours, at his discretion, after such default shall have been made, notifying the purchaser within one hour after such sale; and any loss resulting to the seller shall be paid by the party in default.

Rule 18.—When a member buys from or sells to another member, and the names of principals are not given up by the one to the other within 24 hours, those members shall be to each other as merchants or principals in such transactions, with claims on each other only, and liabilities to each other only, and notwithstanding that it shall afterward be shown that such members (either or both) were acting as brokers.

Rule 19.—Fictitious sales or false reports of sales are positively forbidden, and will render the parties concerned liable to suspension or expulsion from the New York Iron and Metal Exchange.

Rule 20.—All rules as to iron and steel must be justly and liberally construed, and no property shall be rejected or condemned for merely technical reasons.

Amendments.—Rule 21.—No change shall be made in these rules by any special committee before submitting the same to a meeting of the trade interested, properly called, at which 10 members shall constitute a quorum.

Following is the form of certificate that has been adopted:

New York Iron and Metal Exchange.—This certifies that is a member of the New York Iron and Metal Exchange at the time of the date hereof, and this certificate of membership may be transferred upon the books of the Exchange to any person eligible to membership, provided all assessments hereon shall be paid at the time of such transfer and the provisions of the by-laws relating hereto fully complied with.

NEW YORK, 1882

President.

Secretary.

On the back of this appears the following endorsement:

At the City of New York, on this day of 188 , for value received, I hereby assign, transfer and set over to all my right, title and interest in and to the within certificate, and all rights of membership vested in me by virtue of the said certificate.

Witness

The Iron and Metal Exchange Company, Limited.—This is an outgrowth of the same want that gave birth to the "Iron and Metal Exchange." The by-laws were adopted April 4th, this year (1882), and the following officers were elected in the following month:

Officers of The Iron and Metal Exchange Company.—President, James B. Brinsmade; Treasurer and Secretary, Edwin F. Bedell; Assistant Secretary, Wm. Allen Smith. Directors, May, 1882. Jas. B. Brinsmade, of E. Bech and Co.; Benjamin G. Clarke, of The Thomas Iron Co.; Frederick L. Lehmann, of Naylor and Co.; Edwin F. Bedell, of Cooper, Hewitt and Co.; William H. Wallace, of Wm. H. Wallace and Co.; Edwin S. Wheeler, of E. S. Wheeler and Co.; John B. Cornell, of J. B. and J. M. Cornell; Chester Griswold, of The Albany and Rensselaer Iron and Steel Co.; Thomas J. Pope, of Thomas J. Pope and Bro. The by-laws are as follows:

I. The business of this Corporation shall be managed by a Board, consisting of nine Directors.

II. The term of office of such Directors shall be one year.

III. Vacancies among Directors and Officers may be filled at any meeting of the Board, by a majority vote by ballot, two-thirds of the whole Board being present.

IV. The Annual Meeting shall be held on the first Tuesday in April, at three o'clock in the afternoon, at the office of the Company in the city of New York.

V. Special Meetings of stockholders shall be called by the President or Secretary whenever a majority of the stockholders shall request him to call such meeting. The President, or in his absence the Treasurer, or in his absence the Secretary, shall preside at such meeting.

VI. In order to constitute a quorum for the transaction of any business at any meeting of stockholders, a majority, in shares, of the stockholders must attend in person or by proxy. But, in case there shall not be present a majority within fifteen minutes after the time named for the meeting, the same may be called to order, and, by vote, adjourned to another time.

VII. The officers of the Corporation shall be a President, a Treasurer, and a S cretary, all of whom shall be elected by the Board from their own number, by ballot, to serve one year, or until the meeting of the Board next succeeding an election of Directors, and they shall not be entitled to any compensation for their services. It shall be the duty of the President to preside at the meetings of the Board and of the stockholders; to sign certificates of stock; to have a general supervision of the affairs of the Company; to audit all bills against the Company which he shall find to be correct, and to perform the acts which are usually incident to the office.

It shall be the duty of the Treasurer to have the care and custody of all the funds of the Company, to deposit the same in such bank as the Board may direct; to sign and indorse checks, drafts, and orders necessary for the collection, custody, and disbursement of the funds of the Company, subject to the direction of the President; to present to each annual meeting of the stockholders, and at any other meeting if he shall be required to do so, a report showing the receipts and disbursements, and the financial condition of the Company; and to exhibit his books and accounts to any stockholder, whenever requested so to do; and to countersign certificates of stock. He shall give a bond in the penal sum of three thousand dollars, with two sureties, to be approved by the President, conditioned for the faithful discharge of his duties.

It shall be the duty of the Secretary to keep the minutes of the meetings of stockholders and of the Board; to have the custody of the seal of the Company, and to affix the same to certificates of stock, and, on the order of the Board, to any other paper or document; to keep the stock certificate book, transfer book, ledger, and such other books as the Board may require, and to exhibit the same at the request of any stockholder; to collect statistics and other information which may be useful in the Company's business, and keep the same in good order for permanent preservation and reference; to take charge of and safely preserve the papers of the Company; to take general supervision of the rooms of the Company, and see that the same are well kept; that the comfort of those who have a right to the use of the rooms is provided for; that the rules of the rooms are duly observed and obeyed, and to report all violations of such rules to the Board; and to give and serve such notices of meetings as may be required.

There shall also be an Assistant Secretary, to be appointed by vote of the Board by ballot, whose duty it shall be to be in constant attendance at the rooms of the Company during the open hours of the same, to perform such of the duties of the Secretary as that officer shall delegate to him, and to render for the Company such services as shall be required of him by the Board or the President. He shall hold office only during the pleasure of the Board, and shall be entitled to such compensation as the Board shall determine.

VIII. Three Inspectors of Election shall be appointed by the Board, and it shall have power to determine how the vacancy shall be filled, in case any inspector so appointed shall fail to attend a meeting at which an election is to be held.

IX. The Board shall, as soon as practicable, secure the use of a room or rooms, to be called the IRON AND METAL EXCHANGE ROOMS, and it shall prescribe rules and regulations designating what persons, and on what terms, shall be entitled to admission to the same, and to the enjoyment of its privileges, and also rules and regulations to be observed by such persons as a condition of their having and retaining a right to admission to said rooms. But no person shall be entitled to such admission except by vote of the Board, and three ballots against his admission shall exclude him.

In the government of said room it shall be the duty of the Board to make every effort possible to make the same a convenient and desirable place of resort during suitable hours, on every business day, for producers and consumers, and sellers and buyers of iron and other metals, for selling and buying for actual consumption, and by all means in the power of said Board to discourage and prevent buying and selling on speculation; to exclude from the privileges of the room any person who shall be dishonest or dishonorable in any business dealing, or who shall fail to fill any contract or pay any debt.

The Board shall also discourage litigation, and shall organize an Arbitration Committee, to be composed of persons who are not Directors, and shall prescribe such rules and regulations for said Committee as may make it efficient to settle disputes, correct misunderstandings, and preserve harmony among those who choose to submit any question in difference to such committee.

X. The stockholders shall be entitled to dividends of six per cent. per annum, if the profits of the Company shall warrant it. The Board may appropriate any part of the surplus profits, not necessary for the due maintenance of the rooms, in such way as they may think proper, to promote social acquaintance and good fellowship among those having a right to the use of the rooms; or, it may accumulate such surplus towards providing a fund for the purchase or erection of a suitable building for the purposes of the Company; or, may make such other disposition of said surplus as it may deem best to subserve the interests of the Company.

XI. These By-Laws may be amended by a majority of the stockholders at any meeting of the same, two-thirds of the stock being represented either in person or by proxy.

A REVIEW OF THE IRON MARKET FOR THE EIGHTEEN MONTHS ENDING JUNE 30, 1882.

IN his review of the iron trade in this country for 1881, Mr. James M. Swank, secretary of the American Iron and Steel Association, says: "The prosperity which was restored to the American iron trade in the spring of 1879, and which was continued in 1880, attained its highest development in 1881. This was the most prosperous year American iron and steel manufacturers have ever known. The demand for their products was very active all through the year, production was greatly stimulated, and prices were in the main satisfactory. It was notably a year of *uniform* prosperity; not characterized by spurts and reactions, but by a steady demand at good prices in all branches except in some pig iron districts in the summer months, when the demand for pig iron weakened slightly in consequence of the large quantities of foreign pig iron that were pressed upon the market. From this local depression there was, however, a complete recovery in the autumn. With this temporary variation in the general situation the demand for all forms of iron and steel was active and even urgent all through the year. The production was far in advance of that of any previous year, and it all passed into consumption. The stocks on hand at the beginning of the year were also consumed. Never has there been a healthier business done by our iron and steel manufacturers than they did in 1881. The year ended with more orders on their books than were entered when it began, and at prices that were generally higher than were then obtained." The average monthly quotations for the year for the articles mentioned, he also gives, as follows:

Months.	*Iron rails.—Per ton.*	*Steel rails.—Per ton.*	*Pig iron.—Per ton.*	*Bar iron.—Per lb.*
January	$46.50	$60.00	$25.00	2.5c
February	47.50	62.00	23.50	2.5c
March	47.00	62·50	26.00	2.5c
April	47.00	63.00	25.00	2.4c
May	46.50	63.09	25.00	2.4c
June	46.50	65.00	24.00	2.4c
July	46.75	61.00	24.50	2.45c
August	47.00	60.00	24.50	2.55c
September	47.75	60.00	25.25	2.7c
October	47.50	60.00	25.50	2.8c
November	47.75	61.50	25.75	2.9c
December	48.00	60.50	26.00	2.9c

At the beginning of 1881 there were 456,658 tons of pig iron in stock with producers, and of foreign iron the amount was stated at over 800,000 tons, all of which, as Mr. Swank says, was consumed during the year. The production in the United States was 4,641,564 net tons. The following table shows the highest and lowest prices by months for the year in New York, of the articles named:

The following is a comprehensive statement of the Bessemer steel works in this country:

Names of Companies.	*Converters.*
Albany and Rensselaer Iron and Steel Co., Troy	two 6¼-ton.
Bethlehem Iron Co., Bethlehem	four 7-ton.
Pennsylvania Steel Co., Steelton	two 6½-ton. three 8-ton.
Lackawanna Iron and Coal Co., Scranton	two 7½-ton.
Cambria Iron Co., Johnstown	two 6-ton.
Carnegie Bros. & Co., Limited, Bessemer	three 10-ton.
Pittsburgh Bessemer Steel Co., Limited, Homestead	two 4-ton.
Pittsburgh Steel Casting Co., Pittsburgh	one 7-ton.
Cleveland Rolling Mill Co., Cleveland	two 6¼-ton.
North Chicago Rolling Mill Co., Chicago	two 10-ton. two 6¾-ton.
Union Iron and Steel Co., Chicago	two 5⅓-ton.
Joliet Steel Co., Joliet	two 5⅓-ton.
Vulcan Steel Co., St. Louis	two 6¼-ton.
Scranton Steel Co., Scranton	two 4-ton.
Colorado Coal and Iron Co., South Pueblo	two 5-ton.
Total	.37

There were indications before the close of the year that the remarkable prosperity which had attended the iron business for the preceding twelve months, could not be expected to continue throughout 1882. Indeed, there were unmistakable signs of a decreased demand and of lower prices in December. The over-speculation in railroad stocks, short crops in the west reducing the east bound tonnage, and the reduced rates prevailing, all pointed to a more conservative management of the railroads already built and hesitancy and delay in carrying out or undertaking new schemes. Just at a time when the country had demonstrated its ability to furnish a large increase in the supply of steel rails, there was a falling off in the demand. The prospects of last winter respecting the condition of the trade this year have been fully verified. Steel rails on December 15, 1881, were quoted at $60, and by Jan. 1, at $58. On May 15, of this year orders could be easily placed at $50. Iron rails were $48 on Jan. 1, and only $44 in May. On July 1, steel rails are quoted at $47.50 to $50.00, but there is nothing doing, and there is not even a reliable quotation for iron rails. At the close of the six months the quotations for pig iron are as follows: No. 1 foundry, $25.00; No. 2, $23.00; gray forge, $22.00 Scotch pig; Eglinton, $22.75 to $23.00; Glengarnock, $24.75; Gartsherrie, $25.50 to $26.00, and Coltness, $26.50 to $27.00. These prices are in the face of a strike in the mills at Pittsburg, Wheeling, the Mahoning and Shenango valleys, Chicago and St. Louis that has existed for nearly three months. With none but the mills in the Cincinnati district running, those in operation are complaining of the condition of trade. In commenting on the present market for furnishing iron the *Iron Age* of New York, in its issue of June 29, says: "It will be remembered that the chief point of difference at the conference between the iron manufacturers and the workingmen was as to the ability of the former to pay any advance in wages at the present time, owing to the state of trade. The manufacturers stated that there was no trade, that prices were declining, stocks were accumulating, and that they would soon have to reduce pro-

The average prices in Philadelphia for a number of years of No. 1 anthracite pig iron, and also of bar, iron rails and Bessemer steel rails, are given in Mr. Swank's report, printed in another part of this volume.

duction. The workingmen denied this, claiming that it was a cry that was always heard about this time of the year, and that it was uttered for effect. They asserted that the reports in certain newspapers showed that prices were not declining, that consumption was up to production, and that manufacturers could afford to pay the advance asked. Of course there was no doubt among manufacturers and those posted in what might be called the secrets of the iron trade, as to the correctness of the statement of the manufacturers, and this has now become apparent to all on-lookers; and even the hot-heads among the workingmen, who insisted that the manufacturers' statement was not true, are becoming convinced that it *was* true. It is a strange fact that with all of the Pittsburg, Mahoning and Shenango valleys, Wheeling, Chicago and St. Louis mills virtually idle, and with only the mills in the Cincinnati district running, the Cincinnati mills are complaining of bad trade, and it is a fact, also, that this statement is not made for effect. The Cincinnati mills are finding it difficult to secure orders to run their mills. So, also, immediately after the strike many Pittsburg manufacturers who wished certain sizes of bar to sort up with, wrote East to endeavor to secure the iron. They were answered, almost without exception, that it would be impossible for Eastern mills to fill orders before the middle of August or the first of September. Soon, however, the Eastern mills took a very different turn. One Pittsburg iron manufacturer, for example, who two weeks before could not get quotations on the little iron that he wanted, received in one day offers from four different parties in the East of 100 tons of iron delivered in Pittsburg at less than card rate at Pittsburg. Another manufacturer who wished some pipe iron with which to sort up some sizes, failed at first to get quotations. In the second week of the strike he received a telegram offering him 100 tons of the size he wished at mill, delivered at less price than he had been selling the iron for before the strike. The same is true regarding English iron. As we have stated above, considerable of No. 20 sheet iron, which is largely used at Pittsburg in connection with the manufacture of oil tanks, has been placed with English parties. The card rate at Pittsburg on this iron is 4.1. The English iron, which is equal to the Pittsburg iron, has been laid down in Pittsburg at 3.5. All these facts go to show not only that the manufacturers' statement was correct, but also that they were fully justified, in view of the condition of the market, in refusing to pay the advance demanded. Further, it shows that the present stoppage will be of very great importance and profit to the manufacturers. With this condition of things existing, it certainly is evident that if the manufacturers had continued running, iron must have gone down materially in price, and it probably is true that if the mills were to start to-morrow iron would be selling at two cents before many weeks had passed. No doubt a belief in this is what made the manufacturers so united in their determination to resist the demands of the workingmen, and no doubt also led consumers to refuse to place orders except for immediate delivery. Further, the Spring of 1882, while in some respects, was a good time for the workingman to strike—fuel, clothing and food not being needed to the extent that they are in the winter, and the opportunities for outside labor being much greater—it is also true that it was a good time for the manufacturers. The railroads were doing nothing. The other large consumers of iron, that is the manufacturers of agricultural implements, were doing very little. They were finishing up machines that were being manufactured, and had not yet begun to manufacture for next year, and, in view of the state of the iron trade, they certainly will not place their orders at this time."

Writing in the middle of May, Mr. Swank says:—"The fact may as well be accepted philosophically, if reluctantly, that we have again entered upon a cycle of low prices for iron and steel. We do not think this result is greatly to be regretted, if we consider that some remedy is needed to check our enormous importations of these articles. Were these importations to be continued for a few years longer upon the scale which has existed during the past three years, our iron and steel industries would suffer the most serious consequences, which would be felt for a generation. * * * Importations of iron and steel had, therefore, to be checked, in some way, if we would not prevent the future prosperity of the domestic producers of these articles. Low prices may be a distasteful remedy for our manufacturers and their workmen, and for iron ore producers, but no other remedy is available. It is a pity that good use was not made of it a few months ago."

In some respects the western iron market is peculiar, although with the exception of certain brands, such as car-wheel iron, it sympathizes with the general market of the country. But in the Lake Superior and Missouri ore regions, which control the ore trade of the West, it is customary to contract with the blast furnaces early in the year for the entire season's wants at a fixed price. This usually renders the market devoid of features of interest, except such as may relate to the output, or such as come from the advance in price of the ores not contracted for, as was the case in 1880, when the Republic Iron Co. sold some of its ore as high as $15 on the docks at Cleveland. The chief feature of the trade in 1881, was the enormous production of ore during the year, far exceeding that of any previous year. The total production of Lake Superior iron ore in 1881 was the largest in the history of the district, being 2,336,335 gross tons against 1,987,598 tons in 1880, and 1,414,182 tons in 1879. For the first six months of 1882, the total lake shipments were 1,161,148 tons against 727,185 tons for the same time last year. There has also been a large increase in the output of the Missouri mines as well as those in the vicinity of Pittsburg and other sections of the country. The region known in iron circles as the "West" has within the past few years become not only the largest producer, but the largest consumer of pig iron of any of the sections of the country. It produces and consumes considerably more than one half of the pig iron product of the United States, the consumption being larger than the production. But little pig iron comes from the West to the East, and that is only charcoal iron, while the West draws largely from the East and South. This condition of the market has been especially manifested for more than a year past. The quotations of pig iron in the West are generally on forge irons at four months' time. The market opened in January with a medium quality of forge iron, selling at $23 @ $24 and $26 @ $27 *for all ore red short irons.* These grades advanced to $25 @ $25.50 and $27 @ $28, respectively, by the middle of February. From this point prices dropped to $24 @ $25 and $26.50 @ $27.50 in April, and to $22.50 @ $23 and $25 @ $26 in August. In September the market became much firmer, and the medium quality sold up to $23.50. From this point the advance was gradual until the close of the year, when it bounded to $24 @ $25.50 for medium, and all ore-red shorts, $26 @ $28. Since the beginning of the current year, prices have followed the general course of the market, notwithstanding the mills have generally been idle for several months. The following table, compiled from actual sales, shows the range of prices at Pittsburg of gray forge coke or bituminous irons made in whole or in part from Lake Superior ores. The prices are on four months' time:

Month.	1881.	1880.	1879.	1878.	1877.	1876.	1875.	1874.	1873.

The *Iron Age* publishes returns from the blast furnaces quarterly. In its summary of the reports for the quarter, ending July 1, 1882, it gives the following:

Furnaces.	*July* 1, 1882.		*January* 1, 1882.	
	In blast.	*Out of blast.*	*In blast.*	*Out of blast.*
Charcoal	151	126	155	117
Anthracite	164	72	159	67
Bituminous	119	109	142	78
Total	434	307	455	262

For the last six years the relative condition of the furnaces on July 1 was reported as follows:

Furnaces in Blast July 1.

	1877.	1878.	1879.	1880.	1881.	1882.
Charcoal	87	64	81	131	147	151
Anthracite	87	95	101	167	146	164
Bituminous	85	89	95	115	144	119
Total	259	248	277	413	437	434

Furnaces out of Blast July 1.

	1877.	1878.	1879.	1880.	1881.	1882.
Charcoal	181	202	176	136	125	126
Anthracite	139	130	125	68	90	72
Bituminous	123	128	107	109	77	109
Total	443	460	408	313	292	307

In the above tables the columns "in blast" and "out of blast" show only the stocks from which the journal quoted received reports, and their footings for different periods when added, will not always agree. The following table prepared by Mr. Joseph Nimmo, Chief of the Bureau of Statistics at Washington, shows the quantity and value of iron ore imported into the United States during the year ended December 31, 1881, by countries:

Countries.	*Tons.*	*Value.*
Brazil	800	$2,002
France	44,465	103,449
French Possessions in Africa and adjacent islands	147,165	444,955
Germany	1,034	17,933
England	67,540	285,463
Scotland	2,247	10,535
Ireland	14,959	34,263
Gibraltar	1,500	5,539
Nova Scotia, New Brunswick and Prince Edward Island	5	37
Quebec, Ontario, Manitoba, Rupert's Land and Northwest Territory	44,222	143,445
British Columbia	1,100	1,522
British Possessions in Africa and adjacent islands	715	2,857
Italy	89,225	250,930
Portugal	23,946	63,379
Russia, on the Baltic and White Seas	*987	30,812
Spain	327,848	753,373
Turkey in Asia	*2,687	66,029
Turkey in Africa	2,850	5,317
Uruguay	505	1,700
Total	782,887	2,222,552

*Correct per certified invoices. This ore, or the most part of it, is imported by chrome works for chromic acid.

A REVIEW OF THE COAL MARKET FOR THE EIGHTEEN MONTHS ENDING JUNE 30, 1882.

THE demand for anthracite coal during 1881, exceeded anything heretofore known in the history of the coal trade. This was due partly to the prosperous condition of all kinds of business, and especially the manufacture of iron in which large quantities of coal were consumed, and partly to the fact that the low prices for coal which prevailed for some time prior to the last combination of the leading anthracite coal companies, led to the introduction of anthracite coal into new fields and especially the West as far as the Mississippi river. There are reasons for believing that anthracite coal will gradually become more and more a house fuel throughout the country, while the softer coals will in time take the place of anthracite in the manufactures. In commenting on some figures showing the amount of anthracite coal still available for use in the Schuylkill, Lehigh and Wyoming districts, Mr. Frank Wilkinson says: "In less than forty years, if coal be produced at the rate of 30,000,000 tons per annum, anthracite will be an article of luxury, and the price it will bring will exclude the poor people from its use." Any danger of this kind, however, had no appreciable effect upon prices, except such as may have arisen from the gradual introduction of bituminous coal into manufacturing districts, where the harder coal geographically controlled the field.

It is a remarkable fact that there was no change in the circular prices of the leading companies during the whole of 1881, except one of 10 to 25 cents in March of that year, and for the first six months of the current year, the only changes were a reduction of 10 to 15 cents in January caused by the light consumption on account of the unusually mild winter, and a restoration of the old prices in June. This steady condition of the market has been brought about by an agreement between the coal companies that they will regulate the output so as not largely to exceed the consumptive demand from month to month, by a stoppage of work whenever required. The producing capacity of the mines still exceeds the demand for consumption, and consequently frequent suspensions of work occurred during the past eighteen months. The average circular prices of anthracite coal were only two cents higher in 1881 than in 1880, but as prices were not as well maintained in 1880 as 1881, it is probable that the average prices actually received were as much as 25 cents higher last year than during the year preceding. It is practically impossible to maintain full circular rates throughout the year, but the fluctuations, except as stated above, consisted in the shading of the published schedule rates, which was not so great as to cause a rupture of the mutual understanding between the companies as to output.

The shipments in round figures were 5,000,000 tons greater in 1881 than in 1880, and during the last six months of 1881, they were about 16,000,000 tons, which was nearly equal to the carrying capacity of the railroads and vessels by which the coal is moved. A potent influence which is operating upon the anthracite coal trade in its extension to the Western States, is the condition of the through traffic of the trunk line railroads. Freightage to the sea-board from the West has been largely in excess of the shipments on the return trips of the cars, and consequently many cars had to be hauled back empty. The expense of drawing a loaded car from New York to Chicago is little more than if the same car were taken unloaded. Consequently the railroads can afford to carry freight, not liable to damage, by transportation, such as coal, from the east to the west at a very low figure. This they are now doing, and the extension of the anthracite coal consuming territory may thus be much greater than could possibly be brought about if the coal had to pay its full cost of transportation. This demand from remote sections of the country must, of course, be limited to household purposes.

The year 1881 opened with a stock of only 500,273 tons in the hands of the companies, and a very unusually large demand caused by the severe winter weather. The water routes were frozen up, and dealers and others who supposed they had laid in a full supply for the winter months, already found their stocks running low. Large shipments had to be made by rail, and prices consequently stiffened. An agreement which had been made in the previous month to work only three days in each week during the remainder of that month and January had to be abandoned for the third week in January to meet the requirements of consumers. During the month the stocks held by the companies were reduced 82,387 tons. In February there was trouble with the transportation companies on account of heavy snow storms, and the coal companies were consequently unable to move as much coal as there was a demand for. The retailers advanced their prices in New York 50 cents a ton and the companies made no effort to curtail production. The stocks were further reduced leaving the coal in the hands of the companies at the end of the month at only 395,286 tons or a little more than one-half a week's production. There was milder weather in March and prices were a shade lower at the opening of the month. On March 17, at a meeting of the presidents of the leading companies, it was resolved to work only three days a week during the following two weeks. As lower prices were expected, buyers held off or made only light purchases. The companies had been unexpectedly slow in coming to a mutual agreement to regulate trade, which had the effect of destroying confidence in the stability of the market. Soon after the meeting at which it was decided to reduce the output, the Pennsylvania Coal Company issued a circular making a reduction in its prices, and the other companies followed with a reduction ranging from 10 to 25 cents a ton. The shipments from the mines for the first three months of the year exceeded the shipments for the corresponding period of 1880 by 1,208,903 tons, and the stocks at the end of March were 563,063 tons. In April it was found that all the coal that the trade demanded could be produced by working only three days in each week, and a failure to observe this rule for the fourth week, had the effect of weakening the market. On April 15 the Western Association established prices 55 and 60 cents a ton lower than those which prevailed immediately preceding that time, but the schedule prices at the east remained unchanged. During three weeks of May, the companies worked only half time, and by June some of the companies were so well supplied with orders that they would not consent to more than six days. curtailment. The business for June was remarkably good for that season of the year, and the month closed with a scarcity of vessels and indications of higher prices for coal. For the first six months of the year the shipments were 12,467,496 tons against 10,312,120 tons for the corresponding six months of 1880, an increase of 2,155,376 tons while the stocks in the companies' hands at the end of the half year were 598,565 tons, a gain of 180,680 over the amount on hand at the beginning of the year.

The last stoppage for the year to control production was made in July (3 days), and at the end of the month the stocks amounted to 674,716 tons, but the demand in the following month far exceeded expectations, that from the West being greater than the companies could get transportation to meet. The total shipments amounted to 2,733,548 tons. In September there was some trouble on account of a scarcity of water and of labor at the mines. Transportation was also limited, there being a want of cars for the West and of vessels at the seaboard. The Delaware and Hudson Canal Company sold some coal which it called "off-color" at a concession and prices were somewhat irregular. The Western Association, however, advanced the price of egg, stove and chestnut sizes 25 cents a ton. Throughout October the demand was ahead of the supply and prices were well maintained. The want of cars to supply the western trade caused shipments to be made by the Erie Canal to Buffalo, and in some instances more than schedule rates were paid for certain sizes. November opened with current prices 15@25 cents a ton higher than circular rates (which were not changed) for stove and chestnut sizes, but the extra demand was supplied during the month, while during December the larger sizes accumulated with some of the companies, and prices were consequently weak. During this month vessels were in fair supply and freights reasonable. The mild weather which prevailed up to the close of the year, led to apprehensions that a stoppage of work at the mines in order to curtail. production would soon have to be resorted to again.

The year was in some respects the most remarkable in the history of the anthracite coal trade of the country. The total production for the year was 28,500,017 tons, an increase over 1880 of 5,062,775 tons, while the stock on hand at the close of the year was 497,024 tons, a slight reduction for the twelve months. The desperate determination among the managers of the companies to maintain prices at what they regarded as living rates, was never more conspicuous, and they were successful in burying all differences which would prevent the consummation of this end. At the same time the absence of any fluctations in prices or of uncertainty as to what would be the probable cost of fuel in the near future, gave general satisfaction to the public. Where formerly all was confusion and doubt and complaints were consequently abundant, no matter how low the prices might be, under the present system the coal trade has ceased to be a subject of daily interest to the public and the officers of companies and consumers alike appear happy.

The trade during the past six months—the first half of 1882—has been less satisfactory to the coal companies and coal dealers. The remarkably mild weather which prevailed throughout the winter, and the absence since then of an active demand until recently, have kept prices weak and the market dull. A reduction of 10 to 15 cents early in January did not immediately improve matters, but this accompanied by a stoppage at the mines for three days in the latter part of the month, had a tendency to stiffen quotations, but notwithstanding the companies kept the mines idle nine working days in February, prices fell below the schedule rates. The managers of the companies began to lose confidence in each other, and by the end of the month there was a manifest disposition among them to take what business they could get at the best figures obtainable. It is also to be remembered that February is always a poor month in the coal trade. It was evident that the stocks were not heavy in March, but the demand continued light with no improvement in prices until toward the end of the month when a slight improvement was noticeable. The total production for the first three months of the year amounted to 4,897,703 tons, against 5,565,210 tons for the corresponding period of the preceding year, a decrease of 667,507 tons.

During the latter part of March it was agreed that the companies would suspend work three days in the early part and three days near the last of April, but the market was extremely dull, closing heavy at a considerable reduction from the published rates, in prices actually obtained. The western demand sympathized with the eastern market in being dull and prices weak. There was a stoppage again of nine days in May, and by the end of the month a slight improvement in quotations was observable. The only suspension of work in June was for three days in the first week. The low stocks and apprehension that the trouble which had broken out in some other trades, might extend to the coal mines, led many persons to regard the time as a good one in which to increase their supplies and the demand very much improved. Prices were advanced 10 to 15 cents early in the month and the condition of the trade during the month gave evidence that another advance might be expected soon. Following is a comparative statement of the production of anthracite coal for the first six months of 1881 and 1882:

Tons of 2240 lbs.	1882. Year.	1881. Year.
Wyoming Region.		
D. & H. Canal Co	1,539,120	1,651,298
D. L. & W. R.R. Co.	2,014,921	1,960,377
Penna. coal Co.	581,205	585,883
L. V. R. C. Co.	512,000	542,830
P. & N. Y. R. R. Co.	95,184	39,449
C. R.R. of N. J.	1,093,045	1,107,664
Penna. Canal Co.	173,287	163,724
	6,008,762	6,052,225
Lehigh Region.		
L. V. R.R. Co.	2,171,322	2,041,830
C. R.R. of N. J.	996,574	942,405
S. H. & W. B. R.R.	20,000	1,224
	3,187,896	2,985,459
Schuylkill Region.		
P. & R. RR. Co.	2,922,568	3,054,759
Shamokin & Lykens Val	546,017	454,224
	3,468,585	3,508,983
Sullivan Region.		
St. Line & Sul. R.R. Co.	27,070	31,017
T tal	12,692,313	12,577,684
Increase	114,629	....

The above table does not include the amount of coal consumed and sold at the mines, which is about six per cent. of the whole production. The total production compares with the first six months of previous years as follows:

Years.	Tons.	Years.	Tons.
1877	9,915,120	1879	12,033,998
1878	7,212,665	1880	10,321,876

The annual report of the Department of Internal Affairs of the State of Pennsylvania gives the following information respecting the mining of anthracite coal in the State in 1881:

Total number of collieries	319
Average number of days worked during year	275.01
Total number employees	75,169
Total amount paid in wages during the year	$27,454,781.36
Total production of anthracite for 1881, tons	27,929,128.18
Average amount per ton paid in wages	$11,655
Average amount of coal produced per employee	373.14

A similar table for the bituminous fields shows the following:

Total number of collieries	382
Average number of days worked during the year	217.07
Total number of persons employed	35,530
Total amount paid in wages during the year	$14,540,057.50
Total production of bituminous coal for the year ended December 31, 1881, tons	15,692,923.12
Total number of coke ovens	6,640
Total production of coke for the year, tons	2,176,403.08
Average amount per ton paid in wages	$0.92.05
Average amount of coal produced to each employee	442.47

The Connellsville coke region furnishes a remarkable illustration of the development of an industry that was practically unknown only a few years ago. The manufacture of coke was begun just before the war and amounted at first to a car-load a week, and it gave but little promise of becoming an item of importance, until 1870. To-day there are at least four firms in the coke regions whose output is over 100 cars a day and one that equals 200 cars. The development since 1878 has been marvelous; at the beginning of that year there were about 3578 ovens, with a daily product of 4500 tons; the close of 1881 found a total of nearly 8000 ovens in the region, with a product of 11,000 tons a day, and it is reported that contracts are out or in progress that will raise the total to nearly 10,000 ovens. There seems to be a demand for all of this immense production. In the West not only has the output of blast furnaces, classified as coke furnaces, largely increased, both by an increased output at old furnaces and by the output of newly-built furnaces, but many of the furnaces that formerly used raw coal have either changed to coke entirely or are using a large percentage of coke by reason of the largely increased output it gives. The same is and has been increasingly true of anthracite furnaces; there is hardly an anthracite furnace that can procure it that does not use some coke. It is becoming true of charcoal furnaces and bloomaries. It is a fact, not generally known, that charcoal pig and charcoal blooms are made with, in many cases, a large percentage of coke as fuel. Coke is also entering more largely into consumption for domestic purposes.

The production of the Connellsville region the past year was considerably below its capacity, and it seriously inconvenienced furnaces. This arose, not from a lack of demand, but from the impossibility of securing cars for transporting the coke. Usually no coke is stored in the region; the ovens are discharged upon the "wharf" or platform at the mouth of the ovens, and the coke is loaded immediately upon cars. During the past year, in some cases, large piles of coke were stored waiting for transportation, but in this case but little coke can be stocked, owing to its bulk and the yards, not being prepared for storing, being too small. Regarding the production of coke in Western Pennsylvania no reliable statistics have yet been published, and but few figures of any kind. The railroads that convey most of the coke are chary about giving any statistics of the amount transported, which would include nearly all made. Estimates can be made with some degree of accuracy based on the number of ovens and the output. These estimates make the amount produced in 1880 about 2,500,000 tons and in 1881, 3,000,000. The prices were remarkably steady last year, being in this respect like 1879 rather than 1880. In 1879, the prices to furnaces did not vary more than 15 cents @ 25 cents a ton the whole year. In 1880 the price fluctuated between $1.50 and $5 a ton. Opening with $1.50, it advanced to $4 @ $5 in March and April and fell to $1.50 @ $1.75 at the close of the year. In 1881, the price to furnaces on yearly contracts was $1.50 @ $1.65 on cars at ovens. For foundry purposes and occasional orders the price was $1.75 @ $2. The price to furnaces for 1882 was fixed at $1.65 @ $1.85.

In the bituminous regions the number of days worked in the year is much less than in the anthracite regions. One reason of this is, probably, that the demand supplied from the bituminous regions is more local than that from the anthracite districts. The number of days' work in a large section of the West Pennsylvania bituminous field depends upon the state of water in the Ohio River, which was not favorable to shipments, and consequently to mining, last year. The greater ease of mining bituminous coal has made the output per man much greater than in the anthracite region.

Mr. John H. Jones, accountant, of Philadelphia, has compiled some interesting statements, principally from official sources, showing the distribution of anthracite coal in 1881, as follows:

Competitive—Including tonnage passing out of Capes of Delaware, to New York Harbor; to points on Hudson River, Long Island Sound, and Atlantic Coast, North of Port Judith	12,169,030
Western—Including tonnage to United States points west of Buffalo and the Detroit River, Erie, Pittsburg, and Baltimore	2,079,134
Canadian—Including all tonnage by lake and rail to points in Dominion of Canada	694,428
Southern—Estimated tonnage to all points in Delaware, Maryland and the territory bounded by the Ohio and Mississippi River on the north and west and the Gulf of Mexico on the South	800,000
Pacific Coast—	15,000
Local—Embracing all coal consumed in Pennsylvania, New York, and New Jersey	12,742,424
Total production in 1881	28,500,016

The shipments to Western United States points were as follows:

By lake from Buffalo	839,465	
rail " " and the Bridges	616,044	
lake " Erie	85,030	
rail " "	166,258	
" " Pittsburg, Baltimore, Salamanca, Dunkirk, etc	309,191	
From Lake Ontario ports through the Welland Canal	63,146	—2,079,134

A review of the Copper Market for the eighteen months ending June 30, 1882.—The *Encyclopedia Britannica* for 1879 gives the maximum production of metallic copper throughout the world at 130,000 tons, and Professor Davies, for the same year, makes the following distribution of the output:

	Tons.
Japan metallic copper	3,000
Russia "	6,500
Spain "	6,000
France "	2,000
Austria "	3,000
German Empire "	2,000
Norway & Sweden "	2,000
Cuba and West Indies, about	2,500
Chili, about	39,000
Australia, about	5,000
United States, about	25,000
Leaving for England and all other countries	34,000
Total	130,000

The following table shows the product (refined copper) of the Lake Superior copper mines for each year since 1854, together with the average value:

Year.	Tons.	Lbs.	Value.
1854 and previous	6,992	1,727	$4,146,400
1855	2,904	1,334	1,586,160
1856	4,108	1,392	2,218,320
1857	4,765	830	2,382,500
1858	4,579	1,916	2,129,235
1859	4,463	1,995	2,239,591
1860	6,034	375	2,654,960
1861	7,519	837	3,487,995
1862	6,793	328	3,634,255
1863	6,492	1,344	4,415,600
1864	6,245	1,965	5,870,300
1865	7,197	583	5,635,515
1866	6,875	63	4,629,375
1867	8,763	1,607	4 442,841
1868	10,467	124	4,940,424
1869	13,312	1,300	9,230,016
1870	12,311	849	5,096,752
1871	12,873	349	5,728,485
1872	12.276	1,523	7,979,400
1873	15,045	1,505	8,726,100
1874	17,168	1,389	8,009,356
1875	18,019	1,497	8,180.626
1876	19,135	997	7,998,430
1877	19,513	671	7,327,888
1878	20,845	1,266	6,920,540
1879	21,425	1,529	7,327,350
1880	24,869	367	9,947,673
1881	20,274	1,708	9,955,321
Total	328,328	1,370	$152,571,458

The yield of the Lake Superior copper mines in 1881 was distributed as follows:

Name of mine.	Net tons.	Lbs.	Name of mine.	Net tons.	Lbs.
Adventure	3	1,600	Huron	127	615
Allouez	736	1,007	Isle Royal	23	1,308
Arcadian	1	267	Madison	....	1,534
Ash Bed	6	1,984	Mass	233	1,684
Atlantic	6,264	9	Minnesota	12	227
Aztec	4	784	Minong	7	1,397
Calumet & Hecla	15,580	781	Nonesuch	69	1,397
Central	709	465	Ogima	8	775
Cliff	39	1,382	Osceola	22,089	1,976
Concord	14	849	Pewabic	938	244
Conglomerate	193	91	Phœnix	200	1,357
Copper Falls	334	1,121	Quincy	2,753	848
Evergreen Bluff	....	968	Ridge	117	1,606
Flint Steel River	2	1,400	Sheldon Columbian	6	31
Franklin	1,338	1,932	Star	....	758
Grand Portage	13	264	St. Clair	62	1,493
Hancock	285	1,897			
			Total	37,274	1,708

The special features of the copper market during the past 18 months have been the absence of speculative influences upon prices, the development of mines in Arizona, New Mexico, Colorado, and other portions of the far west to an extent sufficient to affect materially the total output, and the increased consumption, which promises to assume large proportions in the near future, for electrical purposes. The continued troubles between Chili and Peru prevented Europe from obtaining a full supply from that source last year, and in this country the excess of exports over imports amounted to about £7,000,000 against an excess of imports in 1880. The Chilian product was only 38,000 tons against an average of 45,239 tons for the preceding twenty years, and 54,867 tons for the exceptional year 1869. The domestic product during the past two years has been as follows, approximate figures being given for 1881:

	1880.	1881.
	Pounds.	Pounds.
Michigan	45,830,262	53,000,000
Maine	83,080	100,000
Maryland	164 640	100,000
Missouri	230,717	100,000
North Carolina	1,640,000	1,000,000
Pennsylvania	476,508	500,000
Vermont	2,647,894	2,500,000
Wisconsin	18,087	50,000
Colorado, Arizona, Idaho and California and other western territories,	5,764,460	12,750,000
Total	56,855,640	71,200,000

Of the quantity given above, Arizona produced alone last year 8,000,000, and Colorado 1,750,000 pounds.

The year 1881 opened with a quiet market, which, however, was firm at $19\frac{1}{8}$ cts. for Lake Superior. In London Chili Bars were £62 and Best Selected £67. During January the price rose to $19\frac{1}{2}$ cts. and the market continued dull at steady quotations until March when the quotation fell to $19\frac{1}{8}$. The sales at New York in January were only about 750,000 pounds; in February 500,000, and in March 1,000,000 pounds. In April the market became still duller, the sales not exceeding 500,000 pounds at $18\frac{3}{4}$ to $18\frac{7}{8}$. The principal Lake Superior companies came to the relief of the situation by large export sales amounting to about 3,000 tons, the London market meanwhile having declined to £59 for Chili Bars and £66 for Best Selected. The approach of the season when a fresh supply from the Lake region would be thrown upon the market, accompanied by reports of the wonderful production of the copper mines in the west and south-west prevented purchases for anything more than the amount required to supply immediate wants, and the May sales were again limited to 1,000,000 pounds. Confidence in the richness of the western mines, both in quantity and in high grade ores, and the fact that some large contracts had been made for supplying the metal from that region, led to a quick and decided decline in June. During the latter part of May the quotation in New York for Lake Superior copper was 19 to $18\frac{3}{4}$ cts.; on June 3 it sold at $18\frac{1}{4}$, on June 10 at 18 cts., on June 17 at 17 cents, and a week later at $16\frac{1}{2}$ cts. The sales for this month were about 1,200,000 pounds; but early in July a number of manufacturers, including the leading consumers of copper, purchased fully 20,000,000 pounds, deliverable throughout the rest of the year at 16 cts., an extremely low figure. Later in the month some small sales were made amounting in the aggregate to 200,000 at $16\frac{1}{4}$ to $16\frac{1}{2}$ cts. Meanwhile Chili Bars having fallen in the latter part of June in London to £58, it was shown that the charters on the west coast (of South America) for the year ending June 30 had only 35,250 tons against 48,350 tons during the preceding twelve months, and this was followed by a recovery of prices in London to £59 10s. An active market was not to be expected after the heavy transactions above referred to, but prices stiffened somewhat, closing at the end of August at $16\frac{3}{4}$ with sales for the month not exceeding 500,000 pounds.

From this time forward there was a radical change in the condition of the market, prices steadily but persistently advancing upon what under the circumstances was an unprecedented demand from consumers, and on account of rising quotations in London. The transactions in September reached 1,500,000 pounds, and the price $18\frac{5}{8}$ cts. The supply in first hands had been well taken up, and there was therefore no urgency on the part of producers to sell; as a result the market remained steady until the latter part of November, with only slight fluctuations from the quotations last given. The October sales were 1,000,000 pounds. But the total sales during the first nine months of the year included 6,685,788 pounds for export against only 312,371 pounds during the corresponding period of the preceding year, and in November a speculative movement in London carried Chili Bars to £66 10s., the quotation being £63 10s. in October. In the New York market the price advanced to $19\frac{1}{2}$ with sales for the month of 1,200,000, and during December further decided advances were made on sales of about 1,000,000 pounds on the spot and 4,500,000 to be delivered in January and February. The closing quotation was 21 cts., at which considerable business was done, and which is the highest price at which the metal has sold in the past eighteen months. Meanwhile the London market advanced to £70 10s. for Chili Bars and £76 for Best Selected. The predicted production of the territory west of the Mississippi river for 1882 of twenty to twenty-five millions pounds was offset by the wonderful increase in consumption which promised to continue.

Notwithstanding the very bad management of some of the leading gold and silver mining properties introduced within the past three years to eastern capitalists, and the unwise investments in other cases, eastern men have not been discouraged easily, the best evidence of which is to be found in the avidity with which they still seize upon any mining enterprise that can show a fair prospect of making returns for the investment asked. The promoters of some of the copper mining companies have met with flattering success in placing their properties on the New York and other eastern markets during the past year or two. Probably never before in the history of the country has the copper market attracted as much attention as during the past six months. The new elements that have begun to affect the market are also of such an uncertain quantity that experienced dealers are much at sea as to the future. While the domestic consumption last year was about 64,000,000 pounds, it was estimated until recently that the American product for 1882 would not fall much, if any, short of 90,000,000 pounds, and it would require a heavy increase in the amount of the home consumption as well as a heavy falling off of Chilian shipments to England and other parts of Europe, to take care of this excess of products; otherwise a break in prices was inevitable. During the month of June the price declined, it is true, from 21 cts., at which it closed last year, to 20 cts., and this on light sales. At the same time Chili Bars had fallen in London to £66 10s. and Best Selected to £73 10s. With a dull market and lighter sales this decline continued slowly until April when the quotation for spot copper was 17⅞ to 18 cts., and about the middle of the month fully 6,000,000 pounds were sold to brass manufactnrers, to be delivered during the next four months at 18 cts. The London quotation for Chili Bars was then £65, and for Best Selected £70 10s. In May spot copper was a shade firmer, prices ranging between 18 and 18¾ cts.; during the latter part of the month over 1,200 tons were sold for export, principally on French account, at 16 cts. It became apparent about this time, however, that both the United States and Chilian supplies would fall considerably short of the early estimates. The panic in some of the mining districts of Arizona, from which region a much larger supply than for 1881 was expected, owing to the Indian depredations, has caused some of the miners to desert the camps. The English production from domestic ores declined from 14,823 tons in 1862 to 3,500 tons in 1881.

The falling off in Chili and England within the last few years has been compensated for in part by the Rio Tinto mines in Spain, which Bremen and London capitalists purchased some six years ago when the Spanish Government was in financial distress. Since then, French capitalists have likewise become interested there, and Rio Tinto has become a great producer by turning out something like 10,000 tons of metallic copper per annum. Besides the Rio Tinto mines, there is the Tharsis Copper Co., of Spain. Australia and the Cape, as well as Japan and minor producers, contribute about the same amount as for years past. These have not been sufficient, however, to compensate for the decline in the Chilian and English products and the increased consumption abroad, so that the foreign demand for our copper may be expected to continue and the increased consumption in America is enormous. According to the English Board of Trade returns the total imports and exports into and from that country for the first five months of the following years were:

Imports.

	1889.	1881.	1882.
	Tons.	*Tons.*	*Tons.*
Copper in ores	5,156	3,953	4,204
Copper regulus and precipitate	11,222	11,556	11,017
Bars, cake and ingots	16,609	10,992	14,034
In pyrites, estimated	7,682	5,803	6,938
Total	40,689	32,334	36,193

Exports.

English copper—wrought and unwrought	11,895	13,287	10,788
Foreign copper—unwrought	6,606	4,575	4,813
Yellow metal	8,158	6,170	7,644
Total	24,659	24,032	23,246

According to advices from Valparaiso, the comparative exports of fine Copper from Chili and Bolivia to all parts of the world during the first three months of the following years were:

1882.	1881.	1880.	1879.	1878.	1877.
10,764	8,200	11,898	12,422	11,909	12,699

The increase this year will be noticed. The old Cobre Mining Co., of Santiago de Cuba, previous to the Cuban rebellion a most productive English Copper mining enterprise on the East Coast of Cuba, has been taken in hand again by its owners.

The market was dull throughout the month of June, but prices at New York were firm at 18¼ @ 18 @ 18⅛. In London at the close of the month, Chili Bars were quoted at £67 5s. and Best Selected nominally at £74 10s.

The following table shows the value of ingot copper at New York in currency (cents per pound) for the years indicated:

	1874.	1875.	1876.	1877.	1878.	1879.
January	26	23¼	23	19⅝	17½	15¾
February	25	22	22¾	19	17¼	15½
March	24½	21½	22½	19⅜	17⅛	15¾
April	25	22½	22¾	18⅜	17	16
May	25	23	20	19¼	16¾	16⅛
June	24¾	23	20¾	19¼	16⅜	16¼
July	24	23½	20¼	19⅛	16¼	16⅛
August	21	23½	19½	18	16⅛	16¼
September	21¼	23¼	20⅜	18	16⅛	17¼
October	22¼	23½	21	17¾	16	21
November	23¼	23½	20¾	17¾	15¾	21½
December	23¼	25¼	20	17⅝	15⅞	21½

And the following table gives the lowest and highest prices for Lake Superior copper at New York, in cents per pound for the period mentioned:

	1880.	1881.	1882.
January	21 @ 25	19 @ 19½	19¾ @ 20½
February	24 @ 24½	19⅜ @ 19½	19 @ 20
March	22¼ @ 23⅞	19 @ 19⅜	19 @ 19½
April	21 @ 22¼	18½ @ 19	17⅞ @ 19
May	17¾ @ 20½	18½ @ 19	18 @ 18½

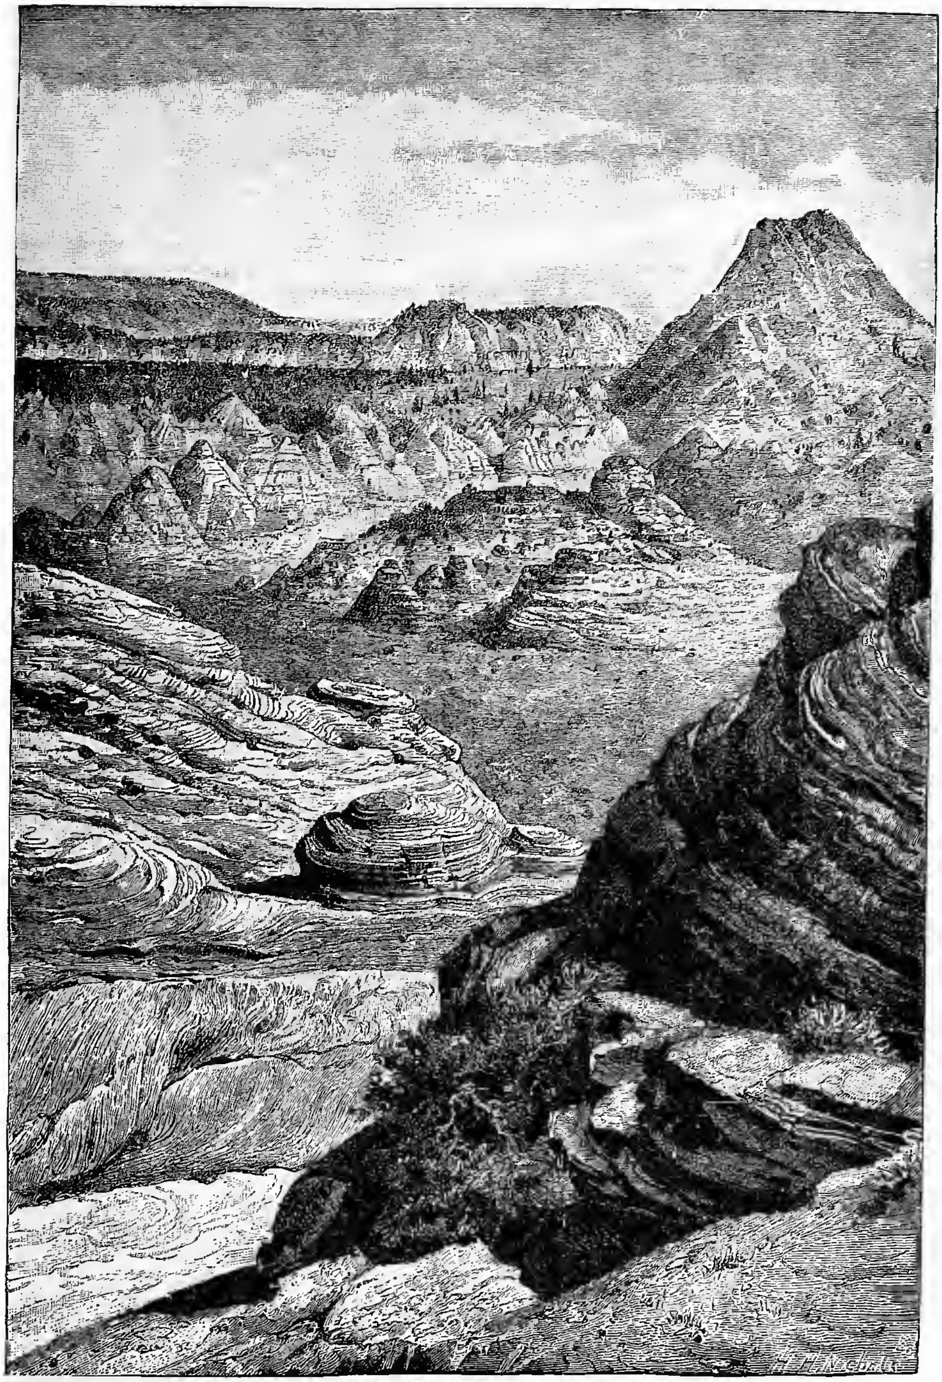
December	18⅞ @ 19	19¼ @ 21	

REVIEW OF THE TIN MARKET FOR THE EIGHTEEN MONTHS ENDING JUNE 1882.

DURING the past year there has been a very active speculation in the London tin market, a fact which has attracted all the more attention because it did not belong to a class of merchandise which one would expect to be selected for speculative purposes. For this very reason, however (that it had become a speculative commodity abroad) it has attracted less than the usual amount of attention in this country. The year 1881 opened at New York with a visible supply of 5,000 tons at 19 cents for Straits. In London the price stood at £93. The product of the world has increased 75 per cent. during the past eight years, this enormous increase being due principally to the steadily increasing output in Australia proper and Tasmania. In 1872 the Australian product began with 150 tons, but it rose at once in 1873 to 2,990 tons; in 1874 it was 5,800 tons; in 1878, 9,500 tons; in 1879, 8,458 tons; in 1880, 9,149 tons and in 1881, 10,084 tons. The increase in the Australian output has come principally from the island of Tasmania or Van Dieman's Land, which lies to the south of Australia and forms one of its colonies, and which has developed its tin mines with great energy and corresponding success; it is, in fact, becoming almost as important as the main land. A very large increase in consumption in this country saved the market from a heavy decline, on account of the steady increase in the world's product, until it was taken in hand by the speculators. The imports of tin into the United States in 1880 amounted to 13,346 tons, worth $6,120,316 against 10,186 tons in 1879, worth $3,605,614. From the Straits alone the shipments to the United States



WESTERN SCENERY—A MIDSUMMERDAY'S DREAM—JURASSIC—ON THE COLOB. GRAND CAÑON DISTRICT.

SEE PART X.

—FROM U. S. GEOLOGICAL SURVEY REPORT.

were 8,650 tons in 1880; 7,300 tons in 1879: 4,140 tons in 1878, and 4,204 tons in 1877. During the early part of the year the shipments from the Straits were light to the United States and correspondingly heavy to England and Holland; consequently the price rose here to 20 @ 20¼ cents, and declined in London to £88. By the close of April the visible supply here was reduced to 1,400 tons, while the price was steady throughout March and April at 20 and 20½ cents. In London on May 1, 1881, Straits tin was worth £87 10s. against £82 for the corresponding period of the preceding year, £68 10s. on May 1, 1879, and £61 in 1878. An unexpected dullness and corresponding weakness was developed in May, and in some instances resales were made here by discouraged holders, thus forcing prices still lower. The quotation went as low as 19⅝ cents and in London, £86 10s. The result was a speculative movement begun in June, which has not yet culminated, although the highest prices were reached some time ago. The visible supply was increased by July 1, in New York to 3,480 tons, and the price had advanced to 20⅝, and in London to £89 10s. In July little was done, but in August, owing to the light shipments to the United States for the first six months of the year, the price rose to 21¼ cents; in London it also advanced to £92. The speculative movement showed more strength in London during September, and the price was pushed up to £96; there was also a gain here of ½ cent to 21¾ cents. By November 1, the visible supply here again reached 5,000 tons, and it became necessary in the interest of speculators to send a portion of this supply to Europe. At the same time the price was advanced in London and Holland by the purchase of some large lots, bought to be held from the market for a time. The speculation was a complete success, so far as obtaining control of the market and running up prices were concerned, notwithstanding it was carried on at a time of the year that the heaviest shipments are made from Australia. In November Straits tin advanced in New York to 22 cents, and in London, after some fluctuations, to £107 10s. There was a virtual cessation of shipments from the Straits this way in November and December, by which through a concerted movement between London and New York, an artificial famine was created, thus giving to the speculation its strongest support. Prices advanced here during Dec. to 24½ cents and in London to £108 10s. @ £110 10s. for spot and futures.

The following table shows the product of the world for several years past:

	1881.	1880.	1879.	1878.
	Tons.	*Tons.*	*Tons.*	*Tons.*
England	8,620	8,907	9,500	10,106
Banca	4,385	3,638	4,253	3,960
Billiton	4,000	4,000	3,259	3,417
Straits	11,324	11,000	11,369	8,350
Australia	10,084	9,149	8,458	9,514
Bolivia	300	200	300	250
	38,123	36,994	37.539	35,597

Consumption last year is estimated to have been 32,000 tons in Europe and 9,000 tons in this country. The total visible supply in Europe and America on January 1, 1882, was 18,736 tons, against 20,938 tons at the beginning of the preceding year and 23,500 tons on January 1, 1880. In Europe one of the greatest items of consumption is the manufacture of tin plates, and the strongest argument in favor of higher prices is the increase of Welsh tin plate exports from 118,800 tons in 1872 to 242,400 tons in 1881. The world's consumption of tin plate is dependent, however, to a considerable extent upon the cheapness of the article, and the unnatural advance in tin that has taken place during the past year must have a very decided effect upon the demand.

There was no halt in prices in January of the current year when sales were made as high as 25½ cents here for spot, with no transactions in futures at the highest figures, while in London the price rose to £114 5s. for spot and £115 15s. for future delivery, an extensive business being done in the latter place; the market was, however, feverish and wide fluctuations were frequent. Quotations remained steady here at 25 @ 25½ cents until the latter part of February, when, in sympathy with the London market where most of the speculative trading was done, the price declined about ½ cent, and continued dull at this decline throughout the greater part of March. As compared with former years the price of Straits tin at the beginning of March was as follows in this market: 1882, 25 @ 25½ cents; 1881, 19¾ cents; 1880, 22¼; 1879, 15⅛, and 1878, 14¾. After a dull market these figures were succeeded by a heavy decline about the middle of April. In a single day, April 14, London prices fell from £106 to £96, and by April 19 the quotations were down to £91 and back to £94. Several failures occurred and the market became very unsettled. There was very little business done here, and quotations could be considered only nominal at about 22½ @ 23 cents. By the middle of May, with a dull market, prices were down to 22 @ 22¼ cents, and on June 1, to 21½ @ 21¾ cents. A little better feeling has prevailed here during the latter part of June and, partly owing to the threatened closing of the Suez Canal, a decided improvement in prices has taken place, sales being made as high as 22½ cents, but the general dullness in all kinds of metals has prevented a realization of the full effect of the Eastern troubles. The imports of tin into the United States for the ten months ending April 30, were 7,879 tons against 7,304 tons for the corresponding period last year.

The following table indicates the prices in New York for the period indicated:

Straits Tin.

Sept. '78	13⅛c @ 13½c	May, '80	16 c @ 18 c
Oct. '78	13⅛c @ 15½c	June, '80	15¼c @ 18¾c
Nov. '78	15¼c @ 17 c	July, '80	18⅜c @ 20¾c
Dec. '78	15 c @ 16 c	Aug. '80	20⅝c @ 21⅛c
Jan. '79	14 c @ 14½c	Sept. '80	19⅞c @ 20¾c
Feb. '79	14¾c @ 15 c	Oct. '80	19¾c @ 20 c
Mar. '79	14¾c @ 15½c	Nov. '80	20⅜c @ 21¼c
April, '79	14½c @ 15 c	Dec. '80	19¼c @ 20½c
May, '79	14⅛c @ 14½c	Jan. '81	19½c @ 20½c
June, 79	14½c @ 15⅜c	Feb. '81	19½c @ 20¼c
July, '79	14½c @ 14⅞c	Mar. '81	19¾c @ 20 c
Aug. '79	14⅝c @ 16 c	April, '81	20 c @ 20½c
Sept. '79	15¾c @ 17½c	May, '81	19⅔c @ 20⅛c
Oct. '79	18¼c @ 25 c	June, '81	19½c @ 20¾c
Nov. '79	22 c @ 24 c	July, '81	20⅜c @ 20⅔c
Dec. '79	20 c @ 22 c	Aug. '81	20¾c @ 21¾c
Jan. '80	21 c @ 25 c	Sept. '81	21 c @ 21¾c
Feb. '80	23¼c @ 24¾c	Oct. '81	21⅜c @ 22 c
Mar. '80	21¼c @ 22⅜c	Nov. '81	20¾c @ 22 c
April, '80	18¼c @ 21¼c	Dec. '81	22¼c @ 24½c

For the past six months the prices have been as follows:

Jan. '82	24½ @ 25½	April, '82	21½ @ 24¾
Feb. '82	24¾ @ 25½	May, '82	21½ @ 22¼
March, '82	24¾ @ 25¼	June, '82	21½ @ 21¾

Prices of Banca tin in Holland since 1873, in guilders, per 50 kegs, have been as follows:

	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.
January 1	70	57¼	50	45	40¾	38½	54¾	55¼
February 1	70	56¼	50½	43½	40	36¾	58¼	54
March 1	62	54	50¼	43¼	40½	40	55½	53
April 1	53	51½	50	42¾	40	43	52¼	53¼
May 1	57	50¾	49	42½	39½	40¼	50¼	52¼
June 1	58½	50	45½	42½	39½	39½	43½	52
July 1	60	50¾	46¼	42½	39¼	39	49	54½
August 1	56½	48¼	44	41⅝	39½	38½	56	55
September 1	57	51	43	40½	37¾	41¼	54½	55¼
October 1	56½	52¾	42½	40¾	35¾	45	52	58½
November 1	58	52¼	44½	43	37¾	57	54½	59¼
December 1	58½	51	44¾	41⅔	39	56	56½	64

The following tables will be found interesting as illustrating the enormous increase in the consumption of tin plate in this country for several years past. The Board of Trade returns of the United Kingdom show the following general export of the article:

Years.	*Tons.*	*Years.*	*Tons.*	*Years.*	*Tons.*
1867	79,000	1872	118,900	1877	153,100
1868	88,400	1873	120,600	1878	156,100
1869	96,700	1874	123,000	1879	197,800
1870	99,900	1875	138,000	1880	217,700
1871	119,600	1876	132,400	1881	242,400
	483,600		632,500		966,100

There was, as is here shown, an increase of 31 per cent. from 1871 to 1876 in the exports from the producing country, and of 52 per cent. from 1876 to 1881. The imports into this country have increased even more rapidly, as indicated by the following figures:

Net Import of Tin in the United States.

Calendar Year.	Tons.	Value.
1876	89,617	$9,376,956
1877	111,907	10,624,575
1878	107,055	9,001,454
1879	154,054	13,208,980
1880	157,554	16,428,558
1881	182,517	14,838,246
1882	65,997	6,138,551

The importations have thus doubled within the past five years. But notwithstanding this great increase in the American consumption, the price of coke tin has fallen to about one-half of what it was before the panic as shown by the following table giving the price of coke tin in Liverpool on January 1, 1873—1882 inclusive:

	£ s d		£ s d
1873	1 14 0	1878	0 18 0
1874	1 9 0	1879	0 16 0
1875	1 9 0	1880	1 7 0
1876	1 2 6	1881	0 16 0
1877	1 0 0	1882	0 17 3

This decline was due on the one hand to cheaper raw material, and on the other to the fact that the output was all along in excess of the demand, notwithstanding the rapid increase of consumption.

REVIEW OF THE LEAD MARKET FOR THE EIGHTEEN MONTHS ENDING, JUNE 30, 1882.

THE production of lead during 1881 was remarkably heavy, the total output amounting fully to 440,000 tons, of which the United States contributed 111,000 tons and of which fully two-thirds were desilverized metal. Some of the western cities have very rapidly become prominent as lead markets, at the head of which stand St. Louis and Chicago. A number of desilverizing works were erected during the year at various points, and there is a growing tendency to arrest the flow of bullion from the Rocky Mountains to the east, not only to supply the local demand, but also to compete with eastern refiners. The market opened in New York quiet and weak, early in January, Common Domestic selling at $4. 30. This very low price, however, attracted the attention of manufacturers, and some good sales were made before the month closed at $4. 75 @ $5.00. There were also 700 tons refined disposed of at $5. 25. From San Francisco there had been shipped by sea in 1880 altogether 9276 tons, of which 9190 came to New York; the previous year the total shipments had been 6413 tons, of which 6162 were for New York. The import of lead into England had been 96,000 tons in 1880, against 102,100 in 1879, and 100,233 in 1878, while there had been exported 33,000 tons, against 37,007 and 34,385. England's production from native mines was 60,000 in 1880, against 51,635 in 1879; 58,020 in 1878; 61,403 in 1877, and 58,667 in 1876. In 1871 it had been 69,037 tons. The import of Pig Lead into the United States in 1880 was 2884 tons, against 1633 in 1879. The export of Pig Lead from Spain in 1880 was 92,400 tons, against 100,336 tons the previous year.

In February prices were barely steady, but by March the long winter began to tell upon the spring trade and before the month closed quotations had drooped to $4.62½. The succeeding month gave no better assurances of an increased demand from consumers, although the reported sales amounted to about 4,000 tons for spot and futures, while the price declined further to $4. 50. The decline was assisted by some leading operators, who sought to break the market in order to buy up stock at low figures. At St. Louis the price fell to $4. 12½. There was an earnest effort made by large holders in May to rally prices, which were pushed up to $4. 62½, only to react again, however, in the absence of a consumptive demand, and the market closed flat at $4. 25. Owing to some heavy purchases by Russia (20,000 tons) a better feeling was created in London, and common English pig advanced to £14 10s. @ £14 15s. Nevertheless reports of a large yield in the west held the American market down, St. Louis declining as low as $4. 05. The New York market was quiet. June was, however, more active and sales of 4,000 tons were made at $4. 25 @ $4. 37½. In July the quotation touched $5.00 in New York and $4. 30 in St. Louis, the building demand for lead during that month and August being very active, and there was also a brisk movement in shot. Estimates were published during the summer showing that the probable consumption in the United States for the year would not fall much short of 120,000 tons. The visible supply was rather light, the price rose to $5. 37½, and a few imports were made from Europe. But notwithstanding the available supply of lead continued light, the price fell in October to $5.00, large consumers depending on the supply on hand and the arrival of some shipments from California. The mild weather of November and December favored consumption which proved equal to the earlier prognostications, and the supply consequently remained light, but the purchases were not heavy. In November the range of prices was $4. 87½ @ $5. 25, while during the last month common became so scarce that it was dearer than refined, selling at $5.00 @ $5. 25, with a few transactions as high as $5. 37½.

The winter of 1881–2 continued remarkably mild, and there was therefore little check to consumption, which gave unusual strength to prices at that season of the year. From January 1 to March 4 quotations did not fall below $5.05, and they ranged between those figures and $5.25. The market was extremely dull during March, and sales were made as low as $4.90, and at $4.85 just at the close of the month. This weather continued, and common lead has since sold as low as $4.60, but most of the transactions have been at $4.85 to $5.00, except during the latter part of May and early in June, when it touched the low price here quoted. The further decline that was then threatened was checked by the burning of the Grant Smelting Works at Leadville, which was not as disastrous to the trade as was at first imagined, but was sufficient to arrest the decline. The market in the meantime has been dull, sales being confined principally to jobbbers.

The average price of common domestic lead at New York, in cents per pound for the periods indicated, has been as follows:

	1877.	1878.	1879.	1880.	1881.
January	6¼	4⅛	4¼	6	5⅞
February	6⅜	3⅝	4⅝	6	4⅞
March	6⅝	3¾	4	5½	4⅞
April	6½	3¾	3	5⅜	4
May	5¾	3½	3	4¾	4⅝
June	5⅜	3⅛	3⅝	4⅝	4⅜
July	5⅜	3½	4	4½	5
August	5	3⅝	4⅛	4¾	5
September	4¾	3⅝	4	4⅞	5¼
October	4⅜	3½	5¼	4⅝	5⅛
November	4¾	3⅞	5⅛	5¼	5⅛
December	4½	4	5¾	5⅜	5¼

The quotations for the first six months of the current year are as follows:

1882.		1882.	
January	$5.05 @ $5.25	April	$4.85 @ $5.12½
February	5.12½ @ 5.20	May	4.60 @ 4.90
March	4.85 @ 5 15	June	4.60 @ 4.85

REVIEW OF THE SPELTER MARKET FOR THE EIGHTEEN MONTHS ENDING JUNE 30, 1882.

THE year opened with a fair demand for spelter in this country and an effort in Europe to force prices higher; the result was that Common Domestic advanced in New York during January from 5 cts. to 5½ cents., while Silesian was steady at 5¾ cts. The expected demand from India did not come, however, to the relief of the London market, and prices began to droop in February both here and abroad, accompanied by light orders. No relief whatever came until in April, when news was received from the West that production had diminished there somewhat, and a little better feeling prevailed for a short time. But this was succeeded by extreme dullness both here and in Europe, and by the end of May the price had declined to 4¾ to 5 cts. Production in Germany was shown to have been 100,000 tons in 1880 against 97,000 tons in 1879. The imports of Calamine from Spain into England had been 32,491 tons in 1880 against 27,631 tons in 1879. The condition of the English market is easily shown by the statement that the London quotation on May 1, 1881, was £15 7s. 6d. against £19 15s. at the corresponding period of the preceding year; £14 15s. on May 1, 1879; £18 on May 1, 1878; £20 5s. May 1, 1877, and £24 on May 1, 1876. It finally became apparent by July that the use of galvanized goods was greater than had been generally estimated, and a somewhat better feeling followed on both sides of the Atlantic, while the subject of forming a syndicate to control the market was again revived. The price rose here to 5 to 5⅛ cts., but with this advance dullness again ensued. Thereafter the market continued barely steady at 5⅛ to 5¼ cts. for Domestic and 5⅜ to 5½ cts. for Silesian, until October, when a decided improvement set in caused by the increased demand for galvanized goods and by greater activity in the rolled metal. A good demand came from consumers who laid in their supplies without the aid of the proposed syndicate. The European stock was low, and with the approach of winter only a light supply was to be expected from the Silesian mountains; the result was a better feeling in the European market as well as in American. Meanwhile the price advanced in New York to 5¾ cents. During November there was a further advance to 5⅞ cents., and the volume of business was restricted only by the supply. London also gained £1 to £17 12s. 6d. Sheet zinc had gradually risen during the year from 7 cts. to 8 cts. In December the market was steady at 5⅞ to 6 cts. for Common Domestic and Silesian, while Sheet zinc sold at one time as high as 8½ cts., but declined again to 8 to 8¼ cts., on receipt of a supply from Europe. The London quotation for Spelter advanced to £18 10s.

England's production of Zinc Ore in 1881 was 27,548 tons, from which 7,162 tons of metallic Zinc were made. Besides this, 43,177 tons of ore were imported, Italy sending 11,028 tons; Greece, 11,485, and Algeria, 17,578 tons, the remainder probably coming from the North of Spain. The import of crude Spelter was 33,301 tons, 13,480 coming from Germany, 7,993 tons from Holland in transit, and 9,402 tons from Belgium. There were also 16,677 tons of manufactures received, Germany contributing 3,797 tons; Holland, in transit, 6,675, and Belgium, 5,907 tons. The export of Spelter and manufactures was 12,237 tons, of which British India took 7,640 tons. Estimating the yield of slab metal from foreign imported ore at the same figure as the domestic British, there was a production of 11,225 tons of metallic Zinc, and adding the import of Spelter and its manufactures, the total quantity obtained from abroad was 92,203 tons, of which 12,237 tons were re-exported. The exports of Calamine from Spain have been as follows:

1880.		1879.		1878.	
Tons.	*Value in francs.*	*Tons.*	*Value in francs.*	*Tons.*	*Value in francs.*
32,491	1786,995	27,613	1,507,781	33,532	2,011,954

The Silesian output of metallic zinc has increased of late years at the rate of about ten per cent. per annum, or 10,000 tons a year. But the large exports of Sheet zinc from Silesia to Russia have greatly fallen off of late, caused by an increase in the tariff imposed by the latter country for the purpose of protecting the Polish production. Poland now produces between 4,000 and 6,000 tons of Spelter, but under protection this amount may be doubled. The total imports by the United States in 1881 were only 3,643 tons, as follows:

	1881.	1880.
	Lbs.	*Lbs.*
In blocks	2,511,203	6,160,653
In sheets	2,676,790	4,288,028
Total	8,187,993	10,448,681
Less re-export—		
Sheets	27,611	74,598
Net import	8,160,382	10,374,083
Equal to tons	3,643	4,631

During the past six months much more attention has been given to the Spelter market than in 1881. At the enhanced price Domestic Spelter has shown great steadiness. It would not unlikely have advanced beyond six cents but for the heavy importation of Silesian, of which some 3,500 tons arrived during the first quarter of the year. The price of Domestic Spelter remained tolerably steady under these heavy arrivals, whereas some brands of Silesian are said to have sold in February as low as 5¼ cts. on the dock. The firmness of the domestic product in the face of these unexpectedly large imports was due, on the one hand, to the reduced output at the West, in consequence of the failure and stoppage of works, and on the other, to increased consumption in this country since September last year. The increase noticed was not only in brass manufacture and for rolling purposes, but especially for galvanizing, notably fence wire. It is estimated that the present annual output in the United States does not exceed 18,000 tons, while the consumption this year may not fall much if any short of 30,000 tons. This would require an importation of 12,000 tons assuming that the stock to be carried into next year is to be as great as that carried over from 1881—2,000 tons.

The market continued strong throughout the first quarter of the year at 5⅞ to 6 cts. against 5 cts. @ 5⅜ @ 5⅛ cts. for the corresponding period in 1881; but for the past three months dullness accompanied by lower prices has been the prominent feature of the market, and there is still no improvement. The quotations for both Domestic and Silesian are 5⅜ to 5½ cts, and in London, £16 15s. to £17. This is the condition of affairs at the end of the first six months of the year, notwithstanding a syndicate was formed in Europe on April 19, representing two-thirds of the European output, for the purpose of controlling the market.

The following table exhibits the lowest and highest prices in cents per pound of Common Spelter at New York for the periods indicated:

	1878.	1879.	1880.	1881.	1882.
January	5⅝ @ 6	4⅜ @ 4½	6⅛ @ 6¾	5¼ @ 5½	5⅞ @ 6
February	5⅜ @ 5⅞	4⅝ @ 5	6¾ @ 6⅞	5¼ @ 5½	5¾ @ 6
March	5⅜ @ 5¾	4½ @ 4¾	6⅞ @ 7	5 @ 5½	5¾ @ 6
April	5⅛ @ 5⅝	4⅜ @ 4¾	6 @ 6¾	4⅞ @ 5¼	5½ @ 5⅞
May	4¾ @ 5⅝	4½ @ 4¾	6 @ 6¼	4⅞ @ 5⅛	5½ @ 5¾
June	4½ @ 5	4⅜ @ 4⅝	5⅜ @ 5½	4⅞ @ 5⅛	5⅜ @ 5⅝
July	4.55 @ 5	4½ @ 4⅛	5 @ 5¼	4⅞ @ 5⅛	
August	4¾ @ 5½	5 @ 5¾	5⅛ @ 5½	5 @ 5⅛	
September	4⅞ @ 5	5¾ @ 6⅛	5⅛ @ 5½	5 @ 5¼	
October	4¾ @ 5⅛	6 @ 6½	5 @ 5⅛	5⅜ @ 5¾	
November	4⅝ @ 5	6⅛ @ 6½	4⅞ @ 5	5¾ @ 5⅞	
December	4⅛ @ 4¾	6 @ 6¼	4¾ @ 4⅞	5⅞ @ 6	

The daily output of the different furnaces in Kansas and Missouri when in active operation, is given as follows:

Pittsburgh, Kan., 10 furnaces	22,500	
Wier City, Kan., 8 furnaces	18,000	
Joplin, Mo., 4 furnaces	9,000	
Rich Hill, Mo., 1 Siemens gas	8,500	
Rich Hill, Mo., 1 Siemens gas	8,500	
		66,500
At Carondelet:		
Missouri Zinc Co., 14 furnaces	24,000	
Glendale Zinc Co., 8 furnaces	18,000	
Carondelet Zinc Co., 4 furnaces	6,500	
		48,500
Total daily in Kansas and Missouri		115,500
Collinsville, Ill., 3 furnaces		5,500
Total		120,500

This makes a total output of 60 tons per day or 22,000 tons per annum. There are also works at Lasalle and Peru, in Illinois, which are capable, it is stated, of producing 50 tons per day, but the zinc at the two places last mentioned, is generally rolled into sheets.

REVIEW OF THE QUICKSILVER MARKET FOR THE EIGHTEEN MONTHS ENDING JUNE 30, 1882.

THE total production of quicksilver in California in 1881 was 60,851 flasks against 59,453 flasks during the preceding year. The exports by sea in 1881 were 35,269 flasks, valued at $1,027,508, of which about 17,000 went to China and 15,141 flasks to Mexico. In its review of the quicksilver market the San Francisco *World* says: "The production during 1881 has not materially varied, compared with former years, neither in California nor in Europe, say about 60,000 flasks here and 50,000 in Europe. Stocks here are moderate, it being the policy of our producers generally to meet the demand under reasonable restrictions. Probably our whole available stock is about 5000 flasks, while in London it was 84,000 on the 23d of last November, according to the statement of the agents of the Almaden Mine (Spain), the Rothschilds, they holding 13,000 bottles and speculators 71,000 bottles. It is safe to say that this large quantity has all accumulated during the past six or seven years, and 10,000 to 20,000 flasks are now being added yearly, which will give in London by the close of the present year 100,000 flasks or over. Prices during the year were tolerably steady at 37 cts. to 38 cts., except on or about the 26th of September, when advices came from London of a sharp advance there from £6 5s. to £6 10s. per bottle, and a few days later to £6 17s. 6d. to £7. The price here was advanced and carried as high as 42 cts. per pound, at which sales were reported. It is, however, to be noted that considerable quantities were taken by speculators, they paying from 37 cts. to 39 cts. per pound. Subsequently the price declined in London, and when the semi-official statement was made of stocks there on the 23d of November, the market fairly collapsed and £6 5s. to £6 2s. 6d. per flask was the asking price, less 3 per cent. Hence the price dropped to the old figures. With an average production, both here and in Europe, it is difficult to see how prices can be permanently advanced, unless new uses can be found for the article or valuable bodies of silver-bearing ore be discovered involving large consumption. As with silver product, doubtless China would take all offered at the same price, but as purchasers for that country, both in silver and mercury, are largely made as a means of investing surplus wealth—another term for speculation—no permanent relief would follow in the matter of stocks of this article, and any advance in prices would be, at the best, only spasmodic. The producer here can hardly be expected, after selling at moderate figures, to hold his stock out of the market and aid the London speculators to work off their large stock at high figures. All indications point to steadiness in price and moderate figures."

The following table shows the production of the different mines of California in 1881, and also the highest and lowest prices for the year. The compilation was made by Mr. J. B. Randol, manager of the New Almaden Mines, which, it will be observed, lead all the rest:

The product of the first six months of the current year has been much below the corresponding period of last year, as is shown by the following table, also from the same source:

	1881. Flasks.	1882. Flasks.	Difference. Flasks.	
New Almaden	12,545	12,508	Decrease.	37
Napa Consolidated	2,914	3,076	Increase.	162
Great Western	3,179	2,711	Decrease.	468
Sulphur Bank	5,962	2,583	"	3,379
New Idria	1,266	977	"	289
Guadaloupe	3,447	732	"	1,715
Reddington	1,224	909	"	315
Great Eastern	506	521	Increase.	15
Various	163	111	Decrease.	51
	31,206	24,128	Decrease.	7,078

Notwithstanding this heavy reduction in the California production, there has been an increased demand from China.

Almaden Mine, in Spain, turned out last year 50,353 flasks, weighing, net, 1,737,572 kg., or 34½ kg. per flask, 76.07 pounds, English. The New Almaden (California) flask nets 76.50 pounds. Between January 1 and April 27, 1882, the export by sea from San Francisco was only 11,639 flasks, against 14,029 during the corresponding time in 1881, but the price, nevertheless, gradually improved there from 36½ cts. on January 1 to 38½ cts. April 27, 1882.

Since 1850 California up to the first of the current year, produced altogether some 1,250,000 flasks, and exported of that amount 890,000 flasks. Toward this amount of production the New Almaden mine alone contributed no less than 710,729 flasks, while the Almaden mine of Spain has turned out, altogether, 902,364 flasks. The highest price was reached in California in 1874-5, when quicksilver commanded as much as $1.55, and the lowest in 1879, when it fell to 33 cts. In London it advanced to £26 per flask in 1874, and receded to $5 17s. 6d. in 1879, since which time the highest figure attained was £7 15s., again receding to £6 5s., from which price it has fluctuated but little.

The Spanish Government at the time of the renewal of the lease of the Almaden mine to the Rothschilds, a couple of years ago, came to an understanding with the lessees that the price should be regulated by the one ruling in London, but £6 was fixed as a minimum. Between £6 and £8 the difference is shared jointly, and if the price rises above £8, Spain receives two-thirds of the difference between £6 and the price obtained, while the Rothschilds only get one-third. The interest of the latter firm in a high ruling at London is therefore considerable, and the only obstacle in the way is excessive production in California. The consumption of quicksilver for gold and silver mining purposes has decreased since 1878, and with the very large output that is constantly taking place, production runs ahead of consumption. Spanish quicksilver has also of late entered into a more active competition for the Hong Kong and other Chinese markets, as well as that of New York. For mere technical purposes, exclusive of

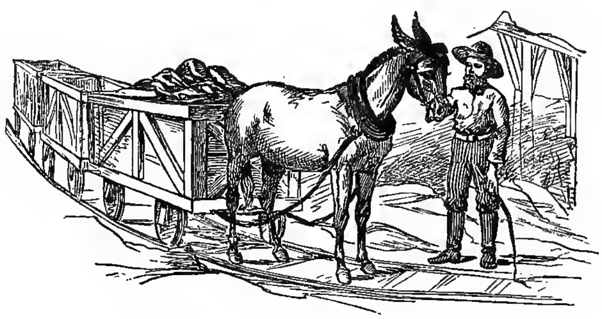
Production in California during 1881, 60,831 flasks, each of 76.50 pounds avoirdupois. Production in Spain during 1881, 1,737,571,600 kg. (50,353 flasks, each of 76.07 pounds, avoirdupois.)

mining, quicksilver is not very important outside of China, where it is used extensively in the preparation of paints, etc. Since quicksilver entered this country duty free, Rothschild has thrown on the New York market, in 1879, 5441 flasks; in 1880, 200 flasks, and in 1881, 3005 flasks, competing advantageously with California dealers here on account of the high freights from the Pacific coast to the New York market.

The world's production of quicksilver was last year 115,-600 flasks, which include Idria, in Austria, and some other minor localities, while the actual consumption for 1881 has been estimated at 110,000 flasks. On January 1, 1882, the stock in London had gradually accumulated to no less than 92,000 flasks, of which only 12,000 flasks were in first hands, the remainder being held by speculators, having been bought long since at high prices.



PART VII.

MINING LAWS AND REGULATIONS—THE LAND OFFICE AND ITS PREROGATIVES—U. S. MINING LEGISLATION—STATE LAWS—THE DEBRIS QUESTION.

LAW and legal difficulties are to many engaged in mining business little short of a terror. There has been so much misery and anxiety caused by the uncertainties of titles, by the ups and downs of legal decisions and the irrepressible conflict of laws that we doubt not Part VII of the MINES, MINERS AND MINING INTERESTS OF THE UNITED STATES, will be very welcome to mining men, furnishing, as it does, a clear statement of all laws touching mineral lands passed up to July 1, 1882. An account of the powers and duties of the Land Office is added, and the Part is appropriately begun with a paper on the relations of government to mining, which, though it appeared in 1870, in Mr. Rossiter W. Raymond's report, is still timely from an historical point of view. The Debris question, a much vexed issue upon the Pacific coast, having recently begun what promises to be a long squabble in the courts, is therefore properly placed in the part devoted to law. The various forms that are necessary to the successful legal prosecution of a mining company's business are also included here.

MINING AND MINING LAW AMONG THE ANCIENTS.

THE main subject of the present discussion being the history of mining jurisprudence, and the consideration of that subject being limited as far as possible to its bearings on the immediate problems of legislation in the United States, I shall not attempt to collect, in this chapter, all that is known of the practice of ancient nations in regard to the arts of mining and metallurgy. The theme is an exceedingly attractive one. Our knowledge of the legislation of earlier times has to be, however, in great part inferred from circumstantial evidence, or from the records which remain of ancient practice. A frequent reference to the history of mining, as distinguished from that of mining law, is unavoidable; yet this account must not be considered as even a complete outline, much less a comprehensive summary of all that is known to antiquarians on this interesting subject. In comparison with the literature concerning the dress, language, mythology, and poetry of the ancients, we have very few books about the much more important questions connected with their proficiency in the mechanical arts, and especially the arts of mining and metallurgy.

Authorities.—Two books published during the last century are the only ones which have come to my knowledge in which the indications and fragmentary facts contained in ancient literature or existing ruins, observed by travellers, have been collected and systematically arranged. One is the work of Caryophilus, *De Auri et Argenti Fodinis Veterum,* of which I have not yet been able to find a copy in this country, though it is accessible in several libraries abroad; the other is a dissertation in the German language, by Dr. J. F. Reitemeier, published in Göttingen, 1785, and entitled *Geschichte des Bergbaues und Hüttenwesens bei den alten Völkern.* This admirable essay received the prize of the Royal Society of Sciences at Göttingen. There is a copy in the city library of Boston, to the superintendent of which I am indebted for the courtesy with which he placed the book at my disposal. Ancient authorities are more numerous, but not so satisfactory, since they give us mostly mere allusions or accidental revelations. Among them we may mention the Bible, Herodotus, Strabo, Pliny, Diodorus, Agatharcides, Clement of Alexandria, Aristotle, (*de mirabilibus, de cura rei familiaris, etc.,*) Dioscorides, Livy, and Polybius, not to mention a multitude of classic writers from whose works intimations of importance can be gleaned, such as Xenophon, Cæsar, Plutarch, and even the legendary poems of Homer and Hesiod. To these sources of information must be added the works of various mediæval and modern travellers, and the researches of antiquarian scholars in special fields of inquiry, too numerous to be catalogued here.

The origin of mining.—The art of mining is linked with so many others, which are the fruit of civilization only, and must be practiced under so many natural difficulties, which only advanced science has been able to overcome, that we may naturally believe it to have had neither a very early nor a very rapid development. No doubt the first races were led to the discovery of one metal after another by accident rather than systematic study of nature. Probably the first metals used by men were those occurring in a native state—such as gold, silver, and copper. The discovery of bronze, or the secret of hardening copper by rude metallurgical processes and mixture with other metals, was a step in the progress of the human race so important that it marks an epoch of pre-historic time, known as the age of bronze. The peculiar properties of gold and silver—their beauty, malleability, and above all their resistance to oxidation, which rendered their preservation possible through long periods, were undoubtedly the ground of that high esteem in which they have always been held, and which is at the present day enhanced by their relative scarcity, and the difficulty of obtaining them. The knowledge of these metals seems to have been indigenous in all countries where they occur, whether among the tribes of Asia, of Siberia, or of North America. Gold and silver are the A and B of the alphabet of metallurgy; and, although the mastery of the whole alphabet and its combinations in the literature of civilization has been the laborious work of ages, and is not yet complete, these first letters of it were beneficently made easy for man to discover. The rudiments of mining are first found in those countries where the human race itself probably had its origin. The Bible informs us that even before the *Noachian* deluge, some of the peoples of Asia understood the use of iron—but this knowledge does not appear to have been propagated among other nations. The Siberians and the Peruvians most certainly did not possess it, and other nations have made the discovery at a comparatively late period; but this only corroborates what we have already said, that the knowledge of metals was not, in the beginning, transmitted from one nation to another, but was the child of circumstances and accidental discovery in different parts of the world. At any given epoch of the first historic eras, before commerce and literature had produced an interchange of commodities and ideas, it is to be supposed that some nations would be more advanced than others in these respects. If the use of iron was confined to the race destroyed by the flood, then it perished with them.

At a much later period we learn that the Chaldeans and Assyrians possessed gold, silver, and "brass." The Phœnicians had also an abundance of metals; and it is more certain, in their case, that they obtained their supply from some sort of systematic mining. Their country itself was not rich in mineral wealth. Possibly they worked the copper mines at Sarepta, but these were their only mines at home. But their extended commerce brought them into connection with other countries abounding in the treasure they sought; and they went to islands of the Mediterranean for gold and other metals, including iron, of which they understood the use, ascribing its discovery to two of their mythical heroes. They are known also to have mined in Spain, (probably for "Tyrian lead" and silver,) and they even touched the distant shores of Britain in their bold explorations, and gathered the tin ore of Cornwall and Devon. But at least an equal antiquity, and a much greater elaboration and system, must be recognized in the mining of the Egyptians. Under the reign of Osiris, the Egyptian mines of copper, silver, and gold were in productive operation. Both on the Ethiopian and the Arabian border, and near Saba, (which may or may not be Sheba of the Bible,) they worked the ores of their country. The Sinaitic desert, through which the Israelites travelled, contains to this day the ruins of mining works, the origin of which is shrouded in mystery, but may well be ascribed to that wonderful people the Egyptians, the extent of whose achievements in many directions the world is just beginning to estimate aright. They did not learn the use of iron so early as that of some other metals. Abraham found gold and silver used for instruments, ornaments, and currency among them, but no mention is made of iron. In the time of Moses, however, as is evident from two passages in Deuteronomy, the Egyptians smelted iron.

Mines of the Persians and Egyptians.—In the early times, as in all subsequent periods, conquest was one of the foes of mining. The Egyptians were twice conquered by the Ethiopians, and had several Assyrian wars, which must not only have produced such a disturbed condition of affairs as prevented the prosecution of mining, but also have drawn into the military service the classes of laborers employed in that business. The final establishment of the Persian dominion removed the disturbances from without, but the tyranny of the provincial governors produced numerous revolts, which doubtless had a disastrous effect upon mining. The Persians, however, amassed much treasure from their conquests, and obtained from the Egyptian mines, in particular, the finest silver. The strength which wealth imparted to this dynasty was painfully felt by the Greeks, in the vast armies which invaded their territory and the bribes with which their leaders were corrupted. The first period in the history of mining closes with the overthrow of the Persian empire by Alexander, and the transfer of the treasure and resources of the Orient into European hands. Meagre as are our data for this period, we are nevertheless led to a reasonably certain conclusion with regard to the tenure and authority under which mining was carried on. We hear of kings, like Crœsus, enriching themselves from the product of the mines; but there is no indication that these sources of wealth were open to private citizens. The immense quantities of gold and silver employed by governments, and their use in constant wars, also confirm our conjecture that the mines of Asia and Africa were the property of the rulers, and that they were worked by slaves. This was certainly the case in Egypt, in the following period. It is probable, therefore, that the doctrine of ownership by the crown of the metals in the earth was originally established by tyranny, and that before its establishment mining, like agriculture, was carried on by the citizens. The story of Joseph, in the Bible, shows by what means the despot of Egypt was able to destroy the individual industry of agriculture, and to turn the whole kingdom into his own farm. Doubtless the process of "consolidation" in mining followed a similar course.

In the second period there was apparently still greater activity and extent of mining operations; at least our information on the subject is more satisfactory. Gold, silver, copper, and iron were obtained in Ethiopia, and iron at least in Libya. Possibly the recent discoveries of gold in Africa, which are now attracting considerable attention from the English, are but rediscoveries of the fields worked centuries before Christ. India and Caramania produced gold, and the latter country also silver, copper, and cinnabar. The people, however, are said by Strabo to have been very ignorant of the art of working metals. The Derbæ did not know how to melt their gold dust into lumps, and the Indians sold crude specimens of rich ore to foreigners. The Chalybeans, on the other hand, became famous as workers in iron, and derived their principal revenue from this source. In Asia Minor the gold mines formerly owned by Crœsus were worked down to the times of Xenophon, but Strabo says that in his day they were exhausted, and only traces of them remained. There were iron mines and skilled workmen in Palestine. Arabia Felix is celebrated by many ancient writers as possessing very rich gold and silver mines, but no traces of them now remain, nor have modern travellers observed auriferous sands in any of the streams of that country. Historical testimony on the subject is, however, quite positive and unanimous, and the matter may be considered as still in doubt. It is not impossible that the ancient writers, who were not always exact in such statements, mistook the treasure obtained by the Arabians through their Indian commerce for a product of their own soil. We may well believe that this wide-spread development of mining, accompanied as it was with a diffusion of government, brought about some change in the mining law. The loosely-strung empire of Alexander fell to pieces after his death, and no doubt the mines became the property of governors, generals, nobles, and wealthy citizens. We have, however, in Egypt a type of the general systems which obtained, on a greater or smaller scale, throughout the petty despotisms which divided the world. Diodorus gives us a picture of Egyptian mining, partly taken from the earlier work of Agatharchides. According to this account the mines of Egypt were the property of its kings, who obtained immense sums from them.

Those were in one sense the palmy days of mining; for the king got his mining ground gratis, worked only the richest deposits, captured or reduced to slavery the necessary laborers, and levied contributions on his kingdom for the necessary food and other mining supplies. Rich mines, worked at no expense, naturally paid handsome dividends. Machines were not employed to any extent, since human power was cheaper. The Egyptian monuments which remain to us represent the most stupendous works of engineering, as accomplished by the labor of countless multitudes of men. The labor of the mines was performed by prisoners of war, convicts, and purchased slaves. As the Egyptians were not a warlike people, and seldom returned from battle victorious, it is not likely that their prisoners were numerous. Neither could the convicts have supplied their extensive mines. It is probable that the greater portion of their miners were purchased slaves. We are, in fact, informed that the workmen in the Egyptian mines spoke different languages. To prevent conspiracies and escapes the different gangs were placed under overseers who were not their countrymen, and all hope of flight was finally extinguished by fetters, by constant confinement in contracted caverns, and by the nature of the region itself, which offered no opportunity for successful escape. The lot of these unhappy creatures in the mines and furnaces was indeed a hard one. They were forced to labor day and night, without rest or hope, and under the most dreadful hardships and cruelties. They were entirely naked, and neither age nor sex, sickness nor wounds, excused them from the severity of discipline. The stronger ones hewed the rock in the mines, the half-grown youths carried the ore to the surface, persons over thirty years (so soon was their vigor destroyed) were set at the easier task of crushing it in mortars, and the women and old men ground it fine in hand-mills. The historian adds, with laconic pathos, that they continued to labor until they dropped dead beneath their burdens.

Ancient Mining in Siberia and Europe.—The far northern country of the Massagetes is said by ancient writers to have produced gold and copper, but no silver nor iron. This is the nearest approach to a mention of mining operations in Siberia which history presents. But the observations of travellers, especially those recorded by Pallas, Lepechin, Gmelin, and Rytchkow,* afford convincing evidence of the existence of extensive workings for gold and copper in Siberia. The tradition of the Russians, that these early miners were Scythians, is groundless. Tartars they were not, since they were unacquainted with iron, which the former knew how to use. A nomadic race they are believed to have been, since no traces of buildings or masonry remain in those regions. All that we can conclude with probability is that, before the irruption of the Tartars into Siberia, very extensive but rude mining operations were carried on in that country by tribes not far removed in culture from the aborigines of North America. The tools which they employed were either of stone or copper—never, so far as has yet been discovered, of iron. The smelting of copper appears to have been successfully carried on, even with somewhat refractory ores. Traces of mining accidents, of the voluntary abandonment of very hard rocks, of great economy of labor in "dead work," &c., taken together with the indications above mentioned of the social condition of this unknown people, prove to us that they carried on their mining operations by individual enterprise, as freemen, and probably without reference to particular ownership of the soil. Although this system (if system it may be called) stands in favorable contrast, on grounds of humanity, with the cruel and tyrannical practices connected with mining in the southern Orient, and especially in Egypt, yet it is evident that its result was superficial exhaustion, abandonment, and finally burial in oblivion of the mines. From the very dawn of history, therefore, these two representative voices of Egypt and Siberia warn us that neither mining by the crown, nor nomadic, superficial mining by the individual, is the true method of utilizing with economy the mineral resources of any country. The first is inconsistent with liberty, and the second with stable industry.

Concerning the earliest beginnings of mining in Europe little can be said. The civilization of the East, as is well known, communicated itself first to the Mediterranean nations. As mining is an essential condition to the progress of civilization, so we may reasonably conjecture the progress of mining at any given period from the culture of the people. We are justified, therefore, in assuming that mining in Europe takes its rise with the emergence from barbarism of the Mediterranean tribes. Strabo, Pliny, and Herodotus declare that Cadmus, a Phœnician, opened the first gold and copper mines in Thrace—a statement which is philosophically, if not historically, true. The Phœnicians certainly carried on mining in the islands of the Mediterranean, and even along the coast of distant Spain. But it is not probable that their operations contributed much to the spread of the art among the barbarians; since they not only, with characteristic selfishness, carried away all the products of their industry to enrich their own land, but kept to themselves whatever knowledge they acquired. They cannot be regarded as the teachers of European nations in this art—a credit which belongs rather to fugitives and exiles from other parts of Asia, who opened mines, or communicated the knowledge of mining, in the regions where they took refuge. The nature of the laws or customs regulating mining differed, therefore, according to the source of the art. The labors of the Phœnicians seem to have derived extent and comparative permanence from the conservative influence of commerce rather than tyranny.

Mining in Greece.—The mining works of ancient Greece are remarkable for extent, antiquity, and improved arrangement. The Greeks mined in the mother country and in their eastern and western colonies, and maintained through many centuries this industry, improving it by their own experience, and even studying it by scientific methods. The works of Theophrastus and Philo on metals are unfortunately lost, as is that of Strabo on machines and methods of parting metals. The remains of Greek mines are too nearly obliterated to afford us any evidence. We must learn what we can from incidental passages in Greek literature, and these refer almost entirely to the mines of Attica. The history of Greek mining may be divided into three periods. The first includes the activity of the mines upon the islands, the oldest of which belonged to the Phœnicians; the second period comprises the operations of the Greeks themselves, on the main land; and the third is characterized by the working of new and productive mines in the provinces of the Macedonian Philip, which finally, with the rest of the Greek mines, fell into the hands of the Romans. The operations of the first period must be mainly inferred from passages in the Iliad and Odyssey; and these are of course to be interpreted with due allowance for their poetic form. When it is said that Helios, or the sun, invented gold, and the mythical, not to say allegorical, Erycthonius discovered silver, while copper was brought to light by the investigations of workmen directed by the gods, we may infer that the order in which these metals became known to the Greeks was similar to that which, as we have already seen, obtains in the history of other peoples. Iron is said by an old Greek inscription to have been discovered at a period corresponding to 1431 B. C. of our calendar. These gleams of early history help us to understand how gold and silver, more than any other metals, have come to be considered the property of sovereigns. They were the earliest known, and that at a time when sovereigns took all they could get and could get almost anything they wanted. Homer's descriptions of the magnificence of Greek princes, if we may interpret them as historical, indicate no small surplus of gold and silver in Greece. It is to be remembered, however, that in the absence of that diffusive action which commerce maintains, and of that great demand for the precious metals to which their use as currency gives rise, the accumulation in a few hands of a comparatively small amount of gold and silver might well justify the glowing descriptions of Homer; and also that if the rich men of the present day were to spend their wealth, not on the means of comfort and enjoyment, not on books and works of art, not on public improvements, but only on plate, armor, jewelry, and chariots, they could far outshine the splendor of Homeric heroes. The islands in which the Greeks carried on mining operations included Crete, (iron,) Thasos, (gold,) Eubœa, (iron and copper,) Cyprus, (gold, and silver, copper, and iron,) Delos, (copper,) Rhodes, (copper, iron, and lead,) Milo, (alum and sulphur,) Seriphos, (iron,) and Siphnos, now (Siphanto, very rich gold and silver mines.) From the mines of the latter island one-tenth of the product was sent every year to the shrine of Delphi. In later times, this payment having been discontinued, the mines were drowned by the rising of the neighboring sea; and this disaster was ascribed to the wrath of Apollo at being deprived of his divine royalty! In addition to these mines upon the eastern islands, there were others, probably of later origin, upon the islands near Italy. Pithecusa, opposite Cuma, was rich in gold; Sicily and the Liparian Islands were also famous for various ores. The petty rulers of the islands were the only or principal owners of the mines, and the labor was doubtless performed by slaves, according to rude and simple methods.

The second period of Greek mining, comprising the operations on the mainland, in Greece proper, is better known and more important. The Spartans, under the influence of their political system, established no important industry of this, or, indeed, of any kind; but the Athenians became distinguished in the administration of the rich silver mines of Attica, and the productive colonial gold mines in Thrace and Thasos. Thessaly had also rich gold ores, Bœotia produced iron, and Epirus possessed mines of silver. These resources seem to have been developed about the time of the Persian war. The public revenue from the Attic mines at the beginning of that war was equivalent to about $30,000, and afterwards increased to much larger sums, which, to-

* The treatise of Pallas is found in *Actis Soc. Imp.* 1780, published at St. Petersburg, 1784; and that of Rytchkow in Busching's Magazine, part 8.

gether with the product of the colonial mines, had a great deal to do with the splendor and power of Athens. The unhappy Peloponnesian war put an end to Athenian mining. In vain Xenophon exhorted his countrymen to reopen the sources of their former prosperity, and prophesied the continuance in depth of the rich ores they had once so successfully worked. The poverty of the citizens, and the exhaustion (in spite of Xenophon) of the mines, were obstacles which could not be overcome. Neither, as we shall see, was the system of the Athenians favorable to the persistent working of mines under discouragement. We may take leave to doubt, at the present day, whether the mineral deposits of Attica are really exhausted; but at that time a temporary barrenness was equivalent to a complete failure. For nothing can carry forward such an industry over its periodical seasons of depression except despotic power on the one hand, or on the other hand that faith in the future which is the result of accumulated experience, called science; and the Athenians had neither of these. Their failure in mining was due to the same cause as their failure in political science; there was no education of the people to take the place of centralized power.

The administration of the Athenian and that of the Egyptian mines differed as widely as did the political systems of the two countries. The State indeed appears to have held a certain title to the minerals, but its rights did not extend to absolute possession, or at least were not strictly insisted upon. Before the Persian war the income of the mines was annually distributed among the citizens, from which we may conclude that the republic either mined for itself or leased its mineral lands. After that war, however, this distribution of profits was discontinued on the advice of Themistocles, although the State still received payments from the mines. It is not improbable that certain mines, especially ancient ones, were rented on special terms, as the property of the republic; but the general practice was adopted of encouraging the development of mineral resources by a liberal and universal code. Taxes on gross production were remitted; citizens and friendly aliens alike were encouraged to mine under the light royalty of one twenty-fourth part of the net profits. The number of private adventurers thus encouraged to mining enterprise must have been very great. Even Demosthenes, in whose day Athenian mining was already on the wane, speaks of them as a class, like farmers and merchants.* The labor was performed by slaves, hired from their owners. The overseers were also slaves skilled in mining. It is probable that in many cases the lessees themselves were slaves, as it was not uncommon in Athens for masters to lease to their slaves factories, workshops, and farms. In such leases the slave-superintendent usually paid a daily net sum *per capita* for the number of laborers employed. The owner of slaves employed in mining received daily one obolus for each. The lessee was rosponsible for the food and clothing, and, in case of flight, for the value of the slaves—possibly also for their lives. No doubt this was a much milder slavery than that of the Egyptians, yet, as the slaves were strictly watched and always kept in fetters, it was oppressive enough, Slave-labor must always be lacking in individual skill and zeal, and make up for this deficiency by increased numbers. Accordingly we find that the slave-miners of Athens amounted to many thousands, or, as Athenœus says, to myriads. History speaks of a miners' revolt, in which the insurgent slaves took possession of Mount Sunium, and from that point made many destructive raids upon the Attic realm. The extent to which the republic attempted to prevent such perils by laws, regulating the number of laborers in each mine, or to control in general the operations of lessees, is unknown. That a certain governmental supervision was exercised appears from the fact that a director of mines was appointed, who indicated to adventurers, upon application, where they might prospect for ore, and that there were laws to determine the methods of mining, and the location, direction, and extent of veins, as well as the proper distance between different claims upon this same field.

Ancient Mining in Western Europe.—Before the time of the Roman dominion, mining was carried on in many parts of western Europe; and although there are little or no traces left of the laws which regulated the industry of the barbarians, I shall briefly mention the localities referred to, partly to complete this historical outline, and partly because the mining jurisprudence of the Romans, like their mining science, was affected by their conquest of those countries where the natives already practiced this art. The Etruscans and the Sabines, in Italy, were acquainted with the use of copper, and the former made early discovery of iron on the neighboring island of Elba, the specular ores of which are famous to this day. The Salassians, in Lombardy, turned the Po into canals, and established extensive washings for gold. The region of the Taurisci and Norici was rich in gold, and at one time the natives invited laborers from the south to assist them in its production; but the result was an over-stocked market, and a fall of one-third in the value of gold, which caused them to send home their laborers and reduce production to maintain the price. The tribes of Gaul obtained gold, silver, copper, and iron. But Spain exceeded in its treasures of gold, silver, copper, tin, lead, and iron all the countries of the ancient world. The barbarian natives obtained these metals from superficial deposits or outcrops, and the Phœnicians and Carthagenians, and afterwards the Romans, extracted them by deep mining. In fact, the art itself was planted in Spain by these foreign nations. The mere use of surface deposits can no more be called mining than the gathering of bunch-grass and pine nuts by our Nevada Indians can be called agriculture. Probably the Phœnicians themselves, in their distant operations in Spain and Britain, engaged rather in commerce than mining, buying the metals of the barbarians. But Carthagenians, we know, established in Spain and Sardinia most extensive and productive mines, the revenue of which enabled them to support a numerous army of mercenaries and to wage long and costly wars with Rome. No doubt these mines were in some form the property of the state. The British islands were the scene of a considerable native industry, comprising gold, silver, iron, copper, lead, and tin. Strange to say, the Britons seem to have lacked or despised the art of manufacturing copper, though they practiced the more difficult metallurgy of iron. The Phœnicians traded with them secretly for tin, and the Romans, by following the Phœnician ships, finally discovered the mystery of the Cassiterides. But the Britons continued, until their conquest by Cæsar, to work their own mines of lead and tin. The tin of Cornwall was shipped first to the Isle of Wight, and thence to the coast of Gaul, where it was loaded upon horses and transported to Marseilles—a journey of 30 days.

Mining of the Romans.—Almost all the nations celebrated for their mines in ancient times became at last the prey of the Romans; and Roman mining was therefore a very widespread industry. Our knowledge concerning it is, however, mainly confined to Europe; since neither the hints of classical writers nor the observations of modern travelers have thrown much light on the Roman mines in Asia and Africa. The poverty of the early Romans indicates that they did not work the mines of their native land. They struck the first silver coins shortly before the first Punic war, when, by rapid conquests in middle and lower Italy, they acquired mines which furnished them the means to greater undertakings. The wars against Carthage made Rome mighty among nations, and eminent in the history of mining. The first two Punic wars delivered into her power the important mines of Sardinia, Sicily, and Spain. Oriental conquests added mines in Asia Minor, Greece, and Macedonia, and at a subsequent period the remaining mines of the east, in Asia and in Egypt, were acquired by the victorious arms of Pompey and Augustus, and those of northern Spain and Gaul yielded to the legions of the Cæsars. The tin mines of Britain were their latest conquest of this sort; and after these had been gained Rome was mistress of all the important mines of the ancient world, and gathered into her coffers the wealth which had before been the strength and glory of many different nations.

As the mines had been acquired by conquest, they became the property, not of private citizens, but of the republic, and afterwards of the empire. In the period after the first Punic war the revenues of the republic were collected, indirectly, through contractors; and the censor, to whom belonged the duty of farming out the finances, awarded

* Demosth. adv. Aristocratem.

at certain times the leases of the mines. Ordinarily, as for instance in upper Italy and Spain, the lessees worked their ground with purchased slaves. In a few districts, however, the native inhabitants were held to a certain amount of labor in mines and furnaces, as a sort of vassalage, like that of the crown-serfs of Russia a few years ago, and this crown-right over their services was granted to the lessees of the mines. The treatment of the slaves was not less inhuman than that practiced by the Egyptians. Diodorus describes both in nearly the same language. The increased money value of a slave among the Romans might indeed have caused some amelioration of his condition for the sake of prolonging his life; but probably this was lost sight of in view of the immediate profit derived from the rapid and reckless robbery of the mines. It was the swift exhaustion and waste of their mineral resources, and not any considerations of humanity towards barbarians, which led the Romans to change their policy of leasing the mines. From an economical point of view no system of mining could have been more injurious to the state. The lessees cared nothing for the future; they took no pains to utilize all the treasure in the earth; they were absorbed in the endeavor to realize as much profit as possible during their limited term of possession, and to this end they employed vast armies of slaves and ruthlessly laid waste the mining lands. Polybius says that the lessees of a single district in Spain employed in their mines no less than 40,000 purchased slaves; and this evil grew to such a size in the gold mines of upper Italy that the censor, in order to delay the exhaustion of the mines and prevent the sudden depreciation of the precious metals, made it a condition of lease that the number of laborers in those mines should not exceed a certain limit. Of course under these circumstances the art of mining made no progress. The Romans took it as they found it among the conquered nations, and rather fell behind their teachers than surpassed them. The system of Egypt, bad as it was, was better than this. The selfishness of despotism was at least more provident than the indifference of democracy. The period from the first Punic war to the empire was characterized by an immense production of metals, and ended with the exhaustion of many of the mines. The despotic emperors took the matter in hand, and, though the past could not be repaired, they reformed the causes of evil. They began to work the mines through regularly appoined officials, instead of leasing them to unscrupulous speculators; and as it was not feasible for the government to obtain so many slaves as had previously been employed by private parties, the system of feudal service from the inhabitants was gradually extended, and the oppression of the former irresponsible administrations was lightened. The crown-serfs, so to speak, were allowed to own and sell land, but the purchaser acquired, together with the property, the obligations of service resting upon the former owner. Slaves were also employed, but these were rather condemned convicts than purchased barbarians or captives of war. The emperors seem to have preferred to apply this system to the maintenance of mines already open, and to have willingly allowed private adventurers to discover and explore new ones. Thus Trajan allowed the Dacian gold mines to be worked by a sort of stock company, (*collegium aurariorum,*) and Valentinian I. gave free permission to prospect for metals on payment of a portion of the subsequent products. Instances are mentioned of private persons owning large and profitable mines, probably by special grant. A new impulse was thus given to mining, and gold mines were opened during the first hundred years of the empire in Dalmatia, Illyria, and Dacia. The supervision of this vast industry required numerous officials, of whom the names only are left to us, such as *Comes metallorum*, the *Comes sacrarum largitionum*, the *Comes Orietis*, the *Vicarii*, and *Rationales.* Probably their duties were chiefly of a financial or magisterial nature, although the *Comes metallorum* may have been a sort of mining engineer.

But agencies came into play which overpowered the good influence of the new system. The errors of the past were, to a great extent, irremediable; the impoverished mines could not compete with others more favorably situated; and finally the irruptions of the barbarians on the borders disturbed or destroyed the industry of many districts. The serf-laborers were quite as likely to join the invaders as to defend the mines against them. From the silence of the later historians we may infer that mining in the Roman empire declined rapidly after the third century; and after the fifth century, when the barbarian hordes overwhelmed with successive invasions the tottering empire of the west, it ceased entirely. The Byzantines maintained it a little longer, but after the seventh century they gradually surrendered their mines to the conquering Arabs. The mines of Asia Minor, Thrace, and Greece were the last which the empire retained. The victorious barbarians no doubt gleaned what they could from the abandoned works of their predecessors. This was done, we know, by the Arabs in Spain, the Franks in Gaul, and the Goths under Theodoric in Italy. But we have no record of their manner of operation, nor can we say in what way the mining of mediæval times grew out of this ruin of ancient mining. There is a chasm of centuries not bridged by historic records.

Mining Law in the Middle Ages.—Mining is the only industry which extends its activity into the earth's interior. The accidental boundaries which topography or commerce may give to landed estates can scarcely be the limits for the extent of underground work, which is rather controlled by the dimensions of subterranean mineral deposits. Mining was therefore even in prehistoric times already separated, as an independent industry, from other exploitations of the soil. It is carried on neither within the same boundaries nor by the same persons as agriculture. Under the influence of this distinction peculiar legal relations were established in Germany at a very early day, probably at the commencement of systematic mining, which have for their subject the subterranean deposits, and are not dependent upon the ordinary laws of property. In the form of a local custom, obtaining with remarkable uniformity in all the original centres of German mining, the principle of mining freedom (*Bergbaufreiheit*) established itself, permitting all persons to search for useful minerals, and granting to the discoverer of such a deposit the rights of property within certain limits. This principle of free mining emigrated with the German miners to all places whither their enterprise extended itself, and the original local custom became the general law. In this existence of an estate in minerals, entirely independent of the estate in soil, lies the distinctive character of German mining law. It is eminently a special law, not subordinate to the civil law, but co-ordinate with it. Its rules and maxims are self-created, and based upon its own peculiar experience. Where the mining freedom of which we have spoken does not exist, where the owner of the soil possesses, as in England, the exclusive right to the minerals contained in it, there can be no such thing as a distinct mining law.

The Roman law gave, as a rule, the mineral right to the land owner; but the opposite principle seems to have sprung up spontaneously in Germany. The earliest record of the German custom is the mining treaty between Bishop Albrecht, of Trent, and the miners immigrating from Germany to that locality, bearing date March 24, 1185. In 1208 the mining customs were officially announced in Trent. The formation of the Iglau code in Moravia took place about 1250, and this system was rapidly extended through Bohemia also. The Schemnitz law in Hungary was formed somewhat latter, but coincides exactly with that of Iglau. The code of Freiberg, in Saxony, was probably brought from the Harz, since Freiberg was first settled by Goslar miners. Its publication took place in the 14th century. The mining regulations of Massa, in Tuscana, date from the middle of the 13th century. The uniformity of these laws is striking, and extends not only to the common principle of free mining, but to special provisions thereunder, and even to certain formulated maxims, which lead us irresistibly to the conclusion that they have in the transmitted habits and traditions of wandering miners their common origin. This was much earlier than the records above cited. Mining is known to have been carried on by the Germans at Andreasberg, in the Harz, since anno Domini 972 by the pawing of a steed, named Rammel, tied to a tree in the forest. Before the return of the master the horse had "developed" a promising vein of ore, and the mountain was baptized in his honor. The Freiberg district was discovered about 1165, by a teamster of Goslar, who picked up a rich specimen of ore while passing through the then unpopulated region. A stampede of miners from Goslar, and the opening of many valuable mines, was the result. Since 1547 the mines of Freiberg have been steadily producing. The mines of St. Annaberg were discovered by one Daniel, said to have been guided by a celestial flame. The mines of Schneeberg were found about 1470 by a specie pedlar from Zwickau, who, travelling by this mountain, noticed a discoloration of the soil, and set some laborers at work. In 1477 the great mass of native silver was found at Schneeberg, and honored by the elector Ernest, who used it on a memorial occasion as a dining table. It was a slab nearly a foot thick, and about 12 feet long by 6 broad. When it was melted, it yielded some 20 tons of silver. The mines of Marienberg date from 1521, and those of Mansfeld, which are still prosperous, from 1199. But older than any of these is Hungarian mining, which can be traced as far back as A. D. 750. Reitemaier* says the German mines were undeniably opened by miners from Gaul; but I think it fair to conjecture from the great antiquity of Hungarian mining, that there was also a direct current of progress from the east, perhaps not unconnected with those operations of the Danube to which allusion was made in a previous chapter. Whatever mining the Gauls did was done under Roman law, and certainly there is no trace of that law in the history of German mining. In this case, as in many others, the tide of Latin ideas broke in vain upon the rocky Saxon character, and retreating left no marks but such as time speedily erased.

The earliest records of mining law in the middle ages do not create, they only recognize and establish, the customs which were even then already old. If the source of these customs is lost in obscurity, so also is their gradual development; for, as I have said, the earliest publication of them was made in Trent—in other words, in a foreign land, where they came into collision with existing systems. Of their peaceful growth at home we have no trace. They suddenly appear in history, adult and strong. But they soon met with opposition and modification at home, where the emperor and the territorial sovereigns laid claim, at the end of the 12th century, to the mining royalty. The German mining law is a product of this antagonism—a compound of mining freedom with mining royalty—(*Bergfreiheit und Bergregal.*) The contest between the two principles occupied part of the 13th and 14th centuries. It was the south against the north, Egypt against Siberia. The proud dynasty of Hohenstaufen began the war. Frederick I claimed the mines of Trent as imperial royalties, (*regalia,*) and forced the bishop to accept a lease of them. The mines themselves were not interfered with. All that the emperor desired was a recognition of his prerogative, as a support to future claims; and, in general, the struggle of the German emperors for the royalty of mines was prompted, not by their desire to appropriate and work them, but by their claim of the right to levy on mining imperial taxes, independently of the different legislatures and sovereigns of the empire. Meanwhile, the territorial rulers saw their advantage in promptly adopting and employing for their own interest the theory of royalty, and finally the owners of the soil made themselves heard, and obtained a certain recognition of their claims to some non-precious metals.

During this conflict of ideas contradictory principles were proclaimed by different parties; and the thirteenth century presents a scene of confusion and uncertainty as to the relations of emperor, prince, landlord, and miner. The famous "Golden Bull" of Emperor Charles IV, dated January 9, 1356, simplified the contest by excluding from it two of the conflicting parties. That emperor was more inclined to augment his hereditary power as a Bohemian prince than to increase the prerogatives of his imperial authority, which would pass to some other German sovereign after his death. He therefore, in the imperial law referred to, surrendered the claims of the emperor in favor of the electors; and in fact the result of this partial surrender was the actual exercise of mining royalty by all the other sovereigns, as well as the electors. But the Golden Bull excluded also the land owner, putting all metals, precious and base, together with salines, under one rule, namely, the right of the territorial sovereign. Two forces were now left face to face, the royalty of the princes, recogized by the emperor, and the principle of free mining, already repeatedly recognized to a greater or less extent by the princes themselves. The relations of these two forces were not determined by the Golden Bull, which left the princes free to enforce their claims as far as they had already done so, or might be able to do so in future. The issue of the conflict, thus left to time, was different in different states; but the essential victory remained with the miners. The princes recognized the right of free prospecting and the right of the discoverer to the mineral deposit discovered, reserving to themselves only the usual tribute (finally the tithe) and the rights of police and magisterial jurisdiction. But although mining freedom thus obtained practical recognition, the rights of the sovereigns were exercised in exceptional cases in opposition to this principle. Mines and whole mining districts were granted without reference to the discovery; and the occasional feature of special grants was accepted as a part of the jurisprudence of mines. The procedure necessary to obtain property in minerals also suffered a change. Mere occupation by the discoverer was no longer sufficient; he must "denounce" his claim, and obtain his lease from the prince or his delegate—generally a regularly constituted office or court of mines, (*Bergamt, Bergbehörde.*) The maxim was still preserved, "The first finder is the first claimant;" but the greater weight was laid upon the "denunciation," (*Muthung,*) and the right of the discoverer was forfeited if he failed within a brief period to make his discovery known in the appointed manner. The princes of different states made use of their power to extend and modify existing regulations, so that mining codes proper took the place of the mass of traditional usages which had accumulated through four centuries, and which have been called by partial analogy the common law of mines.

German Mining Codes of the Sixteenth and Seventeenth Centuries.—One of the first steps taken by sovereigns to confirm by exercise their rights of royalty, was the endowment of certain cities and districts with peculiar privileges, on account of their mines. Turin and Vallensasco, in Italy; Mont Saut, in Languedoc; Truro and Pensance, in Cornwall; the Isle of Wight; Grünberg, Engleberg, and Melchthal, in the canton of Underwalden; several iron mines in the canton of Berne; the Black Erzberg, in the valley of Filisur; Mount Guntzen, in the Alps; Goldberg, Reichstein, Zuckmantel, Kupferberg, and Gieren, in Silesia; Cremnitz, Schemnitz, Altsol, Neusol, Königsberg, Puggany, Tyller, and Eperies, in Hungary; Smaland in Sweden; and Casan in Tartary, are examples of this practice outside of Germany. The mining cities of Germany were very numerous. The Harz alone contained seven, which exist to this day, St. Andreasberg, Altenau, Clausthal, Zellerfeld, Grund, Lautenthal, and Goslar. In Saxony, and particularly in the realm of the Counts of Meissen, was the "ancient and honorable free mining city" of Freiberg, originally called Freistein, the origin of which is interesting as an illustration of the history of the period. The Freiberg district, as I have said, was discovered about 1165 by a teamster of Goslar, (the locality of the famous Rammelsberg mines in the Brunswickian Harz) and first settled by miners from that place. A few years after, Duke Otto of Brunswick quarrelled with his director of mines, (*Bergvogt,*) and the latter, to revenge himself, marched to Saxony with all his workmen. They were joyfully welcomed by the Margrave, who not only granted them extraordinary privileges, but also, for the protection of the Freiberg mines in those uncertain times, surrounded them in 1176 with walls, and built the castle of Freistein in the midst of them. Saxony has many other mining cities, among which may be named St. Annaberg, Schneeberg, St. Georgenstadt, Schwarzenberg, Marienberg, localities of silver mining, and Altenberg, Eibenstock, Scheibenberg, Wolkenstein, and Ehrenfriedersdorf, localities of iron and tin mining. Arensberg at Cologne, and the copper mines of Riegelsdorf in Hesse, are also mentioned among the privileged mining districts. Watering-places were generally favored also, as appears from the following passage in an old essay on mining royalty:

> Regarding mineral springs, hot and metallic baths, it is not considered that a great prince should make a royalty of them, or demand of the guests at such places any payment for their use. For

* *Geschichte des Bergbaues, etc. bei den Alten Volkern,* p. 150.

Almighty God did not cause these springs to flow for the sake of princes and rich people only, but also, and perhaps chiefly, for the healing of the poor. And it is to be feared that they may dry up, if this gift is abused, as indeed was the case with the Griesbach, not far from Strasburg, the water of which disappeared when a certain duty was imposed upon the spring, but reappeared again as soon as the duty was removed. For this reason the Emperor, Charles IV, granted a privilege to the Wildbad of the Canton Berne. If a prince, however, should tax lightly the guests at any spa and use the money for their benefit, as, for instance, in the erection of a church in that place, he may not be reproved.

The principal German mining codes (*Bergordnungen*) of this period are those of Electoral Saxony, Cremnitz and Schemnitz in Hungary, Treves, Joachimsthal, Brunswick-Lüneberg, Zohnstein, &c. There is also a Danish mining code, and a good statement of general principles in the celebrated work of Agricola, *De Re Metallica*. It would be scarcely profitable at this time to review these different systems in detail, or to burden the general description which I propose to give with constant reference to particular sources of information. It will be quite sufficient for my purpose to present a picture of those features in which the codes of this period substantially agree, in order to show the general nature of the system which obtained throughout middle Europe during the period of "paternal government"—a period when political economy was imperfectly understood, and the doctrine that sovereigns might interfere for their own private ends with individual industry was replaced by the notion that governments ought to regulate for the general good all the affairs of the people.

It was principally the flow of precious metals, and afterwards of other products, from America to Europe which brought the industrial problem of the sixteenth and seventeenth century, and placed commerce in antagonism with the hitherto accepted maxims of government. At the end of the fifteenth century the value of the precious metals in Europe reached its maximum. The price of grain in 1494 was only half as much as in 1399; but it rose in the sixteenth century, (or, in other words, gold fell) to three times, and in the seventeenth century to five times, the price of 1494. The effect of this change on mining was disastrous; and the arbitrary measures taken, in accordance with the spirit of the age, to abate the evil, of course failed of their intended effect. It must be remembered that at this time the laws regulating the guilds prescribed precisely how many masters, journeymen and apprentices there should be in every trade, and what wares they might or might not produce; workmen were not allowed to labor outside of their proper city; heavy penalties attended the importation of any article which, in the opinion of the guilds, could as well be manufactured at home. It is not surprising that mining also was administered by the state under a bureaucratic system, and on false notions of political economy. It is amusing to read that in one instance the increase of the number of coal mines was forbidden, *lest the expense of so many deep workings should raise the price of coal*, while, at the same time, the owners of mines nearest the market were prevented from working, because it would not be fair to those whose mines lay further away! In spite of such follies as these, however, there grew up an elaborate, and, in many respects, very wise system of administration, much of which has remained to the present day, and is well worthy to be studied.

A scheme of the organization of this industry would be something like the following:

1. The sovereign.
2. The director of mines, (*Berghauptmann.*) This officer represents the government, and is the highest authority. There may be more than one in the same state if it is a large one. Prussia recently had five, besides one chief director of mines, who was at the same time a sort of minister without a vote (*Vortragender Rath*) in the royal cabinet.
3. Mining councillor (*Bergrath.*) These are inspecting and consulting officers, who make periodical tours through the districts under their charge, and report to their superior. The director of mines and the councillors include within their duties also the administration of smelting works; but all ranks below them are restricted to one or the other department.
4. Master of mines, master of furnaces, (*Bergmeister, Hüttenmeister.*) This officer has charge of a single district, and inspects weekly.
5. Sworn inspectors of mines or of furnaces, (*Berggeschworene, Pochgeschworene.*) These officers inspect daily.
6. Surveyor, (*Markscheider.*)

These six grades must be filled by men of thorough education as well as experience.

7. Captains and foremen, (*Bergsteiger, Pochsteiger, Untersteiger.*) These officers may or may not be graduates of schools. They are chosen for their faithfulness and practical ability, and are constantly under the supervision of the various inspecting engineers.
8. At the smelting works there are assayers, counter-assayers, &c., and there is a paymaster (*Schichtmeister*) elected by the miners and confirmed by the mining court, who takes charge of the accounts of several mines at once.

This is an outline of the system which still prevails substantially in Germany. I am far from recommending, as the sequel will show, the adoption of such a plan by the American government; but mining companies in different districts would be greatly benefited if by free and voluntary association they could effect a similar cheap and effective administration. Under such a system the whole mining enterprise of the Comstock lode could have been superintended by the ablest men in the country at one-quarter the expense which has been incurred under the multiplied administrations of different companies.

As I have said, great weight is laid, in the ancient codes, upon the denunciation of claims. Prospecting seems to have been in most cases unhindered. Says a German writer:

Here occurs the question whether a private person has any right to dig for and mine metals on the ground of another. A doubtful question *a priori*, since "no one may go a-hunting on another's land." It is also forbidden for any one to seek treasure on the land of another, and we might naturally suppose gold and silver mines to be meant; nevertheless the contrary is declared, in view of the general benefit from the production of metals, and the particular advantage of the royalty to the coffers of the state.

This freedom of prospecting was, however, limited so far that the foundations of buildings must not be injured, and all damages done to the surface or to agriculture must be paid. The discovery of a vein must be immediately made known to the master of mines by a denunciation, either written, or, if oral, then followed within three hours with a written one. The master of mines must see that the first discoverer is not cheated of his rights. He also exercises a general authority over all the prospecting work, and when the vein is actually exposed, he issues upon the denunciation aforesaid a permit to work it, (*Muthzettel, Muthschein.*) No such permit can be issued unless the denunciation contains an accurate description of the locality of the vein; until such a definite statement is possible the work proceeds merely as prospecting. After the permit is issued, the miner may go on until he has developed the true dip and course of the vein and opened it to a sufficient depth to require "bucket and rope" for his operations. At this point the master of mines orders a survey and location of the field, which is then regularly leased to the holder of the preliminary permit. Denunciations of placers (*seifen*) may also be received, but the master must then visit the place in company with the royal gamekeeper and forester, and satisfy himself that the proposed operations will not be hurtful to timber, game, irrigating or draining canals, etc., when he may give a license for placer mining. This license, however, he may revoke at any time; and if wilful damage is done in these respects by the placer miners, he may not only eject them, but hold them for the repair of the said damage, and even proceed, if required, to punish them for the wrong committed. The erection of stamp-mills, etc., he may authorize, if not to the injury of others already erected. All mining leases require the work to be continuously prosecuted. Parties engaged in making preparatory shafts and tunnels are allowed no interval, unless they are miners at work part of the time elsewhere. This provision was evidently intended to encourage prospecting by the workmen in their leisure hours, and to give them a chance to become mine owners on their own account; but at the same time to prevent capitalists from commencing work and then dropping it, while continuing to claim such rights as would exclude other adventurers. After the mines are open and ore is struck, the making of the survey and application for a lease is peremptory, and when the lease is once issued, certain delays, caused by natural necessity, are to be permitted. Foul air or much water are good excuses. The longest interval of idleness, however, must not exceed one quarter for silver and two quarters for base metals. Other claimants offering at any time during such an interval, "time is called" upon the idle lessees, and they must presently resume operations or lose the lease, which may then be issued, upon new denunciation, to others. Parties receiving permits to reopen abandoned mines are not obliged to specify the vein or veins they will work, but must report them and take leases upon them as soon as they are discovered.

Leases were generally subject to the royalty, usually 1-10 or 1-20 of gross product, paid to the sovereign. Where the mines were upon private lands, the landlord received a second tithe in lieu of damages. It was common also to give the Elector, "by ancient usage," one-eighth of the stock in every leased mine. This he retained, liable to the same assessments as any other stockholder, and if he at any time declined to pay his share of assessments his stock was forfeit. Poor mines, and in many cases iron mines, were freed from the oppressive tithe. Yet the coal mines were frequently held subject to the metallic royalty. The Counts of Schaumburg are said to have derived as much revenue from coal as other princes from silver. In Holland and Lower Saxony, even peat was laid under royalty, and it was not uncommon to include the manufacture of saltpetre in the same category.

Mining leases covered a certain area of the surface and a space below the surface, either bounded by vertical planes or by surfaces parallel with a dip of the vein. The first was called a square location, (*gevierdtfeld*), and the second an inclined location, (*gestrecktfeld*). The practice of following to any distance outside of the vein leased the "dips, spurs, and angles," was unknown; and I am unable to discover any traces of it in ancient or modern times except in the mining customs of this country. The possessor of an inclined location was generally allowed to work about 30 feet in the hanging wall, and the same distance below the foot wall, (*Vierung, viertehalb Lachter ins Hangende, und viertehalb Lachter ins Liegende*). Within these limits all the ore discovered might be extracted by the lessee. In cases of veins crossing the elder location took precedence, but could only maintain the right to a zone of 30 feet on each side of its vein. In cases of doubtful controversy the matter was compromised by a union of the two mines. The simple square location was applied to beds, masses, and even to true veins, when they possessed a dip of not more than 15° below the horizontal plane. The size of this kind of location varied with the locality and the circumstances, such as the number of associates or stockholders, etc. A frequent size seems to have been about 200 feet square, with the discovery shaft in the centre. The length of a claim upon a vein was also variable. In Frieberg, I believe, 400 feet were allowed; in Hungary 200, and elsewhere, ordinarily, 300. According to the general rule, the discovery shaft stood in the middle of the claim. A mine was generally divided into 128 shares, (*Kuxe*), which might be held by one man, if he could afford it; but such was scarcely ever the case. An old authority says, "a silver mine needs thirty-two stockholders, a copper mine sixteen, and a tin mine eight." Wood for timbering was furnished, when possible, by the royal forester. Where there were no crown lands and forests, the companies must agree with the owners of timber, and it was the duty of the master to preserve harmony and fair play between the two interests. The mines were mostly worked under contracts with the laborers, and the price per foot or fathom (*Lachter*) was fixed by the master and sworn inspector, according to the varying hardness of rock and difficulty and danger of the work. The driving of adits or deep tunnels was the privilege of the prince, but it was almost universally permitted, under certain regulations, to private parties. There were peculiar rights connected with such a work. One was the tunnel-right, (*Stolleniheb*), entitling the lessee to all ores found within about eight feet (5 *Viertellachter*) above the water level of the tunnel, and for a distance of two feet on either side. The second right was the tunnel royalty (*Stollengerechtigkeit*), entitling the tunneller to one-ninth of the profits of any mine drained and ventilated by his tunnel. To gain this, however, the tunnel must really and effectively drain and ventilate; and this royalty might be taken away by the opening of a deeper tunnel, which thus acquired the right to one-ninth the mining profits. In order to gain either of these privileges a tunnel must be a certain distance "under grass," in Saxony 70 feet, and in some states as much as 120. A new tunnel, in order to be entitled to the royalty already enjoyed by an older one, must strike the mine at least 30 feet deeper. Special contracts were frequently made between tunnels and mines, by virtue of which, when the ninth was too onerous and the mine was in danger of failure, a lower royalty was accepted.

The Spanish Mining Law.—The essential features of this law were given in the first report of Hon. J. Ross Brown, and I shall only recapitulate a few important facts in regard to it, referring to that report and to the full compilation of Mr. Rockwell.[1] The royal ordinance of the King of Spain published in 1783, has been ever since substantially in force in Mexico. It asserts the right of sovereignty over all species of metal, and authorizes the concession of mineral rights only while the mine is worked. It is also very full in its directions as to the manner of mining, experience, having shown that a mere temporary ownership of mines tends to a reckless and insecure method of exploitation. This law is remarkable for an attempt to reconcile the two systems of square and inclined locations by an elaborate graduation of the size and shape of the surface claim according to the dip of the vein. Chapter VIII of the ordinance, containing this plan deserves to be quoted. It runs as follows:

Section 1.—Experience having shown that the equality of the mine measures established on the surface cannot be maintained under ground, where, in fact, the mines are chiefly valuable, it being certain that the greater or less inclination of the vein upon the plane of the horizon must render the respective properties in the mine greater or smaller, so that the true and effective impartiality which it has been desired to show towards all subjects of equal merit has not been preserved; but, on the contrary, it has often happened that when a miner, after much expense and labor, begins at last to reach an abundant and rich ore he is obliged to turn back, as having entered on the property of another, which latter may have denounced the neighboring mine, and thus stationed himself with more art than industry—this being one of the greatest and most frequent causes of litigation and dissension among the miners—and considering that the limits established in the mines of the kingdoms, and by which those of New Spain have been hitherto regulated, are very confined in proportion to the abundance, multitude, and richness of the metallic veins which it has pleased the Creator of his great bounty to bestow on these regions, I order and command that in the mines where new veins, or veins unconnected with each other shall be discovered, the following measures shall in future be observed:

Sec. 2.—On the course and direction of the vein, whether gold, silver or other metal, I grant to every miner, without any distinction in favor of the discoverer, whose reward has been specified,[2] 200 yards, taken on a level, as hitherto understood.

Sec. 3.—To make it what they call a square, that is, making a right angle with the preceding measure, supposing the descent or inclination of the vein to be sufficiently shown by the opening or shaft of ten yards, the portion shall be measured by the following rule:

Sec. 4.—Where the vein is perpendicular to the horizon, (a case which seldom occurs,) one hundred level yards shall be measured on either side of the vein, or divided on both sides, as the miner may prefer.

Sec. 5.—But when the vein is inclined, (which is the most usual case,) its greater or less degree of inclination shall be attended to in the following manner:

Sec. 6.—If to one yard perpendicular the inclination be from three fingers to two palms,[3] the same hundred yards shall be allowed for the square, as in the case of a vertical vein.

[1] A Compilation of Spanish and Mexican Law in Relation to Mines, &c., by J. A. Rockwell, New York, 1851.

[2] The reward of the discoverer (chap. iv, secs. 1 and 2) consists in three "portions" of the vein when in a mountain where no shaft nor mine has ever been opened before, and two portions when in a mountain known and worked in other parts. This grant is conditioned upon denunciation within ten days, and like all others, becomes void by four months' neglect to work the mines.

[3] This corresponds to a "dip," as now estimated by mining engineers, measured by the angle between the plane of the lode and that of the horizon, of 85° 25′ to 63° 20′. In the following section

Sec. 7.—If to the vertical yard there shall be a departure of—

Amount of departure.	*Side of square allowed.*	*Dip. in degrees.*	*Depth.*
Two palms, three fingers .	112½ yards	60° 39'	200 yards.
Two palms, six fingers . .	125 yards.	58°	do.
Two palms, nine fingers. .	137½ yards . .	55° 30'	do.
Three palms	150 yards.	53° 08'	do.
Three palms, three fingers	162½ yards . . .	50° 55'	do.
Three palms, six fingers .	175 yards.	48° 50'	do.
Three palms, nine fingers .	187½ yards.	46° 50'	do.
Four palms	200 yards	45°	do.

So that if to one vertical yard there correspond a departure of four palms, which are equal to a yard, the miner shall be allowed 200 yards on the square of the declivity of the vein, and so on with the rest.

Sec. 8.—And supposing that in the prescribed manner any miner should reach the perpendicular depth of 200 yards, by which he may commonly have much exhausted the vein, and that those veins which have greater inclination[1] than yard for yard, that is to say of 45 degrees, are either barren or of little extent, it is my sovereign will that although the declivity may be greater[2] than the above mentioned measures, no one shall exceed the square of 200 level yards, so that the same shall always be the breadth of [claim upon] the said veins by the length of 200 yards, as declared above.

Sec. 9.—However, if any mine owner, suspecting a vein to run in a contrary direction to his own, (which rarely happens,) should choose to have some part of his square [laid off] in a direction opposite to that of his principal vein, it may be granted to him provided there shall be no injury or prejudice to a third person thereby.

Sec. 10.—[Provides that banks, beds, or other accidental depositories of gold or silver shall be apportioned into claims by the miners themselves, attention being paid to the richness of the place and to the number of applicants, and preference given only to the discoverer. The government reserves the right to revise such local mining regulations so as to prevent unfair dealing.]

Sec. 11.—The portions being regulated in the manner described above, the denouncer [that is, each claimant) shall have his share measured at the time of taking possession of the mine, and he shall erect around his boundaries, stakes or landmarks, such as shall be secure and easy to be distinguished, and enter into an obligation to keep and observe them forever, without being able to change them; though he may allege that his vein varied in course or direction, (which is an unlikely circumstance: but he must content himself with the lot which Providence decreed him, and enjoy it without disturbing his neighbors. If, however, he should have no neighbors, or if he can without injury to his neighbors, make an improvement by altering the stakes and boundaries, it may be permitted him in such case, with previous intervention, cognizance, and authority of the deputy of the district, who shall cite and hear the parties, and determine whether the causes for such encroachment are legitimate.

