In this case the wire was not alone diminished to one-half, but the tensile strength, too, suffered appreciable reduction, which cannot be attributed as easily to errors in determining the section of the wire. This is shown by the results of the tests of the single wires. In the wires of the new rope, the difference between the best and the poorest was 15 per cent. of the average tensile strength, the poorest being 7 per cent. lower than the average. In those of the broken rope, the range is 24 per cent. But even the worst single wire had only a decrease of 41 per cent. in the tensile strength as compared with the average of the new wire rope.

The following figures were obtained by testing wire ropes at Creusot:

Specimen No. 1.	*New wire.*	*Seven months' service.*	*Eleven months' service*
Total tensile strength.	704	605	496
Percentage referred to new rope	220	189.2	156.2

This rope lasted 21 months, and the fignres express the average tensile strength in pounds.

Specimen No. 2.	*New wire.*	*Five m'nths*	*Nine m'nth.*	*Thirteen mos.*	*Eighteen mos.*	*Twenty-five mos.*
Total tensile strength in lbs. .	726	708.4	686.4	616	378.4	402.6
Percentage referred to new rope	220	217.8	187	165	114.4	121

The Cost of Wire Ropes in Anthracite Collieries.—In a paper contributed to the Transactions of the Engineers' Club of Philadelphia, Dr. H. M. Chance gives the following valuable table showing the tonnage raised by twenty-three wire ropes used at eleven different slopes in the anthracite coal regions on dips ranging from fifteen to sixty degrees; and the tonnage of six ropes at three shaft collieries. Nearly all of these ropes were made by the Roebling Company; are of seven strands of nineteen wires each, and were in use at some period from 1875–1880. The first cost of the ropes is calculated from Roebling's price list for October, 1880.

Slope.	*No. of ropes.*	*Diam. Inch.*	*Length. Feet.*	*Cost.*	*Tons.*	*Total tons.*	*Cost per ton.*	*Cost per 100 feet lift*

Averages and totals,	6	. . .	687	$2,222	97,376	684,255	0.38	0.053

In these tables, says Dr. Chance, the cost has been estimated by the actual tonnage (exclusive of the weight of the mine cars) raised. The coal raised does not exceed two-thirds of this amount, but the value of the discarded rope, estimated at one-third its cost, has been considered an equal offset, and the figures given may, therefore, be taken as the average cost per ton of merchantable coal.

—*Coal.*

THE VALUATION OF IRON MINES IN NEW YORK AND NEW JERSEY.

PROF. John C. Smock, assistant geologist of New Jersey, in a paper presented at the Washington Meeting of the American Institute of Mining Engineers, gives interesting data collected during the census, for a valuation of mines of iron ore, his figures relating particularly to those of New Jersey and New York. The mines which were selected for the several groups and mining districts include nearly all those from which the most full and carefully filled returns were received by the Census Bureau. They were also representatives of their respective districts, so that the averages obtained from them are good types of these districts. The New Jersey mines appear in six groups, each containing from three to eleven mines, or in all, thirty-four mines. The magnetic iron ores of New York are in four well-marked groups, and there are twenty-six mines in them. Then follow the red hematite mines of St. Lawrence and Jefferson counties; and lastly, the brown hematite groups of Dutchess and Columbia counties, and those of the adjacent parts of Connecticut and Massachusetts. The whole number of mines represented by the table is eighty-eight, of which 28 are hematite ores. The first column gives the value of the real estate; the second that of the plant; the third is the sum of these two, or the capital invested. Then follow the number of men employed, the amount of wages paid during the census year, the value of materials used in mining and preparing the ores for market. The seventh column gives the total expenditures, or cost of the ore. The product in tons is in the eighth column, while the cost per ton is in the ninth. The last column of the table shows the ratio between the real estate value and the product.

The first observation to be made on this table is the apparent discrepancies when capital and product are compared, as is done in the last column. The difference in ratios of product to capital are greatest among the groups of magnetic iron ore mines of New York, and between the hematites of Connecticut and Massachusetts. In the latter $3.17 of real estate produced a ton of ore, whereas, in Connecticut, it required an investment valued at $12.23, or nearly four times as much. Although much of this difference is inherent in the mines, and due to great disparity in actual value, somewhat of it must be credited to imperfect valuation, and a more accurate method of valuation would tend to the equalization of these ratios. Another observation is to be made in the variation in the cost of the ore per ton, ranging from $3.96 to $1.57. The greater cost is found to be in the groups of deeper mines. The larger proportion of open workings or pit work reduces the average cost. The larger size of the ore-bodies also affects favorably the cost; and the more expensive the plant, when compared with the total expenditures, the less is the cost of the ore. And, in general, the labor expenditure seems to enter more into the cost than the value of materials used, although the separation of these classes of expenses is nearly always incomplete. Other points for consideration and comparison will suggest themselves to the reader who may examine the table.

These elements are sufficient to give the basis for valuations, so far as the several districts are concerned. The problem is in the nature of an annuity; and, knowing the term and amount received annually, the question is, What is it worth? In the case of the New Jersey mines, the value of the real estate was placed at seven times the annual dividend or amount of profits. Thus, for example, taking the 34 mines in New Jersey, according to the table above, their product was 560,340 tons, which, at 78 cents per ton, would yield a dividend of $437, 065, and that multiplied by seven gives $3,059,456 as their valuation. It remains to fix the rate of interest to allow for a return of the investment, or what is known as a redemption fund. Authorities differ so widely that it is almost an arbitrary matter to assign any figure. The mean range is from 8 to 20 per cent. The rate allowable for redeeming the principal should not exceed 4 per cent.—that of our most reliable trust-

The enduring character of our iron mines in New Jersey and in New York is here to be noted, as it bears so closely upon this question of their value; it is particularly true of the magnetic iron ore mines. Many of them have been worked steadily for long periods, and some of them figure in our colonial history. Their production previous to 1840 was comparatively small, and the larger part of the aggregate amounts obtained from them belongs to the past three decades. Notwithstanding the extent to which they have been opened, there are no signs of exhaustion. It seems entirely safe to assert that many of these ore-bodies, now so largely explored, are practicably inexhaustible, at least by known methods of mining.

Assuming the rate of production of the census year, it is easy to ascertain how long it would have taken to raise the known amounts of ore estimated as coming from them. From fifteen to thirty-five years would have sufficed at the present rate in all of the larger mines, both in New Jersey and New York, and in others from 4 to 10 years. The average, for safety, Mr. Smock puts at 15 years. Having assumed the working term and the annual product, the remaining essential factor in all cases is the profit per ton. It was obtained by subtracting the cost from the average price at the mines in the several districts, as follows:

	Average price.	*Cost.*	
New Jersey mines	$4.16	$3.38	$0.78
Orange County, N. Y	3.00	2.19	0.81
Putnam County, N. Y	3.00	3.16	0.16
Essex County, N. Y	3.30	1.57	1.73
Clinton Connty, N. Y	4.50	2.84	1.66
St. Lawrence and Jefferson counties, N. Y.	2.70	2.15	0.55
Dutchess and Columbia counties, N. Y	3.90	2.00	1.90
Connecticut mines	4.80	2.61	2.19
Massachusetts mines	4.00	3.05	0.95

fund investments. Owing to the great permanency which characterizes many of our iron-mine properties, 10 per cent. has been thought to be a reasonable profit upon the capital, and 4 per cent. sufficient for its redemption. Turning to Hoskold's tables, we find that the present value of $1 per annum in fifteen years, allowing interest at 10 per cent. upon the purchase money, and redeeming the capital at 4 per cent., is $6669, or nearly the arbitrary multiplier which was used in the case of the New Jersey mines. With a higher rate of interest, for example, 20 per cent., the multiplier would be 3,061. These are the general principles which have been employed in the valuation of nearly all of the mines of New Jersey and in many of New York. As already stated, they are subject to almost endless modification, owing to the ever-varying combinations of the other essential elements, which need to be taken into account, and which vary almost with every mine.

Engineering and Mining Journal.

THE GREAT COMSTOCK LODE.

THE sister cities—Virginia City and Gold Hill, which form the "mining camp" of the Comstock—the greatest silver and gold-producing district in the world, are situated in Storey County, the southwestern part of the State of Nevada. The practicable ways of reaching the Comstock are as follows: From San Francisco, by the Central Pacific Railroad; northeastward to Reno, thence by the Virginia and Truckee Railroad, southward to Gold Hill and Virginia City; from New York and the East the route is by the Union Pacific Railroad. The "Washoe range" of mountains—the most prominent peak of which is Mt. Davidson—is an offshoot or spur of the Sierra Nevadas, which separate upper Nevada from California. This range occupies about two-thirds of Storey County, and runs from Carson City, the capital of Nevada, northward, passing Gold Hill and Virginia City on their west side, and extending to the Truckee River, the northern boundary of the county. Hill's valley, and the canyons are alike barren and destitute of natural growth, with the exception of the inevitable sage-brush. The Comstock Lode or vein, like other "true-fissure" veins, is a long, deep and comparatively thin mass of metalliferous quartz and other kindred matter, filling a fissure made in the solid rock by igneous action from below, the fissure and its vein being at a considerable inclination or slant from the horizontal. Veins of quartz are usually found at or near the base of mountains, and sloping nearly at the angle of the face of the mountains. They also tend to curve around in their length of course, following the curves of the mountains. The Comstock fissure and lode form no exception to the rule. The original developments, as those of the Ophir, Gould & Curry; Savage, Hale & Norcross; Chollar Potosi Imperial, down to the Belcher and Overman, embrace that part of the Lode which runs along the eastern slope of Mt. Davidson for a distance of about two miles. This distance has been greatly extended, however, by the comparatively new claims, such as Justice, Silver Hill, etc., south of Overman; and Sierra Nevada, Utah, and others, north of Ophir. Let it be understood that all these mines or claims are not merely various lengths of, say 100 to 1000 feet along the same line of Lode, so that the north line of one claim is the south line of the next, and so on. Although the Congressional law of 1872, in regard to mining claims, limits claims from the date of its action to 1,500 feet on the length of a lode or vein by 600 feet in width across its outcroppings. The original claims along the Comstock are generally understood to be indefinite in their extension eastward, or perpendicular to the course of the vein, so far as they do not interfere with other claims on parallel ledges or lodes. The case is different with the more recent claims which come under the above law.

In order to see why fissures and their veins tend to occur at or near the bases of mountains, or between the mass of the mountain itself and its overlying stratum, it is necessary to understand that the mountains were *in situ* before the internal volcanic action or earthquake caused the fissure or rent. The fissure would naturally take the line of least resistance, wherever that might be. The mountain when it was thrown up would have already tilted the horizontal strata up to an angle with the horizontal, equal to that of its own surface slope. The dividing-line or boundary between the mountain itself as it extends downward, and the overlying strata which it has forced or tilted up, would naturally be the line of such least resistance to any internal pressure; on account, not only of their being distinct, but also on account of the great weight and solidity of the mountain mass. When the fissure was formed, there was in all probability a simultaneous ejection from below of a great quantity of semi-liquid and quartzose matter into said fissure. This, in ascending, broke large masses of the country rock from the "hanging" or upper wall, and also from the "foot" or lower wall, more especially from the former, which masses must have fallen into the vein and form the small and large "horses" which we so often hear spoken of in mining affairs. The quartzose matter would find its way to the top of the fissure as a rule, and there form the "outcrop" or "croppings," which, in some parts of the course of the lode, are more or less prominent, and in others not observable. But when the convulsion by which it was thrown up ceased, the quartzose matter being in a semi-liquid mobile state, as before said, would fall down again as it ascended, if in its passage it did not break the surrounding walls, and thus, form an impenetrable obstruction somewhere in its course to its own downward and backward fall. This obstruction would end the "bonanza" or chimney of ore. Below it the wall-rock would break in, and close up the fissure as just observed, until perhaps the descending quartz below had crushed in some more wall-rock, and formed another bottom for this lower "bonanza" of mineralized quartz. And so there might even be a third so-called "bonanza" some distance below that. Or these bonanzas might all have been formed at different times corresponding to various upheavals and earthquakes, when the same process would obtain, as in the case of the first and highest body of ore. These views would account for the fact that, as a rule, a second bonanza of rich ore is not "struck" in continuity downward with a former one, but only after passing through sometimes several hundred feet of the country rock, which either reduces the quartz and quartzose matter to a very narrow width, or else cuts it off entirely.

Mt. Davidson and Mt. Butler, the adjacent peak, consist of *sienite* which is a mechanical mixture of quartz, feldspar —both whitish and hornblende—a blackish mineral, presenting a coarse pepper-and-salt appearance, making a very hard rock similar to granite. This rock, therefore, constitutes the western or "foot" wall of the vein on the eastern slope of these mountains, although the west wall in the southern part of Gold Hill consists of other rocks called "metamorphic rocks," owing to the fact that they have been changed from their original character and position by the action of heat, moisture, etc., while north of these mountains a rock called "propylite"—so named by Baron Richthofen—and which is a kind of porphyritic feldspar of almost all colors—light green, blue, red, and black, resembling clay or argilaceous slate—forms the west wall. This last kind of rock—propylite—constitutes the east or hanging wall, continuously from one end of the vein to the other so far as worked.

Each of the inclosing walls of sienite and propylite is separated from the vein matter by a thin sheet of black clay called "selvage," and in the mine, if a drift or tunnel is run perpendicular to the course of the vein to reach it, the appearance of this clay indicates the immediate proximity of the vein, and when it reaches another clay selvage in going through the vein, it is known that the latter has been traversed. The "strike" or course of the vein is nearly magnetic north and south, and is 16½° east of true north, this being the magnetic variation. Its dip is directed eastward, and varies in the different claims from 34° to 45° downward from the horizontal. In rising, however, the vein at the top has been penetrated in the middle by a vast "horse" of about 650 feet wide, and this has tipped up the eastern half of the vein for a depth of 400 feet, so that it dips westward, as in Fig. 1, which represents a vertical section of the vein, showing its two branches at the top. It is more than probable that the vein matter pressed so hard in its ascent upon the hanging wall, that, when it reached a point where the weight of the overlying mass was comparatively light, it made another fissure or method of exit for itself, besides the first, and that this was the eastern half of the vein just spoken of; it is supposed by some that the hanging wall fell in at the top. Fig. 2 represents a horizontal section through a part of the Comstock Lode, showing the regularity of the course of the west or foot-wall, and the great irregularity of the hanging wall. In Fig. 3 is presented a horizontal section of two bonanzas or chimneys of ore, and Fig. 4 shows such a bonanza in vertical section, that is, as if the observer were looking northward through the vein. Bonanzas or ore bodies are generally found in the swells of the vein, and they usually traverse the vein southward, and at a steeper dip than its own. As will be noticed, the form of its horizontal section (that is, what would be seen if we suppose the top to be cut off perfectly level, and the observer to look vertically down upon the top of what is left), is rudely lenticular or egg-shaped. In fact, if we take an egg, and hold it horizontally—the ends pointing north and south—suppose the depth to be about 500 feet; width about 10 to 100, and length from end to end, about 650; we will not have a very fallacious idea of a bonanza. The original Gould & Curry bonanza was of these dimensions. The fine Savage, and Hale & Norcross bonanza, was about 800 feet long, but not so wide as the G. & C. The Imperial, Chollar, and the wonderfully rich Ophir and Mexican, had each a splendid body of ore, as also the Belcher and Crown Point, whose body of ore, on the 1,100 level, about the centre of the body, reached as high as 150 feet in width, and the enormous value of $2,000 a ton for about half a level of 100 feet deep.

The ore of the Comstock, whose valuable constituents are silver and gold, does not by any means all present the same appearance or constitution. There are three principal kinds of ore; one is the black sulphuret of silver, which is composed of sulphur and silver, and is usually found in an amorphous condition, that is, without crystallization, and sometimes contains considerable gold with it—although not often apparent to the eye. The blackish propylite before mentioned is often taken for this ore by visitors in the mine; but they may be distinguished by the fact that the ore presents a jet black, living appearance, while the propylite or "waste" rock has a dull look. The sulphuret of silver, also, occurs occasionally in small crystals of a cubical or octahedral shape, and can be cut like lead with the knife, which it also somewhat resembles in appearance; it is then called Silver Glance. An antimonial sulphuret of silver called Stephanite or Brittle Silver Ore, sometimes occurs, but is rare; and the Silver Glance is often mistaken for it, even by those who should know better. The Stephanite is easily distinguished by the fact that it is brittle, and for this reason cannot be cut by the knife like the Silver Glance, but breaks off. Another thing is, the great purity of the Comstock ore from arsenic, antimony, lead, and zinc has permitted the use of the simple pan-amalgamation process by quicksilver for the reduction of their gold and silver, which could not be the case if any considerable amount of antimony were present in them.

The second kind of ore is the yellow sulphuret. It is the common bisulphuret of iron or iron pyrites, and is of a whitish to yellowish color and shining. It is sometimes called "fools'" gold, because novices mistake it for that metal. It is often associated with a little copper pyrite—the sulphuret of copper, which is still more yellow, and similarly shining. Bnt the iron pyrites, although it must not be confounded with the gold itself, still is the ore which principally contains the gold of the Comstock, and, indeed, it may be said here that this is the same ore that contains nearly all the gold of the earth. The precious metal, however, is usually invisible in the pyrites.

The third kind of ore is the Chloride of Silver. It is white and light green, and is composed of silver and gas chlorine. It is very rich in silver, but contains little gold with it. Where it occurs compact, it is called Horn Silver, because it can be cut like horn or lead.

Besides these three principal kinds of ore, there sometimes occur minute bits or crystals of ruby silver ore (a compound of silver or sulphur with arsenic or antimony), and in the rich places small quantities of free gold and native silver occur; but these are exceptions, and not the rule.

The gangue or matrix which holds the ores in the Comstock vein is *quartz*, with often considerable chalky carbonate of lime and sulphate of lime or "gypsum." Although the quartz often occurs crystallized in fine hexagonal or six-sided prisms and pyramids, and some pretty specimens of fibrous and crystallized gypsum are sometimes found, the *ore* of the lode is remarkably free from crystallization.

Mt. Davidson and the other hills in all directions are dotted here and there with mound-like heaps of rocks of a light grayish tint, which mark the places where prospecting shafts or pits have been "sunk," or dug out. These are merely circular holes, generally about 10 feet in diameter and 50 to 80 feet in depth, and are untimbered.

Owing to the false dip to the westward of the eastern half of the vein, as shown in Fig. 1, the dip of the entire vein was originally supposed to be westward, that is, that it would cut through the center of the mountain, and this supposition was acted on, although it was clearly to be seen that there was another line of outcrop (*b* in Fig. 1) some hundred feet above and to the west of the line of outcrop *a*. But when in sinking, the west or footwall was reached, and the shaft sunk still deeper it was found that the hard sienite, of which Mt. Davidson consists, was encountered; and that in running a level or drift through this intensely hard rock, westward to *c*, where the vein if it dipped westward, should have been found, no vein was there; but that, in running a tunnel or drift eastward to *d*, the vein was discovered. Hence further exploration by the original shafts was abandoned, not only on account of the fact that every succeeding 100 feet downwards the vein would be at a rapidly increasing distance from the shaft, but also because of the very great cost and hard labor that was required in traversing such exceedingly hard rock.

New shafts, like that shown in Fig. 4, were commenced by nearly all the companies on the lode, about 1,000 feet east of their original ones, and on the site of the new shafts new hoisting works were forthwith erected. These shafts vary considerably in depth, owing to the difference of level of the surface from which they are begun. They are sunk vertically, and usually go down through and under the vein. They are commonly sunk 50 to 100 feet further, when, as a rule, an "incline" or inclined shaft is begun in the footwall —upward, to connect with the vertical or "downright" shaft, and downward, about 150 to 175 feet, which is the equivalent on the dip or incline for 100 feet vertically downwards. From this point in the incline, a tunnel or "drift" is run eastward to the vein to find it, and through its cross section or thickness to explore it. When the eastern clay, before spoken of which bounds the vein, is traversed, the miners return to the point of the drift, which is immediately to the west of the vein and in the footwall, and from there they commence a north and south drift, which is either entirely in the footwall, or else half its section in the footwall and half in the vein; and this is driven both ways, northward and southward, to the extremities of the claim of the particular company. This drift, in case it is driven in the footwall, is said to be "in the firm" or "in the solid," because it is in firm or solid ground. At several points along this drift, say at every hundred feet, cross drifts are driven eastward to explore the vein. From the north extremity of the main drift north, and also from the south extremity of the main drift south, the miners begin to pick and blast out ore, and they work in the vein towards the incline, up which the ore is sent to the downright shaft, through which it is hoisted to the surface. The men timber after taking out the ore, and other men follow behind them and above them, and standing on timbers take out the ore higher up, letting it fall down to the drift below, where it is carried to the surface as before. So again another set of men follow these, but still higher up, and so on, till the entire depth of a hundred feet of ore, from the main drift up to the level of the bottom of the downright shaft, has been removed and hoisted. Meanwhile the incline has been carried down by other men a hundred feet deeper, and the same process repeated at that level.

The foregoing is a very general view of the mining operations below ground—the most that can be presented in this one article. But a particular and clear view will be given of each and every part and detail of the work, above and below ground, in succeeding articles, so that a far better and more thorough knowledge of the entire subject will be secured by our readers than if they were to merely go upon the ground and visit the mines, and see what little they could for themselves; for even those who have been in the mines on a visit have a very meagre idea of how they are worked. They know they have been underground, through an intricate series of passages, and travelling along some ladders, and on a car or "giraffe;" that they have seen picks, and drills, and shovels, but they rarely retain anything but an exceedingly confused notion of these, together with a remembrance of great heat, half-clothed men, hard work, rock, candles and cars.

NOTE.—The first quartz claim on the Comstock Lode was located on the 22d of February, 1858, by one James Finney, who was nicknamed "Old Virginia," the croppings being called the "Virginia Croppings," and it was from him that Virginia City took its name. The first discovery of rich silver ore on the lode, however, was not made till June, 1859, when two Irishmen—O'Reilly and McLaughlin—found a rich vein of black sulphuret of silver on the ground of the present Ophir Company. This ground being owned at the time by Kirby and others—placer miners in Six Mile Canyon below the Ophir works—one Comstock was sent to purchase it from them, and the entire lode has since been called the "Comstock."

It is to the discovery and development of this gigantic lode that the great impulse to quartz or vein mining in the West was originally due. The wonderful richness of that vein at once attracted immigration of miners from all quarters, and much attention from scientific men—among them notably the learned Baron Richthofen. Claims were quickly taken along the lode in lengths of 50 to 1,200 feet, until a total distance of about two and a half miles had been located, which has now been greatly added to in both directions—north and south. The yield of gold and silver from the Ophir and other mines soon became enormous, more especially after the crude methods and instruments of mining had been replaced by a better system, as well as suitable and powerful machinery.

The following table presents the annual and total yield of bullion from the entire lode since its discovery:

Year.	*Yield.*
1859 to end of 1865, estimated,	$80,000,000
1866	11,732,100
1867	13,626,062
1868	8,499,769
1869	7,528,607
1870	8,321,528
1871	11,053,320
1872	11,897.612
1873	21,544,727
1874	22,400,783
1875	26,000,000
1876 estimated	35,000,000
Total yield to end of 1876	$257,604,508

Of this the Belcher Mine alone produced bullion from June 1st, 1871, to December 3d, 1874, to the amount of $16,772,965.

Taken as a whole, the Comstock has proved itself the most valuable silver and gold bearing lode in the world.

—*Albert P. Schock, E. M., in Scientific American.*

THE SUTRO TUNNEL.

IT is just twenty years since the Comstock lode was discovered in what was then a portion of the Territory of Utah. It was, as far as I am informed, the first discovery of a real silver mine within the borders of the United States, and, strange to say, it has proved to be not only one of the most valuable that has been found in the United States, but, in all probability, it will prove the most productive deposit of the precious metals of any known in the world. The yield thus far amounts to about four hundred millions of dollars in bullion; and at least an equal amount in low grade ores has actually been developed, but which ores, as I shall hereafter explain, have thus far not been extracted.

Strange as it appears, that the first silver lode discovered in the great West should have proved to be the most productive, it is equally strange that the first ore extracted from it should have been the richest. The first forty tons of ore taken from the Ophir mine on the Comstock lode were packed on mules and sent across the Sierrra Nevadas to San Francisco, and yielded $160,000, or an average of $4,000 per ton; and no body of ore approaching this in value per ton has since been found. You may readily imagine that the discovery of a mine containing ore yielding $4,000 per ton created an intense excitement among the enterprising men of California.

Extent of the Mining regions.—This discovery marks a new era in the tide of Western immigration, when men whose westward progress had been stopped by the Pacific Ocean commenced to retrace their steps eastwardly, overspreading the vast area of country lying between the eastern base of the Rocky mountains and the western base of the Sierra Nevadas. Here was a field well suited to the restless, adventurous spirit of the Western prospector; and so this immense stretch of country, embracing almost a million square miles, has within the last twenty years been traversed and prospected in every direction; and almost numberless mining camps have been established where not a mine was worked or even known at the time of the discovery of the Comstock lode, although several hundred thousand people, prior to that time, when on their way to California, had, to some extent, prospected this identical territory. Gold, silver, and also the useful metals seem to occur almost everywhere in these regions, although not always in paying quantities.

These explorations have disclosed what may be considered an unexplained fact, that the summit of the Sierra Nevada Mountains forms the dividing line of what may be termed the pure gold ores; that is to say, the pure gold ores are almost uniformly found west of the Sierra Nevadas, while silver ore in all varieties, though occasionally associated with more or less gold, is found to the eastward.

Backbone of America.—It appears that the backbone of the American continent, stretching from Cape Horn to the icy regions of the north, forms the great mineral store-house of the globe; and that portion lying within the boundaries of the United States constitutes one of the most important interests of this country. This interest should be fostered and developed; and permit me to say to you that your club, which has been properly styled the Bullion Club, will form an important factor in the development of this great source of wealth, by disseminating information, and by bringing together representative men from every section.

In this connection, I intended to have made some remarks upon the influence which the increased production of the precious metals and a bi-metallic currency have upon the prosperity of the commercial world; but I leave this subject to the abler hands of Judge Kelley, of Pennsylvania, who will, as I am informed, shortly address your club upon that subject. Permit me now, after these general remarks, to turn to the Comstock mines and the Sutro Tunnel.

The Comstock Lode.—The Comstock lode appears on the surface of a range of hills called the Washoe Mountains, lying to the east of the Sierra Nevadas, and running parallel therewith. The Comstock lode occurs mainly at the contact of two kinds of rock, and is, therefore, in fact, to a large extent, a contact vein, though in other parts, as at the north and south ends, it is surrounded by the same kind of country rock. The central portion of this mountain range is formed by Mount Davidson—a mountain rising to the height of something like 7,800 feet—and which consists of syenite; this is probably the oldest formation in that neighborhood. Immediately east, and, in fact, also west of the syenite of Mount Davidson, we find greenstone or porphyry, of which great varieties exist, which for convenience are called by the family name of propylite. Still farther east, we find the trachytic mountain range. There have been various theories advanced as to the origin of that lode, but there can be hardly a doubt that it is a true fissure vein. All the evidence tends to show that such is the fact.

Formation of the Fissure.—According to Baron von Richthofen (who is probably one of the ablest geologists now living, and who has made a careful examination of the Comstock section of country, spending nearly two years there), the syenite is the oldest formation, the propylite or greenstone coming next in order, while the trachyte is the outburst which appeared at the latest geological period. If we examine the locality, we find, as already indicated, that the Comstock lode occurs mainly between the syenite and the propylite. The probability is, that when the trachyte made its appearance, the upheaval was so great that it uplifted a large portion of the greenstone. The effect of this upheaval was that a fissure was formed at the plane of least resistance—that is, at the point of contact between the two rocks; large masses of country rock from the hanging-wall falling into the fissure, forming what we now call "horses," were the cause of keeping the fissure open. Had it not been for the fact of these masses falling into the fissure, it would, in all probability, have closed up again. But in this manner there was left an open channel down to an indefinite depth, which gradually became filled, probably by means of thermal agencies, or possibly by volatilization, according to the different theories which scientific men accept. These masses or horses must necessarily have fallen into the fissure from above; and, as a proof, we have the fact that in the Comstock lode every "horse" consists of greenstone, that being the upper rock; the syenite being at the bottom, none of it could have fallen into the lode. The open spaces thus left in the fissures were gradually filled, and the horses became surrounded by quartz and minerals, mainly silver ores, carrying more or less gold, which are sometimes accompanied by the base metals. I listened with great attention to the lecture which Professor Newberry delivered in this room last Thursday, in which he expressed the opinion that the particular fissure which he was describing had been filled in with ore by the process of deposits from thermal waters. It seems to be hardly probable that the Comstock lode was entirely filled in that way. It is probable that different processes were at work at different periods; and it is very likely that a portion of the vein matter which now fills that lode entered it by the process of volatilization.

Volatilization.—It seems difficult to imagine silver or gold in a gaseous form; but if you consider for a moment, it does not appear so strange. We know that all the substances of the entire globe exist in one of three forms: solid, liquid or gaseous; while some substances are familiar to us in all three forms.

Take water, for instance: we know it as a solid when it is ice; we know it as a liquid ordinarily; and we know it as a gas in the form of vapor. We know all of the metals in two of these forms, as solids, and as liquids when molten. We know some of the metals in all three of the forms. In fact, in our laboratories, we can convert many solids into liquids by melting, and even into gases by volatilization. Now if we imagine the great laboratory of natuie down in the bowels of the earth, where all the agencies probably exist which are necessary for reducing these various minerals to a gaseous state, the filling of fissure-veins with metals does not appear so difficult of explanation. We must try to realize the fact that in the laboratory of nature there may exist a pressure of millions of millions of pounds to the square inch, and that the steam which is there generated may be heated to white heat; that is, hot enough to melt iron or any other substance. If we imagine such a heat as that, we can readily perceive how any substance might be volatilized; and if to these two forces certain chemical agents are added, the transformation will seem still more probable. I doubt that a vein the size of the Comstock lode would ever have entirely been filled by deposits from water.

Downward Continuance.—These theories may be correct or not, but we do absolutely know that we here have a vein which lies between Mount Davidson, the syenitic mountain, and the propylite adjoining it, extending for a distance of four miles, and reaching downward as far as the miners have gone, and in all probability farther than mechanical means will ever permit man to go. There are obstacles in the way which will prevent an exploration to an indefinite depth. As far as the lode itself is concerned, we find that it retains its general characteristics at various depths; that it varies in width from fifty to one hundred and fifty feet; that it consists of solid quartz, interspersed with particles of ore; but that in many portions it is not sufficiently rich in ore to pay largely for extracting. It seems that the ore in the Comstock lode often occurs in the form of pockets, or channels, or chimneys, or, as we call them when we find a great body, "bonanzas." It is strange that, in the vein itself, a bonanza hardly ever occurs.

Bonanzas.—The lode descends on an incline eastwardly, following the dip of Mount Davidson; in places the pitch is greater than at others, but the average is about 45 degrees. The ore-bodies seem to occur outside and to the east of the vein; they are generally of a lenticular form. It frequently happens that, in sinking a shaft or in running a drift, no ore at all is found; a drift may run right over or under it: while the very next drift may show an ore body of great width. This accounts for the great fluctuations which have taken place in the stocks of the mining companies on the Comstock lode. People who are not familiar with the situation do not understand the reason for such fluctuations; but what I have stated will explain one of the causes. These ore bodies are not confined to any particular spot. The country to the east of the Comstock lode may contain ore bodies to an almost indefinite extent. If we imagine, which I firmly believe, that the Comstock lode continues downward for miles, then it is possible that these ore-bodies may make their appearance at comparatively lesser depths, several thousand feet to the eastward of the present workings. The disposition of these ore-bodies is not governed by any rule. It seems to be entirely arbitrary. We do not know where they are until we stumble upon them. The only way to look for them is to run drifts all through the country, and then to cross cut from these every one hundred or two hundred feet. Some men say that the Comstock lode is working out. That is nonsense. Several deposits have been found which were of such immense value as to astonish everybody; but these bonanzas were limited in number—probably not over a dozen altogether; and they were always found in the manner I have described.

Sinking Shafts.—They first commenced the working of these mines by endeavoring to sink a shaft, on an incline, down into the lode itself. It was soon found that this was a poor way of mining. It was considered necessary to start shafts farther to the east. Accordingly, shafts were started which would cut the lode at a depth of seven or eight hundred feet; but they found that these shafts at that depth struck the rock of Mount Davidson, and, owing to the meagre facilities which they then had for boring, they were obliged to give that up. They found it more profitable to start still other shafts farther east; and wheu these reached Mount Davidson rock, they were continued by inclines; lately, still other shafts were started so far east that they will not reach the lode until they have gone down to a depth of 3,000 feet; one of these shafts has lately been started on a gigantic scale, and so far east that it will not strike the west wall until it gets down to a depth of 4,000 feet. People look upon that as being rather an extreme undertaking, because the shaft will be so far away from the lode that they will have to drift, after it reaches a depth of 3,000 feet, still over 1,000 feet to get to the lode. So you see that it is not always advantageous to start a shaft so far away from the point designed to be reached.

Strength of Cables.—During the past twenty years enormous sums have been spent on these mines. Probably, in no mines of the world that have been worked, has there been such a lavish expenditure for machinery, in order to secure every facility for the successful working of the mines. Such an expenditure was necessary. The work could not have been performed otherwise. The result has been that the mines have been more rapidly developed than any other mines ever worked. Of course, the difficulties in mining increase as we go down. In the first place, after you get down below 2,000 feet, the steel cables have to be made of such a size (in order to sustain their own weight), that it becomes a very serious question whether they can be used in one length to much greater depth. This is a subject which has been discussed very fully in England and in Belgium; and the engineers there have come to the conclusion that it is not practicable to hoist with them after you get down over 2,500 feet; but the people on the Comstock lode say that they can go down over 3,000 feet and still use them. It is a question simply of the strength of material. These cables are made of fine steel wires woven together. There certainly must be a limit to their capacity, even if they are made tapering. If the cable is long enough, it will certainly break of its own weight, and without the attachment to it of any additional weight On the Comstock lode I do not think that this will cause any very great practical difficulty for several years to come; and before that difficulty does arise a new basis for hoisting work will have been utilized at the level of Sutro Tunnel, where they can start afresh.

Water and Temperature.—Another difficulty, and one of the greatest obstacles encountered in the working of these mines, is the presence of water, which is found in great quantities—and hot water at that. Gentlemen have different ideas about this water, and how it gets so hot. I have, from my own observation, formed my own ideas about it. I do not think, as is contended by many, that this water is heated by chemical decomposition. My theory is, that the water from rains and the melting snow upon the Sierra Nevada Mountains rapidly descends through the fissures of the crystalline rocks (and as they generally incline at a sharp angle, the water descends very rapidly), until it reaches a depth of several miles. We know (although by some it has been disputed) that the increase in heat is about one degree of Fahrenheit to every sixty feet of descent. I think that this has been demonstrated all over the world. Of course, there are instances where this is not the case; but those are the exceptions. On the Comstock lode this rule does not strictly apply, because the heat increases much faster as you descend. There, at the depth of 1,400 or 1,500 feet the mercury rises to 110°; and at 2,500 feet, the temperature of the rock is as high as 130°; and at 2,800 or 3,000 feet, it is as high as 150°. I have observed this matter for many years, and have looked into it pretty closely, and my idea is, that this water descends from the Sierra Nevada Mountains to a depth of 10,000 to 15,000 feet; that it is there converted into steam, and finally into superheated steam. Of course, there is then exercised an upward pressure which does not permit any more water to descend, because the pressure of the descending water is counterbalanced by the pressure of the superheated steam. I recollect that I had, a few years ago, a controversy with Professor Sterry Hunt (probably the best informed man on this subject in the United States) and some other gentlemen; and his idea was, that if there was so great a pressure down there, the steam would thereby be again converted into a liquid. But I do not think that bears upon my theory at all; because if the steam is reconverted into a liquid by the immense pressure, it would become steam again upon lessening or removing the pressure. If, therefore, the water descends until it becomes heated to a boiling point, it may then ascend, either because of capillary attraction or of pressure; and as it finds its way upward through the crevices of the rocks, it necessarily heats the rocks by the contact. And here it is where mistaken ideas come in; the rock does not heat the water at these higher points, but the water heats the rock. It seems to me quite evident that, as the water permeates all the cracks and fissures of the rock, the rock itself thus becomes heated. Of course the water loses some of its heat in its ascent. If we could go down 3,000 feet deeper than we are now, we should find boiling water. It is now 165° in some places.

At Steamboat, and in that immediate neighborhood, we find springs that are emitting great quantities of boiling water. On a direct line, these boiling springs are not over six or seven miles from the Comstock lode, and it is quite possible that these may be connected directly with that lode. The only difference between the hot water at the Comstock lode and that at the boiling springs is, that the water at Steamboat is somewhat sulphurous. Otherwise they are very much alike. That difference might be caused by the water passing over rocks containing sulphur.

Limit to Mining.—Accordingly, the limit of mining on the Comstock lode will be reached when the mines get to a depth where it is so hot that human beings can not exist any longer. Some think that said point will be reached very soon, considering the rapidity with which the mines are worked. The fact is, that now, already, where the men are working in the lower levels, it seems almost impossible for a human being to exist. The men could not work in such a heat but for the fact that in the particular locality where they are swinging their picks a stream of compressed air, or cool air from a blower, is directed upon them; but as they go to and from that particular locality, they have to pass through places which are intensely heated, and in which they could not exist for any length of time. By means of such appliances, using very large blowers and powerful compressing machinery, I have no doubt that the men could work these mines even where they contain boiling hot water. If you show the people a big bonanza, they will devise some way of getting out the ore. The only trouble is, that at this great depth it takes so much longer to explore the mines that people get impatient. Where it formerly took only three months to explore a new level, it now takes six, nine, or twelve months. I believe that the Comstock lode can be successfully worked for thirty, forty, or fifty years to come below its present depth; and there is work enough above it to last for a hundred years to come.

Mining Tunnels.—After these general remarks about the Comstock lode, I will now proceed to say a few words about the Sutro Tunnel. The idea of running a tunnel into a mountain for mining purposes is nothing new. It has been done ever since mining commenced. In Germany, where mining has been carried on largely, and also in Spain, and even in England, they have used tunnels quite extensively in connection with mining operation. In the Hartz Mountains, a great number of tunnels have been thus constructed. The topography of the country there is such that tunnels can be run to considerable depth, and they have been constructing tunnels for the last eight hundred years. At the end of the last century they constructed a tunnel 6½ miles in length; then, starting at a lower level, they constructed another tunnel, and so on, until finally a tunnel was completed, some twenty years ago, which had a length of fourteen miles, and which reached three hundred feet below the level of the next deepest tunnel. In other parts of Germany and in Hungary we find the same thing.

The Sutro Tunnel.—Fourteen or fifteen years ago, I proposed to run a tunnel into the Comstock lode, a distance of four miles. The people thought that it was an immense undertaking. Those who are interested in the mines would never have consented to contribute to such a work, for their interest is only of a temporary character; they calculate their profits from day to day, in the attempt to make a stock speculation. All such people care for is to make a "turn" in the stock, to sell at a high rate, and then they back the stock at a lower rate. In other words, the men owning shares in the mines were unwilling to give any portion of their earnings for the construction of a work which would not benefit them immediately; it troubled them but little what would become of the mines after some years. Their method of mining was a regular "grab" game. They looked for big bonanzas; they left the poor ore untouched and seemed unwilling to make any provision for the future which would enable them to work the lower grade of ore profitably. I did not, at that time, know much about these tunnels in Europe, but I saw that the construction of a tunnel to the Comstock lode was a common-sense proposition. I saw that it would be an immense benefit to run a tunnel reaching the mines at a depth of 1,700 feet. Many other people began to think so, too; they were finally convinced that it would be a good thing; but, instead of lending their aid and influence, and spending their money in the construction of the tunnel, they spent their money in fighting it. They spent more money in fighting the tunnel than we spent in constructing it; and they were beaten in the end. It was a question of millions. The object was to get possession of the work for themselves. They were determined to oust us. Finally, they found that they could not continue the opposition any longer, and that it would be impossible to work the mines without the assistance of a tunnel; and so at last we came to an understanding all around. We commenced, last spring, to negotiate the terms of a new agreement. They were pretty stiff-necked about it, and so were we. We thought, as they had held back so long, and as they had to have the aid of our tunnel finally, that we were entitled to make fair and equitable terms. And thus it took about three months to negotiate an arrangement. At last we came to an understanding, which is looked upon as being a fair arrangement for all parties concerned. Under that the agreement which we had originally entered into with the mining companies was modified. Under the original agreement we had contracted not only to run a tunnel to the Comstock lode, a distance of four miles, but we were also to construct a tunnel along the Comstock tunnel for three or four miles more. A part of the settlement is, that we agreed to reduce our royalty on all ores yielding under forty dollars per ton, from two dollars to one dollar per ton, while all ores yielding above forty dollars still pay two dollars. They, on their part, agree to pay for these lateral tunnels in the form of a loan; but it is really no loan at all, for we pay no interest upon it, and it is not repayable except by deducting half the royalties that we earn. So, if a mine finds no ore, we are never to repay it. It is therefore, not in the form of a debt. We are now engaged in constructing these lateral branches, and the mining companies pay us from $20,000 to $40,000 on the fifth day of every month, which fully pays for the work. We have, also, already commenced earning some royalty, though not a great deal as yet. We probably receive from $7,000 to $8,000 per month from that source; and as soon as the lateral tunnels are extended past each mine it commences to pay, and our royalties, therefore, will increase gradually. The production of the Comstock lode, at the present time, is very limited. The fact is, that during these pending difficulties they could not prospect their mines, and for three years they had hardly been doing anything. Since we have constructed the tunnel, and commenced carrying off the water which obstructed them, they have again begun to prepare for prospecting the mines. These preparations have occupied many months; they are now just about ready for a start; and I think that by the end of the year they will be able to prospect a number of the mines, and especially those that they call the water mines, such as the Savage and Hale & Norcross. From that time they will go right on prospecting and opening up the mines.

Difficulties in Tunneling.—In the construction of this tunnel we had a severe struggle to get along. On the one hand, we had these people opposing us, and on the other hand we encountered the difficulty of raising money sufficient to carry on the work, and that was about the "toughest job" of all. But still we succeeded. There were some gentlemen who took broad views of the matter, and partly through their influence and aid the money was forthcoming, and since then we got along reasonably well.

In one way and another we encountered many difficulties doing the work. We had to work our way inch by inch through solid rock. In these tunneling operations, we have first to drill a dozen or twenty holes, charge them with giant-powder. explode the blast, then wait for the smoke of the powder to disappear before we can commence loading the debris on the cars for removal. Under the circumstances, one can not get ahead very fast; but altogether we made quite as rapid progress as has ever been made in any similar undertaking. In fact, our progress was more rapid than was the construction of the Hoosac, the Mont Cenis, the St. Gothard, or any other tunnel.

A Chapter on Mules.—Up to the present time all the transportation has been done by means of mules. We found it more convenient to use mules than to use steam, because, under ground, steam is fatal to life. We are now preparing to use compressed air motors, built on the same plan as those in use on Second avenue in New York. We have now two motors building in England. We have been using mules for years, and have found that they are tolerably good animals; but there is a prejudice against mules, though they are very intelligent. I think that I could write a chapter on their traits, as I have had a very extensive experience with them. It has been said that they have a strong propensity for kicking, but I have never seen them kick when in the tunnel. They become very tame under ground; in fact, they become the miners' pets. The men become quite attached to them; and as the shift-mules pass along by the men at lunch, they will often receive from one a piece of pie, and from another a cup of coffee, etc. When a signal is given to fire a blast, the mules understand the signal, and will try to get out of the way of it just as the men do. Of course, under ground is very dark, and the mules become so accustomed to the darkness that even when they go out into the sunlight they cannot see very well, and when they go back from the sunlight into the mine, they cannot see at all. So we are in the habit of covering one eye with a piece of cloth whenever they go out, and keep the covering over the eye until they go into the tunnel again; we then remove the cloth, so they have one good eye to see with. We had to adopt this plan for preserving their sight, because the mule is so stubborn that he will not pull unless he can see his way ahead. We have found out another thing about mules. We tried horses at first, but we found that whenever anything touched the ears of a horse, he would throw up his head and break his skull against the overhanging rock; but if you touch a mule's ears he drops his head. For that reason we could not use horses; we employed mules, and they have answered very well.

Obstacles to Progress.—In carrying on a work of this kind, we meet all sorts of difficulties. Now and then we would get indications of water. The men would put in a blast, and the water would pour out in a perfect torrent, and the men would have, at times, to quit temporarily to escape it, and wait until the water had subsided sufficiently, so that they could go to drilling again. Every now and then we would come to a clay, that would swell and cave so as to reduce our progress of 150 feet (and afterward with improved machinery of 300 feet) per month to less than 50 feet per month. Sometimes we could not keep the roof up. As soon as we could get started a little way in our work of excavation, the rock would yield, and hundreds of feet would come pressing down on the timbers with such force that it was almost impossible to resist it. The worst ground that we came to was the swelling ground. This is sometimes clay, and sometimes it is rock. The moment you dig into it, it swells out; and no matter what size of timbers you use, it will snap them off as if they were but matches. Nothing will resist it. You must let it swell. In one place the swelling was so great that the track swelled up a foot or two seven different times, and each time we had to cut it down. The timbers used are a post and a cap. The pressure on this cap would be so great that the post would be pressed through the cap in twenty-four hours—just as though the cap were a piece of cheese. The only way to keep the timbers from breaking, in such ground, was to employ men to ease up the ground behind the timbers. That is to say, they would take away the rock or clay from behind the posts from time to time, until, after a year or so, the ground settles down to its natural state and does not swell any longer. We have very little trouble of that sort now; but I suppose we shall encounter it every now and then as we go on with the lateral tunnels.

Bad Air.—The greatest obstacle encountered by us was the heat and the poor air. Our last opening to the surface was at shaft No. 2, about 9,000 feet from the tunnel entrance. From there we had to go to the Comstock lode, a distance of 11,000 feet, without any natural air connection. After we got into a distance of 17,000 feet from the mouth of the tunnel, the heat became so intense and the air so bad that it was almost impossible to keep the air sufficiently cool and pure to sustain life. There was not oxygen enough in the air to make our candles burn. Although we blew in air by means of blowers and air-compressors, still at times there was not sufficient air to enable the men to work. In the place where the men were at work we could generally manage to keep the air sufficiently pure; but at some distance back from the face of the tunnel the air was so bad that one could hardly exist. In fact, in going through these portions of the tunnel, the men would often give out; and as for the mules, we could not get them there at all. A mule would make straight for the air pipe, and you could not get him away. We had one mule that would not go away from the air pipe at all. They beat him, but it was of no use. He had to be carried out, and that mule escaped. He never went into the tunnel again. A shift mule would always want to go to where the stream of air was rushing in, and he would monopolize it all to himself. He would never leave it, but would stand there, and as he bobbed his head up and down past the pipe, you would hear the air whistling by him.

Accidents.—We had some sad accidents happen. These air pipes are made of galvanized iron, and the leakage is prevented by wrapping the joints with canvas which is covered with tar or with white lead. I recollect that one day after a blast had been fired, one Garnett, the man whose duty is was to keep these joints wrapped, went forward (he was nearly fainting) to the end of the air pipe near the face of the tunnel; but before he got there, he fell down in a swoon. When the blaster went forward to examine the blast which had just been made, he found that two of the holes had not gone off, and so he reconnected them and fired the blast while this poor man was lying on the ground. It did not kill him, although he was riddled with rocks. He had about a hundred large and small pieces of rock in him, one being in the back of his head. I thought that he could not live for ten minutes; but he is alive now and as well as ever. The most curious part of it is that for a long time previous this man had been in ill health, and that application of rocks cured him. He has told me often since "that confounded thing cured me." It was rather a severe cure, but it was effectual.

As we approached shaft No. 2, 900 feet from the tunnel entrance, which had been abandoned some time previous, because it had filled by a great influx of water to the depth of about 900 feet; we bored a diamond drill-hole into it, and the pressure of that column of water, 900 feet high, was so great that it threw out the drill-rod and cast it a distance of several hundred feet, although the rod weighed several hundred pounds.

Caves.—Not long ago some timbers broke down, and the report came to me that a man had been killed. We found, however, that he was not injured, but that he had been caved on and could not get out. I started in with the doctor to see how he was getting on, We found that all the work had stopped, and that the man, who had been working in the ditch which we were then constructing in the floor of the tunnel for the purpose of carrying off the hot water, had been caved on and become surrounded by a lot of loose, fine gravel, up to his chest, and that the water running in around this gravel had packed it so tightly that the man could not move. We had to get him out in some way, and so three or four men (which were as many as could get into the confined space) got down alongside of him and tried to dig him out; but as fast as they would, the gravel would cave in again. When I reached the place the man had been fast for three or four hours. The miners had built dams above in the tunnel to stop the water from flowing down; for if the water had been permitted to come down, it would soon have risen to his mouth, and would have drowned him. He was so fast that he could only move the upper part of his body a little. I urged the men to work away with all their might at the dam to keep the water back; but after awhile they reported that it was of no use, that the water was rising above the dam. We did not want to see the man killed, and used every effort to rescue him. I told the men to pass a rope under his legs, and try to pull him out. We thought we had better pull him out, even if it did injure him somewhat, rather than let him drown; but as soon as we began to pull, he commenced to cry out, so that we had to give that plan up. Then the men dug again for awhile, until the foreman came and said that if we did not get him out within ten minutes, the water would be down in such volume as to drown him. Then the men worked again with the rope for dear life; at last they got one leg out, then they gave another jerk, and brought the man out.

Hospital.—As I have remarked, we employ a surgeon. There were many accidents although we had less than there were in other works. In the Hoosac tunnel, 185 men were killed in the construction of the work. In our tunnel, but 12 men were killed, and I do not think that of the 12, more than three or four were killed by anything actually happening in the tunnel itself. I told our men several years ago, that every man employed by the company must pay three dollars per month toward a hospital fund; that the company could not afford to give the men all the attention that they ought to receive in case of accident. The men remonstrated a good deal against this; they did not wish to spend their money in that way; each one thought that no accidents would happen to himself; but I made this payment compulsory, and after awhile the men became reconciled to it.

We employed a physician and opened a drug store. If a man was injured he received every attention. He had the care of nurses, physicians and medicine. But these miners are all members of an association, the Miners' Union, which does not permit of any man to work a shift of eight hours under four dollars per day. All the mine managers have agreed to yield to their wishes, and I think a man working in these hot places well earns his four dollars. But sometimes the union will interfere with us where they should not. They sent a deputation to me not long ago, to say that we were not paying four dollars per day. I said that we were. They said that we deducted three dollars per month for the hospital, and that therefore the men only received one hundred and twenty-seven dollars per month, which was not four dollars per day. I replied that that was for the benefit of the men themselves; that it was a work of benevolence; that I had inaugurated it solely for the benefit of the men. They insisted that the men should not be compelled to pay anything to that fund; and as we had to complete a certain amount of work at a given time, and could not afford to get into any trouble with the men, we had to yield in this matter.

Starting a Graveyard.—One labors under all sorts of difficulties in dealing with the men. It seems ridiculous; but the most difficult thing we had to do was to start a graveyard. It took some three years to start it. Whenever a man got killed or died, the men would get up a big funeral, and go off to Virginia City or some other place and bury the man. All work had to be stopped for one or two shifts. They would each lose their \$4.00 for wages; would pay \$300 or \$400 more for teams; and some would drink so freely as to be unfit for work the following day. I was determined to put a stop to that. So said I to the men: "Why cannot we have a grave-yard of our own and bury our men here?" I had a grave dug for the next man that died. The dead man's friends came and said they would not have the man buried there. I asked them why? They said that "it would be too lonely for the poor fellow." That seems ridiculous, but it is a fact. I did not wish to have any trouble over the matter, and so I let them bury the man where they chose. Every time a man died we had just the same trouble again. At last two miners got killed who had not paid their fees to the Miners' Union, and had been discarded. They had no friends there to object, and so we buried them there, and thus were able at last to start our own graveyard.

Advantages of the Sutro Tunnel.—But, gentlemen, I fear that I am detaining you too long with these outside matters, and will now begin to speak about the advantages of the Sutro Tunnel itself. The first great advantage of the Sutro Tunnel is, that it creates a new base of operations. We open a new surface for mining operations—a surface which is in fact a better surface than the original one. We are down 1,700 feet from the surface, and can introduce hundreds of millions. The Comstock lode has already yielded something like \$400,000,000, and there is in it an enormous quantity of low grade ore which has not been taken out.

Drainage.—The next important advantage secured by the tunnel is that we carry off the water. Instead of pumping this immense body of water to the surface, it is pumped into our tunnel, which saves 1,640 feet of pumping. When I last left the work there were running out about 12,000 tons of water every twenty-four hours. To lift this water to the surface, estimating it at a very low rate—indeed, at much less than it actually costs, say at 25 cents per ton, it would cost \$3,000 per day to pump it out to the surface. In order to carry off this volume of water (and we agreed to take the water within ninety days from the time we made the settlement with the mining companies), we had to provide the means. Some of this water has a temperature of 165°; some has a lower temperature; where it is all mixed together it is about 130° or 135°. If we were to let this water flow through this open tunnel, a distance of four miles, the heat would be so great that we could use the tunnel for no other purpose; the steam would suffocate the men. We were therefore compelled to construct a drain, and to place a wooden box in this drain. We had quite a controversy over the way this drain should be effected. Every man had his own ideas as to the best way; each engineer thought that he knew all about it. I contended that if we were to construct

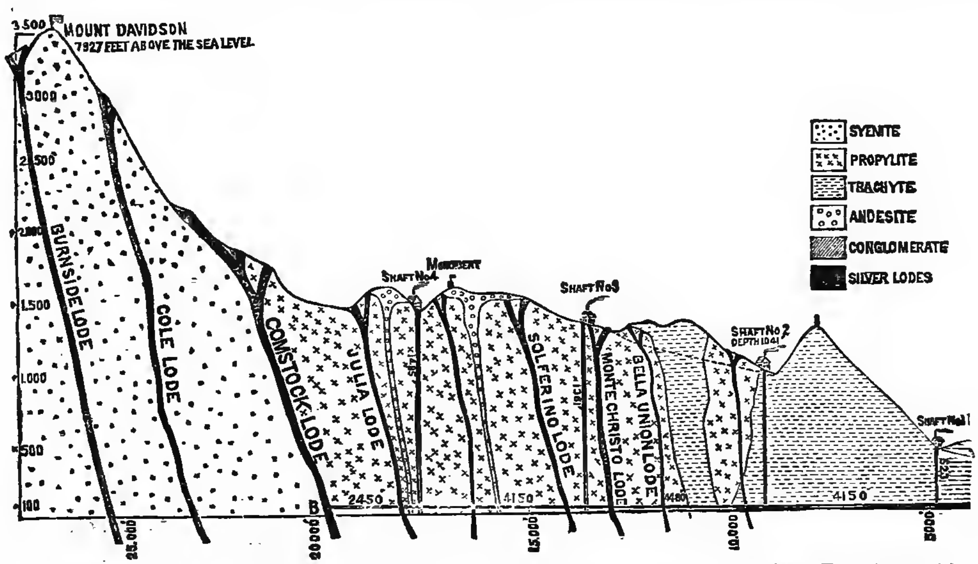

FIG. 8.—THE SUTAO TUNNEL. Geological cross-section of the country from the entrance of the Sutro Tuunel to and beyond the Comstock Lode; also the four shafts on the tunnel line.

water through the shafts, and thus get a fall of 1,700 feet; or we can take the water which exists at some point between the surface and the tunnel and let it flow down to run the machinery which is placed at the tunnel level. We thus could get an abundant water-power. A very small stream of water with a pressure of 1,700 feet will give an immense power. The time will come in the working of these mines when they will economize all of the water. In fact, the water which is brought in pipes from the Sierra Nevada Mountains can be most profitably used for that purpose; and the time will come when it will be so used extensively. You can readily perceive that a new surface at that point adds just as much to the working possibility of the Comstock lode.

The lode extends down indefinitely, and the ore bodies recur at different places; we cannot tell exactly how or where, because the distribution seems not to be governed by any known law. The tunnel adds to the working possibility of that lode certainly 1,640 feet, which is the level at the point where the Savage shaft is intercepted by our tunnel, and that shaft is away down the hill. That is, of course, an incalculable advantage; for those 1,640 feet are surely added to the working possibility of the Comstock lode, and ought to be worth to it a great many millions of dollars, perhaps a wooden flume, perfectly tight, of 3 inch yellow pine, we should be able to carry off the water and not radiate much heat from it. Others disputed it. I had machinery built for planing, tonguing, and grooving this yellow pine, and which cut it off, all in the same operation, so that the construction of this box was done at a very reasonable cost. We placed these boxes and joined them together with slips of iron $\frac{1}{4}$ by $1\frac{1}{2}$ inch, which were driven into the end of the boxes, and it made a continuous box so perfectly tight that when the covers (which were also tongued and grooved) were nailed on, and the water was turned in, there was not a leak from one end of the tunnel to the other; and, to the utter astonishment of everybody, the temperature of the tunnel has not been increased materially by the passage of the hot water through it; and the water, which was at 130° on entering the box, after flowing the four miles still has a temperature of 123°, having lost only 7° of heat in the passage. After it gets to the mouth of the tunnel the water is conducted down a shaft in the machine shop, where we have a water wheel placed at the bottom of the shaft 60 feet in depth, from whence the water is carried off by a tunnel, 1,100 feet in length, which serves as a tail race. From this small tunnel the water flows about a mile and a half to the Carson River. This water can now be used for many purposes. The first who utilized it were the boys, who made small ponds to swim in at the lower end of the town. It can be turned to account in heating hot houses. We have a rich soil there, which, if covered over by glass, will produce early vegetables and fruit at very little cost. We use the water first for power and then for irrigation.

Farming.—We have quite a farm belonging to the company, which will become very profitable indeed. The company owns over five thousand acres of land. The soil is very fertile, and all that is needed to make it highly productive is water. The water from the Comstock lode is particularly well adapted for irrigation, because it contains in solution sulphate of lime or gypsum, which is of itself a valuable addition to the soil, although that land is now so rich that it does not need any fertilization whatever.

Ventilation.—The tunnel will also be of great advantage for the purpose of ventilation, not so much, however, by the air going four miles directly through the tunnel; for we find that does not answer so well as to use the air in the lateral tunnels by connecting every shaft with the other shafts. By that means we get a draught of air from shaft to shaft that is wonderful. Not long ago we were laboring under a great difficulty in the south header of the tunnel which was not ventilated. In fact, for three months we could not do anything. The men in these heated places are taken with "cramps," as they call it. We really did not know what the difficulty was, until one day a mule died while in there, and I had the surgeon hold a post-mortem examination on it. He found every organ perfectly sound, until he came to his lungs, which were found to be congested with blood. We can carry ventilation down the shafts as deep as they may go; and this fact will make it possible to work the mines at much greater depths than they have yet been worked. The great volume of air going through a shaft causes an evaporation of moisture which covers the sides of the shaft, and in that way lessens the temperature. Up to lately it was so hot in the north header that the men could not do a full day's work; but about two weeks ago we made the connection by a drift with a shaft, and now the air there is delightful, and our men are doing double the work that they did before. This shows how much depends upon a proper system of ventilation. It is worth millions to the mines. When the temperature is so high and the air so impure as it usually is in the mines, the men cannot do much work; in the hottest places it takes six to eight men to do a day's work; a man can only work five minutes at a time, and then he must retire to a cooling station; but if you give the men good cool air, they can do a day's work.

Low Grade Ore.—Another very important thing in connection with our tunnel is the fact that it will make possible the extraction of the enormous body of the low-grade ore in the Comstock lode. As I have already said, $400,000,000 have been extracted from the different bonanzas. People speculate in mining shares to make a fortune, and they want to make it overnight; and in searching for these bonanzas they have passed by the low-grade ores, because they thought they would not pay, or would pay so little as to amount to nothing worth the effort required. By means of our tunnel we can transport the ore to the mouth for one cent per ton per mile, which is as cheaply as the best regulated surface railroad can do a similar work. We can afford to take these ores out and reduce them at the mouth of the tunnel. We have not yet commenced doing this; it has taken so much money for other purposes that we have not been able to do anything yet with the low-grade ores; but the time is coming when we shall be able to utilize them. Suppose that we are able to work 1,000 tons per day, which would not be considered very heavy work on the Comstock lode; that would give at least $2 or $3 per ton profit. They are willing to sell the ore to us at $1 per ton. We have established a scale of prices by which we are to pay $1 per ton for ore which yields under $15 per ton. But rock that yields $15 to the ton will assay a good deal more. Everything that we can get out of it is so much clear gain to the world; for under the old system they can never utilize these low-grade ores. I think there are $300,000,000 or $400,000,000 to be extracted from these ores now in sight in the 200 miles of drifts on the lode—enough to last for a hundred years' steady work.

Cheap Firewood.—There are other sources of revenue that the Sutro Tunnel Company will have. The Carson River, which flows within a mile and a half of the tunnel entrance, has its rise in the Sierra Nevada Mountains. There is wood enough there to last for many years, which can be floated down for less than $5.50 per cord. We can, by contracting therefor, a season in advance, get our wood there for less than $5; it is worth in Virginia City $10 per cord, and they often get $12, and the consumption is 600 cords per day. It will not cost over $1.50 to deliver it at Virginia City. There is also a profit to be made from the sale of timber.

Ice.—There is another article which may be made remunerative, and that is ice, which is used in these mines to an extent which is really marvelous. The quantity of ice water that a man working in the mine will drink would astonish you. You know what you can do in that way when taking a Turkish bath; but they can discount that several times over. They drink it by the gallon. The men will rub ice all over their bodies, and it does not make them feel chilly. They get so heated that the ice feels comfortable to the body. When the surveying engineers go into the mines they have to take with them big sacks of ice to rub their heads and bodies, or else they could do no work. I cannot state the number of tons per day used at the mines; but there is more ice used there than there is in the whole city of San Francisco. It sells there for $20 per ton. Certain parties largely monopolize the ice business there; but some of the mining companies are ready to take ice from us. We can make it for fifty cents per ton. It freezes from six to fifteen inches thick every winter. We shall have a tram road down to the river, propelled by water power, over which we can haul up wood, timber, and ice. That will be a great advantage in connection with the workings of these mines.

Royalty.—I will refer, in conclusion, to the royalty to which we are entitled. Before the settlement made last spring we were entitled to a royalty of $2 per ton for every ton of ore taken from the mines in all future time. Whether it was taken through the tunnel or not, they were to pay us $2 per ton. We, however, partly yielded our rights, and agreed to take $1 per ton for all ore that yields under $40 per ton, and for all ore that yields over $40 the old rate of $2 per ton was retained. As the lateral tunnels progress our revenue will increase. I think that the royalty alone will in the end amount to $100,000 per month.

We have another source of revenue, from the transportation of men and ores. The royalty is received for draining the mines. We receive that without doing any further service. For the transportation of ore and men we will make additional charges. On ore or rock we are entitled to charge 25 cents per ton per mile. Negotiations are now pending for opening some of the mines east of the Comstock, and the people will want to go to work through the tunnel and to take their ore out through it.

Mineral Land Grant.—I think that the most important possession of the Sutro Tunnel is its mineral grant. Under the Act of Congress of 1866, there was given to the Tunnel Company a strip of mineral land 2,000 feet in width on each side of the tunnel, forming the very heart of the Comstock country. The tunnel runs at right angles with the Comstock lode, which it reaches in a distance of four miles. After passing the Comstock lode we may go still three miles farther, through Mount Davidson, and beyond it. As far as this strip of land is concerned, we have discovered and opened several large ledges. We have cut one vein 120 feet thick, and we have just commenced to prospect it. We have run into it on one side—that is to say, we prospect the vein for a width of 4 feet, which is the size of the drift. That does not explore the vein. After we get in a certain distance we propose to cross-cut it at given intervals. We get assays of that ore varying from $2 to $43 per ton. There is no body of it that will assay at that rate; it is only in spots that it will do it. These veins are all of the same nature as the Comstock lode. We may here come across as big a bonanza as has ever been found on the Comstock lode. These veins were probably formed at the same time, and they may all unite somewhere; but we can never get to that place, as it is probably two or three miles down. Under the Act of Congress, we are entitled to all the mineral deposits we find on that grant, which were not owned in 1866, and worked according to the mining laws. The Comstock lode is, by words, specifically excepted; so that, of course, we have no claim to any part of it; but the Comstock mines have to pay their contributions for benefits derived.

To the other veins I think we have a pretty clear title, with the possible exception of one or two mines, which the companies claim to have possessed and held before this act was passed.

So far as our grant of land beyond the Comstock lode is concerned, I think it will before long be prospected by continuing the tunnel beyond its present end. We have to cut through the syenitic mountain, which nobody else could ever pierce. People there think that there are no mineral veins in the syenite.

Mount Davidson.—I have visited many of the mining districts of Europe, and I found that at Schemnitz, in Hungary, there is precisely the same formation as at the Comstock lode. I have mingled specimens of the country rock from the two places, and I have never found anybody in Nevada who could tell them apart. We have the syenite there, as well as the greenstone and the trachyte. We find at Schemnitz half a dozen veins in the syenite that have been worked for a long time. We know that there are outcrops on Mount Davidson which show well in metal. They have not gone into Mount Davidson, because they have been afraid of striking water. We do not care how much water we strike, for it will flow off through the tunnel. The water all comes from that side, from the Sierra Nevada Mountains. They have not gone into that mountain because they were afraid of being drowned out, and also because the rock is so hard that the men say that they can never get through it. I think that in this respect they are mistaken. We have never yet seen any rock that we could not go through with a 5 inch percussion drill. With it we can strike a blow of 1,000 pounds, at the rate of 300 per minute, which will drive the drill through almost anything. But we are not yet prepared to go into Mount Davidson. It will take considerable money to do so, and we have a use for all the money at present. The time will come before long when we will go ahead with that.

The same formation existing east of the Comstock lode also occurs beyond Mount Davidson. We there find the same propylite, with specimens of gold, on the surface, although there is no well-defined ledge. But you cannot tell anything about these outcroppings until you get down to a considerable depth, for the surface is all covered over with *dêbris.* You may find ore there, and you may not. You may find a chimney there. It is a mistaken idea to suppose that, because you find a vein of ore, you may be able to dig out the whole vein. The ore occurs in all mineral veins, in zones, chimneys, and spots. There is always some uncertainty in working a mine. You may explore and find a good showing of ore, but you cannot tell how far the ore goes. Experience teaches us that this is uncertain. But the ore does occur in zones, and you may have to dig a long distance through the vein before you find another zone.

Longevity of Mining Districts.—But if you take a whole mineral district you will find that there is a most extraordinary permanency about the aggregate yield. History tells us that the mines of Cornwall have been worked for over three thousand years, and they are being worked to this day, and the yield still is very considerable. The same is true of the mineral deposits of the Hartz Mountains. The mines there have been yielding for over eight hundred years. The same is true of the district of Freiberg. That has also been worked for centuries, and it still furnishes a good yield.

If you take the district of Schemnitz, you find that it is the same. If you go into Mexico, you find that the mines of the Veta Madre, of Guanajuato, have yielded over $800,000,000, and are yielding still. If they were to put up proper works there they could continue to work those mines for centuries to come. There is a chance for an enterprising man to go and dig a tunnel into those mines. I do not, myself, want to dig any more tunnels; it takes too long a time. So, too, the mines of Veta Grande, of Zacatecas, are still yielding four or five millions per year, though they have been worked almost since the discovery of America.

I consider that an enterprise like the Sutro Tunnel, based as it is upon the results obtained in a whole mining district, furnishes one of the most promising and surest investments in the world. It may take time to realize, but it is sure. These every-day ventures are gone into by everybody, and, as a result, there is only a little money to divide.

Security of Title.—Under the act of Congress we are given certain rights. At that time the United States was the sole owner of these lands. At the time of the passage of the Sutro Tunnel Act the government owned in fee all the mineral lands in the West. Shortly after that time a general law was passed, giving a title to any man under certain conditions who wants to purchase mineral lands. Immediately succeeding the Sutro Tunnel Act, this general act was passed. But our act has the precedence over all others, and our title is better than the title of anybody else holding mineral lands; for ours is the first act and the first grant of mineral lands made by the Government of the United States since its organization.

The cost of the Sutro Tunnel thus far has been about $3,800,000. That is according to the last balance sheet, and is exclusive of interest. Adding the interest, it would figure up about three millions more during the ten years. So I estimate the total cost of the tunnel to be about $7,000,000.

I have taken up your time much longer than I intended. I could go into other phases of the history of the tunnel, but it would take entirely too long.

—*An Address by Adolph Sutro, before the Bullion Club of New York.*

Nickel in Oregon.—At a late meeting of the San Francisco Microscopic Society, the first public and reliable notice was made of the important discovery of a large deposit of a rare form of nickel ore at a place about eight miles from the town of Canyonville, Douglass county, southern Oregon, and three miles from the Oregon and California railroad. The deposit closely resembles that discovered in New Caladonia, in 1864, as will be seen from an article on the subject in another column of this issue. Professor Liversidge, in

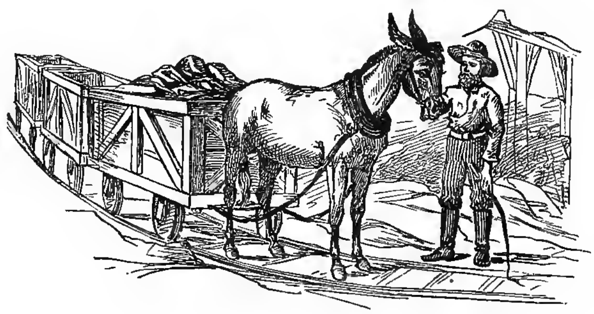
1874, read a paper before the University of Sydney on the "Nickel Minerals from New Caledonia," wherein he says: "These minerals consist of two hydrated silicates of nickel and magnesia, which are found in small veins and fissures, traversing the serpentine occurring at Mont D'Or, not far from the town of Noumea, New Caledonia. They are associated with chromo iron, steatite and other minerals commonly occurring in serpentine, and are seen disseminated through the loose blocks and bowlders of that rock scattered over the surface of the ground. The chief differences between the two minerals are found in some of their physical properties, for chemically they do not differ so widely; in fact, both forms contain nearly equal proportions of nickel; their other constituents, however, vary considerably." In the "Transactions of the Royal Society of New South Wales," for 1876, is a long notice by the Vice-President of that society on the deposits of nickel ore in New Caledonia. In a pamphlet by Capt. A. E. Bruno, lately published in San Francisco, he says: "New Caledonia, discovered by Capt. Cook over 100 years ago, is, next to New Zealand, the largest island in the great South sea, being upwards of 220 miles in length and 40 in width. Its valleys and transverse plateaux contain large areas of transcendent fertility, teeming with spontaneous vegetation; yet no product of this prolific island figures in the world's commerce, except its sandal-wood, gold, copper and nickel ore—the latter presenting itself in the form of a magnesium hydro-silicate, which has received the name of garnierite." Dr. Hood has given the following comparative analysis of the Oregon and New Caledonia nickel ores: (see preceding page.)

The peculiarity of this rare deposit of nickel will be highly interesting to mining geologists, and we hope, ere long, to see works erected for its reduction in or near San Francisco, as the demand for this useful metal is daily increasing.

— *Mining and Scientific Press.*



PART XI.

STATISTICS OF MINES AND MINING—AMERICAN IRON AND STEEL PRODUCTION—THE COAL FIGURES FOR 1881—*GOLD AND SILVER TOTALS—THE MINING COMPANIES.*

THE reader has, doubtless, by this time, hastened on to Part XI of the MINES, MINERS AND MINING INTERESTS OF THE UNITED STATES, to dip into the great sea of statistics and fish out for himself grand columns and pregnant totals upon the enormous mining interests of this continent. The figures of the Iron and Steel production, compiled by the accurate Mr. Swank, are properly preceded with his report on the same subject prepared for the Tenth Census. The results of Mr. Clarence King's work in the same direction are given, with the maps prepared by him and published by the Census Bureau. The final reports of Mr. Raphael Pumpelly not having been published as late as August 15th, 1882, we have inserted, perforce, his preliminary papers upon the subjects under his charge. Other statistics gathered from other sources are added, and the part concludes with a long list of mining companies, which has been compiled at great trouble under the most careful supervision.

THE PRODUCTION OF THE PRECIOUS METALS.

THE following is from the Report of Mr. Clarence King, Tenth Census of the United States: Three principal methods have been adopted by statisticians in studying the bullion production of the United States. The first and most obvious plan has been to use as a basis the receipts of domestic bullion reported by the several mints and United States assay offices, ascertaining the probable total product by adding to the figures thus obtained the amount shipped abroad, as shown by the custom-house returns, and the probable amount consumed in the arts. The objections to this method are: The amount coined within a certain period does not necessarily correspond to the production for that period. In the same way the proportion of the domestic product exported may be largely affected by the stock of precious metals on hand at any given time. Both of these variations depend primarily upon fluctuations in the bullion market and international balance of trade. An average of a long series of years would give tolerably accurate results; but for any stated period the figures of coinage, export, and consumption in the arts are apt to be deceptive. Assuming the source of the bullion deposited at the mints to be correctly stated, there are still serious and unavoidable defects in the custom-house statistics, notwithstanding the care taken to secure accuracy. No account is taken of bullion transported overland into Canada, nor are the export figures for doré bullion, base bullion, ores, and matte shipped abroad always to be depended upon. This difficulty is particularly manifested in the last three instances. The regulations prescribed by the custom-house authorities are not followed by penalties sufficient to insure accurate invoicing of the values thus exported. It is well known that during the period of intense speculation in gold a very large proportion of both receipts and exports even of gold coin was entirely hidden from official scrutiny, with a still greater margin in the bullion movement, and although the inducements to a concealment of the actual movement do not now exist in the same force, it is still doubtful whether the official figures are entirely reliable. A less important source of error is the undisputed fact that not infrequently bullion of domestic production, after having been shipped abroad, is, from changes in the silver-bullion market or from the necessities of coinage, reimported into the United States. It will thus be seen that the best results which can be hoped for from the most careful application of the "consumption and export" method, are close approximations extending over considerable periods, but not the exact product for any given year. The system also fails to segregate the yield according to the productive source; and while the geographical distribution by state and territorial lines may be shown, it is hardly possible to carry the analysis further and ascertain in this way the yield of single districts or even counties. The director of the mint has examined the bullion product of the country critically from the "consumption and export" point of view, employing as a supplementary means of information the details obtainable by correspondence and circulars scattered through the mining districts. The substantial accuracy of the estimates thus reached has been fully borne out by the results of the present investigation.

The second or "transportation" method consists in estimating the product from the statistics of the express companies, freight lines, and banks which have the handling of the product from its original sources. This plan would give more satisfactory results if, in the first place, all the bullion, ores, etc., were transported from the producing points through these different channels alone; and if, in the second place, none of the product were reshipped from point to point and thus twice recorded. As a matter of fact, there is a considerable portion of the gold yield sent through the mails as registered matter, and a large proportion passes from the productive source into the market through private channels. Both of these means of conveyance are affected by proximity to main lines of communication, or, on the other hand, by the absence of express or railroad facilities; and in neither can the exact effect of these circumstances be very definitely counted upon. In the Pacific states and territories the great bulk of the mine output is handled by Wells, Fargo & Co.'s express, and upon the detailed returns of the many offices of this company Mr. J. J. Valentine, general superintendent, has been enabled to furnish very valuable estimates of the bullion production, covering a long series of years. The business connections of this express company in portions of the country not covered by their agencies, have rendered it impossible for Mr. Valentine to frame approximate estimates of the product of the mining territory outside of that from which Wells, Fargo & Co. are the principal transporters of bullion. But the impossibility of assigning to other channels the due proportion of the outflow through them; the fact that no record is made of the value of the gold bullion and dust sent through the mails; that no reliable allowance can be made for the undervaluation of gold dust and unassayed bullion by consignors, amounting in many cases to from five to ten per cent.; that there is no satisfactory means of checking the reshipments which are twice or more times recorded, combine to create a large margin which can hardly be definitely accounted for in making the total estimates. Notwithstanding these palpable but unavoidable defects in the system, much credit is due Mr. Valentine for the painstaking care with which he has prepared his annual estimates.

The third system is one which, were it practicable to pursue it into complete details, would lead to results more satisfactory than could be obtained in any other way. This may be termed the direct method. It would consist, if properly carried out, in obtaining from each bullion producer a statement of the quota contributed. The aggregate of the details thus reached would represent the actual total product of the country, and would, moreover, segregate it according to districts. In the census work conducted by the United States Geological Survey, the plan indicated has been followed to as minute detail as it was possible to extend it with the means at command. No attempt had ever been previously made which aimed at securing individual returns throughout the whole United States with the same degree of thoroughness: though the successful adoption of the direct method by Mr. A. Del Mar, in his investigation of the silver product of Nevada in 1876, showed the advantages of the plan. But even with all the care and time expended by the experts engaged in collecting these statistics, it was found to be impracticable to do more than obtain returns from the larger producers. In some instances well-based and careful estimates were submitted by the experts, covering aggregates of a large number of small mines, for whole districts. In other cases, and more especially in portions of the country where placer-mining on a small scale furnished a large proportion of the yield, reliance had to be placed on extraneous data. The chief obstacles encountered in the collection of bullion statistics directly from the producers were:

First. The wide extent of the field to be covered, and the vast number of mines to be reported upon. Even were the mines located in easily accessible places, the wide range of territory over which they are scattered would render the labor of personally visiting each productive district a tedious matter. But when it is considered that they are for the most part to be found in rugged mountainous tracts, often at high altitudes, and, when destitute of railroad communication, to be reached only by stage or on horseback, some idea may be gathered of the amount of work involved.

Second. The fact that a considerable yield is derived from small mines, the product from each of which, however insignificant in itself, goes to form part of an important aggregate, and should not be neglected.

Third. The reluctance of some mine owners and superintendents to give a full account of their operations, notwithstanding the strictly confidential manner in which these individual statements have been treated. On explanation of the purposes for which the statistics were collected, such objections were in most cases overruled, however, and invariably great courtesy was personally manifested.

Fourth. The fact that in a large majority of cases no systematic accounts are kept by mine owners, who were often unable to state from memory the precise output of their properties for a period which had elapsed some time before the inquiry was made.

Fifth. Many mines having changed hands during the census year, it was frequently impossible to obtain from the present holders a statement of the operations conducted prior to the change in ownership, or to communicate with the former owners if they had removed.

Sixth. When in the case of mines worked during only a portion of the census year, or during a season limited by the weather, water supply or other causes, operations had been suspended at the time the district was visited by the examin-

* Estimated.

ing expert, it was often impracticable to communicate with the only persons able to supply information.

Seventh. The variation in the fiscal year of the incorporated companies makes it a mátter of much difficulty to reduce the returns to a different period from that for which the books are kept.

With means still less adequate than were lately at command, the census authorities in 1870 found it impossible to trace the bullion product of the country at that time. The best results reached by the deputy marshals in certain instances hardly amounted to a moiety of the actual product, as known through other sources of information. In the case of the census of 1880, even with greatly increased facilities, there were many gaps in the testimony which had to be filled out by estimates derived from other data than those collected directly by the experts. Where such estimates have been applied in the tabulation, they have been indicated by an asterisk (*). In all cases a careful scrutiny has been exercised in the selection and comparison of material. It is believed, in view of the more extended and fuller details accessible, as compared with previous researches of the same nature, that the results reached in this compilation are as close an approximation to absolute accuracy as it is possible to attain without a far greater expenditure of money and time than the subject demands. In compiling the material at hand, the following system was adopted: The returns in the individual mine schedules were first abstracted and grouped into aggregates for districts. Information as to the operations of the different establishments being in many cases confidential, publication of the results begins with the district exhibits. These, again, are condensed into tables for counties, and finally into abstracts for whole states and territories. Where a marked discrepancy existed between the schedule returns and other reliable data, the necessary additions were entered and the fact that they were estimates indicated. It is hardly necessary to remark that the schedules would show deficiencies rather than an excess as compared with correlative data. At the same time the schedules of reduction works were examined, and furnished a valuable check upon the figures derived from the mine reports. In some instances the yield was quoted in ounces of fine metal, as is customary in localities where the ore is reduced by smelting; in others, in ounces of crude bullion, as in the case of placer gold; in still others, in dollars calculated from the assay value of the bullion; and more rarely in dollars representing the net proceeds after deducting the discount upon silver and other charges. In order to present the whole in harmonious shape it became necessary to reduce these various denominations to a uniform standard. That adopted is the ounce of fine metal and its assay value in United States money. The terms are interchangeable and appear side by side in the tables of production. As a preliminary step a series of conversion tables was prepared.

Classification of Mines.—Mines of the precious metals are grouped under two comprehensive heads: deep mines and placer mines. The former are workings in primary deposits, in which the ore usually, though not invariably, occurs in a vein, and while the earlier operations in mines of this class may begin at or near the outcrop of the vein, the tendency is always downwards. The leading varieties of deep mines are:

1. Mines of free gold, or gold alloyed with a small proportion of silver.
2. Mines of silver ores, containing only traces of gold.
3. Mines yielding doré bullion from milling ores, containing both gold and silver in appreciable quantities.
4. Mines yielding base bullion from smelting ores in which the precious metals are associated with larger quantities of lead, copper, etc.

All of these divisions shade imperceptibly into each other.

Placer or gravel mines are workings in secondary or fragmentary gold deposits, including gravels and sands, and are either surface or shallow workings. The leading types are:

1. Hydraulic mines.
2. Dry washings.
3. Booming and shovel-sluicing.
4. River mines.
5. Pocket mines.
6. Drift mines.
7. Branch mines.
8. Black sand littoral deposits.

In the tables of production the classification under these two main heads is observed.

Classification of Reduction Works.—In some of the following tables a distinction is made between the production as shown by the different reduction works, which, like the mines, are divided into two principal classes. These are, first, amalgamating mills, including:

1. Gold quartz mills.
2. Mills in which silver ore is treated in the raw state.
3. Mills in which roasting is practiced before amalgamation.

a Including $300,000 from "pocket" mines.

4. Concentration works.
5. Chlorination and leaching establishments.
6. Arrastras.

The second class includes the several varieties of smelting works in which the production of base bullion, matte, or speiss, is a preliminary step toward the final extraction of the precious metals. Placer mines, with the exception of pocket mines and branch mines, require no reducing process, and in the two exceptions named, the mill process is not always a necessary concomitant; in the former, in fact, but rarely. Various systems of reduction by chlorination and amalgamation have also been applied to black sand deposits and refractory conglomerates containing placer gold; but not to an extent affecting the general principle of classification here maintained.

[NOTE.—In each of the tables of production and throughout this discussion, the following explanations apply: The short ton of 2,000 pounds is invariably used. The ore tonnage is stated in gross tons; the assay values are of net tons, without allowance for moisture. Mint values are assumed in all cases. The weight of bullion is given in troy ounces of fine metal. The gold ounce is taken at $20.671,834, and the silver ounce at $1.2929. A statement of the estimated market value of the silver is elsewhere appended. No account is taken of the value of the silver alloyed with placer gold in the primary production tables; as, with very few exceptions, no allowance is made for it in selling. This is treated of separately and the proper addition made in the final summary. The bullion yield is given according to the district in which the ore producing it was raised, without regard to the locality where the ore was reduced. This method of stating the product apportions it with reference to the original source, so far as it is practicable to trace it. Were the yield to be credited to the reduction works, Omaha, Chicago, St. Louis, Newark, New York, and other points remote from the mines would appear as large producing centres, Individual estimated amounts are designated by an asterisk (*); and where such estimates form a considerable proportion of the totals, the fact is similarly indicated.]

California.—In production of gold California still holds the first place, The vast deposits of auriferous gravel continue to yield largely, though their final exhaustion, in view of the enormous hydraulic operations now being prosecuted, is to be looked for at no very distant day. Previous to the discovery of the Bodie district, the placer mines furnished more than two-thirds of the total gold output of the state, but the large yield of that district, amounting to over two and three-quarter millions in gold during the year, in addition to the silver product, has placed the deep mines about on a par with the placers in point of productiveness. The amount of silver contributed by California is relatively small, and comes mainly from two adjoining counties, Inyo and Mono. There is a larger number of actively working mines in California than in any other state or territory, as, owing to the settled condition, transportation facilities, and comparative cheapness of labor and supplies, it is possible to mine deposits of lower grade than could be made profitable in localities having less advantages of position. The result is that there are, besides a few large incorporated companies, a great many mining properties worked on the small scale, but still profitably, by individual owners. The collection of accurate statistics regarding these smaller claims is a very tedious and also somewhat uncertain matter. Schedule returns were received from 128 deep mines, 147 placer mines, 57 amalgamating mills, concentration and leaching works, 9 arrastras, and 4 smelting works in this state. These include most of the more important establishments, and are supplemented by general reports covering in some cases whole districts. But, with all the care taken by the census experts to cover thoroughly the ground, the subject was by no means exhausted, and in several cases in the accompanying tabulations resort has been had to information from outside sources. California furnishes 71.47 per cent. of the total placer product of the United States, and 40.09 per cent. of the total gold product of the deep mines, or 51.38 per cent. of the total gold product of the country (from all sources). The yield in silver, however, is only 2.80 per cent. of the total, California standing sixth in rank as a producer of the latter metal. In proportion to its area, again, California leads in production of gold, with an average of $108.30 per square mile; is sixth in its silver yield of $7.27 per square mile; and third as to its output of both metals, $115.57 per square mile. As the population of the state has largely increased, while the mine production has remained nearly at a standstill for some years, the showing in relation to the population is less favorable, the yield of gold being only $19.83, silver $1.33, and that of both the precious metals only $21.16 per capita, placing California fifth as to gold, and eighth as to silver and the total, in the ranks of the states. The prosperity of the state is not, however, dependent upon its mines in the same degree as formerly, agriculture and manufacturing having outstripped the earlier industry.

Nevada.—The production of this state shows a considerable decline, as compared with that of the preceding six years. This is not due to any general falling off in the prosperity of the mining industry of the state, but to the decrease in the yield of the leading source, the Comstock lode. From 1871 to 1879, Nevada had outranked all the other states and territories in its output of the precious metals; but in the present census year it has fallen to the third place, having been passed by both Colorado and California. With the yield of the outside districts maintained at the existing rate of production, an important discovery of ore in the Comstock would perhaps raise Nevada again to the first rank. And even without any striking new developments, there is still a reserve of low-grade ore and tailings remaining unworked, sufficient to give a large and steady product for many years to come. In 1876 the yield of the Comstock, according to Mr. Del Mar's careful analysis, was: gold, $18,002,906; silver, $20,570,078; total, $38,572,984. During the census year the product of the whole Comstock district, including the Virginia, Gold Hill, and Devil's Gate subdistricts, the outlying veins, such as the Occidental, etc., and the yield of tailings worked at various points throughout the entire tract known as the Washoe country, was: gold, $3,109,156; silver, $3,813,174; total, $6,922,330; showing a decline of $31,650,654, or 82.06 per cent., since 1876. The bullion product of Nevada represents an average of $44.16 gold, $112.29 silver, and $156.45 gold and silver for each square mile of its area. In this respect Nevada is surpassed by Colorado, the figures for which are $25.98 gold, $159.24 silver, and $185.22 total. But with reference to its population, Nevada, even with the reduced output, remains the richest of the mining states and territories, as its annual product, if distributed equally per capita, would give $78.51 gold, $199.63 silver, and $278.14 total to every man, woman, and child within its borders. Notwithstanding the large proportion of adult males, it will be seen that this would be a fair income for the actual working population. The Nevada mines, however, are largely owned outside the state, and although they have not, taken as a whole, been profitable during the year, the local disbursements in wages, etc., continue steadily, so that the inhabitants have a direct interest in the prosecution of the work, independent of the question of ownership.

Placer Mines.—The placer yield of Nevada is insignificant. No important gravel deposits having suitable water supply are known to exist. The ground worked is in most cases merely the wash from the croppings of quartz veins. Operations are conducted on a small scale at Tuscarora, Tulé Cañon, points in the neighborhood of the Comstock, and in a few other isolated spots. The aggregate yield for the year is estimated roundly at $50,000.

Correlative Statistics.—There is a state bullion tax in Nevada, but in no other state or territory. The assessor's rolls, prepared in collecting this tax, furnish interesting comparative data, which have been condensed into the following abstracts. The periods selected for comparison correspond with the United States fiscal year (ending June 30th, 1880). The discrepancies between the census figures and those obtained from assessor's rolls are mainly due to the natural undervaluation attending the collection of information for the purpose of taxation, and the escape of many small amounts from enrollment all together; and in a less degree to the fact that the United States fiscal year is one month later than the census year.

Utah.—The bullion product of Utah is remarkably steady, varying latterly but little from year to year. This territory presents facilities for arriving at a true valuation of the product which are wanting in many other mining localities. The mines are more concentrated, the yield coming from a comparatively few but rich claims, and the bulk of the ore is treated by a few large smelting works and mills, where accurate accounts are kept. It is therefore easier to collect full statistics of the product than in regions where the bullion is derived from a vast number of sources, each one of which furnishes only a small quota, as is the case where placer-mining forms an important factor. The census figures for Utah are also the more reliable from the fullness and clearness with which the schedules were prepared by the special expert for the territory. The tabulation of the product is based on returns from 535 deep mines, 1 placer mine, 18 amalgamating mills, 34 smelting works, and 10 miscellaneous metallurgical establishments, consisting of sampling, concentration and leaching works. Many of these sources, were, however, unproductive during the census year. The silver-lead ores sold to the smelters are in many cases transported for reduction out of the district in which they were raised; and as their identity is lost in the mixture of ores from all portions of the territory, and even from other states and territories, it is impossible to segregate the bullion yield by districts.

* Estimated.

In the preceding table, which gives the yield by counties, the ore is stated in gross tons, and the assay value and yield is of net tons, the amount of moisture being noted in the district table where important. The following is an exhibit of the proportionate amounts of ore milled and ore smelted:

UTAH—STATEMENT OF ORE MILLED AND SMELTED.

County.	District.	Ore milled.	Ore smelted.	Total ore treated.	Percentage of ore milled.	Percentage of ore smelted.
		Tons.	Tons.	Tons.		
Beaver	Bradshaw		1,771.75			100
Do.	San Francisco		16,244.00			100
Do.	Star		900.00	18,915.75		100

Washington	Harrisburg or Silver Reef	46,795		46,795.00	100	
Scattered			180.00	180.00		100
Total		75,101	67,581.78	142,682.78	53	47

The most noticeable feature shown in the foregoing table is the large proportion of milling ore which Utah furnishes, compared with her base ores, although a territory generally supposed to be dependent upon her smelting works. It should be noted, also, that of the ore smelted there was a considerable amount which might have been treated by amalgamation, but which, because of the absence of proper milling facilities, or because of unusual richness, it was advisable to sell to the smelters. But while the percentage by weight of ore milled was 53 per cent., as against 47 per cent. for ores smelted, the same proportion does not hold with regard to value, the percentage of bullion extracted being only 51.08 per cent. for the product of amalgamating mills, as against 48.92 per cent. for that from the smelting works—a nearly even ratio. This difference is accounted for by the fact, that as a rule, the ores smelted, on account of the greater expense usually involved, are richer than the ores which will bear the milling expense, and also because of the higher proportion of the assay contents of the ore extracted by the smelting process, as compared with the milling results. The following analysis of the total bullion product of the territory shows the relative amounts coming from each source:

MINES FOR THE YEAR ENDING MAY 31, 1880.

Bullion produced from ore raised and treated during census year, as traced by counties.					Ore raised, but not treated.	Assay value of ore raised during census year and remaining on hand at close of year.					Bullion produced during census year from ore previously raised.					Ore sold.	Cash receipts for ore sold. (Bullion accounted for in returns of smelting works.)

* Estimated. a From 357.5 tons raised prior to census year. b For 300 tons concentrations.

UTAH—ANALYSIS OF PRODUCT.

Classification of source.	Gold.	Silver.	Total.
Amalgamating mills, from ore raised during census year	$175,024	$2,247,009	$2,422,033
Amalgamating mills, from ore raised prior to census year	. . . .	139,518	139,518
Total from mills	175,024	2,386,527	2,561,551
Smelting-works, from ore raised during census year	94,989	2,349,948	2,444,937
Smelting-works, from ore raised prior to census year	1,542	6,444	7,986
Total from smelting-works	96,531	2,356,392	2,452,923
Total from mills and smelting-works	271,555	4,742,919	5,014,474
Placer mines	20,000	. . . .	20,000
Total	291,555	4,742,919	5,034,474

The average product of the Utah milling ores and ores smelted, and the average yield of all the Utah ore reduced by either process during the census year, was as follows:

UTAH—COMPARATIVE RESULTS OF TREATMENT.

Metal.	Average yield of—		
	Ores milled.	Ores smelted.	All ore treated.
Gold, per ton	$2 33	$1 40	$1 90
Silver, per ton	29 92	34 78	33 24
Total	32 25	36 18	35 14

The next table shows the base bullion product of the Utah smelting works, with the precious-metal contents. It includes the yield of ores sent from Idaho, Montana and Nevada to the Utah smelters, and also the product of a small quantity of ore which was raised prior to the census year.

UTAH—BASE BULLION PRODUCTION OF SMELTING WORKS FOR THE YEAR ENDING MAY 31, 1880.

County.	Refined lead.	Crude bullion, including weight of silver and gold contents.	Precious metals contained in base bullion.				
			Gold.		Silver.		Total.
	Pounds.	Pounds.	Ounces.	Dollars.	Ounces.	Dollars.	Dollars.
Beaver	. . . . . .	8,312,957	444.1	9,180	522,447	675,472	684,652
Salt Lake	2,586,370	16,781,778	3,731.4	77,135	1,159,583	1,499,225	1,576,360
Tooele	. . . . . .	3,118,766	335.9	6,944	131,876	170,502	177,446
Total	2,586,370	28,213,501	4.511.4	93,259	1,813,906	2,345,199	2,438,458

Deducting from the crude bullion product 322,170 pounds, produced from Idaho, Montana and Nevada ores smelted in Utah, the remainder, 27,891,331 pounds, is the yield of Utah ores smelted in the territory. To this should be added 865,500 pounds of crude lead bullion, the estimated yield of Utah ores smelted in Chicago and in Omaha. The total crude bullion product of Utah for the census year, is therefore, 28,756,831 pounds.

The gross precious metal product of the Utah smelting works, given in the preceding table, is segregated as follows:

UTAH—PRODUCT OF ORES SMELTED IN UTAH DURING CENSUS YEAR.

Product.			Gold bullion.		Silver bullion.		Total.
			Ounces.	Dollars.	Ounces.	Dollars.	Dollars.
Product of smelting works (precious metals contained in base bullion)			4,511.4	93,259	1,813,906	2,345,199	2,438,458
Deduct product of Beaver county smelting works			444.1	9,180	522,447	675,472	684,652
Product of smelting works, less product of Beaver county smelting works			4,067.3	84,079	1,291,459	1,669,727	1,753,606
From this deduct:	Ounces.	Dollars.					
Product of Nevada ores smelted in Utah (a)	14,994	a19,386	. . .	. . .	. . .	. . .	. . .
Product of Idaho ores smelted in Utah (b)	16,916	b21,871	. . .	. . .	. . .	. . .	. . .
Product of Montana ores smelted in Utah (c)	5,116	c6,614	. . .	. . .	. . .	. . .	. . .
Product of Nevada sulphides from leaching works	15,469	20,000	. . .	. . .	. . .	. . .	. . .

Net product of Utah ores smelted in Utah during census year			4,067.3	84,079	1,238,964	1,601,856	1,685,935

a 359 tons containing 25 per cent. lead. Estimated product, 80.775 tons lead.
b 162 tons containing 45 per cent. lead. Estimated product, 65.610 tons lead.
c 49 tons containing 30 per cent. lead. Estimated product, 14.700 tons lead.

In addition to the bullion product from ores which were treated in the territory, there was also a considerable yield from ores and matte shipped to Chicago and to Omaha and reduced at these points. As nearly as ascertainable, this additional product was as follows:

UTAH—BULLION PRODUCED FROM UTAH ORES AND MATTE, TREATED ELSEWHERE THAN IN THE TERRITORY.

Ores and matte shipped to Chicago and Omaha.	Assay value per ton.			Total assay value.					Estimated yield per ton.			Estimated product to be included in total production of Utah.					Remarks.

From the preceding tables the following *résumé* is derived:

RÉSUMÉ.

Classification of product.	*Bullion.*				
	Gold.		*Silver.*		*Total.*
	Ounces.	*Dollars.*	*Ounces.*	*Dollars.*	*Dollars.*
Bullion product traceable by districts from Utah ore raised during census year	8,910.9	184,205	2,260,408	2,922,481	3,106,686
Bullion product traceable by districts from Utah ore raised prior to census year	74.6	1,542	112,895	145,962	147,504
Net bullion product from Utah ores sold to and treated by Utah smelting works during census year	4,067.3	84,079	1,238,964	1,601,857	1,685,936
Estimated bullion product of ores and matte shipped to Chicago and Omaha during census year	83.7	1,730	56,168	72,620	74,350
Product of placer mines (of West mountain district, Salt Lake county) during census year	967.5	20,000	. . . .	. . .	20,000
Total	14,104.0	291,556	3,668,435	4,742,920	5,034,476

Utah Placer Gold.—The small placer product of the territory ($20,000 in the census year) was from West Mountain district, in Salt Lake county.

Market Value of Utah Base Bullion.—The gold and silver contents of the base bullion are sold at a price which allows for the refining charge on each metal, with, of course, the market discount on the silver. Thus the gold contents brought from $19 to $20 per ounce, and the silver an average of $1.10 per ounce during the census year. The average price of refined lead at Salt Lake City during the same period was 4¾ cents per pound, and that of unrefined lead $47.50 per ton.

Market value of 2,586,370 pounds refined lead	$122,853
Market value of 28,756,831 pounds unrefined lead	682,975
Total	$805,828

This represents roughly, the value at the seaboard after deducting freight charges, commissions, etc. There were also $14,160 worth of copper sold, the product of Utah ores worked for the extraction of the precious metals. Adding the market value of the lead and copper, all of it an accessory product of the precious metal industries, to the mint value of the precious metals, the total product of the Utah mines is raised to $5,854,462. This does not include the value of iron ore sold for flux, and some other small items.

Wells, Fargo & Co.'s Estimates of the Utah Bullion Product.—By way of comparison, the following estimates of the Utah bullion product, furnished by J. E. Dooly, agent of Wells, Fargo & Co., at Salt Lake City, are appended. They are for the calendar years 1879 and 1880.

WELLS, FARGO & CO.'S STATEMENT OF THE MINERAL PRODUCT OF UTAH FOR 1879.

Total doré bars			2,379,747	5,142

RECAPITULATION.

2,892,498	pounds refined lead, at 5 cents per pound	$144,524 90
26,442,093	pounds unrefined lead, at $50 per ton (average price for 1880)	661,052 32
3,783,566	ounces silver, at $1.10 (average price for 1880)	4,161,922 60
8,020	ounces gold, at $20	160,400 00
	Total export value.	$5,127,999 82

In explanation, the agent observes:

The above includes the product of ores received from Idaho, Montana, and Nevada, aggregating 784,450 pounds lead and 120,383 ounces silver. Computing the gold and silver at the mint valuation and lead at its value at the seaboard, it would increase the value of the product to $6,450,953.70.

Arizona.—A marked impulse has been given to the mining industry of Arizona by the fine showing of the new Tombstone district, in Pima county. The bullion production of this district had only begun in the period covered by the census year. A few months later, with increased mining facilities, a considerably higher rate of production was maintained.

The accompanying tables contain a probable error of at least 20 per cent., owing to the fact that no schedule data were available for estimating the production from the following sources: Various districts in Apache county; in Maricopa county, the Vulture mine (a large producer) and Myers district; in Mohave county, Aubrey, Hope, and San Francisco districts; in Pima county, Aztec, De Frees, Huachucha, Patagonia, Santa Catarina, and Tyndall districts, also several important mines in Tombstone district; in Pinal county, Mineral, Pinal, Randolph and Summit districts, also the Silver King mine in Pioneer district and the Silver Era mine in Globe district; in Yavapai county, Agua Fria, Greenwood, Hassayampa, Lynx Creek, Martinez, Pine Grove, and Turkey Creek districts; in Yuma county, Bill Williams' Fork, Eureka, Harcuvar, La Paz, Montezuma, and Weaver districts. The estimates given for the production from the sources mentioned as not included in the schedule data furnished by the experts accordingly have a wide margin of uncertainty in comparison with the statements of the yield of localities from which fuller information was received.

Idaho.—The tabulation of the output of this territory is based upon reports of the examining expert on 369 deep mines, 14 placer mines, 18 amalgamating mills, 2 arrastras, and 2 smelting works, besides several general reports on whole districts. From 1876 up to the close of the census year, the product of this territory has been mainly dependent upon the older mining districts, of which the placer mines of Boise basin have contributed a large proportion. The panic in the stock market of San Francisco in 1876 led to a suspension of operations in the principal Owyhee mines, which for some years previous to that period had yielded large returns. This crash was due quite as much to mismanagement of the mines themselves as to causes inherent in the speculative market; but whatever the reason, the result was the closing down of many mines which probably would have been still largely productive if properly worked. As the case now stands, the Owyhee district, which formerly yielded by far the greater part of the total output of the territory, at present furnishes only about one-fifth of the aggregate. It is to be hoped that at no distant time in the future this district may again appear as a large producing centre.

Had the census statistics been collected only a few months later, the new and promising Wood river country would have added largely to the total product. Operations in this district were only seriously begun toward the close of May, 1880; hence the large product from ores shipped to Salt Lake during the fall of the same year does not enter into the tabulation for the census year.

In addition to the developments in the Wood river country, a number of other new localities appear as future important productive sources, prominent among which is the Sawtooth district, which from the absence of local milling facilities was at a standstill pending the erection of reduction works. Another year will witness a considerable bullion production from the mines of this district. The same remark holds good with regard to Smiley's cañon, from which a small amount of ore was shipped at great expense to distant points for reduction. The returns from these shipments were such as to give great hope for a large increase when it becomes possible to treat the ores at greater advantage in mills placed near the mines.

In the Yankee Fork region, a decided impulse—the effect of which was not shown until the opening of the season of 1881—was given by the erection of the fine and well appointed mill of the Custer company. Previous to the building of this mill the ores of the district had either to be worked in arrastras, with a large percentage of loss, or be freighted at a heavy charge to Salt Lake, or elsewhere, for treatment. In spite of these disadvantages two mines were shipping considerable amounts of $900 ore, while a third was developing an immense body of ore which was expected to yield $300 per ton. The smelting works recently constructed at Bay Horse and Kinnikinnick will also add largely to the total product. The period covered by the census year, while one of great promise for the future of the territory, nevertheless showed a comparatively small yield. The probabilities are that within two years the output of Idaho will at least have doubled. The deposits of Idaho bullion (so far as it is possible to segregate them—a very large portion having passed through private refineries and thus losing their identity) up to the close of the fiscal year ending June 30, 1880, are stated by the director of the mint to have been $24,137,417 gold, $727,296 silver, and $24,864,713 total. This amount is considerably within the actual output. Of the total gold product of Idaho, 59.45 per cent. is from the placers, and 40.55 per cent. from the deep mines. Idaho furnishes 7.33 per cent. of the placer output of the United States, 2.81 per cent. of the deep-mine gold, and 4.43 per cent. of the total gold; 1.13 per cent. of the silver, and 2.61 per cent. of the entire product of the precious metals in the whole country. As a gold-producer the territory ranks sixth, and in silver, seventh. The average yield per square mile is $17.45 gold, $5.48 silver, and $22.93 total. In this respect Idaho stands fifth in point of gold, seventh in silver, and sixth in developed richness in gold and silver. The average yield per capita is $45.37 gold, $14.25 silver, and $59.62 in both precious metals, placing the rank as regards product in reference to population, third as to gold, sixth as to silver, and fifth altogether. The comparison with regard to population is probably the most reliable test of the relative prosperity of a mining region.

Oregon.—Oregon is one of the oldest of the western mining states, the discovery of gold within its limits having followed closely upon that in California. Its output has never been very large, in comparison with the yield of its neighbor state, but although the mines have become secondary to its agricultural resources in point of importance, they still furnish occupation and profit to many of its inhabitants. The quartz veins of Baker county, in the eastern portion of the state, adjoining Idaho territory, continue to yield the larger portion of the total deep-mine product of this state. The prevailing type of the Oregon ores is a free gold quartz, though rebellious gold ores, requiring special treatment, are found in some localities, and a small amount of silver is produced in Grant county. The latter county takes the lead in surface mining, while Baker, Jackson, and Josephine counties are also productive of a considerable amount of placer gold. Oregon now ranks seventh on the roll of the mining states in production of gold, eleventh in output of silver, and ninth in its yield of both metals. Its quota toward the total production of the United States is 7.71 per cent. of the placer gold, 0.80 per cent. of the deep-mine gold, 3.29 per cent. of the total gold, and only 0.07 per cent. of the total silver. The percentage of the total combined gold and silver product is 1.51 per cent. The average yield per square mile is $11.43 gold, $0.29 silver, and $11.72 total. The product per capita is $6.28 gold, $0.16 silver, and $6.44 total, giving Oregon a rank of seventh in gold, tenth in silver, and ninth in total bullion output, in point of production as relative to population. The small proportion per capita shows how completely mining has been overshadowed by other industries in this state.

Washington.—Of the small product reported from the deep mines of Washington territory, nearly the whole comes from Peshaston district, in Yakima county, where gold quartz mining is conducted on a small scale.

The Upper Columbia placers furnish over one-half of the total placer yield of the territory. The Skagit mines, in Whatcom county, about which, from time to time, reports glittering with golden promise have been spread, are not yet to be numbered among the important productive deposits of the country. They have attracted much attention from the press, and have been the scene of several incipient "rushes," but the shortness of the season, inaccessibility, and other natural disadvantages have combined to retard operations, and the yield is still very scanty.

All other places	2,176.9	45,001
Total	5,756.6	119,000

Alaska.—This vast territory, occupying an area of over half a million square miles, is for the most part still an unexplored region. The small amount of prospecting which has been done has developed the fact that Alaska contains many gold-bearing localities, none of which, however, have yet yielded any considerable output. The climate and remoteness from communications will always be obstacles in the way of mining, but in spite of the natural disadvantages of the country, it is reasonable to look for an increased product in the future. Recent reports, much exaggerated, of fabulous discoveries of mountains of silver ore, have attracted many adventurous miners to Alaska. Thus far only disappointment has resulted. The small amount of placer gold received at the San Francisco mint from Alaska during the census year, $5,951, does not perhaps represent the whole product, as a portion may have found its way to Victoria, and thus have become identified with the product of British Columbia. No means of tracing this small possible balance are at hand. The total was in any event insignificant.

Colorado.—From an average production of only three or four millions, Colorado has suddenly risen to the first rank as a producer of the precious metals among the states and territories for gold and silver combined; as for silver alone it ranks first, while for gold it holds the fourth rank. In the relation of production to area, it holds the first rank, likewise, for gold and silver combined and for silver alone, and the third for gold alone. In the relation of production to population, however, it ranks only third for gold and silver together, second for silver alone, and sixth for gold alone. The total value of its product during the census year in gold and silver, was in round numbers, nineteen and a quarter million dollars, and if we add to this the value of lead and copper in crude metal produced, we have a total value of metallic product of twenty-two and three-quarters million dollars.

The collection of statistics of the precious metals in this state presents certain peculiar difficulties. First, from the fact that there are so many small mines which keep no accurate record of their production; second, because a very large proportion of its ores, being essentially heterogeneous in composition, have to be smelted, and are thus more difficult to trace than milling ores. The smelting ores are sold, it is true, mostly to smelters within the state, but the same mine often sells to different and widely separated works, and the smelters themselves buy ores in small lots from many mines, of which no separate record is kept. Moreover, the check furnished in the more western states over the total production by the express returns is here wanting, since, practically, the whole silver product is shipped east in lead bullion of which the transportation companies keep no record. Nevertheless, owing to the almost uniform willingness which the more important mine-owners, samplers and smelters have shown to afford the data which they possessed,

* Estimated. a 14,384 tons lost by concentration. b 4,684 tons lost by concentration. c Including the Leadville district.

it is believed that the totals attained represent a very close approximation to the actual product of the state, and that the figures given are, on the average, within 5 per cent. of the true amount, although in districts as yet incompletely developed this percentage may be greater.

As it was found impossible to separate with any degree of approximation the amount of "bullion produced," which should be credited to individual districts in several counties, the division into districts has been abandoned in such instances. In the following tables the amount and value of ore raised has been given to districts as far as was possible, the heading "Scattered" including, in general, mines from which no direct information was obtained, but which had sold ore to samplers or smelters. The sign of "estimated" (*) might be appended in many cases to amounts of bullion produced by counties, because these amounts were largely obtained by segregating returns of ore purchased by smelters, and apportioning to each county the corresponding proportion of bullion produced from that ore; thus, while the relative amounts may be considered estimates, the total footings of the columns are determined from comparatively accurate data.

In the foregoing tables the following are the more important items of uncertainty or inadequacy of data:

Arapaho county.—In this county, as well as in Jefferson, and Pueblo counties no mines producing gold and silver are known to exist. In these, however, are located important smelting works, which buy and treat ores from almost every county in the state, as well as from Montana and New Mexico. The bullion production of these counties would therefore be an important fraction of the total bullion yield of the state. It has, however, been considered best to apportion this yield as nearly as possible among the districts or counties in which the ore was raised. This has been done in the following manner: The greater part of the ore treated could be traced back to the county where it was raised, and the total bullion product of each such lot was deduced from the average assay value of such lot, of the total amount treated, and of the total amount of bullion produced, in the case of each individual smelter. A portion of ore treated and bullion produced therefrom, which could not be directly traced back to its source, was distributed on estimated proportions, founded mainly on the relative amounts of ore produced, as determined by schedules and previous estimates. In considering the amount of bullion produced and ore treated, there is this element of uncertainty in some of our calculations, that the larger smelters cannot always say that the bullion produced was from the very lots of ore purchased, as they keep a varying stock of ore on hand. It is probable, however, that, considering the whole, the figures obtained are sufficiently near the truth.

Boulder county.—No reliable data could be obtained in regard to the Niwot mine, which is said to produce about 15,000 tons of ore per year. In general the returns from this county were more incomplete and less satisfactory than from most counties in the state. It was not possible to apportion out by districts even the ore raised. The product, as obtained from smelters, is approximately correct, that from mills less certain and probably incomplete.

Chaffee county contains a number of promising mines, but owing to absence of owners no reliable data of production during census year could be obtained.

Clear Creek county includes a great number of small districts, within a limited region, whose boundaries are not always clearly defined; hence no allotment of ore by districts was attempted. One element of uncertainty in this district is the very common practice of leasing the mine to one or more parties, who pay the owner a royalty, or a portion of the gross product. A second is, that the ores are sampled frequently concentrated, and sometimes treated in Gilpin county. Small lots of rich ore have been also shipped to smelters in the east, of which no record could be obtained. The loss by concentration (14,384 tons) was obtained by actual returns from ore-dressing works in one case only, of a few hundred tons, an estimate being made of the degree of concentration. The proportionately large loss in treatment is due, doubtless, to defective systems of working, but may be less than shown by the figures given above, since the product of rich ores shipped east does not appear here.

Custer county—Its production is relatively low, since the Bassick mine did not produce during a great part of the census year. The loss by concentration (4,684 tons) is an estimate, deducting the sum of tons treated and tons remaining on hand from tons raised.

Gilpin county.—Owing to the system pursued by a large proportion of the mines and mills, viz.: that the miners send their ore to custom mills to be treated, and receive in return the bullion produced, less charges, without any assay control, to determine how much was lost in treatment, or any record being kept by mills of value of bullion returned, it has been necessary to estimate a large proportion of the bullion thus produced. The express returns give for the year ending June 30, 1880, a shipment from Central City of 88,016 ounces of gold bullion, of reported value of $1,320,260. The census figures for the year ending May 31, 1880, are somewhat less, viz.: For the mill production, 54,361.8 ounces fine gold, having a mint value of $1,123,758.11, showing that this estimate is probably somewhat under the truth, although it is not certain that absolutely all bullion shipped from Central City was produced within Gilpin county. The figures in the column of "Bullion from ore raised prior to census year" are an estimate of the yield of tailings from the mills, which were sold to smelters during the year, and which are supposed to come mainly from ore raised during previous years.

Gunnison county.—But few mines were sufficiently developed to be regular producers during the census year, and many small lots shipped out for treatment may have escaped the record.

Hinsdale county.—The principal smelting works of the San Juan region are located here, and its production includes probably some small lots of ore raised in Ouray and San Juan counties, which could not be segregated.

Huerfano county has but few mines. From only a single district were returns made by the expert who had charge of this portion of the state.

Lake county.—Is the largest producer and furnishes the most accurate data, though it has been impossible in every case to actually trace back the bullion produced to the individual mine from which it came. The figures given are known to be under the truth for the following reason: The "American" and "Gage, Hagaman & Co.'s" smelters ran during a portion of the year, but were shut down and changed hands, so that when these statistics were collected no record, or even estimate, could be obtained of the amount of bullion produced by them. A thousand tons of crude bullion, of an average of 300 ounces silver per ton, would probably be an outside figure for the production of the two. This would add 300,000 ounces silver to the total production for the year. No record was obtained of the amount of ore, if any, which was shipped directly from Leadville to the smelting works at Omaha; its influence on the total production would be, at all events, inconsiderable. With these exceptions the figures given present a very accurate estimate of the bullion produced. With regard to the gold production the amount contained in the ores is in general too small to be taken account of, and it is only when concentrated in the lead bullion that it becomes appreciable; moreover a considerable portion of it comes from small lots of auriferous ores purchased by smelters from mines or prospects in outlying districts within the county, and in some cases from Gunnison or Summit counties. The gold contents of ore raised had therefore to be largely determined by estimate.

La Plata county.—From this county reports of only a single district were obtained, as the mines were as yet but little developed in the census year; probably many small lots of ore are unaccounted for.

Ouray county.—Doubtless from this county also the returns are somewhat incomplete, and it is certain that some addition is due to the amount of "bullion produced" which has been credited to it. Unfortunately data are wanting for making an accurate estimate, although it is known that some of this has been credited to Hinsdale county.

Park county.—At the time of collecting these statistics accurate data could be obtained from but few of the producing mines of this county; it has been necessary, therefore, to deduce them largely from information obtained from samplers and smelters, and estimate their proportionate bullion yield.

Rio Grande county.—Here, also, returns were obtained from but a single district.

San Juan county.—To this the same remarks are applicable which were made in regard to Ouray county.

Summit county.—From this county, for various reasons, the returns as regards the census year are rather incomplete, and figures probably below the truth. The bullion produced also had to be largely estimated. The following years will probably show an increased production. To show the data from which the figures given above have been obtained the number of mines from which full schedules were received is subjoined, and the proportion thereof that have been bullion-producers during the census year, as well as those producers of which data have been obtained otherwise than by schedules and visits of census experts:

Total deep mines scheduled	249
Productive mines scheduled	126
Productive mines reported otherwise	249
Total productive mines reported	375
Total all mines reported on	498

COLORADO—Production of Placer Mines for the year ending May 31, 1880.

County.	*Gold.*	
	Ounces.	*Dollars.*
Chaffee	1,275.0	26,357
Clear Creek	410.0	8,475
Lake	835.0	17,261
Park	1,000.0	20,672
Routt	241.9	5,001
Summit	1,160.0	23,979
Total	4,921.9	101,745

The above table gives all the data which were obtained by the experts engaged in this work on placer and hydraulic workings in the state. The inherent difficulty of obtaining complete information with regard to surface mining, in that it is carried on only during a limited portion of the year, and in great part by individuals who keep no accurate account of their gains, renders these returns necessarily incomplete here as elsewhere. In Colorado, moreover, owing to the fact that other gold bullion is produced so largely, it has been impossible to supplement these figures by express or mint returns. While the above figures doubtless very inadequately express the production of placer gold for the state, it is a fact that this production was relatively small during the census year, owing to the unusual activity in prospecting for and working deep mines.

COPPER AND LEAD PRODUCTION IN COLORADO.—Although copper and lead belong rather to the useful than to the precious metals, their importance among the mineral products of Colorado, and their intimate connection with the production of gold and silver, render their consideration here essential. In the table given below, only the crude metal obtained from ores actually smelted within the state is given, no account being taken of the copper or lead contained in ores which were shipped outside of the state for treatment. This amount is, however, of comparatively little importance, forming probably not over 5 per cent. of the total product. The lead product was all in the form of argentiferous lead bullion, which was shipped to various smelters in the East to be refined. The copper product was partly as matte, but largely in the form of copper oxide. Of the actual shipments of the latter a portion has been produced from ores raised in Montana; a proportionate amount of the total product has, however, been credited to that territory in its appropriate place. In calculating the value of these metals the average market value of either for the year has been assumed as 4½ cents per pound for lead, 20 cents per pound for copper.

* Estimated. *a* 14,384 tons lost by concentration. *b* 4,684 tons lost by concentration.

In the preceding table are shown the relative amounts of ore treated by mill process and by smelting, and their average yield per ton. Its principal value is to show the average character of ore in each county in reference to its adaptation to either process of reduction. It would have been extremely interesting, had the data been such as would yield accurate results, to have given the assay value of the ore treated in either case, and thus compare the relative losses in either process, but the number of cases in which it has been necessary to estimate product from assay value, or *vice versâ*, would seriously impair the value of such comparison. This subject will be found treated at length in another part of the report.

Dakota.—The metallic production of Dakota is derived from the region of the Black Hills, and in greater part from Lawrence county, where free-milling gold-quartz ores of low grade are reduced in amalgamating mills of great size. The perfection to which the milling process has been brought is shown by the large percentage of the assay value extracted. Custer and Pennington counties are opening new mines, but had scarcely become producers during the census year. The following table is a condensation of the preceding, and gives the deep-mine production by counties only:

PLACER AND HYDRAULIC MINES—The following table gives the production of hydraulic and placer mines so far as could be ascertained by the expert in charge of this district. The amount seems very small, compared with the supposed value of the surface deposits in this region. This may be in part accounted for by the fact that several important companies were making ditches, and preparing for work on a large scale, but had not become producers during the census year.

DAKOTA—Production of Hydraulic, Placer, Drift and River Mines for the year ending May 31, 1880.

County.	*Gold.*	*Gold.*

Lawrence	2,307.5	47,700
Pennington	152.8	3,159
Total	2,460.3	50,859

Montana.—Montana has within its boundaries the elements favorable to a lagre production of the precious metals—rich and varied ores and abundant fuel, both coal and wood. As yet, however, owing to lack of development and want of sufficient transportation facilities, it has not taken its proper rank as a producer. Owing to the great extent of territory over which its mines are scattered, and the fact that, from circumstances beyond our control, the collection of statistics was not completed until the winter was far advanced, and travel rendered thereby very difficult, our data leave something to desire in point of completeness. It was evident that the figures of gold production deduced from the schedules were below the truth, since the mint returns report the gold production of Montana as a little over a million dollars in excess. As the mint figures are certainly below the truth, it was proper that this difference should be added, the only question being to what branch of mining it should be credited. Now, the census returns from placer and hydraulic mines were notoriously incomplete, since, owing to the lateness of the season, but few of their owners could be found; but it is well known that they form the most important element in the gold production of Montana. On the other hand, it was thought that returns had been obtained from practically all the mills and smelting works. Under these circumstances it was judged best to discard the census figures for hydraulic and placer mines altogether, and assume as their production the difference between the amount of gold produced, as determined by mill and smelters' returns, and the total product obtained from mint returns. While, therefore, it is possible that a small amount of the gold credited to hydraulic and placer mines may belong to mill production, it is probably not more than that by which the mint returns fall short of giving the total gold production of the territory as gold which, for various reasons, has not passed through the hands of its agents.

The following table gives the production of the deep mines of Montana by districts, and the yield of the ore treated, as far as could be ascertained, though some small lots of ore are known to have been shipped east, which could not be traced:

Total	86,576.5	7 30	32 52	39 82	30,570.4	631,946	2,177,760	2,815,626	3,447,572

Hydraulic and Placer Mines.—The gravel deposits of Montana form an important source of its wealth, and their product is known to be very considerable. The figures for this product, as explained above, have been assumed, in the absence of more reliable data, derived from direct information, and are:

Gold	ounces	56,255.6
Value		$1,162,906

The counties from which hydraulic-mine returns were received are Deer Lodge, Meagher, Beaver Head, and Lewis and Clarke, the relative amount of production reported from each standing in the order in which they are named above. The ores of Montana, like those of Colorado, contain considerable amounts of copper and lead, which cannot be neglected in considering its production of metals. The table below gives the amounts which could be traced, a portion of the copper having been reduced to copper oxide in Colorado. The figures below are for crude bullion which was not reduced to the metallic state within the territory. A certain amount of copper ore was shipped directly east from Montana, but its value or contents could not be ascertained.

MONTANA—CRUDE BULLION PRODUCED FOR THE YEAR ENDING MAY 31, 1880.

County.	Gross tons.	Lead.		Copper.		Gold.		Silver.		Total.
		Tons.	Dollars.	Tons.	Dollars.	Ounces.	Dollars.	Ounces.	Dollars.	Dollars.

Lead, $90 per ton. Copper, $400 per ton.

New Mexico.—Although during the census year the mines of New Mexico were attracting much attention, their practical development was awaiting the completion of the railroads which were about to intersect it. Its mining districts were many of them difficult and even dangerous of access, and it was almost impossible to ascertain in advance whether they had actually producing mines. The collection of statistics under these circumstances was peculiarly difficult, and the completeness of the material obtained was seriously impaired by the assassination of Colonel Charles Potter, the expert in charge of this territory. The data presented below do not necessarily give a fair idea of the capabilities of the territory as a mineral producer. It is believed, however, that the amount of ore produced during the census year and not accounted for below is not of very great amount.

The subjoined tables give the production of the deep mines by districts and by counties:

NEW MEXICO—PRODUCTION BY COUNTIES OF DEEP MINES FOR THE YEAR ENDING MAY 31, 1880.

County.	Ore raised during census year.	Average assay value per ton.			Total assay value of ore raised during census year.					Ore raised and treated.	Average yield per ton.		
		Gold.	Silver.	Gold and silver.	Gold.		Silver.		Total.		Gold.	Silver.	Gold and silver.

Placer Mines.—Considerable rich placer ground is known to exist in New Mexico, but as yet but little gold has been obtained from it, owing to want of water. No record could be obtained of any product from such workings during the census year.

NEW MEXICO—PRODUCTION BY COUNTIES OF DEEP MINES FOR THE YEAR ENDING MAY 31, 1880.—*Continued.*

County.	Bullion produced from ore raised during census year.					Ore raised but not treated.	Assay value of ore raised during census year and remaining on hand at close of year.

Wyoming.—Wyoming is surrounded on three sides by important mining regions, but has as yet developed but few mines within its borders. During the census year, as far as could be ascertained, the actual production of gold and silver has been confined to Sweetwater county, of which the production is given below:

WYOMING—PRODUCTION OF DEEP MINES FOR THE YEAR ENDING MAY 31, 1880.

SILVER CONTAINED IN PLACER GOLD.—No account is taken by the miners of the silver alloyed with placer gold, unless in the exceptional cases where the value of the former is allowed for in the sale of the product, as in direct sales to the mints or United States assay offices. In the aggregate this silver forms a considerable item, which should be included in the total product, but which has usually been disregarded by statisticians. The schedules of the experts contain data for a close estimate as to the average tenor of the placer product. A statement of the fineness in gold of samples from various localities is appended.

From the same sources the following condensed abstract has been prepared, showing the average fineness in gold and silver of the placer yield of several states and territories, with the number of specimen examples from which these averages are derived. The amount of base metal contained in the crude bullion varies from nothing to 0.020.

Average Tenor of Placer Gold.

State or Territory.	Number of examples.	Average fineness.	
		Gold.	Silver.
California	80	0.8836	0.1124
Colorado	9	0.8205	0.1755
Dakota	7	0.9235	0.0725
Georgia	10	0.9228	0.0732
Idaho	413	0.7806	0.2134
Montana	14	0.8951	0.1009
Oregon	77	0.8727	0.1233
Total	610		

From eighty examples of California placer dust and bullion an average fineness of 0.8836 is derived, a proportion slightly in excess of that stated in Dana's *Mineralogy*, where the fineness is quoted at 0.875 to 0.885, or an average of 0.880. It is possible that the census average is a trifle too high, owing to the natural tendency of producers to overestimate the fineness of their gold; but the slight difference between it and the figures given by Dana would not materially affect the general result. The average for Idaho is of 413 lots of placer gold from Boisl basin, a district producing three-fourths of the total for the territory. This gold is of less fineness than that obtained in several other localities in Idaho, but the average stated will hold as a close approximation for the total. There are three methods of obtaining from these data an average for the United States—neither of which is quite free from defects.

If the sum of the figures representing the average gold fineness for the several states and territories be divided by seven, the number of the states and territories from which reliable data as to fineness are obtainable, the quotient is 0.871257, which may be described as an average of geographical distribution. This, however, does not represent the average fineness of the whole actual amount produced, for by this method each state and territory is taken as an equal member in the calculation, without regard to the large difference in their several products. Thus Georgia, with a product of $66,863, has as much weight in influencing the general average as California with a placer yield of $8,580,989, or 128 times as large.

Another mode is to give each individual example equal weight, disregarding territorial limits. Dividing the sum of fineness in gold of 610 specimen examples, 495,887, by 610, an average of 0.8129 is obtained. This gives a true average for the number of cases in which the fineness is definitely given in the schedules, but represents neither the average according to geographical distribution nor that of the whole product. In this way California, with a placer product nine and three-fourths times greater than that of Idaho, is largely overweighted by the latter, owing to the preponderance of examples furnished by Idaho in the census returns. The result is evidently too low.

The third and preferable method is to multiply the average fineness for each state and territory by the coefficient of the several yields, and then divide the sum of the products so obtained by the sum of the coefficients. This gives each not an equal but a just weight. The result is the average fineness of the total product without reference to the producing source. This principle is thus applied:

State or Territory.	Average fineness in gold.		Yield of placer gold in millions of dollars.		Resultants.
California	0.8836	×	8.581	=	7.5821716
Colorado	0.8205	×	0.102	=	0.0836910
Dakota	0.9235	×	0.051	=	0.0470985
Georgia	0.9228	×	0.067	=	0.0618276
Idaho	0.7806	×	0.880	=	0.6869280
Montana	0.8951	×	1.163	=	1.0410013
Oregon	0.8727	×	0.926	=	0.8081202
			11.770		10.3108382

$$\text{Total average gold fineness} = \frac{10.3108382}{11.770} = 0.87602$$

The proportionate contents in silver and in base metal are similarly ascertained. By using the figures representing the average tenor of the placer gold for each of the states and territories for which reliable data are obtainable, and assuming the general averaged deduced from them for the cases in which the returns are defective, the probable total silver contents may readily be calculated. It is found that the 580,766.6 ounces of fine gold were associated with 80,177.3 ounces of fine silver and 2,753.2 ounces of base metal, making the total weight of the crude placer gold 663,697.1 ounces. In mint value the silver contents were worth only $103,661 as against $12,005,511 for the gold. Thus while the ratio of silver to gold products was 1:7.2437 in weight, it was only 1:115.8153 in assay value. At the market rates the value of this placer silver, if any account were taken of it, would be considerably less, or a ratio of about 1:131. The loss to the miners in the price paid for the actual gold contents of the placer dust, when sold in small quantities to local dealers, is so much greater than the whole value of the silver contents, that the latter does not appear to them a matter of any consequence. The amount of silver alloyed with the placer gold of the several states and territories is shown in the accompanying table:

CONTENTS AND MINT VALUE OF CRUDE PLACER GOLD.

* Estimated.
a Average calculated without including partial data from Eastern and Southern States.
b No further schedule data.

It appears that of the ore mined during the census year 91.39 per cent. in tonnage was treated at the reduction works, and 8.61 per cent. was left on the dumps. The average result of working treatment, as compared with assay value, was 81.86 per cent. of the gold contents, 79.68 per cent. of the silver, and 80.40 per cent. in all. Notwithstanding the large number of estimated amounts entering into the calculation, these results are probably a very close approximation to the truth.

The highest average yield was from the Arizona ores, amounting to $7.01 gold, $86.24 silver, and $93.25 total per ton. Of the localities producing any considerable amount of bullion, Dakota, with an average of $6.33 gold, $0.14 silver, and $6.47 total per ton, appears as the region where low-grade gold ores are worked to the best advantage, the percentage of yield to assay value being 82.10 per cent. in gold, 42.42 per cent. in silver, and 80.47 per cent. total. The total product of each state and territory, including the silver contents of placer gold, appears in our Table which shows the aggregate bullion output of the United States for the census year.

The relative quota contributed by each of the three great arbitrary divisions into which the country has been apportioned is indicated in the accompanying abtracts, from which it will be seen that the Pacific division furnishes 75.68 per cent. of the gold, 51.43 per cent. of the silver, and 62.30 per cent. of the total. The division of the Rocky mountains yields 23.60 per cent. of the gold, 48.45 per cent. of the silver, and 37.31 per cent. of the total. The product of the Eastern division represents 0.72 per cent. of the gold, 0.12 per cent. of the silver, and 0.39 per cent. of the total.

Of greater interest than the above is the following table where the magnificent totals of American bullion production are gathered in contrast. Sixty-two millions of dollars is a total of considerable importance in the economic forces of the country.

SUMMARY.

Pacific Division	$25,261,840	$21,143,879	$46,405,719
Division of the Rocky Mountains	7,878,183	19,917,492	27,795,675
Eastern Division	239,640	49,586	289,226
Total	33,379,663	41,110,957	74,490,620

The bullion product of the deep mines of the United States for the year under review amounted to 35 tons 900 pounds avoirdupois (1,033,974.6 ounces troy) of fine gold, and 1,087 tons 900 pounds avoirdupois (31,717,297 ounces troy) of fine silver. That of the placer mines weighed 19 tons 1,824 pounds avoirdupois (580,766.6 ounces troy) in fine gold, with which were alloyed 2 tons 1,498 pounds avoirdupois (80,177.3 ounces troy) of silver. The total weight of fine bullion was no less than 55 tons 724 pounds avoirdupois (1,614,741.2 ounces troy) of gold, and 1,090 tons 398 pounds avoirdupois (31,797,474.3 ounces troy) of silver. These huge figures may be better grasped, perhaps, by considering that the gold represents five ordinary car-loads, while a train of 109 freight cars of the usual capacity would be required to transport the silver. Historians have stated that during the early Spanish occupation whole galleons were freighted exclusively with silver from the mines of Mexico and Peru. This would hardly seem to be an exaggeration, in view of the fact that the present annual product of the United States would suffice to form the full cargo of a large modern vessel.

COMPARISONS.—The relative proportion of placer gold to that produced by the deep mines; the percentage in each class of product of the precious metals from the several mining regions of the United States; the average yield per square mile and per capita in different localities, and the rank of the states and territories in productiveness, are indicated in the following exhibits:

Production Unaccounted for in the Preceding Tables.—In addition to the returns received directly from the mines, there are several minor points to be included in the total yield. A larger item than it is usually considered to be is the annual hoarding of rich specimens. This is not accounted for in the mine production as reported. While it is impossible to state the actual amount thus absorbed with any degree of precision, a careful estimate would place the value of the gold nuggets and ore annually added to the cabinets of collectors at not less than $150,000, and that of the silver ore at about $50,000. This, in view of the great number of mineral collections maintained throughout the mining territory, is certainly not an overestimate.

There is also quite an extensive manufacture of gold quartz into jewelry and souvenirs, particularly in San Francisco. The value so absorbed probably does not fall short of $50,000 annually. In 1870 the United States mining commissioner estimated the amount of gold hoarded as specimens or worked up by local jewelers at $400,000. The same authority, at that period, estimated the annual loss of gold dust in handling as currency at $100,000. As the practice of using dust for money has almost disappeared, the amount so lost is now very small.

Another indefinite quantity is the value of precious metal lost in melting, in assay grains, etc. Summing up the estimates for these additional items, the following result is reached:

Production Unaccounted for in Tabulation.

	Gold.	Silver.	Total.
Bullion product shown in preceding tables	$33,379,663	$41,110,957	$74,490,620
Estimated value of specimens hoarded	150,000	50,000	200,000
Estimated value of gold quartz made into jewelry and souvenirs	50,000	......	50,000
Estimated value of gold dust lost in handling as currency	10,000	......	10,000
Estimated loss in melting and assaying, assay grains, etc.	20,000	10,000	30,000
Total	33,609,663	41,170,957	74,780,620

FOREIGN MOVEMENT.—The exports and imports of treasure are recorded at the custom-houses of the ports through which the outflow and the inflow pass. Such statistics are compiled with great care, and furnish valuable information from a monetary point of view. Used as a means of determining the bullion production of the country they are often deceptive, as explained on a previous page. The figures for the various offices are published regularly by the Bureau of Statistics, and are therefore not repeated here; but an analysis of the returns of the San Francisco custom-house is appended, to show the character of the movement, and as affording a basis of a comparison between similar periods at the beginning and close of the census year.

GOLD PRODUCTION OF THE SOUTHERN STATES FROM 1804 TO 1850.

[Estimates of Professor J. D. Whitney.]

Value of gold production by States.

Georgia	$6,048,900
North Carolina	6,842,900
South Carolina	818,100
Tennessee and Alabama	263,800
Virginia	1,198,600
Total	15,172,300

Value of gold production in the respective divisions of time.

1804–'23	$47,000
1824–'30	715,000
1831–'40	6,695,000
1841–'50	7,715,300
Total	15,172,300

EXPORTS OF GOLD FROM SAN FRANCISCO FROM 1848 TO 1863.

[With estimates of Mr. W. P. Blake.]

Year.	*Declared gold export.*	*Estimated actual gold export.*
1848	$60,000,000	$10,000,000
1849		40,000,000
1850		50,000,000
1851 up to May 1	11,497,000	55,000,000
1851	34,960,895	
1852	45,779,000	60,000,000
1853	54,965,000	65,000,060
1854	52,045,633	60,000,000
1855	45,161,731	55,000,000
1856	50,697,434	55,000,000
1857	$48,976,692	$55,000,000
1858	47,548,026	50,000,000
1859	47,640,462	50,000,000
1860	42,325,916	42,325,916
1861	40,676,758	39,176,758
1862	42,561,761	36,061,761
1863	46,071,920	33,071,920
Total	676,908,228	755,630,355

MR. A. DEL MAR'S ESTIMATE OF THE SILVER PRODUCTION FROM 1871 TO 1876.

District.	1871.		1872.		1873.	
	Gold product.	*Silver product.*	*Gold product.*	*Silver product.*	*Gold product.*	*Silver product*
Comstock Lode	$4,077,427	$6,230,587	$6,310,035	$6,612,943	$10,493,756	$11.037,020
Other mines in Nevada	1,485,007	7,880,764	2,142,730	9,953,634	2,678,469	8,094,440

Remainder of the United States		4,000,000		2,000,000		6,000,000
Entire silver product		18,111,351		18,566,577		25,131,460

District.	1874.		1875.		1876.	
	Gold product.	*Silver product.*	*Gold product.*	*Silver product.*	*Gold product.*	*Silver product.*
Comstock Lode	$12,579,825	$11,881,000	$11,739,873	$14,492,350	$18,002,906	$20,570,078
Other mines in Nevada	1,650,202	3,521,382	2 250,618	6,717,636	1,337,798	7,462,752
Whole of Nevada	14,230,027	15,402,382	13 996,491	21,209,986	19,340,704	28,032,830
Remainder of the United States		10,000,000		9,000,000		10,151,520
Entire silver product		25,402,382		30,209,986		38,184,350

The silver product in the United States (with the exception of Nevada) is given for 1876, as follows:

Arizona	$500,000
California	1,800,000
Colorado	3,000,000
Idaho	300,000
Montana	800,000
New Mexico	400,000
Utah	3,351,520
Total, about	10,151,520

Bullion Product of the World.—The world's annual output, so far as ascertainable, is shown in the following tables, which state the sources according to political divisions, and also by continents. The data are for calendar years except for the United States, British Columbia, and Japan. Accurate statistics of the small production of gold and silver in Central America, that of silver in Canada, and gold in Nova Scotia are not available. The totals given are probably slightly under the actual amount. A comparison of the individual figures shows that the United States produce 33.13 per cent. of the gold yield of the whole world, 50.54 per cent. of the silver, and 40.91 per cent. of the total. Of the aggregate supply of the precious metals, North America (including the United States, Mexico, and British Columbia) furnishes 55.78 per cent.

ANNUAL BULLION PRODUCT OF THE WORLD.

a Census of 1880. *b* Actual export. *c* From *Dr.* Soetbeer's estimate in 1875. *d* Estimated from production of other years.