It is frequently said that the Spanish mining law is the best that was ever devised. It certainly is one of the most elaborate, and perhaps was well fitted to the knowledge and social conditions of the era when it was formed. But a careful study of it is sufficient to show that it is now antiquated. The chapter above quoted, for instance, is evidently based on two assumptions: first, that mineral veins very seldom change their course and dip, and that an opening ten yards deep is enough to show what these characters are; and second, that no mine can be profitably worked to a greater depth than 200 yards. The first of these assumptions is not justified by experience; and the second has long since been rendered obsolete by the steam-engine, deep tunnels, and other appliances of modern engineering. The Spanish system in Mexico has certainly stimulated mining, after a fashion, in that country. The mines of Mexico have produced vast quantities of bullion, but a closer examination reveals that the art of mining itself has made little progress; the lack of permanent proprietorship has led to reckless robbery of mineral deposits; very valuable veins have been so unskillfully opened as to render deep workings impossible; the profits of mining have not been expended in permanent improvements, but either carried out of the country or wasted in civil wars; in short, Mexico has been plundered, not developed. She is just so much poorer to-day by the millions she has yielded to man; and those millions are proof only of the magnificent endowment which nature bestowed upon the land, not of any extraordinary wisdom in its administration. At the present time the policy of the Mexican government is to tax mining just as much as it will bear. A recent reduction in the exorbitant charges upon the extraction and exportation of bullion was the result merely of the determination of the mining companies to stop work if these tyrannical exactions were continued; and I do not yet see the signs of an intelligent and liberal policy towards this industry. The spirit of old Spain, which regarded the treasures of the earth as a prize to be avariciously grasped and selfishly appropriated, is still dominant in republican Mexico. An indolent people desires mining to prosper, not that agriculture, manufactures, and all other forms of industry may also prosper, but that all these industries may be unnecessary. The cure for this evil is to alienate the mines from the government, make them private property, put them on a level with other property, relieve them from unjust taxation, and make them a part of a wise general system of internal administration. Whether such a change could be effected as would extend the miner's title along the dip of the vein in depth, I do not pretend to decide. In Prussia the inclined location has been abolished; but that country has been so long the scene of mining operations that almost every group of mineral veins has been sufficiently explored to determine its peculiarities. Hence, by a proper selection of ground on the surface, a mining lessee may secure all the advantages of an inclined location. Whatever be the case in Mexico in this respect, it is, I think, quite necessary at present in our comparatively unexplored mining regions to give the miner what in early days the German law gave him, the right to follow his vein.

Modern German Codes.—The elaborate administration of the mining interest on the part of the state which characterized Germany in the middle ages is giving way to a more democratic policy. Even so late as a century ago, the mining code of Frederick the Great made it the duty of the authorities to superintend all mining operations, to inaugurate them in one district, regulate them according to scientific principles in another, or sustain and protect them where they were already properly established. This policy is no longer necessary. The spread of knowledge and the activity of commerce renders it safe to leave to the mining communities in the main the management of their own affairs. The new Prussian mining law, which took effect October 1, 1866, replacing the former systems of Prussia, Nassau, Hanover, Electoral Hesse, Frankfort, and other provinces, presents the best example of the modern idea, in which education takes the place of government; and I shall content myself with a brief review of its characteristic features, omitting any detailed description of the present codes of Austria, Saxony, and other German states, as prolonging too far this already extended historical sketch.

1. According to the general mining law of Prussia,[1] the following minerals are excluded from the proprietary rights of the land-owner; Gold, silver, quicksilver, iron, (with the exception of bog-iron ores,) lead, copper, tin, zinc, cobalt, nickel, arsenic, manganese, antimony, sulphur, ores of alum and vitriol, pit coal, brown coal, graphite rock salt and other salts occurring with it, and salt springs. These minerals are objects of mining, and the law prescribes the manner in which a title to them can be obtained. The state surrenders entirely its claim to mineral rights, and stands henceforward on the same footing as private citizens, retaining only the rights of police, justice, and finance, which it exercises over every other form of property and labor. Special grants, made under the ancient system, are not interfered with. To be properly objects of mining, the minerals enumerated must be (1) in their natural deposits, and (2) in such forms as can be utilized. Alluvial deposits, such as gold or tin

I have added to each specification the dip in degrees, and also the depth in yards at which, according to this law, the vein, *if it held a regular dip*, would pass out of the mining field into the neighboring one.

[1] The word "inclination" is the same as I have previously translated "departure," and a greater inclination than 45 degrees would be, in modern phrase, a smaller one, that is, the vein would dip less than 45 degrees below the horizon. See remarks on this section, below.

[2] Less.

[1] Perhaps the best manuals on this subject are those of Mining Councillor R. Klostermann, Berlin, and Director A. Huyssen, of Halle, both of which I have freely used, in various portions of this report.

placers, are included; the rare metals, precious stones, amber, petroleum, &c., are either left to the land-owner or made subject to special regulations. Marble and building stone generally are not held as objects of mining. In provinces once Saxon, as in the present kingdom of Saxony, coal belongs to the owner of the surface.

2. Prospecting, (*Schürfen,*) whether by open cuts, pits, shafts, tunnels, or bore-holes, is allowed to all under the following limitations: It must not be carried on upon any public square, street, or railway, nor in grave-yards, nor in places where the authorities forbid it on grounds of public interest, nor, without express consent of the owner, within 200 feet of any building on grounds belonging to the same, nor in gardens or yards. Whoever wishes to prospect on the grounds of another must seek his permission, but every land-owner must give such permission to all applicants, unless some one of the objections above enumerated can be shown to exist. Probable injury to wells, mineral springs, ponds, or neighboring mines is sufficient ground for prevention of prospecting by the mining authorities. The prospector is bound to pay the land-owner annually in advance for the use of his land, if it be necessarily withdrawn by the prospecting operations from other uses, and to return it to him at the close of such occupancy, with damages for any depreciation of its value. All disputes arising are settled by the proper court. The prospector must make formal application in every case to the authorities, and receive the necessary license, before commencing to work. The proprietor of mines in operation cannot forbid prospecting in his field for metals to which he has not acquired the right; but, like the land-owner, he may demand security in advance for possible damages to his own property; and, when the new prospecting work actually threatens the safety or the undisturbed operation of the older mines, the authorities may refuse to allow it. But the owner of a mine has the preferred right to apply for permission to work for other metals than those already granted to him if the authorities decide that the former had better be mined in common with the latter. If the prospector, therefore, discovers them, the previous miner in the same field may claim them.

3. The discovery of a vein must be followed by its regular denunciation, (*Muthung.*) This act, like the recording of a claim in American mining districts, gives the miner at once the right of property in the mineral. The denunciation, which is also an application for license to mine, is made in writing, and in duplicate. Each copy is endorsed with the day and hour of presentation to the authorities, and one is then returned to the applicant. It must contain the name and residence of the applicant, the name of the metal or metals to be mined, a description of the locality in which the vein or deposit has been discovered, and the title by which the mine is to be known. A title already applied to a mine in the same district is not allowable. As I have said, the mere presentation of this document gives the applicant a *prima facie* ownership; but this right is still conditioned upon the investigation of the mining authorities, as to the validity of the alleged discovery. The metal or metals mentioned must be found, by official examination, to exist at the point described, in natural deposit, *i. e.*, not brought there by human agency, and in such quantity as to justify mining. The latter question is a delicate one, and the facts are generally construed with great liberality towards the applicant, who, after all, assumes the greatest risk of loss, if the deposit be poor. But certainly the rights of a land-owner are not to be disturbed to favor some crack-brained adventurer who has found a seam of coal an inch thick, or a lump of galena as large as a walnut. Under this rule the mining authorities of Bonn refused to grant a license on the strength of a few particles of pyrites in the rock. It should be also borne in mind that such a refusal is no real hardship to the prospector, unless he desires to deceive some one, or the public, as to the value of his claim. He is still free to continue prospecting as before. Finally, the authorities have to be satisfied that the proposed concession of a mining field does not conflict with the rights of other parties, whether earlier discoverers or neighboring mine-owners. For this purpose due nctice must be giveu, and a certain time allowed. Meanwhile, the applicant must have the field surveyed by the official surveyor, and file duplicate maps, upon which the discovery-point and boundaries are laid down. This must be done within six weeks after the denunciation, otherwise the latter fails of validity—a very important provision calculated to secure the *bona-fide* prosecution of a claim by the discoverer. The actual discoverer of a vein has, for one week after his discovery, the prior claim, even though another make earlier denunciation; but after the lapse of that period the date of denunciation determines priority of right.

4. Mining rights are granted, as far as possible, in fields bounded on the surface by straight lines, and in depth by vertical planes. The ancient custom of granting "inclined locations" on the dip of the vein is thus entirely abolished, and modern authorities in Europe do not hesitate to condemn it as productive of great uncertainty and litigation. The size of the field on the surface may be a little over five acres in most parts of Prussia, but is restricted to a quarter of an acre in a few districts, for special reasons. Theae areas give only the maximum; of course smaller fields may be granted. The shape of the field may vary, straight lines being the boundaries, and the greatest length not exceeding for a five-acre field about 13,600 feet (2,000 Prussians *Lachter* or fathoms,) and for a quarter-acre field one-fourth that distance. The discovery-point must lie within the field, though not necessarily in the centre.

5. All preliminaries being complete, the deed (*Verleihungsurkunde*) is made out in the name of the king, and published in the official newspaper of the district. It contains the name, business, and residence of the grantee, the name of the mine, the area and boundaries of the field, with a description of its location as to parish, county, civil and mining districts, the names of the metals to be mined, the date, and the seal and signature of the authorities. Three months are allowed for the assertion of conflicting claims, after which the rights of such claimants, in ordinary cases, expire.

Under certain conditions, which I will not pause to enumerate, the consolidation of adjacent mines is permitted. The division of one field into several, or the exchange between neighboring mines of portions of their respective fields, is generally permitted by the authorities; but such divisions or exchanges are not permitted as would leave segregated mining fields too small to be worked independently.

6. The nature of the property thus conveyed to the grantee is defined as "the right to obtain and utilize the minerals excluded for reasons of political economy from the title of the land-owner, and to construct, above and under ground, all necessary buildings and apparatus for this purpose." This right may be sold, mortgaged, and levied upon, like real estate. It must be exercised, however, under certain regulations, justified by the general good, and fixed by the state, and, when these conditions are not complied with, the right itself may be impaired or forfeited. A few of the more important conditions will be enumerated. The mine-owner is bound to keep the mine in operation, if so required by the authorities. It is no longer, as formerly, forbidden to let a mine lie idle for more than a certain period. On the contrary, work may be suspended at any time, without the formal permission of the authorities; and they can only demand its resumption when clearly required by public interests. A great lack of metals produced, and an impossibility of obtaining a supply from other quarters, would be a satisfactory reason for such a demand. The owner has six months' time in which to comply with this demand, and, even before it is issued, is entitled to a hearing of his protest. He may also appeal to the minister of commerce. If he intends to resume work, he gives the authorities four weeks' notice of the fact. But if he fails to comply with their demand, they may proceed to deprive him of his grant, unless the circumstances which made the demand proper have in the mean time changed. Every mine must be worked according to a plan, which must previously be submitted to the government officials, and approved by them. If no objection is made, the mine-owner may proceed with his plan. If the plan is objected to, which can only be on grounds of safety to the mine, the miners, and the public, the mine owner must convince the authorities that their objections are unfounded, or change his plan to obviate them. Violation of this rule is punished with fine, and if necessary the authorities may suspend operations at

the mine. Every mine must have an exact map of the underground workings, and this must be periodically perfected as the work advances. The responsible managers and superintendents of mines must be reported to the authorities, and if necessary examined as to their capacity for their several positions. If a person not recognized as competent by the mining authorities is put in charge of a mine, they may demand his removal, or suspend the operations of the mine until a competent person is appointed. Superintendents are responsible for the proper working of the mines according to the plans agreed upon, and bound to afford the proper officials free opportunity for inspecting the works, and all desired information. The mine-owner is bound to furnish, at stated periods, the statistical information called for by the minister of commerce. He must also permit persons bearing the permission of the authorities to enter his works. (This provision is most beneficial to students at a German school of mines, since they enjoy by virtue of it an opportunity of studying practical operations, such as they could not otherwise obtain.)

7. The mining authorities are: 1. The district officials (*Revierbeamten*;) 2. The supreme mining bureaux (*Oberbergämter*;) and 3. The minister of commerce. The district officials are inspecting and reporting officers or surveyors. The names given in a previous chapter, on the codes of the middle ages, are mostly retained, but the superintendents and mining captains are no longer government officials. The mining bureaus are presided over by the directors, as formerly. They issue licenses and grants, and have the general administration of the law in their hands. The minister is appealed to in the last instance.

8. In addition to these authorities there are the courts, the jurisdiction of which is determined by statutes, and is not at present important for us to consider. It is, however, a fact not without significance that all the German states have various courts, in which cases arising in mining operations may be adjudicated, often without the tedious forms attendant upon ordinary suits. The English court of the stannaries is an institution of this kind, and the English "cost-book" system of stock companies is also the counterpart of the immemorial *Gewerkschaften* of Germany. Our American mining districts contain many examples of mining partnerships or associations of a similar character: and no doubt it will be found advisable in the course of time to establish courts and rules of procedure adapted especially to this state of things, as has been done in all older states. Further remarks on this subject will be found in the portion on English mining law.

9. The Prussian law in respect to the taxation of mines has been greatly simplified, but there still remain many complicated provisions which must be regarded as legacies of the past. In view of the history of that kingdom under the most remarkable dynasty of modern times, its gradual increase from the original limits of the little duchy of Brandenburg, by constant territorial acquisitions, to its present imperial proportions, and the respect which it has always shown towards existing laws and privileges, and towards its own past contracts and grants, it is not wonderful that those differences in legislation which I have mentioned in a previous chapter as growing up in the petty states of Germany should still be to some extent perpetuated in the provinces of Prussia. The present Prussian mining law is based upon nearly a score of ancient codes, and recognizes many local exceptions to its general provisions. There has been, however, a steady progress towards unity and simplicity, and the general outline of this progress is instructive. According to former laws all mines were bound to pay the sovereign a royalty of one-tenth of their gross product free of mining cost to him. This was reduced by the law of 1851 to one-twentieth; by the law of 1861 a gradual decrease was established amounting to one-fifth of the royalty per annum, until the royalty should be reduced to two per cent.: by the law of 1862 iron mines were declared entirely free of royalty, and a new decree established with regard to all mines, by virtue of which, after January 1, 1865, the royalty was to be but one per cent.; and this is the present amount paid to the state under that head. The state pays its share of the expenses of reducing ores, but receives its percentage of gross product free of mining cost.

But in addition to the royalty there were formerly innumerable taxes and commissions paid by the mines to cover the expenses of the scientific and financial administration carried on by the state. In some provinces (as I have said in a previous chapter) the sovereign had a certain share of the stock of every company as a complimentary gift; and on this he could draw his dividends like any other stockholder, being bound at the same time to pay assessments or forfeit his interest. There were quarterly dues, additional quarterly dues, dues for measurements, for specimens, for inspections, for auditing accounts, for supervision and direction, for affidavits, for weighing, for assaying, for surveying, in short for every act which the government officials performed; and these were not fees but fixed sums assessed upon the mines, as a hotel-keeper on the Rhine charges for candles, attendance, etc., the same amount in every guest's account. All these petty payments are now abolished, and in place of them a regular "tax of supervision," amounting to one per cent. of the value of the product, is levied on mines in actual operation. When surveys or other special services are performed for any mine, the official is merely paid a proper fee for his labor. Many of the services formerly performed by the officials may now be done by others, the authorities reserving only the right to insist upon the employment of competent persons. The tax of supervision of one per cent. is therefore nothing more than a contribution from the mines to secure thorough scientific inspection and direction of their works at a far cheaper rate than would be possible under any other arrangement. What American mining company, even among the wealthiest, could obtain the service of a whole board of able engineers and metallurgists, such as the directors and inspectors of every German mining district, by the payment of one per cent. of its product? Certainly in that vast number of our mines which are just beginning to produce, and need more than any others wise counsel and direction, much time, labor, and money are wasted, because competent direction is too expensive. I think it possible to devise a plan, not inconsistent with American ideas of individual liberty, by which the opportunity to acquire such assistance may be afforded to our mining districts. But a national school must first give us the material in the shape of thoroughly trained engineers, before we can expect either legislation or association to secure so great a reform.

To recapitulate: the Prussian law, apart from local exceptions, imposes a royalty of one per cent., which is net revenue to the state, and a tax of one per cent., which the state expends for the good of the mines themselves. I shall urge, in the sequel, that the United States ought to repudiate the whole doctrine of a royalty, as such, and leave the mines free from taxation under that head. The late bullion tax was something of that nature, and has properly been abolished. But that the mines, thus relieved of all burdens, may rightfully be required to contribute something toward the expense of such necessary provisions for their own benefit as they cannot make, in their isolated condition, for themselves, is a far more reasonable proposition, and one which deserves serious consideration. A tax far lighter than the late bullion tax might be so expended as to save to the mines themselves millions of dollars every year. Prussia received from her mines, in 1865, a little over $9,000,000 gold (American.) This was partly the product of mines actually worked by the state, and partly the royalty from others. The expense incurred by Prussia on account of the mines in the same year was more than $7,000,000, leaving a net profit of only $2,000,000. The steady reduction of taxes under such circumstances shows that the government has adopted the wise and liberal policy of administering the mining law so as to secure, not an immediate revenue to itself, but an energetic and skilful development of the resources of the country, rightly deeming the increased production and use of the metals to be worth more to the nation than a few thousand of dollars, obtained by stifling this most beneficent industry.

The Code of France.—It was the law of April 21, 1810, in the formation of which the Emperor Napoleon I took so large a part, which gave its present constitution to the mining industry of France. Under the ancient monarchy the mines were regarded as a dependency of the royal domain, and only the sovereign could grant permission for their exploitation. Such grants had only a temporary character, and were most frequently encumbered with onerous conditions of payment into the royal treasury, besides those which in the majority of cases must be made to the owner of the soil.

After the abolition of feudal rights, the mines and mineral deposits of France were placed, by the law of July 28, 1791, at the disposal of the nation, and the government was authorized to make "concession" of them; but this concession was at the same time forbidden to be otherwise than temporary; and, moreover, all that part of every mineral deposit lying within a hundred feet of the surface was expressly reserved to the landed proprietor, who also had a right of preference in obtaining the concession. These provisions nearly amounted to a prohibition of general mining. It was made easy to mine in the case of those persons only who, being farmers, would probably not care, or know how to mine; and it is no wonder that, under these restrictions, little progress was made in the exploitation of mineral deposits.

The law of 1810 declared, in accordance with the Code Napoleon, that the property in minerals goes with the property in land; but stipulated that the government might separate the two, granting the mineral right, even in perpetuity, to another than the land-owner, on the single condition of a tribute paid to the latter. It made this property in minerals negotiable and taxable like any other, putting it on a basis as secure as that of real estate. In this way protection was given to capitalists desiring to engage in mining, and an era of prosperity, previously impossible was inaugurated for the mines of France. The law, in making this distinction between surface and subterranean proprietorship, has included in the class of mines only those substances which by reason of their nature or the manner of their occurrence must be exploited in a certain way, according to special rules. All other minerals are left to the proprietor of the soil, and may be worked under a simple permission, or without such permission, subject to the police regulations established by government. *Minieres*, or surface works, such as beds of iron-ore, workable by open excavation, pyritous earths, suitable for the manufacture of copperas, or deposits of peat, require the permission referred to; quarries (*carrieres*) of building-stone, marble, granite, sandstone, &c., require only observance of the police regulations. Mines, in the sense of the law, capable of becoming the objects of a concession, include therefore mineral fuels, bitumens, sulphur, alum, and metalliferous deposits of every kind except the beds of iron specially classed as *minieres*. Among the substances thus legally subject to segregation from the surface proprietorship, only two, mineral fuel and iron, are worked to any large extent in France. Aside from these, there were in that country in 1860, only 247 mines of all kinds, classified as follows:

Graphite and bitumen	50
Pyritic and aluminiferous ores	15
Rock salt and salt springs	29
Antimony	24
Manganese	20
Lead and galena	18
Lead and silver	27
Copper	9
Copper, lead and silver	17
Lead, silver, zinc, copper, and other metals	30
Gold and silver, separate or together	3
Arsenic, separate or with gold and silver	2
Tin	2
Sulphur	1
Total	247

At the time when the law of 1810 was passed, however, the mines of France were not so limited in number. The productive provinces west of the Rhine, which now belong to Prussia, were then included in the empire of Napoleon; and the principles of mining law, as well as the rates of taxation established by the French law of 1810 and the imperial decree of 1811, remained in force under the Prussian supremacy until the end of 1864. The only change made by the Prussian law in regard to loyalty is the subjection of salt mines and springs in those provinces to the state. This was necessary on account of the monopoly of salt maintained by the Prussian government. In all other respects the law of Napoleon virtually continued in west Prussia.

The provisions with regard to taxes were these: Each mine paid a certain fixed sum per annum, according to the size of its field, and also a tax of 5 per cent. on net profits. To this amount one-tenth was added to cover incidentals. The net profit was ascertained by subtracting the cnrrent expenses, only, not the cost of permanent improvements, from the total production. These taxes amounted in the aggregate to about 2 per cent. of the gross product; and since the 1st of January, 1865, they have been replaced by a single tax of that amount. It is, of course, much easier to collect a tax on gross receipts than on net profits, and the result is the same to the mines. Prussia has also declared the iron mines free of tax. Thanks to the law of Napoleon, which swept away with vigorous hand the accumulated privileges and forms of the past, or, perhaps, we might rather say, thanks to the revolution which burned off the forest-growths of centuries and left him an open field, and finally, thanks to the judicious legislation of Prussia, less hampered here than in her eastern provinces, the districts west of the Rhine enjoy one of the simplest and most efficient mining codes in the world.

Mining Law of England.—The English law of mines is, like all English law, the growth of centuries, and complicated with many local regulations and "immemorial customs." The oft-quoted "case of mines," in the reign of Elizabeth, referred the crown right to the common law, and the decision of the judges was that all gold or silver ores belonged to the crown, whether in private or public lands; that any ores containing neither gold or silver belonged to the proprietor of the soil; that the king[1] could grant away mines of gold and silver, but not without express words in his patent, demonstrating his intention to sever the mines from his royal patrimony. It is indeed not improbable that the crown once laid claim to all mines, and it is well known that at a comparatively recent period it was attempted to comprise within the royal prerogative all those of copper and tin on the ground that these ores necessarily contain some portion of gold and silver. In the reign of William and Mary, however, two enactments[2] secured to the subject the enjoyment of all mines in which tin, copper, iron, or lead are found, nothwithstanding any quantity of the precious metals mixed. The property in minerals unsevered from the land, whether held together with the property in the land or separate from it, is what the law terms corporeal hereditament, as distinguished from the mere right to work for them, which is an incorporeal hereditament. Apart from the claims of the crown, the property in minerals is *prima facie* in the owner of the fee of the land, whether in possession, remainder, or reversion, or subject to the tenancy of other persons. But the property in minerals is not necessarily accompanied by the right to work for them.[3] Indeed, when the owner of the fee is not in possession, nobody can work for the minerals; not the tenant, lest he commit a waste;[4] not the lord of the manor, because he has not possession of the surface, nor even of the subsoil. The minerals are part of the demesnes of the manor, and naturally follow the fee in every case. Thus, for instance, minerals found on the sea-shore below ordinary high-water mark, belong *prima facie* to the crown; between the ordinary and extreme high water mark, to the owner of the adjoining freehold; in land suddenly left by the retirement of the sea, to the crown; in land formed by the casting up of alluvial matter, to the lord of the manor. The property in minerals, and the right to search for them, may be vested in other persons than the owner of the fee, by alienation, prescription, or custom.

In the case of alienation there is an important distinction between such a conveyance as confers an estate and such as

[1] Plowden, 31, 310, quoted in Hon. J. Ross Browne's first report, p. 217. The quaint reason given by Onslow in this case was that, "because gold and silver are the most excellent things which the soil contains, the law has appointed them, as in reason it ought, to the person most excellent, and that is the king." (See Pettus, Fodinae Regales.)

[2] 1 Wm. and M., c. 30; 5 Wm. and M., c. 6.

[3] For these and other points, see authorities quoted in Collier's Law of Mines, p. 14, *et seq.*, from which much of this sketch of the English law is taken.

[4] Tenants may dig *open* mines to get for their own use gravel, clay, marl, or manure, and, it has been held, coal and iron also.

merely confers a right to dig, without property in the minerals until severed from the soil. A conveyance of the former class is binding forever, whether the owner of the minerals continues to work for them or not. This distinction of law between an estate in minerals and the right to mine is an important one; it describes exactly the step which the United States government takes, in the mining law of 1866, by which a perpetual estate is granted to those who had up to that time only been able to enjoy a possessory title, conferring the right to mine. According to the English statue of frauds no legal interest in minerals beyond that of a tenancy at will can be created or transferred otherwise than by writing. The effect of this and other statutes is to make an instrument under seal necessary for the conveyance of any interest beyond that of a tenant at will, or for less than three years, as also for the conveyance of a right to dig for minerals. The most general form of conveyance for particular interests are either leases of the minerals or licenses to dig them for a term of years. A license is not exclusive in its nature unless expressly so drawn; the grantor may work himself for the minerals, or he may license other persons to do so. Conflicting claims, arising out of different licenses, would probably be decided in eqnity in favor of the party in possession and actually working.

A lease is necessarily exclusive of the rights of all other persons, vesting in the grantee the absolute possession of the whole of the subject-matter demised.[1] The legal estate in mines can only be alienated in the modes thus noticed; but an equitable interest, with a title to a share of produce, may be acquired by agreement, either written or spoken, expressed or implied, attended with equitable rights against coadventurers, and with legal liabilities to the public. A mining company, for instance, can only acquire title to mines by deed (*i. e.*, by an instrument under seal) or by prescription or custom, of which I shall speak presently; but each stockholder may acquire effective title to his share of profits by virtue of a mere certificate, or, rather, by a mere agreement, of which the certificate is the convenient expression or result. This kind of title in mines is subject to the statutes affecting partnership, joint-stock companies, and cost-book mines.[2]

Prescription and custom, as has already been said, may also vest in other persons than the owner of the feet the property in minerals, or the right to search for them. According to Coke,[1] prescription is a personal usage, as that such an one and his ancestors or those whose estate he hath, have used, time out of mind, to have such an advantage or privilege. Prescription can be claimed only by the owner for the time being of the freehold; an incorporeal hereditament only can be subject of it, and it must be of origin beyond the time of legal memory; in other words, the right to work for minerals, but not the legal estate in them, may be subject of prescription.

Custom is defined to be a usage of the inhabitants of a certain district, and requires three things for its validity: It must have its origin beyond legal memory, ("from time whereof the memory of man runneth not to the contrary;") it must have been uninterupted; and it must be reasonable. The law is very careful to guard against the abuse of this right. In fact, the whole institution of "immemorial custom" is based only upon the principle that it is better to allow certain deviations from the rules of abstract justice laid down for general practice, than to commit the greater injustice of invading the established usages of society, and disappointing the well-grounded confidence of honest citizens therein. The notion that a custom may be arbitrarily created or modified at any given time, "by popular sovereignty," so as to affect the vested rights of property, is foreign to English and to every other law worthy of the name. It really overthrows the whole foundation on which this humane maxim has been built. A good illustration of an immemorial custom, affecting the right to mining property, is the "tin bounding" which formerly prevailed in Cornwall and Devonshire, and is still valid, though comparatively disused in those districts. A charter granted in the third year of King John to the tinners of Cornwall and Devon speaks of it as already ancient.[2] In the recent case of Rogers *vs*, Brenton, 10 Q. B., 26, the custom was stated and confirmed by the jury as follows: "That any person may enter on the waste land of another in Cornwall, and mark out by four corner boundaries a certain area; a written description of the land so marked with metes and bounds, and the name of the person for whose use the proceeding is taken, is recorded in an immemorial local court, called the stannary court, and proclaimed at three successive courts held at stated intervals; if no objection is successfully made by any other person the court awards a writ to the bailiff of the court to deliver possession of the said 'bounds or tin-work' to the bounder, who thereupon has the exclusive right to search for, dig, and take to his own use all tin ore within the described limits, paying to the land-owner a certain customary proportion of the ore raised under the name of toll tin. The right descends to executors, and may be preserved for an indefinite time, either by actually working and paying toll, or by annually renewing the four boundary marks on a certain day." Similar customs exist in Derbyshire, in the forest of Dean, and in various parts of Europe. In the case above alluded to, Rogers, the plaintiff, claimed his exclusive rights

[1] The granting clauses in the form of a lease of metals, with license to dig, use of water, &c., are as follows:

"In consideration of * * * he, the said A B, hath given, granted, and demised, and by these presents doth give, grant and demise unto the said C D, his executors, administrators, and assigns, all copper, and all other ores, metals or minerals (except coals) to be found in, under and throughout the lands and premises comprised within the limits hereinafter described, * * * together with full and free liberty, license, and authority to dig, mine, work and search for the same, and to raise and bring to grass all such copper and other metals and minerals, * * * to carry away and convert the same to his and their own use and uses, and at his and their wills and pleasure to pass and repass, carry and recarry, and to drive, dig, work and make any new or other adit or adits, shaft or shafts, pits, drifts, leats and watercourses in, over, upon and through any part of the said premises, and to use those already made and driven, and to erect thereon any shed or sheds, mill or mills, engine or engines, or other buildings as he * * shall from time to time think necessary and convenient for the more effectually working the premises aforesaid, and for working, washing, dressing, cleaning, manufacturing, bringing about, and making merchantable such copper and other ores, metals and minerals, * * * to have and to hold, use, exercise, and enjoy all and singular the several powers, liberties, and authorities hereby granted and intended so to be, (excepting and reserving and subject as aforesaid,) * * * from the day of the date of these presents for and during the term and time of —— years now next ensuing, and fully to be complete and ended." * * * * *

The grant is qualified by various agreements between the parties. The use of water may be granted for the purpose of mining, subject to the rights and privileges of others already acquired, and to such other reservations as the circumstances require. The time, manner, and amount of payment of rent or royalty is specified (*tribute* is not strictly rent,) and the lessee is bound to keep proper accounts, accessible to the landlord, to work the mine with all reasonable expedition "regularly and effectually, and in every respect according to the most approved modern practice of good miners," etc., etc., with greater or less fulness of detail, according to the whim of the parties. My experience in this country rather favors the drawing of a mining lease in general terms, leaving it for the courts to decide, in case of disagreement, what is fair dealing on either part. Detailed specifications in the lease do not obviate, but complicate, litigation.

[2] The cost-book system in use in Cornwall and Devonshire differs from ordinary partnerships on the one hand, and joint-stock companies on the other. The principal distinction from ordinary trading partnerships appears to be the absence of the *delectus personæ*, and consequently a limited liability: while the organization differs from that of a stock-company in the fact that its powers are not delegated to an aristocracy of directors, but directly exercised by the whole body of shareholders.

The following is the form of transfer of share in a cost-book mine:

"I, —— ——, do hereby, for valuable consideration, sell, assign and transfer unto —— —— —— parts or shares of and in a certain mine of adventure, called ——, situated in the parish of ——, county of ——, together with the like share or proportion of and in all engines, tools, tackle, materials, ores, halvans, moneys, and all other appurtenances thereto belonging, together with all dividends and profits in respect of the said part —— or share, and all interest, privileges and advantages to be derived therefrom. As witness, &c.

"I —— ——, do hereby accept the said —— shares, subject to the same terms and conditions, rules and regulations, as the said —— —— held the same."

[1] 1 Inst., 113.

[2] Quod possint (stammatores nostri) omni tempore libere et quiete abasque alicujus hominis vexatione fodere stammum, et turbas ad stammum fundendum * * * *sicut solebant et consueverunt*, et emere buscam * * * et divertere adquas ad operationem eorum in stammariis *sicut de antiqua consuetudine* consueverunt.

as a bounder, though he had neglected the mine for many years, pleading that the bounds had been regularly renewed. The defendant was agent of a company which had begun to work the mine and refused to recognize the alleged rights of the plaintiff. Much evidence was given concerning the nature and prevalence of the custom. The witnessess agreed that the bounds could be preserved by mere annual renewal without working, and some of them doubted whether even the ceremony of renewal was necessary, except as evidence of the right. They also differed as to the consequence of neglecting to renew on the exact day. None could assign any limit to the surface of land that might be included within the four corners, but it was said to be generally very small. One of the most experienced witnesses remembered a pair of tin-bounds "a quarter of a mile each way," but this was the largest he knew of. Only one instance was recollected by any witness of bounds recently proclaimed; all the wastes of tin-mining districts were supposed to be already under ancient bounds. The jury found, as to the question of fact, a verdict for the plaintiff, on the ground that working was not essential to the custom. The court, however, decided that the custom as found to exist by the jury was unreasonable in as far as it conferred a right to bounds on a person not actually working. The opinion pronounced on this occasion by Lord Denman is a most thorough and elaborate explanation of the principles underlying the case, and deserves to be studied by American legislators. I quote a few passages:[1]

"Upon the ownership of the land, giving a *prima facie* title to minerals, the custom of bounding has been engrafted. * * * In substance it is this: the mine is parcel of the soil; the ownership is in the owner of the soil, but it is a parcel which to discover and bring to the surface, may ordinarily require capital, skill, enterprise, and combination; which while the bowels of the earth, is wholly useless to the owner as well as to the public; and the bringing of which into market is eminently for the benefit of the public.

"If, therefore, the owner of the soil cannot, or will not, do this for himself, he shall not be allowed to lock it up from the public; and, therefore, in such case (unless, by enclosure, he may seem to have devoted the land to other important purposes inconsistent with mining operations, such as agriculture or building) any tinner, *i. e.*, any man employing himself in tin mining, may secure to himself the right to dig the mines under the lands, rendering a certain portion of the produce to the owner of the soil.

"It is right to observe, in passing, how every step, even in this strong invasion of the rights of ownership, still is made with reference to them. In the first place, the land to be bounded must be wastrel; if it be several and enclosed, it must have been anciently bounded while wastrel, and so, in the language of the country, assured for wastrel; the liability must have first attached on it, therefore, before enclosure and devotion to other useful purposes. Then after the tinner or bounder has commenced by cutting turves, and so making out the limits within which he will work, proceedings are to be taken in the stannary courts, of which the owner has noticed, and sufficient time is allowed before the bounder's title becomes complete, during which the owner may still intervene and preserve his rights entire, so as he will exercise them for the benefit of the public. If he abstains from any interference it may well be considered that he has consented to the bounder's proceedings; and the customary render of the portion called toll-tin may be very sufficient consideration to him for what he gives up of his original exclusive rights. * * * This then brings us to the point which was more especially contested on the argument, whether this customary right can exist without continuing *bona fide* to search for tin, and to work the land for mining purposes with the enclosed limits; whether it is sufficient to renew the bonds annually by a new cutting of the turves as at the commencement. Assuming for the present the validity of the custom, if the *bona fide* working within the bounds be made a part of it, and assuming that it is a custom which is to be tried by the tests established by the common law for the ascertaining whether a custom be good or not, it appears to us that without this qualification it cannot be sustained. Customs, especially where they derogate from the general rights of property, must be construed strictly; and above all things, they must be reasonable. Bounding is a direct interference with the common law rights of property; it takes from the owner of the land, who is unable or unwilling at a particular moment to dig for tin under his waste land, the right to do so, it may be forever, and vests it in a stranger, making only the customary render in return; it empowers the stranger not only to extract the mineral from beneath the surface, but to enter on the surface, and cumber it with machinery, buildings, and refuse stuff which the operators below occasion,[1] and all this without the least regard to the convenience or interest of the owner. The only things which make this reasonable are the render of the toll-tin to the owner, and the benefit to the public secured thereby in the extraction of the mineral from the bowels of the earth. Both these are not only lost, but the latter, it may be, positively prevented, may decline to work and yet retain the right to exclude the owner. Instead of insuring that the minerals should be brought to the surface, the custom so construed may be made the means of keeping them locked up within it, and at the same time preventing any improvement in the surface. Many bounds may become the property of the same owners, who may think their interests best served by limiting the supply and diminishing competition, while the owner will decline to spend his capital in building or agricultural improvements, because at any moment the bounder may renew his operations, and entirely without compensation defeat the purposes of his expenditure. If it be said that the public good is best served by that regulated supply which best serves the private interests of the bounder, that wherever it is for the interest of the public that the mine should be worked, the interest of the bounder will be to meet the demand by an adequate supply, and that when the mine is not worked, it is only because it is for the interest equally of both that it should not be; without admitting or denying the truth of these assertions, our answer is that, where such a state of things has existed so long and so decidedly as to amount to reasonable proof that the original purpose with which the bounds were enclosed has been abandoned, it is unreasonable to maintain the bounds themselves. It may have been that the owner did not enclose the land or work for the mineral himself, only on account of a temporary inability, or the temporary existence of the same causes which the bounder now alleges as the ground for his ceasing to work. Why then is he to lose his earlier and better right forever, and under the same circumstances the bounder to preserve his? Another answer is drawn from regarding the original purpose of the custom, which was not founded on the doctrine of demand and supply, but on the expediency simply of bringing the mineral to the surface for the use of men."

In view of these and other considerations, the court held that the provision in question was void, because unreasonable; and there are good grounds for supposing that the unqualified right claimed was also historically to be refuted, as but an abuse of the original limits of the custom.[2] I have quoted this exposition of the law at some length, because the principles laid down are universally applicable and just. They apply with equal force to the case of mines in public lands; and the frequency with which they are violated by the whimsical "regulations" of mining districts in the United States is an evil which requires immediate attention, now that those regulations have been formally recognised as valid to some extent in law, and as furnishing a proper basis for the acquisition of the estate in minerals from the general government. I do not find any traces in the law of England of a recognition of the right to follow mineral deposits in depth outside of the boundaries marked upon

[1] The opinion may be found in 10 Q. B., 26, and the passages here quoted, with others, in Collier's Law of Mines, p. 33 *et seq.*

[1] According to the legal maxim, "Cuicunque ali quid conceditur, conceditur etiam id sine quo res ipsa non esse potuit." The right to obtain minerals comprises the right to do all that is necessary thereto.

[2] The ancient charters were granted to tinners "operantes in stannarriis," and "dum operantur." In Carew's *Survey of Cornwall*, fol. 136, ed. 1769, it is said, "These bounds he is bound to renew once evereie yeere, as also in most places to bestow some time in working the myne, otherwise he loseth his privilege." Collier, quoting from Smirke, gives these and other instances.

the surface. Statutes regulating the manner of working mines, the employment of children, &c., have from time to time been made by Parliament. So, for instance, a bill passed February 14, 1860, provides for the regulation and inspection of mines, and prescribes general rules as to safety lamps, ventilation, guide-rods, &c.[1] The laws and equities relating to mining in England are administered generally by the courts of chancery and common law. There is, however, a court of very ancient origin,[2] called the stannaries court (formerly several courts, called stannary courts, held before the stewards of the four stannaries) and now presided over by the vice-warden of the stannaries. This court has both common law and equitable jurisdiction, concurrent with that of the superior courts and the county courts, and affords an easy and expeditious method of settling such disputes as arise out of mining transactions. The proceedings in equity concern chiefly the mines operated on the cost-book system, and contrast favorably with the prolonged, complicated, and expensive operations of the courts of chancery. The late Prince Albert was lord-warden of the stannaries.

OPEN LETTER OF R. W. RAYMOND RELATIVE TO MINERAL LANDS.

THE principle of the right of the sovereign to the ownership or control of any of the minerals in the earth, apart from proprietorship of the land itself, is not recognized by our laws. The government, like any private proprietor, possesses the surface of its lands, together with all that lies beneath them, to the center of the globe. There is no distinction in this respect between the base and the precious metals, or between the Atlantic and Pacific slopes, or between the areas acquired by the United States from individual States and those obtained by treaties with foreign nations or Indian tribes. So far as I am aware, the government owns the minerals when it owns the land, and not otherwise. The mineral right, however, although it accompanies the surface ownership, is separable by the act of the owner. A farmer in New Jersey may lease or sell the right to mine and carry away all the iron ore in his farm, with the privileges of entry and use of the surface necessary to mining operations, retaining his title in all other respects unimpaired; or he may thus dispose of the right to a single bed or vein of ore, retaining all others. A farmer in Pennsylvania may in a like manner lease or sell all his "coal rights," or the right to one or more specified seams of coal, reserving to himself, undiminished, whatever is not thus transferred. A party owning two adjacent farms may grant the mineral right to a given deposit of coal, ore, or other minerals upon one of them, with the right to follow and mine in the other that deposit only. All these and many varieties of grants actually occur in our Eastern States; and the rights thus conferred, as defined by the agreements creating them, are independent of surface ownership, although in their origin they rest upon the principle that the owner of the surface owns also the minerals beneath it. The government occupies precisely this position towards the public domain. It can do what it likes with its own. There is no "miners' right," created by the discovery of valuable mineral in any part of that domain, except what the government chooses to create by its own voluntary acts. By such acts it is bound, as an individual would be, neither more nor less. It is as free as any individual would be to dispose, as it may see fit, of any rights not already conveyed away; to change its policy at any time; to lease or sell on new conditions, or to decline to lease or sell at all. This elementary statement seems to be required to correct a popular impression that the principles of the law of mines are different in different parts of our country, and that there is some mysterious obstacle in this difference to the introduction of a uniform system. The fact is, that the owner of a gold mine in Georgia might, if he chose, sell his mine on the terms described by the government to purchasers of gold mines in Montana; and the government might, if it chose, by a change in the statute, alter its terms in Montana to conform to the present usual practice in Georgia. The course of Federal legislation in this respect has been dictated by policy. Its object has been to encourage the development of the mineral resources of the public lands, and to transfer the ownership of both land and mineral rights to individual citizens. That this course is wisest in itself, and best adapted to the spirit of our institutions, scarcely admits of question. The policy of administering the public lands as a means of producing revenue, through mines, timber, agriculture, or rents, is one which a highly centralized or despotic government may perhaps pursue; but certainly, is not suited to Democratic or representative government; and even in monarchical states, it has not proved advantageous, as may be inferred from the general tendency in all enlightened nations at the present day, toward the transfer of governmental enterprises to private hands. It may be questioned, perhaps, whether a system by which the government, as in Spain, Portugal, and Mexico, retains the ownership of mines, and leases them upon conditions involving their continuous working, is not calculated to secure a more active and steady mining industry than a system which, conferring individual ownership, permits mines to lie idle at the will of their owners. But I think no one can fail to perceive, upon thorough consideration, that the advantages of the Spanish system are delusive, and that its disadvantages, in the expense of administration and the inducements which it offers to the "robbing" of mines, are greater than its advantages, even if these were real. The tenant of the government mine will work it if it be profitable, of course. He would do the same, if he owned it. When it ceases to be profitable, he may continue operations for a while, rather than lose his lease. But there is no economic gain to the State in forcing its citizens to unremunerative labor. On the contrary, if a mine does not pay, it is best that it should be closed, while labor turns to more productive enterprises; and if a mine is to be closed it is far better that this should be done by an owner than by a tenant, for the owner may hope to resume operations under more favorable circumstances while it is the interest of the tenant, whose abandonment of the property is final, to rob it of all accessible value and leave it in ruins. As for the revenue to be derived from renting mines, two things may be confidently asserted: First, if it were wise to burden the industry of mining with a tax not laid upon other forms of production, this could be done more effectively, conveniently, and equitably by a bullion tax; and secondly, it is not wise to do anything of the kind. I am aware that, a dozen years ago, while the bullion tax was collected by our government, I favored in my report to the Secretary of the Treasury its continuance in a reduced measure, and its devotion to special purposes for the benefit of the mining industries. I will not pause here to explain in what particulars the circumstances and in what particulars my views have changed. It is quite sufficient at present to say that the obvious policy of the government is to treat mining like any other industry, and to administer the mineral lands, like the agricultural lands, with as little machinery and as little interference with private enterprise as possible.

We come, then, to this proposition—the United States is the holder, as the trustee of the people, of a vast area of mineral land. On the whole, it is best to sell this land as fast as possible, not looking for large revenue from its sale, but rather transferring it to private owners at prices that will repay the cost of the surveys and other necessary proceedings, and under conditions that will favor the exploration of its resources. To encourage mining, or at all events to lay no unnecessary burdens upon it, and to get rid of the unproductive property in mineral lands which cannot under our system be made productive by the government—these are the objects to be attained by Federal legislation. In selling the mineral lands should the government make any distinctions as to price? It would have a perfect right to do so; and it seems at first glance a wrong to the people that public property worth many millions of dollars should be given away to those who have no other claim than that of discovery. This point deserves careful consideration. There are three ways in which the government might derive

[1] Levi's Annals of British Legislation, ix., 1861.

[2] Confirmed rather than created by charters, 3 John and 33 Edw. 1, often subsequently recognized and defined, and finely established in its present form during the reign of William IV.

pecuniary benefit from the developed value of the mines on the public domain. It might provide for an estimate of value by its own officers, and a price based on such an estimate. It might sell the mining locations at public auction, thus leaving the estimate of value to competing purchasers. Or, it might reserve a certain percentage of the gross or net product of a mine—an unassessable interest in the property—which, in case of a large and profitable development, would amount to a considerable sum. These three alternatives cover substantially all that could be done in this direction, apart from the actual retention of ownership by the government, and the collection of mine-rents. As to the first of these, it is evident that in most cases no government officer could possibly make a just estimate of the value of a mine, before it had been worked; and no intending purchaser would spend money in developing it, without knowing at what price he could buy it; nor would it be for the interest of any intending purchaser to develop the real value of the property and thereby enhance its price. The sale of locations at auction is open to similar objections. Nobody will explore and develop a piece of mining ground, with the knowledge that every proof of value which he may expose will make its acquisition more costly and more doubtful. But if such sales are to be held without previous exploration of the claims, then the chances are that the prices to be obtained by this method will not exceed the ordinary rates sufficiently to pay for the extra trouble and cost of administration. The third alternative—the reservation of a portion of the proceeds of a mine—would prove in practice, I think, difficult, odious, and unremunerative. It would be really a special tax. If levied upon gross production, it would bear severely on struggling enterprises. If levied upon profits, it would involve an inquisition into private business, a premium on deceit and concealment, and a vast amount of official labor for comparatively small return. It would be like the revenue tax on spirits in difficulty of enforcement, but not in resulting revenue. We may conclude, then, that the true policy of the government is to sell the mineral lands outright at uniform prices and with as little trouble and cost to itself and the purchaser as possible, seeking its profit, not in the direct proceeds of sale, but in the rapid development of natural resources and the establishment of prosperous communities. It remains to be considered whether the present system of Federal mining law, as construed by the courts and administered by the General Land Office, effectively executes this policy; whether it needs reform; and, if so, whether that reform should be of the nature of moderate amendment or radical change. In the discussion of these questions, I shall strive rather to present an impartial statement of both sides then to advocate a definite scheme. No scheme suggested by individual study or experience can claim to be the best under the circumstances; because it is of the very essence of the problem that the system adopted by the government shall be acceptable to the mining communities. The present arrangement, whatever may be its defects, has the positive recommendation that it will work, is working; that it is a growth, and, like all growths, possesses vitality, which mere symmetry without vitality cannot replace; that its evils are known, while those of a new system are unknown. Moreover, it is of the utmost importance that any proposed reform shall be practicable and acceptable, because its failure to be adopted and successfully executed would indefinitely delay, and perhaps defeat, all reform in this department.

The declaration that the Government of the United States "owns the minerals when it owns the land, and not otherwise," might be deemed inexact as to Mexican land grants within our borders, not yet confirmed by United States patents. Such grants, if they did not originally convey to the grantee the mining right, reserved that right to the sovereign; and upon the transfer of sovereignty to the United States, this reserved ownership of the metals passed to our government, which thus became, in these instances, proprietor of the metals in the land otherwise owned by private parties. But the same leading cases in which this rule was laid down (chiefly the so-called Mariposa cases) contain the decision that a patent in confirmation of a Mexican grant is not restricted to the interest transferred by Mexico to its grantee, although such Mexican grant did not convey the precious metals. The practical application of this principle annuls the effect of the preceding one, and justifies the general statement that the right to metals in the soil, as a royal prerogative, is not incident to the sovereignty of the United States or of any single State. The present system of Federal legislation originated in the tacit recognition of miners' customs, and has been gradually developed with perpetual, perhaps excessive, regard to those customs. Its general outlines are so generally known that I shall not burden this letter with a description of them. Still less can I attempt to discuss in detail its doubtful or ambiguous features, although some of these may receive attention in passing. I purpose rather on this occasion to consider directly the evils which seem to attend the operation of our present system, and the possible remedies for such evils. Not all the complaints so loudly made deserve the attention or fall within the proper sphere of the government. People who engage in mining, on the public lands or elsewhere, have no special claim to be protected against the consequences of their own ignorance or over eager credulity. The hazardous nature of the industry is good ground for rejecting the notion, once generally entertained, that special burdens should be laid upon it—that the mines, in some way not demanded of farms and factories and railroads, should "pay the national debt" but it is not good ground for asking the government to furnish the technical knowledge required in mining, or to exercise supervision over mining operations. The general aid given to all the industries of the country by a scientific survey, and a complete statistical review of its resources and activities, is all that can be properly conceded; and this will never prevent the complaints of many adventurers who have suffered damage through the risks and difficulties peculiar to mining. The evils of "speculation" of which we hear so much, cannot be cured by legislation, if, indeed (as I do not believe), they are unmitigated evils, or if, (as I do not believe) speculation could be repressed at all, without producing something worse. We may set aside, then, all those features inherent in the industry of mining itself, as matters which the government cannot mend, and with which it should not meddle. Another set of embarrassments arises from the peculiar present conditions of mining in the public domain. The law-abiding instinct of our people is remarkable. The rudeness and violence often observed in our frontier communities cannot hide from the thoughtful observer the deeper fact that our institutions have bred in the masses a notable capacity for self-government. The very first step in a new mining district is the making of laws; and the degree to which such laws have been respected and enforced by public sentiment is a significant testimony in behalf of democracy. But this state of affairs, though infinitely better than barbarism, and certain, as experience has shown, to pass by peaceful gradations into the complete, lawful organizations of society, necessarily involves much initial confusion, bearing the germs of future trouble. The fundamental right of property fails of adequate definition among a host of pioneers, settling suddenly, like a swarm of bees, in the trackless wilderness. The entrance upon the public lands of population in advance of official surveys, is the most prolific source of embarrassment arising out of the present conditions of mining in those regions. Nearly all the other evils of this class will cure themselves faster than Congress could cure them. This one, however, needs, in my judgment, a special remedy. It will not cure itself under the present system of land surveys. A system is imperatively called for, which will permit the surveys to keep pace with the pioneers. The exact determination of points of reference all over the country, to which local surveys could be referred, and the abandonment of the futile attempt to lay out our whole national area like a checkerboard, with meridians and parallels, would, I think, be a wise and feasible measure, so far as the mineral lands are concerned. Of the agricultural land system I am not qualified to speak; but it seems plain enough that the reform required for the mountain lands, which mostly contain the mines, would be required also for the valleys inextricably intercalated among them, and occupied with mill-sites and ranches. I conclude, then, with regard to the evils, inherent, not in the nature of the mining industry, but in its present conditions in the West, that they are either (1) such as may be left to cure themselves, or (2) such as the local governments of States, Territories, and municipal subdivisions should deal with, as they deal with other matters affecting public peace and the enforcement of contracts; or (3) such as the Federal Government, the owner of the public domain, may measurably remedy by a more nearly adequate provision for the reception of settlers, and the adjustment of their initial relations to the land.

We now come to a class of evils inherited from the earlier (and to some extent, still continuing) local customs. In my official reports (particularly the first, transmitted to Congress in 1869), to which, for brevity's sake, I beg to refer, without further citation, I have discussed at some length the absurdity of permitting the title to mineral lands to rest upon the shifting and untrustworthy basis of an irregular, periodical *plébiscite*, the edicts of which are carried out by irresponsible officials, and the records of which often may be, and often have been, exposed without efficient guardianship, to loss, destruction, mutilation, or falsification. It has repeatedly happened that the disputed possessory title to valuable mining property has turned upon the memory or honesty of contradictory witnesses, concerning records which could not be found, landmarks which had disappeared, "customs" which had been repeatedly amended, repealed and forgotten, and acts performed pursuant to or in violation of such customs by persons who had long since left the district or the world. Even if all mining recorders were sworn officers; if all their records were properly kept and guarded; if the local regulations were carefully prepared, not liable to sudden change, and permanently preserved for reference, there would still be great confusion arising from the lack of uniformity in the methods of acquiring and maintaining title. Something has been done, as I shall hereafter show, to remove the evils inherited from the miners' "customs." What remains to be done is to abolish altogether the irregular and whimsical subdivisions known as "mining districts," with all their officers, and to make all mining titles on the public lands originate in entries duly attested and preserved in duplicate or triplicate by the regular officers of the United States. Once, this would have been difficult and expensive; but I think the time has come when it can be thoroughly done, and will meet with the approval of the mining communities themselves. Should the Federal Government attempt to replace all local regulations with a complete mining code? The answer to this question depends largely upon the meaning of the terms employed. It is evident that in all points within the sphere of State governments, legislation should be left to them; and, by analogy, though not with the same force, we may conclude that similar freedom should be accorded to territorial legislatures. According to the principles already laid down, the United States is simply the owner of certain lands, the development and sale of which it desires to promote. It is the business of the local governments to look after the peace and general welfare of the inhabitants; even considerations of political economy, such as the prevention of irreparable waste, would not justify the Federal authority in doing more than to look after its own property. Consequently, it seems to me, nothing should be done by Congress to establish mining regulations apart from such measures as are required to encourage the exploration and purchase of the public mineral lands, and (as incident to this end) to convey to the purchaser definite and secure title. It may seem desirable, on the whole, that the size of mining claims should be made uniform by law over all the public domain. The present law fixes the maximum length and a maximum and minimum width; but within these limits any size may be fixed by local "custom" or rule; and the liberality of such "custom" is apt to depend upon the number of miners to the acre present when the "custom" is ordained. It must be remembered that the practice of fixing these dimensions by votes of the inhabitants grew up at a time when they involved only the use of the surface for mining purposes, such as dumps, machinery, buildings, &c., and not such an absolute ownership thereof as rendered any intrusion by others an act of trespass. The miner was not limited by his surface in his underground operations; nor did his prior surface right hinder in any way the explorations of other prospectors, or their workings of other veins within the space covered by his claim. Hence, very narrow surface claims were adequate appendages to very large mines. In any attempt to sell its mineral lands, the policy, as well as the clear right, of the United States seems to be to divide the property into parcels of such size as will be at once most convenient to itself and most attractive to the buyer. Under the present law, however, there is no great practical difficulty in consolidating claims so as to obtain a sufficient portion of the main lode, which is the object of the purchase. Moreover, the State and Territorial legislatures have done much, and in many cases have done it admirably, to supersede with definite codes the previous local regulations of the districts. I am inclined to think that the size of the claims, *under the present system*, may be left to them within the limits fixed by the Federal law. If the present law is not changed in any other particular, I do not think it need be changed in this, except so far as to provide for certain cases in which the actual width of a vein at the surface is greater than the width of the claim. This point may be better discussed under a subsequent head.

Passing from the evils inherited from the mining customs, we come to consider such as are the legacy of former Federal legislation. The acts of Congress intended to correct the causes of complaint arising under the absence of all uniform law have entailed upon us some unnecessary complications, which have been further aggravated by conflicting decisions of the Land Office and the courts. The Supreme Court has brought order out of chaos in a number of cases which have reached it; but many moot points remain, and will, perhaps, never be settled, before the necessity of considering them shall have passed away entirely. I refer now to those difficulties only which arise from the features of our earlier laws (principally that of 1866), repealed or amended by later acts with reservation of all vested rights. The law of 1866 has been held in some cases to convey to the patentee under it no real ownership of the surface, but to give him, nevertheless, underground rights which the act of 1872 does not confer. This doctrine was partly overthrown by the decision in the "Eureka case" in 1877; but a recent decision in Utah shows that some courts, at least, hold that, among the vested rights of a locator prior to 1872, the right to follow his vein *on the course* into the ground of a prior locator is included, and cannot be destroyed even by the patent of the United States granted (prior to 1872) to the prior locator. It is claimed also that parties locating under the act of 1866, though they did not apply for patent until after the passage of the act of 1872, had a "vested right" to obtain, under the latter acts, a patent comprising all the privileges granted to patentees under either act. I have elsewhere argued, at length, the unsoundness of these and similar contentions. I mention them here simply to show the nature of the complications inflicted upon us by past legislation. I do not see that legislation is required to remedy this state of things. The number of mining claims located before 1866, held by uninterrupted possessory title ever since, but not made subjects of patents, is not large enough to require a general measure; and the troublesome questions of so-called "vested rights," accruing under the earlier statute will best be settled judicially. This brings us to consider briefly the evils developed in the administration of the present law. There is cause for complaint in the expense of proceedings attendant upon the procurement of surveys and the perfecting of titles. Your inquiries in the mining districts will have shown you that these expenses are not only onerous, but exceedingly irregular, being much greater in some districts than in others. As the true policy of the government is to sell its mineral lands, no unnecessary obstacles in the way of costly proceedings should be interposed. And this point is particularly reasonable in view of the fact that the surveyors who charge whatever they can get for their services have in many cases proved to be somewhat careless workmen; so that there is reason to complain of defective, as well as expensive, preliminary work. Changes in the machinery of the law, whether its general principles are changed or not, will be required to remedy such evils. The multiplicity of officials may be reduced; their duties may be redistributed; and they may be paid by the government, and bound to pay over to the government all their legally-determined fees. The result should be a saving to the people and no loss to the public treasury.

We have considered briefly the inherent, the inherited, and the administrative evils of our Federal system of mining law. We now take up, in conclusion, a fourth class of evils attendant upon that system, namely, those which flow from the main features of the sections of the Revised Statutes constituting our only national mining code, and which requires, as a remedy, important changes in the law, not mere reforms of administrative detail, such as have been alluded to under foregoing heads of this discussion. I repeat the declaration already made as a starting-point, that the true policy and avowed purpose of the government is to sell its mineral lands on such terms as will promote their exploitation. Whatever may be the alternatives to which we are now shut up, we had, in the beginning, the possible course of renting the mines, or in other ways getting a revenue from them. I have already expressed my views on this point, and it may, therefore, be passed without further comment. Assuming, however, that the mineral lands should be definitely disposed of, the government might have, secondly, transferred them to the States as fast as these were organized and admitted, or, thirdly, sold them in large quantities to private persons or corporations. In either case, the expense of surveying and selling in detail would have been saved. But the public advantages sought by the system actually adopted could not have been attained under any plan which permitted a monopoly of the lands, or the growth of conflicting rules in different localities as to the exploration and acquisition of mineral property by individuals. It may fairly be maintained that the retention of the mineral lands by the general government, with a view to their sale under uniform laws, to *bona-fide* miners or mining corporations, was, under the circumstances, wise. But the law, as it stands, fails to secure fully the objects for which it was designed. What it should do, to secure those objects, is to encourage prospecting merely as a preliminary to purchase; to hold out inducements, or even apply pressure, which will lead the "possessory owner" or temporary occupant of a mining claim to become, as soon as practicable, its purchaser; and to give to each purchaser a definite and secure title, as a protection to him, on the one hand, and to the intending purchaser of a neighboring claim on the other. In all these points, the law is more or less defective; and its defects may be classed under two heads. Those which spring from the right to follow a lode in depth outside the side lines of the surface claim constitute the first class; and their consideration involves the question, whether it would be wise and practicable to cease granting this right, and limit by vertical planes drawn through the side-lines as well as the end lines of surface claims the ownership of mines patented hereafter. The defects which may be remedied without this fundamental change in the law constitute another class; and of these I purpose to treat first, concluding my survey of the subject with a consideration of the so-called "side-line question."

Assuming that the right of the mine owner to follow and exploit his lode in depth between the projected end lines of his claim and beyond its side lines should be retained, the present law is still radically defective in several particulars. The theory of it is that, as a preliminary to purchase, the citizen may freely occupy and explore any portion of the public mineral lands not already occupied. This possessory title must be maintained by the performance of a certain amount of work annually. The amount fixed by the law is not enough to secure a real development of the mine; but it is enough to discourage the practice, once common, of the holding of many claims by one adventurer, to the exclusion of those who would gladly work them, and it furnishes a good legal test of the otherwise indefinite act of abandonment. I doubt whether this feature could be changed with advantage. But the present law, by conferring upon the possessory occupant rights as extensive as those of a patentee, and by permitting the possessory title to remain undisturbed and invulnerable for an unlimited period, offers too little inducement to the locator to apply for a patent. Indeed, in a large number of instances, the inducement is the other way. Not only the expense of the proceedings for patent, and the chance of suffering local taxation, as owner of land, to which the mere squatter upon government land would not be subject, operate to the advantage of the mere locater and the disadvantage of the patentee; but the application for a patent involves the precipitation of all pending contests as to title. Adverse claimants must then speak, or forever after hold their peace. The result is, that locators often delay applying for patent, in order not to arouse opposition which they hope to wear out in time; and disputes are thus nursed along, instead of being brought to an issue, and definitely ended. It seems that only two strong inducements to take a patent arise under this law. If a possessory holder wishes to be able to abandon his mine for a while, without losing it, he must get a patent. If he wishes to sell it to a distant capitalist, or to a stock company, he must usually get a patent, because such buyers usually (and always should) insist upon this security against adverse claims. Unless these contingencies arise, there seems to be no special reason for taking patent. In my judgment, the law should limit the period of possessory ownership; should not authorize the working of lodes in depth outside the side lines of locations until after the patent has been applied for (even though, as now, that right be granted by the patent); and should render the holder of a possessory title only incapable of enforcing an ejectment against parties working on his lode beyond his side lines, or of collecting damages, after he has applied for a patent, for ore so extracted by others before he made such application—under which term, in the present connection, I mean to include all the steps required of the applicant for the proof of his claim. It may be said that, under such a law, locators might still go on indefinitely, by the simple expedient of repeated relocation. I admit the force of this objection; and I do not think a prohibition of such relocation by the same parties would be very effectual, since it would be easy for them to evade it by employing others to make the record. But I apprehend that the consideration of the loss of priority in title by relocation would be a powerful objection to the course; and, at all events, it may be safely asserted that the inducements to apply for patents would be stronger than they now are.

I would mention, in passing, the limitation of the right of purchase to citizens as a feature of the law which serves only to annoy foreign purchasers, without preventing them from really holding mines. A citizen may convey his patent "to any person whatever;" and this being the case why not let "any person whatever" buy the mine and get the patent? As it is, foreign corporations manage to control our mines, if they choose; and our citizens are never weary of inviting foreign capital to do so. The law as it now stands, and as it has been in some cases at least construed by the courts, operates to the discouragement of the most enterprising kind of explorations, namely, explorations by shafts or tunnels. Section 2323 of the Revised Statutes says that the owners of a tunnel "shall have the right of possession of all veins or lodes within three thousand feet from the face of such tunnel on the line thereof, not previously known to exist, discovered in such tunnel, to the same extent as if discovered from the surface." In this grant, I believe the words "on the line thereof" have been so construed by the Land Office as to exclude veins crossing the tunnel, and thus to reduce the section almost to a nullity; but even setting aside this construction, the phrase "to the same extent as if discovered from the surface" is enough to destroy all tunnel claims. For it is held that the discoverer of a vein "from the surface" can acquire no title, not even a possessory one, unless he finds its outcrop, and locates his claim to include that. If I remember correctly, the Land Office has refused to grant a patent for a vein discovered in a tunnel; and I confess it is difficult to see how any other decision could have been made under the circumstances. A patent requires a surface location, and that location must include the outcrop or the "top or apex" of every vein for which the patent gives title. The tunnel section might as well be repealed. It is worth nothing to anybody as it is now framed and interpreted. But I think it would be just to declare that the discoverer, in ground not already occupied, of a vein not previously known to exist, wherever and however he may discover it, by shaft or tunnel, at its outcrop or in depth, shall have the right to locate a claim covering the point of his discovery, and to obtain a patent entitling him to work that vein as if its outcrop were within his claim. I say this would be just; and it would encourage enterprise and promote the discovery of valuable deposits not otherwise likely to be exposed. But it would seriously complicate the relations of patentees and locators. Less effectual, but perhaps more practicable, would be a provision authorizing the record of an underground discovery of a new lode, and giving to the discoverer a certain time within which he may seek for the outcrop or apex of the lode, and, upon finding it, be entitled to locate upon it, with the date of his underground discovery. If the outcrop or apex, when found, should happen to be covered by a patent, that ought to take precedence; but a mere location of later date than the underground discovery ought to give way. The guiding principle here is to encourage prospecting as much as possible; but, above all, to encourage the taking of patents.

Another defect of the law, or its construction, is the vagueness of the title conveyed under it by a patent. There is nowhere in it any definition of the terms "deposits," "veins," "lodes," "ledges," "dips," "variations," "angles," "locations," "claims," &c., which are freely used. Some of them are merely tautological. Such phrases as "vein, lode, or ledge," "dips, variations, and angles," merely lead to hair-splitting constructions by puzzled jurists, who try to discover shades of meaning in what was probably nothing more than aimless rhetoric. The adoption of all the ordinary miner's terms without definition constitutes one of the most troublesome elements of the bondage to local customs which has fettered our legislation. Even if Congress should declare the mining law to be independent of such customs, the declaration would be futile so long as the customs must be appealed to for the interpretation of the law. The meanings of the terms "vein," "lode," and "ledge," for instance, although much clarified by judicial decisions, are still subject to doubt. In a recent case in Colorado (which I cite, not to assail the ruling, but to illustrate this point), it was held that a "contact bed," or deposit, admitted to be legally a vein, did not begin to be a vein at its outcrop, because that was barren of precious metal, but did begin to be a vein, or in other words had its true outcrop or apex, at the point where it first showed by assay "an ounce or more per ton" of silver. Now, any law or construction of law which makes the miner's title dependent upon subtle geological or chemical distinctions is unfortunate. As far as practicable, the statute should be so worded as to avoid such contingencies. Another serious embarrassment of a similar nature arises from the construction which has been put upon the phrase of section 2322, "the top or apex of which lies inside of such surface lines extended downward vertically." Under this clause it has been held that unless a locator includes within the width of his claim the whole width of the outcrop or apex of a lode, he cannot acquire the right to follow that lode beyond his side lines. This ruling has been applied in cases in which the local laws actually forbade the locator to make a claim wide enough to include the lode. It is easy to see that in such a case two or more locations may be made side by side on the same lode, and neither of the locators possess the right to follow it in depth. The remedy appears to be to consider the prior locator or patentee as entitled to the lode, and a slight change in the statute would put this beyond doubt; or else the provisions of section 2320 might be so modified as to forbid the limitation of width in mining claims by local regulation to a less width than that of the vein itself at the surface; or parties holding locations side by side, comprising the outcrop which neither of them singly covers, might be allowed to consolidate their claims and thereby acquire a right which, under the present construction of the law, I suppose they could not acquire by consolidation, since they do not severally possess it beforehand.

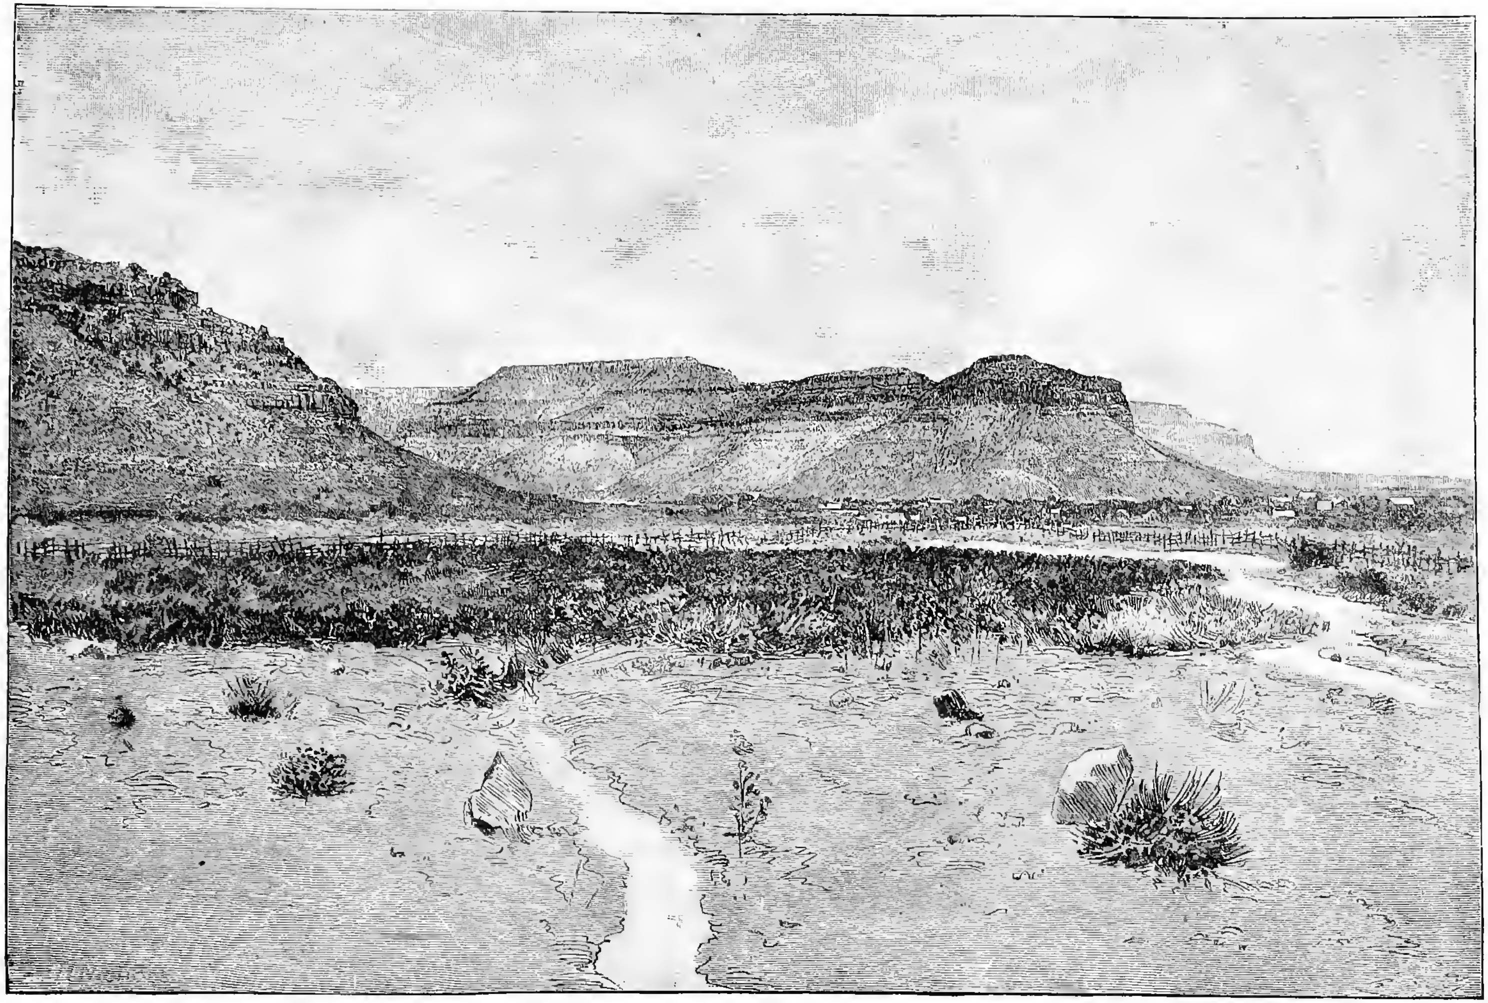
But all these and many more ambiguities and uncertainties arising under the present law have their ultimate origin in the attempt to encourage the purchase and development of mineral lands by granting to the locator and patentee something more and at the same time something less than the contents of his claim, according to the ordinary common-law practice. Strictly speaking, the present system is, as I have shown, equally in accordance with the common law. But the ordinary common-law practice is that the boundaries of the mining rights are the vertical planes drawn through the boundaries of the surface tract. The convenience of this practice is attested by its universality. Land goes from hand to hand in parcels, and even when the mining rights have been alienated the unit of land measurement naturally remains the unit of measurement for the mining right. Our mining law involves endless trouble in its attempt to combine two units, the surface and the lode. Before the law was enacted the miners had but one unit, namely, the lode. Surface ownership there was none, only an easement or privilege of using the surface when necessary for mining operations. It may be questioned whether the present system is an improvement. In the report which I had the honor, as United States Commissioner of Mining Statistics, to present to the Secretary of the Treasury, January 18, 1869, and in which the subject of the mining law was discussed, I used the following language:

"The Spanish and English laws, as I have shown, invariably bound mining claims by vertical, just as the property of land-owners is bounded. The modern Prussian law does the same thing. But, according to the present codes of other German states, and the ancient codes of all, inclined locations may be granted, with the right to follow the vein in depth, without reference to the surface ownership. The American miners' law is unlike either, and, so far as I know, has no parallel in history. It comprehends the vein, its dips, spurs, and angles, to any depth; and under this provision, when two veins are found to meet in depth, the oldest location is held to be the main lode, and the other is confiscated as a 'spur.' (The word 'spur' is omitted from the United States law of 1866; but the sweeping recognition in that law of 'mining customs' virtually restores it.) There is no justice in such a provision. On the other hand, there is no limit in American local regulations as to the distance between parallel locations, which, no matter how closely they lie together, are presumed to be on different veins until proved to be on the same. This state of things both invites and protracts a litigation which is seldom settled except by exhaustion and compromise.

"There are not wanting those who urge the adoption of 'square locations' exclusively as the cure for these evils. But with such, after mature reflection, I cannot agree. The great aim of the government, in disposing of its mines should be to secure their permanent and systematic working. To define the boundaries of mining ground by vertical planes does indeed lessen the danger of litigation; but it also lessens the value of the claim; and, in most cases, the value thus subtracted from one property is not added to any other. Thus, a miner under the Spanish law loses the right to work his vein because, at the depth of 600 feet it passes out of his surface boundaries into the neighboring claim; but the neighbor is not much better off for knowing that 600 feet below the surface he may find a vein of ore. To the miner who has already reached that depth it is valuable; to the miner who must dig and blast 600 feet to find it, it may be worth nothing. Meanwhile it is undoubtedly for the interest of the country that the work should be continued in depth; and the proper person to carry it on is evidently the one who has commenced it and prosecuted it thus far. * * * For the present stage of mining in this country, as for the earlier stages of mining in Germany, the inclined location must be accepted as the best for lodes."

My later reports and publications show a more decided recognition of the advantages of vertical boundary planes, now almost universal among civilized nations. But they also repeat the one consideration, which seemed to me decisive, ten years ago, against that system, and which still constitutes the chief objection to it. I mean the encouragement to deep mining held out by the present system, or, rather, the encouragement to the investment of capital in mining, constitutes in the knowledge that the valuable mineral deposit may be followed indefinitely in depth. Can that advantage be in any way secured under a system of vertical boundaries?

I shall waste no time in vindicating personal consistency in this matter. It might be shown that ten years have changed the conditions of mining in this country and the features of the mining law more than they have changed the views embodied in the long argument from which I have quoted. Our mining districts are better known; it is more easily practicable to measure and define the surface-unit at the beginning of operations; the vague rights granted by miners' custom have been largely shorn and restricted by definition. Above all the present requirement that the survey of a claim shall not be changed after first location, except by relocation (sacrificing prior date of title), and that it shall convey only that portion of the mineral deposit of which it contains the outcrop, top, or apex, utterly revolutionizes



WESTERN SCENERY—VERMILION CLIFF AT KANAB—TRIASSIC—GRAND CAÑON DISTRICT.

SEE PART X.

—FROM U. S. GEOLOGICAL SURVEY REPORT.

the spirit of the former system, and reduces to a slender remainder the "rights of the discoverer." It is no longer possible for a citizen discovering valuable mineral in place to claim it by virtue of priority alone for an indefinite period. He must make haste to find its top or apex or outcrop before any one else; then he must make haste to locate a claim including that upper edge; and by that location, however wisely or unwisely made, he must abide through all subsequent proceedings for title. The certainty of a location carrying absolute ownership of a tract and its contents would be in many cases far better for the miner than this combination of the chance of getting a great deal with the risk of getting nothing. But assuming that a change could be effected in the present administration of the statute, or in the statute itself, by which more freedom should be given to the locator, or assuming that, in the majority of cases, the discoverer actually finds and successfully locates upon the outcrop of his deposit, then there is certainly a real encouragement for him in the knowledge that he can follow the deposit in depth Can this be secured under a system of vertical side boundaries? Two expedients only are suggested. The first is to vary the size of the claim, as the Spanish law does, according to the dip of the deposit. This is open to the gravest objections. It delays the definition of the surface claim (to the manifest injury of neighboring explorers) until the mine has attained a certain depth. The Spanish law makes this depth ten yards, and the dip of the deposit for the first ten yards is taken as the basis for determining the width of the claim (which, however, never exceeds 200 yards on either side of the outcrop). It may fairly be said that this offers little security to the locator. The uppermost thirty feet of a vein are, perhaps, more likely than any other part of it to show a false, local dip. Yet it would not be practicable to require a greater depth, and hence a greater delay, before settling the boundaries of the surface claim.

But if we cannot well vary the size of the claim according to the features of the deposit, the only other expedient is the granting of a tract sufficiently large to offer as great encouragement to miners as is now offered by the peculiarity of the underground ownership. In my report, above quoted, I mentioned 40 acres as the size of the "square location," which would in many districts be necessary to effect this purpose. But that statement needs explanation and qualification. Let us first assume that the location is square in form. The tract of 40 acres is then 1,320 feet square. If the outcrop of a vein runs along one side of it, dipping into the tract—the most favorable case for the locator—the location commands 1,320 feet of the strike, and a distance on the dip indefinitely great as the position of the vein approaches the vertical, and diminishing as it approaches the horizontal, toward a minimum of 1320 feet. Assuming, as an average case, the dip of 45°, the depth of vein within the tract would be about 1,867 feet, and the vertical depth at the point where it leaves the tract 1,320 feet. For many reasons, however, it is not to be supposed that square claims would be generally, or even frequently, so located as to carry the outcrop along one side. Assuming, then, as an average case that the location, of the form and size now under discussion, carries the outcrop through the center, and parallel with two of its sides, we have for a dip of 45° a distance on the dip, within the location, of 933 feet. This is not too much, if a single vein is taken into consideration; and if a mining district is to be surveyed according to the present land-surveying system, with the square mile as a basis, and meridians and parallels as the boundaries, and if such survey is to be independent of the course of the mineral deposits, and the mining locator or purchaser is to be obliged to choose his location among the squares thus defined, I think the square of 1,320 feet, or $\frac{1}{16}$ of a square mile, is at once the most convenient and the smallest which can reasonably be fixed as the size of a claim. But I thought in 1869, and I think still, that the area of forty acres is too great to be accepted by the mining communities, and that the attempt to introduce it would cause much trouble, particularly in districts where several parallel veins might cross such a tract. But few prospectors (sixteen to a square mile) could get a foothold under such a system, and those few would occupy at the outset all the valuable mining ground. Prospecting would be discouraged, and the motive which supplies our new mining camps with the population absolutely necessary for a supply of labor, the establishment of communications, &c., would be almost destroyed.

Hence, I think the attempt to lay out the mineral land in fixed squares would not be wise. If the claims were permitted to have, on the other hand, any form and position, a minimum width (or, better, a maximum length) and maximum area being prescribed, one half the area of 40 acres would suffice to secure substantially equal advantages to the miner; and this is the size which I venture to recommend. Judge Hallett, of Colorado, in an able review of this subject, addressed to your honorable commission, advocates the absence of restrictions as to form and position of locations, fixing the size as not exceeding ten acres, in any form not less than 100 feet wide at any point. This would permit a maximum length of 4,356 feet; and cases might easily arise in which this length would be located. Given, for instance, a well-defined vein or bed, easily worked near the outcrop, and yielding above water level oxidized ores reducible cheaply, say, by amalgamtion, it would be the interest of a locator to take up 4356 feet by 100 feet along such a vein, with the intention of robbing its upper portion by an open cut and then abandoning it. To encourage this would be to discourage systematic and permanent mining. Hence it would, in my judgment, be preferable to fix no minimum width, but a maximum length of location in any direction of 1,500 feet. This length would permit, for the area of 10 acres, a width of about 290 feet, which is, in my judgment not enough. For the area of 20 acres, the width for the maximum length might be 579 feet, which is sufficient to encourage permanent mining. It is true that many, perhaps most, deep mines would extend beyond such a width. For the average case we have been considering, of a vein running through the center of the claim and dipping 45°, this width would give but 410 feet of mining depth; but it may safely be presumed, as Judge Hallett remarks in a letter to the Denver Tribune, that this point will be met by "the ability and disposition of capitalists to gather up a sufficient area for deep mining where the existence of valuable ore may be shown." In other words, a capitalist will buy the neighboring claim if he needs it. Judge Hallett, however, uses this argument in favor of the ten-acre claim. I submit that such a claim is too small to secure the necessary deep mining to satisfy the mine-owner of the permanence and value of the deposit; while, on the other hand, if a rich and valuable vein passes out of a claim of 1,500 by 290 feet, it is likely to enter the adjoining claim at so small a depth below the surface as to invite the owner of that claim to work it himself, or hold it at an exorbitant price. Judge Hallett's proposed claim is less than one-half as large as the maximum now permitted by the United States law. The size which I suggest is nearly the same as the present maximum (1,500 by 600 feet). In all the suggestions which I have heard on this subject, it seems to have been taken for granted that no location should be made until after the discovery within it of "valuable mineral." This phrase is vague enough, and the administration of the part of the law containing it is very likely to be a farce. If the condition could be removed without detriment to the public interest, the whole problem would be greatly simplified. So far as the government is concerned, it seems a simple proposition that if the government is willing to sell agricultural land at $1.25 per acre, and mineral lands at $5 per acre, it would have no reason to object to sell the latter and take the money, leaving to the purchaser the risk of value. We do not ask the settler upon agricultural land to prove the fertility of the soil before we sell it to him. He pre-empts or buys at his own risk. We guard against monopoly of land, so far as we can, by limiting the size of the pre-emption claim. We can do the same thing to the same degree by limiting the size of the mining claim. In neither case can we prevent people who have the desire and the means from buying up farms, or land warrants, or mineral land patents, and then working upon the property or not as they see fit. Under our present system, a patentee may allow his mining property to lie idle if he chooses. If he does so choose it is manifestly immaterial to the public whether there is really a mine there or not. But the locator, we ordain, must have found a valuable mineral deposit, and must bestow upon it, to maintain possessory title, a certain amount of work annually. The only reason that I can discover for this rule is the desire to prevent a mere locator from holding without developing a piece of ground in which, otherwise, some one else might find a valuable mine. If the miners were all owners under patents, we should, and safely could, leave the question of working or not working to their self-interest. Any mine that promised to be profitable would be worked or sold in the course of no very long time. The policy of the government, as I have explained, is to encourage prospecting as a preliminary to purchase; to induce prospectors and possessory owners, by every practicable means, to take patents, and to grant patents on terms so easy and for tracts so small as to favor the miner of limited capital. It seems to me that these ends might be secured by a simple system like the following: Let mining locations be made anywhere on unoccupied public lands, whether any discovery of mineral has taken place or not. Fix the maximum area at 20 acres, and the maximum length at 1,500 feet. Allow the locator to occupy by possessory title for one year—adequate evidence of the boundaries of the location being maintained on the ground as well as in the record. Require a certain amount of work for each 100 feet in length of the location to be performed as a condition of relocation. At any time during the year, if the locator applies for patent, sell him the tract. If he desires to continue to occupy by possessory title, require him to give notice to that effect, together with proof of the performance of the prescribed work, before the end of the year and at the end of the year, *unless some other party has, at least sixty days before, made application to purchase*, issue to the locator the certificate of his possessory title for another year, on the same conditions. But if application to purchase has been made by some other party, and not by the locator, then the latter, during the last sixty days of the year may elect whether he will purchase or vacate the claim. In case no such application has been made, and the locator has not appeared before the close of the year with his proof of work done, let the claim be open to relocation by others.

Under this system, the locator would occupy the position of a tenant, to whom the proprietor should say, "I will let you have this property for one year, with the option to buy it at any time at a nominal price. At the end of the year if you have done a certain small amount of work on the property, I will let you have it for another year, unless a purchaser appears. In that case I shall sell it—to you if you choose, or else to him. But if you neither buy nor improve the property, and no purchaser appears, I shall put somebody else in your place on the same terms as I offer you." Thus we should get clear altogether of the mineral deposit or lode as a unit, and base all proceedings on the land. The officers of the government from the register and surveyor to the judge, would be relieved from the duties of mining experts, and geologists, chemists, and mining captains would no longer be called upon as witnesses to settle by hair-splitting distinctions the right of property. If any radical change in our mining law can be successfully made at the present time, I believe this plan would be as practicable as any, and more beneficial than any, which have come to my notice. If this, or something like this, cannot be adopted, then it seems to me that it would be wiser to amend in detail our present law, rather than attempt changes which would be revolutionary without being remedial. There are many points still needing discussion. Whether the lines of a location should be alterable by resurvey before application for patent (I would say, Yes; the rights of neighboring locators being respected); whether a prospector should have any rights prior to a regular survey and record of location) I would say, Yes; the right to stake off his claim provisionally, and to lose nothing by delay of the government officer in making official survey—all this under proper regulations (whether a prospector simply roaming over the public land, and finding "mineral," should have any right by virtue of discovery (I would say, No; but his commencement to stake off or mark the boundaries of a claim should give him the inchoate right to that claim, to be perfected, however, by continuing and finishing the proceeding); whether one year, as I have suggested, is the proper term; whether sixty days, suggested in another place, is the proper term; whether possessory owners should be notified, by advertisement or otherwise, of applications to purchase, at the end of their term, the claims they are occupying; whether such notice should be given at the expense of the party acquiring the claim, or whether it is sufficient that these facts should be kept in accessible records, and the possessory owner obliged to consult the record thirty days (or some other fixed period) before the end of his year, to discover for himself whether there is a proposing purchaser; how far present possessory owners can be forced to take patents or to accept the terms of the new law (I fear nothing of this kind can be done so long as they obey the terms of the present law)—these and many other questions of detail arise; but I cannot see in any of them difficulties which would constitute insuperable objections to the proposed system, or which would justify me in prolonging further these communications, for the length and diffusiveness of which I ought rather to offer my apologies.

Yours respectfully,

R. W. Raymond.

—From the "Public Domain," by Thos. Donaldson, Public Land Commission.

THE GOVERNMENT ORGANIZATION.

THE following is from the United States Statutes at Large.—

Secretary of the Interior—Section 1. The Secretary of the Interior is charged with the supervision of public business relating to the following subjects:

* * * * * * *

Second. The public lands, including mines.

2 Stat. 716; 5 *id.* 107: 9 *id.* 395; R. S. 441. Wilcox *v.* Jackson, 13 Pet. 498; Maguire *v.* Tyler, 1 Black, 195; Snyder *v.* Sickles, 8 Otto, 203; Wolsey *v.* Chapman, S. C., Oct. T., 1879, in manuscript; Patterson *v.* Tatum, 3 Saw. C. C. 164. 3 Op. Att. Gen. 137; 12 *id.* 250. 2 Laws, Instructions and Opinions, 104; 1 Lester, 681. Hesters *v.* Brennan, 50 Call. 211.

Sec. 2. He shall grant warrants to parties entitled to land heretofore or hereafter given by the United States for military services.

2 Stat. 717; R. S. 456.

Sec. 3. Copies of papers filed in the Interior Department and remaining therein shall be authenticated under the hand of the Secretary and the seal of the General Land Office.

3 Stat. 721; 5 *id.* 111; R. S. 460.

Sec. 4. The bonds of surveyor-general shall be executed and delivered to the Secretary of the Interior.

3 Stat. 697; R. S. 2215. U. S. *v.* Tingley, 5 Pet. 115; U. S. *v.* Stephenson, 1 McLean, C. C. 462; Farrar *v.* U. S., 5 Pet. 373.

Sec. 5. He shall take the necessary measures for the completion of the public-land surveys.

5 Stat. 384; 19 *id.* 121; R. S. 2218.

Sec. 6. He shall discontinue the land office in any district wherein the public lands are reduced to less than one hundred thousand acres, and shall give notice at what convenient existing land office such residue shall be subject to sale.

5 Stat. 455; R. S. 2249; Matthews *v.* Zane's Lessee, 5 Cranch, 95; same case, 7 Wheat. 164.

Sec. 7. He shall make a reasonable allowance for office rent for consolidating land offices, and may approve the employment of clerks by the register.

12 Stat. 131; R. S. 2255.

Sec. 8. He is authorized to repay the purchase money, fees, commissions, and excess payments in cases where the lands have been erroneously sold and the title cannot be confirmed.

4 Stat. 80; 11 *id.* 387; act June 16, 1880; R. S. 2362. 4 Op. Att. Gen. 277. Decisions Sec. Int., Aug. 17, 1849; July 23, 1864; April 15, 1878; Aug. 5, 1878; May 7, 1879; Nov. 20, 1878; July 1, 1879; July 29, 1879; Aug. 12, 1878; Jan. 8, 1880.

Sec. 9. He is authorized to permit innocent parties who purchased and located claims arising under the treaty of September thirty, eighteen hundred and fifty-four, to perfect their entries with cash or military bounty-land warrants.

17 Stat. 340; R. S. 2368. Decisions Sec. Int., July 6, 1876; July 19, 1879; May 6, 1880.

Sec. 10. He is authorized to allow erroneous entries of lands sold at private sale and warrant locations to be corrected; and this authority extends to patented cases upon surrender of the patent with satisfactory relinquishment of title indorsed thereon.

3 Stat. 526; 4 *id.* 301; 10 *id.* 257; R. S. 2369, 2370, 2371.

Sec. 11. When, in the opinion of the President, the public interests require it, he shall cause town-site reservations to be surveyed into lots; shall fix their cash value by appraisement of disinterested persons; and after, offering same at public entry to the highest bidder shall prescribe regulations for sale of the residue at private entry at no less than the appraised values. All such sales shall be conducted by the register and receiver of the proper land district.

12 Stat. 754; R. S. 2381. U. S. *v.* Hare, 4 Saw; C. C. 653.

Sec. 12. He may cause a survey and plat to be made of a city or town, if within twelve months from its establishment on the public domain the parties interested do not file in the General Land Office the showing required by law; and thereafter the minimum price of lots included therein shall be increased fifty per centum.

13 Stat. 344; R. S. 2384.

Sec. 13. He may vary the subdivisional surveys in the State of Nevada from a rectangular form to suit the circumstances of the country.

14 Stat. 86; R. S. 2408. Heydenfeldt *v.* Mining Co., 3 Otto, 634.

Sec. 14. He may authorize the geodetic method of survey in Oregon and California.

9 Stat. 496; 10 *id.* 245; R. S. 2409.

Sec. 15. He may direct a departure from the rectangular mode of survey in the State of California.

10 Stat. 245; R. S. 2410.

Sec. 16. He may direct compensation by the day for surveys in Oregon and California.

10 Stat. 247; R. S. 2411.

Sec. 17. He may prescribe regulations for the location and patenting, free of expense, of any military bounty-land warrant transmitted for that purpose in the General Land Office.

9 Stat. 521; R. S. 2437. Decision Sec. Int., March 1, 1876.

Sec. 18. He may authorize issue of patents in cases of lost military bounty-land warrants.

3 Stat. 317; R. S. 2439.

Sec. 19. He shall cause new bounty-land warrants to be issued in lieu of lost or destroyed warrants, and shall prescribe regulations for the prevention of frauds.

12 Stat. 90; 18 *id.* 111; R. S. 2441, 2442.

Sec. 20. He shall issue patents to the heirs of persons entitled to bounty lands.

5 Stat. 650; R. S. 2443.

Sec. 21. Conjointly with the Attorney-General and the Commissioner of the General Land Office, he shall prescribe regulations for the equitable decision of suspended entries of public lands and of suspended pre-emption claims, and adjudicate in what cases patents shall issue upon the same.

9 Stat. 51; 10 *id.* 258; 11 *id.* 22: 28 *id.* 50; 19 *id.* 244; R. S. 2450, 2451.

Sec. 22. He shall have exclusive control of the Yellowstone Park, with authority to lease portions thereof.

17 Stat. 33; R. S. 2475.

Sec. 23. He shall make accurate lists and plats of the swamp and overflowed lands granted to the several States and transmit same to the governors thereof; and at the request of the governor of any State in which such lands are situate, he shall cause patents to be issued conveying to said State the fee-simple of said lands.

9 Stat. 519: R. S. 2479, 2480. Railroad Co. *v.* Smith, 9 Wall, 95; French *v.* Fyan, 3 Otto, 169; Martin *v.* Marks, 7 *id.* 345. 9 Op. Att. Gen. 253. Clarkson *v.* Buchanan, 53 Mo. 563; Masterson *v.* Marshall, 65 *id.* 94; Funkhouser *v.* Peck, 67 *id.* 20; Busch *v.* Donohue, 31 Mish. 481; Kile *v.* Tubbs, 23 Cal. 431; Kernan *v.* Griffith, 27 *id.* 87; Fremont Co. *v.* R. R. Co., 22 Iowa, 91; R. R. Co. *v.* Brown, 40 *id.* 333; Page Co. *v.* R. R. Sec. 24. Indemnity for swamp lands sold by the United States shall not be allowed until approved by the Secretary of the Interior.

10 Stat. 634, 635; R. S. 2482.

Sec. 25. He shall notify the governors of the States of Minnesota and Oregon when public land surveys have been completed and confirmed in said States.

12 Stat. 3; R. S. 2490. Gaston *v.* Scott. 5 Oreg. 48. Decisions Sec. Int., Oct. 13, 1876; Jan. 7, 1879; April 15, 1880.

Sec. 26. He shall sign all requisitions for the advance or payment of money out of the Treasury on estimates or accounts approved or certified by the Commissioner of the General Land Office, subject to the control of the proper accounting officers of the Treasury.

9 Stat. 395; R. S. 444. 1 Lester, 314.

Sec. 27. He shall prescribe the duties of the Assistant Secretary of the Interior, who shall act as the Secretary of the Interior in the absence of that officer.

12 Stat. 369; R. S. 439.

Sec. 28. Upon the survey of lands designated as mineral, the Secretary of the Interior may designate and set apart such portions of the same as are clearly agricultural lands, which lands shall thereafter be subject to pre-emption and sale as other public lands and be subject to all the laws and regulations applicable to the same.

14 Stat. 253; R. S. 2342.

Sec. 29. He shall prescribe regulations for the subdivision of fractional sections.

3 Stat. 566; 4 *id.* 503; R. S. 2397. Gazzam *v.* Phillips' Lessee *et al.*, 20 How., 372. 3 Op. Att. Gen. 281. Decision Com. G. L. O. May 17, 1875.

Sec. 30. It shall be the duty of the Secretary of the Interior to designate one newspaper in each State or Territory, where public lands are situated, for the publication of all Executive proclamations relating to the sale of public lands.

19 Stat. 221.

THE GENERAL LAND OFFICE.

THERE shall be in the Department of the Interior a Commissioner of the General Land Office, who shall be appointed by the President, by and with the advice and consent of the Senate, and shall be entitled to a salary of four thousand dollars a year.

2 Stat. 717; 5 *id.* 107, 17 *id.* 508; R. S. 446.

Sec. 32. The Commissioner of the General Land Office shall perform, under the direction of the Secretary of the Interior, all executive duties appertaining to the surveying and sale of the public lands of the United States, or in anywise respecting such public lands, and, also, such as relate to private claims of land, and the issuing of patents for all grants of land under the authority of the Government.

2 Stat. 7, 16; 5 *id.* 107; 18 *id.* 62, 317; R.S. 453. Foley *v.* Harrison, 15 How. 433; Barnard's Heirs *v.* Ashley's Heirs, 18 *id.* 43; Bell *v.* Hearne, 19 *id.* 252; Castro *v.* Hendricks, 23 *id.* 438; Maguire *v.* Tyler, 1 Black, 195; Harkness *v.* Underhill, 1 *id.* 316; U. S. *v.* Commissioner, 5 Wall, 563; Gaines *v.* Thompson, 7 *id.* 349; Sec'y *v.* McGarrahan, 9 *id.* 228; Johnson *v.* Towsley, 13 *id.* 72, 12 Op. Att. Gen. 250; Le Roy *v.* Clayton, 2 Saw. C. C. 493; Patterson *v.* Tatum, 3 *id.* 164; Le Roy *v.* Jamison, 3 *id.* 369. Lott *v.* Prudhomme, 3 Rob. (La.) 293; Bettis *v.* Amonett, 4 *id.* 364; Foley *v.* Harrison, 5 *id.* 75; Gurdry *v.* Wood, 19 *id.* 234; Lamont *v.* Stinson, 3 Wis. 545; Fremont Co. *v.* R. R. Co., 22 Iowa, 91; Bellows *v.* Todd, 34 *id.* 18; Brill *v.* Stiles, 35 Ills. 305; Aldrich *v.* Aldrich, 37 *id.* 32; Lewis *v.* Lewis, 9 Mo. 183; Pope *v.* Athearn, 42 Cal. 606; Hosmer *v.* Wallace, 47 *id.* 461; Parker *v.* Duff, 47 *id.* 554; McGarrahan *v.* Mining Co., 49 *id.* 331; Hesters *v.* Brennan, 50 *id.* 211; Vance *v.* Kohlburg 50 *id.* 346; Weaver *v.* Fairchild, 50 *id.* 360; Fugy *v.*-Hensley, 52 *id.* 299.

Sec. 33. The Commissioners of the General Land Office shall retain the charge of the seal heretofore adopted for the office, which may continue to be used, and of the records, books, papers, and other property appertaining to the office.

2 Stat. 717; R. S. 445.

Sec. 34. The Commissioner of the General Land Office shall when required by the President, or either House of Congress, make a plat of any land surveyed under the authority of the United States, and give such information respecting the public lands and concerning the business of his office as shall be directed.

2 Stat. 717; R. S. 455.

Sec. 35. All returns relative to the public lands shall be made to the Commissioner of the General Land Office; and he shall have power to audit and settle all public accounts relative to the public lands; and upon the settlement of any such accounts he shall certify the balance, and transmit the account with the vouchers and certificate to the First Comptroller of the Treasury, for his examination and decision thereon.

2 Stat. 717; R. S. 456.

Sec. 36. All exemplifications of patents, or papers on file or of record in the General Land Office, which may be required by parties interested, shall be furnished by the Commissioner upon the payment by such parties at the rate of fifteen cents per hundred words, and two dollars for copies of township plats or diagrams, with an additional sum of one dollar for the Commissioner's certificate of verification with the General Land Office seal; and one of the employes of the office shall be designated by the Commissioner as the receiving clerk, and the amount so received shall, under the direction of the Commissioner, be paid into the Treasury; but fees shall not be demanded for such authenticated copies as may be required by the officers of any branch of the Government, nor for such unverified copies as the Commissioner in his discretion may deem proper to furnish.

13 Stat. 375; R. S. 461. Lane *v.* Bommelmann, 17 Ills. 95; Lacy *v.* Davis, 4 Mich. 140; Gilman *v.* Ripela, 18 *id.* 145; Clark *v.* Hill, 19 *id.* 356; Boyd *v.* Stambaugh, 34 *id.* 348; Ansley *v.* Peterson, 30 Wis. 653; McLean *v.* Bovee, 35 *id.* 27; Kelly *v.* Wallace, 14 Minn. 336; Washburn *v.* Mendenhall, 21 *id.* 332; Barton *v.* Murrain, 27 Mo. 235; Railroad Co. *v.* Moore, 37 *id.* 338; Stephen *v.* Westwood, 25 Ala. 716; Smith *v.* Mosier, 5 Blackf. (Ind.) 51. Cir. G. L. O., July 20, 1875.

Sec. 37. That public lands situated in States in which there are no land offices may be entered at the General Land Office, subject to the provisions of law touching the entry of public lands; and the necessary proofs and affidavits required in such cases may be made before some officer competent to administer oaths, whose official character shall be duly certified by the clerk of a court of record; and moneys received by the Commissioner of the General Land Office for lands entered by cash entry shall be covered into the Treasury.

19 Stat. 315; 20 *id.* 201.

Sec. 38. Upon the discontinuance of any surveying district the authority, powers, and duties in relation to the survey, resurvey, or subdivision of lands therein and all matters and things connected therewith, as previously exercised by the surveyor-general, shall be vested in and devolved upon the Commissioner of the General Land Office; and deputy surveyors or other agents under his direction shall have free access to any field-notes, maps, records, and other papers turned over to the authorities of any State pursuant to law, for the purpose of making copies thereof, without charge of any kind.

10 Stat. 152; R. S. 2219, 2220.

Sec. 39. Appeals from the decision of district officers in cases of contest for the right of pre-emption shall be made to the Commissioner of the General Land Office, whose decision shall be final, unless appeal therefrom be taken to the Secretary of the Interior.

5 Stat. 456; 11 *id.* 326; R. S. 2273. Barnard *v.* Ashley, 18 How. 43; Garland *v.* Wynn, 20 *id.* 6; Lytle *v.* Arkansas, 22 *id.* 193; Harkness *et al. v.* Underhill, 1 Black, 316; Lindsey *v.* Hawse, 2 *id.* 554; Minnesota *v.* Batchelder, 1 Wall. 109; Litchfield *v.* Register and Receiver, 9 *id.* 575; Johnson *v.* Towsley, 13 *id.* 72; Warren *v.* Van Brunt, 19 *id.* 646; Shepley *et al. v.* Cowan *et al.*, 1 Otto, 330. 1 Op. Att. Gen. 201. Laughlin *v.* McGarvey, 50 Cal. 169.

Sec. 40. Where bona-fide settlers, under the homestead or pre-emption laws, have, subsequent to the date of filing their applications to enter not exceeding one quarter-section of public lands, been appointed as register or receiver of the land office of the district in which the lands are located, proof and payment must be made to the satisfaction of the Commissioner of the General Land Office.

17 Stat. 10; R. S. 2287. 4 Op. Att. Gen. 223; 7 *id.* 647.

Sec. 41. The Commissioner of the General Land Office shall have power to establish the maximum charges for surveys and the publication of notices under the mineral laws; and in case of excessive charges for publication he may designate any newspapers published in a land district where mines are situated for the publication of mining notices in such district, and fix the rates to be charged by such paper.

17 Stat. 95; 19 *id.* 52; R. S. 2334.

Sec. 42. Whenever any reservation of public land is brought into market, the Commissioner of the General Land Office shall fix a minimum price not less than one dollar and twenty-five cents per acre, below which such lands shall not be disposed of.

13 Stat. 374; R. S. 2364.

Sec. 43. In case of mistakes in description, the Commissioner is authorized, upon prescribed proof, to correct entries of public lands, where the same do not exceed one half-section, and where the certificate has not been assigned.

4 Stat. 31; R. S. 2372. Wilson *v.* Byns, 77 Ills. 76; Corwan *v.* Johnson, 29 Mo. 84; State *v.* Commissioner, 17 Wis. 248.

Sec. 44. He shall prescribe regulations for the conduct of sales of town lots at public sale and by private entry.

12 Stat. 754; R. S. 2381. Leech *v.* Ranch, 3 Minn. 448.

Sec. 45. The Commissioner shall approve all contracts for the survey of the public lands.

12 Stat. 409; R. S. 2398. Maguire *v.* Tyler, 1 Black, 201; Parke *v.* Ross, 11 How. 362; McKee *v.* U. S. 1 N. & H. 336.

Sec. 46. The instructions issued by the Commissioner of the General Land Office not in conflict with law shall be deemed part of every contract for surveying the public lands.

12 Stat. 409; R. S. 2399.

Sec. 47. Subject to the statutory maximum he shall fix the price per mile for public surveys, and he shall instruct the surveyor-general as to the mode of keeping accounts and making reports of the cost of surveying and platting private land claims.

12 Stat. 409; 18 *id.* 384; R. S. 2400.

Sec. 48. He shall instruct the surveyor-general as to the survey of any townships upon the deposit by settlers of the cost thereof.

12 Stat. 410; R. S. 2401. Cir. G. L. O., March 5, 1880.

Sec. 49. The Commissioner of the General Land Office may authorize, in his discretion, public land in Oregon, densely covered with forests or thick undergrowth, to be surveyed at augumented rates, not exceeding eighteen dollars per mile for standard parallels, fifteen dollars for townships, and twelve dollars for section lines.

16 Stat. 304, 305; R. S. 2404. Decision Sec. Int. June 16, 1879.

Sec. 50. The Commissioner of the General Land Office, in his discretion, may hereafter authorize public lands in California and in Washington Territory, densely covered with forests or thick undergrowth, to be surveyed at augmented rates, not exceeding eighteen dollars per linear mile for standard parallels, sixteen dollars for townships, and fourteen dollars for section lines.

17 Stat. 358; R. S. 2405. Decision Sec. Int., June 16, 1879.

Sec. 51. When geodetic surveys in Oregon and California are authorized by the Secretary of the Interior, the Commissioner shall prescribe the regulations and terms for the execution thereof.

9 Stat. 496; 10 *id.* 245; R. S. 2409.

Sec. 52. Under the direction of the Secretary of the Interior, the Commissioner may allow compensation by the day for public surveys in Oregon and California.

10 Stat. 247; R. S. 2411.

Sec. 53. The Commissioner shall prescribe regulations for the making and execution of assignments of military bounty-land warrants, and for the location thereof.

10 Stat. 3; 11 *id.* 309; R. S. 2414. Bouldin *et al. v.* Massie's Heirs, 7 Wheat. 122. Nichols *v.* Nichols, 3 Pinney (Wis.) 174; Price *v.* Johnston, 1 Ohio St. 390. Duke *v.* Thompson, 16 Ohio 34; Mock *v.* Brammer, 28 *id.* 508; Dupre *v.* McCright, 6 La. 146; B. & M. R. R. Co. *v.* Clingman, 23 Iowa, 306; Waters *v.* Bush, 42 *id.* 255; Dyke *v.* McVey, 16 Ills. 41. Decision Sec. Int., March 1, 1876.

Sec. 54. Pursuant to regulations to be prescribed by the Secretary of the Interior, the Commissioner shall cause to be located, free of expense, military bounty-land warrants transmitted to him for that purpose by the holders thereof.

9 Stat. 521; R. S. 2437. Decision Sec. Int., March 1, 1876.

Sec. 55. The Commissioner shall prescribe regulations for the relocation of military bounty-land warrants erroneously located by actual settlers.

10 Stat. 256; R. S. 2446.

Sec. 56. Conjointly with the Secretary of the Interior and the Attorney-General, he shall prescribe regulations for the equitable decision of suspended entries of public lands and of suspended pre-emption claims, and adjudicate in what cases patents shall issue upon the same, and report such adjudication to Congress.

9 Stat. 51; 10 *id.* 258; 11 *id.* 22; 18 *id.* 50; 19 *id.* 244; R. S. 2450, 2452.

Sec. 57. Upon public notice of at least thirty days by the proper register and receiver, the Commissioner may order into market, without Presidential proclamation, all lands embraced in claims rejected by the board for equitable adjudication, and isolated or disconnected parcels of unoffered lands.

9 Stat. 51; R. S. 2455.

Sec. 58. The Commissioner shall issue patents upon entries confirmed by the board for equitable adjudication, when such entries had been previously patented and the patents surrendered for cancellation.

10 Stat. 258; R. S. 2456.

Sec. 59. The Commissioner shall cause to be prepared, and shall certify, under the seal of the office, such copies of records, books, and papers on file in his office as may be applied for to be used in evidence in courts of justice.

5 Stat. 111; 13 *id.* 375; R. S. 461, 891, 2469, 2470. Galt *v.* Galloway, 4 Pet. 331.

Sec. 60. With the approval of the Secretary of the Interior, the Commissioner may, upon satisfactory proof, allow indemnity to the several States for swamp and overflowed lands granted to them by the act of September twenty-eighth, eighteen hundred and fifty, and sold by the United States prior to March third, eighteen hundred and fifty-seven.

10 Stat. 634, 635; 11 *id.* 251; R. S. 2482. 11 Op. Att. Gen. 467; *id.* July 25, 1877, in manuscript. Decisions Sec. Int. March 31, 1861; May 8, 1861; March 12, 1863; Feb. 8, 1868; Feb. 2, 1874. Decision Com. G. L. O., Feb. 17, 1879.

Sec. 61. The Commissioner, under the direction of the Secretary of the Interior, is authorized to enforce and carry into execution every part of the public land laws not otherwise specially provided for.

R. S. 2478. Bell *v.* Hearne *et al.*, 19 How. 252; Garland *v.* Wynn, 20 *id.* 6. 3 Op. Att. Gen. 93, 104, 697; 10 *id.* 56. Pope *v.* Athearn, 42 Cal. 606; McDowell *v.* Morgan, 28 Ills. 528; Foley *v.* Harrison, 5 La. Ann. 75.

Sec. 62. The Commissioner shall possess and exercise all the powers and authority and perform all the duties heretofore required by law to be performed by the recorder of land titles in Missouri.

18 Stat. 62. Hale *v.* Gaines *et al.*, 22 How. 144; Rector *et al. v.* U. S., 2 Otto, 698; Scull *v.* U. S., 8 *id.* 410; U. S. *v.* Clamorgan, S. C., Oct. T., 1879, in manuscript. 1 Op. Att. Gen. 718. Prim *v.* Horen, 27 Mo. 205; O'Flaherty *v.* Kellogg, 59 *id.* 485. Decision Sec. Int., Sept. 6, 1870. Decision Com. G. L. O., March 21, 1879.

Sec. 64. In case of any claim to land in any State or Territory which has heretofore been confirmed by law, and in which no provision is made by the confirmatory statute for the issue of a patent, it may be lawful, where surveys for the land have been or may hereafter be made, to issue patents for the claims so confirmed, upon the presentation to the Commissioner of the General Land Office of plats of survey thereof, duly approved by the surveyor-general of any State or Territory, if the same be found correct by the Commissioner. But such patents shall only operate as a relinquishment of title on the part of the United States, and shall in no manner interfere with any valid adverse right to the same land, nor be construed to preclude a legal investigation and decision by the proper judicial tribunal between adverse claimants to the same land.

O., Sept. 18, 1874; Sept. 19, 1876.

Sec. 65. Where lands have been or may hereafter be granted by any law of Congress to any one of the several States and Territories, and where such law does not convey the fee-simple title of the lands, or require patents to be issued therefor, the lists of such lands which have been or may hereafter be certified by the Commissioner of the General Land Office, under the seal of his office, either as originals or copies of the originals or records, shall be regarded as conveying the fee-simple of all the lands embraced in such lists that are of the character contemplated by such act of Congress and intended to be granted thereby; but where lands embraced in such lists are not of the character embraced by such acts of Congress, and are not intended to be granted thereby, the lists, so far as these lands are concerned, shall be perfectly null and void, and no right, title, claim, or interest shall be conveyed thereby.

Sec. 66. There shall be in the General Land Office an inferior officer appointed by the Commissioner, to be employed therein as he shall deem proper, to be called the chief clerk. The chief clerk shall perform the duties of the Commissioner of the General Land Office in case of a vacancy in said office, or of the absence or sickness of the Commissioner.

2 Stat. 716; 11 *id.* 301; R. S. 448.

Sec. 67. There shall be in the General Land Office an officer called the Recorder of the General Land Office, who shall be appointed by the President, by and with the advice and consent of the Senate, and shall be entitled to a salary of two thousand dollars a year.

5 Stat. 112, 163, 264; R. S. 447.

Sec. 68. It shall be the duty of the Recorder of the General Land Office, in pursuance of instructions from the Commissioner, to certify and affix the seal of the office to all patents for public lands, and attend to the correct engrossing, recording, and transmission of such patents. He shall prepare alphabetical indexes of the names of patentees and of persons entitled to patents; and he shall prepare such copies and exemplifications of matters on file or recorded in the General Land Office as the Commissioner may from time to time direct. Whenever the office of Recorder shall become vacant, or in case of his sickness or absence, the duties of his office shall be performed *ad interim* by the principal clerk on private land claims.

Sec. 69. All patents issuing from the General Land Office shall be issued in the name of the United States, and be signed by the President and countersigned by the Recorder of the General Land Office; and shall be recorded in the office in books to be kept for the purpose.

2 Stat. 717; 5 *id.* 417; R. S. 458. Steeple *v.* Downing, 60 Ind. 478; Boyce *v.* Stambaugh, 34 Mich. 348; Lane *v.* Bommelmann, 17 Ills. 95; 3 Op. Att. Gen. 623.

Sec. 70. There shall be in the General Land Office a principal clerk of the public lands and a principal clerk on private land claims, who shall be appointed by the President, by and with the advice and consent of the Senate, and shall each be entitled to a salary of one thousand eight hundred dollars a year; and they shall perform such duties as may be assigned to them by the Commissioner of the General Land Office.

5 Stat. 109; R. S. 448.

Sec. 71. The officers, clerks, and employes in the General Land Office are prohibited from directly or indirectly purchasing or becoming interested in the purchase of any of the public lands; and any person who violates this section shall forthwith be removed from his office.

2 Stat. 717; 5 *id.* 112; R. S. 452.

Sec. 72. The President is authorized to appoint, from time to time, by and with the advice and consent of the Senate, a secretary, at a salary of one thousand five hundred dollars a year, whose duty it shall be, under the direction of the President, to sign in his name, and for him, all patents for land sold or granted under the authority of the United States.

5 Stat. 111. R. S. 450. Steeple *v.* Downing, 60 Ind. 478. 3 Op. Att. Gen. 623.

Sec. 73. If at any time the number of patents for lands sold or granted under the authority of the United States is such that they cannot be signed within a reasonable time by the secretary appointed under the preceding section, the President may appoint an assistant secretary to sign the same, but such assistant shall be employed by the express direction of the President, and only for such time as may be necessary to bring up the arrears of patents which may be ready for signature.

9 Stat. 209; R. S. 451.

Sec. 74. In all cases in which land has heretofore or shall hereafter be given by the United States for military services, warrants shall be granted to the parties entitled to such land by the Secretary of the Interior; and such warrants shall be recorded in the General Land Office, in books to be kept for the purpose, and shall be located as is or may be provided by law; and patents shall afterwards be issued accordingly.

Sec. 75. Whenever any person claiming to be interested in or entitled to land under any grant or patent from the United States applies to the Department of the Interior for copies of papers filed and remaining therein, in anywise affecting the title to such land, it shall be the duty of the Secretary of the Interior to cause such copies to be made out and authenticated, under his hand and the seal of the General Land Office, for the person so applying.

3 Stat. 721; 5 *id.* 111; R. S. 460.

Sec. 77. There shall be in the General Land Office a principal clerk of the surveys, who shall be appointed by the President, by and with the advice and consent of the Senate, and shall be entitled to a salary of one thousand eight hundred dollars a year. He shall direct and superintend the making of surveys, and returns thereof, and all matters relating thereto, which are done through the officers of the surveyor-general, and perform such other duties as may be assigned to him by the Commissioner of the General Land Office.

5 Stat. 110; R. S. 449.

ADMINISTRATION OF THE LAND SERVICE.

THE following have been the various Commissioners.

Commissioners.	*Term of service.*	*Where born.*	*Whence appointed.*
Edward Tiffin	1812–1814	England	Ohio.
Josiah Meigs	1814–1822		Georgia.
John McLean	1822–1823	New Jersey	Ohio.
George Graham	1823–1830		Dist. of Columbia.
Elijah Hayward	1830–1835		Ohio.
Ethan A. Brown	1835–1836	Connecticut	Ohio.
James Whitcomb	1836–1841	Vermont	Indiana.
Elisha M. Huntingdon	1841–1842	New York	-
Thomas H. Blake	1842–1845	Maryland	Indiana.
James Shields	1845–1847	Ireland	Illinois.
Richard M. Young	1847–1849	Kentucky	Illinois.
Justin Butterfield	1819–1852	New Hampshire	Illinois.
John Wilson	1852–1855	Dist. of Columbia	Dist. of Columbia.
Thomas A. Hendricks	1855–1859	Ohio	Indiaoa.
Samuel A. Smith	1859–1860		Tennessee.
Joseph S. Wilson	1860–1861	Dist. of Columbia	Dist. of Columbia.
James M. Edmunds	1861–1866	New York	Michigan.
Joseph S. Wilson	1866–1871	Dist. of Columbia	Dist. of Columbia.
Willis Drummond	1871–1874	Missouri	Iowa.
Samuel S. Burdett	1874–1876	England	Missouri.
James A. Williamson	1876–1881	Kentucky	Iowa.
N. C. McFarland	1881		Kansas.

Duties of the Commissioner.—The Commissioner of the General Land Office is appointed by the President and confirmed by the Senate; receives an annual salary of $4,005 and holds office indefinitely. He performs, under the direction of the Secretary of the Interior, all executive duties appertaining to the surveying and sales of the public lands of the United States, or in any wise respecting such public lands, and also such as relate to private claims of land and the issuing of patents for all lands under the authority of the Government.

Importance of the General Land Office.—The General Land Office holds the records of title to the area known as the public domain, on which are hundreds of thousands of homes. Its records constitute the "Doomsday Book" of the public domain of the United States. All the business pertaining to the survey, disposition, and patenting of the public lands of the United States is transacted through it, or under its order and supervision. No more responsible bureau of the Government exists. Important questions of law often arise in the various divisions of this Office as to rules of evidence, as to boundaries, riparian rights, entries, locations, cultivation improvements, settlement, domicile, expatriation, jurisdiction of executive officers, such as the power of the Commissioner of Pensions to cancel land warrants under various circumstances after they have issued or after they have been located; as to the authority of this Office to set aside or cancel patents after execution, and before delivery and after delivery; as to rights of way and water rights; as to when patents take effect; as to when patents are valid, void, or merely voidable; as to when legal title passes without patent; in construing foreign treaties and Indian treaties; as to forfeitures, abandonments, assignments; as to rights of parties holding scrip of various kinds; as to the rights of owners of lost instruments; as to advancement for surveys, deposits and excess. The laws and decisions of various States and Territories have to be examined to determine who are the lawful wives, widows, heirs, devisees, executors, administrators, or guardians; to determine the jurisdiction of local courts and the validity of proceedings therein, and the legality of judicial sales. Since the organization of the Government about three thousand acts have been passed by Congress concerning the public lands. Many of these acts are composed of numerous sections, and many of these sections present a number of difficult questions of construction. These provisions are generally construed in the first instance by this office; it is often many years before a judicial interpretation is obtained, if ever. The Supreme Court of the United States has on more than one occasion declared that the construction and practice of this Department is entitled to great respect, and such construction is usually followed by the State courts. It is true that many of these enactments have been repealed; but under imperfect administration in former years, titles acquired or supposed to be acquired under such repealed provisions are found to be imperfect, and necessitate an examination and consideration of the early acts of Congress and of the rights of parties thereunder. In determining and in deciding these cases careful opinions must be written deciding the questions of fact and of law, giving reasons for conclusions and citing authorities. Rules of practice in cases before the district land offices, the General Land Office, and the Department of the Interior are provided. (See circular approved October 9, 1878, and revised rules.)

Present Organization.—Commissioner, N. C. McFarland, of Kansas. Chief Clerk, Curtis W. Holcomb, of Connecticut. This bureau is charged with the survey and disposal of the public lands of the United States. There are at the present time, subordinate to the General Land Office, sixteen surveying districts, each in charge of a surveyor-general, with a competent corps of assistants and deputies, through whom the current and annual surveys are made and reported to this bureau. There are also ninety-six land districts, each with an office conveniently located for the sale or other disposal of the public lands. These offices are in the charge of registers, to whom application is made for lands, and receivers of public money, who, as the name indicates, receive all moneys in payment for the same, and are situated in the different public-land States and Territories. The transactions of these subordinate offices are at regular intervals of time reported to the General Land Office, and the duty of classifying, examining, and definitely disposing of the work done in these offices together with supervising and directing the same, forms the principal part of the work of the General Land Office, giving employment to an average of two hundred clerks. In the execution of this work the necessities of the case have led to the system of subdividing the office into divisions, each in charge of a principal clerk, and to each of which respective work is referred when received from the district offices. These divisions are at present designated by letters from A to N, and in all correspondence sent from the bureau the initial letter of the division from which it emanates is marked, in order that the same may be more readily referred to in after days.

Division A.—The chief clerk has charge of this division. Its work consists in receiving, briefing, and properly referring all communications received; in keeping the record of all appointments, resignations, or dismissals in the clerical force of the bureau; in supervising the opening or closing of district land offices; investigating charges against land officers; the matter of official bonds; the drawing of requisitions for printing; the expenditure of the contingent expense fund; and the assignment and general regulation of the clerical force of the bureau. In this division, also, all fees for exemplifications of records are received by a clerk designated for that purpose. The chief clerk is, by law, made the Acting Commissioner during the absence of the Commissioner.

Division B.—This division is in charge of the records of the General Land Office. In this division patents are prepared for all tracts sold or located with warrants or scrip at the district land offices, after such transfers have been properly examined in other divisions of the bureau. A correct record is here kept of all patents issued, and letters transmitting patents are prepared. The original papers forming the basis of patent are here filed, and all patents undelivered or uncalled for are retained in this branch of the office. To this division are finally referred for examination and proper action, the papers in locations made in satisfaction of military bounty-land warrants issued by authority of various acts of Congress. The same reference is made of locations by agricultural college scrip, and the special scrip issued to Porterfield. In this division land warrants and scrip, submitted for official approval, are examined as to genuineness and regularity of assignment. All revolutionary bounty land-scrip is here prepared, as also are patents for lands in the Virginia military district, Ohio. The recorder is appointed by the President, and by law, is required to countersign all patents after they have received the signature of the President. The number of patent records in Division B are as follows:

	Vols.
Military	1,207
Cash	3,652
Home	353
Miscellaneous	375
Total (of 500 pages each)	5,587
Miscellaneous, letter, and other records	1,793
Total books of record	7,380

Division C.—In charge of the principal clerk of public lands. In this division are kept the numerous "tract-books," which show, in well-arranged order, the status of every surveyed tract of land which is or has been included in the public domain. All sales or other disposals of land made and reported in the district offices are noted in the proper places in these books. They also show reservation, for Indian, military, or other purposes, private grants and special appropriations of land. This division has charge of the examination and final action on all entries under the homestead and timber-culture laws, of ordinary private purchase by cash or by sale at public offerings, all selections under internal-improvement grants or under the various grants for educational purposes and locations with land scrip.

Division E.—In charge of the principal clerk of surveys. This division is charged with the supervision of all work relating to the public surveys. Instructions to the surveyors-general relative to the extension of surveys or the examination and correction of erroneous surveys are here prepared. All contracts for surveys by deputy surveyors are here examined and passed upon, and the adjustment of accounts for surveying service made and submitted to the Treasury Department for payment. All returns of surveys are referred to this division for examination as to correctness, and after approval are filed in the division. All records and correspondence relating to Indian, military, light-house, live-oak, or other reservations are in charge of this division. To this division are also referred matters pertaining to the establishment of boundary lines, by astronomical surveys, between States and Territories of the United States. The plats and field-notes of all surveys are retained on the files of this division, in charge of a principal draughtsman, who supervises all work of draughting or copying plats of surveys, and who compiles and prepares the official map of the United States. There are in this division more than 50,000 plats or maps of township and other surveys.

Division M.—To this division are first referred all returns made by registers and receivers of the business of the district land offices. The various dispositions of land are here classified, and the accounts of the registers and receivers are here kept. A strict account is also kept of the five per cent. fund due the States from the sale of public lands within their respective limits; an account of the receipts and expenditures of money collected from depredators of timber lands, and the accounts of sale of Osage and other Indian lands. All applications for repayment of moneys received for lands to which title cannot be given are here examined. In this division is kept a classified statement of all disposals of public lands.

Division N.—The work of this division relates to mineral lands, and has in charge the examination and final disposition of applications for patents for that class of lands, and the adjudication of contests growing out of such applications. Here, also, the mineral or non-mineral classification of given lands is passed upon. All patents for mineral and coal lands are here prepared, and the plats of survey of all mines for which patents are sought are here filed.

Salaries of Officers and Employes of General Land Office.

1 commissioner, at $4,000	$4,000
1 chief clerk, at $2,000	2,000
1 recorder, at $2 000	2,000
1 law clerk, at $2,000	2,000
1 principal clerk public lands, at $1,800	1,800
1 principal clerk private land claims, at $1,800	1,800
1 principal clerk surveys, at $1,800	1,800
6 clerks class four, at $1,800 each	10,800
1 draughtsman, at $1,600	1,600
22 clerks class three, at $1,600 each	35,200
1 assistant draughtsman, at $1,400	1,400
40 clerks class two, at $1,400 each	56,000
80 clerks class one, at $1,200 each	96,000
30 clerks, at $1,000 each	30,000
9 copyists, at $900 each	8,100
9 assistant messengers, at $720 each	6,480
6 packers, at $720 each	4,320
12 laborers, at $660 each	7,920
223	273,220

Other Offices.—The first officer in charge of the surveys of the public lands was called the geographer of the United States. He was appointed under the ordinance of May 20, 1785. Thomas Hutchins was the first and only incumbent of the office. Under the act of May 18, 1796, creating the office, Rufus Putnam, in 1797, was appointed surveyor-general of the Northwest Territory (including Michigan Territory). He remained until 1803. Captain Jared Mansfield, U. S. A. succeeded as surveyor-general from 1803 to 1813. Under Captain Mansfield, aided by the advice of Mr. Jefferson, many and important changes and improvements were made in the surveying system. Josiah Meigs held the office of surveyor-general of this territory from 1813 to 1815. He gave way to Edward Tiffin from 1815 to 1825. These surveyors-general employed a sufficient number of skilful deputy surveyors; who employed a force of men as chain men, &c. They were paid by the mile for each mile of line run, the first rate being $3 per mile. Sections of the country were laid out, over which from time to time Congress or the Treasury Department appointed surveyors-general, who employed deputies, special statutes in most cases regulating this.

Surveyors Prior to 1825.—Aaron Greeley, surveyor of Michigan Territory, 1812; William Rector, surveyor of Illinois, Missouri, and Arkansas, 1814 to 1824; Wm. Clark, surveyor of Illinois, Missouri, and Arkansas, 1824 to 1825; Wm. McRee, surveyor of Illinois, Missouri, and Arkansas, 1825; Isaac Briggs, surveyor south of Tennessee, 1803 to 1807; Seth Pease, surveyor south of Tennessee, 1807 to 1820; Thomas Freeman, surveyor south of Tennessee, 1820 to 1822; John Coffee, surveyor of Alabama, 1817 to 1825; Robert Butler, surveyor of Florida, 1824 to 1825; Silas Bent, surveyor of Louisiana, 1807 to 1813.

Surveyors-general within States or Territories.—May 7, 1822, the first surveying district was created, viz., the State of Ohio, with an officer called a surveyor-general in charge. A surveying district may be a State, a Territory or two or more of any of them joined together for such purpose by law and in charge of a surveyor-general, with assistants. The surveys are made under the contract system, the surveyor-general selecting the deputy, Congress fixing the compensation. These surveying districts are closed by act of Congress when all the public lands are surveyed, and certain archives therein transferred to the State in which the lands lie.

Registers and Receivers.—The offices of register and receiver were created by the act of May 10, 1800. Districts for the sale of lands were made at the same time and by the same act, and this method has since continued. A land district for disposing of lands, with a register and receiver, may cover a State or there may be ten in a State. Land districts are in no wise connected in boundary with surveying districts. They are made by law of Congress, or by the President in mineral districts, and are abolished, consolidated one with another, reduced in area, or closed by Congress or the President. They are simply points for sale and disposition of land, more for the convenience of the people than of the Government. The land being surveyed is duly returned and notice of filing of plats given, and the land laws applicable to the district are put in force by the registers and receivers of the several district land offices, in permitting the settlers and locators to proceed under the law. When closed, their archives are sent to the General Land Office, which during their existence has complete and entire control over them by a system of checks and notations on a set of duplicate plats, notes, and supervises each and all changes made on the plats of the district offices, which are duly reported by them at the end of each month to the General Land Office at Washington. Through the agency of these district offices the United States proceeds to dispose of the public lands in the methods contemplated in the laws providing for sales at ordinary private entry, for pre-emptions, for entries for homestead, timber culture, town site, and mining purposes, and in the laws making grants for specific objects, and exceptional provisions with regard to abandoned military and other reservations.

List of offices of surveyor-general from May 10, 1800, to June 30, 1880.

Surveying district.	*Location of office.*	*When established.*	*Removed or discontinued.*

Registers and Receivers are paid an annual salary of $500 each, and are allowed fees up to and including $3,000 per annum.

SURVEYS OF THE PUBLIC LANDS.

THE cessions of the several States were organized from time to time into geographical divisions by the laws creating them and the lands were ordered to be surveyed, including lands to which the Indian title had been or would be extinguished. The same proceeding took place with purchased territory in 1803, 1819, 1848, 1850 and 1853. The extension of the surveys being authorized by Congress over a district of country, the Commissioner of the General Land Office directs the surveyor-general of the district, whose office is created by the law prior to extending the surveys, to begin the same.

The Rectangular System.—The land surveys under the United States are uniform and done under what is known as the "rectangular system." This system of surveys was reported from a committee of Congress May 7, 1784. The committee consisted of Thomas Jefferson, chairman; Messrs. Williamson, Howell, Gerry, and Reas. This ordinance required the public lands to be divided into "*hundreds*" of ten geographical miles square, and those again to be subdivided into lots of one mile square each, to be numbered from 1 to 100, commencing in the northwestern corner and counting from west to east and from east to west continuously; and also that the lands thus subdivided should be first offered at public sale. This ordinance was considered, debated, and amended; and on the 3d of May, 1785, on motion of Mr. Grayson, of Virginia, seconded by Mr. Monroe, the size of the townships was reduced to six miles square. It was further discussed until the 20th of May, 1785, when it was finally passed. The origin of this system is not known beyond the committee's report. There had been land surveys in the different colonies for more than a hundred years; still the method of granting land for settlements in vogue in all the colonies was in irregular tracts, except in the colony of Georgia, where, after 1733, eleven townships of 20,000 square acres each were divided into lots of 50 acres each.

The act of cession of the State of Virginia of her western territory provided for the formation of States from the same not less than one hundred nor more than one hundred and fifty miles square. This square form of States may have influenced Mr. Jefferson in favor of a square form of survey, and besides the even surface of the country was known, the lack of mountains and the prevalence of trees for marking it also favoring a latitudinal and longitudinal system. Certain east and west lines run with the parallels of latitude, and the north and south township lines with the meridians. The system as adopted provided for sale in sections of 640 acres, one mile square. In 1820 a quarter-section, or 160 acres, could be purchased. In 1832 sub-divisions were ordered by law into 40-acre tracts or quarter-quarter-sections to settlers, and in 1846 to all purchasers. On May 18, 1796, the ordinance of May 20, 1785, was amended; also on May 10, 1800, on the introduction of land offices and credit sales, and on February 11, 1805; April 24, 1820; April 5, 1832; and May 30, 1862. (For existing laws or surveys see chapter IX, United States Revised Statutes, "Survey of the public lands," sections 2395 to 2413.) Since the inauguration of the system it has undergone modification in regard to the establishment of standard lines and initial points, the system of parallels or correction lines, as also of guide meridians, having been instituted, contributing largely towards its completeness.

Methods and System of Land Parceling Surveys.—Preliminary to surveying a district, a surveying meridian and base line must be established. Since the adoption of the rectangular system of public surveys, May 20, 1785, twenty-four initial points, or the intersection of the principal bases with surveying meridians, have been brought into requisition to secure the certainty and brevity of description in the transfer of public lands to individual ownership. From the principal bases townships of six miles square are run out and established, with regular series of numbers counting north and south thereof, and from the surveying meridians a like series of ranges are numbered both east and west of the principal meridians. During the period of ninety years since the organization of the system the following numerical and independent principal meridians and bases have been initiated, to wit:

The first principal meridian divides the States of Ohio and Indiana, having for its base the Ohio River, the meridian being coincident with 84° 51′ of longitude west from Greenwich. The meridian governs the surveys of public lands in the State of Ohio.

The second principal meridian coincides with 86° 28′ of longitude west from Greenwich, starts from the confluence of the Little Blue River with the Ohio, runs north to the northern boundary of Indiana, and governs the surveys in Indiana and a portion of those in Illinois.

The third principal meridian starts from the mouth of the Ohio River and extends to the northern boundary of the State of Illinois, and governs the surveys in said State *east* of the meridian, with the exception of those projected from the second meridian, and the surveys on the *west* to the Illinois River. This meridian coincides with 89° 10′ 30″ of longitude west from Greenwich.

The fourth principal meridian begins in the middle of the channel of the mouth of the Illinois River, in latitude 38° 58′ 12″ north, and longitude 90° 29′ 56″ west from Greenwich, and governs the surveys in Illinois west of the Illinois River, and west of the third principal meridian lying north of the river. It also extends due north through Wisconsin and Northeastern Minnesota, governing all the surveys in the former and those in the latter State lying east of the Mississippi and the third guide meridian (west of the fifth principal meridian) north of the river.

The fifth principal meridian starts from the mouth of the Arkansas River, and, with a common base-line running due west from the mouth of the Saint Francis River, in Arkansas, governs the surveys in Arkansas, Missouri, Iowa, Minnesota west of the Mississippi, and the third guide meridian north of the river, and in Dakota Territory east of the Missouri River. The meridian is coincident with 90° 58′ longitude west from Greenwich.

The sixth principal meridian coincides with longitude 97° 22′ west from Greenwich, and, with the principal base line intersecting it on the 40th degree of north latitude, extends north to the intersection of the Missouri River and south to the 37th degree of north latitude, controlling the surveys in Kansas, Nebraska, that part of Dakota lying south and west of the Missouri River, Wyoming, and Colorado, excepting the valley of the Rio Grande del Norte, in Southwestern Colorado, where the surveys are projected from the New Mexico meridian. In addition to the foregoing six principal meridians and bases governing public surveys, there have been established the following meridians and bases, viz:

The Michigan meridian, in longitude 84° 19′ 09″ west from Greenwich, with a base-line on a parallel seven miles north of Detroit, governing the surveys in Michigan.

The Tallahassee meridian, in longitude 84° 18′ west from Greenwich, runs due north and south from the point of intersection with the base line at Tallahassee and governs the surveys of Florida.

The Saint Stephen's meridian, longitude 88° 02′ west from Greenwich, starts from Mobile, passes through Saint Stephen's, intersects the base line on the 31st degree of north latitude, and controls the surveys of the southern district in Alabama and of the Pearl River district lying east of the river and south of township 10 north in the State of Mississippi.

The Huntsville meridian, longitude 86° 31′ west from Greenwich, extends from the northern boundary of Alabama as a base, passes through the town of Huntsville, and governs the surveys of the northern district in Alabama.

The Choctaw meridian, longitude 89° 10′ 30″ west from Greenwich, passes two miles west of the town of Jackson, in the State of Mississippi, starting from the base line twenty-nine miles south of Jackson, and terminating on the south boundary of the Chickasaw cession; controlling the surveys east and west of the meridian and north of the base.

The Washington meridian, longitude 91° 05′ west from Greenwich, seven miles east of the town of Washington, in the State of Mississippi, with the base line corresponding with the 31st degree of north latitude, governs the surveys in the southwestern angle of the State.

The Saint Helena meridian, 91° 11′ longitude west from Greenwich, extends from the 31st degree of north latitude, as a base, due south, and passing one mile east of Baton Rouge, controls the surveys in the Greensburgh and the southeastern districts of Louisiana, both lying east of the Mississippi.

The Louisiana meridian, longitude 92° 20′ west from Greenwich, intersects the 31st degree north latitude at a distance of forty-eight miles west of the eastern bank of the Mississippi River, and, with the base line coincident with the said parallel of north latitude, governs the surveys in Louisiana west of the Mississippi.

The New Mexico meridian, longitude 106° 52′ 09″ west from Greenwich, intersects the principal base line on the Rio Grande del Norte about ten miles below the mouth of the Puerco River, on the parallel of 34° 19′ north latitude, and controls the surveys in New Mexico, and in the valley of the Rio Grande del Norte, in Colorado.

The Great Salt Lake meridian, longitude 111° 53′ 47″ west from Greenwich, intersects the base line at the corner of Temple Block, in Salt Lake City, Utah, on the parallel of 40° 46′ 04″ north latitude, and governs the surveys in the Territory of Utah.

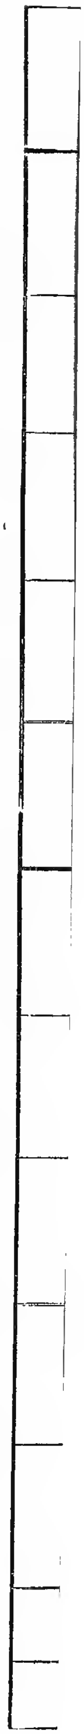
The Boisé meridian, longitude 116° 20′ west from Greenwich, intersects the principal base between the Snake and Boisé Rivers, in latitude 43° 26′ north. The initial monument, at the intersection of the base and meridian, is nineteen miles distant from Boisé City, on a course of south 29° 30′ west. This meridian governs the surveys in the Territory of Idaho.

The Mount Diabolo meridian, California, coincides with longitude 121° 54′ west from Greenwich, intersects the base line on the summit of the mountain from which it takes its name, in latitude 37° 53′ north, and governs the surveys of all Central and Northeastern California and the entire State of Nevada.

The San Bernardino meridian, California, longitude 116° 56′ west from Greenwich, intersects the base line at Mount San Bernardino, latitude 34° 06′ north, and governs the surveys in Southern California lying east of the meridian and that part of the surveys situated west of it which are south of the eight standard parallel south of the Mount Diabolo base line.

The Humboldt meridian, longitude 124° 11′ west from Greenwich, intersects the principal base line on the summit of Mount Pierce, in latitude 40° 25′ 30″ north, and controls the surveys in the northwestern corner of California lying west of the Coast range of mountains and north of township 5 south of the Humboldt base.

The Willamette meridian, is coincident with longitude 122° 44′ west from Greenwich, its intersection with the base line



MAP showing rectangular survey of public land (usual method) with the survey of a Mineral District therein, showing method of Quartz or Lode claim locations.

is on the parallel of 45° 30′ north latitude, and it controls the public surveys in Oregon and Washington Territory.

The Montana meridian extends north and south from the initial monument established on the summit of a limestone hill, eight hundred feet high, longitude 111° 40′ 54″ west from Greenwich. The base line runs east and west from the monument on the parallel of 45° 46′ 27″ north latitude. The surveys for the entire Territory of Montana are governed by this meridian.

The Gila and Salt River meridian intersects the base line on the south side of the Gila River, opposite the mouth of Salt River, in longitude 112° 15′ 46″ west from Greenwich, and latitude 33° 22′ 57″ north, and governs the public surveys in the Territory of Arizona.

The Indian meridian intersects the base line at Fort Arbuckle, Indian Territory, in longitude 97° 15′ 56″ west from Greenwich, latitude 34° 31′ and governs the surveys in that Territory.