Explanation of Charts.—The construction of the diagrams in the charts presented herewith is based upon the figures reached in the preceding compilation, which the plates are designed to exhibit graphically. The plates illustrating the bullion product of the several states and territories per square mile and per capita are founded upon the averages given by our tables in connection with the official measurements of areas by Mr. Henry Gannett, geographer of the tenth census, and the latest count of the population. The inner squares, printed in pink, in each case denote the relative averages of bullion product (gold and silver combined), while the outer gray squares are of an arbitrary, uniform size, and represent in one chart the unit of area, and in the other the unit of population—that is, the square mile and the single individual. The length of the sides of the inner squares is given by the respective square roots of the averages. The plate showing the absolute bullion product of the states and territories, without reference to their size or population, is a repetition in a graphic form of the figures given in our tables, which is the summary of the bullion product of the United States for the census year. It exhibits at a glance three distinct comparisons: that of the gold product, that of the silver, and that of both precious metals. The natural arrangement of the series, according to the totals, is observed. The extreme height of each column is in each case equal to the sum of the height indicating gold, plus that representing the silver. Two essential features are in this manner presented to the eye: first, the wide difference between the product of the three leading mining states, Colorado, California, and Nevada, and that of the remainder of the country; and, second, the remarkable diversity in the proportions of gold and silver in different localities. Colorado and California appear to be anti-types; the one showing a large predominance in the silver yield, the other in that of gold. A similar contrast is shown by another pair, Utah and Dakota. The chart exhibiting the annual fluctuations in the yield of the precious metals since 1848 is in itself a history of the mining industry. The rapid increase in the product following the discovery of the gold fields in California, which reached its highest point in 1853, from which year, owing to the gradual exhaustion of the more accessible and richer deposits, the yield for a time gradually dwindled; the impulse given by the finding of the great Comstock lode, and the addition of the Idaho placers to the productive sources; the effect of the Crown Point and Belcher orebody upon the total product; and, finally, the sudden and vast increase consequent upon the opening of the famous bonanza in the Consolidated Virginia and California mines—these are all pictured. The annals of the silver production, a comparatively recent addition to the national resources, are likewise told. In the same way, if the chart be carried forward beyond the limits of the census year, the rising curves would tell of Leadville and of Tombstone. The figures assumed in this chart are the annual estimates of the director of the mint for fiscal years up to the census year, for which the results reached in this compilation are quoted. It should be remarked that as the fiscal year embraces only the first half of the calendar year of the same designation, the curves in some cases are projected one space to the right of what their position would be were the calendar year to be taken. The two plates illustrating the world's annual product are based on the figures of our table. In one the yield is segregated, so far as possible, according to the political divisions; in the other, according to its continental distribution. The preponderance of the United States as a bullion-producing nation, and of North America as a bullion-producing continent, is in this manner, perhaps, more clearly indicated than by the tabular exhibit.

THE PRODUCTION OF IRON ORE.

MR. RAPHAEL PUMPELLY'S report to the Superintendent of the Tenth Census contains the following, and while these tables do not represent the final results of Mr. Pumpelly's work they summarize it and furnish a fair idea of the iron ore industry of the United States. They are all of the results of his work obtainable up to the time of going to press with this volume. Other statistics in this connection will be found upon other pages which will furnish, in connection with Mr. Pumpelly's figures, a comprehensive view of the iron industry of the country.

* 64 oxen are also reported in Alabama.

Remarks on Table I.—Table I contains the principal results thus far compiled from the schedules of the production of iron ore during the census year ending June 1, 1880. The ton of 2,000 pounds is invariably used. The second column of Table I gives the number of mines or establishments which have a regular industrial organization, and from whom it was possible to obtain an account of the capital, wages, and materials employed. The sixth column, headed "irregular product," gives the amount of iron ore raised between the above dates by persons the principal part

* Loss.

of whose livelihood was obtained in some other occupation, generally farming. In twelve of the states there are localities where soft ore can be obtained from surface diggings. These are worked by farmers during the intervals of agricultural employment, the product drawn by farm teams to the nearest furnace and sold. The quantities of ore so produced by individuals vary from 5 to 500 tons. In some instances, again, furnace companies own the land on which the ore is dug, and hire the farmers of the neighborhood to deliver it at the furnace for a fixed price per ton. This work is done in such an irregular and desultory manner that the only items safely attainable are the amount and value of the product, although the total so produced amounts to over a ninth (11.4 per cent.) of the entire tonnage of the country. An account of purchases of ore was obtained from the furnace companies in these localities, with the name of the producer, the price and technical name of the ore, and the name of the county where the ore was mined, or, more properly, dug. Great care has been taken to avoid duplication of any of the amounts so produced, by comparing the names taken from the books of the smelting establishments with the names on the regular schedules of production received from our agents. It will therefore be observed that no items based on this "irregular product" appear in the columns of employés, wages, materials, capital, etc. The columns of production, both "regular" and "irregular," contain no estimates, but are made up from authentic returns. A small amount of ore raised in Colorado is omitted, as it is used as a flux, and does not, as yet, affect the iron-manufacturing industry. The total production, 7,971,706 tons, exceeds the amount reported as consumed in manufacturing establishments by Mr. Swank (7,709,706 tons) by 232,000 tons. There was imported during the census year at the ports of Buffalo, Boston, Oswego, Philadelphia, New York, and Baltimore, 439,451 tons, from which it would appear that the stocks of ore on hand must have increased during the census year about 701,451 tons, or that only 91.66 per cent. of the ore produced (and imported) was consumed during the period. In view of the fact that there was a scarcity of iron ore in 1879, and that many new mines were opened in consequence, whose stocks failed to reach consumers before the summer of 1880, the two results are easily reconcilable. The value of the ore is taken at the mine, or at the point of delivery to a customer or a transportation company, but always at the point where the expenses of labor and material which come under our consideration, cease. Where the ore is smelted by the same company which mines it, it not unfrequently happens that the cost and value as returned are the same, since the ore is regarded as part of the furnace supplies. This has had the effect of depressing slightly the value returned to us below the market price, and of carrying part of the profits of mining into the manufacture of pig iron. In nearly all of the iron-mining districts of the country, though the systems of labor vary, it is the custom that each miner or underground laborer furnish his oil or candle, and, when working by the ton, his own powder and fuse. The amounts thus expended have, as far as possible, been deducted from the pay of the men and added to the cost of material, in order that the column headed "wages" might more nearly represent the net cash income of the laborer available for his support. "Labor" is classified with regard to age and occupation. In the underground mines the classes of employés are well defined. In the open-cut and quarry mines the distinction between laborers and miners is more indefinite. "Materials used" covers everything consumed in the business, including, among the more important items, feed for animals, timber, fuel, repairs of all kinds, tools, powder, fuse, lights, etc. "Capital" is divided into—First, "working capital," or the sum of money required to run the mine from month to month and to pay wages and buy materials in producing the stock that is ordinarily carried. Taking the broad view of the entire industry, this portion of the capital is represented by marketable product and is not jeopardized.

Second, "plant," which represents the permanent openings, roads, buildings, machinery, etc., which are subject to rapid deterioration, require constant repairs, and are of little value when the mine is exhausted.

Third, "real estate," which means the land as a mineral producer, its value as such being considered apart from its possible value for agricultural or forestry purposes. This value is a fund which is constantly diminished as the ore is withdrawn, and eventually reaches zero; and must be made good by capitalizing the royalties. The lands in question are not wild lands, but such as are attached to a working mine. Their acreage cannot be given, as iron ore deposits are irregular in their occurrence, but their extent is such that for all practical purposes their present annual yield may be regarded as not likely to be diminished for many years.

Remarks on Table II.—Table II contains the averages drawn from the data in Table I. In finding the average net income of a man, the three classes of labor are considered together, and two boys are considered the equivalent of one man in earning capacity. The year, which is divided into percentages of time lost and made, is the working year of twelve months of 25 working days each. The small amount of time lost in strikes, equivalent to the average working lifetime of two men only, shows that no serious conflict between capital and labor arose during the census year in this industry. The low rate of monthly wages must be qualified by the consideration that the miner receives the advantages of low rent and prices of the necessaries of life, and in some cases privileges which cannot be brought into columns of statistics, but which tend to equalize his condition with the higher-paid labor of cities. As stated before, the price of ore in some of the states, notably Georgia, North Carolina, Tennessee, Ohio, Virginia, and West Virginia, is seriously lowered by the fact that it is returned by furnace companies who, in many cases, include, in the price given, no allowance for royalty nor profit, as they charge it to their furnaces at cost. We have not felt at liberty to change the price fixed by a producer without positive information. The product would replace the capital employed and invested in little more than three years, but the profits and royalty would require nearly seven and three-quarter years to effect the same result. It requires an investment of $8.75 on the average to produce a ton of ore yearly. The annual product, as will be observed, is but little in excess of one-half of the maximum capacity. The mines which yield ore fit for the manufacture of Bessemer steel, however, approach much nearer their greatest possible yield. "Maximum capacity" means an estimate of what could be produced from present developments, with present appliances, under the stimulus of a pressing demand. It could be attained with an increase of working capital and labor only. Its excess over real product is partly accounted for by the fact that many new mines went into operation during the latter part of the year. The following table presents some comparisons with the census of 1870:

Table III.—Changes in the iron-ore mining industry in the United States during the decade ending June 1, 1880, expressed in percentages on the returns of the Census of 1870.

	Per cent.
Gain in number of establishments	91.67
Gain in total number of employés	110.81
Gain in total horse-power of steam-engines	189.69
Gain in amount paid as wages	39.48
Gain in amount paid for material	126.33
Gain in total capital	247.61
Loss in value per ton of product	25.45
Gain in value of total product	75.45
Gain in tonnage of total product	135.00
Gain in product of regular establishments	108.00
Loss in yearly income of man	32.13
Loss in per cent. of value of product paid for labor	5.19
Gain in per cent. of value of product paid for materials	4.46
Gain in per cent. of value of product retained for royalty, interest, etc.	0.74

The gain in the total number of mine employés, 110.81 per cent., is slightly more than the gain, 108 per cent., in the product of the establishments to which they belong. This arises from the fact that many new mines were opened in 1879–'80 which were not productive till the latter part of the year. The effectiveness per man has undoubtedly been increased by the increased use of power, as shown in the large per cent., 189.68, and by the introduction of improved drilling machinery and high explosives. The census of 1870, unfortunately, affords no basis for making this important comparison. Proportionately more is expended for material and less for labor than was the case in 1870. This arises partly from the fact that wages are reduced to net wages, as explained before, and partly from a real increase in consumption of supplies as mining becomes more systematic and dependent on mechanical appliances. The average yearly incomes of labor cannot be justly compared, for the same reason that we cannot compare its effectiveness, *i. e.*, because we cannot ascertain the proportion of the year lost in 1870. The number of boys employed has increased at a much more rapid rate than the number of men. They now constitute five per cent. of the entire force, and have increased 348 per cent. in ten years. The large gain in capital, 247.61 per cent., is explained by the fact that all iron-ore producing property was included in the present census, whether it belonged to the mine operator or was leased or worked on a royalty. Viewing the iron lands returned as a whole, they are capable of keeping up the present annual yield for an indefinite time, though parts of them may become rapidly exhausted. Extending the average royalty of 42 cents a ton to the entire product, we would have a yearly income of over three millions of dollars, or rather more than 6.25 per cent. on the returned value of the real estate. In view of the fact that this income, though not likely to be diminished for fifty years to come, is very far from being a perpetual annuity, it will be seen that the present value of the real estate is not overestimated. After taking out the royalty charge, if from the remainder of the annual net receipts we deduct an amount equal to 6 per cent. interest on the working capital, there is left, in round numbers, the sum of $4,690,000. The "plant," consisting of animals, boilers, engines, tools, buildings, cars, tracks, etc., is subject to a deterioration of not far from 30 per cent. yearly. Deducting this, leaves $2,096,000 as the profits and expenses of the general management of the business, or a trifle over 9 per cent. of the value of the annual product, a proportion which cannot be called excessive; for it must be remembered that, though the income of the business, *as a whole*, is a steady and regular addition to our national wealth, each individual mine is subject to interruptions from accidents, and to exhaustion of the mineral deposit. Consequently, the net income of each individual mine cannot be regarded as consisting solely of interest, royalty and profits, but must be charged, for safety, with a certain sum for insurance against unforeseen contingencies, which would not be necessary if one company owned the entire property. The conditions of iron-ore mining are so different in different districts that only the most general analysis can be applied to the totals. The above considerations show that the general relations between capital and production spread over our returns are harmonious, and are given, not so much with a view to prove the healthy condition of the industry, as to justify the assertion that our valuations of capital are very far from extravagant, though the period during which they were made—the summer of 1880—was one of great activity in iron mining. It may be observed, too, that the real estate which furnishes the "irregular product" of 1,015,981 tons is far from worthless as mineral land, though we have not included it in our valuation. Its principal value, however, consists in the fact that it affords its owners a field for moderately remunerative labor. The average price per ton has fallen from $3.89 to $2.90, or 25.45 per cent. As gold averaged about 30 per cent. above the paper dollar in 1870, the true fall in iron ore is only 14 cents a ton. Since the last census was taken the average price per ton has changed in the five great states as follows: In Michigan it has fallen 15 per cent.; in Missouri it has risen 56.32 per cent.; in New Jersey it has fallen 30 per cent.; in New York it has fallen 29 per cent.; in Pennsylvania it has fallen 35 per cent. These irregularities are chiefly due to the increased demand for ores suitable to the manufacture of Bessemer steel.

North Carolina	3,318	0.042	0.0228
Delaware	2,726	0.034	0.0283
Vermont	560	0.007	0.0119
Indiana	513	0.006	0.0044
The United States	7,971,706		

Table V.—The rank of the sixteen states reported in the census of 1870 as producers of iron ore was as follows:

1. Pennsylvania.	5. Ohio.	9. Massachusetts.	13. Vermont.
2. Michigan.	6. Missouri.	10. Wisconsin.	14. North Carolina.
3. New York.	7. Maryland.	11. Kentucky.	15. Delaware.
4. New Jersey.	8. Tennessee.	12. Virginia.	16. Indiana.

The six great iron states retain in 1880 their former relative rank, and Alabama, a new state, takes the rank next them. Pennsylvania and Michigan yield over one-half the entire product. The six states at the head of the list yield 87.48 per cent. of the total, which is worth 90.91 per cent. of the total value. Sixteen states were reported in 1870 against twenty-three at present. The new iron-producing states are Alabama, Georgia, West Virginia, Connecticut, Oregon, Maine, and Texas. They produce 4.96 per cent. of the product. Virginia has gained four places; Maryland and Tennessee have lost two; Massachusetts four, and Kentucky one.

Table VI.—List of Counties of the first class producing over 100,000 tons.

County.	State.	Tons.
Marquette	Michigan	1,374,812
Essex	New York	630,944
Morris	New Jersey	568,420
Menominee	Michigan	459,900
Lehigh	Pennsylvania	321,322
Lebanon	Do.	285,629
Berks	Do.	252,940
Blair	Do.	154,914
Saint François	Missouri	144,265
Dutchess	New York	125,859
Northampton	Pennsylvania	104,788
Total of 11 counties of the 1st class		4,423,793

The eleven counties (Table VI.) produce 55.49 per cent. of the entire tonnage, of which total Marquette county, Michigan, must be credited with 17.25 per cent. Menominee county, Michigan, is the only one of the above which did not produce iron ore in 1870. The total number of counties from which reports have been received and tabulated is 135, against 71 in 1870, a gain of a little over 90 per cent.

Table VII.—List of Counties of the second class producing less than 100,000 tons and over 50,000 tons.

County.	State.	Tons.
Clinton	New York	92,166
Orange	Do.	88,988
Crawford	Missouri	87,033
Putnam	New York	76,746
Sussex	New Jersey	70,365
Cumberland	Pennsylvania	67,846
Jefferson	New York	64,111
Fayette	Pennsylvania	63,792
York	Do.	63,570
Lancaster	Do.	63,274
Berkshire	Massachusetts	62,637
Lawrence	Ohio	62,599
Dent	Missouri	58,878
Iron	Do.	57,297
Warren	New Jersey	50,214
Total of the 15 counties of the 2d class		1,029,516

The above 15 counties, in 6 states, produce 12.92 per cent. of the entire product. The 26 leading counties produce 68.41 per cent. of the entire product, leaving 31.59 per cent. to be spread over the remaining 109 counties. The following table contains a list of all mines or industrial establishments producing over 50,000 tons during the census year, in the order of their production:

Table VIII.

State.	County.	Name of mine.	Product.	Value of product.	Employés.
			Tons		
Pennsylvania	Lebanon	Cornwall Ore Bank	280,000	$500,000	135
Michigan	Marquette	Republic	224,000	896,000	600
Do.	Do.	Lake Superior Iron Company	215,930	771,180	542
Do.	Menominee	Norway and Cyclops	210,875	527,187	510
New York	Essex	Old Bed	208,416	744,344	321
Do.	Do.	21	187,448	238,525	282
Missouri	Saint François	Iron Mountain	144,153	1,061,801	300
Michigan	Marquette	Jackson	134,585	569,582	252
Do.	Do.	Cleveland Iron Mining Company	125,440	448,000	450
New York	Essex	Crown Point	112,000	500,000	450
Michigan	Marquette	Champion	99,609	355,748	350
New Jersey	Morris	Glendon Hibernia	85,623	382,245	550
Michigan	Menominee	Vulcan	83,394	208,485	200
Do.	Marquette	Michigamme	66,158	212,652	197
Do.	Menominee	Quinisec	63,689	159,220	178
Missouri	Crawford	Merimec Iron Mining Company	60,385	134,788	184
New York	Putnam	Tilly Foster Iron Mines	56,000	131,500	250
Missouri	Iron	Pilot Knob	52,761	115,993	410
New Jersey	Morris	Mount Hope	50,379	264,390	194
			2,460,845	8,222,640	6,355

The preceding 19 mines yielded 34.85 per cent. of the entire tonnage of the "regular mines," the value of which reached 40.16 per cent. of the value of the total. The labor employed by them, however, aggregates only 20.06 per cent. of the entire force, as it is generally worked more continuously and at higher wages. The product of the Cornwall Ore Bank was 3.97 per cent., and of the Republic 3.17 per cent. of the entire product of the regular mines. 174 mines have been opened during the census year, or 21.6 per cent. of the total reported. During the census year the iron-mining industry consumed 6,907,931 linear feet of round timber for props, etc., valued at $114,951; 8,625,463 superficial feet of sawed lumber, valued at $128,110; and 88,443 cords of wood for fuel, valued at $177,309; all of which is included in the gross amount of materials used.

Remarks on Table No. 1.—Column No. 2 gives the number of separate individual "establishments" from which schedules have been received. As a rule, each schedule received represents what is ordinarily called "a mine," but in some cases one schedule necessarily contains all the data of a company which works one or more shafts not connected underground, and keeps no separate record of the product or labor of each of their mine openings. Such cases—though from the point of view of a mine engineer they might represent two or more mines—we have been obliged to consider as one "industrial establishment." In the anthracite field this question as to what should constitute the industrial unit in the census report cannot arise, since there the word "colliery" has a definite signification, *i. e.*, all the mine openings whose product goes to a single breaker building and is there mixed before delivery. No such absolute distinguishing criterion exists in the iron ore and bituminous coal industry, but the term "industrial establishment" must be taken to mean an organization, the managers of which keep a record in such a manner that the data required for the census can be obtained for it separately. There are, however, not more than five or six cases where any doubt on this point can arise. Column 3, headed "Maximum capacity," represents the number of tons which the operators claim could be raised yearly from the present openings with the present facilities, if the market would take it. It is unexpectedly large, and

possibly in some cases based on too sanguine estimates of capacity. As will be noticed, the average time run was only nine months of the year, which would indicate that the capacity of the mines was at least one-third more than the product. Column 4 gives the production of mines supplying the general market, in tons of 2,000 pounds. It also is larger than was anticipated, but there is no reason to suppose it exaggerated. For instance, the production of Pennsylvania is given in the *Mine Inspectors' Report* (see "Annual Report of the Secretary of Internal Affairs" for 1879–'80, pages 289, 362, and 410) at 18,837,962 tons. This summation is based largely on estimates, and covers the year ending December 1, 1880, thus embracing a period marked by a more active demand for coal and coke than the census year ending June 1, 1880. Our total is 18,004,988, a difference of 4.4 per cent., which is less than the natural increase between the two periods. The 6th column is headed "Irregular product." Under this has been gathered the output of all the small operations where coal is mined in small quantities for local consumption. In many cases, in

some of the bituminous fields, a farmer digs coal from the outcrop on his own farm and supplies his own, and perhaps one or two neighboring families. This industry is analogous to the cutting of wood for domestic fuel, and has no bearing on the mining industry of the country. The whole amount so produced is only 628,569 tons, and it might as well be disregarded hereafter. The iron ore mined in a small way eventually reaches the general market, but the coal does not. No labor is hired and no machinery is used, and the work is carried on when there is nothing else to do on the farm. Strictly speaking, no capital is employed, but the value of the land, as coal land, has been assessed and included in column 29, headed "Grand total of capital." There were over 5,000 of these small operations or "farmers' diggings" reported, and the labor of gathering the statistics from them is entirely disproportioned to the value of the results. They average less than 125 tons yearly. All the other columns, except the 7th, 8th, and the 29th, apply to the regular mines or "establishments" only. In column 5 the value is taken at the "mine's mouth," or rather at the point where the product is delivered for transportation to market. Column 9, "Value of materials," covers mine supplies consumed, including powder, fuse, iron, steel, timber, lumber, wire, rope, etc., whether bought by the miners or by the operators. Column 10 covers wages paid to all classes of labor during the census year, and represents the amount received by the men, less the amount paid by them for material, as powder, fuse, etc., which in many cases are charged to the miners and deducted at the end of the month from their gross wages. The necessity of making this deduction, when not already made on the return, has involved a great deal of extra labor which could not well be avoided, since the average net annual income of the miner available to the support of himself and his family is clearly one of the important items which the census should seek to ascertain with accuracy. The meaning of the columns relating to capital has been sufficiently explained in the former bulletins on anthracite coal, iron ore, and copper, and need not be repeated here. An endeavor was made to ascertain the number of acres of coal lands that were worked out. This has not been altogether successful, as in many cases it was impossible to answer the question with approximate accuracy. In other cases the upper seam only was worked out over a certain area, leaving one or more below untouched. The sum of the three columns of acres is *but a very small fraction of the total available coal land.* The sum in question, 466,743 acres, represents the land attached to working collieries, and averages $133 an acre. The fields are so extensive that only those lands which have special advantages of position, ease of mining, or quality of product, have any present industrial value as mineral lands.

Table No. 2 contains the averages drawn from the data in Table No. 1. In estimating the day's work, yearly earnings, etc., two boys were considered the equivalent, in producing and earning capacity, of one man. The year is taken to consist of twelve months of twenty-five working days each. A very considerable amount of time has been lost in strikes—about twenty days each for every man employed. Although it is not our province to discuss the question of strikes, it may not be out of place to call attention to some of the concomitant facts. First, in the bituminous coal industry there has been an *absolute fall* in the value per ton of the product, whereas iron ore and anthracite coal have not fallen in price since the last census more than gold has, or rather after falling they recovered, which bituminous coal did not. Second, in spite of the time lost in strikes, the average yearly earnings of a man engaged in mining bituminous coal are very nearly the same as those of the iron-ore miner, being in the one $328.72 and in the other $316.08, for the country at large. Third, that in the bituminous industry the percentage of the value of the product obtained by labor has increased nearly 1 per cent., labor obtaining in 1880 62.3 per cent. of the selling price of the product, against 61.6 per cent. in 1870. In other words, the cost of labor per ton has not fallen in quite so large a ratio as the value per ton, though both have fallen more than gold did in the same interval (see Table No. 3). This very small difference represents a gain in favor of labor of one-third of a million of dollars annually, and is the more striking from the fact that wages in the census of 1880 represent net wages, whereas it is possible that the return in the census of 1870, which is used as a basis of comparison, may include a part of what was necessarily expended by the men for mine supplies.

Table 3.—Production of Bituminous Coal during the Census Year ending June 1, 1880, compared with the one ending June 1, 1870, for Mines east of the 100th Meridian.

	Per cent.
1. Gain in number of mines	122.0
2. Gain in yearly tonnage	135.0
3. Gain in value of yearly product	44.0
4. Gain in value of material used	133.0
5. Gain in amount paid as wages	46.0
6. Gain in total number of employés	133.0
7. Gain in total capital	54.0
8. Decrease in value per ton	39.0
9. Gain in tons raised per man per year	3.0
10. Decrease in yearly earnings	36.0
11. Decrease in cost of labor per ton	38.0
12. Decrease in cost of material per ton	1.0
13. Gain in per cent. of value of the product paid for labor	0.7
14. Gain in per cent. of value of the product paid for materials	3.9
15. Decrease in per cent. of value of the product left for royalty, interest, profits, etc.	4.6
16. Gain in number of counties reporting	68.0

NOTE.—The above table illustrates the fact that the fall in price per ton of bituminous coal during the last decade has borne less heavily on labor than on capital. Compare 3, 6, 8, 11 and 13.

As between the bituminous coal industry and the iron-ore mining industry, the former takes from the earth a product worth 140 per cent. more, employs 205 per cent. more hands, and 46 per cent. more capital, uses 161 per cent. more materials, and pays 222 per cent. more wages. These figures are based on the returns from regular mines and would be slightly less if the "irregular product"—more important in the case of coal than in that of iron—were taken into consideration. The increase in the tonnage of the iron ore mined during the census year is 136 per cent., and in that of bituminous coal 135 per cent., as compared with the census year of 1870; showing that these two great divisions of mineral production keep pace with each other, and are advancing nearly twice as fast as the production of anthracite. The reason of this is the obvious one, that in the former cases new fields are laid under contribution, from time to time, as railways are extended, whereas anthracite is restricted to its original area.

Iron is mined in 135 counties and bituminous coal in 314 counties east of the 100th meridian.

Table No. 4.—List of Counties of the first class east of the 100th Meridian, *i. e.*, producing over 500,000 tons per annum.

County.	*State.*	*Tons.*
Total		22,167,999
Allegheny	Pennsylvania	4,426,871

Will	Do.	611,311
Cambria	Pennsylvania	590,075
Columbiana	Ohio	515,602
Bradford	Pennsylvania	500,965

The sixteen counties of the first class furnish 54.9 per cent., and the twenty counties of the second class 16.6 per cent. of the entire product, leaving 28.5 per cent. to be spread over the remaining two hundred and seventy-eight counties. Allegheny County, Pennsylvania, produces over one-tenth, and the three leading counties of Pennsylvania nearly one-quarter of the entire product,

The three leading states, Pennsylvania, Illinois, and Ohio, produce nearly three-fourths, and the eight leading states nearly nineteen-twentieths of the entire product.

Table No. 5.—List of Counties of the second class east of the 100th Meridian, *i. e.*, producing over 250,000 tons per annum.*

	County.	*State.*	*Total.*

18.	Peoria	Illinois	273,540
19.	Madison	Do.	272,927
20.	Tuscarawas	Ohio	255,495

The United States, exclusive of the territories, has gained 134.4 per cent. in weight of product. The average price per ton has fallen from $1.99 to $1.22 during the past decade, the price for 1870 being, of course, reckoned in paper dollars.

The production of coal in England was, in 1855, 64,661,401 tons, and in 1877 it was 136,179,968 tons, and in 1880 it was 146,818,122 tons. The English ton, however, is 2,240 pounds. The number of collieries in 1880 was, in England, 3,880, and in the United States, 3,264.

Tables 10 and 11 illustrate, in a general way, the proposition that large mining establishments, which employ power and labor-saving machinery, can pay higher wages and give more steady employment to labor than smaller ones. The mines chosen in the two states were typical ones of their classes. The large amount spent for "materials" by Class 2 is, to a great extent, made up of feed, etc., for the animals used.

As a general rule, too, the mines employing capital most liberally can afford to yield to labor a larger share of the value of the product, since their profits depend on the volume of their business. They also employ more skilled labor. It is believed that these features run through the entire mining industry.

THE PRODUCTION OF ANTHRACITE COAL.

MR. PUMPELLY'S report to the Superintendent of the Census has the following: The following exhibit shows the number of establishments, capacity, product, capital, number of employés, and various details under the above head of the "anthracite industry" during the Census year beginning June 1, 1879, and ending June 1, 1880. The net ton of 2,000 pounds is invariably used in this Bulletin.

Establishments.

Number of counties reporting	number	8
Total number of separate establishments or collieries	do.	273
Average yearly capacity of production	tons	149,348
Average actual product in Census year	do.	100,488
Per cent. of maximum capacity attained	per cent	67.28
Average capital, leased, employed and invested	dollars	550,041
Average number of hands employed	number	250
Average amount of wages paid yearly	dollars	79,414
Average value of materials used yearly	do.	23,588
Average number of acres of coal land attached to a colliery	acres	604
Ratio of value of yearly product to total capital	per cent	26.86
Number of company stores	number	69

Two new counties appear as anthracite producers in the present Census, viz., Lackawanna, which was set off from Luzerne, and Susquehanna, in the southern border of which one small colliery was opened.

The number of working collieries has increased during the past ten years from 225 to 273, or 21⅓ per cent. The average horse-power used has, however, increased from 216 to 375, or 73.6 per cent. The average number of hands has increased from 235 to 250, or only 6.4 per cent., while the average product per colliery has increased from 69,320 tons to 100,488 tons, a gain of 45 per cent.

The "capacity of production" referred to means the probable output, with present force and appliances, under a steady demand. The correctness of the figure is presumable from the fact that it bears about the same relation to the actual output that the time run does to the whole year.

Production.

Merchantable product for year ending June 1, 1880	tons	27,433,329
Value of product delivered for transportation	dollars	40,331,981
Average value of same per ton delivered for transportation	do.	1 47
Amount of coal washed	tons	1,396,906
Ratio of value of product to capital	per cent	26.86
Ratio of actual output to capacity	do.	67.28
Tons raised yearly per man	tons	454.4
Tons raised daily per man	do	2.14
Maximum yearly capacity of all collieries reported	do.	40,772,000

The value of the product is taken at the point where the labor we consider ceases to act on it.

A comparison of the Census returns of 1880 and 1870 shows that the output has increased from 15,596,257 tons to 27,433,329 tons, or 11,837,072 tons, a gain of 75.9 per cent., while the gross value has increased only 5.25 per cent. But the value of the product of 1870 was reckoned in paper dollars. The apparent fall of the average price per ton is from $2.49 to $1.47, or $1.02, about 41 per cent., considerably more than the change of standard would account for. The number of tons raised yearly per man—laborers, miners, and administrative force being considered together, and two boys being reckoned the equivalent of one man for this purpose—has, however, risen from 320.5 tons to 454.4, a gain of 41.8 per cent. A portion of this increased output per man is due to more steady labor, a portion to the increased use of steam-power, and a small portion, doubtless, to the increased efficiency of the individual when unharassed by declining prices. In addition to the merchantable product given above, 83 collieries, with a production of 20,295,529 tons, report the production of 7,060,447 tons of impure coal and dust, under the head of "culm." This would be 34.8 per cent. of their product, and would indicate a total production of 9,382,086 tons of unmerchantable coal during Census year, to which no value is assigned. The best procurable estimate would show that 908,250 tons of this was used in making steam at the mines. A small unascertained portion is used in locomotives on the coal roads, and another unascertained portion is sold, for use under boilers, at the cost of transportation. A slight increase in the price of coal, or improvements in the manner of using it, may give this product a commercial value hereafter. At present it is ignored, in accordance with the usage of the trade.

Employes, wages, and time.

Number of men above ground	number	15,564
Number of men below ground	do.	36,952
Number of boys above ground under 16 years of age	do.	11,921
Number of boys below ground under 16 years of age	do.	3,802
Total employés	do.	68,239
Of whom miners number		19,585
Of whom laborers number		47,410
Of whom administrative force number		1,244
Giving the same total		68,239
Per cent. of total force, miners	per cent	28.7
Per cent. of total force, boys	do.	23
Per cent. of total force, laborers and boys	do.	69.5
Per cent. of total force, administrative force	do.	1.8
Total wages paid	dollars	21,680,120
Average yearly income of man	do.	359 08
Average monthly income of man	do.	42 33
Total number of months worked by one man	months	512,204
Total number of months of enforced idleness	do.	207,090
Total number of months lost in strikes	do.	5,234
Per cent. of year worked	per cent	70.69
Per cent. of year lost by stoppages, etc	do.	28.60
Per cent. of year lost in strikes	do.	0.72

As compared with the force reported in the Census year of 1870, the total number has increased from 52,882 to 68,239, or 29.04 per cent. A large proportion of this increase, however, consists of boys who are employed as slate-pickers in the breaker buildings, the number of boys employed in the mine proper remaining almost stationary, and the number of boys employed above ground having increased from 9,051 to 15,723, a gain of 73.7 per cent. The number of adult employés has increased 20 per cent. only. The term "administrative" force includes foremen, mine superintendents, engineers, clerks, etc., employed about the collieries. The total amount returned as wages is $1,218,029 less than in the Census year of 1870, a decrease of 5.62 per cent. Wages, however, in the present returns, are of course reckoned on a specie basis, but, further, they signify net wages, *i. e.*, the pay-roll, less the sum the miner is obliged to expend for powder, oil, etc. The average yearly income of adult employés has contracted only 24.17 per cent., which is less than its purchasing power has increased during the same interval, without taking into account the allowance necessary to reduce the wages of 1870 to net wages. The average monthly income is found by dividing the total sum paid for wages by the total number of months worked by one man. The sum thus arrived at is slightly too high, since miners who work by the ton can find employment during part of the time the colliery is idle. For the same reason the per cent. of the year lost by enforced idleness is slightly too high, and represents in reality the time shipments were suspended. The small proportion of the time lost in strikes, less than one per cent., and the short average duration of the strikes reported, show that the relations between managers and miners are more harmonious than they were ten years ago. The per cent. of the value of the product paid for labor is now 53.75 against 59.75 ten years ago. This loss of advantage to labor is, however, apparent, not real, and is caused by the reduction of gross wages to net wages referred to above. For the same reason the cost of supplies or material consumed, measured in unit of the product, is increased from 9.34 per cent. to 15.96 per cent. The proportion of the value of the product retained for royalty, interest, taxes, profits, etc., is now 30.29 per cent., and was 30.91 per cent. in 1870

Consumption of Material.

Linear feet of unsawed lumber	feet	30,405,658
Value of same	dollars	830,743
Feet sawed lumber (board measure)	feet	39,605,547
Value of same	dollars	644,109
Value of explosives	do.	1,550,680
Total value of all materials consumed	do.	6,439,437
Cost of explosives per ton merchantable product	cents	5.7
Cost of all material per ton merchantable product	do.	23.5

The materials used embrace explosives, oil, candles, lumber and timber, rails, repairs of all kinds, horse and mule feed, etc., but not fuel, to which no value is given. A considerable portion of the material is paid for by the miners, on the sale of which the companies controlling the 69 supply stores referred to doubtless make a profit. The capital invested in these stores is, however, not included, the mining industry alone being considered.

Ratio of plant to total capital	do.		26.51
Ratio of working capital to total capital	do.		5.15
Ratio of value of annual product to total capital	do.		26.86

The very large increase in capital reported ($150,161,196) over that returned in 1870 ($50,807,285) would seem to call for some explanation and justification, the more so that the capital in 1870 was reckoned in paper dollars. The increase is over 195 per cent. The "plant" covers machinery, tracks, cars, buildings, animals, shafts and dead work, and is the sum of the several items, and has been kept rather under than above its true value. The largest part of the increase of capital is due to the fact that we have included in our returns the coal lands not owned by the mining companies, but worked on a royalty. Mineral lands are clearly a part of the capital of the mining industry, whether owned or leased or mortgaged. It has been our aim, however, to include only those coal lands which are in immediate connection with a working colliery, and either producing, or, in view of the increasing demand for this fuel, about to produce. The average number of acres reported (604) is not too large in this view; for the area reported would make a block only 16.12 miles square, which the 1,085 miles of underground track would pierce with 67 parallel gangways from side to side, less than ¼ of a mile apart. 53,385 acres of non-producing coal lands, valued at $25,702,500, held in reserve by the great companies, were thrown out altogether as not an element of productive wealth at present. Of the 164,852 acres retained, 13,852 were returned as worked over. As all but a very small portion of this still contains the lower seams, it has all been considered as producing coal lands. The total amount so retained constitutes about 56.68 per cent. of the entire area of anthracite lands, estimated at 290,791 acres. The average value per acre, $622.47, is much less than the ordinary market value of such lands, so far as such property—valuable only in blocks—can be said to have a market value. The price has usually been fixed by the owners. Again, taking the average royalty of 23.17 cents per ton, which is reported as paid on 51¼ per cent. of the product returned, and extending it to the entire output, the anthracite real estate would receive a yearly income of $6,356,302. We are justified in this extension, since the lands owned are returned as equally valuable with those worked on a royalty. Assuming the careful estimate of the total yield of the entire field made by Mr. Joseph B. Harris, based on the very conservative view that only 27 per cent. of the total content could be mined and marketed, the production of anthracite after 1880 would reach 4,009,640,000 net tons before exhaustion. This would indicate that the output of the Census year could be maintained for 146 years. As the lands which we have assumed as a necessary part of the industrial capital to be reported constitute 56.68 per cent. of the entire area, they could continue to earn their present income for 83 years. If we assume that one-tenth of the income would be absorbed in taxes and expenses, the present value of the above income for 83 years would be, with interest at 5 per cent., in round numbers, $112,420,000, and with interest at 5½ per cent., $102,790,000.

64

The above valuations would be materially increased if we took into account the probable anticipations of the payments of the income of the later years of the term, owing to the increasing demand and the probable reduction of taxes as the estate approached exhaustion. Finally, the term "working capital" means the sum of money necessarily advanced for wages and supplies during the interval between production and the receipt of returns from sales. It is represented in actual property by the unsold product on hand and in transit. The estimate of this amount was made in nearly all of the collieries by the operators. As the sum is equal to but little more than the value of the product for sixty days, it is evidently not exaggerated. On the whole, the actual value of the anthracite property, as an element of productive wealth, is underestimated, notwithstanding the great apparent rise since 1870. These considerations will apply also to our forthcoming reports on the other mineral industries, in all of which the production has nearly doubled, while the capital has increased in a much greater ratio.

Production by Counties.

		1880.	1870.	*Per cent.*
Luzerne	10,766,360	16,414,725	9,519,298	Gain, 72.4
Lackawanna	5,648,365			
Schuylkill		7,323,174	3,860,144	Gain, 89.7
Northumberland		2,099,966	1,001,200	Gain, 109.7
Carbon		808,373	403,384	Gain, 100.4
Dauphin		450,343	411,355	Gain, 9.5
Columbia		318,573	400,876	Loss, 20.53
Susquehanna		18,173		
Total		27,433,329	15,596,257	Gain, 75.9

Relative production of the Counties, 1880.

Luzerne, per cent. of total output	39.25
Schuylkill, per cent. of total output	26.69
Lackawanna, per cent. of total output	20.59
Northumberland, per cent. of total output	7.65
Carbon, per cent. of total output	2.95
Dauphin, per cent. of total output	1.64
Columbia, per cent. of total output	1.16
Susquehanna, per cent. of total output	0.07

Careful estimates prove that about 50,000 tons, in addition to the above, is raised in a small way for local consumption. As this does not enter into the merchantable product, nor affect the relations of the industry in any way, it has been omitted. The anthracite producers are entitled to the acknowledgments of the Department for the pains they have taken in filling the Census schedules, a task which, in case of the larger companies, involved a great deal of labor. The Census Report of 1870 covered some coal from other fields now classed as semi-anthracite. This amount was deducted before the general comparisons were made.

THE PRODUCTION OF COPPER EAST OF THE 100th MERIDIAN.

MR. PUMPELLY'S Report to the Superintendent of the Census has the following:

All the ratios between production, wages, capital, number of mines, etc., are so controlled by the figures from one exceptionally productive mine in Houghton County, Michigan, that no general results can be drawn from the subjoined table which would not be greatly changed, and in some cases reversed, if that mine were excluded from the consideration.

The product is reduced to metallic copper, and its value is given at the mines or at the point where it is no longer operated on by the labor reported in the schedule. In some cases both smelting and mining are carried on by the same establishment; in others the process of reduction is partly carried on at or near the mine, and the product, in the form of a "matte," is shipped to a distance; in others the ores of copper are mined and shipped without any preliminary reduction. Thus the industry, strictly speaking, embraces both mining and manufacturing, in a manner which renders it impossible to separate them. The only common unit to which these various products can be reduced is evidently metallic copper, the value of which, per pound, to the mine producing varies greatly, depending upon the expense and labor that must be laid out upon it before it reaches the general market in the form of merchantable metal. Under all these various conditions the average price realized by the mines has been 17.46 cents per pound. The small product of the Ducktown mines, of Tennessee, has been excluded, as it did not reach the market at all—the reduction furnaces having been closed—and the amount of copper in the ore reported, probably about 70 tons, being unascertained. The Lake Superior region furnishes 90.48 per cent. of the entire product given in the table. The production of $6,919 worth of native silver is also reported from this region. The 50,655,140 pounds of copper would make a cube whose edge would be 45⅓ feet, or, in other words, would cover 25.75 acres with a sheet one inch thick.

The product is reported as equaling 80.49 per cent. of the "maximum capacity" of the mines. "Maximum capacity," however, represents in many cases rather the hopes and wishes of the manager than the probabilities of the mine. From the nature of the case it has a somewhat different significance from what it has when applied to iron or coal mining, where production from time to time outruns demand. The copper mines are worked continuously during the year, and for the industry as a whole "maximum capacity" may be taken to mean rather the capacity of the machinery than of the mines. We have regarded the return of "capital employed" as one of the most important we had to make, second only to those of wages and labor. It is divided into three items of a totally different nature.

First: The "working capital," which was intended to represent the amount necessary to run the mine between production and sales. As returned it equals nearly four months' expenses, and may be assumed as a low average.

Second: The "plant" means all machinery, improvements, personal property (not supplies), animals, fixtures, etc. An estimate of this should be based on actual values, not cost, and should exclude all antiquated and idle machinery. The footing in the table is believed to be a very conservative estimate.

Third: "Real estate," as explained in the bulletins of iron ore and anthracite coal, means the mine itself as a mineral producer. Its value depends, of course, on the average price of copper during a term of years, and on the reasonable expectation of productive life for each mine.

These three items make up all the substantial actual property of the industry, as it existed June 1, 1880, and an estimate of them for each mine is much more likely to approximate to true values than a mere return of share capital. The market value of the share capital has been, of course, used as a check whenever it was based on ability to pay dividends. The values sought for were not original cost nor selling price, but actual worth based on ability to contribute to the net industrial income of the country at large. Our aim has been to avoid overestimates, and to adopt a system that could be used for future comparisons for the purpose of illustrating industrial progress. The "working capital" of the establishments is represented by copper on hand at the mines or in transit to market. If it is carried after that point by the mines, they assume the character of metal brokers. We wish to restrict our report to industrial production simply. Therefore we assume that what we call "working capital," or that portion which is not invested, but advanced out of production, is not jeopardized except by the inconsiderable fluctuations of price during a period of four months. Consequently it may be assumed that it need not earn more than five per cent. per annum. The "plant," however, like all mining plant, should earn not less than thirty per cent. to make good average expenditures for deterioration and replacement. After deducting the proper sum for these two permanent charges the net income of the copper mines of the eastern district is very nearly two and three-quarter millions of dollars. Assuming this to be paid annually, and taking five per cent. as the ruling rate of interest, the value of the real estate as reported would indicate an average expectation of a productive life of twelve years for the copper mines on it—an expectation which it is believed that their average condition justifies. The fact that the income is paid at intervals shorter than one year shortens the expectation considerably; but, without taking this into consideration, it is evident that we have not fallen into the error of exaggerating the present value of the copper-producing property. It requires, as will be seen by the tables, 62½ cents capital to produce a pound of copper per year. Of this 77.4 per cent. represents the land (though the original outlay may have been much less), 18.39 per cent. of it is invested in the "plant," and 4.21 per cent. of it is required for wages advanced and supplies carried in the ordinary course of business. These averages apply to the industry as a whole, and, of course, vary greatly for different mines. Labor obtains about one-third of the value of the product, and nearly one-sixth is expended in the necessary mine supplies. The value of the yearly product is nearly 28 per cent. of the total capital. The production of the extreme Western States and Territories (Colorado, Arizona, Idaho, and California) is not included in the

Total		119,142	366,047	1,531,448	116,116	3,883,944	59,931	1,333,125	5,824,825	24,517,146	31,675,096

table. As far as received the production is 6,244,702 pounds, or 12.33 per cent. of the amount produced in the eastern district. Details from them will be given in the final report. Eleven new mines in Maine, Maryland, and New Hampshire report the employment of 162 men, the payment of $31,995 for wages, and $7,650 for material consumed. They have spent $658,470 for machinery, dead work, etc., but have produced no ingot copper. The returns from this class of mines are excluded from the tables, which are restricted to establishments of productive industry. The acknowledgments of the office are due to the agents of the copper mines throughout the country, especially to those of the Lake Superior district, for the promptness and courtesy with which they responded to our calls for information. Had the Census year corresponded with the business year terminating January 1, the questions could have been answered with much greater ease. The preceding tables contain the principal statistics of the copper-mining industry of the United States in the region east of the 100th meridian during the Census year ending June 1, 1880.

MANUFACTURE OF CHEMICALS.

FROM the report of W. L. Rowland we obtain the following figures of the Census year:

ESTABLISHMENTS.		
Total number of establishments in the U. S.		1,349
CAPITAL.		
Capital invested, including buildings and machinery		$85,486,856
HANDS.		
Average number of males 16 years and above		26,751
Do. do below 16 years		1,207
Average number of females 15 years and above		1,493
Do. do. below 15 years		49
Total		29,500
WAGES.		
Total amount paid		$11,820,728
MATERIALS.		
Anthracite coal	tons	273,161
Do. do.	value	$968,432
Bituminous coal	tons	326,398
Do. do.	value	$924,791
All other materials	value	$75,451,058
Total value of all materials		$77,344,281
PRODUCTS.		
Aniline colors	pounds	80,518
Do. do.	value	$107,292
Anthracenes	pounds	344,114
Do.	value	$99,242
Sulphate of Ammonia	pounds	16,575,088
Do. do.	value	$618,485
Alum	pounds	39,217,725
Do.	value	$803,165
Borax	pounds	3,692,443
Do.	value	$277,233
Bromine	pounds	404,690
Do.	value	$114,752
Phosphorus	pounds	56,292
Do.	value	$29,271
Castor oil	gallons	893,802
Do.	value	$790,741
Stearic acid candles	pounds	18,363,066
Do. do.	value	$2,281,600
Oleic acid soap	pounds	33,058,411
Do. do.	value	$1,707,969
Other hard soaps	pounds	378,743,627
Do. do.	value	$18,299,350
Soft soap	pounds	34,494,100
Do.	value	$358,280
Glycerine	pounds	7,117,825
Do.	value	$961,477
Nitroglycerine	pounds	3,039,722
Do.	value	$1,830,417
Manufactured manures	tons	727,453
Do. do.	value	$19,921,400
Dry colors	pounds	67,482,415
Do.	value	$4,086,821
White lead	pounds	123,477,890
Do.	value	$8,770,699
Other salts of lead	pounds	11,375,466
Do. do.	value	$758,680
Ground barytes	tons	19,165
Do. do.	value	$371,829
Zinc oxide	pounds	20,121,761
Do.	value	$766,337
Acetate of lime	pounds	6,593,009
Do. do.	value	$156,892
Potash and pearlash	pounds	4,571,671
Do. do.	value	$232,643
Soda	pounds	40,259,938
Do.	value	$866,560
Sulphur	pounds	1,200,000
Do.	value	$21,000
Sulphuric acid	pounds	308,765,432
Do. do.	value	$3,661,876
Glucose	pounds	151,830,435
Do.	value	$4,551,212
All other products	value	$44,946,831
Total value of all products		$117,407,054

THE MANUFACTURE OF IRON AND STEEL.

THE Tenth Census work, under this head, was intrusted to Mr. James M. Swank, than whom there was none better to handle it. Concerning the method of his work, he says, in his report to the Superintendent: The products of the blast furnaces embrace pig iron and a few furnace castings; the products of the rolling mills embrace all rolled iron, and such other finished iron articles, whether rolled or hammered, as a few of the mills make a specialty of producing; the products of the steel works embrace steel of every description in its crude state, and finished steel in various forms, whether rolled or hammered; the products of the forges embrace blooms made from pig and scrap iron; and the products of the bloomaries embrace blooms and hammered bar iron made directly from the ore. The branches of the American iron and steel industries which are here enumerated may for convenience be termed the *productive* branches of those industries, in contradistinction to such *reproductive* branches as foundries, machine shops, anchor works, chain works, pipe and tube works, nut and bolt works, wire works, tack factories, etc., the collection of the statistics of which branches has been made directly by the Census Office. The productive branches above mentioned include all which produce iron and steel from raw materials, and, with the exception of iron foundries, all which produce iron and steel by what may be termed secondary operations. Iron foundries could not be embraced in the scope of this report because of their close association with machine shops and other reproductive branches, which are so extensive and varied and so infinitely ramified that no statistical machinery other than that of the Census Office itself could justly deal with them.

Some assurance may be desired by the public that the statistics which relate to the blast furnaces, rolling mills, steel works, and forges and bloomaries have been faithfully collected. An explanation of the manner in which these statistics have been obtained will probably satisfy this natural desire. The American Iron and Steel Association has for years compiled at stated intervals a complete directory to all the iron and steel works above mentioned, embodying a detailed description of each establishment, the character of its product, the name and post-office address of its owners, its exact geographical location, etc. Through the co-operation of the Association with the plans of the Census Office a carefully revised edition of this directory was prepared and published a few weeks previous to the beginning of the Census year. Special efforts were made after the publication of this edition to ascertain any changes or additions that might have taken place while it was passing through the press, and this supplementary work was continued until exact information concerning the location, ownership, and character of every establishment existing at the beginning of the Census year is believed to have been obtained. With a complete list in my possession of all the iron and steel works in the country whose statistics I had been requested to collect, the next step was to send, on the 1st day of June, 1880, to each company or firm or individual owning or controlling these works a schedule of interrogatories which had been prepared by the Census Office, accompanied by a circular letter over my signature requesting prompt answers, and explaining the nature and importance of the inquiry which the Census Office had authorized to be made. Special stress was placed in this letter upon the provision in the law authorizing the Tenth Census which specified that any information contained in the schedules returned to the officers of the census should not be disclosed, except to superior officers. The result has been very gratifying. A large majority of the schedules were filled up and returned with reasonable promptness. Others were delayed from various causes, so that a second circular letter and protracted correspondence and personal visits became necessary. In extreme cases the aid of the telegraph was called into requisition. In only one case were coercive measures resorted to, and in only one other case was desired information withheld. That full answers to all interrogatories were not insisted upon in this latter case is due solely to lack of time, the final refusal to furnish information having been made too late to admit of further delay in closing the statistical tables for the country. With this single exception full replies to all the interrogatories were made by the owners, lessees or trustees of all the iron and steel works covered by the schedules, and the results were summarized and presented to the country in my preliminary report, dated April 1, 1881, exactly ten months after the inquiry was undertaken.

In the final report which is herewith submitted the statistics which have been obtained are arranged by states, by counties, by processes, and by products. The tables have been made as compact as was consistent with clearness, comprehensiveness, the gratification of the natural pride of locality, and the object of all true statistical research, which is the accumulation of useful information. To assist those who have not the time or the inclination to study the complete tables, the leading facts established by them have been presented a second time in condensed tables and in connection with explanatory comments. After presenting the results of the census of 1880 I have deemed it best, after careful deliberation, and with your approval, to supplement them with a brief historical sketch of the manufacture of iron and steel in all ages, and with a more elaborate sketch of the growth of the iron and steel industries of our own country from the earliest settlements to the present time. A knowledge of the world's iron history must be regarded as forming part of a useful education in an age like this, which is so proverbially identified with a liberal use of iron and steel; while a knowledge of our own iron history is essential to a full understanding of the causes of our national development. To know what the iron and steel industries have accomplished for our own country is a patriotic duty; to know something of their small beginnings and of the humble circumstances which surrounded the pioneers who planted them and their sons who struggled to sustain and extend them is a matter of patriotic pride. The greatness and the prominence of our country to-day in the production of iron and steel in large quantities and by scientific methods could in no other way be so satisfactorily exhibited as by affording the opportunity for a comparison of these magnificent results with the primitive methods and the meager results which characterized these industries in "good old colony times," or even a few years ago.

Finished steel products.	*Bessemer steel.*	*Open-hearth steel.*
	Tons.	*Tons.*
Rails	741,475	9,105
Bars	76,710	43,296
Rods	49,064	1,134
Shapes	557	80
Sheets	....	1,700
Plates	1,475	11,034
Other forms	20,615	20,794
Total finished products	889,896	93,143

The item of muck bar is an unavoidable duplication, as it reappears as finished iron to be counted a second time.

In the Bessemer and open-hearth steel works of the country the preceding finished products were produced in 1880.

In the Census year 1870 the production of Bessemer steel finished products was only 19,403 tons. No open-hearth steel products are reported for that year. The quantity of Bessemer steel ingots produced in the Census year 1880 was 985,208 tons, and the quantity of open-hearth steel ingots was 84,302 tons. No statistics of ingots produced in 1870 are available for comparison. It will be observed that a larger quantity of finished open-hearth steel products was produced in 1880 than of ingots, which is probably due to the carrying over of ingots from the preceding year and to importations during the Census year. The Bessemer steel ingots produced in 1880 are in excess of the finished products. The increase in the production of crucible steel finished products in the decade between 1870 and 1880 was from 28,069 tons to 70,319 tons, or 151 per cent. The production of crucible steel ingots in 1880 was 76,201 tons. The production of blister steel and of steel made by other minor processes was only 2,285 tons in 1870 and 4,956 tons in 1880, and it is not likely to increase in the future. There was a decrease of 35 per cent. in the production of the forges and bloomaries from 1870 to 1880, or from 110,808 tons to 72,557 tons. This decrease is due to the general substitution of improved processes for the forges and bloomaries of our earlier iron history, and it would have been much greater in the decade mentioned if the improved American bloomary, so largely used in Northern New York, had not contributed its large product to swell the production of 1880.

Raw Materials.—The following table presents the quantities of mineral products used by the iron and steel works in 1880:

Works.	*Iron ore.*	*Limestone.*	*Anthracite Coal.*	*Bituminous Coal.*	*Coke.*
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*
Blast furnaces	7,256,684	3,169,149	2,615,182	1,051,753	2,128,255
Rolling mills	363,959	...	526,126	3,915,377	14,834
Bessemer and open-hearth steel works	7,327	...	140,458	465,655	104,980
Crucible steel works	2,128	....	40,392	224,657	22,791
Forges and bloomaries	79,610	....	340	1,613	6,695
Total	7,709,703	3,169,149	3,322,498	5,659,055	2,277,555

Of the iron ore and limestone given in the table, at least one-half was purchased from independent producers; of the anthracite coal, nearly all was so purchased; and of the bituminous coal and coke, fully two-thirds was so purchased.

The following table shows the quantities of all other leading raw materials used in 1880 in the manufacture of iron and steel:

Works.	*Charcoal.*	*Mill cinder.*	*Pig iron.*	*Old iron rails.*	*Scrap iron.*	*Ore blooms.*	*Pig or scrap blooms.*	*Muck bar purchased.*
	Bushels.	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*
Blast furnaces	53,909,828	354,048	......	......	......	......	......	......

Forges and bloomaries	13,014,361	.....	38,113	...	8,933	.....	.....	......
Total	69,592,091	354,048	2,596,635	708,534	447,078	43,411	49,511	53,754

Works.	*Spiegeleisen.*	*Old steel rails and crop ends.*	*Bessemer steel ingots and blooms purchased.*	*Open-hearth ingots and blooms purchased.*	*Scrap steel.*	*Swedish billets and bars.*	*Other billets and bars.*	*Oil used as fuel.*
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Barrels.*
Blast furnaces								
Rolling mills								
Bessemer and open-hearth steel works	86,138	85,653	42,939	17,713	90,645			
Crucible steel works					19,726	10,410	16,496	
Forges and bloomaries								853
Total	86,138	85,653	42,939	17,713	110,371	10,410	16,496	853

The large consumption of old iron rails and scrap iron in the rolling mills in 1880 was abnormal, and was the result mainly of the great scarcity of pig iron which followed the sudden revival of a demand for iron and steel products in the summer of 1879.

Relative Rank in Production of the States.—The relative rank in production of all the states and territories which produced iron or iron and steel in 1870 and in 1880 is given in the following table:

States.	*Production, 1880.*	*Rank.*	*States.*	*Production, 1870.*	*Rank.*
	Tons.			*Tons.*	
Pennsylvania	3,616,668	1	Pennsylvania	1,836,808	1
Ohio	930,141	2	Ohio	449,768	2
New York	598,300	3	New York	448,257	3
Illinois	417,967	4	New Jersey	115,262	4
New Jersey	243,860	5	Maryland	95,424	5
Wisconsin	178,935	6	Missouri	94,890	6

North Carolina	439	31	Nebraska		
District of Columbia	264	32	Texas		
South Carolina			District of Columbia		
Total	7,265,140		Total	3,655,215	

Twelve states made over 100,000 tons each in 1880. Pennsylvania, which for more than a hundred years has been the leading iron-producing state in the Union, made in 1870 a fraction over 50 per cent. of the total product, and in 1880 it made a fraction under 50 per cent. At both periods its prominence in the production of iron and steel was virtually the same. From 1870 to 1880 it increased its production 97 per cent., or from 1,836,808 tons to 3,616,668 tons. Ohio was the second state in prominence in 1870, and it held the same rank in 1880. In the former year it produced 449,768 tons, and in 1880 it produced 930,141 tons, an increase of 107 per cent. The third state in prominence in 1870 was New York, and it maintained this rank in 1880, but its growth fell far below that of its two sister states above mentioned. It 1870 it produced 448,257 tons, and in 1880 it produced 598,300 tons, an increase of 33 per cent. New Jersey was fourth in rank in 1870, producing 115,262 tons, but it was fifth in 1880, although in that year it produced 243,860 tons, an increase of 112 per cent. The fourth place in 1880 was taken by Illinois, which produced in 1870 only 25,761 tons, while in 1880 it produced 417,967 tons, an increase of 1,522 per cent.—the most marvelous in the history of the country. Maryland ranked fifth in 1870, producing 95,424 tons in that year, while in 1880 it produced only 110,934 tons, an increase of 16 per cent., causing it to drop to the twelfth place. The sixth state in rank in 1870 was Missouri, with a production of 94,890 tons, which was increased to 125,758 tons in 1880, or 33 per cent., giving it the tenth place in that year. The seventh state in rank in 1870 was Kentucky, but it fell to the eleventh place in 1880, increasing its production from 86,732 tons to 123,751 tons, or 43 per cent. Michigan ranked eighth in 1870, and in 1880 its rank was the same, its production increasing in the ten years from 86,679 tons to 142,716 tons, or 65 per cent. Massachusetts was ninth in rank in 1870, and it held the same rank in 1880, increasing its production from 86,146 tons to 141,321 tons, or 64 per cent. Of the New England states, Massachusetts shows the greatest actual growth in the ten years. West Virginia was tenth in the list in 1870 and seventh in 1880, increasing its production from 72,337 tons to 147,487 tons, or 104 per cent. Wisconsin was twelfth in rank in 1870, but passed to the sixth place in 1880, increasing its production from 42,234 tons to 178,935 tons, or 324 per cent. This state ranks next to Illinois among the western states.

Of the states which made less than 100,000 tons in 1880, several gave promise in that year that they would soon reach an annual production of at least this quantity. Indiana narrowly escaped accomplishing this result, increasing its production from 64,148 tons in 1870 to 96,117 tons in 1880, or 50 per cent. In the ten years from 1870 to 1880 Alabama increased from 7,060 tons to 62,986 tons, or 792 per cent. Georgia increased from 9,634 tons to 35,152 tons, or 265 per cent. Tennessee increased from 34,305 tons to 77,100 tons, or 125 per cent. Delaware increased from 8,307 tons to 33,918 tons, or 308 per cent. Virginia increased from 37,836 tons to 55,722 tons, or 47 per cent. All the states which made iron or steel in 1870 increased their production in 1880, except Maine, North Carolina, and South Carolina. The greatest percentage of increase in the decade was in the western states, beginning with Ohio, and in the southern states, beginning with Delaware, but the greatest actual increase was in Pennsylvania.

Geographical Distribution of all Products.—The whole territory of the United States may be regarded as comprising four grand divisions—the eastern states, the southern states, the western states and territories, and the Pacific states and territories. Assuming that the eastern states comprise all of the states lying north of Delaware and east of Ohio, that the southern states comprise all of the late slaveholding states except Missouri, and that the other divisions require no explanation, we present the following comparative statement of the development of our iron and steel industries in each of the grand divisions in the census year 1880.

Grand divisions.	*Number of establishments.*	*Capital invested.*	*Hands employed.*	*Wages paid.*	*Tons produced.*	*Value of all products.*
Eastern states	556	$149,507,461	82,842	$34,361,660	4,671,808	$192,696,010
Southern states	218	29,145,830	20,595	6,261,344	649,153	25,353,251
Western states and territories	224	50,755,990	36,663	14,542,587	1,912,689	76,933,686
Pacific states and territories	7	1,562,603	878	311,194	31,490	1,574,738
Total United States	1,005	$230,971,884	140,978	$55,476,785	7,265,140	$296,557,685

In the decade between 1870 and 1880 the iron industry was extended into many new states and territories. Twenty-five states were engaged in the manufacture of iron or iron and steel in 1870. Thirty states, the District of Columbia, and Wyoming Territory made iron in 1880, and about the half of these also made steel. South Carolina made iron in 1870, but does not appear in the statistics for 1880. Its total production in 1870 did not, however, aggregate 500 tons. The iron industry in this state has been practically abandoned. Between 1870 and 1880 three states for the first time engaged in the manufacture of iron, namely, Colorado, Kansas, and Nebraska; also two territories, namely, Utah and Wyoming. Utah did not, however, make any iron in 1880. It made a small quantity in each of the years 1874, 1875, and 1876, and will make a larger quantity in the near future. (Since the close of the Census year 1880 Washington Territory has commenced to manufacture pig iron, as have also California and Minnesota. California had previously, since 1868, rolled iron at San Francisco.) Minnesota appears in 1880 among iron-manufacturing states, but its statistics relate only to the preparations that had been made to embark in the business. New Hampshire made iron many years ago, but it does not appear in the statistics for 1870; it re-appears in the tables for 1880. Oregon and Texas each built a blast furnace in the decade preceding the Census year 1870, but they did not make any iron in that year; they appear, however, in the statistics of production for 1880. The District of Columbia once had a blast furnace in operation, but in 1870 it had no iron industry whatever; in 1880 the United States government owned and operated a small rolling mill at the Washington navy-yard. The percentage of total production in 1880 was distributed as follows: Pennsylvania, 50 per cent.; Ohio, 13; New York, 8; Illinois, 6; New Jersey, 3; Wisconsin and West Virginia, each over 2 per cent.; Michigan and Massachusetts, each nearly 2 per cent.; Missouri, Kentucky, and Maryland, each over 1½ per cent.; Indiana over 1 per cent.; Tennessee, about 1 per cent.; and all other states and territories, an aggregate of about 4 per cent.

Centres of Production.—In the following table is presented a view of the principal centres of production of the iron and steel industries of the United States in the Census year 1880. These centres are divided into two classes—the first comprising fifteen counties which produced over 100,000 tons of pig iron, blooms, and finished products, and the second comprising seventeen counties which produced over 60,000 and less than 100,000 tons. Six states are represented in the first class, and eight states in the second class.

The Centre of Total Production.—The geographical centre of total production of the iron and steel industries of the United States is the point at which equilibrium would be established were the country taken as a plane surface, itself without weight but capable of sustaining weight, and loaded with its production of iron and steel, each ton exerting pressure on the pivotal point directly proportioned to its distance therefrom. The centre of production of iron

COUNTIES OF THE FIRST CLASS, PRODUCING OVER 100,000 TONS.

and steel in the United States in the Census year 1880 is found to be at 40° 43′ north latitude, and 79° 20′ longitude west from Greenwich. This point is in Pennsylvania, on the boundary line between Armstrong and Indiana counties, and about 12 miles northeast of Apollo and 12 miles west of Indiana—Laufman & Co.'s rolling mill at Apollo being the nearest iron works. At the centre of production thus ascertained iron has never been manufactured in any form.

Values.—There is a striking disproportion between the values of raw materials and of all products in 1870 and 1880 upon the one hand and the weight of all products in these periods upon the other. The percentage of increase in the values of raw materials and of all products in 1880 over 1870 was 41.13 and 43.12 respectively, while the weight of all products increased 98.76 per cent. The explanation is simple and is twofold. First, the Census year 1870 was a year of high prices, caused partly by an average gold premium throughout the year of about 15 per cent., and partly by other well-known causes. Second, the Census year 1880 was not only a year of lower average prices than 1870, but it may be said to have closed a decade of wonderful mechanical and scientific development in the American iron and steel industries, through which the production of large masses of both crude and finished products was rendered possible.

Geographical Distribution of Special Products.—The various branches of our iron and steel industries have not been equally domesticated in each of the four grand geographical divisions that have been mentioned, and much less can it be said that they are equally at home in any one of the iron-making states or territories. While this statement may embody only a self-evident truth, the full significance of the fact stated is deserving of some consideration. A glance at the statistics for 1880 shows that New England now makes but little pig iron, and that the South makes considerable pig iron and scarcely any rolled iron; that the West has embarked largely in the manufacture of steel by the Bessemer process, while New England cannot boast a single Bessemer establishment, but has preferred the open-hearth process; while New York makes most of the blooms that are made from ore, and Pennsylvania most of the blooms that are made from pig and scrap iron; that Michigan is the leading producer of charcoal pig iron, and now makes no other kind; that West Virginia has developed a remarkably active interest in the manufacture of cut nails; that only five states make Bessemer steel, and two states, Pennsylvania and New Jersey, make nearly all of our crucible steel; and that Pennsylvania has made a greater effort than any other state to manufacture all kinds of iron and steel. A glance, however, at leading geographical characteristics is not sufficient to illustrate the wide diversity of the influences which have affected the local development of our iron and steel industries, and the following details are therefore added.

Pig Iron.—Of 3,781,021 tons of pig iron and direct castings produced in 1880 in 22 states, Pennsylvania made 1,930,311 tons, or 51 per cent.; Ohio, 548,712 tons, or 15 per cent.; New York, 313,368 tons, or 8 per cent.; New Jersey, 157,414 tons, or 4 per cent.; Michigan, 119,586 tons, and Wisconsin, 118,282 tons—each over 3 per cent.; Illinois, 95,468 tons, and Missouri, 95,050 tons—each nearly 3 per cent.; West Virginia, 80,050 tons, or over 2 per cent.; Alabama, 62,336 tons; Maryland, 59,664 tons, and Kentucky, 58,108 tons—each over 1½ per cent.; Tennessee, 47,873 tons, or over 1 per cent.; and all other states and territories, each less than 1 per cent. Anthracite pig iron was produced in Pennsylvania, New York, New Jersey, Massachusetts, and Maryland—the last two states producing but little. Pig iron produced with a mixture of anthracite and coke was made in Pennsylvania, New York, Wisconsin, Illinois, New Jersey, and Maryland. Pig iron produced with bituminous coal and coke was made in Pennsylvania, Ohio, West Virginia, Missouri, Tennessee, Kentucky, Indiana, Illinois, Alabama, Georgia, Virginia, and Maryland. Charcoal pig iron was made in all of the states that made pig iron in 1880, with the exception of Illinois and New Jersey, which used mineral fuel exclusively.

Rolled Iron.—Of 2,353,248 tons of rolled iron of all kinds produced in 29 states and territories in 1880, Pennsylvania made 1,071,098 tons, or 46 per cent.; Ohio, 272,094 tons, or 12 per cent.; New York, 163,538 tons, or 7 per cent.; Illinois, 117,051 tons, and Massachusetts, 109,252 tons—each 5 per cent.; Indiana, 77,880 tons, or over 3 per cent.; West Virginia, 67,437 tons; New Jersey, 66,030 tons; Kentucky, 65,293 tons, and Wisconsin, 60,653 tons—each a little less than 3 per cent.; Maryland, 47,609 tons, or 2 per cent.; Virginia, 35,176 tons, and Delaware, 33,918 tons—each about 1½ per cent.; Tennessee, 25,381 tons, or 1 per cent.; and all other states and territories each less than 1 per cent. Of 466,917 tons of iron rails produced in 1880, Pennsylvania made 34 per cent.; Illinois, 16 per cent.; Ohio, 9 per cent.; Indiana, 8 per cent.; New York, 7 per cent.; Wisconsin, 6 per cent.; Kentucky, 4 per cent.; Kansas and Tennessee, each nearly 3 per cent.; Wyoming Territory, Maryland, and Georgia, each about 2 per cent.; California and Massachusetts, each 1 per cent., and Colorado, West Virginia, and Vermont, each less than 1 per cent. Of the cut nails produced in 1880, Pennsylvania made 30 per cent.; West Virginia, 21 per cent.; Ohio, 14 per cent.; Massachusetts, 10 per cent.; New Jersey and Indiana, each 6 per cent.; Illinois and Kentucky, each 4 per cent., and Tennessee and Virginia, each 2 per cent. New York, Nebraska, and Maine each produced less than 1 per cent., but Nebraska made more nails than New York. The whole number of kegs of cut nails made in the United States in 1880 was 5,056,600, each keg weighing 100 pounds.

Steel Ingots.—The following table shows the states which produced Bessemer, open-hearth, and crucible steel ingots in 1880:

States.	Bessemer steel ingots.	Open-hearth steel ingots.	Crucible steel ingots.
	Tons.	Tons.	Tons.
Connecticut	......	...	2,116
Illinois	253,514	925	130
Kentucky	..	275	75
Massachusetts	......	9,475	140
Missouri	8,409	....	..
New Hampshire	......	4,521	....
New Jersey	....	450	10,492
New York	84,160	.....	2,585
Ohio	82,811	24,712	360
Pennsylvania	556,314	36,944	60,303
Tennessee	..	4,000	..
Vermont	...	3,000	..
Total	985,208	84,302	76,201

Bessemer Steel.—Of the production of 985,208 tons of Bessemer steel ingots in 1880, Pennsylvania made 56 per cent.; Illinois, 26 per cent.; New York, 9 per cent.; Ohio, 8 per cent., and Missouri, less than 1 per cent. Of the production of Bessemer steel rails, Pennsylvania made 55 per cent.; Illinois, 27 per cent.; Ohio, 9 per cent.; New York, 8 per cent., and Missouri and Vermont, each less than 1 per cent. The last-named state had, however, no works for the production of Bessemer steel ingots. At the close of the Census year there were 24 Bessemer converters in the United States, of which six were in Illinois, 2 were in Missouri, 2 were in New York, 2 were in Ohio, and 12 were in Pennsylvania.

Open-hearth Steel.—Of the production of 84,302 tons of open-hearth steel ingots in 1880, Pennsylvania made 44 per cent.; Ohio, 29 per cent.; Massachusetts, 11 per cent.; New Hampshire and Tennessee, each 5 per cent.; Vermont, 4 per cent., and Illinois, New Jersey and Kentucky, each less than 1 per cent. Of the open-hearth steel ingots produced in 1880, only a small quantity was converted into rails, the weight of these being 9,105 tons. At the close of the Census year 1880, there were 37 open-hearth furnaces in the United States, of which 2 were in Illinois, 1 was in Kentucky, 4 were in Massachusetts, 1 was in New Hampshire, 1 was in New Jersey, 10 were in Ohio, 14 were in Pennsylvania, 1 was in Rhode Island, 2 were in Tennessee, and 1 was in Vermont.

Crucible Steel.—Of the production of 76,201 tons of crucible steel ingots in 1880, Pennsylvania made 60,303 tons, or 79 per cent.; New Jersey, 10,492 tons, or 14 per cent.; New

York, 2,585 tons, or over 3 per cent.; Connecticut, 2,116 tons, or under 3 per cent., and Ohio, Massachusetts, Illinois, and Kentucky, an aggregate of less than 1 per cent. Pennsylvania, New Jersey, and Connecticut also unitedly produced 4,956 tons of blister steel and miscellaneous steel products, of which Pennsylvania produced 78 per cent.; New Jersey, 20 per cent., and Connecticut, 2 per cent.

Blooms and Bar Iron from Ore.—The total production of these products in 1880, nearly all of which, however, was in the form of blooms, was 37,633 tons, of which New York produced 84 per cent.; Missouri, 11 per cent.; Tennessee, 2 per cent.; New Jersey and North Carolina, each over 1 per cent., and Pennsylvania, Georgia, and Virginia, an aggregate of less than 1 per cent. Pennsylvania's product was made in a Siemens rotator; that of North Carolina, Georgia, Virginia, and Tennessee, by the old-fashioned Catalan process; that of Missouri, by the Peckham process; while the more considerable product of New York was almost wholly made in American bloomaries—an improvement on the Catalan forge. The very small quantity of bar iron made from ore in 1880 was all made in Virginia, North Carolina, Georgia, and Tennessee bloomaries. It aggregated but little over 1,000 tons.

Blooms from Pig and Scrap Iron.—Of 34,924 tons of blooms of this character made in 1880, Pennsylvania produced 70 per cent.; Maryland and New Jersey, each 10 per cent.; Virginia, 7 per cent.; Georgia, over 1 per cent.; Tennessee, about 1 per cent., and New York and Massachusetts together, less than 1 per cent.

All kinds of Rails.—The production of rails of all kinds in 1880 is given in the following table in connection with the States which produced them. The tonnage of rails produced in 1880 was greater than that of any other rolled product, and was about one-third that of pig iron.

States.	*Iron rails.*	*Bessemer steel rails.*	*Open-hearth steel rails.*	*Total production of all kinds of rails.*
	Tons.	*Tons.*	*Tons.*	*Tons.*
California	6,000			6,000
Colorado	4,500			4,500
Georgia	8,673			8,673
Illinois	72,802	201,186		273,988
Indiana	38,600			38,600
Kansas	13,500			13,500
Kentucky	18,000			18,000
Maryland	9,280			9,280
Massachusetts	5,600			5,600
Missouri		5,100		5,100
New York	34,305	57,870		92,175
Ohio	41,838	66,480		108,318
Pennsylvania	157,213	409,339	3,360	569,912
Tennessee	12,800		2,745	15,545
Vermont	1,500	1,500	3,000	6,000
West Virginia	3,333			3,333
Wisconsin	29,552			29,552
Wyoming Territory	9,421			9,421
Total	466,917	741,475	9,105	1,217,497

Pennsylvania made 47 per cent. of the total production of rails; Illinois, 23 per cent.; Ohio, 9 per cent.; New York, 8 per cent.; Indiana, 3 per cent.; Wisconsin, 2 per cent.; Kentucky, Tennessee, and Kansas, each 1 per cent.; and all other states and Wyoming Territory, each less than 1 per cent.

Labor.—In the following table is presented a summary of the hands employed, hours of labor required, and wages paid in the iron and steel industries of the United States in 1880, compared as far as possible with like statistics for 1870:

United States.	*Males above 16 years.*	*Males below 16 years.*	*Females above 15 years.*	*Females below 15 years.*	*Total hands employed.*	*Average number of hours of labor per week.*	*Average day's wages for a skilled mechanic.*	*Average day's wages for an ordinary laborer.*	*Total amount paid in wages.*
Grand total in 1880	133,203	7,709	45	21	140,978	65	$2 59	$1 24	$55,476,785
Grand total in 1870	75,037	2,436	82		77,555				$40,514,981
Percentage of increase in 1880	77.52	216.46			81.78				36.93
Percentage of decrease in 1880			45.12						

Hands Employed and Wages Paid.—The total number of hands employed in 1880 was 140,978. Of the whole number, 133,203 were men above 16 years old, and 45 were women above 15 years old; 7,709 were boys below 16 years old, and 21 were girls below 15 years old. The remarkably small number of 66 women and girls employed in the manufacture of iron and steel in 1880 will not escape notice, and is exceedingly creditable to our American civilization. The comparatively small number of boys employed is also worthy of notice. The 140,978 persons who were employed in 1880 were paid $55,476,785 as wages, or an average of $393.51 for the year for each person. The average daily wages of skilled labor were $2.59; of unskilled labor, $1.24. The highest average daily wages of skilled labor were paid in Rhode Island, Colorado, and Wyoming Territory—$4; the lowest in North Carolina—$1.25. The highest average daily wages of unskilled labor were paid in Wyoming Territory—$2; the next highest in Colorado and California—$1.75; the lowest in North Carolina—54 cents. It may be remarked of North Carolina that its iron industry in 1880 was wholly confined to the use of the primitive ore bloomary, and that the labor employed was largely that of colored men. The average wages paid in the four grand divisions were as follows: Eastern states—skilled, $2.70; unskilled, $1.21: southern states—skilled, $2.09; unskilled, $1.03: western states—skilled $2.70; unskilled, $1.31: Pacific states and territories—skilled, $3.50; unskilled, $1.75. It is necessary to explain that the figures of "hands employed" and "wages paid" refer to the labor directly employed at the various iron and steel works of the country, and in the mining and other operations conducted in direct connection with these works. They do not include the labor employed in independent and often remote mining operations which supply our iron and steel industries with ore and coal and other raw materials. (The statistics of these operations are being compiled by other hands.) Nor do they include any considerable part of the labor employed in the transportation of raw materials from the sources of production to the places of consumption. If the "hands employed" and "wages paid" in these various contributory channels were added to the figures given in our tables, the total number of persons directly supported by our iron and steel industries in 1880, and the total amount of wages paid to them, would be largely increased and probably doubled.

Hours of Labor.—The average number of hours of labor required per week in the iron and steel works of the United States in 1880 was 65. This gives a little less than 11 hours for each working day of the week. The average is high, in consequence of the general although not universal practice of operating blast furnaces seven days in the week, and in consequence also of the usual practice at blast furnaces, rolling mills, and steel works of working twelve-hour turns or shifts, which practice may require the presence of the workmen for that length of time, although they may not be, and generally are not, so long actually employed. The state which presents the highest average is Vermont—75 hours, while the lowest average in any of the states is found in Delaware and Kansas—56 hours. A still lower average is found in the District of Columbia—54 hours.

A Year of Prosperity.—The Census year 1880, which it may here be stated extended from the 1st of June, 1879, to the 31st of May, 1880, was a year of exceptional prosperity for the iron and steel industries of this country. The coincidence is notable that it exactly covered the period which has been designated as "the boom," during which all iron and steel products were in such great demand by American consumers that the iron and steel works of the country were unable to meet it. The home supply was supplemented by large importations, and even these could not be made with sufficient rapidity to meet the urgent wants of consumers. Prices were high throughout the whole year, but fluctuated violently. Labor was in demand, wages were promptly paid, and disputes between workingmen and their employers were rare and unimportant. The Census year 1880 will long be memorable as a year of general prosperity for our iron and steel industries, and as one which witnessed the beginning and the end of a most exciting epoch in their history.

SUMMARY OF IRON AND STEEL STATISTICS FOR 1880.

THE complete statistical results of the census of the blast furnaces, rolling mills, steel works, forges, and bloomaries in the United States in the Census year 1880 will be found in the accompanying tables. These results are here summarized, and as far as possible compared with results established by the census of 1870. The net ton of 2,000 pounds is invariably used in the tables and summary.

Grand Summary.—In the following table is presented a summary of the more important results established by the census of 1880, compared with similar results established by the census of 1870.

furnaces in 1870 was 574, and in 1880 it was 681, an increase of 18.64 per cent.

The following exhibit shows the number and capacity of the blast furnaces, rolling mills, steel works, forges, and bloomaries at the close of the Census year 1880:

Blast furnace establishments	490
Completed blast furnaces	681
Rolling mill establishments	324
Puddling furnaces, each double furnace counting as two furnaces	4,319
Rotary puddling furnace (Sellers)	1
Danks puddling furnaces	19
Hammers in iron rolling mills	239
Heating furnaces	2,105
Trains of rolls in iron rolling mills	1,206
Nail machines	3,775
Steel works	73
Bessemer steel converters	24
Open-hearth steel furnaces	37
Pot holes for crucible steel	2,691
Trains of rolls in steel works	136
Hammers in steel works	219
Forges and bloomaries	118
Forge and bloomary fires	495
Siemens rotator	1
Hammers in forges and bloomaries	141
Daily capacity of blast furnaces, in tons	19,248
Daily capacity of iron rolling mills, in tons	16,430
Daily capacity of Bessemer steel converters, in tons	4,467
Daily capacity of open-hearth steel furnaces, in tons	827
Daily capacity of Bessemer and open-hearth steel rolling mills, in tons	5,223
Daily capacity of crucible steel works, in tons	445
Daily capacity of forges and bloomaries, in tons	520

Capital.—The whole amount of capital invested in 1880 in the iron and steel industries in the United States which are embraced in this report was $230,971,884; in 1870 it was $121,772,074; increase $109,199,810, or 89.68 per cent. Of the whole amount invested in 1880, Pennsylvania's share was 46 per cent.; that of Ohio was 11 per cent.; that of New York was 9 per cent.; and that of Missouri and New Jersey was each 4 per cent. No one of the other states shows an investment greater than 3 per cent.

Total Production.—The total production of the iron and steel works of the United States in 1880 was 7,265,140 tons; in 1870 it was 3,655,215 tons; increase, 3,609,925 tons, or 98.76 per cent. The phrase "total production" includes the products of all the various processes or operations, although in ascertaining most of these products there

United States.	*Number of establishments.*	*Amount of capital (real and personal) invested.*	*Value of all materials used.*	*Value of all products made.*	*Weight of all products (tons).*	*Total hands employed.*	*Total amount paid in wages.*
Total in 1880	1,005	$230,971,884	$191,271,150	$296,557,685	7,265,140	140,978	$55,476,785
Total in 1870	808	$121,772,074	$135,526,132	$207,208,696	3,655,215	77,555	$40,514,981
Per centage of increase in 1880	24.38	89.68	41.13	43.12	98.76	81.78	36.93

Establishments.—The whole number of establishments that were engaged in the manufacture of iron and steel in 1880, or were built or partly built to engage in their manufacture, was 1,005. In 1870 it was 808. The increase in the ten years was 24.38 per cent. By the term "establishment" is meant a single manufacturing enterprise, or an aggregation of enterprises of like character under one management. Thus one establishment may embrace two rolling mills, and another may embrace four blast furnaces. If, however, a firm or company operates two or more enterprises of different character, each of these enterprises is classed as a separate establishment. A comparison of the number of the various establishments in 1870 and 1880 is given below.

	1870.	1880.
Blast furnace establishments	386	490
Rolling mill establishments	310	324
Steel works	30	73
Forges and bloomaries	82	118
Total	808	1,005

The size and capacity of the establishments were much greater in 1880 than in 1870. As the capacity of blast furnaces only was given in 1870, no complete data are available for a comparison of the capacity of all the works in the two periods. The daily capacity of the blast furnaces in 1870 was 8,357 tons of pig iron, and in 1880 it was 19,248 tons, an increase of 130.32 per cent. The number of blast

is a necessary duplication of the tonnage of raw or comparatively raw materials already stated. Thus rolled iron is mainly produced from pig iron. As the method of stating the production of 1880 is the same that was observed in 1870, a comparison of the results for both periods cannot be open to objection.

Production in Detail.—The following table shows the production of each branch of our iron and steel industries in 1870 and 1880, with the percentage of increase or decrease in the latter year:

Iron and steel products.	*Census year* 1870.	*Census year* 1880.	*Percentage of increase* in 1880.	*Percentage of decrease* in 1880.
	Tons.	*Tons.*		
Pig iron and castings from furnace	2,052,821	3,781,021	84	. . .
All products of iron rolling mills	1,441,829	2,353,248	63	.
Bessemer steel finished products	19,403	889,896	4,486	.
Open-hearth steel finished products	. . . .	93,143	. . .	.
Crucible steel finished products	28,069	70,319	151	.
Blister and other steel	2,285	4,956	117	. . .
Products of forges and bloomaries	110,808	72,557	. . . .	35
Total	3,655,215	7,265,140	98.76	. .

Of the pig iron produced in the census year 1880, there were produced with charcoal and cold blast, 79,613 tons; with charcoal and hot blast, 355,405 tons; with anthracite, 1,112,735 tons; with bituminous coal and coke, 1,515,107 tons; and with mixed anthracite and coke, 713,932 tons. The furnace castings amounted to only 4,229 tons. The total production was 3,781,021 tons, of which 12,875 tons were spiegeleisen. In the following table is presented a comparative statement of iron rolling mill products in 1870 and 1880:

Iron rolling mill products.	1870.	1880.
	Tons.	*Tons.*
Bar iron	488,834	663,211
Rod iron	26,087	145,626
Nail plate iron converted into cut nails	230,225	252,830
Boiler-plate iron	54,477	89,560
All other plate iron		94,749
Sheet iron	74,753	94,992
Iron rails	531,605	466,917
Skelp iron	2,217	128,321
Muck bar made for sale to other works	33,631	64,469
Structural iron	. . .	96,810
Rolled iron axles	. . .	2,630
Hoop iron	. . .	96,843
Fish-plates and miscellaneous forms of rolled iron	. . .	48,345
Railroad spikes, horseshoes, etc., made by iron rolling mills from rolled iron not included above	. . .	82,358
Hammered axles	. . .	21,884
Forgings	. . .	3,703
Total	1,441,829	2,353,248

STATISTICS OF THE AMERICAN IRON TRADE IN 1881.

We are indebted to the valuable compilations of Mr. James M. Swank, in his report to the American Iron and Steel Association, for the following summary of the American iron trade during 1881, and the opening months of 1882:

The prosperity which was restored to the American iron trade in the spring of 1879, and which was continued in 1880, attained its highest development in 1881. This was the most prosperous year American iron and steel manufacturers have ever known. The demand for their products was very active all through the year, production was greatly stimulated, and prices were in the main satisfactory. It was notably a year of *uniform* prosperity; not characterized by spurts and reactions, but by a steady demand at good prices in all branches, except in some pig iron districts in the summer months, when the demand for pig iron weakened slightly in consequence of the large quantities of foreign pig iron that were pressed upon the market. From this local depression there was, however, a complete recovery in the autumn. With this temporary variation in the general situation, the demand for all forms of iron and steel was active and even urgent all through the year. The production was far in advance of that of any previous year, and it all passed into consumption. The stocks on hand at the beginning of the year were also consumed. Never has there been a healthier business done by our iron and steel manufacturers than they did in 1881. The year ended with more orders on their books than were entered when it began, and at prices that were generally higher than were then obtained.

The following table shows the average monthly quotations, for each month of the year 1881, for iron rails per gross ton at the mills in Eastern Pennsylvania; for Bessemer steel rails per gross ton at the works in Pennsylvania; for No. 1 anthracite foundry pig iron per gross ton delivered in Philadelphia; and for best refined roll bar iron per pound at the stores in Philadelphia. The quotations which we give express the average of weekly quotations for the year, but it is fair to add that the latter may have been shaded in actual sales. In all our tables of prices we claim simply to use due caution in giving market quotations, which, as is well known, do not always represent bottom prices.

Months.	*Iron rails. Per ton.*	*Steel rails. Per ton.*	*Pig iron. Per ton.*	*Bar iron. Per lb.*
January	$46.50	$60.00	$25.00	2.5 cts.
February	47.50	62.00	25.50	2.5 cts.
March	47.00	62.50	26.00	2.5 cts.
April	47.00	63.00	25.00	2.5 cts.
May	46.50	63.00	25.00	2.4 cts.
June	46.50	60.00	24.00	2.4 cts.
July	46.75	61.00	24.50	2.45 cts
August	47.00	60.00	24.50	2.55 cts.
September	47.75	60.00	25.25	2.7 cts.
October	47.50	60.00	25.50	2.8 cts.
November	47.75	61.50	25.75	2.9 cts.
December	48.00	60.00	26.00	2.9 cts.

As we have said, and as the above table establishes, prices were generally higher at the close of the year than at its beginning. Yet there were not wanting indications in December that a decreased demand and lower prices might soon be expected. There had been a flurry in railroad stocks, resulting from over-speculation, short crops, a shrinkage in freights, and reduced rates, and clearly pointing to greater caution in the immediate future in railroad investments. This flurry was significant of an early decline in the demand for rails and other railway materials for new roads, while the short crops and the consequent shrinkage in freights and struggle for freight traffic were equally significant of an early spasm of economy in the purchase of rails and other materials for existing roads. These indications of a decreased demand for railway supplies became manifest, too, at the moment when it became generally recognized that the ability of the country to supply itself with steel rails had been greatly increased. The elements of weakness in steel rails were plainly visible, and as steel rails had been largely instrumental in holding up the prices of other iron and steel products it was clearly to be inferred that when they would decline in price the market would weaken at almost every point from this cause alone if from no other.

The indications of last December have been only too fully verified. The demand for most iron and steel products has sensibly slackened, and prices have very generally sympathized with this decline. Steel rails especially have experienced a remarkable fall in price. At the middle of December they were quoted at $60, while the price at the end of the month was $58. At the middle of May orders were easily placed at $50, a decline of $10 in five months. Iron rails were quoted at $48 at the close of December, and in May they had fallen to $44. Pig iron fell about one dollar and a half per ton from December to May, except for best brands of No. 1 anthracite foundry. The prices of bar iron and nails have recently sympathized with the downward tendency in the prices of the other articles above named. In December the prices of bar iron at the stores in Philadelphia was 2.9 cents per pound, and at the middle of May it was 2.6 cents. The quoted price of nails at Pittsburg in December was $3.30 per keg, and at the middle of May it was $3.

Of the demand for all iron and steel products in May, when this report is written, it is certainly correct to say that it is not satisfactory. The situation at the present moment is far from encouraging, and in some respects is discouraging. The heavy importations of iron and steel that have been made since the beginning of the year exercise an unfavorable influence upon the market. Pig iron and iron and steel rails have been brought into the country in large quantities at a time when we are abundantly able to supply the home demand from our own works. The floods in the Mississippi and the cold and wet spring have had an unfavorable effect on all business. The shortness of the harvest last year has increased the cost of the necessaries of life, and labor is consequently unwilling to accept any reduction in its wages; in some instances it even demands higher wages. Through a decline in our exports of agricultural products the balance of trade is being rapidly turned against us, which means less buoyancy and ease in the general financial situation. The whole trade of the country, with which, of course, the iron trade must sympathize, is to-day undergoing a moderate reaction from the remarkable activity of the last three years. Such are the influences that affect unfavorably the American iron trade to-day. We may hope, however, that the prevailing low prices of iron and steel will ere long, especially if we should have a favorable harvest, infuse greater activity than now exists into all branches of our iron and steel industries. But under no circumstances that can possibly happen will this year's business be as prosperous as that of last year. The fact may as well be accepted philosophically, if reluctantly, that we have again entered upon a cycle of low prices for iron and steel. We do not think this result is greatly to be regretted if we consider that some remedy is needed to check our enormous importations of these articles. Were these importations to be continued for a few years longer upon the scale which has existed during the past three years our iron and steel industries would suffer the most serious consequences, which would be felt for a generation. Iron and steel are not consumed like bread or worn out like clothing. Every ton of these metals that is imported stays here and permanently displaces a ton of the same product that might be made at home. Even when iron and steel "wear out" in one form they reappear in another. As a matter of fact, however, the iron and steel rails and some other iron and steel articles that have recently been imported will last a long time in their present forms. Importations of iron and steel had, therefore, to be checked in some way if we would not prevent the future prosperity of the domestic producers of these articles. Low prices may be a distasteful remedy for our manufacturers and their workmen, and for iron ore producers, to apply to the evil mentioned, but no other remedy is available. It is a pity that good use was not made of it a few months ago.

The Production of 1881 Compared with that of 1880.—The production of the leading articles of iron and steel in the United States in 1881 is given in the following table in comparison with the production of the same articles in 1880. With the exception of iron rails our production of every article enumerated was larger in 1881 than in 1880 or in any other year of our history.

Products.	*Net tons.*	
	1880.	1881.
Pig iron	4,295,414	4,641,564
All rolled iron, including nails and excluding rails	1,838,906	2,155,346
Bessemer steel rails	954,460	1,330,302
Open-hearth steel rails	13,615	25,217
Iron and all other rails	493,762	488,581
Kegs of cut nails and spikes, included in all rolled iron	5,370,512	5,794,206
Crucible steel ingots	72,424	89,762
Open-hearth steel ingots	112,953	146,946
Bessemer steel ingots	1,203,173	1,539,157
Blooms from ore and pig iron	74,589	84,606

Our Imports of Iron and Steel from 1871 to 1881.—The foreign value of the imports into the United States from all countries of iron and steel and manufactures thereof, including tin plates, has been as follows in the eleven years from 1871 to 1881.

Years.	*Values.*	*Years.*	*Values.*
1871	$57,866,299	1877	$19,874,399
1872	75,617,677	1878	18,013,010
1873	60,005,538	1879	33,331,569
1874	37,652,192	1880	80,443,362
1875	27,363,101	1881	61,555,078
1876	20,016,603		

The foregoing table of values includes *all* our importations of iron and steel and manufactures thereof, of every description whatever. In the following table we give the quantities of all the *leading* iron and steel products imported into the United States from all countries in the eleven years from 1871 to 1881, except steel in ingots, bars, sheets, and wire, for which statistics of values only are obtainable. To be more specific, the figures below embrace only our importations of pig, bar, boiler, band, hoop, scroll, and sheet iron, iron and steel rails, castings, old and scrap iron, anchors, cables and chains, and tin plates.

Years.	*Net tons.*	*Years.*	*Net tons.*
1871	1,278,965	1877	236,777
1872	1,325,034	1878	236,434
1873	717,761	1879	862,382
1874	337,845	1880	2,112,341
1875	268,477	1881	1,321,767
1876	228,716		

The importations in 1880 were the largest in our history. The decline in 1881 was about $19,000,000 in the value of all iron and steel imports, and about 800,000 net tons in the quantities of the leading articles just enumerated. The following table gives, in net tons, the details of our imports in the last six years of the leading articles above mentioned.

Commodities imported.	1876.	1877.	1878.	1879.	1880.	1881.
Pig iron	83,072	66,861	74,484	340,762	784,968	520,162
Castings	35	53	69	61	114	632
Bar iron	26,653	30,531	33,346	48,840	126,987	47,820
Boiler iron	15	2	1	91	168	290
Band, hoop, etc.	144	150	7	1,031	25,322	827
Railroad bars of iron	287	. .	.	19,090	132,459	137,013
Railroad bars of steel	. . . .	35	10	25,057	158,230	249,309
Sheet iron	1,758	1,184	838	5,459	11,412	8,121
Old and scrap iron	14,149	10,903	6,225	248,429	694,273	151,107
Anchors, cables, etc.	1,863	1,073	646	892	1,393	1,520
Tin plates	100,740	125,976	120,808	172,760	177,015	204,066
Total	228,716	236,777	236,434	862,382	2,112,341	1,321,767

The rapid and unprecedented increase in our iron and steel imports in 1879 and 1880 has been sufficiently explained in preceding annual reports. The same causes which produced this increase may be credited with our large importations of iron and steel rails in 1881. The country could not supply its own pressing need of these articles. The large quantities of pig iron imported in 1881 were not, however, due to a scarcity of domestic pig iron, but to the cheapness, notwithstanding the duty, of the foreign article. There was a noticeable decline in 1881 of importations of old and scrap iron.

Our Imports of Iron and Steel in the First Quarter of 1882.—In the following table we give, in net tons, the imports during the first three months of 1882 of the leading articles of iron and steel above mentioned, with the values added.

Commodities imported.	*Net tons.*	*Values.*
Pig iron	90,333	$1,547,501
Castings	306	19,169
Bar iron	21,338	869,527
Boiler iron	31	1,036
Band, hoop and scroll iron	180	6,779
Railroad bars or rails, of iron	21,150	555,253
Railroad bars or rails, of steel	51,992	1,558,772
Sheet iron	1,949	107,831
Old and scrap iron	65,614	1,094,661
Anchors, cables and chains	481	45,804
Tin plates	57,262	4,410,446
Total	319,636	$10,216,779

The figures given in this table show a larger aggregate importation of the articles mentioned than occur in the corresponding period of 1881, and at first sight indicate no diminution in the volume of imports this year as compared with last year. But the demand for iron and steel has slackened and prices have fallen in this country since the orders were sent abroad for the articles which were imported in the first quarter of this year, and further importations during the year must show a decline.

Our Imports of Iron Ore in 1879, 1880, and 1881.—During the years 1879, 1880, and 1881 our imports of iron ore were derived from the following countries, as we are officially advised by the Chief of the Bureau of Statistics.

Brazil, Denmark, France, French West Indies, French Possessions in Africa and adjacent islands, Germany, England, Scotland, Ireland, Gibraltar, Nova Scotia, New Brunswick and Prince Edward Island, Quebec, Ontario, Manitoba and the Northwest Territory, British Columbia, British Possessions in Africa and adjacent islands, other British Possessions, Italy, Portugal, Russia on the Baltic and White Seas, Spain, Spanish Possessions in Africa and adjacent islands, Turkey in Asia, Turkey in Africa, United States of Colombia, Uruguay, and Venezuela.

The following statement shows the quantity and value of iron ore imported into the United States during the calendar years 1879, 1880, and 1881, by customs districts. Most of the ore was imported from Spanish and Mediterranean ports. Previous to 1879 the quantity of iron ore annually imported was not preserved by the Treasury Department, but in no year did it amount to 100,000 tons.

Districts.	1879.		1880.		1881.	
	Gross tons.	*Dollars.*	*Gross tons.*	*Dollars.*	*Gross tons.*	*Dollars.*
Baltimore	27,090	60,869	170,308	506,560	375,798	1,005,496
Boston	701	2,438	2.155	13,359	716	2,867

Puget's Sound	. . . .	. . . .	400	412	1,100	1,622
Cape Vincent	. . . .	. . . .	158	413	. . . .	. . . .
Total	284,141	681,467	493,408	1,436,809	782,887	2,222,652

Like the statistics of our imports of iron and steel in the last three years, the above table of our imports of iron ore in these years must be an eyesore to every patriotic American. That this country, with all its wealth of iron ore and its splendid transportation facilities, should have imported in these three years over one and a half million tons of foreign iron ore, paying for it over four million dollars, is a remarkable fact upon which the next generation of American iron and steel manufacturers will probably look with amazement. The large importations were mainly caused by the high prices charged for domestic ores, but partly also by a scarcity of ores suitable for the manufacture of Bessemer pig iron. It is, however, gratifying to learn that the imports of iron ore in the present year promise to be quite small as compared with those of last year. In the first three months of 1882 we imported only 43,648 tons, valued at $127,146. We are informed that very few contracts for foreign ore, for delivery this year, have been made by our manufacturers.

Our Domestic Exports of Iron and Steel from 1871 to 1881.—The value of the exports from the United States to all countries of domestic iron and steel and manufactures thereof in the eleven years from 1871 to 1881 was as follows:

Years.	*Values.*	*Years.*	*Values.*	*Years.*	*Values.*
1871	$11,836,137	1875	$16,092,906	1879	$12,470,448
1872	10,030,125	1876	11,798,459	1880	12,690,995
1873	12,129,939	1877	16,659,675	1881	15,782,282
1874	15,389,807	1878	13,260,369		

Our exports of iron and steel and manufactures thereof are made principally to countries on the American Continent, particularly to Canada. Among other countries Australia is a liberal customer for our manufactured articles, England coming next. In 1881 we exported 104 locomotives to foreign countries, a larger number than in any preceding year. The indications are that in this year we will export as many as in last year.

The Production of Pig Iron in 1881.—The total production of pig iron in the United States in 1881 was 4,641,564 net tons, or 4,144,254 gross tons. (A net ton is 2,000 pounds, and a gross ton 2,240 pounds.) The production was less than had been generally anticipated. It was a little more than 8 per cent. greater than that of 1880, which was 4,295,414 net tons, or 3,835,191 gross tons. The production of 1880 was 40 per cent. greater than that of 1879, which was 3,070,875 net tons, or 2,741,853 gross tons. That the production of the last three years may be made still plainer to the eye we present it below in tabular form.

Years.	*Net tons.*	*Gross tons.*
1879	3,070,875	2,741,853
1880	4,295,414	3,835,191
1881	4,641,564	4,144,254

An increase of a little more than 8 per cent. in 1881 makes a poor showing in comparison with the wonderful increase of 40 per cent. in 1880. But the failure of our pig iron industry to maintain in 1881 a rate of increase even approximate to that of 1880 is easily explained. The year 1879 was partly spent before our pig iron manufacturers awakened to the fact that a boom in the iron trade had commenced, and even after this fact was fully realized valuable time was lost in making needful preparations to put idle furnaces in blast. Consequently the production of 1879 was not much larger than that of 1878, which was a year of great depression. But in 1880 our best furnaces were all in operation and were driven to their utmost capacity; hence the remarkable product of that year. In 1881 this activity was generally continued, but a better record than had been made in 1880 could hardly be expected from the furnaces that were running in that year, so that the increased production of 1881, if any, would have to come mainly from new furnaces. There was, however, diminished activity in a few districts and states in 1881 as compared with 1880, owing to the large quantity of foreign pig iron which was sold in our markets during the year, much of which had been carried over at Atlantic ports from 1880. But for these sales of foreign iron during 1881, aggregating over 600,000 gross tons, most of which was of qualities suitable for the manufacture of Bessemer steel and fine castings, our domestic production in that year would have been largely increased over that of 1880, instead of being, as we have stated, only about 8 per cent. greater. Our ability to supply the demand for pig iron in 1881 cannot be doubted, and the chief reason why we did not wholly supply it was the inability of some of our furnace owners to make pig iron profitably at the prices which foreign competition had established. We need not here dwell upon the causes of this inability, but it may be briefly stated that the leading cause was the high price of iron ore.

Twenty-six states and one territory (Washington) made pig iron in 1881. Colorado, California, and Washington territory each made pig iron in that year for the first time, while North Carolina, which had not made pig iron since 1877, resumed its place in the list of pig iron producing states. Minnesota first commenced to make pig iron in 1880, and in 1881 the activity of its solitary furnace was continued. Pig iron was made in Colorado at the furnace of the Colorado Coal and Iron Company, at South Pueblo, which was blown in on September 7; in California at the furnace of the California Iron and Steel Company, at Clipper Gap, (Hotaling post office,) in Placer county, which was blown in on April 24; and in Washington territory at the furnace of the Puget Sound Iron Company, at Irondale, in Jefferson county, which was blown in on January 27. Iron ore of a superior quality and in large quantities is reported to be in course of development about ninety miles from Duluth, in Minnesota, affording the promise of a larger production of pig iron at an early day in that state, and of shipments of ore to other states. A majority of the states which made pig iron in 1881 increased their production in that year over their record in 1880, although in some cases the increase was very small. The largest increase in tons was in Pennsylvania, which produced 107,665 net tons more than in 1880. The most noticeable increase was in Allegheny county. The production of the state in 1881 was 2,190,786 net tons, against 2,083,121 tons in 1880. But the largest percentage of increase was in Virginia, Alabama, Georgia, Tennessee, Illinois, Michigan, Connecticut, Maine, Vermont, Minnesota, and Oregon—the last four states, of course, producing but little pig iron in either year. The increase in Virginia is remarkable, being from 29,934 net tons to 83,711 tons. The increase in Alabama was from 77,190 tons to 98,081 tons; in Georgia it was from 27,321 tons to 37,404 tons; in Tennessee from 70,873 tons to 87,406 tons; in Illinois from 150,556 tons to 251,781 tons; in Michigan from 154,424 tons to 187,043 tons, and in Connecticut from 22,583 tons to 28,483 tons. Ohio increased its production in 1881 very slightly over that of 1880—only 36,339 net tons, or from 674,207 tons to 710,546 tons. Several states made less pig iron in 1881 than in 1880; in some of the states the falling off was quite marked. New York declined from 395,361 tons to 359,519 tons; Maryland from 61,437 tons to 48,756 tons; West Virginia from 70,338 tons to 66,409 tons; Kentucky from 57,708 tons to 45,973 tons, and Indiana from 12,500 tons to 7,300 tons. The states whose production in 1881 did not vary greatly from that of 1880 were Massachusetts, New Jersey, Texas, Wiconsin, and Missouri.

The production of pig iron in 1881 in the pig iron producing states was as follows, in the order of their prominence:

States.	*Net tons.*	*States.*	*Net tons.*
Pennsylvania	2,190,786	Connecticut	28,483
Ohio	710,546	Massachusetts	18,318
New York	359,519	Minnesota	7,442
Illinois	251,781	Indiana	7,300
Michigan	187,043	Colorado	6,396
New Jersey	171,672	Oregon	6,100
Missouri	109,799	California	4,414
Wisconsin	102,029	Maine	4,400
Alabama	98,081	Texas	3,000
Tennessee	87,406	Vermont	2,796
Virginia	83,711	Washington Territory	1,200
West Virginia	66,409	North Carolina	800
Maryland	48,756		
Kentucky	45,973		
Georgia	37,404	Total	4,641,564

The most remarkable fact presented in this table is the prominent place held by Illinois in the production of pig iron. In 1879 her production was 78,143 net tons, and her place in the list of pig iron producing states was eighth; in 1880 her production was 150,556 tons, and she advanced to the sixth place; in 1881 her production was 251,781 tons, and she was fourth in rank. The percentage of production by the four leading states in 1881 was as follows: Pennsylvania, $47\frac{1}{5}$; Ohio, $15\frac{1}{3}$; New York, $7\frac{3}{4}$; Illinois, $5\frac{2}{5}$. No other state made 5 per cent. of the production of the year. Neither Pennsylvania nor Ohio made the same percentage in 1881 that it made in 1880, nor did Pennsylvania make the same percentage in 1880 that it made in 1879. The percentage for these states in the three years mentioned was as follows: Pennsylvania, 1879, $52\frac{1}{3}$; 1880, $48\frac{1}{2}$; 1881, $47\frac{1}{5}$. Ohio, 1879, $14\frac{3}{5}$; 1880, $15\frac{5}{7}$; 1881, $15\frac{1}{3}$.

The following table shows the production of pig iron in Pennsylvania and Ohio, separated according to the varions districts of those states, for the years 1879, 1880, and 1881:

	Districts.	*Net tons of 2,000 pounds.* 1879.	1880.	1881.
Pennsylvania.	Lehigh Valley	456,350	544,987	560,190

The increase in the production of pig iron in this country from 1879 to 1881 (covering the production of the two years 1880 and 1881) was 51 per cent. The New England states and New York and New Jersey increased 63 per cent.; Pennsylvania, 36 per cent.; the Southern states, beginning with Maryland and including West Virginia, 64 per cent.; the Western states, beginning with Ohio and including Missouri and Colorado, 70 per cent.; the Pacific Coast, 369 per cent. The percentage of the total production of 1881 in each of these territorial divisions was as follows, in round numbers: Northeast, 13; Pennsylvania, 47; the South, 10; the West, 30; the Pacific Coast, less than 1 per cent. The number of tons of pig iron produced in each of these territorial divisions in 1879, 1880, and 1881 was as follows:

Territorial Divisions.	*Net tons of 2,000 pounds.* 1879.	1880.	1881.
The Northeast	359,992	612,388	585,188
Pennsylvania	1,607,763	2,083,121	2,190 786
The South	287,725	397,301	471,540
The West	812,895	1,197,604	1,382,336
The Pacific Coast	2,500	5,000	11,714
Total	3,070,875	4,295,414	4,641,564

The production of speigeleisen increased slightly in 1881 over previous years, the quantity produced in 1881 being 21,086 net tons. This country makes remarkably slow progress in the production of this essential raw material in the manufacture of Bessemer steel. Both foreign and domestic ores are used in its production in our furnaces. The following table shows the production of this kind of pig iron since 1875:

Years.	*Net tons.*	*Years.*	*Net tons.*
1875	7,832	1879	13,931
1876	6,616	1880	19,603
1877	8,845	1881	21,086
1878	10,674		

Three states made spiegeleisen in 1881—New Jersey, Pennsylvania, and Ohio. Pennsylvania's share of the total production was 16,276 net tons. The spiegeleisen produced in Ohio was made by the Brier Hill Iron and Coal Company, of Youngstown, in a furnace specially built for that purpose and first blown in in 1881. The Lehigh Zinc and Iron Company, of Bethlehem, Pa., erected a small furnace in 1881 to make speigeleisen, but it was not in operation. The product of 1881 was made by the New Jersey Zinc and Iron Company, the Cambria Iron Company, Carnegie Bros. & Co., Limited, and the Brier Hill Iron and Coal Company. The following table shows in net tons the quantity of pig iron produced in each of the years 1879, 1880, and 1881 with bituminous coal, anthracite coal, and charcoal, it being understood that the second of these classifications is not absolutely accurate, as coke is used as a mixture in many anthracite furnaces.

Fuel used.	1879.	1880.	1881.
Bituminous	1,438,978	1,950,205	2,268,264
Anthracite	1,273,024	1,807,651	1,734,462
Charcoal	358,873	537,558	638,838
Total	3,070,875	4,295,414	4,641 564

It will be observed that the use of bituminous coal and charcoal has steadily increased in the years mentioned, but that the use of anthracite coal was less in 1881 than in 1880. The increase in the consumption of bituminous coal was to be expected as the iron industry would be extended in the western and southern sections of the country, where bituminous deposits are abundant and anthracite deposits are practically unknown, but the great increase in the use of charcoal in the last two years is a real surprise. Our production of charcoal pig iron in 1881 was greater than in any previous year in our history, the years of next largest production being 1873 and 1874, in the order named. The following table gives the production of anthracite, charcoal, and bituminous pig iron from 1854 to 1881:

Years.	Net tons of 2,000 pounds.			
	Anthracite.	Charcoal.	Bituminous.	Total.
1854	339,435	342,298	54,485	736,218
1855	381,860	339,922	62,390	784,178
1856	443,113	370,470	69,554	883,137
1857	390,385	330,321	77,451	798,157
1858	361,430	285,313	58,351	705,094
1859	471,745	284,041	84,841	840,627
1860	519,211	278,331	122,228	919,770
1861	409,229	195,278	127,037	731,544
1862	470,315	186,660	130,687	787,662
1863	577,638	212.005	157,961	947,604
1864	684,018	241,853	210,125	1,135,996
1865	479,558	262,342	189,682	931,582

1867	798,638	344,341	318,647	1,461,626
1868	893,000	370,000	340,000	1,603,000
1869	971,150	392,150	553,341	1,916,641
1870	930,000	365,000	570,000	1,865,000
1871	956,608	385,000	570,000	1,911,608
1872	1,369,812	500,587	984,159	2,854,558
1873	1,312,754	577,620	977,904	2,868,278
1874	1,202,144	576.557	910,712	2,689,413
1875	908,046	410,990	947,545	2,266,581
1876	794,578	308,649	990,009	2,093,236
1877	934,797	317,843	1,061,945	2,314,585
1878	1,092,870	293,399	1,191,092	2,577,361
1879	1,273,024	358,873	1,438,978	3,070,875
1880	1,807,651	537,558	1,950,205	4,295,414
1881	1,734,462	638,838	2,268,264	4,641,564

The stocks of pig iron unsold in the hands of makers or their agents on the 31st of December, 1881, amounted to 210,896 net tons, against 456,658 tons at the close of 1880. The following table shows the quantity of each kind of pig iron held in stock by the furnace owners or their agents at the close of these years:

Kind of fuel.	Net tons.	
	Dec. 31, 1880.	Dec. 31, 1881.
Bituminous	184,626	36,495
Anthracite	175,862	90,351
Charcoal	96,170	84,050
Total	456,658	210,896

The consumption of pig iron in the United States in 1881 can be approximately ascertained. We produced 4,144,254 gross tons and imported 464,430 tons. We had in stock at the beginning of the year 407,730 tons of domestic pig iron and 164,404 tons of foreign pig iron. The total supply was 5,180,818 gross tons. At the close of the year we had on hand 188,300 gross tons of domestic pig iron and 9,953 tons of foreign pig iron, which, being deducted from the total supply, gives us 4,982,565 gross tons as the probable consumption of the year. In our Annual Report for the year 1880, published in July, 1881, we estimated the consumption of 1880 at 3,990,415 gross tons—the elements of our calculation being the same for that year that we have taken above for 1881. An increase of 1,000,000 gross tons in one year in our consumption of pig iron is a most remarkable fact.

	Districts.	December 31, 1880.			December 31, 1881.		
		In blast.	Out of blast.	Total.	In blast.	Out of blast.	Total.

	Other bituminous and charcoal	19	7	26	17	8	25

About one-third of this vast increase was used in the production of Bessemer steel; the remainder was required to supply the miscellaneous iron and steel works of the country. The preceding table shows the number of furnaces in blast and out of blast at the close of 1880 and 1881 in the pig iron districts of Pennsylvania and Ohio. That so many furnaces should have been out of blast in these states in 1880 and 1881 is a singular fact.

The following table gives the number of completed furnaces in the United States at the close of each of the ten years from 1872 to 1881:

1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.
612	657	693	713	712	716	692	697	701	746

Of 701 furnaces in the United States on December 31, 1880, there were 446 in blast and 255 out of blast; of 716 furnaces on December 31, 1881, there were 455 in blast and 261 out of blast. The following table shows the furnaces in blast and out of blast at the close of the years 1880 and 1881:

Production of Iron and Steel Rails in 1881.—Large as was our production of rails in 1880, the production of 1881 was very much larger. We give below, in both net and gross tons, the total rail product of each of the four last years:

	1878.	1879.	1880.	1881.
Net tons	882,685	1,113,273	1,461,837	1,844,100
Gross tons	788,111	993,993	1,305,212	1,646,518

The increase in the rail production of 1880 over 1879 was 348,564 net tons, or 311,219 gross tons, whereas the increase in the rail production of 1881 over 1880 was 382,263 net tons, or 341,306 gross tons. The record of the last three years is really marvelous, and in no other country could it have been possible. In 1881 we more than doubled the rail production of 1878, the product of 1881 being 961,415 net tons, or 858,407 gross tons, larger than that of 1878. The production in 1880 was 31 per cent. greater than that of 1879, and the production of 1881 was 26 per cent. greater than that of 1880. The total rail production of 1881 was as follows, compared with the production of 1879 and 1880, net tons being used:

Kind of rails.	1879. *Net tons.*	1880. *Net tons.*	1881. *Net tons.*
Iron rails	420,160	493,762	488,581
Bessemer steel rails	683,964	954,460	1,330,302
Open-hearth steel rails	9,149	13,615	25 217
Total	1,113,273	1,461,837	1,844,100

The increase in the production of Bessemer steel rails in 1881 over 1880 was 375,842 net tons, or 39⅓ per cent., and the increase in the production of open-hearth steel rails was 11,602 tons, or 85 per cent. In the production of iron rails in 1881 there was a decrease of 5,181 net tons upon the production of 1880, or about one per cent. The production of iron rails in this country must henceforth be annually less than in either of the last two years. Iron rails cannot hereafter be made by our manufacturers in competition with steel rails, except under the favorable circumstances which were explained in our Annual Report for the year 1877, the principal favorable circumstance being the comparative cheapness with which old iron rails may be rerolled at iron rail mills located in sections of the country where there are no steel rail mills. Their manufacture culminated in 1872, from which year it steadily declined until 1879, in which year and in the two following years there was a partial recovery in consequence of the inability of the steel rail manufacturers to supply the demand for their product. This inability no longer exists. The following table gives the production of iron rails in the United States in each of the last twelve years, in net tons:

1870.	1871.	1872.	1873.	1874.	1875.
586,000	737,483	905,930	761,062	584,469	501,649
1876.	1877.	1878.	1879.	1880.	1881.
467,168	332,540	322,890	420,160	493,762	488,581

Included in the production of 1,330,302 net tons of Bessemer steel rails in 1881 were 77,173 net tons which were produced mainly, but not entirely, from imported blooms. Eleven mills in Vermont, New York, Pennsylvania, Ohio, Tennessee, Illinois, and California rolled Bessemer steel rails from purchased blooms. A few other mills have engaged to roll rails from imported blooms in 1882. The business, however, cannot be expected to increase largely, if, indeed, it does not actually decrease from this time forward. Twenty states and one territory (Wyoming) produced rails in 1881. In that year there were in these states and this territory 87 rail mills, of which 57 were active. Of these 87 mills two were burned during the year—one at Topeka, Kansas, which will not be rebuilt, and one at Atlanta, Georgia, which has not yet been rebuilt. The following table shows the production of rails of all kinds, by states, in the order of their prominence, in 1881:

States.	*Net tons.*	*States.*	*Net tons.*
Pennsylvania	891,179	California	6,035
Illinois	433,420	Kentucky	5,005
Ohio	153,596	Georgia	4,000
New York	109,283	West Virginia	3,152
Missouri	64,226	Massachusetts	2,622
Indiana	44,645	Alabama	2,300
Wisconsin	41,165	Maine	2,183
Tennessee	32,660	Colorado	1,643
Kansas	19,016	Virginia	640
Vermont	15,200	New Jersey	244
Wyoming Territory	11,886		
		Total	1,844,100

The capacity of the Bessemer and open-hearth steel rail mills of the country is now much larger than it was a year ago, and is more than equal to the present demand. If necessary we could produce in 1882 not less than 1,500,000 gross tons of steel rails, but it is doubtful whether our product during the year will materially exceed that of 1881. The production of street rails in 1881, which is included in the total production for the year, amounted to 21,544 net tons, of which 12,464 tons were of iron, 7,990 tons were of Bessemer steel, and 1,100 tons were of open-hearth steel. The production of street rails in the eight preceding years was as follows: 1873, 9,430 net tons; 1874, 6,739 tons; 1875, 16,340 tons; 1876, 13,086 tons; 1877, 7,015 tons; 1878, 9,229 tons; 1879, 8,646 tons; 1880, 16,894 tons. The production of iron and steel rails in this country since the beginning of the manufacture of Bessemer steel rails in 1867 has been as follows, in net tons:

Years.	*Net tons of 2,000 pounds.*			
	Open-hearth steel rails.	*Iron rails, all kinds.*	*Bessemer steel rails.*	*Total.*
1867	...	459,558	2,550	462,108
1868	...	499,489	7,225	506,714
1869	...	583,936	9,650	593,586

1857	161,918	1866	430,778	1875	792,512	...	...

The manufacture of heavy iron rails (other than strap rails) in this country was not commenced until 1844, when they were first made at the Mount Savage Rolling Mill, in Allegheny county, Maryland. In previous reports it has been necessary to state that a few tons of steel-headed rails were annually included in the production of iron rails. In 1881 no rails of this character were reported to us. Pennsylvania's share of the total production of rails in 1881 was 48 per cent.; Illinois came next, with 24 per cent.; Ohio followed, with 8 per cent.; New York, with 6 per cent.; Missouri, with 3 per cent.; Indiana, Wisconsin, and Tennessee, each with 2 per cent.; Kansas, with 1 per cent., and all other states, each with less than 1 per cent. The increased production of the two leading states—Pennsylvania and Illinois—in 1881 over 1880 was at nearly the same rate, the percentage of increase by Pennsylvania being 33 and that of Illinois being 34. For the first time in many years, probably for the first time since rails were first made in this country, Maryland made no rails in 1881. Michigan has made no rails since 1876. Maine made no rails in 1880, and New Jersey made none in 1879 and 1880, but in 1881 both of these states contributed small quantities of rails to the general supply. Two Southern states—Virginia and Alabama—had not made rails for many years prior to 1880, but in that year they again commenced their manufacture, and in 1881 they largely increased their product. Of all the Southern states, Tennessee is the largest producer of rails, its production in 1881 amounting to 32,660 net tons—more than the whole country made in 1849. The following table will show approximately the consumption of all kinds of rails in this country from 1867 to 1881, in net tons:

Years.	*Made in United States.*	*Imported.*		*Approximate consumption.*
		Iron.	*Steel.*	
1867	462,108	163,049		625,157
1868	506,714	250,081		756,795
1869	593,586	313,163		906,749
1870	620,000	399,153		1,019,153
1871	775,733	566,202		1,341,935
1872	1,000,000	381,064	149,786	1,530,850
1873	890,077	99,201	159,571	1,148,849
1874	729,413	7,796	100,515	837,724
1875	792,512	1,174	18,274	811,960
1876	879,629	287	None	879,916
1877	764,709	None	35	764,744
1878	882,685	None	10	882,695
1879	1,113,273	19,090	25,057	1,157,420
1880	1,461,837	132,459	158,230	1,752,526
1881	1,844,100	137,013	249,309	2,230,422

In round numbers we may be said to have consumed 2,000,000 gross tons of rails in 1881. To fully realize how enormous is this consumption, a simple calculation will show that these 2,000,000 tons are sufficient to lay a single track 22,727 miles long with 56-pound rails; or, in default of fuller information, we may compare our consumption of Bessemer steel rails alone in 1881 with that of some other country in the same year. Of the production of 1,023,749 gross tons of Bessemer steel rails by Great Britain in 1881 there were exported 594,419 tons, leaving 429,321 tons for home consumption. The United States, however, imported 222,597 gross tons of steel rails (probably all Bessemer) in addition to the 1,187,770 gross tons of Bessemer steel rails produced at home, thus making its total consumption of these rails 1,410,367 tons. The United States in 1881 therefore used 981,046 tons of these rails more than Great Britain.

Production of Bessemer Steel in 1881.—The total quantity of Bessemer steel ingots produced in the United States in 1881 was 1,539,157 net tons, or 1,374,247 gross tons. The production in 1880 was 1,203,173 net tons; in 1879, 928,972 net tons; in 1878, 732,226 net tons. The increased production of 1881 over 1880 was 335,984 net tons, or 28 per cent.; over 1879 it was 610,185 net tons, or 66 per cent.; and over 1878 it was 806,931 net tons, or 110 per cent. The production of Bessemer steel ingots in this country in the ten years from 1872 to 1881 has been as follows.

Years.	*Net tons.*	*Years.*	*Net tons.*
1872	120,108	1877	560,587
1873	170,652	1878	732,226
1874	191,933	1879	928,972
1875	375,517	1880	1,203,173
1876	525,996	1881	1,539,157

Bessemer steel ingots were produced in 1881 by 13 works, of which 7 are in Pennsylvania. Two new works, both in Pennsylvania, produced Bessemer steel in 1881 for the first time. These works are those of the Pittsburg Bessemer Steel Company, Limited, located at Homestead, near Pittsburg, having two converters, and the Pittsburg Steel Casting Company, of Pittsburg, having but one converter. The Pittsburg Bessemer Steel Company, Limited, made its first blow on March 19, 1881, and the Pittsburg Steel Casting Company made its first blow on August 26, 1881. The latter company, as its name imports, intends to produce Bessemer steel castings, but it also proposes to produce Bessemer steel in other forms, a blooming mill being now in course of erection. Some extensions were made to old works in 1881, one new works has been completed and put into operation since the close of the year, and two new works are now in course of erection. The newly completed works are those of the Colorado Coal and Iron Company, located at South Pueblo, Colorado, which made their first blow on April 11, 1882. New Bessemer steel works at Scranton, in Pennsylvania, and at Chicago, are expected to go into operation this year. The new works at Chicago are owned by the North Chicago Rolling Mill Company, but are located at some distance from the company's old works, and hence virtually form a separate establishment, although not classified as such. A comprehensive exhibit of the fifteen Bessemer steel works of the country which are completed or in progress is as follows:

Names of companies.	*Converters.*	
	Completed.	*Building.*
Albany and Rensselaer Iron and Steel Company, Troy.	two 6¼ ton	......
Bethlehem Iron Company, Bethlehem	four 7-ton	......
Pennsylvania Steel Company, Steelton	two 6½-ton three 8-ton	......
Lackawanna Iron and Coal Company, Scranton	two 7½-ton	......
Cambria Iron Company, Johnstown	two 6-ton	......
Carnegie Bros. & Co., Limited, Bessemer	three 10-ton	......
Pittsburg Bessemer Steel Co., Limited, Homestead	two 4-ton	......
Pittsburg Steel Casting Company, Pittsburg	one 7-ton	......
Cleveland Rolling Mill Company, Cleveland	two 10-ton	......
North Chicago Rolling Mill Co., Chicago (2 plants)	two 6¾-ton	two 10-ton
Union Iron and Steel Company, Chicago	two 5⅓-ton	......
Joliet Steel Company, Joliet	two 5⅓-ton	......
St. Louis Ore and Steel Company, St. Louis	two 6¼-ton	......
Colorado Coal and Iron Company, South Pueblo	two 5-ton	......
Scranton Steel Company, Scranton	......	two 4-ton
Total	33	4

Only 30 converters were in use in 1881, Carnegie Brothers & Co., Limited, having substituted three 10-ton converters since the close of the year for their two 7-ton converters, and the Colorado Coal and Iron Company having put its two converters at work in 1882 for the first time. The Cleveland Rolling Mill Company used two 6¼-ton converters in 1881. The American producers of Bessemer steel rolled 1,253,129 net tons, or 1,118,865 gross tons, of Bessemer steel rails in 1881. But this is not the whole quantity of Bessemer steel rails rolled in the United States in that year, as the iron rail mills of the country rolled 77,173 net tons of these rails, chiefly from imported blooms. The total quantity of Bessemer steel rails rolled in the United States in 1881 was, therefore, 1,330,302 net tons, or 1,187,770 gross tons. The following table shows the production of Bessemer steel rails in the United States and Great Britain in 1880 and 1881, in gross tons:

Countries.	1880. *Tons.*	1881. *Tons.*	*Increase. Tons.*
United States	852,196	1,187,770	335,574
Great Britain	739,910	1,023,740	283,830
Excess of United States over Great Britain	112,286	164,030	51,744

The following table shows the production of Bessemer steel ingots in the United States and Great Britain in 1880 and 1881, in gross tons:

Countries.	1880. *Tons.*	1881. *Tons.*	*Increase. Tons.*
Great Britain	1,044,382	1,441,719	397,337
United States	1,074,262	1,374,247	299,985
Excess of United States over Great Britain	29,880	....	....
Excess of Great Britain over United States	....	67,472	97,352

It will be seen from these tables that in 1880 the production of both Bessemer steel ingots and rails by the United States exceeded that of Great Britain, while in 1881 honors were divided, the United States producing the most rails, and Great Britain producing the most ingots. But how unequal are all other elements of comparison in the Bessemer steel practice of the two countries! The British production of Bessemer steel in 1881 was made by 23 works with 82 converters in operation, while that of the United States was made by only 13 works with 30 converters in operation. The average production of each converter in Great Britain in 1881 was 17,582 gross tons of ingots, while the average production of each converter in the United States in the same year was 45,808 tons. In 1882 seven more converters will probably be in use in the United States, while in Great Britain there will be 41 more converters available than were at work in 1881, of which 14 are new. The production of Bessemer steel rails in this country in the fifteen years since 1867, when they were first made to fill orders, has been as follows, in net tons:

Years.	*Net tons.*	*Years.*	*Net tons.*	*Years.*	*Net tons.*
1867	2,550	1872 . . .	94,070	1877 . .	432,169
1868	7,225	1873	129,015	1878 . .	550,398
1869	9,650	1874 . . .	144,944	1879	683,964
1870	34,000	1875 . .	290,863	1880 . .	954,460
1871	38,250	1876 . . .	412,461	1881 . .	1,330,302

Island and Kentucky each had one open-hearth furnace in 1881 which was not in operation. The total number of open-hearth furnaces in the country in 1881 was 44. The production of blister and puddled steel and of "patented" steel in 1881 was only 3,047 net tons, against 8,465 tons in 1880, and 5,464 tons in 1879. These branches of our steel industry scarcely deserve a separate classification. The following table gives the production of these classes of steel from 1874 to 1881, in net tons:

States.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.
New England . .	376	1,500	. . . . .	. . . .	192	950	72	200
New York. . . .	200	. . . .	139	. . . .	220	215	617	. .
New Jersey . . .	. . . .	100	652	. . . .	. . . .	. . . .	. . . .	. . . .
Pennsylvania . .	4,417	7,340	7,601	9,870	8,069	3,004	6,658	2,113
Western States .	1,300	. . . .	1,700	2,034	75	1,000	1,018	734
Southern States .	60	3,667	214	20	. . .	295	100	. .
Total . . .	6,353	12,607	10,306	11,924	8,556	5,464	8,465	3,047

The small quantity of blister, puddled, and miscellaneous steel which was made in this country in 1881 was produced in Massachusetts, Pennsylvania, Kentucky, and Ohio.

Production of all Kinds of Steel in Recent Years.—The following table gives the production in the United States of

States.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.
New England . .	1,509	1,620	1,008	1,974	1,602	1,608	660	2,780
New York	2,696	2,300	2,300	2,032	2,800	2,300	3,500	4,961
New Jersey	8,164	7,098	6,806	6,749	7,377	8,651	10,387	14,500
Pennsylvania . .	23,289	26,615	28,217	27,983	30,585	43,614	57,077	66,290
Western States . . .	570	1,500	700	1,400	480	605	800	1,231
Southern States . . .	160	268	261	292	62	2	. . . . . .	. . . . . .
Total	36,328	39,401	39,382	40,430	42,906	56,780	72,424	89,762

Production of Crucible, Open-Hearth, Blister and Miscellaneous Steel in 1881.—The production of crucible steel ingots in the United States in 1881 was 89,762 net tons, against 72,424 tons in 1880, and 56,780 tons in 1879. The preceding table gives the production of crucible steel ingots in various sections of the country from 1874 to 1881, in net tons.

Seven states made crucible steel in 1881—Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Ohio, and Illinois. Pennsylvania, as has been the case for many years, made in that year about three-fourths of the total crucible steel ingots, blister steel, and steel made by various minor processes, from 1865 to 1881, in net tons:

Years.	*Net tons.*	*Years.*	*Net tons.*	*Years.*	*Net tons.*
1865	15,262	1871. . . .	37,000	1877.	52,354
1866 . . .	18,973	1872.	37,000	1878.	51,462
1867	19,000	1873. . .	48,500	1879.	62,244
1868	21,500	1874.	42,681	1880.	80,889
1869	23,000	1875.	52,008	1881.	92,809
1870	35,000	1876. . .	49,688	. . . .	. . . . . .

States.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.
New England	5,300	3,010	6,085	6,652	8,228	14,660	20,560	24,600
Pennsylvania and New Jersey	1,700	4,240	7,547	7,771	12,231	19,575	50,736	68,363
Western and Southern States	. . .	1,800	7,858	10,608	15,667	22,055	41,657	53,983
Total	7,000	9,050	21,490	25,031	36,126	56,290	112,953	146,946

production. The production of open-hearth steel ingots in the United States in 1881 was 146,946 net tons, against 112,953 tons in 1880, and 56,290 tons in 1879. Our open-hearth steel industry has made a rapid advance in late years. In 1874 our total production of open-hearth steel ingots was only 7,000 net tons. Rapid, however, as our progress in the production of this class of steel has been, we still fall far behind the production of Great Britain. In 1881 that country produced 338,000 gross tons, or 378,560 net tons, of open-hearth steel. The preceding table gives the production of open-hearth steel ingots in the United States from 1874 to 1881, in net tons.

Eight states made open-hearth steel in 1881—New Hampshire, Vermont, Massachusetts, New Jersey, Pennsylvania, Ohio, Tennessee, and Illinois. These states had 38 open-hearth furnaces at work in 1881 and 4 furnaces idle. Rhode

The following table gives the production in the United

Years.	*Net tons.*				
	Bessemer steel ingots.	*Crucible steel ingots.*	*Open-hearth steel ingots.*	*All other steel.*	*Total.*
1872 . .	120,108	29,260	3,000	7,740	160,108
1873 . .	170,652	34,786	3,500	13,714	222,652
1874 . .	191,933	36,328	7,000	6,353	241,614
1875 . .	375,517	39,401	9,050	12,607	436,575
1876 . .	525,996	39,382	21,490	10,306	597,174
1877 . .	560,587	40,430	25,031	11,924	637,972
1878 . .	732,226	42,906	36,126	8,556	819,814
1879 . .	928,972	56,780	56,290	5,464	1,047,506
1880 . .	1,203,173	72,424	112,953	8,465	1,397,015
1881 . .	1,539,157	89,762	146,946	3,047	1,778,912

States of all kinds of steel in the ten years from 1872 to 1881, in net tons.

An increase in our production of steel from 160,108 net tons to 1,778,912 tons in ten years reads like a fable. The figures are, however, reliable. They undoubtedly record the greatest metallurgical achievement ever accomplished by any country.

Production of Bars, Shapes, Plates, Sheets, and other Rolled Iron in 1881.—By the term rolled iron we include (1) cut nails and spikes; (2) bar, shaped, bolt, rod, skelp, and hoop iron; (3) plate and sheet iron; and (4) all sizes of iron rails. Bessemer steel rails are not classed among rolled iron products. The production of all kinds of rolled iron in the United States in 1881, including iron rails, was 2,643,927 net tons, against 2,332,668 tons in 1880, and 2,047,484 tons in 1879. In the following table we give detailed statistics of the production of the different forms of rolled iron in each of the States in 1881, in net tons:

States.	*Bar, rod, bolt, hoop, skelp and shaped iron. Net tons.*	*Plate and sheet iron, except nail plate. Net tons.*	*Cut nails.*		*Iron rails. Net tons.*	*Total. Net tons.*
			Kegs.	*Net tons.*

Virginia	33,984	West Virginia	4,106
Delaware	23,920	Wyoming territory	3,286
Indiana	20,485	Georgia	3,000
Maryland	18,517	New Hampshire	3,000
Connecticut	17,589	Colorado	2,306
Kentucky	15,425	District of Columbia	220
Michigan	14,685		
		Total	1,492,555

The following table gives the production of plate and sheet iron, except nail plate, in 1881, in each of the states, in net tons:

States.	*Net tons.*	*States.*	*Net tons.*
Pennsylvania	251,225	Michigan	5,920
Ohio	37,327	New York	4,945
Massachusetts	29,446	Missouri	4,500
Maryland	14,215	New Jersey	1,823
Delaware	10,355	Indiana	975
West Virginia	6,234	District of Columbia	82
Kentucky	6,035		
		Total	373,082

The following table gives the production of cut nails in 1881 in each of the states, in kegs of 100 pounds:

States.	*Kegs of 100 pounds.*	*States.*	*Kegs of 100 pounds.*
Pennsylvania	1,914,706	Virginia	127,566
West Virginia	1,241,102	Tennessee	94,495
Ohio	860,665	Kentucky	69,000
Massachusetts	525,089	Nebraska	31,667
Illinois	352,643	New York	2,256
Indiana	326,496		
New Jersey	248,521		
		Total	5,794,206

Our production of cut nails in 1881 (5,794,206 kegs) was much the largest in our history. Our next largest production was in 1880, when we produced 5,370,512 kegs. It is a noticeable fact that the production of cut nails in this country has not in recent years advanced with the rapidity that has characterized other branches of our iron and steel industries. In 1873 our production was 4,024,704 kegs, and in 1874 it was 4,912,180 kegs. From 1874 to 1879 the annual production fluctuated between 4,000,000 and 5,000,000 kegs, in the latter year amounting to 5,011,021 kegs. The production in 1880 and 1881 has been mentioned above. The following table gives the production of all kinds of rolled iron in the United States from 1864 to 1881, in net tons:

Years.	Net tons of 2,000 pounds.		
	Iron rails.	Other rolled iron.	Total.
1864	835,369	536,958	872,327
1865	356,292	500,048	856,340
1866	430,778	595,311	1,026,089
1867	459,558	579,838	1,039,396
1868	499,489	598,286	1,097,775
1869	583,936	642,420	1,226,356
1870	586,000	705,000	1,291,000
1871	737,483	710,000	1,447,483
1872	905,930	941,992	1,847,922
1873	761,062	1,076,368	1,837,430
1874	584,469	1,110,147	1,694,616
1875	501,649	1,097,867	1,599,516
1876	467,168	1,042,101	1,509,269
1877	332,540	1,144,219	1,476,759
1878	322,890	1,232,686	1,555,576
1879	420,160	1,627,324	2,047,484
1880	493,762	1,838,906	2,332,668
1881	488,581	2,155,346	2,643,927

It has been said that the puddling furnace and the iron rolling mill must soon give way to the Bessemer converter, the open hearth, and the steel rolling mill. The table just given shows that in this country the puddling and rolling of iron are steadily increasing.

Products.	Net tons.								
	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.
Blooms and billets from ore	32,863	36,450	24,416	20,784	24,227	24,139	30,282	40,652	45,369
Blooms from pig and scrap iron	29,701	25,220	24,827	23,844	23,073	25,906	32,071	33,937	39,237
Total	62,564	61,670	49,243	44,628	47,300	50,045	62,353	74,589	84,606

As we have heretofore explained, blooms and billets from ore are made chiefly in the Champlain district of New York, and blooms from pig and scrap iron are made chiefly in Pennsylvania. The make of each of these products in the last nine years is given on preceding column, in net tons. The steady increase in their production in the last three years is an interesting fact.