Administration and Method of the Surveys.—The public surveys are controlled by the Commissioner of the General Land Office, and under the immediate superintendence of sixteen surveyors-general in their respective surveying districts into which at present the public lands are divided. The surveyors-general whose offices are conveniently located in their districts and well appointed with personal and other facilities for the business, enter into contracts with professional surveyors, whom they commission as their deputies, and who are thoroughly acquainted with the system and the official requirements in regard to field operations. Surveying contracts describe the particular field-work to be executed, time within which it is to be completed, consideration stipulated at so much per lineal mile of surveying, including all expenses of the surveyor, his party and instruments, together with the proper returns of survey to the office of the surveyor-general, to be accompanied by an affidavit of the surveyor to the effect that the work was performed by him, in his own proper person, in accordance with his contract and the manual of surveying instructions, and in strict conformity to the laws governing the survey. The party of the deputy surveyor generally consists of two chainmen, flagman, axeman, and two moundmen, whose duties are to assist him in running, measuring, and marking the lines, and constructing and setting corner boundaries. They are sworn to perform their respective duties with fidelity before they enter on the same, and on completing the work they make affidavits to the effect that the deputy surveyor was assisted by them in the survey which they describe, and that it has been executed in all respects well and faithfully. To guard the Government from any loss that might be occasioned by erroneous or fraudulent surveys on the part of the surveyor, he is required to give bond, with approved securities, in double the amount of his contract; and when his unfaithfulness is detected the delinquent deputy and his bondsmen are punishable by law, and the surveyor debarred from future employment in like capacity. Upon the return of surveys to the surveyor-general, consisting of original field-notes and a topographical sketch of the country surveyed, the work is examined, and if on applying the usual tests, it is found to be correctly executed, the surveyor-general approves the field-notes; whereupon the draughtsman protracts the same on township plats in triplicate, and, after approving the plats, the surveyor-general files the original in his office, to be ultimately delivered to State authorities upon closing of United States surveys in the States; the duplicate is sent to the local land office to enable the register and receiver of public lands to dispose of the lands embraced in the several townships, and the triplicate is transmitted to the Commissioner of the General Land Office for the information of the Government. The manual of instructions for surveyors-general to regulate the field operations of deputy surveyors, prepared by the Commissioner of the General Land Office, 1855, was, by the second section of the act of May 30, 1862, legalized. This manual was prepared February 22, 1855, by the principal clerk of surveys. It describes the method in the field and is illustrated by diagrams. Special instructions are sometimes issued.

Execution of surveys.—The United States surveyor-general for the district enters into contract with a deputy surveyor, after being commissioned, for the survey of either standards, townships, or sub-divisions. The contract specifies the localities where surveys are to be made, duration of time within which the work is to be returned, the price of survey per lineal mile, including all contingent expenses to be borne by the deputy surveyor, who is required to execute the work in his own proper person, sub-contracting being illegal, and the contract must be approved by the Commissioner of the General Land Office. The lines of public surveys over level ground are measured with a four-pole chain, sixty-six feet in length, 80 chains constituting one lineal mile, but with a two-pole chain where the features of the country are broken and hilly. The lines thus chained are marked through timber land by chops on line trees on each side, and in the absence of such trees those standing nearest the survey on both sides are blazed diagonally toward the line run. Trees standing at the precise spot where legal corners are required are made available. If no such trees are there, then the corners are perpetuated by posts or stones, with inscriptions, and the positions of the same are indicated by witness trees or mounds, the angular bearings and distances from the corner being ascertained and described in the field-notes. The lines intersecting navigable streams, the area of which are excluded from sale, require the establishment of meander corner-posts, the courses and distances meandered by navigable streams governing the calculations from which the true contents of fractional lots are computed and expressed on township plats. Township corner-posts, or stones common to four townships, are set diagonally, properly marked with six notches on each of the four angles set to the cardinal points of the compass; and mile posts on township lines are marked with as many notches on them as they are miles distant from the township corners respectively; the four sides of the township and section posts, which are common to four townships or sections, are marked with the corresponding number of sections. See accompanying diagrams.

The principal meridian, base, standard and guides have been first measured and marked, and the corner boundaries thereon established, the process of surveying and marking the exterior lines of the townships, north and south of the base, and east and west of the meridian, within those standard lines, is shown on accompanying diagrams. The public lands are first surveyed into rectangular tracts, according to the true meridian, noting the variation of the magnetic needle. These tracts are called townships, each six miles square, having reference to an established principal base line on a true parallel of latitude, and to longitude styled principal meridian. Any series of contiguous townships, north or south of each other, constitutes a range; the townships counting from the base, either north or south, and the ranges from the principal meridian, either east or west. Each township is subdivided into 36 sections of one mile square, or 640 acres, in all, 23,040 acres. In establishing and surveying a base-line from the initial point east and west, quarter-section, section, and township corners are established at every 40, 80, and 480 chains, respectively, which are for sections and townships lying north of the base, and not for those situated south. In surveying the principal meridian north and south of the initial point, similar corners are established, which are common for townships lying immediately east or west. Standard parallel or correction lines are run east and west from the principal meridian with similar character of corners, as on the principal base and meridian, and constitute special bases for township lines lying north thereof, the correction lines being run and marked at every four townships, or 24 miles north of the base, and at every five townships, or 30 miles south of the same. Guide meridians are surveyed at distances of every eight ranges of townships, or 48 miles east and west of the principal meridian; the guides north of the principal base starting either from it or from standard parallels. They are closed by meridional lines on other standard parallels immediately north, while those lying south of the principal bases start in the first instance from the first standard parallel south, and are closed by meridional lines on the principal base. Then the guides begin on the second standard parallel south, and close on the first standard parallel south, again starting from the third standard parallel south, and closing on the second standard parallel south, and so on. The closing corners on the principal base and standard parallel are established at points of convergency of the meridians, which occasion a double set of corners on the principal base and correction, or standard parallels, styled "standard corners" and "closing corners." This process requires offsetting of the guide meridians to the extent of the convergency of the meridians on each of the standard parallels and bases.

The principal base, principal meridian, standard parallels, and guide meridians, constitute a framework of the rectangular system of public surveys. Within these limits any errors are avoided which otherwise would result from adhering to the surveys made as the law directs, to the true meridian, in consequence of the convergency of meridians and of measurement over uneven surfaces. The surveys of the standard lines are made with instruments operating independently of the magnetic needle, the magnetic being noted solely to show the true variation. These lines divide the sphere of field operations into parallelograms of 48 by 24 miles north of the principal base and 48 by 30 miles south, the convergency of the meridians in the former instance being greater than in the latter. The parallelograms formed by meridians and parallels are in their turn subdivided into townships, and the latter ultimately into sections with an ordinary but perfectly adjusted compass. These parallelograms also serve to connect distant surveys from those progressing regularly from the initial point, if first required, for the convenience of remote settlements or other considerations. The township lines start from the standard corners, pre-established on the principal base and standard or correction parallels, and are surveyed to the extent required within each parallelogram. On those lines quarter-section, section, and township corners are fixed to govern the subdivisional work of the townships in 36 sections. The sections of one mile square are the smallest tracts, the out-boundaries of which the law requires to be actually surveyed. Their minor subdivisions, represented in dotted lines on the accompanying diagram, are not surveyed and marked in the field. They are defined by law, and the surveyors-general, in protracting township plats from the field-notes of sections, merely designate them in red ink, the lines being imaginary, connecting opposite quarter-section corners in each section from south to north, and from east to west, thereby dividing sections into four quarter-sections of 160 acres each, and these, in their turn, into quarter-quarter-sections, of 40-acre tracts, by imaginary lines, starting from the equidistant points between the section and quarter-section corners to similar points on the opposite sides of the section. Each section containing 640 acres, subdivided into legal subdivisions, affords forty different descriptions, susceptible of being disposed of to purchasers, from 640-acre tracts to 40-acre parcels. This convenient mode of subdividing sections with a view to economy and to facilitate sales of small tracts, although not actually marked on the ground by metes and bounds, yet under laws of Congress are susceptible of demarkation by any surveyor in the different States and Territories in accordance with the field-notes of the original survey made by United States officers. The instruments employed in the field-work by United States surveyors consist of solar compasses, transits, and common compasses of approved construction; four-pole chains and two-pole chains, of 100 and 50 links, respectively, each link of the chain being equal to 7.92 inches. The surveyors' chains are compared with standard chains and standard yard measures furnished surveyors-general by the government. The measurement of the lines of public surveys is horizontal, requiring shortening of the chain over abrupt and undulating surface; the navigable lakes and water-courses are segregated from the land, the same being declared by law public highways and not subject to sale.

Classification or Definition.[1]—Under existing laws the deputy surveyors note the character of the lands in their field-notes, as agricultural, timber, mineral, etc., and the natural and artificial objects. These are entered upon the township plats in detail, showing the topography of the surveyed township. This description is subject to correction or amendment by proof, in the manner indicated by the "Instructions from the General Land Office;" also, "Instructions in cases of contest and charges of fraud." See accompanying map for illustration of classification by a deputy surveyor, being copy of a township plat on file in the district land office at Salt Lake City, Utah, and from which the lands are sold by the district officers.

Geological Surveys under General Land Office.—The lead, copper, and other mineral lands in Iowa, Michigan, Minnesota, Wisconsin and Missouri, were first the subject of a geological survey under the General Land Office, and after this were surveyed under the rectangular or usual system, and sold in legal sub-divisions, the soil carrying with it the mineral. The following table shows the geological surveys of the public domain under the General Land Office:

Geological Surveys of public domain under General Land Office.

State and Territory.	*Names of Geologists.*	*Acts of Congress.*	*United States Statutes.*	*Date of Instructions.*
Southern Peninsula of Michigan	Douglas Houghton	June 17, 1844	Vol. 5, p. 691	June 25, 1844.
Chippewa land district, Wisconsin and Iowa	David Dale Owen	March 3, 1847	Vol. 9, p. 165	April 16, 1847.
Lake Superior land district, Michigan	Charles T. Jackson	March 1, 1847	Vol. 9, p. 146	April 16, 1847.
Ditto.	Whitney & Foster	March 1, 1847	Vol. 9, p. 146	May 16, 1849.
Oregon and Washington	John Evans	March 3, 1853 March 3, 1855	Vol. 10, p. 650	April 14, 1853. March 20, 1855.
Nebraska, Wyoming and Colorado	Ferd. V. Hayden	March 2, 1867	Vol. 14, p. 470	April 29, 1867.
Wyoming and Colorado	Ditto.	July 20, 1868	Vol. 15, p. 119	July 28, 1868.

The geological survey of the Territories of the United States by F. V. Hayden was continued under authority of act of Congress approved March 3, 1869 (15 Stats., p. 306), under the direction of the Secretary of the Interior exclusively, and discontinued on the 30th day of June, 1879. (See 20 Stats., p. 394.)

Method of Surveying Mineral Claims.—Under the provisions of the mining act of July 26, 1866, the surveyors-general of the several districts divided their jurisdictions into mineral surveying districts, by grouping counties or parts of counties, and gave each district a numerical designation from one upward. Deputy mineral surveyors were appointed for each of these districts by the surveyors-general. Lode claims were limited in length to not exceeding 200 feet for each individual, with one additional claim for discovery; no location by an association of individuals to exceed 3,000 feet. The width of locations was regulated by the local rules of miners in each district.

The method of application for survey and return of survey of a mining claim, in compliance with the act above stated, can be found in the act and in the instructions from the General Land Office on this subject, of date January 14, 1867. This system of establishing mineral surveying districts for mineral surveys was discontinued by the act of May 10, 1872. The act of May 10, 1872, was to cure the defects in the act of July 26, 1866, and to complete a system of survey and disposition of mineral lands, containing gold, silver, cinnabar, and other valuable minerals. Under this act the surveyors-general appoint a sufficient number of surveyors of mineral claims, called deputy mineral surveyors. The maximum rates of charges for such surveys may be fixed by the Commissioner of the General Land Office. (See R. S., sec. 2334.) Claimants pay all expenses of survey, and make deposits for platting and other expenses up to the issuing of patents. The statute provides the method of posting and other incidents pertaining to the procedure for obtaining patent. Mineral districts can be formed from the public domain, whether surveyed or not.

Classification of Mineral Land.—The method of classification of mineral lands on the public domain, when the

[1] Section 2409, Revised Statutes, authorizes the Secretary of the Interior to introduce the geodetic method of surveys of public lands in Oregon and California, if he deems it advisable, and section 2410 provides for a departure from the rectangular method of survey in California, if he deems proper. He may also vary the lines of survey from a rectangular form—to suit the circumstances of the country—in Nevada.

lines of the public surveys are being extended over them, is as follows: At the time of survey in the field the deputy surveyor notes on his field-notes (which remain permanently in the surveyor-general's office, a copy being sent to the Commissioner of the General Land Office) the character of the country, both from observation and information from persons, if any there be, having knowledge of the same. This makes up the general topography. He describes the country by sections one mile square. When the deputy makes up his plats he enters upon them the topography noted in his field-notes and returns the same to the surveyor-general, who prepares three copies thereof. One of the township plats, with a copy of the field-notes, is sent to the General Land Office, to be used in checking all entries or changes of entries made in the district land office. If the land surveyed is returned as mineral, the Commissioner at once issues notice to the land office of the district in which the lands lie of the withdrawal of the same from agricultural or entry other than as mineral. Claimants of mining claims may make application for survey to the surveyor-general, as provided by law, and the surveys of their claims will be made by a mineral deputy, with or without reference to the lines of the rectangular system. Still they can and may be used for points of determination and reference. Proof is admissible, upon contest in the district land offices between claimants, as to its mineral or non-mineral character. The register and receiver render an opinion on the case, which is forwarded to and approved or disapproved by the Commissioner of the General Land Office, and after his action is subject to appeal to the Secretary of the Interior. In case the rectangular surveys are not extended over the lands containing mineral, the claimant, whether a mining district has been formed by the miners or not, applies to the surveyor-general who orders a survey by a deputy mineral surveyor, and the law is followed. Mining claims are surveyed whether public lands surveys have been made or not. The survey of a mining claim—lode, vein, or placer—has no reference necessarily to any other surveys or systems of surveys.

Placer claims, not exceeding 160 acres, located in conformity with law may be surveyed independent of the land-parceling surveys; but when they are within the limits of surveyed lands and conform to legal subdivisions, no further survey is necessary. All placer claims after May 10, 1872, must conform as nearly as possible to the land-parceling or rectangular system of surveys. Ten-acre claims are recognized; forty-acre lots being subdivided into ten-acre lots.

The Benefits of the Present System of Land Parceling.—The rectangular system came in at the birth of the public domain. It started prior to the opening of the lands for sale in the territory northwest of the river Ohio, in the survey of the first seven ranges of townships therein adjoining Pennsylvania. It afterward covered the territory south of the river Ohio, and thence was applied to the old Natchez settlement, in the present State of Mississipi. It now extends over portions, if not all, of every land, State, and territory in the Union. It has been in operation for about ninety years, and has been a faithful friend to the settlers on the public domain. In the extensive sphere over which the surveys have progressed from Florida, on the Atlantic, and westward to the Pacific, including all the public land, States and Territories of the Union, with the exception of Alaska, formerly Russian America, the system has worked satisfactorily, furnishing facilities for the acquisition of public lands in any region of the country, and methods for the restoration of landmarks which may be lost or destroyed by time or accident. Adequate means exist in the surrounding landmarks of the adjacent public surveys, whereby missing metes and bounds can be restored in accordance with the original field-notes thereof, and the designations placed on township plats. Its recommendations to the public lie in its economy, simplicity, and brevity of description in deeding the premises by patent and for future conveyancing, and in the convenience of reference from the most minute legal subdivision to the corners and lines of sections, and of townships of given principal base and meridians. Its greatest convenience is its extreme simplicity of description. Any person, by its monuments and markings, can readily find the tract sought for. It was originated for land parceling for sale, and it has answered the purpose. The system now extends over the whole surface of the States of Ohio, Indiana, Illinois, Michigan, Arkansas, Mississippi, Alabama, Missouri, Wisconsin, Iowa, Kansas, and portions of the States of Florida, Louisiana, Nevada, Minnesota, Nebraska, California, Oregon, and Colorado; also in the Territories of Washington, Utah, Montana, Idaho, Wyoming, Arizona, New Mexico, and Dakota, and the Indian Territory. The total area surveyed under this system is 752,557,195 acres in the various land States and Territories, as is shown by the following tabular statement:

Tabular statement showing the number of acres of Public Lands surveyed by the following Land States and Territories up to June 30, 1879, during the present fiscal year, and the total of the Public Lands surveyed up to June 30, 1880; also, the total area of the Public Domain remaining unsurveyed within the same.

* 208,299.30 acres are embraced in Red Cloud and Spotted Tail Indian reservations. † 67,063.90 acres are also embraced in same reservations.

Cost of Surveying under the Rectangular System.—The price per mile for surveying has varied with the several acts. Under the ordinance of May 20, 1785, the surveyor was allowed at the rate of $2 per mile for every mile in length he should run, including the wages of chain carriers, markers, and every other expense attending the same. Under the powers to the Board of Treasury to sell western territory, July 23, 1787, the Ohio Company were to survey the lands of their purchase into townships and other subdivisions, as provided in the survey ordinance above set out, at their own expense, and return the plat to the Board of Treasury. Under the ordinance of July 9, 1788, supplemental to the one of May 20, 1785, the surveyors to be appointed by the geographer to lay off lands and locate warrants thereon were to receive for their compensation an allowance to be fixed by the governor and judges of the western territory.

Under the act of 1796, May 18, the President of the United States was to fix the compensation of the assistant surveyors, chain carriers, and axe men, provided the whole expense should not exceed $3 per mile. This price was continued in the act of May 10, 1800. The price was varied, owing to topographical features, as in wooded or swampy country, for which from $3 to $20 have been paid in Missouri and other land states. The several acts of Congress up to 1860 will give prices paid per mile.

Tables showing Cost of Surveys from 1860 to 1881.—The following table will give the variations in prices of surveys from 1860 to 1881:

Statement of rates paid per linear mile from 1860 to 1881, inclusive.

Surveying Districts and Offices of Surveyors-General.

Statement showing dates of organization of the several surveying districts since the beginning of the service, dates of closing the offices of surveyors-general in States where the surveys have been completed, and dates when the original surveying archives were delivered to the State authorities.

Name of district.	*Act creating office of surveyor-general.*	*Statutes at large.* Vol.	Page.	Sec.	*Office closed.*	*Archives delivered to State authorities.*	*Remarks.*
Alabama	Apr. 20, 1818	3	466	1	1850.	1850	Originally part of district south of Tennessee, subsequently part of district of northern part of Mississippi Territory.
Arizona	Feb. 24, 1863	12	664	2			Attached to New Mexico by act of July 2, 1864. Attached to California district by act of March 2, 1867. Made separate district, act July 11,1870
Arkansas	June 15, 1832	4	531		March 8, 1859	1861	Archives delivered to state auditor by the register of land office at Little Rock during the war.
California	Mar. 3, 1851	9	617				See remarks for Arizona and Nevada.
Colorado	Feb. 28, 1861	12	172	17			See remarks for Utah, Idaho, and Nevada.
Dakota	Mar. 2, 1861	12	239	17			See remarks for Montana.
Florida	May 8, 1822	3	718				
Idaho	June 29, 1866	14	77				By the act of July 2, 1864, Idaho was attached to the Colorado surveying district.
Illinois and Missouri	Apr. 29, 1816	3	325		October 31, 1863	Illinois, June 16, 1869. Missouri, Oct. 10, 1866.	
Iowa and Wisconsin	June 12, 1838	5	243		June 30, 1866	Iowa, March 23, 1868. Wisconsin, Aug. 1, 1866	
Kansas and Nebraska	July 22, 1854	10	309	10	Kansas, June 30,'76	Kansas, June 30, 1876	By act of July 28, 1866, the surveying district of Nebraska and Iowa was created.
Louisiana	Mar. 3, 1831	4	492				
Minnesota	Mar. 3, 1857	11	212				
Mississippi	Mar. 3, 1817	3	375		October 31, 1849	October 31, 1849	Originally part of district south of Tennessee.
Montana	Mar. 2, 1867	14	542				By act of July 2, 1864, Montana was attached to Dakota surveying district. No surveys made until 1867.
Nebraska and Iowa	July 28, 1866	14	344				See Kansas and Nebraska.
Nevada	Mar. 2, 1861	12	209	17			By act March 14, 1862, Nevada attached to California. Act July 2, 1864, Nevada attached to Colorado. Act July 4, 1866, Nevada separate district.
New Mexico	July 22, 1854.	10	308				See remarks for Arizona.
Northwest of Ohio	May 18, 1796	1	464		May 11, 1857	Ohio, July 29, 1846. Indiana, Dec. 11, 1849. Michigan, May 12, 1857	This district embraced Ohio, Indiana, Illinois, Michigan, Wisconsin, and part of Minnesota. See Illinois and Missouri, also Iowa and Wisconsin.
Oregon	Sept. 27, 1850	9	496				This district embraced Washington Territory which was made a separate district by act of July 17, 1854.
Utah	Feb. 21, 1855	10	611				Attached to Colorado by act March 14, 1862. Made separate district by act of July 16, 1868.
South of Tennessee	Mar. 3, 1803	2	229	10			Act of March 2, 1805, extended powers of surveyor south of Tennessee to Territory of New Orleans. See Ala. and Miss.
Washington	July 17, 1854	10	305	7			Mississippi.
Wyoming	Feb. 5, 1870	16	64				See Oregon.

U. S. LAWS RELATING TO SURVEYS AND SURVEYORS.

Sec. 77. There shall be appointed by the President, by and with the advice and consent of the Senate, a surveyor-general for the States and Territories herein named, embracing, respectively, one surveying district, namely: Louisiana, Florida, Minnesota, Kansas, California, Nevada, Oregon, Nebraska and Iowa, Dakota, Colorado, New Mexico, Idaho, Washington, Montana, Utah, Wyoming, Arizona.

3 Stat. 755; 4 *id.* 492; 9 *id.* 496; 10 *id.* 244, 306, 308, 309, 611; 11 *id.* 212; 12 *id.* 176, 214, 244; 14 *id.* 77, 85, 344, 542; 15 *id.* 91; 16 *id.* 65, 230; 17 *id.* 76; 18 *id.* 18, 34, 121, 122, 123, 201, 303; 19 *id.* 126, 207; R. S. 2207.

Sec. 78. The surveyors-general of Louisiana, Florida, Minnesota, Kansas, Nebraska and Iowa, and of Dakota Territory, shall each receive a salary at the rate of two thousand dollars a year.

3 Stat. 755; 4 *id.* 493; 12 *id.* 244; 17 *id.* 76; R. S. 2208.

Section 79. The surveyors-general of Oregon and of Washington shall each receive a salary at the rate of two thousand five hundred dollars a year.

9 Stat. 496; 10 *id.* 158, 248, 306, 674; 12 *id.* 410; 17 *id.* 76; R. S. 2209.

Sec. 80. The surveyors-general of Colorado, New Mexico, California, Idaho, Nevada, Montana, Utah, Wyoming, and Arizona shall each receive a salary at the rate of three thousand dollars a year.

10 Stat. 244, 308, 611; 12 *id.* 176, 214, 410; 14 *id.* 77, 85, 542; 15 *id.* 91; 16 *id.* 65, 230; 17 *id.* 76; R. S. 2210.

Sec. 81. The salary of each surveyor-general of Florida, Oregon and California shall be paid quarter-yearly, and shall commence from the time he enters into bond, as provided by law.

3 Stat. 756; 9 *id.* 496; 10 *id.* 244; R. S. 2211.

Sec. 82. The surveyor-general's office for Minnesota district shall be located at the city of Saint Paul; that for Idaho Territory at Boise City; that for the district of Nebraska and Iowa at Plattsmouth, in Nebraska; and for each other surveying district at such place as the President, in view of the public convenience, may from time to time direct; and there shall be but one office of surveyor-general in each district.

11 Stat. 212; 13 *id.* 352; 14 *id.* 77, 344; R. S. 2212, 2213.

Sec. 83. Every surveyor-general, while in the discharge of the duties of his office, shall reside in the district for which he is appointed.

5 Stat. 637; R. S. 2414.

Sec. 84. Every surveyor-general shall, before entering on the duties of his office, execute and deliver to the Secretary of the Interior a bond, with good and sufficient security, for the penal sum of thirty thousand dollars, conditioned for the faithful disbursement, according to law, of all public money placed in his hands and for the faithful performance of the duties of his office; and the President has discretionary authority to require a new bond and additional security, under the direction of the Secretary of the Interior, for the lawful disbursement of public moneys.

3 Stat. 697; R. S. 2215, 2216. U. S. *v.* Vanzandt, 11 Wheat. 184; U. S. *v.* Tingey, 5 Pet. 115; Farrar and Brown *v.* U. S., 5 *id.* 373; U. S. *v.* Bradley, 10 *id.* 343; U. S *v.* Linn, 15 *id.* 290; U. S. *v.* Prescott, 3 How. 578; U. S. *v.* Boyd, 5 *id.* 29; Bryan *v.* U. S., 1 Black, 140; Boyden *v.* United States, 13 Wall. 17; Bevans *v.* U. S., 13 *id.* 56; U. S. *v.* Thomas, 15 *id.* 337; U. S. *v.* Stephenson, 1 McLean, C. C. 462; U. S. *v.* Linn, 2 *id.* 501; U. S. *v.* Ward, 3 *id.* 179. 8 Op. Att. Gen. 7. Cir. G. L. O., July 1, 1871; *id.* May 14, 1879. Treasury Cir., July 13, 1871 (Copp's L. L. 783; 1 Lester's L. L. 312, 314).

Sec. 85. The commission of each surveyor-general shall cease and expire in four years from the date thereof, unless sooner vacated by death, resignation, or removal from office.

3 Stat. 697; R. S. 2217. Best *v.* Polk, 18 Wall. 112. Decision Com. G. L. O., Feb. 20, 1858 (1 Lester's L. L. 340).

Sec. 86. Every surveyor-general, except where the President sees cause otherwise to determine, is authorized to continue in the uninterrupted discharge of his regular official duties after the day of expiration of his commission and until a new commission is issued to him for the same office, or until the day when a successor enters upon the duties of such office; and the existing official bond of any officer so acting shall be deemed good and sufficient and in force until the date of the approval of a new bond to be given by him, if recommissioned, or otherwise, for the additional time he may so continue officially to act, pursuant to the authority of this section.

10 Stat. 247; 18 *id.* 62; R. S. 2222.

Sec. 87. Whenever the surveys and records of any surveying district are completed the surveyor-general thereof shall be required to deliver over to the secretary of state of the respective States, including such surveys, or to such other officer as may be authorized to receive them, all the field-notes, maps, records, and other papers appertaining to land titles within the same; and the office of surveyor-general in every such district shall thereafter cease and be discontinued.

5 Stat. 384; 19 *id.* 121; R. S. 2218.

Sec. 88. In all cases of discontinuance, as provided in the preceding section, the authority, powers, and duties of the surveyor-general in relation to the survey, resurvey, or subdivision of the lands therein, and all matters and things connected therewith, shall be vested in and devolved upon the Commissioner of the General Land Office.

10 Stat. 152; R. S. 2219.

Sec. 89. Under the authority and direction of the Commissioner of the General Land Office, any deputy surveyor or other agent of the United States shall have free access to any such field-notes, maps, records, and other papers for the purpose of taking extracts therefrom or making copies thereof without charge of any kind; but no transfer of such public records shall be made to the authorities of any State until such State has provided by law for the reception and safe-keeping of such public records and for the allowance of free access thereto by the authorities of the United States.

10 Stat. 152; 18 *id.* 62; R. S. 2220, 2221.

Sec. 90. Every surveyor-general shall engage a sufficient number of skilful surveyors as his deputies, to whom he is authorized to administer the necessary oaths upon their appointments. He shall have authority to frame regulations for their direction, not inconsistent with law or the instructions of the General Land office, and to remove them for negligence or misconduct in office.

Taylor and Quarlls *v.* Brown, 5 Cranch, 234; Craig *et al. v.* Braxford, 3 Wheat. 594; Ellicott *et al. v.* Pearl, 10 Pet. 412; Brown's Lessee *v.* Clements, 3 How, 650. Decisions Sec. Int., July 16, 1872; Aug. 8, 1876; Aug. 17, 1876; March 16, 1877. Decisions Com. G. L. O., Aug. 18, 1860; Sept. 18, 1874; Nov. 3, 1874; Sept. 18, 1875; Oct. 28, 1875; June 26, 1879. Cir. G. L. O., June 26, 1880.

Fourth. He shall transmit to the register of the respective land offices within his district general and particular plats of all lands surveyed by him for each land district; and he shall forward copies of such plats to the Commissioner of the General Land Office.

Barnard *v.* Ashley, 18 How. 43; Water and Mining Co. *v.* Bugbee, 6 Otto, 165. Hamil *v.* Carr, 21 Ohio St. 258; Doe *v.* Hildreth, 2 Ind. 274; Pope *v.* Athearn, 42 Cal. 606. Com. G. L. O. Instructions to Surveyors-General, April 17, 1879.

Fifth. He shall, so far as is compatible with the desk duties of his office, occasionally inspect the surveying operations while in progress in the field, sufficiently to satisfy himself of the fidelity of the execution of the work according to contract, and the actual and necessary expenses incurred by him while so engaged shall be allowed; and where it is incompatible with his other duties for a surveyor-general to devote the time necessary to make a personal inspection of the work in progress, then he is authorized to depute a confidential agent to make such examination, and the actual and necessary expenses of such person shall be allowed and paid for that service, and five dollars a day during the examination in the field; but such examination shall not be protracted beyond thirty days, and in no case longer than is actually necessary; and when a surveyor-general, or any person employed in his office at a regular salary, is engaged in such special service he shall receive only his necessary expenses in addition to his regular salary.

1 Stat. 464; 13 *id.* 325; 4 *id.* 492; 10 *id.* 245, 247; 18 *id.* 34; 19 *id.* 126; R. S. 2223. Sec. Int. Instructions, July 1, 1874; Sept. 21, 1874. Cir. G. L. O., June 26, 1880.

Sec. 91. Every deputy surveyor shall enter into bond, with sufficient security, for the faithful performance of all surveying contracts confided to him; and the penalty of the bond, in each case, shall be double the estimated amount of money accruing under such contracts, at the rate per mile stipulated to be paid therein. The sufficiency of the sureties to all such bonds shall be approved and certified by the proper surveyor-general.

4 Stat. 493; 10 *id.* 247; R. S. 2230. U. S. *v.* Vanzandt, 11 Wheat. 184; U. S. *v.* Tingey, 5 Pet. 115; Farrar *et al. v.* U. S., 5 *id.* 373; U. S. *v.* Bradley, 10 *id.* 343; U. S. *v.* Linn, 15 *id.* 290. U. S. *v.* Stephenson, 1 McLean, C. C. 462.

Sec. 92. The surveyor-generals, in addition to the oath now authorized by law to be administered to deputies on their appointment to office, shall require each of their deputies, on the return of his surveys, to take and subscribe an oath that those surveys have been faithfully and correctly executed according to law and the instructions of the surveyor-general.

9 Stat. 79; R. S. 2231. Ellicott and Meredith *v.* Pearl, 10 Pet. 412; U. S. *v.* Hanson, 16 *id.* 196; Bollard *et al. v.* Dwight *et al.*, 4 Cranch, 421; Taylor *et al. v.* Brown, 5 *id.* 234. Cir. G. L. O., June 26, 1880.

Sec. 93. The district attorney of the United States, in whose district any false, erroneous, or fraudulent surveys have been executed, shall, upon the application of the proper surveyor-general, immediately institute suit upon the bond of such deputy and the institution of such suit shall act as a lien upon any property owned or held by such deputy or his sureties at the time such suit was instituted.

9 Stat. 79; R. S. 2232.

Sec. 94. In the event of the failure of a deputy in Louisiana to comply with the terms of his contract, unless such failure be satisfactorily shown by him to have arisen from causes beyond his control, he shall forfeit the penalty of his bond on due process of law, and ever afterward be debarred from receiving a contract for surveying public lands.

4 Stat. 493; 18 *id.* 19, 62; 19 *id.* 207, 221; R. S. 2233.

Sec. 95. The official seals heretofore authorized to be provided for the offices of the surveyors-general of Oregon, California, and Louisiana shall continue to be used; and any copy of or extract from the plats, field-notes, records, or other papers on file in those offices respectively, when authenticated by the seal and signature of the proper surveyor-general, shall be evidence in all cases in which the original would be evidence.

10 Stat. 245, 248; R. S. 2224, 2225. U. S. *v.* Delespine's Heirs *et al.*, 12 Pet. 654; U. S. *v.* Wiggins, 14 *id.* 334; Hedrick *v.* Hughes, 15 Wall. 123. Hensley *v.* Tarpey, 7 Cal. 288; Lawrence *v.* Grout, 12 La. Ann. 835.

Sec. 96. All official books, papers, instruments of writing, documents, archives, official seals, stamps or dies which have been heretofore authorized by law to be collected and deposited in the office of the surveyor-general of California shall be safely and securely kept by such surveyor-general in the archives of his office.

11 Stat. 289; R. S. 2229.

Sec. 97. There shall be allowed for clerk hire, office rent, fuel, books, stationery, and other incidental expenses of the several offices of surveyors-general such sums as may be appropriated for such purposes by Congress from year to year.

R. S. 2226, 2227.

Sec. 98. The President is authorized, in any case where he thinks the public interest may require it, to transfer the duties of register and receiver in any district to the surveyor-general of the surveying district in which such land district is located.

12 Stat. 410; R. S. 2228.

Sec. 99. The public lands shall be divided by north and south lines run according to the true meridian, and by others crossing them at right angles, so as to form townships of six miles square, unless where the line of an Indian reservation, or of tracts of land heretofore surveyed or patented, or the course of navigable rivers, may render this impracticable; and in that case this rule must be departed from no further than such particular circumstances require.

McKinney *v.* McKinney, 8 Ohio, 423; Hamil *v.* Carr, 21 Ohio St. 258. Decision Sec. Int., Jan. 28, 1880. Cir. G. L. O., June 26, 1880.

Second. The corners of the townships must be marked with progressive numbers from the beginning, each distance of a mile between such corners must be also distinctly marked with marks different from those of the corners.

Third. The township shall be subdivided into sections, containing, as nearly as may be, six hundred and forty acres each, by running through the same, each way, parallel lines at the end of every two miles; and by making a corner on each of such lines, at the end of every mile. The sections shall be numbered, respectively, beginning with the number one in the northeast section and proceeding west and east alternately through the township with progressive numbers till the thirty-six be completed.

Grogan *v.* Knight, 27 Cal. 516. Decision Sec. Int., April 14, 1879. Cir. G. L. O., June 26, 1880.

Fourth. The deputy surveyors, respectively, shall cause to be marked on a tree near each corner established in the manner described, and within the section, the number of such section, and over it the number of the township within which such section may be; and the deputy surveyors shall carefully note, in their respective field-books, the names of the corner-trees marked and the numbers so made.

Cir. G. L. O., June 26, 1880.

Fifth. Where the exterior lines of the townships which may be subdivided into sections or half-sections exceed, or do not extend six miles, the excess or deficiency shall be specially noted, and added to or deducted from the western and northern ranges of sections or half-sections in such townships, according as the error may be in running the lines from east to west, or from north to south; the sections and half-sections bounded on the northern and western lines of such townships shall be sold as containing only the quantity expressed in the returns and plats respectively, and all others as containing the complete legal quantity.

Knight *v.* Elliott, 57 Mo. 317; Vaughn *v.* Tate, 64 *id.* 491; Waters *v.* Commons, 2 Port. (Ala.) 38; Lewen *v.* Smith, 7 *id.* 428. Decision Sec. Int., April 14, 1879. Cir. G. L. O., June 26, 1880.

Sixth. All lines shall be plainly marked upon trees, and measured with chains, containing two perches of sixteen and one-half feet each, subdivided into twenty-five equal links; and the chain shall be adjusted to a standard to be kept for that purpose.

Bradley *v.* Taylor, 5 Cranch, 191; McIvers *v.* Walker, 9 *id.* 173; Shipp *v.* Miller's Heirs, 2 Wheat. 316; Holmes *v.* Trout, 7 Pet. 171; Brown *v.* Huger, 21 How. 305; Meron *v.* Whitney, 5 Otto, 551; Robinson *v.* Moon, 4 McLean, C. C. 279. Oakley *v.* Stuart, 52 Cal. 521. Cir. G. L. O., June 26, 1880.

Seventh. Every surveyor shall note in his field-book the true situations of all mines, salt licks, salt springs, and mill-seats, which come to his knowledge; all water courses over which the line he runs may pass; and also the quality of the lands.

Newsom *v.* Pryor's Lessee, 7 Wheat. 7; Preston *v.* Bowman, 6 *id.* 580; Patterson *v.* Jenks, 2 Pet. 216.

Eighth. These field-books shall be returned to the surveyor-general, who shall cause therefrom a description of the whole lands surveyed to be made out and transmitted to the officers who may superintend the sales. He shall also cause a fair plat to be made of the townships and fractional parts of townships contained in the lands describing the subdivisions thereof and the marks of the corners. This plat shall be recorded in books to be kept for that purpose; and a copy thereof shall be kept open at the surveyor general's office for public information, and other copies shall be sent to the places of the sale and to the General land office.

1 Stat. 465; 2 *id.* 73; 19 *id.* 348; R. S. 2395. Taylor *et al. v.* Brown, 5 Cranch, 234; Barnard *v.* Ashley, 18 How. 43; Water and Mining Co. *v.* Bugbee, 6 Otto, 165. Rector *v.* Gaines, 19 Ark. 70; Lewen *v.* Smith, 7 Port. (Ala.) 428; Mott *v.* Smith, 16 Cal. 534; Hamil *v.* Carr, 21 Ohio St. 258; Doe *v.* Hildreth, 2 Ind. 274; McClintock *v.* Rodgers, 11 Ills. 279. Decision Sec. Int., Jan. 15, 1878. Decision Com. G. L. O., April 17, 1879.

Sec. 100. The boundaries and contents of the several sections, half-sections, and quarter sections of the public lands shall be ascertained in conformity with the following principles:

First. All the corners marked in the surveys, returned by the surveyor-general, shall be established as the proper corners of sections, or subdivisions of sections, which they were intended to designate; and the corners of half and quarter sections, not marked on the surveys, shall be placed as nearly as possible equidistant from two corners which stand on the same line.

Second. The boundary lines, actually run and marked in the surveys returned by the surveyor-general, shall be established as the proper boundary lines of the sections, or subdivisions, for which they were intended, and the length of such lines, as returned, shall be held and considered as the true length thereof. And the boundary lines which have not been actually run and marked shall be ascertained by running straight lines from the established corners to the opposite corresponding corners; but in those portions of the fractional townships where no such opposite corresponding corners have been or can be fixed, the boundary lines shall be ascertained by running from the established corners due north and south or east and west lines, as the case may be, to the water-course, Indian boundary line, or other external boundary of such fractional township.

Mott v. Smith, 16 Cal. 534; Guin v. Brandon, 29 Ohio St. 656; McClintock v. Rodgers, 11 Ills. 279; Goodman v. Myrick, 5 Oreg. 65. Cir. G. L. O., June 26, 1880.

Third. Each section or subdivision of section, the contents whereof have been returned by the surveyor-general, shall be held and considered as containing the exact quantity expressed in such return; and the half-sections and quarter-sections, the contents whereof shall not have been thus returned, shall be held and considered as containing the one-half or the one-fourth part, respectively, of the returned contents of the section of which they may make part.

2 Stat. 313; R. S. 2396. Lindsey v. Hawes, 2 Black, 554; U. S. v. Pacheco, 2 Wall. 587; Railway Co. v. Schurmier, 7 id. 272; County of Saint Clair v. Livingston, 23 id. 46; Heidekoper v. Brooms, 1 Wash. C. C. 109; Coon v. Pen, 1 Pet. C. C. 496. 2 Op. Att. Gen. 578. Knight v. Elliott, 57 Mo. 317; Vaughn v. Tate, 64 id. 491; Waters v. Commons, 2 Port. (Ala.) 38; Lewen v. Smith, 7 id. 428; Billingsly v. Bates, 30 Ala. 376; Doe v. Hildreth, 2 Ind. 274; Grogan v. Knight, 27 Cal. 516. Decision Com. G. L. O., May 17, 1875. Cir. G. L. O., June 26, 1880.

Sec. 101. In every case of the division of a quarter-section the line for the division thereof shall run north and south, and the corners and contents of half quarter-sections which may thereafter be sold shall be ascertained in the manner and on the principles directed and prescribed by the section preceding, and fractional sections containing one hundred and sixty acres or upwards shall in like manner, as nearly as practicable, be subdivided into half-quarter sections, under such rules and regulations as may be prescribed by the Secretary of the Interior, and in every case of a division of a half-quarter-section, the line for the division thereof shall run east and west, and the corners and contents of quarter quarter-sections, which may therefore be sold, shall be ascertained, as nearly as may be, in the manner and on the principles directed and prescribed by the section preceding; and fractional sections containing fewer or more than one hundred and sixty acres shall in like manner, as nearly as may be practicable, be subdivided into quarter quarter-sections, under such rules and regulations as may be prescribed by the Secretary of the Interior.

3 Stat. 566; 4 id. 503; R. S. 2397. Gazzam v. Phillips' Lessee, 20 How. 372; Railway Co. v. Schurmier, 7 Wall. 272. Buel v. Tuley, 4 McLean, C. C. 268. Wharton v. Littlefield, 30 Ala. 245. 3 Op. Att. Gen. 281, 284. Decision Sec. Int., April 14, 1879. Decision Com. G. L. O., May 17, 1875. Cir. G. L. O., June 26, 1880.

Sec. 102. Whenever in the opinion of the President, a departure from the ordinary method of surveying land on any river, lake, bayou, or water-course would promote the public interest, he may direct the surveyor-general, in whose district such land is situated, and where the change is intended to be made, to cause the lands thus situated to be surveyed in tracts of two acres in width, fronting on any river, bayou, lake, or water-course, and running back the depth of forty acres; which tracts of land so surveyed shall be offered for sale entire, instead of in half quarter sections, and in the usual manner, and on the same terms in all respects as the other public lands of the United States.

4 Stat. 34; R. S. 2407.

Sec. 103. In extending the surveys of the public lands in the State of Nevada, the Secretary of the Interior may vary the lines of the subdivisions from a rectangular form, to suit the circumstances of the country.

14 Stat. 86; R. S. 2408. Heydenfeldt v. Mining Co., 3 Otto, 634.

Sec. 104. The Secretary of the Interior, if he deems it advisable, is authorized to continue the surveys in Oregon and California, to be made after what is known as the geodetic method, under such regulations and upon such terms as have been or may hereafter be prescribed by the Commissioner of the General Land Office; but none other than township lines shall be run where the land is unfit for cultivation; nor shall any deputy surveyor charge for any line except such as may be actually run and marked or for any line not necessary to be run.

9 Stat. 496; 10 id. 245; R. S. 2409.

Sec. 105. Whenever, in the opinion of the Secretary of the Interior, a departure from the rectangular mode of surveying and subdividing the public lands in California would promote the public interests, he may direct such change to be made in the mode of surveying and designating such lands as he deems proper, with reference to the existence of mountains, mineral deposits, and the advantages derived from timber and water privileges; but such lands shall not be surveyed into less than one hundred and sixty acres or subdivided into less than forty acres.

10 Stat. 245; R. S. 2410. Cir. G. L. O., June 26, 1880.

Sec. 106. The public surveys shall extend over all mineral lands, and all subdividing of surveyed lands into lots less than one hundred and sixty acres may be done by county and local surveyors at the expense of claimants; but nothing in this section contained shall require the survey of waste or useless lands.

10 Stat. 15, 21; 16 id. 218; R. S. 2406.

Sec. 107. The printed manual of instructions relating to the public surveys, prepared at the General Land Office, and bearing date February twenty-second, eighteen hundred and fifty-five, the instructions of the Commissioner of the General Land Office, and the special instructions of the surveyor-general, when not in conflict with such printed manual or the instructions of the Commissioner, shall be taken and deemed to be a part of every contract for surveying the public lands.

12 Stat. 409; R. S. 2399. Cir. G. L. O., June 26, 1880.

Sec. 108. Legal subdivisions of forty acres of placer lands may be subdivided into ten-acre lots.

16 Stat. 217; R. S. 2330.

Sec. 109. The surveyor-general of the United States may appoint in each land district containing mineral lands as many competent surveyors as shall apply for appointment to survey mining claims. The expenses of the survey of vein or lode claims, and the survey and subdivision of placer claims into smaller quantities than one hundred and sixty acres, shall be paid by the applicants, and they shall be at liberty to obtain the same at the most reasonable rates, and they shall also be at liberty to employ any United States deputy surveyor to make the survey. The Commissioner of the General Land Office shall have power to establish the maximum charges for such surveys; and to the end that he may be fully informed on the subject, each applicant shall file with the register a sworn statement of all charges and fees paid by such applicant for surveys, which statement shall be transmitted to the Commissioner of the General Land Office.

17 Stat. 95; 19 id. 52; R. S. 2334. Decision Com. G. L. O., April 20, 1877.

Sec. 110. The surveyor-general of the United States shall prepare or cause to be prepared a plat and field-notes of all mining surveys made by authority of law, which shall show accurately the boundaries of such claims; and, when warranted by the facts, he shall give to the claimant his certificate that five hundred dollars' worth of labor has been expended or improvements made upon the claim by the claimant or his grantors, and that the plat is correct, with such further description by such reference to natural objects or permanent monuments as shall identify the claim, and furnish an accurate description, to be incorporated in the patent.

17 Stat. 92; R. S. 2325.

Sec. 111. Contracts for the survey of the public lands shall not become binding upon the United States until approved by the Commissioner of the General Land Office, except in such cases as the Commissioner may otherwise specially order.

12 Stat. 409; R. S. 2398. Maguire *v.* Tyler, 1 Black, 201; Parks *v.* Ross, 11 How. 362; Spencer *v.* Lapsley, 20 *id.* 264. Reed *v.* Conway, 26 Mo. 13. Decision Sec. Int., Feb. 27, 1878.

Sec. 112. The Commissioner of the General Land Office has power, and it shall be his duty, to fix the prices per mile for public surveys which shall in no case exceed the maximum established by law; and, under instructions to be prepared by the Commissioner, an accurate account shall be kept by each surveyor-general of the cost of surveying and plotting private land claims, to be reported to the General Land Office, with the map of such claim; and patents shall not issue for any such private claim, nor shall any copy of such survey be furnished, until the cost of survey and platting has been paid into the Treasury by the claimant or other party; and before any land granted to any railroad company by the United States shall be conveyed to such company or any persons entitled thereto, under any of the acts incorporating or relating to said company, unless such company is exempted by law from the payment of such cost, there shall first be paid into the Treasury of the United States the cost of surveying, selecting, and conveying the same by the said company or persons in interest.

12 Stat. 409; 18 *id.* 384; 19 *id.* 122; R. S. 2400. Railway Co. *v.* Prescott, 16 Wall. 603; Railway Co. *v.* McShane, 22 *id.* 444; Hannewell *v.* Cass Co., 22 *id.* 464; Colorado Co. *v.* Commissioners, 5 Otto, 259. Decisions Sec. Int., Dec. 17, 1874; Feb. 27, 1878; Feb. 20, 1879; March 5, 1879; April 2, 1879. Decisions Com. G. L. O., April 18, 1867; Aug. 8, 1867; Feb. 17, 1869; March 26, 1870. Cir. G. L. O., June 26, 1880.

Sec. 113. The Commissioner of the General Land Office may authorize, in his discretion, public lands in Oregon, densely covered with forests or thick undergrowth, to be surveyed at augmented rates, not exceeding eighteen dollars per mile per standard parallels, fifteen dollars for townships, and twelve dollars for section lines; and under like conditions he may allow augmented rates in California, and in Washington Territory, not exceeding eighteen dollars per linear mile for standard parallels, sixteen dollars for township, and fourteen dollars for section lines.

16 Stat. 304, 305; 17 *id.* 358; R. S. 2404, 2405. Decision Sec. Int., June 16, 1879. Cir. G. L. O., June 26, 1880.

Sec. 114. Whenever the public surveys, or any portion of them, in the States of Oregon and California, are so required to be made as to render it expedient to make compensation for the surveying thereof by the day instead of by the mile, it shall be lawful for the Commissioner of the General Land Office, under the direction of the Secretary of the Interior, to make such fair and reasonable allowance as, in his judgment, may be necessary to insure the accurate and faithful execution of the work.

10 Stat. 247; R. S. 2411. Decision Sec. Int., June 16, 1879. Cir. G. L. O., June 26, 1880.

Sec. 115. When the settlers in any township, not mineral or reserved by Government, desire a survey made of the same, under the authority of the surveyor-general, and file an application therefor in writing, and deposit in a proper United States depository, to the credit of the United States, a sum sufficient to pay for such survey, together with all expenses incident thereto, without cost or claim for indemnity on the United States, it may be lawful for the surveyor-general, under such instructions as may be given him by the Commissioner of the General Land Office, and in accordance with law, to survey such township and make return thereof to the general and proper local land office, provided the township so proposed to be surveyed is within the range of the regular progress of the public surveys embraced by existing standard lines or bases for the township and subdivisional surveys.

12 Stat. 410; R. S. 2401. Decision Sec. Int., Jan. 28, 1880. Cir. G. L. O., June 27, 1879; March 5, 1880.

Sec. 116. The deposit of money in a proper United States depository, under the provisions of the preceding section, shall be deemed an appropriation of the sums so deposited for the objects contemplated by that section, and the Secretary of the Treasury is authorized to cause the sums so deposited to be placed to the credit of the proper appropriations for the surveying service; but any excesses in such sums over and above the actual cost of the surveys, comprising all expenses incident thereto, for which they were severally deposited, shall be repaid to the depositors, respectively.

13 Stat. 404; R. S. 2402. Cir. G. L. O., June 27, 1879.

Sec. 117. Where settlers make deposits in accordance with the provision of section one hundred and fifteen, the amount so deposited shall go in part payment for their lands situated in the townships, the surveying of which is paid for out of such deposits; or the certificates issued for such deposits may be assigned by endorsement and be received in payment for any public lands of the United States entered by settlers under the pre-emption and homestead laws of the United States, and not otherwise.

16 Stat. 581; 19 *id.* 38; 20 *id.* 352; R. S. 2403. Cir. G. L. O., June 27, 1879.

Sec. 118. Each surveyor-general, when thereunto duly authorized by law, shall cause all confirmed private land claims within his district to be accurately surveyed, and shall transmit plats and field-notes thereof to the Commissioner of the General Land Office for his approval. When publication of such surveys is authorized by law, the proof thereof, together with any objections properly filed and all evidence submitted either in support of or in opposition to the approval of any such survey, shall also be transmitted to said Commissioner.

2 Stat. 326, 352; 3 *id.* 325; 5 *id.* 740; 9 *id.* 242, 633; 10 *id.* 244, 308, 599; 11 *id.* 294; 12 *id.* 172, 209, 369, 409; 13 *id.* 332, 344; 14 *id.* 218; 16 *id.* 64, 304; 18 *id.* 305; 19 *id.* 121, 202; R. S. 2447. Bissell *v.* Penrose, 8 How. 317; Villalobos *v.* U. S., 10 *id.* 541; Ledoux *v.* Black, 18 *id.* 473; U. S. *v.* Fossat, 20 *id.* 413; Brown *v.* Huger, 21 *id.* 305; U. S. *v.* Vallejo, 1 *id.* 658; Sutter's case, 2 *id.* 562; Fossat case, 2 *id.* 649; Higueras *v.* U. S., 5 *id.* 827; Alviso *v.* U. S., 8 *id.* 337. 12 Op. Att. Gen. 116, 250; 14 *id.* 74, 601. U. S. *v.* Garcia, 1 Saw. C. C. 383; Russell *v.* Henshaw, 1 *id.* 553; Leroy *v.* Jamison, 3 *id.* 369; U. S. *v.* Flint, 4 *id.* 42. Dent *v.* Segerson, 29 Mo. 480; Fowler *v.* Duvall, 11 La. Ann. 561; Waterman *v.* Smith, 13 Cal. 373; Moore *v.* Wilkerson, 13 *id.* 478; Merritt *v.* Judd, 14 *id.* 60; Mott *v.* Smith, 16 *id.* 534; Johnson *v.* Van Dyke, 20 *id.* 225; McGarraghan *v.* Maxwell, 27 *id.* 75; Seale *v.* Ford, 29 *id.* 104. Cir. G. L. O., June 26, 1880.

Sec. 119. It shall be the duty of each surveyor-general, whose respective surveying district includes any portion of the territory embraced, on the twenty-second day of July, eighteen hundred and fifty-four, within the limits of the then Territory of New Mexico, under the instructions of the Secretary of the Interior, to ascertain the origin, nature, character and extent of all claims to lands under the laws, usages, and customs of Spain and Mexico; and for this purpose may issue notices, summons witnesses, administer oaths, and do and perform all other necessary acts in the premises. He shall make a full report on all such claims as originated before the cession of the Territory to the United States by the treaty of Guadalupe Hidalgo, of eighteen hundred and forty-eight, denoting the various grades of title, with his decision as to the validity or invalidity of each of the same under the laws, usages, and customs of the country before its cession to the United States; and shall also make a report in regard to all pueblos existing in the Territory, showing the extent and locality of each, stating the number of inhabitants in the said pueblos, respectively, and the nature of their titles to the land. Such report shall be made according to the form which may be prescribed by the Secretary of the Interior, and shall be laid before Congress for such action thereon as may be deemed just and proper, with a view to confirm bona fide grants and give full effect to the treaty of eighteen hundred and forty-eight between the United States and Mexico; and until the final action of Congress on such claims, all lands covered thereby shall be reserved from sale or other disposal by the Government.

10 Stat. 309. Newhall *v.* Sanger, 2 Otto, 761; Tameling *v.* Emigration Co., 3 *id.* 644; U. S. *v.* Clamorgan and Danterive *v.* U. S., S. C., Oct. T., 1879, in manuscript. 14 Op. Att. Gen. 624. Decisions Sec. Int., Dec. 29, 1862; July 26, 1867; Sept.

6, 1870; July 27, 1871; June 6, 1872; Feb. 21, 1872; March 15, 1872; June 6, 1872; Sept. 2, 1872; Dec. 17, 1872; Feb. 21, 1873; March 21, 1873; March 26, 1873; July 23, 1873; July 31, 1873; Oct. 30, 1873; Feb. 28, 1874; March 17, 1874; June 29, 1874; July 15, 1874; Aug. 15, 1874; Oct. 27, 1874; Dec. 5, 1874; Jan. 23, 1875; March 27, 1875; June 1, 1875; Feb. 4, 1876; April 22, 1876; Aug. 8, 1876; Aug. 12, 1876; Aug. 17, 1876; Dec. 30, 1876; Feb. 7, 1877; Feb. 15, 1877; March 16, 1877; April 15, 1877; June 30, 1877; Nov. 15, 1877; June 12, 1878; July 11, 1878; Aug. 9, 1878; Oct. 24, 1878; May 21, 1879; May 28, 1879; June 9, 1879; June 21, 1879; Aug. 28, 1879; Sept. 20, 1879. Decisions Com. G. L. O., Aug. 18, 1860; June 22, 1870; Dec. 14, 1870; June 17, 1871; Dec. 19, 1871; July 9, 1872; Aug. 13, 1872; Sept. 18, 1874; Nov. 3, 1874; Feb. 12, 1875; June 29, 1875; July 19, 1875; May 13, 1876; May 19, 1876; July 7, 1876; Sept. 19, 1876; Nov. 15, 1876; April 13, 1877; June 22, 1877; June 27, 1877; Feb. 1, 1878; Feb. 21, 1878; April 13, 1878; Nov. 11, 1878; Dec. 2, 1878; March 21, 1879; July 14, 1879; Aug. 14, 1879; Sept. 5, 1879.

Sec. 120. Every person who in any manner, by threat or force, interrupts, hinders, or prevents the surveying of the public lands, or of any private land claim which has been or may be confirmed by the United States, by the persons authorized to survey the same, in conformity with the instructions of the Commissioner of the General Land Office, shall be fined not less than fifty dollars nor more than three thousand dollars, and be imprisoned not less than one nor more than three years.

4 Stat. 417; R. S. 2412.

Sec. 121. Whenever the President is satisfied that forcible opposition has been offered, or is likely to be offered, to any surveyor or deputy surveyor in the discharge of his duties in surveying the public lands, it may be lawful for the President to order the marshal of the State or district, by himself or deputy, to attend such surveyor or deputy surveyor with sufficient force to protect such officer in the execution of his duty, and to remove by force should any be offered.

4 Stat. 417; R. S. 2413.

Sec. 122. The President is authorized to appoint surveyors of public lands, who shall explore such vacant and unappropriated lands of the United States as produce the live-oak and red-cedar timbers, and shall select such tracts or portions thereof, where the principal growth is of either of such timbers, as in the judgment of the Secretary of the Navy may be necessary to furnish for the Navy a sufficient supply of the same. Such surveyors shall report to the President the tracts by them selected, with the boundaries ascertained and accurately designated by actual survey or water-courses.

3 Stat. 347; R. S. 2459. U. S. *v.* Briggs, 9 How. 351.

Sec. 123. The director of the geological survey shall, under the Interior Department, have the direction of the geological survey and the classification of the public lands and examination of the geological structure, mineral resources, and products of the national domain.

20 Stat. 394.

SURVEYING OF MINING CLAIMS IN COLORADO.

As the system of public land surveys is well understood by those engaged in the engineering profession it would be needless in a sketch of this nature to dwell upon it at any length, and for the purposes of this article it will be found sufficient to accept the divisions as we find them, in ranges, townships, and sections.

In the main it will be found that there is no difference in the pre-emption of agricultural or mineral lands, as both are described as forming a certain portion of whatever section, township, or range they may be located in; in the case of pre-empted timber or agricultural lands, the description is complete when the direct subdivision of a section is given, as, for example, in Fig. 1, the shaded area would be described as the south half of the southeast quarter, of the northwest quarter of Section ——, Township ——, North (or South) Range ——, East (or West) of ——, Principal Meridian.

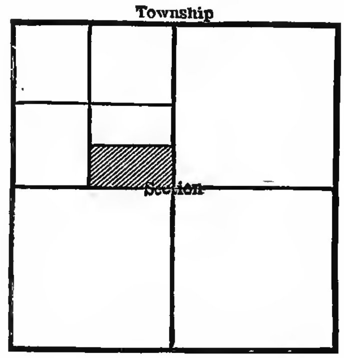

Fig. 1.

In mining districts where aliquot portions of a section are not pre-empted, but claims, consisting generally of rectangles, one hundred and fifty or three hundred feet in width, by fifteen hundred feet in length, a corner of the claim is connected by survey with a corner of the section, and it is thus definitely located.

It is the work of the United States Deputy Marshal Surveyor to survey and locate claims in reference to section corners. In case sectionizing had not progressed to the locality wherein a claim has been established, it is tied to a "locating monument," a description of which will be given later on.

The survey for a mining claim consists of two parts—the survey for location, and the survey for patent.

Before a *valid* location can be made, there are a few points it would be well for the engineer to note in his field book, not that they would in any way affect him or his work, but that they form the basis of the majority of lawsuits, and the benefit of a note made upon the ground, and at the time of survey, would be invaluable; they are: whether, first, the discovery shaft is ten feet deep at its *lowest surface* point; second that there is a true vein exposed, though not necessarily showing mineral; and third, that he has been called upon to survey the claim within ninety days from the date of the discovery of the lode or vein, as shown by the discovery or location stake.

Lodes are discovered in all sorts of ways, some stumbled on, some showing clean mineral in place, and others legitimately prospected for; the latter requiring knowledge, energy, and pertinacity. The prospector, armed with a few days' rations, pan, coffee pot, pick and shovel, a few gads, hammers, etc., starts for some district and commences the ascent of a mountain he may favor; while so doing a close watch is kept for indications or "float-ore," a decomposed ferruginous quartz that has probably become detached from the vein filling and rolled down the mountain side. This float is the prospector's polar star. Still ascending until all trace of it has disappeared, he feels that he has then passed above the apex of the vein he is in search of, and descends until it is again encountered. Reascending, he continues until the area which probably contains the vein is narrowed down to a few yards. An adit is run in the mountain side, or a shaft sunk, to determine further the exact location of the vein. If one is found, then a location stake is planted by which ownership is claimed and which forms the initial point of the survey. On it is written a notice containing the date of the discovery, the name of the lode and its locator, its general direction, and finally the distances to the end lines of the claim. Sixty days subsequent to the date of discovery is given by law, in which the discovery shaft or adit has to be sunk or driven ten feet; and in case no vein matter or wall-rock is exposed, giving evidence of an existing vein at some greater depth, then such shaft must be sunk until the necessary proof is obtained. These sixty days are usually spent in searching for such out croppings on or near the surface as will most thoroughly establish the line of the lode upon the ground;

as it is of the utmost importance that the latter be accurately determined, in order that the apex of the vein may be contained within the side lines for the full length of the claim, as a second location may be made by another prospector upon the extension of the vein discovered, when found outside of the side or end lines of a claim. Before ninety days have elapsed since the discovery of the lode it must be surveyed, and a description of it, with the names of the locators, placed upon record in the county in which the claim was discovered.

Claims are of a uniform length or fifteen hundred feet at present writing, although the widths vary. In five counties, Gilpin, Boulder, Clear Creek, Summit and Park, they are located seventy-five feet on each side of the discovery

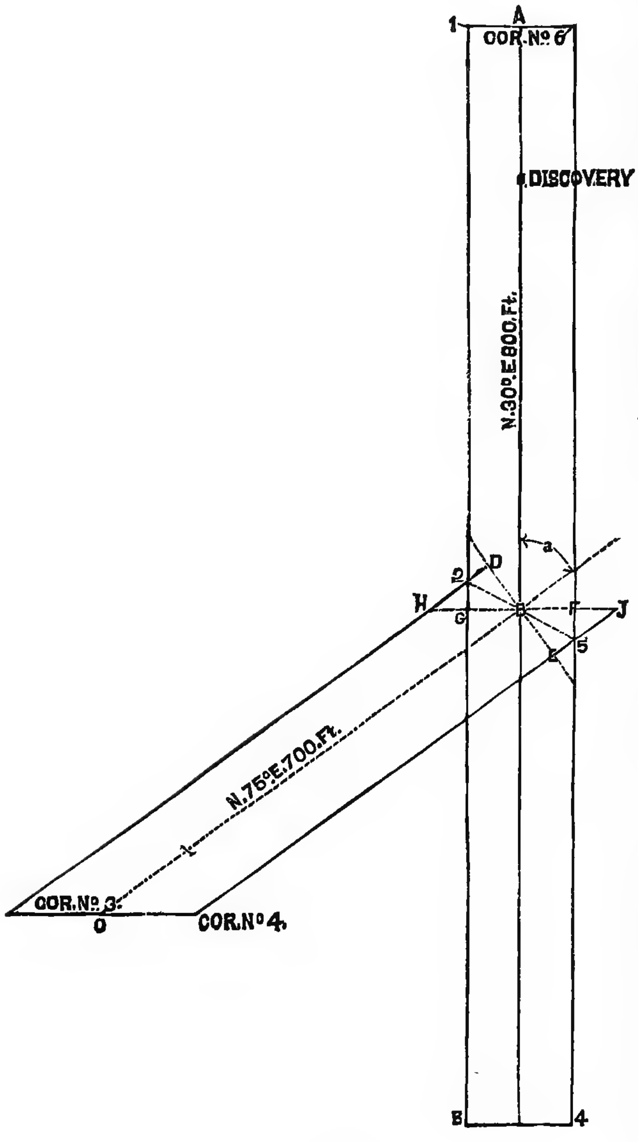

FIG. 2.

shaft (supposed to indicate the position of the vein), and in all others one hundred and fifty feet on each side. The discovery shaft must be in the center of the claim in reference to the side-lines, and in no case can the claim be located so that the distance from the discovery to either side line will exceed the limit of width as placed upon it by the customs of that mining district.

We will suppose the necessary work to be done and the claim is ready for the surveyor. In case the lode is a straight one, a rectangle of the required width is laid out upon the ground, and stakes planted at each corner and at the middle points of the long side lines, each stake being marked with the name of the lode, and "S. E." "S middle," etc., to indicate its position on the ground with regard to the claim, to enable prospectors who go over the same country to keep outside the lines of this location. Mountain bearings are to be given from at least two corners or points, and for *this* work an ordinary compass will suffice, though for many reasons it is best to use a transit, and obtain true courses. If, however, a bend occurs in the outcrop, besides planting stakes at the corners and middle points of the side line, stakes are to be driven at *each* bend in the survey; thus, in the case of a single bend there would be eight stakes required to properly mark the claim on the ground.

The end lines 1—6 and 3—4 or 3—4, as shown in Fig. 2, must in all cases be parallel, and should a bend occur in the lode, the length of one of the end lines 3—4 must be calculated in order that the claim have a uniform width. To illustrate this and the method generally adopted for obtaining the lengths of the side-lines, let us take the case of a single bend in the claim as shown in the same figure. Here we have given the course A B, say N 30° E, eight hundred feet, and B C, N 75° E seven hundred feet. Denote the complement of the angle A B C by a; from the figure it is evident that the side-lines 1—2 and 5—6 are eight hundred feet, and 2—3 and 4—5 are seven hundred feet, plus or minus an increment, it being different in both cases. To determine this increment, through the angle point B draw perpendiculars to the side-lines, the lines F B G and E B D, then will the angle G B D or E B F be equal to the angle a, and E B 5 or G B 2 be equal to ½ a. We now have the line 1—2 equal A B minus G 2, and 5—6 equal to A B plus G 2 or F 5. But G 2 or F 5 is equal to one half the claim-width multiplied by the

$$\tan, \tfrac{1}{2} a \text{ or } \left.\begin{matrix}1-2\\5-6\end{matrix}\right\} = 800 \mp \tfrac{1}{2} W \tan. \tfrac{1}{2} a$$

and similarly 2—3 and 4—5 are equal to

$$B\,B + H\,D - D\,2 \text{ and } B\,C - H\,D + D.$$
$$\text{Or, } 700 + \tfrac{1}{2} W \tan., a - \tfrac{1}{2} W \tan., \tfrac{1}{2} a, \text{ and}$$
$$700 - \tfrac{1}{2} W \tan., a + \tfrac{1}{2} W \tan., \tfrac{1}{2} a, \text{ or}$$
$$L = L \pm \tfrac{1}{2} W (\tan, a \mp, \tan, \tfrac{1}{2} a) \text{ in which}$$

L is equal to the length of the side lines.
L " " " center "
W " " width of claim.
a " " complement of angle between the center lines.

Should a number of bends occur in the claim, it is readily seen that the solution of side lines is entirely similar, and it would be needless to carry the illustration further.

The end-line 3—4 is equal to $\dfrac{W}{\sin a}$

If any two alternate courses are parallel then the side lines of the connecting course are of the same length as the course. The stakes for location work are not generally substantial, being posts two or three inches in diameter and of about as many feet in length, and are not intended for permanent use. When work sufficient to fulfil the requirements of the law ($500) has been done, and the property would seem to justify the additional expense, a patent is applied for to obtain a Government title to the land. This is done by the owners or their representatives, sending a certified copy of the original location as found in the county records, twenty-five dollars and a letter to the Surveyor-General of the State, requesting that an order may be issued to some deputy surveyor to survey the claim. This fee is to pay for the office work necessary for checking the clerical work of the deputy, furnishing blanks, copies of the field-notes of the claim surveyed, etc., etc. Upon receipt of the order to make the survey, the deputy notes the number given to it by the Surveyor-General, and proceeds to make the survey, the claim being thereafter designated by its number. Should additional land be required either for milling or timber purposes, it may be pre-empted with the lode, and all work done upon the latter will be in effect as though done upon the "mill-site, as it is technically called. In this case a number such as 967 A would designate the lode, and 967 B the mill-site, which must in every case be tied together, as often the lode will be found near the summit of a mountain, and the mill-site in the valley half a mile or more distant. The law does not regulate the shape of a mill-site, and its only restriction is that it shall not exceed five acres in area, its survey is in every respect entirely similar to that of a lode-survey as herein described.

The variation of the magnetic needle being so great, ranging from 14° 30, E to 16° E, and its liability to error from local attraction so well known, recourse is made to the solar compass. The old Burt solar which is the basis of every modern one, obtains favor especially with the older surveyors, but the use of a combined solar compass and transit is being rapidly extended. The instruments made by Gurley, of Troy N. Y., are excellent for general use, but require considerable time to set up, the solar attachment being placed upon the telescope. Those furnished by Young & Son, of Philadelphia, are a decided improvement in the matter of time required for adjusting, and in them the attachment is placed under the plates and removed when not in use. For the method of using a solar transit we would refer the reader to text books or a handbook issued by W. & L. E. Gurley, of Troy, and will merely give the outline of field and office work necessary to the procuring of a patent. The fifty foot chain is the principal instrument used for measuring, though there are many places where its use is impossible, and the telemeter takes its place. The length of the side-lines (in case of a bend) having been computed, a meridian is established by solar observation, and the courses and distances are run off on the center line, until an angle point, B, is reached; here the instrument is reset, and the line in which the corners lie (2—5) determined, and the corners located at the end of these lines. Corners are preferably either trees, bowlders or rock in place, and in case they are not found at the exact point, then stone or wooden posts are to be used. If a stone is used, its dimensions must not be less than 4″ × 4″ × 2′, sunk in the ground one foot and protected by a mound of stones; if of wood, then its minimum dimensions are 4″ × 4″ × 4′, sunk *two* feet in the ground and similarly protected by stones; they should be permanently marked with the number of survey and the corner of claim. A square nail pointed chisel is used for stones, and a timber scribe for wooden posts. From *each* corner a bearing is taken to the nearest natural object, such as stumps, trees, bowlders, rocks in place, or any object likely to give permanency to the corner, and serve to fully locate and identify it. If a tree has been used it should be blazed and marked B. T. (bearing tree) together with the number of survey, and if a stone pointer, an X, with the survey number chiseled on it, will suffice.

If mountain or other bearings were given in the original location certificate, they should be verified by solar observation at the respective points from which they were taken. Should it appear that the bearings or courses do not agree after making due allowance for the variation of the needle at that point, then a new certificate of location must be made out, placed upon record, and used as a guide instead of the original one. Close attention must be given to see that the solar survey covers every point embodied in the original certificate, otherwise the work will have to be repeated. It is usual to make in the field-book a diagram of the lode with all details as called for, and verify each point as the survey progresses. While in the field, all improvements, such as shafts, tunnels, drifts, houses, etc., placed upon the claim by the applicant for a patent, and noted with their approximate value and their position in reference to some corner of the claim ascertained. Crossings of roads, fences and creeks are noted, and connecting lines run to the section corner and all adjacent patented surveys, as they must be shown upon the plat and field notes sent to the Surveyor-General. Should, however, there be no section corner within two miles of the claim, then the deputy is directed to establish a "locating monument," which consists of a bar of copper or iron, one inch in diameter, inserted in some prominent bowlder or rock in place, upon which is chiseled, "U. S. L. M.," for United States Locating Monument, and a name is given it by which it is designated, as "U. S. L. M. Chihuahua." Bearings to trees, prominent peaks, the junction of roads, confluence of streams, etc., are to be given, and a full description of it given in the field-notes each time it is used to locate a lode.

The plats are made upon mounted sheets of Whatman's paper, which together with blank field-note paper is furnished by the government to insure uniformity. Lodes are platted on a scale of two hundred feet to one inch, with black boundary lines, and the surface colored except in the case of a conflicting claim which has a prior title, the area in conflict being left white. Mountain and all other bearings are in red, with the course of each one plainly lettered. Each corner is marked "Cor. No. 1, Cor. No. 2" etc. The connection from Cor. No. 1 to the section corner is shown, as is also the section or quarter-section lines in which the claim is placed.

"If in running the exterior boundaries of a claim, it is found that two surveys conflict, the plats and field-notes should show the extent of the conflict, giving the area embraced in both surveys, and also the distance from the established corners at which the exterior boundaries of the respective surveys intersect each other." In notes give area as follows:

Total area	5·16
Less area in conflict with surveys Nos. 967 and 1151	2·00
Leaving a net area	3·16

On the plat the net area only is given. The following will give the general form of field-notes at present in use:

Field-notes of the survey of the claim of G. G. Jones, on the Porter Lode and Mill Site, situated in Griffith Mining District, Clear Creek County, State of Colorado.

Survey began June 1, 1880.
Survey ended June 3, 1880.

Feet.	
	Beginning at the S. E. cor. Sec. 27, T. 3 S. R. 76 W.; thence N. 27° 15′ 39″ W. Var. 15° 30′ E.
7462-84	To Cor. No. 1 beginning, a granite post 26″ × 7″ × 12″ in the ground one foot, and protected by a mound of stones, and is marked 1—973 A; whence cer. No. sur. No. 963 B., Porter Mill site, G. G. Jones, applicant, bears S. 27° 16′ 26″ W., 10.841.2 ft. distant. Republican Mt. bears N. 10° 12′ E., and Democrat Mt., bears N. 16° 14 W.; cor. No. 3, sur. No. 840; Pluto Lode, James Gorman, applicant, bears S. 0° 10′ W. 402 ft. A × 963 A. cut on N. face of bowlder bears S. 23° 15′ W. 21 ft. Thence S. 23° 47′ W.
903.7	To east line of sur. No. 465, bullion Lode, Colorado Mining Company, applicants, and from cor. No. 5 of sur. No. 465 to the same point of intersection, S. 34° 21′ E., 87.2 ft.
1,069.4	To west line of sur. No. 465, and from cor. No. 2 of same survey, S. 34° 21′ E., 133·4 ft. to the point of intersection.
1,243	To road to Georgetown running N. 85° W.
1,500	To Cor. No. 2, a pine post four inches by four inches by four feet, marked 2—963 A, in ground two feet, and in mound of stones, whence a spruce tree 16 inches diameter; blazed and marked B.T. —963 A, bears N. 63° E. 20 ft. Squaw Mt. bears S 83° E., and Little Chief Mt. S. 74° 30′ E. Thence N. 66° 13′ W.
150	To cor. No. 3, a spruce post, etc., etc.

The plat and field-notes being finished and sworn to by the deputy and those that assisted in marking corners, chaining, etc., they are then sent to the Surveyor-General's office for approval. If any clerical error has occurred, or if it be found by calculation that the connecting lines through the several intersecting lodes of the section corner disagree, then the plat and field-notes are returned with a marginal note, as "*cut thro' 465 with sec. cor.*," and the error must be discovered and corrected. If the work be right, then it is platted upon the general map of that section of the country, and two approved copies sent to the deputy, with one copy of the field-notes; another set of both is sent to the U. S. Land office, for government use. The patent for the land is now applied for, and the furthering of it properly belongs to a lawyer, as may readily be imagined, by glancing over the list of "first" or preliminary papers.

A complete abstract of title.

A certified copy of the pre-emption of lode and mill site.

Proof by affidavit of non-mineral character of the mill site.

Affidavit of work done on the lode.

Copy of articles of incorporation of the company, if land is pre-empted by an organization.

Certificate of agency.

Copy of field notes with affidavit of persons assisting on the survey.

Two copies of the plat (as approved).

An approved copy of the same furnished by the Surveyor-General.

Proof of citizenship and peaceable possession of claim.

Proof of posting notice that a patent has been applied for.

But as this paper was intended to give an outline of the method and requirements of claim surveying, it would be tedious to attempt to follow the papers through their official career, and it will suffice to say that it generally consumes a year before the government titles are perfected. The work of claim surveying is not difficult, requiring care alone, and to the young engineer there are few fields that offer inducements at all comparable with Colorado, and especially the lately developed districts of San Juan and Gunnison. The value of engineers' work as *surveyors only* is appended below. General underground or surface work, $10 per day. Locations $6 to $10 each, inclusive of expenses, such as horse-hire and placing the location on record, which costs $1.50. Patents cost all the way from $150 to $225, the official fees of which range from $95 to $140, and are of course included in the above estimate.

—*A paper by Richard A. Parker, C. E., in the School of Mines Quarterly.*

LAND DISTRICTS AND OFFICERS.

Sec. 124. The following are the established boundaries of the existing land districts, with the location of the respective land offices, until changed in pursuance of law, namely:

Mathews *v.* Zane, 5 Cranch, 92; Same case, 7 Wheat. 164; Hellan *v.* Ripley, 3 Rob. (La.) 138.

Missouri.—*Booneville.*—Booneville land district embraces all that part of the State of Missouri which lies north of the line between townships thirty-seven and thirty-eight north, lying west of the line between ranges ten and eleven west and townships thirty-four and thirty-five north of ranges eleven to thirty-three west, inclusive.

Ironton.—The land district of Ironton embraces all that part of the State of Missouri which lies south of the line between townships thirty-seven and thirty-eight north, and east of the line between ranges ten and eleven west of the fifth principal meridian.

Springfield.—The land district of Springfield consists of that portion of the State of Missouri which is situated south of the line between townships thirty-four and thirty-five north, and west of the line between ranges ten and eleven west of the fifth principal meridian.

Alabama.—*Huntsville.*—Huntsville land district includes all that portion of the State of Alabama lying north of Calhoun and Cleburne counties and north of the line between townships fourteen and fifteen south of the base meridian of Huntsville, extending from the western boundary of the State to the western boundary of Calhoun county.

Montgomery.—Montgomery land district includes all that portion of the State of Alabama lying south of townships fourteen and fifteen south of the base meridian of Huntsville, extending from the western boundary of the State to the western boundary of Calhoun county, and south of the northern boundaries of Calhoun and Cleburne counties.

Louisiana.—*New Orleans.*—The land district of New Orleans comprehends within its limits that portion of the State of Louisiana which lies south of the basis parallel of thirty-first degree of north latitude and that portion thereof lying north of the basis and east of range lines three and four west, townships one to thirteen north, inclusive; and also east of range lines five and six west, extending from township fourteen north to northern boundary of State.

Natchitoches.—This land district occupies the north-western part of the State of Louisiana, extending from townships one to thirteen north, inclusive, and west of the line between ranges three and four west; and also from township fourteen north to the north boundary of the State, extending from the line between ranges five and six west of the principal meridian to the western boundary of the State of Louisiana.

Mississippi.—*Jackson.*—The land district of Jackson is co-extensive with the limits of the State of Mississippi.

Michigan.—*Reed City.*—Reed City land dictrict includes all that part of the State of Michigan situated west of the following lines: Townships one to four south, inclusive, west of the line between ranges three and four west; townships five to eight south, inclusive, west of the line between ranges four and five west; townships one to ten north, inclusive, west of the principal meridian; townships eleven to thirty-nine north, inclusive (extending to Lake Huron), west of the line between ranges two and three west, including islands in Lake Michigan and the straits of Mackinac, exclusive of the island of Mackinaw.

East Saginaw.—East Saginaw land district embraces townships six to ten north, inclusive, lying east of the principal meridian and west of the line between ranges eleven and twelve east of said meridian; also townships eleven to twenty-eight north, inclusive, lying east of the line between ranges two and three west of the principal meridian, and west of the line between ranges eleven and twelve east.

Marquette.—Land district embraces the whole extent of the northern peninsula of Michigan, including Drummond Island, Isle Royale, and those adjacent to the Big Bay de Noc.

Detroit.—The land district of Detroit includes all that part of the State of Michigan situated east of the following lines of public surveys, viz: Townships one to five north, inclusive, east of the principal meridian; townships six to nineteen north, inclusive, extending east of the line between ranges eleven and twelve east, townships one to four south, inclusive, lying east of the line between ranges three and four west; townships five to nine south, inclusive, extending from the line between the ranges four and five west. It also includes that part of the State which lies north of the line between townships twenty-eight and twenty-nine north, and east of the line between ranges two and three west of the principal meridian, and extending to Lake Huron, in the southern peninsula of Michigan, comprehending within its limits the island of Mackinaw.

Arkansas.—*Dardanelle.*—Land district is bounded on the east by a line between ranges seventeen and eighteen west of the fifth principal meridian, running north from the base line to the corner common to townships twelve and thirteen north of the base line, on the north by the line between townships twelve and thirteen north, on the west by the western boundary of the State of Arkansas, on the south by the base line.

Little Rock.—The Land district is bounded as follows, viz: Beginning on the south boundary of the State of Arkansas where the line between ranges five and six west of the fifth principal meridian intersects the same; thence north on said range line to the corner common to townships ten and eleven south; thence west on the line between townships ten and eleven south to the line between ranges seventeen and eighteen west; thence north on the said range line to the corner common to townships twelve and thirteen north of the base line; thence east on the line between townships twelve and thirteen north to the line between ranges seven and eight west; thence north along said range line to the north boundary of the State; thence east with the said boundary to the Saint Francis River; thence down said river to the intersection of the thirty-sixth degree of north latitude; thence east along said parallel of north latitude to the Mississippi River; thence down said river to the south boundary of the State of Arkansas; and thence west along said boundary to the point of beginning.

Camden.—Land district is bounded on the north by the base line extending from the west boundary of the State of Arkansas to the intersection of the line between ranges seventeen and eighteen west of the fifth principal meridian; thence south with said range line to the corner common to townships ten and eleven south of the base line; thence east, on the line between townships ten and eleven south, to the intersection of the line between ranges five and six west of the fifth principal meridian; thence south along said range line to the south boundary of the State; thence west with the said boundary to the west boundary of the State; and thence with the west boundary to the place of beginning.

Harrison.—Land district comprises all that part of the State of Aakansas which lies north of the line between townships twelve and thirteen north of the base line, and west of the line between ranges seven and eight west of the fifth principal meridian.

Florida.—*Gainesville.*—The land district of Gainesville is co-extensive with the limits of the State of Florida.

Iowa.—*Des Moines.*—The land district of Des Moines is co-extensive with the limits of the State of Iowa.

Wisconsin.—*Menasha.*—Land district embraces eastern part of the State of Wisconsin lying east of the line between ranges eight and nine east, extending from the south boundary of the State to the corner common to townships fourteen and fifteen north; thence east on said township line to the line between ranges eleven and twelve east; thence north along said range line to the north boundary of the State.

Falls Saint Croix.—Land district is bounded on the north by the fourth correction line north of the base line; on the east by the line between ranges eleven and twelve west of the fourth principal meridian; on the south by the Chippewa and Mississippi Rivers, and on the West by the Saint Croix River.

Wausau.—Land district embraces all that portion of the State of Wisconsin lying north of the line between townships fourteen and fifteen north of the base line, west of the line between ranges eleven and twelve east of the fourth principal meridian; and east of the line between ranges one and two east of the fourth principal meridian.

La Crosse.—Land district is included within the following boundaries, to wit: Beginning on the south boundary of the State of Wisconsin, where the lines between ranges eight and nine east of the fourth principal meridian intersects the same; thence north with the said range line to the corner common to townships fourteen and fifteen north of the base line; thence west with said line to the line between ranges one and two east; thence north along said range line to the corner common to townships twenty-four and twenty-five north; thence west on the line between said townships to the line between ranges eleven and twelve west; thence north with said range line to the intersection with the Chippewa River; thence down said river to its mouth; thence down the Mississippi River to the southern boundary of Wiscousin; and thence east along the said boundary to the place of beginning.

Bayfield.—Land district embraces all that part of the northwestern corner of the State of Wisconsin lying north of the fourth correction line and west of the line between ranges one and two of the fourth principal meridian.

Eau Claire.—Land district is bounded on the north by the fourth correction line running through ranges one east and one to eleven west of the fourth principal meridian; on the west by the line running south between ranges eleven and twelve west to the corner common to townships twenty-four and-twenty five north of the base line; on the south by the line running east between said townships to the line between ranges one and two east of the fourth principal meridian, and on the east by the said range line extending north to the corner common to townships forty and forty-one north of the base line, to the place of beginning.

California.—*San Francisco.*—Land district is bounded as follows: Beginning on the Pacific Ocean where the line between townships twenty-four and twenty five north intersects the ocean, and running thence east with the said township line to the line between ranges ten and eleven west of the Mount Diabolo meridian; thence north on said range line to the corner common to townships twenty-five and twenty-six north; thence east between said townships to the line between ranges seven and eight west; thence south on said range line to the corner common to townships nineteen and twenty north; thence east between said townships to the line between ranges six and seven west; thence south on said range line to the corner common to townships sixteen and seventeen north; thence east between said townships to the line between ranges five and six west; thence south along the line between ranges five and six west to the corner common to townships twelve and thirteen north; thence east between said townships to the line between ranges four and five-west; thence south on said range line to the corner common to townships nine and ten north; thence east between said townships to the line between ranges three and four west; thence south on said range line to the corner common to townships seven and eight north: thence east on the line between townships seven and eight north to the line between ranges three and four east; thence south on the line between ranges three and four east to the first standard north; thence west along said standard to the line between ranges two and three east; thence south on the line between ranges two and three east to the corner common to townships three and four north; thence west between townships three and four north to the line between ranges one and two east; thence south on line between ranges one and two east to the corner common to townships one and two north; thence east to the line between ranges two and three east; thence north betweeen ranges two and three east to the corner common to townships two and three north; thence east on said township line to the line between ranges four and five east; thence south on the line between ranges four and five east to the corner common to townships one and two south of the Mount Diabolo base line; thence east between townships one and two south to the line between ranges five and six east; thence south on said range line to the corner common to townships seven and eight south; thence east on the line between townships seven and eight south to the line between ranges six and seven east; thence south on said range line to the corner common to townships nine and ten south; thence east to the line between ranges seven and eight east; thence south to the corner common to townships ten and eleven south; thence east on line between townships ten and eleven south to the line between ranges eight and nine east; thence south on said range line to the intersection of the third standard south; thence east along said standard to the line between ranges nine and ten east; thence on said range line to the corner common to townships thirteen and fourteen south; thence east on the line between townships thirteen and fourteen south to the line between ranges ten and eleven east; thence south between ranges ten and eleven east to the corner common to townships fifteen and sixteen south; thence east on the line between townships fifteen and sixteen south to the line between ranges eleven and twelve east; thence south to the fourth standard south; thence east along said standard to the line between ranges twelve and thirteen east; thence south on said range line to the corner common to townships eighteen and nineteen south; thence east along said township line to the line between ranges thirteen and fourteen east; thence south to the fifth standard line south; thence east along said standard line to the line between ranges fourteen and fifteen east; thence south to the corner common to townships twenty-two and twenty-three south; thence east on the line between townships twenty-two and twenty-three south to the line between ranges fifteen and sixteen east; thence south on said range line to the corner common to townships twenty-three and twenty-four south; thence east on said township line to the line between ranges sixteen and seventeen east; thence south on said range line to the corner common to townships twenty-six and twenty-seven south; thence east on said township line to the line between ranges seventeen and eighteen east; thence south between said ranges to the corner common to townships twenty-seven and twenty-eight south; thence east on the line between said townships to the line between ranges eighteen and nineteen east; thence south on said range line to the seventh standard line south of the base line; thence east along said standard line to the line between ranges nineteen and twenty east; thence south on said range line to the corner common to townships twenty-nine and thirty south; thence east on said township line to the line between ranges twenty and twenty-one east; thence south on said range line to the corner common to townships thirty and thirty-one south: thence east on said township line to the line between ranges twenty-one and twenty-two east; thence south on said range line to the corner common to townships thirty-one and thirty-two south; thence east on line between townships thirty-one and thirty-two south to the line between ranges twenty-two and twenty-three east; thence south to the eighth standard line south; thence east along said standard line of the Mount Diabolo base line to the line between ranges twenty-three and twenty-four west of the San Bernardino meridian; thence south on said range line to the corner common to townships ten and eleven north of the San Bernardino base line; thence east on line between said townships to the line between ranges twenty and twenty-one west; thence south on said range line to the first standard north of the San Bernardino base line; thence west along said standard line to the Pacific Ocean, and thence northwesterly along the ocean to the place of beginning.

Maryville.—Land district includes all that portion of the State of California situated within the following boundaries: Commencing at a point on the fifth standard parallel north, between ranges seven and eight west, of Mount Diabolo meridian; thence south with said range line to the line between townships nineteen and twenty north; thence east with said line to the line between ranges six and seven west; thence south with said line to the line between townships sixteen and seventeen north; thence east with said line to the line between ranges five and six west; thence south with said line to the line between townships twelve and thirteen north; thence east with said line to the line between ranges four and five west; thence south with said line to the line between townships nine and ten north; thence east with said line to the line between ranges three and four west; thence south with the said line to the line between townships seven and eight north; thence east with said line to the line between ranges three and four east; thence north with said line to the line between townships eleven and twelve north; thence east with said line to the line between ranges four and five east; thence north with said line to the line between townships twelve and thirteen north; thence east with said line to the line between ranges five and six east; thence north with said line to the line between townships thirteen and fourteen north; thence east with said line to the line between ranges six and seven east; thence north with said line to the line between townships sixteen and seventeen north; thence east with said line to the line between ranges eight and nine east; thence north with said line to the line between townships nineteen and twenty north; thence east with said line to the line between ranges nine and ten east; thence north with said line to the fourth standard parallel north; thence east with said parallel to the line between ranges ten and eleven east; thence north with said line to the line between townships twenty-one and twenty-two north; thence east with said line to the line between ranges eleven and twelve east; thence north with said line to line between townships twenty-three and twenty-four north; thence west with said line to the line between ranges eight and nine east; thence north with said line to the fifth standard parallel north; thence west with said parallel to the line between ranges five and six east; thence north with said line to the line between townships twenty-six and twenty-seven north; thence west with said line to the line between ranges four and five east; thence south with said line to the fifth standard parallel north; thence west on said parallel to the place of beginning.

Humboldt.—Land district includes all that portion of the State of California lying west of the line between ranges ten and eleven west of Mount Diabolo meridian, and north of the line between townships twenty-four and twenty-five north, Mount Diabolo base line.

Stockton—Land district is bounded as follows: Beginning at the north-west corner of township five north, range five east of the Mount Diabolo meridian, and running thence east along the first standard north to the line between ranges nine and ten east: thence south to the corner of townships three and four north, ranges nine and ten east; thence east to the line between ranges seventeen and eighteen east; thence north to the corner of townships four and five north, ranges seventeen and eighteen east; thence east to the line between ranges twenty-two and twenty-three east; thence south to the first standard south of the Mount Diabolo base line; thence east along said standard line to the line between ranges twenty-six and twenty-seven east; thence south to the third standard south; thence west along said standard to the line between ranges eight and nine east; thence north to the corner of townships ten and eleven south; thence west to the line between ranges seven and eight east; thence north to the corner of townships nine and ten south; thence west to the line between ranges six and seven east; thence north to the corner of townships seven and eight south; thence west to the line between ranges five and six east; thence north to the corner of townships one and two south; thence west to the line between ranges four and five east; and thence north to the place of beginning.

Visalia—Land district is bounded as follows: Beginning at the northwest corner of township thirteen south, range ten east, of the Mount Diabolo meridian, running thence east along the third standard parallel south to the line between ranges thirty-two and thirty-three east; thence south with said line to the eighth standard parallel south; thence west along said parallel to the line between ranges twenty-two and twenty-three east; thence north with said line to the line between townships thirty-one and thirty-two south; thence west with said line to the line between ranges twenty-one and twenty-two east; thence north with said line to the line between townships thirty and thirty-one south; thence west with said line to the line between ranges twenty and twenty-one east; thence north with said line to the line between townships twenty-nine and thirty south; thence west with said line to the line between ranges nineteen and twenty east; thence north with said line to the seventh standard parallel south; thence west with said parallel to the line between ranges eighteen and nineteen east; thence north with said line to the line between townships twenty-seven and twenty-eight south; thence west with said line to the line between ranges seventeen and eighteen east; thence north with said line to the line between townships twenty-six and twenty-seven south; thence west with said line to the line between ranges sixteen and seventeen east; thence north with said line to the line between townships twenty-three and twenty-four south; thence west with said line to the line between ranges fifteen and sixteen east; thence north with said line to the line between townships twenty-two and twenty-three south; thence west with said line to the line between ranges fourteen and fifteen east; thence north with said line to the fifth standard parallel south; thence west along said parallel to the line between ranges thirteen and fourteen east; thence north with said line to the line between townships eighteen and nineteen south; thence west with said line to the line between ranges twelve and thirteen east; thence north with said line to the fourth standard parallel south; thence west along said parallel to the line between ranges eleven and twelve east; thence north with said line to the line between townships fifteen and sixteen south; thence west with said line to the line between ranges ten and eleven east; thence north with said line to the line between townships thirteen and fourteen south; thence west with said line to the line between ranges nine and ten east; thence north with said line to the place of beginning.

Sacramento—Land district includes all that portion of the State of California situated within the following described boundaries: Commencing at a point where the northern boundary of township nineteen north, Mount Diabolo base line, intersects the eastern boundary of the State of California; thence west along said township line to the line between ranges thirteen and fourteen east; thence north with said line to the line between townships twenty-one and twenty-two north; thence west with said line to the line between ranges ten and eleven east; thence south with said line to the fourth standard parallel north; thence west with said standard to the line between ranges nine and ten east; thence south with said line to the line between townships nineteen and twenty north; thence west with said line to the line between ranges eight and nine east; thence south with said line to the line between townships sixteen and seventeen north; thence west with said line to the line between ranges six and seven east; thence south with said line to the line between townships thirteen and fourteen north; thence west with said line to the line between ranges five and six east; thence south with said line to the line between townships twelve and thirteen north; thence west with said line to the line between ranges four and five east; thence south with said line to the line between townships eleven and twelve north; thence west with said line to the line between ranges three and four east; thence south with said line to the first standard parallel north; thence west with said parallel to the line between ranges two and three east; thence south with said line to the line between townships three and four north; thence west with said line to the line between ranges one and two east; thence south with said line to the line between townships one and two north; thence east with said line to the line between ranges two and three east; thence north with said line to the line between townships two and three north; thence east with said line to the line between ranges four and five east; thence north with said line to the first standard parallel north; thence east along said parallel to the line between ranges nine and ten east; thence south with said line to the line between townships three and four north; thence east with said line to the line between ranges seventeen and eighteen east; thence north with said line to the line between townships four and five north; thence east with said line to the line between ranges twenty-two and twenty-three east; thence north with said line to the intersection of the eastern boundary of California; thence northwesterly with the eastern boundary of California to the intersection of the boundary with the thirty-ninth parallel of north latitude; thence north with said eastern boundary to the place of beginning.

Bodie.—Land district includes all that portion of the State of California situated within the following boundaries: Commencing at a point on the eastern boundary of the State of California, where the line between ranges twenty-two and twenty-three east, Mount Diabolo meridian, intersects said boundary; thence south with said range line to the first standard parallel south; thence east along said parallel to the line between ranges twenty-six and twenty-seven east; thence south with said line to the intersection of the third standard parallel south; thence east along said parallel to the line between ranges thirty-two and thirty-three east; thence south with said range line to the intersection of the eighth standard parallel south; thence east with said parallel to the intersection of the San Bernardino meridian; thence south to the corner of townships eleven and twelve north of San Bernardino base line; thence east to the intersection of the eastern boundary of the State of California; thence northwesterly with said boundary to the place of beginning.

Los Angeles.—Land district is bounded as follows: Beginning at a point of the intersection of the first standard north of the San Bernardino base line with the Pacific Ocean; thence east along said standard line to the line between ranges twenty and twenty-one west of the San Bernardino meridian; thence north to the corner of townships ten and eleven north; thence west to the line between ranges twenty-three and twenty-four west; thence north with said range line to the intersection of the eighth standard line south of the Mount Diabolo base line; thence east with said standard line to the intersection of the San Bernardino meridian; thence south to the corner of townships eleven and twelve north of San Bernardino base line; thence east to the intersection of the eastern boundary of the State of California; thence in a southeasterly direction with said boundary to the intersection of the Colorado River of the West; thence down said river to the intersection of the boundary between the United States and Mexico; thence southwesterly with said boundary to the Pacific Ocean; and thence in a northwesterly direction along the ocean to the place of beginning.

Shasta.—Land district is bounded as follows: Beginning on the northern boundary of the State of California, where the line between ranges ten and eleven west of the Mount Diabolo meridian intersects said boundary; thence east with said boundary to the intersection of the line between ranges five and six east; thence south on said range line to the corner of townships thirty and thirty-one north; thence west to the line between ranges four and five east; thence south to the fifth standard north of the Mount Diabolo base line; thence west along said standard line to the line between ranges ten and eleven west; and thence north with said range line to the north boundary of the State, the point of beginning.

Susanville.—Land district is bounded as follows: Beginning at a point where the north boundary of township nineteen north, Mount Diabolo base line, intersects the eastern boundary of the State of California; thence west on the north boundary of township nineteen north to the corner of townships nineteen and twenty north, ranges thirteen and fourteen east; thence north to the corner of townships twenty-one and twenty-two north, ranges thirteen and fourteen east; thence west to the corner of townships twenty-one and twenty-two north, ranges eleven and twelve east; thence north to the corner of townships twenty-three and twenty-four north, ranges eleven and twelve east; thence west to the corner of townships twenty-three and twenty-four north, ranges eight and nine east; thence north to the corner of townships twenty-five and twenty-six north, ranges eight and nine east; thence west to the corner of townships twenty-five and twenty-six north, ranges five and six east; thence north between ranges five and six east to the corner of townships twenty-six and twenty-seven north, ranges five and six east; thence west to the corner of townships twenty-six and twenty-seven north, ranges four and five east; thence north to the corner of townships thirty and thirty-one north, ranges four and five east; thence east to the corner of townships thirty and thirty-one north, ranges five and six east; thence north along said range line to the northern boundary of the State of California; thence east with the said boundary to the intersection of the eastern boundary of the State; and thence south along the eastern boundary to the place of beginning.

Nevada.—*Carson.*—Land district includes all that portion of the State of Nevada situated within the following described boundaries: Commencing at the northwest corner of the State of Nevada; thence east with the north boundary of the State to the intersection of the line between ranges forty-four and forty-five east of Mount Diabolo meridian; thence south on said range line to the corner of townships twenty-four and twenty-five north of the Mount Diabolo base line; thence west to the line between ranges thirty-nine and forty east; thence south along said range line to the eastern boundary of California; thence northwesterly with the eastern boundary of California to the intersection of the boundary with the thirty-ninth parallel of north latitude; thence north with the eastern boundary of California to the place of beginning.

Eureka.—Land district includes all that portion of the State of Nevada lying south and east of the following described boundaries: Beginning at the northeast corner of the State of Nevada; thence west with the north boundary of the State to the intersection of the line between ranges forty-four and forty-five east of the Mount Diabolo meridian; thence south on said range line to the corner of townships twenty-four and twenty-five north of the Mount Diabolo base line; thence west to the line between ranges thirty-nine and forty east; thence south along said range line to the eastern boundary of the State of California.

Washington Territory.—*Olympia.*—Land district is bounded as follows: Beginning on the boundary line between the United States and the British possessions, and on the summit of the Cascade Mountains, at the nearest range line to the east line of range twelve east of the Willamette meridian; thence south on the nearest range lines on the summit of said mountains to the line dividing townships ten and eleven north of the base line; thence west to the line dividing ranges six and seven west; thence north on said range line to the third standard parallel; thence west to Shoal Water Bay; thence with the Shoal Water Bay to the Pacific Ocean; thence northwesterly with the ocean to the Strait of Juan de Fuca; and thence along the boundary line between the United States and British possessions, running through the said strait and that of De Harro, to the intersection of the forty-ninth parallel of north latitude; and thence due east along said parallel to the place of beginning.

Walla-Walla land district includes all that portion of Washington Territory situated within the following described boundaries: Commencing at the southeast corner of the Territory of Washington at a point where the forty-sixth parallel of north latitude crosses the Snake River; thence west along said parallel to the Columbia River; thence down the Columbia River to the intersection of range line nineteen and twenty east of Willamette meridian; thence north on said range line to the line between townships six and seven north; thence east with said line to the line between ranges twenty-seven and twenty-eight east; thence north with said line to the line between townships sixteen and seventeen north; thence east with said line to the Columbia guide meridian; thence south with said meridian to the line between townships twelve and thirteen north; thence east with said line to its intersection with Snake River; thence up Snake River to its intersection with the eastern boundary Washington Territory; thence continuing up Snake River to the place of beginning.

Colfax.—Colfax land district includes all that portion of Washington Territory situated within the following described boundaries: Commencing at a point where the Columbia guide meridian intersects the third standard parallel in said Territory; thence east along the line of said standard parallel to where the same intersects the Snake River; thence up said Snake River to where the same intersects the boundary line between Washington and Idaho Territory; thence north on said boundary line to where the same intersects the boundary line between Washington Territory and British Columbia; thence west along said line to where the same intersects the aforementioned Columbia guide meridian; thence south along the line of said meridian to the place of beginning.

Yakima land district is bounded by a line commencing at a point of the intersection of the line between townships six and seven north, and between ranges twenty-seven and twenty-eight east of the Willamette meridian; and running westerly along said line between townships six and seven north to the summit of the Cascade Mountains; thence northerly along said summit to the boundary line between the United States and British Columbia; thence east along said line to the Columbia guide meridian; thence south on said meridian to the line between townships sixteen and seventeen north; thence west along said line to the line between ranges twenty-seven and twenty-eight east; thence south along said line to the place of beginning.

Vancouver land district includes all that portion of Washington Territory situated between the following described boundaries: Commencing at a point where the line between townships twelve and thirteen north intersects Shoal Water Bay; thence with the Shoal Water Bay, including any islands therein, to the Pacific Ocean; thence southerly with the ocean to the mouth of Columbia River; thence up the river to the point opposite the line between ranges nineteen and twenty east of Willamette meridian; thence north with said range line to the corner common to townships six and seven north; thence west with said line to the summit of the Cascade Mountains; thence northerly along said summit to the line between townships ten and eleven north; thence west along said line to the line between ranges six and seven west; thence north on said line to the intersection of the third standard parallel north; thence west with said standard parallel to the place of beginning.

Minnesota.—*Taylor's Falls.*—Land district is bounded as follows: Beginning at a point where the northern boundary of township forty-five north of the base line and fourth principal meridian intersects the boundary between the States of Minnesota and Wisconsin; thence south along said boundary to the intersection of the Saint Croix River; thence down with said river to its mouth; thence up the Mississippi River to the intersection of the line between ranges twenty-seven and twenty-eight west of the fourth principal meridian with said river; thence north with said range line to the corner of townships forty-five and forty-six north; and thence east to the place of beginning.

Saint Cloud.—Land district is bounded as follows: Beginning at a point of intersection of the fifth standard parallel north of the base line with the line between ranges thirty-five and thirty-six west of the fifth principal meridian; thence north with the said range line to the boundary line between the United States and British possessions; thence east and southeasterly along said boundary to the intersection of the line between ranges twenty-three and twenty-four west of the fourth principal meridian; thence south with said range line to the corner of townships forty-five and forty-six north; thence west to the line between ranges twenty-seven and twenty-eight west; thence south with said range line to the Mississippi River; thence up the river to the intersection of the line between ranges twenty-four and twenty-five west of the fifth principal meridian with said river; thence south on the line between ranges twenty-four and twenty-five west to the intersection of the fifth standard parallel north; thence west with said standard parallel to the place of beginning.

Du Luth.—Land district is bounded as follows: Commencing at a corner common to townships, forty-five and forty-six north, ranges twenty-three and twenty-four west of the fourth principal merdian; thence north with said range line to the intersection of the boundary line between the United States and the British possessions; thence eastwardly with said boundary to Lake Superior; thence southwesterly with said lake the mouth of Saint Louis River; thence up said river to the intersection of the boundary line between Wisconsin and Minnesota; thence south along said boundary line to the intersection of the line between townships forty-five and forty-six north; and thence west between townships forty-five and forty-six north to the place of beginning

Fergus Falls.—Land district is bounded as follows: On the east by the line between ranges thirty-five and thirty-six west of the fifth principal meridian; on the north by the ninth standard parallel north of the base line, on the south by the sixth standard parallel north: and on the west by the western boundary of the State of Minnesota.

Worthington.—Root River land district is bounded on the south by the boundary line between the States of Iowa and Minnesota; on the west by the western boundary of the State of Minnesota; on the north by the line between townships one hundred and five and one hundred and six north; and on the east by the Mississippi River.

Tracy.—Winona land district is bounded on the north by the line between townships one hundred and ten and one hundred and eleven north; on the south by the line between townships one hundred and five and one hundred and six north of the base line; on the east by the Mississippi River; and on the west by the western boundary of the State of Minnesota.

Benson.—Land district is bounded as follows: Beginning on the Mississippi River at a point of the intersection of the south boundary of township twenty-seven north of the base line fourth principal meridian with said river; thence west on said township line to the southwest corner of township twenty-seven north, range twenty-four west of the fourth principal meridian; thence north to the intersection of the line between townships one hundred and fifteen and one hundred and sixteen north; thence west with said township line to the western boundary of Minnesota; thence north with the western boundary of the State of Minnesota to the intersection of the said boundary with the sixth standard parallel north; thence east with said standard parallel to the intersection of the line between ranges thirty-five and thirty-six west of the fifth principal meridian; thence south along said range line to the intersection of the fifth standard parallel north; thence east with the said standard parallel to the third guide meridian west of the fifth principal meridian; thence north with said third guide meridian to the Mississippi River; thence down the Mississippi River to the place of beginning.

Redwood Falls.—Land district is bounded on the south by the line between townships one hundred and ten and one hundred and eleven north; on the west by the western boundary of the State of Minuesota; on the north by the line between townships one hundred and fifteen and one hundred and sixteen north, extending east from the western boundary of the State of Minnesota to the intersection of the western boundary of township twenty-seven north, range twenty-four west of the fourth principal meridian; thence south with said west boundary of township twenty-seven north to the southwest corner thereof; thence east with the south boundary of township twenty-seven north to the

Mississippi River; thence down the Mississippi River to the intersection of the line between townships one hundred and ten and one hundred and eleven north of the base line.

Crookston.—Land district embraces all that part of the State of Minnesota which lies north of township number one hundred and thirty-six north and west of range number thirty-five west of the principal meridian.

Oregon.—*Oregon City.*—Land district includes all that portion of the State of Oregon situated within the following boundaries: Commencing at the mouth of the Alsea River; thence easterly with said river to its intersection with the third standard parallel south between townships thirteen and fourteen south; thence east with said parallel to the line between ranges eight and nine east of Willamette meridian; thence north with said range line to Columbia River; thence down said river to the Pacific Ocean; thence with the ocean to the place of beginning.

Roseburgh.—Land district includes all that portion of the State of Oregon situated within the following boundaries: Beginning on the southern boundary of the State of Oregon where the line between ranges five and six east of the Willamette meridian intersects said boundary; thence north with said range line to the fourth standard parallel south between townships eighteen and nineteen south; thence east with said parallel to the line between ranges eight and nine east; thence north with said range line to the third standard parallel south between townships thirteen and fourteen south; thence west with said parallel to its intersection with Alsea River; thence with said river to the Pacific Ocean; and thence along the ocean to the south boundary of Oregon; thence east with said south boundary of Oregon to the place of beginning.

Lake View.—Land district includes all that portion of the State of Oregon lying south of the fourth standard parallel south, between townships eighteen and nineteen south, and east of the meridian line between ranges five and six east of the Wilamette meridian.

Le Grand.—Land district includes all that portion of the State of Oregon lying north of the fourth standard parallel south, between townships eighteen and nineteen south, and east of the meridian line between ranges twenty-six and twenty-seven east.

Dalles.—The Dalles land district includes all that portion of the State of Oregon situated within the following boundaries: Commencing at a point on the Columbia River where the line between ranges eight and nine east of Willamette meridian intersects said river; thence south on the said range line to the fourth standard parallel south, between townships eighteen and nineteen south; thence east on said parallel to the line between ranges twenty-six and twenty-seven east; thence north on said range line to the Columbia River; thence down said river to the place of beginning.

Kansas.—The northern land district includes all that portion of the State of Kansas lying west of the third guide meridian west of the sixth principal meridian and north of the line between townships nine and ten south.

Topeka.—Land district is bounded on the north by the boundary line between the States of Kansas and Nebraska; on the east by the Missouri River and the boundary line between the States of Arkansas and Missouri; on the south by the line between townships twenty-two and twenty-three south of the base line; and on the west by the first guide meridian east of the sixth principal meridian.

Independence.—Land district is bounded on the north by the line between townships twenty-two and twenty-three south of the base line; on the east by the western boundary of the State of Missouri; on the south by the south boundary of the State of Kansas; and on the west by the first guide meridian east of the sixth principal meridian.

Concordia.—Republican land district is bounded on the east by the first guide meridian east of the sixth principal meridian; on the south by the second standard parallel south of the base line; on the west by the first guide meridian west; and on the north by the boundary line between the States of Kansas and Nebraska.

Wichita.—Land district includes all that portion of the State of Kansas situated within the following described limits: Beginning at a point on the southern boundary of the State of Kansas where the range line ten and eleven, west sixth principal meridian, intersects the same; thence north with said range line to the line between townships twenty-one and twenty-two south; thence east with said line to the line between ranges five and six west; thence north with said line to the fourth standard parallel south; thence east with said standard parallel to the first guide meridian east; thence south with said guide meridian to the southern boundary of the State of Kansas; thence west with said boundary to the place of beginning.

Salina.—Land district includes all that portion of the State of Kansas situated within the following described boundaries: Commencing at a corner common to the fourth standard parallel south, and the first guide meridian east of the sixth principal meridian; thence west with said standard parallel to the line between ranges five and six west; thence north with said line to the line between townships seventeen and eighteen south; thence west with said line to the line between ranges ten and eleven west; thence north with said line to the third standard parallel south; thence west along said standard parallel to the line ranges fifteen and sixteen west; thence north with said line to the second standard parallel south; thence east along said standard parallel to the first guide meridian east; thence south with said guide meridian to the place of beginning.

Wa—Keeney.—The western land district includes all that portion of the State of Kansas situated within the following described boundaries: Commencing at a point on the western boundary of the State of Kansas, where the fourth standard parallel south intersects the same; thence east with said standard parallel to the line between ranges twenty and twenty-one west of the sixth principal meridian; thence north with said line to the line between townships nineteen and twenty south; thence east with said line to the line between ranges fifteen and sixteen west; thence north with said line to the line between townships nine and ten south; thence west with said line to the western boundary of the State of Kansas; thence south with said boundary to the place of beginning.

Larned.—The Arkansas Valley land district includes all that portion of the State of Kansas situated within the following described boundaries: Commencing at a point on the western boundary of the State of Kansas, where the fourth standard parallel south intersects the same; thence east with said standard parallel to the line between ranges twenty and twenty-one west; thence north with said line to the line between townships nineteen and twenty south; thence east with said line to the line between ranges fifteen and sixteen west; thence north with said line to the third standard parallel south; thence east with said standard parallel to the line between ranges ten and eleven west; thence south with said line to the line between townships seventeen and eighteen south; thence east with said line to the line between ranges five and six west; thence south with said line to the line between townships twenty-one and twenty-two south; thence west with said line to the line between ranges ten and eleven west; thence south with said line to the southern boundary of the State of Kansas; thence west with said boundary to the western boundary of the State; thence north with said boundary to place of beginning.

Kirwin.—The northwestern land district includes all that portion of the State of Kansas situated within the following described boundaries: Commencing at a point on the northern boundary of the State of Kansas where the range line eight and nine west sixth principal meridian intersects the same; thence south with said range line to the second standard parallel south; thence west with said second standard parallel to the line between ranges fifteen and sixteen west; thence north with said line to the line between townships nine and ten south; thence west with said line to the third guide meridian west; thence north with said guide meridian to the northern boundary of the State of Kansas; thence east with said boundary to the place of beginning. March 3, 1881, an additional district was created by Congress, by a law reading as follows:—"That the following described territory in the State of Kansas, to wit: commencing at the southeast corner of township thirty-five, south range thirty-one west of the sixth principal meridian on the south boundary of the State of Kansas thence west on said southern boundary to the western boundary of said State; thence north on said western boundary to the fourth standard parallel south; thence east along said parallel to the northeast corner of township twenty-one south, range thirty-one west, and thence south to the place of beginning, in the State of Kansas, shall constitute an additional land district, to be called the southwestern land district, the location for the office of which shall be designated by the President of the United States, and shall by him from time to time be changed, as the public interest may seem to require."

Nebraska.—Grand Island land district is bounded as follows: Commencing at the corner common to townships twenty and twenty-one north of the base line ranges four and five east of the sixth principal meridian; thence south with said range line to the south shore of Platte River; thence west with said south shore of Platte River to the intersection of range line twenty and twenty-one west; thence north with said line to the line between townships twenty-three and twenty-four north; thence east with said line to the line between ranges eleven and twelve west; thence south with said line to the line between townships twenty and twenty-one north; thence east with said line to the place of beginning.

Beatrice.—Nehama land district is bounded on the north by the line between townships six and seven north of the base line; on the west by the line between ranges eight and nine west of the sixth principal meridian; on the south by the boundary line between Kansas and Nebraska; and on the east by the Missouri River.

Lincoln.—South Platte district is bounded on the south by the line between townships six and seven north of the base line; on the west by the line between ranges eight and nine west of the sixth principal meridian; on the north by the south shore or right bank of Platte River; and on the east by the Missouri River.

Bloomington.—The Republican Valley land district is bounded as follows: Commencing at a point on the southern boundary of Nebraska where the range line eight and nine west, sixth principal meridian, intersects said boundary; thence north with said range line to the south shore of Platte River; thence west with said south shore of Platte River to the line between ranges twenty and twenty-one west; thence south with said line to the line between townships six and seven north; thence west with said line to the line between ranges twenty-five and twenty-six west; thence south with said range line to the southern boundary of the State of Nebraska; thence east with said boundary to the place of beginning.

North Platte.—The western land district includes all that portion of the State of Nebraska situated within the following described boundaries: Commencing at a point on the southern boundary of the State of Nebraska where the range line twenty-five and twenty-six west, sixth principal meridian, intersects said boundary; thence north with said range line to the line between townships six and seven north; thence east with said line to the line between ranges twenty and twenty-one west; thence north with said range line to the northern boundary of the State of Nebraska; thence west with said northern boundary to the eastern boundary of Wyoming; thence south with said boundary to the southern boundary of Colorado; thence east with said boundary to the eastern boundary of Colorado; thence south with said boundary to the southern boundary of Nebraska; thence east with said boundary to the place of beginning.

Niobrara.—Dakota land district includes all that portion of the State of Nebraska situated within the following described boundaries: Commencing at a point on the Missouri River where the south line of the Omaha Indian reservation intersects said river; thence west with said south line to the western boundary of said Indian reservation; thence north along said western boundary to the south line of township twenty-six north; thence west along said line to the line between ranges eleven and twelve west of the sixth principal meridian; thence south with said line to the line between townships twenty-three and twenty-four north; thence west with said line to the line between ranges twenty and twenty-one west; thence north with said line to the northern boundary of the State of Nebraska; thence east and south along the northern and eastern boundary of the State to the place of beginning.

Norfolk.—The Omaha land district is bounded as follows: Commencing at the confluence of the Platte River with the Missouri; thence up the Missouri River to the intersection of the south line of the Omaha Indian reservation; thence along said south line to the western boundary of said Indian reservation; thence north along said western boundary to the south line of township twenty-six north; thence west along said line to the line between ranges eleven and twelve west of the sixth principal meridian; thence south with said line to the line between townships twenty and twenty-one north; thence east along said line to the line between ranges four and five east; thence south with said line to the south shore of Platte River; thence down said river to the place of beginning.

New Mexico.—*Santa Fe* land district includes all that portion of the Territory of New Mexico lying north of the base line.

Mesilla land district includes all that portion of the Territory of New Mexico lying south of the base line.

Idaho.—*Boise City* land district embraces all that portion of Idaho Territory lying west of range line twenty-three and twenty-four west, Boise meridian, extending from the southern boundary of Utah to the southern boundary of Lemhi County, west of the western boundary of Lemhi County, and south of the Salmon River range of mountains.

Lewiston land district consists of all that portion of the Territory of Idaho lying north of the Salmon River range of mountains.

Oxford.—The Oneida land district includes all that portion of Idaho Territory situated within the following described boundaries: Commencing at the southeast corner of said Territory; thence west on the line between said Territory and the Territory of Utah to the line between ranges numbered twenty-three and twenty-four east, Boise meridian; thence north to the southern boundary of Lemhi County; thence west to the western line of said Lemhi County; thence north on said western line of said county to the line between the Territories of Idaho and Montana; thence easterly on said Territorial line to the eastern boundary of the Territory of Idaho; thence south on the line of the eastern boundary of Idaho Territory to the place of beginning.

Montana.—*Miles City.*—Land district comprises all that portion of Montana Territory lying east of range line twenty-seven and twenty-eight east of the principal meridian.

Bozeman.—Land district comprises all that portion of Montana Territory lying south of the first standard parallel north, west of range line twenty-seven and twenty-eight east of the principal meridian, and east of range line two and three west of principal meridian.

Helena.—Land district comprises all that portion of the Territory of Montana lying west of range line two and three west, extending from the southern boundary of the Territory to the first standard parallel north; north of the first standard parallel north, extending from range two and three west to range twenty-seven and twenty-eight east of the principal meridian; and west of range line twenty-seven and twenty-eight east, extending from the first standard parallel north to the boundary line between Montana and British possessions.

Utah.—*Salt Lake City.*—Land district is co-extensive with the limits of the Territory of Utah.

Wyoming.—*Evanston.*—Land district includes all that portion of Wyoming Territory lying west of range line ninety-four and ninety-five west of the sixth principal meridian.

Cheyenne.—Land district includes all that portion of Wyoming Territory lying east of range line ninety-four and ninety-five west of the sixth principal meridian.

Arizona.—*Florence.*—Gila land district comprises all that portion of the Territory of Arizona lying south of the first standard parallel north.

Prescott.—Land district comprises all that portion of the Territory of Arizona lying north of the first standard parallel north.

Colorado.—*Denver.*—Land district includes all that portion of the State of Colorado situated within the following described limits: Commencing at a point on the eastern boundary of the State of Colorado where the second correction line south, sixth principal meridian, intersects said boundary; thence west with said correction line to the line between ranges seventy and seventy-one west; thence north with said line to the line between townships three and four north; thence west with said line to the summit of the continental divide; thence with said summit of the continental divide to the northern boundary of the State; thence east with said boundary line to the eastern boundary of the State; thence south with said boundary line to the place of beginning.

Central City.—Land district includes all that portion of the State of Colorado situated within the following described limits: Commencing at a point on the western boundary of the State of Colorado where the first correction line south intersects said boundary; thence east with said correction line to the line between ranges seventy-one and seventy-two west, sixth principal meridian; thence south on said line to the second correction line south; thence east on said correction line to the line between ranges seventy and seventy-one west; thence north on said line to the line between townships three and four north; thence west with said line to the summit of the continental divide; thence along said summit of the continental divide to the northern boundary of the State; thence west with said boundary line to the western boundary of the state, thence south with said boundary line to the place of beginning.

Del Norte.—Land district includes all that portion of the State of Colorado situated within the following described limits: Commencing at a point on the south boundary of the State of Colorado where range line sixty-nine and seventy west, sixth principal meridian, intersects the said boundary; thence north with said range line to the line between townships twenty-seven and twenty-eight south; thence west with said line to the west line of range seventy-three west; thence north on said line to the intersection of township line forty-five and forty-sixth north, New Mexico principal meridian; thence west with said line to the line between ranges eleven and twelve east, New Mexico principal meridian; thence north with said line to the line between townships forty-six and forty-seven north; thence west with said line to the line between ranges ten and eleven east; thence north with said line to the line between townships forty-seven and forty-eight north; thence west with said line to the first New Mexico guide meridian east; thence north with said guide meridian to the twelfth correction line north; thence west with said correction line to the New Mexico principal meridian; thence south with said principal meridian to the ninth correction line north; thence west with said correction line to the line between ranges four and five west; thence south on said range line to the south boundary of the State; thence east with said boundary to the place of beginning.

Leadville.—Land district includes all that portion of the State of Colorado situated within the following described limits: Commencing at a point on the western boundary of Colorado where the first correction line south intersects said boundary; thence east with said correction line to the line between ranges seventy-one and seventy-two west, sixth principal meridian; thence south with said line to the second correction line south; thence east with said correction line to the line between ranges seventy and seventy-one west; thence south with said line to the third correction line south; thence west with said correction line to the intersection of range line ten and eleven east, township fifty-one north, New Mexico principal meridian; thence south with said line to the line between townships forty-nine and fifty north; thence west with said line to the line between ranges nine and ten east; thence south with said line to the twelfth correction line north; thence west with said correction line to the line between ranges six and seven east; thence north with said line to the line between townships forty-nine and fifty north; thence west with said line to the line between ranges five and six east; thence north with said line to the line between townships fifty and fifty-one north; thence west with said line to the line between ranges four and five east; thence north with said line to the intersection of the third correction line south, sixth principal meridian; thence west with said correction line to the west boundary of the State; thence north with said boundary to the place of beginning.

Lake City.—Land district includes all that portion of the State of Colorado situated within the following described limits: Commencing at a point on the western boundary of Colorado where the third correction line south, sixth principal meridian intersects said boundary, thence east with said correction line to the intersection of range line 4 and 5 east, township 51 N. New Mexico principal meridian; thence south with said range to the line between townships fifty and fifty-one north; thence east with said line to the line between ranges five and six east; thence south with said line to the line between townships forty-nine and fifty north; thence east with said line to the line between ranges six and seven east; thence south with said line to the twelfth correction line north; thence west with said correction line to the New Mexico principal meridian; thence south with said principal meridian to the ninth correction line north; thence west with said correction line to the line between ranges four and five west; thence south with said range line to the south boundary of the State; thence west with said boundary to the western boundary of the State; thence north with said boundary to the place of beginning.

Pueblo.—Land district includes all that portion of the State of Colorado situated within the following described limits: Commencing at a point on the eastern boundary of Colorado where the second correction line south intersects said boundary; thence west with said correction line to the line between ranges seventy and seventy-one west, sixth principal meridian; thence south with said range line to the third correction line south; thence west with said correction line to the intersection of range line ten and eleven east, township fifty-one north, New Mexico principal meridian, thence south with said line to the line between townships forty-nine and fifty north; thence west with said line to the line between ranges nine and ten east; thence south with said line to the twelfth correction line north; thence west with said correction line to the first New Mexico guide meridian east; thence south with said guide meridian to the line between townships forty-seven and forty-eight north; thence east with said line to the line between ranges ten and eleven east; thence south with said line to the line between townships forty-six and forty-seven north; thence east with said line to the line between ranges eleven and twelve east; thence south with said line to the line between townships forty-five and forty-six north; thence east with said line to the intersection of the west line of range seventy-three feet west, sixth principal meridian; thence south with said line to the line between townships twenty-seven and twenty-eight south; thence east with said line to the line between ranges sixty-nine and seventy west; thence south with said range line to the southern boundary of the State; thence east on said boundary to the eastern boundary of the State; thence north on said boundary to the place of beginning.

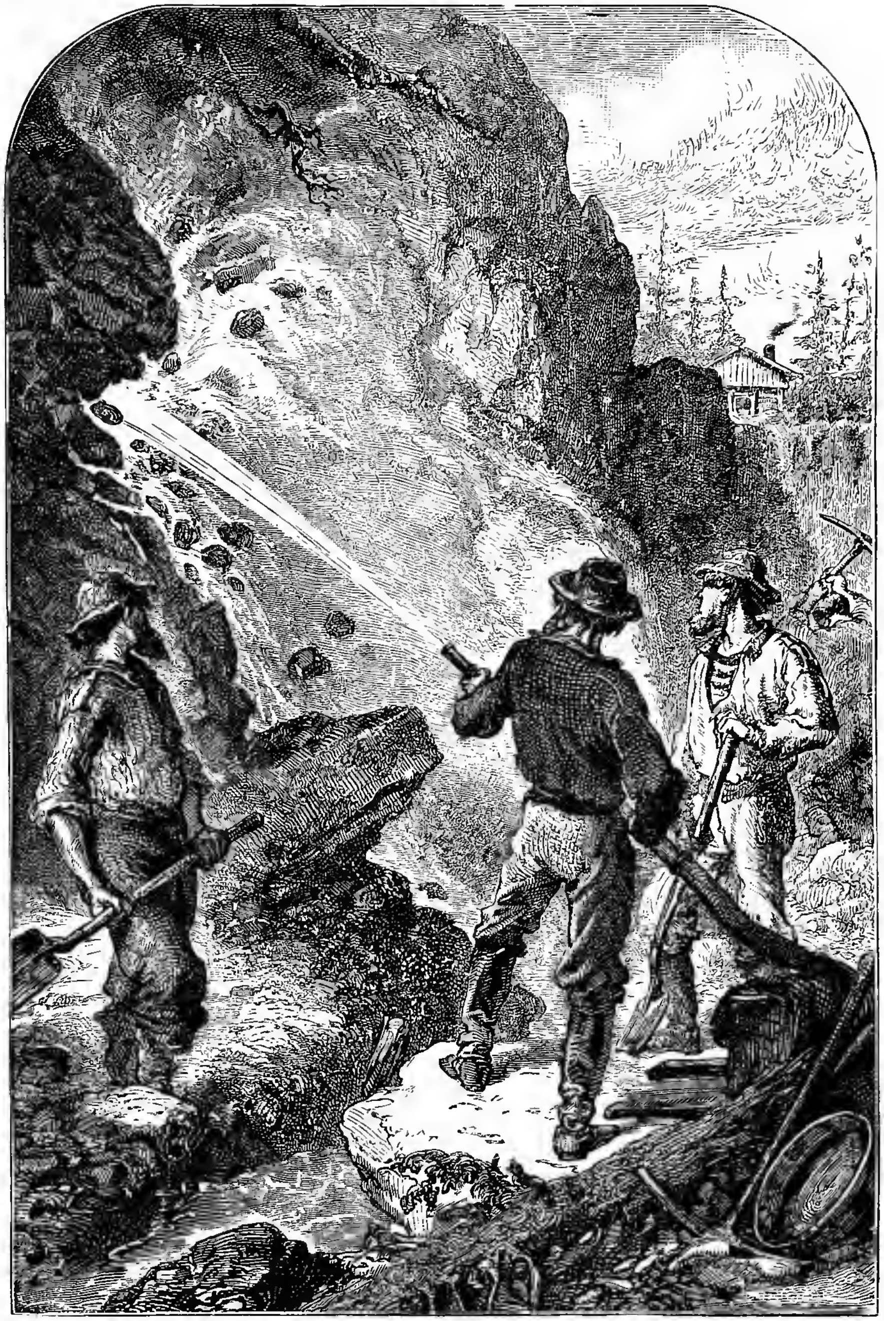
Dakota—*Bismarck.*—Land districts include all that portion of the Territory of Dakota situated within the following described boundaries: Commencing at a point on the western boundary of Dakota where the seventh standard parallel north, fifth principal meridian, intersects said boundary; thence east on said standard parallel to the line between ranges seventy-eight and seventy-nine west; thence north on said line to the line between townships one hundred and twenty-nine and one hundred and thirty north; thence east on said line to the ninth guide meridian; thence north on said guide meridian to the twelfth standard parallel north; thence west with said standard to the tenth guide meridian; thence north on said guide meridian to the boundary line between Dakota and the British possessions; thence west with said line to the western boundary of Dakota; thence south with said western boundary to the place of beginning.

Fargo.—Land district includes all that portion of the Territory of Dakota lying north of township line between townships one hundred and twenty-nine and one hundred and thirty of the fifth principal meridian, south of the twelfth standard parallel, and east of the ninth guide meridian.

Springfield.—The Springfield land district includes all that portion of the Territory of Dakota lying between the third standard parallel north and the township line between townships one hundred and twenty-nine and one hundred and thirty north of the fifth principal meridian and east of the eastern boundary of the Great Sioux Indian Reservation.

Mitchell.—Sioux Falls land district includes all that portion of the Territory of Dakota lying between the third standard parallel north and the base line, and east of the eastern boundary of the Great Sioux Indian Reservation.

Yankton.—The Yankton land district includes all that



MINING LIFE—A FIRST ATTEMPT AT HYDRAULICKING.

—FROM "LA VIE SOUTERRAINE" BY L. SIMONIN

portion of the Territory of Dakota lying south of the base line of the fifth principal meridian.

Grand Forks.—Land district includes all that portion of the Territory of Dakota lying north of the twelfth standard parallel and east of the tenth guide meridian, fifth principal meridian.

Deadwood.—Land district includes all that portion of the Territory of Dakota lying west of the one hundred and second meridian of longitude and south of the forty-fifth parallel of north latitude.

Sec. 125. Whenever the quantity of public land remaining unsold in any land district is reduced to a number of acres less than one hundred thousand, it shall be the duty of the Secretary of the Interior to discontinue the land office of such district; and if any land in any such district remains unsold at the time of the discontinuance of a land office, the same shall be subject to sale at some one of the existing land offices most convenient to the district in which the land office has been discontinued, of which the Secretary of the Interior shall give notice.

5 Stat. 385; R. S. 2248.

Sec. 126. The Secretary of the Interior may continue any land district in which is situated the seat of government of any one of the States, and may continue the land office in such district, notwithstanding the quantity of land unsold in such district may not amount to one hundred thousand acres, when, in his opinion, such continuance is required by public convenience, or in order to close the land system in such State.

5 Stat. 455; R. S. 2249.

Sec. 127. Whenever the cost of collecting the revenue from the sales of the public lands in any district is as much as one-third of the whole amount of revenue collected in such district, it may be lawful for the President, if, in his opinion, not incompatible with the public interest, to discontinue the land office in such district, and to annex the same to some other adjoining land district.

10 Stat. 189, 194; 2250.

Sec. 128. The President is authorized to change the location of the land offices of the several land districts established by law, and to relocate the same from time to time at such point in the district as he deems expedient.

10 Stat. 204, 244; R. S. 2251.

Sec. 129. Upon the recommendation of the Commissioner of the General Land Office, approved by the Secretary of the Interior, the President may order the discontinuance of any land office and the transfer of any of its business and archives to any other land office within the same State or Territory.

12 Stat. 409; R. S. 2252.

Sec. 130. The President is authorized to change and re-establish the boundaries of land districts, whenever, in his opinion, the public interests will be subserved thereby, without authority to increase the number of land offices or land districts, except that he is authorized to establish additional land districts, and to appoint the necessary officers under existing laws, whenever he may deem the same necessary for the public convenience in executing the provisions of the mineral laws.

14 Stat. 252; 16 *id.* 171; R. S. 2253, 2343.

Sec. 131. In case of the division of existing land districts by the erection of new ones, or by a change of boundaries by the President, all business in such original districts shall be entertained and transacted without prejudice or change, until the offices in the new districts are duly opened by public announcement under the direction of the Secretary of the Interior. All sales or disposals of the public lands heretofore regularly made at any land office, after such lands have been made part of another district by any act of Congress, or by any act of the President, are confirmed, provided the same are free from conflict with prior valid rights.

17 Stat. 192; R. S. 2254.

Sec. 1323. The Secretary of the Interior is authorized to make a reasonable allowance for office rent for each consolidated land office; and when satisfied of the necessity therefor, to approve the employment by the register of one or more clerks, at a reasonable per diem compensation, for such time as such clerical force is absolutely required to keep up the current public business, which clerical force shall be paid out of the surplus fees authorized to be charged by section one hundred and thirty-eight, if any; and if no surplus exists, then out of the appropriation for incidental expenses of district land offices; but no clerk shall be so paid unless his employment has been first sanctioned by the Secretary of the Interior.

12 Stat. 131; R. S. 2255. U. S. *v.* Jarvis, 1 Davies, C. C. 274; U. S. *v.* Lowe, 1 Dillon, C. C. 585. 1 Lester's L. L. 314.

Sec. 133. There shall be appointed by the President, by and with the advice and consent of the Senate, a register of the land office and a receiver of public moneys, for each land district established by law.

18 Stat. 34, 122, 295; R. S. 2234. Litchfield *v.* Railway Co., 1 Woolw. C. C. 299. Bullock *v.* Wilson, 5 Port. (Ala.) 338; Hellan *v.* Ripley, 3 Rob. (La.) 138.

Sec. 134. All registers and receivers shall be appointed for the term of four years, but shall be removable at pleasure.

3 Stat. 582; R. S. 2244. Best *v.* Polk, 18 Wall. 112.

Sec. 135. Every register and receiver shall reside at the place where the land office for which he is appointed is directed by law to be kept.

R. S. 2235. [See all acts establishing land districts.]

Sec. 136. Every register and receiver shall, before entering on the duties of his office, give bond in the penal sum of ten thousand dollars, with approved security, for the faithful discharge of his trust.

2 Stat. 73, 75; 10 *id.* 245; R. S. 2236. U. S. *v.* Vanzandt, 11 Wheat. 184; Walton *v.* U. S. 9 *id.* 651; Minor *v.* Mechanics' Bank, 1 Pet. 46; U. S. *v.* Tingey, 5 *id.* 115; Farrar *et al.* *v.* U. S. 5 *id.* 373; U. S. *v.* Boyd, 15 *id.* 187; U. S. *v.* Linn, 15 *id.* 290; U. S. *v.* Irving, 1 How., 250; U. S. *v.* Girault, 11 *id.* 22; U. S. *v.* Prescott, 3 *id.* 578; U. S. *v.* Boyd, 5 *id.* 29; Bryan *v.* U. S., 1 Black, 140; Boyden *v.* U. S., 13 Wall. 17; Bevans *v.* U. S., 13 *id.* 56; U. S. *v.* Thomas, 15 *id.* 337. Alexandria *v.* Corse, 2 Cranch, C. C. 363; U. S. *v.* Stephenson, 1 McLean, C. C. 462; U. S. *v.* Spencer, 2 *id.* 265; U. S. *v.* Ward, 3 *id.* 179. 8 Op. Att. Gen. 7. 1 Lester's L. L. 312, 314.

Sec. 137. Every register and receiver shall be allowed an annual salary of five hundred dollars; and, in addition thereto, each shall be allowed the following fees and commissions, namely:

3 Stat. 466; 12 *id.* 409; R. S. 2237. Dobbins *v.* Commissioners, &c., 16 Pet. 435. Decisions Com. G. L. O., Feb. 20, 1858; May 1, 1871.

First. A fee of one dollar for each declaratory statement filed and for services in acting on pre-emption claims.

5 Stat. 456; 13 *id.* 35; R. S. 2238. Decisions Com. G. L. O., June 17, 1875; Sept. 9, 1879. Cir. G. L. O., Aug. 7, 1872; March 10, 1880.

Second. A commission of one per centum on all moneys received at each receiver's office.

3 Stat. 466; R. S. 2238. U. S. *v.* Dickson, 15 Pet. 141. U. S. *v.* McCarty, 1 McLean, C. C. 306; U. S. *v.* Edwards, 1 *id.* 467. Decision Sec. Int., May 30, 1859. Decision Com. G. L. O., March 6, 1878.

Third. A commission to be paid by the homestead applicant, at the time of entry, of one per centum on the cash price, as fixed by law, of the land applied for; and a like commission when the claim is finally established, and the certificate therefor issued as the basis of a patent.

12 Stat. 393; 16 *id.* 320; R. S. 2238. Decision Sec. Int., March 3, 1874. Decisions Com. G. L. O., May 7, 1877; Sept. 12, 1879. Cir. G. L. O., June 13, 1872; June 17, 1875; March 10, 1880.

Fourth. The same commission on lands entered under any law to encourage the growth of timber on western prairies, as allowed when the like quantity of land is entered with money.

17 Stat. 606; R. S. 2238. Decision Sec. Int., March 3, 1874. Decision Com. G. L. O., Sept. 12, 1879. Cir. G. L. O., Oct. 30, 1873; March 13, 1874; June 17, 1875; March 10, 1880.

Fifth. For locating military bounty-land warrants, issued since the eleventh day of February, eighteen hundred and forty-seven, and for locating agricultural college land scrip, the same commission, to be paid by the holder or assignee of each warrant or scrip, as is allowed for sales of the public lands for cash, at the rate of one dollar and twenty-five cents per acre; but they shall not be entitled to any fees for locating warrants which are authorized by law to be located free of expense by the Commissioner of the General Land Office, nor upon the location of warrants issued prior to the eleventh day of February, eighteen hundred and forty-seven.

9 Stat. 231; 10 *id.* 4; 12 *id.* 505; R. S. 2238, 2437. U. S. *v.* Babbit, 1 Black, 55; same case, 5 Otto, 334. Decision Sec. Int., March 1, 1876. Cir. G. L. O., Feb. 24, 1864; March 15, 1873; June 17, 1875; July 20, 1875; Feb. 13, 1879.

Sixth. A fee, in donation cases, of five dollars for each final certificate for one hundred and sixty acres of land, ten dollars for three hundred and twenty acres, and fifteen dollars for six hundred and forty acres.

12 Stat. 409; R. S. 2238.

Seventh. In the location of lands by States and corporations under grants from Congress for railroads and other purposes (except for agricultural colleges), a fee of one dollar for each final location of one hundred and sixty acres; to be paid by the State or corporation making such location.

13 Stat. 335; 18 *id.* 21; 19 *id.* 52; R. S. 2238. Railway Co. *v.* Prescott, 16 Wall. 603; Railway Co. *v.* McShane, 22 *id.* 444; Hunnewell *v.* Cass Co., 22 *id.* 464. Decisions Com. G. L. O., April 18, 1867; Aug. 8, 1867; Feb. 17, 1869; March 26, 1870.

Eighth. A fee of five dollars per diem for superintending public land sales at their respective offices; and, to each receiver, mileage in going to and returning from depositing the public moneys received by him.

3 Stat. 567; R. S. 2238.

Ninth. A fee of five dollars for filing and acting upon each application for patent or adverse claim filed for mineral lands, to be paid by the respective parties.

17 Stat. 95; R. S. 2238.

Tenth. Registers and receivers are allowed, jointly, at the rate of fifteen cents per hundred words for testimony reduced by them to writing for claimants, in establishing pre-emption and homestead rights.

13 Stat. 35; R. S. 2238. Decision Com. G. L. O., Sept. 1, 1879. Cir. G. L. O., May 24, 1879.

Eleventh. A like fee as provided in the preceding subdivision when such writing is done in the land office, in establishing claims for mineral lands.

17 Stat. 95; R. S. 2238. Decision Com. G. L. O., Sept. 1, 1879. Cir. G. L. O., May 24, 1879.

Twelfth. Registers and receivers in California, Oregon, Washington, Nevada, Colorado, Idaho, New Mexico, Arizona, Utah, Wyoming, and Montana, are each entitled to collect and receive fifty per centum on the fees and commissions provided for in the first, third, and tenth sub-divisions of this section.

13 Stat. 36; R. S. 2238. [See also the several acts establishing land offices for Utah, Wyoming and Montana.]

Thirteenth. A fee of one dollar shall be paid to registers for giving notice of cancellation to any person who has contested, paid the land-office fees, and procured the cancellation of any pre-emption, homestead, or timber-culture entry; the said fee to be paid by the contestant, and not to be reported.

Act of May 14, 1880.

Sec. 138. The register for any consolidated land district, in addition to the fees now allowed by law, shall be entitled to charge and receive for making transcripts for individuals, or furnishing any other record information respecting public lands or land titles in his consolidated land district, such fees as are properly authorized by the tariff existing in the local courts of his district; and the receiver shall receive his equal share of such fees, and it shall be his duty to aid the register in the preparation of the transcripts, or giving the desired record information.