The following table shows the proportion of ore blooms and billets made in New York in the past seven years, and the proportion of pig and scrap blooms made in Pennsylvania, in the same time, in net tons:

Years.	Net tons.			
	Ore blooms and billets made in New York.	Total make of ore blooms and billets.	Pig and scrap blooms made in Pennsylvania.	Total make of pig and scrap blooms.
1875	23,666	24,416	19,032	24,827
1876	20,202	20,784	13,401	23,844
1877	23,466	24,227	16,517	23,073
1878	22,829	24,139	15,121	25,906
1879	27,290	30,282	23,956	32,071
1880	34,351	40,652	24,319	33,937
1881	39,892	45,369	28,342	39,237

The production of both products from 1865 to 1881 has been as follows, in net tons:

Years.	Net tons.	Years.	Net tons.	Years.	Net tons.
1865	63,977	1871	63,000	1877	47,300
1866	73,555	1872	58,000	1878	50,045
1867	73,073	1873	62,564	1879	62,353
1868	75,200	1874	61,670	1880	74,589
1869	69,500	1875	49,243	1881	84,606
1870	62,259	1876	44,628	......	......

Total Production of Iron and Steel in the United States in the last Ten Years.—The annexed table shows the total production of iron and steel in the United States in the ten years from 1872 to 1881, in net tons:

Products.	Net tons of 2,000 pounds.									
	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.
Pig iron	2,854,558	2,868,278	2,689,413	2,266,581	2,093,236	2,314,585	2,577,361	3,070,875	4,295,414	4,641,564

Steel of all kinds	160,108	222,652	241,614	436,575	597,174	637,972	819,814	1,047,506	1,397,015	1,778,912
Blooms from ore and pig iron	58,000	62,564	61,670	49,243	44,628	47,300	50,045	62,353	74,589	84,606

The Iron and Steel Production of Allegheny County.—The following table gives the production of iron and steel in Pittsburg and the remainder of Allegheny county, Pennsylvania, in 1881 and the seven preceding years, in net tons. We scarcely need to explain that Allegheny county is the leading iron and steel producing county in the United States:

Years.	Number of iron rolling mills.	Product of iron rails, bar, angle, bolt, rod and hoop. Tons.	Product of sheet and plate, except nail plate. Tons.	Product of nails. Kegs of 100 pounds.	Total rolled iron, including nails. Net tons.
1874	31	194,114	52,361	562,995	274,625
1875	31	171,178	45,773	442,359	239,069
1876	31	189,511	31,488	538,874	247,943
1877	31	208,342	30,254	597,806	268,486
1878	31	226,687	33,445	444,013	282,333
1879	82	286,882	52,265	294,942	353,894
1880	30	287,253	80,899	419,098	389,107
1881	30	405,119	75,767	485,916	505,182

Years.	Number of blast furnaces.	Make of pig iron. Net tons.	Number of steel works.	Net tons crucible steel ingots.	Net tons all other steel, including Bessemer ingots.	Total make of steel. Net tons.
1874	11	143,660	11*	17,915	6,000	23,915
1875	11	131,856	14*	22,942	15,498	38,440
1876	11	128,555	14*	25,009	54,467	79,476
1877	12	141,749	14*	24,747	82,401	107,148
1878	12	217,299	14*	27,806	106,948	134,814
1879	13	267,315	18*	40,142	130,781	170,923
1880	15	300,497	17*	52,186	169,819	221,955
1881	15	385,453	17*	61,256	247,345	308,601

* Bessemer steel included. Four of these works are also iron rolling mills.

It will be observed that Allegheny county has in late years largely increased its production of all kinds of iron and steel except cut nails, the production of which was not so large in 1881 as in each of the years 1874, 1876, and 1877 —all years of dull trade. Wheeling and its vicinity have for many years formed a much more important nail-producing district than Allegheny county. The contiguous counties of Plymouth, Bristol, and Norfolk in Massachusetts comprise another nail-making district which usually makes more nails annually than Allegheny county.

Grand summary of United States statistics for 1881.

Production of pig iron in 1881, net tons	4,641,564
Production of Spiegeleisen in 1881 (included in pig iron), net tons	21,086
Production of all rolled iron, including nails and excluding rails, in 1881, net tons	2,155,346
Production of cut nails and spikes in 1881, included in all rolled iron, kegs of 100 pounds	5,794,206
Production of Bessemer steel rails in 1881, net tons	1,330,302
Production of open-hearth steel rails in 1881, net tons	25,217
Production of iron and all other rails in 1881, net tons	488,581
Total production of rails in 1881, net tons	1,844,100
Production of iron and steel street rails in 1881 (included above), net tons	21,554
Production of crucible steel ingots in 1881, net tons	89,762
Production of open-hearth steel ingots in 1881, net tons	146,946
Production of Bessemer steel ingots in 1881, net tons	1,539,157
Production of blister and "patented" steel in 1881, net tons	3,047
Production of all kinds of steel in 1881, net tons	1,778,912
Production of blooms from ore and pig iron in 1881, net tons	84,606
Imports of iron and steel in 1881	$61,555,078
Exports of iron and steel in 1881	$15,782,282
Imports of iron ore in 1881, gross tons	782,887
Production of Lake Superior iron ore in 1881, gross tons	2,336,335
Production of iron ore in New Jersey in 1881, gross tons	737,052
Total production of iron ore in Census year 1880, net tons	7,974,705
Production of anthracite coal in the Census year 1880, net tons	28,646,995
Production of bituminous coal in the Census year 1880, net tons	42,420,581
Production of anthracite coal in 1881, gross tons	28,500,016
Miles of railway completed in 1881	9,650
Miles of railway in the United States December 31, 1861	103,321
Miles of railway track in the United States December 31, 1881, including double track, sidings, etc. (estimated),	130,000
Iron ships built in the United States in the fiscal year ended June 30, 1881	42
Net imports of foreign merchandise into the United States in the ten months ended April 30, 1882	$579,462,510
Exports of domestic merchandise out of the United States in the ten months ended April 30, 1882	$635,867,349
Net imports of specie into the United States in the ten months ended April 30, 1882	$35,875,247
Exports of domestic specie out of the United States in the ten months ended April 30, 1882	$22,708,081
Immigrants into the United States in the calendar year 1881	720,045

MICHIGAN IRON AND COPPER STATISTICS.

FROM Mr. A. P. Swineford's "Annual Review of Lake Superior Mines," we take the following statistics:

Iron Mines.—The following table exhibits the output of the Lake Superior iron mines in 1881, together with the approximate value of the same in the market:

Name of mine.	*Gross tons.*	*Value.*
Argyle	4,584	$43,548.00
Barnum	27,883	264,888.50
Bay State	583	3,166.50
Bessemer	16,718	91,940.00
Boston	14,824	140,828.00
Cambria	19,245	106,122.50
Champion	145,427	1,454,270.00
Chapin	134,521	1,076,168.00
Cheshire	7,449	40,969.50
Chicago	5,531	30,420.50
Cleveland	198,569	1,886,405.50
Columbia	11,158	89,264.00
Commonwealth	97,410	608,812.50
Conrad	355	3,372.50
Cornell	11,816	94,528.00
Curry	17,534	149,038.00
Cyclops	12,644	101,152.00
Dalliba	10,986	60,423.00
East Champion	3,408	27,264.00

Wheat	9,040	76,840.00
Winthrop	43,630	239,965.00
Miscellaneous	1,237	6,803.50
Total iron ore	2,321,315	$18,834,923.00
QUARTZ.		
Carp River	8,460	42,300.00
Lake Fairbanks	6,560	32,800.00
Total quartz	15,020	75,100.00
Total ore and quartz	2,336,335	$18,910,023.00

The following table shows the product of the Lake Superior charcoal furnaces in 1881, together with its value in market:

Name of furnace.	*Gross tons.*	*Value.*
Pioneer	17,030	$510,900
Menominee	8,336	250,080
Florence	714	21,420
*Carp River Iron Co.	10,253	307,590
Jackson	4,660	140,400
Deer Lake	7,831	234,930
Martel	4,109	123,270
Total	52,953	$1,588,590

*Three Stacks—Carp River, Pacific and Excelsior.

The following table shows the aggregate product of the working mines of this district, from 1856 to 1881, inclusive —a period of 26 years:

Name of mine.	*Gross tons.*
Argyle	228,091
Barnum	487,906
Bay State	14,799
Bessemer	87,023
Boston	31,302
Cambria	55,703

Total ore, pig iron and quartz	10,448

The following table exhibits, in gross tons, the total lake shipments of iron ore from upper peninsula ports the present season up to and including July 5, 1882, together with the amount shipped during a corresponding period last year:

Name of port.	1881.	1882.
Escanaba	437,562	640,271
Marquette	184,045	361,548
L'Anse	15,761	16,276
St. Ignace	.....	8,930
Total	637,368	1,027,025

Showing an increase of 389,657 tons.

Of the 389,657 tons increase in the lake shipments, 220,436 tons comes from the mines of Marquette county, and 169,221 tons from the Menominee range. Of the entire lake output Marquette county has contributed 631,813, and the Menominee range 395,212 gross tons. Increase in shipments from Escanaba, as compared with last year, 202,709 tons, from Marquette 177,503 tons, and from L'Anse 515 tons, the balance of the increase being accounted for by 8,930 tons shipped via St. Ignace. The aggregate shipments up to July 5—less than half the season—were never exceeded in any one year previous to 1878, with the single exception of 1873, in which year the total output was 1,195,234 tons. We very much fear, however, that there may be a gradual falling off during the remainder of the season; an unusual effort has been made to forward shipments in order to take all possible advantage of the prevailing low rates of lake carriage, which are likely to advance immediately after harvest. The strikes among the iron workers, should they continue, will likewise have a bad effect on the ore market, as in that event it is not likely that any new contracts can be made for this season's delivery. Consequently, the *Mining Journal* will not be surprised if, at the end of the year, the figures which now point toward a product of nearly, if not quite, 3,000,000 tons, should show only a slight increase, if any at all, over last year's output.

Copper.—The copper district of Lake Superior embraces the counties of Houghton, Keweenaw, Ontonagon, and Isle Royale. The following table shows a list of the mines wrought in 1881, together with the product (refined copper) of each, and the aggregate market value:

Name of mine.	*Net tons.*	*Pounds.*	*Market value.*

1881	27,274	1,708	9,955,321
Total	328,328	1,370	$152,571,458

These copper tables have been compiled from figures kindly furnished by Mr. Wright, Commissioner of Mineral Statistics.

New Jersey.—Professor George H. Cook, the State Geologist of New Jersey, in his annual report for 1881 places the production of iron ore in that State in the year mentioned at 737,052 gross tons. The production of 1880 was 745,000 tons. Statistics of the production of iron ore in New Jersey during the past decade, and the estimated production at various intervals in preceding years, in gross tons:

Years.	*Gross tons*	*Years.*	*Gross tons.*
1790	10,000	1872	600,000
1830	20,000	1873	665,000
1855	100,000	1874	625,000
1860	164,900	1875	390,000
1864	226,000	1878	409,674
1867	275,067	1879	488,028
1870	382,636	1880	745,000
1871	450,000	1881	737,052

Remy Hoffman	6,772	6,395
Goldschmidt	2,721	2,069
	85,989	85,362

More than one-quarter of the whole production in Germany is produced by the Mechernich Mining Company from their own ores. This company produces only selected lead, and the ready sale and good prices which they obtain for their brand enabled them to pay twelve per cent. dividend last year, a highly satisfactory result considering the dull state of the lead market during last year.—*London Mining Journal.*

Production of the Mines of Great Britain in 1881.—From a report on his district, kindly sent us by Dr. Le Neve Foster, of Llandudno, we take the following figures in statute tons on the production of the mines of Great Britain in 1881:

	1881.
Coal	154,184,300
Ironstone	11,858,766
Iron ore	3,244,657
Iron pyrites	11,764
Arsenic (obtained at the mines)	3,660
Arsenical pyrites	14,322
Banxite	7,732
Copper ore	62,583
Copper precipitate	587
Fluor-spar	373
Ganister	1,201
Lead ore (dressed)	63,445
Lead ore (undressed)	233
Manganese ore	2,737
Rock salt	197,631
Brine salt	1,830,000
Tin ore, dressed (block tin)	11,788
Zinc ore	34,135

The ores enumerated of course are those only which were mined in the country. The vast quantities of foreign ores and products worked in England are not included.—*From Coal.*

Belgium Spelter.—One of the greatest spelter producing districts of the world is that of Liége, Belgium. According to M. Van Scherpenzeel's annual report, the eleven works of the province treated 19,200 tons of Belgian ores and 145,900 tons of foreign ores, of which 40,000 tons came from Greece, 39,000 tons from Italy, 35,000 tons from Spain, 13,000 tons from Sweden, 13,000 tons from Germany, and 3,800 tons from France. Some of our franklinites are also worked in the same district: 375,000 tons of coal were burnt in working them. The product reached the enormous total of 69,800 tons, or about 10,000 tons more than the preceding year. With such heavy supplies weighing down the European markets, and the German works increasing steadily though not as rapidly, it is not surprising that a strong pressure is brought to bear in our Eastern markets, which before the close of this month have been forced to absorb nearly 6,000 tons of foreign metal.—*From Coal.*

THE COAL TRADE IN THE UNITED STATES IN 1881.

FROM *Coal* we take the following review of the coal interests during 1881: *Anthracite—January*—The year opened with a stock of only 500,273 tons in the hands of the companies and an extraordinary large demand caused by very severe weather. Before the end of the month, many dealers and consumers who were in the habit of putting in full supplies before the close of navigation, found that their stocks were becoming exhausted and they were compelled to order shipments by rail. The demand from the West and South was beyond the ability of the railroads to furnish transportation. Water routes were frozen up, and steam power had to be substituted in many instances. Prices strengthened, and the outlook was most favorable. In December, 1880, an arrangement was made to work but three days in the week during the remainder of the month, and up to February 1st. The demand was so great that during the third week of this month the companies were compelled to work full time, to meet the requirements of consumers. It may be stated, however, that the severity of the weather was so great as to bring about an unexpected curtailment, the mines being unable to produce and the railroads to carry the usual quantity of coal. There was at the same time great trouble in moving the coal from the shipping ports, owing to the accumulation of ice. The shipments this month were 1,672,645 tons. Stocks were reduced 82,387 tons, and were, at the end of the month, 417,885 tons.

February.—This month opened with very cold weather and snow-storms, so that the consumption of coal was very large, and the inability to move it great, owing to the railroads being blocked with snow and the harbor almost blocked with ice. Early in the month, however, the weather became milder, and new orders became less abundant, although the companies had orders more than sufficient to take all their coal, and prices were very firm. During the beginning of the month, coal was so scarce in this city that the retailers were enabled to advance their prices 50 cents a ton and the demand was so great that the companies took no action relative to curtailing production. However, the severe weather of the early part of the month and the crippled condition of the motive power of the coal-carrying roads acted as a curtailing influence. The shipments for the month amounted to 2,118,174 tons, making an excess of 729,938 tons for the two months of the year, as compared with the corresponding months of 1880. The stocks were reduced by 22,599 tons to the very small aggregate of 395,286 tons, or but little more than half a week's production.

March.—This month opened with prices slightly lower, and the demand so much reduced that a reduction of output was considered necessary. No action was taken, however, until the 17th, when it was resolved to work but three days a week during the following fortnight. Buyers were making hand-to-mouth purchases in expectation of lower prices and lower rates of freight. The line and Western trade was so great that demoralization was prevented in this market. The delay in action on the part of the companies began to destroy confidence in their settling upon any plan for regulating trade, and as a consequence orders began to be canceled on one pretext or another. At the meeting at which it was decided to curtail production, it was the predominant sentiment that a reduction of prices to induce spring purchases was unnecessary and unwise; but shortly afterward, the Pennsylvania Coal Company issued a circular making a reduction, and all the other companies followed the example by issuing circulars showing a reduction of 10@25 cents in prices. By the end of the month, both demand and supply were better. The shipments of coal this month amounted to 2,225,842 tons, and the total shipments from January 1st exceeded those for the first three months of the previous year by 1,208,903 tons. Stocks aggregated 563,063 tons, an increase during the month of 167,777 tons.

April.—A curtailment of production by working but three days during each of the first three weeks produced a steady improvement; but it was characteristic of the managers that they could not leave well enough alone, but must agree to full time work during the fourth week, with the result of weakening prices once more. On the 15th, the Western Association established prices 55@60 cts. per ton lower than were current immediately previous to its action. The shipments were 1,945,855 tons, making an increase for the first four months of this year, as compared with the like period of 1880, of 1,138,118 tons. The stocks were 528,198 tons, a decrease of 34,865 tons, as compared with the stocks at the end of the previous month.

May.—This month furnishes but little worth recording. During the first week, the mines were worked each day, while during the remaining weeks they produced but three days each week. The production was moved at fairly steady prices, which were not in all cases equal to circular rates. The free-burning coals were a little difficult to sell. The shipments were 2,086,743 tons. For the first five months of the year, they exceed those for the corresponding period of 1880 by 1,573,780 tons. The stocks at the end of the month were 562,719 tons, having increased 34,521 tons.

June.—Some of the companies were so well supplied with orders that they would not consent to more than six days' curtailment. The larger production all around gave trouble to those whose order-books were not well covered, and prices, as a consequence, were a shade weak. The business, however, was a remakarbly good one for the season of the year. The month, and the first half of the year, closed with a scarcity of vessels, and indications of higher prices for coal and freights in the early future. The shipments for the month were 2,418,238 tons; for the first six months, 12,467,496 tons; for the first six months of 1880, 10,312,120 tons; an increase for the first six months of 1881 of 2,155,376 tons. Stock at the end of the month, 598,565 tons, an increase of 35,846 tons for the month, and 180,680 tons for the six months.

July.—During the first half of July, there was a curtailment of three days' work (the last for the year), and prices were steady or improving. During the last, however, too much coal was mined, and prices were weaker. Vessels became scarce and freights higher. The shipments were 2,570,100 tons, making the total production 3,090,680 tons greater than for the first seven months of 1880. Stocks aggregated 674,716 tons, an increase of 76,151 tons for the month.

August.—This was a remarkable month. The production was very large and it was thought that coal was accumulating, but at the end of the month it was found that the coal was all taken and stocks slightly reduced, a misapprehension which caused an irregularity of prices. The demand on the line was very great, while the Western demand was beyond the ability of the companies to secure the necessary transportation to meet it. The movement to the East was greater, owing to an improved supply of vessels; but as this was still small, the rates of freight were high and the movement not so large as it might otherwise have been. The shipments reached the enormous total of 2,733,548 tons, making an increase from January 1st, as compared with the like period of the previous year, of 3,928,712 tons. Stocks at the end of the month aggregated 852,943 tons, a decrease of 21,773 tons.

September.—The production was somewhat curtailed by a scarcity of labor and water at the mines, while the movement of coal was not so great as it might have been, owing to a scarcity of vessels at the seaboard and of cars for meeting the Western demand. Prices were a little irregular, which was largely due to the fact that the Delaware & Hudson Canal Company offered what is called "off colored" coal at a concession. During this month, President Garfield died, and after the long period of suspense business began to improve. The Western Association advanced the prices of egg, stove, and chestnut 25 cents per ton. The shipments aggregated but 2,588,219 tons, reducing the increase over 1880 to 3,677.454 tons. The stocks at the end of the month aggregated 613,958 tons, a decrease of 38,985 tons.

October. —There was no curtailment excepting that which came from a scarcity of water at the mines and a lack of transportation facilities. The demand was constantly ahead of the supply, and prices were well maintained. In fact, for certain sizes and qualities of coal afloat, even more than circular prices were paid. Vessels were in fair supply, but the supply of cars for Western shipment was so meager that coal was shipped to Buffalo via the Erie Canal.

THE ANTHRACITE COAL PRODUCTION OF PENNSYLVANIA, IN TONS OF 2240 POUNDS.

BY RICHARD P. ROTHWELL.

Wyoming includes the Loyalsock Region in Sullivan County, opened in 1871. The production of this region has been as follows: 1871, 23,122 tons; 1872, 51,527 tons; 1873, 32,058 tons; 1874, 36,268 tons; 1875, 16,522 tons; 1876, 30,000 tons; 1877, 23,000 tons; 1878, 37,000 tons; 1879, 50,000 tons; 1880, 59,000; 1881, 64,325 tons.

The shipments amounted to 2,686,054 tons, while for ten months, as compared with the like period of 1880, there was an increase of 3,981,698 tons. The stocks at the end of the month amounted to but 474,904 tons—a reduction of 139,054 tons.

November.—November opened with current prices 15 @25 cents a ton higher than circular rates for stove and chestnut sizes of coal. All through the month, the demand was fully equal to the supply, although some sizes were said to have accumulated to a small extent. Old orders were mostly absorbing all the coal produced, while new orders were not so plenty. Vessels were in moderate supply and freights firmer. The mines worked full time. The shipments amounted to 2,727,871 tons. The stocks at the end of the month aggregated 392,315 tons a decrease of 82,589 tons.

December.—The demand for stove and chestnut sizes continued to be very great during all of this month, although, in anticipation of a slackening in the demand, these sizes were offered at a concession for delivery. The larger sizes were accumulating with some of the companies, and were weak. Vessels were in fair supply and freights reasonable. There was some cold weather, which brought about a fair consumption; but at the close of the year, the winter had been an exceedingly mild one, and it became evident that the falling off in consumption must tell on the business of 1882. The demand at the end of this month was so small as to make the subject of an early curtailment of production one for serious consideration. So ends one of the most remarkable years in the anthracite coal trade of this country. The shipments for this month amounted to 2,724,727 tons, making a total production for the year of 28,500,016 tons, and an increase over 1880 of 5,062,774 tons. The stocks at the end of this month aggregated 497,024 tons, an increase of 104,709 tons for the month. The stocks at the beginning of the year were 500,273 tons, showing a decrease for twelve months of 3249 tons. Mr. John H. Jones furnishes the following statement of anthracite coal shipments for the month of December, 1881, compared with the same period last year.

	December, 1881.	December, 1880.	Increase.	For year 1881.	For year 1880.	Increase.

* Decrease.

The stock of coal on hand at tide-water shipping points, December 31st, 1881, was 497,024 tons; on November 30th, 392,315 tons; increase, 104,709 tons. The amount on hand December 31st, 1880, was 500,273 tons. Of the total production in 1881, 13,651,383 tons, or 48.96 per cent. was from the Wyoming Region; 5,204,676 tons, or 18.58 per cent. from the Lehigh Region; and 9,253,958 tons, or 32.46 per cent. from the Schuylkill Region. Competitive tonnage, including all coal which for final consumption or in transit reaches any point on the Hudson River or the Bay of New York, or which passes out of the Capes of the Delaware, except pea and dust:

1880	10,088,159 tons.
1881	2,169 030 "

Of the whole business of 1880 and 1881, the following companies did the percentages set opposite their names:

Prices of Lehigh Coal in Philadelphia. (From Grotjan's *Public Sale Report.*) 1822, May to December, $8.40. 1823, January to August, $10; September, $9.50; October to December, $8.40. 1824, January to April, $8.40.

Compiled by The American Iron and Steel Association.

MR. SAWARD'S FIGURES.

Mr. Frederick E. Saward gives the following review of the year 1881 in *The Coal Trade Journal:*

We present herewith, the usual succinct review of the condition of the coal trade during the year 1881. The business of the country was in far better shape than during any preceding year since the war times. Coal was readily taken, and the amount disposed of was largely in excess of any year preceding. In our review of a year ago we said that "the output of Anthracite would be 27,000,000 tons at least, and with proper management it might be greater." We have had a year of proper management, and the result is a grand total of something over 28,000,000 tons. We also remarked referring to the Western trade that "the time may come when the tide-water trade will be a matter of secondary consideration, by reason of the better prices realized for the commodity at points short of tide." That there has been a realization of this point, is felt even at the present date by the dealers along the coast. Without the trade to interior points, is it at all probable that the tonnage would have been what is recorded, or the prices at tide kept up as they have? As year by year goes by, there is more effort made to supply the interior trade, the result netting better prices at the breaker, than that realized from the tide-water coal. When this fact does become more settled in the minds of the dealers on the seaboard, there will be no putting off of purchases in the hope of lower prices. The circular prices hardly varied during the entire year, and the average result must show that card prices were closely realized. At one time in October and November there were sales made at an advance over card rates for prompt deliveries. The Anthracite mines were worked 104 days in the first half of the year, or an average of two-thirds time, and the output to the end of June was 12,467,496 tons. Since that time there has been uninterrupted work and the output now aggregates 28,000,000 tons. It is expected that the year 1882 will show an increase on this quantity as there is a most satisfactory state of affairs in industrial pursuits generally, and the supplies on hand to begin the year with are not great. We append details of the business of the several regions, districts and companies, and to the latest dates available at this moment. Bituminous coals show a largely increased trade and traffic for the year. and at prices that must have been satisfactory to the shipper. There is an improvement in this regard within the past month or so, which if it can be held, will show good balance sheets for the operators another season. Some low prices were made early in the year 1881, and contracts taken at prices delivered at points beyond the tidewater ports. This will gradually be done away with, as the demand continues to keep ahead of the supplies promptly available. The future of the Bituminous coal is exceedingly flattering, and there is no doubt but that this quality of fuel will be relied upon in the East, as the source of steam-raising. Anthracite will sell to better advantage for domestic purposes. There have been no serious interruptions in the several mining districts, and the laborer having been well employed at fair rates, is not disposed to find a pretext for changing this condition of affairs. Our comparative table of the Anthracite output is given herewith. It is subject to some few corrections, and additions to close out the year.

The Production of Anthracite Coal.

Year.	*Schuylkill.*	*Lehigh.*	*Wyoming.*	*Total.*
1871	6,552,772	2,235,707	6,911,242	15,699,721
1872	6,694,890	3,873,339	9,101,549	19,669,778
1873	7,212,601	3,705,596	10,309,755	21,227,952
1874	6,866,877	2,773,836	9,504,408	20,145,121
1875	6,281,712	2,834,605	10,596,155	19,712,472
1876	6,221,934	3,854,919	8,424,158	18,501,011
1877	8,195,042	4,332,760	8,300,377	20,828,179
1878	6,282,226	3,237,449	8,085,587	17,605,262
1879	8,960,339	4.595,567	12,586,293	26,142,689
1880	7,554,742	4,463,221	11,419,279	23,437.242
1881 (estimated)	8,400,000	6,650,000	13,200,000	28,250,000

The workingmen in the Anthracite coal regions have had on the average, better employment than for several years, and at rates that are fair, being usually based upon the price of coal. The stoppages to restrict production bear heavily upon them, no doubt, but without this, would the prices be fair? We trust that there may be little necessity for this stopping after a season or two. The railroad companies have had a good year, as tolls have borne a proportionate improvement with prices, on a very heavy tonnage.

Lehigh Valley Railroad Company.—This company is rapidly assuming the foremost position in the rank of Anthracite coal carriers, and there is an increase each year in the amount of business done. In the efforts being made to secure a trade to the West, this company is well situated in regard to railway and transfer facilities. The activity prevailing in all the industrial centers along the Lehigh Valley makes a scarcity of coal, when others are complaining of a surfeit. The several branches all show an improvement in the amount of business done; with a line that may be said to extend from the lakes to the Atlantic, is there not opportunity for a vastly increased business in all commodities? We append a detailed statement for the fiscal year ending with November.

The tonage for 1881 was distributed as follows:

Furnaces, etc.	762,042
To connecting railroads between Mauch Chunk and Easton,	300,910
Local trade	88,672
For use of company	237,611
To Morris Canal at Port Delaware	298,951
To Lehigh Canal at Mauch Chunk	66,184
To New Jersey Division at Easton	1,604,203
To P. & N. Y. R. R. at Coxton	712,014
To Belvidere Railroad at Phillipsburg	1,257,176
To M. & E. R. at Phillipsburg	78,213
To Danville, H. & W. R. R. at Hazleton	101,447
To L. & B. R. R. at Lackawanna Junction	245,276
To other connecting railroads	38,575

The tonnage of this line increased during the last year at a greater ratio than has heretofore been recorded. There is an activity along the entire route from the lakes to the Atlantic, that warrants the prophecy that it will always be second in rank of the Anthracite coal carriers. We give details of the traffic:

Received from.	*Tons,* 1878.	*Tons,* 1879.	*Tons,* 1880.	*Tons,* 1881.
Wyoming region	909,712	1,135,587	1,162,706	1,362,706
Hazleton region	1,520,049	1,964,278	2,125,104	2,674,077
Beaver Meadow region,	435,951	474,761	441,591	502,631
Mahanoy region	565,826	786,082	876,860	1,257,933
Miscellaneous	5,076	1,076	243	197
Totals	3,446,615	4,361,785	4.606,415	5,791,376

The distribution was as below:

Year.	*East of Mauch Chunk.*	*Total Coal Tonnage.*
1871	2,210,272	2,889,074
1872	3,009,395	3,850,118
1873	3,189.023	4,144,339
1874	3,016,636	4,150,659
1875	2,417,800	3,277,571
1876	3,129,895	3,951,513
1877	3,453,533	4,362,124
1878	2,758,756	3,446,615
1879	3,531,829	4,361,785
1880	3,774,729	4,606,415
1881	4,498,323	5,791,376

Of the quantity east of Mauch Chunk as noted above, there was 1,604,203 tons delivered to the New Jersey Division for shipment at Perth Amboy, an increase of two hundred thousand tons over the preceding year. There was also 1,258,176 tons delivered to the Belvidere Division of the Pennsylvania Railroad, for shipment at Trenton and South Amboy. The rate of transportation was maintained at $1.40 per ton, for the 101 miles from Mauch Chunk to Perth Amboy, throughout the year. Laterals to Mauch Chunk average fifty cents per ton. Prices of coal remained unchanged throughout the season of 1881, on tide-water deliveries, and the demand was active at all times for Lehigh coal with sales a shade above the circular rates during November. Quotations were:

Lump.	*Broken.*	*Egg.*	*Stove.*	*Chestnut.*
$5 25	$4 45	$4 45	$4 25	$4 00

Prices of coal at Mauch Chunk, for delivery 'on the line,' were evently maintained throughout the season and averaged $3.10 per ton.

The Pennsylvania and New York Railroad.—This line forms the northern connection of the Lehigh Valley Railroad, for its business to the North and West. In addition thereto, it transports a large amount of bituminous coal from what is known as the "Barclay" region. The Loyalsock coal mined in Sullivan county, Pa., is shipped over the State Line and Sullivan Railroad to Towanda and hence to market via this line and its connections. Tonnage has been as below:

	In 1879.	*In* 1880.	*In* 1881.
Anthracite	860,161 tons.	705,464 tons.	1,108,056 tons.
Bitumioous	329,901 tons.	435,516 tons.	419,551 tons.

We append a statement of the business during the fiscal year ending with November.

ANTHRACITE COAL.	
Received from Lehigh Valley Railroad	712,014 02
Received from Lack. & B. Railroad	233,631 06
Received from Pleasant Valley Branch	97,576 18
Received from State Line and Sullivan Railroad	64,834 04
Total	1,108,056 10
Same time last year	705,464 04
BITUMINOUS COAL.	
Barclay Railroad, shipped north from Towanda	370,892 16
Barclay Railroad, shipped south from Towanda	47,644 05
North Central Railroad	1,013 18
Total	419.550 19
Same time last year	435,516 15

Philadelphia and Reading Railroad Company.—The business of this company shows an increase that is very flattering; there was a large increase in the profits as compared with many preceding seasons, and if the company was out of the hands of the receivers, it would be on as good a footing as the other coal carriers and producers. We append details of the distribution of this coal carrier during the eleven months ending with November. The destination of the coal carried is about equally divided between tide-water and Philadelphia and what is termed the "line trade."

Passing over Main Line and Lebanon Valley Branch	4,829,568
For shipment by Schuylkill canal	595,504
Shipped West'd via Cat. & Wpt. Br. & N. C. R. R.	467,863
Shipped East via Lehigh Valley R. R	66,960
Shipped West and South from Pine Grove	129,443
Consumed on Laterals	120,486
Lehigh and Wyomiog coal	976,964
Bituminous	331,376
Coal for Company's use	554,358
Grand total tonoage	8,072,440

Year.	*Tons.*	*Year.*	*Tons.*
1860	1,946,195	1871	6,002.573
1861	1,639,535	1872	6,185,434
1862	2,310,990	1873	6,546,555
1863	3,065,261	1874	6,348,812
1864	3,065,577	1875	5,505,455
1865	3,090,814	1876	5,595,207
1866	3,714,684	1877	7,055,818
1867	3,446,826	1878	5,909,140
1868	4,574,874	1879	8,147,579
1869	4,239.457	1880	7,179,398
1870	4,633,504	1881	8,072,440

The above is the total coal tonnage carried.

Of the coal produced from the lands owned by the company during the years 1873-81, together with the reported average cost of coal in cars at the mines, the following schedule is given:—

	Leases produced.	*P. & R. C. & I. Co. produced.*	*Average cost at mines.*
1873	2.055.565 tons.	1,348,838 tons.	$2.51 per ton.
1874	1,802,370 tons.	1,374,790 tons.	2.45 per ton.
1876	1,594,741 tons.	1,510,572 tons.	1.87 per ton.
1876	1.218,533 tons.	1,[illegible]53,364 tons.	1.35 per ton.
1877	1,389,108 tons.	3,794.528 tons.	1.04 per ton.
1878	1,100,181 tons.	2.727,608 tons.	1.24 per ton.
1879	1,300,822 tons.	4,269,929 tons.	1.14 per ton.
1880	1,235,642 tons.	3,460,464 tons.	1.43 per ton.
1881	1,484,992 tons.	3,937,607 tons.	1.49 per ton.

Philadelphia takes over a million tons of Schnylkill coal, carried by this company; there is a shipping business of two million tons at Port Richmond, and the 'line' deliveries aggregate yearly two millions of tons. This company also sends coal through the tide-water shipping ports of South Amboy and Elizabethport, N. J. The coal tonnage originating at collieries tributary to this railroad company, is stated to have been 6,040,383 tons during the calendar year 1881, thus making it the largest Anthracite coal-carrier.

The ton named is of 2,240 lbs., and the year in all tabular statements ends with November 30th.

Lehigh Coal and Navigation Company.

Year.	*Tons.*	*Year.*	*Tons.*
1872	566,724	1877	550,519
1873	525,623	1878	430,987
1874	572,470	1879	701,761
1875	397,427	1880	617,989
1876	606,773	1881	645,338

Lehigh Coal and Navigation Company.—This company dates back to 1820, as a mining and carrying company. The figures in the schedule above, are the figures of the production at the "Summit Mines."

Coal Cleared Over the New York Canals.

	1879.	1880.	1881.
Anthracite	810,517	762,598	902,214
Bituminous	160,538	186,213	206,935

Delaware, Lackawanna and Western Railroad Company.—The large business that has been done by this company has been cause for surprise with many persons who are not aware of the persistent push that permeates every branch of the management. Westward for Anthracite is one of the cardinal points in their belief; the facilities existing for an increasing business, year by year, are of the most ample description. With the completion of the line from Binghampton to Buffalo, one may naturally expect a greater tonnage in that direction. So far as the tonnage reports are a criterion there must be a profit in this trade that far overshadows the business to tide. In 1878, this company mined and purchased, and transported for others 2.147,000 tons, of which 676,000 went north and west. A comparison with later details is given below.

	Tons 1879.	*Tons* 1880.	*Tons* 1881.
Forwarded North	1,516,458	1,505,843	1,885,350
Forwarded South	2,306,956	2,023,243	2,386,603

Year.	*Tons.*	*Year.*	*Tons.*
1871	1,916,486	1877	2,089,523
1872	2,836,948	1878	2,180,672
1873	3,136,306	1879	3,867,407
1874	2,570,437	1880	3,550,348
1875	3,326,901	1881	4,388,969
1876	2,300,500		

This tonnage includes coal carried, purchased and mined. There are no details of the distribution other than "North" and "South." The tonnage forwarded North includes all the coal sent West, the tonnage forwarded South is the coal brought to Hoboken, and for the line trade in New Jersey. The extension from Binghampton to Buffalo, known as the New York, Lackawanna and Western, will prove of great advantage to this company in developing the trade in Anthracite at the West.

The following is the official statement made at the regular meeting of the Delaware, Lackawanna and Western directors showing the business for the year 1881:

Gross earnings from all sources			$27,396,526
Less expenses, &c			19,632,661
Balance, net earnings			$ 7,763.864
Less interest and rentals of leased lines			3,558,493
Balance profit.			$ 4,205,370

COST OF PROPERTY AND ASSETS.

Construction account			$30,873,356
Materials on hand			1,121,850
Stocks and bonds (cash value, $7,026,800)			6,265,520
Accounts receivable as follows:—			
Cash and demand loans	$ 871,781		
Coal on hand (less than market value)	553,873		
Advances to leased lines	336,645		
Advances on coal to be delivered	608,013		
Coal bills and sundry accounts due	1,519.193		
		$3,804,507	
Less accounts payable:—			
Part due and uncalled for dividends, interest and rentals	$ 93,451		
Dividends, interest and rentals due and payable after January 1	1,576,090		
State taxes payable after January 1	282,179		
Accounts due and payable after January 1	631,673		
Pay rolls for December payable in January	446,641		
		$3.035,037	
			$ 769,469
Total			$39,030,197

CAPITAL STOCK, BONDS AND SURPLUS.

Capital stock	$26,200,000
Bonded debt	4,044,900
Balance due on account of bonds paid and retired March 1, 1881.	1,200,000
Surplus account	7,585,297
Total	$39,030,197

Coal transported in 1881, 4,983,736 tons.

Central Railroad of New Jersey.—We have details of the business of this company to the 24th ultimo, and it will be noticed that there is a largely increased traffic, and the distribution is about equally divided between tide and the interior trade.

1876	2,952,520		

Pennsylvania Coal Company.—The output of coal from the mines of this company is yearly increasing and the figures for 1881 show a larger business than ever before. Tide coal is received at Weehawken, N. J., and at Newburgh, N. Y. by the 'Erie' Railway from Hawley. We append annual business:

1876	1,143,922 tons.	1879	1,372,759 tons.
1877	1,118,011 tons.	1880	1,123,585 tons.
1878	925,995 tons.	1881	1,427,747 tons.

This distribution during 1880 and 1881 was:

	1880.	1881.
West by Erie	131,917	181,494
East by Erie	986,023	1,239,990
East by D. & H. Canal	5,733	6,263

Pennsylvania Railroad—Belvidere Division.—This line connects at the Delaware river with the roads from the Anthracite regions, and we give the amount of Anthracite coal carried to December 24th, 1881:

	1881.	1880.
To South Amboy for shipment	759,703	552,157
For distribution	718,495	503,129
For company's use	113,779	104,906
	1,591,978	1,160,193

This was received from:

Lehigh region	1,327,244	942.427
Wyoming region	264,733	537,756

In the annual report of this company, facts and figures relative to the Anthracite companies controlled by the company are given below:—

SUSQUEHANNA COAL COMPANY.

Receipts from sale of coal, etc		$2,770,958 74
Expenses mining, selling, shipping coal, including taxes and amount charged off for exhaustion of lands, being ten cents a ton on coal mined above certain sizes		2,297,734 97
Net earnings for 1881		$ 473,223 77
From which deduct:		
Interest on funded debt	$120,000 00	
Interest and discount	3,638 68	
		123,638 68
		349.685 09
Add increased value of personal property at mines (as per inventory) as compared with January 1, 1881		23,620 30
		$ 373,205 39
Out of which was paid a dividend of four per cent		85,472 00
Leaving a balance of		$ 287,733 39
Net profit, 1881		$ 373,205 39
Net profit, 1880		209,806 50
Being an increase in profits of		$ 163,398 89

SUMMIT BRANCH RAILROAD COMPANY.

Receipts from sale of coal, rents, &c	$1,107,830 12
Expenses mining, selling, shipping coal, including taxes and amount charged off for exhaustion of lands	993,361 24

Net earnings for year		$ 114,468 88
Add amou t received from Lykens Valley Coal Company on account of advances made to that company in former years		25,875 52
		$ 140,344 40
Interest on funded debt	$70,000 00	
Interest and discount	15,272 31	
		85,272 31
Net profit for 1881		$ 55,072 09
Net profit for 1880		34,809 94
Being an increase in profits in 1881 of		$ 20,362 15

LYKENS VALLEY COAL COMPANY.

Receipts for sale of coal, rents, &c	$ 755,034 04
Expenses mining, selling, shipping coal, taxes, &c	729,158 52
Net earnings for 1881	$ 25,875 52
Net earnings for 1880	48,907 80
Being a decrease in 1881 of	$ 23,032 28

MINERAL RAILROAD AND MINING COMPANY.

Receipts from sale of coal, rents, &c	$1,747,035 25
Expenses mining, selling and shipping coal, taxes, &c	1,147,185 82
	$ 326,849 43
From which deduct:	
Royalty paid on coal to the Pennsylvania Railroad and Northern Central Railway Co's	233,589 31
	$ 93,260 12
Out of which was paid a dividend of	10,000 00
Leaving a balance of	$ 83,260 12
Net profit for 1881	$ 93,260 12
Net profit for 1880	39,858 57
Being an increase in profits in 1881 of	$ 53,401 55

The average price per ton at point of sale, aggregating the results of the four coal companies for 1881, was $3.43 7-10, as against $3.34 6-10 for 1880, showing an increase of 9 1-10 cents per ton.

It will be seen from the foregoing statements, that your companies mined 161,223 more tons of coal in 1881 than in 1880; and that the financial result for the year was a surplus profit of $537,413.12, after paying their interest upon their fixed liabilities, and a royalty by the Mineral Railroad and Mining Company of fifty-three cents per ton on coal mined, amounting to $233,589.31.

Cumberland Coal Trade in 1881.—Shipments of Georges Creek Cumberland coal during the past season have been on a generous scale, and an increased tonnage is recorded. It will be noticed that one company has done a business of nearly three-quarters of a million tons, an amount far ahead of anything previously recorded. A large trade westward has been developed for this coal. The Georges Creek and Cumberland road was opened for business, and all things considered, they have done well. The canal has been dry, or nearly so, unfortunately too, in the busiest time of the year, and there is a decrease in the shipments by that line. The increase in business by the Pennsylvania line is due to the tonnage furnished by G. C. & C. road, and Cumberland coal is now shipped at Georgetown, Baltimore, Philadelphia and South Amboy on the Atlantic sea coast. The development of this coal field south of the B. & O. road, in the Elk Garden country, is likely to increase the shipments of this coal beyond previous calculations. The coal is found there in its purest, with the deepest seam of any portion of the district. Prices have been fairly maintained, and with the conditions of demand of the past month or two continued through 1882, there must be a good financial showing. We quote $3.50 at Georgetown, $3.75 at Baltimore, and $5.00 at New York as a fair average. Contracts, of course, realize less returns. Wages paid for mining are 65 cents per ton. We append details for last two years of the several companies. Those for 1880 are official figures for the calendar year, and 1881 are figures as per tonnage report to the 24th ultimo. If one may judge from the reported improvements being made at the collieries in this district there is likely to be a very much larger tonnage in 1882. The flush times of 1871–'2–'3 induced a heavy tonnage, averaging 2,250,000 tons, and this point has been turned in 1881, in spite of all the coals that have come into market since that time. Is there any doubt, that there is a growing demand for Bituminous coal in view of the points here related?

Shipped by	*Tons* 1880.	*Tons* 1881.
Borden Mining Company	157,533	161,328
Consolidation Coal Company	552,484	730,673
Blæn Avon Coal Company	45,921	25,295
Hampshire and Baltimore Company	98,739	62,121
Georges Creek Coal and Iron Company	235,599	250,102
New Central Coal Company	350,184	296,403
Maryland Coal Company	113,445	121,362
American Coal Company	124,901	113,354
Atlantic and Georges Creek Company	62,802	55,901
Piedmont Coal and Iron Company	14,007	8,157
Swanton Mining Company	41,741	41,144
Potomac Coal Company	77,431	79,294
Maryland Union Coal Company	153,359	169,328
Davis Bros	54,189	67,092
Miscellaneous	367	19
W. Va., C. & P. R. R.	...	10,2[illegible]5
Total	2,189,430	2,197,715

The production was sent to market by the following routes:

	1880.	1881.
B. & O. R. R.	1,319,587	1,415,613
C. & O. Canal	603,125	505,339
P. S. Line	213,460	270,163

The G. C. & C. road carried 207,824 tons of the output in 1881 and the same is included in the coal forwarded to market (83,122 tons) by the C. & O. Canal and (128,102 tons) by the Pennsylvania State Line Railroad, and the local trade of 4,599 tons.

Clearfield Coal Trade in 1881.—Each returning year shows an increasing tonnage from this now well-known source of supply. As remarked in our last review, there must be something in the quality of the commodity that will assert itself in spite of all arguments to the contrary. How were it possible, otherwise for the tonnage to grow from 1,281,861 tons in 1876 to 2,364,169 tons in 1881. Could a supply of cars have been secured, there would have been a still further increase. There was no strike, and wages are at fifty cents per ton. Prices have been remunerative on the average, and $3.75 at Philadelphia, and $4.50 at South Amboy, shows the price realized for good coal. Of course there are many contracts that will not realize these figures, but the lively demand during November and December enabled much better rates to be obtained on very large amounts. It is almost a repetition of our old reports, to state that the business at tide has taken a larger percentage of the traffic in Bituminous coal than in former years. Manufactories, steamships, etc., have all taken more of this coal. We regret not being able to give a detailed statement of the output at each of the forty operations, embraced within this district, but neither the operator nor the railway will give these facts. There are half a dozen concerns that do three-fourths of the business, for much of the coal mined by others is purchased and disposed of by them. There is every prospect of a greater output during the year 1882, and we hope that the operators will realize their anticipations both as to quantity and price. The output is reported at 2,364,169 *net* tons for 1881, as compared with 1,711,098 tons the preceding year. Of course the coal passing over Tyrone and Clearfield road is alone embraced in these figures.

Huntingdon and Broad Top Mountain Railroad.—This is yearly becoming an important coal carrier, not so much of the coal that originates upon its own line, but from the Georges Creek coal that is coming over it for shipment at Philadelphia and South Amboy. Details of the tonnage are given below:

	1879.	1880.	1881.
Broad Top Coal	141,594	174,736	203,000
Georges Creek	174,930	242,593	312,000

An outlet for the coal from the region is afforded by the Huntingdon and Broad Top Mountain Railroad (this was completed in 1856, and during the latter part of that year 42,000 tons were forwarded from this region to various markets.) The line extends from the town of Huntingdon, on the Pennsylvania Railroad, 203 miles west of Philadelphia, to Mt. Dallas, in Bedford county, a distance of 45 miles. At Saxton, 24 miles from Huntingdon, a branch road, 10 miles in length, extends to Broad Top City; at Riddlesburg, 5 miles beyond Saxton, is a branch into Fulton, 5 miles, from the main road. From Mt. Dallas the Bedford and Bridgeport Railroad, 386–10 miles in length, extends to the Maryland State line; from this point to Cumberland, Md., via the Cumberland and Pennsylvania Railroad is 7 miles. At or near Cumberland, connection is made with the Cumberland and Pennsylvania, and the Georges Creek and Cumberland roads. This connection gives an outlet for the Cumberland coal to the interior markets of Pennsylvania, to Philadelphia and South Amboy, N. J. The Bedford and Bridgeport road is leased to the Pennsylvania Railroad, and operated by them.

We append details of the tonnage of the Huntingdon and Broad Top road, during the past ten years.

1872	297,473 tons.	1877	140,143 tons.
1873	350,245 tons.	1878	150,204 tons.
1874	226,693 tons.	1879	141,594 tons.
1875	204,921 tons.	1880	174,736 tons.
1876	159,779 tons.	1881	204,819 tons.

The shipments of Cumberland coal over the Pennsylvania and the Huntingdon and Broad Top Railroads have been as below:

1872	22,021 tons.	1877	187,488 tons.
1873	114,589 tons.	1878	163,598 tons.
1874	67,681 tons.	1879	171,930 tons.
1875	175,154 tons.	1880	242,593 tons.
1876	145,796 tons.	1881	313,600 tons.

The East Broad Top Railroad penetrated this coal field in 1875; there were delivered to the Pennsylvania Railroad at Mt. Union, 53,567 tons of coal during 1875, 66,104 in 1876, 54,738 in 1877, 63,068 in 1878, 67,929 in 1879, 72,450 in 1880, and 91,745 tons in 1881. In addition, some 47,634 tons were last year used in the furnaces, on the line of the E. B. T. road. The coal measures are regular in structure, with gentle undulation dividing the field into several synclinals or basins. The coal is semi-bituminous in its nature, and has been largely used for blacksmithing purposes, for generating steam in locomotives, marine and stationary engines, in rolling mills, puddling furnaces and forge fires; with glass works it is an especial favorite. It gives a white ash, is free burning, and easily ignited. Included in this region, are all the mines in Huntingdon and Bedford counties.

Union Pacific Railroad.—The production and cost of coal mined by the Union Pacific Railroad Company compare as follows:

	Tons.	*Cost.*	*Av. cost.*
In 1881	587,493	$814,613.56	$1.39
In 1880	445,129	547,325.66	1.23
Increase	142,364	$267,287.90	$0.16

The cost of additional machinery and of improvements of all kinds for increasing the capacity of existing mines and for the opening of new mines is included in the above. During the year 1881, there were expended for these purposes:

At Carbon mines	$63,793.52
At Rock Spring mines	17,881.07
At Almy mines	69,926.18
At Grass Creek mines	23,054.84
Making the total	$174,655.61

The annual report says that, although the quantity of coal mined by the company has increased for some years at the rate of 25 per cent. per year, yet the demand for coal on the line of the railroad has increased in a greater proportion. The improvements made the past year have increased the capacity of the mines to double the output of the year 1881, and it is now expected that the additional railroad equipments, under contract to be delivered early this season will enable the company to meet promptly the demand for coal during this year. The company has an interest in fully supplying this demand, not only on account of the direct profit realized from the sale of coal, but also from the development of business that results from an abundant supply of cheap fuel of an excellent quality for domestic and manufacturing purposes. The sales of coal to other railroad companies and to private consumers compare as follows:

	Tons.	*Amt. sales.*
In 1881	193,031	$1,098,863.83
In 1880	137,119	743,087.05
Increase in 1881	55,912	$355,776.78

The production and cost of coal for seven years of the different mines of the company are as follows:

Year.	Carbon.			Rock Springs.		
	Tons.	*Cost.*	*Per Ton.*	*Tons.*	*Cost.*	*Per Ton.*
1875	61,750	$126,716.13	$2.05	104,667	$192,973.09	$1.84
1876	69,062	109,193.02	1.58	134,953	185,844.60	1.38
1877	74,343	92,702.41	1.25	146,494	162,075.07	1.11
1878	62,418	75,026.14	1.20	154,281	152,796 90	.99
1879	75,325	89,541.90	1.19	193,251	190,338.36	.98
1880	100,434	136,040.40	1.35	244,460	303,818.41	1.24
1881	156,820	236,773.03	1.51	279,908	355,978.10	1.27
Total	600,152	$865,993.03	$1.44	1,258.014	1,543,824.53	$1.23

Year.	Almy.			Total.		
	Tons.	*Cost.*	*Per Ton.*	*Tons.*	*Cost.*	*Per Ton.*
1875	41,805	$72,195.88	$1.73	208,222	$391,885.10	$1.88
1876	60,756	80,482.94	1.32	264,771	375,520.56	1.42
1877	54,603	57,353.89	1.05	275,480	312,131.37	1.13
1878	59,096	59,393.81	1.00	275,795	287,216.85	1.04
1879	71,576	83,368.90	1.16	340,152	363,249.16	1.07
1880	100,235	107,466.85	1.07	445,129	547,325.66	1.23
1881	110,157	132,652.38	1.20	587,493	814,613.56	1.39
Total	498 288	$592,914.65	$1.19	2,397,042	$3,091,942.26	$1.29

The total for 1881 includes Grass Creek, 40,608 tons, cost, $89,210.05; average per ton, $2.20. —*From "Coal."*

New York Pennsylvania and Ohio Railroad.—The recent report of the New York, Pennsylvania & Ohio Railroad for the year 1881 contains the following statement of the traffic of coal, ore, and oil during the last seven years:

Year.	*Coal, tons.*	*Ore, tons.*	*Oil, barrels.*
1881	1,359,759	534,159	933,250
1880	1,003,141	494,569	835,556
1879	740,569	375,378	2,385,752
1878	621,743	255,908	2,027,792
1877	747,145	245,199	3,530,188
1876	746,642	204,128	2,158.149
1875	728,967	175,607	2,719,830

—*From "Coal."*

Illinois Central Railroad.—The Illinois Central Railroad carried the following quantities of coal in 1881;

	From Mines along Road.	*From Grand Tower R. R., at Carbondale, Ill.*	*From Crooked Creek R. R., at Judd, Iowa.*
January	27,500	2,375	2,830
February	27,700	5,055	850
March	28,220	7,310	1,390
April	29,960	7,910	1,170
May	21,700	8,585	320
June	20,350	4,130	390
July	23,500	5,210	290
August	41,325	8,135	575
September	38,525	7,070	555
Total for 9 mos.	258,780	55,780	8,370

—*From "Coal."*

COAL IN DIFFERENT STATES.

UNDER this head we gather some further figures of interest from various indicated sources.

Output of the Different States.

	Tons, 1880.	*Tons, 1881.*
Pennsylvania Anthracite	23,437,242	28,500,016
Pennsylvania Bituminous	19,000,000	20,000,000
Illinois	4,000,000	6,000,000
Ohio	7,000,000	8,250,000
Maryland	2,136,160	2,261,918
Missouri	1,500,000	1,750,000
West Virginia	1,400,000	1,500,000
Indiana	1,100,000	1,500,000
Iowa	1,600,000	1,750,000

Kentucky	1,000,000	1,100,000
Tennessee	600,000	750,000
Virginia	100,000	100,000
Kansas	550,000	750,000
Michigan	75,000	100,000
Rhode Island	10,000	10,000
Alabama	340,000	375,000
Washington	175,000	175,000
Wyoming	225,000	225,000
Utah	275,000	275,000
Colorado	575,000	700,000
Georgia	100,000	150,000
Total	65,198,402	76,121,934

—*F. A. Saward, The Coal Trade.*

Government Estimates.—The Department of Internal Affairs of Pennsylvania furnishes the following tabulation of anthracite coal for 1881:

Total number collieries	319
Average number of days worked during year	27.501
Total number employees	75,169
Total amount paid in wages during year	$27,454,781.36
Total production of anthracite for 1881, tons	27,929,128.18
Average amount per ton paid in wages	1.0655
Average amount of coal produced to each employee	373.14

A similar table for the bituminous fields shows:

Total number of collieries	382
Average number of days worked during the year	217.07
Total number of persons employed	35,630
Total amount paid in wages during the year	$14,340,057.50
Total production of bituminous coal for the year ended December 31, 1881, tons	15,692,923.12
Total number of coke ovens	6,640
Total production of coke for the year, tons	2,176,403.08
Average amount per ton paid in wages	$0.92.05
Average amount of coal produced to each employee	442.47

In the bituminous regions the number of days worked in the year is much less than in the anthracite. One reason of this is, probably, that the demand supplied from the bituminous region is more local than that from the anthracite. The number of days' work in a large section of the West Pennsylvania bituminous field depends upon the state of water in the Ohio River, which was not favorable to shipments, and consequently to mining, last year. The greater ease of mining bituminous coal has made the output per man much greater than in the anthracite region.

Accidents.—According to a statement prepared by the engineer of the Philadelphia & Reading Coal and Iron Company, the accidents at the collieries worked by the company during the last nine years, referred to the tonnage of coal extracted, were as follows;

Year.	*Total tonnage.*	*Total serious accidents non-fatal.*	*Number of tons mined per serious accident.*	*Total fatal accidents*	*Number of tons mined per fatal accident.*
1873	1,348,838	132	10,294	44	30,655
1874	1,374,791	96	14,320	36	38,188
1876	1,510,572	80	18,882	30	50,352
1876 (11 mos.)	1,853,364	75	24,711	30	61,778
1877	3,794,529	185	20,511	45	84,323
1878	2,727,608	217	12,570	44	61,991
1879	4,269,929	238	17,941	52	82,114
1880	3,460,464	198	17,477	43	80,476
1881	3,937,608	236	16,685	33	119,321

Referred to the number of employees, the figures stand as follows:

Year.	*Number of employees.*	*Total serious accidents non-fatal.*	*Per cent. serious accidents.*	*Total fatal accidents.*	*Per cent. fatal accidents.*
1873	5,000	132	$2\frac{64}{100}$	44	$0\frac{88}{100}$
1874	8,000	96	$1\frac{20}{100}$	36	$0\frac{45}{100}$
1875	9,000	80	$0\frac{89}{100}$	30	$0\frac{33}{100}$
1876	9,110	75	$0\frac{82}{100}$	30	$0\frac{33}{100}$
1877	11,428	185	$1\frac{61}{100}$	45	$0\frac{39}{100}$
1878	10,630	217	$2\frac{04}{100}$	44	$0\frac{41}{100}$
1879	12,661	238	$1\frac{88}{100}$	52	$0\frac{41}{100}$
1880	13,093	198	$1\frac{51}{100}$	43	$0\frac{33}{100}$
1881	13,509	236	$1\frac{75}{100}$	33	$0\frac{24}{100}$

It will be noted that there was a steady increase.

There were seventy-nine accidents in the Wilkes-Barre district resulting fatally from the following causes.

By Explosions of Carburetted Hydrogen Gas	10
By Falling of Roof and Coal	28
By Falling down Shaft and Slopes	3
Crushed by Mine Cars	10
By Explosions of Powder and Blasts	7
By miscellaneous causes underground	3
By various causes outside around the mines	18
Total	79

One hundred and seventy accidents which were serious but not proving fatal occurred as follows:

By Falling of Roof and Coal	43
By Explosions of Carburetted Hydrogen Gas	24
By Falling down Shafts	1
Crushed by Mine Cars	44
By Explosion of Powder and Blasts	25
From miscellaneous causes inside of the mines	16
By various causes on surface	17
Total	170

Number of persons employed in and around the mines of each company are as follows:

Lehigh Valley Coal Company	1,550
Lehigh and Wilkesbarre Coal Company	4,941
Delaware and Hudson Canal Company	2,699
Susquehanna Coal Company	2,341
Miscellaneous coal companies	5,277
Total	16,808

Miners.—According to returns obtained from the operators by the Pennsylvania Bureau of Statistics, the average daily wages paid to employees in anthracite and bituminous coal mines during the year was as follows:

Anthracite.	*Number.*	1878.	1879.	1880.	1881.
Miners on contract	21,442	$1.97	$2.09	$2.71	2.52
Miners on wages		1.66	1.63	1.88	2.05
Inside laborers	12,550	1.38	1.37	1.62	1.72
Outside laborers	11,241	1.21	1.19	1.30	1.27

It will be noted that, as a general thing, wages have increased since 1879, when they were very low. Inside, labor, both in the anthracite and bituminous fields, is now better paid, relatively, than in the past, and so it is with many other branches of the labor connected with coal mining. We have added to the table the number of employees named, the difference between the totals given and the sum of the men enumerated being employees not classified. A glance at these figures will show that while the production bore the proportion of about 28,000,000 tons of anthracite to 16,000,000 tons of bituminous, the number of miners is very nearly alike. On the other hand, the inside and outside laborers in the anthracite collieries is 23,791 against only 5346 in the bituminous mines, and the number of boys is about eight times as large. While, therefore, one miner apparently can accomplish more in an anthracite mine, it requires so much other labor that the cost of wages per ton is, according to the returns of the Bureau of $1.065 to $0.92, the latter figures, however, not including the wages paid in coking bituminous coal, so that, strictly speaking, the figures are not directly comparable, on the basis of expenditure or product prepared for market.

The *Commercial Herald* gives the following figures on the imports of coal into San Francisco:

Foreign.	1880. *Tons.*	1881. *Tons.*	*Increase.* *Tons.*	*Decrease.* *Tons.*
Australian	59.872	126,296	66,424	. . .

Total	821,456	
Corresponding period, 1880	531,745	
Corresponding period, 1879	578,417	

Colorado.—The year 1881 will be remembered as a notable one in the development of the coal and iron interests of the State. Its marked features have been the largely increased output of the coal mines already opened; the developments of the Gunnison coal fields, and especially the anthracite measures at Irwin, near Crested Butte; and pre-eminently the starting of the blast furnace at South Pueblo, with the attendant opening up of iron mines, limestone quarries and other feeders of the furnace. While the coal interests in the northern part of the State have prospered, it is in the southern portion that the greatest strides have been made for which the Colorado Coal and Iron Company, having its general offices in Colorado Springs, must receive the credit. This corporation was organized January 23, 1880, by the consolidation of several of the companies that had been organized to develop different portions of Colorado. It has rapidly grown to be one of the largest and wealthiest corporations of the West, and now owns upwards of 100,000 acres of land in central and southern Colorado, 15,000 acres of which are underlaid with coal, and 12,000 acres containing large deposits of iron ore. To develop these properties, the company has in operation a coke oven at El Moro and Crested Butte, a blast furnace at South Pueblo, with steel works nearly completed, and a rolling mill at Denver.

The following table shows the total output of the Canon City, Walsenburg and El Moro coal mines for the years 1880 and 1881:

Mines.	1880. *Tons.*	1881. *Tons.*	*Increase for* 1881.
Canon City	107,575	120,000	12,425
Walsenburg	32,106	68,000	35,894
El Moro	81,697	140,000	58,303
Totals	221,378	328,000	106,621

From the El Moro mine there were shipped to the coke ovens 51,891 tons in 1880, and 95,000 in 1881. The total coal output of all the company's mines is 332,000 tons in 1881, as against 211,378 tons in 1880.

Canon Coal Fields.—These comprise 3740 acres of land in Fremont county, thirty-eight miles west of South Pueblo. Their product has long been recognized as the best steam, domestic and metallurgical coal in Colorado. It is non-coking and is largely used by the railroad companies, besides supplying a large part of the fuel used in Denver, Pueblo, Colorado Springs, Canon City and Leadville. During the past year the company has increased its facilities for the rapid mining of this popular coal. The annexed analyses were obtained from two specimens of Canon coal.

	No. 1.	*No.* 2.
Water	4.50	6.15
Volatile matter	34.20	36.03
Fixed carbon	56.80	52.82
Ash	4.50	5.00
	100.00	100.00
Sulphur		.65

Cuchara Coal Fields.—These measures, the product of which is known as Walsenburg coal, comprise 2,390 acres of land in Huerfano county, directly on the line of the D. & R. G. Railway. Of the three workable seams, only one has as yet been developed. This like the Canon is a non-coking, steam and domestic coal, largely used by the railroad companies and for household fuel. Analyses are as follows:

	No. 1.	*No.* 2.
Water	3.23	2.97
Volatile matter	40.93	40 08
Fixed carbon	49.54	48.67
Ash	6.30	8.28
	100.00	100.00
Sulphur	.62	.65

El Moro Coal Fields.—In Las Animas county the company owns 8,121 acres of coal lands. The El Moro mine is located in a tract of 1,800 acres lying along the base of Fisher's Peak. The mine is entirely free from water, and the vein of coal is from ten to twelve feet in thickness, lying almost horizontal. It is easily mined, and the average cost of putting the coal on the cars is less than at any other mine west of the Pittsburg, Pa., district. The mine has now a capacity of over 1,000 tons per day which could be readily doubled. The coal is a true Bituminous, producing coke of excellent quality, to which reference will hereafter be made under its appropriate head. It is the best gas and blacksmith's coal in the State, and is used extensively for steam and metallurgical purposes. It is the only coal yet discovered in Colorado east of the mountains which can be profitably used for heating iron in furnaces, and for this use it is equal to the best grades of eastern coal.

Crested Butte Coal Fields.—The company owns 160 acres of coal lands at Crested Butte, and has leased about 1,000 acres of adjoining lands. The coal deposits are of remarkable thickness and of a very superior quality. There are five separate veins, respectively ten, six, five, four, and three feet in thickness, making a total of twenty-eight feet of coal. Three of these veins have already been opened and found to contain good coal. Two of these, the six feet and five feet veins, are coking coal, and the coke made therefrom, in open pits, is much superior in quality and texture to the best product of Pennsylvania ovens. The analysis of coke and coal is as follows:

	Water.	*Vol. Matter.*	*Fixed Carbon.*	*Ash.*
Coke	1.35	. .	92.03	6.62
Coal	.44	24.17	72.30	3.09

The railroad was extended to these mines in November, 1881, and the coking ovens are now well opened by three drifts. The mines are prepared for an output of 400 to 500 tons per day, while the coke pits can be extended to meet any demand.

Unquestionably the most important fact developed during the past year in connection with the coal development of the State, is the determination of the true Anthracite character of certain of the Gunnison coal fields. Near Irwin, nine miles west of Crested Butte, a vein of fine Anthracite coal, three feet four inches in thickness, covers a considerable area of country, and the company have opened a drift on a tract of 240 acres. The railroad has not yet been completed to this mine, and hence no regular shipments have as yet been made. The coal is a true Anthracite, hard, bright, and forming an excellent fuel, as the subjoined analysis testifies:

Water	3.15
Fixed carbon	93.93
Ash	2.92
	100.00

Another extensive Anthracite region has recently been discovered directly north of Crested Butte, with two veins, four and six feet respectively, of the same quality as that found at Irwin. The Anthracite fields of Crested Butte, undoubtedly cover many square miles, and the quality of the coal is believed to be fully equal to the best that Pennsylvania produces. Their development must mark an important era in the history of Colorado.

Until the opening up of the Gunnison coal fields, the El Moro mines and coking ovens furnished all the coke consumed in Colorado. Extensive works were here erected by the Colorado Coal and Iron Company, the present plant of which consists of three steam pumps, a fifty horse-power engine with crushing and washing machinery, and 250 bee-hive coking ovens. The present daily product for 1881 is 50,000 tons, against 25,568 tons in 1880. The quality of this coke has always been regarded as superior. The following will be found an instructive comparison of the analysis of El Moro coke with those of the celebrated Connellsville of Pennsylvania.

COAL.

	Water.	Vol. Matter.	Fixed Carbon.	Ash.	Sulphur.
El Moro	0.25	29.66	65.76	4.32	0.85
Connellsville	1.25	30.11	59.62	8.23	0.78

COKE.

	Fixed Carbon.	Ash.	Sulphur.
El Moro	87.47	10.68	0.85
Connellsville	87.47	11.79	0.75

The supply of coke now furnished by El Moro, may soon be expected to be largely supplemented by the superior product of the Crested Butte ovens, to which reference has been made.

		1,124,270	826,003	209,011	1,035,014	90	78,166	28,922	9

Turning now to the shipments from Cape Breton collieries, we find that there has been a most remarkable increase from every one of them.

Mines.	1880.	1881.	*Increase.*
	Tons.	*Tons.*	*Tons.*
Reserve	31,614	67,000	35,386
Caledonia	22,120	42,600	20,480
L. G. Bay	26,440	31,800	5,360
Ontario	7,852	13,300	5,448
Gowrie	46,204	61,368	15,164
International	59,000	74,000	15,000
Block House	44,000	55,000	11,000
G. M. Association	121,000	131,000	10,000
Lingan	28,000	35,000	7,000

While then Nova Scotia shipped some 70,000 tons less last year than the year previous, Cape Breton has increased her sales by no less than 124.000 tons. The combined shipments from Nova Scotia and Cape Breton this year, as will be gathered from the above figures, are at least 1,031,000 tons. The shipments or sales for 1880 were 954,959 tons, thus showing a net increase of over 76,000 tons in favor of 1881. The parties interested in some of the Cape Breton collieries who last year chartered steam colliers for the transportation of coal to Montreal, are reported to have lost heavily by the undertaking. More steamers were engaged than the mines could load with dispatch, and the result was that a large portion of their time was lost waiting for cargo at Sydney. A steamer of 1500 tons capacity cost the charterer about seven hundred pounds sterling a month, besides the cost of loading, discharging, and all port charges and pilotage. They have, therefore, to be handled very quickly to pay. No doubt the same class of ships will have to be brought out again this year, as transient tonnage will not likely offer sufficient to carry all the coal wanted in Montreal and Quebec. It is hoped that prudence will be displayed in chartering, as losses made in connection with these vessels are very frequently attributed to the unprofitableness of coal mining in Nova Scotia, whereas it is by the mismanagement of chartering agents that the losses are made. Some of the Pictou companies will also re-engage steamers this year.

—From the Trades Journal.

The returns from the various coal mines for the first quarter of 1882 have all been received by the Mines Department and indicate in an unmistakable way the flourishing state of our coal mining industry. The total amount of coal raised during the quarter ending 31st of March last was 196,884 tons, an increase of over 57,000 tons over the same quarter of last year. This shows not only expansion but enterprise, since very much of this increased output has been "banked" for the Spring trade, something which our coal mines heretofore did not care to venture on. The total sales amounted to 111,710 tons, an increase of about seven per cent. over last year's sales during the same time. Comparing the output and sales for the first three months of 1882 with those of the first three months of 1879—the last quarter under jug-handled free trade—we have the following results:

	Output.	*Sales.*
First quarter 1879	101,526 tons.	58,123 tons.
First quarter 1882	169,884 tons.	111,710 tons.

—From the Colonial Standard.

Powder Dividends in 1881.—The consumption of powder, especially blasting descriptions, has always been large in this State. Probably no corresponding number of population use as much. In early years, most of this material was imported. We still receive a good deal of Eastern powder. But we are, nevertheless, manufacturing on a scale as never before. Most of the capital thus employed is paying well. There are several companies that make no announcement of dividends disbursed, and yet they are considered to be more than meeting expenses. The California Powder Works, the pioneer enterprise, keeps its business pretty close, and yet it is understood that the dividends are as regular as the returning months. So far as this office is advised, the dividends of the local powder companies for the past year have been as annexed:

Atlantic Giant Powder Company	$120,000
California Powder Works	180,000
Excelsior Powder Company	10,000
Giant Powder Company	108,000
Vulcan Powder Company	10,000
Total	$428,000

The Vulcan paid for the first eight months. The Excelsior paid one in August.

San Francisco Bulletin.

Comparative Statement of the Salt Industry,

According to the Census Reports of 1880 and 1870, for the principal Salt-producing States,

States.	*Number of Establishments.* 1880	1870	*Capital Employed.* 1880	1870	*Wages Paid.* 1880	1870

GOLD AND SILVER.

It is proper in taking up the question of gold and silver production in the United States, to begin with quotations from so excellent an authority as the San Francisco *Bulletin*. From the columns of that paper we take the following by way of review. Some tables printed here appear elsewhere also, but we have printed them twice rather than direct the reader to other pages. The *Bulletin* says:

After yielding over $300,000,000 and enriching many thousands, the great Comstock Lode has for the past four years been mainly worked by the contributions of those who still retain an interest in its development. During these four years the bullion product has been gradually growing less. For the fiscal year ending June 30th, 1881, Storey county is credited with a yield of $2,340,000. For the first nine months of the current calendar year the yield was only $972,000, and for the last third of that period the yield was only $173,200. Should the total for the fourth quarter be as large as for the third, the result for the year 1881 would be only $1,145,200. Old friends of the Comstock will note in these figures a strange contrast with the yield a few years ago, when a single mine in a single month, produced more bullion than the whole Comstock lode now produces in a whole year. But for the power to levy and collect assessments, work would have to be abandoned, and the miles of levels and drifts would soon fill with water and *débris*. There are over one hundred claims on the Comstock lode, though on a good many of them no work has been done for some time; and it will depend on the finding of an ore body whether any more work will be done on these temporarily abandoned claims. More or less work has been performed on about fifty Comstock claims during the past year

Many will be surprised at the number of Storey county mines that are being worked mainly by the help of friends. There have been 113 assessments levied this year for account of mines in that county. These assessments aggregate a total of $5,355,800, which has been distributed among 54 mines. There were 24 claims which levied only one assessment each during the year; 12 others levied two; 10 others, three; 5 others, four, and 3, the extreme limit of five assessments. Those in the last named category were the Bullion, Caledonia, Hale and Norcross. The Bullion and Caledonia have been sources of expense to owners for a score of years. Such faith deserves to be rewarded, but faith without the show of ore is dead. Following is a condensed statement of Storey county assessments for 1881:

Mine.	*Assessments.*	*Amount*
Alpha Con	1	$30,000
Alta	3	162,000
Andes	2	75,000
Belcher	3	234,000
Benton Con	2	54,000
Best & Belcher	2	100,800
Bonanza	1	15,000
Bullion	5	370,000
Caledonia	5	125,000
California	1	162,000
Concordia	1	75,000
Confidence	1	12,500
Con. Dorado	1	10,000
Con. Imperial	3	150,000
Con. Virginia	1	162,000
Crown Point	3	175,000
Choller	1	56,000
Exchequer	1	25,000
Flowery	1	10,000
Gold Lead	2	13,000
Gould & Curry,	2	108,000
Hale & Norcross	5	308,000
Iowa	4	21,000
Justice	2	52,500
Julia Con	3	99,000
Kentuck	2	24,000
Lady Washington	1	10,800
Leviathan	1	25,000
Lord of Lorn	2	25,000
Lower Comstock	1	50,000
Mexican	4	302,400
Morning Star	1	20,000
New Wells Fargo	1	5,000
New York	2	20,000
North Gould & Curry	1	25,000
North Sierra Nevada	1	10,000
Ophir	2	201,600
Original Gold Hill	1	3,000
Original Keystone	1	25,000
Overman	4	230,400
Phil Sheridan	1	10,000
Potosi	3	108,000
Prospect	1	10,000
Savage	4	252,000
Segregated Belcher	2	12,800
Sherwood Con	1	5,000
Scorpion	2	35,000
Sierra Nevada	4	400,000
Silver Hill	3	81,000
Trojan	1	10,000
Union Con	3	300,000
Utah	3	120,000
Utah Extension	1	10,000
Yellow Jacket	3	360,000
Totals	113	$5,355,800

The above mines have not only absorbed over $5,000,000 in assessments during the past year, but they have also used up their entire bullion product for the year, estimated at over $1,000,000. The industry has been rather an expensive luxury to those who have had to maintain it. But the contribution has supported many families in Storey county, and has served to keep in existence two Stock Boards in San Francisco, with their numerous attaches. Most of the mines in the above list have been in the assessment business for years, and are considered well up in the art of extracting money from their owners, under the promise of returning it with good interest. There are, however, some new candidates in the field, that deserve to be encouraged. The California mine, after paying $31,320,000 in dividends to stockholders, made its first demand upon them last August. In the following month, Consolidated Virginia made a similar demand upon its stockholders, the first since June, 1873. In the meantime the Consolidated Virginia paid its stockholders the magnificent sum of $42,930,000 in dividends. The assessment levied last spring by the Confidence mine is the first since 1878. The above is the first assessment on the Bonanza, Concordia, Gold Lead, Lorn of Lorn, Lower Comstock, Morning Star, North Gould & Curry, Sherwood Consolidated and Utah Extension. During the year 1880, 61 Storey county mining claims levied $7,989,900.

The last dividend from a Storey county mine was paid by the Consolidated Virginia in August, 1880. In January, 1880, the Ophir paid its last dividend, and in December, 1879, the California paid its last dividend. These are the only three Comstock mines that have paid any dividends since April, 1876, when Belcher paid its last dividend. Crown Point paid its last dividend in January, 1875. The only dividends that have come out of Storey county in the past two years was $100,800 by the Ophir in January, 1880, and $270,000 by the Consolidated Virginia in August, 1880. Against this $370,800, there has been paid into that county during the past two years, through assessments, about $13,-000,000; beside about $3,000,000 of bullion produced by the mines there during this interval. It is a case of patience that has a limit, but whether that limit will be reached before the reward comes, is the one great problem of those interested.

The first break in Consolidated Virginia dividends occurred in January, 1877. That was the forerunner of a changed condition of affairs on the Comstock Lode. It is true Consolidated Virginia has since paid nearly $16,000,000 in dividends and California over $22,000,000, but the reaction in the prosperity of that section fairly dates from the first interruption in these dividends. The only other dividends from the Comstock mines in the past five years are the two by the Ophir in December, 1879, and January, 1880. It is now sixteen months since there was a dividend from any mine in that section. This is a longer interval of non-dividends than has occurred before since the Comstock mines first began making these disbursements. The dividends and assessments of the principal mines there for the past five years are as follows:

	Dividends.	*Assessments.*
1877	$21,600,000	$6,306,200
1878	13,500.000	7,002,000
1879	3,070,800	7,259,500
1880	640,800	6,792,800
1881	....	4,825,200
Totals	$38,811,600	$32,185,800

In this race between what goes in and what goes out of the mines, the dividends still lead, but another year, similar to the past, will bring these two interests nearly neck and neck. The demands of the Comstock mines for the past year have been the most modest for a long time. In 1880, the Sierra Nevada Mining Company was bold enough to ask for $1,000,000 for development purposes. During the past year it has asked for $400,000. It has, however, already put in a claim for $100,000 on account of 1882. Unless some Comstock mine steps to the front soon with dividends, less money will be collected for account of assessments next year than has been collected during the past year. Should 1882 be as barren of dividends as 1881 has been, it is probable that the Comstock mines will be sold at lower figures than at any previous time in their history. The record of dividends and assessments on twenty-nine of these mines for the past five years has been as follows:

	Dividends.	*Assessments.*
Utah	......	$800,000
Sierra Nevada	......	3,150,000
Union Consolidated	......	1,000,000
Mexican	......	1,481,800
Ophir	$201,600	1,159,200
California	22,680,000	162,000
Consolidated Virginia	15,930,000	162.000
Best & Belcher	......	1,008,000
Gould & Curry	......	1,088,000
Savage	......	2,100,000
Hale & Norcross	......	1,512,000
Chollar	......	784,000
Potosi	......	392,000
Julia Consolidated	......	1,259,500
Bullion	......	1,920,000
Exchequer	......	325,000
Alpha Consolidated	......	210.000
Consolidated Imperial	......	2,250,000
Confidence	......	25,000
Yellow Jacket	......	2,400,000
Kentuck	......	63,000
Crown Poiut	......	1,475,000
Belcher	......	1,872,000
Overman	......	1,285,200
Caledonia	......	875,000
Silver Hill	......	982,800
Justice	......	1,732,500
Alta	......	1,404,000
Benton Consolidated	......	307,800
Total	$38,811,600	$32,185,800

Every one of the above mines was in the assessment list during the past year. This has never occurred before. Confidence has levied only two assessments in five years. The promised Sierra Nevada bonanza is found to have had an existence only in the pockets of stockholders.

Comstock Product for Quarter Ending June 30, 1882.

This is reported by the Story county assessor as follows:

Mine or Company.	*Tons Extracted.*	*Gross yie'd or value.*	*Cost Extraction & Reduction.*	*Net yield.*	*Tax.*
Union Con	7,936	$243,335 :8	$217,044 00	$97,334 23	$4,769 37

Lake County, Colorado Product.—By request, the *Herald* publishes the following statement of the product of Lake county since 1860. The figures are those compiled by Commissioner Reed, and are displayed in connection with the Lake county exhibit at the exposition, and are divided into two periods, representing respectively the ante-Leadville and the Leadville eras, the latter dating from the time when the carbonate ores of Leadville began to form a considerable factor in the output:

PRODUCT OF LAKE COUNTY—FIRST PERIOD.

1860–1873, gold from placers	$6,400,000
1874, gold and silver	145,000
1875, " " "	113,000
1876, gold, sil er and lead	852,00
1877, " " " "	555,330
1878, " " " "	3,152,925
Total	$10,451,455

PRODUCT OF LEADVILLE—SECOND PERIOD.

1879, gold, silver and lead	$10,333,740 60
1880, " " " "	14,187,697 00
1881, " " " "	13,170,576 00
1882, " " " " first half	7,817,918 00
Total product of Leadvillc	$45,509,931 69
Product of Lako County	10,451,455 00
Total product, 1860 to July 1, 1862	$55,961,380 69

—*Leadville Herald.*

Nova Scotia.—From the last annual report of the Government Inspector of Mines, M. E. S. Gilpin, we obtain the following:

The following summary shows, so far as I have been able to learn, the extent of the mineral production of Nova Scotia during the year 1881, compared with that of the previous year:

Gold	Ounces	13,234	10,756
Iron Ore	"	51,193	39,843
Manganese Ore	Tons	223	231
*Coal raised	"	1,032,710	1,124,270
†Gypsum	"	128,528	107,133
†Building stone	"	3,540	6,638
†Barytes	"		40
Coke Made	"	13,125	27,871
Fireclay	"	75	401
Grindstones, etc.	"	1,500	1,680

Through the kindness of the Collectors of Customs at the ports specified, I am enabled to give further details under this head at the end of the Report.

Gold.—The total yield of gold during the past year was 10,756 oz. 13 dwt., 2 grs., against 13,234 oz. in 1880. The returns from unproclaimed districts amount to 2,436 oz. 9 dwts. 12 grs., an increase of 1,594 oz. 4 dwts. 23 grs. over the preceding year. The continued decline in the produce of several districts which hitherto yielded uniform returns, has outweighed the increased production of several districts. During the past year the extraction of quartz was more or less suspended in the following Mines, which were sold and being prepared for work on a more extensive scale, viz: Moose River, Satemo, Gallagher and Renfrew. A large number of other mines which have hitherto contributed to the returns, have been idle during part of the year, pending negotiations for their sale; among these may be mentioned, Strawberry Hill, Fifteen Mile Stream, Harrigan's Cove, Moosehead, Symonds, and several Mines at Oldham and Mount Uninacke. That the interest in the Mines has not diminished is shown by the fact that in spite of the suspension of work alluded to above, the returns, not including a large amount of prospecting done at Chezzetcook, Beaver Dam, and other places, show a much larger number of days' work than in the previous year. Under these circumstances the outlook for the year 1882 is of a favorable character, as in it should be reaped the fruits of the large amount of preliminary work performed during the past year.

General Annual Summary.

Year.	*Total ounces of Gold extracted.*	*Stuff Crushed.*	*Yield per ton of 2,000 lbs.*	*Total Days' Labor.*	*Average earnings per man per day and year, at 300 working days, $18 per oz.*	
	Oz. Dwt. Gr.	*Tons.*	*Oz. Dwt. Gr.*		*A day.*	*A year.*

BRAZILIAN MINT, RIO DE JANEIRO, July 21, 1882.

DEAR SIR.—I send you these statistics of the annual production of gold such as it was taken at the Rio Custom House and the meagre gold coinage at the mint, during the last three financial years. As for my reports they are not published.

HON. ALEX. DEL MAR. B. J. R. LOBRAGY, Director of Mint.

—*Mining Record.*

A Small Source of Gold.—The Government *Gazette* of Surinam, dated Sept. 7, 1880, notified the export of gold from that colony as follows:

	Guilders.		Guilders.
1876	49 900	First half 1880	390,697
1877	293,880	July	75,922
1878	407,059	Aug	85,343
1879	679,914	Sept	34,074

The total value of the export of gold from 1876 to Sept. 1880 is 2,066,789 guilders, or about $861,160 or 172,232*l.* 8s. 4d. sterling.

MINING AND MILL SUPPLIES AND WAGES AT BUTTE, MONT.

WE are indebted to Mr. G. W. Maynard for the following details of the cost of wages and supplies for mine and mill:

Mines.—*Wages, per Day.*—Miners, $3.50; timbermen, $4.00; pumpmen, $4.50; toolpackers, (boys) $2.00; chief engineer, $5.00; assistant engineer, $4.00; fireman, $3.50; woodman, $2.25; topmen, (carmen) $3.50; carpenters, $5.00; carpenter's helper, $3.50; blacksmith, $5.00; blacksmith's helper, $3.50; foremen, $5.00; stablemen, $3.25; ore haulers, $3.00; assayers, $4.00; assayer's helper, $1.66.

Mill.—General foreman, $5.00; foremen, $5.00; crushers, $3.50; batterymen, $4.00; roasters, $4.00; cooling floor, $3.50; wood helpers, $3.00; amalgamators, $4.00; carmen, $3.50; melter, 5.00; assistant melter, $4.00; engineers, $4.00; firemen, $3.50; millwright, $5.00; chief machinist, $6.00; machinists, $5.00; machinist's helper, $4.00; watchman, $3.50; talingsman, $2.50; roustabout, $3.00; saltman, $3.00.

Supplies.—Wood, per cord, $6.00; mine timber, per thousand, $25.00; charcoal, per bushel, 18 cts.; candles, box, $6.50; lagging, each, 12½ cts.; Hercules powder, No. 1, 55 cts.; Hercules powder, No. 2, 40 cts.; fuse, per thousand feet, $9.00; black powder, per keg, $7.50; hammers, per pound, 24 cts.; pickeyes, per dozen, $8.00; pickeye handles, per dozen, $3.50; sledge handles, per dozen, $2.35; shovels, per dozen, $11.50; battery shoes and dies, per pound, 08 cts.; pan shoes and dies, per pound, 08 cts.; mullers, each, $132.00; iron turnings, per pound, 05 cts.; brass screens, per square foot, 42 cts.; rubber belting, 6-inch, 4-ply, 38 cts.; 8-inch, 4-ply, 42 cts.; 10-inch, 4-ply, 54 cts.; 14-inch, 4-ply, $1.00; 20-inch, 4-ply, $1.25; 36-inch, 7-ply, $3.80; leather belting, 8-inch raw hide, $1.40; 10-inch, raw hide, $1.85; cyanide of potassium, per pound, 50 cts.; bluestone, per pound, 13 cts.; coal oil, per gallon, 50 cts.; lard oil, per gallon, extra, $1.30; lard oil, per gallon, No. 1, $1.05; lard oil, per gallon, No. 2, 90 cts.; tallow, 09; lubricating oils, $1.75; heavy lubricators, 65 cts.; cotton waste, per pound, 15 cts.; Packing, 60 cts.; Assay materials: No. 8 crucibles, French, per dozen, $1.40; No. 8 crucibles, French, covers, per dozen, 75 cts.; Black-lead crucible, No. 50, $3.75; litharge, per pound, 13 cts.; bone-ash, per pound, 09 cts.; muffles, each, $1.00; bicarbonate of soda, per pound, 09 cts.; assay, lead, per pound, 12 cts.; argols, per pound, 19 cts.; nitric acid, C. P., 50 cts.; borax, pulverized, per pound, 25 cts.; borax, crystallized, per pound, 17 cts.; quicksilver, per pound, 43 cts.; battery stems, $42.20; hydraulic cement, 06 cts.; steel dies, per pound, 09 cts.; iron dies, per pound, 08 cts.; drill steel (English), per pound, 22 cts.; boiler tubes (3¾), $9.30; gas pipes, per foot, 80 cts.; wire rope, Roebling, 1 inch, 37 cts.; wire rope, Roebling, ⅝ inch, 18 cts.; hemp rope, per pound, 14 cts.; Babbitt metal, per pound, 18 cts.; copper rivets, 42 cts.; salt, per ton, $39.00.

THE PRODUCTION OF PRECIOUS METALS IN 1881—MR. BURCHARD'S REPORT.

THROUGH the courtesy of Hon. H. C. Burchard, Director of the Mint, we are enabled to present herewith the substance of his "Report on the Production of Precious Metals in the United States in 1881," in advance of its publication by the government. In it will be found much that is valuable and pertinent to the history of American Mines and Mining.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., June, 1882.

SIR:—I have the honor to submit herewith my report upon the production of the precious metals in the United States for the calendar year 1881.

To procure the information necessary for preparing and making this report, besides obtaining from depositors in the usual manner the locality of production of the gold and silver brought to the mints and assay offices, the superintendents and assayers in charge of institutions in the mining regions were directed to make special inquiries, and endeavor to ascertain the yield of the mines and the amount of bullion handled by dealers, bankers, and transportation companies, and treated at smelting and refining works in their respective localities.

Information was also gathered for the same purpose by personal visits to the most important mining fields, and by correspondence and special reports from gentlemen concerned in, or familiar with, mining operations, and by the collection and tabulation in my office of such published statements and statistical material as seemed suitable and reliable.

From these sources I am able, with reasonable confidence, to present not only a summary of the yield of the mines of the United States for the year, but also detailed statements or estimates approximately and sufficiently accurate, giving the product of the respective States and Territories, and often, in many cases, of the counties and districts.

The official records of the Mint Bureau show the amount and character of the bullion deposited and purchased during the year, and what portion came from the mines of the United States. They also show the amount of gold and silver used in coinage, and the amount delivered back to depositors in the form of bars.

The Custom-House records give the amount exported, and the reports from manufacturers state approximately the aggregate amount used by them in manufactures and the arts. By ascertaining and adding the domestic gold and silver deposited at the mints and assay offices, and the undeposited domestic bullion exported and used in the arts, the total production of the year can be estimated and stated with sufficient certainty for statistical purposes.

DOMESTIC PRODUCTION OF GOLD IN 1881.

The deposits of gold at the mints and assay offices during the year were $98,763,426.08, of which $34,871,859.46 were reported to be of domestic production.

The export of domestic gold bullion for the year was only $160,766, but wholly in bars, manufactured at private refineries.

The amount of undeposited domestic gold used in the arts must, in part, be estimated. It may safely be placed at half a million of dollars; for while the manufacturers' statements received at this Bureau show that fine gold bars to the value of $6,230,000 were used by them in manufacturing during the fiscal year 1881, the aggregate value of the fine gold bars issued for manufacturing purposes by the New York Assay Office, and of all the fine gold bars made at the mints during the same period, was only $5,960,094.31. The remaining $270,000 of the fine gold bars reported by manufacturers must have been obtained from private refiners and assayers, by whom fine gold bars are also prepared for use in manufactures, consisting principally of domestic bullion received directly from mines or smelting works. The statements of the manufacturers did not include the value of the native gold in the form of grains, ingots, lumps, etc., used for ornamentation and in the arts, which would amount to a considerable sum.

Although this estimation is based upon statements and reports made for the fiscal year, the facts they disclose show that to ascertain the total gold production during the calendar year, an addition to the domestic gold bullion deposited and exported of perhaps half a million dollars should be made for bars manufactured at private establishments, and native gold used in the arts.

From these data, the yield of gold from the mines of the United States in 1881 might be placed, in round numbers, at $35,000,000.

As, however, the imports exceeded the deposits of foreign gold bullion at San Francisco by 348,101, a portion of which refined by the Selby Works in that city may have been reported at the mint as domestic bullion. I have added for undeposited domestic gold only the $270,000 shown by the reports received at my office to have been used in manufactures. This makes the total gold production in the United States, for the calendar year 1881, to have been:

Deposited at Mints and Assay Offices	$34,270,000
Undeposited exports	160,000
" " used in the arts	270,000
Total	$34,700,000

This is over four millions higher than the estimated gold production west of the Missouri river, published by Mr. Valentine, who, from the amount of bullion carried in various forms by express and other conveyances, and the estimated proportions of gold and silver contained, puts the gold domestic production for the calendar year 1881 at $30,653,959.

In my former report, I estimated the gold production for the calendar year 1880 at $36,000,000, from which the production of 1881 has declined over one and a quarter million of dollars.

SILVER PRODUCTION.

The mines of the United States produced of silver bullion during the year 1881, as indicated by the receipts at the mints and customs and manufacturers' returns, $43,000,000, if computed at its standard dollar coining value, or about $37,000,000 at its commercial value.

The purchases for coinage and deposits for bars at the mints and assay offices amounted to $30,326,848.24, of which $27,899,213.13 were of domestic production.

The exports of domestic silver bullion at all the ports of the United States were valued at $12,796,280, worth at the coinage rate about $14,500,000.

Of the $30,326,848.24 silver bullion received at the mints and assay offices, $25,008,268.55 was purchased for coinage, leaving a balance of $5,300,000 deposited for bars. These deposits were $700,000 less than the estimated annual consumption of silver bullion in the United States for manufactures, which deficiency, while undoubtedly containing some foreign coin and bullion, was composed principally of domestic bullion received from private refineries.

I therefore add to the deposits and exports of domestic bullion $600,000 for undeposited domestic bullion used by manufacturers during the calendar year, making the total production of silver bullion deposited at the mints and assay offices $27,900,000, exported $14,500,000, undeposited used in manufacturing $600,000—Total, $43,000,000.

This gain of nearly $4,000,000 over my estimate for the silver production in 1880, resulted from the opening of new mines in portions of Colorado, which fully compensated for the decline in the yield of the Leadville region, and from greater silver production in Arizona, Utah, Montana, and Idaho, notwithstanding the heavy falling off in the yield of the silver mines of Nevada.

It is impossible to determine with exactness the amount of gold and silver supplied from the mines of each State and Territory; but a comparison of the various data received at my office justifies this statement as an approximate estimate.

Production of Gold and Silver in the United States during the calendar year 1881, by States and Territories.

	Gold.	*Silver.*	*Total.*
Alaska	$15,000	$ . . .	$15,000
Arizona	1,060,000	7,300,000	8,360,000
California	18,200,000	750,000	18,950,000
Colorado	3,300,000	17,160,000	20,460,000
Dakota	4,000,000	70,000	4,070,000
Georgia	125,000	. . .	125,000
Idaho	1,700,000	1,300,000	3,000,000
Maine	. . .	5,000	5,000
Montana	2,330,000	2,630,000	4,960,000
Nevada	2,250,000	7,060,000	9,310,000
New Mexico	185,000	275,000	460,000
North Carolina	115,000	. . .	115,000
Oregon	1,100,000	50,000	1,150,000
South Carolina	35,000	. . .	35,000
Tennessee	5,000	. . .	5,000
Utah	145,000	6,400,000	6,545,000
Virginia	10,000	. . .	10,000
Washington	120,000	. . .	120,000
Wyoming	5,000	. . .	5,000
Total	$34,700,000	$43,000,000	$77,700,000

Of the gold production (about $26,000,000), nearly four-fifths of the whole came from the mines of the Pacific coast, including Nevada, Idaho, and Arizona, and was deposited with the San Francisco and Carson mints, while nearly eight millions were received at Philadelphia and New York from Colorado, Dakota, and Montana.

Colorado was again the largest producer of silver, although the yield of the Leadville mines has greatly diminished.

The production of the Tombstone mines brought Arizona to the second rank, and Nevada, once the first, now stands third, her production only exceeding that of Utah by a few thousand dollars.

Besides the material and contributions furnished for this report, for which credit is given in the appropriate place, I have received valuable information and assistance from other officers and gentlemen connected with the mint service or interested in the production of the precious metals, to whom special acknowledgments are due. The superintendents and officers of mines, mills, smelters, and reduction works have furnished me liberally with details showing the character, source, and amount of bullion produced in their business. Bankers and bullion dealers have supplied me with information as to the amount and locality of production of the bullion handled by them, and express and railroad agents and officers have forwarded tabulated statements of the shipments of ore and bullion during the year by their respective companies.

In reviewing the condition of the mining industry in Colorada, Montana, Utah, and Idaho, credit is given to the gentlemen to whom had been assigned the collection of statistics, or who had furnished information from those localities. Their contributions, however, from fuller information received at my office, have been revised, modified, and in some cases rewritten.

A considerable portion of the statistics and materials relating to the mines of California, Oregon, and Nevada, with some information in regard to Idaho and Arizona, was procured by Mr. A. M. Lawver, Superintendent of the Mint at San Francisco, to whom I gave special charge of the collection of statistics on the Pacific coast.

The report upon the mines of New Mexico was prepared by Mr. F. P. Gross, of my office, who personally visited that Territory, and who also compiled and arranged the information received from all sources in relation to mining in Arizona.

While acknowledging my indebtedness to these and many other gentlemen who have to a greater or less extent contributed statistical and other information, special mention should be made of the valuable assistance of Mr. Frederick Eckfeldt, of my office, who has had the general charge of this work, and has ably assisted me in preparing, classifying, and arranging material for this report.

I have the honor to be,
Very respectfully,

Director of the Mint.

HON. CHARLES J. FOLGER,
Secretary of the Treasury.

ARIZONA.

THE mineral bearing sections of Arizona are not local, but are found in all parts of the Territory, except the single county of Apache, in which are rugged, unexplored mountain ranges, that, as is confidently believed by many intelligent people, may also, upon being properly prospected, be found to contain rich mines of silver. In fact there are rumors of such discoveries, which could not, however, be traced to a reliable source, and no mention will be made of them. For more than twenty years the existence of the precious metals in certain portions of the Territory was well known, and mining was commenced in a few of the western counties by adventurous miners from California. Rich prospects were found, and some mines opened, that, under favorable circumstances, would have become profitable. The first considerable ventures of this nature were made in Mohave county, but great distance from sources of supplies, indifferent roads, and inadequate means of transportation caused them to be attended by such enormous expense, that many were necessarily abandoned. The richness of the ores, however, permitted their profitable shipment to San Francisco for reduction, and supported a considerable mining population. Mills and smelters have since been erected, but the industry is barely prosperous. This is true not only of Mohave, but applies to the entire Territory, except that portion opened up by the completion of the Southern Pacific Railroad, which has greatly stimulated the mining industries of the southern half of the Territory. In addition to its inaccessibility, the prosperity of the Territory has been greatly retarded by Indian troubles. For many years it was the stronghold of the Apache, the most warlike and rapacious tribe of Indians of our frontier, who have stubbornly resisted the advancement of civilization. There is scarcely a settlement or mining camp in any portion of the Territory that is not marked by the graves of numerous victims of their cruelty, and the road-sides and cañons on every hand show, by rude crosses or heaps of stone, the last resting-places of hundreds who have been murdered by them. The mineral belt of the Territory, as now defined by actual exploration and valuable discoveries, embraces all that portion south of the thirty-fourth parallel and the southern portions of Mohave and Yavapai counties. Gold and silver lodes have been found in almost every mountain range and isolated peak of this section, and actual developments already made in many places, demonstrate their richness and apparent permanency. Gold placers have also been found in many portions of the Territory, which, after yielding large amounts in nuggets and dust, were abandoned on account of the scarcity of sufficient water to conduct operations upon a scale extensive enough to be profitable. Considerable quantities of gold are, however, still obtained from them by individual enterprise, Mexicans principally, who transport the pay-dirt to the nearest water during the dry season. Many gulches and dry beds of creeks are thus worked by individual effort, and good wages are made generally by those engaged. Arrangements are being made to wash the gravel of some of the streams, notably the San Francisco river, by the hydraulic process, and to this end water is being piped long distances, and expensive plants have been put in place. The most important mining region in the Territory, in point of development at least, is that of Tombstone, in Cachise county, in which the first location was made in 1878 with a single exception, the Bronkow, which is noted in the body of this report. Active development was, however, not commenced until upwards of a year later, when the first stamp-mill was erected. Now a dozen or more, with a capacity of over 200 stamps, are in active operation, and the monthly yield of bullion is doubtless in excess of half a million in gold and silver. The southeastern portion of Pima county and the northern portions of Pinal and Gila counties are also practically demonstrated to be prolific bullion producers. When it is remembered that railroad communication with this section has only been established a year and a half, the result will be found to be truly marvelous. Railroad enterprises are now under way, which will at an early day bring all the important mining centres in direct communication with points on the Southern Pacific; and in addition to this, the northern half of the Territory will be opened by the extension of the Atlantic and Pacific, which, as now marked by the preliminary surveys, will pass through a portion of the mineral belt of Mohave county; and a road north from Prescott to intersect this will give the many mines of that section the advantage of outside railroad communication. A road will also be completed at an early day from Prescott southward, which will traverse the richest portion of the mineral belt south of that city in Yavapai, and north of Phœnix in Maricopa, county. Perhaps no other mining section in the country possesses as favorable facilities for the mining and reduction of ores as the Territory of Arizona. Wood and water are abundant in nearly every locality for necessary mining purposes, and when the supply of wood for fuel becomes exhausted, the coal beds, which underlie at least one-half of the Territory, can be relied upon for centuries to come. The ores generally are easy mined, and can be reduced at the minimum of expense. The smelting varieties are reported to be unusually tractable. In the richness and variety of its ores it differs materially from any other mining section of the country. Pure native silver, in leaf and wire form, chlorides, carbonates, sulphurets, ruby silver, silver glance, bromides and sulphides, are some of these, and those most generally found. It is especially noted for its yield of wonderful masses of pure native silver, *planchos de plata*, the largest of which weighed almost two tons avoirdupois. It was at any rate sufficient in quantity to tempt the cupidity of the Spanish king, who confiscated the production of the mine to his own use. Arizona possesses also the advantage of an equable climate, and work can be prosecuted at all seasons of the year. Snow, except in the mountains, is scarcely known, and the heat in the mining localities is not excessive except in a few districts of Yuma county, where the thermometer sometimes records a very high temperature. The following is my estimate of the production of Arizona, by counties, for the calendar year 1882: The production of Arizona during the calendar year 1881 was $1,060,000 in gold, and $7,300,000 in silver, which I estimate was produced, by counties, as follows:

Counties.	*Gold.*	*Silver.*	*Total.*
Cochise	$645,000	$4,065,000	$4,710,000
Pima	15,000	750,000	765,000
Pinal	25,000	1,250,000	1,275,000
Gila	30,000	530,000	560,000
Yavapai	50,000	450,000	600,000
Maricopa	240,000	75,000	315,000
Mohave	25,000	75,000	100,000
Yuma	30,000	105,000	135,000
Total	$1,060,000	$7,300,000	$8,360,000

Mohave County.—This county lies in the northwestern corner of the Territory. The Colorado river skirts the western boundary for fully two-thirds of its length, otherwise it is bounded by Nevada on the northwest, Utah on the north, Yavapai county on the east, and by Yuma county on the south. The most important portion of the county lies south of the Colorado, and is traversed by extensive mountain ranges and wide valleys, abounding in nutritious grasses, and admirably adapted for stock raising. The valleys of the Colorado and Big Sandy, by the aid of irrigation, are rendered exceedingly productive, and the settlers in those regions devote themselves exclusively to agricultural pursuits. The northern portion, that cut off by the Colorado, has been but little explored, and is generally believed to be a rugged, bleak, and barren waste. Evidently the future prosperity of this county must depend largely upon its promising mineral resources, although there was a decided falling off in the silver bullion production during the calendar year 1881; the gold production was about the same as that of 1880. The people of this county believe the decline is due to inaccessibility rather than a failure in productiveness, and anxiously look forward to the completion of the Atlantic and Pacific Railroad, confident that improved facilities of communication will insure their future prosperity. They have easily succeeded in persuading themselves that every prospect is a bonanza, and that the marvelous richness of their mines, as soon as known, will insure the influx of capital, if improved means of communication are afforded. This confidence is not without reason, for hitherto the revenue derived from higher-grade ores only—none less than $200 in value being profitably mined and shipped—has been sufficient to support the population. The railroad has been completed to a point in Eastern Arizona, over two hundred miles west from Albuquerque, and its construction westward is being pushed forward as rapidly as possible. It will most likely penetrate the mineral section of the county about June or July, 1883, and test the reality of the dreams of the prospector and miner. The Aubrey, Cedar Valley, Greenwood, Hualapai, Maynard, and San Francisco are the most important and best known mining districts of Mohave county. The first three are in the extreme south. Hualapai and Maynard are located near the center, south of the Colorado river, and the San Francisco district is in the western portion, skirting the river. These districts embrace the major portion of the known mineral-bearing area, and contain many valuable mines and locations in which ore bodies of gold, silver, argentiferous galena, and copper, carrying both gold and silver, are found. The Hualapai district is formed by the sub-districts or camps of Cerbat, Todd Basin, Chloride, Stockton, and Gold Basin, the last of which is in the extreme northern portion of the district. Reports from this county are somewhat meagre; the following, however, from the Stockton camp on the east side of the Cerbat range is of interest: The average mill runs of ores from the mines of this camp are above $300 silver per ton. The general strike of the principal veins is northwest, although many small seams or feeders of high-grade ore run into them at various angles. The veins are usually found in a granite formation, frequently with one wall of porphyry. Among the most important mines of the camp now worked are the Franklin, Little Chief, Cupel, Silver Monster, Cincinnati, Miner's Hope, Blue Bell, Fremont, Fountain Head, Pure Metal, and Tigress.

The production of Mohave county during the census year 1880 was reported by the Census Bureau to be (by districts) as follows:

District.	*Gold.*	*Silver.*	*Total.*
Cedar Valley		$7,430	$ 7,430
Hualapai	$9,251	65,134	74,385
Maynard		18,944	18,944
Owens		16,800	15,800
Scattered		9,070	9,070
Total	$9,251	$116,378	$125,629

I have estimated the production for the calendar year 1881 to have been $25,000 in gold and $75,000 in silver.

Yavapai County.—This extensive county covers fully one-fourth of the entire area of the Territory. It is bounded on the north by Utah Territory, on the east by Apache county, on the south by Gila and Maricopa counties, and by Mohave on the west. About one-third of the northern portion of the county is cut off from the remainder by the Colorado and Little Colorado rivers. Like Mohave, but little is known of this region except that it is extremely rugged and mountainous. Whether the mountains contain, as is generally believed, mineral deposits, is yet to be proven by the prospector. The more favored portions of the county even are difficult to penetrate, but the discovery of valuable gold and silver mines by adventurous prospectors, has stimulated enterprise and brought a considerable influx of population to that part of the county west of the Verde river, and especially in the vicinity and south of Prescott. The county generally is an elevated plain traversed by mountain ranges, with occasional isolated peaks. The plains and valleys are covered with a luxuriant growth of grass, upon which cattle thrive during the entire year, as the snow-falls are not excessive and generally melt rapidly. Its agricultural resources are unfavorable, although the soil of the valleys and plains is fertile, for the seasons are irregular and rains uncertain. Tillage must therefore be confined to low meadow lands susceptible of irrigation, and as those are of limited extent, the prosperity of the people must depend upon the mineral resources and stock raising. As yet the production of the precious metals has been only in that portion of the county extending about fifty miles north from its southern boundary, and lying between Mohave county and the Verde river. Within the past few years more favorable localities, opened to the prospector and miner by the completion of the Southern Pacific Railroad, have attracted capital and enterprise from the mines of this county. The prosperity of Yavapai has, like that of Mohave, been greatly retarded by its remoteness from lines of communication, and the expense of transporting ores and concentrations and the necessary mining machinery and supplies. Only the richer ores of the mines could be profitably mined and treated, and some idea may be formed of their value from the fact that the entire community for many years has been supported from their product without external aid, to say nothing of the large fortunes that have been accumulated. The placer mines of this section first attracted attention about twenty years ago, and soon thereafter discoveries of lodes, of both gold and silver, were made at various points. The placers were found to be of great value, were profitably worked for some years, and abandoned only by reason of the scarcity of water and the discovery of mineral lodes. By the term "abandoned" it is not intended to convey the idea that the placers were entirely deserted, as they have been constantly worked to the present time, and are represented still to give good returns for labor employed upon them. Notwithstanding these disadvantages, the reports of the production of both gold and silver during the year 1881 show a large increase over that of the previous calendar year. The following are the estimates, as carefully compiled from the most reliable returns received: Gold $19,124 as against $5,000 for 1880, and silver $716,389 to $265,000 for the same time. This increase is in a measure due to the stimulus given to mining industry throughout the Territory by the completion of the Southern Pacific Railroad, but it may be safely predicted that within a year or so even this production will be largely enhanced by the construction of the Atlantic and Pacific, and a new railroad which is to run from Prescott, the capital of the Territory, southward, to intersect the Southern Pacific at Maricopa. The mineral bearing section of Yavapai county is divided into the following districts, viz.: Agua Fria, Big Bug, Black Cañon, Black Hills, Bradshaw, Cherry Creek, Green Valley, Greenwood, Hassayampa, Humbug, Martinez, Peck, Silver Mountain, Tiger, Trinity, Turkey Creek, Walker, Walnut Grove, Weaver, Verde, Tip Top, Pine Grove, Groom Creek, Crook Cañon, and Lynx Creek. While this list may not embrace all the districts of the county, it comprises all that have thus far reported. Of these the most important are the Peck and Tip Top districts. The former is located about thirty miles southeast from Prescott in the northern foothills of the Bradshaw mountains. Although possessing mines of unusual richness, the prosperity of the district has been seriously retarded since 1878 by continuous litigation in respect to the legal ownership of certain mines. This is especially the case in regard to the Peck, the most valuable mine yet developed. This mine was discovered in 1875, and worked with great success until 1878, when operations ceased, owing to legal controversies. Its production during the three years was about $1,200,000. The ore occurs in the form of chlorides and carbonates in a strong vein, the pay-streak of which is eighteen inches in width. The mine was developed by a shaft 400 feet in depth and by four levels amounting to 1,300 feet, but since the commencement of its legal difficulties has lain idle, as has also the ten-stamp mill with which it is provided.

The production of Yavapai county during the census year 1880 was reported by districts, by the Census Bureau, as follows:

District.	*Gold.*	*Silver.*	*Total.*
Big Bug	. .	$71,250	$71,250
Cave Creek	$4,000	. . .	4,000
Castle Creek	1,499	. . .	1,499
Cherry Creek	600	. . .	600
Humbug	. .	237,847	237,847
Hassayampa	4,000	. . .	4,000
Peck	. .	64,959	64,959
Tiger	3,200	185,188	188,388
Walker	5,500	. . .	5,500
Walnut Grove	1,001	. . .	1,001
Weaver No 2	9,000	. . .	9,000
Estimate (additional)	13,499	. . .	13,499
Total	$42,299	$559,244	$601,543

I have estimated the production of this county during the calendar year 1881 to have been $50,000 in gold and $450,000 in silver.

Apache County.—This county may almost be regarded as a veritable *terra incognita*, especially so far as any development of its mineral resources is concerned. It occupies the northeast portion of the Territory, and next to Yavapai is the largest county in it, being over two hundred miles in length, from north to south, by one hundred in width. The county is exceedingly mountainous, but abounds in fertile, well-watered valleys, that by irrigation can be made to produce grain, though at present they are only valuable for grazing purposes, being covered with a luxuriant growth of nutritious grasses. Large forests of fine timber are found in the central and northern part of the county, and the mountain ranges are also well covered with a variety of trees well adapted for building purposes, fuel, etc. Every portion of the county may be said to be plentifully supplied with water. A large tributary of the San Juan flows through a hundred miles of the northern portion of the county, and the Rio Puerco, with its branches and other tributaries of the Little Colorado, drain and water the central and southern portions. Up to the present time no discoveries of consequence, of either gold or silver, have been made in Apache county, but its physical conformation would indicate it to be an admirable field for the prospector. It, however, must await the suppression of attacks from the fierce Apaches, for there will be no extensive prospecting while the region is liable to their incursions. It will doubtless yet be shown that the cañons of the numerous watercourses of the southern half of the county are rich in placer gold, and the adjacent mountain ranges will also probably prove rich depositories of the precious metals. Should it eventually prove to be as rich in minerals as the older and more thickly settled and thoroughly prospected counties of the Territory, the profusion of timber for all purposes and the plentiful supply of water afforded by its many streams will greatly enhance its value as a mining section, as the scarcity of wood and water has ever been among the most serious obstacles to profitable and extensive mining. The Atlantic and Pacific Railroad from Albuquerque westward is completed to a point on the Rio Puerco in this county, and before the end of the summer it will probably be finished a considerable distance beyond its western border. The road crosses the county in the vicinity of the thirty-fifth parallel. Its completion will, without doubt, hasten the settlement of the central portion, and, despite the presence of hostile Apaches, attract prospectors and capitalists to discover and develop its mineral resources.

Graham County.—This is a county of recent organization, and was formed from portions of Pima and Apache. It lies due south of the latter, west of the boundary of New Mexico, north of Cochise, and east of Pinal. Its principal river is the Gila, which flows through the center of the county from east to west. The San Francisco river and other smaller streams are northern tributaries of the Gila, and water that portion of the county lying north of that stream. These watercourses, especially the Gila, form extensive valleys, which are exceedingly fertile and already are largely taken up by settlers and extensively cultivated. The county has some five or six distinct mountain ranges, besides numerous isolated peaks, between which stretch magnificent plains covered with the rich, nutritious grasses peculiar to the climate. The county has not yet been sufficiently prospected to prove the extent of its mineral resources except in the matter of its copper mines. These are located near Clifton, on the San Francisco river, about fifteen miles above its confluence with the Gila, and are marvelous in extent and richness. The mountains have been tunneled and drifted in various directions without discovering walls, so that the deposits would seem to be vast masses of ore, rather than veins or leads. These mines have been successfully and profitably worked for a number of years past, even when their product had to be transported overland some seven hundred or eight hundred miles by ox teams. From Clifton northward, some fifteen miles, the sand and gravel of both banks of the San Francisco river are found to be gold-bearing. These gravel beds give good surface assays, and shaft and tunnel excavations show that every portion contains placer gold in paying quantities. They were discovered some ten years ago by a Mr. Greenler, who for a time worked them profitably by the cradle and rocker process. Afterwards they passed into the hands of a company of gentlemen from St. Louis, who continued to work in the same crude way until within a year or so past, when a New York company secured by purchase some 10,000 acres of those beds lying along both sides of the river, with a view to washing the gravel by improved hydraulic process. This company is a responsible one and under enterprising management. It is proposed to bring the water some fifteen miles in pipes and flumes. About ten miles of the pipe are already on the ground and will be laid as rapidly as possible. Improved hydraulic machinery is also being erected, and everything will be in readiness to commence work within a very short time. The capacity of these works will be about 5,000 miner's inches per diem. Aside from these extensive placers, alluvial deposits are found in other streams and cañons of the county, especially in the Sierra Blanco range, where the supply of water is abundant, and some of the mountains are known to contain gold quartz ledges as well as extensive silver lodes. Whether these will develop into rich, paying mines remains yet to be determined, except in what is known as the De Frees district, in the western portion of the county, where some work has been done and several fine prospects have been located. Notwithstanding the production of the precious metals in this county up to the present time has not been large, it is confidently predicted by well-informed persons, thoroughly acquainted with the country, that it will eventually prove a rich mining section. The county is liable to incursions by raiding bands of Indians, but the population is increasing so rapidly that but little further trouble from this source is apprehended. Even now the more thickly settled portions are capable of self-protection from the ordinary dangers incident to an exposed frontier.

Gila County.—This is a new and comparatively small county, of irregular shape, formed from the eastern portion of Maricopa and a section of the northeast corner of Pinal county. It is bounded by Apache and Graham counties on the east, Graham and Pinal on the south, Maricopa on the west, and by Yavapai and Apache on the north. The northern half of the county is admirably watered by the Salt, or, as sometimes called, the Black river, and its numerous tributaries. The county is rough and mountainous, possessing little arable land outside the Gila river bottom, and the narrow strips bordering the Black and San Carlos rivers and other smaller streams. An abundance of timber is found in the mountain ranges, and the valleys afford ample pasturage. The entire county is mineral-bearing, but the principal discoveries and richest developments have been made in that portion south of the Apache range, taken from Pinal county, and known as the Apache range. The formation is generally granite and porphyry, though syenite and quartzite are also found, as well as limestone and micaceous slate. The ores of the Apache range, and in fact of the districts generally, are usually high grade and free milling, occasionally carrying copper and iron, while those of the Pinal Mountains in the south are sulphurets requiring the roasting process to precede mining. Wood, and in most places water also, is abundant for all necessary mining purposes. This is especially the case in the Pinal Mountains, where large tracts of fine pine timber guarantee a supply for many years to come. In other sections the oak and juniper afford an ample supply. This county, as yet, has no railroad facilities, though a branch from the Southern Pacific to intersect the mineral sections of Pinal and Gila is under contemplation and will likely be commenced, if not completed, during the coming summer. Improved means of communication with business centers and for obtaining supplies will insure a prosperous future to mining industries in Gila county. Hostile Indians have occasioned considerable alarm and some interruption, but a railroad through the mineral section will lessen the frequency of, if not altogether prevent, their incursions.

I have estimated the production of Gila county, during the calendar year 1881, to have been $30,000 in gold and $530,000 in silver.

Pinal County.—This county lies in the center of the southern portion of the Territory, and is bounded on the south by Pima county, west by Maricopa, north by Maricopa and Gila, and by Gila and Graham on the east. The Gila river flows through the county from east to west, receiving as a principal tributary the San Pedro, which, flowing northward, empties into it near the eastern boundary of the county. The valleys of these streams form the principal portion of the productive soil of the county, and these can only be cultivated by irrigation. Aside from these streams there are but few watercourses, other than small creeks, which do not constantly contain running water, and yet the mining districts are comparatively well supplied by these and local springs, which afford enough water for all purposes except hydraulicing. The principal mineral discoveries yet made are found in that part of the county lying north of the Gila river, which, like the same portion of Gila county, is very rugged and mountainous. Other and later discoveries in different parts of the county, however, indicate that the mineral deposits are not confined to this locality, but are general throughout the county. The geological formation of the county rock is usually granite and porphyrite, but basalt and quartzite are also found in some places. Pioneer district is the most important mineral subdivision of this county. It adjoins Globe district, of Gila county, on the west, and extends northward into Gila and Maricopa, in which, however, no discoveries of importance are reported.

The production of Pinal county, during the census year 1880, was reported to the Census Bureau as follows (by districts):

District.	*Gold.*	*Silver.*	*Total.*
Globe	$2,526	$829	$3,355
Pioneer	....	4,000	4,000
Total	$2,526	$4,829	$7,355

I estimate the production during the calendar year 1881 to have been $25,000 in gold and $1,275,000 in silver.

Maricopa County.—This county lies in the southwestern portion of the Territory, and is bounded on the west by Yuma, north by Yavapai, east by Gila and Pinal, and on the south by Pinal and Pima counties. The Salt and Gila rivers flow through the county in their westward course; the former emptying into the Gila some fifteen miles west of Phœnix, the county seat. The northern portion is, in addition, watered by the Rio Verde and Agna Fria, and Hassayampa creeks. In an agricultural point of view the county is regarded as ranking first in the Territory. It is also rich in its mineral resources, as almost every mountain range is known to be seamed with lodes of gold and silver. The county has not been as yet thoroughly prospected, and all the development in its mining districts, except in a few instances, has been of recent date. The oldest and most important mine of the county is the Vulture, in the northwest portion. This mine was discovered in 1863, and steadily operated for about ten years, when it was abandoned on account of the expense attending the hauling of the ore to the mill, some ten miles distant. Some time after it was relocated and operated successfully for several years by a company which erected a ten-stamp mill on the Hassayampa, twelve miles distant. In 1878 the mine became the property of the Central Arizona Mining Company, under whose management it has been systematically opened and worked. The main shaft has attained a depth of nearly four hundred feet, and it is otherwise opened by working levels and cross-cuts. The ledge is gold quartz, from fifty to one hundred feet in width, between well-defined walls of porphyry and talcose slate, the hanging wall being of the former formation. The ores are not even medium as to grade, but the facilities for treatment are such that the company can handle them at an expense of about $2.25 per ton. An eighty-stamp mill has been erected convenient to the mine, and the necessary water is piped from the Hassayampa, a distance of some fifteen miles. The mill is kept constantly running (barring accidents), and the bullion production amounts to about $20,000 monthly in value, as shown by the following detailed statement of the company for the month of December, 1881, taken from the *Mining Record:*

General expenses	$341 23
Exchange	305 30
Water service	1,575 52
Mine, labor, and supplies	7,308 57
Mill supplies	6,617 82
Dead work	1,400 00
Pipe repairs	192 91
Territorial and county tax	1,064 85
Total expenditure	$18,806 20
Gross product 1124 ounces bullion	$17,971 22
Deficit	$834 98

The mill was operated twenty-seven days, fourteen hours, crushed 6,676 tons ore and waste. Stopped eight hours to repair boilers.

	Per ton.
Average product of ore and waste milled	$269¼
Average cost of operating	241½
Average total expenses	281⅝

The assay of tailings for the month showed an average loss of $1.31 per ton, of which the amalgam loss was fifty-three cents; balance sulphuret. Average production of mine $20,000 monthly; for 1881, $240,000. During the census year 1880 the production of Maricopa county was reported to the Census Bureau as follows: District, Globe: Silver, $99,380. I estimated the production during the calendar year 1881 to have been $240,000 in gold and $75,000 in silver.

Yuma County.—This county lies in the southwestern portion of the Territory, and is bounded north by Mohave, east by Yavapai, Mariposa, and Pima counties, south by Mexico, and west by the Colorado river. The Gila river flows for about one hundred miles through its southern portion, enriching in its course a narrow strip of valley. The western part, bordering the Colorado river, is traversed north and south by parallel ranges of mountains. These and other peaks are known to be rich in precious metals of various kinds. The eastern part is crossed in all directions by rugged mountains, the valleys of which, together with the high table-lands, abound with water and afford good pasturage. Many of these mountain-ranges contain rich lodes of precious minerals. The valleys along the Colorado and Gila rivers are productive farming lands. As far back as 1858 rich placers were discovered on the Gila river, and even now placer mining is carried on to a considerable extent in the region of the Gila, which is rich in alluvial gold. The most noteworthy discovery of placer gold was, however, made in 1862, in the La Paz district, about twenty miles northeast of Ehrenberg. It is estimated that this region has produced over a million a half of dollars' worth of gold. Placer mining declined on account of scarcity of water, which compelled the miners to extract the gold by dry washing. Valuable discoveries of silver in the mountain-ranges along the Colorado have again brought the section to the notice of the public. Castle Dome district lies in the Castle Dome Mountains, about twenty miles northeast of Yuma City. The southern and western boundaries are washed by the waters of the Gila and the Colorado. Owing to Indian hostilities, mining operations in this district were not actively commenced until 1869, although discoveries of its hidden treasures were made six years earlier. The mines owned by the Castle Dome Mining and Smelting Company are the most productive and profitable in the district, and comprise the Rail Road, Flora Temple, William Penn, Pocahontas, and Caledonia. The William Penn has a strong vein of good ore. It is opened by two shafts, each of which is over two hundred feet in depth. It also has necessary working-levels, drifts, etc., and the two shafts are connected by a four hundred-foot tunnel. About $2,000,000 have so far been produced from these mines.

According to a statement of the *Star*, dated Yuma, 31st December, 1881, the bullion output of this county for the year 1881 amounted to $103,000 in silver and $64,000 in gold. The production of gold during the census year ending May 31, 1880, for Yuma county, as given by the census report, is $1,019 in gold, from Ellsworth, Plumas, and Centennial districts. I estimate the production during the calendar year 1881 to have been $30,000 in gold and $105,000 in silver.

Pima County.—This is one of the oldest counties in the Territory, and originally embraced that portion which has lately been organized into Cachise county. It is bounded on the east by the latter, south and southwest by Old Mexico, west by Yuma, and on the north by Maricopa and Pinal counties. The Santa Cruz, the principal watercourse of this county, is formed by several creeks that have their source in Sonora. It flows northward for a distance of nearly eighty miles, to a point some ten miles northwest of Tucson, where it is absorbed by the sands and lost. The valley and the mountains bordering it on either side are an excellent grazing region, and where the land is sufficiently low to be susceptible of irrigation it is an excellent agricultural section. This stream is in the eastern part of the county, which is green and fruitful, while all that portion west of it, and beyond its fructifying influence, is a barren and sandy waste, alternating between sandy plains and rugged mountain ranges, and elevated table lands. As is the case generally in the southern half of Arizona, almost every portion of the county can be considered mineral-bearing, mining districts being found throughout its entire extent. Next to the mining section south of Santa Fé, N. Mex., this is believed to be the oldest in the United States. It is not known at precisely what time the mines were first worked by Americans; but it is pretty generally believed, from the best evidence attainable, that the Jesuits commenced mining operations in this county about the year 1650, and as early as 1700 many valuable mines were discovered, and opened in what are now known as the Oro Blanco, Patagonia, Santa Rita, and Arivaca districts, in all of which localities old shafts, tunnels, and other evidences, showing ancient and extensive workings, abound, while, in some instances, rich mines that are known to have been operated by these enterprising people have never been found, notwithstanding the most diligent and patient search. This is supposed to be the section from which came the Planchas de Plata, which contained about five tons of prime silver, accounts of which are given in Mexican chronicles. These districts were worked until the year 1828, when the missions were finally abandoned by reason of incursions of hostile Apaches, and but little mining was done until the Territory came into the possession of the United States, and then only fitfully until some eight or nine years ago, when the industry was permanently revived. The completion of the Southern Pacific Railroad, a few years ago, stimulated enterprise in this and the adjoining county of Cachise, and the development of mining properties has become general, and in many instances successful. Harshaw district is the most important of the mining subdivisions of Pima county. It is located in the Patagonia Mountains, about seventy miles southeast of Tuscon. Wood and water for all necessary purposes can be conveniently procured, although there is not a superabundance of either. The Hermosa is the principal mine of this district. The vein of this mine varies in width from eight to twelve feet of chloride, mixed with large quantities of horn silver. It is opened by a tunnel upwards of 700 feet in length, cutting the vein some 300 feet below the croppings, by shaft 100 feet below the tunnel level, and by necessary working levels, drifts, and cross-cuts. The ores of this mine are free-milling in character, and are more than sufficient in quantity to keep a twenty-stamp mill, owned by the company, constantly employed. This mill has a capacity for the reduction of about eighty tons ore per day, and its bullion output for the year is reported to be $412,000. During the first twenty-seven days of August last, the output of this mill was $42,000. Ten stamps only were in operation for a portion of this time, owing to scarcity of water, and the mill was stopped entirely for six days by reason of floods washing away the road, besides doing other damage.

The great discoveries in the neighboring county of Cachise, and the success attending the mining ventures in that county have not retarded, but, on the contrary, have stimulated the advancement of Pima county. The following was the production by districts, during the census year 1880, as reported by the Census Bureau.

District.	*Gold.*	*Silver.*	*Total.*
Oro Blanco	. .	$3,672	$3,672
Tombstone	$96,748	802,450	899,198
Total	$96,748	$806,122	$902,870

I estimate the production during the year 1881 to have been $15,000 in gold and $750,000 in silver.

Cachise County.—This county is at present the richest mining section of Arizona. It is situated in the southeast corner of the Territory, and was erected into a county in 1881, from a portion of Pima. It is bounded on the east by New Mexico, south by Sonora, west by Pima, and north by Graham, counties. The San Pedro river, flowing from the south, skirts the entire western portion of the county, and affords admirable water facilities for the richest mining sections. The eastern half of the county is traversed by small creeks, which afford an ample water supply for stock and mining purposes. The entire county is a rugged, mountainous region, and outside the San Pedro bottoms contains little if any arable land. Fine grasses, however, abound in the valley, and on the mountain slopes. The Sulphur Spring Valley is an extensive basin-like scope of country, between the Chericahua and Dragoon mountain ranges, some fifty miles in length by twenty-five in width, which may in time become valuable as a cattle range, as the mountains now are for their mineral deposits. Wood for all purposes is found in almost every portion of the county; especially is this the case in every mining section, where it is a most important consideration. Less than three years ago but little was known of this county as a mining section. Now Tombstone is perhaps the most important bullion-producing district in the United States, which is truly wonderful, when it is remembered that it had no railroad facilities one year ago. The most important property of the county is that of the Contention Consolidated Mining Company of Tombstone district, which consists of the Contention, formerly the Western, the Flora Morrison, and the southeast half of the Sulphuret. The consolidation of these properties was effected during the past summer. The Contention has long been known as one of the principal mines of this district. It has been opened by several shafts, the deepest of which has attained a depth of upwards of 700 feet, and by working levels, drifts, winzes, cross-cuts, etc., aggregating many thousands of feet. The first level is at a depth of 112 feet, where the vein is seven feet in width. This has been opened south to the northern boundary of the Grand Central 290 feet, and north 190 feet. The walls are smooth and well defined, and the width of the ledge throughout this level averages six feet. The ore assays range about $150 to the ton. Some lateral cross drifting indicates a rich mineralized formation outside the main vein, both to the east and west. But little stoping or upraising has been done in this level. The vein is reached from the new level, at a depth of 162 feet, by a west cross-cut thirty-two feet in length. The drift to the north on this level extends 300 feet, and south to the limit of the claim. As in the case of the first, but little stoping has been done. The formation at this depth is porphyritic, and the lateral mineralization is found by cross-cuts about 100 feet in width, while still lower down it extends about 100 feet on either side of the vein. On the 212-foot level, the ledge is reached by a west cross-cut at a distance of ninety-three feet, and is found to be eight feet in width, with good strong walls, and increasing richness of ore body. The south development extends to the limits of the claim, and north a distance of 520 feet. The north and south winzes of this level have been sunk to intersect the fourth. Assays of the ore of this level run up to $160 per ton. In driving west cross-cuts, a six-inch seam of ore was encountered, fifty feet from shaft, or forty-three feet from the ledge, from which ore that ran $2,400 to the ton was extracted. Considerable stoping has been done in this level, especially south from point of contact with shaft where the ore has been taken out the entire 290 feet, to a height of twenty-four feet. About fifty feet north of the cross-cut, the vein was found to contract to one foot in width, which continued a distance of some sixty feet, beyond which point it again widened to its natural proportions, which it retained to the point of exploration; 390 feet north of shaft, a winze has been sunk to fourth level in ore, which gives assays of $200 to the ton. A few upraises are seen in the north end of this level; otherwise the ore remains untouched. At a point in the north drift, 450 feet north of the west cross-cut intersection, a drift has been run east to the new shaft, which thus makes its first connection with these workings. In reaching the 262-foot level, the cross-cut west, at a distance of sixty-five feet from shaft, enters first inside ledge, and ninety feet further cuts the second or outside. The cross-cut was extended still forty feet further in this ledge, all in highly mineralized matter, without reaching its limit. Indeed, the ledge formation at this depth is over 200 feet wide, and seamed with ore throughout. This level is in all respects similar to the last above described, and the outside ledge first encountered from this level differs from the first only in size, as it shows a width of from five to eighteen feet, bearing ore that is said to average $100 to the ton. Very little stoping and upraising have been done, the highest point of the former, fifty feet in a few places. Winzes have been sunk in vein from both ends of drift to the fifth level. The drifting in the outside ledge aggregates 530 feet, inside 480. The 312-foot level is connected with inside ledge by west cross-cut, at a distance of ninety-five, and with outside ledge at 150, feet. The drifting on this level is about 750 feet on each ledge. The lateral drifting shows the same high mineralized formation, both east and west, as far as followed. Exploiting the south end of the outside ledge proves it to be the same that forms the west ledge of the Grand Central. From the extreme north end of the drift, a second cross-cut has been run east to connect with the new working shaft. North and south winzes from this have been driven to the 400-foot level. On the 400-foot level the drift is 115 feet, and connection has been made northward with the shaft. The vein is shown to be eight feet in width. On the 500-foot level the south drift has been run 250 feet, and the connecting cross-cut is said to look promising. The north and south winzes from the upper level have also formed connection with this one. On the 600-foot level the cross-cut west is completed, and the south drift is in about eighty feet. The east drift on this level has been run a distance of 280 feet, and ore breasts, stopes, etc., are said to be very promising. The 700-foot level has not been extensively opened, though some rich ore developments have been made in the north drift, which demonstrate that large ore bodies exist at this depth, and are likely to continue. But little work has latterly been done in this mine, every energy being bent to connect the lower levels of the Flora Morrison with the 500 and 600 levels of the Contention, with a view to concentrating future operations. The shaft of the Flora Morrison, and the new working-shaft of this mine, will hereafter be used by the company, and to this end the works of the old shaft are being dismantled. In all these extensive improvements the new company is extracting sufficient ore to keep its teams employed, and the mill at Contention City, ten miles distant, constantly running, as is shown by the reported product for the month of December, upwards of $136,000 in value. In addition to this mill it is represented that a new one of forty-stamp capacity will be built near the mine during the coming summer. Many thousands of tons of low-grade ore, ranging from ten to thirty ounces of silver to the ton, are now on the dumps of this property, all of which can be profitably operated if the expense attending the transportation of ores can be avoided. The production of this company for the year 1881 amounts, in round numbers, to about $1,500,000, as shown by tables published by the Tombstone *Epitaph*, December 4—last month estimated. The Flora Morrison is a small irregular claim immediately west of the Contention. This is the second of the company's mines. Its working shaft is below the 500-foot level, and, as before remarked, the company is bending every energy to the task of bringing it in with the 500- and 600-foot levels of the Contention. It is regarded as a very valuable property, but its production is included in that given as the bullion yield of the company, and cannot in consequence be given separately.

I estimate the production of Cachise county during the calendar year 1881 to have been $645,000 in gold and $4,065,000 in silver.

Estimate of Mr. A. M. Lawver of the Bullion Production in Arizona during the calendar year 1881, *classified by counties.*

County.	*Gold.*	*Silver.*	*Total.*
Cachise	$490,000	$3,896,210	$3,886,210
Gila	21,334	406,799	428,133
Maricopa	280,044	90,000	370,044
Mohave	20,000	71,000	91,000
Pima	195,000	1,600,155	1,795,155
Piond	1,480	983,373	984,853
Yavapai	19,124	716,389	735,513
Yuma	35,699	114,168	149,867
Total	$1,062,681	$7,378,094	$8,440,775

CALIFORNIA.

THE principal gold belt of California lies along the lower slopes and foothills of the Sierra Nevada Mountains, and extends from San Diego county, in the south, to Siskiyou, in the north, a distance of over seven hundred miles, and varies from twenty to sixty miles in width.

Of the fifty-two counties in the State, nearly every one, excepting those bordering on San Francisco bay, has at some time or other been the scene of mining industry, and at the present time reports of production from thirty-five have been received at the Mint Bureau. Mining is the chief industry in eighteen of these counties, in some of which, if it did not exist, the other industries would decline proportionally to their loss in mining population. Throughout this immense auriferous area, the gold occurs under widely varied conditions. It is found in the numberless quartz veins scattered throughout all parts of the gold fields; in the channels of ancient rivers, buried in some instances under hundreds of feet of lava and the products of the erosion of lofty mountains for countless ages; in the banks, bars, and beds of the modern river system, constituting the placer diggings; in seams and pockets, and in the bluffs and beaches of the northern coast.

More varied even than the sources of gold, are the means that have been employed for securing it, and the inventive genius of the miner and mechanician have been taxed to overcome the obstacles which have arisen at every step of the process. In the early days of mining in California, nearly all of the gold produced was from the superficial and easily worked placers, but they, for the most part, have been exhausted, and the rocker, tom, and sluice are now things of the past, or used only by individual operators of small means, or Chinamen content to re-work old claims and secure what was lost or disregarded in the flush of fortune by the first claimants. The amount produced in this manner throughout the whole State is not inconsiderable in the aggregate, and as the bulk is taken out by Chinamen, from whom no reports are received, it can be estimated only from returns of express companies. More than half the production of the State to-day is from the gravel of the ancient river channels, and this is obtained either by drift or hydraulic mining. In the first, the pay-gravel is extracted by drifting or tunneling under the superincumbent lava, while by the hydraulic method the whole deposit is disintegrated by a large stream of water thrown under high pressure from the nozzle of a pipe and washed down the sluices and flumes to the valleys below. The quartz lodes of the State have also produced largely. The ores for the most part are easily treated, and under a better system of mining and more intelligent understanding of methods of treatment of ores than formerly prevailed, this branch of the industry is acquiring a permanency that promises for many years to come to add a large share to the wealth of the State. During the past year, mining in California, and particularly hydraulic mining, has been retarded by litigation between farmers and miners. The detritus from the mines first fouling the streams and rivers, filled their channels, caused their banks to overflow, and gradually encroached upou the arable lands of the lower valleys, until thousands of acres were covered and their capacity for culture and value were destroyed. It is still an open question as to what will be the best method for securing the agricultural lands from injury, while permitting the development of the gravel claims. Mining streams usually cannot carry all the *dêbris* washed into them, and when inclosed by high banks, their channels are rising year by year. This accumulation of millions of cubic yards is gradually making its way further and further towards the valleys, and means must be adopted to check its progress as well as to provide for the bowlders, gravel, and sand constantly being added. Mining will not cease so long as gold exists in sufficient quantities to pay for its extraction, but the cost of building and maintaining large and costly dams to restrain the tailings, may cause a permanent suspension of work in some of the least profitable of the mines. The total production of California during the calendar year 1881, as nearly as can be ascertained from all the sources of information at the command of the Mint Bureau, was $18,950,000, of which $18,200,000 was gold and $750,000 silver.