12 Stat. 131; R. S. 2239. Cir. G. L. O., July 19, 1878.

Sec. 139. The compensation of registers and receivers, including salary, fees, and commissions, shall in no case exceed in the aggregate three thousand dollars a year, each; and no register or receiver shall receive for any one quarter or fractional quarter more than a pro-rata allowance of such maximum.

3 Stat. 466; 10 *id.* 4; 11 *id.* 378; 12 *id.* 131, 393, 409, 505; 13 *id.* 36, 335; R. S. 2240. U. S. *v.* Babbit, 1 Black, 55; same case, 5 Otto, 334. Cir. G. L. O., Feb. 20, 1858; May 1, 1871; June 24, 1875; July 19, 1878; May 24, 1879.

Sec. 140. Whenever the amount of compensation received at any land office exceeds the maximum, allowed by law to any register or receiver, the excess shall be paid into the Treasury, as other public moneys.

10 Stat. 204; 12 *id.* 131; R. S. 2241.

Sec. 141. No register or receiver shall receive any compensation out of the Treasury for past services who has charged or received illegal fees; and, on satisfactory proof that either or such officers has charged or received fees or other rewards not authorized by law, he shall be forthwith removed from office.

10 Stat. 4, 306; R. S. 2242.

Sec. 142. The compensation of registers and receivers, both for salary and commissions, shall commence and be calculated from the time they respectively, enter on the discharge of their duties.

10 Stat. 615; R. S. 2243. U. S. *v.* Edwards, 1 McLean, C. C. 467. Cir. G. L. O., Feb 20, 1858; May 1, 1871.

Sec. 143. The receivers shall make to the Secretary of the Treasury monthly returns of the moneys received in their several offices, and pay over such money pursuant to his instructions. And they shall also make to the Commissioner of the General Land Office like monthly returns, and transmit to him quarterly accounts-current of the debits and credits of their several offices with the United States.

5 Stat. 111; R. S. 2245. Cir. G. L. O., July 1, 1871; June 24, 1875; July 19, 1878; May 24, 1879. Treasury Cir., July 13, 1871. 1 Lester's L. L. 312, 314.

Sec. 144. The register or receiver is authorized, and it shall be their duty, to administer any oath required by law or the instructions of the General Land Office, in connection with the entry or purchase of any tract of the public lands; but he shall not charge or receive, directly or indirectly, any compensation for administering such oath.

5 Stat. 384; R. S. 2246.

Sec. 145. If any person applies to any register to enter any land whatever, and the register knowingly and falsely informs the person so applying that the same has already been entered, and refuses to permit the person so applying to enter the same, such register shall be liable therefor to the person so applying, for five dollars for each acre of land which the person so applying, offered to enter, to be recovered by action of debt in any court of record having jurisdiction of the amount.

5 Stat. 112; R. S. 2247.

Sec. 146. All receivers having public money to pay to the United States may pay the same to any depositary constituted by or in pursuance of law, which may be designated by the Secretary of the Treasury, except that the receiver at San Francisco shall pay over such money to the United States assistant treasurer in that city at the office of said assistant treasurer.

9 Stat. 62; 16 *id.* 216, 17 *id.* 435; R. S. 3615, 3616.

Sec. 147. Where bona-fide settlers under the homestead or pre-emption laws have, subsequent to the date of filing their applications to enter not exceeding one quarter-section of public lands, been appointed a register or receiver of the land office of the district in which the lands are located, proof and payment must be made to the satisfaction of the Commissioner of the General Land Office.

17 Stat. 10; R. S. 2287. 4 Op. Att. Gen. 223; 7 *id.* 647.

Special Agent.—Sec. 148. When it is incompatible with his other duties for a surveyor-general of the United States to personally inspect the surveying operations of his district while in progress in the field, he is authorized to depute a confidential agent to make such examination; and the actual and necessary expenses of such person shall be allowed and paid for that service, and five dollars per day during the examination in the field: *Provided,* That such examination shall not be protracted beyond thirty days, and in no case longer than is actually necessary; and when a surveyor-general, or any person employed in his office at a regular salary, shall be engaged in such special service, he or they shall only receive his necessary expenses in addition to his regular salary.

10 Stat. 248; R. S. 2223.

Sec. 149. Any officer or clerk of any of the executive departments of the government who shall be lawfully detailed to investigate frauds, or attempts to defraud, on the Government, or any irregularity or misconduct of any officer or agent of the United States, shall have power to administer oaths to affidavits taken in the course of any such investigation.

16 Stat. 55, 75; U. S. *v.* Bailey, 9 Pet. 238.

Right of officers detailed on special duty to extra compensation: 1 Cranch, 137; U. S. *v.* Ripley, 7 Pet. 18; U. S. *v.* Fillebrown, 7 *id.* 28; Gratiot *v.* U. S., 15 *id.* 336; U. S. *v.* Brown, 9 How. 487; Converse *v.* U. S., 21 *id.* 463; Stanbury *v.* U. S., 8 Wall. 33. U. S. *v.* Jarvis, 1 Davies, C. C. 274. *Definition of office, and power to bind Government;* U. S. *v.* Hartwell, 6 Wall. 385; Whiteside *et al. v.* U. S., 3 Otto, 247. *Reimbursement of expenditures:* U. S. *v.* Jarvis, 2 Ware, C. C. 274, Decisions Sec. Int., July 1, 1874; Sept. 21, 1874. Cir. G. L. O., July 1, 1871.

[The authority to appoint special agents in the administration of the land laws seems to be derived from the annual appropriation bills, and from the general authority incident to the duty of executing the laws.]

SALE AND DISPOSITION OF PUBLIC LANDS.

IN 1806, April 18, Congress, by law, refused to receive in payment for purchases of public lands any more certificate, or receipts of evidence of public debt after April 30, 1806, saving all rights under the old act. This required all payments to be made in cash. Petitions, resolutions, legislative enactments, and personal applications for relief from the pressure of land purchases from the government under the credit system resulted in various acts of relief. March 2, 1809, Congress passed an act to extend time of payment two years for residue of purchase money due. April 30, 1810, and December 12, 1811, Congress further extended the time for purchases made prior to January 1, 1806, and enacted conditions for re-entry of lands by applicants where time of payment had expired and the lands had reverted to the United States. June 30, 1812, Congress ordered that Treasury notes be taken at all land offices for public lands and payments thereon, and that credit should be given for principal and interest thereof. Acts for relief were further passed on April 23, 1812; July 6, 1812; March 3, 1813; February 9, 1814; February 4, 1815; April 24, 1816; April 18, 1818; March 3, 1819; March 30, 1820; March 2, 1821; April 20, 1822; March 3, 1823; May 18, 1824; May 26, 1824. These acts were all operative for the benefit of persons holding not over 640 acres. The Congress of the United States, April 24, 1820, provided for the sale of half quarter-sections, or 80-acre lots of land, and that credit should not be allowed for the purchase-money of any lands after July 1, 1820, but that complete payment must be made by the purchaser or applicant at the time of purchase; and by section 3 of this act, it was provided that the public lands offered should be sold at the "minimum" price of $1.25 per acre at either public or private sale, and provided for the entry or purchase by persons at the several district land offices of all lands which, prior to July 1, had been offered at public sale and remained unsold. It further provided for the sale of reverted lands, which were forfeited for non-fulfilment of purchase terms under the credit system. Previous to this time Congress had, by special acts directed land sales to be made, but by this act it became the duty of the President, and has so continued to this day, to issue proclamations of sale of public lands through the Commissioner of the General Land Office. This act was a great innovation. It reduced the price of all public lands which should be offered to the minimum of $1.25 per acre, and after they were offered (i. e., offered at public sale after due advertising and notice) such as remained unsold were to be held for sale at the district land office at $1.25 per acre, in unlimited quantities of not less than 80 acres (half quarter sections) at private sale. Thus, in the period from 1786 to 1820, the price had fallen from $2 to $1.25 per acre cash, and the quantity which might be sold was reduced from whole townships and eight sections to sections (640 acres), half-sections (320 acres) quarter-sections (160 acres), and half-quarter-sections (80 acres), thus fostering small holdings at a low price, with deed in fee from the Government. The disastrous credit system spread over Ohio, Indiana, Illinois, Missouri, Alabama, Mississippi, Louisiana, Michigan. The general policy of land legislation by Congress was, for the first thirty years, to meet exigencies by temporary enactments from time to time. This policy was continued down to the period of the passage of the pre-emption act of 1841. The stages developed to that period were: the sale by the Board of Treasury prior to May, 1800, under and by order of Congress direct, purchasers of tracts going to Congress by petitions, which were acted on and referred to the Board of Treasury; public sale at $2 per acre in tracts from townships, sections, and quarter sections, until after 1805, when half quarter sections were sold; all lands to be offered; then if not sold at public vendue, to be open to purchase at $2 per acre at private sale.

The act of 1800, May 18, instituted the offices of registers and receivers, who sold land at definite points under orders of the Secretary of the Treasury; afterward, April 25, 1812, under orders of the Commissioner of the General Land Office, then a bureau in the Treasury Department, to whom they were and are now subordinate. The act of April 24, 1820, the general provisions of which have been carried into the Revised Statutes, fixed the minimum price of the public lands at $1.25 per acre. Thereunder the lands were sold to the highest bidder at public sales for not less than the minimum rate per acre, and at private sale, after the offering, at the minimum rate. The general pre-emption law of September 4, 1841, required payment at the minimum rate for lands entered thereunder; that is, the minimum rate fixed by the act of 1820. This is the price required of pre-emptors and parties who commute their homestead entries under section 2301 of the revised Statutes, except where the lands have been enhanced to the double minimum price of $2.50 per acre, in which case the pre-emptor or homesteader is required by law to pay for the same at the increased rate. Congress, upon making grants of alternate sections of land for railroad purposes within certain limits, provided that the sections within such limits reserved to the government should be enhanced to the price of $2.50 per acre. This rate is double that of the minimum rate established by the act of 1820, and is, therefore, termed the "double-minimum rate. These are the existing rates of disposal under the general provisions of law for the sale of the public lands upon bringing them into market, or under the pre-emption statutes and section 2301, Revised Statutes, above mentioned. Lands subject to entry, which had been enhanced to the double minimum price and put in market prior to January, 1860, by reason of railroad grants, were reduced to the minimum price by the act of June 15, 1880.

Disposal of Public Lands by Public Offering and Sale.—In some of the early acts of Congress providing for bringing lands into market dates were fixed for the sales, and the superintendence of the sales was placed under the register of the land office, or the governor or secretary of the Territory. In the act of March 3, 1803, which, among other things, provided for the disposition of lands belonging to the United States south of the State of Tennessee, it was provided that the President of the United States should make public proclamation of the sales, fixing therein a day or days for the same to take place. By this act it was provided that the sales should be made under the direction of the governor of the Mississippi Territory, the surveyor of the lands, and the register of the land office, the sales to take place where the land offices were "kept." The act directing the survey and sale of the public lands in the Territories of Orleans and Louisiana, approved March 3, 1811, provided for proclamation of the sales of lands in the Territory of Louisiana by the President, and that the same should be under the direction of the register and receiver of the land office and the principal deputy surveyor. In the acts of 1803 and 1811 it was directed that the sales remain open for three weeks, and no longer. The statutes and rules at present in force in respect to offerings are briefly stated below. The act of April 24, 1820 (see sections 2360, 2353, eighth subdivision, and 2238, R. S.), provided that the public sales authorized thereby should be kept open two weeks, and no longer; it also provided that the tracts to be sold be offered for sale in half quarter-sections; and thereby registers and receivers were allowed a fee of $5 each per diem for superintending the sales. The act of June 28, 1834 (section 2359, R. S.), provided that lands exposed to public sale by order of the President shall be advertised for a period of not less than three nor more than six months prior to the day of sale, unless otherwise specially provided. The act of August 3, 1846 (section 2455, R. S.), authorized the Commissioner of the General Land Office to order into market after due notice, without the formality and expense of a proclamation of the President, such isolated or disconnected tracts or parcels of unoffered lands which, in his judgment, it would be proper to expose to sale, and required that public notice of the offering for a period of at least thirty days should be given by the district officers pursuant to directions of the Commissioner. It is the rule to resort to published notice in such cases.

By a regulation of the General Land Office, district officers are allowed a crier and a clerk during the progress of the sales, at a stated per diem compensation. Lands are offered for sale by public outcry, at not less than the minimum or double minimum price per acre, as the case may be, and are sold to the highest bidder in case bids are received. Technical quarter-sections are sold in half-quarter-sections. Where practicable the north half of the section should be sold first, the order of offering being as follows: East half of northeast quarter; west half of northeast quarter; east half of northwest quarter; west half of northwest quarter; east half of southeast quarter; west half of southeast quarter; east half of southwest quarter; west half of southwest quarter. Such portions of sections as are designated by numbers on the plats are sold in the order of the numbers, as follows: Lot 1, lot 2, lot 3, lot 4. The regulations require the district officers to keep a complete record in abstract form, day by day, as the sales progress, of each subdivision offered, and to note the sales made in margin thereof, such notings as the following being desirable: Name of purchaser, date of sale, and the number of the certificate of purchase issued as the basis of a patent (which is also the number of the receipt for the purchase-money accompanying the certificate, a duplicate of which is given to the purchaser); and opposite the description of tracts offered, but not sold, the facts are required to be noted as follows: "Offered; no bids." When the sale is closed, it is required that the abstracts of offerings be sent as a part of the official report of the district officers to the General Land Office, after making a copy of the same to be retained as a record in the district office. The practice in regard to making up the official reports of offerings has varied to some extent, but the above is substantially the present method. The authority to proclaim lands for sale is not limited by law to a stated period of time after survey thereof. Of course it is not deemed safe or advisable to proclaim lands for sale prior to survey, even if contracts for survey thereof have been entered into. The President is not empowered to proclaim lands for sale not authorized to be exposed to public sale by law of Congress; the laws authorizing such sales have reference to particular localities therein mentioned. There is no general provision of law authorizing public sales of all the vacant lands of the government, and a portion of the lands in the far west, the Territory of Utah, for instance, is not subject to be proclaimed for sale. The vacant lands generally in the Louisiana purchase are subject to be proclaimed for sale under the act of 1811, referred to above. The lands in Arkansas, Louisiana, Mississippi, Alabama, and Florida, which were restricted to homestead entry by the act of June 21, 1866, were authorized to be brought into market by proclamation for sale at public offerings by the act of June 22, 1876. Lands within the limits of the Pacific Railroad and branches, belonging to the government, in the even-numbered sections, were restricted to homestead and pre-emption entry by the act of March 6, 1868. In view of a resolution of the House of Representatives, which passed some time after the recent war of the rebellion, and the general drift of public sentiment expressed in various ways, it is the present policy to hold lands outside of the Southern States above mentioned, not yet proclaimed for sale, for actual settlers. The following is a printed form for proclamation of sales by the President:

Proclamation by the President of the United States.

In pursuance of an Act of Congress of June 22, 1876, I, Chester A. Arthur, President of the United States of America, do hereby declare and make known that a public sale of valuable Government land will be held at the land office at ————, in the State of ————, on ————, ———— —, ——, at which time will be offered all lands not previously disposed of in the undermentioned townships and parts of townships, viz.:

North of base-line and west of the ——— meridian:

[Here is given lists of townships to be sold.]

Lands appropriated by law for the use of schools, military or other purposes, or reserved for railroad purposes, will be excluded from the sale. The offering of the above lands will be commenced on the day appointed, and will proceed in the order in which they are tabulated in the lists of sectional subdivisions until the whole have been offered and the sales thus closed; but the sale shall not be kept open longer than two weeks, and no private entry of any of the lands will be admitted until the day after the close of the public offering. All lands held at double minimum price will be disposed of at not less than two dollars and fifty cents ($2.50) per acre, and all the lands held at minimum price will be disposed of at not less than one dollar and twenty-five cents ($1.25) per acre. Lists of sectional subdivisions are in the hands of the district officers, and will be open for the examination of those desiring to purchase.

Given under my hand, at the City of Washington, this —— day of ———, A. D. 18—.

CHESTER A. ARTHUR,
President of the United States.

By the President:
N. C. McFarland,
Commissioner of the General Land Office.

Notice to Pre-emption Claimants.

Every person entitled to the right of pre-emption to any of the lands within the townships and parts of townships above enumerated is required to establish the same to the satisfaction of the register and receiver of the ———— land office, and make payment therefor as soon as practicable after seeing this notice, and before the day appointed for the commencement of the public sale of the lands embracing the tract claimed; otherwise such claim will be forfeited.

No pre-emption claim based on a settlement subsequent to the date of this proclamation, and prior to the offering, will be recognized by the Government.

N. C. McFarland,
Commissioner of the General Land Office.

Prices of the Public Lands at Various Periods.—The United States from 1758 to 1880 has sold land at various prices, as follows: *Agricultural lands* at the rates of 12½, 25, 50, 66⅔, and 75 cents, and $1.00, $1.25, and $2.50 per acre. Under the cash sales and pre-emption acts a vast area containing coal, and millions of acres of timber land, have been sold at the foregoing rates. *Mineral lands.*—In Michigan, Wisconsin, and other States lands containing copper and lead were formerly offered at public sale at not less than $5 per acre, and if not then disposed of they were to be held for private sale at that rate. Persons in possession under leases from the War Department, however, were to have preference right of purchase, at the rate of $2.50 per acre. Under present laws, except in the States of Michigan, Wisconsin, Minnesota, Missouri, and Kansas, lands valuable for minerals contained in veins or lodes, or "rock in place," including lead, copper, gold, silver, cinnabar, iron, &c., are sold at the rate of $5 per acre. Lands containing "placer" deposits of minerals are sold at the rate of $2.50 per acre. In the States above excepted all lands are sold as agricultural.

Coal lands are sold at $20 per acre where situated within fifteen miles of a completed railroad; otherwise at $10 per acre. *Desert lands* are sold at $1.25 per acre; *Saline lands* at $1.25 per acre; and *Timber and stone lands* at $2.50 per acre.

Saline Lands.—In the act of Congress of May 18, 1796, which provided for the sale of the public lands in a portion of the territory northwest of the river Ohio, was a proviso that salt springs were to be reserved for the use of the United States, together with a section of one mile square, which should include the spring. A whole township of land was to be reserved with one particular spring named in the act, situated on a creek emptying into the Scioto River. By the act of 1800 the surveyor-general had authority to lease these reserved lands. The acts for the admission of all the public-land States up to Nevada, gave to them all the salines not exceeding twelve in number in the respective States, together with six sections of land with each spring for school purposes and public improvements.

Not subject to entry under pre-emption or homestead law.—In the pre-emption act of September 4, 1841, sec. 10, it was ordered that "no lands on which are situated any known salines, or mines, shall be liable to entry under and by virtue of the provisions of this act." The homestead act of May 20, 1862, reaffirmed the exceptions in the pre-emption act of 1841, and its amendments. Salines were disposed of by special acts of Congress—until after the admission of the State of Nebraska into the Union, March 1, 1867.

Change in Saline Laws.—The act of January 12, 1877 (see circular General Land Office April 10, 1877), provided a new mode of proceeding by which such lands are rendered subject to disposal as other public lands. Under its provisions a hearing is ordered and witnesses are examined as to the character of the land in question, and the testimony taken at the hearing is transmitted to the General Land Office for its decision. Should the tracts be adjudged agricultural, they will be subject to disposal as such. Should the tracts be adjudged saline in character, they would be offered at public sale to the highest bidder for cash, at a price of not less than $1.25 per acre. In case they are not sold, the same will be subject to private sale at a price of not less than $1.25 per acre, in the same manner as other public lands are sold. This law is not operative in the Territories nor in the States of Mississippi, Florida, Louisiana, California, and Nevada, because their former saline grants have not as yet been filled.

Area of Grants to the several States.—The following table shows the area and dates of grants by Congress, of salines to the several States:

States.	*Area.*	*Under what acts of Congress.*
Ohio	24,216	May 18, 1706; April, 30, 1802; March 26, 1804.
Indiana	23,040	April 19, 1816.
Illinois	121,029	April 18, 1818.
Missouri	46,080	March 6, 1820.
Alabama	23,040	December 14, 1819.
Michigan	46,080	June 23, 1836.
Arkansas	46,080	June 23, 1836.
Iowa	46,080	March 3, 1845.
Minnesota	46,080	February 26, 1857.
Oregon	46,080	February 14, 1859.
Kansas	46,080	January 29, 1861.
Nebraska	46,080	April 19, 1864.
Total	559,965	

Note.—With the exception of the States of Ohio, Indiana, and Alabama, each of which were granted thirty-six sections of land lying contiguous to the salt springs, six sections for each, for the use thereof; and of the State of Illinois which was granted all the Springs in the State, and the same quantity of land for each, the remaining States in the above list were each granted twelve springs together with six sections of land for the use of each spring lying contiguous thereto. They were patented by the United States to the several States, which disposed of them as they thought best.

TIMBER AND TIMBER CULTURE.

Sec. 256. All citizens of the United States and other persons, bona-fide residents of the State of Colorado, or Nevada, or either of the territories of New Mexico, Arizona, Utah, Wyoming, Dakota, Idaho, or Montana, and all other mineral districts of the United States, shall be, and are hereby, authorized and are permitted to fell and remove, for building, agricultural, mining, or other domestic purposes, any timber or other trees growing or being on the public lands, said lands being mineral, and not subject to entry under existing laws of the United States, except for mineral entry, in either of said States, territories, or districts of which such citizens or persons may be at the time bona fide residents, subject to such rules and regulations as the Secretary of the Interior may prescribe for the protection of the timber and of the undergrowth growing upon such lands, and for other purposes, provided, that the foregoing provisions shall not extend to railroad corporations.

20 Stat. 88. U. S. *v.* Nelson, 5 Saw C. C. 68. 1 Op. Att. Gen. 471, 475. Rogers *v.* Soggs, 22 Cal. 444. Cir. G. L. O., Aug. 15, 1878 (6 Copp's L. O. 21).

Sec. 257. It shall be the duty of the register and the receiver of any local land office in whose district any mineral land may be situated to ascertain from time to time whether any timber is being cut or used upon any such lands, except for the purposes authorized in the preceding section, within their respective land districts; and, if so, they shall immediately notify the Commissioner of the General Land Office of that fact; and all necessary expenses incurred in making such proper examinations shall be paid and allowed such register and receiver in making up their next quarterly accounts.

20 Stat. 88. Cir. G. L. O., Aug 15, 1878 (6 Copp's L. O. 21).

Sec. 258. Any person or persons who shall violate the provisions of the two next preceding sections, or any rules and regulations in pursuance thereof made by the Secretary of the Interior, shall be deemed guilty of a misdemeanor, and, upon conviction, shall be fined in any sum not exceeding five hundred dollars, and to which may be added imprisonment for any term not exceeding six months.

20 Stat. 89. Cotton *v.* U. S., 11 How. 229; Hutchins *v* King, 1 Wall. 53; Schulenber *v.* Harriman, 21 *id.* 44. U. S. *v.* Nelson, 5 Saw. C. C. 68. 1 Op. Att. Gen. 194, 471, 475. Cir. G. L. O., Aug. 15, 1878 (6 Copp's L. O. 21).

Sec. 259. Surveyed public lands of the United States within the States of California, Oregon, and Nevada, and in Washington Territory, not included within military, Indian, or other reservations of the United States, valuable chiefly for timber, but unfit for cultivation, and which have not been offered at public sale according to law, may be sold to citizens of the United States, or persons who have declared their intention to become such, in quantities not exceeding one hundred and sixty acres to any one person or association of persons, at the minimum price of two dollars and fifty cents per acre; and lands valuable chiefly for stone may be sold on the same terms as timber lands; provided, that nothing herein contained shall defeat or impair any bona-fide claim under any law of the United States, or authorize the sale of any mining claim, or the improvements of any bona-fide settler, or lands containing gold, silver, cinnabar, copper, or coal, or lands selected by the said States under any law of the United States donating lands for internal improvements, education, or other purposes: And provided further, That none of the rights conferred by the act approved July twenty-sixth, eighteen hundred and sixty-six, entitled "An act granting the right of way to ditch and canal owners over the public lands, and for other purposes," shall be abrogated by this act; and all patents granted shall be subject to any vested and accrued water rights, or rights to ditches and reservoirs used in connection with such water rights, as may have been acquired under and by the provisions of said act; and such rights shall be expressly reserved in any patent issued under this act.

14 Stat. 251; 20 *id.* 89; R. S. 2339, 2340, 2341. McFarland *v.* Culbertson, 2 Nev. 280; Peck *v.* Brown, 5 *id.* 81; Eureka Mg. Co. *v.* Way 11 *id.* 171. Decison Com. G. L. O., June 6, 1874 (1 Copp's L. O. 58). Cir. G. L. O., May 1, 1880 (7 Copp's L. O. 26).

Sec. 260. Any person desiring to avail himself of the provisions of this act shall file with the register of the proper district a written statement in duplicate, one of which is to be transmitted to the General Land Office, designating by legal subdivisions the particular tract of land he desires to purchase, setting forth that the same is unfit for cultivation, and valuable chiefly for its timber or stone; that it is uninhabited; contains no mining or other improvements, except for ditch or canal purposes, where any such do exist, save such as were made by or belong to the applicant, nor, as deponent verily believes, any valuable deposit of gold, silver, cinnabar, copper, or coal; that deponent has made no other application under this act; that he does not apply to purchase the same on speculation, but in good faith to appropriate it to his own exclusive use and benefit; and that he has not, directly or indirectly, made any agreement or contract, in any way or manner, with any person or persons whatsoever, by which the title which he might acquire from the Government of the United States should inure, in whole or in part, to the benefit of any person except himself; which statement must be verified by the oath of the applicant before the register or the receiver of the land office within the district where the land is situated; and if any person taking such oath shall swear falsely in the premises, he shall be subject to all the pains and penalties of perjury, and shall forfeit the money which he may have paid for said lands, and all right and title to the same; and any grant or conveyance which he may have made, except in the hands of bona-fide purchasers, shall be null and void.

20 Stat. 89. Cir. G. O. L., May 1, 1880 (7 Copp's L. O. 26.)

Sec. 261. Upon the filing of said statement, as provided in the preceding section, the register of the land office shall post a notice of such application, embracing a description of the land by legal subdivisions, in his office, for a period of sixty days, and shall furnish the applicant a copy of the same for publication, at the expense of such applicant, in a newspaper published nearest the location of the premises, for a like period of time; and after the expiration of said sixty days, if no adverse claim shall have been filed, the person desiring to purchase shall furnish to the register of the land office satisfactory evidence, first, that said notice of the application prepared by the register as aforesaid was duly published in a newspaper as herein required; secondly, that the land is of the character contemplated in this act, unoccupied and without improvements, other than those excepted, either mining or agricultural, and that it apparently contains no valuable deposits of gold, silver, cinnabar, copper, or coal; and upon payment to the proper officer of the purchase money of said land, together with the fees of the register and the receiver, as provided for in case of mining claims in the one hundred and thirty-seventh section, the applicant may be permitted to enter said tract, and, on the transmission to the General Land Office of the papers and testimony in the case, a patent shall issue thereon; provided, that any person having a valid claim to any portion of the land may object, in writing, to the issuance of a patent to lands so held by him, stating the nature of his claim thereto; and evidence shall be taken, and the merits of said objection shall be determined by the officers of the land office, subject to appeal, as in other land cases. Effect shall be given to the foregoing provisions of this act by regulations to be prescribed by the Commissioner of the General Land Office.

17 Stat. 95; 20 *id.* 89. R. S. 2238. McFarland *v.* Culbertson, 2 Nev. 280: Peck *v.* Brown, 5 *id.* 81. Cir. G. L. O., May 1, 1880 (7 Copp's L. O. 26).

Sec. 262. After the passage of this act it shall be unlawful to cut, or cause or procure to be cut, or wantonly destroy any timber growing on any lands of the United States, in said States and Territory, or remove, or cause to be removed, any timber from said public lands, with intent to export or dispose of the same; and no owner, master, or consignee of any vessel, or owner, director, or agent of any railroad shall knowingly transport the same, or any lumber manufactured therefrom; and any person violating the provisions of this section shall be guilty of a misdemeanor, and, on conviction, shall be fined for every such offence a sum not less than one hundred nor more than one thousand dollars; provided, that nothing herein contained shall prevent any miner or agriculturalist from clearing his land in the ordinary working of his mining claim, or preparing his farm for tillage, or from taking the timber necessary to support his improvements, or the taking of timber for the use of the United States; and the penalties herein provided shall not take effect until ninety days after the passage of this act.

20 Stat. 90. Cotton *v.* U. S.. 11 How. 229. U. S. *v.* McEntee, U. S. Dist. Ct. Minn., Oct. 1877. Decision Com. G. L. O., Dec. 11, 1878, (6 Copp's L. O. 76). Cir. G. L. O., Aug. 15, 1878 (6 Copp's L. O. 21); May 1, 1880 (7 *id.* 26).

Sec. 263. Any person prosecuted in said States and territory for violating section two hundred and sixty-eight, who is not prosecuted for cutting timber for export from the United States, may be relieved from further prosecution and liability therefor upon payment, into the court wherein said action is pending, of the sum of two dollars and fifty cents per acre for all lands on which he shall have cut or caused to be cut timber, or removed or caused to be removed the same; provided, that nothing contained in this section shall be construed as granting to the person hereby relieved the title to said lands for said payment; but he shall have the right to purchase the same upon the same terms and conditions as other persons, as provided hereinbefore in this act; and further provided, that all moneys collected under this act shall be covered into the treasury of the United States. And section four thousand seven hundred and fifty-one of the Revised Statutes is hereby repealed, so far as it relates to the States and territory herein named.

20 Stat. 90, 91. U. S. *v.* Nelson, 5 Saw. C. C. 68. Cir. G. L. O., Aug. 15, 1878 (6 Copp's L. O. 21).

Sec. 264. All acts and parts of acts inconsistent with the provisions of the five preceding sections are repealed.

20 Stat. 90, 91.

Sec. 265. The Secretary of the Navy is authorized, under the direction of the President, to cause such vacant and unappropriated lands of the United States as produce the live-oak and red-cedar timbers to be explored, and selection to be made of such tracts or portions thereof, where the principal growth is of either of such timbers, as in his judgment may be necessary to furnish for the Navy a sufficient supply of the same.

3 Stat. 347, 607; 4 *id.* 242; R. S. 2458. U. S. *v.* Briggs, 9 How. 351. Cir. G. L. O., Aug. 8, 1831, (2 Laws, Instructions and Opinions, 455).

Sec. 266. The President is authorized to appoint surveyors of public lands, who shall perform the duties prescribed in the preceding section, and report to him the tracts by them selected, with the boundaries ascertained and accurately designated by actual survey or water courses; and the tracts of land thus selected with the approbation of the President shall be reserved, unless otherwise directed by law, from any future sale of the public lands, and be appropriated to the sole purpose of supplying timber for the Navy of the United States; but nothing in this section contained shall be construed to prejudice the prior rights of any person claiming lands, which may reserved in the manner herein provided.

3 Stat. 347; R. S. 2459. U. S. *v.* Briggs, 9 How. 351. 2 Op. Att. Gen. 524. Cir. G. L. O., Aug. 8, 1831 (2 Laws, Instructions, and Opinions, 455).

Sec. 267. The President is authorized to employ so much of the land and naval forces of the United States as may be necessary effectually to prevent the felling, cutting down, or other destruction of the timber of the United States in Florida, and to prevent the transportation or carrying away any such timber as may be already felled or cut down; and to take such other and further measures as may be deemed advisable for the preservation of the timber of the United States in Florida.

3 Stat. 651. R. S. 2460. Schulenberg *v.* Harriman, 21 Wall. 44.

Sec. 268. If any person shall cut, or cause or procure to be cut, or aid, assist, or be employed in cutting, or shall wantonly destroy, or cause or procure to be wantonly destroyed, or aid, assist, or be employed in wantonly destroying any live-oak or red-cedar trees, or other timber standing, growing, or being on any lands of the United States, which in pursuance of any law passed, or hereafter to be passed, have been reserved or purchased for the use of the United States, for supplying or furnishing therefrom timber for the Navy of the United States; or if any person shall remove, or cause or procure to be removed, or aid, or assist, or be employed in removing from any such lands which have been reserved or purchased, any live-oak or red-cedar trees, or other timber, unless duly authorized so to do, by order, in writing, of a competent officer, and for the use of the Navy of the United States; or if any person shall cut, or cause or procure to be cut, or aid, or assist, or be employed in cutting any live oak or red-cedar trees, or other timber on, or shall remove, or cause or procure to be removed, or aid, or assist, or be employed in removing any live-oak or red-cedar trees or other timber, from any other lands of the United States, acquired or hereafter to be acquired, with intent to export, dispose of, use, or employ the same in any manner whatsoever, other than for the use of the Navy of the United States; every such person shall pay a fine not less than triple the value of the trees or timber so cut, destroyed, or removed, and shall be imprisoned not exceeding twelve months.

4 Stat. 472; R. S. 2461. U. S. *v.* Briggs, 9 How. 351; Cotton *v.* U. S., 11 *id.* 229; Hutchins *v.* King, 1 Wall. 53; Schulenberg *v.* Harriman, 21 *id.* 44. U. S. *v.* McEntee, U. S. Dist. Ct. Minn., Oct. 1877, in manuscript; U. S. *v.* Nelson, 5 Saw. C. C. 68. Kansas *v.* Harrold, 9 Kansas, 194; Stevens *v.* Perrier, 12 *id.* 297; James *v.* Snelson, 3 Mo. 278; Turley *v.* Tucker, 6 *id.* 583; Hower *v.* Higbee, 9 *id.* 259; Keeton *v.* Andsley, 19 *id.* 362; Woodruff *v.* Roberts, 4 La. Ann. 127; Lovett *v.* Noble, 1 Scamm. (Ills.) 185, 11 Ill. 529, Nincher *v.* Schrewsbury, 2 Scamm. Ill. 284; Rogers *v.* Soggs, 22 Cal. 444. 1 Op. Att. Gen. 194, 471, 475; 2 *id.* 524. Decisions Sec. Int., Dec. 26, 1854 (1 Lester's L. L. 629). Decisions Com. G. L. O., Sept. 1, 1865 (Zab. L. L. 891); June 29, 1874. 1 Copp's L. O. 102); Dec. 11, 1878 (6 *id.* 76). Cir. G. L. O. Dec. 24, 1855 (Zab. L. L. 888; Copp's L. L. 658; 1 Copp's L. O. 102); May 2, 1877 (4 Copp's L. O. 55); Aug. 15, 1878 6 *id.* 21); June 27, 1879 (6 *id.* 59); May 1, 1880 (7 *id.* 26).

Sec. 269. If the master, owner, or consignee of any vessel shall knowingly take on board any timber cut on lands which have been reserved or purchased as in the preceding section prescribed, without proper authority, and for the use of the Navy of the United States; or shall take on board any live-oak or red-cedar timber cut on any other lands of the United States, with intent to transport the same to any port or place within the United States or to export the same to any foreign country, the vessel on board of which the same shall be taken, transported, or seized, shall, with her tackle, apparel, and furniture, be wholly forfeited to the United States, and the captain or master of such vessel wherein the same was exported to any foreign country against the provisions of this section shall forfeit and pay to the United States a sum not exceeding one thousand dollars.

4 Stat. 472; R. S. 2462. 4 Op. Att. Gen. 247, 339, 403.

Sec. 270. It shall be the duty of all collectors of the customs within the States of Alabama, Mississippi, Louisiana, and Florida, before allowing a clearance to any vessel laden in whole or in part with live-oak timber, to ascertain satisfactorily that such timber was cut from private lands, or if from public ones, by consent of the Navy Department. And it is also made the duty of all officers of the customs, aud of the land officers within those States, to cause prosecutions to be seasonably instituted against all persons known to be guilty of depredations on, or injuries to, the live-oak growing on the public lands.

4 Stat. 647; R. S. 2468. 4 Op. Att. Gen. 403.

Sec. 271. The Secretary of the Navy is authorized to cause an examination to be made of the condition of all lands in the State of Florida which have been set apart or reserved for naval purposes, excepting the reservation upon which the navy yard at Pensacola is located, and to ascertain whether or not such reserved lands are or will be of any value to the Government of the United States for naval purposes.

20 Stat. 470, 471.

Sec. 272. All of said lands which, in the judgment of the Secretary of the Navy, are no longer required for naval purposes shall, as soon as practicable, be certified by him to the Secretary of the Interior, and be subject to entry and sale in the same manner and under the same conditions as other public lands of the United States: *Provided*, That all persons who have, in good faith, made improvements on said reserved lands so certified on the third day of March, eighteen hundred and seventy-nine, and who occupy the same, shall be entitled to purchase the part or parts so occupied and improved by them, not to exceed one huudred and sixty acres to any one person at one dollar and twenty-five cents per acre within such reasonable time as may be fixed by the Secretary of the Interior.

20 Stat. 471.

Sec. 273. If any person or persons shall knowingly and unlawfully cut, or shall knowingly aid, assist, or be employed in unlawfully cutting, or shall wantonly destroy or injure, or procure to be wantonly destroyed or injured, any timber tree or any shade or ornamental tree, or any other kind of tree, standing, growing, or being upon any lands of the United States, which, in pursuance of law, have been reserved, or which have been purchased by the United States for any public use, every such person or persons so offending, on conviction thereof before any circuit or district court of the United States, shall, for every such offense, pay a fine not exceeding five hundred dollars, or shall be imprisoned not exceeding twelve months: *Provided*, That nothing in this section shall be construed to apply to unsurveyed public lands and to public lands subject to pre-emption and homestead laws, nor to public lands subject to an act to promote the development of the mining resources of the United States, approved May tenth, eighteen hundred and seventy-two.

18 Stat. 481, 482. U. S. *v.* Briggs, 9 How. 351; Cotton *v.* U. S., 11 *id.*, 229: Hutchins *v.* King, 1 Wall. 53. 1 Op. Att. Gen. 194.

Sec. 274. When any lands of the United States, not mineral, shall have been entered and the government price paid therefor in full, no criminal suit or proceeding by or in the name of the United States shall thereafter be had or further maintained for any trespasses upon or for or on account of any material taken from said lands, and no civil suit or proceeding shall be had or further maintained for or on account of any trespasses upon or material taken from the said lands of the United States in the ordinary clearing of land, in working a mining claim, or for agricultural or domestic purposes, or for maintaining improvements upon the land of any bona-fide settler, or for or on account of any timber or material taken or used by any person without fault or knowledge of the trespass, or for or on account of any timber taken or used without fraud or collusion by any person who, in good faith, paid the officers or agents of the United States for the same, or for or on account of any alleged conspiracy in relation thereto: *Provided*, That the provisions of this section shall apply only to trespasses and acts done or committed and conspiracies entered into prior to March first, eighteen hundred and seventy-nine: *And provided further*, That defendants in such suits or proceedings shall exhibit to the proper courts or officer the evidence of such entry and payment, and shall pay all costs accrued up to the time of such entry.

Act of June 15, 1880. U. S. *v.* McEntee, U. S. Dist. Ct. Minn., Oct. 1877, in manuscript. Decision Com. G. L. O., June 29, 1874 (1 Copp's L. O. 152). Cir. G. L. O., July 17, 1880 (7 Copp's L. O. 89).

Sec. 275. The act entitled "An act to amend the act entitled 'An act to encourage the growth of timber on western prairies,'" approved March thirteenth, eighteen hundred and seventy-four, is amended to read as follows: That any person who is the head of a family, or who has arrived at the age of twenty-one years, and is a citizen of the United States, or who shall have filed his declaration of intention to become such, as required by the naturalization laws of the United States, who shall plant, protect, and keep in a healthy, growing condition for eight years ten acres of timber, on any quarter-section of any of the public lands of the United States, or five acres on any legal subdivision of eighty acres, or two and one-half acres on any legal subdivision of forty acres or less, shall be entitled to a patent for the whole of said quarter-section, or of such legal subdivision of eighty or forty acres, or fractional subdivision of less than forty acres, as the case may be, at the expiration of said eight years, on making proof of such fact by not less than two credible witnesses, and a full compliance of the further conditions as provided in the next section: *Provided*, That not more than one quarter of any section shall be thus granted, and that no person shall make more than one entry under the provisions of this law.

20 Stat. 113, 114, 115. Decisions Sec. Int., July 31, 1876 (3 Copp's L. O. 73); Aug. 3, 1876 (3 *id.* 122, Jan. 4, 1877, 3 *id.* 181); Sept. 24, 1877 (4 *id.* 134); Feb. 12, 1879 (6 *id.* 22); Aug. 23, 1879 (6 *id.* 113); Sept. 12, 1879: Dec. 4, 1879 (6 Copp's L. O. 153); April 30, 1880 (7 *id.* 39). Decisions Com. G. L. O., June 10, 1873 (Copp's L. L. 657); June 24, 1873 (*id.* 652: June 6, 1874, *id.* 653; 1 Copp's L. O. 58); June 20, 1874 (Copp's L. L. 658); June 30, 1874 (*id.* 656); Aug. 4. 1874 (*id.* 654; 1 Copp's L. O. 92); Aug. 17, 1874 (1 Copp's L. O. 92); Oct. 23, 1874 (Copp's L. L. 655; 2 Copp's L. O. 39); Dec. 11, 1874 (6 Copp's L. O. 174); Aug. 16, 1875 (2 *id.* 86); March 27, 1876 (3 *id.* 3); June 30, 1876 (3 *id.* 73); July 6, 1876 (3 *id.* 71); July 6, 1876 (3 *id.* 71); July 17, 1876 (3 *id.* 72); Dec. 12, 1876, (3 *id.* 172); Jan. 27, 1877 (3 *id.* 179); April 9, 1877 (4 *id.* 162); July 25, 1877 (4 *id.* 85); Dec. 18, 1879 (6 *id.* 154); March 16, 1880 (7 *id.* 6); April 15, 1880 (7 *id.* 25); May 18, 1880 (7 *id.* 39). Cir. G. L. O., May 3, 1876 (3 Copp's L. O. 38); June 27, 1878 (5 *id.* 77); ——, 1878 (5 *id.* 118). General Cir., Sept. 1, 1879, pp. 23, 26.

Sec. 276. The person applying for the benefits of this law shall, upon application to the register of the land district in which he or she is about to make such entry, make affidavit, before the register or the receiver, or the clerk of some court of record, or officer authorized to administer oaths in the district where the land is situated; which affidavit shall be as follows, to wit: I, ———, having filed my application, number —, for an entry under the provisions of an act entitled "An act to amend an act entitled 'An act to encourage the growth of timber on the western prairies,'" approved ———, 187–, do solemnly swear (or affirm) that I am the head of a family (or over twenty-one years of age), and a citizen of the United States (or have declared my intention to become such); that the section of land specified in my said application is composed exclusively of prairie lands, or other lands devoid of timber; that this filing and entry is made for the cultivation of timber, and for my own exclusive use and benefit; that I have made the said application in good faith, and not for the purpose of speculation, or directly or indirectly for the use or benefit of any other person or persons whatsoever; that I intend to hold and cultivate the land, and to fully comply with the provisions of the law; and that I have not heretofore made an entry under the timber culture laws.

20 Stat. 113, 114, 115. Decisions Sec. Int., May 15, 1876 (3 Copp's L. O. 38); July 31, 1876 (3 *id.* 73); Jan. 4, 1877 (3 *id.* 181); Sept. 24, 1877 (4 *id.* 134); Sept. 12, 1879. Decisions Com. G. L. O., June 6, 1874 (Copp's L. L. 653; 1 Copp's L. O. 58); Aug. 6, 1874 (Copp's L. L. 654); Oct. 23, 1874 (*id.* 655; 2 Copp's L. L. 39); Dec. 11, 1874; Jan. 24, 1879; Dec. 18, 1879 (6 Copp's L. O. 154). Cir. G. L. O., Jan. 8, 1878, (4 Copp's L. O. 167); June 27, 1878 (5 *id.* 77); ——, 1878 (5 *id.* 118). Gen. Cir. G. L. O., Sept. 1, 1879, p. 25.

Sec. 277. Upon filing said affidavit with the register and receiver and on payment of ten dollars, if the tract applied for is more than eighty acres, and five dollars if it is eighty acres or less, he or she shall thereupon be permitted to enter the quantity of land specified and the party making an entry of a quarter-section shall be required to break or plow five acres covered thereby the first year, five acres the second year, and to cultivate to crop or otherwise the five acres broken or plowed the first year; the third year he or she shall cultivate to crop or otherwise the five acres broken the second year, and to plant in timber, seeds, or cuttings the five acres first broken or plowed, and to cultivate and put in crop or otherwise the remaining five acres, and the fourth year to plant in timber, seeds, or cuttings the remaining five acres. All entries of less quantity than one quarter-section shall be plowed, planted, cultivated and planted to trees, tree-seeds, or cuttings, in the same manner and in the same proportion as hereinbefore provided for a quarter-section: *Provided, however*, That in case such trees, seeds, or cuttings shall be destroyed by grasshoppers, or by extreme and unusual drouth for any year or term of years, the time for planting such trees, seeds, or cuttings shall be extended one year for every such year that they are so destroyed: *Provided, further*, That the person making such entry shall, before he or she shall be entitled to such extension of time, file with the register and the receiver of the proper land office an affidavit, corroborated by two witnesses, setting forth the destruction of such trees, and that, in consequence of such destruction, he or she is compelled to ask an extension of time, in accordance with the provisions of this law.

20 Stat. 113, 114, 115. Decisions Sec. Int., May 17, 1876 (3 Copp's L. O. 38); Dec. 23, 1876 (3 *id.* 180); April 2, 1877 (4 *id.* 21); May 29, 1878 (5 *id.* 87); Dec. 4, 1879 (6 *id.* 153); April 30, 1880 (7 *id.* 39); May 31, 1880 (7 *id.* 39). Decisions Com. G. L. O., June 24, 1873 (Copp's L. L. 652); July 25, 1874 (*id.* 653; 1 Copp's L. O. 92); Aug. 4, 1874 (Copp's L. L. 654); Dec. 11, 1874; Jan. 21, 1875 (1 Copp's L. O. 171); Feb. 11, 1875 (Copp's L. L. 654; 1 Copp's L. O. 181); June 28, 1875 (2 Copp's L. O. 54); July 1, 1875 (2 *id.* 54); Sept. 27, 1875 (2 *id.* 100); Dec. 3, 1875 (2 *id.* 133); July 6, 1876 (3 *id.* 72); July 17, 1876 (3 *id.* 71); April 9, 1877 (4 *id.* 162); July 18, 1877 (4 *id.* 162); July 24, 1877 (4 *id.* 85); Jan. 24, 1879; May 18, 1880 (7 Copp's L. O. 39). Cir. G. L. O., April 6, 1874 (Copp's L. L. 649; 1 Copp's L. O. 26). General Cir. G. L. O., Sept. 1, 1879, pp. 25, 27.

Sec. 278. No final certificate shall be given, or patent issued, for the land so entered until the expiration of eight years from the date of such entry; and if, at the expiration of such time, or at any time within five years thereafter, the person making such entry, or, if he or she be dead, his or her heirs or legal representatives, shall prove by two credible witnesses that he or she or they have planted, and, for not less than eight years, have cultivated and protected such quantity and character of trees as aforesaid; that not less than twenty-seven hundred trees were planted on each acre, and that at the time of making such proof that there shall be then growing at least six hundred and seventy-five living and thrifty trees to each acre, they shall receive a patent for such tract of land.

20 Stat. 113, 114, 115. Decisions Sec. Int., Dec. 23, 1876 (3 Copp's L. O. 180); Nov. 14, 1877 (4 *id.* 134); Dec. 22, 1877 (5 5 *id.* 21); Sept. 17, 1878 (5 *id.* 119); April 30, 1880 (7 *id.* 39). Decisions Com. G. L. O., June 24, 1873 (Copp's L. L. 652); Feb. 11, 1875 (*id.* 654); March 11, 1875 (*id.* 655); March 23, 1875 (*id.* 656); June 28, 1875 (2 Copp's L. O. 54); July 1, 1875 (2 *id.* 54); Sept. 2, 1875 (2 *id.* 117); Dec. 3, 1875 (2 *id.* 134); March 10, 1877 (4 *id.* 162); Jan. 8, 1878 (4 *id.* 167); May 18, 1880 (7 *id.* 39). Cir. G. L. O., June 27, 1878 (5 Copp's L. O. 77). General Cir. G. L. O., Sept. 1, 1879, p. 24.

Sec. 279. If at any time after the filing of said affidavit, and prior to the issuing of the patent for said land, the claimant shall fail to comply with any of the requirements of this law, then and in that event such land shall be subject to entry under the homestead laws, or by some other person under the provisions of this law: *Provided*, That the party making claim to said land, either as a homestead settler, or under this law, shall give at the time of filing his application, such notice to the original claimant as shall be prescribed by the rules established by the Commissioner of the General Land Office; and the rights of the parties shall be determined as in other contested cases.

20 Stat. 113, 114, 115. Decisions Sec. Int., March 19, 1877 (4 Copp's L. O. 21); May 28, 1877 (4 *id.* 54); Sept. 17, 1878 (5 *id.* 119); Aug. 23, 1879 (6 *id.* 113); March 4, 1880 (7 *id.* 39); May 31, 1880 (7 *id.* 39). Decisions Com. G. L. O., June 30, 1874 (Copp's L. L. 656); Dec. 11, 1874 (6 Copp's L. O. 174); March 11, 1875 (Copp's L. L. 655); March 23, 1875 (*id.* 656); March 25, 1875 (*id.* 637); Oct. 30, 1875 (2 Copp's L. O. 117); Feb. 18, 1876 (2 *id.* 180); May 11, 1876 (3 *id.* 22); July 20, 1876 (3 *id.* 72); March 30, 1877 (4 *id.* 76); July 13, 1877 (4 *id.* 77); Dec. 4, 1877 (4 *id.* 149); Nov. 1, 1878 (5 *id.* 147); March 4, 1879 (6 *id.* 126); Oct. 22, 1879; Feb. 17, 1880; April 15, 1880 (7 Copp's L. O. 25). Cir. G. L. O., Dec. 28, 1877 (4 *id.* 166); June 27, 1878 (5 *id.* 77); ——, 1878 (5 *id.* 118); General Cir. G. L. O., Sept. 1, 1879, pp. 25, 27.

Sec. 280. No land acquired under the provisions of this law shall, in any event, become liable to the satisfaction of any debt or debts contracted prior to the issuing of the final certificate therefor.

20 Stat. 113, 114, 115. Cir. O. L. O., June 25, 1878 (5 Copp's L. O. 77). General Cir. G. L. O., Sept. 1, 1879, p. 25.

Sec. 281. The Commissioner of the General Land Office is required to prepare and issue such rules and regulations, consistent with this law, as shall be necessary and proper to carry its provisions into effect; and the registers and receivers of the several land offices shall each be entitled to receive two dollars at the time of entry, and the like sum when the claim is finally established and the final certificate issued.

20 Stat. 113, 114, 115.

Sec. 282. The fifth section of the act entitled "An act in addition to an act to punish crimes against the United States, and for other purposes," approved March third, eighteen hundred and fifty-seven, shall extend to all oaths, affirmations, and affidavits required or authorized by this act.

11 Stat. 250; 20 *id.* 113, 114, 115; R. S. 5392. Cir. G. L. O., June 27, 1878 (5 Copp's L. O. 77). General Cir. G. L. O., Sept. 1, 1879, p. 26.

Sec. 283. Parties who have already made entries under the acts approved March third, eighteen hundred and seventy-three, and March thirteenth, eighteen hundred and seventy-four, shall be permitted to complete the same upon full compliance with the provisions of this chapter; that is, they shall, at the time of making their final proof, have had under cultivation, as required by this chapter, an amount of timber sufficient to make the number of acres required by this chapter; and all laws and parts of laws in conflict with the provisions of this chapter are hereby repealed.

17 Stat. 605; 18 *id.* 21; 20 *id.* 113, 114, 115. Decision Sec. Int., March 17, 1879 (6 Copp's L.O. 21). Decisions Com. G.L.O., Feb. 14, 1879 (6 Copp's L. O. 22); April 1, 1879 (6 *id.* 126). Cir. G. L. O., June 27, 1878 (5 Copp's L. O., 77). General Cir. G. L. O., Sept. 1, 1879, p. 24.

Sec. 284. The notices of contest provided by law under the tree-culture laws shall be printed in some newspaper printed in the county where the land in contest lies; and if no newspaper be printed in such county, then in the newspaper printed in the county nearest to such land.

20 Stat. 91. Cir. G. L. O., June 12, 1878 (5 Copp's L. O. 101).

Sec. 285. When any timber-culture claimant shall file a written relinquishment of his claim in the local land office, the land covered by such claim shall be held as open to settlement and entry without further action on the part of the Commissioner of the General Land Office.

Act of May 14, 1880. Decisions Com. G. L. O., Nov. 5, 1875 (2 Copp's L. O. 133); July 18, 1877; Aug. 18, 1877 (4 *id.* 85); Nov. 1, 1878, (5 *id.* 147); March 3, 1880.

Sec. 286. In all cases where any person has contested, paid the land office fees, and procured the cancellation of any timber-culture entry, he shall be notified by the register of the land office of the district in which such land is situated of such cancellation, and shall be allowed thirty days from date of such notice to enter said lands; and the register shall be entitled to a fee of one dollar for the giving of such notice, to be paid by the contestant, and not to be reported.

Act of May 14, 1880. Decisions Sect. Int., March 29, 1877 (3 Copp's L. O. 21); May 28, 1877 (3 *id.* 54).

NOTE.—The following acts authorizing settlers upon the public lands under the pre-emption, homestead and timber-culture laws, whose crops were destroyed by grasshoppers, to absent themselves temporarily from their lands, and extending the time for making final proof, have been passed from time to time by Congress, viz: 18 Stat. 81; 19 *id.* 54, 55, 59, 405; 20 *id.* 88, 169; act of June 4, 1880.

TOWN SITES AND COUNTY SEATS.

Sec. 287. The President is authorized to reserve from the public lands, whether surveyed or unsurveyed, town sites on the shores of harbors, at the junction of rivers, important portages, or any natural or prospective centers of population.

12 Stat. 754; 19 *id.* 392; R. S. 2380.

Sec. 288. When, in the opinion of the President, the public interests require it, it shall be the duty of the Secretary of the Interior to cause any of such reservations, or part thereof, to be surveyed into urban or suburban lots of suitable size, and to fix by appraisement of disinterested persons their cash value, and to offer the same for sale at public outcry to the highest bidder, and thence afterward to be held subject to sale at private entry, according to such regulations as the Secretary of the Interior may prescribe; but no lot shall be disposed of at public sale or private entry for less than the appraised value thereof; and all such sales shall be conducted by the register and receiver of the land office in the district in which the reservations may be situated, in accordance with the instructions of the Commissioner of the General Land Office.

12 Stat. 754; R. S. 2381. Decision Sec. Int., Aug. 28, 1880 (8 Wash. Law. Rep. 574).

Sec. 289. In any case in which parties have already founded, or may hereafter desire to found, a city or town on the public lands, it may be lawful for them to cause to be filed with the recorder for the county in which the same is situated, a plat thereof, for not exceeding six hundred and forty acres, describing its exterior boundaries according to the lines of the public surveys, where such surveys have been executed; also giving the name of such city or town, and exhibiting the streets, squares, blocks, lots, and alleys, the size of the same, with measurements and area of each municipal subdivision, the lots in which shall each not exceed four thousand two hundred square feet, with a statement of the extent and general character of the improvements; such map and statement to be verified under oath by the party acting for and in behalf of the persons proposing to establish such city or town; and within one month after such filing there shall be transmitted to the General Land Office a verified transcript of such map and statement, accompanied by the testimony of two witnesses that such city or town has been established in good faith, and when the premises are within the limits of an organized land district, a similar map and statement shall be filed with the register and receiver, and at any time after the filing of such map, statement, and testimony in the General Land Office it may be lawful for the President to cause the lots embraced within the limits of such city or town to be offered at public sale to the highest bidder, subject to a minimum of ten dollars for each lot; and such lots as may not be disposed of at public sale shall thereafter be liable to private entry at such minimum, or at such reasonable increase or diminution thereafter as the Secretary of the Interior may order from time to time, after at least three months' notice, in view of the increase or decrease in the value of the municipal property. But any actual settler upon any one lot, as above provided, and upon any additional lot in which he may have substantial improvements shall be entitled to prove up and purchase the same as a pre-emption, at such minimum, at any time before the day fixed for the public sale.

13 Stat. 343; R. S. 2382. Towsley *v.* Johnson, 1 Neb. 95; Nevada *v.* Rhodes, 4 Nev. 312; Robinson *v.* Imperial Silver, &c., 5 *id.* 44; Bell *v.* The Bed Rock Tunnel Mining Co., 36 Cal. 214. Decision Com. G. L. O., April 4, 1868 (Zab. L. L. 196). Cir. G. L. O., Aug. 20, 1864 (Zab. L. L. 179; Copp's L. L. 661); Oct. 20, 1865 (Copp's L. L. 678).

Sec. 290. When such cities or towns are established upon unsurveyed lands, it may be lawful, after the extension thereto of the public surveys, to adjust the extension limits of the premises according to those lines, where it can be done without interference with rights which may be vested by sale; and patents for all lots so disposed of at public or private sale shall issue as in ordinary cases.

13 Stat. 344; R. S. 2383.

Sec. 291. If within twelve months from the establishment of a city or town on the public domain, the parties interested refuse or fail to file in the General Land Office a transcript map, with the statement and testimony called for by the provisions of section two hundred and eighty-nine, it may be lawful for the Secretary of the Interior to cause a survey and plat to be made of such city or town, and thereafter the lots in the same shall be disposed of as required by such provisions, with this exception, that they shall each be at an increase of fifty per centum on the minimum of ten dollars per lot.

13 Stat. 344; R. S. 2384.

Sec. 292. In the case of any city or town, in which the lots may be variant as to size from the limitation fixed in section two hundred and eighty-nine, and in which the lots and buildings, as municipal improvements, cover an area greater than six hundred and forty acres, such variance as to size of lots or excess in area shall prove no bar to such city or town claim under the provisions of that section; but the minimum price of each lot in such city or town, which may contain a greater number of square feet than the maximum named in that section, shall be increased to such reasonable amount as the Secretary of the Interior may by rule establish.

13 Stat. 530; R. S. 2385. Cir. G. L. O., April 26, 1855 (Zab. L. L. 181; Copp's L. L. 664); Oct. 20, 1865 (Copp's L. L. 678).

Sec. 293. Where mineral veins are possessed, which possession is recognized by local authority, and to the extent so possessed and recognized, the title to town lots to be acquired shall be subject to such recognized possession and the necessary use thereof; but nothing contained in this section shall be so construed as to recognize any color of title in possessors for mining purposes as against the United States.

13 Stat. 530; R. S. 2386. Decision Sec. Int., March 4, 1879 (6 Copp's L. O. 3). Decisions Com. G. L. O., June 16, 1874 (Copp's L. L. 698); Dec. 3, 1875 (2 Copp's L. O. 150); Oct. 27, 1876 (3 *id.* 114); Nov. 23, 1876 (3 *id.* 131); April 9, 1877 (4 *id.* 46).

Sec. 304. No title shall be acquired, under the foregoing provisions of this chapter, to any mine of gold, silver, cinnabar, or copper; or to any valid mining claim or possession held under existing laws.

14 Stat. 541; 15 *id.* 67; 18 *id.* 254; R. S. 2392. Decision Sec. Int., March 4, 1879 (6 Copp's L. O. 3). Decisions Com. G. L. O., April 21, 1874 (1 Copp's L. O. 19); June 16, 1874 (Copp's L. L. 698); Dec. 23, 1875 (2 Copp's L. O. 150); Oct. 27, 1876 (3 *id.* 114); Nov. 23, 1876 (3 *id.* 131); April 9, 1877 (4 *id.* 46).

MINERAL LANDS.

Sec. 386. In all cases lands valuable for minerals shall be reserved from sale, except as otherwise expressly directed by law.

Sec. 387. All valuable mineral deposits in lands belonging to the United States, both surveyed and unsurveyed, are hereby declared to be free and open to exploration and purchase, and the lands in which they are found to occupation and purchase, by citizens of the United States and those who have declared their intention to become such, under regulations prescribed by law, and according to the local customs and rules of miners in the several mining districts, so far as the same are applicable and not inconsistent with the laws of the United States.

Decision Sec. Int., Aug. 26, 1871 (Copp's Mg. Dec. 60); Sept. 3, 1872 (*id.* 140); Jan. 2, 1875 (1 Copp's L. O. 178). Decisions Com. G. L. O., June 7, 1871 (Copp's Mg. Dec. 43); July 10, 1873 (*id* 209); July 15, 1873 (*id.* 316); July 26, 1873 (*id.* 214); May 2, 1874 (1 Copp's L. O. 4); Oct. 23, 1874 (1 *id.* 132); Jan. 30, 1875 (1 *id.* 75); June 30, 1875 (1 *id.* 79); Dec. 3, 1875: April 24, 1876 (3 Copp's L. O. 18); Nov. 13, 1877 (4 *id.* 179); Sept. 30, 1879.

Sec. 388. Mining claims upon veins or lodes of quartz or other rock in place bearing gold, silver, cinnabar, lead, tin, copper, or other valuable deposits, heretofore located, shall be governed as to length along the vein or lode by the customs, regulations, and laws in force at the date of their location. A mining claim located after the tenth day of May, eighteen hundred and seventy-two, whether located by one or more persons, may equal, but shall not exceed, one thousand five hundred feet in length along the vein or lode; but no location of a mining claim shall be made until the discovery of the vein or lode within the limits of the claim located. No claim shall extend more than three hundred feet on each side of the middle of the vein at the surface, nor shall any claim be limited by any mining regulation to less than twenty-five feet on each side of the middle of the vein at the surface, except where adverse rights existing on the tenth day of May, eighteen hundred and seventy-two, render such limitation necessary. The end lines of each claim shall be parallel to each other.

O. 178); April 1, 1875 (2 *id.* 2): July 29, 1876 (3 *id.* 68); July 26, 1879 (G. L. O. Rep. 1879, p. 157). Decisions Com. G. L. O., June 7, 1871 (Copp's Mg. Dec. 43); Aug. 13, 1872 (*id.* 134); Sept. 17, 1874 (1 Copp's L. O. 98); Oct. 28, 1875 (2 *id.* 114); April 14, 1876 (G. L. O. Rep. 1877, p. 83); July 18, 1876 (3 Copp's L. O. 69).

Sec. 390. The locators of all mining locations heretofore made or which shall hereafter be made, on any mineral vein, lode, or ledge, situated on the public domain, their heirs and assigns, where no adverse claim exists on the tenth day of May, eighteen hundred and seventy-two, so long as they comply with the laws of the United States, and with State, Territorial, and local regulations not in conflict with the laws of the United States governing their possessory title, shall have the exclusive right of possession and enjoyment of all the surface included within the lines of their locations, and of all veins, lodes and ledges throughout their entire depth, the top or apex of which lies inside of such surface lines extended downward vertically, although such veins, lodes, or ledges may so far depart from a perpendicular in their course downward as to extend outside the vertical side lines of such surface locations. But their right of possession to such outside parts of such veins or ledges shall be confined to such portions thereof as lie between vertical planes drawn downward as above described, through the end lines of their locations, so continued in their own direction that such planes will intersect such exterior parts of such veins or ledges. And nothing in this section shall authorize the locator or possessor of a vein or lode which extends in its downward course beyond the vertical lines of his claim to enter upon the surface of a claim owned or possessed by another. No possessory action between individuals, in any court of the United States, for the recovery of any mining title, or for damages to any such title, shall be affected by the fact that the paramount title to the land on which such mines are, is in the United States, but each case shall be adjudged by the law of possession.

Sec. 391. Where a tunnel is run for the development of a vein or lode, or for the discovery of mines, the owners of such tunnel shall have the right of possession of all veins or lodes within three thousand feet from the face of such tunnel on the line thereof, not previously known to exist, discovered in such tunnel, to the same extent as if discovered from the surface; and locations on the line of such tunnel of veins or lodes not appearing on the surface, made by other parties after the commencement of the tunnel, and while the same is being prosecuted with reasonable diligence, shall be invalid; but failure to prosecute the work on the tunnel for six months shall be considered as an abandonment of the right to all undiscovered veins on the line of such tunnel.

17 Stat. 92; 19 *id.* 52; R. S. 2323. Tunnel Co. *v.* Pell, 4 Colo. 507; Titcomb *v.* Kirk, 51 Cal. 288. Decisions Com. G. L. O., Sept. 20, 1872 (Copp's Mg. Dec. 144); April 15, 1873 (*id* 193); Aug. 1, 1873 (*id.* 215); Nov. 3, 1876 (3 Copp's L. O. 130); Aug. 30, 1877 (4 *id.* 102); Jan. 6, 1878 (5 *id.* 134).

Sec. 392. The miners of each mining district may make regulations not in conflict with the laws of the United States, or with the laws of the State or Territory in which the district is situated, governing the location, manner of recording, amount of work necessary to hold possession of a mining claim, subject to the following requirements: The location must be distinctly marked on the ground so that its boundaries can be readily traced. All records of mining claims hereafter made shall contain the name or names of the locators, the date of the location, and such a description of the claim or claims located by reference to some natural object or permanent monument as will identify the claim. On each claim located after the tenth day of May, eighteen hundred and seventy-two, and until a patent has been issued therefor, not less than one hundred dollars' worth of labor shall be performed or improvements made during each year: *Provided*, That the period within which the work required to be done annually on all unpatented claims, so located, shall commence on the first day of January succeeding the date of location of such claim. On all claims located prior to the tenth day of May, eighteen hundred and seventy-two, ten dollars' worth of labor shall be performed or improvements made by the first day of January, eighteen hundred and seventy-five, and each year thereafter, for each one hundred feet in length along the vein until a patent has been issued therefor; but where such claims are held in common, such expenditure may be made upon any one claim; and where a person or company has or may run a tunnel for the purposes of developing a lode or lodes, owned by said person or company, the money so expended in said tunnel shall be taken and considered as expended on said lode or lodes, whether located prior to or since the tenth day of May, eighteed hundred and seventy-two, and such person or company shall not be required to perform work on the surface of said lode or lodes in order to hold the same as required by said act. Upon a failure to comply with the foregoing conditions of annual expenditure, the claim or mine upon which such failure occurred shall be open to relocation in the same manner as if no location of the same had ever been made: *Provided*, That the original locatros, their heirs, assigns, or legal representatives have not resumed work upon the claim after failure and before such location. Upon the failure of any one of several co-owners to contribute his proportion of the expenditures required hereby, the co-owners who have performed the labor or made the improvements may, at the expiration of the year, give such delinquent co-owner personal notice in writing or notice by publication in the newspaper published nearest the claim, for at least once a week for ninety days, and if at the expiration of ninety days after such notice in writing or by publication such delinqent should fail or refuse to contribute his proportion of the expenditure required by this section, his interest in the claim shall become the property of his co-owners who have made the required expenditures.

Sec. 393. A patent for any land claimed and located for valuable deposits may be obtained in the following manner: Any person, association, or corporation authorized to locate a claim under this chapter, having claimed and located a piece of land for such purposes, who has, or have, complied with the terms of this chapter, may file in the proper land office an application for a patent, under oath, showing such compliance, together with a plat and field-notes of the claim or claims in common, made by or under the direction of the United States surveyor-general, showing accurately the boundaries of the claim or claims, which shall be distinctly marked by monuments on the ground, and shall post a copy of such plat, together with a notice of such application for a patent, in a conspicuous place on the land embraced in such plat previous to the filing of the application for a patent, and shall file an affidavit of at least two persons that such notice has been duly posted, and shall file a copy of the notice in such land office, and shall thereupon be entitled to a patent for the land, in the manner following: The register of the land office, upon the filing of such application, plat, field-notes, notices, and affidavits, shall publish a notice that such application has been made, for the period of sixty days, in a newspaper to be by him designated as published nearest to such claim; and he shall also post such notice in his office for the same period. The claimant at the time of filing this application, or at any time thereafter, within the sixty days of publication, shall file with the register a certificate of the United States surveyor-general that five hundred dollars' worth of labor has been expended or improvements made upon the claim by himself or grantors; that the plat is correct, with such further description by such reference to natural objects or permanent monuments as shall identify the claim, and furnish an accurate description, to be incorporated in the patent. At the expiration of the sixty days of publication the claimant shall file his affidavit, showing that the plat and notice have been posted in a conspicuous place on the claim during such period of publication. If no adverse claim shall have been filed with the register and the receiver of the proper land office at the expiration of the sixty days of publication, it shall be assumed that the applicant is entitled to a patent, upon the payment to the proper officer of five dollars per acre, and that no adverse claim exists; and thereafter no objection from third parties to the issuance of a patent shall be heard, except it be shown that the applicant has failed to comply with the terms of this chapter. Where the claimant for a patent is not a resident of or within the land district wherein the vein, lode, ledge or deposit sought to be patented is located, the application for patent and the affidavits required to be made in this section may be made by his, her, or its authorized agent, where said agent is conversant with the facts sought to be established, and this provision shall apply to all applications for patents to mineral lands pending on the twenty-second day of January, eighteen hundred and eighty.

Sec. 394. Where an adverse claim is filed during the period of publication, it shall be upon oath of the person or persons making the same, and shall show the nature, boundaries, and extent of such adverse claim, and all proceedings, except the publication of notice and making and filing of the affidavit thereof, shall be stayed until the controversy shall have been settled or decided by a court of competent jurisdiction, or the adverse claim waived. It shall be the duty of the adverse claimant, within thirty days after filing his claim, to commence proceedings in a court of competent jurisdiction, to determine the question of the right of possession, and prosecute the same with reasonable diligence to final judgment; and a failure so to do shall be a waiver of his adverse claim. After such judgment shall have been rendered, the party entitled to the possession of the claim, or any portion thereof, may, without giving further notice, file a certified copy of the judgment-roll with the register of the land office, together with the certificate of the surveyor-general that the requisite amount of labor has been expended or improvements made thereon, and the description required in other cases, and shall pay to the receiver five dollars per acre for his claim, together with the proper fees, whereupon the whole proceedings and the judgment-roll shall be certified by the register to the Commissioner of the General Land Office, and a patent shall issue thereon for the claim, or such portion thereof as the applicant shall appear, from the decision of the court, to rightly possess. If it appears from the decision of the court that several parties are entitled to separate and different portions of the claim, each party may pay for his portion of the claim, with the proper fees, and file the certificate and description by the surveyor-general, whereupon the register shall certify the proceedings and judgment-roll to the Commissioner of the General Land Office, as in the preceding case, and patents shall issue to the several parties according to their respective rights. Nothing herein contained shall be construed to prevent the alienation of the title conveyed by a patent for a mining claim to any person whatever.

Law Rep. 461).

Sec. 395. The description of vein or lode claims, upon surveyed lands, shall designate the location of the claim with reference to the lines of the public surveys, but need not conform therewith; but where a patent shall be issued for claims upon unsurveyed lands, the surveyor-general, in extending the surveys, shall adjust the same to the boundaries of such patented claim, according to the plat or description thereof, but so as in no case to interfere with or change the location of any such patented claim.

17 Stat. 94; 19 *id.* 52; R. S. 2327.

Sec. 396. Applications for patents for mining claims under former laws now pending may be prosecuted to a final decision in the General Land Office; but in such cases where adverse rights are not affected thereby, patents may issue in pursuance of the provisions of this chapter; and all patents for mining claims upon veins or lodes heretofore issued shall convey all the rights and privileges conferred by this chapter where no adverse rights existed on the tenth day of May, eighteen hundred and seventy-two.

17 Stat. 94; 19 *id.* 52; R. S. 2328.

Sec. 397. Claims usually called "placers," including all forms of deposit, excepting veins or quartz, or other rock in place, shall be subject to entry and patent, under like circumstances and conditions, and upon similar proceedings, as are provided for vein or lode claims; but where the lands have been previously surveyed by the United States the entry in its exterior limits shall conform to the legal subdivisions of the public lands.

16 Stat. 217; R. S. 2329. Chapman *v.* Toy Long, 4 Saw. C. C. 28. Moxon *v.* Wilkinson, 2 Montana, 421. Decisions Sec. Int., March 4, 1879 (6 Copp's L. O. 4). Decisions Com. G. L. O., Feb. 12, 1872 (Copp's Mg. Dec. 78); April 18, 1873, (*id.* (194); April 25, 1874 (1 Copp's L. O. 18).

Sec. 398. Legal subdivisions of forty acres may be subdivided into ten-acre tracts; and two or more persons, or associations of persons, having contiguous claims of any size, although such claims may be less than ten acres each, may make joint entry thereof; but no location of a placer claim, made after the ninth day of July, eighteen hundred and seventy, shall exceed one hundred and sixty acres for any one person or association of persons, which location shall conform to the United States surveys; and nothing in this section contained shall defeat or impair any bona-fide pre-emption or homestead claim upon agricultural lands, or authorize the sale of the improvements of any bona-fide settler to any purchaser.

16 Stat. 217; R. S. 2330. Campbell *v.* Adams, U. S. Dist. Ct. Colo. 1880, in manuscript. Decisions Com. G. L. O., March 1, 1871 (Copp's Mg. Dec. 40); Jan. 20, 1873 (*id.* 157); July 10, 1873 (*id.* 211); Oct. 23, 1873 (*id.* 229); Nov. 20, 1873 (*id.* 235); Nov. 21, 1874 (1 Copp's L. O. 134); Sept. 20, 1879 (G. L. O. Rep. 1879, p. 143).

Sec. 399. Where placer claims are upon surveyed lands, and conform to legal subdivisions, no further survey or plat shall be required, and all placer-mining claims located after the tenth day of May, eighteen hundred and seventy-two, shall conform as near as practicable with the United States system of public land surveys, and the rectangular subdivisions of such surveys, and no such location shall include more than twenty acres for each individual claimant; but where placer claims cannot be conformed to legal subdivisions, survey and plat shall be made as on unsurveyed lands; and where by the segregation of mineral land in any legal subdivision a quantity of agricultural land less than forty acres remains, such fractional portion of agricultural land may be entered by any part qualified by law, for homestead or pre-emption purposes.

17 Stat. 94; 19 *id* 52; R. S. 2331. Cambell *v.* Adams, U. S. Dist. Ct. Colo. 1880, in manuscript. Decisions Com. G. L. O., May 19, 1873 (Copp's Mg. Dec. 200); Aug. 27, 1873 (*id.* 222).

Sec. 400. Where such person or association, they and their grantors, have held and worked their claims for a period equal to the time prescribed by the statute of limitations for mining claims of the State or Territory where the same may be situated, evidence of such possession and working of the claims for such period shall be sufficient to establish a right to a patent thereto under this chapter, in the absence of any adverse claim; but nothing in this chapter shall be deemed to impair any lien which may have attached in any way whatever to any mining claim or property thereto attached prior to the issuance of a patent.

16 Stat. 217; R. S. 2332. The 420 Mg. Co. *v.* The Bullion Co., 3 Saw. C. C. 634. Davis *v.* Clark, 2 Montana, 310; Maine Boys Co. *v.* Boston Co., 37 Cal. 40.

Sec. 401. Where the same person, association, or corporation is in possession of a placer claim, and also a vein or lode included within the boundaries thereof, application shall be made for a patent for the placer claim, with the statement that it includes such a vein or lode, and in such case a patent shall issue for the placer claim, subject to the provisions of this chapter, including such vein or lode, upon the payment of five dollars per acre for such vein or lode claim, and twenty-five feet of surface on each side thereof. The remainder of the placer claim, or any placer claim not embracing any vein or lode claim, shall be paid for at the rate of two dollars and fifty cents per acre, together with all costs of proceedings; and where such a vein or lode, such as is described in section three hundred and eight-eight, is known to exist within the boundaries of a placer claim, an application for a patent for such placer claim, which does not include an application for the vein or lode claim shall be construed as a conclusive declaration that the claimant of the placer claim has no right of possession of the vein or lode claim; but where the existence of a vein or lode in a placer claim is not known, a patent for the placer claim shall convey all valuable mineral and other deposits within the boundaries thereof.

17 Stat. 94; 19 *id.* 52. R. S. 2333. Decision Com. G. L. O. Oct. 17, 1873 (Copp's Mg. Dec. 226).

Sec. 402. The surveyor-general of the United States may appoint in each land district containing mineral lands as many competent surveyors as shall apply for appointment to survey mining claims. The expenses of the survey of vein or lode claims, and the survey and subdivision of placer claims into smaller quantities than one hundred and sixty acres, together with the cost of publication of notices, shall be paid by the applicants, and they shall be at liberty to obtain the same at the most reasonable rates, and they shall also be at liberty to employ any United States deputy surveyor to make the survey. The Commissioner of the General Land Office shall also have power to establish the maximum charges for surveys and publication of notices under this chapter; and, in case of excessive charges for publication, he may designate any newspaper published in a land district where mines are situated for the publication of mining notices in such district, and fix the rates to be charged by such paper; and, to the end that the Commissioner may be fully informed on the subject, each applicant shall file with register a sworn statement of all charges and fees paid by such applicant for publication and surveys, together with all fees and money paid the register and the receiver of the land office, which statement shall be transmitted, with the other papers in the case, to the Commissioner of the General Land Office.

17 Stat. 95; 19 *id.* 52; R. S. 2334. Decision Com. G. L. O., Aug. 6, 1872 (Copp's Mg. Dec. 131).

Sec. 403. All affidavits required to be made under this chapter may be verified before any officer authorized to administer oaths within the land district where the claims may be situated, and all testimony and proofs may be taken before any such officer, and when duly certified by the officer taking the same, shall have the same force and effect as if taken before the register and receiver of the land office. In cases of contest as to the mineral or agricultural character of land, the testimony and proofs may be taken as herein provided on personal notice of at least ten days to the opposing party; or if such party cannot be found, then by publication of at least once a week for thirty days in a newspaper, to be designated by the register of the land office as published nearest to the location of such land; and the register shall require proof that such notice has been given.

17 Stat. 95; 19 *id.* 52; R. S. 2335. Decisions Com. G. L. O., July 21, 1874 (1 Copp's L. O. 66); Jan. 27, 1876 (2 *id.* 162).

Sec. 404. Where two or more veins intersect or cross each other, priority of title shall govern, and such prior location shall be entitled to all ore or mineral contained within the space of intersection; but the subsequent location shall have the right of way through the space of intersection for the purposes of the convenient working of the mine. And where two or more veins unite, the oldest or prior location shall take the vein below the point of union, including all the space of intersection.

17 Stat. 96; 19 *id.* 52; R. S. 2336. Decisions Sec. Int., Feb. 24, 1873 (Copp's Mg. Dec. 96, 101); July 21, 1879, (6 Copp's L. O. 73). Decision Com. G. L. O., Feb. 25, 1876 (2 Copp's L. O. 178).

Sec. 405. Where non-mineral land not contiguous to the vein or lode is used or occupied by the proprietor of such vein or lode for mining or milling purposes, such non-adjacent surface-ground may be embraced and included in an application for a patent for such vein or lode, and the same may be patented therewith, subject to the same preliminary requirements as to survey and notice as are applicable to veins or lodes; but no location hereafter made of such non-adjacent land shall exceed five acres, and payment for the same must be made at the same rate as fixed by this chapter for the superficies of the lode. The owner of a quartz-mill or reduction-works, not owning a mine in connection therewith, may also receive a patent for his mill-site, as provided in this section.

17 Stat. 96; 19 *id.* 52; R. S. 2337. Decisions Sec. Int., April 29, 1876 (3 Copp's L. O. 67). Decisions Com. G. L. O., Oct. 11, 1872 (Copp's Mg. Dec. 147); April 16, 1873 (*id.* 193); May 20, 1873 (*id.* 201); March 10. 1874 (1 Copp's L. O. 4); Oct. 21, 1875 (2 *id.* 114); Sept. 24. 1879.

Sec. 406. As a condition of sale, in the absence of necessary legislation by Congress, the local legislature of any State or Territory may provide rules for working mines, involving easements, drainage, and other necessary means to their complete development; and those conditions shall be fully expressed in the patent.

14 Stat. 252; 19 *id.* 52; R. S. 2338.

Sec. 407. Whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued, and the same are recognized and acknowledged by the local customs, laws, and the decisions of courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed; but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

14 Stat. 253; R. S. 2339. Atchison *v.* Peterson, 20 Wall. 507; Basey *v.* Gallagher, 20 *id.* 670; Jennison *v.* Kirk, 8 Otto, 453. Decisions Com. G. L. O., Nov. 23, 1869 (Copp's Mg. Dec. 24); April 16, 1871 (*id.* 42); March 21, 1872 (*id.* 82).

Sec. 408. All patents granted, or pre-emption or homesteads allowed, shall be subject to any vested and accrued water-rights, or rights to ditches and reservoirs used in connection with such water-rights, as may have been acquired under or recognized by the preceding section.

16 Stat. 218; R. S. 2340.

Sec. 409. Wherever, upon the lands heretofore designated as mineral lands, which have been excluded from survey and sale, there have been homesteads made by citizens of the United States, or persons who have declared their intention to become citizens, which homesteads have been made, improved, and used for agricultural purposes, and upon which there have been no valuable mines of gold, silver, cinnabar, or copper discovered, and which are properly agricultural lands, the settlers or owners of such homesteads shall have a right of pre-emption thereto, and shall be entitled to purchase the same at the price of one dollar and twenty-five cents per acre, and in quantity not to exceed one hundred and sixty acres; or they may avail themselves of the provisions of chapter eight, relating to "Homesteads."

14 Stat. 253; R. S. 2341. Ah Yew *v.* Choate, 24 Cal. 562: Alford *v.* Barnum, 45 *id.* 482. Decisions Sec. Int., Feb. 12, 1872 (Copp's Mg. Dec. 77); May 6, 1872 (*id.* 93); July 10. (*id.* 128, 130); Dec. 14, 1872 (*id.* 3, 133); Jan. 1876 (2 Copp's L. O. 146); Feb. 5, 1876 (2 *id.* 180; 3 *id.* 2); Dec. 20, 1876 (4 *id.* 102); April 5, 1877 (4 *id.* 19); June 21, 1877 (5 *id.* 3); Feb. 16, 1878 (5 *id.* 3); March 4, 1879 (6 *id.* 4); Dec. 22, 1879 (7 *id.* 23); April 7, 1880 (7 *id.* 36). Decisions Com. G. L. O., Nov. 14, 1872 (Copp's Mg. Dec, 148); Oct. 21, 1871 (*id.* 60); Dec. 2, 1872 (*id.* 150); March 12, 1873 (*id.* 163); July 10, 1873 (*id.* 208); Nov. 11, 1873 (*id.* 233); Aug. 4, 1874 (2 Copp's L. O. 84); Feb. 18, 1875 (1 *id.* 180); June 21, 1876 (3 *id.* 50); Oct. 24, 1876 (3 *id.* 130); March 21, 1877 (4 *id.* 2); March 26, 1877 (4 *id.* 17); Nov. 6, 1879 (6 *id.* 135). Cir. G. L. O., April 22, 1880 (7 Copp's L. O. 36).

Sec. 410. Upon the survey of the lands described in the preceding section, the Secretary of the Interior may designate and set apart such portions of the same as are clearly agricultural lands, which lands shall thereafter be subject to pre-emption and sale as other public lands, and be subject to all the laws and regulations applicable to the same.

14. Stat. 253; R. S. 2342. Ah Yew *v.* Choate, 24 Cal. 562; Alford *v.* Barnum, 45 *id.* 482. Decisions Sec. Int., Feb. 12, 1872 Copp's Mg. Dec. 77); May 6, 1872 (*id.* 93, July 10, 1872, *id.* 128, 130); Dec. 14, 1872 (*id.* 133); Jan. 3, 1876 (2 Copp's L. O. 146); Feb. 5, 1876 (2 *id.* 180; 3 *id.* 2); Dec. 20, 1876 (4 *id.* 102). April 5, 1877 (4 *id.* 19); June 21, 1877 (5 *id.* 2); Feb. 16, 1878): 5 *id.* 3); March 4, 1879 (6 *id.* 4); Dec. 22, 1879 (7 *id.* 23); April 17, 1880 (7 *id.* 36). Decisions Com. G. L., Nov. 14, 1872 (Copp's Mg. Dec. 148); Oct. 21, 1871 (*id.* 60); Dec. 2, 1872 (*id.* 150) March 12, 1873 (*id.* 163); July 10, 1873 (*id.* 208); Nov. 11, 1873 (*id.* 233); Aug. 4, 1875 (2 Copp's L. O. 84): Feb. 18, 1875 (1 *id.* 180); June 21, 1876 (3 *id.* 50); Oct. 24, 1876 (3 *id.* 130); March, 21, 1877 (4 *id.* 2); March 26, 1877 (4 *id.* 17); Nov. 6, 1879 (6 *id.* 135). Cir. G. L. O., April 22, 1880) 7 Copp's L. O., 36.)

Sec. 411. The President is authorized to establish additional land districts, and to appoint the necessary officers under existing laws, wherever he may deem the same necessary for the public convenience in executing the provisions of this chapter.

14 Stat. 252; R. S. 2343.

Sec. 412. Nothing contained in this chapter shall be construed to impair, in any way, rights or interests in mining property acquired under existing laws; nor to affect the provisions of the act entitled "An act granting to A. Sutro the right of way and other privileges to aid in the construction of a draining and exploring tunnel to the Comstock lode, in the State of Nevada," approved July twenty-five, eighteen hundred and sixty-six.

16 Stat. 218; 17 *id.* 96; 19 *id.* 52; R. S. 2344. Decision Sec. Int., Aug. 30, 1878 (5 Copp's L. O. 198). Decisions Com. G. L. O., March 8, 1873 (5 Copp's Mg. Dec. 162); March 29, 1873 (*id.* 179); May 27, 1876 (3 Copp's L. O. 34).

Sec. 413. The provisions of the preceding sections of this chapter shall not apply to the mineral lands situated in the States of Michigan, Wisconsin, and Minnesota, which are declared free and open to exploration and purchase, according to legal subdivisions, in like manner as before the tenth day of May, eighteen hundred and seventy-two. And any bona-fide entries of such lands within the States named since the tenth day of May, eighteen hundred and seventy-two, may be patented without reference to any of the foregoing provisions of this chapter. Such lands shall be offered for public sale in the same manner, at the same minimum price, and under the same rights of pre-emption as other public lands.

17 Stat. 465; R. S. 2345. Decisions Com. G. L. O., July 21 1876 (3 Copp's L. O. 132).

Sec. 414. Within the State of Missouri and Kansas deposits of coal, iron, lead, or other minerals are excluded from the operation of the preceding sections of this chapter, and all lands in said States shall be subject to disposal as agricultural lands.

19 Stat. 52.

Sec. 415. No act passed at the first session of the Thirty-eighth Congress, granting lands to States or corporations to aid in the construction of roads or for other purposes, or to extend the time of grants made prior to the thirtieth day of January, eighteen hundred and sixty-five, shall be so construed as to embrace mineral lands, which in all cases are reserved exclusively to the United States, unless otherwise specially provided in the act or acts making the grant; and all mineral lands are excepted from the operation and grants of laws heretofore granting lands to the State of Colorado.

13 Stat. 576; 18 *id.* 476; R. S. 2346. Heydenfeldt *v.* Mg. Co. 3 Otto, 634. Boggs *v.* Merced Mg. Co., 14 Cal. 279; Burdge *v.* Smith, 14 *id.* 380; Doran *v.* Railway Co., 24 *id.* 452; Higgins *v.* Houghton, 25 *id.* 252; McLaughlin *v.* Powell, 50 *id.* 64. Decisions Sec. Int., May 20, 1870 (Copp's Mg. Dec. 31); April 28, 1873; April 30, 1879. Decisions Com. G. L. O., Feb. 5, 1879 (5 Copp's L. O. 178); Dec. 19, 1878 (6 *id.* 152).

Sec. 416. Every person above the age of twenty-one years, who is a citizen of the United States, or who has declared his intention to become such, or any association of persons severally qualified as above, shall, upon application to the register of the proper land office, have the right to enter, by legal subdivisions, any quantity of vacant coal lands of the United States not otherwise appropriated or reserved by competent authority, not exceeding one hundred and sixty acres to such individual person, or three hundred and twenty acres to such association, upon payment to the receiver of not less than ten dollars per acre for such lands, where the same shall be situated more than fifteen miles from any completed railroad, and not less than twenty dollars per acre for such lands as shall be within fifteen miles of such road.

17 Stat. 607; R. S. 2337. Strond *v.* Railway Co., 4 Dillon, C. C. 396. Decisions Com. G. L. O., Aug. 11, 1873 (1 Copp's L. O. 2); March 28, 1874 (1 *id.* 3); May 25, 1874 (3 *id.* 34); Nov. 3, 1874 (3 *id.* 135).

Sec. 417. Any person or association of persons severally qualified, as above provided, who have opened and improved, or shall hereafter open and improve, any coal mine or mines upon the public lands, and shall be in actual possession of the same, shall be entitled to a preference right of entry, under the preceding section, of the mines so opened and improved: *Provided,* That when any association of not less than four persons, severally qualified as above provided, shall have expended not less than five thousand dollars in working and improving any such mine or mines, such association may enter not exceeding six hundred and forty acres, including such mining improvements.

17 Stat. 607; R. S. 2348.

Sec. 418. All claims under the preceding section must be presented to the register of the proper land district within sixty days after the date of actual possession and the commencement of improvements on the land, by the filing of a declaratory statement therefor; but when the township plat is not on file at the date of such improvement, filing must be made within sixty days from the receipt of such plat at the district office; and where the improvements shall have been made prior to the expiration of three months from the third day of March, eighteen hundred and seventy-three, sixty days from the expiration of such three months shall be allowed for the filing of a declaratory statement, and no sale under the provisions of this section shall be allowed until the expiration of six months from the third day of March, eighteen hundred and seventy-three.

17 Stat. 607; R. S. 2349. Decision Com. G. L. O., Aug. 11, 1873 (1 Copp's L. O. 3).

Sec. 419. The three preceding sections shall be held to authorize only one entry by the same person or association of persons; and no association of persons any member of which shall have taken the benefit of such sections, either as an individual or as a member of any other association, shall enter or hold any other lands under the provisions thereof; and no member of any association which shall have taken the benefit of such sections shall enter or hold any other lands under their provisions; and all persons claiming under section four hundred and seventeen shall be required to prove their respective rights and pay for the lands filed upon within one year from the time prescribed for filing their respective claims; and upon failure to file the proper notice, or to pay for the land within the required period, the same shall be subject to entry by any other qualified applicant.

17 Stat. 607; R. S. 2350.

Sec. 420. In case of conflicting claims upon coal lands where the improvements shall be commenced, after the third day of March, eighteen hundred and seventy-three, priority of possession and improvement, followed by proper filing and continued good faith, shall determine the preference right to purchase. And also where improvements have already been made prior to the third day of March, eighteen hundred and seventy-three, division of the land claimed may be made by legal subdivisions, to include, as near as may be, the valuable improvements of the respective parties. The Commissioner of the General Land Office is authorized to issue all needful rules and regulations for carrying into effect the provisions of this and the four preceding sections.

17 Stat. 607; R. S. 2351.

Sec. 421. Nothing in the five preceding sections shall be construed to destroy or impair any rights which may have attached prior to the third day of March, eighteen hundred and seventy-three, or to authorize the sale of lands valuable for mines of gold, silver or copper.

17 Stat. 607; R. S. 2352.

Sec. 440. All navigable rivers, within the territory occupied by the public lands, shall remain and be deemed public highways; and, in all cases where the opposite banks of any streams not navigable belong to different persons, the stream and the bed thereof shall become common to both.

1 Stat. 468; 2 *id.* 235; R. S. 2476.

Sec. 441. The right of way for the construction of highways over public lands, not reserved for public uses, is hereby granted.

14 Stat. 253; R. S. 2477. Railway Co. *v.* Gordon, S. C. Mich., Oct. T. 1879 (7 Copp's L. O. 158.)

Sec. 442. If any rail or plank road or macadamized turnpike company to whom the right of way or sites for watering places, depots and work-shops over and through the public lands of the United States was granted by the act of Congress approved August fourth, eighteen hundred and fifty-two, and by the acts amendatory thereto, shall at any time after its completion be discontinued or abandoned by said company or companies, the grants made by said acts shall cease, and determine, and the lands shall revert back to the United States.

10 Stat. 28, 29, 683; 12 *id.* 577. Decision Com. G. L. O., July 16, 1857.

Sec. 443. The locators of all mining locations heretofore made or which shall hereafter be made, on any mineral vein, lode, or ledge, situated on the public domain, their heirs and assigns, where no adverse claim exists on the tenth day of May, eighteen hundred and seventy-two, so long as they comply with the laws of the United States, and with State, territorial, and local regulations not in conflict with the laws of the United States governing their possessory title, shall have the exclusive right of possession and enjoyment of all the surface included within the lines of their locations, and all veins, lodes and ledges throughout their entire depth, the top or apex of which lies inside of such surface lines extended downward vertically, although such veins, lodes, or ledges may so far depart from a perpendicular in their course downward as to extend outside the vertical side lines of such surface locations. But their right of possession to such outside parts of such veins or ledges shall be confined to such portions thereof as lie between vertical planes drawn downward as above described, through the end lines of their locations, so continued in their own direction that such planes will intersect such exterior parts of such veins or ledges. And nothing in this section shall authorize the locator or possessor of a vein or lode which extends in its downward course beyond the vertical lines of his claim to enter upon the surface of a claim owned or possessed by another.

17 Stat. 91; 19 *id.* 52; R. S. 2322.

Sec. 444. Where two or more veins of mining claims intersect or cross each other, the owners of the mine last located shall have the right of way through the space of intersection for the purposes of the convenient working of the mine.

17 Stat. 96; 19 *id.* 52; R. S. 2336.

Sec. 445. As a condition of sale, in the absence of necessary legislation by Congress, the local legislature of any State or Territory may provide rules for working mines, involving easements, drainage, and other necessary means to their complete development; and those conditions shall be fully expressed in the patent.

14 Stat. 252; 19 *id.* 52; R. S. 2338.

Sec. 446. Whenever by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued, and the same are recognized and acknowledged by the local customs, laws, and the decisions of courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed; but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

14 Stat. 253; R. S. 2339.

Sec. 447. All patents granted, or pre-emption or homesteads allowed, shall be subject to any vested and accrued water-rights, or rights to ditches and reservoirs used in connection with such water-rights, as may have been acquired under or recognized by the preceding section.

16 Stat. 218; R. S. 2340.

MISCELLANEOUS PROVISIONS RELATING TO THE PUBLIC LANDS.

Sec. 466. The Commissioner of the General Land Office is authorized to decide upon principles of equity and justice, as recognized in courts of equity, and in accordance with regulations to be settled by the Secretary of the Interior, the Attorney-General, and the Commissioner, conjointly, consistently with such principles, all cases of suspended entries of public lands and of suspended pre-emption land claims, and to adjudge in what cases patents shall issue upon the same.

9 Stat. 51; 10 *id.* 258; 11 *id.* 22; 18 *id.* 50; 19 *id.* 244; R. S. 2450. 14 Op. Att. Gen. 636, 645. Decisions Sec. Int., Dec. 27 (1 Leester's L. Sec. 467. Every such adjudication shall be approved by the Secretary of the Interior and the Attorney-General, acting as a board; and shall operate only to divest the United States of the title of the lands embraced thereby, without prejudice to the rights of conflicting claimants.

9 Stat. 51; 19 *id.* 244; R. S. 2451. 14 Op. Att. Gen. 636, 645. Decisions Sec. Int., Aug. 12, 1859 (1 Leester's L. L. 487); June 27, 1878 (5 Copp's L. O. 101). Rules and Regulations, Oct. 3, 1846) 1 Leester's L. L. 482); April 25, 1877 (G. L. O. Rep. 1877, p. 100.

Sec. 468. The Commissioner is directed to report to Congress at the first session after any such adjudications have been made a list of the same under the classes prescribed by law, with a statement of the principles upon which each class was determined.

9 Stat. 51; R. S. 2452.

Sec. 469. The Commissioner shall arrange his decisions into two classes; the first class to embrace all such cases of equity as may be finally confirmed by the board, and the second class to embrace all such cases as the board reject and decide to be invalid.

9 Stat. 51; R. S. 2453. Rules and Regulations, Oct 3, 1846 (1 Leester's L. L. 482); April 25, 1877 (G. L. O. Rep. 1877, p. 100.

Sec. 479. In all cases where any oath, affirmation, or affidavit shall be made or taken before any register or receiver, or either or both of them of any local land office in the United States or any Territory thereof, or where any oath, affirmation, or affidavit, shall be made or taken before any person authorized by the laws of any State or Territory of the United States to administer oaths or affirmations, or take affidavits, and such oaths, affirmations, or affidavits are made, used, or filed in any of said local land offices, or in the General Land Office, as well in cases arising under any or either of the orders, regulations, or instructions, concerning any of the public lands of the United States, issued by the Commissioner of the General Land Office, or other proper officer of the Government of the United States, as under the laws of the United States, in any wise relating to or *affecting* any right, claim or title, or any contest therefor, to any of the public lands of the United States, and any person or persons shall, taking such oath, affirmation or affidavit, knowingly, willfully, or corruptly swear or affirm falsely, the same shall be deemed and taken to be perjury, and the person or persons guilty thereof shall, upon conviction, be liable to the punishment prescribed for that offence by the laws of the United States.

11 Stat. 250, 251. People *v.* Kelley, 38 Cal. 145; Barrell *v.* How, 48 *id.* 223; Ainsworth *v.* Miller, 20 Kansas, 220.

Sec. 480. Every person who falsely makes, forges, counterfeits, or alters any letters-patent granted, or purporting to have been granted by the President of the United States; or who passes, utters, or publishes, or attempts to pass, utter, or publish as genuine, any such forged, counterfeited, or falsely altered letters-patent, knowing the same to be forged, counterfeited, or falsely altered, shall be punished by a fine of not more than five thousand dollars, and by imprisonment at hard labor not more than ten years.

4 Stat. 119; R. S. 5416.

Sec. 481. Every person who falsely makes, alters, forges, or counterfeits any bid, proposal, guarantee, official bond, public record, affidavit, or other writing, for the purpose of defrauding the United States, or utters or publishes as true any such false, forged, altered, or counterfeited bid, proposal, guarantee, official bond, public record, affidavit, or other writing, for such purpose, knowing the same to be false, forged, altered, or counterfeited or transmits to or presents at the office of any officer of the United States any such false, forged, altered, or counterfeited bid, proposal, guarantee, official bond, public record, affidavit, or other writing, knowing the same to be false, forged, altered, or counterfeited, for such purpose, shall be imprisoned at hard labor for a period not more than ten years, or be fined not more than one thousand dollars, or be punished by both such fine and imprisonment.

14 Stat. 12; R. S. 5418.

Sec. 482. Every person who falsely makes, alters, forges, or counterfeits; or causes or procures to be falsely made, altered, forged, or counterfeited; or willingly aids or assists in the false making, altering, forging, or counterfeiting, any deed, power of attorney, order, certificate, receipt, or other writing, for the purpose of obtaining or receiving, or of enabling any other person, either directly or indirectly, to obtain or receive from the United States, or any of their officers or agents, any sum of money; or who utters or publishes as true, or causes to be uttered or published as true, any such false, forged, altered, or counterfeited deed, power of attorney, order, certificate, receipt, or other writing, with intent to defraud the United States, knowing the same to be false, altered, forged, or counterfeited; or who transmits to, or presents at, or causes or procures to be transmitted to, or presented at, any office or officer of the Government of the United States, any deed, power of attorney, order, certificate, receipt, or other writing, in support of, or in relation to, any account or claim, with intent to defraud the United States, knowing the same to be false, altered, forged, or counterfeited, shall be imprisoned at hard labor for a period of not less than one year nor more than ten years; or shall be imprisoned not more than five years, and fined not more than one thousand dollars.

3 Stat. 771; R. S. 5421.

Sec. 483. Every person who knowingly and with intent to defraud the United States, has in his possession any false, altered, forged, or counterfeited deed, power of attorney, order, certificate, receipt, or other writing, for the purpose of enabling another to obtain from the United States, or any of their officers or agents any sum of money, shall be fined and imprisoned at the discretion of the court.

3 Stat. 772; R. S. 5422.

Sec. 484. When an occupant of land, having color of title, in good faith has made valuable improvements thereon, and is, in the proper action, found not to be the rightful owner thereof, such occupant shall be entitled in the Federal courts to all the rights and remedies, and, upon instituting the proper proceedings, such relief as may be given or secured to him by the statutes of the State or Territory where the land lies, although the title of the plaintiff in the action may have been granted by the United States after said improvements were so made.

18 Stat. 50.

Sec. 487. Whenever, in any grant of land or other subsidies, made or hereafter to be made, to railroads or other corporations, the United States has reserved the right, or shall reserve it, to appoint directors, engineers, commissioners, or other agents to examine the roads, or act in conjunction with other officers of such company or companies, all the costs, charges, and pay of such directors, engineers, commissioners, or agents shall be paid by the respective companies. Such directors, engineers, commissioners, or agents shall be paid for such services the sum of ten dollars per day, for each and every day actually and necessarily employed, and ten cents per mile for each and every mile actually and necessarily travelled, in discharging the duties required of them, which per diem and mileage shall be in full compensation for such services. In case any company shall refuse or neglect to make such payments, no more patents for lands or other subsidies shall be issued to such company until these requirements are complied with.

14 Stat. 299; R. S. 5259.

The following is an act of Congress approved March 3, 1881:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That if, in any action brought pursuant to section twenty-three hundred and twenty-six of the Revised Statutes, title to the ground in controversy shall not be established by either party, the jury shall so find, and judgment shall be entered according to the verdict. In such case costs shall not be allowed to either party, and the claimant shall not proceed in the land-office or be entitled to a patent for the ground in controversy until he shall have perfected his title.

COAL LANDS.

PRIOR to 1864 coal lands were not specifically noted for reservation or sale, but were disposed of as other public lands under settlement or other laws, until the passage of the pre-emption act of 1841. The act of Congress of July 1, 1864, for the disposal of coal lands and town property on the public domain, authorized the sale of the coal lands which had been excluded from sale, as mines, by the pre-emption act of 1841. Under this act they became subject to pre-emption at the minimum of $20 per acre, after offering, under proclamation of the President, at public sale to the highest bidder, in suitable legal subdivisions. March 3, 1865, an act was passed by Congress supplemental to the act of July 1, 1864, giving citizens of the United States, who were engaged in coal mining for commerce, the right to enter, at the proper district or land office, 160 acres of land, or less, at $20 per acre. The act of March 3, 1873 gave a pre-emption right of 160 acres of coal lands to a person, and 320 acres to an association, upon payment of not less than $10 per acre, where the lands lie not more than 15 miles from a completed railroad, and $20 per acre where the lands lie within 15 miles of such a road; and further provided that when any association of not less than four persons have expended $5,000 in working and improving any mine, located within limits as above, they may make an additional entry of 640 acres at the several limit prices. (See Secs. 2347–2352 R. S.; Regulations of General Land Office, April 15, 1880). The rectangular system of surveys is extended over coal lands, and they are sold in conformity with the legal subdivision thereof. The method of designation or classification, by noting character of land in field-notes by deputy surveyor, and marking on plats, when known, or of proof at the district land office prior to time of filing, is similar to the method of segregation under the mineral act, and is given in detail in the Regulations of the General Land Office.

Estimate of Area of Coal Measure.—The estimated area of coal lands on the public domain, the property of the United States, is as follows:

	Acres.	Acres.
Washington Territory:		
Area	829,440	
Sold	3,350	
		826,(90
Oregon:		
Area	414,720	
Sold	185	
		414,535
California:		
Area	247,820	
Sold	1,800	
		246,020
Colorado:		
Area	1,128,225	
Sold	600	
		1,127,625
Utah:		
Area	2,764,800	
Sold	2,180	
		2,762,620
New Mexico		
Area	10,800	
Sold	720	
		10,080
Wyoming, at least		42,000
Dakota		50,000
Montana, at least		50,000
Arizona, no coal yet discovered.		
Nevada, no coal yet discovered.		
Nebraska, the coal-bearing rocks cover an area of 3,600 square miles, but on account of the smallness of the veins—none exceeding one foot—the coal is of no commercial value.		
Indian Territory, the coal-bearing rocks cover an area of 13,600 square miles.		
Arkansas, the coal-bearing rocks cover an area of 12,000 square miles		
Total		5,528,970

New discoveries in Colorado, Utah, Wyoming, and Dakota will increase the amount given above considerably.

ENTRIES UNDER THE COAL LAND ACTS.

From 1866 to June 30, 1880, under the coal land acts there have been 78 entries at district land offices, containing 10,750.24 acres, for which the United States received $146,999.25, as follows:

State or Territory.	Entries.	Acres.	Amount.
California	18	2,154.79	$32,972 75
Oregon	2	185.18	1,851 80
Utah	13	1,816.54	21,524 00
Washington	26	3,556.92	45,109 00

Laws Governing the Sale of Government Coal Lands.—The act of Congress approved March 3, 1873, entitled "An Act to provide for the sale of the lands of the United States containing coal," is as folllows:

AN ACT to provide for the sale of the lands of the United States containing coal.—SEC. 1.—*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That any person above the age of twenty-one years who is a citizen of the United States, or who has declared his intention to become such, or any association of persons severally qualified as above, shall, upon application to the register of the proper land office, have the right to enter, by legal subdivisions, any quantity of vacant coal lands of the United States not otherwise appropriated or reserved by competent authority, not exceeding one hundred and sixty acres to such individual person, or three hundred and twenty acres to such association upon payment to the receiver of not less than ten dollars per acre for such lands, where the same shall be situated more than fifteen miles from any completed railroad, and not less than twenty dollars per acre for such lands as shall be within fifteen miles of such road.

SEC. 2. That any person or association of persons severally qualified as above who have opened and improved, or shall hereafter open and improve, any coal mine or mines upon the public lands, and shall be in actual possession of the same, shall be entitled to a preference right of entry, under the foregoing provisions, of the mines so opened and improved: *Provided*, That when any association of not less than four persons, severally qualified as in section one of this act, shall have expended not less than five thousand dollars in working and improving any such mine or mines, such association may enter not exceeding six hundred and forty acres, including such mining improvements.

SEC. 3.—That all claims under section two of this act must be presented to the register of the proper land district within sixty days after the date of actual possession and the commencement of improvements on the land by the filing of a declaratory statement therefore: *Provided*, That when the township plat is not on file at the date of such improvement, filing must be made within sixty days from the receipt of such plat at the district office: *And, provided further*, That where the improvements shall have been made prior to the expiration of three months shall be allowed from the passage of this act, sixty days from the expiration of said three months shall be allowed for the filing of a declaratory statement, and no sale under the provisions of this act shall be allowed until the expiration of six months from the date hereof.

SEC. 4.—That this act shall be held to authorize only one entry by the same person or association of persons under its provisions; and no association of persons, any member of which shall have taken the benefit of this act either as an individual or as a member of any other association, shall enter or hold any other lands under the provisions of this act; and no member of any association which shall have taken the benefit of this act shall enter or hold any other lands under its provisions; and all persons claiming under section two hereof shall be required to prove their respective rights and pay for the lands filed upon within one year from the time prescribed for filing their respective claims; and upon failure to file the proper notice, or to pay for the land within the required period, the same shall be subject to entry by any other qualified applicant.

SEC. 5. That in case of conflicting claims upon lands where the improvements shall be hereafter commenced, priority of possession and improvement, followed by proper filing and continued good faith, shall determine the preference right to purchase; and also where improvements have already been made at the date of the passage of this act, division of the land claimed may be made by legal subdivisions, to include, as near as may be, the valuable improvements of the respective parties; and the Commissioner of the General Land Office shall be, and is hereby, authorized to issue all needful rules and regulations for carrying into effect the provisions of this act.

SEC. 6. That nothing in this act shall be construed to destroy or impair any rights which may have attached prior to its passage, or to authorize the sale of lands valuable for mines of gold, silver, or copper.

The Land Commissioner calls attention to the following points:

1. The sale of coal-lands is provided for—

1. By ordinary private entry under section 1.

2. By granting a preference right of purchase based on priority of possession and improvement under section 2.

2. The land entered under either section must be *by legal subdivisions*, as made by the regular United States survey. Entry is confined to surveyed lands; to such as are vacant, not otherwise appropriated, reserved by competent authority, or containing valuable minerals other than coal.

3. Individuals and associations may purchase. If an individual, he must be twenty-one years of age and a citizen of the United States, or have declared his intention to become such citizen.

4. If an association of persons, each must be qualified as above.

5. A person is not disqualified by the ownership of any quantity of other land, nor by having removed from his own land in the same State or Territory.

6. Any individual may enter by legal subdivisions as aforesaid any area not exceeding one hundred and sixty acres.

7. Any association may enter not to exceed three hundred and twenty acres.

8. Any association of not less than four persons, duly qualified, who shall have expended not less than $5,000 in working and improving any coal mine or mines, may enter under section 2 not exceeding six hundred and forty acres, including such mining improvements.

9. The price per acre is $10 where the land is situated *more* than fifteen miles from any completed railroad, and $20 per acre where the land is *within* fifteen miles of such road.

10. Where the land lies *partly within* fifteen miles of such road and in *part outside* such limit, the *maximum* price must be paid for all legal subdivisions the greater part of which lies within fifteen miles of such road.

11. The term "completed railroad" is held to mean one which is actually constructed on the face of the earth; and lands within fifteen miles of any point of a railroad so constructed will be held and disposed of at $20 per acre.

12. Any duly qualified person or association must be preferred as purchasers of those public lands on which they have opened and improved, or shall open and improve, any coal mine or mines, and which they shall have in actual possession.

13. Possession by agent is recognized as the possession of the principal. The clearest proof on the point of agency must, however, be required in every case, and a clearly-defined possession must be established,

14. The *opening and improving* of a coal mine, in order to confer a preference right of purchase, must not be considered as a mere matter of form; the labor expended and improvements made must be such as to clearly indicate the good faith of the claimant.

15. These lands are intended to be sold, where there are adverse claimants therefor, to the party who, by substantial improvements, actual possession, and a reasonable industry, shows an intention to continue his development of the mines in preference to those who would purchase for speculative purposes only. With this view, you will require such proof of compliance with the law, when lands are applied for under section 2 by adverse claimants, as the circumstances of each case may justify.

16. In conflicting claims, where improvement has been made *prior to March* 3, 1873, you will, if each party make subsequent compliance with the law, award the land *by legal subdivisions*, so as to secure to each as far as possible his valuable improvements; there being no provision in the act allowing a joint entry by parties claiming separate portions of the same legal subdivision.

17. In conflicts, when improvements, &c., have been commenced subsequent to March 3, 1873, or shall be hereafter commenced, priority of possession and improvement shall govern the award when the law has been fully complied with by each party. A mere possession, however, without satisfactory improvements, will not secure the tract to the first occupant when a subsequent claimant shows his full compliance with the law.

18. After an entry has been allowed to one party, you will make no investigation concerning it at the instance of any person except on instructions from this office. You will, however, receive all affidavits concerning such case and forward the same to this office, accompanied by a statement of the facts as shown by your records.

19. Prior to entry, it is competent for you to order an investigation, on sufficient grounds set forth under oath of a party in interest and substantiated by the affidavits of disinterested and credible witnesses.

20. Notice of contest, in every case where the same is practicable, must be made by reading it to the party to be cited and by leaving a copy with him. This notice must proceed from your office and be signed by the register or receiver. Where such personal service cannot be made by reason of the absence of the party, and because his whereabouts are unknown, a copy may be left at his residence, or, if this is unknown, by posting a copy in a conspicuous place on the tract in controversy, and by publication in a weekly newspaper having the largest general circulation in the vicinity of the land (where no newspaper shall be specified by this office) for five consecutive insertions, covering a period of four weeks next prior to the trial; and in each case requiring such notice a copy must be forwarded with the returns to this office, accompanied with proof of service by affidavit indorsed thereon.

21. In every case of contest, all papers in the same must be forwarded to this office for review before an entry is allowed to either party.

22. Thirty days from your decision will be allowed by you to enable any party to take an appeal, or file argument to be forwarded to this office.

23. No appeal will be entertained unless the same shall be forwarded through the district land-office.

24. The party may still further appeal from the decision of the Commissioner of the General Land Office to

the Secretary of the Interior. The appeal must be taken within sixty days after service of notice on the party. This may be filed with the district land-officers and by them forwarded, or it may be filed with the Commissioner, and must recite the points of exception.

25. If not appealed, the decision is by law, made final. (See section 10, act of June 12, 1858, United States Statutes, volume 11, page 326.) After appeal, thirty days are usually allowed for filing arguments, and the case is then sent to the Secretary, whose decision is final and conclusive.

26. Manner of obtaining title: First by private entry. The party will present the following application to the register, and will make oath to the same:

I, ——— ———, hereby apply, under the provisions of the act approved March 3, 1873, entitled "An Act to provide for the sale of the lands of the United States containing coal," to purchase the ——— quarter of section ———, in township ——— of range ———, in the district of lands subject to sale at the land office at ———, and containing ——— acres; and I solemnly swear that no portion of said tract is in the possession of any other party; that I am twenty-one years of age, a citizen of the United States (or have declared my intention to become a citizen of the United States), and have never held nor purchased lands under said act, either as an individual or as a member of an association; and I do further swear that I am well acquainted with the character of said described land, and with each and every legal subdivision thereof, having frequently passed over the same; that my knowledge of said land is such as to enable me to testify understandingly with regard thereto; that there is not to my knowledge within the limits thereof any vein or lode of quartz or other rock in place bearing gold, silver, or copper, and that there is not within the limits of said land, to my knowledge any valuable mineral deposit other than coal. So help me God.

——— ———

To this affidavit the register will append the usual jurat.

27. Thereupon the register, if the tract is vacant, will so certify to the receiver, stating the price, and the applicant must then pay the amount of purchase-money.

28. The receiver will then issue to the purchaser a duplicate receipt, and at the close of the month the register and receiver will make returns of the sale to the General Land Office, from whence, when the proceedings are found regular, a patent or complete title will be issued; and on surrender of duplicate receipt such patent will be delivered, at the option of the patentee, either by the Commissioner at Washington or by the register at the district land-office.

29. This disposition at private entry will be subject to any valid prior adverse right which may have attached to the same land, and which is protected by section 2.

30. Second. When the application to purchase is based on a priority of possession, &c., as provided for in section 2, the claimant must, when the township plat is on file in your office, file his declaratory statement for the tract claimed sixty days from and after the first day of his actual possession and improvement. Sixty days, exclusive of the first day of possession, &c., must be allowed.

31. The declaratory statement must be substantially as follows, to wit.

I, ——— ———, being ——— years of age, and a citizen of the United States, (or having declared my intention to become a citizen of the United States,) and never having, either as an individual or as a member of an association, held or purchased any coal-lands under the act approved March 3, 1873, entitled "An Act to provide for the sale of the land of the United States containing coal," do hereby declare my intention to purchase, under the provisions of said act, the ——— quarter of section ———, in township ——— of range ———, of lands subject to sale at the district land-office at ———, and that I came into possession of said tract on the ——— day of ———, A. D. 18—, and have ever since remained in actual possession continuously, and have expended in labor and improvements on said mine the sum of ——— dollars, the labor and improvements being as follows: (here describe the nature and character of the improvements;) and I do furthermore solemnly swear that I am well acquainted with the character of said described land, and with each and every legal subdivision thereof, having frequently passed over the same; that my knowledge of said is such as to enable me to testify understandingly with regard thereto; that there is not, to my knowledge, within the limits thereof any vein or lode of quartz or other rock in place bearing gold, silver, or copper, and that there is not within the limits of said land, to my knowledge, any valuable mineral deposit other than coal.

——— ———

32. When the township plat is not on file at date of claimant's first possession the declaratory statement must be filed within sixty days from the filing of such plat in your office.

33. When improvements shall have been made prior to June 4, 1873, the declaratory statement must be filed within sixty days from that date.

34. No sale under this act will be allowed by you prior to September 4, 1873. One year from and after the expiration of the period allowed for filing the declaratory statement is given within which to make proof and payment, but you will allow no party to make final proof and payment, except on notice as aforesaid to all others who appear on your records as claimants to the same tracts.

35. A party who otherwise complies with the law may enter *after* the expiration of said year, *provided* no valid adverse right shall have intervened. He postpones his entry beyond said year at his own risk, and the Government cannot thereafter protect him against another who complies with the law, and the value of his improvements can have no weight in his favor.

36. One person can have the benefit of one entry or filing *only*. He is disqualified by having made such entry or filing alone, or as a member of an association. No entry can be allowed an association which has in it a single person thus disqualified, as the law prohibits the entry or holding of more than one claim either by an individual or an association. You are to allow no entry, under this act, of lands containing other valuable minerals. You will determine the character of the land under the present rules relative to agricultural and mineral lands. Those that are sufficiently valuable for other minerals to prevent their entry as agricultural lands cannot be entered under this act.

37. Assignments of the right to purchase under this act will be recognized when properly executed. Proof and payment must be made, however, within the prescribed period, which dates from the first day of the possession of the assignor who initiated the claim.

38. You will so construe this act in its application as not to destroy or impair any rights which may have attached prior to March 3, 1873. Those persons who may have initiated a valid claim under any prior law relative to coal-lands will be permitted to complete their entries under the same.

39. You will report at the close of each month as "sales of coal-lands" all filings and entries under this act in separate abstracts, commencing with number *one*, and thereafter proceeding consecutively in the order of their reception. Where a series of numbers has already been commenced by sale of coal-lands you will continue the same without change. The affidavit required from each claimant at the time of actual purchase will be as follows, to wit:

I, ——— ———, claiming the right of purchase under the act of Congress entitled "An Act to provide for the sale of the lands of the United States containing coal," approved March 3, 1873, to the ——— quarter of section ———, in township ——— of range ———, subject to sale at ———, do solemnly swear that I have never had the right of purchase under this act, either as an individual or as a member of an association, and that I have never held any other lands under its provisions; I further swear that I have expended in developing coal mines on said tract in labor and improvements the sum of ——— dollars, the nature of such improvements being as follows: ——— ——— ———; that I am now in the actual possession of said mines, and make the entry for my own use and benefit, and not directly or indirectly for the use and benefit of any other party; and I do furthermore swear that I am well acquainted with the character of said described land, and with each and every legal subdivision thereof, having frequently passed over the same; that my knowledge of said land is such as to enable me to testify understandingly with regard thereto; that there is not, to my knowledge, within the limits thereof any vein or lode of quartz or other rock in place bearing gold, silver, or copper, and that there is not within the limits of said land, to my knowledge, any valuable mineral deposit other than coal. So help me God.

——— ———.

I, ——— ———, of the land office at ———, do hereby certify that the above affidavit was sworn and subscribed to before me this ——— day of ———, A. D. 18—.

——— ———.

40. In case the purchaser shows by an affidavit that he is not personally acquainted with the character of the land, his duly authorized agent who possesses such knowledge may make the required affidavit as to its character; but whether this affidavit is made by principal or agent, it must be corroborated by the affidavits of two disinterested and credible witnesses having knowledge of its character.

MINES ON THE PUBLIC DOMAIN.

THE precious-metal bearing States and Territories of the public domain are California, Colorado, Oregon, Nevada, Idaho, Montana, Wyoming, Utah, New Mexico, Arizona, Dakota and Washington. Lead and copper lands in Arkansas, Missouri, Iowa, Michigan, Minnesota and Wisconsin were sold under special mining laws, the mineral being conveyed with the soil, and are included in cash entries. Under the acts of 1866 and 1872, and the placer act, there have been patented to June 30, 1880, 3,978 lode or vein claims, containing 38,435.11 acres, at $5 per acre, realizing $197,778, and 1,303 placer claims, containing 110,186.03 acres, at $2.50 per acre, realizing $288,767; total, 5,281 claims, containing 148,621.14 acres, and realizing $486,545.

Mineral Reservations in Northwest Territory.—In the ordinance of May 20, 1785, for the disposal of lands in the "Western Territory," it is ordered that there shall be reserved "one-third part of all gold, silver, lead and copper mines, to be sold, or otherwise disposed of as Congress shall hereafter direct," the deed to be given by the Commissioners of the Loan Office, with a clause of reservation in the words of the act. The mineral resources of the country at that time were but little known. Our present Western precious metal regions, and the base-metal belt of the Mississippi, were almost entirely within the domain of France and Spain. The copper regions of Lake Superior had just come into possession of the United States by the definitive treaty of peace with Great Britain. Some gold and lead had been found in the southern colonies—now states—but not on public domain, and economic minerals were but little known or used. The reserving clause in the ordinance of 1785 suggests the reservations as to minerals, by way of royalty or sovereign dues, in some of the crown charters for colonization in America, and further shows the existing doubt as to the policy of the Government in relation to holding, leasing, or selling mines and mineral lands.

Congressional Action.—By resolution of April 16, 1800, Congress authorized the President to employ an agent to collect material information relative to the copper mines on the south side of Lake Superior. This contained a clause "and to ascertain whether the Indian title to such lands as might be required for the use of the United States in case they should deem it expedient to work the said mines, had been extinguished." Thus Congress at this period seems to have had in mind the direct working and control of mines by the United States. March 3, 1807, Congress, by section 5 of an act for the sale of certain lands now in Ohio and Indiana, provided that lead mines in Indiana, with as many contiguous sections of land to each as the President might deem necessary, should be reserved for future disposal by the United States; and—

Any grant which may hereafter be made for a tract of land containing a lead mine which has been discovered previous to the purchase of such tract from the United States shall be considered fraudulent and null; and the President of the United States shall be, and is hereby, authorized to lease any lead mine which has been or may hereafter be discovered in the Indian Territory, for a term not exceeding five years.

This inaugurated the policy of the United States of leasing mineral lands. It will be noted that this reserving clause contained a proviso for reserving lands for mine easements. These reserved adjacent sections were afterwards used by the lessees for dumpage-grounds, and the timber thereupon used for smelting. The leases provided for this, Congress, March 25, 1816, in an act relating to settlers on the public lands of the United States, provided—

That in all cases where the tract of land applied for includes either a lead mine or salt spring, no permission to work the same shall be granted without the approbation of the President of the United States.

This provision of law was continued by two separate acts until March 3, 1819. The House of Representatives, February 8, 1823, by resolution, asked for information in regard to the mining regions of the West. The President in reply transmitted such information as he at that time had (see Ex. Doc. 128, first session Eighteenth Congress). This Congressional inquiry and the reply related to lands containing base metal and iron. By act of March 3, 1829, Congress conferred authority on the President to expose to sale as other public lands "the reserved lead mines and contiguous lands in the State of Missouri," with this qualification, that at least six months' public notice should be given, "with a brief description of the mineral region in Missouri and the lands to be offered for sale, showing the number and the localities of the different mines (then) known, the probability of discovering others, the quality of the ore, the facilities for working it, the further facilities if any, for manufactures of shot, sheet lead, and paints, and the means and expense of transporting the whole to the principal markets of the United States."

February 6, 1839, the House of Representatives—

Resolved, That the President be requested to cause to be prepared a plan for disposal of the public mineral lands, having reference as well to the amount of revenue to be derived from them, and their value as public property, as to the equitable claims of individuals upon them; and that he communicate to Congress all the information in the possession of the Treasury Department relative to their location, value, productiveness, and occupancy, and that he cause such further information to be collected and surveys to be made as may be necessary for this purpose.

Dr. David Dale Owen explored the Territories of Iowa and Wisconsin, by order of the President, under this resolution. (See report of Dr. Owen, Ex. Doc. No. 239, First session Twenty-sixth Congress.) In the pre-emption act September 4, 1841, section 10 provided that "No lands on which are situated any known salines or mines shall be liable to entry under and by virtue of the provisions of this act." In United States *v.* Gear (3 How., 120), the Supreme Court of the United States, 1845, held that the act of June 26, 1834, did not subject lead mines to ordinary sale or pre-emption in certain districts thereby created.

Executive Action as to Mines.—President Polk, December 2, 1845, in his first annual message said:

The present system of managing the mineral lands of the United States is believed to be radically defective. More than a million acres of the public lands, supposed to contain lead and other minerals, have been reserved from sale, and numerous leases upon them have been granted to individuals upon a stipulated rent. The system of granting leases has proved to be not only unprofitable to the Government, but unsatisfactory to the citizens who have gone upon the lands, and must, if continued, lay the foundation of much future difficulty between the Government and the lessees. According to the official records, the amount of rents received by the Government for the years 1841, 1842, 1843, and 1844, was $6,354.74, while the expenses of the system during the same period, including salaries of the superintendents, agents, clerks, and incidental expenses, were $26,111.11, the income being less than one-fourth of the expense. To this pecuniary loss may be added the injury sustained by the public in consequence of the destruction of timber, and the careless and wastful manner of working the mines. The system has given rise to much litigation between the United States and individual citizens, producing irritation and excitement in the mineral region, and involving the Government in heavy additional expenditures. It is believed that similar losses and embarrassments will continue to occur while the present system of leasing these lands remains unchanged. These lands are now under the superintendence and care of the War Department, with the ordinary duties of which they have no proper or natural connection. I recommend the repeal of the present system, and that these lands be placed under the superintendence and management of the General Land Office as other public lands, and be brought into market and sold upon such terms as Congress in their wisdom may prescribe, reserving to the Government an equitable percentage of the gross amount of mineral product, and that the pre-emption principle be extended to resident miners, and settlers upon them, at the minimum price which may be established by Congress.

April 18, 1876, the Attorney-General of the United States, in an opinion respecting the mineral lands on Isle Royal, Lake Superior, held, that "salines, gold, silver, lead, and copper mines" were reserved for "future disposal of Congress."

Cash Sales of Mineral Lands Ordered.—By act approved 11th July, 1846, Congress ordered "the reserved lead mines and contiguous lands in the States of Illinois and Arkansas and" then "Territories of Wisconsin and Iowa" to be exposed to sale as other public lands, with the exception: that six months' notice be given, with brief description of the mineral region, as required by the act of 1829 respecting Missouri; stipulating further that such lands should not be subject to pre-emption until after public offering, and subject to private entry; that upon proof to the register and receiver of any tract containing lead ore, and of being so worked, no bid should be received at less than $2.50 per acre, but if not sold at that price, nor entered at private sale within twelve months thereafter, to be subject to sale as other public lands. (See D. D. Owen's survey.)

By an act of 1st March, 1847, Congress ordered the organization of the Lake Superior district in the upper peninsula of Michigan, directed that a geographical examination and survey be made of those lands, and conferred authority on the President for the public sale, after six months' notice, of such land as contained "copper, lead, or other valuable ores," with description of locality of mines, &c., the minimum price at public sale to be $5 per acre, and where not thus disposed of at public auction, to be subject to private sale at that price. (See Foster and Whitney's survey.) By the act of 3d March, 1847, the Chippewa land district in Wisconsin was organized, a geological examination and survey ordered, and the lands disposed of in like manner to those in the Lake Superior district, in Michigan. Congress March 3, 1849, created the Department ("Home Department") of the Interior, and thereafter the supervision of mineral lands was transferred to the General Land Office in that Department.

Mineral Lands in Charge of the War Department.—The act of July 11th, 1846, and March 1st and 3d, 1847, made a radical change in the method of disposition of mineral lands on the public dominion, abolished leases, and substituted cash sales. The act of 1849 transferred the charge of these lands from the War Department, where they had been since the ordinance of Congress of 1785, to the Department of the Interior. August 28th, 1850, the Attorney-General of the United States held that public lands containing "iron ore merely" are not the "mineral lands" referred to in the second section of the act of March 1st, 1847 (act for the sale of copper, lead, or other valuable ores in Lake Superior district). The act of 26th September, 1850, ordered the mineral lands in the Lake Superior district in Michigan, and Chippewa district in Wisconsin, to be offered at public sale in the same manner, at the minimum, and with same rights of pre-emption as other public lands, but not to interfere with leased rights.

The Discovery of Gold in California.—The discovery of gold at Coloma, Cal., by John W. Marshall, January 19, 1848, necessitated a change in the mineral laws of the United States. Copper, lead, and iron had prior to this been the minerals for which the laws were made. In the ordinance of 1875 gold and silver were reserved out of abundant caution, but now gold had actually been discovered on the public domain, and legislation was necessary. President Fillmore, in his annual message of December 2, 1849, said:

> I also beg leave to call your attention to the propriety of extending at an early day our system of land laws, with such modifications as may be necessary, over the State of California and the Territories of Utah and New Mexico. The mineral lands of California will, of course, form an exception to any general system which may be adopted. Various methods of disposing of them have been suggested. I was at first inclined to favor the system of leasing, as it seemed to promise the largest revenue to the Government and to afford the best security against monopolies, but further reflection and our experience in leasing the lead mines and selling lands upon credit have brought my mind to the conclusion that there would be great difficulty in collecting the rents, and that the relation of debtor and creditor between the citizens and the Government would be attended with many mischievous consequences. I therefore recommend that instead of retaining the mineral lands under the permanent control of the Government, they be divided into small parcels and sold, under such restrictions as to quantity and time as will insure the best price and guard most effectually against combinations of capitalists to obtain monopolies.

December 3, 1849, the Secretary of the Interior, Hon. Thomas Ewing, calling attention of Congress to the discovery of gold in California, said:

> The right to the mines of precious metals, which, by the laws of Spain, remained in the Crown, is believed to have been also retained by Mexico while she was sovereign of the territory, and to have passed by her transfer to the United States. It is a right of the sovereign in the soil as perfect as if it had been expressly reserved in the body of the grant; and it will rest with Congress to determine whether, in those cases where lands duly granted contain gold, this right shall be asserted or relinquished. If relinquished, it will require an express law to effect the object, and if retained, legislation will be necessary to provide a mode by which it shall be exercised. For it is to be observed that the regulation permitting the acquisition of a right in the mines by registry or by denouncement was simply a mode of exercising by the sovereign the proprietary right which he had in the treasure as it lay in and was connected with the soil. Consequently, whenever that right was transferred by the transfer of the eminent domain, the mode adopted for its exercise ceased to be legal, for the same reason that the Spanish mode of disposing of the public lands in the first instance ceased to be legal after the transfer of the sovereignty.
>
> Thus it appears that the deposits of gold, wherever found in the Territory, are the property of the United States. Those, however, which are known to exist upon the lands of individuals are of small comparative importance, by far the larger part being upon unclaimed public lands. Still our information respecting them is yet extremely limited; what we know in general is that they are of great extent and extraordinary productiveness, even though rudely wrought.
>
> * * * * * * * *
>
> No existing law puts it in the power of the Executive to regulate these mines, or protect them from intrusion. Hence, in addition to our own citizens, thousands of persons, of all nations and languages, flock in and gather gold, which they carry away to enrich themselves, leaving the lands the less in value by what they have abstracted, and they render for it no remuneration, direct or indirect, to the Government or people of the United States. Our laws, so strict in the preservation of public property that they punish our own citizens for cutting timber upon the public lands, ought not to permit strangers, who are not and who never intend to become citizens, to enter at pleasure on these lands, and take from them the gold which constitutes nearly all their value.
>
> Some legal provision is necessary for the protection and disposition of these mines, and it is a matter worthy of much consideration how they should be disposed of so as best to promote the public interest and encourage individual enterprise. In the division of these lands regard should be had to the convenience of working every part of them containing gold, whether in the alluvion merely or in the fixed rocks. And, that such division may be made in the best manner practicable to promote the general interest and increase the value of the whole, a geological and mineralogical exploration should be connected with the linear surveys, which should be made with the assistance and under the supervision of a skilful engineer of mines. The mining ordinances of Spain provide a mode of laying out the mines, which applies only to districts where veins of ore occur in the rocks, and where it is to be mined by following the metalliferous dike or stratum in the direction of its dip, and along its line of strike. But the gold which is found in the alluvion in California is continuous over a great extent of country, and it may be wrought upon any lot having surface earth and access to water. This district may be, therefore, divided into small lots, with a narrow front on the margin of the streams, and extending back in the form of a parallelogram. Where gold is found in the rocks *in situ*, the lots to embrace it should be larger, and laid off according to the Spanish method with regard to dip and strike. But so various are the conditions under which the precious metals may be found by a careful geological exploration, that the mode of laying off the ground cannot be safely anticipated, but must be left to the direction, on the spot, of a skilful engineer, whose services will be indispensable. The division, disposition, and management of these mines will require much detail; but, if placed on a proper footing, they may be made a source of considerable revenue. It is due to the Nation at large that this rich deposit of mineral wealth should be made productive, so as to meet, in process of time, the heavy expense incurred in its acquisition. It is also due to those who become the lessees or purchasers of the mines that they should be furnished by the Government with such scientific aid and directions as may enable them to conduct their operations not only to the advantage of the Treasury, but also with convenience and profit to themselves. This scientific aid cannot be procured by individuals, as our people have little experience in mining, and there is not, in the United States, a school of mines, or any in which mining is taught as a separate science. If the United States sell the mineral lands for cash, and transfer at once all title to the gold which they contain, but a very small part of their value will probably be realized. It would be better, in my opinion, to transfer them by sale or lease, reserving a part of the gold collected as rent or seignorage. After mature reflection, I am satisfied that a mint at some convenient point will be advantageous to the miner, and the best medium for the collection and transmission of the gold reserved. Gamboa, a Spanish author of much science and practical observation, and at one time president of the Royal Academy of Mexico, strongly recommended the establishment of a mint in their principal mining district, as a means of collecting and transmitting the rents reserved by the Crown, and especially to give a legitimate currency to the miners, that they might not be compelled from necessity to barter their bullion in violation of law. The same reason would apply here with equal force. When the land is properly divided, it will, in my opinion, be best to dispose of it, whether by lease or sale, so as to create an estate to be held only on condition that the gold

collected from the mine shall be delivered into the custody of an officer of the branch mint. Out of the gold so deposited, there should be retained for rent and assay, or coinage, a fixed per cent., such as may be deemed reasonable, and the residue passed to the credit of the miner, and paid to him at his option in coin or stamped bullion, or its value in drafts on the Treasury or mint of the United States. The gold in the mine, and after it is gathered, until brought into the mint, should be and remain the property of the United States. The barter, sale, gift, or exportation of any portion of it before it shall have been delivered at the mint, and so coined, or assayed and stamped, or its concealment with intent to avoid the payment of rent or seignorage, should involve a forfeiture of the gold itself, and also of the mine. The terms of lease or sale should be favorable to the miner, and the law should be stringent to enforce the payment of seignorage or rents. So far as the surface deposits extend, I am of opinion that leases will, for yet a further reason, be preferable to the sales of lands. If sold, they will pass at once into the hands of large capitalists; if leased, industrious men without capital may become the proprietors, as they can work the mines and pay the rent out of the proceeds. But where gold is found in the rocks in place, the case is different. These must necessarily fall at once into the hands of large capitalists or joint stock companies, as they cannot be wrought without a heavy investment. Some persons, whose opinions are entitled to much weight, apprehend difficulty in collecting the rents, if the mode of disposition which I suggest be adopted; but this, I think, is without a full consideration of the condition of the country and the means of enforcement. Gold, unless coined or stamped at the mint, could not circulate in California against a legal provision, and subject to a penalty such as is suggested. It could not be carried across the continent without risk of loss or detection, which would make the value of insurance equal to the rent. In any other direction it must pass the ports of California, and be there liable to detection. Since the discovery of the mines, gold in California has not ranged higher than $16 per ounce; its actual value is a fraction over $18. The difference between its true value and the highest price at which it has sold, or would probably ever sell, except to houses transacting an open, regular and legal business, is therefore *one-ninth*, being more than half the amount that ought to be reserved as rent or seignorage. If the penalty suggested above should be provided for an attempted evasion, and the ordinary advantages given to the officer or other person who should detect the fraud, as in case of smuggling, it would not be the interest of any one to become a dealer in the prohibited article at a small profit and great risk; nor would the miner risk a sale at a small advance of price, to be obtained at the hazard of a heavy forfeiture. The absolute security of the lawful business, the safety of the fund when deposited in the Treasury of the United States, and the small profit and great risk of attempted frauds, would be reasonable security against them. The property of the United States in the mines of quicksilver, derived from Spain through Mexico, with the eminent domain, is, as I have shown, the same as that to the gold, already considered. Indeed, the laws of Spain asserted more sternly and guarded more strictly the rights of the Crown to that metal than to gold and silver. This arose from the scarcity of quicksilver, it being found in sufficient quantities to be worth mining in but few known places on the globe; while its necessary use in separating silver from its matrix, makes it an essential ingredient in silver mining operations.

Congressional action as to Metals on the Pacific Slope.—Congress, in the act of 27th September, 1850, creating the office of surveyor-general of Oregon, and providing for surveys and making donations to settlers, directs that "no mineral lands, nor lands reserved for salines, shall be liable to any claim under and by virtue of the provisions of that act." This embraces the present Washington Territory. Then, in the 14th article of the treaty with Peru, concluded on 26th July, 1851, it is agreed upon that "Peruvian citizens shall enjoy the same privileges in frequenting the mines, and in digging or working for gold upon the public lands situated in the State of California, as are or may hereafter be accorded by the United States of America to the citizens or subjects of the most friendly nations." Subsequently Congress, in providing by the act of 3rd March, 1853, "for the survey of public lands in California, the granting pre-emption rights therein, and for other purposes," directed that "none other than township lines shall be surveyed where the lands are mineral or are deemed unfit for cultivation;" excluding in express terms "mineral lands" from the pre-emption act of 4th September, 1841, and further interdicting "any person" from obtaining "the benefits of this act by a settlement or location on mineral lands." By the fourth section of the act of 22d July, 1854, to establish "the offices of surveyors-general of New Mexico. Kansas, and Nebraska, to grant donations to actual settlers therein, and for other purposes," it is directed that "none of the provisions of that act shall extend to mineral or school lands, salines, military or other reservations, or lands settled on and occupied for purposes of trade and commerce and not agriculture." The Attorney-General's opinion of February 14, 1866, states that Congress had not then made any provision concerning mineral lands in California, except reserving from pre-emption and donation. The act of July 4, 1866, giving authority for varying surveys in Nevada from "rectangular form to suit the circumstances of the country," reserves from sale "in all cases lands valuable for mines of gold, silver, quicksilver, or copper."

Local Mining Laws in California.—From the discovery of rich gold fields in California, January 19, 1848, to July 26, 1866, there was no mining law of the United States relating to the precious metals on the public domain other than those above set out; and the mineral lands of the United States, copper, lead, &c., had all been disposed of, under the above laws, in blocks conforming to legal subdivisions of the surveys, the soil carrying with it the minerals. In California the Spanish and Mexican law and miners' usage were the law. The fee of the land was in the United States, but the occupancy or the equitable title was recognized by Congress, by resolution of February 27, 1865, which first called attention thereto. Local usage and regulations governed mining camps and towns and regulated the size and conditions of working mining claims. These regulations first applied to placer mining, and afterwards extended over and included quartz claims. The rush of emigrants to California after Marshall's discovery was first from Oregon, Mexico, and the Sandwich Islands. Then followed the emigrants from the older States of the Union. The Mexican miner and Georgia gold-washer joined hands, and local usage, consent, and mutual agreement made law. In 1847 the population of California was estimated at 15,000. In 1850 it was 100,000, and the average increase annually for five or six years was 50,000 souls. There was no Territorial or Congressional form of Government. The military of the United States were in control, enforcing the laws found in existence there when the country came to the United States under the treaty of Gaudalupe Hidalgo, in 1848, and thus continued until December 20, 1849, the date of the organization of the State Government. The condition of the placer mining regions of California in 1848 is shown by the following report made to the Adjutant-General United States Army, by Col. R. B. Mason, First United States Dragoons.

REPORT OF COL. R. B. MASON ON THE GOLD-FIELDS OF CALIFORNIA.

HEADQUARTERS TENTH MILITARY DEPARTMENT,
Monterey, Cal., August, 17, 1848.

SIR:—I have the honor to inform you that, accompanied by Lieut. W. T. Sherman, Third Artillery, acting Assistant Adjutant-General, I started on the 12th of June last to make a tour through the northern part of California. My principal purpose, however, was to visit the newly-discovered gold placer in the valley of the Sacramento.

I had proceeded about forty miles when I was overtaken by an express, bringing me intelligence of the arrival at Monterey of the United States storeship Southampton, with important letters from Commodore Shubrick and Lieutenant-Colonel Burton. I returned at once to Monterey, and dispatched what business was most important, and on the 17th resumed my journey. We reached San Francisco on the 20th, and found that all, or nearly all, its male population had gone to the mines. The town, which a few months before was so busy and thriving, was then almost deserted. On the evening of the 24th the horses of the escort were crossed to Sansolito in a launch, and on the following day we resumed the journey, by way of Bodega and Sonoma, to Sutter's Fort, where we arrived on the morning of the 2d of July. Along the whole route mills were lying idle, fields of wheat were open to cattle and horses, houses vacant and farms going to waste. At Sutter's there was more life and business. Launches were discharging their cargoes at the river, and carts were hauling goods to the fort, where already were established several stores, a hotel, etc. Captain Sutter had only two mechanics in his employ—a wagon-maker and a blacksmith—whom he was then paying $10 per day. Merchants pay him a monthly rent of $100 per room, and whilst I was there a two-story house in the fort was rented as a hotel for $500 a month.

At the urgent solicitation of many gentlemen, I delayed there to participate in the first public celebration of our national anniversary at that fort, but on the 5th resumed the journey and proceeded 25 miles up the American Fork, to a point on it now known as the lower mines, or Mormon diggings. The hillsides were thickly strewn with canvas tents and bush arbors. A store was erected, and several boarding-shanties in operation. The day was intensely hot; yet about 200 men were at work in the full glare of the sun, washing for gold, some with tin pans, some with close-woven Indian baskets, but the greater part had a rude machine known as the cradle. This is on rockers 6 or 8 feet long, open at the foot, and at its head has a coarse grate and sieve; the bottom is rounded, with small cleets nailed across. Four men are required to work this machine; one digs the gravel in the bank close by the stream, another carries it to the cradle and empties it on the grate, a third gives a violent rocking motion to the machine, whilst a fourth dashes water on from the stream itself. The sieve keeps the coarse stones from entering the cradle, the current of water washes off the earthy matter, and the gravel is gradually carried out at the foot of the machine, leaving the gold mixed with fine, heavy black sand above the first cleets. The sand and gold, mixed together, are then drawn off through auger holes into a pan below, are dried in the sun, and afterwards separated by blowing off the sand. A party of four men thus employed at the lower mines averaged $100 a day. The Indians and those who have nothing but pans or willow baskets, gradually wash out the earth and separate the gravel by hand, leaving nothing but the gold mixed with sand, which is separated in the manner before described. The gold in the lower mines is in fine bright scales, of which I send several specimens. As we ascended the south branch of the American Fork the country became more broken and mountainous, and at the saw-mill, 25 miles above the lower washings, or 50 miles from Sutter's, the hills rise to about 1,000 feet above the level of the Sacramento plain. Here a species of pine occurs, which led to the discovery of the gold. Captain Sutter feeling the great want of lumber, contracted, in September last, with a Mr. Marshall to build a saw-mill at that place. It was erected in the course of the past winter and spring—a dam and race constructed; but when the water was let on the wheel, the tail race was found to be too narrow to permit the water to escape with sufficient rapidity. Mr. Marshall, to save labor, let the water directly into the race, with a strong current, so as to wash it wider and deeper. He effected his purpose, and a large bed of mud and gravel was carried to the foot of the race. One day Mr. Marshall, when walking down to the race to this deposit of mud, observed some glittering particles at its upper edge; he gathered a few, examined them, and became satisfied of their value. He then went to the fort, told Captain Sutter of his discovery, and they agreed to keep it secret until a certain grist-mill of Sutter's was finished. It, however, got out and spread like magic. Remarkable success attended the labors of the first explorers, and in a few weeks hundreds of men were drawn thither. At the time of my visit, but little more than three months after its first discovery, it was estimated that upwards of 4,000 people were employed. At the mill there is a fine deposit, or bank of gravel, which the people respect as the property of Captain Sutter, although he pretends to no right to it, and would be perfectly satisfied with the simple promise of pre-emption, on account of the mill which he has built there, at considerable cost. Mr. Marshall was living near the mill, and informed me that many persons were employed above and below him, that they used the same machines as at the lower washings, and that their success was about the same, ranging from 1 to 3 ounces of gold per man daily. This gold too is in scales, a little coarser than those of the lower mines. From the mills Mr. Marshall guided me up the mountain, on the opposite or north bank of the South Fork, where, in the beds of small streams, or ravines, now dry, a great deal of the coarser gold has been found. I there saw several parties at work, all of whom were doing very well. A great many specimens were shown me, some as heavy as 4 or 5 ounces in weight: and I send three pieces, labeled No. 5, presented by a Mr. Spence. You will perceive that some of the specimens accompanying this hold, mechanically, pieces of quartz, that the surface is rough, and evidently molded in the crevice of a rock. This gold cannot have been carried far by water, but must have remained near where it was deposited from the rock that once bound it. I inquired of many people if they had encountered the metal in its matrix, but in every instance they said they had not, but that the gold was invariably mixed with washed gravel, or lodged in the crevices of other rocks. All bore testimony that they had found gold in greater or less quantities in the numerous small gullies or ravines that occur in that mountainous region. On the 7th of July I left the mill and crossed to a small stream emptying into the American Fork, 3 or 4 miles below the saw-mill. I struck this stream (now known as Weber's Creek) at the washings of Sunal & Co, They had about thirty Indians employed, whom they pay in merchandise. They were getting gold of a character similar to that found in the main fork, and doubtless in sufficient quantities to satisfy them. I send you a small specimen, presented by this company of their gold. From this point we proceeded up the stream about 8 miles, where we found a great many people and Indians; some engaged in the bed of the stream, and others in the small side valleys that put into it. These latter are exceedingly rich, and 2 ounces were considered an ordinary yield for a day's work. A small gutter, not more than 100 yards long by 4 feet wide and 2 or 3 feet deep, was pointed out to me as the one where two men, William Daly and Perry McCoon, had, a short time before, obtained in seven days $17,000 worth of gold.

Captain Weber informed me that he knew that these two men had employed four white men and about a hundred Indians, and that, at the end of one week's work, they paid off their party and had left with $10,000 worth of this gold. Another small ravine was shown me from which had been taken $12,000 worth of gold. Hundreds of similar ravines, to all appearances, are as yet untouched. I could not have credited these reports had I not seen, in the abundance of the precious metal, evidence of their truth. Mr. Neligh, an agent of Commodore Stockton, had been at work about three weeks in the neighborhood, and showed me, in bags and bottles, over $2,000 worth of gold; and Mr. Lyman, a gentleman of education and worthy of every credit, said he had been engaged, with four others, with a machine on the American Fork, just below Sutter's saw-mill, that they worked eight days, and that his share was at the rate of $50 a day; but, hearing that others were doing better at Weber's place, they had removed there, and were then on the point of resuming operations.

I might tell of hundreds of similar instances: but, to illustrate how plentiful gold was in the pockets of common laborers, I will mention a simple occurrence which took place in my presence when I was at Weber's store. This store was nothing but an arbor of business, under which he had exposed for sale goods and groceries suited to his customers. A man came in, picked up a box of seidlitz powders, and asked its price. Captain Weber told him it was not for sale. The man offered an ounce of gold, but Captain Weber told him that it only cost 50 cents, and he did not wish to sell it. The man then offered an ounce and a half, when Captain Weber *had* to take it. The prices of all things are high; and yet Indians, who before hardly knew what a breech-cloth was, can now afford to buy the most gaudy dresses. The country on either side of Weber's Creek is much broken up by hills, and is intersected in every direction by small streams or ravines, which contain more or less gold. Those that have been worked are barely scratched, and, although thousands of ounces have been carried away, I do not consider that a serious impression has been made upon the whole. Every day was developing new and rich deposits, and the only apprehension seemed to be that the metal would be found in such abundance as seriously to depreciate in value. On the 8th of July I returned to the lower mines, and on the following day to Sutter's, where, on the 10th, I was making preparations for a visit to the Feather, Yubah, and Bear Rivers, when I received a letter from Commodore A. R. Long, United States Navy, who had just arrived at San Francisco from Mazatlan, with a crew for the sloop-of-war Warren, and with orders to take that vessel to the squadron at La Paz. Captain Long wrote to me that the Mexican Congress had adjourned without ratifying the treaty of peace, that he had letters for me from Commodore Jones, and that his orders were to sail with the Warren on or before the 20th of July. In consequence of these, I determined to return to Monterey, and accordingly arrived here on the 17th of July. Before leaving Sutter's I satisfied myself that gold exists in the bed of the Feather River, in the Yubah and Bear, and in many of the small streams that lie between the latter and the American Fork; also that it had been found in the Cosumnes to the south of the American Fork. In each of those streams the gold is found in small scales, whereas in the intervening mountains it occurs in coarse lumps.

Mr. Sinclair, whose ranche is 3 miles above Sutter's, on the north side of the American, employs about 50 Indians on the North Fork, not far from its junction with the main stream. He had been engaged about five weeks when I saw him, and up to that time his Indians had used simply closely-woven willow baskets. His net proceeds (which I saw) were about $16,000 worth of gold. He showed me the proceeds of his last week's work—fourteen pounds avoirdupois of clean washed gold. The principal store at Sutter's Fort, that of Brannant & Co., had received in payment for goods $36,000 worth of this gold from the 1st of May to the 10th of July; other merchants had also made extensive sales. Large quantities of goods were daily sent forward to the mines, as the Indians, heretofore so poor and degraded, have suddenly become consumers of the luxuries of life. I before mentioned that the greater part of the farmers and rancheros had abandoned their fields to go to the mines; this is not the case with Captain Sutter, who was carefully gathering his wheat, estimated at 40,000 bushels. Flour is already worth at Sutter's $36 a barrel, and soon will be $50. Unless large quantities of bread-stuffs reach the country, much suffering will occur: but as each man is able to pay a large price, it is believed the merchants will bring from Chili and Oregon a plentiful supply for the coming winter. The most moderate estimate I could obtain from men acquainted with the subject was that upwards of 4,000 men were working in the gold district, of whom more than half were Indians, and that from $30,000 to $50,000 worth of gold, if not more. was daily obtained. The entire gold district, with very few exceptions of grants made some years ago by the American authorities, is on land belonging to the United States. It was a matter of serious reflection with me how I could secure to the Government certain rents or fees for the privilege of procuring this gold; but, upon considering the large extent of country, the character of the people engaged, and the small scattered force at my command, I resolved not to interfere, but permit all to work freely, unless broils and crimes should call for interference. I was surprised to learn that crime of any kind was very unfrequent, and that no thefts or robberies had been committed in the gold district. All live in tents, in bush-houses, or in the open air, and men have frequently about their persons thousands of dollars' worth of this gold; and it was to me a matter of surprise that so peaceful and quiet a state of things should continue to exist. Conflicting claims to particular spots of ground may cause collisions, but they will be rare, as the extent of country is so great, and the gold so abundant, that for the present there is room and enough for all; still the Government is entitled to rents for this land, and immediate steps should be devised to collect them, for the longer it is delayed, the more difficult it will become. One plan I would suggest is to send out from the United States surveyors, with high salaries, bound to serve specified periods; a superintendent to be appointed at Sutter's Fort, with power to grant licenses to work on a spot of ground, say 200 yards square, for one year, at a rent of from $100 to $1,000, at his discretion; the surveyors to measure the grounds and place the renter in possession. A better plan, however, will be to have the district surveyed and sold at public auction to the highest bidder, in small parcels, say from 20 to 40 acres. In either case there will be many intruders, whom for years it will be almost impossible to exclude.

The discovery of these vast deposits of gold has entirely changed the character of Upper California. Its people, before engaged in cultivating their small patches of ground and guarding their herds of cattle and horses, have all gone to the mines, or are on their way thither; laborers of every trade have left their work-benches, and tradesmen their shops; sailors desert their ships as fast as they arrive on the coast, and several vessels have gone to sea with hardly enough hands to spread a sail; two or three are now at anchor in San Francisco with no crews on board. Many desertions, too, have taken place from the garrisons within the influence of the mines; 26 soldiers have deserted from the post of Sonoma, 24 from that of San Francisco, and 24 from Monterey. For a few days the evil appeared so threatening that great danger existed that the garrisons would leave in a body; and I refer you to my orders of the 25th of July to show the steps adopted to meet this contingency. I shall spare no exertions to apprehend and punish deserters; but I believe no time in the history of our country has presented such temptations to desert as now exist in California. The danger of apprehension is small, and the prospect of higher wages certain; pay and bounties are trifles, as laboring men at the mines can now earn in *one day* more than double a soldier's pay and allowance for a month, and even the pay of a Lieutenant or captain cannot hire a servant. A carpenter or mechanic would not listen to an offer of less than $15 or $20 a day. Could any combination of affairs try a man's fidelity more than this? And I really think some extraordinary mark of favor should be given to those soldiers who remain faithful to their flag throughout this tempting crisis. No officer can now live in California on his pay. Money has so little value, the prices of necessary articles of clothing and subsistence are so exorbitant, and labor so high, that to hire a cook or servant has become an impossibility, save to those who are earning from $30 to $50 a day. This state of things cannot last forever; yet from the geographical position of California, and the new character it has assumed as a mining country, prices of labor will always be high, and will hold out temptations to desert. I therefore have to report, if the Government wish to prevent desertions here on the part of men, and to secure zeal on the part of officers, their pay must be increased very materially. Soldiers both of the volunteer and regular service discharged in this country should be permitted at once to locate their land warrants in the gold district. Many private letters have gone to the United States giving accounts of the vast quantity of gold recently discovered, and it may be a matter of surprise why I have made no report on this subject at an earlier date. The reason is, that I could not bring myself to believe the reports that I heard of the wealth of the gold district until I visited it myself. I have no hesitation now in saying that there is more gold in the country drained by the Sacramento and San Joaquin rivers than will pay the cost of the present war with Mexico a hundred times over. No capital is required to obtain this gold, as the laboring man wants nothing but his pick, shovel, and tin pan, with which to dig and wash the gravel; and many frequently pick gold out of the crevices of rock with their butcher knives in pieces from one to six ounces.

Mr. Dye, a gentleman residing in Monterey, and worthy of every credit, has just returned from Feather river. He tells me that the company to which he belonged worked seven weeks and two days, with an average of 50 Indians (washers), and that their gross product was 273 pounds of gold. His share, one-seventh, after paying all expenses, is about 37 pounds, which he brought with him and exhibits in Monterey. I see no laboring man from the mines who does not show his two, three, and four pounds of gold. A soldier of the artillery company returned here a few days ago from the mines, having been absent on furlough 20 days; he made by trading and working during that time $1,500. During these 20 days he was travelling 10 or 11 days, leaving but a week, in which he made a sum of money greater than he receives in pay, clothes and rations during a whole enlistment of five years. These statements appear incredible, but they are true. Gold is believed also to exist on the eastern slopes of the Sierra Nevada, and when at the mines, I was informed by an intelligent Mormon that it had been found near the Great Salt Lake by some of his fraternity. Nearly all the Mormons are leaving California to go to the Salt Lake, and this they surely would not do unless they were sure of finding gold there in the same abundance as they now do on the Sacramento. The gold "placer" near the mission of San Fernando has long been known, but has been but little wrought for want of water. This is a spur that puts off from the Sierra Nevada (see Fremont's map), the same in which the present mines occur. There is, therefore, every reason to believe that in the intervening space of 500 miles (entirely unexplored) there must be many hidden and rich deposits. The placer gold is now substituted as currency of this country; in trade it passes freely at $16 per ounce; as an article of commerce its value is not yet fixed. The only purchase I made was of the specimen No. 7, which I got of Mr. Neligh at $12 the ounce. That is about the present cash value in the country, although it has been sold for less. The great demand for goods and provisions made by this sudden development of wealth has increased the amount of commerce at San Francisco very much, and it will continue to increase. I would recommend that a mint be established at some eligible point on the bay of San Francisco, and that machinery, and all the apparatus and workmen, be sent by sea. These workmen must be bound by high wages, and even bonds, to secure their faithful services; else the whole plan will be frustrated by their going to the mines as soon as they arrive in California. If this course be not adopted, gold to the amount of many millions of dollars will pass yearly to other countries, to enrich their merchants and capitalists. Before leaving the subject of mines, I will mention that on my return from the Sacramento I touched at New Almaden, the quicksilver mine of Mr. Alexander Forbes, consul of her Britannic Majesty at Tepic. This mine is in a spur of mountains 1,000 feet above the level of the bay of San Francisco, and is distant in a southern direction from the Pueblo San Jose about 12 miles. The ore (cinnabar) occurs in a large vein dipping at a strong angle to the horizon. Mexican miners are employed in working it, by driving shafts and galleries about 6 feet by 7, following the vein.

The fragments of rock and ore are removed on the backs of Indians in raw-hide sacks. The ore is then hauled in an ox-wagon from the mouth of the mine down to a valley well supplied with wood and water, in which the furnaces are situated. These furnaces are of the simplest construction, exactly like a common bake-oven, in the crown of which is inserted a whaler's trying kettle; another inverted kettle forms the lid. From a hole in the lid a small brick channel leads to an apartment or chamber, in the bottom of which is inserted a small iron kettle. The chamber has a chimney. In the morning of each day the kettles are filled with mineral (broken in small pieces), mixed with lime; fire is then applied, and kept up all day. The mercury, volatilized, passes into the chamber, is condensed on the sides and bottom of the chamber, and flows into the pot prepared for it. No water is used to condense the mercury. During a visit I made last spring, four such ovens were in operation, and yielded in the two days I was there 656 pounds of quicksilver, worth at Mazatlan $1.80 per pound. Mr. Walkinshaw, the gentleman now in charge of this mine, tells me that the vein is improving, and that he can afford to keep his people employed even in these extraordinary times. This mine is very valuable of itself, and becomes the more so, as mercury is extensively used in obtaining gold. It is not at present used in California for that purpose, but will be at some future time. When I was at this mine last spring, other parties were engaged in searching for veins; but none have been discovered that are worth following up, although the earth in that whole range of hills is highly discolored, indicating the presence of this ore. I send several beautiful specimens, properly labeled. The amount of quicksilver in Mr. Forbes' vats on the 15th of July was about 25,000 pounds. I inclose you herewith sketches of the country through which I passed, indicating the position of the mines, and the topography of the country in the vicinity of those I visited. Some of the specimens of gold accompanying this were presented for transmission to the Department by the gentlemen named below; the numbers on the topographical sketch, corresponding to the numbers on the labels of the respective specimens, show from what part of the gold region they were obtained:

1. Capt. J. A. Sutter.
2. John Sinclair.
3. William Glover, R. C. Kirby, Ira Blanchard, Levi Fairfield, Franklin H. Ayer, Mormon Diggings.
4. Chas. Weber.
5. Robert Spence.
6. Sunal & Co.
7. Robert D. Neligh.
8. C. E. Picket, American Fork, Columa.
9. E. C. Kemble.
10. T. H. Green, from San Fernando, near Los Angelos.

A. Two ounces purchased from Mr. Neligh.
B. Sand found in washing gold, which contains small particles.

11. Captain Frisbie, Dry Diggings, Weber's Creek.
12. Cosumnes.
13. Cosumnes, Hartnell's Ranch.
14. A small specimen, supposed to be platina, found mixed with the finer particles of the gold.

I have the honor to be your obedient servant,

R. B. MASON,
Colonel First Dragoons, Commanding.

General R. JONES,
Adjutant General, U. S. A., Washington, D. C.

Mining District under Local Usage—How Organized.—As an illustration of how a miner's camp, and placer mining district as well, was organized in California in the early days and is at the present time, to a certain extent, in many portions of the precious-metal mining States and Territories, the following laws and regulations for the internal government of the encampment of Jacksonville, Cal., in 1850, are herewith given. The residents of the camp or town, twenty or thirty in number, held a meeting in front of Col. Jackson's store on the 20th of January, 1850, and proceeded to organize a placer mining district. This local law, it will be noticed, assumed both civil and criminal jurisdiction, there being no legal tribunals of justice, and this course was necessary for the maintenance of social order:

Mining Camp at Jacksonville, Cal.—Organization and Rules.—Article 1.—The officers of this district shall consist of an alcalde and sheriff, to be elected in the usual manner by the people, and continue in office at the pleasure of the electors.

Art. 2.—In case of the absence or disability of the sheriff the alcalde shall have power to appoint a deputy.

Art. 3.—Civil causes may be tried by the alcalde, if the parties desire it; otherwise they shall be tried by a jury.

Art. 4.—All criminal cases shall be tried by a jury of eight American citizens, unless the accused should desire a jury of twelve persons, who shall be regularly summoned by the sheriff and sworn by the alcalde, and shall try the case according to the evidence.

Art. 5.—In the administration of law, both civil and criminal, the rule of practice shall conform as near as possible to that of the United States, but the forms and customs of no particular State shall be required or adopted.

Art. 6.—Each individual locating a lot for the purpose of mining shall be entitled to twelve feet of ground in width, running back to the hill or mountain and forward to the center of the river or creek, or across a gulch or ravine (except in cases hereinafter provided for), lots commencing in all cases at low-water mark and running at right angles with the stream where they are located.

Art. 7.—In cases where lots are located according to article 6 and the parties holding them are prevented by the water from working the same, they may be represented by a pick, shovel, or bar, until in a condition to be worked; but should the tool or tools aforesaid be stolen or removed, it shall not dispossess those who located it, provided he or they can prove that they were left as required; and said location shall not remain unworked longer than one week, if in condition to be worked; otherwise it shall be considered as abandoned by those who located it (except in cases of sickness).

Art. 8.—No man or party of men shall be permitted to hold two locations, in a condition to be worked at the same time.

Art. 9.—No party shall be permitted to throw dirt, stones, or other obstructions upon located ground adjoining them.

Art. 10.—Should a company of men desire to turn the course of a river or stream for the purpose of mining they may do so (provided it does not interfere with those working below them) and hold and work all the ground so drained, but lots located within said ground shall be permitted to be worked by their owners, so far as they could have been worked without the turning of the river or stream; and this shall not be construed to affect the rights and privileges heretofore guaranteed or prevent redress by suit at law.

Art. 11.—No person coming direct from a foreign country shall be permitted to locate or work any lot within the jurisdiction of this encampment.

Art. 12.—Any person who shall steal a mule, or other animal of draught or burden, or shall enter a tent or dwelling and steal therefrom gold dust, money, provisions, goods, or other articles amounting in value to one hundred dollars or over, shall, on conviction thereof, be considered guilty of felony, and suffer death by hanging. Any aider or abettor therein shall be punished in like manner.

Art. 13.—Should any person wilfully, maliciously, and premeditatedly take the life of another, on conviction of the murder, he shall suffer death by hanging.

Art. 14.—Any person convicted of stealing tools, clothing or other articles, of less value than one hundred dollars, shall be punished and disgraced by having his head and eyebrows close shaved and shall leave the encampment within twenty-four hours.

Art. 15.—The fee of the alcalde for issuing a writ or search-warrant, taking an attestation, giving a certificate or any other instrument of writing shall be five dollars; for each witness he may swear, two dollars; and one ounce of gold dust for each and every case tried before him.

The fee of the sheriff in each case shall be one ounce of gold dust and a like sum for each succeeding day employed in the same case. The fee of the jury shall be half an ounce in each case.

A witness shall be entitled to four dollars in each case.

Art. 16.—Whenever a criminal convict is unable to pay the costs of the case, the alcalde, sheriff, jurors, and witnesses shall render their services free of remuneration.

Art. 17.—In case of the death of a resident of this encampment, the alcalde shall take charge of his effects and dispose of them for the benefit of his relatives or friends, unless the deceased otherwise desire it.

Art. 18.—All former acts and laws are hereby repealed and made null and void, except where they conflict with claims guaranteed under said laws. ABNER PITTS, JR., *Sec.*

Jacksonville, Jan. 20, 1850.

The present method of organizing a Mining District.—This, of course, was in the early days, when there was neither State nor county organization. At this date the following system of organization of mining districts, quartz or placer, obtains: Meetings of two or more miners or others are held. The metes and bounds of the district, quartz or placer, are agreed upon. A code of rules and regulations is made for location and size of claims, a compliance with which gives possessory title to claims. A recorder is elected, who charges a fee for recording, and the district is organized. This proceeding is protected by State or Territorial law, and confirmed by the United States mining laws, which require that claimants shall comply with the local regulations of miners. Thus the titles to properties which may yield millions are initiated.

Executive and Departmental Recommendations.—The Secretary of the Interior, Hon. Caleb B. Smith, in his annual report for 1861 called the attention of Congress to the fact that—

The valuable and extensive mineral lands owned by the Government in California and New Mexico have hitherto produced no revenue. All who chose to do so have been permitted to work them without limitation. It is believed that no other government owning valuable mineral lands has ever refused to avail itself of the opportunity of deriving a revenue from the privilege of mining such lands. They are the property of the whole people, and it would be obviously just and proper to require those who reap the advantages of Mining them to pay a reasonable amount as a consideration for the advantages enjoyed.

And again, in his report for 1862, he urged attention to this subject, and referred to the report of the Commissioner of the General Land Office. The Secretary suggested two systems of disposal. The Commissioner of the General Land Office, in his annual report for 1862, after a review of the area of the precious-metal bearing territory and the yield from the mines, gave the following opinion:

An immense revenue may readily be obtained by subjecting the public mines either to lease under quarterly payments or quarterly tax as seigniorage upon the actual product, under a well-regulated and efficient system, which would stimulate the energies of miners and capitalists by securing to such classes an undisputed interest in localities so specified, and, when the conditions as to payment for the usufruct are complied with, for unlimited periods, and while effecting this with beneficial results to them would relieve the necessities of the Republic.

In 1863 the Commissioner of the General Land Office again called attention to the mineral lands, recommending legislation for—

Opening the mines and minerals of the public domain, the property of the nation, to the occupancy of all loyal citizens, subject, as far as compatible with moderate seigniorage, to existing customs and usages, conceding to the discoverer for a small sum a right to one mine, placer, or lead (quartz), with a pre-emptive right in the same district to an addition claim, both to be held for the term of one year, for testing the value.

Collectors of internal revenue were to be the collectors of royalty. December 6, 1864, President Lincoln called the attention of Congress to the mineral lands, and also to the report of the Secretary of the Interior on the subject. The Secretary of the Interior in his report asks for an appropriation to enable the Department to have made a scientific examination of the principal mining localities, and of the mineral regions generally. Former geological and mineralogical surveys of the public domain had been done under the direction of the Commissioner of the General Land Office and the Interior Department. The Commissioner of the General Land Office, in his report for 1864, entered at length into a description of the precious-metal bearing regions. He repeated the recommendation contained in his report for 1863 (see above), in regard to method of disposition of these lands. The Commissioner of the General Land Office, in his report for 1865, again showed the necessity for Congressional action. The Secretary of the Interior, in his report for 1865, said:

The organization of a bureau of mining was recommended in the last annual report of this Department. The attention of Congress is again invited to the subject. All lands denominated mineral which do not bear the precious metals should be brought into market, and thus placed under the guardianship of private owners. * * Individual proprietorship, it is conceded, would stimulate the development of coal fields, petroleum, deposits of iron, lead, and of other gross metals, and mineral formations. There can, therefore, be no sufficient reason for withholding such mineral lands from market. Congress has not legislated with a view to securing an income from the product of the precious metals from the public domain. It is estimated that two or three hundred thousand able-bodied men are engaged in such mining operations on the public lands, without authority of law, who pay nothing to the Government for the privilege, or for the permanent possession of property worth, in many instances, millions to the claimants.

The existing financial condition of the Nation obviously requires that all our national resources and the product of every industrial pursuit, should contribute to the payment of the public debt. The wisdom of Congress must decide whether the public interest would be better promoted by a sale in fee of these mineral lands, or by raising a revenue from their annual product.

Retrospect of Mining Legislation prior to 1866.—The mining laws of the United States began with the reservation, in the ordinance of May 20, 1785, of one-third part of all gold, silver, lead and copper mined; next came the Indiana act of March 3, 1807, authorizing the lease of lands containing lead, with lease of adjoining land for easements, and forest lands for wood for smelting purposes, for a term of not more than five years. The authority to make leases and to collect rents for the same, was in charge of the War Department (until March 4, 1849), which had a corps of employes, headed by a superintendent, to overlook the business, watch wastage, and receive rents; the act of March 25, 1816—the occupancy and trespass act—provided that the working of lead mines on the public lands was only to be granted after approval by the President.

The first sale of mineral lands was that of the reserved lead mines and contiguous lands in the State of Missouri, under act of March 3, 1829. They were to be exposed for sale as other public lands, at $2.50 per acre; but lead and other mineral lands on the public domain, elsewhere than in Missouri, were still reserved from sale.

The act of July 1, 1846, ordered the reserved lead mines and contiguous lands in Illinois, Arkansas, and the Territories of Wisconsin and Iowa, to be sold as other public lands, after six months' public notice, following the Missouri act of 1829, with the addition of the provision that the lands should be offered and held subject to private entry before pre-emptions were allowed. The register and receiver were to take proof as to character of lands, whether mineral (*i. e.*, containing lead) or agricultural. The act of March 1, 1847, opened for sale lands containing copper, lead, and other valuable ores after geographical examination and survey, and provided that there should be public advertisement of six months, and then public sale at not less than $5 per acre, those not disposed of at public auction to be subject to private sale at $5 per acre. The act of March 3, 1847, ordered sale of mineral lead land in Chippewa District, in Wisconsin, and the act of 1850 ordered sale of the remaining mineral lands in Lake Superior District in Michigan, in the same manner, at the same minimum, and with the same rights of pre-emption, as other public lands. From the period of 1785 to the discovery of the great gold fields of California, in 1848, the legislation of the Congress of the United States as to survey, lease, and sale of mineral lands had been for lead, copper, and other base metals, and applied to the territory in the region of the great lakes in the now States of Michigan, Wisconsin, Minnesota, Iowa, and Illinois, embracing the lead mines at Galena and the point now known as Dubuque (where a miner of that name in 1788 first worked lead mines, and subsequently, under permit from Carondelet, the Spanish governor-general) and the present State of Missouri. Under these various laws, the copper, lead and iron lands (also the silver lands since discovered) of the above-mentioned regions were sold. Since the discovery of gold in paying quantities in California, in 1848, there has been produced in the United States the sum of $1,980,463,792 in gold and silver. All but about $1,000,000 of this sum (which would represent the gold and silver extracted in the States other than public-land States) has been extracted from the lands of the public domain.

Precious Metals from 1848 to 1880.—The following estimate of the yearly production of gold and silver from 1848 to 1880, is from the reports of the Director of the Mint:

Estimate of the production of the precious metals in the United States from 1848 to 1880, by fiscal years.

Date.	*Gold.*	*Silver.*	*Total gold and silver.*
1848	$10,000,000	. . . . .	$10,000,000
1849	40,000,000	$50,000	40,050,000
1850	50,000,000	60,000	50,050,000
1851	55,000,000	50,000	55,050,000
1852	60,000,000	50,000	60 050,000
1853	65,000,000	50,000	65,050,000
1854	60,000,000	50,000	60,059,000
1855	55,000,000	50,000	55,050,000
1856	55,000,000	50,000	55,050,000
1857	55,000,000	50,000	55,050,000
1858	50,000,000	50,000	50,050,000
1859	50,000,000	100,000	60,100,000
1860	46,000,000	150,000	46,150,000
1861	43,000,000	2,000,000	45,000,000
1862	39,200,000	4,500,000	43.700,000
1863	40,000,000	8,500,000	48,500,000
1864	46,000,000	11,000,000	57,000,000
1865	53,225,000	11,250,000	64,475,000
1866	53,500,000	11,000,000	63,500,000
1867	51,725,000	13,500,000	65,225,000
1868	48,000,000	12,000,000	60,000,000
1869	49,500,000	12,000,000	61,500,000
1870	50,000,000	16,000,000	66,000,000
1871	43,000,000	23,000,000	66,000,000
1872	36,000,000	28,750,000	64,750,000
1873	36,000,000	35,750,000	71,750,000
1874	33,490,902	37,324,594	70,815,496
1875	33,467,856	31,727,560	65,195,416
1876	39,929,166	38,783,016	78,712,182
1877	46,897,390	39,793,573	86,690,000
1878	51,206,360	45,281,385	96,487,745
1879	38,899 858	40,812,132	79,711,990
1880	36,000,000	37,700,000	73,700,000
Total	1,520,041,532	460,422,260	1,980,483,792

The ordinance of 1785, for the sale of the Western Territory, reserved one-third part of gold and silver from the public lands. The present gold and silver regions of the West were then in the province of Spain. The laws of the United States, excepting the comprehensive word "mineral," as applied to reserved lands, and the pre-emption act of September 4, 1841, the Oregon act of September 27, 1851, and other incidental mention prior to that time, were silent as to gold, silver, and cinnabar.

The act of March 3, 1853, creating the office of surveyor-general of California, excepted, in express terms, mineral lands from lands subject to entry under the pre-emption act of September 4, 1841, and no person was to have the benefit of the act by settlement or location on mineral lands. The act of July 22, 1851, relating to the surveyor-general's office in New Mexico, etc., provided by the fourth section for the exemption of mineral lands from the operations of the acts named. This was the status at the period of the passage of the first general mining law of the United States, July 26, 1866.

The Condition of the Precious-Metal Bearing Regions Prior to 1866.—In the precious-metal-bearing regions on the public domain in California, Oregon, Nevada, Colorado, and the Territories, there had grown up a system of local regulations governing the location, size, and possession of mining claims, with water rights appurtenant thereto. These regulations were not uniform, but varied with different localities, and at first related only to placer claims. Quartz mining was a secondary stage, and regulations for this system were established as soon as required. Mineral districts were organized by the miners of each particular locality at meetings held for the purpose, and for each district an officer, known as the recorder, was elected, whose duty it was to record, in a book kept for that purpose, all notices of mining locations or claims filed with him. It was generally made essential to the validity of a claim that it should be recorded. These regulations at first rested entirely upon the consent of the miners; but they became recognized as customs by the courts, and were held to be binding in all matters relating to the possessory title to mining claims. In the civil codes enacted by the State or Territorial legislatures these local rules were respected and generally specifically recognized. They sprung from the sterling good sense of the American miner, and were adapted to the wants and necessities of a great industry for which there would otherwise have been no protection. They protected millions of property and aided in opening up a region of incalculable wealth. Prospectors, under this code of laws, with pick, pan, and shovel, on mountain side, amidst winter's rugged grasp, on the plains, under sunny skies, in the quiet nooks and flowery ravines of the lower slopes of the Sierras, lifted from the matrix of nature the golden treasure, and toiled on as safely protected in their property as if in the midst of the highest civilization. These laws protected and controlled the possession, and provided for the distribution of hundreds of millions of dollars of property, and affected the people of a half million square miles of territory. (For a list of mining districts, deputy mineral surveyors, etc., see Preliminary Report Land Commission, 1880, and Reports General Land Office from 1866 to 1880). The Congress of the United States by the act of general mining, July 26, 1866, and the supplemental act of May 10, 1872, confirmed these local usages.

The Mining Act of July 26, 1866.—The act of July 26, 1866, ordered that "the mineral lands of the public domain, both surveyed and unsurveyed," were "to be free and open to exploration and occupation by all citizens of the United States, and those declaring their intention to become citizens, subject to such regulations as may be prescribed by law," and subject also to the local customs or rules of miners in the several mining districts, so far as the same may not be in conflict with the laws of the United States." The second section of this act provided "that whenever any person or association of persons claim a vein or lode of quartz, or other rock in place, bearing gold, silver, cinnabar, or copper, having previously occupied and improved the same according to the local customs or rules of miners in the district where the same is situated, and having expended in actual labor and improvements not less than $1,000," such claimants, where there is no conflict. after filing in "the local land office a diagram of the same," according to local laws, customs, and miners' rules can "enter such tract and receive a patent therefor, granting such mine, together with the right to follow such vein or lode, with its dips, angles, and variations, to any depth." The other sections of the law prescribed with specialty the mode of consummating individual rights, surveys, &c.; also in reference to conflicts, rights of way, priority "of possession," right to the use of water for mining, agricultural, manufacturing, or other purposes; to homesteads existing prior to the date of the act, which are used for agriculture, on which valuable mines are not discovered, the law conferring authority on the Secretary of the Interior for setting apart, after survey, the agricultural lands so as to subject them to pre-emption and sale.

Placer-Mining Act, July 9, 1870—July 9, 1870, Congress, provided for a class of "placer" mining not recognized in the lode act of July 26, 1866 (see Stats. at Large). This act provided for the survey and sale of the placer-mining lands of the United States at $2.50 per acre.

The Mining Act of May 10, 1872.—The mining act of May 10, 1872, amended the original mining act of 1866, and constituted mineral lands a distinctive class subject to special conditions of sale and affixed prices differing wholly from the requirements in these respects as to other lands. It provided for the survey and sale of mineral lands, fixing the price of placer lands at $2.50 per acre and $5 for lode claims, and repealed, in effect, the ditch and water rights' act of July 26, 1866. The present laws for the disposition of the mineral lands of the United States are found in chapter 6, of the Revised Statutes, title "Mineral Lands and Mining Resources," and in the Regulations of the General Land Office of date April 1, 1879.

Provisions of the existing Mining Law.—Under section 2318, Revised Statutes, lands valuable for minerals are reserved from sale except as otherwise expressly directed by law. Section 2319 provides for their location by citizens of the United States or those who have declared their intention to become such. The law covers claims for lands bearing gold, cinnabar, lead, tin, copper, or other valuable deposits, and for the above and other valuable and economic minerals, found in lodes of quartz or other rock in place, titles can be obtained from the United States under the existing laws at $5 per acre. Claims cannot exceed 1,500 feet in length along the vein or lode, and 300 feet on each side of the middle of the vein at the surface, the end lines of the claims to be parallel. No vein or lode claim located after May 10, 1872, can exceed a parallelogram 1,500 feet in length by 600 in width. The size below this maximum may be regulated by State or Territorial laws or the rules of the several mining districts. No local regulation or State or Territorial law can limit a vein or lode claim located since May 10, 1872, to less than 1,500 feet along the vein or course thereof, whether the location is made by one or more persons, nor can surface rights be limited to less than 50 feet in width, unless adverse rights existing on the 10th day of May, 1872, render such lateral limitations necessary. This saving clause is essential from the fact that in many of the mining States and Territories, the local rules did not permit the location of surface ground. There are now three classes of location recognized—those made prior to July 26, 1866; those between that date and May 10, 1872; and those made since May 10, 1872. The variety in size and quantity of locations cannot here be detailed at length. Under the United States mining law, the maximum of a quartz lode or vein claim is 1,500 by 600 feet, and the minimum 1,500 by 50 feet, being about 20.66 acres maximum, or 1.72 acres minimum. Cost of surveys, &c., are paid by the claimants, and the land is paid for at $5 for each acre or fraction of an acre. Locations are made under regulations prescribed by law, and according to the local customs or rules of miners in the several mining districts, so far as the same are applicable, and not inconsistent with the laws of the United States. The United States has the authority and can provide a general and uniform system of location, areas, &c., entirely superseding the various State, Territorial, and district laws. Some of the mining States and Territories have adopted the United States mining law of May 10, 1872, as to area; others protect other forms and areas of location by law. (For a full statement of the various methods of locations, holdings, miners' rules, &c., see Preliminary Report of Public Land Commission and Testimony, 1880, which gives the methods prevailing, and the legal status in California, Oregon, Nevada, Colorado, Idaho, Dakota, Arizona, Montana, Utah, Washington, Wyoming, and New Mexico).

Cost of Patents to the United States and Claimants.—It costs the United States on an average $20 to patent each mining claim. During the year ending June 30, 1880, there were issued 886 patents to mining claims. All of the work appertaining thereto, involving an examination of the evidence accompanying the entry papers, including that relating to contests, was executed by the mineral division of the General Land Office, at a cost to the government for salaries of $17,600, an average of about $20, in each case. Where the survey and papers have been properly prepared, and no controversey exists, the cost in a particular case will not exceed $3. The cost to the claimant is as problematical as that of a lawsuit. He is required to pay the expense of survey, including platting and other office work of the surveyor-general's office, which will average about $160; also, fees to the register and receiver, $10, and expense of publication of notice, averaging $30; in all, $200. Practically, it is estimated that the average cost to the claimant falls but little, if any, short of $1,000 in each case.

Placer Claims—Patents Therefor.—The proceedings to obtain patent for placer claims, including all forms of deposit, are essentially similar to the proceedings prescribed for obtaining patents for lode or vein claims. But placer claims, when on surveyed lands and conforming to legal subdivisions, require no further plat or survey, and 40-acre subdivisions may be cut into 10-acre lots and sold as placer claims. Where placer claims cannot be conformed to legal subdivisions, survey and plat must be made as on unsurveyed lands; but where such claims are located previous to the public surveys, and do not conform to legal subdivisions, survey, plat, and entry thereof may be made according to the boundaries thereof, provided the location is in all respects legal. These lands are sold at $2.50 for each acre or fraction of an acre. No location of a placer claim made after July 9, 1870, can exceed 160 acres for any one person or association of persons. All placer-mining claims located after May 10, 1872, must conform as nearly as practicable with the United States system of public surveys and the subdivisions of such surveys, and no such locations can include more than 20 acres for each individual claimant. The act of July 9, 1870, absolutely required locations made after its passage to conform to legal subdivisions, but the act of May 10, 1872, modified this requirement by making such conformation necessary only where practicable. The foregoing provisions of law are construed to mean that after the 9th day of July, 1870, no location of a placer claim can be made to exceed 160 acres, whatever may be the number of locators associated together, or whatever the local regulations of the district may allow; and that from and after May 10, 1872, no location made by an individual can exceed 20 acres, and no location made by an association can exceed 20 acres for each person. In order to locate 160 acres, eight *bona-fide* locators are required. No local laws or mining regulations can restrict a placer location to less than 20 acres, although the locator is not compelled to take so much. Mill sites must be located on non-mineral lands not contiguous to the vein or lode, and not exceed five acres, and may be included in the patent for a mine at $5 per acre. (See sec. 2337 R. S.) Tunnel rights, in tunnels run for the development of a vein or lode or for the discovery of mines, are provided. Proprietors of a mining tunnel, run in good faith, are entitled to the possessory right of all blind lodes cut, discovered, or intersected by such tunnel, which were not previously known to exist, within 3,000 feet of the surface or point of commencement of the tunnel, to the same extent as if such lodes had been discovered on the surface, and other parties are prohibited, after commencement of the tunnel, from prospecting for and making location on *the line thereof* and within said distance of 3,000 feet, unless such lodes appear upon the surface or were previously known to exist. (See sec. 2323 R. S.) For requirements necessary to obtain the benefit of this law, see pages 16–17, "Regulations General Land Office, April 1, 1879."

Iron Held to be a Valuable Mineral.—Iron has been held, along with many other minerals when on the public domain, to come within section 2325 of the Revised Statutes, under the denomination of valuable deposits, and can be paid for at the rate of $2.50 or $5 per acre, depending upon whether the deposit is in placer or lode form.

The Policy of the United States in Relation to Mineral Lands.—The policy of the United States in relation to the sale and disposition of the mineral lands of the public domain—beginning with its reservation of portions of the metal therefrom, next occupancy rights, then leases, followed by public offering and private entry and sale, thereafter culminating in the several mineral acts of 1866, 1870, and 1872—now permits their free exploration and development by citizens, or persons who have declared their intention to become citizens; and a nominal price for the lands (placer $2.50, and quartz, gold, silver, cinnabar, or other valuable deposits $5 per acre) is charged should the owner of the possessory title desire to procure a fee-simple title. This price barely covers expenses of making title on the part of the United States. The material wealth added to the circulating medium by extraction from the earth through individuals or corporations, together with costs of mining and extraction, and the great and dangerous risks to fortune caused thereby, are considered equivalents for the value of the land. The United States protects exploration and developments by the miner on the public domain. As an evidence of the liberality of the Nation in this respect, coal lands are sold at from $10 to $20 per acre. Twenty acres of coal land at $20 per acre cost the purchaser $400, while 20 acres of lode mineral land on the Comstock lode at $5 per acre are sold for $100, and, as in the case of the Consolidated Virginia and California mines, may yield more than $60,000,000.

Number of Locations and of Patents.—In the twelve States and Territories containing the precious metals and forming part of the public domain there are known to have been made more than 200,000 mining locations, yet the total number to June 30, 1880, of lode, vein, or other valuable deposit claims to which titles have been obtained by compliance with the mining laws is but 3,978, containing 38,435.11 acres at $5 per acre, and for which the United States have received $197,778. The total number of placer-mining claims patented in the same region by the United States is 1,303, containing 110,186.03 acres, at $2.50 per acre, and for which the United States has received $288,767. In all a total number of 5,281 lode and placer claims have been patented to June 30, 1880, containing in all 148,621.14 acres, for which the Government received a total of $486,545.

Estimate of Area of Western Precious-metal Regions.—The estimated area of the entire precious-metal bearing region of the public domain is 65,000,000 acres, within which lie the veins, lodes, or deposits of precious and valuable minerals. Deducting the 148,621.14 acres already patented, and the grand total remaining, the property of the Nation exceeds 64,800,000 acres, all situated and lying in the States and Territories named in the tables hereto attached, and being south of the Dominion of Canada (British Possessions), west of the Missouri River, and north of the boundary line between Mexico and this country. All of this is independent of the unexplored area within the unorganized Territory of Alaska, which in the future may form no unimportant portion of our precious-metal-bearing country. The above estimate, however, includes a vast number of located claims held and worked under a possessory title alone, there being no statute compelling the claimants to purchase the fee from the Government. For many of these claims applications for patent have been made, but proceedings are suspended either on account of litigation in the courts, initiated in the manner and within the time prescribed by the statute, or by reason of failure of claimants to produce satisfactory evidence of compliance with law and right to purchase and make entry. The difficulties of obtaining patent under existing laws are so great, and the practice of levying blackmail is so extensive, that many mine owners prefer to rely upon their possessory title rather than purchase the fee from the Government.

Patents Issued.

Statement of the number of placer mining claims patented in the several precious metal-bearing States and Territories of the public domain from 1867 to June 30, 1880, together with the acreage and amount paid therefor, under the several mining acts of July 26, 1866, July 9, 1870, and May 10, 1872.

Washington Territory, although having no mining claims patented, contains valuable deposits of the precious metals.

SALE AND DISPOSITION OF PUBLIC LANDS.

THE several existing laws for the sale and disposition of the public domain permit entries and locations by individuals, associations, and corporations. A single man, a married man, a single woman, or a married woman, if (legally) the head of a family, citizens of the United States, or have declared their intentions to become such, can have the benefits of the several settlement laws. The theory of the settlement law is that an individual, if he be not already the owner of 320 acres of land, can purchase 160 acres under the pre-emption act after six months settlement, occupation, and improvement, and can acquire 160 acres under the homestead act by residence, improvement, and cultivation for a term of five years, with certain legal rebates as to time of settlement, or can purchase at the end of six months by commutation. Under the several settlement and occupancy laws, however, a person can legally acquire 1,120 acres of the public domain. The existing laws recognize several classes of land, as follows:

Mineral.—"In all cases 'land valuable for minerals' shall be reserved from sale, except as otherwise expressly directed by law." (Section 2318, R. S.)

Timber and stone.—Lands valuable chiefly for timber and stone, unfit for cultivation.

Saline.—Salt Springs.

Town-site lands.—Any unoccupied public lands.

Desert.—Lands which will not, without irrigation, produce an agricultural crop.

Coal lands.—Lands containing coal.

And all others as *agricultural.*

Special laws are provided for each of the seven classes named. Lands reserved or withdrawn "are not subject to entry or location."

Mineral Lands.—Mineral lands are located and sold thereafter in the manner previously described.

Coal Lands.—The public lands of the United States containing coal are disposed of under the act of Congress approved March 3, 1873.

The sale of coal lands is provided for by this act—

1. By ordinary private entry under section 1.

2. By granting a preference right of purchase based on priority of possession and improvement under section 2. The land entered under either section must be *by legal subdivisions*, as made by the regular United States survey. Entry is confined to surveyed lands; to such as are vacant, not otherwise appropriated, reserved by competent authority, or containing valuable minerals other than coal. Individuals and associations may purchase. If an individual, he must be twenty-one years of age and a citizen of the United States, or have declared his intention to become such citizen. If an association or persons, each must be qualified as above. A person is not disqualified by the ownership of any quantity of other land, nor by having removed from his own land in the same State or Territory. Any individual may enter by legal subdivisions as aforesaid any area not exceeding 160 acres. Any association may enter not to exceed 320 acres. Any association of not less than four persons, duly qualified, who shall have expended not less than $5,000 in working and improving any coal mine or mines, may enter under section 2 not exceeding 640 acres, including such mining improvements. The price per acre is $10 where the land is situated *more* than fifteen miles from any complete railroad, and $20 per acre where the land is *within* fifteen miles of such road. Where the land lies *partly within* fifteen miles of such road and in *part outside* such limit, the *maximum* price must be paid for all legal subdivisions the greater part of which lies within fifteen miles of such road. The term "completed railroad" is held to mean one which is actually constructed on the face of the earth, and lands within fifteen miles of any point of a railroad so constructed, will be held and disposed of at $20 per acre. One year from and after the expiration of the period allowed for filing the declaratory statement is given within which to make proof and payment, but no party will be allowed to make final proof and payment, except on notice to all others who appear on the records as claimants to the same tracts.

Saline Lands.—The act of Congress of January 12, 1877, provides that where tracts are found to be saline in character, and therefore under pre-existing laws not subject to disposal, they shall be offered at public sale at not less than $1.25 per acre, and if not then sold shall be thereafter held subject to private entry at the same price, as other public lands. The act provides for an investigation to ascertain by testimony the true character of public lands, where there shall be reason to suppose that they are saline. This act is confined in its operations to States which have had grants of salines which have been fully satisfied, or under which the right of selection has expired by efflux of time. This act excepts from its operations the Territories and the States of Mississippi, Louisiana, Florida, California, and Nevada.

RULINGS OF THE GENERAL LAND OFFICE.

THE following are the rulings of the General Land Office in force October 31, 1881:

Lode-Claims Located prior to May 10, 1872.—2. By an examination of the several sections of the Revised Statutes it will be seen that the *status* of lode-claims located *previous* to the 10th May, 1872, is not changed with regard to their *extent along the lode or width of surface.*

3. Mining rights acquired under such previous locations are, however, enlarged by said Revised Statutes in the following respect, viz.: The locators of all such previously taken veins or lodes, their heirs and assigns, so long as they comply with the laws of Congress and with State, Territoral, or local regulations not in conflict therewith, governing mining-claims, are invested with the exclusive possessory right of all the surface included within the lines of their locations, and of all veins, lodes, or ledges throughout their entire depth, the top or apex of which lies inside of such surface-lines extended downward vertically, although such veins, lodes, or ledges may so depart from a perpendicular in their course downward as to extend outside the vertical side-lines of such locations at the surface, it being expressly provided, however, that the right of possession to such outside parts of said veins or ledges shall be confined to such portions thereof as lie between vertical planes drawn downward as aforesaid, through the end-lines of their locations so continued in their own direction that such planes will intersect such exterior parts of such veins, lodes, or ledges; no right being granted, however, to the claimant of such outside portion of a vein or ledge to enter upon the surface location of another claimant.

4. It is to be distinctly understood, however, that the law limits the possessory right to veins, lodes, or ledges, *other* than the one named in the original location, to such as were not *adversely claimed on May* 10, 1872, and that where such other vein or ledge was so adversely claimed at that date, the right of the party so adversely claiming is in no way impaired by the provisions of the Revised Statutes.

5. In order to hold the possessory title to a mining-claim located prior to May 10, 1872, and for which a patent has not been issued, the law requires that *ten dollars* shall be expended annually in labor or improvements on each claim of *one hundred feet* on the course of the vein or lode until a patent shall have been issued therefor; but where a number of such claims are held in common upon the same vein or lode the aggregate expenditure that would be necessary to hold all the claims, at the rate of ten dollars per hundred feet, may be made upon any one claim; a failure to comply with this requirement in any one year subjecting the claim upon which such failure occurred to relocation by other parties, the same as if no previous location thereof had ever been made, unless the claimants under the original location shall have resumed work thereon after such failure and before such relocation. The first annual expenditure upon claims of this class should have been performed subsequent to May 10, 1872, and prior to January 1, 1875. From and after January 1, 1875, the required amount must be expended *annually* until patent issues. By decision of the honorable Secretary of the Interior, dated March 4, 1879, such annual expenditures are not required subsequent to entry, the date of issuing the patent certificate being the date contemplated by statute.

6. Upon the failure of any one of several co-owners of a vein, lode, or ledge, which has not been entered, to contribute his proportion of the expenditures necessary to hold the claim or claims so held in ownership in common, the co-owners who have performed the labor, or made the improvements, as required by said Revised Statutes, may, at the expiration of the year, give such delinquent co-owner personal notice in writing, or notice by publication in the newspaper published nearest the claim, for at least once a week for ninety days; and if upon the expiration of ninety days after such notice in writing, or upon the expiration of one hundred and eighty days after the first newspaper publication of notice, the delinquent co-owner shall have failed to contribute his proportion to meet such expenditures or improvements, his interest in the claim by law passes to his co-owners, who have made the expenditures or improvements as aforesaid. Where a claimant alleges ownership of a forfeited interest under the foregoing provision, the sworn statement of the publisher as to the facts of publication, giving dates and a printed copy of the notice published, should be furnished, and the claimant must swear that the

delinquent co-owner failed to contribute his proper proportion within the period fixed by the statute.

Patents for Veins or Lodes heretofore Issued.—7. Rights under patents for veins or lodes heretofore granted under previous legislation of Congress are enlarged by the Revised Statutes so as to invest the patentee, his heirs or assigns, with title to all veins, lodes, or ledges, throughout their entire depth, the top or apex of which lies within the end and side boundary lines of his claim on the surface, as patented, extended downward vertically, although such veins, lodes, or ledges may so far depart from a perpendicular in their course downward as to extend outside the vertical side-lines of the claim at the surface. The right of possession to such outside parts of such veins or ledges to be confined to such portions thereof as lie between vertical planes drawn downward through the end-lines of the claims at the surface, so continued in their own direction that such planes will intersect such exterior parts of such veins or ledges, it being expressly provided, however, that all veins, lodes, or ledges, the top or apex of which lies inside such surface locations, *other* than the one named in the patent, which were *adversely claimed on the* 10*th May*, 1872, are excluded from such conveyance by patent.

8. Applications for patents for mining-claims pending at the date of the act of May 10, 1872, may be prosecuted to final decision in the General Land Office, and where no adverse rights are affected thereby, patents will be issued in pursuance of the provisions of the Revised Statutes.

Manner of Locating Claims on Veins or Lodes after May 10, 1872.—9. From and after the 10th May, 1872, any person who is a citizen of the United States or who has declared his intention to become a citizen, may locate, record, and hold a mining-claim of *fifteen hundred linear feet* along the course of any mineral vein or lode subject to location; or an association of persons, severally qualified as above, may make joint location of such claim of *fifteen hundred feet*, but in no event can a location of a vein or lode made subsequent to May 10, 1872, exceed fifteen hundred feet along the course thereof, whatever may be the number of persons composing the association.

10. With regard to the extent of surface ground adjoining a vein or lode, and claimed for the convenient working thereof, the Revised Statutes provide that the lateral extent of locations of veins or lodes made after May 10, 1872, shall in no case *exceed three hundred feet on each side of the middle of the vein at the surface*, and that no such surface-rights shall be limited by any mining regulations to less than twenty-five feet on each side of the middle of the vein at the surface, except where adverse rights existing on the 10th May, 1872, may render such limitation necessary; the end-lines of such claims to be in all cases parallel to each other. Said lateral measurements cannot extend beyond three hundred feet on *either* side of the middle of the vein at the surface, or such distance as is allowed by local laws. For example: 400 feet cannot be taken on one side and 200 feet on the other. If, however, 300 feet on each side are allowed, and by reason of prior claims but 100 feet can be taken on one side, the locator will not be restricted to less than 300 feet on the other side; and when the locator does not determine by exploration *where* the middle of the vein at the surface is, his discovery shaft must be assumed to mark such point.

11. By the foregoing it will be perceived that no lode-claim located after the 10th May, 1872, can exceed a parallelogram fifteen hundred feet in length by six hundred feet in width, but whether surface-ground of that width can be taken, depends upon the local regulations of State or Territorial laws in force in the several mining-districts; and that no such local regulations or State or Territorial laws shall limit a vein or lode claim to less than fifteen hundred feet along the course thereof, whether the location is made by one or more persons, nor can surface rights be limited to less than fifty feet in width, unless adverse claims existing on the 10th day of May, 1872, render such lateral limitation necessary.

12. It is provided by the Revised Statutes that the miners of each district may make rules and regulations not in conflict with the laws of the United States, or of the State or Territory in which such districts are respectively situated, governing the location, manner of recording, and amount of work necessary to hold possession of a claim. They likewise require that the location shall be so distinctly marked on the ground that its boundaries may be readily traced. This is a very important matter, and locators cannot exercise too much care in defining their locations at the outset, inasmuch as the law requires that all records of mining locations made subsequent to May 10, 1872, shall contain the name or names of the locators, the date of the location, and such a *description of the claim or claims* located, by reference to some natural object or permanent monument, as will identify the claim.

13. The statutes provide that no lode-claim shall be recorded until after the discovery of a vein or lode within the limits of the claim located, the object of which provision is evidently to prevent the appropriation of presumed mineral ground for speculative purposes to the exclusion of *bona fide* prospectors, before sufficient work has been done to determine whether a vein or lode really exists.

14. The claimant should, therefore, prior to locating his claim, unless the vein can be traced upon the surface, sink a shaft, or run a tunnel or drift, to a sufficient depth therein to discover and develop a mineral-bearing vein, lode, or crevice; should determine, if possible, the general course of such vein in either direction from the point of discovery, by which direction he will be governed in marking the boundaries of his claim on the surface. His location notice should give the course and distance as nearly as practicable from the discovery-shaft on the claim, to some permanent, well-known points or objects, such, for instance, as stone monuments, blazed trees, the confluence of streams, point of intersection of well-known gulches, ravines, or roads, prominent buttes, hills, &c., which may be in the immediate vicinity, and which will serve to perpetuate and fix the *locus* of the claim and render it susceptible of identification from the description thereof given in the record of locations in the district, and should be duly recorded.

15. In addition to the foregoing data, the claimant should state the names of adjoining claims, or, if none adjoin, the relative positions of the nearest claims; should drive a post or erect a monument of stones at each corner of his surface-ground, and at the point of discovery or discovery-shaft should fix a post, stake, or board, upon which should be designated the name of the lode, the name or names of the locators, the number of feet claimed, and in which direction from the point of discovery; it being essential that the location notice filed for record, in addition to the foregoing description, should state whether the entire claim of fifteen hundred feet is taken on one side of the point of discovery, or whether it is partly upon one and partly upon the other side thereof, and in the latter case, how many feet are claimed upon each side of such discovery-point.

16. Within a reasonable time, say twenty days after the location shall have been marked on the ground, or such time as is allowed by the local laws, notice thereof, accurately describing the claim in manner aforesaid, should be filed for record with the proper recorder of the district, who will thereupon issue the usual certificate of location.

17. In order to hold the possessory right to a location made since May 10, 1872, not less than one hundred dollars' worth of labor must be performed, or improvements made thereon annually until entry shall have been made. Under the provisions of the act of Congress approved January 22, 1880, the first annual expenditure becomes due and must be performed during the calendar year succeeding that in which the location was made. Expenditure made or labor performed prior to the first day of January succeeding the date of location will not be considered as a part of, or applied upon the first annual expenditure required by law. Failure to make the expenditure or perform the labor required will subject the claim to relocation by any other party having the necessary qualifications, unless the original locator, his heirs, assigns or legal representatives have resumed work thereon after such failure and before such relocation.

18. The expenditures required upon mining-claims may be made from the surface or in running a tunnel for the development of such claims, the act of February 11, 1875, providing that where a person or company has, or may, run a tunnel for the purpose of developing a lode or lodes owned by said person or company, the money so expended in said tunnel shall be taken and considered as expended on said

MINING LIFE—FALLING IN OF A MINE.

—FROM "LA VIE SOUTERRAINE" BY L. SIMONIN.

lode or lodes, and such person or company shall not be required to perform work on the surface of said lode or lodes in order to hold the same.

19. The importance of attending to these details in the matter of location, labor, and expenditure will be the more readily perceived when it is understood that a failure to give the subject proper attention may invalidate the claim.

Tunnel Rights.—20. Sec. 2323 provides that where a tunnel is run for the development of a vein or lode, or for the discovery of mines, the owners of such tunnel shall have the right of possession of all veins or lodes within three thousand feet from the face of such tunnel on the line thereof, not previously known to exist, discovered in such tunnel, to the same extent as if discovered from the surface; and locations on the line of such tunnel of veins or lodes not appearing on the surface, made by other parties after the commencement of the tunnel, and while the same is being prosecuted with reasonable diligence, shall be invalid; but failure to prosecute the work on the tunnel for six months shall be considered as an abandonment of the right to all undiscovered veins or lodes on the line of said tunnel.

21. The effect of this is simply to give the proprietors of a mining tunnel run in good faith the possessory right to fifteen hundred feet of any blind lodes cut, discovered, or intersected by such tunnel, which were not previously known to exist, within three thousand feet from the face or point of commencement of such tunnel, and to prohibit other parties, after the commencement of the tunnel, from prospecting for and making locations of lodes on the *line thereof* and within said distance of three thousand feet, unless such lodes appear upon the surface or were previously known to exist.

22. The term "face," as used in said section, is construed and held to mean the first working-face formed in the tunnel, and to signify the point at which the tunnel actually enters cover; it being from this point that the three thousand feet are to be counted, upon which prospecting is prohibited as aforesaid.

23. To avail themselves of the benefits of this provision of law, the proprietors of a mining-tunnel will be required, at the time they enter cover as aforesaid, to give proper notice of their tunnel location by erecting a substantial post, board, or monument at the face or point of commencement thereof, upon which should be posted a good and sufficient notice, giving the names of the parties or company claiming the tunnel-right; the actual or proposed course or direction of the tunnel; the height and width thereof, and the course and distance from such face or point of commencement to some permanent well-known objects in the vicinity by which to fix and determine the *locus* in manner heretofore set forth applicable to locations of veins or lodes, and at the time of posting such notice they shall, in order that miners or prospectors may be enabled to determine whether or not they are within the lines of the tunnel, establish the boundary lines thereof, by stakes or monuments placed along such lines at proper intervals, to the terminus of the three thousand feet from the face or point of commencement of the tunnel, and the lines so marked will define and govern as to the specific boundaries within which prospecting for lodes not previously known to exist is prohibited while work on the tunnel is being prosecuted with reasonable diligence.

24. At the time of posting notice and marking out the lines of the tunnel as aforesaid, a full and correct copy of such notice of location defining the tunnel-claim must be filed for record with the mining recorder of the district, to which notice must be attached the sworn statement or declaration of the owners, claimants, or projectors of such tunnel, setting forth the facts in the case; stating the amount expended by themselves and their predecessors in interest in prosecuting work thereon; the extent of the work performed, and that it is *bona fide* their intention to prosecute work on the tunnel so located and described with reasonable diligence for the development of a vein or lode, or for the discovery of mines, or both, as the case may be. This notice of location must be duly recorded, and, with the said sworn statement attached, kept on the recorder's files for future reference.

25. By a compliance with the foregoing much needless difficulty will be avoided, and the way for the adjustment of legal rights acquired in virtue of said section 2323 will be made much more easy and certain.

26. This office will take particular care that no improper advantage is taken of this provision of law by parties making or professing to make tunnel locations, ostensibly for the purposes named in the statute, but really for the purpose of monopolizing the lands lying in front of their tunnels to the detriment of the mining interests and to the exclusion of *bona fide* prospectors or miners, but will hold such tunnel claimants to a strict compliance with the terms of the statutes; and a *reasonable diligence* on their part in prosecuting the work is one of the essential conditions of their implied contract. Neglience or want of due diligence will be construed as working a forfeiture of their right to all undiscovered veins on the line of such tunnel.

Manner of Proceeding to obtain Government Title to Vein or Lode Claims.—27. By section 2325 authority is given for granting titles for mines by patent from the government to any person, association, or corporation, having the necessary qualifications as to citizenship and holding the right of possession to a claim in compliance with law.

28. The claimant is required in the first place to have a correct survey of his claim made under authority of the surveyor-general of the State or Territory in which the claim lies; such survey to show with accuracy the exterior boundaries of the claim, which boundaries are required to be distinctly marked by monuments on the ground. Four plats and one copy of the original field-notes, in each case, will be prepared by the surveyor-general; one plat and the original field-notes to be retained in the office of the surveyor-general, one copy of the plat to be given the claimant for posting upon the claim, one plat and a copy of the field-notes to be given the claimant for filing with the proper register, to be finally transmitted by that officer, with other papers in the case, to this office, and one plat to be sent by the surveyor-general to the register of the proper land-district to be retained on his files for future reference.

29. The claimant is then required to post a copy of the plat of such survey in a conspicuous place upon the claim, together with notice of his intention to apply for a patent therefore, which notice will give the date of posting, the name of the claimant, the name of the claim, mine, or lode; the mining-district and county; whether the location is of record, and if so, where the record may be found; the number of feet claimed along the vein and the presumed direction thereof; the number of feet claimed on the lode in each direction from the point of discovery, or other well-defined place on the claim; the name or names of adjoining claimants on the same or other lodes; or, if none adjoin, the names of the nearest claims, &c.

30. After posting the said plat and notice upon the premises, the claimant will file with the proper register and receiver a copy of such plat, and the field-notes of survey of the claim, accompanied by the affidavit of at least two credible witnesses, that such plat and notice are posted conspicuously upon the claim, giving the date and place of such notice; a copy of the *notice* so posted to be attached to, and form a part of said affidavit.

31. Attached to the field-notes so filed must be the sworn statement of the claimant that he has the possessory right to the premises therein described, in virtue of compliance by himself (and by his grantors, if he claims by purchase) with the mining rules, regulations, and customs of the mining district, State, or Territory in which the claim lies, and with the mining laws of Congress; such sworn statement to narrate briefly, but as clearly as possible, the facts constituting such compliance, the origin of his possession, and the basis of his claim to a patent.

32. This affidavit should be supported by appropriate evidence from the mining recorder's office as to his possessory right, as follows, viz.: Where he claims to be a locator, a full, true, and correct copy of such location should be furnished as the same appears upon the mining records; such copy to be attested by the seal of the recorder, or if he has no seal then he should make oath to the same being correct, as shown by his records; where the applicant claims as a locator in company with others who have since conveyed their interests in the lode to him, a copy of the original record of location should be filed, together with an

abstract of title from the proper recorder, under seal or oath as aforesaid, tracing the co-locator's possessory rights in the claim to such applicant for patent; where the applicant claims only as a purchaser for valuable consideration, a copy of the location record must be filed, under seal or upon oath as aforesaid, with an abstract of title certified as above by the proper recorder, tracing right of possession by a continuous chain of conveyances from the original locators to the applicant, also certifying that no conveyances affecting the title to the claim in question appear of record in his office other than those set forth in the accompanying abstract.

33. In the event of the mining records in any case having been destroyed by fire or otherwise lost, affidavit of the fact should be made, and secondary evidence of possessory title will be received, which may consist of the affidavit of the claimant, supported by those of any other parties cognizant of the facts relative to his location, occupancy, possession, improvements, etc.; and in such case of lost records, any deeds, certificates of location or purchase, or other evidence which may be in the claimant's possession, and tend to establish his claim, should be filed.

34. Upon the receipt of these papers the register will, at the expense of the claimant (who must furnish the agreement of the publisher to hold applicant for patent alone responsible for charges of publication), publish a notice of such application for the period of sixty days, in a newspaper published nearest to the claim; and will post a copy of such notice in his office for the same period. In all cases sixty days must intervene between the first and the last insertion of the notice in such newspaper. When the notice is published in a *weekly* newspaper ten consecutive insertions are necessary; when in a *daily* newspaper the notice must appear in each issue for the required period.

35. The notices so published must be as full and complete as possible, and embrace all the *data* given in the notice posted upon the claim.

36. Too much care cannot be exercised in the preparation of these notices, inasmuch as upon their accuracy and completeness will depend, in a great measure, the regularity and validity of the whole proceeding.

37. The claimant, either at the time of filing these papers with the register, or at any time during the sixty days' publication, is required to file a certificate of the surveyor-general that not less than five hundred dollars' worth of labor has been expended on improvements made upon the claim by the applicant or his grantors; that the plat filed by the claimant is correct; that the field-notes of the survey, as filed, furnish such an accurate description of the claim as will, if incorporated into a patent, serve to fully identify the premises, and that such reference is made therein to natural objects or permanent monuments as will perpetuate and fix the *locus* thereof.

38. It will be the more convenient way to have this certificate indorsed by the surveyor-general, both upon the plat and field-notes of survey filed by the claimant as aforesaid.

39. After the sixty days' period of newspaper publication has expired, the claimant will file his affidavit, showing that the plat and notice aforesaid remained conspicuously posted upon the claim sought to be patented during said sixty days' publication, giving the dates.

40. Upon the filing of this affidavit the register will, if no adverse claim was filed in his office during the period of publication, permit the claimant to pay for the land according to the area given in the plat and field-notes of survey aforesaid, at the rate of five dollars for each acre, and five dollars for each fractional part of an acre, the receiver issuing the usual duplicate receipt therefor. The claimant will also make a sworn statement of all the charges and fees paid by him for publication and surveys, together with all fees and money paid the register and receiver of the land office; after which the whole matter will be forwarded to the Commisioner of the General Land Office and a patent issued thereon if found regular.

41. In sending up the papers in the case the register must not omit certifying to the fact that the notice was posted in his office for the period of sixty days, such certificate to state distinctly when such posting was done and how long continued.

42. The consecutive series of numbers of mineral entries must be continued, whether the same are of lode or placer claims.

43. The surveyor-general must continue to designate all surveyed mineral claims as heretofore by a progressive series of numbers, beginning with lot No. 37 in each township, the claim to be so designated at date of filing the plat, field-notes, etc., in addition to the local designation of the claim; it being required in all cases that the plat and field-notes of the survey of a claim must, in addition to the reference to permanent objects in the neighbourhood, describe the *locus* of the claim with reference to the lines of public surveys by a line connecting a corner of the claim with the nearest public corner of the United States surveys, unless such claim be on unsurveyed lands at a remote distance from such public corner, in which latter case the reference by course and distance to permanent objects in the neighborhood will be a sufficient designation by which to fix the *locus* until the public surveys shall have been closed upon its boundaries.

Adverse Claims.—44. Section 2326 provides for adverse claims, fixes the time within which they shall be filed to have legal effect, and prescribes the manner of their adjustment.

45. Said section requires that the adverse claim shall be filed during the period of publication of notice; that it must be on the oath of the adverse claimant; and that it must show the *nature*, the *boundaries* and the *extent* of the adverse claim.

46. In order that this section of law may be properly carried into effect, the following is communicated for the information of all concerned:

47. An adverse mining-claim must be filed with the register of the same land office with whom the application for patent was filed, or in his absence with the receiver, and within the sixty days' period of newspaper publication of notice.

48. The adverse notice must be duly sworn to by the person or persons making the same before an officer authorized to administer oaths within the land-district, or before the register or receiver; it will fully set forth the nature and extent of the interference or conflict; whether the adverse party claims as a purchaser for valuable consideration or as a locator; if the former, a certified copy of the original location, the original conveyance, a duly certified copy thereof, or an abstract of title from the office of the proper recorder should be furnished, or if the transaction was a mere verbal one he will narrate the circumstances attending the purchase, the date thereof, and the amount paid, which facts should be supported by the affidavit of one or more witnesses, if any were present at the time, and if he claims as a locator he must file a duly certified copy of the location from the office of the proper recorder.

49. In order that the *boundaries* and *extent* of the claim may be shown, it will be incumbent upon the adverse claimant to file a plat showing his entire claim, its relative situation or position with the one against which he claims, and the extent of the conflict. This plat must be made from an actual survey by a United States deputy surveyor, who will officially certify thereon to its correctness; and in addition there must be attached to such plat of survey a certificate or sworn statement by the surveyor as to the approximate value of the labor performed or improvements made upon the claim by the adverse party or his predecessors in interest, and the plat must indicate the position of any shafts, tunnels, or other improvements, if any such exist, upon the claim of the party opposing the application, and by which party said improvements were made.

50. Upon the foregoing being filed within the sixty days as aforesaid, the register, or in his absence the receiver, will give notice in writing to both parties to the contest that such adverse claim has been filed, informing them that the party who filed the adverse claim will be required within thirty days from the date of such filing to commence proceedings in a court of competent jurisdiction to determine the question of right of possession, and to prosecute the same with reasonable diligence to final judgment, and that should such adverse claimant fail to do so, his adverse claim will be considered waived, and the application for patent be allowed to proceed upon its merits.

51. When an adverse claim is filed as aforesaid, the register or receiver will indorse upon the same the precise date of filing, and preserve a record of the date of notifications issued thereon; and thereafter all proceedings on the appli-

cation for patent will be suspended, with the exception of the completion of the publication and posting of notices and plat, and the filing of the necessary proof thereof, until the controversy shall have been adjudicated in court, or the adverse claim waived or withdrawn.

52. The proceedings after rendition of judgment by the court in such case are so clearly defined by the act itself as to render it unnecessary to enlarge thereon in this place.

53. The proceedings to obtain patents for claims usually called placers, including all forms of deposit, are similar to the proceedings prescribed for obtaining patents for vein or lode claims; but where said placer-claim shall be upon surveyed lands, and conform to legal subdivisions, no further survey or plat will be required, and all placer mining claims located after May 10, 1872, shall conform as nearly as practicable with the United States system of public-land surveys and the rectangular subdivisions of such surveys, and no such location shall include more than twenty acres for each individual claimant; but where placer-claims cannot be conformed to legal subdivisions, survey, and plat shall be made as on unsurveyed lands. But where such claims are located previous to the public surveys, and do not conform to legal subdivisions, survey, plat, and entry thereof may be made according to the boundaries thereof, provided the location is in all respects legal.

54. The proceedings for obtaining patents for veins or lodes having already been fully given, it will not be necessary to repeat them here; it being thought that careful attention thereto by applicants and the local officers will enable them to act understandingly in the matter and make such slight modifications in the notice, or otherwise, as may be necessary in view of the different nature of the two classes of claims, placer-claims being fixed, however, at two dollars and fifty cents per acre, or fractional part of an acre.

55. By section 2330, authority is given for the subdivision of forty-acre legal subdivisions into ten-acre lots, which is intended for the greater convenience of miners in segregating their claims both from one another and from intervening agricultural lands.

56. It is held, therefore, that under a proper construction of the law these ten-acre lots in mining districts should be considered and dealt with, to all intents and purposes, as legal subdivisions, and that an applicant having a legal claim which conforms to one or more of these ten-acre lots, either adjoining or cornering, may make entry thereof, after the usual proceedings, without further survey or plat.

57. In cases of this kind, however, the notice given of the application must be very specific and accurate in description, and as the forty-acre tracts may be subdivided into ten-acre lots, either in the form of squares of ten by ten chains, or of parallelograms five by twenty chains, so long as the lines are parallel and at right angles with the lines of the public surveys, it will be necessary that the notice and application state specifically what ten-acre lots are sought to be patented in addition to the other data required in the notice.

58. Where the ten-acre subdivision is in the form of a square it may be described, for instance, as the "S. E. ¼ of the S. W. ¼ of N. W. ¼," or, if in the form of a parallelogram as aforesaid, it may be described as the "W. ½ of the W. ½ of the S. W. ¼ of the N. W. ¼ (or the N. ½ of the S. ½ of the N. E. ¼ of the S. E. ¼) of section———, township ———, range———," as the case may be; but, in addition to this description of the land, the notice must give all the other data that is required in a mineral application, by which parties may be put on inquiry as to the premises sought to be patented. The proof submitted with applications for claims of this kind must show clearly the character and the extent of the improvements upon the premises.

Inasmuch as the surveyor-general has no duty to perform in connection with the entry of a placer-claim of legal subdivisions, the proof of improvements must show their value to be not less than five hundred dollars and that they were made by the applicant for patent or his grantors.

59. Applicants for patent to a placer-claim, who are also in possession of a known vein or lode included therein, must state in their application that the placer includes such vein or lode. The published and posted notices must also include such statement; and the vein or lode must be surveyed and marked upon the plat; the field-notes and plat giving the area of the lode claim or claims and the area of the placer separately. If veins or lodes lying within a placer location are owned by other parties, the fact should be distinctly stated in the application for patent, and in all the notices. It should be remembered that an application which omits to include an application for a known vein or lode therein, must be construed as a conclusive declaration that the applicant has no right of possession to the vein or lode. Where there is no known lode or vein, the fact must appear by the affidavit of claimant and one or more witnesses.

60. When an adverse claim is filed to a placer application the proceedings are the same as in the case of vein or lode claims, already described.

Quantity of Placer Ground Subject to Location.—61. By section 2330 it is declared that no location of a placer-claim, made after July 9, 1870, shall exceed one hundred and sixty acres for any one person or association of persons, which location shall conform to the United States survey.

62. Section 2331 provides that all placer mining claims located after May 10, 1872, shall conform as nearly as practicable with the United States system of public surveys and the subdivisions of such surveys, and no such locations shall include more than twenty acres for each individual claimant.

63. The foregoing provisions of law are construed to mean that after the 9th day of July, 1870, no location of a placer-claim can be made to exceed one hundred and sixty acres, whatever may be the number of locators associated together, or whatever the local regulations of the district may allow; and that from and after May 10, 1872, no location made by an individual can exceed twenty acres, and no location made by an association of individuals can exceed one hundred and sixty acres, which location of one hundred and sixty acres cannot be made by a less number than eight *bona-fide* locators; and no local laws or mining regulations can restrict a placer location to less than twenty acres, although the locator is not compelled to take so much.

64. The regulations hereinbefore given as to the manner of marking locations on the ground, and placing the same on record, must be observed in the case of placer locations, so far as the same are applicable; the law requiring, however, that where placer-claims are upon *surveyed* public lands the locations must hereafter be made to conform to legal subdivisions thereof as near as practicable.

65. With regard to the proofs necessary to establish the possessory right to a placer-claim, section 2332 provides that "where such person or association, they and their grantors, have held and worked their claims for a period equal to the time prescribed by the statute of limitations for mining-claims of the State or Territory where the same may be situated, evidence of such possession and working of the claims for such period shall be sufficient to establish a right to a patent thereto under this chapter, in the absence of any adverse claim."

66. This provision of law will greatly lessen the burden of proof, more especially in the case of old claims located many years since, the records of which, in many cases, have been destroyed by fire, or lost in other ways during the lapse of time, but concerning the possessory right to which all controversy or litigation has long been settled.

67. When an applicant desires to make his proof of possessory right in accordance with this provision of law, you will not require him to produce evidence of location, copies of conveyances, or abstracts of title, as in other cases, but will require him to furnish a duly certified copy of the statute of limitations of mining-claims for the State or Territory, together with his sworn statement giving a clear and succinct narration of the facts as to the origin of his title, and likewise as to the continuation of his possession of the mining ground covered by his application; the area thereof, the nature and extent of the mining that has been done thereon; whether there has been any opposition to his possession, or litigation with regard to his claim, and, if so, when the same ceased; whether such cessation was caused by compromise or by judicial decree, and any additional facts within the claimant's knowledge having a direct bearing upon his possession and *bona fides* which he may desire to submit in support of his claim.

68. There should likewise be filed a certificate, under seal of the court having jurisdiction of mining cases within the judicial district embracing the claim, that no suit or action of any character whatever involving the right of possession

to any portion of the claim applied for is pending, and that there has been no litigation before said court affecting the title to said claim or any part thereof for a period equal to the time fixed by the statute of limitations for mining-claims in the State or Territory as aforesaid, other than that which has been finally decided in favor of the claimant.

69. The claimant should support his narrative of facts relative to his possession, occupancy, and improvements by corroborative testimony of any disinterested person or persons of credibility who may be cognizant of the facts in the case and are capable of testifying understandingly in the premises.

70. It will be to the advantage of claimants to make their proofs as full and complete as practicable.

Mill-Sites.—71. Section 2337 provides that, "where non-mineral land not contiguous to the vein or lode is used or occupied by the proprietor of such vein or lode for mining or milling purposes, such non-adjacent surface-ground may be embraced and included in an application for a patent for such vein or lode, and the same may be patented therewith, subject to the same preliminary requirements as to survey and notice as are applicable to veins or lodes; but no location hereafter made of such non-adjacent land shall exceed five acres, and payment for the same must be made at the same rate as fixed by this chapter for the superficies of the lode. The owner of a quartz-mill or reduction-works, not owning a mine in connection therewith, may also receive a patent for his mill-site, as provided in this section."

72. To avail themselves of this provision of law, parties holding the possessory right to a vein or lode, and to a piece of non-mineral land not contiguous thereto, for mining or milling purposes, not exceeding the quantity allowed for such purpose, by section 2337 United States Revised Statutes, or prior laws, under which the land was appropriated, the proprietors of such vein or lode may file in the proper land-office their application for a patent, under oath, in manner already set forth herein, which application, together with the plat and field-notes, may include, embrace, and describe, in addition to the vein or lode, such non-contiguous mill-site, and after due proceedings as to notice, &c., a patent will be issued conveying the same as one claim.

73. In making the survey in a case of this kind, the lode-claim should be described in the plat and field-notes as "Lot No. 37, A," and the mill site as "Lot No. 37, B," or whatever may be its appropriate numerical designation; the course and distance from a corner of the mill-site to a corner of the lode-claim to be invariably given in such plat and field-notes, and a copy of the plat and notice of application for patent must be conspicuously posted upon the mill-site as well as upon the vein or lode for the statutory period of sixty days. In making the entry no separate receipt or certificate need be issued for the mill-site, but the whole area of both lode and mill-site will be embraced in one entry, the price being five dollars for each acre and fractional part of an acre embraced by such lode and mill-site claim.

74. In case the owner of a quartz-mill or reduction-works is not the owner or claimant of a vein or lode, the law permits him to make application therefor in the same manner prescribed herein for mining-claims, and after due notice and proceedings, in the absence of a valid adverse filing, to enter and receive a patent for his mill-site at said price per acre.

75. In every case there must be a satisfactory proof that the land claimed as a mill-site is not mineral in character, which proof may, where the matter is unquestioned, consist of the sworn statement of the claimant, supported by that of one or more disinterested persons capable from acquaintance with the land to testify understandingly.

76. The law expressly limits mill-site locations made from and after its passage to *five acres*.

77. The registers and receivers will preserve an unbroken consecutive series of numbers for all mineral entries.

Proof of Citizenship of Mining-Claimants.—78.—The proof necessary to establish the citizenship of applicants for mining-patents must be made in the following manner: In case of an incorporated company, a certified copy of their charter or certificate of incorporation must be filed. In case of an association of persons unincorporated, the affidavit of their duly authorized agent, made upon his own knowledge, or upon information and belief, setting forth the residence of each person forming such association, must be submitted. This affidavit must be accompanied by a power of attorney from the parties forming such association, authorizing the person who makes the affidavit of citizenship to act for them in the matter of their application for patent.

79. In case of an individual or an association of individuals who do not appear by their duly authorized agent, will be required the affidavit of each applicant, showing whether he is a native or naturalized citizen, when and where born, and his residence.

80. In case an applicant has declared his intention to become a citizen, or has been naturalized, his affidavit must show the date, place, and the court before which he declared his intention, or from which his certificate of citizenship issued, and present residence.

81. The affidavit of the claimant as to his citizenship may be taken before the register or receiver, or any other officer authorized to administer oaths within the land district. If citizenship is established by the testimony of disinterested persons, such testimony may be taken at any place before any person authorized to administer oaths, and whose official character is duly verified.

Appointment of Deputy Surveyors of Mining-Claims—Charges for Surveys and Publications—Fees of Registers and Receivers, &c.—82. Section 2334 provides for the appointment of surveyors of mineral claims, authorizes the Commissioner of the General Land Office to establish the rates to be charged for surveys and for newspaper publications, prescribes the fees allowed to the local officers for receiving and acting upon applications for mining-patents and for adverse claims thereto, &c.

Under this authority of law the following rates have been established as the maximum charges for newspaper publications in mining cases:

a Where a daily newspaper is designated the charge shall not exceed seven dollars for each ten lines of space occupied, and where a weekly newspaper is designated as the medium of publication five dollars for the same space will be allowed. Such charge shall be accepted as full payment for publication in each issue of the newspaper for the entire period required by law.

It is expected that these notices shall not be so abbreviated as to curtail the description essential to a perfect notice, and the said rates established upon the understanding that they are to be in the usual body-type used for advertisements.

b For the publication of citations in contests or hearings involving the character of lands, the charges shall not exceed eight dollars for five publications in weekly newspapers, or ten dollars for publications in daily newspapers for thirty days.

83. The surveyors-general of the several districts, will, in pursuance of said law, appoint in each land-district as many *competent* deputies for the survey of mining-claims as may seek such appointment; it being distinctly understood that all expenses of these notices and surveys are to be borne by the mining-claimants and not by the United States; the system of making *deposits* for mineral surveys, as required by previous instructions, being hereby revoked as regards *field-work;* the claimant having the option of employing *any* deputy surveyor within such district to do his work in the field.

84. With regard to the *platting* of the claim and other *office-work* in the surveyor-general's office, that officer will make an estimate of the cost thereof, which amount the claimant will deposit with any Assistant United States Treasurer, or designated depository, in favor of the United States Treasurer, to be passed to the credit of the fund created by "individual depositors for surveys of the public lands," and file with the surveyor-general duplicate certificates of such deposit in the usual manner.

85. The surveyors-general will endeavor to appoint mineral deputy surveyors, so that one or more may be located in each mining-district for the greater convenience of miners.

86. The usual oaths will be required of these deputies and their assistants as to the correctness of each survey executed by them.

The duty of the deputy mineral surveyor ceases when he has executed the survey and returned the field-notes and preliminary plats thereof with his report to the surveyor-general, and will not be allowed to prepare for the mining claimant the papers in support of an application for patent, or otherwise perform the duties of an attorney before the land-office in connection with a mining-claim.

The surveyors-general and local land-officers are expected to report any infringement of this regulation to this office.

87. The law requires that each applicant shall file with the register and receiver a sworn statement of all charges and fees paid by him for publication of notice and for survey; together with all fees and money paid the register and receiver, which sworn statement is required to be transmitted to this office, for the information of the Commissioner.

88. Should it appear that excessive or exorbitant charges have been made by any surveyor or any publisher, prompt action will be taken with the view of correcting the abuse.

89. The fees payable to the register and receiver for filing and acting upon applications for mineral-land patents are five dollars to each officer, to be paid by the applicant for patent at the time of filing, and the like sum of five dollars is payable to each officer by an adverse claimant at the time of filing his adverse claim.

90. All fees or charges under this law may be paid in United States currency.

91. The register and receiver will, at the close of each month, forward to this office an abstract of mining applications filed, and a register of receipts, accompanied with an abstract of mineral lands sold, and an abstract of adverse claims filed.

92. The fees and purchase-money received by registers and receivers must be placed to the credit of the United States in the receiver's monthly and quarterly account, charging up in the disbursing account the sums to which the register and receiver may be respectively entitled as fees and commissions, with limitations in regard to the legal maximum.

Hearings to Establish the Character of Lands.—93. In every case where it becomes necessary under the law and existing instructions of this office that a hearing be held and testimony taken for the purpose of ascertaining the mineral or agricultural character of land, the local officers are directed to cause the evidence to be taken before a duly qualified officer whose office is located nearest the land in dispute, the distance to be computed by ordinary routes of travel. Whenever the local office comes within this rule, the hearing will be held before the register and receiver.

It is intended to cause these hearings to be held, as far as practicable, in such manner as to afford the least inconvenience to persons interested. Should it appear, therefore, by written stipulation of all the parties that this purpose will best be subserved by the designation of any particular officer authorized to administer oaths within the land district in which the land in controversy is situated, the instructions herein may be departed from in accordance with such stipulation. Such deviation may also be allowed where the officer who would, otherwise, be designated is an interested party, or where, for other good reason, his selection would be improper.

When the evidence is taken before an officer other than the register and receiver, the record should be sealed up, the title of the case indorsed on the envelope, and the whole returned by mail or express to the register and receiver.

On the 27th of April, 1880, in accordance with the directions of the Secretary of the Interior this office revoked the withdrawals theretofore made, upon general information, that vast tracts of public land were mineral in character, and instructed the local officers, in the absence of a specific allegation of the mineral character of land to allow applications for agricultural entry thereof, upon due proof.

Hereafter the only tracts of public land that will be withheld from entry as agricultural land on account of its mineral character, will be such as are returned by the surveyor-general as mineral; and even the presumption which is supported by such return may be overcome by testimony taken at a regular hearing.

94. Hearings to determine the character of land, as practically distinguished, are of two kinds:

1st. Where lands which are sought to be entered and patented as agricultural are alleged by affidavit to be mineral, or when sought as mineral their non-mineral character is alleged.

The proceedings relative to this class are in the nature of a contest between two or more known parties, and the testimony may be taken on personal notice of at least ten days, duly served on all parties, or, if they cannot be found, then by publication, for thirty days in a newspaper of general circulation, to be designated by the register of the land-office as published nearest to the land in controversy. If publication is made in a weekly newspaper, the notice must be inserted in five consecutive weekly issues thereof.

2d. When lands are returned as mineral by the surveyor-general. When such lands are sought to be entered as agricultural, notice must be given by publication for thirty days, as aforesaid.

95. All notices must describe the land, give the name and address of the claimant, the character of his claim, and the time, place, and purpose of the hearing.

Proof of service of notice, when personal, must consist of either acknowledgment of service indorsed on the citation, (which is always desirable,) or the affidavit of the party serving the same, giving date, place, and manner of service, indorsed as aforesaid.

Proof of publication must be the affidavit of the publisher of the newspaper, stating the period of publication, giving dates, stating whether in a daily or weekly issue, and a copy of the notice so published must be attached to, and form a part of, the affidavit.

Proof of posting on the claim must be made by the affidavits of two or more persons who state when and where the notice was posted; that it remained so posted during the prescribed period, giving dates, and a copy of the notice so posted must be attached to, and made a part of, the affidavits.

Proof of notice is indispensable to the regularity of proceedings and must accompany the record in every case.

The expense of notice must in every case be paid by the parties thereto.

96. At the hearing there must be filed the affidavit of the publisher of the paper that the said notice was published for the required time, stating when and for how long such publication was made, a printed copy thereof to be attached and made a part of the affidavit.

97. At the hearing the claimant and witnesses will be thoroughly examined with regard to the character of the land; whether the same has been thoroughly prospected; whether or not there exists within the tract or tracts claimed any lode or vein of quartz or other rock in place, bearing gold, silver, cinnabar, lead, tin, or copper, or other valuable deposit which has ever been claimed, located, recorded or worked; whether such work is entirely abandoned, or whether occasionally resumed; if such lode does exist, by whom claimed, under what designation, and in which subdivision of the land it lies; whether any placer mine or mines exist upon the land; if so, what is the character thereof—whether of the shallow-surface description, or of the deep cement, blue lead, or gravel deposits; to what extent mining is carried on when water can be obtained, and what the facilites are for obtaining water for mining purposes; upon what particular ten-acre subdivisions mining has been done, and at what time the land was abandoned for mining purposes, if abandoned at all.

98. The testimony should show also the agricultural capacities of the land, what kind of crops are raised thereon, and the value thereof; the number of acres actually cultivated for crops of cereals or vegetables, and within which paticular ten-acre subdivisions such crops are raised; also which of these subdivisions embrace his improvements, giving in detail the extent and value of his improvements, such as house, barn, vineyard, orchard, fencing, etc.

99. It is thought that *bona fide* settlers upon lands really agricultural will be able to show, by a clear, logical and succinct chain of evidence, that their claims are founded upon law and justice; while parties who have made little or no permanent agricultural improvements, and who only seek title for speculative purposes, on account of the mineral deposits known to themselves to be contained in the land, will be defeated in their intentions.

100. The testimony should be as full and complete as possible; and, in addition to the leading points indicated

above, everything of importance bearing upon the question of the character of the land should be elicited at the hearing.

101. Where the testimony is taken before an officer who does not use a seal, other than the register and receiver, the official character of such officer must be attested by a clerk of a court of record, and the testimony transmitted to the register and receiver, who will thereupon examine and forward the same to this office, with their joint opinion as to the character of the land as shown by the testimony.

102. When the case comes before this office, such an award of the land will be made as the law and the facts may justify: and in cases where a survey is necessary to set apart the mineral from the agricultural land in any forty-acre tract, the necessary instructions will be issued to enable the agricultural claimant, *at his own expense*, to have the work done, at his option, either by United States deputy, county, or other local surveyor; the survey in such case may be executed in such manner as will segregate the portion of land actually containing the mine, and used as surface-ground for the convenient working thereof, from the remainder of the tract, which remainder will be patented to the agriculturist to whom the same may have been awarded, subject, however, to the condition that the land may be entered upon by the proprietor of any vein or lode for which a patent has been issued by the United States for the purpose of extracting and removing the ore from the same, where found to penetrate or intersect the land so patented as agricultural, as stipulated by the mining act.

103. Such survey when executed must be properly sworn to by the surveyor, either before a notary public, officer of a court of record, or before the register or receiver, the deponent's character and credibility to be properly certified to by the officer administering the oath.

104. Upon the filing of the plat and field-notes of such survey, duly sworn to as aforesaid, you will transmit the same to the attorney-general for his verification and approval; who, if he finds the work correctly performed, will properly mark out the same upon the original township plat in his office, and furnish authenticated copies of such plat and description both to the proper local land office and to this office, to be affixed to the duplicate and triplicate township plats respectively.

105. In cases where a portion of a forty-acre tract is awarded to an agricultural claimant and he causes the segregation thereof from the mineral portion, as aforesaid, such agricultural portion will not be given a numerical designation as in the case of surveyed mineral claims, but will simply be described as the "Fractional ——— quarter of the ——— quarter of section ———, in township ———, of range ——— meridian, containing ——— acres, the same being exclusive of the land adjudged to be mineral in said forty-acre tract."

106. The surveyor must correctly compute the area of such agricultural portion, which computation will be verified by the surveyor-general.

107. After the authenticated plat and field-notes of the survey have been received from the surveyor-general, this office will issue the necessary order for the entry of the land, and in issuing the receiver's receipt and register's patent certificate you will invariably be governed by the description of the land given in the order from this office.

108. The fees for taking testimony and reducing the same to writing in these cases will have to be defrayed by the parties in interest. Where such testimony is taken before any other officer than the register and receiver, the register and receiver will be entiled to no fees.

109. If, upon a review of the testimony at this office, a ten acre tract should be found to be properly mineral in character, that fact will be no bar to the execution of the settler's legal right to the remaining *non-mineral* portion of his claim, if contiguous.

110. No fear need be entertained that miners will be permitted to make entries of tracts ostensibly as mining claims, which are not mineral, simply for the purpose of obtaining possession and defrauding settlers out of their valuable agricultural improvements; it being almost an impossibility for such a fraud to be consummated under the laws and regulations applicable to obtaining patents for mining claims.

111. The fact that a certain tract of land is decided upon testimony to be mineral in character is by no means equivalent to an award of the land to a miner. A miner is compelled by law to give sixty days' publication of notice, and posting of diagrams and notices, as a preliminary step; and then, before he can enter the land, he must show that the land yields mineral; that he is entitled to the possessory right thereto in virtue of compliance with local customs or rules of mines, or by virtue of the statute of limitations; that he or his grantors have expended, in actual labor and improvements, an amount of not less than five hundred dollars thereon, and that the claim is one in regard to which there is no controversy or opposing claim. After all these proofs are met, he is entitled to have a survey made at his own cost where a survey is required, after which he can enter and pay for the land embraced by his claim.

112. Blank forms for proofs in mineral cases are not furnished by the General Land Office.

RULES OF PRACTICE BEFORE LAND OFFICERS, THE GENERAL LAND OFFICE AND THE DEPARTMENT OF THE INTERIOR.

THE following are the official regulations:

PROCEEDINGS BEFORE REGISTERS AND RECEIVERS.—I. CONTESTS AND HEARINGS.—1. *Initiation of Contests.*—Rule 1.—Contests may be initiated by a party in interest, or by any other person, in the following cases:

1. Alleged abandoned homestead entries. (Revised Statutes, sec. 2297).
2. Alleged abandoned or forfeited timber-culture entries. (20 Stat. 113, sec. 3.)

Rule 2.—In all other cases contests can be initiated only by a party in interest.

Rule 3.—In every case of application for a hearing an affidavit must be filed by the contestant with the register and receiver, fully setting forth the facts which constitute the grounds of contest.

Rule 4.—Where an entry has been allowed and remains of record, the affidavit of the contestant must be accompanied by the affidavits of one or more witnesses in support of the allegations made.

2. *Hearings in contested cases.*—Rule 5.—Registers and receivers may order hearings in the following cases wherein entry has not been perfected and no certificate has been issued as a basis for patent, namely:

1. Contests between pre-emption claimants.
2. Contests between homestead and pre-emption claimants.
3. Contests to clear the record of abandoned homestead entries.
4. Contests to clear the record of abandoned or forfeited timber-culture entries.

Rule 6.—In case of an entry or location of record, on which final certificate has been issued, the hearing will be ordered only by direction of the Commissioner of the General Land Office.

Rule 7.—Applications for hearings under the preceding section must be transmitted by the register and receiver, with special report and recommendation, to the Commissioner for his determination and instructions.

3. *Notice of contest.*—Rule 8.—At least thirty days' notice shall be given of all hearings before the register and receiver, unless, by written consent, an earlier day shall be agreed upon.

Rule 9.—The notice of contest and hearing must conform to the following requirements:

1. It must be written or printed.
2. It must be signed by the register or receiver, or by one of them.
3. It must state the time and place of hearing.
4. It must describe the land involved.
5. It must state the R. and R. number of the entry, and the land office where, and the date when made, and the name of the party making the same.
6. It must give the name of the contestant, and briefly state the grounds and purpose of the contest.
7. It may contain any other information pertinent to the contest.

4. *Service of notice.*—Rule 10.—Personal service shall be made in all cases when possible, if the party to be served is resident in the State or Territory in which the land is situated, and shall consist in the delivery of a copy of the notice to each person to be served.

Rule 11.—Personal service may be executed by any officer or person.

Rule 12.—Notice may be given by publication alone, only when it is shown by affidavit of the contestant, and by such other evidence as the register and receiver may require that personal service cannot be made.

5. *Notice by publication.*—Rule 13.—Notice by publication shall be made by advertising the notice at least once a week for four successive weeks in some newspaper published in the county wherein

the land in contest lies; and, if no newspaper be published in such county, then in the newspaper published in the county nearest to such land.

Rule 14.—Where notice is given by publication a copy of the notice shall be mailed by registered letter to the last known address of each person to be notified, and a like copy shall be posted in a conspicuous place on the land during the period of publication for at least two weeks prior to the day set for hearing.

6. *Proof of service of notice.*—Rule 15.—Proof of personal service shall be the written acknowledgment of the person served, or the affidavit of the person who served the notice attached thereto, stating the time, place, and manner of service.

Rule 16.—When service is by publication the proof of service shall be a copy of the advertisement, with the affidavit of the publisher or foreman attached thereto, showing that the same was successively inserted the requisite number of times and the date thereof.

7. *Notice of interlocutory proceedings.*—Rule 17.—Notice of interlocutory motions, proceedings, orders, and decisions shall be in writing, and may be served personally or by registered letter through the mail.

Rule 18.—Proof of service by mail shall be the affidavit of the person who mailed the notice, attached to the post-office receipt for the registered letter.

8. *Rehearings.*—Rule 19.—Orders for rehearing must be brought to the notice of the parties in the same manner as in case of original proceedings.

9. *Continuances.*—Rule 20.—A postponement of a hearing to a day to be fixed by the register and receiver may be allowed on the day of trial on account of the absence of material witnesses, when the party asking for the continuance makes an affidavit before the register and receiver showing—

1. That one or more of the witnesses in his behalf is absent without his procurement or consent;
2. The name and residence of each witness;
3. The facts to which they would testify if present;
4. The materiality of the evidence;
5. The exercise of proper diligence to procure the attendance of the absent witnesses; and
6. That affiant believes said witnesses can be had at the time to which it is sought to have the trial postponed.

Rule 21.—One continuance only shall be allowed to either party on account of absent witnesses; unless the party applying for a further continuance shall at the same time apply for an order to take the depositions of the alleged absent witnesses.

Rule 22.—No continuance shall be granted when the opposite party shall admit that the witnesses would, if present, testify to the statement set out in the application for continuance.

10. *Depositions*—Rule 23.—Testimony may be taken by deposition in the following cases:

1. Where the witness is unable, from age, infirmity, or sickness, or shall refuse to attend the hearing at the local land-office.
2. Where the witness resides more than fifty miles from the place of travel, computing distance by the usually traveled route.
3. Where the witness resides out of, or is about to leave the State or Territory, or is absent therefrom.
4. Where, from any cause, it is apprehended that the witness may be unable or will refuse to attend; in which case the deposition will be used only in event that the personal attendance of the witness cannot be obtained.

Rule 24.—The party desiring to take a deposition under Rule 23 must comply with the following regulations:

1. He must make affidavit before the register or receiver setting forth one or more of the above named causes for taking such deposition, and that the witness is material.
2. He must file with the register and receiver the interrogatories to be propounded to the witness.
3. He must state the name and residence of the witness.
4. He must serve a copy of the interrogatories on the opposing party, or his attorney.

Rule 25.—The opposing party will be allowed ten days in which to file cross-interrogatories.

Rule 26.—After the expiration of the ten days allowed for filing cross-interrogatories, a commission to take the deposition shall be issued by the register and receiver, which commission shall be accompanied by a copy of all the interrogatories filed.

Rule 27.—The register and receiver may designate any officer authorized to administer oaths within the county or district where the witness resides to take such deposition.

Rule 28.—It is the duty of the officer before whom the deposition is taken to cause the interrogatories appended to the commission to be written out, and the answers thereto to be inserted immediately underneath the respective questions; and the whole, when completed, is to be read over to the witness, and must be by him subscribed and sworn to in the usual manner.

Rule 29.—The officer must attach his certificate to the deposition stating that the same was subscribed and sworn to by the deponent at the time and place therein mentioned.

Rule 30.—The deposition and certificate, together with the commission and interrogatories, must then be sealed up, the title of the cause indorsed on the envelope, and the whole returned by mail or express to the register and receiver.

Rule 31.—Upon receipt of the package at the local land-office, the date when the same is opened must be indorsed on the envelope and body of the deposition by the local land-officers.

Rule 32.—If the officer designated to take the deposition has no official seal, a proper certificate of his official character, under seal, must accompany his return.

Rule 33.—The parties in any case may stipulate in writing to take depositions before any qualified officer, and in any manner.

Rule 34.—All stipulations by parties or counsel must be in writing, and be filed with the register and receiver.

Rule 35.—Registers and receivers are not authorized to cite contestants before any officer other than themselves.

11. *Trials.*—Rule 36.—Upon the trial of a cause the register and receiver may, in any case, and should in all cases when necessary, personally direct the examination of witnesses in order to draw from them all the facts within their knowledge requisite to a correct conclusion by the officers upon any point connected with the case.

Rule 37.—The register and receiver will be careful to reach, if possible, the exact condition and status of the land involved in any contest, and will ascertain all the facts having any bearing upon the rights of parties in interest.

Rule 38.—In pre-emption cases they will particularly ascertain the nature, extent, and value of alleged improvements; by whom made, and when; the true date of the settlement of persons claiming as pre-emptors; the steps taken to mark and secure the claim, and the exact status of the land at that date as shown upon the records of their office.

Rule 39.—In like manner, under the homestead and other laws, the conditions affecting the inception of the alleged right, as well as the subsequent acts of the respective claimants, must be fully and specifically examined.

Rule 40.—Due opportunity will be allowed opposing claimants to confront and cross-examine the witnesses introduced by either party.

Rule 41.—No testimony will be excluded from the record by the register and receiver on the ground of any objection thereto; but when objection is made to testimony offered, the exceptions will be noted, and the testimony, with the exceptions, will come up with the case for the consideration of the Commissioner.

Rule 42.—Upon the day originally set for hearing, and upon any day to which the trial may be continued, the testimony of all the witnesses present shall be taken and reduced to writing.

12. *Appeals.*—Rule 43.—Appeals from the action or decisions of registers and receivers lie in every case to the Commissioner of the General Land Office. (Revised Statutes, sections 453, 2478.)

Rule 44.—After hearing in a contested case has been had and closed, the register and receiver will notify the parties in interest of the conclusions to which they have arrived, and that thirty days are allowed for an appeal from their decision to the Commissioner.

Rule 45.—The appeal must be in writing or in print, and should set forth in brief and clear terms the specific points of exception to the ruling appealed from.

Rule 46.—No appeal from the action or decisions of the register and receiver will be received at the General Land Office unless forwarded through the local officers.

Rule 47.—A failure to appeal from the decision of the local officers will be considered final as to the facts in the case, and will be disturbed by the Commissioner only as follows:

1. Where fraud or gross irregularity is suggested on the face of the papers.
2. Where the decision is contrary to existing laws or regulations.
3. In event of disagreeing decisions by the local officers.
4. Where it is not shown that the party against whom the decision was rendered was duly notified of the decision and of his right of appeal.

Rule 48.—In any of the foregoing cases the Commissioner will reverse or modify the decision of the local officers or remand the case at his discretion.

Rule 49.—All documents once received by the local officers must be kept on file with the cases, and the date of filing must be noted thereon; and no papers will be allowed under any circumstances to be removed from the files or taken from the custody of the register and receiver; but access to the same under proper rules, so as not to interfere with necessary public business, will be permitted to the parties in interest, or their attorneys, under the supervision of those officers.

13. *Reports and opinions.*—Rule 50.—Upon the termination of a contest the register and receiver will render a joint report and opinion in the case, making full and specific references to the postings and annotations upon their records.

Rule 51.—In order that all parties to a contest may have full opportunity to examine the record and prepare their arguments upon the questions at issue, the report of the register and receiver in such cases will not be forwarded until the expiration of the thirty days named in the notice for appeal, unless all parties request its earlier transmission.

Rule 52.—The register and receiver will forward their report, together with the testimony and all the papers in the case, to the Commissioner of the General Land Office, with a brief letter of transmittal, describing the case by its title, the nature of the contest, and the tract involved.

Rule 53.—The local officers will thereafter take no further action affecting the disposal of the land in contest until instructed by the Commissioner.

14. *Taxation of Costs.*—Rule 54.—Applicants for contest must de-

posit with the register and receiver a sufficient sum of money to defray the cost of the proceedings.

Rule 55.—Registers and receivers are not required to make advances from their own funds, nor to incur individual liabilities, for the expense of hearings.

Rule 56.—When testimony is taken by deposition the party in whose behalf the same is taken must pay the costs thereof.

Rule 57.—Parties contesting the validity of homestead and timber-culture entries must pay the costs of the contest.

Rule 58.—In other contested cases the costs may be equitably apportioned between the parties by the register and receiver.

Rule 59.—Only the actual costs of notice, and the legal fees for reducing testimony to writing, or for acting or mineral land applications and protests, can be charged to the parties. (Revised Statutes, sec. 2238).

Rule 60.—Costs of notice will include the costs of all the notices up to the final determination of the case.

Rule 61.—Upon the final disposal of a case, any excess in the sum deposited as security over the amount chargeable to the party making the deposit will be returned to him by the register and receiver.

Rule 62.—When hearings are ordered by the Commissioner or by the Secretary of the Interior, upon the discovery of reasons for suspension in the usual course of examination of entries, the preliminary costs will be provided from the contingent fund for the expenses of local land-offices.

Rule 63.—The preliminary costs provided for by the preceding section will be collected by the register and receiver when the parties are brought before them in obedience to the order of hearing.

Rule 64.—The register and receiver will then require proper provision to be made for such further notification as may become necessary in the usual progress of the case to final decision.

Rule 65.—The register and receiver will append to their report in each case a statement of costs and the amount actually paid by each of the contestants, and also a statement of the amount deposited to secure the payment of the costs, how said sum was apportioned, and the amount returned, if any, and to whom.

Appeals from Decisions Rejecting Applications to Enter Public Lands.—Rule 66.—For the purpose of enabling appeals to be taken from the rulings or action of the local officers relative to applications to file upon, enter, or locate the public lands, the following rules will be observed:

1. The register and receiver will indorse upon every rejected application the date when presented, and their reason for rejecting it.
2. They will promptly advise the party in interest of their action, and of his right of appeal to the Commissioner.
3. They will note upon their records a memorandum of the transaction.

Rule 67.—The party aggrieved will be allowed thirty days from receipt of notice in which to file his appeal in the local land office.

Rule 68.—The register and receiver will promptly forward the appeal to the General Land Office, together with a full report upon the case.

Rule 69.—This report should recite all the facts and the proceedings had, and must embrace the following particulars:

1. A statement of the application and rejection, with the reasons for the rejection.
2. A description of the tract involved and a statement of its status, as shown by the records of the local land office.
3. References to all entries, filings, annotations, memoranda and correspondence shown by the record relating to said tract, and to the proceedings had.

Rule 70.—Rules 43 to 48, inclusive, are applicable to all appeals from the decisions of registers and receivers.

PROCEEDINGS BEFORE SURVEYORS-GENERAL.

Rule 71.—The proceedings in hearings and contests before surveyors-general shall, as to notices, depositions and other matters, be governed, as nearly as may be, by the rules prescribed for proceedings before registers and receivers unless otherwise provided by law.

PROCEEDINGS BEFORE THE COMMISSIONER OF THE GENERAL LAND OFFICE AND SECRETARY OF THE INTERIOR.

Rule 72.—When a contest has been closed before the local land officers, and their report forwarded to the General Land Office, no additional evidence will be admitted in the case unless offered under stipulation of the parties to the record, except where such evidence is presented as the basis of a motion for a new trial or in support of a mineral application or protest; but this rule will not prevent the Commissioner, in the exercise of his discretion, from ordering further investigation when necessary.

Rule 73. After the Commissioner shall have received a record of testimony in a contested case, thirty days will be allowed to expire before any action thereon is taken, unless, in the judgment of the Commissioner, public policy or private necessity shall demand summary action, in which case he will proceed at his discretion, first notifying the attorneys of record of his proposed action.

Rule 74.—When a case is pending on appeal from the decision of the register and receiver or surveyor-general, and argument is not filed before the same is reached in its order for examination, the argument will be considered closed, and thereafter no further arguments or motions of any kind will be entertained except upon written stipulation duly filed, or good cause shown to the Commissioner.

Rule 75.—If, before decision by the Commissioner, either party should desire to discuss a case orally, reasonable opportunity therefor will be given in the discretion of the Commissioner, but only at a time to be fixed by him upon notice to the opposing counsel, stating time and specific points upon which discussion is desired; and except as herein provided, no oral hearings or suggestions will be allowed.

Rule 76.—Motions for rehearings before registers and receivers, or for review or reconsideration of the decisions of the Commissioner or Secretary, will be allowed in accordance with legal principles applicable to motions for new trials at law, after due notice to the opposing party.

Rule 77.—Motions for rehearings and reviews must be filed in the office wherein the decision to be affected by such rehearing or review was made, or in the local land office for transmittal to the General Land Office, and, except when based upon newly-discovered evidence, must be filed within thirty days from notice of such decision.

Rule 78.—Motions for rehearings and reviews must be accompanied by an affidavit of the party, or his attorney, that the motion is made in good faith, and not for the purpose of delay.

Rule 79.—The time between the filing of a motion for rehearing or review and the notice of the decision upon such motion, shall be excluded in computing the time allowed for appeal.

Rule 80.—No officer shall entertain a motion in a case after an appeal from his decision has been taken.

APPEALS FROM THE COMMISSIONER TO THE SECRETARY.

Rule 81.—An appeal may be taken from the decision of the Commissioner of the General Land Office to the Secretary of the Interior, upon any question relating to the disposal of the public lands and to private land claims, except in case of interlocutory orders and decisions, and orders for hearing or other matter resting in the discretion of the commissioner. Decisions and orders forming the above exception will be noted in the record, and will be considered by the Secretary on review, in case an appeal upon the merits be finally allowed.

Rule 82.—When the Commissioner considers an appeal defective he will notify the party of the defect, and if not amended within fifteen days from the date of the service of such notice, the appeal will be dismissed and the case closed.

Rule 83.—In proceedings before the Commissioner in which he shall formally decide that a party has no right of appeal to the Secretary, the party against whom such decision is rendered may apply to the Secretary for an order directing the Commissioner to certify said proceedings to the Secretary, and to suspend further action until the Secretary shall pass upon the same.

Rule 84.—Applications to the Secretary under the preceding rule shall be made in writing, under oath, and shall fully and specifically set forth the grounds upon which the application is made.

Rule 85.—When the Commissioner shall formally decide against the right of an appeal, he shall suspend action on the case at issue for twenty days from service of notice of his decision, to enable the party against whom the decision is rendered to apply to the Secretary for an order, in accordance with Rules 83 and 84.

Rule 86.—Notice of an appeal from the Commissioner's decision must be filed in the General Land Office, and served on the appellee or his counsel, within sixty days from the date of the service of notice of such decision.

Rule 87.—When notice of the decision is given through the mails by the register and receiver, or surveyor-general, five days additional will be allowed by those officers for the transmission of the letter, and five days for the return of the appeal through the same channel, before reporting to the General Land Office.

Rule 88.—Within the time allowed for giving notice of appeal, the appellant shall also file in the General Land Office a specification of errors, which specification shall clearly and concisely designate the errors of which he complains.

Rule 89.—He may also, within the same time, file a written argument with citation of authorities, in support of his appeal.

Rule 90.—A failure to file a specification of errors within the time required will be treated as a waiver of the right of appeal, and the case will be considered closed.

Rule 91.—The appellee shall be allowed thirty days from the expiration of the sixty days allowed for appeal in which to file his argument.

Rule 92.—The appellant shall be allowed thirty days from service of argument of appellee in which to file argument strictly in reply; and no other or further arguments or motions of any kind shall be filed without permission of the Commissioner or Secretary and notice to the opposite party.

Rule 93.—A copy of the notice of appeal, specification of errors, and all arguments of either party, shall be served on the opposite party within the time allowed for filing the same.

Rule 94.—Such service shall be made personally or by registered letter.

Rule 95.—Proof of personal service shall be the written acknowledgment of the party served or the affidavit of the person making the service attached to the papers served, and stating time, place, and manner of service.

Rule 96.—Proof of service by registered letter shall be the affidavit of the person mailing the letter attached to a copy of the post-office receipt.

Rule 97.—Fifteen days, exclusive of the day of mailing will be allowed for the transmission of notices and papers by mail, except in case of notice to resident attorneys, when one day will be allowed.

Rule 98.—Notice of interlocutory motions and proceedings before the Commissioner and Secretary shall be served personally or by registered letter, and service proved as provided in rules 94 and 95.

Rule 99. No motion affecting the merits of a case or the regular order of proceedings will be entertained, except on due proof of service of notice.

Rule 100.—Ex-parte cases and cases in which the adverse party does not appear will be governed by the foregoing rules as to notices of decisions, time for appeal, and filing of exceptions and arguments, as far as applicable. In such cases, however, the right to file additional evidence at any stage of the proceedings to cure defects in the proof or record will be allowed.

Rule 101.—No person hereafter appearing as a party or attorney in any case shall be entitled to a notice of the proceedings who does not at the time of his appearance file in the office in which the case is pending a statement in writing, giving his name and post-office address, and the name of the party whom he represents; nor shall any person who has heretofore appeared in a case be entitled to a notice unless within fifteen days after being requested to file such statement he shall comply with said requirement.

Rule 102.—No person not a party to the record shall intervene in a case without first disclosing on oath the nature of his interest.

Rule 103.—When the Commissioner makes an order or decision affecting the merits of a case or the regular order of proceedings therein, he will cause notice to be given to each party in interest whose address is known.

Attorneys.—Rule 104.—In all cases contested or ex-parte, where the parties in interest are represented by attorneys, such attorneys will be recognized as fully controlling the cases of their respective clients.

Rule 105.—All notices will be served upon the attorneys of record.

Rule 106.—Notice to one attorney in a case shall constitute notice to all counsel appearing for the party represented by him; and notice to the attorney will be deemed notice to the party in interest.

Rule 107.—All attorneys practicing before the General Land Office and Department of the Interior must first file the oath of office prescribed by section 3478 United States Revised Statutes.

Rule 108.—In the examination of any case, whether contested or ex-parte, and for the preparation of arguments, the attorneys employed, when in good standing in the Department, will be allowed full opportunity to consult the record of the case and to examine the abstracts, plats, field-notes, and tract-books, and the correspondence of the General Land Office or of the Department relative thereto, and to make verbal inquiries ot the various chiefs of divisions at their respective desks in respect to the papers or status of said case; but such personal inquiries will be made of no other clerk in the division except in the presence or with the consent of the head thereof, and will be restricted to the hours between 11 A. M. and 2 P. M.

Rule 109.—Any attorney detected in any abuse of the above privileges, or of gross misconduct, upon satisfactory proof thereof, after due notice and hearing, shall be prohibited from further practicing before the Department.

Rule 110.—Should either party desire to discuss a case orally before the Secretary, opportunity will be afforded at the discretion of the Department, but only at a time specified by the Secretary or fixed by stipulation of the parties, with the consent of the Secretary; and in the absence of such stipulation, on written notice to opposing counsel, with like consent, specifying the time when argument will be heard.

Rule 111.—The examination of cases on appeal to the Commissioner or Secretary will be facilitated by filing in printed form such arguments as it is desired to have considered.

Decisions.—Rule 112.—Decisions of the Commissioner not appealed from within the period prescribed become final, and the case will be regularly closed. (Revised Statutes, sec. 2273.)

Rule 113.—The decision of the Secretary, so far as respects the action of the Executive, is final.

Rule 114.—The preceding rules shall take effect on the 1st day of February, 1881.

None of the foregoing rules shall be construed to deprive the Secretary of the Interior of the exercise of the directory and supervisory powers conferred upon him by law.

RECENT DECISIONS AFFECTING RIGHTS UNDER THE MINING LAWS OF THE UNITED STATES.

THE following are of interest:

1. Lizzie Bullock Nos. 1 and 2 Mining Claims.—The rule in case of Big Flat Mining Company *et al. v.* Big Flat Gravel Mining Company (See Annual Report of General Land Office) modified respecting proceedings for survey of mining claims and approval thereof by surveyor general. Instructions issued in pursuance of authority of Secretary's decision.

DEPARTMENT OF THE INTERIOR,

Washington, January 8, 1881.

SIR: I have considered your report of the 28th ultimo, in the matter of the application for patents for the Lizzie Bullock No. 1 and Lizzie Bullock No. 2 mining claims now pending in the district land office at Bodie, Cal., from which it appears that, notwithstanding approved plats of the conflicting claims of the Ivanpah Consolidated Mill and Mining Company were delivered one day prior to the delivery of approved plats of the claims first-above mentioned, the owner of the Lizzie Bullock claims, by extraordinary efforts, was enabled to and did file his applications for patent before the Ivanpah Company had completed its papers for filing application for patents for its claims.

The Ivanpah Company requests that the surveyor-general be at once directed to withdraw the survey issued to Mr. Bidwell, owner of the Lizzie Bullock claims, which conflicts with claims of the company, and that the register and the receiver at Bodie, be directed to receive and file said company's application for patent, and to dismiss the conflicting application for patent filed by Mr. Bidwell, or have the same treated merely as an adverse claim. I agree with your suggestion that the case has passed beyond executive control, as regards a change in the position of the parties. The matters complained of are also beyond the control of this department. The surveys having been found correct by the surveyor-general, and paid for by the party applying for them, and plats thereof having been approved and delivered, are private property, and this department has no authority to withdraw them.

The applications complained of must be allowed to take the usual course in such proceedings.

In your report you suggest that the rule announced in the decision of August 18, 1880, in the case of the Big Flat Mining Company *et al., vs.* the Big Flat Gravel Mining Company, be so modified as to allow a party who first applies for a survey of a mining claim priority over any other applicant for a survey of the same ground, or any portion thereof, not only as to the examination by the surveyor-general of the field work of the deputy-surveyor and delivery of plat, but priority of right to apply for a patent, provided due diligence is exercised in making the application for patent.

I must decline to make any rule interfering with the lawful right of parties to prepare and present in such manner as they see fit their applications for patents for mining claims. It would be manifestly improper to pass upon either the sufficiency or priority of applications by anticipation, or upon applications not presented. The land department can only take jurisdiction when a case is presented for action.

But in view of the reasons presented by you, I think it proper to so modify the rule in question as to require that the mining survey first applied for shall have priority of action in all its stages in the office of the surveyor-general, including the delivery thereof, over any other survey of the same ground, or any portion thereof; and the rule in question is hereby modified accordingly.

This, in my opinion, is the full extent to which departmental authority can properly go in the premises; and if the rule is observed in its true spirit, it will doubtless meet the difficulties which you desire to prevent.

You are authorized to issue all needful instructions for its proper enforcement.

The papers filed with your report are herewith returned.

Very respectfully,

C. SCHURTZ,
Secretary.

THE COMMISSIONER OF THE GENERAL LAND OFFICE.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,

Washington, D. C., March 3, 1881.

GENTLEMEN: On the 8th ultimo the honorable Secretary of the Interior established the following rule in regard to the survey of mining claims, viz: " The mining survey first applied for shall have priority of action in all its stages in the office of the surveyor-general, including the delivery thereof, over any other survey of the same ground or any portion thereof;" and authorized this office to prescribe regulations for the proper enforcement thereof.

In the future, therefore, you will be governed by these regulations:

1st. The surveyor-general should not order or authorize a survey of a claim which conflicts with one previously applied for until the survey first applied for has been completed, examined, approved and platted, and the plats delivered.

2d. When the conflict does not appear until the field-notes of the respective surveys are returned, then the survey first applied for should be first examined, approved and platted, and the plats delivered before the field-notes of the survey last applied for are taken up for examination or plats constructed.

3d. When the survey first authorized is not returned within a reasonable period, and the applicant for a conflicting survey makes affidavit that he believes (stating the reasons for his belief) that such first applicant has abandoned his purpose of having a survey made, or is deferring it for vexatious purposes, to wit, to postpone the subsequent applicant, the surveyor-general shall give notice of such charges to such first applicant, and call upon him for explanation under oath of the delay. He shall also require the deputy mineral surveyor to make a full statement in writing, explanatory of the delay: and if the surveyor-general shall conclude that good and sufficient reasons for such delay do not exist, he shall authorize the applicant for the conflicting survey to proceed with the same; otherwise the order of proceeding shall not be changed. The surveyor-general shall retain on his files all affidavits, &c., relating to the controversy, and in the event of an appeal from his action, shall forward the same to this office.

The deputy surveyors are under your control in the execution of their work, and you will properly instruct them concerning the prompt execution thereof.

4th. Whenever an applicant for a survey shall have reason to suppose that a conflicting claimant will also apply for a survey for patent, he may give a notice in writing to the surveyor-general, particularly describing such conflicting claim, and file a copy of the notice of location of such conflicting claim. In such case the surveyor-general will not order or authorize any survey of such conflicting claim until the survey first applied for has been examined, completed, approved and platted, and the plats delivered.

It is the intent of the rules adopted as aforesaid to furnish the first applicant in good faith for a survey with the opportunity to first present his application for patent at the district land office, and thus secure orderly proceedings. When the field-notes and plats have been delivered, however, it is held by the honorable Secretary that no authority exists to prescribe the order in which the application for patent shall be filed, it being then the right of the party to present his application when he chooses.

Therefore you will seek to avoid errors in the matter of delivery of surveys, and in case of conflicting surveys will postpone the delivery of those last applied for for such temporary period as will be sufficient to enable the first applicant to present his application for patent.

When the survey first applied for is executed and delivered in ignorance of a conflict which speedily thereafter shall appear by the return of a subsequent survey, you will notify the prior party of the existence of the conflict. If, however, the first survey shall have been delivered for any considerable period, at the time the conflict is shown, such notice need not be given.

Acknowledge receipt hereof.

Very respectfully,
A. WILLIAMSON,
Commissioner.

U. S. SURVEYORS-GENERAL.

2. Town Site of Eureka Springs, vs. Conant et al.—Surface of occupation of lode claims considered. Policy of the land department of inserting reservation clauses in mineral and town site patents considered and improved.

DEPARTMENT OF INTERIOR.
Washington, D. C., March 31, 1881.

SIR: I am in receipt of your letter of the 22d instant, accompanied with Senate Ex. Doc., 187, Forty-sixth Congress second session, and a draft of a decision prepared for your signature in the case of Town site of Eureka Springs *vs.* W. R. Conant *et al.*, mineral claimants, and J. K. Northcut *et al.*, Harrison district, Arkansas.

The draft of your decision is submitted, not for any expression of opinion on my part as to the merits of the case, but as illustrative of the existing rule of the department relative to the insertion of clauses of reservation in mineral and town-site patents respectively, reserving in mineral patents the rights of town occupants, and in town-site patents the rights of mineral claimants.

You request my opinion and advice upon the following points:

First. Whether your office should continue to insert the reservation clause, referred to in your letter, in mineral patents, in cases wherein patents for the same land have already issued upon town-site entries.

Second. Whether, in cases like the one in which the draft of decision was prepared, you are justified in deciding what patents should issue, and what clauses of reservation should be inserted therein.

The questions for consideration have relation to town sites in the vicinity of or embracing within their limits lands in which mineral veins exist; and when mineral lands are mentioned herein, it will be understood that lands of this description are meant, and not mineral lands commonly known as placers.

The questions raised by your letter have received the consideration of my predecessors on several different occasions. They were especially considered in the case of the town site of Central City, in which Secretary Chandler, under date of June 7, 1876, affirmed the decision of your immediate predecessor of December 23, 1875 (Copp's L. O. 2, p. 150). Your predecessor's decision was carefully prepared, and treated the questions at length, and it was affirmed upon the grounds and for the reasons therein stated, after full argument. The forms of reservation clauses now employed in the preparation of town-site patents for lands in mineral regions, and of mineral patents for lands within the limits of town sites, are conformable to the opinion expressed in said decision. The doctrine of that decision has not been set aside nor modified. On the contrary, it seems to have been recognized and acquiesced in by Secretary Schurz. (See decisions of this department of October 12, 1880) in the matter of the patent for the town-site of Tombstone, Ariz., and of December 18, 1880, in the matter of the patent to the Little Nettie lode, in the limits of Lead City, Deadwood district, Dak.

The practice of inserting in mineral and town-site patents said clauses of reservation thus established and recognized, and which has prevailed for many years, ought not to be disturbed, unless there is some apparent legal reason for modifying or discontinuing it. There can be no question of my authority to change the practice as to cases not already disposed of, should it be found to be in contravention of law; for it involves simply the construction of statutes relating to the subject under consideration, and the establishment of regulations accordingly.

I agree with the opinion of my predecessor in the matter of the town site of Central City, that the town-site laws contemplate that towns will exist in mining localities, and that by implication town-site entries are permissible which may embrace within their limits valid mining claims, and veins or lodes containing valuable mineral deposits upon which no location has been made. Section 2386 of the Revised Statutes, so far as it relates to the matter under consideration, is as follows:

"Where mineral veins are possessed, which possession is recognized by local authority, and to the extent so possessed and recognized, the title to town lots to be acquired shall be subject to the recognized possession and the necessary use thereof."

This section was taken from and expressed in the very language of the last two provisos to section 2 of the act of March 3, 1865 (13 Statutes, 529), which act was in existence prior to the passage of a general mining law. There was no law then in existence by which mineral claimants could acquire title from the United States, but the act of 1865 recognized their possession to the extent that it was recognized by local laws, and protected it against the right of occupancy and entry by town-site claimants. But the mining acts of July 26, 1866, and May 10, 1872, fully recognized and protected, as does chapter 6 of the Revised Statutes now fully recognize and protect, the possession of mining claims held under local regulations not in conflict with the laws of the United States. Hence the possession mentioned in section 2386 must be held to mean the same as a possession held under the mining statutes of the United States.

Now, in addition to the reservation in favor of mineral claimants expressed in section 2386, section 2392 of the same chapter provides that "no title shall be acquired under the foregoing provisions of this chapter to any mine of gold, silver, cinnabar, or copper; or to any valid mining claim or possession held under existing laws."

Thus it appears that while town-site laws permit occupation and entry of land in mineral regions, they expressly provide that no title shall be acquired thereunder to any mine of gold, silver, cinnabar, or copper, or to any valid mining claim or possession.

It seems to me that nothing could be more proper than to express in the patent the exceptions or reservation thus expressed in the law.

Again, as the law contemplates the occupancy by town-sites, or for town purposes, of lands in the vicinity of mines, or of lands in which mineral veins may be found to exist, and at the same time the existence of mining claims within town-site limits, located before or after the town occupancy has commenced, it clearly contemplates the protection of such occupancy so far as it may be necessary for the proper use of the individual inhabitants of the town, or for streets, alleys, and the like.

Parties owning mining claims must, therefore, hold subject to the legal occupancy of the town or individual lot-holders therein. Hence it is proper to express in mineral patents such reservation in favor of town sites or town-site occupants as the law reognizes.

It is true that section 2322 Revised Statutes provides that "the locators of all mining locations heretofore made, or which shall hereafter be made, on any mineral vein, lode, or ledge, situated on the public domain, their heirs and assigns, where no adverse claim exists on the tenth day of May, eighteen hundred and seventy-two, so long as they comply with the laws of the United States, and with the State, Territorial, and local regulations not in conflict with the laws of the United States, governing their possessory title, shall have the exclusive right of possession and enjoyment of all the surface included within the lines of their locations." Construing this section with sections 2386 and 2392, it might be contended that the reservation in favor of town sites should only be of such rights of surface occupancy as accrued before the location of the mining claim.

In cases in which there was no waiver or granting away of this right of possession, doubtless that would be the full extent to which the courts would construe the usual clause of reservation to have any force; but while this may be the case, it must be remembered that mineral claimants may yield or waive their right of possession, or make conveyances thereof; and to meet such cases the present clause of reservation would be a great protection to town-site claimants, occupants, or property-holders, as well as to purchasers of mines. As the law stands, no one, whether for the purpose of establishing a town, or for a residence or place of business, or for any other purposes, has the right to intrude or trespass upon the possession of a valid mining claim; and the courts afford ample remedy and protection against such intrusion or trespass, and it is the business as well as the privilege of the mineral claimant to assert his right in this respect, and not the duty of the United States to stand guard over his premises.

As to all mining locations made within town limits after occupancy for municipal purposes, as before stated, they are subject to the prior legal occupancy.

Out of the conflicting claims may grow questions that must be settled by the courts. The government cannot undertake to provide specifically in patents for every such conflicting claim or right. The clauses of general reciprocal reservation will amply protect the rights of all, and in no event can they injure any one, for no more can be conveyed by patent than Congress has authorized; and all that Congress has provided that a party may acquire by a compliance with the law will pass by the patent which Congress has authorized to issue therefor, regardless of any reservations that the executive may insert. In other words, a reservation unauthorized by law is as impotent as a patent issued without authority of law. When parties bring their conflicting claims or rights before the judicial tribunals for adjudication, those tribunals will declare the force and effect of the reservations in the patent.

As at present advised, I see no reason to change the established practice of inserting reservation clauses in town-site and mineral patents; and having thus stated my conclusions, it is unnecessary to further specifically advise you upon the points presented.

S. J. Kirkwood,
Secretary.

The Commissioner of the General Land Office.

3. Mining Claims within patented Town Sites.—

Mining claims can only be located under the mining act upon lands belonging to the United States.

After a town site has been patented, the land embraced therein does not belong to the United States, even if the minerals, do and no location of a mining claim can therefore be made.

Department of the Interior,
General Land Office,
Washington, D. C., June 28,1881.

Sir:—I am in receipt of your communication, dated 7th instant, in which you state that a client of yours, while sinking or excavating on a town lot owned by him in the town of Tombstone, discovered a ledge bearing silver ore, and you request to be informed in his behalf how he may obtain title to the same.

Patent issued for the town site of Tombstone, September 22, 1880, and contained the following clause, to wit: "*Provided,* That no title shall be hereby acquired to any mine of gold, silver, cinnabar, or copper, or to any valid mining claim or possession held under existing laws. *And provided further,* That the grant hereby made is held and declared to be subject to all the conditions, limitations, and restrictions contained in section two thousand three hundred and eighty-six of the Revised Statutes of the United States, so far as the same is applicable thereto.

The effect of this condition which is in terms almost in the exact language of the law authorizing it, is to exclude from the grant, 1st, all valid mining claims located prior to the entry of the town site and held in accordance with existing laws when the town site patent issued; and second, all "mines of gold, silver, cinnabar or copper."

The definition to be placed upon the "terms "mines of gold, silver, cinnabar, or copper," is somewhat doubtful, and I am inclined to think the law refers only to known mines discovered prior to the issuance of patent.

Practically, however, under existing legislation, it is immaterial whether veins not known at the date of patent are excluded from the grant or otherwise.

Conceding that the title thereto remains in the United States, they would not in that case be subject to occupation and purchase under the provisions of the mining act for the reason that said act permits locations of mineral deposits only where the same are situate upon lands belonging to the United States. Even if the title to such veins remains in the United States, the land in which they are situated belongs to the grantees under the town-site patents. Hence such veins would not constitute "valuable mineral deposits in lands belonging to the United States," which alone are subject to location under the terms of the law.

I am therefore of the opinion that under existing legislation your client cannot obtain a patent for the mine discovered by him.

Very respectfully,

C. W. Holcomb,
Acting Commissioner.

Geo. R. Williams, Esq.,
Tombstone, Arizona.

4. Coal Lands.—

The price to be paid for coal lands depends wholly upon its distance from a completed railroad at the date of entry, irrespective of the preferred right of entry.

If at the date of proof and payment the land is more than 15 miles from such a road the price should be not less than $10 per acre; and if it lies within 15 miles, the price should not be less than $20 per acre.

Department of the Interior,
Washington, October 17, 1881.

Sir:—I have considered the question submitted for my consideration by your letter of September 29, ult., viz., the price government should charge for coal lands—whether $10 or $20 per acre—where the land is situated more than 15 miles from any completed railroad at the time the claimant commenced opening and improving the mine and at the date he filed his declaratory statement, but which is within 15 miles of such road at the date of his application to purchase the land.

The answer rests upon a construction of sections 2347, 2348, 2349, and 2350, Revised Statutes. Section 2347 provides that "every person * * * or association of persons * * * shall * * * have the right to enter * * * any quantity of vacant lands * * * not exceeding 160 acres to such individual person, or 320 acres to such association, upon payment to the receiver of not less than $10 per acre for such lands, where the same shall be situated more than 15 miles from any completed railroad, and not less than $20 per acre for such lands as shall be within 15 miles of such road."

Section 2348 provides that "any person or association of persons * * * who have opened and improved, or shall hereafter open and improve, any coal mine or mines upon the public lands, and shall be in actual possession of the same, shall be entitled to a preference right of entry, under the preceding section, of the mines so opened and improved." * * *

Section 2349 provides for the presentation of all claims, under the preceding section, to the register of the proper land district, within sixty days after the date of actual possession and the commencement of improvements on the land, by the filing of a declaratory statement therefor; and if the township plat is not on file at the date of such improvement, the filing must be made within sixty days from receipt of the plat at the district office.

Section 2350 provides that persons claiming under section 2348 shall prove their respective rights and pay for the land filed upon within one year from the time prescribed for filing their respective claims; and upon failure to file the proper notice, or to pay for the land within the required period, the same shall be subject to entry by any other qualified applicant.

These sections are a re-enactment of the act of March 3, 1873, which was not a part of the pre-emption system for the disposition of the public lands, but "An act to provide for the sale of the lands of the United States containing coal."

As an independent act, it must therefore be construed by itself, unaided by other acts, unless by analogy. It is not, in my opinion, difficult of interpretation.

Under the section named, coal lands, when subject to sale, may be disposed of by private cash entry; or, a person opening and improving the same and in actual possession, may acquire a preference right to enter the same by presenting his claim to the district land office within sixty days after the date of his actual possession and commencement of improvements, and filing his declaratory statement therefor within the time required by section 2349, in which case he must prove his right and pay for the land within one year from the time prescribed for filing his claim; in default of which, his preference right expires, and the land becomes subject to entry by another, as provided in section 2350. This preference right is a mere right of entry secured to such person as against others, and affects no other question. If waived by neglect to prove up and pay for the land, it ceases. It has no relation to the price of the land, but to an entry only. The price is otherwise determined.

The provision of section 2348, that the persons named "shall be entitled to a preference right of entry *under the preceding section,*" means, I think, that they may enter the land upon the terms and conditions named in section 2347, which section fixes the prices of the land.

The preference right to enter a tract and the actual entry thereof are quite distinct in their legal significance and effect, and when the statute gives the "right to enter" a tract upon payment of a certain price, it confines the entry to that price, and does not permit the entry to be controlled by conditions affecting the price, which may have existed when the preference right was secured—perhaps a year previously—and when the relation of the land to a completed railroad may have been quite different. The preference right has reference to a subsequent entry, but the price is to be determined at the date of entry, as if the party made private cash entry, and notwithstanding he may have secured a preference right, and is regulated by the relation of the land to the road at the date of proof and payment.

I am of the opinion, therefore, that the price of the land depends wholly upon its distance from a completed railroad at the date of entry, irrespective of the preferred right of entry, and that if at the date of proof and payment (which constitutes the entry) the land is more than fifteen miles from such a road, the price should not be less than $10 per acre, and that if it is within 15 miles, the price should be not less than $20 per acre.

The letter of F. Perkins, accompanying yours of the 29th ult., is herewith returned. Very respectfully,

S. J. KIRKWOOD, Secretary.

The Commissioner of the General Land Office.