It is as difficult to ascertain the profit of mining as the expenses. Only fourteen companies paid dividends, aggregating $1,808,722. These were the Black Bear, Bulwer, Gold Stripe, Green Mountain, Idaho, Inyo, Magalia, New York Hill, Plumas Eureka, Plumas Mining and Water, Rising Star, Sierra Buttes, Spring Valley Hydraulic, and Standard Consolidated. In addition to this, much was undoubtedly divided without publicity, but in the majority of cases, the profit resulted only to those who did the manual labor. Notwithstanding the large aggregate production and the amount of profits that have been divided, the expense of working the mines has been very great. The output of many of the mines is swallowed up in their development, and where there has been no metal-bearing ore to defray expenses, assessments have been levied. During the year 1881, one hundred and fifty-five assessments were made upon ninety-seven mines in the State, amounting to $2,288,250. The principal appeals for aid came from Mono county. The following shows the number of mines and assessments made, and the aggregate amount for each county:

County.	*No. of mines.*	*No. of assessments.*	*Amount.*
Amador	5	7	$105,500
Butte	5	5	22,000
Calaveras	4	4	18,000
El Dorado	1	1	7,500
Fresno	2	2	16,500
Inyo	3	4	105,000
Los Angeles	4	1	2,500
Mariposa	4	6	81,000
Mono	36	64	1,201,000
Nevada	17	28	220,250
Placer	8	20	220,500
San Diego	1	1	5,000
San Bernardino	1	1	10,000
Shasta	1	1	6,000
Sierra	1	1	15,000
Tehama	1	3	14,000
Trinity	1	1	5,000
Tulare	1	2	16,000
Tuolumne	2	2	17,500
Yuba	2	3	200,000
Totals	97	155	$2,288,250

Two of the principal gravel mines in the State which heretofore have been paying dividends now appear for the first time for years among those that levied assessments. They were obliged to suspend operations during most of the year, not from any diminution in the value of their property, but from litigation consequent upon the conflict between the agricultural and mining interests. Taken as a whole, the past year has not been an unsuccessful one for mining in California. The output has been fully as large as that of the preceding year. The yield from new mines and an increase from those in which the development has been systematically conducted has compensated for decreased production of others on account of litigation. The outlook for the future is equally as good. Mining for the precious metals is becoming year by year more of a legitimate business. Necessarily it involves many uncertainties, but these uncertainties create a need for knowledge, energy, and prudence, which the established companies have acquired, and this fact insures their permanency. During the coming year the pending *dêbris* question will be solved, and hydraulic and drift mining will probably be pursued with renewed energy, and it is not likely that there will be a less yield than the average annual production of the past ten years. The following is my estimate of the production of the State by counties:

County.	*Gold.*	*Silver.*	*Total.*
Alpine	$2,000	$2,100	$4,100
Amador	1,450,000	1,500	451,500
Butte	650,000	1,000	651,000
Calaveras	800,000	1,200	801,200
Colusa	3,500	....	3,500
Del Norte	60,000	....	60,000
El Dorado	550,000	900	550,000
Fresno	90,000	....	90,000
Humboldt	75,000	300	75,300
Inyo	170,000	140,000	310,000
Kern	190,000	14,000	204,000
Lassen	71,000	1,000	72,000
Los Angeles	13,000	39,000	52,000
Mariposa	200,000	1,200	201,200
Mendocino	1,000	....	1,000
Merced	1,500	....	1,500
Modoc	20,000	1,500	21,500
Mono	3,385,000	300,000	3,685,000
Nevada	3,700,000	9,500	3,709,500
Placer	850,000	6,500	856,500
Plumas	1,350,000	2,000	1,352,000
Sacramento	425,000	1,000	426,000
San Bernardino	9,000	100,000	109,000
San Diego	60,000	....	60,000
Santa Barbara	2,000	....	2,000
Shasta	350,000	85,000	435,000
Sierra	950,000	6,000	956,000
Siskiyou	850,000	1,500	851,500
Stanislaus	63,000	31,000	94,000
Tehama	500	....	500
Trinity	550,000	1,500	551,500
Tulare	8,000	....	8,000
Tuolumne	500,000	1,000	501,000
Ventura	500	....	500
Yuba	800,000	1,300	801,300
Total	$18,200,000	$750,000	$18,950,000

The foregoing exceeds by a little over $1,000,000 the estimate prepared at the San Francisco Mint, and varies in several instances in the estimate as to counties. It also exceeds the total estimate of $18,020,679 of Mr. Valentine, based on shipments by express, by upwards of $900,000. I am inclined to believe, however, that the gold production was greater rather than less than the figures I have given. The deposits of gold of domestic production at the San Francisco and Carson mints during 1881 were $26,161,782, not including a deposit of $5,657,677 of foreign gold. The production of all the Pacific States and Territories, except California, which deposit their gold production at the Western mints, is estimated at $6,140,000, which would make the production of California more than $19,000,000. Some foreign gold may have been melted at private refineries on the Pacific coast and deposited at the mint as domestic bullion, but, after making all proper allowance and deduction on this account, I am satisfied that the gold production of the State could not have been less than the amount I have stated—$18,200,000.

Alpine County.—Alpine county is in the eastern part of California, on the border-line of Nevada. It is on the summit and eastern slope of the Sierra Nevada Mountains, and is essentially a mountainous region, having an altitude of from 5,000 to 11,000 feet above sea level. The mines in this county are chiefly in quartz, carrying gold, silver, and copper, but from the rugged nature of the country, the sparse population, and want of capital, they have not been developed to any considerable extent. So far as has been ascertained, the production for the last year has been less than that of 1880.

One mine in Alpine county reports for the fiscal year ending June 30, 1881, a production of $1,643 gold and $2,096 silver. The production of the county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Mint Bureau, fiscal year 1880	$17,113	$24,146
Mint Bureau, fiscal year 1881	1,643	2,096
Mint Bureau, calendar year 1881	1,643	2,096

I estimate the production during 1881 to have been $2,000 in gold and $2,100 in silver.

Amador County.—This county, wedged in between El Dorado, Alpine, Calaveras, San Joaquin, and Sacramento counties, possesses a diversity of wealth-producing resources, not the least of which are gold, copper, and coal. Gold is almost universally disseminated over its whole area in greater or less quantities, although the quartz-mining region in which the greatest developments have been made surrounds the towns of Jackson, Sutter Creek, Plymouth, Amador, and Volcano. The work, however, compared with that done in other mining sections of the State, has been but superficial, but it has been sufficient to warrant more vigorous prosecution and a larger investment of capital. The mining interests of Jackson are not in as flourishing condition to-day as in times past. The Zeile mine is the principal one in operation. It employs about 100 men, has fine hoisting machinery, a forty-stamp mill, and chlorination works; upwards of 100 tons of ore are crushed daily; it is rich in sulphurets, and pays fairly. The water-power, however, is only sufficient to run thirty or thirty-five stamps of the mill. A larger pipe to carry water from the ditch to the mill will be substituted, the prospects of the mine justifying this improvement. This will allow the full number of stamps to be run, and produce sufficient sulphurets to keep the chlorination works running to their utmost capacity. The Kennedy mine, north of the town, is again running, a good character of ore being taken out; at a depth of 400 feet a drift was run north forty feet, encountering a body of ore averaging four feet in width.

The production of Amador county during the census year ended May 31, 1880, was reported as follows by the Census Bureau:

District of	*Gold.*
Amador City	$645,399
Drytown	9,879
Jackson	163,401
Pine Grove	567
Pioneer	....
Plymouth	476,901
Sutter Creek	60,040
Volcano	45,860
Total	$1,407,047

Reports of the production for the fiscal year ending June 30, 1881, were sent by the owners and officers of the following mines: Bunker Hill, Consolidated Amador, De Witt, Empire Gold, Franklin Consolidated, Golden Gate, Griggs, Keystone Consolidated, McQuade, Mahoney, Modoc, Oneida, Pacific, Flood and O'Brien, Lincoln, Madina Milling, Mason, Telegraph Hill, Tellurium, Whitney and Babcock, Pacific Gold, Soto, Telegraph Hill, Volcano Mill, Yuille, Chinese at Laucha Plana, at Volcano, at Jackson, at Alta, at Ione, and small mines at Sutter, Volcano, Jackson, and Ione. The estimated production of the calendar year 1881 is $1,450,000 gold and $1,500 silver. Assessments were made on five mines aggregating $105,000.

The production of Amador county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$1,407,047	
Mint Bureau, fiscal year 1880	1,495,053	$1,953
Mint Bureau, fiscal year 1881	1,561,668	1,172
Mint Bureau, calendar year 1881	1,401,310	1,172

Butte County.—Butte county, on the eastern side of the Sacramento Valley, is between Tehama and Yuba counties on the north and south, and Plumas and Colusa on the east and west, respectively. The western half of the county, bordering on the Sacramento river, is devoted to agricultural purposes, but the eastern portion, lying along the foot-hills of the Sierras, contains the principal mines of the county. This section is drained by the Feather river and its tributaries. The principal mining localities are Bangor, Wyandotte, Forbestown, Cherokee, Mountain House, Dogtown or Magalia, Lovelocks, and Inskip.

Several important projects have been started to mine the bed of the Feather river above Oroville. It is a well-known fact that the river bed is very rich. In 1857 two dams were built across the river, about 1,000 yards apart; the one above to turn the stream, another below to keep out the back-water, with a flume connecting the two. Into this flume the river was turned, and after many weary months' work the intervening space was pumped out and the bed of the river appeared. Along the bed-rock was found gravel, varying in depth from three to ten feet. In some places were found large bowlders. It was late in the season when the work on the wing dams was completed, and every effort was made to clean up as much of the bed of the river as was possible. Less than sixty days were allowed them before the storms came, and every vestige of work disappeared in a day. Yet in that short time nearly one million of dollars' worth of gold dust was taken out. In many places fortunes would be taken out in a space of a few square feet. Since then other attempts to flume or wing-dam the river have been only partially successful. It is now proposed to get at these riches in a systematic way, and to overcome the existing obstacles by engineering science, and a company has been formed to turn the waters of the north fork of the Feather river, known as Big Bend, a little above Whisky Bar, by means of a tunnel, into a tributary of the west branch, called Dark Canyon, which empties into it a few hundred feet above the confluence of the west branch and north fork of Feather river, about ten miles above Oroville. Many have thought something of this kind could be done, but only within a year has the project begun to assume shape. The north fork of Feather river rises at Lassen's Peak, where the melted snow percolates through the fissures in the lava below the cap and gush forth in one immense body, creating, as it were, a river instantaneously at the head of Big Meadows. From this place it continues its course through Lassen, Plumas, and Butte counties, a distance of one hundred miles, until it reaches the point selected for the head of the tunnel. The peninsula of Big Bend is composed of high mountain land with precipitous banks to the river. The area is about eleven square miles, and length of the river to be drained is twelve miles. The tunnel begins nearly half a mile above Whisky Bar, at a place where the river is deeply encaved between the banks, and where the stream has very little fall. It is proposed to establish the bottom of the tunnel four feet below the lowest portion of the stream, in order to give the impetus to the waters, taking a greater velocity than they had in the stream, and in order to obtain at once the required depth of water in the tunnel which it is provided to carry on its whole course. It will be 11,600 feet long, twenty-five and one-half feet wide, twenty-one and one-fourth feet high, and the excavations will cost about $4 per cubic yard. At the entrance of the tunnel will be a permanent dam across and up to the level of the bed of the stream. The tunnel would be large enough to carry all the water of the river, under ordinary circumstances, for enough months in the year to allow of very profitable work. Preliminary work has commenced, roads and houses are being built, and it is intended to begin work on the two faces of the tunnel in April, 1882. The owners of the Greek claim believe they can successfully mine it by sinking a shaft on the bank above high-water mark to several feet below the bed of the river, and then run up a tunnel from the bottom of the shaft to the bed of the river. This experiment could be made at a cost less than $10,000. If successful, it would open up a rich bed of gold dust. Whoever enters upon this enterprise will start in with the knowledge that the gold is on the river bed; on this point there can be no mistake.

The production of Butte county for the census year 1880 was reported by districts as follows:

District of	*Placer Gold.*
Centreville and Helltown	$15,000
Cherokee Flat	274,057
Magalia, or Dogtown	17.118
Morris Ravine	9,000
Oroville	9,999
Total	$325,174

The production reported by the following mines for the fiscal year, 1881, was: Gold, $350,787; silver, $19, viz.: Big Kenshew, Billingsly & Halsey, Black Leg, Brush Creek, Dodson, Hedges & Co., Lott's Gravel Range, Magalia Gold, McIntyre & Co., March & Gwyn, production of Granite Basin, President Langley, Robert & Kendall, Sam Davis, Booming Dutch Gravel, Butte Creek Hydraulic, French Creek, Fulton & Co., Little Kimshaw, McBride, Nichol & Langley, Oroville Irrigating, Reece, Williams & Vinton, Wyandotte Hydraulic, Spring Hill Hydraulic, Thos. H. Williams & Co., Woodson, Garland & Wilcox, small mines at Forbestown and Yankee Hill, and Chinese at Yankee Hill, and at Chico. The production of Butte county for recent periods as reported by the mines has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$325,174	
Mint Bureau, fiscal year 1880	430,501	$1,247
Mint Bureau, fiscal year 1881	350,787	19
Mint Bureau, calendar year 1881	646,790	46

I estimate the total production for the calendar year 1881 to have been $650,000 gold, $1,000 silver.

Calaveras County.—Calaveras county is one of the oldest settled, as well as one of the most celebrated, of the gold-producing counties of the State, and lies southeast of and adjoining Amador county. During the last year there has been no abatement in the mining industry; on the contrary, prospecting has been active, and new mines have been discovered, old ones have been reopened, and in the steadily producing mines, improvements in machinery and appliances for reducing ores or saving gold have been introduced, and work has been prosecuted with an earnestness that insures success.

The Eureka Hydraulic Mining Company, on Calaveras river, have steadily prosecuted work on their claims. The ground was worked in the early mining days, and abandoned until taken in hand by the present owners, who, by a system of ditches miles in length, brought sufficient water to keep two pipes playing continually against the bank. About 6,000 feet of pipe are used, and a flume, upwards of 1,500 feet in length, conveys the tailings into the Calaveras river. During the last season, about four acres of surface, averaging sixty feet in depth, were washed and yielded about $40,000. The main Eureka ditch was extended to Esperanza creek, a total distance of twelve miles. A second ditch, the Calaveras, conveys water from Jesu Maria creek to the claim. The Calaveras Mining Company has from 1,800 to 2,000 acres of mining land, embracing both cement and gravel. Its principal place of operation is three and a half miles north of Milton. A ditch carrying 15,000 inches of water was constructed at an expense of nearly $30,000. The main ditch is twelve miles long, but with its feeders amounts to twenty-one miles. The supply of water is scarcely sufficient, but is aided by a system of reservoirs. The Sand Hill claim, across the Calaveras river, contains 640 acres of gravel. It has not heretofore been worked on account of the difficulty in obtaining water, but this is now obviated, as water can be taken from the reservoir across the river in pipes. Electric lights will be used, so that the work will progress night and day.

The Census Bureau reports for the census year 1880 the following production by districts, viz.:

District.	*Gold-quartz Mines.*	*Gold-placer.*
Angel's Camp	$21,499	
Carson Hill	20,000	
Independence	126,150	
Mesquite		
Mokelumne Hill	181,000	$63,450
Robinson's Ferry	....	15,000
Vallecito	....	18,001
Washington		
Total	$348,649	$96,451
Aggregate	....	445,100

For the fiscal year 1881 reports were received from the following mines, viz.: Adelaide, Brown & McSorley, Bragg & Co., Bully Bully, Ballards Hydraulic, Bonanza Hydraulic, Chong Kee Company, Concentrated de Santo Hydraulic, Champion, Dolan & Cogswell, Duryea Hydraulic, Eureka Hydraulic, Emerson Hydraulic, Grey Hill, Gwin, Gopher, Jupiter, John Rothgeib, J. W. Taylor, Knox & Osborn, Lewis & Fairchild, Lone Star, Morse & Stone, Oro Plata, Red Wheel, River Side, Sheep Ranch, Shawmut, T. T. Collins, Veith & Co., Amelia, Collier, Confidence, German, Kendall & Gunnison, McElroy, Gravel and Safe Deposit Tunnel. These mines shipped a production of $815,724 gold and $22 silver. The production of the year 1881 is estimated at $800,000 gold and $1,200 silver. The production of Calaveras county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$145,100	
Mint Bureau, fiscal year 1880	320,865	$643
Mint Bureau, fiscal year 1881	815,724	22
Mint Bureau, calendar year 1881	793,113	49

Colusa County.—Colusa county lies between the Sacramento river on the east and the Coast Range on the west, and is about eighty miles north of San Francisco. Iron and copper ores exist in considerable abundance, but with the exception of the Manzanita mine, on Sulphur creek, no gold mines are worked in the county. The ore was formerly worked in a stamp-mill and collected with amalgamated copper plates, but from its refractory nature the amalgamating process was abandoned and one of concentration has been adopted. The production of Colusa county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Mint Bureau, fiscal year 1880	$4,830	$78
Mint Bureau, fiscal year 1881	1,251	23
Mint Bureau, calendar year 1881	3,221	23

I estimate the total production for the calendar year 1881 to have been $3,500 gold.

Del Norte County.—Del Norte county is the extreme northwestern county of California. The principal gold mining operations have been conducted in the vicinity of Happy Camp, in the southeastern part of the county, on Klamath river. Here there are large areas of auriferous gravel, ample supply of water for hydraulic operations, and every element essential to large and profitable operations, the only drawbacks being the isolated condition of this section of country and the shortness of the mining season. The Happy Camp Hydraulic Mining Company are running their mine night and day with two pipes. Considerable river-bed mining has been done with profit during the past season along both the Klamath and Smith rivers by means of wing damming; a dam is constructed half-way across the river and then continued down the stream to any desired distance, thus turning the whole body of water into one-half of its channel. The water inclosed by the dam is then pumped out by the force of the current acting on wheels attached to shafts projecting beyond the dam, and the gravel on the portion of the river-bed laid bare is raised with derricks and emptied into sluice-boxes for washing. There appears to be numerous good openings in this county for hydraulic mining. In the vicinity of Crescent City, the county-seat, situated on a little bay on the Pacific, beach or black sand mining has been carried on for several years. A new company was organized and commenced operations with favorable prospects, and, if successful, will no doubt induce others to engage in similar enterprises. The production of Del Norte county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$128,331	
Mint Bureau, fiscal year 1880	215,403	$300
Mint Bureau, fiscal year 1881	45,885	

I estimate the total production for the calendar year 1881 to have been $60,000 gold.

El Dorado County.—This county lies bordering on the State of Nevada, and is about one hundred and twenty-five miles northeast of San Francisco. Throughout the county there are a number of good paying quartz mines, while placer mining is prosecuted mainly by Chinamen.

At Hoosier Bar, a new invention for elevating gravel by hydraulic process has been adopted, of such power that a column of gravel and water can be driven upward twenty feet for every 100 feet of pressure in the driving current. Some very rich ground has been opened up by this elevator, one pan of bed-rock gravel yielding over $25.

Reports of production were received from the Rosecranz, Modoc, Inez, Faber, Mount Pleasant, Seller's Ranch, Fowler & Granger, Gignac, Weber, Hosking, Mason, North Star, Park Canal, Chapparal, Walker, Blue Rock, Roach, Cornwell, Mameluke, Bryant, Toombs, Oro Fino, Grit, Loomis, Beattie, American Cañon, Spanish, Mike Muntz, Von Bremen, Pelton, Kay, Gregory, Blakeley, El Dorado, Friedman, Cumberland, Monteverde, Snow, Iowaville, Verza, Lone

Jack, Vaughn, Pie Pie, Lyon, Grand Victory, Church Union, Tingman, and Pacific. The production of El Dorado county for the census year 1880 was reported by districts as follows:

	Gold.
Scattered	$514,268*
Mud Spring or Springfield	74,601
Placerville	22,280
Total	$611,149

*Placer.

The production of the county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$611,149	
Mint Bureau, fiscal year 1880	389,383	$208
Mint Bureau, fiscal year 1881	710,230	711
Mint Bureau, calendar year 1881	540,173	316

I estimate the total production for the calendar year 1881 to have been $550,000 gold and $900 silver.

Fresno County.—Fresno is one of the largest counties in California, and crosses the great San Joaquin Valley, extending from the Sierra Nevadas on the east to the Coast Range on the west. The mineral resources of Fresno county have not been thoroughly prospected, neither have the mines that have been discovered been developed to a producing point, with very few exceptions. Many that have been long known to be valuable, can be made to produce bullion in paying quantities, when appliances for properly working the ores have been introduced. There are hundreds of ledges through the hills and mountains of Fresno county, carrying large bodies of ore worth from $8 to $10 per ton to much of more valuable quality; the cost of working this low grade ore has hitherto been so great as to practically render it valueless. There is only one river mine of importance east of Millerton, and that is of recent discovery. A number of parties have attempted to prospect a claim twenty miles east of Fresno Flat on the north fork of the San Joaquin. The reported prospects are sufficient to warrant more extensive operations. Rich gravel deposits are reported along the banks of Keyser Gulch. The bed of the creek was rich and was mined out years ago, but the banks were never extensively prospected. The deposits now being opened are said to indicate an ancient river channel, which has not hitherto been discovered in this county.

The production of Fresno county, all from the deep mines in the Potter Ridge district, as reported to the Census Bureau for 1880, was $72,599, gold; $6,291, silver. Reports were received from the Deadwood and a few small mines. The estimated production in Fresno county for the calendar year 1881 is $90,000, gold. The production of this county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$72,599	$6,292
Mint Bureau, fiscal year 1880	143,433	
Mint Bureau, fiscal year 1881	114,307	
Mint Bureau, calendar year 1881	83,513	27

Humboldt County.—Humboldt county is on the coast, in the northwestern part of the State, and immediately south of Del Norte county. There are no quartz mines in this locality, at least none are in operation. The chief placer mining is upon the Trinity and Klamath rivers. It is, however, subordinate to the agricultural and lumber interests. The gravel deposits are neither as extensive nor rich as in other sections of the State, but they have not been vigorously worked, and opportunities exist for enterprise and capital; water is plentiful and can generally be brought upon the mines at but little cost, and as it comes from high mountains a good pressure for hydraulic operations is easily obtained. The mining season is usually short. Of late years considerable attention has been paid to the working of beach sands at Gold Bluff. The presence of gold in the sands thrown up by the surf has been known almost from the time of the first discovery of gold in the State, and at various times projects were formed for washing these deposits and securing the gold; but the fact that the gold existed in infinitesimal particles, and that a rich deposit brought up or exposed at one time was liable to be swept away or covered with barren sand at another, rendered working beach sands too precarious mining to be followed for any length of time, and it was almost abandoned. The whole beach lying in front of Gold Bluff is now owned by two parties, Adson Adams and the Greenbaum Company, who have pursued systematic operations that have not been without success. Mr. Yale, of San Francisco, describes the manner of conducting the business of gold gathering at this point as follows: After a heavy surf, the superintendent of the mine rides along the beach, as the tide begins to ebb, and carefully notes the condition of the sand, watching for evidence of gold having been thrown up by the waves. If he discovers that fresh deposits have been made, he signals the muleteers to that effect, who then rush down their animals and pack out as much of the auriferous sand as possible before the tide again comes in and puts a stop to their work, covering up, perhaps, the rich streak with a heavy layer of barren sand, or possibly sweeping it away altogether.

It is a singular circumstance that when the surf comes square on the beach the gold brought up by it is covered under several feet of this barren sand, and that only when the surf strikes the beach at some other angle is the gold left on the surface, where it can be seen and readily gathered. After being so collected, the rich sand is washed in sluices, small streams of water having been brought in for the purpose. For saving the gold only copper-silver plates are used in the sluices, which are usually run with a light head of water. On the border of a small lagoon on the Greenbaum ground, a short distance back from the beach, occurs a large body of low-grade sand. This is run out on cars and washed in an old-fashioned "Jenny Lind" tom, being a sluice of one box widened out and supplied with a screen at the lower end. At one time it was thought that this gold was brought up out of the ocean, an opinion that some people still entertain. But this is clearly a mistake. It came from the bluff in the rear, which is made up of alternating strata of clay, gravel, and sandstone, the gravel strata, three or four in number, being all more or less auriferous. The action of the waves has broken down this bluff, which varies from 100 to 500 feet in height, and released the gold, the latter having afterwards been by the same agency carried seaward at least as far as low-water mark. After a very heavy surf breaking down, as sometimes happens, a portion of the bluff, the beach below is sensibly enriched, the gold by this new addition being rendered somewhat coarser than before. This fact has suggested the utility of employing powder for breaking down and disintegrating these banks, an agent that will, no doubt, some day be used for that purpose. While the sand along this beach must, under such steady and long-continued working, necessarily suffer a gradual impoverishment, this latter has not as yet proceeded far enough here to sensibly affect practical results; a fact due, it may be presumed, to the great width of the beach at this point and to the replenishment which the stock of workable material is constantly receiving from the caving down of the banks above. Farther north, where these favorable conditions do not exist, the gold-bearing beaches have been so nearly exhausted that hardly any work is now being done, where from fifteen to twenty-five years ago thousands of men made good wages. That the sand, which is constantly covered by the sea, is not very rich has been proven by the trials made on it some years ago with steam-dredges, none of which found gold enough in it to warrant a continuance of these operations. Each of the companies above mentioned employs from ten to twelve men and about eighteen pack-animals the year round. Operations are kept up with but little interruption, the men being engaged a good part of the time either in gathering sand or washing it. It is reported that each of the claims yields about $40,000 per annum; the expenses are about $14,000, leaving $26,000 as net profit. The production of Humboldt county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$77,001	
Mint Bureau, fiscal year 1880	153,940	$80
Mint Bureau, fiscal year 1881	32,679	3,345
Mint Bureau, calendar year 1881	19,115	27

I estimate the total production for the calendar year 1881 to have been $75,000 gold and $300 silver. For the year 1880 the Census Bureau reports by districts as follows:

	Gold.
Gold Bluffs	$27,000
Orleans Bar	50,001
Total	$77,001

Inyo County.—Inyo county comprises the section of country formerly known only as the Owens river and Panamint valleys, lying in the southeastern part of California between the Sierra Nevada Mountains and the State line. In the early history of this county almost a continual warfare was kept up between the settlers, prospectors and miners, and the Indians; but notwithstanding this the reputed richness of the mineral deposits caused a steady influx not only of adventurers but of miners, who came prepared with mills and other machinery to work the mines and secure the precious metals, and the Indians were finally subdued. At Bishop's creek, in the northwestern part of the county, the Poleta, or, as it was formerly called, the Pajaro, is the principal mine in the district. The main incline is 360 feet in depth, all in first-class milling ore, of which about 1,000 tons are on the dump. Two drifts have been started. The west drift, at a depth of 230 feet, and running on the ledge, is in a distance of forty-five feet, and the ledge is looking well; the east drift, at a depth of 126 feet, also running on the ledge, is in fifty feet, the face being in the same character of ore as that encountered in the main incline. Besides these two drifts a tunnel has been started in the ravine west of the mine to connect with the main incline at the depth of 200 feet; it is now in a distance of seventy feet, and about 150 more will have to be run before the connection is made. The work on the main incline has been suspended, as it could not be advantageously continued with a windlass, and until suitable hoisting machinery is erected operations will be confined principally to prospecting the ledge by drifts. It is in contemplation to erect a mill in the course of the coming season. Water is brought to the mine by pipes from the head of Redding's cañon, about two and a half miles.

The production of Inyo county during the census year ended May 31, 1880, was reported as follows:

District.	Gold.	Silver.
Alabama		
Beveridge	$17,000	
Cerro Gordo	3,307	$140,517
Coso	939	17,622
Deep Spring Valley		
Fish Springs		
Kearsarge	....	9,400
Lee	....	6,500
Lookout	633	18,499
Pajaro		
Panamint		37,140
Russ	2,925	2,600
Snow's Cañon	200	1,300
Swansea		5,567
Tarrytown		
Ubehebe		
Union		
Waucoba		
Wild Rose		
Total	$25,004	$239,145

The following mines returned reports of production: Phœnix, Los Angeles, Maggie, Del Norte, Key Note, Juarez, Hippolyte Galeron, Freeborn, American Union, Del Monte, Panamint, Ygnacio, and Modoc.

The production of the county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$25,004	$239,145
Mint Bureau, fiscal year 1880	48,648	173,916
Mint Bureau, fiscal year 1881	90,710	180,077
Mint Bureau, calendar year 1881	168,093	59,020

I estimate the total production for the calendar year 1881 to have been $170,000 gold and $140,000 silver.

Kern County.—Kern county, in the southern part of the State, and lying east of the Coast Range, has some excellent quartz mines, the chief of which is the Sumner, at Kernville, in the northwestern part of the county, on the headwaters of the Kern river. This mine has an 80-stamp mill, one of the best and most costly in the State. Mr. Charles E. Sherman, of Havilah, has furnished the following approximate estimate of the yield of Kern county by districts during the six months ended December 31, 1881. The mills are all wet crushing mills on gold-bearing quartz.

District.	Mills.	Stamps.	Yield.	Placer yield.	Total.
Sageland	1	10	$6,000	$2,000	$8,000
Pah Ute	2	23	2,500	} 3,000	10,500
Claraville	1	10	5,000		
Erskine Creek	1	10	1,000	....	1,000
Washington	1	10	10,000	3,500	13,500
Kernville	1	80	125,000	....	125,000
Bull Run	1	20	6,000	....	6,000
Greenhorn	Arrastras	....	2,500	1,500	4,000
Agua Caliente	1	5	5,000	....	5,000
Lower Caliente	1	5	1,200	....	1,200
Havilah	4	50	11,000	....	11,000
Total	14	223	$175,200	$10,000	$185,200

The production of Kern county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Mint Bureau, fiscal year 1880	$94,214	$390
Mint Bureau, fiscal year 1881	139,287	450
Mint Bureau, calendar year 1881	187,155	14,306

The following mines of Kern county returned reports of production: Bronaugh, Tom Lane, Anthrum, Harding, Oriental, Hailey.

The production during 1881 I estimate to have been $190,000 in gold and $14,000 in silver.

Lassen County.—Lassen county, in the northeastern part of the State, and south of Modoc county, has hitherto had but little reputation as a gold producing county, but discoveries made in late years of quartz ledges carrying varying proportions of gold indicate that with a wise expenditure of capital in their development the county may become a future producer to a considerable extent.

The total production of Hayden Hill district, in this county, is reported as $34,739 gold, $1,307 silver. The production of Lassen county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$34,739	$1,037
Mint Bureau, fiscal year 1880	25,900	
Mint Bureau, fiscal year 1881	42,905	1,406
Mint Bureau, calendar year 1881	70,590	

I estimate the total production for the calendar year 1881 to have been: gold, $71,000; silver, $1,000.

Reports of production were received from the following mines: Hopkins' Consolidated, Don't Care, New Hope, Fairfield & Co., Golden Eagle, and Juniper.

Los Angeles County.—This county, in the southern part of California, and lying on the Pacific Ocean, has lately attracted some attention from the discoveries of both gold and silver bearing ores in the mountains east of Anaheim.

Los Angeles county reported for the census year the production, by districts, as follows: Silverado, $29,400 silver. The following list of mines reported a production during the fiscal year 1881 of $3,978 gold, $3,368 silver: Arams, Stonewall, Santiago, Gold and Silver, Dunlap, Union, and small enterprises at Ravenna. The county's gold and silver production for the calendar year was, gold, $13,000; silver, $39,000. The production of the county for recent periods, as reported by the miners, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	......	$29,400
Mint Bureau, fiscal year 1880	$7,700	66,300
Mint Bureau, fiscal year 1881	3,978	3,368
Mint Bureau, calendar year 1881	13,046	38,166

Mariposa County.—Mariposa county, in Central California, is essentially a mining region, and possesses a large number of rich and valuable gold-bearing quartz veins. Many of the best mines are situated on the Fremont grant, a portion of which is the property of the Mariposa Land and Mining Company. This estate has been involved in prolonged litigation, and at present the company is doing little or nothing in mining, and their mines for the most part are lying idle. The Washington mine, 2 miles north of the town, is perhaps the best developed in the district. It has been exploited to the depth of 1,600 feet, and the ore, which is low-grade, has, under careful and economical management, been made to pay a profit. The depth to which the mine has been worked has, however, caused a proportionate increase in expense over former working, when a greater amount of ore could be extracted with less machinery and at less cost, and this has been gradually reducing the profits until they have reached a point at which the company has been compelled to suspend operations. This is a matter of regret, as the large number of miners employed depended upon the successful working of the mine for support. The machinery at the mine is of the most complete character, an excellent 20-stamp mill, chlorination works, hoisting apparatus, air-compressors, etc. It is in contemplation to remove and work the pillars of ore in the mine, after which the machinery will be sold or shipped to some other mine.

The production of Mariposa county during the census year 1881, by districts, was reported as follows:

	Gold.
Coulterville	$11,250
Hornitos	108,525
Mariposa estate	202,499
Total	$322,274

The production of Mariposa county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$392,274	
Mint Bureau, fiscal year 1880	150,017	$1,300
Mint Bureau, fiscal year 1881	141,449	520
Mint Bureau, calendar year 1881	194,694	1,230

I estimate the total production for the calendar year 1881 to have been $200,000 gold and $1,200 silver. The following mines reported production: Yosemite, Josephine, Burnwell, Piney Hill.

Mendocino County.—Mendocino county, on the Pacific Ocean, south of, and adjoining, Humboldt county, is an extremely mountainous region, the Coast Range occupying its whole extent. It cannot, however, be called a mining county, although gold in paying quantities is known to exist in various sections, and mining is carried on to some slight extent. The chief mining enterprise in the county is the Mendocino Flume and Mining Company of Boston. The mines of this company consist of 300 acres of placer claims near Calpella, which will be worked as soon as the flume is completed. The soil is a light sandy, washed gravel, easily worked, with no clay known. It has never been worked except a little during the rainy season with rocker or tom, when from $2.50 to $4.00 per day were made. The company only began work in the latter part of July, and are now engaged in building a temporary reservoir and the permanent flume for taking lumber and water to their mining ground and Calpella, twelve miles distant. Three tunnels will be necessary. The dam across Mill creek ravine is progressing as fast as possible. It will be 150 feet long and eight feet high, built of logs, brush, and earth, and faced with heavy planks, which will be sunk to their places with a pile-driver. The head dam will be eighty feet long and eight feet high. Flume work is proceeding briskly. A mile of trestle is in place, and water is flowing through three-quarters of a mile of thirty-six-inch flume, carrying material for its extension. Gold has been discovered lately in the hills east of Ukiah, on the Russian river, in fine particles in black sand, which appears to predominate in the formation in that section. The gold-bearing deposit is reported to be quite extensive. The estimated production for the calendar year 1881 is $1,000 gold. The production of Mendocino county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Mint Bureau, fiscal year 1880	$733	
Mint Bureau, fiscal year 1881	650	$125
Mint Bureau, calendar year, 1881	650	

Merced County.—Merced county embraces a large portion of the San Joaquin Valley, and extends from the foothills of the Sierra Nevadas on the east to the Coast Range on the west. The county is nearly all level prairie, and no quartz mines are known to exist. The surface gravel deposits were exhausted long since, and no gold is now extracted except on the Upper Merced river, near Snelling, where a little work is still done by Chinamen. The production of Merced for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.
Mint Bureau, fiscal year 1880	$17,515
Mint Bureau, fiscal year 1881	1,230
Mint Bureau, calendar year 1881	1,284

I estimate the total production for the calendar year 1881 to have been, gold, $1,500.

Mono County.—Mono county is in the eastern part of California, bordering upon the State of Nevada; the western portion lies among the Sierra Nevada Mountains, while the eastern part is principally deserts and volcanic tablelands. The wealth of the county is in its mines of both gold and silver. During the last year it ranked second among the counties of the State in its production of the precious metals. The principal mining district is at Bodie, although there are numbers of mines in other districts which, when developed to the same extent as those at Bodie, will render them equally famous. The Standard Consolidated is the largest bullion producer. It is employing about 150 men, half of whom are underground miners. The east cross-cut on the 1,000-foot level is in 570 feet. A few weeks' more work should cut the west vein of the Summit Mine, which is under control of the Standard. The west cross-cut 700-foot level is in 407 feet, and ought to be in the Bulwer ground, which is also under the Standard control. Most all the ore extracted has been from and above the 500-foot level, which is below the incline 550-foot level. But little work has yet been performed on the 700-foot level, and yet that little reveals the fact that the two great ore veins of the mine are fully as large, if not larger on that, as on the upper levels, and equally as rich. These veins, where cut by the shaft, reveal a tendency to a change of dip from the west to the east. It is reported that a cross-cut will be run west to cut the two immense veins that now lie west of the shaft on the 1,000-foot level, and when these are developed the company will require probably not less than 100 additional stamps. It is contemplated also to open the 1,200-foot level during the coming spring. This mine has been worked continuously for nearly five years, and is far from being worked out. It has rather improved as the years have gone by. It is producing more bullion this year than in any previous year in its history. In 1878 it was considered to be in a good state of development, and the product for that year was a little over $1,000,000. In 1879 and 1880 it did still better. The product for 1881 will exceed $2,000,000. The official figures of product for the first eleven months of 1881 are annexed, together with the actual cash balance on the first of each month:

Months.	Bullion.	Months.	Cash Balance.
January	$207,960	January	$41,315
February	184,342	February	58,148
March	168,175	March	144,004
April	166,376	April	201,362
May	158,835	May	212,273
June	167,651	June	224,390
July	167,360	July	242,354
August	161,384	August	243,886
September	170,230	September	289,971
October	164,632	October	326,709
November	222,793	November	349,914
December		December	397,086
Total	$1,939,738	Total	$2,731,412

Commencing with a cash balance of $41,315 on the 1st of January, 1881, the Standard has kept up its regular dividends of $75,000 per month, and reports a cash balance on the 1st of December of $397,086. In September, 1877, this mine paid its first dividend of $50,000, and continued to pay the same amount monthly until March, 1880, when it paid $75,000, which amount it has paid each month since that time. In addition to this, in December, 1880, and 1881, it declared extra dividends of $75,000, making the total amount paid to the close of the year 1881, $3,300,000.

At the Mono-Bodie or Lent shaft the tank and bob stations are rapidly nearing completion. The excavation for the tank station at the 810-foot level has been completed. The inflow of water remains very constant, the pumps running at seven and a half strokes per minute. At 705 level, north drift is now 266 feet long. In face the rock is firmer and there is less water, showing that it is getting beyond (north of) the great faulting breccia. The Noonday mine is looking well, but they cannot go below the 512-foot level until the Red Cloud shaft takes the water from them, and that may involve a cross-cut 1,000 feet in length, even after the Red Cloud attains sufficient depth; and it is not likely that another cross-cut will be run west short of the 800-foot level. They have substituted a 350-horse-power engine in their mill for the 96 horse-power formerly in use, and have added 10 stamps, making 49 in all. They have drifts running on the 200, 300, 400, and 500 foot levels, and enough ore in sight opened to a depth of 500 feet to keep their 40-stamp mill running for months; but from the fact that the rich ore in the lower levels cannot at present be extracted on account of a large amount of water, their mill is now running on Bechtel Consolidated ore. The rich ore recently struck in this mine is being followed downward and southward, and is holding its own in both directions. The south drift 500-foot level, which led through fair milling ore to the point where rich ore was encountered, is now in 330 feet south of the main east cross-cut. At or near this point a winze has been started and is now down ten feet. The ledge in the winze is five feet wide of clean ore, three assays from which gave the following results: No. 1, $50.23 in gold, and $348.73 in silver; total, $398.96. No. 2, $46.44 in gold, and $659.78 in silver; total, $706.21. No. 3, $46.44 in gold (precisely the same as No. 2), and $342.43 in silver; total, $388.87. The vein in the winze, as before stated, is five feet wide, of clean ore of the quality indicated by the above assays; but this is between smooth clay walls, outside of which is a harder quality of quartz of lower grade, so that really the width of the ore vein is unknown. In the North Noonday the No. 2 north drift on the 412-foot level is in good milling ore, the vein generally being about two feet wide. Work has been renewed in the No. 2 north drift 512-foot level, and shortly they should reach the body of ore which the same drift on the 412-foot level has recently encountered, as all indications point to its pitching north. An upraise has been started from the 512 to the 412 foot level. The No. 2 vein is larger and giving good assays. Ore for the mill is being stoped from the 212, 312, and 412 foot levels.

The Red Cloud great shaft is still being sunk, and has already cost several hundred thousand dollars. It has three compartments; its present depth is about 700 feet, and is intended to be sunk to a depth of 1,000 feet. The machinery, comprising double compound engines, pumps, etc., is simply immense, all of which suggests that the owners who are investing their money in this enterprise have great confidence in the mines. They are now cross-cutting at the 600-foot level and are in 51 feet. The Concordia vein will probably be cut at a distance of about 300 feet. The appearance of this vein on the 400-foot level above would render the discovery of a silver mine on this level a matter not at all surprising.

The United States Government has issued patents to the Bechtel Consolidated, and Tioga Consolidated of Bodie, thus setting all disputes as to titles in their favor.

The bullion shipments from Bodie during the year just closed were the largest of any year since the revival of the district. They amounted to $3,173,000. This is an increase of more than $100,000 over those of 1880, of more than $600,000 over those of 1879, and of more than a million over those of 1878, which was the year of greatest excitement in Bodie mines. The shipments for the five years ending December 31, 1881, have been as follows:

1877	$979,922 80
1878	2,129,732 58
1879	2,556,847 58
1880	3,063,699 13
1881	3,173,000 00
	$11,902,302 09

Notwithstanding this large yield of bullion, only three Bodie mines have ever paid any dividends. The total amount paid by the Standard to date is $3,300,000. The Bodie commenced paying dividends in August, 1878. It paid three that month, first, $1 per share, then $2, then $5 per share. After paying eight dividends, the disbursements were stopped until August, 1879, when eight more monthly dividends followed. From August, 1878, to March, 1880, the mine paid $1,200,000 in dividends. It has paid nothing since, but has levied some assessments. The Standard never levied an assessment. The Bulwer Consolidated mine has produced some bullion, but its main revenue for the past year has been from the rent of its fine mill. On the 1st of December, the company reported a cash balance of $100,000, and out of that a dividend of $10,000 was paid, the first one disbursed.

During the year 1881, Mono county mines have levied the following assessments:

Mine.	*Assessments.*	*Amount.*
Addenda	1	$10,000
Bechtel Consolidated	1	15,000
Belvidere	4	75,000
Black Hawk	3	15,000
Bodie Tunnel	1	50,000
Boston Consolidated	2	50,000
Brooklyn Consolidated	1	5,000
California	1	10,000
Champion	1	25,000
Consolidated Pacific	1	24,000
Defiance	1	25,000
Double Standard	1	12,500
Dudley	1	6,400
East Noonday	2	15,000
Glynn Dale	1	25,000
Goodshaw	2	30,000
Harrington	1	5,000
Headlight	1	10,000
Homer	1	30,000
Jupiter	2	41,000
Maybelle Consolidated	4	36,000
Mammoth	2	50,000
McClinton	1	3,000
Mono	5	150,000
Mount Cristo Consolidated	1	10,000
Noonday	2	75,000
North Noonday	2	75,000
Northern Standard	1	25,000
Oro	4	90,600
Paris	1	25,000
Red Cloud Consolidated	2	17,500
South Bulwer	2	50,000
Spaulding	2	20,000
Syndicate	1	25,000
Tioga Consolidated	3	50,000
University	2	20,000
Total	64	$1,201,000

The above list contains thirty-six mines, some of which are producing bullion. All these mines, it is hoped, will some day become self-supporting, if they do not pay dividends. But while this is the hope, no one has faith enough to believe that such will be the result.

On Mill Creek Cañon the Mono Lake Hydraulic Company have secured a large tract of auriferous gravel, and are making preparations for its systematic mining. The hydraulic mines on Mill creek cover 20,080 acres, secured by patent, of gold-bearing gravel, some three miles in length by one in width, commencing a little above the mouth of Mill Creek Cañon and extending down the creek in a southeasterly direction to within a half mile of Mono Lake. Work was commenced on the 10th day of October last on the big ditch, whose proposed dimensions were five feet wide on top, three feet on the bottom, four feet deep, and having a carrying capacity of 2,500 inches. Up to date it has been completed one mile from where it taps the creek to its present point of connection with the penstock. The latter is fifty feet long, four feet wide by three feet deep. There are now in use 300 feet of Norway iron pipe, twenty-four inches in diameter at the penstock, and tapering down to eleven inches at the giant. The largest sized monitors with patent deflectors are used. The nozzles are four and a half and six inches in diameter, and under an eight-foot pressure, the former is capable of throwing 500 inches, the latter 800. There is now only about 1,500 inches of water in the channel bed, and it is all required. The flume is 700 feet long, and it is being extended at the rate of fourteen feet per day. Its width in the clear is forty-eight by thirty-six inches in depth. The bottom blocks are ten inches by thirty-six inches in diameter; lining blocks four by eighteen with six sets of riffles; dip four inches in twelve feet, while its gravel capacity is 4,000 tons every twenty-four hours, with 2,000 inches of water. Seventy thousand feet of lumber have thus far been consumed in its construction. The bank is fifty-three feet high, and in six days' work of ten hours each, with a four-inch nozzle under an eighty-foot head, 20,000 tons of gravel have been washed down and flumed away. The buildings consist of a boarding-house, lodging-house, office and blacksmith shop. The creek, on leaving the cañon, makes a sweep from east to south about three miles to the lake. The company is now getting ready to lay its pipes from its present workings directly south to the lake, instead of following the old creek channel and commence cutting back on bed-rock to the extreme northern boundary of its property. This manner of procedure will give it a fine tailing off or dumping place, save one and one-fourth miles of flume and pierce the center of the claims, whose highest point is 900 feet. Ample fall will thus be secured. There is now enough pine timber of the best quality standing on the claims along the creek to furnish blocks for two miles of flume. All the water coming from the cañon has been secured by purchase and pre-emption. They can also increase the number of inches to 5,000 when necessary. All that is required is five more miles of ditch, which can be easily constructed, as the soil is good picking ground. There are two to five colors, and sometimes a dozen can be found in every pan of dirt prospected on any part of the creek, or in its vicinity.

The report of the Census Bureau for 1880 gives the following as the production of Mono county by districts:

District.	*Gold.*	*Silver.*
Bishop Creek		
Blind Spring	$308	$43,233
Bodie	*25,199 2,765,927	341,375
Clover Patch		
Homer		
Indian	....	80,317
Montgomery or White Peak	....	5,000
Piute		
Scattered	....	6,601
Total	$2,791,434	$476,526

*Placer mines.

The production of this county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$2,791,434	$476,526
Mint Bureau, fiscal year 1880	2,407,236	582,905
Mint Bureau, fiscal year 1881	2,749,712	517,866
Mint Bureau, calendar year 1881	3,380,751	170,457

The following mines of Mono county reported production for the fiscal year: Josie Green, Delaware, Snow Flake, Honeymoon, Hudson, Babylon, Diana, Lisbon, Standard Consolidated, Bodie Consolidated, Noonday, North Noonday, Bulwer Consolidated, Syndicate, Golden Prince, May Lundy, and Bodie Tunnel. The production during the calendar year 1881 I estimate to have been $3,385,000 in gold, and $300,000 in silver, a total of $3,685,000.

Nevada County.—Nevada county takes the lead among all the counties of California as a producer of gold. Its yield in 1881, as reported by the mines, exceeded by $300,000 that of Mono county, the second in point of production. It lies in the heart of a group of the richest gold-producing counties of the State with Plumas, Sierra, and Yuba on the north, and Placer and El Dorado on the south. Ever since its organization in 1851 the chief industry has been mining. For a number of years succeeding the first discovery of gold in 1849, the river-bars, banks, and shallow placers yielded a golden stream by easy and simple mining processes. The discovery of the ancient river-bed opened a new class of mines involving greater risk and a large outlay of capital for their successful development. An almost continuous deposit of gravel varying from 100 to 300 feet in depth extends along the ridge between the middle and south forks of the Yuba river from Smartsville to the summit of the mountains. To work this in a systematic and profitable manner can be done only by the use of a large supply of water, which is obtained by a system of ditches aggregating hundreds of miles in length and of reservoirs for storing water during the winter months. The reservoirs of the Bloomfield Mining Company, Nevada county, have a capacity of 1,050,000,000 cubic feet; the Milton Company's reservoir has a capacity of 650,000,000 cubic feet; the Eureka Lake Company, 1,130,000,000 cubic feet; the Fordyce and the many other reservoirs of the South Yuba Company contain about 1,800,000,000 cubic feet; the Omega and the Plue Point United, 300,000,000 cubic feet; the Spring Valley, 300,000,000 cubic feet; the California Water Company have nearly 600,000,000 cubic feet; the El Dorado Company's reservoirs have a capacity of 1,070,000,000 cubic feet. There are also a number of small reservoirs on the Feather, Yuba, Bear, and American rivers, whose collected capacity is 700,000,000 cubic feet, making a total of 7,600,000,000 cubic feet of storage capacity of water.

The quartz mines of Nevada county have also been singularly productive. The gold-bearing rocks are chiefly volcanic schisto slates and greenstones. The veins are not generally large, seldom exceeding two feet, while the most productive are rarely over one foot in width. Their peculiarity lies in their uniformity and persistency. The ore is free milling, the sulphurets constituting not over two per cent., and can be readily concentrated; the free gold is in large angular particles and is easily saved, yielding an average of from $25 to $30 to the ton. The concentrates will yield $100 per ton. The chief obstacle to quartz mining is the amount of water, not so much from the bottom of the mines as from the surface. A deep alluvial deposit covers the country rock, and during the rainy season it absorbs an immense quantity of water which percolates through the underlying strata. To keep the deep shafts and lower levels of the mines free from this is a costly operation, requiring ponderous machinery, and frequently taxes the resources of the miners to the utmost. The situation throughout the county, so far as hydraulic and quartz mining is concerned, is encouraging, although the *débris* question and consequent legal proceedings have materially checked the former. Quartz mining, however, is a steady interest, as there are a number of dividend-paying mines that are worked for profit and not for stock purposes, and the number is increasing. Nevada county also possesses some advantages over other mining sections; prominent among which are its railroad communication over a paying road at reasonable rates for freight, long established foundries and machine shops capable of performing any work required upon milling machinery, and a permanent population of skilled laborers in mines, mills, machine shops, etc. In addition to this, its situation is at a sufficient altitude to give exemption from the fierce summer heats of the valley, and it is below the deep winter snows of the mountains. The production of gold in Nevada county from placer mining has been much reduced by the injunction suits instituted by farmers in the Sacramento valley to restrain the working of those mines by hydraulic process and the consequent deposit of the *débris* upon the agricultural lands below. The shipments of gold, most of which was obtained from the quartz mines, none from the mines enjoined, was, in November, $90,536. Work was resumed in several hydraulic mines about the beginning of October, giving employment to hundreds of men who had been idle in consequence of the suits. Nearly all the hydraulic mines in the vicinity of Nevada City were idle in August, and only about $50,000 was taken out, and the product of these mines for the period from June to November was less than $500,000. The most productive quartz mines of the county are found in Grass Valley district, the chief veins being the Idaho, Pittsburg, Empire, Gold Hill, Massachusetts Hill, New York Hill, Eureka, Rocky Bar, and Allison's Ranch.

The Idaho is the principal mine, not only in this district but in the county. The ore is mostly taken from the deepest workings of the mine, the eleventh and twelfth levels, where the vein is strong and uniform in its paying character. Two years ago there were apprehensions that the profitable days of the mine were drawing to a close, as the tenth level east ran into comparatively barren ground, in which the vein did not live. Since then the No. 11 level has been opened and the drift carried under the barren ground spoken of, and a good paying and well defined vein found all the way. The No. 12 level has not been extended as far east as the No. 11, but it carries good ore in its stopes. The No. 13 level is now being opened, a drift having been run about 125 feet. The appearance of the mine is entirely satisfactory, and there is all encouragement to believe that it can be worked profitably to a much greater depth than has yet been reached. Masons are laying the foundation for the engine. The ground has been excavated to the depth of twenty-eight feet down to solid rock, and on this a solid bed of granite is being laid in Portland cement for engine foundation and bob-pit. This foundation will be sixty-three feet in length, twenty-eight feet in depth, and in width a portion sixteen feet, and the remainder thirty-three feet. The cap-stones for the engine will be dressed granite from the quarries of Penryn, amounting to 260 cubic feet. The entire amount of excavating, to receive the stone work, has been 38,000 cubic feet. The entire plant, when ready for use, will be the best pumping-rig in California. The building covering the machinery will be forty-seven feet span in length, twenty feet posts, and supported by a truss roof. The new works will pump the water from the bottom of the mine up to the 800-foot level, a six-inch pump being used for that purpose. From the 800-foot level the engine now in use in the fire-proof pump-house will raise the water to the surface. With the new works it is anticipated that every power requisite for the future drainage of the mine will have been provided for, as it is expected that they will be ready for service about the middle of December, and that the cost of the same will be from $25,000 to $30,000. The mill has fifty stamps, crushing about two tons to the stamp-head. They are fed by hand. The pulp first flows over blankets. The blanket concentrates are passed with a minimum of water through riffles filled with mercury, and thence join the bulk of the battery pulp, which now enters boxes, in which amalgamated, corrugated plates are made to oscillate with sufficient rapidity to agitate the sands. From these boxes they flow over long, narrow amalgamated plates, and are then concentrated in sluices, lined with gunny cloth, through which the water flows in intermitting waves. The concentration is partly done on shares. The concentrates are amalgamated raw in pans before being sold to the chlorination works. This mine was first opened in 1869, since which time the receipts from all sources have been as follows:

1869	$306,038 75	1876	$573,928 31
1870	183,450 23	1877	525,435 18
1871	407,301 16	1878	609,449 18
1872	404,035 52	1879	501,038 15
1873	1,010,612 20	1880	440,445 59
1874	669,023 03	1881	640,107 58
1875	509,430 72		
Total receipts for 13 years			$6,780,295 60

Of this amount there have been paid in dividends the following amounts:

Year.	*Dividend.*	*Per Cent.*	*Amount.*
1869	11	55½	$170,500
1870	7	12	37,200
1871	12	75	232,500
1872	11	52½	162,750
1873	12	220	682,000
1874	12	102½	317,750
1875	11	55½	172,050
1876	12	82½	255,750
1877	12	77½	240,250
1878	12	85	263,500
1879	12	54½	168,950
1880	12	41	127,100
1881	12	87½	271,250

Being for thirteen years 148 dividends, amounting to $3,101,550. The success attendant upon the working of the mine has been due as much to wise and judicious management as to the quantity and quality of the ore.

The superintendent, Edward Cole, reports the monthly dividends paid during 1881:

Date.	*Per Cent.*	*Amount.*
January 3	5	$15,500
February 7	7½	23,250
March 7	7½	23,250
April 4	7½	23,250
May 2	7½	23,250
June 6	7½	23,250
July 4	7½	23,250
August 1	7½	23,250
September 5	7½	23,250
October 3	7½	23,250
November 7	7½	23,250
December 5	7½	23,250
Total		$271,250

Of the operations of the mine, he says:

"The work connected with the company's property has also been kept in as favorable a condition as circumstances would permit; and it is considered that there is fully as much pay ore in sight underground now as there was one year ago; and as was expected the yield has been more satisfactory than it was last year. This also has brought an increase of profits, which have been disbursed to the stockholders by increased monthly dividends.

"In several of my reports I have stated that our machinery was of adequate power to do all the work required, but each year seems to require an addition, and while we may congratulate ourselves on the apparent permanency of the mine, we should also bear in mind that as we attain greater depth, it brings with it the need of larger and heavier machinery. We have been troubled considerably in the past to adjust the pumps for both winter and summer use. In the winter the surface water is very fast, requiring fourteen-inch pumps to keep it at about eight strokes per minute. This water is caught at the 800 level, and below that point a six-inch pump will answer at any time in the year. In the summer months the fourteen-inch pumps are too large, and have to be run so slow that the six-inch are too small to do the required work below the 800 level, and in view of this difficulty, and in order to do away with some of the flat rods, it was deemed advisable to erect another engine to connect with the lower pumps and have them entirely independent of the large pumps. This engine is of twenty-inch diameter and forty-eight-inch stroke, and all its parts are of sufficient strength to work the engine up to its full capacity. As it is impossible to form an idea of the work this engine may have to do in the future, it was deemed best to make a good job in every particular, and when completed it will be second to none on the coast.

"The sump at the 800 station has been enlarged. This was necessary from the fact that if from any cause the large pumps were stopped only a short time, the water ran to the bottom of the mine, and with six-inch pumps running so slow it required a long time to pump it out. The sump is now sixteen feet by fourteen feet and sixty feet long.

"The underground workings are all in good condition. The 1,100 drift is in 850 feet from the incline. The ledge has been of an average quality and size until recently. It now shows indications of breaking up, and I fear we have about exhausted the pay chute in this drift. The stopes connected with this drift are of good size and of an average quality.

"The 1,200 level is in 512 feet from the incline. The ore in the drift is of low-grade all the way from the incline, and it has been broken up badly for the last 100 feet. I think, however, it is only local, and that it will form again only a little below the bottom of the drift. It certainly extends only a short distance up, and the ore is of good quality and the ledge of good size all through the 1,200 stopes.

"The 1,300 drift is in 124 feet from the incline. As we wish to make a connection with the 1,200 as soon as possible, we have not taken the ledge down in this drift. We are now putting up a raise to the 1,200, which will be through in about three weeks.

"Preparations are now being made to commence sinking the incline for the 1,400 level. In the last 100 feet of sinking, the incline ran into the hanging wall. This made it quite expensive, and it is now thought best to make a turn toward the foot-wall, and thus avoid working in the hard hanging wall rock.

"During the year we have crushed 27,945 tons of rock. Of this amount 346½ tons came from the 1,000 level and stopes; 9,753½ from the 1,100; 15,527½ from the 1,200; 1,977¾ from the 800, and 340 tons from the incline; yielding an average of $22.95¾ per ton. Average cost of mining and milling per ton, $9.51⅓."

A company of Chinese miners are working in the bed of Bear river a short distance below the mouth of Greenhorn creek. They have diverted the water in the streams by means of embankments, so that it runs close to the Nevada side, leaving a large area of ground dry. They have sunk a large pit into this, which is compact sand and gravel, the washings from the mines, down to the original bed of the river. The depth is 16 or 18 feet, which makes heavy stripping, as all the top dirt has to be wheeled out in barrows. The pit is kept dry by the usual water-wheel used in river mining, in the erection of which the Chinese always show as much ingenuity as the white men. The Chinese are always reticent as to their success in mining, but from the fact that the same company has worked that part of the river for several years in succession, the inference is that they have paying ground. In September, at the Blue Point mine, on Morris Flat, a slide occurred causing a suspension of operations and over 50 men were temporarily thrown out of employment. A number of men were set to work by the manager drifting a tunnel, and over a month and a half was consumed in restoring the mine to its former condition. The Knickerbocker hydraulic mine, located at Quaker Hill, had a clean-up from a 20 days' run, and took out $2,000 at an expense of $350. The gold found was of unusual purity, assaying $19.41 per ounce.

The production of Nevada county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$931,538	$19,053
Mint Bureau, fiscal year 1880	2,702,362	70,144
Mint Bureau, fiscal year 1881	4,129,325	7,470
Mint Bureau, calendar year 1881	3,645,525	9,358

The Census Bureau reports the production for the year 1880, by districts, as follows:

District.	Quartz. Gold.	Quartz. Silver.	Placer Gold.	Total. Gold.	Total. Silver.
Grass Valley	$440,445	....	....	$440,445	$19,053
Nevada City	396,303	$19,053	....	396,303	
Scattered	....	....	$42,631	42,631	
Willow Valley	52,159	....	....	52,159	
Total	$888,907	$19,053	$42,631	$931,538	$19,053

The following mines of Nevada county reported production during the fiscal year: Mayflower, Red Hill, Charonnat & Sons, Deadwood, California, Gold Tunnel, Lincoln, Spargo, Murchie, El Capitan, Knickerbocker, New York Hill, Idaho, Golden Gate, Centennial, Orleans, Godfrey Gravel, Champion, Walkenshaw, Portuguese, Derbec Blue Gravel, Black Gillespie, Lone Ridge, American, Hathaway, Illinois, Conger, Badger Hill, Sailor Flat, Blue Tent, Mount Vernon, Hawley, Ashburn, Gowell, Lecompton, McDonald, Hall, North Bloomfield, Miller, Consolidated Wyoming, Eureka Consolidated, Round Mount, Pittsburg, Mohigan, Swamp Angel, Deadwood, Quaker Hill, Erskine & Craig, Alpha, Rocky Bar, Place Grand, East New York, Brockmeyer & Hainer, Perkenpine, Bartlett, Tiernan & Co., Wiseman & Co., Corinth, Garden Lodge, Canada Hill, Nevada City, Turner, L. Wheeler & Co., Milton Company, Steep Hollow, Dean Culbertson, Poor & Co., J. W. Hart, Manzanita, Omega, Yuba, Providence, Ford & Mullin, Empire, Rose Hill, and Merrifield.

I estimate the production during the calendar year 1881 to have been $3,700,000 in gold and $9,500 in silver.

Placer County.—Placer county is situated in about the middle of the gold-mining counties of the State. Its western boundry is in the valley plains about fifteen miles from the base of the foot-hills. From there it extends in a northeasterly and easterly direction, nearly 100 miles to the eastern boundary of the State. In width it varies from ten to thirty miles. The northern boundary is in part Bear river, the southern the Middle Fork of the American river, the greater portion of the drainage being into the latter stream through its numerous tributaries. The western portion of the county lying between these two rivers is drained by several small streams, of which Auburn and Doty's ravines and Rock and Coon creeks are the most important. The eastern portion of the county is mountainous and contains but a few mines, which as yet have only been prospected. In the western section, consisting of the lower foot-hills, are the great auriferous channel gravel deposits, which are worked by hydraulicing and drifting. The surface placers have been for the most part long since worked out and abandoned, but a few gravel mines are being now worked on a small scale. There are also numerous auriferous quartz ledges being developed, the Rising Sun, at Colfax, having been the most permanently worked.

At the Daniel Webster mine the owners are now running a tunnel to tap the lode about seventy feet below the present surface. It was prospected over twenty years ago, and was then known as the "Old Man Mason's Lode." It was abandoned, and for several years deemed unworthy of notice. About ten years ago a San Francisco company did some work upon the claim, but they failed to find the vein, and the ground was again abandoned. It has been located several times since, but no work done until located by the present owners, D. W. Malby and P. W. McCarthy, who went to work and stripped the lode for over 100 feet on the surface, and are now opening it in good shape. They found the true vein within thirty feet of the old works.

The gold production of some of the mines in that vicinity has been as follows: North Star and Weisler claim at Iowa Hill proper, $2,000,000; Wolverine mine at Roach Hill, $800,000; Shelby, $105,000; Columbus, $100,000; Dayton, $156,000; Phillips, $80,000; Morning Star mine at Morning Star Hill, $250,000; Bird's Flat mines, $200,000; Strawberry Flat, $100,000; Wisconsin Hill, $550,000; Grizzly Flat mines, $350,000; Sucker Flat, $250,000; total from the Independence Hill mines, $100,000; and Mountain Gate at Damascus, $1,500,000; total, $6,541,000.

The production of Placer county for the census year 1880 was reported by districts as follows:

	Gold.
Bath	$65,000
Colfax	*68,000
Dutch Flat	44,000
Gold Run	53,999
Iowa Hill	16,000
Michigan Bluffs	110,369
Total	$357,368

* Quartz mines.

The production of the county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$357,368	
Mint Bureau, fiscal year 1880	838,133	$640
Mint Bureau, fiscal year 1881	1,236,252	577
Mint Bureau, calendar year 1881	830,126	6,099

I estimate the total production for the calendar year 1881 to have been $850,000 gold and $6,500 silver.

The following mines of Placer county reported production for the fiscal year: Crater, Washington, Yankee Jim's, Sacramento Gold, Laird, Strawberry, Indian Cañon, Wolverine, Mountain Gate, Big Gun, Hidden Treasure, Mayflower, Davis, Loyd & Co., East New York, Blue Bluff, Cañon Creek, Almatah Quartz, Gosling Ravine, U. S. Grant, Boles & McBride, Rockey Point, Zentgraf, Southern Cross, Nevada Hydraulic, Polar Star, Gold Run Ditch, Excelsior Deep Gravel, Hoffman, Julian Gold, Moodey, Paragon, Lowell Hill, Baltimore, James Butts, John Vabmeir, Indian Hill Mill, Trio, Independence Hill Hydraulic, Hope, Morning Star, Homeward Bound, Lost Camp, Cranage Hydraulic, Cedar Creek, Mammoth Bar Placer, Rising Sun, Shipley, Belleview, Succor Flat, St. Patrick, Pie Pie Hill, New Gold Run Hydraulic.

Plumas County.—Plumas county lies high up in the Sierra Nevadas, with Lassen county on the north and Sierra county on the south. The mines constitute the chief source of wealth, both gravel and quartz mines existing in all parts of the county. The auriferous gravel is often found incorporated with volcanic products or hardened cement, rendering blasting and crushing necessary, in many instances, before it can be washed. On this account, mining in some sections had been almost abandoned, but these mines are again coming into notice rapidly and capital is being brought from all quarters for investment. Sometimes, however, the gravel is found loose and is readily washed, and these placers always richly repay the time and labor expended. The old established quartz mines are mostly on a sound paying basis, and new ledges are constantly being discovered and developed to a greater or less extent. The Green Mountain mine near Greenfield, in Indian Valley, is one of the principal quartz mines of the county. The mine is situated on the point of a high range of hills which rise on the southwest side of the valley. The average width of the lode is about fourteen feet, although it widens in places to thirty or forty feet. The country rock is granite, but at some points on the line of the lode it changes to porphyry, and at others to a stratified slaty material; the granite dike which contains the lode lies between the Jurassic slates on the east and west, and the stratified condition of the rock is due to the fact that different strata have mingled in the formation where it passes from granite to slate, and from slate to granite. The main tunnel is in upwards of 3,000 feet, and over 1,000 feet of pay ore has been penetrated. The lode crops at various places along the line, but has not been stoped to the surface. The west hanging-wall of the lode is found, carrying a gouge, but the east foot-wall has not been found. A cross-cut is to be run to cut the same, if possible. The ore is free milling and is worked by the ordinary stamp process, no concentrators nor pans being necessary. The reduction works consist of two mills run by water-power, one of sixty stamps situated at the foot of the hill and one of thirty-two stamps on the top of the first bench. The ore for the latter is run directly from the mine to the mill, while that for the sixty-stamp mill is taken from the tunnel to the dump-house, and from thence by double tramway to the mill. The larger mill is in excellent order, and is supplied with an ore-breaker and automatic ore-feeders. The output of the mine is 150 tons per twenty-four hours. The mills crush the same. The cost of reduction and mining is inside $2.50 per ton. The quality of ore now taken from the shaft that is being sunk on the White ledge is superior to any milled for some time, and it is confidently expected that good results will be given. The mine shows a strong and permanent ledge, and when the lower Bidwell tunnel reaches the ledge it will give good reserves of ore to last for many years to come.

This county reported for the census year the production by districts as follows:

District.	Quartz.		Placer Gold.	Total.	
	Gold.	Silver.		Gold.	Silver.
Claremont					
Genesee Valley	$2,799	$20	....	$2,799	$20
Indian Valley	232,614	2,859	....	232,614	2,859
Lights Cañon	....	....	$5,999	5,999	
Moonlight Mountain	....	....	6,001	6,001	
North Forks, Feather River	....	....	84,376	84,376	
Quartz Township	518,588	4,359	....	518,588	4,359
Seneca	45,773	40	7,035	52,808	40
Scattered	....	....	60,848	60,848	
Total	$799,774	$7,278	$164,259	$964,033	$7,278

The accompanying list of mines reported a production during the fiscal year of gold, $1,251,917; silver, $419: Yankee Hill, Fall River and Ditch, Franklin Hill, Twelve Mill Bar, Badger Hill, Taylor Hill, Grub Flat, Rush Creek Flat, Halstead, Silver Star, Plumas National Gold, New York, Morton, Jolly, Smith & Davis, Harris, Plumas Eureka, Genesee Valley, Diamond, Brown Bear, Hungarian, Scad's Point, Plumas Water, Winters, Empire, English Bar, Diadem, East Branch, Lee & Jolly, Orr & Co., Queensabe, Monte Christo, Centennial, Cunningham Bros., Jos. Dodson, Vermont, Sunnyside, D. Bushman, Granite Basin, Reynolds & Co., Buckeye and Low Pit Gravel, W. W. Wiseman, Western Gravel, Gold Stripe, Green Mountain, Cherokee, Crescent Mills, Loring & Leavitt; Chinese at Spanish Ranch, at La Porte, at Quincy, at Crescent Mills, and small enterprises at Eureka Mills, at Spanish Ranch, and at La Porte.

The production of Plumas county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$964,033	$7,278
Mint Bureau, fiscal year 1880	857,124	181
Mint Bureau, fiscal year 1881	1,251,917	419
Mint Bureau, calendar year 1881	1,354,685	163

I estimate the total production for the calendar year 1881 to have been, gold, $1,350,000; silver, $2,000.

Sacramento County.—Sacramento county is situated in Central California, and was one of the first organized counties. The mining interests are now but secondary to the commercial and agricultural, as the placers have been worked and reworked until but little new ground remains, and the principal production of gold is by the Chinese. Folsom, in the northeastern part of the county, is near the border of a former ocean deposit, adjoining slate and granite bed-rock, with gravel drifts ranging from twenty to sixty feet in depth, and extending across the Sacramento Valley some sixty miles in width, but paying in a belt about five miles in width near the foot-hills. This drift deposit pays chiefly at the junction with the underlying ocean deposit, and is being rapidly washed out. The ocean deposit has been bored to a depth of 120 feet, and gold in paying quantities found on the granite beneath, but it cannot be profitably worked owing to the great amount of water, which requires heavy and expensive pumping apparatus to handle. A field is open here to enterprise, aided by capital, to develop what may prove to be as rich and extensive mines as any heretofore discovered.