5. Relocation by a co-owner—Improvements.—Where a lode mining claim has been located by several persons jointly and during a given year thereafter, the expenditures for labor or improvements necessary to maintain the possessory title have not been made, the claim may be located by one of the former claimants to the exclusion of his co-claimants. Failure to make the required annual expenditures subjects a claim to relocation "in the same manner as if no location of the same had ever been made;" hence labor performed or improvements made by an original locator cannot be claimed by him as a part of the expenditures necessary to entitle him to patent for the relocation.

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., March 16, 1881.

Sir:—I am in receipt of your communication of the 22d ultimo, requesting instruction for your guidance in certain cases demanding your official action as United States Deputy Mineral Surveyor.

First.—Can one of the locators of a mining claim upon which the necessary amount of expenditures for a given year have not been made, relocate the same as abandoned property, in his own name, and for himself only?

Section 2324, Revised Statutes, after prescribing the value of labor to be performed or improvements to be made annually upon each claim in order to protect the possessory right of locators, provides that "upon a failure to comply with these conditions the claims or mine upon which such failure occurred shall be open to relocation in the same manner as if no location of the same had ever been made; provided that the original relocators, their heirs, assigns, or legal representatives, have not resumed work upon the claim after failure and before such location."

From this it will be seen that the only question to be considered in the case stated is whether one of a number of original locators, whose claim has been abandoned, would stand upon the same footing as a stranger to the first location, who by the provision above recited is expressly authorized to relocate such abandoned claim.

It is clear that one of a number of locators of a certain claim can, concurrently with such joint location, locate a separate claim independently of his colocators; and as an abandoned claim reverts to the mass of unappropriated public lands, and becomes subject to a new appropriation, "*in the same manner as if no location of the same had ever been made*," I can see no valid objection to a new adverse location of such claim by one of the former locators.

Second.—Such location being valid, can the locator claim the amount of money actually expended by himself for work on the original location as part of the expenditures required by law to entitle him to receive a patent for the claim so relocated?

As has been stated the right to make such relocation by one of the original locators is found upon the forfeiture or abandonment of the claim consequent upon *his own* dereliction as well as that of his associates. He cannot, therefore, be permitted to assume the dual character of an original claimant and a relocator. Having located the claim in the "same manner as if no location of the same had ever been made," it is not competent for him under existing law to appropriate rights whose extinguishment must have been a necessary precedent to a valid relocation. His rights are the same as those of a party who had no interest in the previous location, neither greater nor less. Very respectfully,

C. W. HOLCOMB, *Acting Commissioner.*

MAX BOEHMER,
United States Deputy Mineral Surveyor, Leadville, Col.

6. Sutro Tunnel.—1. The Sutro tunnel grant includes lands west of the Comstock lode; and the withdrawal therefor operates to the full extent of the grant, notwithstanding the fact that the tunnel has not been constructed west of said lode.

2. Locators in possession of lode claims at the date of the Sutro grant are not required to conform to the provisions of the United States mining laws as regards performance of annual labor, but a compliance with the local laws and regulations prescribed by the legislature of the State of Nevada must be observed.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, May 28, 1881.

GENTLEMEN: This office is advised by your letter of the 14th ultimo that you have allowed the filing of an application for a patent to a mining claim lying about 2,000 feet west of the Comstock lode, and partly within the Sutro tunnel grant, if the lines of said grant were extended beyond the limits of the Comstock lode. You also state that the Sutro tunnel reached the Comstock lode about two years ago, and that while lateral drifts have since been run on said lode, no attempt has been made by the tunnel company to extend their enterprise farther west.

Upon this statement of facts you request the opinion of this office as to whether the withdrawal from sale of the lands within the grant of Adolph Sutro, his heirs and assigns, by the act of July 25, 1866, includes lands west of the Comstock lode, within the 2,000 feet limits of the extended lines of the grant, although the tunnel should never be constructed beyond the Comstock lode, thus prohibiting the government from selling that portion of its domain.

Section 1 of the act of July 25, 1866, granted to A. Sutro, his heirs and assigns, the right of way to construct and excavate a mining, draining and exploring tunnel, and provides that said tunnel "shall commence at some point to be selected by the grantee herein, his heirs and assigns, at the hills near Carson River, and within the boundaries of Lyon County, and extending from said initial point in a westerly direction seven miles, more or less, to and beyond the Comstock lode."

Section 2 gives to the grantee, his heirs and assigns, "the right to purchase at $5 per acre such mineral veins and lodes within 2,000 feet on each side of said tunnel as shall be cut, discovered, or developed by running and constructing the same through its entire extent with all the dips, spurs and angles of such lodes, subject, however, to the provisions of this act, and to such legislation as Congress may hereafter provide. *Provided*, That the Comstock lode, with its dips, spurs, and angles, is excepted from this grant, and all other lodes, with their dips, spurs, and angles, located within the said 2000 feet, and which are or may be, at the passage of this act, and to actual *bona fide* possession of other persons, are hereby excepted from this grant. And the lodes herein excepted, other than the Comstock lode, shall be withheld from sale by the United States."

In accordance with this provision, and upon the filing in this office July 31, 1866, of a preliminary survey showing the initial and terminal points and direction of the proposed tunnel, the lands embraced within the exterior boundaries of the grant, as shown by the plat of said preliminary survey, were withdrawn from sale. Notice of such withdrawal was forwarded to your office by letter of August 1, 1866, together with a diagram showing the line of the tunnel to run "through the public lands from a line dividing sections 1 and 2, in township 16 north, of range 21 east, to section 23 in township 17, of range 20 east, M. D. M."

On July 7, 1876, instructions were issued by this office to the Surveyor general of Nevada for an official survey of the Sutro tunnel grant. Said survey was executed in the same year by Deputy Surveyor Charles T. Hoffman, and was based upon the preliminary survey referred to above. From the plat and field-notes of said official survey it appears the northerly and southerly side lines of the grant were run about three miles beyond the Comstock lode, to the full extent of seven miles from the initial point or eastern line of the grant. The direction and position of these lines, are distinctly indicated by iron monuments, placed at short intervals, and numbered from 1 to 28 on the northerly and from 1 to 33 on the southerly line. Monuments numbered 28 and 33 are respectively the terminal points of the northerly and southerly lines of the grant, and are distant from the initial monuments (1) 36,960 feet or seven miles. The withdrawal from sale, therefore, made by this office is in accordance with the provisions of section 2 of the granting act embracing all lands west as well as east of the Comstock lode within the lines of said survey.

The present length of the Sutro tunnel is about 4 miles, extending from its face to the Comstock lode, thus leaving about 3 miles yet to be constructed west of said lode. There is no provision in the act limiting the grantees to a certain period of time in which to complete their work on pain of forfeiture of the grant. Even if such a provision had been inserted, it would not be within the power of the executive department of the government to enforce the forfeiture, the title of the grantees would remain unimpaired until Congress should by appropriate legislation declare the forfeiture, or provide for the institution of judicial proceedings for that purpose.

It is true that Congress by a clause in the second section of the act reserves to itself the right to alter or modify the provisions of said act, but until Congress sees fit to exercise this right, the privileges extended by this act are not affected by the failure of the company to prosecute their undertaking.

You will, therefore, not permit the entry of so much of the claim referred to in your letter as lies within the limits of the tunnel grant. If the mine is drained, benefited, or developed by the tunnel, the usual condition of payment of royalty to the tunnel company must be inserted in the patent when issued for that portion lying without the limits of the grant. You will be governed in this case and in all similar cases arising in future by the instructions communicated to you by letter of February 18, 1881, in the case of Moore and Morgan lode.

Another question suggested by your communication is whether parties in the *bona fide* possession of claims within the tunnel grant at the date of the act conferring said grant will be "compelled to do their annual labor forever in order to save their claims from falling into the hands of the tunnel company, and never be allowed the right enjoyed by other citizens of procuring government patents."

Section 2 of the act of July 25, 1866, after excepting from the grant all lodes in the actual *bona fide* possession of other persons at the time of the grant, provides that "such lodes shall be abandoned and not worked, possessed, and held in conformity to existing mining rules or such regulations as have been or may be prescribed by the legislature of Nevada, they shall become subject to such right of purchase by the grantee herein, his heirs or assigns."

The general mining act of July 26, 1866, and amended by the act of July 9, 1870, and the act of May, 1872, provide that nothing in said acts "shall be construed to repeal, impair, or in any way affect" the provisions of the Sutro tunnel grant. Hence persons in possession of such lodes at the time of the grant need not conform to the requirements of the mining laws of the United States as to the performance of annual labor. A compliance with the local mining rules, or regulations prescribed by the legislature of Nevada, if any there be, is sufficient for the purpose of maintaining the possessory right to such lodes. If such compliance be productive of hardship, it is a hardship remediable only by legislative action, no power being vested in this office to change or modify the conditions of the grant. Very respectfully,

J. A. WILLIAMSON,
Commissioner.

REGISTER AND RECEIVER, *Carson City, Nev.*

7. Mark Twain Lode.—The instructions of the General Land Office requiring the location, marking of boundaries, and recording of notice of a tunnel run in accordance with section 2323, Revised Statutes, are not applicable to tunnels run for the purposes mentioned in the Act of February 11, 1875. Where a party runs a tunnel to develop a lode already located, notice of intention to run such a tunnel is not required, and no tunnel location need be made.

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., May 4, 1881.

GENTLEMEN: I have examined the protest submitted by M. D. Cooper against the issuance of patent to Henry M. Hoyt *et al.* for the Mark Twain lode and mill site, lots 344 A and B, situate in Mount Sneffle's mining district, Ouray County, Colorado, and embraced in mineral entry No. 190 of the series of your office.

The record of said entry shows that the Mark Twain lode was duly located, and that the possessory title is vested in the applicants for patent. The application for patent was filed in your office April 30, 1880, due notice of which was given in the manner prescribed by law, the period of publication expiring September 4, 1880. February 3, 1881, the claimants entered and paid for the land.

Mr. Cooper alleges that during the year 1880 no work whatever was performed upon the Mark Twain lode, and that on the 22d of January, 1881, he made a relocation of the same under the name of Ida City lode. Protestant further alleges that "said H. M. Hoyt *et al.* attempted to develop said Mark Twain lode by running a tunnel on the Wheel of Fortune lode [a claim owned by Hoyt *et al.*], a claim or lode distant from said Mark Twain lode about 1200 feet, and lying at right angles with the said Wheel of Fortune lode, the said H. M. Hoyt *et al.* not being owners of the lode or surface ground intervening, * * * and without giving any notice whatever of a tunnel location for the development of said mine or mines," &c.

By an act of Congress, approved February 11, 1875, it is provided that "where a person or company has or may run a tunnel for the purposes of developing a lode or lodes owned by said person or company, the money so expended in said tunnel shall be taken and considered *as expended on said lode or lodes*, whether located prior to or since the passage of said act [May 10, 1872], and such person or company shall not be required to perform work on the surface of said lode or lodes in order to hold the same as required by said act."

Protestant admits that a tunnel has been commenced on the Wheel of Fortune lode and run for the development of the Mark Twain lode, and that a sufficient amount has been expended upon or in said tunnel to maintain the possessory title to said lode during the year 1880, but contends that such expenditures cannot be held to apply to said lode because the line of said tunnel was not located and marked upon the surface of the ground by stakes, because no notice was posted at the mouth or face of such tunnel describing the purpose for which it was run, and because no copy of such notice was filed for record with the mining recorder, &c.

Inasmuch as there is nothing in the law or instructions of this office requiring these things to be done, I fail to perceive the force of the reasons assigned.

Where a tunnel is run for the purpose of discovery of "blind" lodes under the provisions of section 2323, United States Revised Statutes, it is proper and the regulations require that due notice of such tunnel shall be given, in order that other persons may not prospect for lodes along the line of such tunnel, which by law are vested in the tunnel claimants so long as they shall prosecute the tunnel with due diligence.

But these instructions are not applicable to tunnels run, in accordance with the act of February 11, 1875, for the purpose of developing lodes already discovered and located.

Indeed said instructions were promulgated long prior to the passage of said act, and there exists not the slightest reason why any notice whatever should have been given to the world as to the manner in which the claimants proposed to develop their claims, as the rights of third parties could not by any possibility be affected thereby.

Admitting all that is alleged by protestant, there appears to be no reason why patent should not issue to the applicants.

The protest is hereby dismissed.

Very respectfully,

J. A. WILLIAMSON,
Commissioner.

REGISTER AND RECEIVER, *Lake City, Colo.*

CIRCULAR.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, D. C., January 17, 1881.

GENTLEMEN:—Your attention is directed to the following act of Congress and the instructions thereunder:

AN ACT to amend sections twenty-three hundred and twenty-four and twenty-three hundred and twenty-five of the Revised Statutes of the United States concerning mineral lands.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section twenty-three hundred and twenty-five of the Revised Statutes of the United States be amended by adding thereto the following words: "*Provided*, That where the claimant for a patent is not a resident of or within the land district wherein the vein, lode, ledge, or deposit sought to be patented is located, the application for patent and the affidavits required to be made in this section by the claimant for such patent may be made by his, her, or its authorized agent, where said agent is conversant with the facts sought to be established by said affidavits: *And provided*, That this section shall apply to all applications now pending for patents to mineral lands."

SEC. 2.—That section twenty-three hundred and twenty-four of the Revised Statutes of the United States be amended by adding the following words: "*Provided*, That the period within which the work required to be done annually on all unpatented mineral claims shall commence on the first day of January succeeding the date of location of such claim, and this section shall apply to all claims located since the tenth day of May, anno Domini, eighteen hundred and seventy-two.

Approved January 22, 1880.

The first section of this act has reference only to the affidavits mentioned in section 2325 of the Revised Statutes. It is therefore held that it has no reference to the manner of establishing proof of citizenship. An applicant for mining patent who resides in the land district in which the mine is located, if within the district at the time application is made, must make the required affidavits. If he is not so within the district, the affidavits may be made by a duly appointed agent conversant with the facts.

It is held under the second section of the act that labor performed or money expended upon a mining claim prior to the first day of January succeeding the date of location thereof will not be considered as a part of or applied upon the first annual expenditure required by law. Thus upon a claim located at any time during the year 1880 the *period* within which the labor must be performed commences January 1, 1881, and *during* the calendar year 1881 the expenditure must be made, or the claim will be subject to relocation on and after January 1, 1882.

In order to apply the law to a claim located prior to the year 1880 it will be necessary to calculate from the date of location. For instance, upon a claim located in 1875 the first expenditures would be reckoned as due within one year from January 1, 1876, to wit: January 1, 1877, and *annually* thereafter by the calendar year.

Very respectfully,

J. A. WILLIAMSON,
Commissioner.

REGISTERS AND RECEIVERS,
United States District Land Offices.

Expenditures on Mining Claims.—The following is the full text of a decision filed February 25th, 1882, in the case of Du Prat vs. James et al., in Department Two of the Supreme Court of California. It covers several very important points to prospectors, locators, and mine owners:

This is an action to recover possession of a quartz mine. Judgment was rendered for defendants, and plaintiff appealed.

The objections to the answer cannot be sustained. The appeal is from the judgment, and the judgment roll only is inserted in the transcript. The plaintiff did not demur to the answer nor does it appear that he objected to the evidence when offered to prove its allegations. The cause appears to have been tried as if the answer was proper and sufficient in all respects. Such objections as those of plaintiff, will not be permitted to be raised for the first time in this Court. (Racouillat vs. Rene, 32 Cal., 450; Cave vs. Crafts, 53 Id., 135.) The cases of Atherton vs. Fowler, 6 Otto, 513, and Fletcher vs. Mower, 6 Pac. L. J., 521, cited by plaintiff's counsel, have no application to this case.

It is contended that plaintiff was lawfully in possession when defendants made their location of the mine in question, and that defendants had no right to locate when their locations were made. It appears from the findings of fact, that the parties under whom plaintiff claims, properly located the mining claim or claims in question prior to the 10th day of May, 1872, that the defendants entered upon and located the claims or mine partly on the first day of January, 1881, and partly on the fifth day of January, 1881, and that they filed for record with the proper Mining Recorder, the notices of these locations, as required by the rules and regulations of miners, within 30 days from the date of such notices. It further appears from the findings, that the defendants made such locations on the ground that plaintiff had failed to perform the labor required by the Act of Congress of May 10, 1872, and the acts amendatory thereof. By the fifth section of the Act of Congress of May 10th, 1872, it was provided as follows:

"On each claim located after the passage of this Act, and until a patent shall have issued therefor, not less than $100 worth of labor shall be performed or improvements made during each year. On all claims located prior to the passage of this Act, $10 worth of labor shall be performed or improvements made *each year* for each 100 ft. in length along the vein until a patent shall have been issued therefor; but when such claims are held in common, such expenditure may be made upon any one claim; and upon a failure to comply with these conditions, the claim or mine upon which said failure occurred, shall be open to re-location in the same manner as if no location of the same had ever been made." (17 U. S. Stats. at Large, 92).

On the first day of March, 1873, Congress passed an Act by which the provisions of the 5th section of the Act of May 10th, 1872, which requires expenditures of labor and improvements on claims located prior to the passage of said Act, were so amended "that the time *for the first annual expenditure*" on such claims was "extended to the tenth day of June, 1874." (17 U. S. Stats. at Large, 483; Sec. 2324, U. S. Rev. Stats.)

By Section 2324 of the Revised Statutes of the United States it was thus provided:

"On all claims located prior to the tenth day of May, 1872, $10 worth of labor shall be performed or improvements made by the 10th day of June, 1874, and each year *thereafter*, for each 100 ft. in length along the vein until a patent has been issued therefor; but where such claims are held in common, such expenditure may be made upon any one claim; and upon a failure to comply with these conditions, the claim or mine upon which such failure occurred shall be open to re-location in the same manner as if no location of the same had ever been made; *provided*, that the original locators, their heirs, assigns, or legal representatives, have not resumed work upon the claim after failure and before such location.

It will be observed that by this section it was provided that the labor to be performed or improvements to be made on claims located prior to the 10th day of May, 1872, were to be performed or made by the 10th day of June, 1874 *and each year thereafter*, until a patent had been issued for such claim. The words "*and each year thereafter*," were here first added to the date mentioned, viz: 10th day of June, 1874. The Revised Statutes of the United States were approved by Act of Congress, passed on the 22d of June, 1874. Section 5,595 of this revision, consisting of 73 titles, declares that these titles embrace the Statutes of the United States, general and permanent in their nature, in force on the 1st day of December, 1873. The acts above referred to, passed prior to the date last named, were repealed by force of section 5,596 of the revision, but all rights accruing or accrued under the Acts repealed were preserved by the provisions of section 5,597.

Congress further amended this 5th section of the Act of 1872, by an Act passed on the 6th day of June, 1874. By this amendment, the time for such "*first annual expenditure*," on claims located prior to the Act of 1872, was extended "to the 1st day of January, 1875." (18 U. S. Stats. at Large, Part 3–61.)

The foregoing Act of the 6th of June, 1874 is not affected by the Revised Statutes, but has as full effect as if passed after the enactment of the revision, *i. e.* after the 22d of June, 1874, and so far as it varies from or conflicts with any provision contained in the revision, has effect as a subsequent statute, and repeals any portion of the revision inconsistent with such statute. This results from the provisions of sections 5601 of the revision.

By the act of the 22d of January, 1880, Congress amended section 2324 of the Revised Statues, by adding thereto the following words: "Provided, that the period within which the work required to be done annually on all unpatented mineral claims shall commence on the first day of January succeeding the date of the location of such claim, and this section shall apply to all claims located since the 10th day of May, A. D. 1872." (See 21st U. S. Stats. at Large, 61.)

The counsel for appellant puts forth a contention in relation to the Act of June 6, 1874, in these words:

"The act of June 6, 1874, only amended the act of May 10, 1872, in extending the time for doing the annual work, which the existing laws required to be done by June 10, 1874, to Jan. 1, 1875, but did not make any arbitrary rule affecting the date of locations made prior to May 10, 1872, so that that act became *functus officio* on the expiration of the 1st of Jan., 1875."

If by this it is intended to say that the act of June 6, 1874, had its full effect on the 1st day of Jan., 1875, and that no provision of law then existed in regard to the work of improvements on a mining claim requiring that they should be performed or made in each year succeeding Jan. 1, 1875, we think the learned counsel has fallen into an error, as an examination of the various acts above referred to will show. What is said herein on this point, relates only to claims located prior to the 10th of May, 1872, such being the character of the claims involved in this case. By the act of May 10, 1872 (see Sec. 5), the labor or improvements required as to such claim were to be performed or made "*each year.*" The first amendment to this act was made on the 1st of March, 1873, and by it the time for "the first annual expenditure" was extended to the 10th day of June, 1874. The legislation on this matter next succeeding, according to the provisions of Sec. 5,601 of the revised statutes was Sec. 2324 of the revision (see quotation from it above), which required the labor or improvements to be performed or made by the 10th of June, 1874, "*and each year thereafter.*" Then came, not in order of time, but as it went into operation, the act of June 6, 1874, by which the time for the "*first annual expenditure*" for labor or improvements, was extended to the 1st of Jan., 1875. But as we have seen, this act has effect so far as it varies from or conflicts with any provision contained in section 2324 of the revision as a subsequent statute, and repeals any portion of the revision inconsistent with it.

The only inconsistency or conflict with the revision, Sec. 2,324, is as to the date to which the first annual expenditure is extended, which, by Sec. 2,324, is to the 10th day of June, 1874, and by the act of June 6, 1874, to the 1st day of January, 1875. There is no conflict or inconsistency so far as regards the words "*and each year thereafter*" in the Sec. 2,324, and they remain. The requirement, then, as enacted by the legislation of Congress, was, after the 22d of June, 1874, that the first annual expenditure must be made by the first day of January, 1875, and each year thereafter. (See Weeks on Mineral Lands, Sec. 69.) This, in our view is the correct interpretation of the acts of Congress relating to the point under discussion. If the act of the 22d of January, 1880, applies to the case in hand, of which we entertain some doubt, the meaning is the same. The learned counsel for appellant seems to labor under the impression that the section 2,324 took effect subsequently to the act of June 6, 1874; but this is a misconception, as will be seen by examining section 5,601 of the revised statutes, above referred to. Upon a failure to comply with the conditions mentioned in section 2,324, among which are those which relate to labor and improvements above stated, by the provisions of the same section, the claim or mine is "open to re-location in the same manner as if no location of the same had ever been made."

The Court found that plaintiff failed to perform the labor or make the improvements thereon as required by law during the year 1880, commencing on the first day of January, 1880, and ending on the 31st of December of the same year; that it was open to re-location on the 1st and 5th days of January, 1881, on which days defendants made their locations. It is argued by counsel for appellant, that the location on the 1st of January, 1881, was premature; that he had all that day to perform the labor or make the improvements required by law. The question is not free from difficulty. The act of 6th of June, 1874, extends the time *to* the 1st day of January, 1875. In Bradley vs. Rice, 13 Maine, 201, in the construction of a conveyance of land, which described a tract of land as running "*to Flying Pond*," the question was whether the tract ran into the pond or was bounded by the water of the pond; the Court said: "To, from and by are terms of exclusion, unless by necessary implication, they are manifestly used in a different sense." The tract of land was held to extend to the pond, excluding any portion of it.

In considering a question of the same character arising upon a deed in Bonney vs. Morrill, 52 Maine, 243, the same Court said: "From" an object or "to" an object "excludes the terminus referred to." The call on which the construction was made described a course as easterly "to land now or formerly owned by Isaac Bonney," etc. The land of Bonney was held to be excluded.

If the question under consideration is to be determined upon the words of the act of the 6th of June, 1874, the 1st day of January, 1881, must be excluded from the time within which the plaintiff had to perform the labor or make the improvements required for the year 1880. But it may be contended that the effect of section 5,601 of the Revised Statutes is merely to substitute the 1st day of January, 1875, for the 10th day of June, 1874, in section 2,324, and that the section ought to be read, making such substitution, thus: "Labor shall be performed, or improvements made *by* the 1st day of January, 1875." If "by" is a word of exclusion, as held in the above-cited case from 13 Maine, then the same conclusion must be reached as above, as to the 1st day of January, 1881, viz.; that it must be excluded from the period during which the labor had to be performed, or the improvements made for the year 1880. In Rankin vs. Woodworth, 3 Penrose and Watts, 46, it was held that a contract to complete work *by* a certain time, means that it shall be done before that time. The contract was dated in February, 1815, and was "to build a sawmill" and "to have it completed by November next." The Court thus expressed itself in regard to it: "By the contract the work was to be finished *by* the ensuing month of November, which in the popular acceptation of the word excludes the month. When a thing is ordered by a particular day, it is with a view of having the use of it on that day. Thus a coat is ordered by Sunday, with a view of wearing it to church. And the popular agrees with the philological import of the word, which is explained by our great lexicographer, by the words 'near, besides, passing, in presence;' all of which denote exclusion."

The proper interpretation of the legislation of Congress on the subject is, in our judgment, that *by* is used as a word of exclusion, and therefore that the plaintiff was not entitled to perform the labor or make the improvements for the year 1880, on the first day of January, 1881. A review of the acts of Congress in regard to this point, leads us to the conclusion that it was the intention of Congress to confine the period, after the first day of Jan., 1875, in which the labor or improvements were to be performed or made by the claimant of a mining claim, to the calendar year, commencing on and including the 1st day of Jan., of the year, and ending with and including the last day—the 31st of December. This seems to be the construction put on this legislation by the officers of the Department of the Interior. (See Sickel's Mining Laws and Decisions, 373, 392, 393, 394.) The Court finds that the plaintiff performed the requisite amount of labor on the mine during the years preceding 1880. The finding as to the year 1880 is, that plaintiff "caused three days *work* to be performed in and upon said claim," but does not find the value of the *work* performed. We cannot see that the work did not amount to $150 in value. It is not found whether this *work* consisted of labor performed or improvements made on the claim. *Non constat*, but it may have been improvements made on the claim worth $150. This Court cannot know judicially whether this work consists of labor or improvements, or what the worth of it was. For the failure to find as to this worth or value which was in issue, the judgment must be reversed and the cause remanded that the worth or value of the work may be found by the Court below. In this course, we pursue the practice adopted in Billings vs. Everett, 52 Cal., 661.

Judgment reversed and cause remanded to the Court below, with an order to the Court to find on the said issue on the evidence taken or on such other evidence as may be adduced as to said issue, and thereupon to proceed to render judgment in accordance with the views expressed in this opinion. So ordered.

Locating Mineral Veins.—In his charge to the jury in the Contention Head Center suit, recently decided at Tombstone, Arizona, Judge W. H. Stilwell said: "Mining law was made for miners. It is plain and simple. It provides that a man or number of men may make a location of certain mineral lands, after they have found a mineral vein, lode or ledge. You have listened to the testimony of miners of great experience, and of men learned in geology. You may find some difficulty in coming to your verdict to reconcile all the testimony that you have listened to, and I will state here that the mining law is simple and general. It would be difficult to give definitions, such as you have listened to that can be fully applied in this or other cases. Therefore the definitions of words found in our statutes are very limited, in fact no definitions regarding a vein, ledge or lode. Courts must be careful of giving definitions of veins, lodes or ledges and trust very much to the wisdom and good judgment of the jury, after listening to the testimony, to find what is a vein, ledge or lode in the case they consider. Miners usually follow ore that will pay, or what they think will lead them to ore that will pay to mine. There are many little seams, as you have heard testified to, running out from large bodies of ore. Some may pay to follow and some may not. What there is of them may be pure, rich and valuable, and yet not pay to follow, and I will add that some of the testimony that you have may have listened to, as a matter of science, may be clear in logic, rich in learning, but as miners it may not pay you to undertake to reconcile all the facts or opinions that you may have listened to before finding your verdict. You are at liberty to consider such part of the testimony as will enable you to arrive at the facts in the case. It will be quite impossible for you in this case to reconcile all the testimony I have illustrated, though as a matter of science the fine distinctions and definitions you have listened to may be true and interesting. A lode, vein or ledge, so far as satisfying the law is concerned, may be defined as a mass or body of mineralized or metalliferous rock in place, surrounded by other different rock. That is about all the definition that I feel can be given from the bench that will apply to many different cases.

I am of the opinion that the coloring on the map, taking these three long spots, are in the meaning of the law, in place. Yet you had testimony before you that they are not where they originally were—that they have been faulted and moved. The mineral, we were told, is not where it was when the vein, lode or ledge was formed, yet they are in place. By rock in place, we mean rock that has not been changed by the elements or gravitation. In coming to your decision as to what is a vein, if you find that there is one here, and whether it embraces the entire porphyry dike, or, simply, as is claimed by the defendants, the mineral embraced within clay selvages, which they call walls, you are at liberty to consider the formation of those other veins, lodes or ledges in the Contention mine. If you are convinced that those veins were formerly one vein, but have been faulted and separated by forces in the earth, you may consider and compare them as to their general formation. In passing upon this vein, ledge or lode, it is for you to say what is the boundary of it and of what it consists. If you come to the opinion that the vein, ledge or lode is simply that described by the defendant, then in making the lines, as I shall hereafter instruct you, you must be guided as to where that vein courses or takes its strike. If you come to the opinion that the porphyry dike is the vein, you shall be guided by the size of that and the strike it takes, in placing those lines about which I will instruct you.

"Regarding the location of mining claims, to make a location, a miner is not compelled or permitted, until he finds a mineral-bearing vein, ledge or lode, and until he is fully satisfied as to its course and strike, that he may locate the claim conformatory thereto. If the location is made before the strike of a vein is or can be ascertained, the principle that the law does not require an impossibility, cannot be used as an excuse for following a vein after it materially departs from the exterior boundaries of a mining claim and does not return to it. A man may locate a mining claim, if he chooses, before he learns the true strike of his vein or ledge; and the law provides what minerals he may extract therefrom. If he makes a mistake in his location, he cannot be excused on the principle that the law does not require an impossibility, and be permitted to follow his vein or ledge before it strikes out beyond the side boundaries of his claim. He must abide by what the law says is embraced in the boundaries of his claim, and about which I will more particularly instruct you. In this case, I instruct you that it is your duty to give to the plaintiff all that you would consider him entitled to if the property claimed by the defendant belonged to the United States. That is to say, if I locate a farm, the boundary of my farm is not different by reason of the fact that the property adjacent may belong to the United States, or any individual; and I am of the opinion that if the property belonging to, or claimed by the defendant, belonged to the United States, the plaintiff would have no right in law to go any farther beyond their side lines than they have in this case. If the defendants are *bona fide* subsequent locators, the law provides that the location shall be made substantially parallel with the strike of the lode or vein, and that the end lines shall be parallel. It is so difficult to do this in all cases, that if the line or rim enters the claim at one corner under the end line and crosses diagonally through the claim and out under the other end line, it is held that the location is good, and the owner of the claim cannot be disturbed, and may follow the vein downward in its dip, to any extent, even though it should so far depart from a perpendicular in its course downward as to extend outside the vertical side lines of such surface locations."

Decisions on Vital Principles.—We include here two decisions that are of great importance, though not so very recent They are from the report of the State Controller of Nevada. The first is an action of ejectment for the possession of certain mining ground, particularly described in the complaint, situated in Eureka mining district, in the County of Eureka, in the State of Nevada.

The Richmond Case.—"The plaintiff in this celebrated case is a corporation created under the laws of California, and the defendant, the Richmond Mining Company, is a corporation created under the laws of Nevada. The other defendants, Thomas Wren and Joseph Potts, are citizens of the latter State. The action was originally commenced in the State Court of Nevada, but upon application of the plaintiff, and upon the ground of its incorporation in another State, and presumed citizenship, from that fact, of its corporators or stockholders in that State, it was transferred to the Circuit Court of the United States. The complaint in the State Court, in addition to the usual allegations of a declaration in ejectment, set forth various grounds upon which was based a prayer for an order restraining the defendants from working the premises in controversy pending the action. The defendants, in their answer to the complaint, not only denied the title of the plaintiff, but made various averments, upon which a like restraining order against the plaintiff was asked. Both orders were granted. This union of a demand in ejectment for the property in controversy with a prayer for provisional equitable relief, is permitted, by the system of procedure which obtains in the State, thus saving the parties the necessity of litigating in two suits, what can as readily, and less expensively, be accomplished in one. But this union is not permitted in the Federal Court; and upon the transfer of the present action, the pleadings of the plaintiff were amended, by substituting a regular complaint in ejectment on the law side of the Court; and a bill was filed for an injunction on its equity side. The defendants answered both, and also filed a cross-bill for an injunction against the plaintiff. By arrangement of the parties, the defendants, Messrs. Wren and Potts, are dropped out of the controversy, and their names may be stricken from the pleadings. The claim for damages is also waived in this action, without prejudice to any future proceedings with respect to them. By stipulation, the case at law, the action of ejectment, is tried by the Court without the intervention of a jury, and the judges sit at San Francisco, instead of Carson, their finding and judgment to be entered in term time in the latter place as though the case were heard and decided there. The testimony taken in the action at law is to be received as depositions in the equity suit, and both cases are to be disposed of at the same time, to the end that the whole controversy between the parties may be settled at once. The premises in controversy are of great value, amounting by estimation to several hundred thousands of dollars, and the case has been prepared for trial with a care proportionate to this estimate of the value of the property; and the trial has been conducted by counsel on both sides with eminent ability.

"Whatever could inform, instruct or enlighten the court, has been presented by them. Practical miners have given us their testimony as to the location and working of the mine. Men of science have explained to us how it was probable that nature in her processes had deposited the mineral where it is found. Models of glass have made the hill, where the mining ground lies transparent, so that we have been able to trace the course of the veins, and see the chambers of ore found in its depths. For myself, after a somewhat extended judicial experience, covering now a period of nearly twenty years, I can say that I have seldom, if ever, seen a case involving the consideration of so many and varied particulars, more thoroughly prepared or more ably presented. And what has added a charm to the whole trial has been the conduct of counsel on both sides, who have appeared to assist each other in the development of the facts of the case, and have furnished an illustration of the truth that the highest courtesy is consisteut with the most earnest contention.

"The mining ground which forms the subject of controversy is situated in a hill known as Ruby Hill, a spur of Prospect Mountain, distant about two miles from the town of Eureka in Nevada. Prospect Mountain is several miles in length, running in a northerly and southerly course. Adjoining its northerly end is the spur called Ruby Hill, which extends thence westerly or in a south-westerly direction. Along and through this hill for a distance slightly exceeding a mile, is a zone of limestone in which, at different places throughout its length, and in various forms, mineral is found, this mineral appearing sometimes in continuous veins, sometimes in apparently isolated chambers, and at other times in what would seem to be scattered grains. And our principal inquiry is to ascertain the character of this zone, in order to determine whether it is to be treated as constituting one lode, or as embracing several lodes, as that term is used in the acts of congress of 1866 and 1872, under which the parties have acquired whatever rights they possess. In this inquiry the first thing to be settled is the meaning of the term in those acts. This meaning being settled, the physical characteristics and the distinguishing feature of the zone will be considered.

"Those acts give no definition of the term. They use it always in connection with the term vein. The act of 1866 provided for the acquisition of a patent by any person or association of persons claiming "a vein or lode of quartz or other rock in place, bearing gold, silver, cinnabar, or copper." The act of 1872 speaks of veins or lodes of quartz, or other rock in place, bearing similar metals or ores. Any definition of the term should, therefore, be sufficiently broad to embrace deposits of the several metals or ores here mentioned. In the construction of statutes, general terms must receive that interpretation which will include all the instances enumerated as comprehended by them. The definition of a lode given by geologists is that of a fissure of the earth's crust filled with mineral matter; or, more accurately, as aggregations of mineral matter containing ores in fissures. (See Von Cotta's Treatise on Ore Deposits, Prime's Translation, 26). But miners used the term before geologists attempted to give it a definition. One of the witnesses in this case, Dr. Raymond, who, for many years, was in the service of the general government as commissioner of mining statistics, and in that capacity had occasion to examine and report upon a large number of mines in the States of Nevada and California, and the Territories of Utah and Colorado, says that he has been accustomed as a mining engineer to attach very little importance to those cases of classification of deposits, which simply involve the referring of the subject back to verbal definitions in the books. The whole subject of the classification of mineral deposits, he states to be one in which the interests of the miner have entirely overridden the reasonings of the chemists and geologists. "The miners," to use his language, "made the definition first. As used by miners, before being defined by any authority, the term lode simply meant that formation by which the miner could be led or guided. It is an alteration of the verb lead; and whatever the miner could follow, expecting to find ore, was his lode. Some formation within which he could find ore, and out of which he could not expect to find ore, was his 'lode.' The term lode-star, guiding-star, or north-star, he adds, is of the same origin. Cinnabar is not found in any fissure of the earth's crust, or in any lode as defined by geologists, yet the acts of Congress speak, as already seen, of lodes of quartz, or rock in place bearing cinnabar. Any definition of lode, as there used, which did not embrace deposits of cinnabar, would be as defective as if it did not embrace deposits of gold or silver. The definition must apply to deposits of all the metals named, if it apply to a deposit of any one of them. Those acts were not drawn by geologists or for geologists; they were not framed in the interests of science, and consequently with scientific accuracy in the use of terms. They were framed for the protection of miners in the claims which they had located and developed, and should receive such a construction as will carry out this purpose. The use of the terms vein and lode in connection with each other in the act of 1866, and their use in connection with the term ledge in the act of 1872, would seem to indicate that it was the object of the legislator to avoid any limitation in the application of the acts which a scientific definition of any of these terms might impose. It is difficult to give any definition of the term as understood and used in the acts of Congress which will not be subject to criticism. A fissure in the earth's crust, an opening in its rocks and strata made by some force of nature, in which mineral is deposited, would seem to be essential to the definition of a lode in the judgment of geologists. But to the practical miner, the fissure and its walls are only of importance as indicating the boundaries within which he may look for and reasonably expect to find the ore he seeks. A continuous body of ore lying within any other similar well-defined boundaries on the earth's surface, and under it, would equally constitute in his eyes a lode. We are of opinion, therefore, that the term, as used in the acts of Congress, is applicable to any zone or belt of mineralized rock lying within boundaries clearly separating it from the neighboring rock. It includes, to use the language cited by counsel, all deposits of mineral matter found through a mineralized zone or belt coming from the same source, impressed with the same forms, and appearing to have been created by the same processes.

Examining, now, with this definition in mind, the features of the zone which separate and distinguish it from the surrounding country, we experience little difficulty in determining its character. We find that it is contained within clearly defined limits, and that it bears unmistakable marks of originating, in all its parts, under the influence of the same creative forces. It is bounded on the south side, for its whole length, at least so far as explorations have been made, by a wall of quartzite of several hundred feet in thickness; and on its north side, for a like extent, by a belt of clay or shale, ranging in thickness from less than an inch to seventy or eighty feet. At the east end of the zone, in the Jackson mine, the quartzite and shale approach so closely as to be separated by a bare seam less than an inch in width. From that point they diverge, until on the surface, in the Eureka mine, they are about five hundred feet apart, and on the surface, in the Richmond mine, about eight hundred feet. The quartzite has a general dip to the north, at an angle of about forty-five degrees, subject to some local variations as the course changes. The clay or shale is more perpendicular, having a dip at an angle of about eighty degrees. At some depth under the surface, these two boundaries of the limestone, descending at their respective angles must come together. In some of the levels worked they are now only from two hundred to three hundred feet apart. The limestone found between these two limits—the wall of quartzite and the seam of clay or shale—has, at some period of the world, been subjected to some dynamic force of nature, by which it has been broken up, crushed, disintegrated and fissured, in all directions, so as to destroy, except in three or four places of a feet each, so far as explorations show, all traces of stratification; thus especially fitting it, according to the testimony of the men of science, to whom we have listened, for the reception of the mineral which, in ages past, came up from the depths below in solution, and was deposited in it. Evidence that the whole mass of limestone has been, at some period, lifted up and moved along the quartzite, is found in the marks of attrition engraved on the rock. This broken, crushed and fissured condition pervades to a greater or less extent the whole body, showing that the same forces which operated upon a part, operated upon the whole, and at the same time. Wherever the quartzite is exposed, the marks of attrition appear. Below the quartzite no one has penetrated. Above the shale the rock has not been thus broken and crushed. Stratification exists there. If in some isolated places there is found evidence of disturbance, that disturbance has not been sufficient to affect the stratification. The broken, crushed and fissured condition of the limestone gives it a specific, individual character by which it can be identified and separated from all other limestones in the vicinity. In this zone of limestones numerous caves or chambers are found, further distinguishing it from the neighboring rock. The limestone being broken and crushed up as stated, the water from above readily penetrated into it, and operating as a solvent, formed these caves and chambers. No similar cavities are found in the rock beyond the shale, its hard and unbroken character not permitting, or at least opposing such actions from the water above. Oxide of iron is also found in numerous places throughout the zone, giving to the miner assurance that the metal he seeks is in his vicinity. This broken, crushed and fissured condition of the limestone, the presence of the oxides of iron, the caves or chambers we have mentioned, with the wall of quartzite and seam of clay bounding it, give to the zone, in the eyes of the practical miner, an individuality—a oneness as complete as that which the most perfect lode in a geological sense ever possessed. Each of the characteristics named, though produced at a different period from the others, was undoubtedly caused by the same forces operating at the same time upon the whole body of the limestone.

Throughout this zone of limestone, as we have already stated, mineral is found in the numerous fissures of the rock. According to the opinions of all the scientific men who have been examined, this mineral was brought up in solution from the depths of the earth below, and would, therefore, naturally be very irregularly deposited in the fissures of the crushed matter, as these fissures are in every variety of form and size, and would also find its way in minute particles in the loose material of the rock. The evidence shows that it is sufficiently diffused to justify giving to the limestone the general designation of mineralized matter—metal-bearing rock. The three scientific experts produced by the plaintiff, Mr. Keyes, Mr. Raymond and Mr. Hunt, all of them of large experience and extensive attainments, and two of them of national reputation, have given it as their opinion, after examining the ground, that the zone of limestone between the quartzite and shale constitute one vein or lode, in the sense in which those terms are used by miners. Mr. Keyes, who for years was superintendent of the mine of the plaintiff, concludes a minute description of the character and development of the ground, by stating that, in his judgment, according to the customs of miners in this country and common sense, the whole of that space should be considered and accepted as a lead, lode or ledge of metal-bearing earth, or rock in place. Dr. Raymond, after giving a like extended account of the character of the ground, and his opinion as to the causes of its formation, and stating with great minuteness the observations he had made, concludes by announcing as his judgment, after carefully weighing all that he had seen, that the deposit between the quartzite and shale is to be considered as a single vein in the sense of the word in which it is used by miners—that is, as a single ore deposit of identical origin, age and character throughout. Dr. Hunt, after stating the result of his examination of the ground and his theory as to the formation of the mine, gives his judgment as follows:

"My conclusion is this: That this whole mass of rock is impregnated with ore; that although the great mass of ore stretches for a long distance above horizontally and along an incline down the foot wall, as I have traced it, from this deposit you can also trace the ore into a succession of great cavities or bonanzas lying irregularly across the limestone, and into smaller caverns or chasms of the same sort; and that the whole mass of the limestone is irregularly impregnated with the ore. I use the word impregnation in the sense that it has penetrated here and there; little patches and stains, ore vugs and caverns and spaces of all sizes and all shapes, irregularly disseminated through the mass. * * * I conclude, therefore, that this great mass of ore is, in the proper sense of the word, a great lode, or a great vein, in the sense in which the word is used by miners; and that practically the only way of utilizing this deposit is to treat the whole of it as one great ore-bearing lode or mass of rock."

This conclusion as to the zone constituting one lode of rock bearing metal, it is true, is not adopted by the men of science produced as witnesses by the defendant, the Richmond Company. These latter gentlemen like the others, have had a large experience in the examination of mines, and some of them have acquired a national reputation for their scientific attainments. No one questions their learning or ability, or the sincerity with which they have expressed their convictions. They agree with the plaintiff's witnesses as to the existence of the mineralized zone of limestone with an underlying quartzite and an overlying shale; as to the broken and crushed condition of the limestone, and substantially as to the origin of the metal and its deposition in the rock. In nearly all other respects they disagree. In their judgment, the zone of limestone has no features of a lode. It has no continuous fissure, says Mr. King, to mark it as a lode. A lode, he adds, must have a foot wall, and a hanging wall, and if it is broad, these must connect at both ends, and must connect downward. Here there is no hanging wall or foot wall; the limestone only rests as a matter of stratigraphical fact on underlying quartzite, and the shale overlies it. And distinguishing the structure at Ruby Hill from the Comstock lode, the same witness says that one is a series of sedimentary beds laid down in the ocean and turned up; the other is a fissure extending between two rocks. The other witnesses of the defendant, so far as they have expressed any opinion as to what constitutes a lode, have agreed with the views of Mr. King. It is impossible not to perceive that these gentlemen at all times carried in their minds the scientific definition of the term as given by geologists, that a lode is a fissure in the earth's crust filled with mineral matter, and disregarded the broader, though less scientific, definition of the miner, who applies the term to all zones or belts of metal-bearing rock lying within clearly marked boundaries. For the reasons already stated, we are of opinion that the Act of Congress uses the term in the sense in which miners understand it.

If the scientific definition of a lode, as made by geologists, could be accepted as the only proper one in this case, the theory of distinct veins existing in distinct fissures of the limestone would be not only plausible, but reasonable; for that definition is not met by the conditions in which the Eureka mineralized zone appears. But as that definition cannot be accepted, and does not meet the case of a lode, as that term is understood by miners, the theory of separate veins, as distinct and disconnected bodies of ore falls to the ground. It is, therefore, of little consequence what name is given to the veins in the limestone, whether they be called pipe veins, rake veins or pipes of ore, or receive the new designation suggested by one of the witnesses, they are but parts of one greater deposit, which permeates in a greater or less degree, with occasional intervening spaces of barren rock, the whole mass of limestone, from the Jackson mine to the Richmond, inclusive. The acts of Congress of 1866 and 1872 dealt with a practical necessity of miners; they were drawn to protect locations on veins or lodes, as miners understood those terms. Instances without number exist, where the meaning of words in a statute has been enlarged or restricted and qualified, to carry out the intention of the legislature. The inquiry, where any uncertainty exists, always is as to what the legislature intended, and when that is ascertained it controls. In a recent case before the Supreme Court of the United States, singing birds were held not to be live animals, within the meaning of a revenue act of Congress. (Reiche *v.* Smythe, 13 Wall. 162). And in a previous case, arising upon the construction of the Oregon donation act of Congress, the term, a single man, was held to include in its meaning an unmarried woman. (Silver *v.* Ladd, 7 Wall. 219.) If any one will examine the two decisions reported as they are in Wallace's Reports, he will find good reasons for both of them.

Our judgment being that the limestone zone in Ruby Hill in Eureka District, lying between the quartzite and shale, constitutes, within the meaning of the act of Congress, one lode of rock bearing metal, we proceed to consider the rights conveyed to the parties by their respective patents from the United States. All these patents are founded upon previous locations, taken up and improved according to the customs and rules of miners in the district. Each patent is evidence of a perfected right in the patentee to the claim conveyed, the initiatory step for the acquisition of which was the original location. If the date of such location be stated in the instrument, the patent will take effect by relation, as of that date, so far as may be necessary to cut off all intervening claimants, unless the prior right of the patentee, by virtue of his earlier location, has been lost by a failure to contest the claim of the intervening claimant, as provided in the act of 1872. As in the system established for the alienation of the public lands, the patent is the consummation of a series of acts, having for their object the acquisition of the title; the general rule is to give it an operation by relation at the date of the initiatory step, so far as may be necessary to protect the patentee against subsequent claimants to the said property. As was said by the Supreme Court, in the case of Shepley *v.* Cowan, 1 Otto, where two parties were contending for the same property, the first in time, in the commencement of proceedings for the acquisition of the title, when the same are regularly followed up, is deemed to be the first in right.

But this principle has been qualified in its application to patents of mining ground, by provisions in the act of 1872, for the settlement of adverse claims before the issue of the patent. Under that act, when one is seeking a patent for his mining location, and gives proper notice of the fact, as there prescribed, any other claimant of an unpatented location, objecting to the patent of the claim, either on account of its extent or form, or because of asserted prior location, must come forward with his objections and present them, or he will afterward be precluded from objecting to the issue of the patent. While, therefore, the general doctrine of relation applies to mining patents so as to cut off intervening claimants, if any there can be, deriving title from other sources, such, perhaps, as might arise from a subsequent location of school warrants, or a subsequent purchase from the State, as in the case of Heydenfeldt *v.* Daney Gold Mining Company, reported in the third of Otto; the doctrine cannot be applied so as to cut off the rights of the earlier patentee, under a later location, where no opposition to that location was made under the statute. The silence of the first locator is, under the statute, a waiver of his priority. But, from the view we take of the rights of the parties under their respective patents and the locations upon which those patents were issued, the question of priority of location is of no practical consequence in the case. The plaintiff is the patentee of several claims on the Ruby Hill lode, but for the purpose of this action it is only necessary to refer to three of them—the patents for the Champion, the At Last and the Lupita or Margaret claims. The first of these patents was issued in 1872, the second in 1876, and the third in 1877. Objection is taken to the validity of the last two, because the end lines of the surface locations patented are not parallel, as required by the act of 1872. But to this objection there are several obvious answers. In the first place, it does not appear upon what locations the patents issued. They may have been, and probably were, issued upon locations made under the act of 1866, where such parallelism in the end lines of the surface locations was not required.

The presumption of the law is, that the officers of the executive department specially charged with the supervision of applications for mining patents, and the issue of such patents, did their duty; and in an action of ejectment, mere surmises to the contrary will not be listened to. If, under any possible circumstances, a patent for a location without such parallelism may be valid, the law will presume that such circumstances existed. A patent of the United States for land, whether agricultural or mineral, is something upon which its holder can rely for peace and security in his possessions. In its potency it is iron-clad against all mere speculative inferences. In the second place, the provision of the statute of 1872, requiring the lines of each claim to be parallel to each other, is merely directory, and no consequence is attached to a deviation from its direction. The essential point was to secure parallel end lines drawn vertically down, and that was done by taking the extreme points of the respective locations on the length of the lode. In the third place, the defect objected to does not affect the defendant, and no one but the Government has the right to complaint. The defendant, The Richmond Mining Company, also holds several patents issued to it upon different locations; but in this case it specially relies upon the patents of the Richmond and Tip Top claims. These patents were issued upon locations made in 1869, which is earlier than any of the locations upon which the patents to the plaintiff were issued, at least so far as we are informed. Upon this fact, and claiming from it that the patents antedate in their operation, by relation, back to their respective locations the patents under which the plaintiff claims, and the further fact that the patents were issued upon locations made in 1866, the defendant relies to defeat the pretensions of the plaintiff. It contends that, inasmuch as the croppings of the vein it works are within the surface of its patented locations, it can follow the vein wherever it leads, though it be outside of the end lines of the locations when vertically drawn down the lode. Its position is that whenever, under the law of 1866, a location was made on a lode or vein, a right was allowed to follow the vein wherever it might lead, without regard to the end lines of the location. This position is urged with great persistence by one of the counsel of the defendant.

The second section of the act of 1866, upon the provisions of which this position is based provides: "That whenever any person or association of persons claims a vein or lode of quartz, or other rock in place, bearing gold, silver, cinnabar or copper, having previously occupied and improved the same according to local custom or rules of miners in the district where the same is situated, and having expended, in actual labor and improvements thereon, an amount of not less than one thousand dollars, and in regard to whose possession there is no controversy or opposing claim, it shall and may be lawful for said claimant, or association of claimants, to file in the local land-office a diagram of the same, so extended, laterally or otherwise, as to conform to the local laws, customs and rules of miners, and to enter such tract and receive a patent therefor, granting such mine, together with the right to follow such vein or lode, with its dips, angles and variations, to any depth, although it may enter the land adjoining, which land adjoining shall be sold subject to this condition." It will be seen by this section that to entitle a party to a patent, his claim must have been occupied and improved according to the local customs or rules of miners of the district, and that his diagram of the same, filed in the land-office, in its extension, laterally or otherwise, must be in conformity with them. The rules of the miners in the Eureka Mining District, adopted in 1865—Laws of the District, as they are termed by the miners—provided that claims of mining ground should be made by posting a written notice on the claimant's ledge, defining its boundaries if possible; that each claim should consist of two hundred feet on the ledge, but claimants might consolidate their claims by locating in a common name, so that in the aggregate no more ground was claimed than two hundred feet for each name, and that each locator should be entitled to all dips, spurs and angles connecting with his ledge; and that a record of all claims should be made within ten days from the date of location. The rules also allowed claimants to hold one hundred feet each side of the ledge for mining and building purposes, but declared that they should not be entitled to any other ledge within this surface. It will be perceived by these rules that they had reference entirely to locations of claims on ledges. It would seem that the miners of the district then supposed that the mineral in the district was only found in veins or ledges, and not in isolated deposits. In February, 1869, new rules were added to those previously passed, authorizing the location of such deposits. These new rules provided that each deposit claim should consist of one hundred feet square, and that the location should take all the mineral within the ground to any depth. In September, 1869, under these rules, square locations and linear locations were made by parties through whom the defendant derives title on what is called the Richmond ledge, and linear locations were made on what is called the Tip Top ledge, with surface locations for mining purposes, both parties claiming with their locations all dips, spurs and angles. It is only of the linear locations we have occasion to speak; it is under them that the defendants assert title to the premises in controversy.

Now, as neither the rules of miners in Eureka Mining District nor the act of 1866, in terms, speak of end lines to locations made on ledges nor, in terms impose any limitation upon miners following these veins wherever they may lead, it is contended that no such limitation can be considered as having existed and be enforced against the defendant. The act of 1866, it is said, recognizes the right of the locator to follow his vein outside of any end lines drawn vertically down when it permits him to obtain a patent granting his mine, "together with the right to follow such vein or lode with its dips, angles and variations to any depth, although it may enter the land adjoining, which land adjoining shall be sold subject to this condition." It is true that end lines are not in terms named in the rules of the miners; but they are necessarily implied; and no reasonable construction can be given to them without such implication. What the miners meant by allowing a certain number of feet on a ledge was, that each locator might follow his vein for that distance on the course of the ledge, and to any depth within that distance. So much of the ledge he was permitted to hold for the working of his vein as could be measured in its width anywhere by the feet on the surface. If this were not so, he might by the bend of his vein hold under the surface, along the course of the ledge, double or treble the amount he could take on the surface. Indeed, instead of being limited by the number of feet prescribed by the rules, he might in some cases oust all his neighbors and take the whole ledge. No construction is permissible which would substantially defeat the limitation of quantity on a ledge, which was the most important provision in the whole system of rules. Similar rules have been adopted in numerous mining districts, and the construction thus given has been uniformly and everywhere followed. We are confident that no other construction has ever been adopted in any mining district in California or Nevada. And the construction is one which the law would require in the absence of any construction by miners. If, for instance, the State were to-day, to deed a block in the city of San Francisco to twenty persons, each to take twenty feet front, in a certain specified succession, each would have assigned to him, by the law, a section parallel with that of his neighbor of twenty feet in width cut through the block. No other mode of division would carry out the grant. The act of 1866 in no respect enlarges the right of the claimant beyond that which the rules of the mining district gave him. The patent which the act allows him to obtain does not authorize him to go outside of the end lines of his claim, drawn down vertically through the ledge or lode. It only authorizes him to follow his veins with its dips, angles and variations to any depth, although it may enter land adjoining; that is, land lying beyond the area included within his surface lines. It is land lying on the side of the claim, not on the ends of it, which may be entered. The land on the ends is reserved for other claimants to explore. It is true as stated by the defendant, that the surface land taken up in connection with a linear location on the ledge or lode is, under the act of 1866, intended solely for the convenient working of the mine, and does not measure the miner's right either to the linear feet upon its course, or to follow the dips, angles and variations of the vein, or control the direction he shall take. But the line of the location taken does measure the extent of the miner's right. That must be along the general course or strike, as it is termed, of the ledge or lode. Lines drawn vertically down at right angles, with a line representing this general course, at the ends of the claimant's line of location, will carve out, so to speak, a section of the ledge or lode within which he is permitted to work, and out of which he cannot pass.

As the act of 1866 requires the applicant for a patent to file in the local office a diagram of his claim, such diagram must necessarily present something more than the mere linear location. It is intended that it should embrace the surface claimed for the working of the mine. In this way the patent of the Richmond claim embraces three acres and a fraction of an acre of surface ground, and five hundred and a half linear feet on the lode. And the patent of the Tip Top embraces nearly four acres of surface ground and six hundred linear feet on the lode. The Act of 1872 preserves to the miner the right acquired under the Act of 1866, and confers upon him additional rights. Under the Act of 1866 he could only hold one lode, or vein, although more than one appeared within the lines of his surface location. The surface ground was allowed him for the convenient working of the lode or vein located, and for no other purpose. It conferred no right to any other lode or vein. But the Act of 1872 alters the law in this respect. It grants to him the exclusive right of possession to a quantity of surface ground, not exceeding a specified amount, and not only the particular lode or vein located, but all other veins, lodes, and ledges, the top or apex of which lies within the surface lines of his location, with the right to follow such veins, lodes or ledges to any depth. But these additional rights are granted subject to the limitation that in following the veins, lodes or ledges, the miner shall be confined to such portions thereof as lie between vertical planes drawn downward through the end lines of his location, and a further limitation upon his right in cases where two or more veins intersect or cross each other. The Act in terms annexes these conditions to the possession not only of claims subsequently located, but to the possession of those previously located. This fact, taken in connection with the reservation of all rights acquired under the Act of 1866, indicates that in the opinion of the Legislature, no change was made in the rights of previous locators by confining their claims within the end lines. The Act simply recognized a pre-existing rule, applied by miners to a single vein or lode of the locator, and made it applicable to all veins or lodes found within the surface lines.

Our opinion, therefore, is that both the defendant and the plaintiff, by virtue of their respective patents, whether issued upon locations under the Act of 1866, or under the Act of 1872, could only follow the veins or lodes lying within lines drawn vertically downward at the end of their respective locations, and that each took the ores found in all veins or lodes, the apex or top of which lay within those lines. The question of priority of location is, therefore, as already stated, of no practical importance in the case. This question can only be important where the lines of one patent overlap those of another patent. Here, neither plaintiff nor defendant could pass outside of the end lines of its own locations, whether they were made before or after those upon which the other party relies. And inasmuch as the ground in dispute lies within the end lines of the plaintiff's patented locations drawn vertically downward, our conclusion is that the ground is the property of the plaintiff, and that judgment must be for its possession in its favor. The same conclusion would be reached if we looked only to the agreement of the parties made on the sixteenth of June, 1873. At that time the plaintiff owned the patented claim called the Lookout claim, adjoining on the north the Richmond claim. The defendant had worked down from an incline in the Richmond and Tip Top into the ore under the surface lines of the Lookout patent. The plaintiff thereupon brought an action for the recovery of the ground and the ores taken from it. A compromise and settlement followed which are contained in an agreement of that date, and were carried out by an exchange of deeds. A map or plat was made showing the different claims held by the two parties. A line was drawn upon this map, on one side of which lay the Champion, the At Last and the Margaret claims, and on the other side lay the Richmond and the Lookout claims. By the agreement of the parties, the plaintiff, on the one hand, was to convey to the defendant the Lookout ground and also all the mining ground lying on the north-westerly side of the line designated, with the ores, precious metals, veins, lodes, ledges, deposits, dips, spurs, or angles, on, in or under the same, and to dismiss all pending actions against the defendant; and on the other hand, the defendant was to pay to the plaintiff the sum of eighty-five thousand dollars, and to convey with warranty against its own acts, all its right, title or interest in and to all the mining ground situated in the Eureka Mining District, on the south-easterly side of the designated line, and in and to all ores, precious metals, veins, lodes, ledges, deposits, dips, spurs or angles, on, in or under the same—"it being," says the agreement, "the object and intention of the said parties hereto to confine the workings of the party of the second part (the Richmond Mining Company) to the north-westerly side of the said line continued downward to the center of the earth, which line is hereby agreed upon as the permanent boundary line between the claims of the said parties."

The deeds executed between the parties the same day were in accordance with this agreement. The deed of the Richmond Mining Company to the plaintiff conveyed all the mining ground lying on the south-easterly side of the designated line, together with all the dips, spurs and angles, and also all the metals, ores, gold and silver-bearing quartz, rock and earth therein, and all the rights, privileges and franchises thereto incident, appendant and appurtenant, or therewith usually enjoyed. The line thus designated, extended down in a direct line along the dip of the lode, would cut the Potts chamber, and give the ground in dispute to the plaintiff. That it must be so extended necessarily follows from the character of some of the claims it divides. As the Richmond and the Champion were vein or lode claims, a line dividing them must be extended along the dip of the vein or lode, so far as that goes, or it will not constitute a boundary between them. All lines dividing claims upon veins or lodes necessarily divide all that the location on the surface carries, and would not serve as a boundary between them if such were not the case. The plaintiff would, therefore, be the owner of the ground in dispute by the deed of the defendant, even if it could not assert such ownership solely upon its patented locations. Our finding, therefore, is for the plaintiff, and judgment must be entered thereon in its favor for the possession of the premises in controversy.

The Shark Paymaster Case.—This is an action to determine the right of possession of certain mining ground in the Ward District, White Pine County. The plaintiff deraigns title from the location of a claim called the Shark, and the defendant is the grantee of the location of the Paymaster. Both claims were located on the same ledge—the Paymaster in July, the Shark in September—and the principal question in the case is as to the validity of the Paymaster location. The facts in regard to this location are very clearly and fully presented by the findings of the District Judge, which embrace the special verdict of a jury upon a number of issues submitted to its decision. No exception whatever is taken by either party to the findings of the jury, and the objections of the appellant to the additional findings of the Court relate rather to the conclusions of law involved than to the facts on which they are based. The question before us is therefore narrowed down to a construction of the legislation of Congress and the local rules of the Ward District governing the location of mining claims. Before entering upon a discussion of the purely legal questions involved in the case, however, it will be best to give a connected statement of the facts, which are as follows:—Mineral deposits were first discovered in what is now the Ward Mining District by Thomas F. Ward, in March, 1872. On the first of May the district was organized, a set of local rules adopted, and (it seems) Ward appointed Recorder. The rules so first adopted were, in their general features, like the rules everywhere prevalent on this coast before the enactment of the Law of Congress of May 10, 1872. Claims were to be located by posting a notice at the point of discovery; the notice to be recorded in fifteen days; this to hold the claim good for one hundred days, within which time a certain amount of work was to be done on the ground in order to hold the claim a year. Each locator was to have fifty feet of the surface on each side of his ledge or vein, but this not to carry the right to any mineral deposit therein distinct from the one located. These rules, so far as they were not inconsistent with the Act of Congress of May 10, 1872, continued in force till the first of October, following, when the miners adopted a new set of rules. Such being the law of the district for the location and holding of claims, Ward, on the seventeenth of July, 1872, discovered the vein or ledge which is now in controversy, and placed upon the croppings at the discovery point the following notice:

"Paymaster location notice.—We, the undersigned, do hereby locate and claim fifteen hundred (1500) feet on this ledge, lode, or deposit of mineral-bearing quartz or rock, with all its dips, spurs, angles and variations, together with all privileges prescribed by the mining laws of the United States and this district, and intend to hold and work the same accordingly. We claim three hundred (300) feet easterly, and twelve hundred (1200) feet westerly, from this monument, running along the course of the vein. This shall be known as the Paymaster.

"Ward Mining District, July 17, 1872, situated about fifteen hundred feet north-west by north, from Mountain Pride lode."

To this notice were appended the names of the locators, and opposite the name of each were set the number of feet (undivided) to which he was to be entitled.

On the following day, July 18, the claim was recorded by Ward, as Mining Recorder of the district, by copying into a small memorandum book, which he carried in his pocket, and which at that time constituted the record book of the district. Subsequently, about the first of August, a larger book was obtained, and the records transcribed from the little book. In the meantime, however, the Paymaster notice, and the record of it, had been changed as follows: It seems that there was some sort of an agreement subsisting between Ward, John Henry, E. C. Hardy, and three others, that they should be equally interested in the locations made by Ward, but in the location of the Paymaster, Ward had omitted Hardy's name, and inserted that of Dave Pierson, who was not a member of the company. A few days after the location and recording of the claim, Henry called Ward's attention to the fact that Pearson's name was improperly on the notice, and Hardy's name improperly omitted. He also objected to the unequal distribution of the claim among the six locators. Ward thereupon changed the notice on the ground, and the record in the little book, by erasing the name of Pearson, and substituting the name of Hardy, and by changing the figures following the names, so as to give to each locator two hundred and fifty feet of the claim. These changes in the notice and in the little book were made before the transcription to the large book, which since the first of August, 1872, has contained the records of the Ward District.

Subsequent developments have shown that the vein or ledge upon which this Paymaster claim was located has a course or strike from south-east to north-west. According to the magnetic meridian (variation 16½°) it runs more nearly east and west. In September, 1872, some work—it does not appear how much—had been done on the Paymaster location, but the course of the vein was not clearly determined. Such being the condition of that claim, on the ninth of September the locator of the Shark discovered the croppings of the same vein at a point about four hundred feet north-west of the location point of the Paymaster, and posted the following notice:

"Shark mine No. 1. Notice:—We, the undersigned, do hereby locate and claim fifteen hundred (1,500) feet on this ledge, lode or deposit of mineral-bearing quartz and rock, with all its dips, spurs, angles and variations, together with all privileges prescribed by the mining laws of the United States and this district, and intend to hold and work the same accordingly. We claim seven hundred and fifty feet on each side of the monument running along the course of the vein. This shall be known as the Shark mine No. 1.

"Ward Mining District, Nye County, Nevada, September 9, 1872.

"JOHN TAYLOR, 375 feet.
"THOMAS CONNOR, 375 feet.
"MATHEW GLEESON, 375 feet.
"CHAS. STRUTENBERGER, 375 feet."

On the following day this notice was recorded, the certificate to the record being as follows:

"Recorded September 10, 1872, at 10 o'clock, A. M. Situated about 600 feet north-easterly from Young American mine, and about 300 feet north-westerly from Paymaster mine.

"THOS. F. WARD, Recorder."

Some significance is attributed to the fact that Ward, the locator of Paymaster, going upon the ground for the purpose of making this record, and necessarily observing the proximity of the Shark to the Paymaster, made no complaint at the time that the Shark locators were on his claim It was not until October, and after some work had been done by the locators of the Shark, that notice was given that they were on the Paymaster vein. They, however, denied that it was the same vein. They claimed a cross vein, and declared that if it turned out that they were on the Paymaster they would give it up. About this time—on October 10th, 1872—John Henry, one of the Paymaster locators, took down their notice and put up another, the same in all respects as the one removed except that it claimed three hundred feet southerly and one thousand two hundred feet northerly from the monument, instead of three hundred feet easterly and one thousand two hundred feet westerly. On the same day he drove down two stakes, one at the north-west end of the Paymaster and the other at the south-east end. They were marked "North-westerly stake of Paymaster" and "South-easterly stake of Paymaster." These stakes were on a line, or very nearly on a line, with the croppings of the vein as now developed, and within a few feet of the center line of claim as now surveyed. At some time subsequent to the change of the notice on the mine, a corresponding change was made in the record of the claim by erasing the words easterly and westerly, and inserting the words southerly and northerly. The jury could not find who made this change in the record, but the District Judge was of the opinion, and so are we, that it was done by Ward and Henry, but without any fraudulent intent. In the meantime, on the first of October, the laws of the district had been changed so as to conform more nearly to the Act of Congress of May 10th, 1872, it being especially provided that locators should have three hundred feet of surface ground on each side of their vein—to include, of course, not only the vein originally located but all veins within the surface lines. (R. S., Sec. 2322.) It is found as a fact that sufficient work has been done under each of these locations to satisfy the requirements of the law of Congress and the rules of the district. The Paymaster location was never marked upon the ground in any other way than by the three stakes on the line of the croppings—one at each end and one at the point of discovery—until it was surveyed for the purpose of the patent application in October, 1875. The Shark location was never marked on the ground in any way, except by the monument at its initial point, until April, 1874, when Gleeson set stakes at the four corners of the surface claim. On these facts the District Judge concluded that the Paymaster location was valid, and, as a consequence, that the subsequent location of the Shark on the same ground was invalid. In accordance with this conclusion, the judgment of the District Court was for the defendant. The plaintiff, appealing from the judgment and from the order denying her motion for a new trial, makes a number of assignments of error, which, however, are all involved in the three propositions following: It is contended:

1. That the Paymaster claim was not located in conformity with the Act of Congress and the rules of the district, and consequently that it was void;

2. That the Paymaster locators, if they ever had a good claim, abandoned it; and,

3. That they are stopped by their own acts from asserting any claim adverse to the Shark.

Keeping these propositions entirely distinct, and confining our attention for the present to the first, it is to be observed that there is no question that the locators of the Paymaster were the original discoverers of the ledge in controversy; that they made a *bona fide* attempt to locate it; that their claim was notorious; that they and their successors have continued to occupy and develop the property; that the Shark locators were aware of the priority of the Paymaster claim, and originally repudiated any intention of locating upon the same vein. These facts being conceded, the only position open to the appellant, and the only position her counsel have attempted to maintain, is, that a mining claim cannot be held except by compliance with certain requirements of the mining laws; that the Paymaster locators did not conform to those requirements, while the locators of the Shark did, and that, as a necessary consequence, the law gives her the property. Aside from the questions of abandonment and estoppel, she claims nothing except from a strict application of the law, regardless of any seeming hardship in depriving the defendant of a mine which its predecessors were the first to discover, claim and develop. There can be no doubt as to the correctness of the position upon which the claim is founded. The United States have granted to their citizens, and to those who have declared their intention to become such, the right to explore and occupy the public mineral lands (U. S. Revised Statutes, sec. 2319). Those qualified locators who comply with the laws of the United States, and the local regulations not in conflict therewith, governing their possessory title, have the exclusive right of possession and enjoyment of their locations: (R. S. 2322.) He who complies with the law has the exclusive right. Therefore, if it is true that the Shark locators complied, and those of the Paymaster did not, the plaintiff must take the mine, no matter who is entitled to the credit of the discovery. What, then, constitutes compliance? The questions involved in this branch of the case have led to a very thorough and elaborate discussion of the mining laws of the United States, and particularly of the Act of Congress of May 10, 1872 (R. S., Sec. 2319 *et seq.*), under which these claims were located, and which embodies the most important features of the mining legislation. The same questions were, to some extent, involved in the case of the Golden Fleece Company *v.* The Cable Consolidated Company (12 Nev. 312), but were not very fully argued, and were discussed in the opinion only so far as seemed to be necessary for the disposition of that case. Some of the conclusions then announced have been questioned by counsel for respondent in this, but after a thorough re-examination of the whole subject, with all the light that has been thrown upon it by the most elaborate argument, oral and written, we remain entirely satisfied with that opinion. So far as it goes, it is a correct exposition of our present understanding of the law. But it does not cover the whole ground and is perhaps not sufficiently explicit upon some of the points adverted to. The magnitude of this case, and the great importance of the subject to a mining community warrant a restatement of our views in a more complete, and we hope, a more convincing form. One of the imperative requirements of the statute, an indispensable condition precedent of a valid location, is that it shall be "distinctly marked on the ground, so that its boundaries can be readily traced (R. S., Sec. 2324)." By reference to the foregoing statement of facts, it will be seen that one of the locators of the Shark, in April, 1874, marked the boundaries of that location by setting stakes at the four corners of the claim. It is conceded that this was a sufficient marking of that location; but it is contended that the Paymaster had been sufficiently marked since October 10, 1872, by means of two stakes at the ends of the claim on the line of the croppings and by the location monument at the point of discovery. Whether this marking was sufficient to answer the requirements of the statute is the principal question in the case, and as a step towards its solution, counsel have devoted a great portion of their argument to the preliminary question, What does a mining claim consist of; what are its essentials, what are its incidents? Is it the surface ground that is located, or is it the vein with the surface as an incident? It is conceived that a determination of this point will greatly facilitate the inquiry as to what sort of marking of boundaries is required. Counsel for appellant contended that the location is of the surface, and stakes at the corners of the claim are essential. Counsel for respondent insists that the location is of the vein as the principal thing, with the surface as a mere incident, and that stakes to define the limits of the claim upon the vein are sufficient.

What we have said in the Golden Fleece case we think expresses the truth in regard to this matter: "It is true that the vein is the principal thing, and that the surface is but an incident thereto; but it is also true that the mining law has provided no means of locating a vein except by defining a surface claim, including the croppings or point at which the vein is exposed, and the part of the vein located is determined by reference to the lines of the surface claim." (12 Nev. 329.) The vein is the principal thing in the sense that it is for the sake of the vein that the location is made; the surface is of no value without it; no location can be made until a vein has been discovered within its limits, and the surface must or at least ought to be located in conformity with the course of the vein. (R. S. 2320.) But the location is of a piece of land including the vein. "A mining claim located after the 10th day of May, 1872, whether located by one or more persons, may equal, but shall not exceed, fifteen hundred feet in length along the vein or lode; but no location of a mining claim shall be until the discovery of the vein or lode within the limits of the claim located. No claim shall extend more than three hundred feet on each side of the middle of the vein at the surface, nor shall any claim be limited by any mining regulation to less than twenty-five feet on each side of the middle of the vein at the surface, except where adverse rights existing on the 10th day of May, 1872, render such limitation necessary. The end lines of each claim shall be parallel to each other." (R. S. 2320.) This section alone shows that it is a surface parallelogram not less than fifty feet in width that must be located. But the purpose of the law is more clearly indicated by its granting clauses. What is it that locators have the exclusive right to possess? Having complied with the laws they shall have the exclusive right of possession and enjoyment of all the surface included within the lines of their locations, and of all veins, lodes and ledges throughout their entire depth, the top or apex of which lies inside of such surface lines extended downward vertically, although such veins, lodes or ledges may so far depart from a perpendicular in their course downward as to extend outside of the vertical side-lines of such surface locations. (R. S. 2322.) This is the only part of the Act which grants the right to possess any lode, ledge or vein.

The vein originally discovered, and for the sake of which the location is made, is lumped in with other mineral deposits that may happen to exist within the limits of the surface claim, and no part of it is granted except that part the top or apex of which lies inside of the surface lines extended downward vertically. This, it would seem, ought to be conclusive, but the language of section two thousand three hundred and twenty-five is, if possible, still more convincing: "Section 2325. A patent for any land claimed and located for valuable deposits, may be obtained in the following manner: Any person, association, or corporation authorized to locate a claim under this chapter, having claimed and located a piece of land for such purposes," may, by taking the prescribed steps, obtain the title upon the payment of five dollars per acre for the land. Thus it appears that a location on a vein must be made by taking up "a piece of land" to include it. No other means are provided, and it is only upon condition of complying with the law that the locator becomes entitled to anything. The discoverer of a vein may be allowed a reasonable time to trace its course, before being compelled to define his surface claim, and in the meantime may be protected in his claim to one thousand five hundred feet of the vein, but his location will never be complete until his surface claim is defined. That this is the only possible construction of the statute, seems so plain to our minds that we should have thought it superfluous to say a word in defense of our view if we were not aware that an opposite opinion is very largely prevalent.

We think this due to the fact that the custom of locating a vein claim by means of a notice posted on the croppings, and of holding it by record of the notice and work done at the discovery point, without any definition of boundaries, has prevailed so long and so universally on the Pacific Coast that the system has come to be regarded by a great many as something essentially inherent in the nature of things. The right, under such locations, to follow the vein in whatever direction it might run, to the extent claimed in the location notice, taking the adjacent surface necessary for the convenient working of the mine as a mere incident thereto, has been so long recognized and enjoyed as to have almost assumed the character of one of the natural and inalienable rights of man. That the Government, in disposing of its mineral lands, has adopted a radically different system, under which a vein can only be located by means of a surface claim, and held only to the extent that it is included within the surface lines, is a thing too incredible to be believed by those to whom the old customs seemed rooted in the very foundations of justice. But disagreeable as the awakening may be, it is time we were opening our eyes to the fact that a new system has been introduced. The Act of Congress of May 10, 1872, has effected the changes above indicated. Its language is plain, unambiguous; and whatever may be our opinion of the impolicy of the changes effected by it, we are bound to submit and conform ourselves to its requirements. If the terms of the statute left any room for construction, the *argumentum ab inconvenienti* might be entitled to great weight, but it cannot be revoked where the language of the law is so plain as it is in this instance. Besides, we do not share in the opinion that the new system is so utterly bad. Nobody can pretend that it is a great improvement on the system which it displaced. We are willing to admit that cases may arise to which it will be difficult to apply the law, but this only proves that such cases escaped the foresight of Congress, or that, although they foresaw the possibility of such cases occurring, they considered that possibility so remote as not to afford a reason for departing from the simplicity of the plan they chose to adopt. So far, the wisdom of the Congressional plan has been sufficiently vindicated by experience. It is true that veins and ledges are not found to be perfectly regular in their formation—they have not a perfectly straight course even in depth—and near the surface they present still greater irregularities of strike and dip; but still they approximate the ideal vein that Congress seems to have had in view sufficiently nearly to admit an easy application of the law in all cases of conflicting claims that have fallen under their observation. As to the difficulty of establishing surface lines immediately upon the discovery of a vein; that also is conceded. It is a well known fact that the croppings of a vein are always very imperfect and often a very deceptive guide to its course; and it will often be difficult and sometimes impossible to locate a surface claim in conformity with the course of the vein, even after years spent in its development. But all this affords no argument against the system. Unless the miners voluntarily restrict themselves by local regulations, a claim may always be fifteen hundred feet long by six hundred feet wide. Let the discoverer of a vein be ever so unfortunate in locating his claim, he cannot possibly get less than six hundred feet of the vein, while under the old law the most he could get was four hundred feet. How then can it be said that he is subjected to any hardships? So far from restricting his rights, the new law has very greatly enlarged them, and at the same time has made them vastly more certain and secure. Furthermore, we do not understand that the law requires the surface claim to be defined immediately upon the discovery of the vein. We think that under any circumstances the discoverer, if he went to work diligently to trace out its course, would be allowed a reasonable time for that purpose, and in the meantime would be protected in his right to one thousand five hundred feet of the vein. In the absence of any State or Territorial or local regulation prescribing the time to be allowed for tracing, the question as to what should be deemed a reasonable time would have to be determined in view of the facts and circumstances of each case. We said, however, in the Golden Fleece case (12 Nev. 329), and we still think that this is a matter for local regulation under the power delegated to the miners by section 2,324 of the Revised Statutes, to make rules not in conflict with the laws. Any reasonable rule for the provisional holding of a claim, by means of the posting and recording of notice, during the time necessary for tracing would, we feel confident, be favorably viewed by the courts, especially if it required the locator to use diligence in the work of tracing during the time allowed for that purpose. This, however, is a question which we are not called upon to decide in this case. We have been led into this line of argument in response to what has been said by counsel for respondent in regard to the great hardship imposed upon the discoverer of a vein by compelling him to define his surface claim before he could possibly ascertain the course of the vein. If we are right in our opinion that he would be allowed a reasonable time for tracing, the supposed hardship does not exist. If we are wrong, and if the discoverer must set his stakes without stopping to trace the vein, even then, as we have shown, he is better off since than he was before the statute. His surface lines will necessarily include at least six hundred feet of the vein, and may include upward of one thousand six hundred. In the latter case he may be compelled to readjust his lines so as to take only one thousand five hundred feet, but in any case he can secure six hundred feet. Before the statute he could claim no more than four hundred feet of the vein, and of that he was not secure for a day. The moment he developed rich ore he was beset by trespassers, and in order to enjoin them from stealing his property, was obliged to trace the vein between them and the location point. He was harassed with litigation, and his means often entirely consumed in the prosecution of work not necessary for the development of his mine, but essential for the vindication of his title. Under the new law this source of vexation and expense is entirely swept away. Within his surface lines the discoverer of a vein is secure, and he might well consent to sacrifice something in the extent of his claim for the sake of that security.

So far, however, from having to make such a sacrifice, his claim, at the very worst, is more ample than it ever was before. Sound policy, therefore, concurs with the language of the statute in sustaining our conclusion that a vein can only be located by means of a service claim. How soon after the discovery of the vein "the location must be distinctly marked on the ground so that its boundaries can be readily traced" (R. S. 2324), we do not decide; but until it is so marked we are clear that the location is not complete, and the law has not been complied with. So far we agree entirely with the views of counsel for appellant; but, although we are satisfied that a location must be of a surface claim, and that the boundaries and extent of the claim must be clearly defined by stakes or marks on the ground, it does not appear to be a necessary consequence that the least admissible markings is by posts or monuments at all the corners of the claim. We are aware that the Commissioner of the Land Office has recommended the planting of posts at the corners, and the erection of a signboard with the name of the claim, the names of the locators, etc., at the location point; and undoubtedly a compliance with these recommendations would be sufficient to satisfy the law in this particular. But at the same time we think it may be satisfied by something less. There is, after all, something in the fact that it is a mining claim, and not an agricultural claim that is being located: and some account should be taken of the customs, habits and circumstances of a mining community in determining what is a sufficient marking of a mining claim. The vein is always the principal object that the locator has in view; it is generally, after location and work at the location point, a conspicuous feature of the locality; it is the first thing that attracts the attention of mining men; the surface claim by which it is to be located ought to conform to its course; the end lines must be parallel; and, as they ought to conform to the dip of the ledge as nearly as practicable, they ought to be at right angles to the side lines, so that if the centre-line of the claim is once established, the boundaries are thereby fixed, and may be readily traced. The object of the law in requiring the location to be marked on the ground is to fix the claim—to prevent floating or swinging—so that those who in good faith are looking for unoccupied ground in the vicinity of previous locations may be enabled to ascertain exactly what has been appropriated in order to make their locations on the residue. We concede that the provisions of the law designed for the attainment of this object are most important and beneficent, and that they ought not to be frittered away by construction. But it must be remembered that the law does not in express terms require the boundaries to be marked. It requires the location to be so marked that its boundaries can be readily traced. Stakes at the corners do not mark the boundaries; they are only a means by which the boundaries may be traced. Why not, then, allow the same efficacy to the marking of a center line in a district where the extent of a claim on each side of the center line is established by the local rules? It would be safer, and therefore better, to comply with the recommendations of the Land-office and erect stakes at the corners of the claim, but if the grand object of the law is attained by the marking of a center line we can see no reason why it should not be allowed to be sufficient.

In this case the locators of the Paymaster marked the center line of their claim on the tenth of October, 1872. No miner, no man of common intelligence, acquainted with the customs of the country, could have gone on the ground and seen the monument, notice and work at the discovery point and the two stakes—one three hundred feet south-east of the location monument, marked "Southeasterly stake of Paymaster," the other twelve hundred feet north-west of the location monument and marked "Northwesterly stake of Paymaster"—in a line with the croppings and the discovery point, without seeing at a glance that they marked the center line of the claim. By the rules of the district and the laws of the land he would have been informed that the boundaries of the claim were formed by lines parallel to the center line and three hundred feet distant therefrom and by end lines at right angles thereto. With this knowledge he could have traced the boundaries and, if such was his wish, ascertained exactly where he could locate with safety. We conclude, therefore, that the Paymaster location was sufficiently marked on October 10, 1872. At that time the Shark location had not been marked in any way, and whether the law allows a locator a reasonable time or not to mark his boundaries—protecting his full claim in the meanwhile—the same result equally follows. If the Paymaster was not marked within a reasonable time after discovery, then certainly the Shark was not, for the first was marked within three months and the latter not until more than eighteen months after discovery; so that the Shark claim was lost by the failure to mark its location within a reasonable time, and such time is allowed, then the Shark was thereby excluded. If no time for tracing is allowed, and the first to mark his boundaries is first in right, then the Paymaster location holds the claim, because it was first defined by monuments on the ground. Unless the Paymaster location failed in some other particular to comply with the law, there is no hypothesis upon which anything can be claimed under the Shark location. But it is contended that the Paymaster location was rendered invalid by non-compliance with the rules of the district and the law of Congress respecting the notice and record of claims. There is no doubt that in order to secure the right of possession to a mining claim there must be a compliance not only with the laws of the United States, but also with such local regulations of the mining district as are not in conflict therewith (R. S. 2324), and if the miners of the Ward District have made the posting and recording of location notices essential, the courts are not at liberty to dispense with them. The original laws of the district were adopted May 1, 1872, ten days prior to the passage of the Act of Congress, which, as we have seen, introduced an entirely new system of making locations—a system in which the preliminary posting and recording of notices is entirely out of place, except as a means of protecting a claim during the time necessary for tracing the ledge and marking the boundaries of the location. When the location is thus marked, all that the notice and record were intended or expected to accomplish is effected in a manner far more satisfactory and complete. In place of a very imperfect, and often misleading notice of what was claimed, there is a plain and unambiguous notice to all the world of the exact position and extent of the location. It might well have been held, therefore, with respect to the rules adopted May 1, 1872, that their requirements as to the posting and recording of notices were superseded by the Act of Congress of May 10, 1872; that they were merged in the higher and more efficacious rule of the statute, or, at least, that if they continued of any force whatever, it was only as a means of protecting a vein discovery during the time reasonably necessary for tracing its course and marking the boundaries of the location, and consequently that if the discoverer chose to mark his location in the beginning, or actually did so at any time before an adverse claim was made, his failure to post and record a notice would count for nothing.

But the rules of the district were revised on the first of October, after the passage of the Act of Congress, and the provisions with respect to the notice and record of claims were readopted without any additional provision for bringing them into sensible relation to the law. They do not purport to supply a means of holding a claim pending the marking of the location on the ground, but stand as substantive and independent requirements, a compliance with which is essential to the validity of a claim. We are not willing, under the circumstances, to go to the extent of holding that their observance can be dispensed with, even where a location has been plainly marked before the making of an adverse claim. We will assume that it was necessary for the locators of the Paymaster not only to have marked their location before the Shark locators complied with the law, but also to have posted and recorded a notice of the claim. Did they do so? There can be no question that the original Paymaster notice was all that the law requires. The only objection to it is that it did not contain in itself a description of the claim by reference to some natural object or permanent monument. It was necessary that it should. It is only the record of the claim that is required to contain such a description; and there are excellent reasons for making a distinction between the notice and the record in this particular. A notice is generally, and for safety ought always to be, posted immediately upon the discovery of the vein, before there is any time to survey the ground, and ascertain the bearings and distances of natural objects or permanent monuments in the neighborhood; and besides, the claim referred to by the notice is always sufficiently identified by the fact that it is posted on or in immediate proximity to the croppings. A notice claiming a location on "this vein" has only one meaning. But the notice is exposed to the danger of removal by adverse claimants, or destruction by the elements, and for permanent evidence of the location its record is provided for. The record, if it consisted of a mere copy of the notice would not identify the claim, and there would be an opportunity as well as a temptation to the locators, upon the discovery of a more valuable mine in the vicinity, to prove, by perjured witnesses, that their notice was posted on that mine. The floating of claims was by no means an infrequent occurrence prior to the act of 1872, and if such attempts were seldom completely successful, they were always vexatious, and often the means of levying a heavy blackmail. It was on this account that the record (not the notice), was required to contain "such a description of the claim or claims located by reference to some natural object or permanent monument as will identify the claim." (R. S., Sec. 2324). It is a sufficient compliance with this provision of the law if the description of the *locus* of the claim is appended to the notice when it is recorded. But by reference to the foregoing statement of facts it will be seen, that not only did the record of the Paymaster location contain the necessary description, it was also contained in the body of the notice as posted on the ground: "Situated about fifteen hundred feet north-west by north of the 'Mountain Pride lode,'" is the description in the notice; and as no objection to it was made upon the ground that the "Mountain Pride lode" was not a well-known natural object, at that distance, and in that direction from the Paymaster location monument, we presume it was, in fact, a good description. The record also contained the names of the locators and the date of the location, and thus fulfilled every requirement of the Act of Congress. (R. S., Sec. 2324.) But it was changed by Ward and Henry, and it is contended that after those changes it was no longer a good record.

The argument in support of this point is about as follows; Pearson, whose name was in the original notice, as first recorded in the little book, was one of the locators of the claim; he had a vested right, and could not be deprived of his interest by the erasure of his name from the notice and record, and consequently after his name was scratched out, the record no longer contained the names of the locators, and was void. We do not think it is by any means clear that Pearson ever acquired any interest in the claim. It does not appear that he ever assented to the use of his name as a locator by Ward, who actually made the discovery and posted and recorded the notice, and it does appear that there was some sort of arrangement by which Ward was to divide his discoveries equally among those whose names were afterwards signed to the notice. If Pearson had no right to a share in the discovery, and if Ward merely inserted his name by mistake or under some misapprehension, and erased it before the claim had been perfected by work or the marking of its boundaries, it is difficult to see upon what ground he could claim to have ever had any vested right as a locator. But whether he had or not is a question between him and the other locators of the Paymaster. As to outsiders, the notice and record were sufficient. They contained the names of those who claimed to be the locators, and served every purpose of the law—that is, they identified the claimants and the claim.

The subsequent alteration of the notice by changing the words westerly and easterly to northerly and southerly had no effect on the rights of the parties. The only purpose of those words was to show in which direction from the discovery point the claim extended one thousand two hundred feet, and in which direction its extent was only three hundred feet. Either set of words served the purpose equally well. No doubt when the vein was first discovered, its course seemed to be east and west; after a certain amount of development, it seemed to run north and south; and the notice was changed for the perfectly innocent and even laudable purpose of giving to all whom it might concern a better description of the claim. The corresponding alteration in the record was made with the same motive—at least the court finds that it was done without any fraudulent intent; and certaintly it was wholly immaterial. There was no swinging of the location effected by this change in the notice and record. The claim was never fixed until the stakes were set; and so far as the notice was concerned, it claimed one thousand five hundred feet of the vein, no matter where it might run. If it was good for anything it was good for what it claimed, pending the marking of the location. The changes and erasures in the record were certainly irregular; and if they had been material, or if they had not been satisfactorily explained, might have afforded good grounds for excluding it from evidence.

But they were satisfactorily explained. They were not designed to defraud any one, and had no such effect. We think that the comments of the District Judge on this matter are very just. Mining recorders are a class of officials that must be treated with a great deal of forbearance and indulgence. They are often entirely ignorant of legal forms, and have no appreciation of the horror with which an ordinary lawyer views the erasure or alteration of records and other documents. Where no fraud or deception is intended, their blunders are not to be construed into crimes.

This disposes of the first proposition of the appellant. The second and third are entirely without merit, and as they relate to well-settled doctrines of the law, they will be briefly adverted to. There is not the slightest evidence of an intention on the part of the Paymaster location to abandon their claim. The act of Henry in changing the language of the notice on the 10th of October, 1872, proves only that he had abondoned the opinion that the course of the ledge was east and west. So far from proving an intention to abandon a foot of his claim on the ledge, it proves exactly the reverse.

Nor do the facts present a single element of estoppel.

Each party had exactly the same means of information. When the Shark location was made, it was as much the business of its locators to know whether it was on the Paymaster vein, as it was of Ward, the recorder. The truth probably is, that no one at that time thought the two claims would conflict. It is idle, therefore, to say that any culpable silence on the part of Ward caused the expenditure of labor and money on the Shark. If the locators of that claim were deceived, it was their fault and they must suffer the consequences.

As to the change in the Paymaster's notice from east and west to north and south, that was, as we have seen, wholly immaterial. The simultaneous setting of the stakes entirely superseded the calls of the notice, and was the first thing that ever fixed the boundaries of the claim. If after that the Shark locators continued at work, they did so with their eyes wide open, as they did everything else from the beginning to the end of their attempts to locate the ground. From the outset they had the same opportunities to know the truth that the other party had. If they have any better claim to the property than the defendant, it is not because they were deceived or misled, but only because they can show a technical compliance with the law, while their adversaries cannot. It is upon this ground alone that their case has any semblance of strength, and upon this ground we think it entirely fails. The judgment and order appealed from ought to be affirmed, and it is so ordered.

Beatty, J.

I concur: Leonard, J.

Since the foregoing opinion was written two cases (Gelsich *v.* Moriarty et. al., and Holland et. al. *v.* Mount Auburn G. Q. Mining Company) have been decided by the Supreme Court of California, in both of which it is assumed, as a point beyond question, that the marking of a mining location on the ground so that its boundaries can be readily traced is absolutely essential to the validity of the claim. This is in perfect accordance with our own views, as above expressed. But in the latter of these cases it seems also to be held that the marking of the centre line of the claim is not sufficient to satisfy the requirements of the law. The opinion of the Court is very brief, and no reasons are assigned for the conclusions reached. We have however, been led by that decision to thoroughly reconsider our own opinion on this point and the arguments of counsel *pro* and *con.* The result is that we are satisfied of the correctness of our first conclusion. A mining claim consists of a certain breadth of surface, to be laid off on each side of the line of the croppings, with the mineral deposits included therein. The centre line, as a matter of course, is to be a straight line conforming to the general strike of the vein, as nearly as that can be ascertained. The side lines are to be parallel to the centre line, and if, as we assume to be the proper construction of the law, the end lines must be parallel and conform to the dip of the vein, which is at right angles to its strike, it follows, with the conclusiveness of a mathematical demonstration that when the centre line is once definitely fixed the boundary lines can be traced (that is, followed out) with absolute certainty. It may be that they could not be traced as easily and readily as if stakes were set at the corners, but the difference would be very slight and of no practical consequence. In any case, we think that the law should receive as liberal and beneficial a construction as is consistent with the object which Congress undoubtedly had in view in passing it. That object, we are satisfied, was not to save intending locators a slight amount of labor in tracing older claims, but it was to make the boundaries of such older claims certain and immovable; to put an end forever to the shifting and floating of claims; to do away with an existing and intolerable evil. The whole object of the law is accomplished whenever, from the monuments on the ground, the boundaries of a mining claim can be traced with absolute certainty and without any practical difficulty, and for that purpose a definitely fixed centre line is sufficient.

Beatty, J.

I concur: Leonard, J.

By Hawley, C. J., Concurring.—I concur in the conclusions reached by the Court, that the judgment of the District Court ought to be affirmed; but I am unwilling to give an unqualified approval of the construction given to the mining laws of the United States.

If I entertained the opinion, as expressed by the Court, that "it is a surface parallelogram not less than fifty feet in width that must be located;" that the location on a vein "must be made by taking up a piece of land to include it;" that a vein can "only be located by means of a surface claim, and held only to the extent that it is included in the surface lines," and if—upon these points—I agreed "entirely with the views of counsel for appellant, I should be inclined to agree with their conclusions that it is the surface location that "must be distinctly marked on the ground so that its boundaries can be distinctly traced."

But I do not believe that it was the intention of Congress, by the passage of the several Acts referred to in the opinion of the Court, to produce an entire revolution in the system of locating mining claims. Some very important changes have been made and the rights of the locators have been enlarged and made more specific; but, in my judgment, it is—as it was under the old system—the vein of quartz, the lode, that is the principal thing constituting the location. The surface ground is but an incident thereto. The location of such a mining claim is distinctly marked on the ground so that its boundaries can be readily traced, by the placing of stakes along the lode and at the ends of the location, or by such other monuments or marks as will clearly designate the number of feet in length and the particular lode located. In my judgment, the location need not, necessarily, be the making up of "a piece of land" in the form of a parallelogram. When the vein or lode is sufficiently identified and marked, as above stated, the laws of the local district fix the number of feet in width—of the surface ground—to which the locator is entitled. It being, of course, understood that "no claim shall extend more than three hundred feet on each side of the middle of the vein at the surface, nor shall any claim be limited by any mining regulation to less than twenty-five feet on each side of the middle of the vein at the surface."

I differ with the court upon another point discussed in the opinion. I think that after the vein or lode is properly located the locator thereof has the right to fifteen hundred feet along the course of the lode, "in whatever direction it runs, irrespective of the vertical side lines of the surface boundaries" (dissenting opinion, Golden Fleece *v.* Cable Consolidated, 12 Nev., 331), and that he would only be entitled to fifteen hundred feet in length, although the vein took such a course as to embraee more than fifteen hundred feet within the ends lines of his surface location.

HAWLEY, C. J.

Other Decisions.—The following are taken from Carpenter's Mining Code:

David C. Patterson vs. Hiram Hitchcock. Bull of the Woods—American Case. 3 Colorado Reports, 533.

Opinion by Elbert, J.

Error is assigned upon the refusal of the court below to give the following instruction: "It is essential to a mining claim that it should be made upon the line of a lode; and it is therefore incumbent on the defendant, in making out his defense, to show that the vein of the American mine runs into or through the ground in controversy. If he has offered no testimony to show that the vein of the American lode enters, or passes across the territory of the Bull of the Woods location, and there are no other proofs in the case from which you can find that fact, the defendant must fail, and the plaintiff would be entitled to a verdict." Error is also assigned on the refusal of the court to admit evidence to show that the American lode did not cross the Bull of the Woods lode, although the location crossed it. There was no error in refusing the instruction. When a locator has shown a compliance with the requirements of the law in making his location, he is entitled, *prima facie*, to all the rights which the law attaches to a valid location. The extent to which a location must be *on* a lode in order to its validity *prima facie*, is fairly measured by the extent to which it is necessary to show it on the lode, in order to entitle the locator to state his boundaries, make his record, and if he desires, perfect his title by patent. The refusal of the court to allow Paterson to show that, although the American location crossed the Bull of the Woods lode, the American vein or lode did not cross it, present a more difficult question. May a location, *prima facie* valid, be defeated, in whole or in part, by showing a termination or departure of the vein at some point within or along the side lines of the location? The evidence of Van Wittering, respecting the underground workings within the limits of the intersection of the two locations, did not connect the workings with the American lode or show its actual presence; much less did it show that the American vein extended to or across the vein of the Bull of the Woods. The question presented is, therefore, unembarrassed by any question of fact. Both locations are made under the Act of 1872. It will be observed that the right secured by section three of the Act attach to the locations made, in the language of the section, "*on* any mineral vein, lode or ledge." To arrive as a whole; accepting the broader or doubtful expressions of one section, as limited or explained by other sections. The term "*on* any mineral vein, lode or ledge," must be read in the light of the requirements of section two of the Act. This section limits the location to 1,500 feet in length "along the vein or lode," and declares that "no claim shall extend more than 300 feet on each side of the middle of the vein at the surface." These provisions are plain and explicit, and require, not in express terms it is true, but by necessary implication, that the location should be on the lode the entire extent of the 1,500 feet. With a location off the lode, compliance with the law would be impossible in the matter of width, as the basis of measurement provided by the law would have no existence. By necessary implication, the work requisite to fix the course and position of the lode was also contemplated in order to enable the locator to embrace it within the lines of his location.

These requirements interpret the expression, "on a vein or lode," as used in section three of the Act. They afford undoubted evidence that this was the character of locations to which it was intended that the rights conferred by the section should attach. It is claimed, however, that a mislocation, however it may affect the miner's right to the lode located, will not affect his right to the surface ground, either in whole or in part; that under the Act of 1872, the "surface ground is not a dependent grant. Under the Act of 1866, a surface ground was allowed for the convenient working of the lode or vein, and for no other purpose." Such is the language of Justice Field, in the case of the Eureka Mining Company *vs.* The Richmond Mining Company, 4 Sawyer, 302. Under this Act the right to surface ground was clearly dependent upon the right to the lode located. It failing, all incidents thereto attaching would also necessarily fail, although the Act of 1872 enlarges the rights of the locator by a grant of "all the veins, lodes and ledges, the top or apex of which lie within his surface lines." We are still of the opinion that his right to the surface ground, continues dependent upon his right to the principal lode, and that his right to other lodes within the surface limits is equally dependent. This enlargement of the rights of the locator, was doubtless intended to stimulate his enterprise by increasing his reward; but the controlling reason was to prevent the controversies which were constantly arising, respecting veins or lodes connected or associated with the lode claimed. These controversies abstracted the full and proper enjoyment of the principal lode granted, and the design was to settle and prevent them. In this, and in the case of surface ground, it was intended to grant that which was associated with the principal lode by proximity, within prescribed limits. When this association ceases in the case of surface ground, the reason for granting it ceases. A *mineral vein or lode* is a leading term in both Acts. There must be a lode discovered and appropriated by compliance with the requisites of location.

This is the prominent and pronounced subject of the grant. This is what the miner has discovered, and claimed by right of discovery. The security of his title thereto, was the practical necessity with which the Act dealt; all else, we think, incident thereto, under the Act of 1866, the right to the surface ground, under the Act of 1872, both the right to the surface ground, and the right to other veins, lodes and ledges. The principal lode constitutes the measure of the miner's right to the surface ground, as the surface ground when thus determined, in turn constitutes the measure of his right to other veins, lodes and ledges, subject to the express limitations of the law. It follows, therefore, that if the lode located, terminates at any point within the location, or departs at any point from the side lines, that the location beyond such point, and to that extent, is defeasible, if not void.

Wolfy and Skinner vs. The Lebanon Mining Company. Bell Tunnel—Ben Harding Case. 4 *Colorado Reports*, 112.

Opinion by Thatcher, C. J.

This was an action of ejectment to recover the possession of eight hundred feet of the Ben Harding lode. The evidence tended to show that the Ben Harding lode in its general course or strike, departed from the vertical side lines of the location as described in the patent, and entered the Bell Tunnel lode location, which was also patented. At common law, a grant of land carries with it all that lies beneath the surface to the center of the earth. This rule, except so far as modified by statute, must extend to the plaintiff's patent. There may be a grant of the mineral, separate from the surface of the earth. The Ben Harding patent must be construed under the Act of 1866. The second section of that Act provides, "that it shall be lawful for the claimant of a vein or lode, to file in the local land office a diagram of the same, so extended laterally or otherwise, as to conform to the local laws, customs and rules of miners, and to enter such tract and to receive a patent therefor, granting such mine, together with the right to follow such vein or lode with its dips, angles and variations *to any depth*, although it may enter the land adjoining, which land adjoining shall be sold subject to this condition." This section is a departure from the common law doctrine, and permits the patentee to follow his lode in its downward course to any depth although it is carried by its dips, angles and variations, beyond its side lines, while the words "*to any depth*," limit the direction in which the mine may be pursued beyond the side lines. The claimant is required to file in the land office a diagram of his vein or lode. This is his own act. Before making such diagram, the law contemplates that he shall so far expose and develop the lode as to be able to trace its course. If the plat made by the surveyor does not cover the lode, he will not be permitted to shift his lines so as to include the lode. The error is his own, not that of the government officer who acts under the direction of the claimant. However tortuous might be the course of the lode, the claimant has a right to follow it up and prepare his diagram so as to include it. There are no words in the Act which require the diagram to be in the form of a parallelogram or any other particular form. The Act requires that there must be a discovered lode, whose *locus* must be embraced in the limits of the diagram. The surface ground and the lode are not independent grants. It is not the purpose of the law to grant surface ground without a discovered lode. The lode is the principal thing, and the surface ground incident thereto.

In conveying a segment of the earth located under the provisions of the Act, it is the intention of Congress to convey a mine contained within that segment as the substance of the grant. The Act appeals to the industry of the miner to make sure that the lode is within his location. The higher his diligence the greater his reward. If by lack of care he makes a location not embracing the lode he seeks to secure, he cannot be heard to complain because others have explored and occupied the adjacent territory containing the claim he might have embraced in his diagram. If, as the evidence tends to show, the Bell Tunnel lode is but a continuation of the Ben Harding lode (after its departure from the vertical side lines), extending through the adjacent location, there is no principle of law or justice, in the absence of an express statutory provision, by which the patentee of the last named lode can encroach upon the premises embraced by the Bell Tunnel lode location, and deprive the owner thereof of the fruits of his discovery. Before a claimant is entitled to a patent under the Act of 1866, he must comply with all its provisions, the leading object of which is to require that the claimant, before applying for a patent, shall ascertain the exact location of his lode and fix by his diagram that location, so that the public may be apprised of its limits and may thereafter with safety explore and occupy adjacent tracts. It is insisted that if not by the terms of the Act of 1866, then by virtue of territorial legislation and local customs and rules of miners, the patentee of the Ben Harding lode was entitled to follow the course of the discovered lode beyond his own side lines, and that the Act of 1866 was to recognize and confirm these rules and customs. The Act confirmed such legislation of local rules, *so far as the same may not be in conflict with the laws of the United States*. The Acts of Congress are paramount to all local laws, and the patentee takes under the laws of the United States. The right of the locator to the possession of his claim and to appropriate to his own use the mineral deposits therein under the Acts of Congress, is full and complete, and he need not take steps to obtain patent for the land.

There is no time prescribed in which he shall apply for the patent. Ample time is given to ascertain the precise *situs* of his lode, with reference to adjacent land. The surface and the lode are both the subject of the grant. The patent operates to convey, not only the circumscribed tract of land, but also the lode contained therein, with the right to follow the same in its downward course into adjoining premises, but not to follow it when in its general strike it departs from the vertical side lines. In the latter case, after its departure, it is the subject of location by whomsoever it may be discovered. If, then, as the evidence tends to show, the ledge on which the Ben Harding lode was located deflected in its general strike from the patented side lines, the patentee is not entitled, in virtue of his patent, to its possession beyond the side lines, as against one who has subsequently located it and patented it.

In the case of the Flagstaff Silver Mining Company, of Utah, *vs.* Helen Tarbet, the Supreme Court of the United States, in May, 1879, decided that "a location of a mining claim upon a lode or vein of ore should be laid along the same lengthwise of the course of its apex, at or near the surface, as well under the mining Act of 1866 as under that of 1872. If located otherwise, the location will only secure so much of the lode or vein as it actually covers."

G. W. Hall et als. vs. Equator Mining and Smelting Co. et als. Colorado Central—Equator Case. U. S. Circuit Court.

Trial and opinion by Hallett, J.

Both locations are fifty feet in width, one 1,400 feet, and the other 1,500 feet in length. Their general course is east and west, and they differ in direction about twelve degrees. The greater length of the Equator is eastward from the Colorado Central, and the locations overlap in some such way as the rails of a Virginia fence overlap each other. The east end of the Central location passes over and across the west end of the Equator, so that the end of each location projects beyond the north side line of the other a distance of two or three hundred feet.

The position of the claims with reference to each other seems to indicate that they are cross and intersecting lodes, with an acute angle of twelve degrees. It appears from the evidence that, instead of two lodes intersecting each other in the manner indicated by the locations, there is at the junction of the surface lines, and for a considerable distance east of that point, but one lode, which lies partly in both locations and partly between them, and perhaps extends beyond the north line of the Central patent. At the east end of the Central patent, and the corresponding point on the Equator patent, and thence westward, the unity and entirety of the lode is established by the concurring testimony of all the witnesses, and that, of course, covers all the disputed ground. In the Equator works the south wall of the lode is exposed, but the north wall has not been found there or in the Central openings. We may, however, assume the existence of a lode, the northern limit of which is at present unknown.

We then have, as shown by the evidence, the Equator location on the south side of that lode, with the foot-wall coming to the surface pretty near the central line of that location. On the foot-wall and following it westward to and through the disputed ground, there is a mineral vein—that word being used to describe a tabular sheet of ore, as distinguished from the gangue of the lode.

We have also the Central location, a part of the lode within the walls, but not touching either of them. So also in the Central location there is a vein of ore, less distinct, perhaps, than the other, but distinguishable from the general mass of crevice material. With these locations both parties claim the entire lode, the plaintiffs by virtue of their earlier discovery and location, to which they say their patent must relate, and thus secure to them the prior right. The principal question is, whether by locating a part of the width of outcrop the whole may be taken—of several collateral locations on the course of a lode, where the top or outcrop is of sufficient breadth to admit of more than one, are not all of equal dignity and force within their own lines? This question will admit but one answer, with such modifications as may be hereafter suggested. The Acts of Congress require a location to be along the course of the lode, and to include the top of it. The Equator Company assumed to take the whole lode into their location, and if they failed by their own omission, or because of some restricted provision of the local law, the result is the same. They cannot now claim more than was taken. The same rule is applicable to plaintiff's location.

If, however, a right to the entire lode cannot be asserted under a location covering a part only of its width, as seems to be obvious, the location may be valid for the part described in it. If it is on the top of the lode, it is within the Act, and so ought to be good for the part within the lines extended downward vertically, if for no more. *Prima facie* the patentee must be the owner of all that lies within his lines. He has also the right to pursue veins and lodes which he holds by their outcrop, into other territory. He can only do so in pursuit of a lode or vein that has its top and apex wholly on his own ground, and having but a part of the lode in his territory, he cannot comply with that condition. If, then, two or more collateral locations be made on one and the same vein, and the vein appear to be homogeneous throughout its width, we are authorized to say that each shall be confined within his own lines drawn vertically. The occurrence of veins in other veins, applying the word first to the sheet of ore which is often called the pay streak, and again the general mass of the crevice embracing the ore and gangue, will not be controverted. It is said in Webster's Dictionary that the word "vein" is often limited, in the language of miners, to a layer or course of metal or ore. So in works on topography, fissures are mentioned as occurring within other and probably older fissures, which, if filled, may furnish the conditions of a vein within another and larger vein. I have not heard the word "lode" used in the same sense, but as it means only a vein carrying ore, it would be even more significant than the latter. The word "ledge" is not in use with us. As found in the Acts of Congress, the word "vein" may be taken in the limited sense. To give effect to it in that way, we need not resort to the nice definition and subtle distinctions of geological science. It is enough that such is an accepted use amongst miners. So understood, the word "vein," in the Equator patent, may refer to the sheet or crevice of ore that was found on the south wall of the lode. So, also, the word "vein," in the Central patent, may be regarded as referring to the sheets and bodies of ore found in the plaintiff's openings. If the ore had been distributed throughout the lode with anything like uniformity, we should have been unable to distinguish between the several parts, and as we have already said, each party would then be confined to their own lines. But the vein on the south wall is quite distinct from the general mass of the crevice, and of such strength and continuity as may give it unity and individuality in law and in fact. The vein on the south wall may be held as a separate and distinct location, with the right to follow it in its downward course so long as it retains its individual character. All that has been said is based on the fact, as shown by the evidence, that its top and outcrop are wholly within the Equator ground. If the top and apex of the vein had been in the Central location, some questions would arise concerning the force and effect of the patents within the space in controversy. In the view that has been taken of the case, it has not been found necessary to discuss those questions.

The judgment will be for defendants.

Stevens & Leiter vs. Williams et als. Iron-Grand View Case. U. S. Circuit Court.

Charge to the jury by Hallett, J.

The first matter to which I shall ask your attention is, that the reference in the law is to veins or lodes *in place*, bearing any valuable metals which are here spoken of. The language of the Act is, mining claims upon veins of quartz or other rock *in place*, bearing gold, silver, cinnabar, lead, tin, copper, or other valuable deposits. That is the language of the Act used in describing the kind of mines or valuable deposits which may be taken under the Act, and the peculiar feature of that description to which I wish to call your attention, is that they are lodes or veins *in place*. The exact language, as I before read, is veins or lodes of quartz or other rock; that is, veins of quartz or other rock, or lodes of quartz or other rock (the last words being added to the first by way of description) that may contain any of these valuable metals. That is to say, any kind of rock bearing any of these metals, but whatever the rock, whether it be quartz or other rock, it must be *in place*. And, as to the meaning of these words, in place, they seem to indicate the body of the country which has not been affected by the action of the elements; which may remain in its original state and condition as distinguished from the superficial mass which may lie above it. There is quite a number of words which may be applied to that superficial deposit; that which is movable, as contrasted with the immovable mass that lies below, such as alluvium, detritus, debris. Perhaps the last word comes as near as any other that is in use, the word *debris*. A witness in another case here used a word which he appeared to have invented for the occasion, which appeared to me particularly significant; he called it "tumble stuff," which conveys to my mind pretty distinctly the idea of that which may have been brought to its position by the action of the elements as distinguished from the vast body of earth which lies below. In speaking of these deposits, which are in veins or lodes, and of the general mass of rock from which they may be distinguished, miners usually call the surrounding mass of rock in which the lodes or veins are found, the country, or the country rock. By that word they signify the character and description of the general body of the mountain, whether it is granite, or gneiss, or syenite, or porphyry, or any other of the many different kinds of rock. They use that word to describe the general mass of rock, of which the mountain is composed, as distinguished from that which is found in the vein or lode. And when this Act speaks of veins or lodes *in place*, it means such as lie in a fixed position in the general mass of country rock, or in the general mass of the mountain. As distinguished from the country rock, this superficial deposit may have been brought into its present position by the elements, may have been washed down from above, or may have come there as alluvium or diluvium, from a considerable distance. Now, whenever we find a vein or lode in this general mass of country rock, we may be permitted to say that it is *in place*, as distinguished from the superficial deposit, and that is true, whatever the character of the deposit may be; that is to say, as to whether it belongs to one class of veins or another; it is *in place* if it is held in the embrace, is inclosed by the general mass of the country. And as to the word vein or lode, it seems to me that these words may embrace any description of deposit which is so situated in the general mass of the country, whether it is described in one way or another; that is to say, whether in the language of the geologist, we say, that it is a bed, or a separated vein, or gash vein, or true fissure vein, or merely a deposit; it matters not what the particular description of it may be, in respect to these distinctions, which are observed by geologists in defining the different classes of deposits that lie in the embrace, or are inclosed by the general mass of the mountain. In all cases I suppose that they are lodes if not veins. It may be true that many of these deposits will not come under the description of veins as known to geologists, but if they are not so described—if they cannot be so correctly described—they are, at least, lodes, and are recognized as such by miners in their search for them. In other words, whenever a miner finds a valuable mineral deposit in the body of the earth, as I have described it, he calls that a lode, whatever its form may be, and however it may be situated, and whatever its extent in the body of the earth. The books make some distinctions between beds, and lodes, and they make distinctions in the different classes of veins, as you have heard from counsel, but these distinctions are not important in relation to this matter of the discovery and taking of these mineral deposits. It has been decided that Congress, in passing this Act, intended by this description to embrace and include all forms of deposit which are located in the general mass of the mountain, by whatever name they may be known, and the distinctions which are adopted by geologists in respect to the different kinds of veins are not important except for one question and for one purpose, which I may invite your attention to further on. So that we may say, gentlemen, with respect to the case which is now before you, that, whether this may be called a true vein or a contract vein, or a bed; whether it lies with the stratification or transversely to it, the matter is of no importance for the purpose of determining this question; it is in any event a lode, if it lies in place within the meaning of this Act. And it is *in place* if it is inclosed and embraced in the general mass of the mountain and immovable in that position. Perhaps I ought to say further, in view of some things that were said by counsel in the argument, that it is not material as to the character of the vein matter; whether it is loose and disintegrated, or whether it is solid material. In these lodes the earth that is found in them, the earthy matter which may be washed or treated with water or steam is often the most valuable part. It was never understood here or elsewhere, so far as I know, that such earthy matter was not embraced in the location because it was of that character. It is the surrounding mass of country rock; it is that which incloses the lode rather than the material of which it is composed which gives it its character; so that even if it be true, as counsel have stated in the course of their arguments, that this is mere sand, is a loose and friable material which cannot be called rock in the strict definition of that word, if that be true, it does not affect the character of the lode. If it were all of that character it would still be a vein or lode *in place*, if the walls on each side, the part which holds the lode, is fixed and immovable.

That is, perhaps, sufficient as to the character of the deposit, and that which may be located in the manner in which the evidence tends to prove that the location was made; and we have now to consider the question which was so much discussed by counsel, as to the location with reference to the top and apex of the vein. And upon that point it is clear, from an examination of the Act, that it was framed upon the hypothesis that all lodes and veins occupy a position more or less vertical in the earth; that is, that they stand upon their edge in the body of the mountain, and these words, top and apex, refer to the part which comes nearest to the surface. The words used are top and apex, as if the writer was somewhat doubtful as to which word would best describe, or best convey, the idea which he had in his mind. It was with reference to that part of the lode which comes nearest to the surface that this description was used; probably the words were not before known in mining industry, at least they are not met with elsewhere, so far as I am informed. Perhaps they were not the best that could have been used to describe the manner in which the lode should be taken and located. But whether that be true or not, they are in the Act of Congress, and there seems to be little doubt as to their meaning; they are not at all ambiguous. In some instances they may, perhaps, refer to the flow of the lode; that is, a part of the lode which has been detached from the body of mineral in the crevice, and flowed down on the surface; in others, where there is no such outcrop, they may mean that part which stands in the solid rock, although below a considerable body of the superficial mass which I have attempted to describe to you. We are all agreed, however—the courts and counsel, every one—that that is the meaning of the words, that they are to be taken in some such sense as that, as being the part of the lode which comes nearest the surface; and the Act requires that the location shall be along the line of this top or apex. Supposing the lode to have a somewhat vertical position in the earth, with this line of outcrop or of appearance on the surface, or nearest to the surface, it shall be taken up and occupied by the claimant as his location, and he must find where this crop and apex is, and make his location with reference to that. So that by this Act he might claim fifteen hundred feet in length along the linear course of the lode, and would have one hundred and fifty feet on each side of it, making it three hundred feet in width and fifteen hundred feet in length.

We have already reached the conclusion in this state, the supreme court of the state has adopted that construction of the law, that if he fails in that in so far as that his location is not upon the line of his lode, that he can claim no more than he has included within his side lines; that is to say, he makes his location with reference to the top of the lode, with which the lines of the location must be parallel; and if he fails in that, if the line of the lode departs from the surface lines of his location anywhere upon the length of it, it is so far an invalid location that he can take nothing of the lode that lies without the lines of the location. This, then, was the method pointed out by this Act, and by the law of the state, for taking up these claims, that it should be along the line and top and apex of the lode, and if this is done, if the location is so made, then the language of the Act is express that he shall have not only so much of the lode within the lines as lies in its linear course, but that if the lode in its downward course into the earth departs from these lines upon the sides, passes out upon its dip, that he shall have that part also which lies beyond. Congress seems to have appreciated the fact, which is known to all miners, that there are very few, probably no lodes that are exactly perpendicular to the surface of the earth; they incline one way or the other—that is, either to the right or left—extending along the course of the lode. It seems to be universally true that they depart from the perpendicular in one direction or the other, and if in so departing—if in their downward course into the earth—they depart from their side lines, or the planes of those lines extending downward vertically, then he is to have that part which lies without, as well as within, the surface lines. The language of the Act upon that point is, "of all veins, lodes and ledges, throughout their entire depth, the top, or apex of which lies inside of such surface lines extended downward vertically, although such veins, lodes or ledges may so far depart from the perpendicular in their course downward as to extend outside the vertical side lines of such surface location."

Now it was said with reference to the lode which is now in litigation here, the position was taken by the counsel for the defendant that whenever in its departure from the vertical course, it reaches an inclination which is greater than forty-five degrees, that then it is no departure from the perpendicular, but from a horizontal plane, and therefore it is not within the terms of the Act. That position, gentlemen, is merely a verbal distinction, which goes for nothing at all. Of course, in its departure, it may depart in any degree up to the horizontal plane, and it is still a departure from the perpendicular throughout the whole course, until it comes to a right angle from the perpendicular. I think, perhaps, that we may illustrate that with these books. If we say that this is the vertical position, as you perceive it is, then departing from the perpendicular in every angle as you come from this vertical position, carrying it up until you come to a horizontal position, which is ninety degrees, as I understand it, of the arc of a circle, it is still a departure from the perpendicular. In that view, we have been brought to consider, in the present instance, whether the lode or vein lies in a horizontal position; that is, whether the angle of the vein is between the vertical and horizontal. The rule should be that every departure up to that which I have named is but a departure from the perpendicular, and it appears to be exactly within the provisions of this Act if the vein clearly extends outside of the limits of the surface in any angle between the perpendicular and horizontal. I agree that if we should ever find a lode which in its course extends precisely on the plane of the horizon, and it is extremely doubtful whether we shall ever find one in that position, but if we should ever find a lode which is precisely in that position, there may be some difficulty in locating it under this Act; but if you find, from the evidence, that there is a lode or vein in the position in which this has been described by the witnesses, and that it is in rock in place as I have described it to you, I think there can be no difficulty in the present instance in respect to that.

This brings us to a question, gentlemen, which really is the important question in this case, and that is, whether there is any lode in the position which has been mentioned by the witnesses; and in that connection, in the consideration of that question, the character of the deposit, as to whether it is a true fissure vein, or a contact deposit, or a bed, or something of that kind, is of some value; because in respect to fissure veins we accept the cavity or chasm which is found between the walls, and filled with what they call vein matter, as indicating or showing the existence of the lode, even if the matter which is found in it is not very valuable—that is, if there is anything which usually accompanies valuable ores or minerals. But in respect to this kind of deposit, my impression is that it is to be known, called and regarded as an irregular deposit; one which if it should be interrupted for any considerable distance—that is, if what they call a contact or junction between the porphyry and lime should become barren for a considerable distance—that it should no longer be called a lode. As I understand it this line which exists, which always exists when there is a union of rocks of different ages and different formation, may carry ore or it may not; it may be productive or it may be barren; and if this should be found at any point in its course to become barren and remain so for any considerable distance, I do not see how it could be called a lode in that part of it, so that it could be followed with the result to claim what lies beyond. I should say that with reference to such a line of contact between rocks of different formation, that to find that line of contact in one place, unless there were in it valuable minerals which were carried along with something like a continuous course along the line of contact, that no lode would be discovered. It could not be said that any had been found until such minerals were found. I do not mean by this that any slight interruption for a few feet of the valuable part of the ore would have the effect to show that the deposit was broken in its continuousness.

I do not mean that, nor do I mean that if any dyke or other extraordinary foreign matter should be interposed in the course of the lode so as to cut it off, and it should follow on immediatety after that interruption, that would be regarded as such a displacement in the continuity of the deposit as would deprive it of its regular character. Whenever it may appear that the fissure has existed at one time or at any time, with a continuous body of ore in it which may have been interrupted by some subsequent convulsion, the character of the deposit would remain the same as if the interruptiou had never occurred. But if there was such an intervening space in the contact, as these witnesses call it, barren in its continuity, as might show a separate and distinct body of ore, which had always been such, I should say that it would not pass with the grant of the first. It may help you, gentlemen, for me to express this in other language, and ask you to extend the line which is laid down on that map (showing), for some distance further, and to suppose that in the course of that line, we may say that you find that there is, at the head of the deposit, that nearest the surface, a hundred feet or more of continuous ore, lying upon the line between the porphyry and the lime, and then there should be an interruption of a hundred feet or more of this contact which is perfectly barren; the lime and the porphyry coming together carrying nothing whatever, and below that again, another body similar to that which was found at the head, the position which I think might be taken upon this, the position of these ore bodies, would be that there would be two lodes rather than one, the first above and the second below; but if there is a continuous body of ore, or practically continuous, and there is no such interruption as exhibits other than a casual and fortuitous displacement, then it would be one lode.

I think upon that explanation, gentlemen, you will be able to determine whether there is, in that sense, a fixed body of ore, extending from the upper part of these workings to the end of them; if that is its character, then it is to be regarded as one and the same lode, though it may have departed from the side line to a considerable distance, and have only an angle of thirteen, fourteen or fifteen degrees, as the witnesses have described it, from the plane of the horizon.

There may be other deposits in that neighborhood, gentlemen, which show entirely different features or show the same features, but whether that be true or not, is not a matter for present consideration. We determine these questions only upon what appears in this case, and without reference to any others that may arise in the same locality. Other deposits in this neighborhood may be of an entirely different character; they may be such as cannot in any sense be called lodes at all. Whether this is true or not, is not for present consideration. We determine this case, as I said before, upon the evidence given here, leaving other questions which may arise in respect to other locations, to the facts as they may be developed in respect to them.

The above case was tried the second time in June, 1879, in the United States Circuit Court at Denver. Mr. Justice Miller, of the Supreme Court of the United States, presided and charged the jury. No new construction was placed upon the law. Therefore, Judge Hallett's charge is given above.

H. A. W. Tabor et als. vs. Wirt Dexter et als. New Discovery—Little Chief Case. U. S. Circuit Court.

Opinion on motion for preliminary injunction by Hallett, J.

This is a bill for an injunction by parties owning the New Discovery lode, in California Mining District, against the owners of an adjoining claim called the Little Chief. It is not alleged that the defendants have entered upon or into the New Discovery ground, or that they have in any way interfered with plaintiffs' possession within the limits of the New Discovery location. The charge is that plaintiffs' lode descends into the Little Chief's ground on its dip, and that defendants are there mining and exhausting the ore. In other words, plaintiffs contend that the top of the lode is in their ground and that they have the right to follow upon its downward course into and through adjoining territory. To maintain this position it is necessary to show that the lode is *in place* within the meaning of Sec. 2320, Revised Statutes of the United States. And this depends upon the position of the ore or vein matter in the earth, as whether the inclosing mass is fixed and immovable, more than upon the character of the ore itself. Whether the ore is loose and friable, or very hard, if the inclosing walls are country rock, it may be located as a vein or lode. But if the ore is on top of the ground, or has no other covering than the superficial deposit, which is called alluvium, diluvium, drift or debris, it is not a lode or vein within the meaning of the Act, which may be followed beyond the lines of the location. In this bill it is alleged that the overlying material is boulders and gravel, which cannot be *in place* as required by the Act. Not much is known to the court of the deposits on Fryer Hill, but it would seem from the allegations in this bill that they differ materially from the Iron mine, which has a hanging wall as well as a foot-wall. For the decision of this motion it is enough to say that, where the mass overlying the ore is a mere drift, or a loose deposit, the ore is not in place within the meaning of the Act. Upon principles recently explained, a location on such a deposit of ore may be sufficient to hold all that lies within the lines, but it cannot give a right to ore in other territory, although the ore body may extend beyond the lines. The motion will be denied.

Important Stock Decision.—A coal and iron company bought its lands from E for $500,000, paying him $25,000 in money and $475,000 in its capital stock. Subsequently B sued E for seven-eighths' interest in the land, and had a decree in his favor: and he then sued and recovered $320,049 for coal taken from it by the coal company, and, as that was insolvent, he brought an action against the stockholders who held the shares which had been paid to E in the purchase of the land, claiming that this stock had not been paid for, and that the capital stock created a trust fund for the payment of its debts. In this case, Brant vs. Ehler, the Maryland Court of Appeals, in June, affirmed a decree in favor of the defendants. Judge Robinson, in the opinion, said: 1. The liability for a subscription to the stock of a corporation is founded on contract. Where one agrees to take a certain number of shares, the law implies a promise to pay for them according to the terms of his subscription. If they are sold before all the installments are paid, and are bought with such knowledge, the law implies a promise on the part of the purchaser to pay whatever may be due thereon according to the terms of the original subscription. In such cases the purchaser stands in the shoes of the original subscriber. These are elementary principles about which there can be no contention. But where shares are issued by the company to the subscriber as full-paid shares, and are sold by the subscriber as such, there is no ground on which a promise can be implied on the part of the purchaser, without notice, to be answerable either to the company or to its creditors should the representations on the faith of which he purchased prove to be false. 2. No one will pretend for a moment that in subscribing to the stock of a company the purpose is to create a trust fund for creditors. On the contrary, the object primarily is to furnish means to carry on its business, and to share the profits earned by the corporation, and so long as it is a going concern it has the right, and indeed it is the duty, to manage and dispose of its assets, including stock subscriptions, for the promotion of its own interest. 3. Shares of stock are not, strictly speaking, negotiable instruments, but courts speak of them as *quasi* negotiable; and when they are issued as full-paid shares, and as such sold in open market, the purchaser is not bound to suspect fraud where everything seems fair and conformable to the requirements of the law. Any other doctrine would virtually destroy the transferable nature of such shares, and paralyze the whole of the dealings in the stock of corporations.—*From Bradstreet.*

Timber on Mineral Lands.—A very important decision, of great interest to the mining community, was rendered by Hon. H. M. Teller, Secretary of the Interior, on June 3, 1882, on the question of timber on mineral lands. It is as follows:—

My attention has been called to a number of cases, reported by special agent Hardin, of the so-called trespassers in cutting timber on mineral land in the Territory of Dakota. Notably, in the cases of Frank P. Hardin, who is charged with cutting 72 cords of wood; Peter T. Bye, charged with cutting 25 cords; Henry Bressert charged with cutting 60 cords; J. H. Damon, charged with cutting a like amount. Frank Keller charged with cutting 47 cords, and Albert Holam, charged with cutting 100 cords. All of this wood appears to have been cut off of mineral land of the United States. It also appears by the report of the special agent that the persons charged with the trespass have, in cutting this wood, conformed to the rules of the department as to size of the timber to be cut, etc. It is now proposed to compromise with these persons by allowing them to pay for the wood, at the rate of 50 cents per cord. I do not think, on the statement of facts made by the special agent in the cases of Hardin and Peter B. Bye, that they have been guilty of a trespass in cutting such. I understand that the facts are substantially the same in all the cases mentioned.

The Act of Congress, approved June 3, 1878, entitled "An Act authorizing the citizens of Colorado, Nevada and Oregon, to fell and remove timber from the public domain for mining and domestic purposes," clearly authorizes the cutting of timber on mineral lands of the United States for domestic uses. It does not appear that Peter Bye, or any other of the parties complained of, cut wood for transportation from the Territory, and if cut to be used in Dakota, it is clearly for domestic uses. It has been alleged that the Act of June 3, 1878, does not apply to persons cutting timber on mineral lands for sale, and that to enable any person to have the benefit of that Act, he must cut timber for his personal use, and not for sale. Such a construction defeats the very intent of the Act which was to allow the settler on mineral lands to have the benefit of the timber thereon growing, for use, within the Territory or State where it grew. It cannot be supposed that Congress intended to say by that Act to the inhabitants of the mineral regions, that while they might go on the lands of the United States and cut timber for their use, yet they could not employ others to cut timber for them, or purchase it of those who had cut and prepared it for use. Large and prosperous communities had settled on the mineral lands of the United States, by and with the consent of Congress.

A statute has been passed declaring such occupation lawful, and provisions were made for securing a title to the mines that should be discovered and improved on such lands, yet no provisions had been made by which a title could be secured to the timber growing on such lands, until a mine had been discovered thereon. To have restricted the inhabitants to the use of such timber as should be found on mineral claims alone, would have been folly, for in many instances the mineral claims are destitute of timber. Whole mining districts are frequently compelled to procure their supply outside of their districts, either because the timber in such districts had been carted off and used, or because the district was without timber when first settled.

The area of the territory occupied by actually located mineral claims is entirely too small to supply the communities with timber from such claims alone, and so it became a necessity to appropriate timber on Government lands. In the absence of a law authorizing the purchase of either the timber or the land on which it grew, from the first settlement of mineral regions to 1876, such had been the custom of the miners in all mineral regions. Cities and towns, with churches and school-houses, had been built with timber so taken from the public land. Appeals had been made to Congress, from time to time, to provide by law for the securing of the title to timber on mineral lands. Congress, with the wise policy of keeping the mineral lands of the United States open to further exploration and occupation, had declined to pass any law by which timber on such lands could be monopolized by speculators and capitalists. Woodchoppers and lumbermen had, from the first settlement of mineral regions, cut from the mineral lands wood, mining timber and lumber for buildings, and sold the same to those who could not or did not wish to cut such timber for their own use. It was practically impossible for millmen, miners, and other inhabitants of the country, to go out and fell trees that were to be used to build their mills, timber their mines or supply their families with fuel. About the time of the passage of the Act of 1878 it was alleged that such cutting was in violation of the law, and ought not to be allowed.

To have prevented such cutting would have compelled the abandonment of nearly, if not quite all, the mineral regions of the States and Territories named in the Act. The Act was passed to establish by positive enactment a right claim and exercised without interference on the part of the Government for a period of about 30 years. The construction heretofore given to it by this department has defeated the purposes of the Act, and has not been of any advantage, either to the Government or the people residing on such mineral lands. In most of the regions included in the Act referred to, the timber is of but little value for use outside of the neighborhood in which it grows. A comparatively small amount would bear transportation out of the State or territory, and it cannot be used more advantageously to the people and the Government than in the product of precious metals. If the timber is cut having reference to the rule established by the department as to size, etc., no complaint ought to be made. It has been suggested that the use of wood in the quartz mills and reduction works in the mineral regions is not a use for mining purposes.

I do not think there is anything in that suggestion. Quartz mills and reduction mills are indispensable to a mining community, and such use is clearly within the provisions of the law, and the consumer as fully protected by it as if he had consumed it in his own dwelling. You will, therefore, instruct the special agents now in the States and territories named in the Act of June 3, 1878, to conform to the suggestions herein. The great object of a Governmental supervision of cutting timber in those States and Territories ought not to be to compel the payment for timber so cut, but to prevent an unnecessary waste by cutting the small trees under the size prescribed by the department, and to prevent a waste by fires and other means.

SUMMARY OF THE GENERAL LAND OFFICE ANNUAL REPORT FOR 1881.

THE following is a synopsis of the annual report of the General Land Office for the fiscal year ending with June 30, 1881:

Abstract of operations under the laws relating to the survey and disposal of public and Indian Lands during the fiscal year ending with June 30, 1881.

	Acres.
Cash Sales:	
Private entries	666,229.11
Public Sales	2,279.40
Timber and stone lands	42,987.92
Pre-emption entries	721,146.26
Desert lands	108,560.02
Mineral lands	27,189,68
Coal lands	4,975,58
Excesses	12,339.06
Abandoned military reservations	1,910.21
Total	1,587,617.24

Homestead entries	5,028,100.69
Timber culture entries	1,763,799.35
Locations with military bounty land warrants issued under acts of 1847, 1850, 1852, and 1855	55,662,36
Agricultural college scrip locations	360.00
Supreme court scrip locations	28,253.74
Valentine scrip locations	392.15
Sioux half-breed scrip locations	2,519.27
Chippewa half-breed scrip locations	800.00
Locations with Porterfield scrip	16.86
Lands certified or patented for railroad purposes to States:	
Alabama	383.23
Iowa	73,321.58
Minnesota	483,466.63
Kansas	281,277.28
To corporations:	
Pacific railroads	211,992.04
State selections, approved for—	
School indemnity	15,880.00
Internal improvements	1,760.00
Agricultural colleges	1,370.45
Seminaries	3,964.14
Donation claims	18,237.06
Approved to States as swamp	569,001.18
Total	10,128,175.25

	Acres.	Acres.
Indian lands, sales of, during the fiscal year of 1881:		
Osage ceded	4,622,21	
Osage trust and diminished reserve	613,951,05	
Kansas trust	25,736.52	
Kansas trust and diminished reserve	18,971.86	
Pawnee	15,219.55	
Sioux	50,299.64	
Sac and Fox	57.40	
Cherokee strip	20,086.12	
Otoe and Missouri	18,036.87	
Cherokee school	240.57	
		765,221.80
Which added to the sales of public lands makes a grand total of		10,893,397.05

Cash receipts:	
From sales of public lands	$3,534,550 08
*From sales of Indian lands	1,009,671 63
Homestead fees and commissions	556,766 16
Timber culture fees and commissions	154,739 35
Fees on military bounty land warrant locations	1,484 00
Fees on locations with different classes of scrip	17 00
Fees in pre-emption and other filings	59,366 00
Fees in mining applications and protests	28,310 00
Fees on timber land entries	3,330 00
Fees for reducing testimony to writing, by local officers	47,625 24
Fees on railroad selections	3,581 27
Fees on state selections	4,198 63
Fees on donation claims	1,415 00
Fees for transcripts, furnished by the General Land Office, during the fiscal year of 1881	6,727 90
Total	5,408,804. 16

Surveys.

Total area of the land States and Territories		1,814,788,922
Surveyed up to June 30, 1880	752,557,194	
Surveyed but not heretofore reported	10,561,775	
Surveyed during the fiscal year ending with the 30th of June, 1881	21,788,011	
		784,906,980
Leaving		1,029,881,942

acres of public and Indian lands yet to be surveyed, inclusive of private land claims surveyed at the close of the fiscal year ending with the 30th of June, 1881. The surveys during the past fiscal year show an increase of 6,058,759 acres over those executed during the previous year. This extraordinary showing is mainly attributable to the great demand for surveys under the deposit system, and to which reference is hereinafter made. The sales of public lands as compared with those of the previous fiscal year show a decrease of 3,898,974.60 acres, while the aggregate of cash receipts, under various heads, is greater by 3,118,642.56. During the year there were received 83,864 letters, and 68,427 were written and recorded, covering 60,325 pages of record books, and during the same period there were issued and transmitted 56,979 patents. This amount embraces patents for private land claims, mining claims, lands granted for railroad purposes, swamp lands, Indian lands, and for lands sold under the pre-emption and homestead laws.

There were also audited, adjusted, and reported to the First Comptroller of the Treasury 2,800 accounts, embracing accounts of surveyors general, deputy surveyors, registers, and receivers, special agents, &c., covering 13,350 pages of record.

In all the land districts there is a large and legitimate demand for copies from the official records, and for copies or tracings of the maps and plats of survey, &c. As the country is settled and improved, values increase and interests multiply, the records of the local land offices are more frequently consulted, and such copies more largely required. Those who desire transcripts from the records are willing and desirous to pay for the same, but registers and receivers are precluded, under penalty of removal from office, from receiving fees or other rewards not authorized by law (see section 2242, Revised Statutes), and no authority of law exists for any fee for such copies except in consolidated land districts where, under section 2239, Revised Statutes, such fees are authorized to be charged by the land officers as are authorized by the tariff existing in the local courts of the district. It has, until a comparatively recent date, undoubtedly been the general practice of local officers to furnish such copies, receive pay for the same, and use the money in part at least to pay for clerical labor made necessary by this work. The local officers justified themselves on the general ground that it was by law made their duty to furnish such transcripts, &c., and hence it was no infraction of law to perform a legitimate act and receive pay for the same. This proceeding was clearly illegal, however, and led to abuses of considerable magnitude, upon discovery of which instructions were issued to all the local land officers definitively advising them what fees they were authorized to charge or receive, and forbidding the receipt of any other rewards under penalty of recomendation for dismissal from office.

The matter now is in this condition: there is a legitimate and public necessity for copies from the records and files of district land offices; there is no sufficient appropriation to pay for the clerical labor essential to prepare such copies, and the only way they can be had is by allowing outside parties to have access to the official records and make the copies themselves. This course is obviously unadvisable, and I have the honor to recommend that legislation be speedily had authorizing the preparation of copies by registers and receivers, and a fee for the same at the rate of 15 cents per 100 words and $2 for township plats or diagrams, and that the receivers of the several land offices shall make returns of all moneys so received, and shall pay over the same in the manner now provided by law for other moneys received by them in their official capacity. And, in view of the fact that the clerical labor necessary to be employed will be increased in proportion to the amount of said class of work, I further recommend as absolutely essential to the furnishing of such copies that all moneys received therefor be placed to the credit of the appropriation "for incidental expenses of the several land offices," and be available for clerk hire in said offices under authority of the Secretary of the Interior. I would also recommend that the same provisions be extended to all consolidated land offices and substituted for those of section 2239, Revised Statutes. In this connection I would call attention to sections 460 and 461, Revised Statutes, under which it is made my duty to furnish exemplifications of patents, or papers on file or of record in this office, of parties interested, upon payment of certain rates therein named. The labor thus involved is not expended upon the adjustment of entries—a work so much in arrears and so earnestly demanded by the public, who need their evidences of title at the earliest moment—but relates almost exclusively to patented claims, or to land which is in litigation in the courts; and the fees received for such copies are turned into the Treasury. It is thus apparent that a portion of the clerical labor which Congress provides is diverted from its contemplated channel, and engaged upon work which does not relate to the current disposition of any class of land claims. For the year ending June 30, 1880, there were received and turned into the Treasury for such copies $7,043.05, and for the year ending June 30, 1881, $6,727.90. I recommend legislation to the effect that the moneys so annually received be credited to the appropriation for clerical services in this office for the fiscal year in which they are received, and made available for the payment of the clerical labor necessary for the preparation of said copies.

* This money is deposited by the receivers of public moneys in the United States Treasury, to the credit of the Indian funds, for the benefit of the Indians, under treaty stipulations.

In this connection I would state that, owing to the difficult character of much of the copying done as aforesaid, and to the necessity of careful comparison with the original, the fees authorized to be charged are not estimated to be in excess of the actual cost of the clerical labor expended upon the preparation of exemplifications.

Section 2325, Revised Statutes, specifies the proceedings necessary to obtain a patent to mineral lands. It was held by this department that the application for such a patent, which includes an allegation of compliance with law, must be sworn to by the owner of the claim. By act of January 22, 1880 (page 61, pamphlet edition, statutes of 1879-'80), amendatory of sections 2304 and 2305, Revised Statutes, it was provided that the authorized agent of the claimant might make said affidavit when he was conversant with the facts sought to be established thereby and the claimant was not a resident of the land district wherein the claim was located. In view of the fact that a large proportion of the mining claims are managed by such agents, who are thereby better qualified to make the required affidavit than the owner, I would recommend that the duly authorized agent of the claimant, when conversant with the material facts, be allowed to make said affidavit in any case, and that legislation to that effect be had.

Under sections 2401, 2402, and 2403, Revised Statutes, it is provided that when settlers in any township, not mineral or reserved, desire a survey of the same under authority of the surveyor-general, they shall be entitled thereto, upon filing a written application therefor, and depositing a sum sufficient to pay for the survey and all expenses incident thereto; that said sums so deposited shall be placed to the credit of the proper appropriation for the surveying service, and that the amount so deposited by any such settlers may go in part payment for their lands situated in the township, the surveying of which is paid out of such deposits. By act of March 3, 1879, amendatory of section 2403, Revised Statutes, the certificates issued for such deposits were made assignable by indorsement, and receivable in payment for pre-emption and homestead claims. Since the passage of this act of 1879, the deposits for surveys have increased to an unprecedented extent, the numerous representations which are believed to be true have been made to this office, that lands of no present practical value and on which there are no settlers have been largely surveyed; that applications for surveys are fraudulently prepared by or through the instigation and management of deputy surveyors, who, for the purpose of securing the contract for making the survey, either themselves or through friends advance the money for the deposit, thereafter sell and assign the certificates, and thus reimburse themselves and secure their profit from the surveying contracts. The appropriation for surveys for the last fiscal year was $300,000.

The amount of deposits for the same period, and which was placed to the credit of the said appropriation, was $1,804,166.47, and the amount of the certificates surrendered in payment of pre-emption and homestead claims for the same time was $1,346,109.26. It is believed that the practical result of said act of March 3, 1879, has been to cause the survey of the vast areas of lands of no present, and perhaps of no prospective value, and the surrender of title to valuable lands in payment for such surveys. With the intent to secure as far as possible legitimate proceedings under said law, I issued, September 5, 1881, the following circular instructions to surveyors-general:

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, D. C., September 5, 1881.

TO SURVEYORS-GENERAL:

In order to prevent as far as possible the perpetration of frauds and fraudulent surveys, which have already assumed alarming proportions under the system of deposits by individuals, it is hereby ordered:

I. The surveyors-general shall exercise the most searching scrutiny into the statements of applicants for survey, to satisfy themselves of the truth thereof, and unless found to be *bona fide* in every respect they shall not accept such applications nor furnish the estimates requested.

II. Believing that in a great many instances applications for survey, particularly in sections of country unfit for settlement, have been procured or invited at the instance of deputy surveyors seeking contracts, you are instructed that such proceedings on the part of deputy surveyors are unlawful, and that contracts thus unlawfully procured will not be recognized as valid. The surveyor-general must minutely examine into all applications for surveys under the deposit system. If he is satisfied that the deputy has acted in the manner described, the commission of such deputy shall be forthwith revoked, and the surveyor-general shall report all the facts, with his findings in the case to this office. Upon approval thereof, such deputy shall be deemed unfit to exercise the functions of a deputy surveyor, and the approval of a finding against a deputy will be communicated by this office to each surveyor-general for his information and guidance; and any surveyor-general who shall fail to report such deputy, or who shall employ any deputy so barred, will be open to charges to be preferred by the Commissioner of the General Land Office to the Secretary of the Interior.

III.—Surveyors-general are required to exercise the utmost care and vigilance to prevent frauds and irregularities of any kind regarding surveys under the system of deposits by individuals, as also of surveys made under any other appropriation of moneys by Congress, whether general or special, and they will report each and every fact that may come to their knowledge of any attempted fraud, by whomsoever made, with all obtainable particulars, to this office for consideration and action.

IV.—The plats and field notes of surveys under the system of deposits by individuals, as returned to this office, do not usually show the settlements and improvements of the settlers at whose instance the surveys are ostensibly made. In a majority of instances the location of the settler, whether *bona fide* or otherwise, is entirely omitted, while the improvements, if any, are never noted. In order, therefore, to still further check the abuses and dishonest practices to which this system of surveys has become subject, the attention of surveyors-general and deputy surveyors is specially directed to the requirements of pages 18 and 19 of the Manual of Surveys, and pages 43 and 44 of the Instructions of the Commissioner of the General Land Office, dated May 3, 1881. The requirements therein contained must be strictly adhered to, and surveyors-general are required and enjoined to see to it that their deputies comply therewith.

V.—Surveyors-general are directed to instruct their deputies that they must designate in the field-notes and plats of their surveys the location of each and every settlement within a township surveyed under the deposit system, whether it be permanent in character or not, together with the names of such settlers and their improvements, if any. Cattle corrals are not considered as constituting improvements.

VI.—When no settlers are found within a township surveyed under the system of individual deposits, the field-notes of survey must *distinctly and unequivocally state that fact*, and any omission so to describe and designate the settlements and their surrounding improvements, or the *absence* of one or both in the field-notes and plat, will be deemed a sufficient cause to infer fraud, and the accounts of the deputy will be suspended until such omission shall have been supplied to both plat and field-notes. A suspension of the commission of the deputy will in the meantime take place, and all facts will be reported to this office for consideration and action.

VII.—Surveyors-general are directed to make known to their several deputies the provisions and nature of this order, and will be held strictly accountable for its faithful execution. Ignorance of the terms of this order will not be held an excuse for failure to comply therewith by deputies.

VIII.—This order will be observed by deputies now in the field, and surveyors-general are directed to so inform them with the least practicable delay.

IX.—Surveyors-general are reminded of the important trust confided to them, and are instructed to exercise their whole authority to secure correct and honest surveys and returns by their deputies.

X.—This order will take effect from and after the receipt of the same, and its receipt will be immediately acknowledged by each surveyor-general.

XI.—In every case of a contract heretofore approved which the surveyor-general has reason to believe was fraudulently procured, such contract and the accounts thereunder must be immediately suspended and the facts reported to this office.

Very respectfully,
N. C. MCFARLAND,
Commissioner.

Approved: A. BELL,
Acting Secretary of the Interior.

I am compelled to conclude, however, that there is no effectual remedy for said abuses except by the repeal of said act of March 3, 1879. This act, in its purpose and intent, in my opinion is well adapted to the wants of actual settlers who desire to obtain title to their settlements without being subject to the enforced postponement incident to surveys under the present system; but the temptation to irregularity and fraud are too great, and the means of evading the law too easy, to justify a reasonable expectation that the law can be administered in the public interest. The repeal of said act of March 3, 1879, would still leave their prior provisions as found in Revised Statutes, sections 2401, 2402, and 2403, available for actual settlers; and these provisions are as liberal as, in my judgment, can safely be extended for their relief, for in addition to the irregularities hereinbefore named, it is to be considered that it is very difficult to examine and prove the proper execution of the surveys covering so large areas, and very probable that those who would fraudulently procure a surveying contract would fraudulently execute it. I therefore recommend the repeal of said act of March 3, 1879, and an increased appropriation for surveys.

The fact that the monuments now used to mark the boundary corners of the public surveys on our vast plains, devoid of suitable stone or timber, and very destructible and liable to be wholly obliterated by the rubbing of cattle and other causes, leads me to call attention to the advisability of some provision whereby some metallic monument of cheap but durable form and material could be substituted, at least for township corners.

Examination of Surveys in the Field.—The very unsatisfactory manner in which examinations of surveys in the field are made by deputy surveyors, under the direction of the several surveyors-general, and the general slighting of this very important work, needs, in the opinion of this office, a radical and wholesome change. It is an absurdity to suppose that truthful and honest returns of examinations in every particular will be made by deputy surveyors, upon whom surveyors-general are more than ordinarily dependent for examiners, when it is considered that the examining deputy will at some time, if not already under obligations, have his own work examined by the very deputy whose work he has, if honest, condemned. The temptation of overlooking defects, either in the survey of lines or the marking of the same, has proven too great to be resisted by them. It is safe to say that not one per cent. of the number of examinations are satisfactory to this office in the results obtained. It is therefore earnestly recommended that the amount set apart for examination of surveys, either by appropriation or construction of the law by the Treasury Department as applicable to the same, be disbursed directly by this office, through agents appointed for the purpose, who shall be removable only for cause, and who shall make all examinations required, either at the suggestion of the surveyors-general or at the instance of this office; to report directly to, and be responsible to this office alone, and be in every way independent of the surveyors-general; to receive such fair compensation as may be determined upon by the Secretary of the Interior. It is firmly believed that only by making them independent of the surveyors-general, and responsible to this office alone, that honest and faithful returns of examinations can be secured: that it is the best as well as the cheapest method pecuniarily, and will have a most salutary effect upon the entire surveying service, and is the only means by which to purge the service of worthless and contaminating individuals.

The investigation of trespasses upon the timber lands of the United States has resulted in the apprehension and prosecution of many depredators. Where the trespass was the result of mistake the party has been allowed to settle by the payment of a fair valuation of the timber taken, and many suits have been adjusted by the payment for the timber, when the tresspass was of a character to justify compromise. The government has thus realized a very considerable sum of money for timber so illegally taken, and depredators have been measurably deterred from their business, which was swiftly denuding the public lands of their best timber. The present appropriation, however, is quite insufficient for the necessities of this branch of the service. With it I am unable to keep in the field more than fifteen agents. With this number it is impossible to even cursorily examine the vast timber districts, and extensive depredations undoubtedly are undetected. I earnestly recommend an increased appropriation for this service. Not only will the public interests be subserved by the protection of its timber, but the Treasury will profit by the payments made. The existing provisions of law permitting citizens to fell and remove timber on the public lands for mining and domestic purposes, as found in act of June 3rd, 1878 (20 Statutes, 88), are, in my opinion, very defective. The only lands from which such cutting is authorized are the *mineral* lands.

1st. The mineral lands are to a great extent undefined, and necessarily must so remain.

2d. Large quantities of timber are absolutely necessary for the development of mines, while the said act authorizes the cutting thereon of the timber for other purposes. The purchaser of a mining claim has as much (if not a greater) need for the timber thereon as the agriculturist, and the transportation of timber to the mines from a distance is very expensive.

3d. The law furnishes no relief to such as reside at a distance from such lands. The situation is practically this: The settlers on lands devoid of timber need timber for fuel, building, &c. Very frequently they cannot get it, except from the public lands. If they cannot get it legally, still they will take it, and when taken solely for said purposes it is under circumstances which largely mitigate the technical legal offense.

While parties who steal the public timber for speculation and profit deserve severe punishment, those who use it solely for home purposes under the imperative necessities above mentioned should have their privileges accurately and reasonably defined. I deem the enactment of some law which will accomplish this end to be very desirable and in the public interest.

This office contains the record of original sales of land, and of final adjustments of controversies relating to the public domain. It annually furnishes an immense amount of information to interested parties, at a great outlay of labor. I deem it quite impracticable to give in this communication any full detail of the vast work which has for several years seriously embarrassed this office, because of an insufficient clerical force of the requisite ability. My estimate already submitted to you for the clerical force for the fiscal year ending June 30, 1883, is as follows:

Commissioner	$5,000 00
Deputy commissioner	3,000 00
3 inspectors of surveyor-general and district land offices, at $3,000 each	9,000 00
Chief clerk	2,500 00
Law officer	2,500 00
Recorder	2,000 00
3 principal clerks, of public lands, private lands, and of surveys, at $2,000 each	6,000 00
6 chiefs of division, a $2,000 each	12,000 00
Receiving clerk	2,000 00
Chief draughtsmen	2,000 00
34 clerks of class 4, at $1,800 each	63,000 00
50 clerks of class 3, at $1,600 each	80,000 00
60 clerks of class 2, at $1,400 each	84,000 00
55 clerks of class 1, at $1,200 each	66,000 00
35 copyists, at $900 each	31,500 00
Chief messenger	900 00
8 assistant messengers, at $720 each	5,760 00
6 packers, at $720 each	4,320 00
12 laborers, at $660 each	7,920 00
	389,400 00

It will be observed that the above estimate embraces more clerks at somewhat less salaries than were asked for last year by my predecessor. He did not ask for a greater number of clerks because at that time there was no room to accommodate them, and in the matter of my estimate for salaries I have sought to name the very lowest figures which, in my judgment, would possibly justify a reasonable expectation of retaining what good and competent men are now employed and thoroughly skilled in the business, and of obtaining from the outside a class of ability which the public have a right to expect will be employed to adjust the vast interests committed to this office. I conceive it to be of great importance that a deputy commissioner be speedily authorized for this office. The executive duties devolving upon the head of the bureau are so great and varied, as is well known, that it is impracticable and beyond physical possibilities for any Commissioner to personally discharge them in a proper manner. With a deputy commissioner a division of these duties can be made which will result largely to the benefit of the public business. I therefore recommend that this officer be authorized at as early a date after Congress convenes as may be practicable. I have also estimated for an appropriation for three inspectors of surveyor-general and district land offices, at a salary of $3,000 each. It has been the practice to detail clerks from this office, or employ special agents from the outside, to investigate irregularities and frauds, and to inspect the local offices. This proceeding is however open to serious objection. Not only is the agent comparatively unskilled in most instances, but the system of an occasional examination does not meet the demands of the service. The local land officers are subject to frequent change by death, resignation, or removal, and new and unskilled officers are appointed; errors in business methods are perpetuated, and by reason of defective proceedings in the local offices, claimants frequently suffer, and additional work is imposed upon this office. The local offices should be under continued and intelligent supervision. A system of fraud not infrequently continues for a considerable time before this office is advised of its existence, and then it has but imperfect remedies at its command. In this, as in most other matters, prevention is better than cure. The inspectors named should be tried, trusty, intelligent men, well versed in land laws and in the business of this office. Their duty should be, under direction from this office, to aid in the opening of all new land offices; to instruct new officers in their duties; see that the offices are legally and properly administered; detect and report fraud, irregularities, and inefficient officers, and, in short, to do and perform any duties in connection with the land service for which special agents have heretofore been appointed, or as the Secretary of the Interior or this office may direct. Many of the same reasons which render the employment of Inspectors in the Indian Department advisable apply with equal force to the land service. I am confident that the employment of such inspectors would cost less than the present system, would be far more effective, and would result in speedy improvement of the service.

Mineral Lands Division.—The condition of work in the division of this office having charge of mineral lands is shown by the following statement:

Mineral lands sold from July 1, 1880, to June 30, 1881, acres	27,189.68
Excess over previous year, acres	12,066.94
Mineral entries made from July 1, 1880, to June 30, 1881	1,301
Excess over previous year	529
Mineral applications made from July 1, 1880, to June 30, 1881	1,863
Adverse claims made from July 1, 1880, to June 30, 1881	734
Mineral patents issued from July 1, 1880, to June 30, 1881	727
Mineral entries unexamined July 1, 1880	1,156
Mineral entries examined and suspended July 1, 1881	461
Coal lands sold from July 1, 1880, to June 30, 1881	4,975
Coal filings made from July 1, 1880, to June 30, 1881	263
Coal patents issued from July 1, 1880, to June 30, 1881	9
Mineral contests finally disposed of from July 4, 1880, to June 30, '81	20
Mineral contests not finally disposed of June 30, 1881	94
Mineral contests received from July 1, 1880, to June 30, 1881	33
Letters received from July 1, 1880, to June 30, 1881	5,060
Letters written from July 1, 1880, to June 30, 1881	3,484
Pages of patent record written	4,465

Reports of the Surveyors-General.—From the reports of the surveyors-general we extract the following, as being of interest in this connection:

California.—Theodore Wagner, Surveyor-General for California, in his report for 1881, says: Of the mineral productions of California, gold is, beyond comparison, the most important, the most remarkable gold fields in the world existing in the State. Though the metal has been found east of the Sierra Nevada, among the mountains of the coast, and in various other localities, almost the entire product of the State has been derived from the great auriferous belt in the western slope of the Sierra Nevada, extending from Fort Tejon northward into Oregon, and measuring about 220 miles by 40 wide. Under recent developments the gold deposits of the north and south extremities of this belt, which were considered as of comparatively little importance, have shown a surprising richness. The principal mining operations are, however, carried on in the central portion, embracing the western parts of Mariposa, Tuolumne, Calaveras, Amador, El Dorado, Placer, Nevada, Sierra Plumas, and the eastern part of Yuba and Butte Counties.

The gold, with rare exceptions, is found in the native or metallic state. It is never perfectly pure, but is alloyed with more or less silver, and sometimes also with small quantities of other metals. It occurs extensively in two distinct and well-defined conditions, viz., in the solid rock, usually in veins, and in alluvial deposits in the form of minute scales, coarse grains, and larger pieces, more or less water-worn and mixed with sand and gravel. From this circumstance three distinct modes of mining have arisen; viz., placer, hydraulic, and quartz or vein mining. In the first named the metal is obtained by washing the auriferous gravel, by which process, the gold, owing to its great specific gravity, is speedily separated from the sand and earthy matter. Owing to the simplicity of the process placer mining was at first chiefly carried on, but it has been largely superseded by hydraulic and quartz mining, which requires more capital, skill, and complicated machinery.

In hydraulic mining, a body of water in a compact, continuous stream is directed with great force upon the walls or banks of auriferous earth and cemented gravel deposits, which, in most instances, are prepared for the action of the water, by heavy charges of blasting powder placed in small

tunnels run into them a short distance and then turned to right angles. After the placing of the charge, the tunnels are tightly closed and the powder fired by fuse. Thousands of tons are upheaved by one blast. The matter thus loosened, together with the water, is received in sluices, in which the gold, having precipitated, is collected, while the worthless débris is carried away. In this manner many large hills have been leveled, in some instances to the great detriment of farms and orchards situated in the path of the débris or "slickens" from the mines. The auriferous quartz occurs in veins and ledges, which are very numerous and have a general north-northwest and south-southeast direction, parallel with the central axis of the Sierra Nevada. The rock is crushed in powerful mills, and the gold extracted by amalgamation. The most accurate estimate of the gold product of California since the discovery of that metal in 1848 to January, 1881, is $981,800,000.

Next to gold, probably the most important mining interest of California is the production of quicksilver, which is obtained only from its sulphuret or cinnabar, of which deposits are found at many points. It occurs in the Sierra Nevada and the triassic rocks in the southern portion of the State, but most abundantly in the Coast Range. Ores of silver abound in various parts of the State, and some of them are very rich; but silver mining has not yet been developed to such a degree as to render it of any considerable importance. Argentiferous galena is mined at numerous localities in San Bernardino, Mono, Alpine, and Inyo Counties. The mines of that character in the last-named county exceed in productiveness all others within the State. Argentiferous copper ores are found in that part of the State bordering on Arizona. Iron ores of superior quality exist in the Coast Range Mountains and in other parts of the State. The most valuable deposits are supposed to exist in Placer and Sierra Counties. The ores occur in a belt of metaphoric rock, and are marked by an entire absence of arsenic, sulphur, phosphorus, and such other substances as tend to deteriorate the quality of the metal. The ores are magnetic and of the same variety as those from which the best Swedish and Russian irons are made. A smelting furnace has been erected near Clipper Gap, in Placer County, which turns out about 35 tons of pig-iron per day, but the capacity is capable of being extended almost indefinitely according to demand. About 600 tons of this metal have been thus far smelted, one-third of which has already been used in the foundries of San Francisco. It has by actual test proven greatly superior to the best Scotch pig, having successfully resisted a pressure of over 18,000 pounds to the square inch, while the maximum resistance of Scotch pig is placed at about 6,000 pounds. In less exact tests at the foundries, it has taken sixteen blows to fracture a pig of California iron, while a Scotch pig of the same thickness and area yielded at one blow from a sledge-hammer in the same hands. Experts pronounce the placer iron equal to the famous Salisbury (Connecticut) metal for making car-wheels, owing to its "chilling" qualities. It can readily be rolled into first quality "merchant's bar."

The iron is graded, according to its density, from 1 to 5. Nos. 1 and 2 are extra foundry, suitable for all purposes where soft, tough, and durable iron is required; it takes a fine finish, works with ease in either lathe or planer, and supports a strain double that of the best English or French brands. Nos. 3 and 4 are of a harder nature, the former being a superior car-wheel iron, and both are of extra quality. No. 5 is a white iron, and, where a chill of through-and-through nature is required, especially adapted for stamp-mill, &c. The foundries at Dutch Flat, Grass Valley, and Virginia City, and the rolling-mills at Sacramento and this city, as well as the principal San Francisco foundries, have worked the iron and found that in every essential quality it compares favorably with the best foreign article. The presence of iron ore at Clipper Gap has been known for many years, but the high price of labor and fuel prevented its earlier development. At present an abundant supply of fuel, in the form of charcoal, is obtained from the oak and pine forests adjacent to the mine and furnace. The furnace consumes charcoal at the rate of one and three quarter millions of bushels per annum. The charcoal kilns (which are in Nevada County), mine, and smelting furnace provide employment for about 200 men.

A large deposit of marble in the vicinity furnishes a good flux. Good smelting coal, limestone, and iron ore being near geological neighbors in other regions, there is no good reason why the same geological rule should not prevail at Clipper Gap, or at any other place in the State where iron ore and limestone are known to exist in close proximity to one another, and that future explorations should not develop the presence of coal in the vicinity, which may be substituted for charcoal as fuel when the present convenient supply of timber is exhausted. It is reported that the iron company has ordered from the East all the necessary machinery for a rolling-mill, which will be erected near the furnace. It is the intention to manufacture railroad iron, gas pipe, and such other iron wares as will command a profit on this coast. A nail factory, where the Placer iron is worked, is now in operation near San Quentin, in Marin County. The Pacific coast has for years been supplied with iron and steel from foreign sources, brought us by foreign ships. The annual supply from abroad approximates to about 160,000 tons, valued at $6,000,000 in rough, and in the manufactured state, of course, a much larger sum. Importations from the Atlantic States, not dutiable, amount to about $2,000,000. Large as the consumption has heretofore been on this coast, it must rapidly increase hereafter with the building of railroads, quartz-mills, and hoisting works, and its growing use in the construction of iron pipes, for buildings, naval architecture, and in a thousand other ways. It is a safe calculation that the demand for iron will more than double with every future decade. There is no industry which can contribute more to the wealth of the State.

Returning from this digression we find that deposits of chromic iron and manganese exist in the coast range; copper ore has been found in various localities; sulphuret of copper, or copper pyrites, is found in auriferous quartz lodes in nearly all the mining counties; and platinum is said to abound in the lower parts of the Klamath Valley. In the coast mountains asphaltum exists in immense quantities, and petroleum has been obtained to an extent which justifies the belief that the local demand, at least, can be supplied from the home product. Natural exudations of oil can be traced seeping through the sandstone formation, and showing at the surface, accompanied, more or less, with gas and water. The oil belt commences in Humboldt County and passes through Mendocino, Marin, Contra Costa, Santa Clara, San Luis Obispo, Santa Barbara, and Los Angeles Counties. Deposits of lead and zinc have been discovered, but are yet undeveloped. Tin ore of a rich quality has been found; also plumbago, cobalt in various ores, a large lode of sulphuret of antimony, chalk, and chromium. Alum exists in Santa Clara and Calaveras Counties and at the Geysers and Owen's Lake, where there are hot alum springs. Fine specimens of alabaster, marble, granite, and buhrstone have been obtained. Bismuth, gypsum, and many varieties of precious stones occur throughout the mountains. Fine varieties of porcelain clay exist in many of the mining counties, and clay suitable for making fire-brick is found near Benecia. Beds of hydraulic limestone, occupying a position between the sandstone and the shales, occur in the cretaceous strata, but have not been obtained of sufficient size for use as an ornamental stone. Of the non-metallic mineral productions the most important are coal, borax, sulphur, and salt. In 1860 valuable deposits of coal were discovered on the north slope of Mount Diabolo in beds varying in width from 30 to 50 inches. Bituminous coal of good quality is obtained, which is shipped by rail to the San Joaquin River, five miles distant, and shipped thence by water. Coal also exists in the hills south of Mount Diabolo.

Near the Cajon Pass, in Los Angeles County, extensive coal fields have recently been discovered, no less than seven well-defined veins of coal having been found. Two competing railroads, the Southern Pacific and Atlantic and Pacific, will pass along the border of this belt, assuring quick and cheap transportation facilities. In 1859 remarkable deposits of borax, or biborate of soda, were discovered beneath the waters of Borax Lake, near the south extremity of Clear Lake, in Lake County. The water of the lake, which generally covers about 100 acres at an average depth of 3 feet, is strongly impregnated with borax. Beneath the water, in a thick layer of mud, borax abounds in crystals, some of which are three inches across. This mud has been tested, and found to be charged with borax to a depth of 60 feet. There is another borax lake a few miles northeast of Clear Lake. On the edge of the latter is a group of boiling springs, scattered over an area of about 8 acres, lightly charged with boracic acid, soda, and chlorine. These springs discharge about 300 gallons of water per minute. Sulphur occurs in various parts of the State, but most extensively near Clear Lake and in Colusa County. Near the former place are immense deposits which yield 70 to 80 per cent. of pure brilliant sulphur. Salt is found at various points. The most extensive works are in Alameda County, near the Bay of San Francisco, where the salt annually collected exceeds 10,000 tons. Mineral springs of every variety exist in abundance, some of which are highly esteemed for their medicinal qualities. In San Bernardino Valley are numerous warm springs, with temperatures varying from 108° to 172°.

Montana.—Mr. Rosswell H. Mason, Surveyor-General of Montana, says: The yield from placer mines during the last, has been about the same as for the previous, fiscal year—there being possibly a slight decrease. As labor becomes more plentiful, and wages less, large tracts of land which, at present, would hardly pay for development, will be worked at a profit. There has been a slight increase in the product of gold lodes, some valuable mines have been purchased by eastern and foreign capitalists, who are now developing them, and I look for an increased product of at least fifty per cent. during the present fiscal year. In this connection, it should be stated that there are very few of the mines known distinctively as silver lodes that do not contain some gold. I was informed a few days since by a gentleman who is largely interested in mines and mills, that the bullion produced from his ten-stamp mill at Butte, during the past four years, had contained at least $100,000 in gold.

The increase in the product of silver lodes has been very large, some estimates placing it at double that of the previous fiscal year. It would be impossible for me in the limited time and space at my disposal, to mention even the most prominent silver lodes in the Territory, or enumerate the mills and reduction works erected during the past fiscal year. Large bodies of these ores exist in various parts of Montana, but, except those carrying a large percentage of silver, cannot generally be profitably mined or worked. Copper smelting works have recently been established at Butte, and copper mines in that vicinity are now being profitably developed. Some work has been done upon coal mines, but none upon the vast deposits of iron ore in Montana. If the various railroad projects for this Territory are carried to completion the manufacture of car wheels and castings, iron and steel rails, &c., will form an important branch of industry. The most reliable estimates place the value of export of precious metals during the past fiscal year, inclusive of that contained in base bullion and ores, as follows:

Gold	$3,500,000
Silver	5,000,000
Total value of shipments	8,500,000

Nevada.—Mr. E. S. Davis, Surveyor-General of Nevada, reports: The great wealth of Nevada lies not altogether in her agricultural valleys and mountains of mineral veins. Her most barren and utter deserts bid fair to become the source of her greatest wealth. That nature makes nothing in vain is assured by the fact that discoveries are constantly being made of vast deposits of salt, soda, borax, niter, sulphur, &c., on the desert plains. In the desert hills, that are destitute of vegetation, except scattering, stunted sage brush and greasewood, are also found gypsum, asbestos, silica, kaolin, cinnabar, plumbago, bitumous shale, indications of coal, iron, and many other deposits, as well as veins of copper, antimony, galena, gold, and silver, and other metals, all of which are used extensively in the arts and sciences, trades, and manufactures, and their development will inaugurate new and permanent industries, and prove sources of great profit to those engaged in their production. But little progress has been made in the development of these valuable deposits, solely on account of the want of some cheaper means of transportation than has yet been afforded. But they are coming; already narrow-gauge railroads are being projected and constructed to reach these deposits. The construction of the Carson and Colorado narrow-gauge road had for its primary object the traffic to be derived from the salt and borax deposits in Esmeralda County. When the Carson and Colorado Railroad is completed to Columbus the development of these deposits will begin in earnest, and will prove a bonanza to the owners. The soda deposits in Churchill County have not been fully developed for want of some better means of transportation. The deposit seems to be almost unlimited; it exists in a solid stratified form and looks like ice as it is quarried from the pits. Notwithstanding the long distance it has to be hauled by teams to the railroad, large quantities are shipped to San Francisco.

The niter deposits of Humboldt County was the subject of a very able paper recently read before the California Academy of Sciences by Hon. B. B. Redding. This being a matter of general interest, I shall take the liberty of embodying in this report a condensation of Mr. Redding's highly interesting information on the subject, A number of samples of earth, gathered from different points in the Humboldt Desert, having been forwarded to Mr. Redding, he caused them to be carefully analyzed, and found that some of them contained from fifteen to thirty-five per centum of nitrate of soda. Careful inquiry concerning the climate, geological formation, and salt fields of the desert of Tarapaca in Peru, where are found the deposits of nitrate of soda which furnish the principal supplies to the manufactories of the world, satisfied Mr. Redding that the natural conditions of the Tarapaca and Humboldt deserts were not dissimilar, and it seemed probable to him that, by further exploration, extensive beds of earth and gravel, cemented into masses of salt and nitrate of soda (called *caleche* by the Peruvians), might be found sufficiently rich in nitrates to create an extensive business and make the United States, in this valuable material, independent of Peru and Chili. When it is remembered that nitrate of potash or nitrate of soda are used either directly or indirectly in the manufacture of gunpowder, dynamite, nitro-glycerine, as well as a great many other explosives, and nitric acid, it will be readily seen how large a part niter performs in the commerce and manufacture of civilized nations. To illustrate our present dependence on other nations for nitrates, the records of the Treasury Department show that there were imported into the United States for the year ending June 30, 1879, 76.285,798 pounds of nitrate of soda, valued at the custom-house at $1,384;572. There was also imported the same year of nitrate of potash, crude and refined 9,463,388 pounds, which paid a duty of $89,977.80. In evidence of the increasing dependence of the manufactures of the Pacific coast on niters brought from foreign countries. Mr. Redding calls attention to the fact that for the year ending June 30, 1879, there were imported into San Francisco 10,388,589 pounds of nitrate of soda, valued at $191,278, and 258,253 pounds of nitrate of potash, valued at $11,077, while for the past year ending June 30, 1881, the importation into the port had increased to 14,783,-226 pounds of nitrate of soda, valued at $326,494, and 468,257 pounds of nitrate of potash, valued at $18,358. Or to state the facts in a more condensed form, in two years the consumption of nitrate of soda on the Pacific coast had increased nearly one-third, and of nitrate of potash nearly one-half. As before stated, the great source of supply of nitrate of soda is from a desert in the province of Tarapaca in Peru. This desert, which is about seventy-five miles in length, lies at an elevation of from 3,000 to 4,000 feet, and in its nearest point is not more than 45 miles from the ocean.

The nitrate of soda is found in greater or less quantities over an area of several hundred square miles of this desert. Rains are rare in that region and the country is destitute of water near the surface. In addition to nitrate of soda, the earth of this desert contains chloride of sodium, borates of lime and soda, sulphates of lime and soda, and magnesia. Alumina and iodine always exist with the nitrate of soda. The most extensive works on the desert are at the Pampa, or Taramagal. The plain is supposed to have been at one time a sea lake. Its western border for a width of 2,000 feet is covered with salt. Still further west and adjoining the salt deposit is found the *caleche*, or rough nitrate. The remains of many other lakes are also found on the desert with similar characteristics and with beds of nitrate of soda in similar positions. Mr. J. F.

Flagg, a civil engineer, had charge of one of the most extensive works at Taramagal for extracting nitrate of soda and appears to have studied the climate and geological formation of that part of Peru with much care and attention. A paper from him on the subject was read before the American Institute and published in the American Chemist in 1874. From this and other sources, Mr. Redding learns that the *caleche*, or rough nitrate, is found beneath the surface in insolated masses. Sometimes it is found at a short distance beneath the surface, covered only by a few inches of sand, frequently, at a greater depth, covered by a cap of hard earth and sand indurated with salt. The thickness of the nitrate is from 1 to 10 feet, but does not average more than 3 feet. Beneath the nitrate is a bed of soft sand containing an abundance of crystals of glauberite and small quantities of borates of lime and soda. The *caleche*, or earthy matter containing nitrate of soda, varies in quality from nearly pure common salt containing traces of nitrate up to 50 and occasionally 60 per cent. of nitrate of soda. The miner makes an excavation where he expects to find the nitrate and, if successful, tunnels into the *caleche* and fills the hole with course gunpowder made on the spot, regulating the charge to the amount of earth he proposes to loosen. After the mass has been loosened and broken by the explosion, it is assorted and all of the *caleche* supposed to contain over 10 per cent. is conveyed to the works where the salt and other materials are separated from the nitrate. The average cost of production at the works in Taramagal in 1874, including all expenses of mining, assorting, separating and preparing for the market, was estimated at 1¼ cents per pound.

Thus far nitrate of soda has been found on the Humboldt desert, in this State, and at different points on the southeast side of the Sink of the Humboldt for a distance of 25 miles. The center of the region would be approximately opposite Brown's Station, on the Central Pacific Railroad, latitude 40 north, longitude 118.35 west, elevation 3,925 feet. This region, from the description, resembles the desert of Tarapaca in Peru. Its immense beds of salt indicate that it was at one time below the ocean. In it are found also the borates and sulphates of lime and soda, magnesia and alumina. It is also practically a rainless region. A record of eight years shows that it receives an annual rain-fall of but 4.16 inches. Its average summer temperature is 78°.8 Fahr. The discoverer of these nitrate deposits is Mr. Walter Schmidt, and under his direction Mr. Redding visited the Humboldt desert a few months since. He gives a very encouraging account of his researches, and reports that nitrate of soda is found not only on the desert, but in some of the hills surrounding it. On the southeastern side of the Sink of the Humboldt is a range of trachyte mountains having an elevation above the water of the lake of about 1,200 feet. The general trend of these mountains for about 25 miles is northeast and southwest. The particular range does not appear to be named, other than it is called a part of the west Humboldt range. A hill at the southwestern extremity of the range of a marked red color, is called Niter Hill. On the south side of the hill, about 400 feet above the lake, was shown the nitrate of soda in its matrix, if it may be so described. At this place the trachyte is much broken into irregular seams and readily splits off into conchoidal flakes. In these seams and between these flakes the spaces are filled with nitrate of soda united with chloride of sodium. The seams examined by Mr. Redding were from one-eighth to half an inch wide. Several analyses showed from 20 to 30 per cent. of nitrate of soda, the remainder consisting principally of common salt. Appearances seemed to show that the niter and salt, from whatever source derived, formed on each surface of the seams and grew by accretion in crystalline form until the seam was filled. This was shown by the fact that in many cases where the distances between the two surfaces of the rock were wider than usual a vacant place was left in the centre of the niter. Observation has shown that wherever the crevices were exposed to the light rains of winter the nitrate and salt were dissolved, but that the crevice was always filled with the same material during the hot, dry weather of the next summer. After referring to various theories concerning the formation of the nitrate of soda—generally conceded to be through the evaporation of salt water and the agency of the carbonate of lime—Mr. Redding has reason to believe that the formation goes on with great rapidity on the Humboldt desert, and with cheaper transportation its production is destined to become of great commercial importance. He says: "None of the water courses of this region reach the ocean; all evaporate in the so-called sinks. The light winter rains that dissolve the nitrate must carry it in solution down to the desert, where the water is evaporated. At certain places in the gravel beneath the sand the water will come in contact with decayed shells, which are found beneath the surface in nearly all parts of the desert, and also the decayed vegetable matter from plants which once grew on the spot, as well as from decayed vegetable mater annually brought down by the Humboldt River. Here the process of formation may be renewed. Thus far the largest bodies of *caleche* have been found beneath the surface in the desert; and it is probable that if ever found in sufficient quantity and in sufficently large percentage to pay for working, the profitable deposits will be found on the deserts adjoining the salt deposits. The slight explorations that have thus far been made convinced me that in the event of war or a large advance in the present prices of niter, sufficient can be found in the Humboldt desert to supply all demand in the United States for several years. It may also be mentioned that nitrate of soda has also been found near the sink of the Carson River, and at other points where the streams of Nevada run into desert basins and evaporate.

Among other desert productions of the State may be noted the article of sulphur, which may be produced cheaply and in almost any desired quantity. In Humboldt County, especially, sulphur deposits are numerous, some of them producing the nearly pure brimstone of commerce. These mines or deposits seem to be capable of producing an almost inexhaustible quantity, but the distance from the Central Pacific Railroad is considerable, and the roads are sandy and heavy. To one of these deposits a narrow-gauge railroad is contemplated, connecting with the Central Pacific at Humboldt. In fact these minerals and salines are found in every part of the State, and exist mostly in lands unfit for cultivation. These lines should be surveyed as well as the farming, timber, and mineral land, in order that parties locating them may secure proper titles. With progress of the railroad system now being extended over the State, the development of these great laboratories of nature will continue, and must in the end form industries important to the future of the State.

The mineral outlook of the State is most encouraging. While the annual gold and silver product of what is known as the Comstock mines has been steadily decreasing with the exhaustion of the great ore body in the California and Consolidated Virginia mines, the less prominent mining districts in other portions of the State have assisted in swelling the aggregate yield of the precious metals, so that the mining industry of the State still continues to be of paramount importance. Every mountain range in the State contains mines of gold and silver of greater or less value, and the steady efforts of the prospector are almost daily bringing to light and development new and important mineral deposits.

Beyond the Comstock, the Eureka district continues to be the most promising and productive, the silver appearing in combination with lead, and the ores being reduced by smelting. Reliable authority informs us that two mines in that district—the Eureka Consolidated and the Richmond Consolidated—have alone paid more in dividends to their stockholders than all the mines of Colorado combined, and have declared $919,000 more in dividends than all the mines of Utah, Arizona, and Dakota. The amount already paid to the shareholders of these two mines is but little short of $8,000,000, and late developments show that the great ore bodies of the district are practically inexhaustible. The continuation of the Carson and Colorado Railroad toward the southern boundary of the State will greatly stimulate mineral discovery in Esmeralda County, while the extension of the railroad southward from Eureka can scarcely fail to result in the opening of many new mining districts in Eureka, White Pine, Nye, and Lincoln Counties.

At the present writing the indications of the early discovery of new ore bodies below the barren and exhausted levels of the Comstock are most promising, and I hazard little in predicting that for many years to come this great fissure will sustain its reputation as a leading centre of attraction to mining operators. Yet, whatever developments may determine in regard to the future of the Comstock, Nevada will scarcely fail to maintain its position as the first among all the States and Territories in the production of the precious metals; and the future will show, I think, that the annual yield of the State, referring to a period ten years before, reached its minimum in 1880.

New Mexico.—Mr. Henry M. Atkinson, Surveyor-General for New Mexico, reports: The mining interests of the Territory have made wonderful strides in development, and new discoveries are being made almost daily of silver, gold, copper, iron, and coal. The developments made in the old districts are such as to encourage the owners and attract both home and foreign capital for their development. A serious impediment is met with by the miners and prospectors in searching for mineral upon unconfirmed grants. The last clause of the 8th section of the act of Congress provides that the lands embraced within the limits of a grant shall not be disposed of in any manner until final action by Congress upon the question of the validity or invalidity of the claim. The right to the mineral was not embraced in the grants, they being agricultural and pastoral grants, yet there is no provision permitting the miner to acquire any right to what he may discover upon a tract covered by an agricultural grant, and I suggest that some action be had by Congress which will enable the prospector to secure the benefits of his mineral discoveries upon tracts covered by unconfirmed grants. The mining interests of Southern New Mexico have been seriously interfered with by the depredations of hostile Indians under Victory and Naña, and but little prospecting could be safely engaged in, yet the adventurous miners have made many new and valuable discoveries in the limited area that they have been able to prospect. The northwest portion of the Mescalero Apache Indian Reservation is known to be rich in minerals; and, as it is of no practical use to the Indians, I suggest that it would be advisable to restore to market townships 9, 10, 11, 12, and 13 south, of range 11 east, and townships 9 and 10 south, of range 12 east, and if necessary after the reservation an equivalent of land on the south where Indians will be equally as well provided for. In fact, this reservation ought to be abolished entirely and the Indians disarmed and removed to the Indian Territory or the Eastern States, where they can be surrounded by civilization, and, if the object is to civilize and to Christianize them, they should be placed where it can be done quickly and where they will not be subject to the temptations incident to the border. This suggestion would apply with equal force to all of the wild tribes. The Mescalero Reservation, lying so close to the Mexican border, enables the Indians to commit depredations and seek refuge in Old Mexico, or to plunder the citizens of Mexico and return to the reservation, where they are safe from pursuit. The restoration to market of this reservation, which is known to be very rich in gold, silver and copper, would result in opening up one of the finest mineral sections of New Mexico. To the northward of the reservation and but a few miles distant is the district of the White Oaks, which contains several hundred miners and is a very prosperous camp. To the west and southwest, in Doña Ana County, rich discoveries of mineral have recently been made in what is known as the San Augustin District, lying east and northeast of the towns of Mesilla and Las Cruces, in the Organ range of mountains. Several of the mines in this district were worked many years ago, and the old mines, together with the new discoveries which are now being worked, show considerable bodies of fine ore.

More new and valuable discoveries of mineral have been made the past year in this Territory than in all the years preceding, and there is no industry that will pay as well if properly and intelligently managed. Labor is comparatively cheap, and the seasons are favorable for the prosecution of work every day in the year, and, with the great abundance of fine bituminous and anthracite coal, fuel for smelting and refining purposes can be obtained at a mere nominal cost. The past year has witnessed the introduction of considerable capital, which has been applied in mining operations, yet much more is required, and is sure to follow the completion of the lines of railway now in process of construction through the Territory. While a large portion of New Mexico is arable and produces excellent crops of corn, wheat, &c., yet it is eminently a mineral-producing country, and the time is not far distant when it will take rank among the first of the mineral-producing sections of America.

Utah.—Mr. Frd. Solomon, Surveyor General for Utah, reports: The bullion yield of precious metals during the past fiscal year has not been in arrears with former years, notwithstanding the fact that deep snows have been a severe drawback in many localities. A number of prominent mining camps were thereby stagnated, and the mills shut down. The Ontario, in Uintah mining district, still stands at the head of the larger mines in the country, the regular bullion shipments exceeding in round figures the sum of $200,000 per month, or about $2,500,000 per annum. Ore is found in such vast quantities that the company deems it advisable to double the capacity of their 40-stamp mill. The Horn Silver Mining Company, in San Francisco mining district, has sunk the shaft to a much greater depth, and struck new deposits of ore far richer than those in the upper levels. During the last year the shipments amounted to 443 car loads, or 9,370,712 pounds gross, of which 9,326,126 pounds are lead, and 640,531.13 ounces silver. In addition to this, large quantities of ore which were extracted from the mine have been sold in a crude state. The Great Basin Mining Company, with General P. E. Connor as managing director, in Rush Valley mining district, bas, within the past year, erected hoisting and concentrating works at a total cost of $80,000. The product which the mine yielded during this period amounted to $150,000. The ore is chiefly argentiferous galena. W. S. McCornick & Co., bankers in Salt Lake City, have, during the calendar year ending December 31, 1880, handled bullion to the amount of about $34,000 per week, aggregating about $177,000 per annum.

Large deposits of antimony have recently been found on Mesa Creek, which are worked to great advantage, the products being shipped to California. This mineral is found in two localities, one west of Beaver City, the other in Detroit mining district, Millard County. Not much can be said about these deposits, since very little work has been performed towards developing the same.

The coal basin of Utah originally extended from beyond the northern boundary line of the Territory to about the southern boundary, and from beyond the eastern boundary to the western watershed of the Wasatch Mountains. This original basin was broken by the upheaval of the Uintah Mountains, leaving an island north of said Uintah Range, extending from a point near the headwaters of the Weber River to nearly the northern boundary of the Territory. The coal again appears where Book Cliff Mountains branch off from the Wasatch, and thence extends along the eastern watershed of said Wasatch, and through the lower plateaus terracing off from the same to Green and Colorado rivers and the southern boundary of the Territory. Seven or eight seams have so far been definitely explored, varying from 4 to 30 feet in thickness. The 4-foot seam was first opened in San Pete Valley, but was found to be so much mixed with shale and limestone as to be useless for market, but the same seam has again been tapped in Castle Valley, on Ivy Creek, where it is perfectly clear, and produces the best coke of any coal in this system. A seam of from 8 to 10 feet in thickness has for a long time been worked on Grass and Coal Creeks, in Summit County, from which even at present a great part of the supply of Salt Lake City is drawn. The same seam and a 30-foot seam have also been tapped in Pleasant Valley, which said mines were of sufficient importance to build a narrow-gauge railroad. In Castle Valley the coal lies in the greatest available area, and is now being tapped by the two main branches of the Denver and Rio Grande Railroad in Utah. Castle Valley also contains seams of cannel coal, and some not altogether unimportant seams of jet. The coal, with possibly the single exception of the 4-foot seam is lignite, or belonging to the new sandstone formation.

The main deposits of iron are situated in Iron County, the same extending from Iron Springs to Iron City, about 15 miles square. It is mostly magnetic or specular ore and huge bowlders of hematite, the latter containing a small percentage of silver. Smaller deposits may be found at the head of Hard Scrabble and City Creek Cañons, on the boundary line of Morgan and Salt Lake Counties; also in Tintic mining district, and some on the Provo River, east of Park City. A small bed is also found in connection with the coal in Castle Valley; also a deposit in the Wah-Wah Mountains, Beaver County. Attempts have been made to manufacture iron in this territory, but not with important results, since the necessary capital required for the successful operation of this industry has not been invested. The ore is now chiefly used for fluxing purposes in the different smelters, which consume vast quantities during the year.

A species of mineral wax, peculiar to Utah, and which some scientists have termed "Utahcorite," is found along the Pleasant Valley Railroad, in Soldier Cañon, where it occurs in small seams. Another seam of 20 feet, rather impure, is found at the head of north fork of Nine Mile Creek, near the boundary line between Wasatch and Emery Counties. In connection with this is generally found a first-class quality of bituminous shale, varying in thickness with the different localities. Several varieties of marble have been found in this territory, in such quantities and qualities as to make them of commercial value. A very fine white marble is found on Snake Creek, Wasatch County, also at Frisco, Beaver County; brown marble is found in Spanish Fork Cañon, Utah County, and black marble at the Warm Springs, Salt Lake City. The last two kinds are fossiliferous. Rock salt is found in such large deposits that the term of mountain is perfectly justified. They occur principally around Salina, Sevier County, from which the crude and refined article is shipped to the southern parts of Utah, also to Arizona and Nevada. Gypsum, which always accompanies these deposits, is found in corresponding quantities. The main sulphur beds are situated in Gordon Mining District, Millard County, on and about Cove Creek. They cover nearly 300 acres, and of many openings made by shaft and cut, none shows it to be less than twenty feet thick. At that depth the still active exhalations become intolerable. About 5,000,000 tons of sulphur are in sight, some of which is 98 fine, but the average is about 65; the sulphur beds of Sicily being 20. The commercial value of the Utah find is chiefly a question of transportation. Minor beds are found at the head of main fork of Bear River, in Summit County.

MINING LAWS OF THE STATES AND TERRITORIES.

We append here a number of laws in force in different states and territories, and some that are not in force, for the purpose of showing the direction of changes in the laws. They are compiled from various sources, including the laws of the different States, "Copp's Mining Code," "Carpenter's Mining Law," and "Our Western Empire."

NEVADA.—The following are the main sections of a statute of the State of Nevada approved February 27, 1866:

Sec. 1.—Any six or more persons who are males of the age of twenty-one years and upwards, holding mining claims in any mining district, or who hold mineral lands not within the boundaries of any established mining district, may form a new mining district embracing said claims, at a meeting of such persons to be called by posting for five days in at least five conspicuous places within the limits of such proposed new district, notices in writing stating the place and time for holding such meeting, describing as near as may be the limits of such proposed new district, and signed by not less than five of such persons. At said meeting all males of the age of twenty-one years and upward holding mining claims, or any interest therein, within said limits, may vote, and by a majority vote determine whether said new mining district shall be established, and its boundaries, which shall be within the limits named in said notices; and thereafter the persons so qualified and holding mining claims in such newly established district shall proceed to select a name therefor and elect a district recorder, who shall be qualified as aforesaid. He shall perform all the duties required of him by law, and shall, within thirty days after qualifying, file and record in his office a record of the proceedings of said meeting. No district formed under the provisions of this act shall be divided by any county line. Mining districts now existing may be continued.

Sec. 22.—On and after the second Saturday of July, 1866, all locations of mining claims shall be made in the following manner: On a monument not less than three feet high, firmly established in a conspicuous place on the claim, there shall be placed a plainly-written notice embracing a description of the ground claimed, the date of location, the name of the claim, the name of the company, and the names of the locators, with the number of feet claimed by each, and a copy of said notice, accompanied by a written request for a survey of said claim by the district recorder, shall, within thirty days after the making of such location, be filed in the office of the district recorder of the district in which said claim is located; and in case there be no legally authorized district recorder in and for the district, or the claim be outside of the limits of an organized mining district, then, and in that case, said notice may be filed in the office of the county recorder of the county in which said claim is located; and a written request for a survey by the county surveyor shall be served upon the county surveyor within a reasonable time thereafter; the county surveyor, or his deputy, shall perform all the duties required of a district recorder by the provisions of this act. He shall keep a record of all his transactions in such cases, and for such services he may charge and receive the same fees allowed by law for his services in like cases. Within thirty days after the making of such location there shall be done on said claim, as assessment work, to hold the same up to and including the day preceding the first Saturday of the then following August, excavation involving the removal of fifty cubic feet of earth or loose material, or five cubic feet of solid rock, for each two hundred feet in the claim; and, as soon as may be thereafter, said district recorder shall survey the same and record the notice of survey as provided in section 14 of this act; and said district recorder shall file and record a certificate in regard to the assessment work, which shall be substantially in the following form:

—— DISTRICT,—— COUNTY, NEVADA,—— DAY OF —— MONTH OF YEAR.

This is to certify that on the ——— claim governed by the —— ——— company, surveyed on ——— date, there has been done by or on behalf of said company sufficient work to hold said claim up to the first Saturday of August next.

———, *District Recorder.*

Sec. 23.—Any person may locate mining claims in favor of others, but no person shall be entitled to hold by location more than two hundred feet of any one ledge, except by virtue of discovery of the same, for which he shall be entitled to hold two hundred feet additional. In the case of locations made as extensions, the location of two hundred feet by virtue of discovery is allowed. No claim shall, in the aggregate, exceed in extent two thousand feet on any one ledge.

Sec. 24.—Any location made on a ledge by authority of this act shall be deemed to include all the dips, spurs, angles and variations of said ledge. The locators of any ledge shall be entitled to hold one hundred feet on each side of it, except where they would by so doing invade the territory of a claim previously located.

Sec. 31.—On the first Saturday of August, 1866, at which time the first assessment year shall begin, this act shall supersede all district mining laws, and thereafter said laws shall be considered as repealed: *Provided*, Any and all rights heretofore acquired under and by virtue of such district mining laws shall be determined in accordance with said mining laws existing at the time when said rights were acquired. During the period extending from and including the 1st day of May, 1866, to and including the day immediately preceding the first Saturday of the following August, no claim shall become subject to relocation by reason of the non-performance of assessment work. Locations may be made under this act at any time on and after the second Saturday of July, 1866, at which time the district recorders elected under this act shall, if qualified, enter upon the discharge of their duties, and on and after said second Saturday of July, no location shall be made under district mining laws.

Sec. 32.—The doing of assessment work, or the payment of assessment dues, shall not be required in order to hold a claim during any assessment year, if during the year next preceding such assessment year there has been done on said claim, by or on behalf of the claimants thereof, an amount of work costing, at fair valuation, not less than fifty cents for each foot in said claim; but in all other cases assessment work shall be done or assessment dues shall be paid as provided in this act. Assessment dues shall be paid for every assessment year by the parties holding the claim to the district recorder elected under this act, before the first Saturday of August, commencing the assessment year for which they are paid, except as otherwise provided in this section,

Sec. 33.—Except as otherwise provided in section 32, every mining claim located and held under district mining laws, on which, before the 1st day of May, 1866, there has been work done involving the excavation of fifty cubic feet of earth or loose matter, or five cubic feet of solid rock, for each 200 feet in such claim, shall be subject to assessment dues. On every mining claim located and held under district mining laws, on which such work has not been done before the 1st day of May 1866, assessment work shall be done on or before the day immediately preceding the first Saturday of August, 1866. The doing of such assessment work or the paying of such assessment dues shall enable the owner of said claim to hold the same for the next ensuing assessment year, commencing on the first Saturday of August, 1866.

Sec. 34.—The assessment work done within the thirty days after the location of a claim under this act, as provided in section 22, shall hold the same only up to the beginning of the assessment year following the date of said location, and for such next ensuing assessment year and for every year thereafter, except as provided in section 32 of this act, such claim shall be subject to assessment dues.

Sec. 45.—The extraction of gold or other metals from alluvial or diluvial deposits, generally called placer mining, shall be subject to such regulations as the miners in the several mining districts shall adopt.

March 6, 1879, the following became law:

Sec. 1.—In every mining district in this State in which the seat of government of any county is situated, the county recorder of said county shall be *ex-officio* District Mining Recorder, subject, in the discharge of his duties, to such rules, regulations and compensation, as may be now in force or hereafter prescribed by the mining laws of the mining districts respectively to which this Act is applicable. He shall, as such *ex-officio* Mining Recorder, be responsible on his official bond for the faithful performance of the duties of his office, and the correct and safe keeping of all the records thereof.

Sec. 2.—This act shall take effect and be in force from and after the first day of August, A. D. 1880.

OREGON.—Sec. 1.—That any person, or company of persons, establishing a claim on any quartz lead containing gold, silver, copper, tin, or lead, or a claim on a vein of cinnabar, for the purpose of mining the same, shall be allowed to have, hold, and possess the land or vein, with all its dips, spurs, and angles, for the distance of three hundred feet in length, and seventy-five feet in width on each side of such lead or vein.

Sec. 2.—To establish a valid claim the discoverer or person wishing to establish a claim shall post a notice on the lead or vein, with name or names attached, which shall protect the claim or claims for thirty days; and before the expiration of said thirty days he or they shall cause the claim or claims to be recorded as hereinafter provided, and describing, as near as may be, the claim or claims, and their location; but continuous working of said claim or claims shall obviate the necessity of such record. If any claim shall not be worked for twelve consecutive months it shall be forfeited and considered liable to location by any person or persons, unless the owner or owners be absent on account of sickness, or in the service of their country in time of war.

Sec. 3.—Any person may hold one claim by location, as hereinafter provided, upon each lead or vein, and as many by purchase as the local laws of the miners in the district where such claims are located may allow; and the discoverer of any new lead or vein, not previously located upon, shall be allowed one additional claim for the discovery thereof. Nothing in this section shall be so construed as to allow any person not the discoverer to locate more than one claim upon any one lead or vein.

Sec. 4.—Every person, or company of persons, after establishing such claim or claims, shall, within one year after recording or taking such claim or claims, work or cause to be worked to the amount of fifty dollars for each and every claim, and for each successive year shall do the same amount of work, under penalty of forfeiture of said claim or claims: *Provided*, That any incorporate company owning claims on any lead or vein may be allowed to work upon any one claim the whole amount required as above for all the claims they may own on such lead or vein.

Sec. 5.—It shall be the duty of the county clerk of any county, upon the receipt of a notice of a miners' meeting organizing a miners' district in said county, with a description of the boundaries thereof, to record the same in a book to be kept in his office as other county records, to be called a "book of record of mining claims;" and, upon the petition of parties interested, he may appoint a deputy for such district, who shall reside in said district or its vicinity, and shall record all mining claims and water rights in the order in which they are presented for record; and shall transmit a copy of such record at the end of each month to the county clerk, who shall record the same in the above-mentioned book of record, for which he shall receive one dollar for each and every claim. It shall further be the duty of said county clerk to furnish a copy of this law to his said deputy, who shall keep the same in his office, open at all reasonable times for the inspection of all persons interested therein.

Sec. 6.—Miners shall be empowered to make local laws in relation to the possession of water rights, the possession and working of placer claims, and the survey and sale of town lots in mining camps, subject to the laws of the United States.

Sec. 7.—That ditches used for mining purposes, and mining flumes permanently affixed to the soil, be and they are hereby declared real estate for all intents and purposes whatever.

Sec. 8.—That all laws relative to the sale and transfer of real estate, and the application of the liens of mechanics and laborers therein, be and they are hereby made applicable to said ditches and flumes: *Provided*, That all interests in mining claims known as placer or surface diggings may be granted, sold, and conveyed by bill of sale and delivery of possession as in cases of the sale of personal property: *Provided further*, That the bills of sale or conveyances executed on the sale of any placer or surface mining claim shall be recorded within thirty days after the date of such sale, in the office of the county clerk of the county in which such sale is made, in a book to be kept by the county clerk for that purpose, to be called the record of conveyances of mining claims.

Sec. 9.—Mortgages of interest in placer or surface mining claims shall be executed, acknowledged, recorded, and foreclosed as mortgages of chattels.

Sec. 10.—The county clerk shall be entitled to a fee of one dollar each for every conveyance or mortgage recorded under the provisions of this act.

Lodes, Placers, and Water-rights.—AN ACT to amend Section 1 of Chapter 38 of the Miscellaneous Laws of Oregon, pertaining to mines, as compiled by M. P. Deady and L. F. Lane.

Be it enacted by the Legislative Assembly of the State of Oregon:

Sec. 1.—That section 1 of Chapter 38 of the Miscellaneous Laws of Oregon pertaining to mines, as compiled by Matthew P. Deady and Lafayette Lane, be amended so as to read as follows: That any person or company of persons, establishing a claim on any quartz lead containing gold, silver, copper, tin, or lead, or a claim on a vein of cinnabar, for the purpose of mining the same, shall be allowed to have, hold and possess the land or vein, with all dips, spurs, and angles, for the distance of fifteen hundred feet in length and three hundred feet in width on each side of such lead or vein.

Sec. 2.—That all local laws and regulations now existing in the mining districts of this State that have not been made within two years next preceding the passage of this Act, shall be, and the same are hereby, declared null and void.

Sec. 3.—That from and after the passage of this act, any person, company, or corporation owning placer claims, composed of creek, bench, and hill claims, joining, may represent the whole of said claims by working or mining on any one of the same.

Sec. 4.—That from and after the passage of this act, any person or persons, company or corporation, shall be allowed to represent his or their placer claims, ditches and water rights, as may best suit his or their convenience; *Provided*, that whenever any person, company or corporation, being the owner of any placer mining claim or claims, ditches, and water rights, have or shall abandon the same, and who shall for one year thereafter cease to exercise ownership over said claims, ditches, and water rights, shall be deemed to have lost all title, claim, or interest therein.

Sec. 5.—That whenever any person, company, or corporation have or shall locate a placer claim or claims in conformity to the Act of Congress approved May 10, 1872, and the amendments thereto, the said claim or claims, together with all ditches and water rights appurtenant to, and connected with the same, shall not be subject to any local law or regulation of the mining district in which the same may be situated, but shall thereafter be subject only to the law governing real estate.

Approved October 25, 1880.

IDAHO.—Sec. 1.—That any person or persons who may hereafter discover any quartz, lead or lode shall be entitled to one claim thereon by right of discovery, and one claim each by location.

Sec. 2.—That a quartz claim shall consist of two hundred feet in length along the lead or lode by one hundred feet in breadth, covering and including all dips, spurs and angles within the bounds of said claim, as also the right of drainage, tunneling and such other privileges as may be necessary to the working of said claim.

Sec. 3.—The locator of any quartz claim on any lead or lode shall, at the time of locating such claim, place a substantial stake, not less than three inches in diameter, at each end of said claim, on which shall be a written notice specifying the name of the locator, the number of feet claimed, together with the year, month and day when the same was taken.

Sec. 4.—All claims shall be recorded in the county recorder's office, within ten days from the time of posting notice thereon: *Provided*, That when the claim located is more than thirty miles distant from the county seat the time shall extend to fifteen days.

Sec. 5.—Quartz claims recorded in accordance with the provisions of section 4 of this act shall entitle the person so recording to hold the same to the use of himself, his heirs and assigns: *Provided*, That within six months from and after the date of recording he shall perform, or cause to be performed, thereon work amounting in value to the sum of one hundred dollars.

Sec. 6.—Any person or persons holding quartz claims in pursuance of this act shall renew the notice required in section 3 at least once in twelve months, unless such claimant is occupying and working the same.

Sec. 7.—The conveyances of quartz claims heretofore made by bills of sale or other instruments of writing, with or without seals, shall be construed in accordance with the local mining rules, regulations and customs of miners in the several mining districts, and said bills of sale or instruments of writing concerning quartz claims without seals shall be *prima facie* evidence of sale, as if such conveyance had been made by deed under seal.

Sec. 8.—Conveyances of quartz claims shall hereafter require the same formalities and shall be subject to the same rules of construction as the transfer and conveyance of real estate.

Sec. 9.—The location and pre-emption of quartz claims heretofore made shall be established and proved when there is a contest before the courts, by the local rules, customs and regulations of the miners in each mining district where such claim is located, when not in conflict with the laws of the United States or the laws of this Territory.

Sec. 10.—This act is to take effect and to be in force from and after its approval by the Governor.

Approved February 4, 1864.

Miner's Lien.—Sec. 12.—Every sub-contractor, journeyman, laborer, or other person, performing labor, or furnishing materials for any contractor, in or upon any quartz) claim, ledge, or mine, in working in the same or in the improvement or development thereof in the completion or performance of any contract entered into by any person in this Territory, every such person or person so performing such labor or furnishing such material shall have a lien upon all the interest in such quartz claim, ledge or mine of the person or persons employing him or them, or purchasing such materials with the improvements thereon and appurtenances thereto belonging, and also upon all the interest of the person or persons for whom such person or persons acts as agent, or the owner or owners, for the value of such work, or labor or materials furnished, and all the provisions of this act shall apply in respect to recording, recovering, and enforcing such liens provided for in this section: *provided*, the person or persons claiming such lien shall within thirty days after the performance of such labor or furnishing such materials, give notice in writing to any person or persons, agent or agents, owner or owners, and shall within forty days file their lien in other respects as provided by this act.

Sec. 13.—When any person or persons shall do or perform any work or labor in or upon or for any quartz claim, mine, or ledge, in working the same or in the improvement or development thereof; or in the preparation of the ores thereof for reduction; or in the hauling of the ores thereof; or shall perform labor or service as superintendent, manager, or foreman of any mine or ledge, or shall perform labor as a mechanic or artisan therefor; such person or persons shall have a lien upon all the interests in such quartz claim, ledge, or mine of the person or persons employing him or them, or purchasing such materials, together with the improvements thereon and appurtenances for the value of such work, labor, or services, or materials furnished, and all the provisions of this act respecting the filing, recording and recovering and enforcing mechanics' liens are made applicable to this section: *provided*, the person or persons claiming such liens shall, within sixty days after the completion of such work or labor, or rendering said services or furnishing said materials, file their lien in other respects as provided by this Act.

Sec. 14.—This Act shall be so construed as to include in its provisions bridges, ditches, flumes, aqueducts to create hydraulic power for mining purposes, and all improvements on mining claims. —Extract from an Act approved Jan. 11, 1875.

14.—The amount of work to be done or improvements made during each year, to hold possession of a mining claim, shall be that prescribed by the laws of the United States, to wit: one hundred dollars annually.

15.—Within six months after any set time or annual period herein allowed for the performance of labor or making improvements upon any lode claim, the person on whose behalf such outlay was made, or some person for him, shall make and record an affidavit in substance as follows:

TERRITORY OF DAKOTA, County of ———, } ss.

Before me, the subscriber, personally appeared ———, who, being duly sworn, says that at least ——— dollars' worth of work or improvements were performed or made upon [here describe the claim or claims, or part thereof] prior to the — day of ———, A. D. 18—, situate in ———mining district, county of———, Territory of Dakota. Such expenditure was made by or at the expense of ———, owner of said claim, for the purpose of holding said claim.

[Jurat.] [Signature.]

And such certificate, when recorded in the office of the register of deeds of the county wherein such claim is located shall be *prima facie* evidence of the performance of such labor.

16.—The relocation of abandoned lode claims shall be by sinking a new discovery shaft, and fixing new boundaries, in the same manner as if it were the location of a new claim; or the relocater may sink the original shaft, cut, or adit to a sufficient depth to comply with sections five and seven of this chapter, and erect new or adopt the old boundaries, renewing the posts if removed or destroyed. In either case, a new location stake shall be erected. In any case, whether the whole or part of an abandoned claim is taken, the location certificate must state that the whole or any part of the new location is located as abandoned property.

17.—No location certificate shall claim more than one location, whether the location be made by one or several locators; and if it purport to claim more than one location, it shall be absolutely void, except as to the first location therein described; and if they are described together, or so that it cannot be told which location is first described, the certificate shall be void as to all.

18.—The register of deeds shall be entitled to receive the sum of one dollar for each location certificate recorded and certified by him, and shall furnish the locator or locators with a certified copy of such certificate when demanded, for which he shall be entitled to receive fifty cents.

7. Any open cut, cross cut, or tunnel, at a depth sufficient to disclose the mineral vein or lode, or an adit of at least ten (10) feet in along the lode, from a point where the lode may be in any manner discovered, shall be equivalent to a discovery shaft.

8. The discoverer shall have thirty days from the time of uncovering or disclosing a lode, to sink a discovery shaft thereon.

9. The location, or location certificate, of any lode or claim shall be construed to include all surface ground within the surface lines thereof, and all lodes and ledges throughout the entire depth, the top or apex of which lies inside of such lines extended vertically, with such parts of all lodes or ledges as continue, by dip beyond the side lines of the claim, but shall not include any portion of such lodes or ledges beyond the end lines of the claim, or the end lines continued, whether by dip or otherwise, or beyond the side lines in any other manner than by the dip of the lode.

10. If the top or apex of the lode in its logitudinal course extends beyond the exterior lines of the claim at any point on the surface, or as extended vertically downward, such lode may not be followed in its logitudinal course beyond the point where it is intersected by the exterior.

11. All mining claims now located, or which may be hereafter located, shall be subject to the right of way of any ditch or flume for mining purposes, or of any tramway or pack trail which is now in use, or which may be hereafter laid out across any such location: *Provided always*, That such right of way shall not be exercised against any location duly made and recorded, and not abandoned prior to the establishment of the ditch, flume, tramway, or pack-trail, without consent of the owners, except by condemnation, as in case of land taken for public highways; parol consent to the location of any such casement, accompanied by the completion of the same over the claim, shall be sufficient without writing; *and provided further*, That such ditch or flume be so constructed that the water from such ditch or flume shall not injure vested rights by flooding or otherwise.

12. When the right to mine is in any case separate from the ownership or right of occupancy to the surface, the owner or rightful occupant of the surface may demand satisfactory security from the miner, and if it be refused, may enjoin such miner from working until such security is given. The order for injunction shall fix the amount of bond.

13. If at any time the locator of any mining claim heretofore or hereafter located, or his assigns, shall apprehend that his original certificate was defective, erroneous, or that the requirements of the law had not been complied with before filing, or shall be desirous of changing his surface boundaries, or of taking in any part of an overlapping claim which has been abandoned, or in case the original certificate was made prior to the passage of this law, and he shall be desirous of securing the benefit of this act, such locator or his assigns may file an additional certificate subject to the provisions of this act: *Provided*, That such relocation does not interfere with the existing rights of others at the time of such relocation, and no such relocation or the record thereof shall preclude the claimant or claimants from proving any such title or titles as he or they may have held under previous locations.

DAKOTA.—1. The length of any lode claim hereafter located within this Territory may equal, but shall not exceed, fifteen hundred feet along the vein or lode.

2. The width of lode claims shall be one hundred and fifty feet on each side of the center of the vein or crevice; *Provided*, That any county may, at any general election, determine upon a greater width not exceeding three hundred feet on each side of the center of the vein or lode, by a majority of the legal votes cast at said election; and any county, by such vote at such election, may determine upon a less width than above specified; *Provided*, That not less than twenty-five feet on each side of the vein or lode shall be prohibited.

3. That the discoverer of a lode shall, within twenty days from the date of discovery, record his claim in the office of the register of deeds of the county in which such lode is situated, by a location certificate, which shall contain:

(1) The name of the lode.
(2) The name of the locator.
(3) The date of location.
(4) The number of feet in length claimed on each side of the discovery shaft.
(5) The number of feet in width claimed on each side of the vein or lode.
(6) The general course of the lode, as near as may be.

4. Any location certificate of a lode claim which shall not contain the name of the lode, the name of the locator, the date of location, the number of lineal feet claimed on each side of the discovery shaft, the number of feet in width claimed, the general course of the lode, and such description as shall identify the claim with reasonable certainty, shall be void.

5. Before filing such location certificate, the discoverer shall locate his claim by first sinking a discovery shaft thereon sufficient to show a well defined mineral vein or lode; second, by posting at the point of discovery, on the surface, a plain sign or notice containing the name of the lode, the name of the locator, and the date of discovery, the number of feet claimed in length on either side of the discovery, and the number of feet in width claimed on each side of the lode; third, by marking the surface boundaries of the claim.

6. Such surface boundaries shall be marked by eight (8) substan-

tial posts, hewed or blazed on the side or sides facing the claim, and sunk in the ground, to wit: one at each corner, and one at the centre of each side line, and one at each end of the lode. When it is impracticable, on account of rocks or precipitous ground, to sink such posts, they may be placed in a monument of stone.

Arizona.—The following is the statute of Arizona on the registry and government of mines and mineral deposits, with the exception of the sections providing the manner in which the rights of miners shall be enforced by the courts.

Sec. 1.—All mining rights on the public lands of the United States, as well as rights acquired by discovery on the lands of private individuals, are possessory in their character only, and such possessory rights shall be limited, regulated and governed as hereinafter provided.

Sec. 15. Every mining claim or pertenencia is declared to consist of a superficial area of 200 yards square, to be measured so as to include the principal mineral vein or mineral deposits, always having reference to and following the dip of the vein so far as it can or may be worked, with all the earth and minerals therein. But any mining district organized in accordance with the provisions of this chapter may prescribe the dimensions of said mining claim or pertenencia for such district: *Provided*, That in no case the dimensions so prescribed shall exceed the number of yards allowed by this section; *and further provided*, That no such mining district shall diminish the extent of the territorial claim to one pertenencia, as defined in this section.

Sec. 16.—Any person discovering or opening a vein or other mineral deposit in this Territory, not actually worked or legally owned by other parties or registered in accordance with this chapter, shall by properly denouncing and registering the same, be entitled to claim and hold a possessory right to a tract of land to the extent of two mining claims or pertenencias, including the said vein or mineral deposit, and conforming as nearly as possible to the general direction thereof, each to be measured 200 yards long by 200 yards wide, the direction of the lines to be determined by the person claiming.

Sec. 17.—If two or more persons are associated, and have formed a company for the exploration and working of mines, and one or several shall make discoveries of mineral deposits in consequence thereof, said company so engaged in exploration shall be entitled to denounce and register one discovery claim only upon each lode.

Sec. 18.—It shall be lawful for the claimants of a mine or mineral lands to locate and take possession of public lands for a mill site and other necessary works connected therewith, which shall not exceed one quarter section, containing a stream or other water suitable for the purpose. They shall have a right to place a dam or other obstructions on such stream, and to divert its water for the above uses and purposes. They shall, within the time and in the manner prescribed in this chapter for the registration and denouncement of mines, proceed to denounce and register the same with the clerk of the probate court, and they shall be known as auxiliary lands. And if within three years from the day their notice of claim is so recorded they shall expend in fitting the same for a mill, or in placing a mill or reduction works thereon, the sum of $100, they may cause the record of such works to be made and proceedings for confirming their title to be instituted as provided in section 29 of this chapter, with like effect, and receive a certificate of title as thereon provided, conforming as nearly as they can to the requirements of that section. Instead of the work required by section 32 of this chapter they shall use the machinery or other works erected upon said land for mining purposes at least thirty days in each year. Such claims shall be subject to all the provisions of this chapter which are applicable to mining rights, and may be abandoned and relocated. All rights to auxiliary lands acquired under the laws of any mining district before this act takes effect shall be valid, and the owners of the same, upon complying with the provisions of this section, may take the like proceedings to confirm their titles, with a like effect.

Sec. 19.—It shall be the duty of all claimants of mining claims, mineral lands and auxiliary tracts, to at once define the extent and boundary of them as nearly as possible, by good substantial monuments or other conspicuous marks, in the presence of the recorder of the mining district, or of some witness who shall prove to the satisfaction of the recorder that the same has been done, and to post up a public notice of their claim at the opening of the principal vein, and to have them properly registered and recorded within three months from the time of first claiming them at the office of the mining district recorder according to the provisions of this chapter. Such record shall give a faithful description of the veins, mineral deposits, and tracts of lands, the character and bearing of the veins or deposits, and their connection with natural monuments or conspicuous objects in the vicinity.

Sec. 20.—No person shall change his original monuments or boundaries of mineral or other lands, but if a subsequent investigation makes this convenient or necessary, and it can be done without prejudice to other parties, then such change shall take place by the sanction of the judge of the probate court, provided they are properly recorded, and the new boundaries and monuments fixed at once when the original ones are removed.

Sec. 21.—All minerals, woods, waters, earths and vegetation found within the boundaries of any tract of land registered and claimed for mining shall be exclusively used by him or them who are legally entitled to the possession of the land wherein or whereon they are situated, so long as they are used for mining purposes only: *Provided*, That no one shall have the right to prevent transient persons from using the waters along the public highways, where they were provided by nature in natural tanks, springs, streams, or otherwise, nor from making such equitable disposition of the waters as the legislature shall prescribe.

Sec. 22.—No person shall have the right to impede or inconvenience travelling by fencing up the public roads, filling them up with rubbish, or undermining them so as to endanger their safety, neither shall any one change their established direction without sanction of the proper authorities.

Sec. 23.—Whenever two or more persons or parties explore and prospect one and the same vein, and at or about the same time but at different places, and without knowledge of each other, then he or they who shall prove first occupancy shall have the right of first location, taking the principal point of excavation as the center of their claim or claims on each side along the general direction of such vein or deposit. The other parties shall proceed by the same laws after the others have fixed their boundaries. Should there be left vacant ground between the different parties, then it shall be at the option of the first discoverers so to change their boundaries as shall best suit them, and have them recorded accordingly. Any other parties shall locate in the order of the time of their arrival on the vein or mineral deposit.

Sec. 24.—Whenever two or more parties shall select the same mine or mineral deposit for exploration, and the parties first on the ground, knowing the other parties to be at work, shall fail to give warning, either verbally or in writing, of their priority claim on such vein or deposit, then that portion of the mine situated between the main excavations of the two parties shall be equally divided between them, irrespective of the number of members each company may have: *Provided*, That the intervening portions shall not exceed the quantity of land allowed by the provisions of this chapter.

Sec. 25.—The laws and proceedings of all mining districts established in this Territory for the denouncement, registration, and regulation of mines, mining claims, mineral lands, and auxiliary lands, prior to the day this act takes effect, are hereby legalized and declared to be as valid and binding in all courts of law as if enacted by this legislative assembly, to the extent and under the conditions and restrictions herein contained.

I.—All rights, claims, and titles to any veins, mineral lands, or mineral deposits, and auxiliary lands, acquired before this act takes effect, under, by virtue of, and in conformity to the laws of said mining districts, are hereby declared to be valid and legal, and shall be respected and enforced in all courts of this Territory, when sustained by the evidence herein provided; but no amount of work done thereon shall be construed to give a perpetual title thereto, but shall give such title only and such rights and privileges as are provided in section 29 of this chapter; and no person who was at the time of the location of his claim an inhabitant of this Territory shall forfeit his claim because he was not a resident also of the mining district in which his said claim was located. And no such right, claim, or title shall be considered as abandoned provided the claimant shall within six months from the day this act takes effect file with the clerk of the probate court of the county in which his claim is situated a brief description of the same, giving the name of the district in which the lode is situated, and of the lode or lodes, and the extent of his claim thereon, with a declaration that he intends to retain and work the same according to law, unless such claim has been forfeited and subject to re-location under the laws of such mining district before this act takes effect.

II.—All records and all papers required by the laws of said mining district to be deposited with the recorders of said district for record shall be received as evidence of their contents in all courts of this Territory, and shall not be rejected for any defects in their form, when their contents may be understood, but shall be valid to the extent provided by said mining laws, except as hereinbefore restricted: *Provided*, That such records and papers are deposited with or recorded by the clerk of the probate court of the county in which said mining district is located, and within three months from the time this act takes effect; and if said records or papers are lost or mutilated, or if such recorder of a mining district shall neglect or refuse to deposit the same as aforesaid, an affidavit of their contents made by any person interested therein, or certified or sworn copies thereof, may be so recorded, and shall have the like effect.

III. All conveyances of mines, mining rights, mineral and auxiliary lands made prior to the time this act takes effect shall be valid and binding to pass the title of the grantor thereof, although defective in form and execution, if their contents can be understood, and as such shall be received and regarded in all courts of this Territory: *Provided*, That such conveyances shall be deposited with or recorded by the clerk of the probate court of the county where said mines are situated, within three months from the time this act takes effect, and if lost or mutilated, copies or affidavits of their contents, executed as aforesaid, may be recorded as provided above.

Sec. 26.—Every recorder, register, clerk or other recording officer, of every such mining district, or who has at any time acted as such recording officer within three months after this act takes effect, shall deposit with the clerk of the probate court of the county in which said district or greater part thereof is situated, all records which he has so kept, and all papers deposited in his hands for record, and papers so made or deposited with his predecessors in said office, which are in his hands as aforesaid, or he shall so deposit certified copies of the same. And such records and other papers shall be securely kept by such clerk, open in office hours to public inspection, and copies of the same duly certified by him shall be received in all courts of justice, and have the same effect as the originals. And any such recorder, register, or other recording officer of each mining district who shall neglect or refuse to comply with the provisions of this section shall be liable in damages to the party injured thereby, and shall be liable to be punished by the judge of probate of the county in which said mining district, or the greater part thereof, is situated, for contempt, by fine not exceeding $5000 and imprisoned not more than one year, and shall be incapable of holding any such office and mining claim.

Sec. 27.—Mining districts now existing may be continued or new mining districts may be established in the manner and for the purposes hereinafter provided.

I. The recorder of every mining district now existing shall at the same time that he deposits the records of said districts with the clerk of the probate court, as the last preceding section requires, take an oath before the judge of said court that he will faithfully perform the duties of his office until another recorder shall be elected and qualified in his place, which oath shall be recorded by the clerk of the probate court. He shall record in a book to be kept by him for that purpose all notices of claims or rights to veins, mineral deposits, mineral lands, and auxiliary lands which may be left with him to be recorded, and shall note on all papers which may be received by him to be recorded, the time when they were so received by him, and they shall be considered as recorded from that time. He shall, when requested by any such claimant, go with him to his claim and see that the same is measured by metes and bounds, and marked by substantial monuments on the surface of the earth, and shall make a record of the same, and of the time when it was done, and certify it to be correct, or shall make a record and certificate of the same on the evidence of a credible witness, who was present when the same was done, and is cognizant of the facts, and whose name shall be entered on the record. He shall, when requested by any such claimant, go with him to his claim and examine any shaft that may be sunk by him, or tunnels that may be opened to the same, and make measurements of the same, and a record and certificate as aforesaid; and he shall in like manner examine, measure, or estimate, and make and record a certificate of any work which is required by law to be done by a claimant. And the said recording officer shall, quarterly, file with the clerk of the probate court of the county in which said district is located a copy by him certified of all records made by him for the three months last preceding, which shall be duly recorded by said clerk, and a copy of said record duly certified by him shall be evidence of its contents in all courts of this Territory. And such recording officer shall be liable to all the penalties provided in the preceding section if he shall neglect or refuse to perform any of the acts or duties required of him by this section, but shall not be required to perform any such service until his fees for the same, to be fixed by the mining districts, are paid him, if he requests it. And if any paper deposited with him for record is required to be recorded by the clerk of the probate court, he shall at the time said paper was so deposited with him take and receive the fee fixed by law for recording such paper by said clerk, and pay the said clerk said fee when he deposits said paper with him to be recorded as aforesaid. All such mining districts may make laws not inconsistent with the laws of the Territory, may elect officers for the government of such districts, and fix their compensation, but all such acts and proceedings shall be recorded, and all records and papers thereof filed with the clerk of the probate court as aforesaid.

II.—Any number of persons, not less than twelve, owning mining claims in any mining district, or in any contiguous mining districts, or who have discovered and may wish to denounce a mine or mineral lands, not within the limits of any established mining district, may proceed to make a new mining district at a meeting of persons holding claims in such district so to be established, and of claimants in any districts to be divided or included therein. They shall cause a notice in writing, and specifying the limits of said contemplated district, signed by them, to be posted in three conspicuous places in said district, and if any part of an established district is to be included therein, by leaving a copy of said notice with the recorder of said district at least ten days before the day of said meeting. At said meeting all persons holding claims as aforesaid may vote, and may determine by a majority vote of those present whether said new district shall be established, and its limits, but within the boundaries named in the notice for said meeting, and thereupon the persons holding claims in such newly established district shall proceed to select a name, and make laws therefor, and elect a recorder, who shall be qualified as aforesaid, who shall perform all the duties and be subject to all the liabilities provided in this chapter for such officers, and shall file with the clerk of the probate court as aforesaid a record of the proceedings of this and all subsequent meetings at the time and in the manner herein provided.

Sec. 28.—It shall be the duty of all claimants of mineral tracts to sink at least one shaft of thirty feet in depth, or to run a tunnel of fifty feet in length, in the body of the vein or in the adjoining rock, so as to test the vein from the surface, for the purpose of ascertaining the character and capacity of such mineral deposit, within the space of one year from the day of first taking possession thereof, and they shall notify the recorder of the mining district that said shaft or other work is completed, and that they intend working the vein or mineral deposit. And the recorder shall examine said work in person, and make and record a certificate of the result of such examination which shall contain a statement of the condition and quality of the vein or mineral deposit, the amount of labor performed, and a general view of the results obtained. Said report shall be accompanied by three specimens taken from different parts of the work, which said specimens, with a copy of the record so made by him, shall be filed by him within the time required by this act in the office of the clerk of the probate court. And said clerk shall make a record of the same. Such specimens shall be numbered and described by him, and be preserved for the use of the mineralogical professorship of the University of Arizona.

Sec. 29.—The judge of the probate court, at any time within thirty days after the record made by the clerk of said court, as provided in the preceding section, upon complaint in writing made to him by such claimants, describing fully their claims, stating the labor performed by them, and the certificate thereof, and that the registration of the same has been made as required by law, and requesting that their title thereto may be confirmed, shall cause a summons, under the seal of his court, to be issued, requiring all persons interested to appear at a day named therein, and which shall not be less than sixty days from the day the same was issued, and show cause why the title of such complainants and claimants should not be confirmed, a copy of which complaint and summons duly attested by the clerk of the probate court, shall be published twice in the territorial newspaper, and be kept posted in the office of said clerk from the day of issuing the same to the return day thereof; and if no person shall appear on such return day to contest the right of the claimants to such claims, the judge of probate shall examine all the records filed in the office of his clerk relating to such claims, and if he finds that the said claimants have in all respects complied with the provisions of this chapter, he shall make a decree in substance that the complainants have complied with the laws of this Territory relating to the denouncement and registration of mines, have acquired a perfect title to their claims (describing the same) until the first day of January, A. D. 1868, and forever after unless abandoned by them. And the said clerk shall give the said claimant a copy of such decree, under the seal of the court, which shall be conclusive evidence of title in any proceedings relating to such claims, until they are abandoned. And unless the persons adversely interested and contesting the title of the complainants shall appear on the day named in said complaint, and proceed as hereinafter provided, they shall be forever barred from contesting the title of said complainants to such claims. And if the contestants shall so appear they shall on that day or some day to be fixed by said judge proceed to file an answer, setting forth their claim and case, and the proceedings shall then be conducted in conformity to the provisions of this chapter, and the code of civil practice. And whenever a final decree is made thereon, determining the title to said claim or mine, by said judge, or by any other court on appeal, the said judge shall cause a record to be made in the office of his clerk of such decree, and a certified copy thereof may be made as aforesaid with like effect. And any claimants of mineral lands who before this act takes effect have in any way or under any law acquired a title to such mineral lands, after filing with the clerk of the court their evidence of title and description of claim as required by this chapter, may cause an examination of the shaft sunk by them or other work done by them to be made as aforesaid, and take the like proceedings for the confirmation of their title, with the same effect: *Provided*, This section shall not apply except when the complainants are in possession of such mine or mining rights, claiming title thereto.

Sec. 30.—By reason of the Indian wars and unsettled condition of the country, the time within which a shaft is required to be sunk, or other labor performed on a claim, shall not commence until two years from the day this act takes effect, and all the provisions of this chapter relating thereto are suspended for that time; but any claimant may sink a shaft or do such other labor, and at any time after the record of their claims with the probate court, and thereupon institute proceedings to confirm their titles, and be entitled to all the rights and privileges provided for in this chapter.

Sec. 31.—No single person or company shall be compelled to sink shafts or make other improvements on more than one of the tracts of land claimed by him or them for the same vein or mineral deposit; and any number of claimants on the same vein or mineral deposit, who may unite for said purpose, shall be allowed to concentrate labor, capital, and energy to any one single point which to him or them shall be the best suited to ascertain to the best advantage the general character, quality, and capacity of that particular vein or mineral deposit, and may take the like proceedings to confirm their titles.

Sec. 32.—After the work required by section 28 of this chapter has been performed, and the record thereof made as therein provided, two years shall be allowed the claimants of mineral lands to develop the same, and procure machinery and provide for working the same; and during that time the same shall not be considered abandoned, although no work be done thereon: *Provided*, That in such an event, they shall annually, and before the 1st day of June in each year, file with the clerk of the probate court an affidavit signed by them that they have not abandoned such claims, but intend, in good faith to work them; and said term of two years shall not commence until the first day of January, A.D. 1868. And after the expiration of said term of two years, it shall be obligatory upon claimants to such mineral lands to hold actual possession of them and work the vein, which obligation shall be considered as complied with by doing at least thirty days' work thereon in each year; but if such claimants are prevented from working such vein by the hostility of Indians or other good cause, rendering such working difficult or dangerous, they may, by authority of the judge of probate first obtained, be relieved from performing labor thereon from time to time, but for not more than one year at any one time, during the continuance of such cause.

Sec. 33.—Any person who may discover a mineral vein or deposit as aforesaid, which is not included within a mining district, or which may be in a mining district in which there is no legally authorized recorder, may acquire title thereto, and to auxiliary lands, by giving notice as aforesaid, and recording the same with the clerk of the probate court of the county in which the same is situated, and may take the same proceedings, with the like effect, with the clerk of the probate court that are required to be taken with the recorder of a mining district.

Sec. 34.—Discoverers of mines on lands in the legal ownership or possession of others, and not public lands, before doing the work of sinking the shaft required by section 28 of this chapter, shall pay to such parties such compensation for the use of the same as may be awarded by the judge of probate upon complaint of either party, or shall give bond to such parties for payment of the same, and sureties to be approved by said judge; and whenever it becomes necessary or advantageous to construct tunnels for the purpose of drainage, ventilation, or the better hauling of ores or other subterraneous products or mining materials, it shall be lawful for any party or parties to construct such tunnel or drift through all private and public property: *Provided*, That all damages arising from such subterranean works to the other parties, to be determined as provided above, shall be paid by the parties for whose benefit such tunnelling is done, to be paid before such work is commenced, or security given to the satisfaction of the judge of probate for the payment of the same; but no damages shall be paid on public lands when claims for such lands shall be set up after such tunnel shall have been projected or actually in process of construction: *Provided*, That the lapse of time between projection and actual work shall not exceed ninety days, and that the tunnelling parties give timely notice of their project to any new claimant of the so affected ground.

Sec. 35.—Whenever such tunnel as mentioned in the preceding section shall intersect or traverse mineral deposits, or run along lodes claimed and held by other parties, then it shall be at the option of the owners of such other mineral deposits either to pay one-half of the expense of excavation for the distance that such tunnel runs through their mineral deposits, and secure the whole of the ores excavated, or to divide the ores with the tunnelling parties, the latter paying all expenses of excavation; or, it shall be optional with either party to abandon all claim to the ores excavated.

Sec. 36.—If, in the construction of such subterranean works, new veins or deposits are encountered in ground not claimed or owned by other parties, they shall become the property of the party for whom such tunnel is constructed, and shall be denounced and registered as is required of new mines, and shall be governed by the same laws as are prescribed in this chapter.

Sec. 37.—Any claimant or claimants not complying with any of the foregoing conditions and obligations, shall forfeit all right to any such recorded or unrecorded claims to mineral and auxiliary tracts; and it shall not be lawful for him or them to register such claims anew within a period of three years after such forfeiture. All such tracts shall be free for working and registry to any but those excepted in this section.

Sec. 38.—All veins and mineral deposits situated on public lands, which have not been worked and occupied from the time of the acquisition of the Territory by the United States up to the time of the passage of this chapter, except as herein provided, shall be considered as abandoned and subject to registry and denouncement.

Sec. 39.—All veins and mineral deposits that have been or may be abandoned hereafter shall, in all cases and respects, be governed by the laws regulating the opening and working of new veins and deposits, as prescribed in this chapter.

Sec. 40.—Whenever any mine, vein, or mineral deposit shall have been abandoned or forfeited in accordance with the provisions of this chapter, and registered anew by other parties, it shall be obligatory upon such parties to give the former owners warning thereof, so as to remove from the tract, within the space of three months, anything he or they may think valuable or useful. Such warning shall be given in the nearest newspaper published in the Territory, and by posting it at three of the most conspicuous places in the county where the mine is situated. Three months after the expiration of such warning, any and all buildings, furnaces, arrastras, metals, and every other species of property which may still remain on the ground of such mine, vein, or mineral deposit shall become the undisputed property of the new claimant, without compensation of any kind to any person whatever.

Sec. 41.—Any person taking possession of or entering upon a mining claim or auxiliary lands, registered according to the provisions of this chapter, and before it is abandoned, shall be ousted therefrom in a summary manner by the order of the probate judge, and the malfeaser shall be adjudged to pay all damages and costs consequent thereon.

Sec. 51.—It shall be the duty of persons who may discover and claim mining rights or mineral lands, at the same time that they may define the boundary of their claim or claims to any lode or mine as required by the provisions of this chapter, to lay off and define the boundary of one pertenencia, as required by the provisions of this chapter, adjoining their claim or claims, which shall be the property of the Territory of Arizona. And at the same time that they present their notice of claim or claims to be recorded by the recorder of the mining district, they shall also present to such recorder the claim of said Territory. And, if said discoverers and claimants shall neglect or refuse to present to such recorder the claim of said Territory as aforesaid, they shall forever forfeit all claim to the mine or ledge so discovered by them. Any recording officer recording the claim or claims of such discoverers and claimants, when the claim of said Territory is not filed therewith as aforesaid, shall be subject to all the penalties provided in section 26 of this chapter. Such claim shall be recorded as provided in this chapter for like claims, but no work shall be required to be done thereon, nor shall it be considered to be abandoned so long as it is the property of the Territory; and if sold, the time within which the purchaser shall be required to work said claim shall commence from the day of sale, except when the time is suspended as before provided. Every clerk of the probate court, as soon as he records the said claim, shall send a copy of his record to the treasurer of the Territory, and no fees shall be charged by any recording officer in any matter relating to said claim. And the Territorial treasurer may, at any time after six months from the day he receives such record as aforesaid, and at such time and place as in his opinion will be most for the interest of the Territory, cause such claim to be sold at auction to the highest bidder; but every such sale shall be at least twice advertised in the Territorial newspaper, and be held at his office, or the office of the clerk of the probate court, the recorder of the mining district of the county where the claim is situated. And the treasurer is authorized to make a deed of the same to the purchaser in the name of the Territory; and the amount received by him shall be added by him to any fund now or hereafter provided for the protection of the people of the Territory of Arizona against hostile Indians, and be expended as provided by law. And after all such expenses as are incurred by the Territorial authorities for the purpose of destroying or bringing into subjection all hostile Indian tribes in this Territory are liquidated, then all remaining or accruing funds, out of all or any sales of Territorial mining claims, shall be applied as a sinking fund for school purposes.,

Sec. 52.—The extraction of gold from alluvial and diluvial deposits, generally termed placer mining, shall not be considered mining proper, and shall not entitle persons occupied in it to the provisions of this chapter, nor shall any previous section of this chapter be so construed as to refer to the extraction of gold from the above-mentioned deposits.

Sec. 53.—This chapter shall be in force and take effect from and after the 1st day of January, A. D. 1865.

This is what is known as "Chapter Fifty" of the Howell Code. It has been amended as follows:

An act of placer mines and mining.—Approved December 30, 1865.

3111.—Section 1.—It shall be lawful for any person, company or association who shall place upon the mineral lands of this territory commonly called placer mining grounds, a pump or pumps, having a capacity sufficient to raise at least one hundred gallons of water per minute, with an engine or other power attached thereto, of sufficient power to work the same, with the *bona fide* intention of working the said placer grounds for the purpose of extracting the gold therefrom, to locate an amount of said placer grounds equal in extent to one quarter section, in such form and direction as he or they may elect. *Provided*, that said location shall in no case be more than one mile in length, nor less than one quarter mile in width; and, *Provided*, That said machinery shall be used at least three months in each year for raising water to extract the gold from said grounds, and the presence of machinery upon said grounds shall be the only evidence of title to said grounds; but in no case shall this act be so construed as to mean placer grounds which can be worked by water brought in ditches or flumes from any stream or other deposit of water; and said locations shall not in any case be made upon any grounds in the possession of any miner or miners at the time of location.

3112.—Sec. 2.—This act shall only apply to the county of Yuma.

Sec. 3.—This act shall take effect and be in force from and after its passage.

An act providing for the location and registration of mines and mineral deposits, and for other purposes.—Approved November 5, 1866.

District Rules.—Record.—3113.— Sec. 1.—The mining districts heretofore created in the several counties of this territory are hereby authorized and empowered to make all necessary rules and regulations for the location, registry and working of mines therein: *Provided*, That all locations and registrations of mines and mineral deposits hereafter made in any of the said districts shall be transmitted to the county recorder for record within sixty days after the same shall have been located.

Record.—Fees.—3114.—Sec. 2.—The county recorders of the several counties are authorized and required to procure suitable books in which the record of all mines and mineral deposits shall be kept, which said books shall be paid for out of the county treasury, and they shall receive for their services herein the following fees: For recording and indexing each claim not exceeding one folio, one dollar; and for each additional folio, twenty cents.

Vested Rights.—3115.—Sec. 3.—Nothing in this act shall be so construed as to affect the claims to mines and mineral deposits heretofore located and duly recorded.

3116.—Sec. 4.—The claim of the territory to all mining claims heretofore located is hereby abandoned, and the same are hereby declared open to relocation and registry: *Provided*, That nothing herein contained shall be so construed as to affect mining claims heretofore sold and disposed of by the territory.

Placers.—3117.—Sec. 5.—Nothing in this act shall be construed to apply to placer mines or mining, or other mineral deposits other than those commonly called veins or lode mines.

Acts Repealed.—3118.—Sec. 6.—Chapter fifty of the Howe code, entitled, "Of the registration and government of mines and mineral deposits," as well as all other acts or parts of acts in conflict with the provisions of this act are hereby repealed.

Sec. 7.—This act shall take effect and be in force from and after the first day of January, A. D. 1867.

An Act to provide for the segregation of mining claims.—Approved September 30, 1867.

Partition of Claims.—3119.—Sec. 1.—That whenever any one or more joint owners or tenants in common of gold, silver, copper or mineral-bearing ledges or claims may desire to work or develop such ledges or claims and any other owner or owners thereto shall fail or refuse to join in said work, after due notice of at least thirty days, given by publication in one newspaper printed in the county in which said ledges or claims are located, and if none are printed in said county, then in any newspaper printed in the territory, said notice to have publication in four successive weeks of said paper, said other owner or owners may, upon application to the district court of the district wherein the ledge or claim is situated, cause the interests of said parties so refusing to be set off or segregated as hereinafter set forth.

3120.—Sec. 2.—The owner or owners of any mineral-bearing ledge or claim after the expiration of said thirty days' notice having been given, may, if the party or parties notified fail or refuse to join in the working or developing said ledge or claim, apply to the district court of the district wherein the ledge or claim may be situated, for a partition or segregation of the interest or interests of the party or parties so failing or refusing to join.

3121.—Sec. 3.—The party or parties so applying shall set forth the fact that the said parties have been duly notified, in accordance with section one of this act, and that said party or parties have failed or refused to join in said work; all of which shall be sustained by the oath or affirmation of one or more of the parties applying; and, upon such application being made, the clerk of the said court shall post a notice at the office of the county recorder, and in two other conspicuous places within the district, stating the application, and notifying the parties interested, that unless they appear within sixty days, and show good cause why the prayer of the petitioner should not be granted, that the same will be granted if good cause can be shown.

3122.—Sec. 4.—At the expiration of said sixty days, if the party or parties notified do not appear and show good cause why the prayer of the petitioner should not be granted, the court shall appoint two commissioners to go upon the ground and segregate the claims of the parties refusing to join; and in case they do not agree, they to choose a third party; and said commissioners shall make a report in writing to said court, who shall issue a decree in conformity with said report, which shall be final, except appeal be taken to the supreme court within thirty days after issuance thereof.

3123.—Sec. 5.—The provisions of this act shall not apply to the counties of Yavapai and Pima, and the county of Yuma.

3124.—Sec. 6.—All acts and parts of acts in conflict with the provisions of this act are hereby repealed.

Sec. 7.—This act to take effect and be in force from and after its passage.

An Act Supplementary to Chapter XXXV., Howell Code, "Of the Limitation of Actions." Approved November 5, 1866.

Actions, when Barred.—2111.—Sec. 1.—No action for the recovery of property in mining claims, or for the recovery of possession thereof, shall be maintained unless it appear that the plaintiff, his ancestor, predecessor, or grantor was seized or possessed of the premises in question within two years before the commencement of the action.

2112.—Sec. 2.—No cause of action or defense to an action, founded upon the title to property in mining claims, or to the rents or profits out of the same, shall be effectual unless it appear that the person prosecuting the action, or making the defense, or under whose title the action is prosecuted or the defense is made, be the ancestor, predecessor, or grantor of such person, was seized or possessed of the premises in question within two years before the commencement of the act in respect to which such action is prosecuted or defense made.

2113.—Sec. 3.—All acts or parts of acts in conflict with this act are hereby repealed.

Sec. 4.—This act shall take effect and be in force from and after its passage.

An Act Conferring Jurisdiction of all Mining Claims on the District Court. Approved December 30, 1865.

District Courts, Jurisdiction.—Be it enactsd, etc.:—2366.—Sec. 1.—The district courts of said territory shall have exclusive original jurisdiction of all suits and proceedings relating to mines and mineral and auxiliary lands, and the registry and denouncement of the same, and all the jurisdiction, power, and authority conferred upon the probate courts and probate judges by chapter fifty of the Howell code, entitled, "Of the Registry and Government of Mines and Mineral Deposits," or otherwise, are hereby conferred upon the district courts and district judges respectively.

2367.—Sec. 2.—That section two of title one of said chapter is hereby repealed, and also all the other provisions of said chapter, conferring jurisdiction upon the probate courts and probate judges, over suits and proceedings relating to mines, mineral, and auxiliary lands, as well,as other acts and parts of acts inconsistent with the provisions of this act.

2368.—Sec. 3.—All suits and other proceedings in said probate courts, now pending therein, and over which said probate courts have jurisdiction, are hereby transferred to, and shall be continued in the district court of the county in which said suits and proceedceedings are now pending.

2369.—Sec. 4.—The clerks of the probate courts shall, within thirty days after the publication of this act, transfer to and file in the office of the district courts of their respective counties, all records and papers in suits and proceedings relating to mines, mineral, and auxiliary lands, which records and papers shall be kept and filed by the clerks of said district courts, and when so transferred and filed, said suits and proceedings shall be proceeded with as though commenced in said district courts. *Provided*, That in counties where there shall be no clerks of the district courts, the records and papers shall be transferred and filed as aforesaid within thirty days after the appointment of said clerks, and their acceptance thereof.

Sec. 5.—This act shall take effect and be in force from and after its passage.

COLORADO.—*An Act concerning Mines.*—Be it enacted by the Council and House of Representatives of Colorado:

Extent of Lode Claim.—Section 1. The length of any lode claim hereafter located may equal but not exceed 1,500 feet along the vein.

Dimensions.—Sec. 2. The width of lode claims hereafter located in Gilpin, Clear Creek, Boulder and Summit counties, shall be seventy-five feet on each side of the centre of the vein or crevice; and in all other counties the width of the same shall be 150 feet on each side of the centre of the vein or crevice: *Provided*, That hereafter any county may, at any general election, determine on a greater width, not exceeding 300 feet on each side of the centre of the vein or lode, by a majority of the legal votes cast at said election; and any county, by such vote at such election, may determine upon a less width than above specified.

Certificate of Location,—Sec. 3. The discoverer of a lode shall, within three months from the date of discovery, record his claim in the office of the recorder of the county in which such lode is situated by a location certificate, which shall contain: 1st, the name of the lode; 2d, the name of the locator; 3d, the date of location; 4th, the number of feet in length claimed on each side of the centre of the discovery shaft; 5th, the general course of the lode as near as may be.

When void.—Sec. 4. Any location certificate of a lode claim which shall not contain the name of the lode, the name of the locator, the date of location, the number of lineal feet claimed on each side of the discovery shaft, the general course of the lode, and such description as shall identify the claim with reasonable certainty, shall be void.

Discovery Shaft.—Sec. 5. Before filing such location certificate the discoverer shall locate his claim by first sinking a discovery shaft upon the lode to the depth of at least ten feet from the lowest part of the rim of such shaft at the surface, or deeper, if necessary to show a well-defined crevice. *Second*, by posting at the point of discovery on the surface, a plain sign or notice containing the name of the lode, the name of the locator, and the date of discovery. *Third*, by marking the surface boundaries of the claim.

Staking.—Sec. 6. Such surface boundaries shall be marked by six substantial posts, hewed or marked on the side or sides which are in toward the claim, and sunk in the ground, to wit:—One at each corner and one at the centre of each side line. Where it is practically impossible on account of bed-rock or precipitous ground to sink such posts, they may be placed in a pile of stones.

Open Cuts, etc.—Sec. 7. Any open cut, cross cut or tunnel which shall cut a lode at the depth of ten feet below the surface, shall hold such lode the same as if a discovery shaft were sunk thereon, or an adit of at least ten feet along the lode, from the point where the lode may be in any manner discovered, shall be equivalent to a discovery shaft.

Time.—Sec. 8. The discoverer shall have sixty days from the time of uncovering or disclosing a lode to sink a discovery shaft thereon.

Construction of Certificate.—Sec. 9. The location or location certificate of any lode claim shall be construed to include all surface ground within the surface lines thereof and all lodes and ledges throughout their entire depth, the top or apex of which lies inside of such lines extended downward, vertically, with such parts of all lodes or ledges as continue to dip beyond the side lines of the claim, but shall not include any portion of such lodes or ledges beyond the end lines of the claim, or at the end lines continued, whether by dip or otherwise, or beyond the side lines in any other manner than by the dip of the lode.

Cannot be followed.—Sec. 10.—If the top or apex of a lode in its longitudinal course extends beyond the exterior lines of the claim at any point on the surface, or as extended vertically downward, such lode may not be followed in its longitudinal course beyond the point where it is intersected by the exterior lines.

Right of Way and Right of Surface.—Sec. 11.—All mining claims now located, or which may hereafter be located, shall be subject to the right of way of any ditch or flume for mining purposes, or any tramway or pack-trail, whether now in use or which may be hereafter laid out across any such location: *Provided always,* That such right of way shall not be exercised against any location duly made and recorded and not abandoned prior to the establishment of the ditch or flume, tramway, or pack-trail, without consent of the owner, except by condemnation, as in case of land taken for public highways. Parol consent to the location of any such easement, accompanied by the completion of the same over the claim, shall be sufficient without writings. *And provided further,* That such ditch or flume shall be so constructed that the water from such ditch or flume shall not injure vested rights by flooding or otherwise.

Sec. 12—When the right to mine is in any case separate from the ownership or right of occupancy to the surface, the owner or rightful occupant of the surface may demand satisfactory security from the miner, and if it be refused, may enjoin such miner from working until such security is given. The order for injunction shall fix the amount of the bond.

Re-location of Claims.—Sec. 13.—If at any time the locator of any mining claim heretofore or hereafter located, or his assigns, shall apprehend that his original certificate was defective, erroneous, or that the requirements of the law had not been complied with before filing; or shall be desirous of changing his surface boundaries; or of taking in any part of an overlapping claim which has been abandoned; or in case the original certificate was made prior to the passage of this law, and he shall be desirous of securing the benefits of this act, such locator or his assigns may file an additional certificate, subject to the provisions of this act: *Provided,* That such relocation does not interfere with the existing rights of others, at the time of such relocation; and no such relocation, or the record thereof, shall preclude the claimant or claimants from proving any such title or titles as he or they may have held under previous location.

Proof of Development.—Sec. 14.—The amount of work done, or improvements made during each year, shall be that prescribed by laws of the United States.

Form of Affidavit.—Sec. 15.—Within six months after any set time, or annual period herein allowed for the performance of labor or making improvements upon any lode claim, the person on whose behalf such outlay was made, or some person for him, shall make and record an affidavit in substance as follows:

STATE OF COLORADO, } ss.
County of ———— }

Before me, the subscriber, personally appeared———— who, being duly sworn, said that at least————dollars' worth of work or improvements were performed or made upon [here describe the claim or part of claim] situate in————mining district, county of————State of Colorado. Such expenditure was made by or at the expense of———— owners of said claim, for the purpose of said claim.

[Jurat.] ————(Signature.)

And such signature shall be *prima facie* evidence of the performance of such labor.

Working over Old Claims.—Sec. 16.—The relocation or abandoned lode claims shall be by sinking a new discovery shaft and fixing new boundaries in the same manner as if it were the location of a new claim; or the relocator may sink the original discovery shaft ten feet deeper than it was at the time of abandonment, and erect new or adopt the old boundaries, renewing the posts if removed or destroyed. In either case a new location-stake shall be erected. In any case, whether the whole or part of an abandoned claim is taken, the location certificate may state that the whole or any part of the new location is located as an abandoned property.

Record for Claim.—Sec. 17.—No location certificate shall claim more than one location, whether the location be made by one or several locators. And if it purport to claim more than one location, it shall be absolutely void, except as to the first location therein described. And if they are described together, so that it cannot be told which location is first described, the certificate shall be void as to all.

Sec. 18.—All acts or parts of acts in conflict with this act are hereby repealed.

Sec. 19.—This act shall be in force from and after June 15, 1874. Approved February 13, 1874.

Supplementary Act.—Be it enacted by the Council and House of Representatives of Colorado:

Jurisdiction of Authorities.—Sec. 1.—In all actions pending in any district court of this Territory, wherein the title or right of possession to any mining claim shall be in dispute, the said court, or the judge thereof, may, upon application of any of the parties to such suit, enter an order for the underground as well as the surface survey of such part of the property in dispute as may be necessary to a just determination of the question involved. Such order shall designate some competent surveyor, not related to any of the parties to such suit, or in anywise interested in the result of the same; and upon the application of the party adverse to such application, the court may also appoint some competent surveyor to be selected by such adverse applicant, whose duty it shall be to attend upon such survey, and observe the method of making the same; said second survey to be at the cost of the party asking therefor. It shall also be lawful in such order to specify the names of witnesses named by either party, not exceeding three on each side, to examine such property, who shall hereupon be allowed to enter into such property and examine the same; said court, or the judge thereof, may also cause the removal of any rock, debris, or other obstacle in any of the drifts or shafts of said property, when such removal is shown to be necessary to a just determination of the questions involved: *Provided, however,* That no such order shall be made for survey and inspection, except in open court or in chambers, upon notice of application for such order of at least six days, and not then except by agreement of parties or upon the affidavit of two or more persons that such survey and inspection is necessary to the just determination of the suit, which affidavits shall state the facts in such case, and wherein the necessity for survey exists; nor shall such order be made unless it appears that the party asking therefor has been refused the privilege of survey and inspection by the adverse party.

Writs restoring possession.—Sec. 2.—The said district courts of this State, or any judge thereof, sitting in chancery, shall have, in addition to the power already possessed, power to issue writs of injunction for affirmative relief, having the force and effect of a writ of restitution, restoring any person or persons to the possession of any mining property from which he or they may have been ousted, by force and violence, or by fraud, or from which they are kept out of possession by threats, or whenever such possession was taken from him or them by entry of the adverse party on Sunday or a legal holiday, or while the party in possession was temporarily absent therefrom. The granting of such writ to extend only to the right of possession under the facts of the case in respect to the manner in which the possession was obtained, leaving the parties to their legal rights on all other questions as though no such writ had issued.

Penalties following unlawful entry.—Sec. 3.—In all cases where two or more persons shall associate themselves together for the purpose of obtaining the possession of any lode, gulch or placer claim, then in the actual possession of another, by force and violence, or threats of violence, or by stealth, and shall proceed to carry out such purpose by making threats against the party or parties in possession, or who shall enter upon such lode or mining claim for the purpose aforesaid, or who shall enter upon or into any lode, gulch, placer claim, quartz-mill or other mining property, or not being upon such property, but within hearing of the same, shall make any threats, or make use of any language, signs or gestures, calculated to intimidate any person or persons at work on said property from continuing to work thereon or therein, or to intimidate others from engaging to work thereon or therein, every such person so offending shall, on conviction thereof, be fined in a sum not to exceed $250, and be imprisoned in the county jail not less than thirty days nor more than six months; such fine to be discharged either by payment or by confinement in said jail until such fine is discharged at the rate of $2·50 per day. On trials under this section, proof of a common purpose of two or more persons to obtain possession of property, as aforesaid, or to intimidate laborers as above set forth, accompanied or followed by any of the acts above specified by any of them, shall be sufficient evidence to convict any one committing such acts, although the parties may not be associated together at the time of committing the same.

Force or Violence.—Sec. 4.—If any person or persons shall associate and agree to enter or attempt to enter by force of numbers, and the terror such numbers are calculated to inspire, or by force and violence, or by threats of violence against any person or persons in the actual possession of any lode, gulch or placer claim, and upon such entry or attempted entry, any person or persons shall be killed, said persons, and all and each of them so entering or attempting to enter, shall be deemed guilty of murder in the first degree, and punished accordingly. Upon the trial of such cases, any person or parties cognizant of such entry, or attempted entry, who shall be present, aiding, assisting, or in anywise encouraging such entry, or attempted entry, shall be deemed a principal in the commission of said offence.

Sec. 5.—This act shall take effect and be in force from and after its passage.

Approved February 13, 1874.

Placer Mining Claims.—Be it enacted by the General Assembly of the State of Colorado (March 12, 1879):

Section 1. The discoverer of a placer claim shall, within thirty days from the date of discovery, record his claim in the office of the recorder of the county in which said claim is situated, by a location certificate, which shall contain: *First*, the name of the claim, designating it as a placer claim. *Second*, the name of the locator. *Third*, the date of location. *Fourth*, the number of acres or feet claimed. And. *Fifth*, a description of the claim by such reference to natural objects or permanent monuments as shall identify the claim.

Before filing such location certificate, the discoverer shall locate his claim: *First*, by posting upon such claim a plain sign or notice, containing the name of the claim, the name of the locator, the date of discovery, and the number of acres or feet claimed. *Second*, by marking the surface boundaries with substantial posts, and sunk in the ground, to wit: One at each angle of the claim.

Sec. 2. On each placer claim of one hundred and sixty acres or more heretofore or hereafter located, and until a patent has been issued therefor, not less than one hundred dollars' worth of labor shall be performed or improvements made by the first day of August, 1879, and by the first day of August of each year thereafter. On all placer claims containing less than one hundred and sixty acres, the expenditure during each year shall be such proportion of one hundred dollars, as the number of acres bears to one hundred and sixty. On all placer claims containing less than one hundred and sixty acres, the expenditure during each year shall be such proportion of one hundred dollars, as the number of acres bears to one hundred and sixty. On all placer claims containing less than twenty acres, the expenditures during each year shall not be less than twelve dollars; but when two or more claims lie contiguous, and are owned by the same person, the expenditure hereby required for each claim may be made on any one claim; and upon a failure to comply with these conditions, the claim or claims upon which such failure occurred, shall be open to relocation, in the same manner as if no location of the same had ever been made; *provided*, that the original locators, their heirs, assigns, or legal representatives, have not resumed work upon the claim after failure and before such location; *provided*, the aforesaid expenditures may be made in building or repairing ditches to conduct water upon such ground, or in making other mining improvements necessary for the working of such claim.

Upon the failure of any one of several co-owners to contribute his proportion of the expenditures required hereby, the co-owners who have performed the labor or made the improvements, may at the expiration of the year, to wit: the 1st of August, 1879, for the locations heretofore made, and one year from the date of locations hereafter made, give such delinquent co-owner personal notice in writing, or if he be a non-resident of the state, a notice by publication in the newspaper published nearest the claim for at least once a week for ninety days, and mailing him a copy of such newspaper if his address be known; and if at the expiration of ninety days after such notice in writing, or after the first publication of such notice, such delinquent should fail or refuse to contribute his proportion of the expenditure required by this action [section], his interest in the claim shall become the property of his co-owners who have made the required expenditures.

Miscellaneous General Laws, 1877.—*Taxation.*—Extract from the Constitution of Colorado:

Art. x, Sec. 3.—Page 58. Mines and mining claims bearing gold, silver, and other precious metals (except the net proceeds and surface improvements thereof), shall be exempt from taxation for the period of ten years from the date of the adoption of this constitution (July 1, 1876), and thereafter may be taxed as provided by law.

Penal Provisions.—764. Sec. 169. If any person shall knowingly have, keep, or use any false or fraudulent scales or weights for weighing gold or gold dust, or any other article or commodity, every such person so offending shall, on conviction, be fined not exceeding five hundred dollars, or imprisoned in the county jail not exceeding six months.

765. Sec. 170. The owner, manager, or agent of any species of quartz mill, arrastra mill, furnace, or cupel, employed in extracting gold from quartz, pyrites, or other minerals, who shall neglect or refuse to account for or pay over and deliver all the proceeds thereof to the owner of such quartz, pyrites, or other minerals, excepting such portion of said proceeds as he is entitled to in return for his services, shall, on conviction, be fined in a sum not exceeding one thousand dollars, or be imprisoned in the penitentiary not exceeding one year.

776.—Sec. 181.—That every person who shall mingle or cause to be mingled with any sample of gold or silver bearing ore, any valuable metal or substance whatever, that will increase or in any way change the value of said ore, with the intent to deceive, cheat, or defraud any person or persons, shall, on conviction thereof, be punished by a fine not less than $500 nor more than $1,000, or by confinement in the penitentiary for a term of not less than one nor more than fourteen years, or by both such fine and imprisonment.

1603.—Sec. 1.—That if any person or persons shall wilfully and maliciously deface, remove, pull down, injure, or destroy any location-stake, side-post, corner-post, land-mark, or monument, or any other legal land boundary monument in this state, designating, or intending to designate the location, boundary, or name of any mining claim, lode, or vein of mineral, or the name of the discoverer, or date of discovery thereof; the person or persons so offending shall be guilty of a misdemeanor, and, on conviction thereof, shall be fined not more than one thousand dollars, or imprisoned not more than one year, at the discretion of the court: *Provided*, that this act shall not apply to abandoned property.

673.—Sec. 78.—Every person who shall mingle or procure to be mingled with any uncoined gold or gold dust now current, or which shall hereafter be current in this state, any counterfeit gold dust, or counterfeit uncoined gold, or any base metal or substance whatever, with intent to utter or pass the same, or to procure the same to be uttered or passed as gold dust or uncoined gold, shall, on conviction thereof, be punished by a fine not to exceed one thousand dollars, or by confinement in the penitentiary for a term not less than one year nor more than fourteen years.

1961.—Sec. 5.—Any person, association, or corporation, or the agent of any person, association, or corporation, who shall knowingly purchase or contract to purchase, or shall make any payment for or on account of any ore, which shall have been taken from any mine or claim, by persons who have taken or may be holding possession of any such mine or claim, contrary to any penal law now in force, or which may be hereafter enacted, shall be considered as an accessory after the fact to the unlawful holding or taking of such mine or claim, and upon conviction shall be subjected to the same punishment to which the principals may be liable.

1962.—Sec. 6.—Any person, association, or corporation, or the agent of any person, association, or corporation engaged in the business of milling, sampling, concentrating, reducing, shipping, or purchasing ores as aforesaid, who shall keep or use any false or fraudulent scales or weights for weighing ore, or who shall keep or use any false or fraudulent assay scales or weights for ascertaining the assay value of ore, knowing them to be false, every person so offending shall be deemed guilty of a misdemeanor, and on conviction thereof, shall be fined in a sum not exceeding one thousand (1,000) dollars, nor less than one hundred (100) dollars, or imprisonment not more than one year, or both, at the discretion of the court.

1063.—Sec. 7.—Any person, corporation, or association, or the agent of any person, corporation, or association, engaged in the milling, sampling, concentrating, reducing, shipping, or purchasing of ores in this state, who shall, in any manner, knowingly alter or change the true value of any ores delivered to him or them, so as to deprive the seller of the result of the correct value of the same, or who shall substitute other ores for that delivered to him or them, or who shall issue any bill of sale or certificate of purchase that does not exactly and truthfully state the actual weight, assay value, and total amount paid for any lot or lots of ore purchased, or who, by any secret understanding or agreement with another, shall issue a bill of sale or certificate of purchase that does not truthfully and correctly set forth the weight, assay value, and total amount paid for any lot or lots of ore purchased by him or them, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be fined in a sum not exceeding one thousand (1,000) dollars, nor less than one hundred (100) dollars, or imprisonment not more than one year, or both, at the discretion of the court.

1964. Sec. 8.—If any person, lessee, licensee, or employee in or about any mine in this State, shall break and sever, with intent to steal the ore or mineral from any mine, lode, ledge, or deposit in this State, or shall take, remove, or conceal the ore or mineral from any mine, lode, ledge, or deposit, with intent to defraud the owner or owners, lessee, or licensee of any such mine, lode, ledge, or deposit, such offender shall be deemed guilty of felony, and on conviction, shall be punished as for grand larceny.

Drainage.—1830.—Sec. 1.—Whenever contiguous or adjacent mines upon the same or upon separate lodes have a common ingress of water, or from subterraneous communication of the water have a common drainage, it shall be the duty of the owners, lessees or occupants of each mine so related to provide for their proportionate share of the drainage thereof.

Penalty for Non-Compliance.—1831.—Sec. 2.—Any parties so related failing to provide as aforesaid for the drainage of the mines owned or occupied by them, thereby imposing an unjust burden upon neighboring mines, whether owned or occupied by them, shall pay respectively to those performing the work of drainage their proportion of the actual and necessary cost and expense of doing such drainage, to be recovered by an action in any court of competent jurisdiction.

Common Interests.—1832.—Sec. 3.—It shall be lawful for all mining corporations or companies, and all individuals engaged in mining, who have thus a common interest in draining such mines, to unite for the purpose of effecting the same, under such common name and upon such terms and conditions as may be agreed upon; and every such association having filed a certificate of incorporation, as provided by law, shall be deemed a corporation, with all the rights, incidents and liabilities of a body corporate, so far as the same may be applicable.

Subject to Action.—1833.—Sec. 4.—Failing to mutually agree, as indicated in the preceding section for drainage jointly, one or more of the said parties may undertake the work of drainage after giving reasonable notice; and should the remaining parties then fail, neglect or refuse to unite in equitable arrangements for doing the work, or sharing the expense thereof, they shall be subject to an action therefor as already specified, to be enforced in any court of competent jurisdiction.

Action to Recover.—1834.—Sec. 5.—When an action is commenced to recover the cost and expenses for draining a lode or mine, it shall be lawful for the plaintiff to apply to the court, if in session, or to the judge thereof in vacation, for an order to inspect and examine the lodes or mines claimed to have been drained by the plaintiff; or some one for him shall make affidavit that such inspection or examination is necessary for the proper preparation of the case for trial; and the court or judge shall grant an order for the underground inspection and examination of the lode or mines described in the petition. Such order shall designate the number of persons, not exceeding three, besides the plaintiff or his representative, to examine and inspect such lode and mines, and take the measurement thereof, relating to the amount of water drained from the lode or mine, or the number of fathoms of ground mined and worked out of the lode or mines claimed to have been drained, the cost of such examination and inspection to be borne by the party applying therefor. The court or judge shall have power to cause the removal of any rock, debris, or other obstacles in any lode or vein, when such removal is shown to be necessary to a just determination of the question involved: *Provided,* That no such order for inspection and examination shall be made, except in open court or at chambers, upon notice of application for such order of at least three days, and not then except by agreement of parties, nor unless it appears that the plaintiff has been refused the privilege of making the inspection and examination by the defendant or defendants, or his or their agent.

Water Rights.—1835.—Sec. 6.—That hereafter, when any person or persons, or corporation, shall be engaged in mining or milling, and in the prosecution of such business shall hoist or raise water from mines or natural channels, and the same shall flow away from the premises of such persons or corporations, to any natural channel or gulch, the same shall be considered beyond the control of the party so hoisting or raising the same, and may be taken and used by other parties the same as that of natural water-courses.

1836.—Sec. 7.—After any such water shall have been so raised, and the same shall have flown into any such natural channel, gulch or draw, the party so hoisting or raising the same shall only be liable for injury caused thereby, in the same manner as riparian owners along natural water-courses.

Explanatory.—1837.—Sec. 8.—The provisions of this act shall not be construed to apply to incipient or undeveloped mines, but to those only which shall have been opened, and shall clearly derive a benefit from being drained.

Evidence.—1838.—Sec. 9.—In trial of cases arising under this act the court shall admit evidence of the normal stand or position of the water while at rest in an idle mine, also the observed prevalence of a common water-level or a standing water-line in the same or separate lodes; also the effect, if any, the elevating or depressing the water by natural or mechanical means in any given lode has upon elevating or depressing the water in the same, contiguous or separate lodes or mines; also the effect which draining or ceasing to drain any given lode or mine had upon the water in the same, or contiguous or separate lodes or mines, and all other evidence which tends to prove the common ingress or subterraneous communication of water into the same lode or mine, or contiguous or separate lodes or mines.

Approved March 16, 1877.

Ore.—1957.—Sec. 1.—That every person, association or corporation that shall be engaged in the business of milling, sampling, concentrating, reducing, shipping or purchasing ores in the State of Colorado, shall keep and preserve a book in which shall be entered at the time of the delivery of each lot of ore:

First.—The name of the party on whose behalf such ore is delivered, as stated.

Second.—The name of the teamster, packer or other persons actually delivering such ore, and the name of the owner of the team or pack train delivering such ore.

Third.—The weight or amount of every such lot of ore.

Fourth.—The name and location of the mine or claim from which it shall be stated that the same has been mined or procured.

Fifth.—The date of delivery of any and all lots or parcels of ore.

1958.—Sec. 2.—Whenever affidavit shall have been made before any police magistrate of any town in this State, or any justice of the peace of any county, by any person, that ore has been stolen from him, stating as near as may be the amount and value of the ore stolen, such person upon presentation of a certified copy of such affidavit, shall have access to such book, and may examine the entries which may have been made therein during a period of fifteen days next preceding the filing of such affidavit: *Provided,* That the person making such affidavit shall, at the time of making the same, have a present interest in the product of the mine or claim from which said ore has been stolen, or in the ore alleged to have been stolen.

1959.—Sec. 3.—Every person, association or corporation that shall fail or refuse to keep the book required by the terms of the first section of this act, or shall fail or refuse to make any proper entry therein, or who shall make any false entry therein, or who shall refuse to any person who may be entitled to the same, as provided by section two (2) of this act, the right of inspection thereof, shall forfeit and pay for each and every violation of the provisions of said section a penalty of not less than fifty (50) nor more than three hundred (300) dollars, to be collected by action of debt at the suit of any person who may sue for the same. In addition to such penalty, any person, association or corporation violating the provisions of said first section, shall be liable at the suit of the party or persons aggrieved, in the proper form of action, for all damages which may accrue to any party or person by reason of such violation. And in all actions the fact that a false entry has been made shall be *prima facie* evidence that the same was made wilfully and knowingly.

1960.—Sec. 4.—If any person, association or corporation shall fail or neglect to make the inquiries necessary to the making of the proper entries in said book, as provided in section one (1) of this act, or shall so negligently make entries therein that any lot of ore cannot be particularly identified, or so negligently that it cannot be perceived therefrom what person delivered any lot of ore or received the proceeds of the same when purchased, or shall fail to keep such book, or shall wilfully suffer the same to be lost or mislaid, so that the same cannot be produced for inspection, such failure or neglect shall not excuse any party defendant in any suit brought under the preceding section from judgment from any penalty prescribed by said section.

Water Rights.—1789.—Sec. 2.—Whenever any person or persons are engaged in bringing water into any portion of the mines, they shall have the right of way secured to them, and may pass over any claim, road, ditch, or other structure; *provided,* the water be guarded so as not to interere with prior rights.

1821.—Sec. 11.—All mining claims now located, shall be subject to the right of way of any ditch or flume for mining purposes, or of any tramway or pack-trail, whether now in use, or which may be hereafter laid out across any such location; *provided, always,* that such right of way shall not be exereised against any location duly made and recorded, and not abandoned prior to the establishment of the ditch, flume, tramway, or pack-trail, without consent of the owner, except by condemnation, as in case of land taken for public highways. Parol consent to the location of any such easement, accompanied by the completion of the same over the claim, shall be sufficient without writings, *and provided further,* that such ditch or flume shall be so constructed that the water from such ditch or flume shall not injure vested rights by flooding or otherwise.

2279.—Sec. 3.—* * And water sold by the inch by any individual or corporation, shall be measured as follows, to wit: Every inch shall be considered equal to an inch square orifice under a five-inch pressure, and a five-inch pressure shall be from the top of the orifice of the box put into the banks of the ditch, to the surface of water; said boxes, or any dot or aperture through which such water may be measured, shall in all cases be six inches perpendicular inside measurement, except boxes delivering less than twelve inches, which may be square, with or without slides; all slides for the same shall move horizontally and not otherwise; and said box put into the banks of ditch shall have a descending grade from the water in ditch of not less than one-eighth of an inch to the foot.

Tailings.—1804.—Sec. 8.—In no case shall any person or persons be allowed to flood the property of another person with water, or wash down the tailings of his or their sluice upon the claim or property of other persons, but it shall be the duty of every miner to take care of his own tailings, upon his own property, or become responsible for all damages that may arise therefrom.

Hauling Quartz.—1805.—Sec. 9.—Every miner shall have the right of way across any and all claims for the purpose of hauling quartz from his claim,

Mining Claims, Real Estate, Actions.—185.—Sec. 26.—The terms " land " and " real estate," as used in this chapter, shall be construed as co-extensive in meaning with the terms "lands, tenements, hereditaments," and as embracing mining claims and other claims, and chattels real. The term "deed" includes mortgages, leases, releases, and every conveyance or encumbrance under seal.

2126.—Sec. 3.—The owner of every claim or improvement, on every tract or parcel of land, has a transferable interest therein, which may be sold in execution or otherwise; and any sale of such improvement is a sufficient consideration to sustain a promise.

2131.—Sec. 8.—Any person settled upon any of the public lands belonging to the United States, may maintain trespass *quare clausum fregit* trespass ejectment, forcible entry and detainer, unlawful detainer, and forcible detainer for injuries done to the possession thereof.

2135—Sec. 12.—Any person who may have a title to occupy any lot or lots within any city or village or village plot, or any lots or mining claim within any mining district in this state, in virtue of a certificate, deed of gift or purchase from the original claimant or claimants, or their assigns, as well as all purchasers under any decree or execution of any of the so-called provisional government courts, peoples' or miners' courts, of the lands, situate within any city or village plot, or any lots, land, or mining claims situate within any mining district, together with the original claimant or claimants of said lots, land, or mining claims, shall be entitled to maintain the actions authorized by the eighth section of this chapter, against any and all persons who shall enter upon and occupy said lots, lands, or mining claims, or any of them; *provided*, it shall be lawful for the citizens of any mining district to declare an abandonment of any creek, river, gulch, bank, or mining claim a forfeiture of the rights of the claimants thereto; in which case the parties claimant shall not be enabled to maintain either of the actions mentioned in section eight of this chapter.

2136.—Sec. 13.—Nothing in this chapter contained shall be construed to deny the right of the United States to dispose of any lands in this state; nor shall the fact that the title to any lots, lands, lodes, or mining claims hath not passed from the United States, be any bar to the recovery of the plaintiff in either of the actions specified in section eight of this chapter. As against the United States, and all persons holding any of said lands under the United States, or the laws thereof, this chapter shall be of none effect and void.

Foreign Corporations.—213.—Sec. 23.—Foreign corporations shall, before they are authorized or permitted to do any business in this state, make and file a certificate signed by the president and secretary of such corporation, duly acknowledged, with the secretary of state, and in the office of the recorder of deeds of the county in which such business is carried on, designating the principal place where the business of such corporation shall be carried on in this state, and an authorized agent or agents in this state residing at its principal place of business upon whom process may be served; and such corporations shall be subjected to all the liability, restrictions and duties which are or may be imposed upon corporations of like character organized under the general laws of this state, and shall have no other or greater powers.

And no foreign or domestic corporation established or maintained in any way for pecuniary profit of its stockholders or members, shall purchase or hold real estate in this state, except as provided for in this Act, and no corporation doing business in this state, incorporated under the laws of any other state, shall be permitted to mortgage, pledge or otherwise encumber its real or personal property situated in this state, to the injury or exclusion of any citizen, citizens or corporations of this state who are creditors of such foreign corporation; and no mortgage by any foreign corporation, except railroad and telegraph companies, given to secure any debt created in any other state, shall take effect as against any citizen or corporation of this state, until all its liabilities due to any person or corporation in this state at the time of recording such mortgage, have been paid and extinguished.

214.—Sec. 24.—Every company incorporated under the laws of any foreign state or kingdom, or of any state or territory of the United States, beyond the limits of this state, and now or hereafter doing business within this state, shall file in the office of the secretary of state a copy of their charter of incorporation, or in case such company is incorporated by certificate under any general incorporation law, a copy of such certificate, and of such general incorporation law, duly certified and authenticated by the proper authority of such foreign state, kingdom or territory.

215.—Sec. 25.—A failure to comply with the provisions of sections twenty-three and twenty-four of this Act shall render each and every officer, agent and stockholder of any such corporation so failing therein, jointly and severally personally liable on any and all contracts of such company made within this state during the time that such corporation is so in default.

NEW MEXICO.—An act to regulate the manner of locating mining claims, and for other purposes.

Be it enacted by the Legislative Assembly of the Territory of New Mexico:

Sec. 1.—That any person or persons desiring to locate a mining claim upon a vein or lode of quartz or other rock in place—bearing gold, silver, cinnabar, lead, tin, copper or other valuable deposit, must distinctly mark the location on the ground, so that its boundaries may be readily traced; and post in some conspicuous place on such location a notice in writing, stating thereon the name or names of the locator or locators, his or their intention to locate the mining claim, giving a description thereof by reference to such natural object or permanent monument as will identify the claim; and also within three months after posting such notice, cause to be recorded a copy thereof in the office of the recorder of the county in which the notice is posted; and it is provided that no other record of such notice shall be necessary.

Sec. 2.—In order to carry out the intent of the preceding section, it is hereby made the duty of the probate judges of the several counties of this Territory, and they are hereby required to provide, at the expense of their respective counties, such book or books as may be necessary and suitable in which to enter the record hereinbefore provided for. The fees for recording such notices shall be ten cents for every one hundred words.

Sec. 3.—That in estimating the worth of labor required to be performed upon any mining claim, to hold the same by the laws of the United States, in the regulation of mines, the value of a day's labor is hereby fixed at the sum of four dollars: *Provided, however*, That in the sense of this statute, eight hours of labor actually performed upon the mining claim shall constitute a day's labor.

Sec. 4.—All locations heretofore made in good faith, to which there shall be no adverse claims, the certificate of which locations have been or may be filed for record and recorded in the recorder's office of the county where the location is made, within six months after the passage of this act, are hereby confirmed and made valid. But where they may appear to be any such adverse claim, the said location shall be held to be the property of the person having the superior title or claim, according to the laws in force at the time of the making of the said locations.

Sec. 5.—An action of ejectment will lie for the recovery of the possession of a mining claim, as well as of any real estate, where the party suing has been wrongfully ousted from the possession thereof, and the possession wrongfully detained.

Sec. 6.—That "an act concerning mining claims," approved January 18, 1865, and an act amendatory thereof, approved January 3d, 1866; also, an act entitled an act to amend certain acts concerning mining claims in the Territory of New Mexico, approved January 1, 1872; be and the same are hereby repealed: *Provided*, That no locations completed under said acts shall be invalidated, or in anywise affected by such repeal.

Sec. 7.—That this act shall take effect and be in full force from and after its passage.

Approved January 11, 1876.

The following is the work of the last legislature of New Mexico:

Be it enacted by the Legislature Assembly of the Territory of New Mexico:

Sec. 1. Hereafter in actions regarding mining claims, proof must be admitted of the customs, usages, or regulations established and in force in the mining district embracing such claim, and such customs, usages or regulations, when not in conflict with the laws of this Territory, or the United States, must govern the decision of the action.

Sec. 2. Any person or persons claiming or staking upon the surface ground of the mining claim of another who has complied with all laws, regulations and customs, shall be guilty of a misdemeanor, and upon conviction thereof, shall be fined in any sum not less than ten, nor more than one hundred dollars, or shall be punished by imprisonment in the county jail not less than ten, or more than ninety days or both, at the discretion of the court.

Sec. 3. Any person or persons who have their stakes, monuments, or notices upon the surface ground of any mining claim belonging to others, shall within sixty days of the passage of this act, remove such stakes, monuments, or notices from the surface ground of such mining claim, and upon failure to do so, shall be subject to the penalties set forth in section two of this act.

Sec. 4. Within sixty days after the period fixed by the United States laws for doing the assessment on mining claims, the owner shall file with the county and district recorders, an affidavit stating that the full amount has been expended as required by law. Failure to file such affidavit as herein required, shall be construed as prima facie evidence of abandonment of such claim or claims; and provided that the fee of such recorder shall not exceed fifty cents; and for each certified record. All laws and parts of laws in conflict with this act are hereby repealed.

This act shall be in full force and effect from and after the first day of April, A. D., 1882.

CALIFORNIA.—*Water Rights.*—1410.—The right to the use of running water flowing in a river or stream, or down a canon or ravine may be aquired by appropriation.

1411.—The appropriation must be for some useful or beneficial purpose, and when the appropriator or his successor in interest ceases to use it for such a purpose, the right ceases.

1412.—The person entitled to the use may change the place of diversion, if others are not injured by such change, and may extend the ditch, flume, pipe or aqueduct by which the diversion is made, to places beyond that where the first use was made.

1413.—The water appropriated may be turned into the channel of another stream and mingled with its water, and then reclaimed; but in reclaiming it the water already appropriated by another must not be diminished.

1414.—As between appropriators, the one first in time is the first in right.

1415.—A person desiring to appropriate water must post a notice, in writing, in a conspicuous place at the point of intended diversion, stating therein:

1. That he claims the water there flowing to the extent of (giving the number) inches, measured under a four-inch pressure:

2. The purposes for which he claims it, and the place of intended use.

3. The means by which he intends to divert it, and the size of the flume, ditch, pipe, or aqueduct in which he intends to divert it,

A copy of the notice must, within ten days after it is posted, be recorded in the office of the Recorder of the county in which it is posted.

1416.—Within sixty days after the notice is posted, the claimant must commence the excavation or construction of the works in which he intends to divert the water, and must prosecute the work diligently and uninterruptedly to completion, unless temporarily interrupted by snow or rain.

1417.—By " completion " is meant conducting the waters to the place of intended use.

1418.—By a compliance with the above rules, the claimant's right to the use of the water relates back to the time the notice was posted.

1419.—A failure to comply with such rules deprives the claimant of the right to the use of the water as against a subsequent claimant who complies therewith.

1420.—Persons who have heretofore claimed the right to water, and who have not constructed works in which to divert it, and who have not diverted nor applied it to some useful purpose, must, after this title takes effect, and within twenty days thereafter proceed as in this Title, provided, or their right ceases. Civil Code, Annotated, Title viii., p. 402.

[The above law expresses the usual manner of securing water rights in the mining states and territories. See Copp's U. S. Mineral Lands.]

*Mineral Lands on School Sections.**—An Act regulating the sale of mineral lands belonging to the State of California.

Sec. 1.—Any person desiring to purchase from this State any portion of any sixteenth or thirty-sixth section, that shall have been designated by United States survey as of a mineral character, or which is so in fact, shall make an affidavit before some officer authorized to administer oaths, that he or she is a citizen of the United States; or, if a foreigner, that he has filed his intention to become a citizen of the United States; that he or she is of lawful age, and desires to purchase said land, giving a description thereof by legal subdivisions; that he or she has not entered any portion of such mineral lands which, together with that applied for in such affidavit, will exceed forty acres; that there is no occupation of said land adverse to that which he or she holds; or, if there be any adverse occupation thereof, then he or she must state the name of such adverse occupant, together with the fact that the plat of the township has been on file six months or over, and that such adverse occupant has been in such occupation six months or over.

Sec. 2.—Any person that shall be in the actual possession of any of said lands described in section one, at the time of the survey thereof by the United States, or at the time of the passage of this act shall be considered a preferred purchaser thereof to the extent of his or her mining claim: *Provided*, he or she make application for the purchase of the same on or before the first day of January, 1877, if the plat of such survey be already filed in the United States Land Office, and if not so filed, then within six months after the filing of such plat as aforesaid.