The production of Sacramento county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.
Mint Bureau for fiscal year 1880	$342,514
Mint Bureau for fiscal year 1881	306,058
Mint Bureau for calendar year 1881	425,631

I estimate the total production for the calendar year 1881 to have been $425,000 gold and $1,000 silver.

The following mines of Sacramento county reported production for the fiscal year: Humphrey, Gullett & Co., Milgate, Donovan, Amador and Sacramento Canal, Hartford Anderson, James Jordan.

San Bernardino County.—San Bernardino is the largest county in California, and is located in the southeastern portion of the State, bordering on Arizona and Southern Nevada. The mining interests of this county, which have been gradually winning the attention of the public during the last two years, have received a new impetus in the recent discoveries about Calico Mountain. These are attracting miners from adjacent States and Territories, and the building of the California Southern Railroad, which taps some of the most valuable districts, offers encouragement of convenient transport. The town of San Bernardino is the nucleus of the activity, and is showing signs of material advancement.

The Census Bureau reports the production of San Bernardino county for the census year 1880 as follows:

District of	Silver.
Clark	$65,115
Dry Lake	
Silver Mountain	
Total	$65,115

The estimated production of the county for the calendar year is $9,000 gold and $100,000 silver.

San Diego County.—San Diego county is in the extreme southern portion of California. The chief mining done is at Julian, Banner, and Pinacate mining districts. *Pinacate mining district* lies immediately north of the Temescal range, in the region of the county known as the San Jacinto, distant from San Diego seventy-five miles. A good wagon-road connects it with Colton, thirty miles distant, which is the nearest depot of the Southern Pacific Railroad. The district is comparatively a new one, but the developments now making evidence mines of considerable importance. The veins contain free milling ore, and run north and south in decomposed granite.

During the past year there has been a resumption of excitement relative to mineral deposits in the country lying along the foot-hills and mountains skirting the desert, and several discoveries of more or less importance have been made in gold, silver, and copper, prominent among which is the Copper Chief, Silver Dime, and Lucky Strike. The ledge upon which these claims lie runs through the country for miles. It has been exposed in a number of places, and shows a uniform width of about seven feet, lying between two plainly-defined walls. The ore assays rich in gold, silver, and copper, the returns in some instances showing $25 in gold and 20 per cent. copper. Others show very rich in silver.

The production of San Diego county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$237,850	
Mint Bureau, fiscal year 1880	81,558	
Mint Bureau, fiscal year 1881	68,192	$14.00
Mint Bureau, calendar year 1881	34,631	

I estimate the total production for the calendar year 1881 to have been $60,000 gold.

Reports for the fiscal year were received from the Cable, Hubbard, Gardner, and Yuma.

The production by districts has been reported by the Census Bureau thus:

	Gold.
Banner	$9,000
Cargo Muchacho	154,000
Julian	8,850
Pecacho	66,000
Pinnecate	
Total	$237,850

Shasta County.—Shasta county, in the northern part of the State, produced, in the early mining days of California, a large amount of gold, but the gravel deposits were worked over and over again until their poverty led to more attention being paid to quartz mining, and many locations have been made and developments prosecuted of a highly encouraging character.

The production of Shasta county, by districts, for the year 1880 was reported as follows:

District.	Quartz.		Placer Gold.	Total.	
	Gold.	Silver.		Gold.	Silver.
Buck Eye	....	....	$14,400	$14,400	
French Gulch	$38,500	....	28,313	67,313	
Igo					
Iron Mountain					
Northern Shasta County	....	....	107,520	107,520	
Pittsburgh	13,201	$98,337	....	13,201	$98,337
Sawmill Flat	....	....	3,379	3,379	
Shasta City	....	....	25,920	25,920	
Southern Shasta County	....	....	210,000	210,000	
Scattered	4,000	....	60,000	64,000	
Whisky Creek	40,700	....	....	40,700	
Total	$96,401	$98,337	$450,032	$546,433	$98,337

The production of this county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Census Bureau, census year 1880	$546,433	$98,337
Mint Bureau, fiscal year 1880	140,455	117,907
Mint Bureau, fiscal year 1881	233,007	19,805
Mint Bureau, calendar year 1881	347,888	85,107

I estimate the total production for the calendar year 1881 to have been: gold, $350,000; silver, $85,000.

The following mines of Shasta county reported their production during the fiscal year 1881: Aftermath, Rios, Williams, Dunkham Gravel, White, Summit, Thafter Quartz, Chicago, Jennie June, Scorpion, Dry Creek, Fluming Tunnel, Brown Bear, Spring Creek, Dixon & Cooper, Vermont, Washington, Frich & Davis, Dardanells.

Sierra County.—Sierra county, located between Plumas and Nevada counties, in the heart of the Sierra Nevada Mountains, which cross it from north to south, has yielded an immense amount of gold in the past. The hydraulic and drift mines during the last year have produced large sums, and the quartz mines are becoming more and more a leading industry. At Sierra City the Sierra Buttes continues to be the principal producer. The mine is opened by tunnels, and no sinking or pumping is required. The ore is low grade, and consequently a large quantity must be reduced to render it remunerative. It has been found here, as in Dakota, that low-grade ores can be more profitably worked by means of mills having a large number of stamps than in any other manner; the expense of running 100 stamps being but little more than for half that number. This company have ninety-six stamps, which are run by water-power, and employ about 250 men. Eight levels have opened the ledge, and a ninth has been started and is now in about 250 feet. During the year ended June 30, 1881, 48,000 tons of ore were extracted. The mine is owned by an English company.

The Bonanza gravel claim, Howland Flat, was worked during the whole season, and the channel was found to widen and improve in quality. In January, 1881, eleven car-loads from the mine yielded $190. The highest yield at any time reached was $200. During the summer the mine changed hands, being purchased by Cornish capitalists, who paid for it $300,000, and added $100,000 more for working expenses. For the first two months and a half the returns were $12,000 above expenses; but afterwards the main channel was lost, and the new owners ran behind $7,000. The pay channel was, however, again found, and in September gravel was taken from the mine at the rate of one hundred and fifty car-loads per day, worth $5.50 each load. The main tunnel is 4,000 feet in length, the air tunnel 1,600 feet, and the air shaft 375 feet in depth; seventy-five men are employed inside and outside of the mine.

The production of Sierra county for recent periods, as reported by the mines, has been as follows:

Reported to	Gold.	Silver.
Mint Bureau, fiscal year 1880	$974,332	$576
Mint Bureau, fiscal year 1881	1,158,286	1,039
Mint Bureau, calendar year 1881	925,342	6,043

I estimate the total production for the calendar year 1881 to have been: Gold, $950,000; silver, $6,000.

The following mines of Sierra county reported their production during the fiscal year: Grizetz, Richards, Frank, Brennan, Buckeye, Branch and Mammoth, Union Consolidated, Williams, Arnott & Bird, Egleston & Mowrey, Keystone, Hill Placer, Gold Bluff Quartz, Limperick, American Hill Hydraulic, Bonanza Gold, Perry, Sierra Buttes, New York Gravel, Doherty, Havens, California Consolidated, Gardner's Point, Donahue, Caledonia, Indian Queen, Kendall & Noble, Fair Play, Union, Union Hill, Lewis, Baird, Filliput, Martinetti, Golden Star, Highland and Masonic, Truckee, Rising Sun, Bald Mountain, Rainbow Quartz, Virginia, Hill & Co., Troxel & Co., Bald Mountain Extension, Peter Wanemacher, Fur Cap and Live Yankee, Cleveland, J. Winans, Gold Lake, F. Buckerman & Co., W. A. Morse, Cox & Gourley, Dutch, B. F. Folsom & Co., Pioneer Hydraulic, Sierra Yuba Gold Quartz.

Siskiyou County.—Siskiyou is one of the northernmost counties in the State, and borders on Oregon. Two ranges of mountains, the Sierra Nevada and the Coast Range, the latter known locally as the Siskiyou and the Salmon Mountains, meet here, and on the numerous streams which arise in their cañons and ravines, and are tributary to the Klamath and Sacramento rivers, gold-mining of placers first attracted settlers to the county. Although gravel-mining is not so actively pursued as in the early days, it has been by no means abandoned, and is still the chief industry of the county. In addition to this, the quartz-mining interest is gradually assuming an importance which which will in the near future attract capital to profitable investment.

Mr. John Daggett, of Klamath mills, Siskiyou county, furnishes the following interesting and valuable communication in regard to mining for the precious metals in that county. The mining field in Siskiyou county extends from the Oregon line on the north to the line of Humboldt county on the south, and is formed by the Klamath river and its tributaries, the largest being the Salmon and Scott rivers, which have been worked since early in 1850, and although the yield has been large, the diggings are in a much less exhausted condition than in the southern part of the State, affording many opportunities for capital to apply improvements now unused here, but found profitable elsewhere, as the region is well watered and dumpage good. River mining has received a new impetus by the success of wing damming companies on the Klamath for the last three years. The yield for the past season was very profitable, and as the Klamath is fed by auriferous streams from Cottonwood creek, through Siskiyou, Del Norte, and Humboldt counties, to the ocean, a distance of nearly two hundred miles, this branch of mining, is destined to become an important factor in the future production of gold in this part of the State. Quartz mining, although inaugurated as early as 1859 on Humbug and Indian creeks, was only partially successful, until at a later day the mines of the North Fork of Salmon were opened about the head of Eddy's and Black Bear Gulches, where the so-called Mother Lode of California appears with all the characteristics of its occurrence in the southern part of the State, black slate and large veins.

The total yield of Siskiyou county for 1881 from both white and Chinese is:

Quartz mining companies	$200 000 00
Placer mining companies	837,350 00
	$1,037,350 00

I have placed the production of Siskiyou county for the calendar year at $850,000 gold and $1,500 silver, which is $185,850 below Mr. Daggett's estimates. Messrs. Wells & Fargo carried out of Siskiyou county, during the calendar year, $507,000.

For the fiscal year 1881 the production was reported by the following mines, viz.: Thomas Hikey, Black Bear, Last Chance, Johnson Quartz, Boulder Creek, Yreka Creek, Pacific, Steamboat, Matthewson, Oak Grove, Tompkins, Williams, Cameron, Selle Claim, Burnett & Miller, Allen Brothers, Burns Brothers, Pierson & McMahar, Grizzly Quartz, Kanaker, Grizzly Bear, Blind Lode, Klamath Quartz, Knokenback & Myers, Centennial, Empire Quartz, Yreka Creek, Fortune, A. B. C., Wright & Fletcher, G. A. Mohr & Co., Columbia, Grattan, Burns Placer, General McNeal, Chinese, and small enterprises.

The production of Siskiyou county by districts, for the census year 1880, was reported by the Census Bureau as follows:

District.	*Quartz.*		*Placer Gold.*	*Total.*	
	Gold.	*Silver.*		*Gold.*	*Silver.*
Callahan's Ranch	....	....	$82,371	$82,371

The production of the county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$687,196	$6,818
Mint Bureau, fiscal year 1880	440,735	95,340
Mint Bureau, fiscal year 1881	567,519	100
Mint Bureau, calendar year 1881	547,524	

Stanislaus County.—Stanislaus county, forming a part of the San Joaquin Valley, is now more noted as an agricultural than as a mining district. The rich placers of early California days have been long since worked out, and but little attention is now paid to this branch of industry. La Grange, in the eastern part of the county, and formerly known as French Bar, is the seat of the chief gravel mining. The La Grange Ditch and Hydraulic Company is the principal producer. A little work is also done on the Tuolumne river a few miles above the town. From the La Grange district there was reported for the census year 1880, gold, $62,650.

The production of the county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$62,650	
Mint Bureau, fiscal year 1880	73,271	
Mint Bureau, fiscal year 1881	61,553	$4,200
Mint Bureau, calendar year 1881	62,614	31,735

I estimate the total production for the calendar year 1881 to have been $63,000 gold and $31,000 silver.

Trinity County.—Trinity county is in the northern part of California, and is a long and comparatively narrow county, drained by Trinity river and its tributaries. Although gold was discovered in this county in the earliest days of the mining excitement in the State, yet from its inaccessibility and from the distance which mining supplies had to be transported, the mines were never worked to an extent proportionate to their magnitude and richness, and the result is that there are openings here for successful operations, if conducted in a systematic manner, that would not exist had the country been more conveniently located and in the more direct line of travel. At Weaverville, the county seat, but little sluicing is now done except by Chinamen, the principal large companies employing the hydraulic method. The town is situated in a bowl-like depression, four or five miles in diameter, known as Weaver Basin, and hydraulic washing clears the gravel only to the false bed-rock. Beneath this the true bed-rock has been ascertained to be about 600 feet deep, and a project has lately been set on foot and is now being matured for working this deposit to as great a depth as possible, though it is not expected that the true bed-rock will be reached. The consummation of this scheme involves the construction of a large tunnel through a peninsular ridge formed by a long bend in the Trinity river, whereby fall enough will be obtained to run off a large amount of surface gravel in this basin. To mine to the deep bed-rock can only be effected by means of another and much longer tunnel, the construction of which it is believed will some day be undertaken, as a work of this kind would be entirely feasible and very likely accomplish the end proposed. Conjoined with the first of these schemes will probably be the extension to Weaver Basin of the large ditch now being built by Thomas H. Blythe for conducting the water of Coffee Creek and other large branches of the Upper Trinity upon the mining grounds of the proprietor and others adjacent. Viewed as a whole, this enterprise may be considered one of great magnitude, as well as one likely to lead to a successful issue.

The production of Trinity county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$799,999	
Mint Bureau, fiscal year 1880	326.693	$142
Mint Bureau, fiscal year 1881	330,732	643
Mint Bureau, calendar 1881	494,666	

The production by districts, as estimated for the census year 1881, was as follows:

	Gold.
Aggregate of the placer mines	$777,999
Bully Choop, small mines (quartz)	10,000
Deadwood, small mines	12,000
	$799,999

The following mines reported their productions for the fiscal year 1881: Vance's Bar, Price, McKenney, Keno, Weaver Creek, Shoo Fly, Lowden & Bates, Chapman, Julian Creek, Buckeye Water and Hydraulic, Black Bear, Ella May, Smith's Flat, Laws & Co., Lorenz, A. J. Sturdivant, R. M. Holman, McMurray & Hupp, Garden Gulch, Rule Brothers, Trinity Hydraulic Gold, Slattery, A. Pitreau & Co., Wilshire Hydraulic Gold, Portuguese, Cunningham Gravel.

The production for the calendar year 1881 I have estimated at $550,000 gold and $1,500 silver.

Tulare County.—Tulare county is situated in the San Joaquin Valley, between Fresno and Kern counties, and a little south of the center of the State. In the eastern and northeastern part of the county, among the Sierra Nevada Mountains, large deposits of silver-bearing ores, as well as gold quartz, have been discovered.

At White River, in the southern part of the county, White River, East Prong, Coarse Gold, Grizzly, Gordon, and Rag Gulches, are the principal streams which have yielded placer gold in the district. Lack of water has prevented a proper and thorough working of the placers. Many small tributaries of the streams spoken of remain untouched. When the main stream is abandoned the freshet water could be turned into one of these small gulches and the whole worked out. When such an enterprise has been undertaken it has generally paid well. Throughout this section there are an immense number of small veins of gold-bearing quartz. The formation in which these small veins occur is syenitic granite, which generally carries a large percentage of hornblende, which in some cases is so great as to give the rock the constituent properties of greenstone. The country rock is very much decomposed. Tunnels have traversed this rock 100 or 200 feet without exploding a blast. The veins which outcropped were mainly all discovered many years ago, and have been worked in many places five or ten feet deep. In some places they have been worked twenty or thirty feet deep, two or three have approximated 100 feet, and one shaft has reached 112 feet. In many cases the lodes are so flat as to partake of the character of "blanket lodes." Williams and Popple, after following a narrow stream for about thirty feet in soft granite, struck a vein of twenty inches lying nearly flat, and have developed it by about 300 feet of drifts into pay rock, which will probably yield more than $100 per ton on the average. There are some of the sulphurets, however, which do not yield to the simple process of the arrastra, and it is doubtful whether mere milling would save more than $50 per ton.

The production of Tulare county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Mint Bureau for fiscal year 1880	$1,125	$526
Mint Bureau for fiscal year 1881	3,847	36
Mint Bureau for calendar year 1881	8,181	

Reports of production for the fiscal year 1881 were received from Briggs & Garvison, Mahurin, Stone Hydraulic, and Williams & Popple.

The production during the calendar year 1881 I have placed at $8,000 in gold.

Tuolumne County.—Tuolumne is an irregularly shaped county situated on the western slope of the Sierra Nevada Mountains, and about 150 miles due east of San Francisco. Surface mining in this county is nearly exhausted, and the present production of gold is from quartz lodes and the ancient river beds, the channels of which were filled up with volcanic deposits to the depth of from 200 to 400 feet during the period of volcanic disturbances.

Of these ancient rivers there are a number of parallel claims which traverse the county from northeast to southwest. Some portions of these channels which have been opened up have proved to be extremely rich, but there is an extensive field for future enterprise. The great drawback to rapid and successful development has been a want of capital, as the opening of deep gravel mines necessitates a large outlay before any returns may be expected.

The production of Tuolumne county for the census year 1880 was reported by districts as follows:

District.	*Gold.*	*Silver.*
Confidence	$31,260	
Jamestown	44,000	
Riverside	2,000	
Sonora	24,000	
Soulsbyville	28,511	$3,189
	$129,771	$3,189
Placer mines	$559,828	
	$689,599	$3,189

The production reported by the following mines for the fiscal year 1881 was: Gold, $372,454; silver, $375: Mount Zion, Louisiana, Stewart Placer, Keith, Quartz Mountain, T. G. Evans, Golden Treasure, Raw Hide Quartz, Republican Quartz, Philadelphia, Hawes Gold, Tiger, Osgood & Slayton, Mohrman Quartz, Chinese at Big Oak Flat, at Columbia, at Jamestown, at Chinese Camp, at Sonora, small enterprises at Big Oak Flat, at Columbia, at Jamestown, at Sonora, Ogden & Nash, Never Sweat, New Albany, Soulsby, Confidence, Devall & Co., Riverside, Portland, Peterson & Co., Newbaumer & Co., Alto.

The estimated production of Tuolumne county for the calendar year 1881 was $500,000 in gold and $1,500 in silver. The production of Tuolumne county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$689,599	$3,189
Mint Bureau, fiscal year 1880	461,861	1,071
Mint Bureau, fiscal year 1881	372,454	375
Mint Bureau, calendar year 1881	444,684	

Yuba County.—Yuba county lies in the Sacramento Valley, west of and adjoining Sierra and Nevada counties. Its reputation as a mining county, gained from the exceeding richness of its bars, gulches, creeks and ravines, was widespread, but at present, with the exception of a few large hydraulic companies, not over 100 white men are engaged in placer mining, the worked-out claims being now in the hands of Chinamen. Some of the most extensive hydraulic mining in the State has been conducted in Yuba county. When this system was first introduced, an inch nozzle on a two-inch canvas hose was employed, but this was superseded by pipes of boiler-iron eighteen inches in diameter, propelling streams of from five to nine inches against the gravel banks, which in some instances were 200 feet high. At Smartsville, eighteen miles above Marysville, the county seat, is the Excelsior Water and Mining Company, the largest mining enterprise in the county, producing annually nearly three-fourths of all the gold taken out. The property of the company consists of a surface area of 525 acres of gold-bearing gravel, together with a farm of 2,300 acres, 300 of which are irrigated, and all well equipped and stocked. The improvements and appliances embrace six tunnels, the construction of which, before the acquisition of the property, had cost $441,000; 23,000 feet of the rock-paved flumes and under-currents that had cost $50,000; one hundred and fifteen miles of ditches, which, with their strong, well-placed head dams, had cost originally $1,000,000; two distributing reservoirs, having the capacity to store 13,000 inches of water over night; a complete hydraulic equipment, with all the buildings necessary for the most advantageous exploitation of so extensive a property. About 350 men are constantly employed.

The Nevada Reservoir and Ditch Company, at Smartsville, reports the second largest production in the county. This company is associated with the Golden Gate Company. The gravel of this mine can all be worked from the bed-rock to the surface and pay an average of forty-two cents to the cubic yard. The Golden Gate claim has, during about ten years' work, washed away some seven acres of land, which has produced $1,250,000. The Massachusetts Mining Company are opening Garden Valley claim, on Willow Creek, between Comptonville and Bullard's Bar. This property was mined to some extent in the early days, but the tailings from the mines above, drove out the miners and covered the pay gravel up from twelve to twenty feet deep. It is now proposed to rework the whole deposit. As there is no dump to permit of this vast mass of tailings and gravel being washed down and out of the lower end of the valley, it must be raised up out of the sink and carried away through flumes thirty or forty feet above. For this purpose, an improved elevator will be used. It consists of pipe inclined at an angle of 35°, the lower end resting in the claim. Into this a stream of water having a pressure of 400 feet will be turned, and a little giant will be used to drive the tailings in front of the bottom orifice, where the stream will force it up through the pipe and into the sluices. After the work is once fairly inaugurated, six or eight men will be sufficient to do all the work around the claim. The projectors estimate that all of the dirt, including the wash from the mines above, will pay for working.

The production of Yuba county for recent periods, as reported by the mines, has been as follows:

Reported to	*Gold.*	*Silver.*
Census Bureau, census year 1880	$1,042,349	
Mint Bureau, fiscal year 1880	943,860	$438
Mint Bureau, fiscal year 1881	950,203	5,772
Mint Bureau, calendar year 1881	600,101	

I estimate the total production for the calendar year 1881 to have been $800,000 gold and $1,300 silver.

The following was reported by districts for the census year 1880:

	Placer Gold.
Scattered	$1,042,349

The following mines reported production during the fiscal year:

Foster Bar, Purdy Creek Flume, Drake & Blanchard, Boyce, Gorne, Melody, McChesney, Florence, Sharon Valley, Indian Ranch Quartz, Young's Hill, Weed's Point, Humphrey, Brandy City, Pittsburg, Alexanderson, Brown & Purington, Templar Ledge No. 3, Merrill, California, Brownsville, Baxter, Nevada Reservoir Ditch, South Featherwater, Solo Mill, Joubert, Eagle Mill, Forlorn Hope, Gold Quartz, G. B. Pepper, Watson, Resler & Co., J. S. Stevens, Union, Washington Mill, Sparks & Burn, Safford, James Fagin, Bridger Creek, Excelsior Water, John Tolen.

General Statistics.—*California half-year product.* Mr. J. J. Valentine's estimate, which appeared in the San Francisco papers, of the product of gold and silver of the mines of California for the six months of the year ending July 1, 1881, gave:

Gold	$9,418,378
Silver	298,264
Total	$9,716,642

Mr. Valentine's estimates for the previous ten years are:

Year.	*Gold.*	*Silver.*	*Total.*
1871	$19,447,354	$231,270	$19,679,224
1872	18,143,314	906,784	19,050,098
1873	17,289,951	744,771	18,025,722
1874	17,616,124	2,683,407	20,300,531
1875	16,326,211	1,426,940	17,753,151
1876	16,099,559	2,516,248	18,615,807
1877	15,237,729	2,936,987	18,174,716
1878	17,306,508	1,613,953	18,920,461
1879	17,166,166	1,014,807	18,190,973
1880	17,745,745	530,421	18,276,166
Total	$172,370,661	$14,616,188	$186,986,849

Silver Shipments from San Francisco to Hong-Kong and China.

The following shows the shipments of silver in 1881 to Hong-Kong and China:

Months.	*Refined.*	*Mexican Dollars.*
January	....	$70,244
February	$330,000	292,380
March	....	57,230
April	467,630	285,505
May	126,800	266,587
June	1,500	121,417
July	249,590	123,409
August	....	146,239
September	....	154,092
October	....	279,236
November	56,987	148,775
December	....	173,940
Totals	$1,232,507	$2,119,063
1880	1,156,279	2,154,082
Increase	$76,228	
Decrease	....	$35,119

The shipment of trade and Mexican dollars in each of the years named compare as follows:

Years.	*Trades.*	*Mexicans.*
1876	$5,752,079	$2,610,043
1877	7,925,955	2,454,900
1878	1,489,148	2,372,036
1879	546,403	2,340,796
1880	1,000	2,154,182
1881	....	2,119,063
Six years	$15,714,585	$14,057,020

Production of Gold and Silver in California, by counties, during the fiscal year ended June 30, 1881, as reported by the mines to the Superintendent of the San Francisco Mint.

Counties.	*Gold.*	*Silver.*	*Total.*

NEVADA.

THIS State, which at one time produced more bullion annually than any other State in the country, now ranks as third, Colorado and California both having exceeded it during the last year. The decrease in productiou has not been general throughout the State, but mainly in Storey county. Mines outside of the Comstock have not fallen off in their yield, but in many instances have increased in gross yield and net profit. Nearly the whole extent of territory in Nevada is mineral-bearing, though much of the ore found is refractory and of low grade. The great needs of the country are an economical process for working low-grade ores and better and cheaper railway facilities. The latter are being secured by the extension of the Carson and Colorado Railroad through Esmeralda county, and the construction of a new railway from Eureka to Salt Lake, at which point it will become a part of one of the projected transcontinental trunk lines. During the year, eighty-seven mines in the State called for help in the way of assessments, aggregating $6,509,110, as follows:

Counties.	*Mines.*	*Assessments.*	*Amount.*
Elko	8	17	$320,000
Esmeralda	9	12	179,500
Eureka	2	6	207,500
Humboldt	1	1	7,000
Lander	1	2	75,000
Lincoln	3	4	148,000
Lyon	1	1	6,310
Nye	4	7	105,000
Storey	54	113	5,355,800
White Pine	3	8	105,000
Total	87	171	$6,509,110

During the same time but eight mines declared dividends, amounting to $1,397,500; these were:

Mines.	*Dividends.*	*Amount.*
Eureka Consolidated	9	$225,000
Exchange	5	15,000
Indian Queen	10	57,500
Navajo	1	25,000
North Belle Isle	1	15,000
Northern Belle	20	400,000
Richmond Consolidated	4	540,000
Starr Grove	6	120,000
	56	$1,397,500

This State, according to the recently published report of A. J. Hatch, Surveyor-General, contains at the present time 108 ore-crushing mills and twenty-six smelting furnaces, by which latter there were last year smelted 98,825 tons of ore; 1,168,465 tons of ore having been milled meantime. Seven pan mills worked over 119,523 tons of tailings. These reduction works are of very variable capacity, each being able to put through from two or three to forty or fifty tons every twenty-four hours. There are ten mining ditches in the State, having an aggregate length of fifty-one and a half miles, and a carrying capacity of 20,413 inches of water.

The following is my estimate of the production of gold and silver in Nevada during the calendar year 1881 by counties:

Counties.	*Gold.*	*Silver.*	*Total.*
Elko	$30,000	$500,000	$530,000
Esmeralda	35,000	1,620,000	1,655,000
Eureka	980,000	1,980,000	2,960,000
Humboldt	70,000	230,000	300,000
Lander	5,000	930,000	935,000
Lincoln	20,000	280,000	300,000
Nye	15,000	500,000	515,000
Storey (including Lyon)	1,050,000	660,000	1,710,000
Washoe	5,000	35,000	40,000
White Pine	40,000	325,000	365,000
Total	$2,250,000	$7,060,000	$9,310,000

Elko County.—The principal locality where mining is successfully carried on in Elko is in Tuscarora district, in the northwestern part of the county. Less bullion was produced here during the last than in previous years, and did not exceed in value $600,000. The principal mines in the Tuscarora district are the Argenta, Belle Isle, Grand Prize, and Independence.

The *Times Review* publishes the following as the shipments of Tuscarora bullion for eleven months in 1881, as furnished by the books of Wells, Fargo & Co.:

January	$25,025 04
February	39,224 76
March	97,590 06
April	31,276 13
May	20,745 43
June	24,028 28
July	16,888 63
August	69,972 96
September	14,091 00
October	9,146 01
November	37,207 14
Total	$385,195 44

The gross yield of the mines of Elko county for the calendar year 1881, as reported to the assessor, was 2,665 tons—value $156,349.61. According to the San Francisco *Bulletin*, the assessments of the mines of Elko county for the calendar year 1881 were:

Mines.	*Assessments.*	*Amount.*
Argenta	3	$40,000
Belle Isle	2	25,000
Blue Belle Consolidated	1	20,000
Grand Prize	4	115,000
Howe	1	10,000
Independence	2	35,000
Navajo	2	45,000
Tuscarora	2	30,000
Totals	17	$320,000

The following table shows the production of gold and silver in Elko county, for the year 1880, as reported to the Census Bureau by districts:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Blue Jacket			
Columbia	$1,639	$106,600	$108,239
Good Hope			
Rock Creek			
Tuscarora	105,697	1,006,917	1,112,614
White Rock			
Scattered	1,840	50,000	51,840
Total.	$109,176	$1,163,517	$1,272,693

I estimate the production of the county for the calendar year 1881 to be gold, $30,000; silver, $500,000.

Esmeralda County.—This county, situated on the western border of the State, adjoins Mono county, in California, and like the latter has attracted much attention on account of the increasing importance of its mines. While the yield of the precious metals has been gradually decreasing in many other counties, it has increased in Esmeralda, until in 1881 the county ranked second in the State. There is a well-grounded feeling that it is better and more profitable to open new mines than to continue the search for new ore bodies in the deep workings of such mines as are on the Comstock ledge, and the building of the Carson and Colorado Railroad through the heart of the county has induced and aided the search of mineral-bearing ledges in sections of country tributary to the road, and imparted an interest and prospective consequence greater than has heretofore been attached to this county.

The gross yield of the mines of Esmeralda county for the calendar year 1881, as reported to the assessor, was 36,509 tons, and the value $1,372,828.53.

The gold and silver production of Esmeralda county, as reported by districts to the Census Bureau for the year 1880, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Alum Creek			
Black Mountain	....	$48,841	$48,841
Cambridge	$7,675	75	7,750
Columbus	18,000	1,171,028	1,189,028
Dutchman Creek			
Esmeralda	15,000	5,000	20,000
Gold Mountain			
Lake			
Lida Valley	1,500	13,500	15,000
Montezuma	....	16,575	16,575
Mount Grant			
Oneota	....	49,718	49,718
Palmetto			
Santa Fé			
Silver Peak	$13,614	$13,955	$27,569
Volcano			
Washington			
Wilson	74,946	644	75,590
Total	$130,735	$1,319,336	$1,450,071

The San Francisco *Bulletin* gives the following as the assessments of the mines of Esmeralda county for the calendar year 1881:

Mines.	*Assessments.*	*Amount.*
Equator	1	$25,000
Holmes	2	20,000
Juniata Consolidated	1	2,000
Lodi	2	15,000
Metallic	1	12,500
Mt. Potosi Consolidated	1	10,000
Real del Monte	2	75,000
Tilden	1	10,000
Vanderbilt	1	10,000
Total	12	$179,500

The production for the year 1881 I estimate at $35,000 gold, and $1,620,000 silver. The following mines reported their production during the fiscal year 1881: Rothschild, McIntosh & Bauer, Hawkeye, Black Hawk, Northern Belle, Grand Trunk, Shawamut, Consolidated, North Star, Wilson, Mt. Diablo, A. W. Simonson, and Thos. Taylor.

Eureka County.—Eureka stands foremost in production of all the counties of Nevada. This is largely due to the yield of two great mines, the Richmond, and Eureka Consolidated, both situated in the southern part of the county, in Eureka district. Through this district a great ore-channel extends along the eastern base of Prospect Mountain from north of Ruby Hill to Secret Cañon in the south, a distance of about twelve miles. This is a contact lode in a formation of limestone, quartzite, and shale, and from the various mines scattered along the main lode and its branches and spurs more than $50,000,000 have been taken.

The Richmond mine is owned by a London company, and by careful, economical, and systematic management has been made, probably, the best paying mine in Nevada. The ore yields about twenty per cent. of base bullion, and of the value of the precious metals one-third is gold and two-thirds silver. The company have their own smelting works two and a half miles from the mine, the ore being transported by rail. Four furnaces are in constant operation, and until the summer of 1881 had been running for two and a half years without stopping. They also have their own foundry and machine-shops, making their own castings. The following in relation to this mine is from the report of the directors for the last year:

"The smelting and refining works (which had been in continuous operation since December, 1878) were shut down on May 30, and were, together with the whole machinery, thoroughly repaired and put in order, the furnaces rebuilt, a new steam-engine, a new 'Baker' blower, and other machinery erected. This necessitated, of course, the stoppage of the works for some time (seven weeks), the repairs required after such a long run being very heavy. Smelting was resumed on July 18, and from that date to the present everything at the works has been running smoothly and well. Extensive explorations have been made in the mine during the half year; 3,586 feet of drifts and winzes have been run and sunk, low-grade ore and bunches of galena have been found in the 200, and favorable indications for ore in several other places."

On November 1st the directors received telegram from Mr. Probert: "Indication favorable for fourteenth chamber continuing downward northerly; followed ore streak thirty feet below 600 level; only prospect yet, take month to develop." After giving other telegrams showing the value to be maintained, the report continues: "This strike or find is by far the most important that has taken place in the mine for a long time, and it is impossible to estimate its value or foresee its results. The shareholders must remember that up to this time no ore has been discovered in the mine below the 600. The cave was struck at a depth of thirty-five feet below the 600, and good ore found in the bottom; a winze has been sunk fifty feet from the bottom of this cave, all the way in ore, and the ore body is now flattening and extending northward, looking strong, and promising well for a chamber with a flat floor, which has always been the most profitable sort of ore body."

Mr. Rickard, writing on this subject, says: "This is undoubtedly the continuation in depth of the large ore chambers found above the 600; and the fact of it (the ore body) making below the 600 is of great importance, and cannot be too highly appreciated." With the view of further proving the mine at deep levels the main or Richmond shaft has been sunk 330 feet below the 900, and is now down 1,230 feet from the surface. The shaft itself being in the quartzite, a drift has been started at the 1,200 in a northerly direction in order to cut the ore-bearing ground (the limestone); this drift has been run 212 feet, and it is expected that the limestone will be reached with about 100 feet further driving.

During the nineteen weeks of the half year that the furnaces have been running they have reduced 15,200 tons of Richmond ore and 821 tons of purchased ore, together 16,041 tons; the average yield per ton being $57.08 (Eureka assay value). No. 4 furnace, which smelts principally low-grade Richmond and purchased ore mixed with the drosses from the refinery, has smelted 3,606 tons of Richmond and 178 tons of purchased ore. The total quantity smelted by the three furnaces being 19,825 tons, yielding 3,453 tons of lead, 395,578 ounces of silver, and 13,012 ounces of gold. The purchased ore is less than six per cent. of the total quantity smelted, whereas in the corresponding half year it was as much as twenty-seven per cent. Then follows a table showing 15,790 tons to be the quantity of ore smelted by the two large furnaces as cabled weekly, and the gross estimated value of the bullion (gold, silver, and lead), at Eureka assay value, to be $907,000.

The refinery was shut down on June 7th, and started again on August 2d, since which time it has been working continuously, and well treating all the ore produced at the works, as well as 319 tons of purchased bullion. The returns of the refinery (closed down eight weeks) show the gross estimated value of the doré bars (gold and silver), also at Eureka assay value, to be $850,000. After charging revenue with all the costs and expenses of rebuilding the furnaces, providing new machinery, and putting the works in a thorough state of repair, the profits for the half year, although the works were shut down so long, will probably be between £50,000 and £60,000. The price of lead has improved, and the company is sending it forward for sale as quickly as possible; the latest quotation at New York for small parcels is five cents per pound (£20 per ton). The Richmond furnaces have the reputation of being the largest smelters in the world. The accumulation of lead in that company's premises is something wonderful. There must have been in July the vicinity of 50,000 tons of market metal lying outside the refinery. There is an acre of ground piled solidly five feet high with pigs of lead. Writing from Eureka, Nev., a correspondent of the San Jose *Mercury*, says of the Richmond mine: "The stock of this company is owned entirely in London. It is reputed to be the best paying mine in the world. It has already produced $61,000,000 of the precious metal without a single assessment of the stockholders in the nine years of its existence. They have their own smelting works, which are located in the south end of the town, about two and one-half miles from the mine, and their ore is transported by rail. This is probably the largest and most perfect work of the kind in the world, connected directly with their own mine, having their own refinery and machine-shops, and making their own castings, etc., on the premises. They run four furnaces night and day, smelting 200 tons of ore per diem. Of the yield of the ore thirty-three per cent. is gold and sixty-six per cent. silver, and one ton of lead to five tons of ore. The quality of the ore in the two mines is about the same. The Richmond employs 500 men at mine and furnace, and as many more outside in furnishing wood and coal. They consume 5,000 bushels of clear coal per day, and 1,000 cords of wood per month; coal costing twenty-five cents per bushel and wood $7 per cord, delivered at the works. The smelting works were shut down for repair last week, and will remain closed for one month. They have been running constantly for two and a half years without stopping. They have now piled up in their yards 12,000 tons of lead ready for shipping, which will cost at present rates $100,000 to pay freight."

The shipment of the Richmond during the calendar year, reported in the *Engineering and Mining Journal* of bullion for the quarter, was $672,135.

The Eureka Consolidated has had from the time it was first opened a prosperous existence. The company was organized a dozen years since, with a nominal capital of $5,000,000 in 50,000 shares, only $100,000 of which was actually paid up and used in developing the mine and placing it on a self-sustaining basis. The mine commenced to pay dividends in 1871, and has paid seventy-two, ranging from thirty cents to $3 per share. The dividends were as follows:

	Number.	*Amount.*
1871	6	$275,000
1873	4	200,000
1874	4	175,000
1875	8	300,000
1877	4	600,000
1878	12	1,800,000
1879	12	825,000
1880	12	280,000
1881	10	250,000
Totals	72	$4,705,000

The payment of dividends was suspended in November, 1881, and the surplus funds on hand retained to pay for improvements that were being made, the sinking of a new shaft and the erection of extensive works. The mine is explored to the fourteenth level, but the water is too heavy to allow much work to be done until after the new pumping machinery is in operation. The principal extraction of ore was from the eighth and ninth levels. The new machinery consists of six large boilers, two engines for working the hydraulic rams, hoisting engines, and other appliances connected with the hydraulic work. The pumping capacity is estimated at 30,000 gallons per minute on a rise of 3,000 feet. Besides the company's regular force, considerable work has been done by tributers and ore taken out from the twelfth level up. Taken as a whole, the mine is looking well and a large amount of ore in sight. The indications are favorable for the continuation of the ore channel to a great depth. On the twelfth level the ledge narrowed until the hanging and foot walls were scarcely a foot apart, but they rapidly diverged, and the thirteenth level shows an ore body thirty-five feet wide, and the fourteenth one of 109 feet in width. The following from the secretary's annual report shows the condition of the company's account:

From 5,396 tons base bullion	$1,720,313
Sales of candles	1,260
Sales of powder, fuse, and caps	3,384
Sale of boiler	500
Sales of lumber, hardware, etc	99
Discount on coal receipts	444
Assaying	3
Total receipts, 1880–81	$1,726,003
Superintendent's drafts	19,902
Cash in hands superintendent, October 9, 1880	97
Cash on hand, October, 9, 1880	24,521
Total resources	$1,770,523

The output of the Eureka Consolidated for the quarter ending September 30, 1881, as reported to the county assessor, was $305,074.90, its mining expenses $248,277.05, and, according to statements published in the *Mining Record*, bullion to the value of $1,396,618 was shipped during the year.

The *Header*, in publishing the assessor's statement of the proceeds of the mines of the district for the first quarter of the year, said:

"Assessor Wallace's statement of the proceeds of mines for quarter ending March 31, 1881, makes most gratifying showing for district, and shows most decided increase in output of mines. Gross yield for quarter, according to his account, is $916,524.37. Compared with the yield of the previous quarter, it shows an advance of $60,830.33, and makes encouraging increase of $114,153 in the two quarters last past. As compared with preceding quarter, the last shows the total cost of extraction, transportation, reduction, etc., to be $47,629.23 less, and tax derived from mines $3,283.70 more. There were also 769½ tons more ore extracted, the average assay of which was $41.82 per ton for yield of entire district. This marked increase in yield of district is most encouraging, and it demonstrates that mining in Eureka, instead of dying out, is steadily growing in importance. Mines throughout were never in a healthier or more prosperous condition. The Richmond Company produced past quarter $447,286.86—an increase over preceding quarter of

$40,155.44, and Eureka Consolidated produced $344,550.50—an increase of $5,050.50. Not alone on these two important properties is advance noticeable, but along entire line. Present mining outlook of the camp, we can candidly say, is better now than ever has been. Capital is seeking investment in Eureka from all directions, both at home and abroad, and prospects are that more money will be expended in developing mines this season than ever before. With present outlook, and judging from returns of first quarter, 1881 will bring a yield to Eureka of at least four and a half or five millions. Idaho, Colorado, New Mexico, and other great mining centers may boast of richer mines, but we defy them to produce a steadier or more reliable camp than Eureka, or one with more promising prospects."

The *Sentinel*, of November last, published the following condensed statement of the bullion production of the mines of Eureka district for the quarter ending September 30, 1881, condensed from the assessor's statement: "The following Eureka mines produced ore during the quarter: Eureka Consolidated, Garrison, Jackson, Richmond, Williamsburg, Altoona, Alexandria, Antelope, Apex, Bully Boy, Banner, Bowman, California, Cumberland, Connelly, Dead Broke, Eureka Tunnel, El Dorado No. 2, Elise, Excelsior, Geddes and Bertrand, Good Hope, Giant, Helena, Montana, Herculean, Idaho, Kit Carson, Lone Pine, Maid Queen, May Queen, May Flower, Mountain Boy, Macon City, Members, North Macon City, Orange, Oriental, Probert, Phœnix, Piute, Ruby-Dunderberg Consolidated, Reindeer, Rocky Point, Silver Lick, Silver West, Swallow, and Silver Connor. The Richmond leads in production for the time named, the gross yield having been $315,620.48. Eureka Consolidated comes next, with an output of $305,074.90. The Richmond deducted for working expenses $229,255.35, and the Eureka Consolidated $248,277.05. The former paid taxes on $86,355.09, and the latter $56,707.47. The Garrison of Cortez paid $7,821.98; the Jackson of this district on $660.77, and the Williamsburg on $780.17. The Ruby-Dunderberg returned a total yield of $68,606.73, and was allowed the whole amount to offset expenses. The other mines produced from a few tons to several hundred, but were exempt from the quarterly tax under the law. The gross yield of the district was $758,356.72, and the net yield $152,425.50. The amount of tax collected was $3,810 63. The showing falls short of the preceding quarter, but for what reason we do not know."

The following statement from the books of the county assessor shows the product of Eureka county for a series of nine years:

	Tons.	Value.
1873.		
First quarter...	5,612	$191,530.87

The number of tons worked during the nine years, 774,724; amount realized, $28,496,499.14. To this sum should be added twenty-five per cent. discount on bullion, etc., which would swell the total to a much higher figure.

During the year 1881, Wells, Fargo & Co. shipped the following amounts of refined bullion, as reported by the Eureka *Sentinel:*

January	$336,084 00
February	161,663 00
March	175,228 00
April	174,259 00
May	184,080 00
June	52,157 00
July	
August	168,612 00
September	160.722 00
October	171,803 00
November	141,397 00
December	146,000 00
Total shipments	$1,872,000 00

Reports of production have been received from the following mines: Wilson, Connolly, Richmond, Ruby-Dunderberg, California, Emma, Albion, Banner, Lone Pine, Wenham, Silver Lick, and Eureka Consolidated.

The gross yield of the mines of Eureka county for the calendar year 1881, as reported to the assessor, was 75,495 tons; value, $3,074,980.

According to the San Francisco *Bulletin*, the assessments of the mines of the county for the calendar year 1881 were:

Mines.	*Assessments.*	*Amount.*
Albion Consolidated	5	$202,500
Phœnix	1	5,000
Total	6	$207,000

The following table shows the production of gold and silver in Eureka county, as reported to the Census Bureau by districts, for the year 1880:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Cortez	....	$123,053	$123,053
Eureka	$1,300,122	2,634,499	3,934,621
Secret Cañon	....	11,350	11,350
Total	$1,300,122	$2,768,902	$4,069,024

My estimate for the production of the calendar year 1881 is $980,000 gold and $1,980,000 silver.

Humboldt County.—Humboldt county, situated in the northwestern part of the State, possesses a vast extent of desert country interspersed with mountain ranges in which are found numerous ledges rich in the precious metals; but few of which, however, have been developed into mines of permanency and acknowledged value.

The following mines of Humboldt county reported production during the year: Lang Syne, Ohio, Iowa Consolidated, Mary Wilder, Bullion, Arizona Silver, Paradise Valley, and De Soto. The amount reported was $237,000 gold and $70,000 silver. The gross yield of the mines of Humboldt county for the calendar year 1881, as reported to the assessor, was 8,910 tons; value, $76,298.71. The assessment upon Paradise mine in this county, according to the San Francisco *Bulletin*, for the same period was $7,000. The gold and silver production of Humboldt county for the year 1880, as reported to the Census Bureau by districts, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Bradshaw			
Buckskin			
Buena Vista	$4,500	$26,000	$30,500
Congo	....	63	63
Mount Rose	26,259	272,702	298,961
Rebel Creek	500	4,500	5,000
Richmond			
Sierra	34,078	....	34,078
Silver State			
Winnemucca			
Total	$65,337	$303,265	$368,602

My estimate of the production of the county for the calendar year 1881 is $70,000 gold and $230,000 silver.

Lander County.—Lander county is near the center of Nevada and adjoins Eureka on the west. It was formerly the largest in the State, comprising what are now Eureka, White Pine, Elko, and Lander, about one-fourth of the whole area. The well-known Reese river country is included in its present limits.

The following mines of Lander county have reported their production during the year: Manhattan, Defiance, and Starr-Grove.

The amount of gold and silver produced in Lander county by districts, as reported by the Census Bureau for the year 1880, was as follows:

District.	Quartz. Gold.	Quartz. Silver.	Total Gold and Silver.
Lewis	....	$170,000	$170,000
Reese River	....	939,876	939,876
Total	....	$1,109,876	$1,109,876

The gross yield of the mines in this county for the calendar year 1881, as reported to the assessor, was 6,959 tons; value, $929,795.89. According to the San Francisco *Bulletin*, there were two assessments upon the Betty O'Neal mine of the amount of $75,000. My estimate for the calendar year 1881, of the production of gold and silver in Lander county, is $5,000 gold and $930,000 silver.

Lincoln County.—Lincoln county is situated in the southeastern part of Nevada, and comprises a large extent of territory over which the various mining camps are widely scattered.

The following mines reported their production during the last year: Bristol, Mayflower, Ohio, Day, Southwestern, and Bullionville Smelting Company.

The gross yield of the mines of Lincoln county for the calendar year 1881, as reported to the assessor, was 14,465 tons; value, $301,808.89. The San Francisco *Bulletin* states the assessments of the mines of the county for the calendar year 1881 as follows:

Mines.	Assessments.	Amount.
Day	2	$30,000
Hillside	1	100,000
Meadow Valley	1	18,000
Totals	4	$148,000

The following table shows the production of gold and silver in Lincoln county for the year 1880, as reported to the Census Bureau by districts:

District.	Gold Quartz.	Silver.	Gold and Silver.
Bristol	....	$324,401	$324,401
Eldorado	$1,739	12,753	14,492
Ely	562	170,122	170,684
Total	$2,301	$507,276	$509,577

My estimate of the production of the county for the calendar year 1881 is gold, $20,000; silver, $280,000.

Nye County.—This county is in Southern Nevada, with Esmeralda county on the west and Lincoln on the east. The principal mines are situated in the northern and northwestern portions of the county.

The following mines made reports of production during the year: La Salle, Fisherman, Liberty, Barcelona, Forlorn, Alexander, Good Hope, Tybo Consolidated, and Continental. The gross yield of the mines of Nye county for the calendar year 1881, as reported to the assessor, was 12,148 tons; value, $362,431.54.

According to the San Francisco *Bulletin*, the assessments of the mines of this county for the calendar year 1881 were as follows:

Mines.	Assessments.	Amount.
Alexander	1	$30,000
Belmont	4	25,000
Gila	1	25,000
Liguria	1	25,000
Total	7	$105,000

The amount of gold and silver produced in the county of Nye by districts, as reported by the Census Bureau for the year 1881, was as follows:

District.	Quartz. Gold.	Quartz. Silver.	Total Gold and Silver.
Ione			
Jet			
Lodi			
Lone Mountain			
Mammoth or Ellsworth			
Morey	....	$14,400	$14,400
Philadelphia	....	40,322	40,322
San Antonio			
Silver Star	....	30,000	30,000
Sunnyside			
Tybo	$26,208	183,792	210,000
Union	335	363,474	363,809
Total	$26,543	$631,988	$658,531

My estimate of the production for the calendar year 1881 is: gold, $15,000; silver, $500,000.

Storey County.—Storey county, which for years produced more bullion than any equal extent of territory in the United States, has been decreasing in production for the past four years. This may be shown by a comparison of the yield by six months' periods:

From January 1 to June 30, 1880	$2,802,133
From July 1 to December 31, 1880	1,478,774
From January 1 to June 30, 1881	861,731
From July 1 to December 31, 1881	607,187

This decrease has been due to the falling off in production of the Comstock Lode, and mainly in that of two mines, the California and Consolidated Virginia. These two mines made a shipment on December 29, 1877, of the following amounts as the result of eight days' run: The California, 129 bars, weighing 16,130 pounds, valued at $558,904; the Consolidated Virginia, 133 bars, weighing 16,668 pounds, and worth $540,196, or a total for the two mines of 16 tons 798 pounds of bullion, of a value of $1,099,100. The total production of all the mines on the Comstock during the year 1881 was only about $1,100,000, but little more than the one shipment above mentioned. During the year no extensive or rich ore-bodies were discovered, although vigorous prospecting was carried on in all the prominent mines. The Yellow Jacket mine has been worked to the 3,000-foot level, and others to the 2,500 and 2,800 foot, and this deep exploitation has not been done in extracting ore, or following rich mineral-bearing veins; on the contrary, but little ore has been raised compared to the magnitude of the workings, and of a low grade only. The hope of striking large bodies of rich ore such as rendered the Bonanza mines famous, has been the stimulus for the further sinking of shafts and driving of levels. The Yellow Jacket, previous to 1871, paid in dividends $2,184,000, but, although it has been a steady assessor of its stockholders for the greater part of the last ten years, it has continued the work of exploration until its deepest shaft, on the 1st of July last, had cost $1,674,203.53 without finding ore, while its total assessments have amounted to $4,098,000. Its expenditures during the year ending June 30, 1881, were $549,740, of which were paid $27,230 for drifting 743 feet of the Sutro Tunnel. These expenses were chiefly incurred for pumping and repairs. While 1,055 feet of drifts were run, and 980 feet were sunk with the diamond drill.

The Superintendent says: "From April 16, when connection was made with the Sutro Tunnel, to June 20, or in a little more than two months, we pumped and hoisted 6,000,000 gallons, or 360,000 tons of water. We have had since that time a steady flow of sixty miners' inches, or 720 gallons per minute. The cost of raising this weight of water, 3,900 tons a day, from the 3,000-foot level to the Sutro Tunnel, about 1,500 feet, is greater than that required to work some of the largest and most profitable mines in the country. The Yellow Jacket, at the present time, is simply a prospect, and cannot be called a productive mine."

No very considerable amount of high-grade ore has been developed below the 1,600-foot level in any of the mines, except in the Union Consolidated, which had ore from the 2,100 to the 2,400 foot levels. The Utah mine is now down to the 2,500 level, and no ore has been developed in any portion of the mine. Cross-cuts and drifts have been run from the vertical shaft and inclines. A cross-drift is now being run east from the bottom of the incline (2,500), and no ore has as yet been found. The Sierra Nevada has no developed ore of any value on the 2,500 level, although a large amount of exploitation has been done. The joint Sierra Nevada and Union Consolidated winze is down to the 2,800 level, and but little ore has been found. It is hoped that the Union Consolidated may develop ore on the 2,700 level; but the chances are that it will not pay the expense of extracting and milling. The Ophir and Mexican have a joint winze that has been sunk from the 2,500 level to the 2,910 level, and a cross-drift has been run east from the 2,900 level of the winze several hundred feet, and no ore has been encountered, although a large amount of promising vein material has been passed through. The California and Consolidated Virginia have gone at some depth below the 2,500 level, and have made no development of ore. The Best & Belcher and Gould & Curry have extended their exploration to a depth of 2,118 feet and have not succeeded in finding ore. As yet the Savage, Hale & Norcross, Chollar, and Potosi have found no ore on the 2,400 level, although there has been no search for it beyond running a drift from the combination shaft (a drain shaft for those mines). What little ore the above mines have had below the 1,600 level has been of low grade. The Julia and Bullion that have been sunk on to the depth of about 2,500 feet, have had no ore in any of their levels from the surface. The Crown Point and Belcher have carried their workings down to the 3,000-foot level and no ore of value has been developed. This continued work of underground exploration has been carried on at an immense expenditure of capital and labor, and probably nowhere in the world has the science of deep mining been carried to greater perfection than in Storey county. One great problem that has severely taxed the patience and ingenuity of the mining engineer has been the handling of the water. In some cases assessments have been made and expended in keeping pumps running at great expense without anything further being accomplished. During the year the hydraulic pump at the combination shaft was set to work raising water to the level of the Sutro Tunnel, through which it is discharged, and this has permitted much work which otherwise could not have been done if each mine unaided had attempted to keep its own workings free from water. No dividends have been declared by any Storey county mine during the year; on the contrary, not only has the entire bullion product been consumed in further exploration, but 113 assessments were levied, aggregating $5,355,800. The following is a condensed statement of the assesments in Storey county for 1881:

Mine.	*Assessment.*	*Amount.*
Alpha	1	$30,000
Alta	3	162,000
Andes	2	75,000
Belcher	3	234,000
Benton	2	54,000
Best & Belcher	2	100,800
Bonanza	1	15,000
Bullion	5	370.000
Caledonia	5	125,000
California	1	162,000
Concordia	1	75,000
Confidence	1	12,500
Consolidated Dorado	1	10,000
Consolidated Imperial	3	150,000
Consolidated Virginia	1	162,000
Crown Point	3	175,000
Chollar	1	56,000
Exchequer	1	25,000
Flowery	1	10,000
Gold Lead	2	13,000
Gould & Curry	2	108,000
Hale & Norcross	5	308,000
Iowa	4	21,000
Justice	2	52.500
Julia Consolidated	3	99,000
Kentuck	2	24,000
Lady Washington	1	10,800
Leviathan	1	25,000
Lord of Lorn	2	25,000
Lower Comstock	1	50,000
Mexican	4	302,000
Morning Star	1	20,000
New Wells Fargo	1	5,000
New York	2	20,000
North Gould & Curry	1	25,000
North Sierra Nevada	1	10,000
Ophir	2	201,600
Original Gold Hill	1	3,000
Original Keystone	1	25,000
Overman	4	230,000
Phil Sheridan	1	10,000
Potosi	3	168,000
Prospect	1	10,000
Sarave	4	252,000
Segregated Belcher	2	12,800
Sherwood Consolidated	1	5,000
Scorpion	2	35,000
Sierra Nevada	4	400,000
Silver Hill	3	81,000
Trojan	1	10,000
Union Consolidated	3	300,000
Utah	3	120,000
Utah Extension	1	10,000
Yellow Jacket	3	360,000
Total	113	$5,355,800

That more work was not accomplished than has been, by the expenditure of this large sum of money, is not surprising when the great depth at which the operations are conducted is considered. As an illustration of the cost of sinking deep shafts, the following is a statement of the disbursements for the C. and C. shaft during the year:

Office supplies and repairs	$1,418 19
Miscellaneous supplies	28,460 38
Candles	$5,736 70
Powder, caps, and fuse	18,977 50
Timber	19,890 24
Wood	106,671 99
Oils	4,364 68
Ice	24,724 35
Water	9,600 00
Wire cable	2,373 44
Salaries	1,800 00
Wages	112,125 34
Real Estate	750 00
Team expense	77 00
Contribution account	90 00
Interest and exchange	333 86
Taxes	4,073 58
Pumping	10,037 50
Surveying	1,800 00
Legal expenses	20,410 50
Transportation and hauling	3,027 10
Balance, cash on hand	457 70
Total	$377,200 05

This shaft in January was 2,494 feet deep, and was sunk thirty-three feet below the 2,500-foot level. A sump drift was run out fifty feet from the bottom and stationary double plunger pumps, with the requisite balance bobs and tanks put in at the 2,400 and 2,500 foot levels. The Sierra Nevada, Mexican, and Union Combination shaft was sunk 130 feet lower than the 2,600-foot level, and the necessary sump drift, stations, etc., excavated, and the main line of pumps extended, at a total cost of $301,689.93, or $2,320.68 per foot. A description of the underground workings of the well-known mines of Storey county would be imperfect and unimportant. They have the same general character and history, induced by a vigorous and persistent search for large bodies of pay ore. In the lower levels the same vein material is found as was met with above, but it is of so low grade as, in most cases, not to pay the expenses of its extraction and reduction. The expensive nature of the work performed may be gathered from the reports of two or three of the representative companies. The California mine raised 6,175 tons of ore and 13,299 tons of waste. The ore milled seventy-nine per cent. of its assay value and yielded an average of $19.77 per ton, or $82,146.10 gold, and $39,961.16 silver—a total of $122,107.26. The receipts and expenditures of the mine were as follows:

Receipts.

Bullion on hand at last annual statement	$34,359 03
Cash on hand at last annual statement	903 42
Samples on hand at last annual statement	65 91
Gross product of mine for 1881	122 182 32
Assessment No. 1	162,000 00
Overdraft, January 18, 1882, at Nevada Bank	74,630 25
Total	$394,140 93

Disbursements.

Overdraft, last annual statement	$9,804 50
Salaries and wages	55,580 76
Supplies	30,381 47
Hoisting	16,006 63
Compressed air	6,097 50
Sutro Tunnel royalty	3,058 30
Suction fan	3,706 11
Assaying account	745 58
Team account	148 75
Taxes	2,856 14
Pumping expenses	755 00
Bullion freight	465 20
Virginia City expense	1,330 08
C. and C. joint shaft	126,200 00
Real estate, Virginia City	1,325 00
Interest and exchange	6,027 02
Legal expense	11,923 80
Advertising	4,657 25
Discount on bullion	10,104 91
Refining charges on bullion	997 74
San Francisco office expenses	3,757 95
Books and stationery	580 20
Cash on hand	1,174 52
Samples on hand	14 36
Total	$394,140 93

From the Consolidated Virginia 6,435 tons of ore and 8,307 tons of waste rock were raised. The total bullion yield was $144,064.10, or $21.13 per ton. The receipts and expenditures were as follows:

Receipts.

December 81, 1880, cash on hand	$1,569 50
Samples on hand	154 40
Assaying	6,284 19
Supplies	11,382 33
Best & Belcher, joint work	14,029 94
Drafts on secretary	320,365 05
Samples produced	104 47
Suction fans	13,903 10
Total	$367,792 98

Disbursements.

Salaries	$6,000 00
Wages	83,079 50
Timber	7,793 72
Ice	6,547 82
Candles	2,240 35
Powder, fuse, and caps	5,966 04
Miscellaneous supplies	6,441 01
Office expenses	707 84
Assay office wages	6,906 51
Assay office supplies	3,588 05
Team expense	284 75
Legal expense	3,517 05
Tax on real estate	1,443 05
Tax on proceeds of bullion	3,576 48
Hoisting	15,466 20
Reduction	61,351 20
One-half expense of C. and C. shaft	126,200 00
One-half royalty to Sutro Tunnel Company	3,134 00
Interest and exchange	1,373 56
Transportation and hauling	1,458 85
Best & Belcher joint winze	777 35
Suction fans	15,675 41
Samples shipped	258 87
Compressed air	2,069 50
Cash on hand, December 31, 1881	1,980 87
Total	$367,792.98

The Superintendent of the Sierra Nevada reports:

"We have extracted 6,077 tons 1,400 pounds of low-grade ore between the 2,300 and 2,500 foot levels, which have been milled, yielding bullion to the value of $195,213.53, or an average of $32.11 per ton, the yield being about sixty-nine per cent. of the assay value of the ore, no allowance being made for moisture. The value of the gold in the bullion was $141,670.02, and of the silver $53,543.51. We have also raised from the mine 42,130 tons of waste rock. No work has been done in the mine above the 2,300-foot level, with the exception of keeping the winzes and drifts connecting with the main incline below the 1,700-foot level in good repair, for purposes of ventilation."

The receipts and expenditures for the year were:

Receipts.

From other mines for supplies, labor, etc	$27,276 30
From San Francisco office, sundry drafts on president	583,157 57
Total	$610,433 87

Disbursements.

Salaries and wages	$255,234 98
Mining supplies	45,799 97
Miscellaneous expenses	1,360 86
Office expenses	457 27
Timber	22,922 79
Wood	29,280 75
Water and ice	26,694 87
Hoisting	48,732 50
Union shaft, one-third net expenses	100,563 31
Hauling	7,157 37
Legal expenses	1,542 15
Taxes	5,960 99
Milling	51,699 30
Assaying	1,706 73
Surveying	600 00
Eureka mill	4,918 57
Discount and interest	2,801 46
Total	$610,433 87

In regard to the condition of the mine the Superintendent says:

"At no time during the last two years have the prospects of the Sierra Nevada mine looked more promising than they do at the present. In all of the cross-cuts on the 2,500-foot level, both east and west, stringers of ore have been cut giving fair assays showing great strength of formation, and also a strong tendency toward concentration at a greater depth. Soft vein-matter has been cut in all of the drill holes run in from the face of the cross-cuts on this level, and at times giving low assays. We are now nearly ready to open up and develop the 2,700-foot level, and, as before mentioned, will start a north lateral drift in a few days, which, when connected with No. 2 winze down from the 2,100-foot level at a point 1,000 feet north of our south line, will place the workings of the mine in a very interesting position, enabling us to thoroughly prospect the vein on both sides of the drift. Another very interesting point in the mine is the main north lateral drift on the 2,500-foot level running to a connection with the Utah mine. This drift will pass through a new and undeveloped country for a distance of 2,000 feet. The face is now in soft porphyry, showing heavy strata of clay. Cross-cuts will be run on both sides of this drift at most convenient points. The mine is fully equipped with all necessary machinery for use under ground and on the surface, which is now in first-class working order."

The employment directly furnished at present by the operations in the leading Comstock mines is shown by statements taken from Virginia City papers of the number of persons working at each mine.

North End Comstock Employés.—Are reported in Virginia City *Chronicle* of 21st ultimo for the following mines, from the Consolidated Virginia, on the south, to the Utah, on the north:

Utah.—Miners, 24; surface men, 18; total 42.

Sierra Nevada.—Miners, 76; surface men, 14; total 90.

Union Shaft.—Miners, 45; surface men, 61; total 106.

Mexican.—Miners, 39.

Union Consolidated.—Miners, 63.

Ophir.—Miners, 70; surface men, 19; total 89.

California.—Miners, 28; surface men, 1; total 29.

C. and C. Shaft.—Surface men, 43.

Consolidated Virginia.—Miners, 17; surface men, 3; total 20.

Total.—Miners, 362; surface laborers, carpenters, machinists, clerks, etc., 176; grand total, 538.

Number of Employés in the Comstock Mines.—As we have been repeatedly asked to report the number of miners employed in these mines, we reprint the following answer from the Gold Hill *News* of December 24, 1881: "The Gould & Curry and Best & Belcher shaft employs a total of 68 men, Savage 115, Hale & Norcross 59, Andes 10, Yellow Jacket 145, Imperial and Alpha 38, Kentuck 15, Overman and Caledonia 65, Forman shaft 66, Alta 74; total in these mines, 657. The reporter has been unable to see Superintendent Jones, and therefore the number of men employed in the Crown Point and Belcher have not been obtained. Of the number given above, 405 are employed in Gold Hill mines. Add to these the number employed in the Crown Point and Belcher, and the men at work on claims not listed in the San Francisco Boards, the total number employed in Gold Hill district will not fall short of 750 men." (New York *Mining Record*, January 7, 1882.) The amount of money disbursed by these mines for labor is shown by the monthly pay-rolls, two of which have been published for some of these mines.

Comstock Pay-rolls.—Following are some of the pay-rolls for August:

Consolidated Virginia, California, and C. & C. shaft	$20,676 00
Union shaft	20,345 75
Sierra Nevada, Ophir, Mexican, and Union Consolidated	33,567 50
Utah	5,440 75
Gould & Curry and Best & Belcher shaft	8,954 00
Hale & Norcross	8,585 75
Chollar, Potosi, and C. N. S. shaft	11,777 62
Consolidated Imperial	5,777 50
Alpha	150 00
Exchequer	150 00
Yellow Jacket	15,583 00
Overman	4,175 75
Caledonia	958 50
Forman shaft	9,041 19

Following are additional pay-rolls for October work:

Alta	$6,090 00
Benton	3,130 00
Consolidated Imperial	3,780 00
Alpha	150 00
Exchequer	150 00
Forman shaft	8,916 37
Overman	5,587 50
Caledonia	2,185 50
Belcher	11,943 00
Crown Point	9,277 50
Crown Point and Belcher joint shaft	5,211 50
Hale & Norcross	8,403 00
Savage	6,620 55
Savage drift from C. N. S. shaft	1,524 20
Scorpion	1,205 00
Consolidated Virginia, California, and C. & C. shaft	14,179 50
Union shaft	14,109 05
Utah	5,685 70

The great depth and consequent heat seriously interfere with the efficiency of labor in the lower levels of the Comstock lode. Eight men are employed on a shift, four of whom work at the same time. The heat at the face of the drift is so great, the men could not work unless sprinkled continuously with cold water, which, by means of a hose attached to a barrel placed at some height above, is forced through a fine sprinkler and falls upon them in a spray. The men can work in the drifts but a short time, and, after a little labor, must go to the cooling-off station, their places being filled by others. They remain in the drift but six hours, and then are relieved, so that actually the miners work only three hours in the drift, but the labor for that length of time is more wearing and severe than eight hours' work on the surface.

In the Virginia City *Chronicle* of the 31st October we find the following details as to work being done by the quartz mills in that quarter:

"The Brunswick mill is running on tailings, of which there is an almost inexhaustible supply near the mill. About 120 tons a day are being reduced, which pays the expenses of working and a small margin of profit. The Morgan mill, near Empire, has been working on tailings for some time, but is now temporarily laid up, owing to a breaking of a part of the gear. Two teeth broke out and have been patched up several times, but without success. Whenever an attempt was made to start the mill the teeth broke where bolted on. If new gearing is got, the cost will be over $1,000. The Mexican mill, at Empire, one of the largest and finest mills on the river, is running on low-grade ore from the Crown Point mine. The daily shipments of ore from that mine are but about fifty tons, yet the mill is able at present to reduce as much as 120 tons per day, owing to a surplus lot of ore on hand, now aggregating about 1,200 tons. The Vivian mill, located about four miles beyond the Mound House, is running on low-grade ore from the Belcher. The Santiago mill, beautifully located on the river a little north of the Vivian, once had a large and steady business under the superintendency of Donald McKay, now in San Francisco. It is owned by the Union Mill and Mining Company, which once did a land-office business in ore crushing, but whose glory has long since departed. There is some talk of the Santiago being bought or leased by the Savage Mining Company for the purpose of reducing ore from their mine, now forging slowly ahead as a bullion producer. If it is again utilized, much will have to be done in the way of repairs. The batteries are in good order and but little else. New pans will have to be put in and a general overhauling made.

"The Eureka mill, one of the largest and most complete in the State, has been 'hung up' for a long time. It is located out of sight from the railroad track, at the end of a winding ravine a mile east of the Virginia and Truckee main track and two miles south of the Mound House. The clatter of its stamps will not likely be heard again until another bonanza revives the dimmed glories of the Comstock." The county assessor's statement for the quarter ending September 30, 1881, by mines, gives some idea of the amount in value of the ore produced by each of the principal mines, which is as follows:

Mine or Company.	*Tons extracted.*	*Gross value.*	*Net yield.*	*Tax.*
Ophir	12½	$2,098 50	$1,049 27	$51 51
Sierra Nevada	330¼	5,364 07	1,072 58	52 53
Savage	42	1,128 96	339 29	16 63
Belcher	3,155	48,429 