Sec. 3.—When a contest shall arise as to the mineral character of the lands applied for, or from any other cause, the Surveyor-General, or the Register before whom the contest is made, must, within thirty days after the adverse application is filed, unless sooner referred at the request of either claimant, make an order referring such contest to the Superior Court of the county within which the land is situated, and must enter such order in the proper book of his office, and forward a copy thereof to the clerk of the court to which the reference is made. Upon the filing of a copy of such order with the clerk of the court, either party may commence an action in said court to determine the conflict, and the court shall have full and complete jurisdiction to hear and determine the same. Unless an action shall be commenced within ninety days after the copy of the order of reference shall have been filed with the clerk of the court, the party making such demand, or the adverse claimant, if the case is referred without demand, shall be deemed to have waived and surrendered his or her right to purchase, and the Surveyor-General or Register shall proceed as though his or her application had not been made.

Sec. 4.—All lands sold under the provisions of this act shall be sold for the sum of two dollars and fifty cents per acre in United States gold coin, payable to the Treasurer of the county in which the lands are situated, within fifty days from the date of the approval by the Surveyor-General; and in case said payment is not made within said fifty days, the land described in the location shall revert to the State without suit, and said location shall be and become null and void. All payments made to the County Treasurer as above provided, shall be paid over and accounted for as other moneys received for State lands are required to be paid over and accounted for.

Sec. 5.—The Surveyor-General and Register shall, in the matter of approving locations, issuing certificates of purchase or patents, or in other proceedings relating to the sale of lands of a mineral character, which proceedings are not provided for in this act, proceed in the same manner as is now provided for the sale of sixteenth and thirty-sixth sections which are not of a mineral character.

Sec. 6.—All patents issued by the State to any portion of any sixteenth or thirty-sixth section shall be subject to any vested and accrued water-rights, ditches, and reservoirs used in connection therewith, acquired by priority of possession under local customs and the decisions of the courts, and the right of way for the construction of ditches and canals for mining and other purposes, over all of the sixteenth and thirty-sixth sections owned by the State, is hereby granted and confirmed.

Sec. 7.—After the passage of this act, no patents shall be issued for any of the lands described in this act upon which, at the time of the application therefor, there was and still is any actual *bona fide* mining claim, except to the person who is the owner of such mining claim under local mining customs; and when an applicant for such lands, not owning such mining claim, shall have paid the purchase-money therefor, in whole or in part, he may present his certificate of purchase and receive in exchange therefor, from the Register, a certificate showing the whole amount paid; and the Controller, upon the surrender of such certificate, must draw his warrant in favor of the person surrendering such certificate, for the amount therein specified, on the Treasurer of the State, who must pay the sum out of the funds into which the purchase money was paid: *Provided*, That the owner of such mining-claim, under such mining customs, shall apply to purchase the same within six months after the plat of the township containing such land shall have been filed in the local United States land office, on or before the first day of January, 1877: *And provided further*, That any owner of a *bona fide* mining claim who shall have entered into an agreement with the applicant for any portion of a sixteenth or thirty-sixth section upon which said mining claim is situated, for the procurement of a title for the same, shall not avail himself of the provisions of this section. The Governor of this State shall not sign any patent contrary to the provisions of this act.

UTAH.—*Of Mines and Mining.*—AN ACT to provide rules for the working and development of mines.—Approved February 16, 1872.—(1218) Sec. 1.—Be it enacted by the Governor and Legislative Assembly of the Territory of Utah: That any citizen of the United States, and any person who shall have declared his intention to become such, who shall hereafter discover any mineral deposit, lead, or lode, bearing gold, silver, tin, platina, copper, or cinnabar, shall be entitled to one claim thereon, by right of discovery, and one claim by right of location: *Provided*, That no person shall be entitled to more than one claim by right of location, on any one lead or lode.

(1219) Sec. 2.—Any person or persons who shall willfully or maliciously tear down or deface a notice posted on any mining claim, or take up or destroy any stake or monument, marking any such claim, or interfere with any person lawfully in possession of said claim, or who shall alter, erase, deface, or destroy any record kept by a mining recorder, shall be guilty of misdemeanor, and upon conviction thereof shall be punished by a fine of not less than twenty-five nor more than one hundred dollars, or by imprisonment for not less than ten days nor more than six months, or by both such fine and imprisonment. Justices of the Peace, in their respective counties, shall have jurisdiction of such offences.

(1220) Sec. 3.—Any person wrongfully entering upon any mine or mining claim, and carrying away ores therefrom, or extracting or selling ores from any mine, being the property of another, shall be liable to the owner or owners of said ore for three times the value thereof, recoverable by an action at law; and should the plaintiff file his affidavit that the defendant did unlawfully take such ores, the defendant may be arrested and held to bail, as in cases for the recovery of the possession of personal property unjustly detained.

(1221) Sec. 4.—Any person or persons who shall perform any work or labor upon any mine, or furnish any material therefor, in pursuance with any contract made with the owner or owners of such mine, or of any interest therein, shall be entitled to a miner's lien for the payment thereof upon all the interest, right, and property in such mine, by the person or persons contracting for such labor or materials at the time of making such contract; said lien may be enforced in the same manner and with the same effect as a mechanic's lien, as provided by the laws of Utah.

Records and Mining Rules.—AN ACT in relation to proving the records and mining rules and regulations of the mining districts of the Territory, and for other purposes.—Approved February 18, 1876.—(1222) Sec. 1.—Be it enacted by the Governor and Legislative Assembly of the Territory of Utah: That copies of notices of location of the mines, lodes, and veins, and of tunnel sites recorded in the several mining districts, and of the mining rules and regulations in force in the several districts, in like manner recorded, shall be receivable in all the courts of this Territory, as *prima facie* evidence of such notices, rules, and regulations: *Provided*, The recorder of the district shall certify under his hand and seal that such copies are full, true, and perfect copies from the records in his custody. The seal of the office of the mining recorder so certifying, affixed to such certificate, shall be *prima facie* evidence of the fact of the election and qualification and official character of such mining recorder.

(1223) Sec. 2.—It shall be the duty of the county recorder of the several counties of this Territory, to record the mining rules and regulations of the several mining districts in their respective coun-

* This law only applies to sections on which minerals are discovered after survey.

ties; and when so recorded, certified copies thereof shall be received in all the courts of this Territory, as *prima facie* evidence of such rules and regulations.

(1224) Sec. 3.—The mining recorders of the several mining districts shall be allowed the same fees for recording and making copies of any records in their custody as are now allowed by law for like services to county recorders. And it shall be the duty of each mining recorder, upon request and payment or tender of the fees therefor, to make and deliver to any person requesting the same, duly certified copies of any records in his custody; and for a failure so to do, or for receiving larger fees for any such service than those herein provided, such mining recorder shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be subjected to the same penalties provided against public officers in section twenty of the act entitled, "An act to regulate fees and compensation for official and other services in the Territory of Utah," passed February 20, 1874.

(1225) Sec. 4.—Recorders of mining districts shall, for the purpose of this act, be deemed public officers, and the records in their custody shall be deemed public records, and they are hereby required to keep an official seal.

WYOMING.—*Development of Mining Resources.*—An Act to provide for the development of the Mining Resources of the Territory of Wyoming:

Be it enacted by the Council and House of Representatives of the Territory of Wyoming:

Section 1. Any person or persons who shall have performed work or made improvements or expenditures to the amount of one thousand dollars on any lead, lode, or ledge, the same shall not be subject to relocation under the laws of this Territory; *Provided,* That such quartz claim or claims shall not be abandoned, but shall be represented by the person or persons owning such claim or claims, or by his or their agent or attorney, who shall reside within the district in which such claim or claims may be situated, unless driven from said district by Indians.

Sec. 2. Any person or persons who shall defraud, cheat, or swindle any party or parties by what is known as "salting," that is, by placing or causing to be placed in any placer or quartz claim, or dirt, gravel, or quartz contained therein, any gold, silver, or metals, or minerals which would prove to be a misrepresentation, thereby working injury or loss to any party or parties, shall be deemed guilty of a felony, and, upon conviction thereof, shall be fined in any sum not to exceed five thousand dollars and not less than fifty dollars, together with the cost of prosecution, and may be imprisoned in the territorial penitentiary not more than three years or less than thirty days, or both such fine and imprisonment.

Sec. 3. When parties owning in partnership any claim or claims, or any lead, lode, or ledge, or any one of the parties so owning, shall fail to perform his or her portion of the work, for the period of eight months, or pay the reasonable assessment for the same when said claim is being worked in accordance with the expressed wish of a majority of the persons owning such claims, it may be sold to pay such assessment by the person or persons to whom such assessment may be due, by giving thirty days' notice, published in the nearest newspaper, and by posting notice for thirty days on such claim, giving the amount of assessment due, date of notice, and date of sale.

Sec. 4. The provision of the foregoing section shall not apply to persons residing within the district in which his or her property is situated.

Sec. 5. Any property sold to pay assessments may be redeemed within the period of six months by the person or persons formerly owning such property, or by his or her agents, heirs, or attorneys, by paying the cost of advertising and sale, together with the assessments due, and ten per cent. upon all purchase-money for the same.

Sec. 6. All acts and parts of acts conflicting with this act be, and the same are, hereby repealed.

Sec. 7. This act shall take effect and be in force from and after its passage.

Approved December 16th, 1871.

MINERS' LIENS.—Section 1. That every miner or other person, who, at the request of the owner of any ledge or lode of quartz bearing gold, silver, cinnabar, or copper, or of any coal bank or mine, shall work in or upon such mine or bank, shall have a lien upon such vein or lode, mine or bank, to the amount due at any time when a demand shall be made upon such owner, or his or their agent, for money due for such labor, and payment shall be refused.

Sec. 2. That any person who shall labor as a mechanic, or otherwise, or who shall furnish timber, lumber, rope, nails, or any other material for timbering shafts [or] levels for the mine, who shall furnish any kind of materials for erecting windlass, whim, or other hoisting apparatus upon any vein, mine or coal bank, referred to in the first section, shall also have a lien upon the mide or coal bank for which he furnished such materials, or upon which he performed such labor.

Sec. 3. The party seeking a lien shall proceed, so far as the proceedings are applicable in the same manner, to enforce a lien as by law required in the case of mechanics and other persons seeking to enforce a lien upon dwelling-houses and other buildings, except when other provisions are made by this act.

Sec. 4. When any sum exceeding ten dollars for labor performed by any miner or other person upon or in any mine or coal bank specified in section one of this Act, shall be due and unpaid for ten days, it shall be competent for the person or persons to whom such sum of money shall be due, to file a notice in the office of county recorder in the county where such mine is situated, at any time within thirty days after the last day upon which work was done by him; which said notice shall in substance set forth the fact that the party performed labor (naming the kind) for a party or company (naming the party or company), that such labor was performed under a contract (stating the substance); also, the time when the party commenced and when he ceased to work, the amount still due and unpaid, together with a description of the mine or coal bank upon which such work was performed, which statement shall be verified by the affidavit of the party so filing it, and when filed, the county recorder shall record the same in a "lien-book," the same as required in the case of mechanics' notices of liens.

Sec. 5. The provisions of the next preceding section shall apply to persons who shall furnish materials or work upon any shaft, whim, or other hoisting works, who, by complying with the general provisions of such section, shall have a like lien.

Sec. 6. When notices as provided in the next two preceding sections shall be filed, the lien shall hold not only against the owner of the mine or bank, from the time when the miner or other person began work, but against all persons or company who shall have purchased such mine or coal bank while such miner or other person was employed therein, or furnished materials used therein or thereon.

Sec. 7.—Suit to enforce such lien may be commenced at any time within one year after filing such notice.

Sec. 8.—Any owner of any oil well or spring who shall employ any person to perform any work of any kind around or about any oil well or spring, either in building derricks, buildings, or any kind of machinery, or in boring or drilling, shall be deemed within the provisions of this Act; and all persons performing labor or furnishing materials, shall have like liens upon oil territory which he labored, or for which he furnished materials or the improvements thereon, as miners or other laborers upon or in mines as provided in this Act, and shall proceed in the same manner to enforce a lien.

Sec. 9.—This act shall take effect and be in force from and after its passage.

Approved, December 2d, 1869.

MONTANA.—An act in relation to quartz claims.

Be it enacted by the Legislative Assembly of the Territory of Montana:

Sec. 1.—Any person or persons who shall hereafter discover any mining claim upon any vein or lode bearing gold, silver, cinnabar, lead, tin, copper or other valuable deposit, shall, within twenty days thereafter, make and file for record in the office of the recorder of the county in which said discovery is made, a declaratory statement thereof in writing, on oath, before some person authorized by law to administer oaths, describing such claim in the manner provided by the laws of the United States.

Sec. 2.—That in order to entitle any person or persons to record in the county recorder's office of the proper county, any lead, lode or ledge, there shall first be discovered on said lode, lead or ledge, a vein or crevice of quartz or ore, with at least one well-defined wall.

Sec. 3.—Claims on any lead, lode or ledge, bearing gold, silver, cinnabar, lead, tin, copper or other valuable deposits, hereafter discovered, shsll consist of not more than fifteen hundred linear feet along the lead, lode or ledge, and not more than three hundred feet, and not less than twenty-five feet, on each side from the centre of said lead, lode or ledge, for working purposes. *Provided,* That the provisions of this act shall not be so construed as to include claims recorded prior to the passage of this act.

Sec. 4.—All lode claims heretofore discoversd and recorded pursuant to the law, and the possessory title to which shall have been preserved according to law, shall entitle the owner or owners therof to surface ground along the course of the vein three hundred feet on each side from the centre of said vein. *Provided,* That such width shall not be permitted to interfere with any vested possessory rights of any person or persons, corporation or corporations, which hsve intervened and have been preserved, to the time of the taking effect of this act; but parties desiring to avail themselves hereof shall so signify by a record which shall show that they so elect, or if they so desire, they may limit the surface ground on each side of the centre of the vein to any width not less than twenty-five feet.

Sec. 5.—Any person who shall remove any stake or monument placed on any mining claim, or who shall obliterate, deface or destroy any notice placed thereon, shall be deemed guilty of a misdemeanor, and on conviction thereof, shall be punished by fine not exceeding one hundred dollars, or imprisonment not exceeding one year, or both such fine and imprisonment, in the discretion of the court.

Sec. 6.—All acts and parts of acts in conflict with this act are hereby repealed.

Sec. 7.—This act to take effect and be in force from and after its passage.

Approved February 11, 1876,

Sec. 40.—*Statute of Limitations.*—No action for the recovery of mining claims (lode claims excepted), or for the recovery of possession thereof, shall be maintained, unless it appear that the plaintiff or his assigns was seized or possessed of such mining claims within one year before the commencement of such action.

Sec. 363.—*Customs of Proof.*—In actions respecting mining claims, proof must be admitted of the customs, usages or regulations established and in force at the bar or diggings embracing such claim; and such customs, usages or regulations, when not in conflict with the laws of this territory, must govern the decision of the action.

Illinois.—An Act providing for the health and safety of persons employed in coal mines of the State of Illinois.

Section 1.—*Be it enacted by the People of the State of Illinois, represented in the General Assembly,* That the owner, or agent, or operator, of each and every coal mine in this state, employing ten men or more, shall make, or cause to be made, at the discretion of the inspector, or person acting in that capacity, an accurate map, or plan, of the workings of such coal mine, and of each and every vein thereof; showing the general inclination of the strata together with any material deflections in the said workings, and the boundary lines of said coal mine, and deposit a true copy of said map, or plan, with the Inspector of Coal Mines, to be filed in his office, and another true copy of said map or plan with the Recorder of the County in which said coal mine is situated, to be filed in his office, both of which said copies shall be deposited as aforesaid within three months from the day when this act shall go into effect; and the original, or a copy of such map or plan, shall also be kept for inspection at the office of such coal mine; and during the month of January of each and every year after this act shall go into effect, the said owner, agent, or operator, shall furnish the Inspector and Recorder, as aforesaid, with a statement and further map or plan of the progress of the workings of such coal mine, continued from the last report to the end of the December month just preceding; and the Inspector shall correct his map, or plan of said workings, in accordance with the statement and map or plan thus furnished; and when any coal mine is worked out or abandoned, that fact shall be reported to the Inspector, and the map, or plan, of such coal mine shall be carefully corrected and verified.

Inspector may make map at Cost of Owner.—Sec. 2.—Whenever the owner, agent or operator of any coal mine shall neglect or refuse to furnish the said Inspector and Recorder, as aforesaid, with the statement, the map, or plan, or addition thereto, as provided in the first section of this act, at the times and in the manner therein provided, the said Inspector is hereby authorized to cause an accurate map or plan of the workings of such coal mine to be made at the expense of said owner, agent, or operator, and the cost thereof may be recovered by law from said owner, agent, or operator, in the same manner, as other debts, by suit in the name of the Inspector and for his use.

Escapement Shaft—Roadway—Meaning of "Owner."—Sec. 3.—In all coal mines that are, or have been, in operation prior to the first day of July, in the year of our Lord 1882, and which are worked by, or through, a shaft, slope, or drift, and in which more than ten miners are employed in each twenty-four hours, if there is not already an escapement shaft to each and every said coal mine, or communication between each and every coal mine, and some other contiguous mine, then there shall be an escapement shaft or other communication, such as shall be approved by the Mine Inspector, making at least two distinct means of ingress and egress for all persons employed or permitted to work in such coal mine. Such escapement shaft or other communication with a contiguous mine, as aforesaid, shall be constructed in connection with every vein or stratum of coal worked in such mine; and the time to be allowed for such construction shall be one year when such mine is under one hundred (100) feet in depth; two years when such mine is over one hundred (100) feet in depth, and under three hundred (300) feet; and three years when it is over three hundred (300) feet, and under four hundred (400) feet; and four years when it is over four hundred (400) feet in depth; and five years for all mines over five hundred (500) feet, from the time this act goes into effect; and in all cases where the working force of one mine has been driven up or into the workings of another mine, the respective owners of such mines, while operating the same, shall keep open a roadway at least two and one-half feet high and four feet wide, thereby forming a communication as contemplated in this act; and for a failure to do so, shall be subject to the penalty provided for in section two of this act, for each and every day such roadway is unnecessarily closed, each and every such an escapement shaft shall be separated from the main shaft by such extent of natural strata as shall secure safety to the men employed in such mines; such distance to be left to the discretion of the Mine Inspector, or person acting in that capacity; and in all coal mines that shall go into operation for the first time after the first day of January A. D. 1883, such an escapement or other communication with a contiguous mine, as aforesaid, shall be constructed within one year after such mine shall have been put into operation. And it shall not be lawful for the owner, agent, or operator of any such coal mine, as aforesaid, to employ any person to work therein, or permit any person to go therein for the purpose of working, except such persons as may be necessary to construct such an escapement shaft, unless the requirements of this section shall have first been complied with; and the term "owner" used in this act shall mean the immediate proprietor, lessee or occupant of any coal mine, or any part thereof, and the term "agent" shall mean any person having on behalf of the owner the care or management of any coal mine or any part thereof: *Provided,* Nothing in this section shall be construed to extend the time allowed by law for constructing escapement shafts.

Ventilation—Safety-Lamps.—Sec. 4.—The owner, agent or operator of every coal mine, whether operated by shaft, slope or drift, shall provide and maintain for every such mine a sufficient amount of ventilation, to be determined by the Inspector, at the rate of one hundred cubic feet of air per man per minute, measured at the foot of the down-cast, which shall be forced and circulated to the face of every working place throughout the mine, so that said mine shall be free from standing gas of whatsoever kind; and in all mines where fire damp is generated, every working place where such fire damp is known to exist shall be examined every morning with a safety-lamp by a competent person, before any other persons are allowed to enter. The ventilation required by this section may be produced by any suitable appliances, but in case a furnace shall be used for ventilating purposes, it shall be built in such a manner as to prevent the communication of fire to any part of the works by lining the upcast with incombustible material for a sufficient distance up from said furnace.

Bore Holes.—Sec. 5.—The owner, agent or operator shall provide that bore holes shall be kept twenty feet in advance of the face of each and every working place, and, if necessary, on both sides, when driving towards an abandoned mine, or part of a mine, suspected to contain inflammable gases, or to be inundated with water.

Signals—Hoistways—Who may be employed.—Sec. 6.—The owner, agent or operator of every coal mine operated by shaft shall provide suitable means of signaling between the bottom and top thereof, and shall also provide safe means of hoisting and lowering persons in a cage covered with boiler iron, so as to keep safe, as far as possible, persons descending into and ascending out of such shaft; and such cage shall be furnished with guides to conduct it on slides through such shaft, with a sufficient brake on every drum to prevent accident in the case of the giving out or breaking of the machinery; and such cage shall be furnished with spring catches, intended and provided, as far as possible, to prevent the consequences of cable breaking or the loosening or disconnecting of the machinery; and no props or rails shall be lowered in a cage while men are descending and ascending out of said mine: *Provided,* That the provisions of this section in relation to covering cages with boiler iron, shall not apply to coal mines less than one hundred feet in depth, where the coal is raised by horse-power. No person under the age of twelve years, or females of any age, shall be permitted to enter any mine to work therein, nor shall any boy under the age of fourteen, unless he can read and write, be allowed to work in any mine; any party or person neglecting or refusing to perform the duties required to be performed by sections 4, 5, 6, 7 and 8 shall be deemed guilty of a misdemeanor, and punished by a fine in the discretion of the court trying the same, subject, however, to the limitations as provided by section 10 of this act.

Operating Hoistway—Competent Engineer.—Sec. 7.—No owner, agent or operator of any coal mine operated by shaft or slope, shall place in charge of an engine, whereby men are lowered into or hoisted out of the mines, any but an experienced, competent and sober person not under the age of eighteen years: and no person shall ride upon a loaded cage or wagon used for hoisting purposes in any shaft or slope, and in no case shall more than twelve persons ride on any cage or car at one time: nor shall any coal be hoisted out of any coal mine while persons are descending into such coal mine; and the number of persons to ascend out of or descend into any coal mine on any one cage shall be determined by the Inspector, maximum number so fixed shall not be less than four, nor more than twelve, nor shall be lowered or hoisted more rapidly than six hundred feet to the minute.

Boilers Examined—Gincing Shaft—Safety Valves—Signals—Places of Refuge.—Sec. 8.—All boilers used in generating steam in and about coal mines shall be kept in good order, and the agent, owner or operator, as aforesaid, shall have said boilers examined and inspected by a competent boiler-maker or other qualified person, as often as every six months, and oftener, if the Inspector shall deem it necessary, and the result of every such examination shall be certified in writing to the Mine Inspector; and the top of each and every shaft, and the entrance to each and every intermediate working vein shall be securely fenced, by gates properly covering and protecting such shaft and entrance thereto; and the entrance to every abandoned slope, air or other shaft shall be securely fenced off; and every steam boiler shall be provided with a proper steam-gauge, water-gauge and safety-valve; and all undergound self-acting or engine the planes or gangways on which coal-cars are drawn and persons travel, shall be provided with some proper means of signaling between the stopping places and the end of said planes or gangways, and sufficient places of refuge at the sides of such planes or gangways shall be provided at intervals of not more than twenty feet apart.

Accidents—Duty of Inspectors.—Sec. 9.—Whenever loss of life or serious personal injury shall occur by reason of any explosion, or of any accident whatsoever, in or about any coal mine, it shall be the duty of the person having charge of such coal mine to report the facts thereof without delay to the Mine Inspector of the county in which said coal mine is situated; and if any person is killed thereby to notify the Coroner of the county also, or, in his absence, or inability to act, any Justice of the Peace of said county; and the said Inspector shall, if he deems it necessary from the facts reported, immediately go to the scene of said accident, and make such suggestions and render such assistance as he may deem necessary for the safety of the men. And the Inspector shall investigate and ascertain the cause of such explosion or accident, and make a report thereof, which he shall preserve with the other records of his office, to enable him to make such investigations, he shall have power to compel the attendance of witnesses, and administer oaths or affirmations to them; and the cost of such investigations shall be paid by the county in which such accident has occurred, in the same manner as costs of Coroner's inquests are now paid. And the failure of the person in charge of the coal mine, in which any such accident may have occurred, to give notice to the Inspector or Coroner as provided for in this section, shall subject such person to a fine of not less than twenty-five dollars, nor more than one hundred dollars, to be recovered in the name of the State of Indiana, before any Justice of the Peace of such county; and such fine, when collected, shall be paid into the county treasury for the use of the county in which such accident may have occurred.

Fines, Penalties, etc.—Sec. 10.—In all cases in which punishment is provided by fine under this act for any breach of any of its provisions, the fine for a first offense shall not be less than fifty dollars, and not more than two hundred dollars; and for the second offense not less than one hundred dollars, or more than five hundred dollars, in the discretion of the court—except as specially provided for in section 9 of this act.

Inspectors—Oath, Bonds, Compensation—Removal.—Sec. 11.—The County Board in each and every county in this State, in which mining is now or may be hereafter carried on, is hereby authorized, and it is made its duty to appoint an Inspector of Mines at its September meeting, who shall have been a resident of the county for which he is appointed for one year previous to his appointment. He shall be required to enter into a bond to the County Board of said county for a sum not less than one thousand dollars, nor more than three thousand dollars, conditioned upon the due and faithful performance of his duties, said bond to be accompanied by good and sufficient security, to be approved by the said County Board. He shall also take an oath of office as provided for by the constitution, and he shall be required to furnish satisfactory evidence that he has had sufficient practical experience in and around mines to discharge the duties of said office, and to see that the provisions of this act are faithfully complied with. He shall not be interested as owner, stockholder, superintendent, or operator, or be interested in operating any mine during his term of office, which shall be one year, but he may be re-appointed as often as the County Board may think proper. The County Board of such counties shall fix the number of days to be employed by the County Inspector in inspecting the different mines in his county, and enter the same upon the records of said Board. He shall receive such compensation for his time actually employed in the performance of the duties of his office, to be verified by his affidavit, to be not less than three dollars, nor more than five dollars per day, to be paid out of the county treasury. The County Board shall also provide an anemometer and all necessary instruments for testing the air, and in all cases where the Inspector finds the provisions of this act, or any of them, not complied with in operating any mine, it is made his duty to demand, and, if necessary, compel by law, the collection from the owner, or operators, of such mine all expenses of said inspection, as provided in section two (2) of this act: *Provided, however,* That in all cases where the County Commissioners fail or refuse to appoint a competent and experienced Inspector, or where the said Inspector fails to attend to or perform the duties of his office, in accordance with the meaning and intent of this act, the Circuit Court of said county shall, at the request of any ten citizens of said county, and upon proper proof of the incompetency or neglect of said Inspector to properly perform the duties of his office, remove the said Inspector and appoint a properly qualified person to perform the duties of said Inspector for the unexpired term.

Inspector's Duties—Statistics.—Sec. 12.—The Inspector, provided for under this act, shall see that every necessary precaution is taken to insure the health and safety of the workmen therein employed; that the provisions and requirements of this act be faithfully observed and obeyed, and the penalties of the law enforced against all who willfully disobey its requirements. He shall also collect and tabulate the following facts, that is to say: The number of acres of workable coal lands in his county; the number and thickness of the coal beds, and their respective depths below the surface; how they are mined, whether by shaft, slope, or drift; the number of mines in operation, the number of men employed therein, and the aggregate yearly production in tons; together with an estimate of the amount of capital employed in coal mining in his county, and any other information relative to coal mining that he may deem necessary; all of which facts so tabulated, together with a statement of the condition of the mine, as to safety and ventilation, and the general result of his examination into the causes of all accidents in and about the coal mines of his county, he shall fully set forth in an annual report to the Governor, with his recommendations as to such other legislation on this subject as may be proper; he shall also furnish such information as he may have obtained on this subject when called for by the State Geologist.

Inspection of Mines—Refusal of Owner to Permit, etc.—Sec. 13.—It shall be lawful for the Inspector, provided for in this act, to enter, examine and inspect any and all coal mines and machinery belonging thereto, at all reasonable times, by day or by night, but so as not to obstruct or hinder the necessary workings of such coal mine; and the owner, agent, or operator of every such coal mine is hereby required to furnish all necessary facilities for entering upon such examination and inspection; and if the said owner, agent, or operator aforesaid shall refuse to permit such inspection, or to furnish the necessary faciltities for such entry, examination and inspection, the Inspector shall file his affidavit, setting forth such refusal, with the Judge of the Circuit Court in said county in which said mine is situated, enter in term time, or vacation, or, in the absence of said Judge, with the Master in Chancery in said county in which said mine is situated, and obtain an order on such owner, agent, or operator so refusing, as aforesaid, commanding him to permit and furnish such necessary facilities for the inspection of such coal mine, or to be adjudged to stand in contempt of court, and punished accordingly; and if the said Inspector shall, after examination of any coal mine, and the works, and machinery pertaining thereto, find the same to be worked contrary to the provisions of this act, or unsafe for the workmen therein employed, said Inspector shall, through the State's attorney of his county or any attorney, in case of his refusal to act, acting in the name and on the behalf of the State, proceed against the owner, agent, or operator of such coal mine, by injunction without bond, after giving at least two days' notice to such owner, agent, or operator; and said owner, agent, or operator shall have the right to appear before the Judge or Master to whom the application is made, who shall hear the same on affidavits and such other testimony as may be offered in support as well as in opposition thereto, and if sufficient cause appear, the court, or Judge in vacation, by order, shall prohibit the further working of any such coal mine in which persons may be unsafely employed, contrary to the provisions of this act, until the same shall have been made safe and the requirements of this act shall have been complied with, and the court shall award such costs in the matter of the said injunction as may be just; but any such proceedings so commenced shall be without prejudice to any other remedy permitted by law for enforcing the provisions of this act.

Injuries—Remedies in favor of Widow, etc.—Sec. 14.—For any injury to person or property occasioned by any willful violations of this act, or willful failure to comply with any of its provisions, a right of action shall accrue to the party injured for any direct damages sustained thereby, and in case of loss of life, by reason of such willful violation or willful failure, as aforesaid, a right of action shall accrue to the widow of the person so killed, his lineal heirs, or adopted children, or to any other person or persons who were, before such loss of life, dependent for support on the person or persons so killed, for a like recovery of damages for the injuries sustained by reason of such loss of life or lives.

Conduct of Miners—Injuries to Machinery—Disobedience, etc.—Sec. 15. Any miner, workman, or other person, who shall knowingly injure any water gauge, barometer, air course or brattice, or shall obstruct, throw open any air-ways, or carry any lighted lamps or matches into places that are worked by the light of safety lamps, or shall handle or disturb any part of the machinery of the hoisting engine, or open a door in the mine and not have the same closed again, whereby danger is produced either to the mine or those at work therein; or who shall enter into any part of the mine against caution; or who shall disobey any order given in pursuance of this act; or who shall do any willful act whereby the lives and health of persons working in the mine, or the security of the mine or miners, or the machinery thereof, is endangered, shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by fine or imprisonment, at the discretion of the court.

Timber for Props, etc.—Sec. 16. The owner, agent, or operator of any coal mine shall keep a sufficient supply of timber where required to be used as props, so that the workmen may at all times be able to properly secure the said workings from caving in; and it shall be the duty of the owner, agent, or operator to send down all such props when required.

Repeal.—Sec. 17. All acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

Ohio.—The following now (May 14, 1881) forms the law of the State:

Sec. 290.—The inspector of mines shall be appointed by the governor, by and with the advice and consent of the senate, and shall hold his office for four years; and no person shall be appointed unless he is possessed of a competent knowledge of chemistry, geology, and mineralogy, and has a practical knowledge of mining engineering, and of the different systems of working and ventilating coal mines, and of the nature and properties of the noxious and poisonous gases of mines, particularly fire damp.

Sec. 291.—Before entering upon the discharge of the duties of the office, the inspector shall give bond to the state in the sum of five thousand dollars, with sureties, to be approved by the governor, conditioned for the faithful performance of his duties; the bond, with his oath of office, and approval of the governor endorsed thereon, shall be forthwith deposited with the secretary of state.

Sec. 292.—The inspector shall give his whole time and attention to the duties of his office, and shall examine all mines in the state, as often as his other duties will permit, to see that the provisions of this chapter are obeyed; and the inspector may enter, inspect and examine any mine in the state, and the works and machinery belonging thereto, at all reasonable times, by night or by day, but so as not to unnecessarily obstruct or impede the working of the mine, and to make inquiry into the state and condition of the mine, as to ventilation and general security; and the owner and agent of such mine are hereby required to furnish the means necessary for such entry and inspection, of which inspection the inspector shall make a record, noting the time and all the material circumstances; and the person having charge of any mine, whenever loss of life occurs by accident connected with the working of such mine, or by explosion, shall give notice forthwith, by mail or otherwise, to the inspector of mines, and to the coroner of the county in which such mine is situated, who shall hold an inquest upon the body of the person or persons whose death has been caused, and inquire carefully into the cause thereof, and shall return a copy of the finding and all the testimony to the inspector.

SEC. 293. The inspector, while in office, shall not act as an agent, or as a manager, or mining engineer, or be interested in operating any mine; and he shall annually make report to the governor of his proceedings and the condition and operation of the mines of the state, enumerating all accidents in or about the same, and giving all such other information as he thinks useful and proper, and making such suggestions as he deems important as to further legislation on the subject of mining.

Sec. 294.—The inspector shall have an office in the state house, in which shall be carefully kept the maps and plans of all mines in the state, and all records and correspondence papers, and apparatus, and property pertaining to his duties, belonging to the state, and which shall be handed over to his successor in office.

Sec. 295.—There shall be provided for the inspector all instruments and chemical tests necessary for the discharge of his duties under this chapter, which shall be paid for on the certificate of inspector, and which shall belong to the state.

Sec. 296.—The owner or agent of every coal mine, shall make, or cause to be made, an accurate map or plan of the working of such mine, on a scale of not less than one hundred feet to the inch, showing the area mined or excavated, and the location and connection with such excavation of the mine of the lines of all adjoining lands, and the name or names of each owner or owners, so far as known, marked on each tract, a true copy of which map the owner or agent shall deposit with the inspector, and another copy of which shall be kept at the office of such mine; and the owner or agent shall, every four months thereafter, file with the inspector a statement and plan of the workings of such mine up to that date, which statement and plan shall be so prepared as to enable the inspector to mark the same on the original map or plan herein required to be made, and in case of refusal on the part of the owner or agent to make and file the map or plan, or the addition thereto, the inspector is authorized to cause an accurate map or plan of the whole of said mine to be made, at the expense of the owner thereof, the cost of which shall be recoverable against the owner, in the name of the person or persons making the map or plan, which shall be made in duplicate, one copy being delivered to the inspector and the other left in the office of the mine: and he shall, on being paid the proper cost thereof, on demand of any person interested in the working of such mine, or owner of adjoining lands, furnish an accurate copy of any map or plan of the working of such mine.

Sec. 297.—It is unlawful for the owner or agent of any coal mine worked by a shaft, wherein over fifteen thousand square yards have been excavated, to employ or permit any person to work therein, unless there are, to every seam of coal worked in each mine, at least two separate outlets, separated by natural strata of not less than one hundred feet in breadth, by which shaft or outlets distinct means of ingress and egress are always available to the persons employed in the mine; but it is not necessary for the two outlets to belong to the same mine; the second outlet need not be made until fifteen thousand yards have been excavated in such mine; and to all other coal mines, whether slopes or drifts, two such openings or outlets must be provided within twelve months after fifteen thousand yards have been excavated therein; and in case such outlets are not provided as herein stipulated, it shall not be lawful for agent or owner of such mine to permit more than ten persons to work therein at any one time. In case a coal mine has but one shaft, slope, or drift, for the ingress or egress of the men working therein, and the owner thereof does not own suitable surface-ground for another opening, he may select and appropriate any adjoining land for that purpose and for approach thereto, and shall be governed in his proceeding in appropriating such land by the provisions of law in force providing for the appropriation of private property by corporations, and such appropriations may be made, whether he is a corporator or not; but no land shall be appropriated under the provisions of this chapter until the court is satisfied that suitable premises cannot be obtained by contract on reasonable terms.

Sec. 298.—The owner or agent of every coal mine, whether shaft, slope, or drift, shall provide and maintain for every such mine, an amount of ventilation of not less than 100 cubic feet, per minute, per person employed in such mine, which shall be circulated and distributed throughout the mine in such a manner as to dilute, render harmless, and expel the poisonous and noxious gases from each and every working-place in the mine, and no working-place shall be driven more than 120 feet in advance of a break-through, or air-way, and all break-throughs, or air-ways, except those last made near the working-faces of the mine, shall be closed up and made air-tight, by brattice, trap-doors, or otherwise, so that the currents of air in circulation in the mine may sweep to the interior of the mine, where the persons employed in such mine are at work, and all mines governed by the statutes shall be provided with artificial means of producing ventilation, such as forcing, or suction fans, exhaust steam, furnaces, or other contrivances, of such capacity and power, as to produce and maintain an abundant supply of air, and all mines generating fire-damp shall be kept free from standing gas, and every working-place shall be carefully examined, every morning, with a safety-lamp, by a competent person, or persons, before any of the workmen are allowed to enter the mine.

Sec. 299.—The owner or agent of every coal mine operated by shaft, in all cases where human voice cannot be distinctly heard, shall, forthwith, provide and maintain a metal tube from the top to the bottom of such shaft, suitably calculated for the free passage of sound therein, so that conversation may be held between persons at the bottom and top of the shaft: and there shall also be provided an approved safety-catch, and a sufficient cover overhead, on all carriages used for lowering and hoisting persons, and in the top of every shaft an improved safety-gate, and an adequate brake shall be attached to every drum or machine used for lowering or raising persons in all shafts or slopes.

Sec. 300.—No owner or agent of any coal mine operated by a shaft or slope shall place in charge of any engine used for lowering into or hoisting out of such mine persons employed therein, any but experienced, competent, and sober engineers; and no engineer in charge of such engine shall allow any person, except such as may be deputed for that purpose, by the owner or agent, to interfere with it or any part of the machinery, and no person shall interfere or in any way intimidate the engineer in the discharge of his duties: and in no case shall more than ten men ride on any cage or car at any one time, and no person shall ride upon a loaded cage or car in any shaft or slope.

Sec. 301.—All safety-lamps used for examining coal mines, or which are used in any coal mine, shall be the property of the owner of the mine, and shall be under the charge of the agent thereof, and in all mines, whether they generate fire-damp or not, the doors used in assisting or directing the ventilation of the mine, shall be so hung and adjusted that they will shut of their own accord and cannot stand open, and the mining boss shall keep a careful watch over the ventilating apparatus and the airways, and he shall measure the ventilation at least once a week, at the inlet and outlet, and also at or near the face of all the entries, and the measurements of air so made shall be noted on blanks, furnished by the mine inspector: and on the first day of each month, the mining boss of each mine shall sign one of such blanks, properly filled, with the said actual measurements, and forward same to the mine inspector.

Sec. 302.—No boy under twelve years of age shall be allowed to work in any mine, nor any minor between the ages of twelve and sixteen years, unless he can read and write, and in all cases of miners applying for work, the agent of such mine shall see that the provisions of this section are not violated.

Sec. 303.—In case any coal mine does not, in appliances for the safety of the persons working therein, conform to the provisions of this chapter, or the owner or agent disregards the requirements of this chapter, any court of competent jurisdiction may, on application of the inspector, by civil action in the name of the state, enjoin or restrain the owner or agent from working or operating such mine, with more than ten miners at once, until it is made to conform to the provisions of this chapter; and such remedy shall be cumulative, and shall not take the place of or affect any other proceedings against such owner or agent authorized by law for the matter complained of in such action.

Sec. 304. When written charges of gross neglect of duty or malfeasance in office against any inspector are made and filed with the governor, signed by not less than fifteen coal miners, or one or more operators of mines, together with a bond in the sum of five hundred dollars, payable to the state, and signed by two or more responsible free-holders, and conditioned for the payment of all costs and expenses arising from the investigation of such charges, the governor shall convene a board of examiners, to consist of two practical coal miners, one chemist, one mining engineer, and one operator, at such time and place as he deems best, giving ten days' notice to the inspector or against whom the charges are made, and also to the person whose name appears first in the charges, and the board, when so convened, and having been first duly sworn, truly to try and decide the charges made, shall summon any witnesses so desired by either party, and examine them on oath, which may be administered by any member of the board, and depositions may be read on such examination, as in other cases; and the board shall examine fully into the truth of such charges, and report the result of their investigation to the governor; and the board shall award the costs and expenses of such investigation against the inspector or the persons signing the bond according to their finding, against said inspector or in his favor, which costs and expenses shall include the compensation of such board, of five dollars per day for each member, for the time occupied in the trial, and in traveling from and to their homes; and the attorney-general shall forthwith proceed to collect such costs and expenses, and pay the same into the state treasury, being in the first instance paid out of the state treasury, on the certificate of the president of such board.

Sec. 305.—In all coal mines in the state, the miners employed and working therein, the owners of the land or other persons interested in the rental or royalty of any such mine, shall at all proper times have full right of access and examination of all scales, machinery or apparatus used in or about such mine to determine the quantity of coal mined, for the purpose of testing the accuracy and correctness of all such scales, machinery or apparatus; and such miners, landowners, or other persons, may designate or appoint a competent person to act for them, who shall at all proper times have full right of access and examination of such scales, machinery or apparatus, and seeing all weights and measure of coal mined, and the accounts kept of the same; but not more than one person on behalf of the miners collectively, or one person on behalf of the landowners or other persons interested in the rental or royalty jointly, shall have such right of access, examination and inspection of scales, weights, measures and accounts at the same time, and that such persons shall make no unnecessary interference with the use of such scales, machinery or apparatus; and the miners employed in any mine may, from time to time, appoint two of their number to act as a committee to inspect not oftener than once in every month, the mine and the machinery connected therewith, and to measure the ventilating current, and if the owner, agent, or manager so desires, he may accompany said committee by himself or two or more persons which he may appoint for that purpose; the owner, agent or manager shall afford every necessary facility for making such inspection and measurement, but the committee shall not in any way interrupt or impede the work going on in the mine at the time of such inspection and measurement, and said committee shall, within ten days after such inspection and measurement, make a correct report thereof to the inspector of mines, on blanks to be furnished by said inspector for that purpose; and if such committee make to the inspector a false or untrue report of the mines, such act shall constitute a violation of this section.

Sec. 306.—The provisions of this chapter shall not apply to or affect any coal mine in which not more than ten men are employed at the same time; but on the application of the proprietor of or miners in any such mine, the inspector shall make, or cause to be made, an inspection of such mine, and shall direct and enforce any regulations in accordance with the provisions of this chapter that he deems necessary for the safety of the health and lives of miners.

Sec. 306 (*a*).—The inspector of mines may, with the approval of the governor, appoint an assistant, who shall be a practical miner of not less than five years' experience, and who shall perform such duties as may be required by the inspector, and receive a salary at the rate of twelve hundred dollars ($1,200 00) per annum, and the inspector may, with the consent of the governor, remove such assistant at pleasure and appoint a successor, and may allow the assistant traveling expenses out of his contingent fund.

Sec. 6871.—Whoever knowingly violates any of the provisions of sections two hundred and ninety-eight, two hundred and ninety-nine, three hundred, three hundred and one, three hundred and two, and three hundred and five, of the revised statutes, or does any act whereby the lives or health of the persons or the security of any mine and machinery are endangered, or any miner or other person employed in any mine governed by the statute, who intentionally and willfully neglects or refuses to securely prop the roof of any working place under his control, or neglects or refuses to obey any order given by the superintendent of a mine in relation to the security of the mine in the part thereof where he is at work, and for fifteen feet back from the face of his working place, shall be fined not more than fifty dollars or imprisoned in the county jail not more than thirty days, or both.

Pennsylvania.—An Act providing the means for securing the health and safety of persons employed in the bituminous coal mines of Pennsylvania.

Sec. 1.—*Be it enacted, etc.*, That the owner or agent of every bituminous coal mine or colliery, shall make, or cause to be made, within six months after the passage of this act, an accurate map or plan of the workings of such coal mine or colliery, on a scale not exceeding one hundred feet to the inch, and showing the bearing and distances, which shall be kept for the use of the inspector, in the office at the mine of said coal mine or colliery; and said owner, or agent shall cause, on or before the tenth day of January in every year, a plan of the progress of the workings of such coal mine during the year past, to be marked on the original map or plan of the said coal mine or colliery, and the inspector shall have the right at all times to have possession of any such map or plan at the mines to draw a copy therefrom for his own convenience: *Provided*, If the owner or agent of any coal mine shall neglect or refuse, or from any cause fail, for the period of two months after the time prescribed, to furnish the said map or plan, as hereby required, or if the inspector shall find, or have reason to believe that any map or plan of any coal mine furnished in pursuance of the provisions of this act is materially inaccurate or imperfect, he is hereby authorized to cause a correct map or plan of the actual workings of said coal mine to be made at the expense of the owner thereof, the cost of which shall be recoverable from said owner, as other debts are recoverable by law: *Provided*, That if the map or plan, which he claimed to be incorrect, shall prove to have been correct, then aforesaid expenses shall be paid by the said inspector and may be recovered from him in like manner.

Sec. 2.—It shall not be lawful, after six months from the passage of this act, for the owner or agent of any bituminous coal mine to employ any person at work within said coal mine, or permit any person to be in said coal mine for the purpose of working therein, unless they are in communication with at least two openings separated by natural strata of not less than one hundred and fifty feet in breadth, if the mine be worked by shaft or slope, and of not less than twenty-four feet, if the mine be worked by drift: *Provided*, If the mine be worked by drift, two openings, inclusive of air shaft, shall only be required, if the air shaft can be used for ingress and egress in case of emergency; and that not more than twenty persons shall be employed in the mine at any one time after the expiration of the six months until the second opening shall be reached and made available; and in case of furnace ventilation being used before the second opening is reached, the furnace shall not be placed within forty feet of the foot of the shaft, and shall be well secured from danger from fire by brick or stone walls of sufficient thickness, and the mine while being driven for making and perfecting a second opening; the owner or agent shall provide and maintain a metal tube from the top to the bottom of the slope or shaft, suitably adapted to the free passage of sound, through which conversation may be held between persons at the bottom and at the top of the shaft or slope; also, the ordinary means of signalling to and from the top and bottom of the shaft or slope, and an approved safety-catch, and sufficient cover overhead on every carriage used for lowering and hoisting persons; and the said owner or agent shall see that sufficient flanges or horns are attached to the sides of the drum of every machine that is used for lowering and hoisting persons in and out of the mine, and also that adequate brakes are attached thereto; the main link attached to the swivel of the wire rope shall be made of the best quality of iron, and shall be tested by weights, or otherwise satisfactory to the inspector of mines of the district, and bridle chains shall be attached to the main link from the cross pieces of the carriage, and no single link chain shall be used for lowering or raising persons into or out of said mine, and not more than six persons shall be lowered or hoisted by the machinery at any one time; and only sober, competent and experienced engineers shall be employed.

Sec. 3.—When a second opening is made, one opening shall be set apart exclusively for purposes of ingress and egress, and shall not be clogged or obstructed with machinery, pumps or currents of heated air or steam; if the opening is a shaft it shall be fitted with safe and convenient stairs, at an angle of not more than sixty degrees descent, and with landings at easy and convenient distances; all water coming from the surface or out of the strata in the shaft shall be conducted by rings or otherwise to be prevented from falling down the shaft so as to wet persons who are ascending and descending the stairway of the shaft; if the opening is a slope, it shall be provided with safe and available traveling ways.

Sec. 4.—The owner or agent of every bituminous coal mine, whether shaft, slope or drift, shall within six months after the passage of this act, provide, and thereafter maintain for every such mine, ample means of ventilation, affording one hundred cubic feet per minute for each and every person employed in said mine, which shall be circulated around the main headings and cross headings to an extent that will dilute, carry off and render harmless the noxious gases generated therein; and all mines generating fire-damp shall be kept free of standing gas, and every working place shall be carefully examined every morning with a safety-lamp by a competent person before any workmen are allowed to enter.

Sec. 5.—In order to better secure the proper ventilation of every coal mine and promote the health and safety of the persons employed therein, the owner or agent shall employ a competent and practical inside overseer, to be called mining boss, who shall keep a careful watch over the ventilating apparatus, the air ways, traveling-ways, pumps and pump-timbers, and drainage, and shall see that, as the miners advance their excavations, all loose coal, slate and rock overhead are carefully secured against falling in or upon the traveling ways, and that sufficient timber is furnished of suitable lengths and sizes for the places where they are to be used, and placed in the working places of the miners; and it shall also be the duty of the mining boss to measure the air current, at least once a week; at the inlet and outlet and at or near the face of the headings, and keep a record of such measurements, and report the same to the Inspector of his district once in every month; the safety-lamps used for examining mines or which may be used in working therein, shall be furnished by and be the property of the owner of said mines, and shall be in the charge of the agent of such mines; and in all mines generating explosive gases, the doors used in assisting or directing the ventilation of the mine shall be so hung and adjusted that they will close themselves, or be supplied with springs or pulleys so they cannot be left standing open; and bore-holes shall be kept not less than twelve feet in advance of the face of every working place; and, when necessary, on the sides, if the same is driven towards and in dangerous proximity to an abandoned mine or part of a mine suspected of containing inflammable gases, or which is inundated with water.

Sec. 6.—Any miners, workmen or other person who shall intentionally injure any shaft, lamp, instrument, air-course, or brattice or obstruct or throw open air-ways, or carry lighted pipes or matches into place that are worked by safety-lamps, or handle or disturb any part of the machinery, or open a door and not close it again, or enter any place of the mine against caution, or disobey any order given in carrying out the provisions of this act, or do any other act whereby the lives or the health of persons, or the security of the mines or the machinery, is endangered, shall be deemed guilty of a misdemeanor, and may be punished in the manner provided in the sixteenth section of this act; all machinery about mines shall be properly fenced off, and the top of each shaft and the entrance of every abandoned slope and air or other shaft shall be securely fenced off; and there shall be cut in the side of every hoisting shaft at the bottom thereof a traveling-way sufficiently high and wide to enable persons to pass the shaft in going from one side of the mine to the other, without passing over or under the cage or other hoisting apparatus.

Sec. 7.—If any person, firm or corporation is, or hereafter shall be, seized in his or their own right of coal lands, and it shall not be practicable to comply with the requirements of this act in regard to drainage and ventilation, by means of openings on his or their own land, and the same can be done by means of openings on adjacent lands, he or they may apply by petition to the court of quarter sessions of the proper county, after ten days' notice to the owner or owners, their agent or attorney, setting forth the facts under oath or affirmation, particularly describing the place or places where such opening or openings can be made, and that he or they cannot agree with the owner or owners of the land as to the amount to be paid for the privilege of making such opening or openings; hereupon the said court shall appoint three disinterested and competent citizens of the county to view the grounds designated, and lay out from the point or points mentioned in such petition a passage or passages for air and water, not more than sixteen feet in diameter, by the shortest and most convenient route to the coal of such person, firm or corporation preferring in all cases an opening through the coal strata where the same is practicable; the said viewers shall at the same time assess the damages to be paid by the petitioner or petitioners to the owner or owners of such land for the privilege of making said openings, which damages shall be fully paid before such opening is made; it shall be the duty of said viewers to give notice by at least three written or printed hand-bills, posted on the premises at least five days prior to the time of meeting to attend to the duties of their appointment, setting forth distinctly the time, place and object of their meeting, and also to give personal notice to the parties, their agents and attorneys, where it can be done, and shall within thirty days after their appointment make report of their proceedings to said court, stating the amount of damages awarded, accompanied by a map or plan of said openings; and if no appeal be taken to said court within ten days after notice to the opposite party in interest of the filing thereof, it shall be marked confirmed by the clerk, and the petitioner or petitioners may proceed to make said opening or openings; the pay of the viewers and other costs shall be the same as in road cases, and shall be paid by the petitioner or petitioners.

Sec. 8.—As soon as practicable after the passage of this act, the persons exercising the office of presiding judge of each of the several courts of common pleas in the Fifth, Tenth, and Fourth judicial districts, shall appoint one reputable miner of known experience and in practice at the time, (in the Fifth district the president judge of the court of common pleas number one shall make said appointment), and the Governor shall appoint two mining engineers of like repute and experience and practice at the time, who shall constitute a board of five examiners, whose duty it shall be to inquire into the character and qualifications of candidates for the office of inspector of mines under the provisions of this act. The examiners first appointed, in pursuance of this section, shall meet in the city of Pittsburg, on the fifteenth day of May next, and after being duly organized, having taken and subscribed before any officer authorized to administer the same, the following oath, namely: "We, the undersigned, do solemnly swear (or affirm) that we will perform the duties of examiners of applicants for appointment as inspectors of bituminous coal mines to the best of our abilities, and that in recommending or rejecting said applicants we will be governed by the evidence of qualification to fill the position, under the law creating the same, and not by any consideration of political or other personal favors; that we will certify all whom we may find qualified, according to the true intent and meaning of the act, and none others, to the best of our judgments:" shall proceed to the examination of those who may present themselves as candidates for said office; and they shall certify to the Governor the names of all such applicants as they shall find competent to fill the office, under the provisions of this act, which names, with the certificate and the oath of the examiners, shall be mailed to the Secretary of the commonwealth, to be filed in his office, and shall be valid when recommended by four of the examining board. The qualifications of candidates for said office of inspector of mines, to be inquired into and certified by said examiners, shall be as follows, namely: They shall be citizens of the United States, of temperate habits, of good repute as men of personal integrity, shall have attained the age of thirty years, and shall have had at least five years experience in the workings of the bituminous coal mines of Pennsylvania, and upon the examination they shall give evidence of such theoretical, as well as practical knowledge of the working of coal mines and noxious gases, as will satisfy the examiners of their capability and fitness for the performance of the duties imposed upon inspectors of mines by the provisions of this act. The board of examiners shall, also, at their said meeting, divide the bituminous coal counties of the State into three inspection districts, as nearly equal in regard to the labor to be performed as is possible, taking into consideration the number of mines and the extent of territory; at every subsequent calling of the board of examiners this division may be revised as experience may prove to be advisable. The board of examiners shall each receive five dollars per day and all necessary expenses, to be paid out of the State treasury, upon the filing of the certificates of the examining board, in the office of the Secretary of the Commonwealth, as herein before provided. The Governor shall, from the names so certified, appoint one person to be inspector of mines, for each district, as fixed by the examiners in pursuance of the act, whose commission shall be for four years, to be computed from the fifteenth day of May next. As often as vacancies occur, by death, resignation, or otherwise, in said offices of inspectors of mines, the Governor shall fill the same, by appointment, for the unexpired term, from the names on file in the office of the Secretary of the Commonwealth, until the number shall be exhausted; and whenever this shall occur, the Governor shall cause the aforesaid board of examiners to meet, who shall examine persons that may present themselves for the vacant office of inspector, in the same manner as herein provided, and the board of examiners shall certify to the Governor one person, to be commissioned by him for the office of inspector for the unexpired term; and any vacancies that may occur in the examining board shall be filled in the district where the vacancy occurred. And every four years the Governor shall appoint two mining engineers as before, and shall notify the person exercising the office of president judge of the courts of common pleas of three of the judicial districts of the State, containing bituminous coal mines, selecting them in such order as to allow each district an equal share of such appointments, each to appoint one miner, and the five so appointed shall constitute a new board of examiners, whose duties, terms of service, and compensation, and vacancies that may happen, shall be the same as those first provided for by this section, and from the names that may be certified by them, the Governor shall appoint the inspectors provided for in this act. Nothing in this act shall be construed to prevent the re-appointment of any inspector of bituminous mines. The inspectors of mines shall each receive, for their services, an annual salary of two thousand dollars, to be paid quarterly, by the State Treasurer, and they shall each reside in the district for which they shall be appointed. Each inspector is hereby authorized to procure such instrument and chemical tests and stationery, from time to time, as may be necessary to the proper discharge of his duties, under this act, at the expense of the State, which shall be paid by the State Treasurer, upon accounts duly certified by him, and audited by the proper department of the State. All instruments, plans, book memoranda, notes, et cetera, pertaining to the office, shall be the property of the State, and shall be delivered to their successors in office.

Sec. 9.—Each inspector of bituminous coal mines shall, before entering upon the discharge of his duties, give bond in the sum of five thousand dollars, with sureties, to be approved by the president judge of the district in which he resides, conditioned for the faithful discharge of his duty, and take an oath (or affirmation) to discharge his duties impartially, and with fidelity, to the best of his knowledge and ability.

Sec. 10.—No person, who shall act as a manager or agent of any coal mine, or as a mining engineer, or be interested in operating any coal mine, shall, at the same time, act as inspector of coal mines, under this act.

Sec. 11.—For any injury to person or property, occasioned by any violation of this act, or any wilful failure to comply with its provisions by any owner, lessee or operator of any coal mine or opening, a right of action, against the party at fault, shall accrue to the party injured for the direct damage sustained thereby; and in any case of loss of life, by reason of such violation or willful failure, a right of action, against the party at fault, shall accrue to the widow and lineal heirs of the person whose life shall be lost, for like recovery of damages for the injury they shall have sustained.

Sec. 12.—The inspectors of bituminous coal mines shall each devote the whole of his time to the duties of his office; it shall be his duty to examine the mines in his district as often as possible to see that all the provisions of this act are observed and strictly carried out; and he shall make a record of all examinations of mines, showing the condition in which he finds them, the number of mines in his district, the number of persons employed in and about each mine, the extent to which the law is obeyed, the progress made in the improvement sought to be secured by the passage of this act, the number of accidents and deaths resulting from injuries received in the mines, and all other facts of public interest concerning the condition and progress of mining in his district, which record shall, on or before the first Monday of each month, together with all matters and things furnished him in accordance with the provisions of this act, be filed in the office of the Secretary of Internal Affairs, to be by him recorded and included in the annual report of his department; he shall also, from the time of his commission, make strict and careful inquiry and examination into the condition of the ventilation and drainage of the mines.

Sec. 13.—That the inspectors may be enabled to perform the duties herein imposed upon them, they shall have the right at all times to enter any bituminous coal mine to make examination or obtain information; they shall notify the owners, lessees, or agents immediately of the discovery of any violations of this act and of the penalty imposed thereby for such violation, and in case of such notice being disregarded for the space of ten days, they shall institute a prosecution against the owner, owners, agent, or lessee of the mine, under the provisions of section sixteen of this act; in any case, however, where, in the judgment of the inspector of either district, delay may jeopardize life or limb, he shall at once notify the inspectors of the other districts, whereupon they shall at once proceed to the mine or colliery where the danger exists, and examine into the matter, and if, after full investigation thereof, they shall be agreed in the opinion that there is immediate danger, they shall apply, in the name of the commonwealth, to the court of common pleas of the county in which the mine may be located, for an injunction to suspend all work in and about such mine or colliery; whereupon, said court, if the cause appear to be sufficient, after hearing the parties and their evidence as in like cases, shall issue their writ to restrain the working of said mine or colliery until all cause of danger is removed; and the cost of said proceedings, including the charges of attorney prosecuting said application, shall be borne by the owner of the mine or colliery: *Provided*, that no fee exceeding the sum of tweuty-five dollars shall be taxed in any one case for the attorney prosecuting such case: *Provided further*, that if said court shall find the cause not sufficient, then the case shall be dismissed, and the cost shall be borne by the inspector instituting the proceeding, or the county, at the discretion of the court.

Sec. 14.—Whenever, by reason of any explosion or other accident in any bituminous coal mine or the machinery connected therewith, loss of life or serious personal injury shall occur, it shall be the duty of the person having charge of such mine or colliery to give notice thereof forthwith to the inspector of the district, and if any person is killed thereby, to the coroner of the county, who shall give due notice of the inquest to be held; it shall be the duty of the inspector, upon being notified as herein provided, to immediately repair to the scene of the accident and make such suggestions as may appear necessary to secure the future safety of the men; and if the results of the explosion do not require an investigation by the coroner, he shall proceed to investigate and ascertain the cause of the explosion or accident, and make a record thereof, which he shall file as provided for; and to enable him to make the investigation, he shall have power to compel the attendance of persons to testify, and to administer oaths or affirmations; the cost of such investigation shall be paid by the county in which the accident occurred, in the same manner as costs of inquests held by the coroners or justices of the peace are paid.

Sec. 15.—The court of common pleas of any county in the proper district, upon a petition sigued by not less than fifteen reputable citizens, not less than five of whom shall be miners, owners, or lessees of mines, and with the affidavit of one or more of said petitioners attached, setting forth that any inspector of mines neglects his duties or is incompetent, or that he is guilty of a malfeasance in office, shall issue a citation in the name of the Commonwealth to the said inspector to appear on not less than fifteen days' notice, upon a day fixed before said court, at which time the court shall proceed to inquire into and investigate the allegations of the petitioners; if the court find that the said inspector is neglectful of his duties, or is incompetent to perform the duties of his office, or that he is guilty of malfeasance in office, the court shall certify the same to the Governor, who shall declare the office of said inspector vacant, and proceed in compliance with the provisions of this act to supply the vacancy; the costs of said investigation shall, if the charges are sustained, be imposed upon the inspector, but if the charges are not sustained they shall be imposed upon the petitioners.

Sec. 16.—The neglect or refusal to perform the duties required to be performed, by any section of this act, by the parties therein required to perform them, or the violation of any of the provisions or requirements hereof, shall be deemed a misdemeanor, and shall, upon conviction, be punished by fine of not less than two hundred dollars, nor not exceeding five hundred dollars, at the discretion of the court; and all penalties recovered under this act shall be paid into the treasury of the State.

Sec. 17.—The inspector shall exercise a sound discretion in the enforcement of the provisions of this act, and should the operator or owner be dissatisfied with any decision at which the inspector may arrive, it shall and may be lawful for such operator or owner to apply, by petition, to the court of quarter sessions of the county wherein such mine is located, and said court shall, thereupon appoint three reputable, competent, and disinterested persons, whose duty it shall be to forthwith examine such mines, and hear the proofs and allegations of the inspectors and operator or owner, and make such report, under oath, to court, of the facts as they exist, together with their opinion thereon; and if said report sustains the decisions of the inspector, then the party making application to court shall pay the costs of such proceeding, and if the report is against such decision, then the inspector shall pay the costs, unless the court order otherwise. The report of the said board shall become absolute, unless exceptions thereto shall be filed within ten days after notice of the filing thereof to the owner, operator, or inspector, and if exceptions are filed the court shall hear and determine the same, and the decision shall be final and conclusive.

Sec. 18.—The provisions of this act shall not apply to any mine where ten men, or a less number, are employed, or to any mine which does not generate fire-damp, black-damp, or other dangerous or noxious gases.

Sec. 19.—All laws or parts of laws inconsistent with any of the provisions of this act are hereby repealed.

An act to amend an act entitled "An act to provide the means for securing the health and safety of persons employed in the bituminous coal mines of Pennsylvania."

Sec. 1.—*Be it enacted, etc.*, That the last clause of the eighteenth section of the act of General Assembly, entitled "An act to provide the means for securing the health and safety of persons employed in the bituminous coal mines of Pennsylvania," approved the eighteenth day of April, Anno Domini one thousand eight hundred and seventy-seven, after the word "employed," in the second line of said section, which is as follows: "Or to any mine which does not generate fire-damp, black-damp, or other dangerous or noxious gases," is hereby repealed.

Massachusetts.—The text of the new law on foreign mining is as follows, Chap. 106:—

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:—

Sec. 1.—Every corporation, company, or association chartered or organized by authority other than that of this Commonwealth, for the purpose of engaging without the limits of this Commonwealth in the business of coal mining or other mining, of quarrying or extracting carbonaceous oils from the earth, or of purchasing or holding mines or lands without the said limits, which shall for any period exceeding ten days, establish, set up, have, or keep principal or branch subscription, treasury, or transfer office or agency within this Commonwealth, shall, within thirty days after the setting up or establishment of such office or agency, make and return to the secretary of the Commonwealth a certificate in manner and form to be approved by the commissioner of corporations, and signed and sworn to by its president, treasurer, and a majority of its board of directors or trustees setting forth the name of such corporation, company or association, the name of the State, Territory or foreign country under whose laws it is organized, and whether specially chartered or organized under the general laws thereof, its location in such State, Territory, or country, the location of its mines, quarries, oil wells, or lands, and the amount of its capital stock authorized by its charter or organization, and the amount thereof actually called in by assessment or instalment, the place or places within this Commonwealth in which its office or offices are established or set up, and the names and residences of all those of its officers, directors, trustees, and agents who are citizens or residents of this Commonwealth. Such corporation, company, or association shall also, in said return, designate by his proper name and address, one of said offices or agents, a citizen or resident of this Commonwealth, as attorney upon whom service may be made of all process against such corporation, company, or association in this Commonwealth.

Sec. 2.—Within thirty days after any meeting of the stockholders, members, directors, or trustees of any such corporation, company, or association at which the capital stock is increased or reduced, or any changes made in its board of officers, agents, directors or trustees, a like certificate shall be filed setting forth the facts as then established.

Sec. 3.—The fee for filing and recording the certificates required by Secs. 1 and 2 of this Act shall be $5.00 for each certificate, to be paid to the secretary of the Commonwealth, and by him paid into the State treasury.

Sec. 4.—Each such corporation, company, or association shall semi-annually, between the first and tenth days of June and December in each year, pay to the treasurer of the Commonwealth a tax of one fortieth of one per centum upon the par value of its capital stock as standing, fixed by the corporation, company, or association on the first days of May and November respectively then next preceding; *provided, however*, that said semi-annual tax shall not, for any one of such corporations, companies, or associations exceed the sum of $300. And this tax, when paid, shall be in lieu of that required by Sec. 43 of Chap. 13 of the public statutes.

Sec. 5.—All officers, directors, trustees, and agents of such corporations, companies, or associations, citizens of or resident or commorant within this Commonwealth, shall be jointly and severally liable for all taxes due under said Sec. 43 of Chap. 13 of the public statutes, and for fees required to be paid under the provisions of this Act.

Sec. 6.—This Act shall take effect upon its passage.

Approved March 22, 1882.

New Mexico	6 "	No limit.	No penalty.
New York	6 "	6 p. ct.	Forfeiture of contract. The lender can recover neither principal nor int.
North Carolina	6 "	8 p. ct.	Forfeiture of the entire interest, and the party paying greater rate than that allowed by law, can, if action commenced within two years, recover double amount of interest paid.
Ohio	6 "	8 p. ct.	Forfeiture of excess over 6 per cent.
Oregon	8 "	10 p. ct.	Forfeiture of principal and interest.
Pennsylvania	6 "	6 p. ct.	Excess can be recovered if suit is brought within six months.
Rhode Island	6 "	No limit.	No penalty.
South Carolina	7 "	7 p. ct.	Forfeiture of all interest.
Tennessee	6 "	6 p. ct.	Forfeiture of all interest over 6 per cent.
Texas	6 "	12 p. ct.	Forfeiture of all interest if specially pleaded by debtor.
Utah	10 "	No limit.	No penalty.
Vermont	6 "	6 p. ct.	Forfeit of excess.
Virginia	6 "	6 p. ct.	Forfeit of all interest. No corporation can plead usury.
Washington Territory	10 "	No limit.	No penalty.
West Virginia	6 "	6 p. ct.	Forfeit of excess.
Wisconsin	7 "	10 p. ct.	Forfeit of all interest. Borrower can recover treble amount of usury, by an action brought within a year.
Wyoming Territory	12 "	No limit.	No penalty.

THE DOMINION OF CANADA.

AREA, 3,483,952 square miles, or 2,229,729,280 acres. The commissioner of lands of the Dominion of Canada, is appointed by and subject to the minister of the interior, and resides at Ottawa. The Crown domains of the several provinces are disposed of under special laws, but the vast area of Dominion lands (corresponding with the public domain of the United States) is disposed of under the provisions of the statute known as the 42d Victoria, May 15th, 1879. Agents, known as agents of Dominion lands, are appointed in the several Territories, viz, Manitoba, Kerwatin, and Northwest Territories. These agents give notice, by publication, of the filing of maps of survey and that the lands are open to cash sale or settlement. Surveyed townships are grouped into "districts," which are numbered from No. 1. These districts each have an agent at a local office. They are subordinate to the agent of the Territory, who is subordinate to the commissioner of the land office at Ottawa. The Dominion does not control public lands in some of the provinces. A surveyor-general of the Dominion is also appointed, under whom the surveys are made. His office is at Ottawa, in the department of the interior. The law relating to the Dominion lands is here given entire. It will be noticed that this statute gives the executive charged with the control and disposition of the public domain large discretionary authority. The body of this act is based upon the best features of the land system of the United States, with beneficial additions. Many features of this statute could be engrafted upon our system with profit.

LAW RELATING TO PUBLIC LANDS IN CANADA.—42 Victoria, Chap. 31.—*An Act to amend and consolidate the several acts respecting the public lands of the Dominion. Assented to May* 15, 1879. —Whereas, it is expedient with a view to the proper and efficient administration and management of certain of the public lands of the Dominion, that the same should be regulated by statute, and divers acts have been passed for that purpose which it is expedient to amend and consolidate: Therefore Her Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

Preliminary — Interpretation. — 1. This act shall apply exclusively to the lands included in Manitoba and the several territories of the Dominion, which lands shall be styled and known as Dominion lands; and this act shall be known and may be cited as the "Dominion lands act 1879," and the following terms and expressions therein shall be held to have the meaning hereinafter assigned them, unless such meaning be repugnant to the subject or inconsistent with the context: that is to say:

1. The term Minister of the Interior means the Minister of the Interior of Canada.
2. The term surveyor-general means the said officer, or, in his absence, the chief clerk performing his duties for the time being.
3. The term agent or officer means any person or officer employed in connection with the administration and management, sale or settlement of Dominion lands, and the term local agent means the agent for Dominion lands employed as aforesaid, with respect to the lands in question; and the term land office means the office of any such agent.
4. The term Dominion land surveyor means a surveyor duly authorized under the provisions of this act to survey Dominion lands.
5. The term Crown timber agent means the local officer appointed to collect dues and to perform such other duties as may be assigned to such officer, in respect to the timber on Dominion lands.
6. The term island, as used in connection with timber, means an isolated grove or clump of timber in prairie.
7. The term belt as used in connection with timber, means a strip of timber along the shore of a lake, river or water course.
8. The term section means a section of this act distinguished by a separate number, and the term subsection means a subdivision of any clause distinguished by a separate number or letter in smaller type.
9. The term Canada Gazette means the official gazette of the government, published at Ottawa.

Dominion Lands Office.—2. The department of the Minister of the Interior of Canada shall be charged with the administration and management of the Dominion lands.

1. Such administration and management shall be effected through a branch of the said department, to be known and designated as "The Dominion lands office.

2. Copies of any records, documents, plans, books or papers belonging to or deposited in the said office, attested under the signature of the Minister of the Interior, or the surveyor-general, and of plans or documents in any Dominion lands or surveys office in Manitoba or the Northwest Territories, attested under the signature of the agent or inspector of surveys, as the case may be, in charge of such office, shall be competent evidence in all cases in which the original documents, books, plans, or papers could be evidence.

3. No person employed in or under the Dominion lands office shall purchase any of such lands, except under the authority of an order in council, or shall locate military or bounty land warrants, or land scrip, or act as agent of any other persons in such behalf.

System of Survey.—3. Subject always to the provisions hereinafter made with respect to special cases.

The dominion lands shall be laid off in quadrilateral townships, containing thirty-six sections of one mile square in each except in the case of those sections rendered irregular by the convergence or divergence of meridians as hereinafter mentioned, together with road allowances of one chain and fifty links in width, between all townships and sections.

2. The sections shall be bounded and numbered as shown by the following diagram:

N.

	31	32	33	34	35	36
	30	29	28	27	26	25
W.	19	20	21	22	23	24
	18	17	16	15	14	13
	7	8	9	10	11	12
	6	5	4	3	2	1

E.

S.

3. The townships therefore will, subject to deficiency or surplus from converging or diverging meridians, as the case may be, measure on each side, from centre to centre of the road allowances bounding the same, four hundred and eighty-nine chains: Provided, that the Governor in council may hereafter, should the same be deemed expedient, reduce the width of the road allowances on township and section lines in that part of the territory lying north of the line between townships eighteen and nineteen, and east of the tenth range east of the principal meridians, and west of the fourteenth range west of the said meridians.

4. The lines bounding townships on the east and west sides shall, in all cases, be true meridians, and those on the north and south sides shall be cords intersecting circles of latitude passing through the angles of the townships.

5. The townships shall be numbered in regular order northerly from the international boundary or forty-ninth parallel of latitude, and shall lie in ranges numbered, in Manitoba, east and west from a certain meridian line run in the year 1869, styled the "Principal Meridian," drawn northerly from the said forty-ninth parallel at a point ten miles or thereabouts westwardly from Pembina.

6. In the territories east and west of Manitoba such other governing or guide meridians may be adopted and confirmed by the governor in council as may, from time to time, become expedient.

7. The townships shall be laid out the precise width of four hundred and eighty-nine chains, as aforesaid, on the base lines hereinafter mentioned, and the meridians between townships shall be drawn from such bases, north or south to the depth of two townships, that is to say, to the correction lines hereinafter mentioned.

8. The said forty-ninth parallel or international boundary shall be the first base line, or that for townships one and two. The second base line shall be between townships four and five, the third between townships eight and nine, the fourth between townships twelve and thirteen, the fifth between townships sixteen and seventeen, and so on northerly in regular succession.

9. The correction lines, or those upon which the "jog" resulting from the want of parallelism of meridians shall be allowed, will be as follows, that is to say, on the line between townships two and three, on that between six and seven, on that between ten and eleven, and so on. In other words, they will be those township lines running east and west which are equi-distant from the bases at the depth of two townships.

10. Each section shall be divided into quarter sections of one hundred and sixty acres, more or less, subject to the provisions hereinafter made.

11. In the survey of any and every township, the deficiency or surplus, as the case may be, resulting from convergence or divergence of meridians shall be allowed in the range of quarter sections adjoining the west boundary of the township, and the north and south error in closing on the correction lines from the north or south shall be allowed in the ranges of quarter sections adjoining, and north or south respectively of the said correction lines.

12. The dimensions and area of the irregular quarter sections, resulting from the provision in the next preceding clause, whether the same be deficient or in excess, shall, in all cases, be returned by the surveyor at their actual measurements and contents.

13. Preliminary to the subdivisions into townships and sections of any given portion of country proposed to be laid out for settlement, the same shall be laid out into blocks of four townships each, by projecting the base and correction lines, and east and west meridian boundaries of each block.

1. On these lines, at the time of the survey, all township, section, and quarter section corners shall be marked, which corners shall govern, respectively, in the subsequent subdivision of the block.

2. Only a single row of posts or monuments to indicate the corners of townships, or sections (except as hereinafter provided), shall be placed on any survey line. These posts or monuments, as an invariable rule (with the exception above referred to), shall be placed in the west limit of the road allowances, on north and south lines, and in the south limit of road allowances, on east and west lines; and in all cases shall fix and govern the position of the boundary corner between the two adjoining townships, sections, or quarter sections on the opposite side of the road allowance.

3. Provided that in the case of the township, section, and quarter section corners on correction lines, posts or monuments shall in all cases be planted and marked independently for the townships on either side; those for the townships north of the line, in the north limit of the road allowance; and those for the townships south, in the south limit.

14. The township subdivision surveys of the Dominion lands, according to the system above described, shall be carried out and shall be performed by contract at a certain rate per mile or per acre, fixed from time to time by the governor in council.

15. Legal subdivisions as applicable to the survey, sale, and granting of the Dominion lands, shall be as follows: and it shall be sufficient that such legal subdivisions be severally, as the case may require, designated and described by such names or numbers and areas for letters patent, that is to say:

1. A section or 640 acres;
   A half section or 320 acres;
   A quarter section or 160 acres;
   A half quarter section or 80 acres;
   A quarter quarter section or 40 acres.

2. To facilitate the descriptions for letters patent of less than a half quarter section, the quarter sections composing every section, in accordance with the boundaries of the same as planted or placed in the original survey, shall be supposed to be divided into quarter quarter sections, or forty acres, and such quarter quarter sections shall be numbered as shown in the following diagram, which is intended to show the above proposed subdivisions of a section.

N.

	13	14	12	16
	12	11	10	9
W.	5	6	7	8
	4	3	2	1

E.

S.

3. The area of any legal subdivision as above set forth, in letters patent, shall be held to be more or less, and shall in each case be represented by the exact quantity as given to such subdivision in the original survey.

16. Provided that nothing in this act shall be construed to prevent the lands upon the Red and Assineboine rivers surrendered by the Indians to the late Earl of Selkirk, from being laid out in such manner as may be necessary in order to carry out section thirty-two of the act thirty-third Victoria, chapter three, or to prevent fractional sections or lands bordering on any river, lake, or other water course or public road, from being divided; or such lands from being laid out in lots of any certain frontage and depth, in such manner as may appear desirable; or to prevent the subdivision of sections or other legal subdivisions into wood lots as hereinafter provided; or from describing the said lands upon the Red and Assineboine rivers, or such subdivisions of fractional sections, or other lots, or wood lots, for patent, by numbers according to a plan of record, or by metes and bounds, or by both, as may seem expedient.

Mining Lands.—37. No reservation of gold, silver, iron, copper, or other mines or minerals, shall be inserted in any patent from the Crown granting any portion of the Dominion lands.

38. Any person or persons may explore for mines or minerals on any of the Dominion lands, surveyed or unsurveyed, and not then

marked or staked out and claimed or occupied, and may, subject to the provisions hereinafter contained, purchase the same.

39. Mining lands, if in surveyed townships, may be acquired under the provisions herein contained, and shall be sold in legal subdivisions. When situate in unsurveyed territory and without the limits of the fertile belt, such lands shall be sold in blocks to be called mining locations; and every such mining location, except as hereinafter provided, shall be bounded by lines due north and south and due east and west, astronomically; and each such location shall correspond with one of the following dimensions, namely, eighty chains in length by forty in width, containing three hundred and twenty acres, or forty chains square, containing one hundred and sixty acres, or forty chains in length by twenty in width, containing eighty acres:

1. Provided further, that in case of certain lands proving to be rich in minerals, the Minister of the Interior shall have the power to withdraw such lands from sale, and in lieu thereof institute a system of lease.

2. The rent payable to the Crown under any such lease shall be a royalty, not to exceed two and a half per cent. on the net profits of working.

3. Provided further, that when there are two or more applicants for the same tract, and a prior right in either or any of the applicants is not established to the satisfaction of the Minister of the Interior, the same may be tendered for by the claimants on stated terms of lease, and sold to the highest bidder.

4. Provided also, that in territory supposed to contain minerals the Minister of the Interior may in his discretion reserve from sale alternate locations, or quarter-sections, or other legal subdivisions, with the view of subsequently offering the same either for sale or lease at public competition.

40. Mining locations in unsurveyed territory shall be surveyed by a Dominion land surveyor, and shall be connected with some known point in previous surveys, or with some other known point or boundary (so that the tract may be laid down on the maps of the territory in the Dominion land-office) at the cost of the applicants, who shall be required to furnish, with their application, the surveyor's plan, field-notes and description thereof.

41. No distinction in price shall be made between lands supposed to contain mines or minerals and farming lands, but both classes shall be sold at the uniform price of one dollar per acre; provided that section thirty of this act as regards offering lands at public sale shall apply to coal and mineral lands also, when the same are in surveyed townships.

42. It shall also be lawful for the Minister of the Interior to exempt from the preceding provisions of this act such of the Dominion lands upon or adjoining the banks of rivers or other waters as may be supposed to contain valuable "bar," "bench," or "dry" "diggings" for gold or other precious metals; and the governor in council shall regulate, from time to time, as the same may become necessary and expedient, the nature and size of the claims containing such diggings, and shall fix the terms and conditions upon which the same shall be held and worked, and the royalty payable in respect thereof, and shall appoint and prescribe the duties of such officers as may be necessary to carry out such regulations.

Indian Title.—43. None of the provisions of this act respecting the settlement of agricultural lands or the lease of timber lands, or the purchase and sale of mineral lands shall be held to apply to territory, the Indian title to which shall not at the time have been extinguished.

Coal Lands.—44. Coal lands designated by the government as such are hereby withdrawn from the operation of this act as regards the rights of squatters to homesteads on the Dominion lands in advance of the surveys.

45. The minister of the Interior shall have power to protect any person or persons desiring to carry on coal mining in unsurveyed territory, in the possession of the lands on which such mining may be carried on: Provided, that before entering on the working of such mines, such person or persons make written application to the local agent to purchase such land; such application must be accompanied by a description by a Dominion land surveyor, setting forth generally the situation and the dimensions of such land, and shall also be accompanied by payment of the price thereof, estimating the number of acres (which shall be in the discretion of the Minister, but shall in no case exceed three hundred and twenty) at the rate of one dollar per acre. Such application shall be filed by the agent receiving the same; and on the survey of the township containing the land applied for being effected, the claimant or claimants shall be entitled to a patent for such number of acres, in legal subdivisions, including and covering the mine worked, as shall correspond to the application and to the extent of land paid for.

Provided, that all the operations under this section shall be subject to the rights of the Hudson's Bay Company to sections 8 and 26 as hereinbefore enacted: Provided further, that the survey of the township within which such land may be situate, shall not be delayed beyond a period of five years after the date of the purchase of such land, without the consent of the Hudson's Bay Company thereto first had and obtained.

Provided further, that such mine shall have been continuously worked, to the satisfaction of the Minister of the Interior, during the interim between the application and the survey; but if the same should at any time during such interim cease to be worked for twelve consecutive months, unless the lands in question be no longer valuable for mining purposes, then the claim of the parties to the land shall lapse, and the mine shall be forfeited to the Crown, together with any and all purchase-money which may have been paid to the Government on account thereof.

46. The Minister of the Interior, with the view of preventing undue monopoly in coal lands, may in his discretion, on a township being surveyed, exempt from the sale and settlement provisions of this act, the sections or other legal subdivisions of land which may be said to contain coal, except those on which mining may have been carried on under the next preceding clause; and the same shall be subsequently sold or otherwise dealt with in such manner as may be deemed expedient by the Governor in Council.

Surveys and Surveyors.—83. No person shall act as surveyor of Dominion lands unless he shall, before the fourteenth day of April, 1872, have been duly qualified by certificate, diploma or commission, to survey the Crown lands in some one of the provinces of the Dominion, or shall have become qualified under the provisions hereinafter set forth.

[NOTE.—Subdivision of the lands and the interior surveys of blocks of four townships are done by contract surveyors, the exterior lines of these blocks being run and fixed by the corps of surveyors.]

1. Persons qualified under the said provisions shall be styled "Dominion land surveyors," or "Dominion topographical surveyors," as the case may be.

95. No person shall receive a commission from the said board authorizing him to practice as a Dominion land surveyor until he has attained the full age of twenty-one years and has passed a satisfactory examination before the said board on the following subjects; that is to say: Euclid, first four books, and propositions first to twenty-first of the sixth book; plane trigonometry, so far as it includes solution of triangles; the use of logarithms, mensuration of superficies, including the calculation of the area of right-lined figures by latitude and departure, and the dividing or laying off land; a knowledge of the rules for the solution of spherical triangles, and of their use in the application to surveying of the following elementary problems of practical astronomy:

1. To ascertain the latitude of a place from an observation of a meridian altitude of the sun or of a star;

2. To obtain the local time and the azimuth, from an observed altitude of the sun or a star;

3. From an observed azimuth of a circumpolar star, when at its greatest elongation from the meridian, to ascertain the direction of the latter.

He must be practically familiar with surveying operations and capable of intelligently reporting thereon, and be conversant with the keeping of field notes, their plotting and representation on plans of survey, the describing of land by metes and bounds for title, and with the adjustments and methods of use of ordinary surveying instruments, and must also be perfectly conversant with the system of survey as embodied in the "*Dominion Lands Acts*," and with the manual of standing instructions and regulations published from time to time for the guidance of Dominion land surveyors.

96. The board may examine any candidate on oath (which oath may be administered by any one of the examiners) as to his actual practice in the field and with regard to his instruments.

97. Each person passing the examination prescribed by this act shall receive a commission from the board in accordance with Form E in the schedule to this act constituting him a Dominion land surveyor, and shall jointly and severally, with two sufficient sureties to the satisfaction of the board, enter into a bond in the sum of one thousand dollars to Her Majesty, her heirs and successors, conditioned for the due and faithful performance of the duties of his office, and shall take and subscribe the oath of allegiance, and the following oath, before the board of examiners, any one of whom is hereby empowered to administer the same:

"I, , do solemnly swear (or affirm, as the case may be) that I will faithfully discharge the duties of a Dominion land surveyor according to law, without favor, affection, or partiality. So help me God."

1. Until the above formalities shall have been gone through, the said commission of Dominion land surveyor shall have no effect.

2. The said oaths of allegiance and of office shall be deposited in the Dominion lands office.

3. The said bond shall be deposited and kept in the manner prescribed by law with regard to the bonds given for the like purposes by other public officers of the Dominion, and shall be subject to the same provisions, and shall enure to the benefit of any party sustaining damage by breach of any condition thereof; and the commission shall be registered in the office of the registrar-general of Dominion.

Land Laws of Mexico.—In accordance with Interior Department instructions, I have collected information from authentic sources in reference to the laws of Spain and Mexico respecting minerals and what conditions attached to grants embracing mines.

From the earliest European settlement of the country mining for the precious metals constituted the principal branch of industry in Spanish America, and being the one that yielded the largest revenue to the government, laws and royal ordinances were from time to time passed for the encouragement of the adventurous prospectors and for the protection of the fortunate discoverer of mines of the precious metals; yet, although these laws and ordinances dignified the mining profession by attaching thereto the privileges of nobility, still the government went no further in its liberality than to grant the miner the exclusive privilege of working the mine he might have discovered in the manner required and under the conditions imposed by the laws and ordinances in relation thereto; and when these conditions were disregarded or violated the ownership of the mine, or rather the exclusive right to work it, was lost, and the same reverted to the government, to be acquired by any one else who might undertake to comply with the conditions under which it had been granted to the former owner, the absolute ownership of the mine ever remaining in the government. Joaquin Escriche, in his Diccionario Razonado de Legislacion y Jurisprudencia (a standard authority), under the head of Minas, says: "According to the ancient Roman law, mines of gold, silver, copper, iron, and other metals pertained to the owner of the land on which they were discovered, *erant privati, juris, et in libero privatorum usa juris comercio*, because they are benefits bestowed by nature, to be enjoyed by the owners of the land producing the same. Subsequently the Roman emperor appropriated one-tenth of the products of the mines of every character. "Under the Spanish law a different rule was adopted; mines of gold, silver, lead, and other metals could not be worked without royal permission, since they (and also salt pits) belonged to the king. Any one was permitted to 'dig' in search of minerals or stones on his own lands, or on the lands of others with the consent of the owner, under the condition that the discoverer should receive one-third part of the net proceeds of the discovery, the other two-third parts to be given to the government. Every Spaniard or foreigner was permitted to 'dig' in search of minerals on public or private lands, under the obligation of compensating for the damages occasioned. In Mexico, Venezuela, and Chili the matter of mines is governed by the ordinances of the 22d of May, 1783." (Escriche, new edition, printed 1869, Mina.) As early as the year 1383, Don Alonzo XI issued a "pragmatica" in which it is declared: "That all mines of silver and gold and lead, and of any other metal whatever, of whatsoever kind it may be, in our royal seigniory shall belong to us, therefore no one shall presume to work them without our special license and command; and also the salt springs, basins, and wells which are for making salt, shall belong to us, wherefore we command that they revert to us with the produce of the whole thereof, and that no one presume to intermeddle therein except those to whom the former kings, our predecessors, or we ourselves may give them as a privilege, or who may have held them from time immemorial." (*Vide* Book VI, Title XIII, Law II, Recopilacion de Castilla; Book IX, Title XVIII, Novisima Recopilacion.) The law of Philip II, 1559, declares: That inasmuch as the discoverers of mines, after having discovered and registered them, pretend that by that act alone they have acquired such a right to them that no other person can, within the limits and space of such mines, enter, or try, or work, and that they can thus keep them encumbered without working them themselves or permitting others to do so, by which they prevent the principal produce and profit which belongs as well to us as to our subjects and to the public welfare, since that principally consists in the working and reduction of mines and metals, and not merely in their discovery, we declare and command that such discoverer of the mine or mines of silver, after having made registry in the manner prescribed, shall be obliged within six months to sink and excavate to the depth of three *estados* (a measure of about six feet), and not sinking and excavating his mine to the depth of three *estados*, it may be denounced before the judge and registry made thereof as of a vacant or undiscovered mine. Also, that we reclaim, resume, and incorporate in ourself, in our crown and patrimony, all the mines of gold and silver and quicksilver of these kingdoms, in whatsoever parts and places they may be and are found, whether in royal lands, or in those of lordships, or of the clergy, and whether in public, municipal, or vacant lands, or in inheritances, places, and soils of individuals, notwithstanding the grants which by us and by the kings, our predecessors, have been made to any persons, of whatsoever condition, rank, and dignity they may be. (Book VI, Title XIII, Law IV, Recopilacion de Castilla. Also, Book IX, Title XVIII, Law III, Novisima Recopilacion).

Royal ordinances for the direction, regulation and government of the important body of mining of New Spain and of its royal tribunal general, May 22, 1783.

Article I, Title v, declares: That mines are the property of the royal crown, as well by their nature and origin as by their reunion declared in Law IV, Title XIII, Book VI, Nueva Recopilacion.

Article II, same title, declares: That without separating them from the royal patrimony, they are granted to the subjects of the king in property and possession, in such manner that they may sell, rent, donate, and pass them by will, either in the way of inheritance or legacy, or in any other manner alienate the right which in the mines belongs to them, on the same terms on which they themselves possess it, and to persons capable of acquiring the same.

Article III, same title, declares: That this grant is understood to be with the conditions that the grantees contribute to the royal treasury the prescribed portion of the metals, and that they shall work the mines in the manner prescribed by the ordinances, so that they shall be considered forfeited whenever a failure shall occur in complying with the ordinances in which it is provided, and that they may be granted to any person who for that cause may denounce them.

Article I, Title VI, declares: That the discoverers of one or more mineral hills, absolutely new, may acquire on the principal vein which they may select as many as three *pertenencias*, continued or interrupted, according to the measurements which shall be prescribed, and if they may have discovered more veins, they may have one *pertenencia* on each vein, said *pertenencia* being determined and marked out within ten days. (A *pertenencia* was in extent two hundred *varas*, measured on the vein, the width being determined by the dip or angle thereof, being sufficiently wide to prevent the vein from being cut by a shaft sunk on a side claim, at a depth of less than two hundred *varas*, this being the depth beyond which, in those times, it was considered unprofitable to work a mine.)

Article X, same title, declares: That if the denouncer of a mine does not put up his working-shaft in order nor take possession within sixty days, he shall lose his right, and the mine may be denounced by another.

Article XIV, same title, declares: That any one may discover and denounce a vein or mine, not only in common land but also in the private lands of any individual, provided he pays for the land of which he occupies the surface, and the damage which immediately ensues therefrom, according to the valuation of the experts appointed by both parties, and a third in case of disagreement.

Article II, Title IX, provides: That no one shall be permitted to work mines, without the direction and continual assistance of one of the intelligent and practical experts who in New Spain are called *Mineros* or *Guarda-minas*, who must be examined, licensed and affirmed by one of the professors of mining, which each *Real* or *Asiento* must have.

Article XIII, same title, declares: That as mines require to be worked continually and incessantly in order to procure their metals, and as they require in them works and operations which can be executed only in a long time, and as their re-establishment, if their working be suspended and interrupted, will cost as much as in their original undertaking,—therefore, to obviate this inconvenience, and also to prevent any owners of mines who cannot or will not work them, from keeping them without use, and for a long time impeding by pretended working, the real and effective labor which others might bestow upon them, I order and command that any one who shall for four consecutive months fail to work a mine with four operatives regularly employed and occupied in some interior or exterior work of real utility and advantage, shall thereby forfeit the right which he may have to the mine, and it shall belong to the denouncer who proves its desertion.

Article X, same title, declares: That no mine shall be abandoned without first informing the deputation of the district, in order that it may be published by fixing notices on the doors of the churches and other accustomed places, so that all may have notice thereof.

Article II, Title XIX, grants in favor of scientific professors of mining the privileges of nobility in order that all persons who devote themselves to this important profession and occupation may be considered and treated with all the distinction due to so noble a profession.

According to Escriche, the laws of Spain passed prior to 1821 and the laws of Mexico passed since that date have not changed the fundamental principles laid down in the ordinances of the 22d of May, 1783, in relation to the ownership of mines and the manner of acquiring title thereto; hence these ordinances have been in force in Mexico since the date of their passage in 1783, the Mexican mining laws passed since the year 1821 not having essentially changed the spirit thereof.

From the foregoing it is manifest that under the laws and royal ordinances of Spain, from very early times down to the date of the independence of Mexico, and under the mining laws of Mexico down to the publication of the new edition of Escriche (1869), the miner could acquire no absolute title or fee in any mine discovered by him in any part of the Mexican territory, the usufruct thereof being all that was granted him by the government, and this under such regulations, instructions, and conditions as were imposed by law; and when these conditions were not complied with, the right to work the mine was lost, and could be acquired by any one else who might undertake to comply with the conditions and regulations inseparable from the privilege of working mines. The Spanish and Mexican Governments, in granting lands in Mexico, never in terms reserved the minerals contained therein, for the reason that under the constitutional laws they were reserved by and for the government. For this reason, in the many grants of land made by Spanish and Mexican authorities in Sonora, as well as in California, no mention is made of minerals.

Pastoral and mining pursuits were separate branches of industry, and in a certain sense independent of each other. Both were cherished and protected by the government. To the grazier and agriculturist was granted so much of the soil as he had means to occupy and improve, together with such appurtenances thereto as were necessary to make the occupation of the soil possible and the use thereof valuable; and to tho miner were granted the minerals he might discover in the soil and the usufruct of the mine in which they were found. But to neither of these parties was the grant unconditional. To the grazier were granted lands on condition that he occupied them usefully to himself and to the government, and the abandonment thereof was followed by a forfeiture of title, in which case the land reverted to the government to be re-granted to a more industrious applicant. To the miner was granted the exclusive right to work the mine he might have discovered, on condition that he observe certain rules and regulations established by law and paid to the government a certain portion of the products of the mine; a violation of these conditions was also followed by a forfeiture of such title as he possessed, the usufruct of the mine reverting to the government to be re-granted to a more vigilant and "honest miner."

The objects of the government in granting lands for settlement were the increase of the wealth and population of the country, the spread of the holy Catholic faith, and the extension of the power of the Spanish monarchy; and the motive that induced the granting of privileges to miners was that the royal treasury might be supplied with American gold. No grants of lands or mines were ever made by the Government of Spain or Mexico for speculative purposes. It is true that the lands were sometimes granted as a reward for distinguished services, but in all other cases on condition of occupation.

From a careful consideration of the foregoing laws and ordinances, as well as of the usages and customs of Spain and Mexico, I am forced to the conclusions:

First. That the grantee of land under the Spanish and Mexican Governments acquired no title to the minerals contained in the granted land.

Second. That the title to the minerals contained in the tract granted remained in the government notwithstanding the grant of the land.

Third. That under the Spanish and Mexican laws and ordinances any one had a right to "dig" in search of minerals, under certain conditions, on his own lands or on those belonging to individuals or private persons.

Fourth. That the Government of the United States under the treaty of 1853 for the purchase of a portion of the territory of Sonora succeeded to all the rights and obligations of the Mexican Government in relation to the ceded territory at the date of the treaty.

The result of these conclusions necessarily is: That since our government succeeded to all the rights and obligations of the Mexican Government in relation to the ceded territory it is bound by the treaty to recognize and confirm all rights, titles and privileges, which had been granted by that government to private individuals prior to the cession of the territory, and to carry out the intentions of the Mexican Government toward these having ownership in lands and mines precisely as if there had been no change of sovereignty. It is therefore clear to my mind that any one has at present a right to prospect for minerals on such portions of the ceded territory as may have been granted by the Mexican Government to private individuals, and a right to work any mines that may be found on said lands, under no more onerous conditions than the reasonable ones imposed by the mining laws of Mexico. See Article XIV., Title II., Ordinances May 22d, 1783, heretofore cited.

—A communication from John Wasson, U. S. Surveyor-general, Report Public Lands Commission.

THE DEBRIS QUESTION.

VERY few of our Eastern people interested in mining know anything concerning "the Debris question, a question that has agitated California in the past and threatens her peace for many years to come. Consequently what follows here will be read with deep interest. We begin with some historical matter.

The territory of the ancient Roman empire was situated chiefly in the principal and secondary basins of the Mediterranean, and embracing all of Southern Europe, Northern Africa, and Asia Minor, together with Persia and the remoter East, which may be comprised in this general survey, it included a surface larger than that of all Europe, and at one time or other may have supported a population scarcely less numerous. At the present day this portion of the earth is nearly altogether withdrawn from human use; it is substantially a desert. The causes of this extraordinary desolation are attributed chiefly to disafforesting, and to those destructive forces which operate upon the earth when it is deprived of a due extent of arboreal covering. This disafforestation was largely due to the mining operations of the early races. Not only were the aboriginal forests cut down to supply fuel for smelting purposes, and timbers to support the mining excavations, but their regrowth was prevented by the ravages which mining committed upon the fertile portions of the land. These ravages, however, operated as a more direct and perhaps important source of the general devastation alluded to; and mining for the precious metals may, both directly and indirectly be regarded as the principal agent in the physical, and consequently in the ultimate social, decay of Arabia, (Sabia, Media, &c.), Asia Minor, Greece, Carthage, Spain, Italy, and the Islands of the Mediterranean. In modern times the sinister consequences of mining are to be traced in the desolation of many parts of Mexico, the Isthmus, and the countries of South America, which were overrun by the Spaniards and Portuguese. The desolation that befel the countries of the Mediterranean now awaits those of the Northern Pacific. In California, particularly, it is proceeding at a rate that has already seriously damaged the face of the country.

The process began with the opening of the placer mines, when every part of the land suspected of containing gold was torn up, ransacked, and left to the action of the rains, which conveyed the sand and gravel into the rivers, and strewed them over the arable valleys. The area of surface thus torn up is estimated to have amounted in 1862 to 10,000,000 acres.[1] At the present time it amounts to, perhaps, more than double this area. Before the placers failed to induce further explorations of this sort, hydraulic mining came into vogue. This dates back so early as 1850.[2] Streams of considerable volume are diverted from their natural channels and conducted to great distances in canals or wooden flumes, or sheet-iron pipes, and then directed against the hills, or those vast level surfaces of ground which it is necessary to remove to reach the gold-bearing strata, or which themselves contain deposits of the precious metals.[3] In 1867 there were 6,000 miles (including branches) of artificial watercourses employed for mining purposes in California.[4] It is estimated that up to about the year 1870 some £4 000,000 had been expended in constructing mining ditches,[5] and that the wooden flumes, of which the majority of them consisted, do not last on the average more than six to ten years.[6] In 1871 the total number of mining ditches was 516, their aggregate length 4,800 miles, and their daily supply of water 171,000 miner's inches, each discharging $94\frac{464}{1000}$ths cubic feet an hour. Some of this water is used for only ten hours a day, and all of it for only seven months in the year. One hydraulic company, employing ten men at 16s. per day each, and 200 inches or 4,000 gallons of water, washed down 224,000 cubic feet of earth in six days, and though there was only obtained from it £600 in gold (about $\frac{5}{8}$ths of a penny to the cubic foot) £470 of this was profit. Another company used 2,000 inches, or 40,000 gallons of water for 100 days, and washed down 1,000,000 cubic yards of gravel (containing less than $\frac{1}{4}$th of a penny to the cubic foot), and contained £6,400, of which £2,400 was profit. The cube of earth washed down was 1,100 feet long, 300 feet wide, and 80 feet deep. At the present time, 1879, the number of mining ditches is 640; their aggregate length, 6,585 miles; the daily supply of water, 260,000 inches. As some ditches are used only ten hours a day, this is reckoned equal to 200,000 inches running twenty-four hours a day. As on the average the mines can only be worked so as to equal seven months of full time during the year, the actual consumption of water is about 714,370 million gallons a year, or 1,956 million gallons for each and every day. The present annual yield of gold in the State is about £3,600,000 a year, of which one-third is from quartz

[3] Marsh, p. 632. It must be understood that the "gravel hills" of California are the remains of ancient river beds. These hills were once the bottoms of rivers, and the ancient enclosing hills and high lands have been washed down to a level beneath them; so that the ancient bottoms have become hills. The existing streams, such as the Yuba, cut through them, and expose their auriferous deposits. The natural exposure is called a placer, where the largest pieces of gold were found. Away from the river are the gravel banks, which are now being washed into it by artificial streams of water brought from distant mountains.

mines, and the remainder from hydraulic mining and drifting. The present rate of production from hydraulic mining is expected to remain constant for a century or more to come, with a slight tendency to increase during the first twenty-five years. Naked hills and fertile soils are alike washed away by the artificial torrents brought to these mines, and the material removed—vegetable mould, sand, gravel, pebbles—is carried down by the current, and often spread over ground lying quite out of the reach of natural inundations, burying it to the depth of sometimes twenty-five feet. An orchard valued at £12,000, and another estimated at not less than £40,000, are stated to have been thus sacrificed; and a report from the Agricultural Bureau at Washington computes the annual damage done by this mode of mining at the incredible sum of £2,400,000.[1] The subject having been brought to the attention of the Legislature of California a commission was appointed in the early part of 1878 to investigate the matter. Among the testimony given before it, as published in the newspapers, was the following:—

On Bear river, 50,000 acres of land are liable to be ruined by mining débris; the channel of the river has been filled up, and the water spreads all over the adjoining country; in some parts of the valley the débris is fifteen to twenty feet deep; the land covered by the débris, which consists of sand and gravel, is entirely ruined; the railroad company has been compelled to raise its bridge three times. On the Yuba river 12,000 acres of good land had been destroyed by mining débris; this damage was estimated at £400,000. In 1853 the Yuba was a clear stream; it commenced shoaling badly in 1857; near the mines the bed had been raised 150 feet. In 1874 the city of Marysville alone was damaged to the extent of £100,000. So great is the mass of débris already in the Yuba that if mining were stopped now the sand would continue to come down the river for years. On the Feather river the damage done was of the same character and scarcely less extensive. With one exception the witnesses thought that the remedy lay in the building of levees. The exception was that of a banker of Marysville, who had formerly been a miner, and had had much experience in the industry. He declared that the levees could palliate but not cure the evil, and that this could only be remedied by putting an end to mining.[2]

The Sacramento river commenced shoaling badly in 1853. At Steamboat Slough, where there were formerly ten or twelve feet of water, there were now but five. In other places the water has decreased from five to six fathoms to as many feet. Places where steamers ran in 1850 are now dry land. San Pablo Bay has greatly shoaled. At the city of Sacramento, the river has been lessened in depth 18 feet by mining débris. A bar, nearly an island, has formed in Suisun Bay. The harbor of San Francisco is being rapidly shoaled by deposits washed down from the mines. As it is averred that there is enough "pay dirt" in the gravel beds for a century further of hydraulic mining with existing appliances, it is quite evident that the witness Jewett is right. In the course of a century there will scarcely be a gravel hill, scarcely a trace of the ancient river bed left in the State, and vast tracts of land will, by that time, have been reduced to the condition of deserts of sand and stones While gold mining has thus tended to bestrew the arable lands, fill up the streams, and shoal the harbors of California, silver mining has done much to deprive both that State and Western Nevada of their forest trees.

"Before the devastating hand of the miner was laid upon the timber of the foothills (of California) they formed one of the most delightfully wooded regions of the continent, overspread with a luxuriant carpet of grass and flowers from St. Patrick's day till the Fourth of July, and even later in the summer. Disafforesting has done its work, and turned them into a desert from the last of April till the first rains," about the month of November.[1] In a similar way the Sierras have been shorn of trees to timber the mines of Nevada, the winter's fall of snow has been laid bare to the sun's rays in spring, and the distribution of the waters has been disturbed. Destructive freshets now annually sweep through the valleys of California, and vast inundations cover the lowlands. In 1878 a considerable portion of the Sacramento valley was under water, and the city of Sacramento, the capital of the State, was flooded. The damage to the buildings, roads, and movable property, can only be reckoned in millions.

In short, a process of serious geographical injury is in rapid progress. The bottoms of the rivers are so raised above their former levels that a large proportion of the arable lands, if not already reduced to the condition of swamps, must soon become so, for no system of levees can keep pace with the mass of debris capable of being deposited by the washings of ten thousand millions of gallons of water a day; and no diminution of this process is to be looked for so long as it pays to remove a cubic foot of earth which contains less than a farthing's worth of gold.[2]

[1] Marsh, p. 6?3.

[2] Testimony of J. H. Jewett. Another witness, Col. Mendell (a civil engineer, much employed in large works on the Pacific coast) stated that in his opinion from one-third to one-half of the deposits in the rivers and bays was occasioned by ploughing in agriculture. A third witness, Mr. James O'Brien, a practical hydraulic miner and a farmer, thought that about four-fifths of the debris came from the mines, and one-fifth from ploughing; and this opinion seems to be supported by the general weight of the testimony.

The Great Evils of Hydraulic Mining.—Hydraulic mining, a system of mining operation that was a clever product of American mining necessities has proved to have been in addition to a source of good, one of evil. The vast deposits that the unconquerable energy of the placer miner turned into the rivers of the West have been carried downwards to the Pacific and done in many ways much harm. The State Engineer of California ascertained by actual surveys in 1878 that 18,000 acres of valley land on the Yuba river, land that was once the finest bottom land in the State had up to that year been destroyed and buried beneath the mining debris. This vast area had been transformed from a country of magnificent pastures into a barren desert of sand and slickings, alternating with impenetrable jungles of willow swamps. A similar state of affairs existed in the Bear river.

The Land Commission appointed by Congress in March 3, 1879, in the course of its investigations took up this question of mining debris and examined a great many witnesses. The testimony given before the Commission will give the reader an insight into the magnitude and importance of this subject. Mr. G. F. Allardt, civil and hydraulic engineer of San Francisco, gave the following facts concerning the matter:

Although these lands have been exposed to sunshine and rain for years they produce not a blade of grass, nothing but willows and kindred semi-aquatic plants that derive their nourishment chiefly from the stratum of water percolating underneath the surface, and not from the soil itself. From the beginning of hydraulic mining down to the present time the enormous aggregate of 162,000,000 of cubic yards of material has been sluiced out of the hydraulic mines into the Yuba and its tributaries, while the amount now retained in the river above the valley, or lodged in the canyons, will not exceed 12,000,000 cubic yards. This we have from actual surveys. Thus, 150,000,000 cubic yards of solid material have passed the foot-hills and have been deposited on the bottom lands of the Yuba into the waters of the Feather and Sacramento Rivers, the bays of Suisun and San Pablo, and finally into the Bay of San Francisco. (One company alone, the Excelsior Hydraulic Mining Company at Smartsville, admit in a published circular that they have sluiced 1,800,000 cubic yards into the Yuba.) To present to the mind this enormous mass of 150,000,000 cubic yards of material in a more familiar form, it may be stated that such a mass deposited on a farm of 160 acres would cover it to a depth of 581 feet; or, if spread evenly one foot in depth, would cover 93,000 acres or 145 square miles of land, and absolutely destroy the same for agricultural or any other purposes.

The bed of the Yuba at Marysville is now filled up to the level of the streets of that city, where prior to the era of

[1] "San Francisco Chronicle," Feb. 20, 1878.

[2] This ratio is obtained from the actual experience of several of the hydraulic mines. The general average, however, is somewhat higher.

hydraulic mining there was a well-defined channel of clear water from 20 to 25 feet in depth. The authorities of Marysville have just closed a contract amounting to upwards of $50,000 for raising its levees and protecting the city from the further encroachments of the mining debris. The Feather and Sacramento Rivers have shoaled in a lesser degree, but still sufficiently to almost destroy their usefulness as highways of commerce. A resurvey of Suisun Bay recently made under the direction of the United States Coast Survey Department has developed the fact that tules are now growing at points where fifteen years ago there were several fathoms of water. The complete filling up of this bay is a mere question of a few short years, after which San Pablo Bay will become the next settling reservoir, to be followed, finally, by the rapid shoaling of San Francisco Bay, and the eventual destruction of its harbor. This result is sure to follow, the laws of nature make them inevitable, unless, indeed, hydraulic mining be discontinued or unless some adequate works be constructed for arresting the tailings before they reach the valleys or enter the navigable waters of the State. On this head our survey has given us sufficient data to warrant the belief that such works are not only feasible, but entirely within the bounds of a reasonable expenditure of money.

Now, as to the present condition of the Yuba and its hydraulic mines. It is admitted that during the dry season 17,000 miner's inches of water are used daily by the hydraulic mines of the Yuba, and that such miner's inch removes not less than three cubic yards of material in twenty-four hours. This gives a daily total of 51,000 cubic yards. Fully one-half of this amount is held in suspension by the running waters, and carried down the river in the shape of muddy water, or more correctly speaking, in the shape of *liquid mud*, and is deposited as before stated, partly on the bottom lands of the Yuba and partly in the rivers and bays beyond. That is to say, and I wish to emphasize this fact, 25,000 cubic yards of earth and sand, say 43,750 tons, are daily poured from the mountains into the valleys by the hydraulic miners. To use a familiar illustration, suppose it were required to transport this amount on railroad cars; it would take one hundred and ten trains of forty cars each (one train every thirteen minutes) to accomplish the daily task. In the rainy season more water is used and correspondently more material is sent down; moreover, the winter freshets invariably clean out the canyons and sweep away the heavier material that has accumulated at the mining dumps during the low stages of the river. The lighter material runs down with the stream, the heavier material rolls along the bottom with varying velocities, depending on the height and volume of the freshets, and in due course of time finds its way to the level reaches of the river in the foot-hills and the valley.

It is estimated on competent authority that there yet remains between the South and Middle Yubas 700,000,000 cubic yards of known gold-bearing gravel deposits. At the present rate of hydraulicing this will be worked out in about forty years. The hydraulic miners contend that it can be worked successfully only by the present hydraulic method. As it is well known, however, that the gold-bearing stratum in these mines, the "pay-streak," as it is called, is usually at the bottom of the deposits, next to the bed-rock, and that the largest masses of superincumbent earth seldom, if ever, pay working expenses, it may seem pertinent to inquire just here whether the hydraulic method is really the only and the most economical process, and whether the method of *drift mining* would not average more remunerative results. The drift miner, namely, runs his tunnel through and along this pay-streak, and brings to the light the pay-gravel only, from which he extracts the gold in the usual hydraulic way. As all excavations are done by manual labor with pick and shovel, the debris arising from that source is necessarily limited in amount. At a liberal estimate the material taken out of all the drift mines on the Yubas will not exceed a half million cubic yards, the greater portion of which being heavy material remains in the dumps at the mouths of the tunnels and never reaches the water-courses. There are quite a number of so-called drift mines in successful operation in the Yuba belt, some of exceeding richness, notably those on Bald Mountain at Forest City. It is officially reported that the gravel extracted averages over $3 per cubic yard.

Quartz mining is also an industry of growing importance in this section. It consists in exploiting a gold-bearing quartz lode, crushing the quartz in a stamp mill, and obtaining the gold by means of amalgamating pans. One of the largest and most productive quartz mines in the State is the "Sierra Buttes," near Sierra City, on the north fork of the Yuba. Over three hundred men are steadily employed in and about this mine. The tailings from quartz mines are inconsiderable, and their effect upon the flow of the rivers is scarcely appreciable. It remains to mention still another method of gold mining known as *river mining*, or the reworking of the old tailings in the river-beds. This class of mining is confined almost exclusively to the Chinamen; it creates no debris, but merely shifts it from place to place, and does not, therefore, enter as a factor in the debris problem. Much weight has been laid by the miners on the importance of hydraulic mining in supporting a large population, alleged to exceed one hundred thousand inhabitants. This figure is undoubtedly exaggerated. According to my observation, the total number of workmen actually employed in the hydraulic mines of the Yubas does not exceed 1,500 all told, three-fourths of which number, probably, are Chinamen, the white men being engaged only for the higher grades of labor. It is but fair to name the Excelsior Mining Company of Smartsville, as an honorable exception to this custom, all of its employes being white men, most of them men of family. On the other hand, the number of men employed in the quartz and drift mines is very large, all of them, with few exceptions, being white workmen. The Sierra Buttes Company, for instance, employs three hundred men; the Derbec Company, near North Bloomfield, about one hundred; the Bald Mountain mines support a community of over eight hundred souls. Grass Valley and Nevada City, with a joint population of some ten thousand, depend almost exclusively on their quartz mining industry.

In this paper I have confined my remarks mainly to the mines in the Yuba belt, yet there are many extensive hydraulic mines in operation on the Feather, Bear, American, and Mokelumne Rivers, all of which are constantly pouring their tailings into those rivers, thus contributing their quota toward destroying the farming lands and shoaling the navigable waters of the State. Viewing the whole subject of mining debris in its various bearings, and fully recognizing the magnitude of the hydraulic mining industry, and the vast amount of capital invested, yet a candid and impartial observer must necessarily arrive at the following general conclusions:

1st. The process of hydraulic mining is destroying the best agricultural lands of the State.

2d. It is threatening the very existence of the cities of Marysville and Sacramento.

3d. It is rapidly shoaling the navigable waters of the State, and, if continued, will eventually destroy the harbor of San Francisco.

4th. Hydraulic mining, from its very nature, is destructive and ephemeral, and can never become a permanent or desirable industry in any community.

5th. It is chiefly in the hands of rich and powerful corporations who monopolize water privileges and thereby control all the contiguous mining ground, to the exclusion of the citizen miner of limited means.

6th. As the water is made to perform the principal work of the process, the number of laborers employed can never be large.

7th. Justice to the farming interest, the public safety and welfare, alike demand that in future the hydraulic miners be compelled by law to take care of their tailings by means of dams or settling reservoirs, from which the water will return to its proper channel in a condition of comparative purity.

Mr. V. G. Bell, of French Corral, Nevada County, California, a resident of California since 1857, thus spoke of the subject:

Practically, in this matter of debris there is not sufficient account taken of the material collected in the river during the early mining in the State. In the first place mining that was done in the State was, as a matter of course, done in the cañons and gorges, and this went on for some years before the hydraulic mining process came into vogue. I think it was in 1854 that the first hydraulic mining I know of was done. Prior to that time mining had been going on in the gorges and on the surface altogether, and a lot of alluvial material was already removed and stored up, and after the hydraulic process came into use the principal part of the mining had been completed. The first season that we had a flow of tailings or debris was in 1862–'63. All old Californians will recollect that that was a very heavy season and it rained very hard, and the floods ensuing therefrom brought down the whole of this light substance and deposited it in the beds of the streams. That was the first year the Bear and Yuba Rivers were flooded up above their banks. This accumulation of course came from all this washing that had been going on from 1849 up to that time. This light material had accumulated to a considerable extent, but still the floods of 1862–'63 concentrated it and run it down and filled up the rivers and spoiled all the good farming land that there was in the country, which in our section—in Yuba and Nevada Counties—was the bottom land. Outside of the bottom land we did not then consider the land of any value whatever. In fact it seems strange to me that there is farming land in the country. I, as a miner, always looked upon it as a mining country, and I would not have taken a thousand acres of land lying between Marysville and Sacramento as a gift, because I looked upon it as a mining country. After the flood of 1862–'63 the debris covered up all that I considered farming land. This red land that we supposed of no value for farming has turned out to be a very good farming land. Since the floods of 1862–'63, hydraulic mining has improved and got the more modern appliances, and facilities for that kind of mining have increased. They have run long, expensive tunnels to the bottom of the channels, but during the mining of the early days the tops were being washed off and it was the light material from the surface and the gorge diggings that went down. Now we are running off the bottom, and it is just as much as we can do to remove this heavy, rocky material from the mines, and when we shove it through to the river there it stops, and whereas the floods of early days carried down thousands of yards of material there is now really only a very small percentage that is being washed down. It has practically ceased, on account of the heavy nature of the material. There are large fields for hydraulic mining and there is still a great deal of this top material which may come in, but at the same time a very large proportion of it was washed off at an early day, and we are now mining the heavy material at the bottom. The Milton Mining and Water Company during the last mining season spent $40,000 in giant powder to blow up the banks and blast and break the rocks; so that you can imagine something of the kind of work that we have to do in order to break up the rock and break up the material so as to get it into and through the sluices.

Mr. W. H. Drum, of Marysville, California, also a resident since 1857, furnished his experience with the sediment from the rivers:

In 1857 I bought a piece of bottom land on the Yuba, and paid a pretty good price, because I thought it was the best land I had ever seen. When I bought there, the banks of the Yuba were from 20 to 22 feet high at low-water. The stream was clear, with plenty of salmon-fish everywhere. My piece of land was two miles from Bear River, and I had no difficulty with the water. The high water of 1853 barely came out of the river channels, over the banks, and filled a few of the smallest sloughs, but it never came up to the ridges. We got no sediment here, as we call it, until 1862. In that year our water was very high, and it covered the whole bottom, in some places 6 feet deep, but it was comparatively clear in appearance. Yet when it went down we found large banks of sand and much of sediment. The current of the Bear River was rapid. After the fine stuff had passed down, the deposit left was chiefly sand, and not a great deal of it. The first flood left very little, but the succeeding ones, afterwards, left more of it. This has kept going on, from time to time, as the river grew riley and thick with mud, during the winters, until it has now covered the bottoms. I had about 1,030 acres, and it has covered them. It has been doing that now, from time to time, until it has reached the height of 25 feet. All my places are level. I was over there a year ago, looking for some wild cattle I had in the waste, and I could just trace the line of the telegraph poles. The land has filled up within a few feet of the top of the telegraph poles. I am satisfied that it was not so deep as on the other side. It was only from 12 to 20 feet deep all through that body of land. I had about 90 acres that I protected with levees; the remainder was destroyed eight years ago. In 1875 these 90 acres which I protected with levees were destroyed; the water flowed over the levees and filled the ground over 4 or 5 feet. It did not destroy the levees, but flowed over them, thus destroying the remainder of my land. I had a garden, fenced with a strong fence and posts. The tops of these posts have been five feet under for the past six years. They destroyed all my land. My house was 20 feet above the low-water mark in the river, and last winter the water was up to the top of and around the house, and left a sediment of 8 inches. My buildings all sit there still, but they are useless. It cost me $3,500 to put them there, and I had to go away and leave them on that land. I raised 94 bushels and 34 pounds of wheat to the acre on that land. That was a sworn statement before the agricultural fair. I had raised 103 bushels of barley per acre. I raised the first grain that was grown this side of Sacramento. All that land has been destroyed; it is nothing but a swamp now, and you cannot go into it to-day. If I had that land to-day, in good condition, it would be worth $175,000. It is stripped three miles wide and twenty-two miles long. The water has now got up so that the levees will not prevent it from spreading over ten miles; that is, the snow-water that comes down; and the water is at times 2 feet above the highland. It is only the levees that protect it from the land, and when it breaks the levees it runs at random over the plains for five miles. If we had the water come down as it did in 1862, I think it would sweep these levees by the board, and the water would come from the foot-hills at Auburn to the Sacramento River. I do not believe there would be any land that would not be under water. The water ran at that time 6 feet over the land, and the current there was rapid; but now it runs slowly and the channel is entirely obliterated. No man can now tell where the old original channel of the river was. The country then was covered with farms; now it is a wilderness of willow trees, through which a man would have difficulty in finding his way. There was not a shrub on the land then 3 feet high where it was cultivated, and that was the case with all the land around here. There was the Briggs orchard, which was supposed to be worth $300,000. It is not worth anything now. Hundreds of cords of wood were cut off it a few years ago. There was no willow on it in 1862. There were a great many trees in his orchard, and he made a great deal of money out of it, until the debris came, when it was destroyed. It is now a wilderness of willows.

I have found this deposit to be no less than a poison. I have experimented with it for twelve years, and I have not been able to do anything with it. In five years they must put other levees where the levees are now, because the debris is rising 2 feet a year. Opposite the mainland there are four different channels. In this sandy waste, where nothing will grow, the sand is about 26 feet deep, and perhaps 30 feet. There were formerly only one channel where there are now four. The debris fills in and the water cuts another channel. In some places in cutting new channels buildings are swept away. This riley water will weigh 11 pounds to the gallon, while clear water only weighs 8 pounds. In the summer time it is heavier and thicker. In summer it will weigh 12 pounds to the gallon; that was the difficulty with the levees last year. Their owners calculated for the winter water, and the summer water was too heavy for them to withstand it, and their levees were destroyed. I have tested it often in different ways; I have fought the water year after year, and it has driven me steadily back, until I have lost all my land. I have put in crop after crop, and the water would steadily destroy them, until I was driven away. Many other persons, like myself, have spent many years on their farms and have built levees, but when a freshet came they would be destroyed also.

I am well acquainted with Feather River and have been for twenty years. It has filled 8 feet. There is not so much mining on that river. The greatest damage is done on the Feather, Yuba, Bear, and American Rivers.

George Ohleyer, residing in Yuba City, California, made the following statement:

I have lived on Yuba River from 1858 to 1865, and since then I have lived in Sutter County. I was living there before there was any trouble from hydraulic mining and before there was any hydraulic mining, a man, or anything on the Yuba River, about four miles from Yuba City. My occupation was farming and threshing. In early days people did not want the high plains here, they being very dry and worthless as farming lands; so consequently everybody applied for a piece of bottom land; the result was that this Yuba Valley was thickly settled from the left of Yuba to the foot-hills. I am not positive as to distance, but I think it was eleven or twelve miles. This valley bottom land, I should judge, was an average of two-and-a half miles wide. It was thickly settled and was as fine land as I ever saw. In many places it was cultivated right up to the banks of the river and was cultivated along its entire length. I think there was, on an average, a family with hired help, &c., or perhaps twenty-five or thirty persons to the square mile. To-day there is not a foot of one levee on these farms, the people have abandoned the farms, many of them have died, and others have moved away because they have nothing left. During the years 1858–'61 I threshed on both sides of the river, from the mouth of the Yuba River to the foot-hills. I threshed wheat, barley, and oats all along, and could raise corn and vegetables too. All these farms have pretty good buildings on them. The buildings were mostly frame buildings—some of them had fine two-story houses and three-story ones, different and similar houses, and they had barns, which were very well fenced, and had very expensive orchards and vineyards. The land if recovered to-day on a reasonable view of it, in consideration of the orchards and vineyards, would be worth $100 per acre. Some of the grain might not be worth, were one exchanging hands, $100 per acre. A portion of this land, which was covered with buildings then, is now covered with sand. I made a statement before on this subject to the committee, and I will read the following statement which I made and which was printed in one of our newspapers, showing the immense losses that had been sustained by farmers in the river valleys by the inundations of sand, water and sediment at that time. They are as follows:

Twenty-four sections of land destroyed on the Yuba River—15,360 acres—valued at $200 per acre	$3,072,000
Personal property and improvements	3,000,000
Loss and depreciation of property in Marysville	2,000,000
Destruction on Feather River	500,000
Eighteen sections on Bear River—11,520 acres—valued at $100 per acre	1,152,000
Destruction in Yuba County	9,724,000
Assessed value of all property in Yuba County for 1875	5,025,720
Assessed value of all mining property in Yuba County in 1875	298,600

Destruction of property in Sutter County:

Eighteen sections of land on Bear River—11,520 acres, valued at $100 per acre	1,152,000
Personal and improvements	1,000,000
Destruction in southern portions of the county, Coon Creek, and Anourn Ravine	500,000
On Feather River on both sides	500,000
Total in Sutter County	3,152,000

This rather underestimates. Since then this backwater that has been spoken of has injured on Feather River all my land above the confluence with the Yuba River. Below there are many fine orchards that are totally ruined, and below as far as the mouth of the Feather River two millions are almost ruined. It is unsafe to do anything with them. These we attempted to farm, and, having continuous loss of money, most of them failed financially in trying to do anything with the two millions on Feather River. Total in Sutter County, $3,152,000. I also estimated that the amount already spent by the building of levees to protect what was then not wholly destroyed, $1,000,000, and I claim that at that time the levee works were still protecting property that was worth $20,000,000. They had attempted to keep out Feather River at very great expense, but in many places the levee is all blanks, and if it keeps on filling as it has for the last few years we must levee, or we would have to keep building artificial banks, or it will overrun us.

Mr. L. L. Robinson furnished the commission with some comparisons of values between the hydraulic mining interests and the damaged lands:

As to the relative value of farming lands injured by debris from the gravel mines compared with the value of the mines, I desire to state it is a very small percentage. The debris (so called) from the gravel mines alone is not as injurious to farming land as is the case with the tailings from quartz mines and mills, which are poured in large quantities from these sources into the rivers, as the quartz does not decompose, whereas the material held in suspense in the rivers from the gravel washing, after it is deposited on the land in the main valleys, will in a few years make excellent arable land. The industry of hydraulic mining or, as it might properly be called, gravel mining, is a very large and important one in the following counties: Stanislaus, Tuolumne, Calaveras, Amador, El Dorado, Placer, Nevada, Sierra, Plumas, Butte, Yuba, Shasta, Siskiyou, Del Norte, Trinity, and Kalamath. In these counties, and connected directly or indirectly with gravel mining in various ways, at least $100,000,000 has been invested. The most important branch of gravel mining is done by what is known as the hydraulic process. I am personally interested in two mines of this kind, and have been for the past fourteen years. In these two mines, the North Bloomfield and Milton, situated in Nevada County, about $4,000,000 was invested, taking over ten years to get them in complete working operations. In connection with these two mines we have driven, through hard rock, over four miles of tunnel to reach the gravel, the largest single tunnel being nearly two miles in length, constructed at a cost of nearly $600,000. One of these mines, the North Bloomfield, is supplied with about 3,000 miner's inches, or 55,000,000 gallons of water per day of twenty-four hours the year through. The miner's inch of water is 2,230 cubic feet, that will flow in a day of twenty-four hours. This is regulated by an opening an inch square, with a pressure above the opening of six inches. We settled that two years ago by a large series of experiments. The water is brought from a reservoir in the high Sierra Nevadas, 45 miles, through a canal across a most difficult country, at a cost of over half a million of dollars. This reservoir, which consists of two stone dams, one of which is nearly 100 feet high, having a storage of 1,000,000,000 cubic feet of water, was constructed at a cost of $250,000. The other mine, called the Milton, is supplied with about 50,000,000 gallons of water per day, brought 75 miles over a very rough section of mountain country from a reservoir near the summit of the Sierras. The reservoir, which is formed by three stone dams, one of which is among the highest in the world, being nearly 150 feet in height, will hold 900,000,000 cubic feet of water. In the mines of these two companies alone there is used yearly about 1,750,000 miner's inches of water. Each inch of water is equivalent to 2,230 cubic feet. The amount of gravel moved per year by this quantity of water, used as we use it, under a pressure varying from 275 to 400 feet, through nozzzles varying from 6 to 9 inches in diameter, against gravel banks varying from 50 to 400 feet in height, will amount to about 5,000,000 cubic yards, and the gross yield of gold is about $1,000,000 per year, averaging about 20 cents per cubic yard, or 55 to 60 cents per inch of water used. The yield of gold from the gravel mines of this State is about $12,000,000 yearly, averaging about $1,000,000 per month. This yield will continue for the next forty or fifty years to come from this source alone. I do not think it will increase materially, from the fact that the water supply is limited. Nor do I think that the mining machinery and appliances employed at present can be materially enlarged or increased with economy in results. The machinery and appliances connected with this class of mining has about reached its maximum. On the western slope of the Sierras there are some eight or ten counties where gravel mining is the principal industry. The number of such mines, including hydraulic, drift, placer, and river, is very great. At least 100,000 persons derive their support, directly or indirectly, from this kind of mining. To stop it would depopulate nine or ten of our most prosperous counties, ruin a large proportion of our State population, and load down the balance of the State with taxes which they would be unable to bear, and would be most disastrous in all ways.

The damage to the lower rivers, bays, and harbor, caused by gravel mining, has been very much exaggerated. Much the largest portion of the material filling our harbor comes from the operations of the farmers and other causes, and not from the operations of the miners at all. The mining rivers, as they are called, from the gravel mines to their debouchment into the plains, have been filled up to a great extent by the operations of the miners, both gravel and quartz; but even this filling is aided by natural causes. As to the damage caused to the lower rivers, bays, and harbors, by filling, the acts and doings of the farmers and others contribute 15 cubic yards or more where the miners contribute one. In our light soils, upon land at all rolling or inclined and not absolutely level, the constant yearly degradation is very great. And when it is remembered that the area draining in our lower bays and harbors covers nearly 60,000 square miles, it is not to be wondered at that a large amount of material is constantly being poured into them. The general impression is that all the vast amount of material deposited in our lower rivers and bays is from the hydraulic mines, when the fact is that their operations have but a very slight effect upon this filling. In early times in California, before the country was occupied by the Americans, the population was quite limited and scattered. The land was held in large tracts, and was only used for grazing. Our present system of cultivation was unknown, and the surface of the ground was rarely or never broken up by the plow of the farmer. It was protected from washing by the grass roots, and the amount of material washed into the rivers was very limited in quantity; so much so that very little of it ever reached the harbor. Since farming has been carried on by our people upon its present large and increasing scale and area, the yearly increase in the amount of material pouring into the rivers and bays has steadily and rapidly increased, until it has attained such vast proportions as to cause great fears for the future. During the winter months the streams running into the bays and lower rivers are thick with mud. I should say that the degradation of the surface of the country occupied solely by the farmer has been increased, since farming was first commenced in California, say since 1850, from ten to fifty times, depending upon soil and locality. Other causes are also tending to shoal our harbor and its entrance. The most important, perhaps, of these causes are the sewerage and waste from our city and the operations of the railroad company on the Oakland shore. This work is perhaps as injurious, if not more so, than other single causes, for they are not only depositing a very large quantity of new material in the bay, but it is done in such a direction and manner as to cause the rapid shoaling of a large area of San Francisco Bay, diminishing its tidal area, with a consequent injury to our harbor. These grave results, which appear to be inevitable, are certainly not caused by the miners, for their contribution is but a very small percentage of the injury from all other sources. We can measure with much certainty the results of mining operations, and particularly so with hydraulic mining, as in this class of mining our knowledge is derived from close observation and experience. There is used per year in hydraulic mining not exceeding 10,000,000 miner's inches of water (each inch representing 2,230 cubic feet). This quantity of water used under the hydraulic system of mining will move not exceeding 30,000,000 cubic yards of gravel. Of this amount at least 95 per cent. is lodged in the canyons at or near the outlet of the mines. The remainder finds its way into the lower portion of the running rivers, filling them gradually, until by the time it reaches the lower rivers and bays but very little is left. This material is not injurious to any land, on the contrary it is as fertile as the silt or deposit from the Nile or any other alluvial river.

Much the largest portion of the damage committed in proximity to the mining rivers between their outlets at the mouth of the canyons and the main Sacramento River (which has been very much exaggerated) is due to mining upon these rivers and their tributaries long before hydraulic mining was in operation upon a large scale. The placer mines were innumerable, and the amount of material of comparatively light nature moved by the vast number of individual miners engaged in this class of mining was very great indeed. The material was of such a character that it flowed quite readily down the tributaries into the main canyons toward the plains, where a larger portion of it remained until a stormy winter like 1862 came, when the canyons were swept clean to the bed-rock, and the debris was poured into the lower portion of these rivers, filling them up. Since hydraulic mining has attained its present magnitude the material moved is of a much heavier character, and does not pass down the canyons to the plains with the same facility as the lighter material moved from the placer mines. The heavy material moved by the hydraulic process lodges in proximity to the outlets of the mines, fills up the main canyons where it becomes impacted, widens out the beds of these rivers preventing the winter rains from washing it out rapidly by causing the water to spread over a greater area, and impairing its force and power to move the material. In many places these canyons are filled to a depth of one hundred feet or more, and the surface of the river is in consequence widened to several times its normal width. The material thus deposited and impacted will not move down the canyons unless mining ceases. If mining continues as at present, these vast canyons will be constantly filling in the mountains until their beds are raised up to a level with the mining outlets, and as each year fills them more and more the surface of the river-bed becomes wider, while the power of the water to move the material down the canyon will steadily decrease. The miners are now investigating the question of the construction of a series of brush or tree dams in the canyons to aid in retaining both the old and new debris in proximity to where it is first lodged. The miners are, in fact, duplicating the filling of the old rivers from whence they are now moving the material with which they are filled to extract the precious metal contained therein.

Should mining now cease, all the material at present in these canyons (and the quantity is very large indeed) will certainly work down with the water upon the land below the mouths of the canyons on the plains, and so continue for many years to come, to temporarily damage the lands in proximity to and along the course of these rivers after they have debouched from the mountains. There is but little doubt as to the feasibility of retaining the material at present in the canyons in place, as well as to retain a very large per cent. of any new material which may be poured into them from the mines. Nor is there much doubt but that the balance of the material which will be held in suspense in the water can be utilized on the low lands (now valueless) in the main valley below, as well as upon the foot-hill lands in the way of irrigation, by distributing the muddy water over them as is now done to quite an extent in Yuba County successfully. The impounding of such large bodies of water as is contained in the reservoirs of the hydraulic mines has a beneficial effect in two ways; it prevents it from coming down in winter season, thus diminishing the destructive power of these rivers in rainy season and stores it for summer use (when there is very little water in the rivers) for mining and irrigation, equalizing, to a certain extent, the flow of water during the year. The mining reservoirs, costing from $50,000 to $250,000 each, already constructed for hydraulic purposes, can store at least 10,000,000,000 cubic feet of water, which is utilized during the summer or dry season through long lines of canals or ditches, constructed at a cost of from $5,000 to $10.000 per mile. The amount of money expended in construction of these reservoirs and canals exceeds $20,000,000. In the future, when the gravel mines which these works were constructed to supply are exhausted, they will serve to irrigate all the lower slopes of the Sierras for cultivation. No possible system of agriculture could afford to construct such an extensive and expensive system of irrigating works, and although the miners may, in their operations for a few years commit some temporary injury upon a limited quantity of farming lands below them, yet the great benefits which such a vast water system will confer upon the million acres on the lower portion of the western slope of the mountain in the facility and cheapness of irrigation after the mines are exhausted will compensate our State many times over for all the temporary damage now being committed. It is estimated by competent authority that there is yet remaining of known gravel between the South and Middle Yuba Rivers alone about 700,000,000 cubic yards of gravel, which will be mined out by hydraulic process, besides a large amount which will be mined out by drifting. It is safe to estimate that this gravel will yield from $150,000,000 to $200,000,000, and the principal part of it will be mined out during the next thirty or forty years. The gravel mines are situated on and along the mining rivers, at distances varying from 10 to 70 miles from their outlets in the plains, and they will all be exhausted long before these river canyons will be filled to a level with the outlet from the mines. The gravel channels, where the hydraulic mining can be carried on profitably, are well known and can be measured and estimated with considerable accuracy; but the drifting mines in gravel are as yet scarcely known, and this latter class of mining as well as quartz mining (requiring but little water) will continue long after the former class of mining has ceased entirely. The vast gravel deposits where hydraulic mining is carried on cannot be worked in any other way; and there is, in my opinion, no doubt whatever but that the interests of the miners and the comparatively small numbers of farmers and others in the valley injured by mining operations can be harmonized by proper legislation, guided by intelligence and a desire to arrive at results, but it can never be done by litigation guided by those whose interest is subserved by fostering such a course. The interests at stake are of too mementous and important a nature, and the number of persons whose all is invested in mines and whose support depends solely upon mining industry is to great to be interfered with and destroyed by litigation.

The net profits derived from hydraulic mining are not at all excessive, when the risk, length of time necessary to develop a mine, and the amount of money involved and expended, are taken into account. The North Bloomfield Gravel Mining Company was over ten years in opening its mine, and before any net returns were received expended over $3,000,000. The Milton Water and Mining Company was many years in opening its mine, and expended some $2,500,000 before any net return was received by it. Upon such ventures a larger percentage is justifiable than would be the case in any other industry; indeed it is believed that none other than a mining community like California would undertake such a risk requiring so much capital and time. Yet it is believed that none of this class of mines pay over twenty per cent. per year as an average upon the capital invested, with interest, and nothing but the permanence of such a mine as those above mentioned would justify the risk and expenditure in any community. Many first-class hydraulic mines promise more than 20 per cent. but pay less. There is a great number of second-class mines of this kind, running during the rainy season only, which pay their workmen good wages, with but little profit to the owners, and still a larger number of fourth-class, which barely pay their workmen and embarrass their owners. Yet they all find employment for a large number of persons and support for their families.

The gravel miners have gone forward with their enormous works, in the shape of reservoirs, canals, tunnels, and other works, such as have never been equalled in any other portion of the world, under the full cognizance of the United States and State governments, indorsed by the customs and usages of the community, and by the decisions of the courts, and have expended over $100,000,000 in purchasing their claims from the government and developing them, creating a property estimated at $250,000,000 or more in value, and claim that they have acquired by their acts and doings vested rights which cannot, at this late day be taken from them. Hydraulic mining cannot, as a general rule, be carried on with profit on a small scale. It requires a large body of ground to justify the expenditure necessary to open a mine, bring water to, and work it. Hence the necessity of a large capital and consolidation of the smaller claims, which were originally taken up under the mining laws of the United States long ere this kind of mining was introduced. It will be a very serious matter, not only to California, but to the nation at large, if mining is stopped upon this coast on account of the injury committed upon a limited and comparatively small body of farming land and a very limited number of people occupying the same. The value of all the land already damaged, or which ever will be damaged, is certainly not one per cent. of the amount of gold extracted from the mines committing the damage, and the number of people injured financially from these mining operations does not exceed five per cent. of the number which would be injured irreparably if mining was stopped. Our rivers in the great valley of California are extremely alluvial in proportion to their length, and are becoming more so yearly, owing to the physical conformation of our State, the close proximity of the lofty and abrupt mountain ranges, as well as the character of our soils, and the long dry season, followed by a heavy rainy season, and the operations of the farming and mining population. The material brought down by these rivers, highly charged as they are with alluvium, would if utilized, make the valley of the Sacramento and San Joaquin the most productive portion of our continent, and the time is not very far removed when our people will seek to utilize the alluvium instead of finding fault with it, as there are thousands of acres, now valueless, which would become the choicest of agricultural lands if the material held in suspense in our rivers from the farms and mines was utilized, instead of doing injury to our bays and harbors. This subject, upon which the Commission took so much testimony, was not, however, adjudicated upon in the final report of this body. They noted the testimony, considered the subject one for Congressional action and urged that a special commission be appointed to determine it.

A Governmental Report.—Acting, possibly upon the suggestion of the Land Commission the River and Harbor Act of 1880 was made to contain provisional clauses providing for such examinations and surveys as might be found necessary to devise a system of works to prevent further injury to the navigable waters of California from the debris of mines arising from hydraulic mining. This work was entrusted to Lieutenant-Colonel G. H. Wendell, Corps of Engineers, U. S. A. Colonel Wendell carried out his work faithfully and carefully and for so doing was roundly abused by the "Anti Debris Association," California. From Col. Wendell's report submitted we take the following:
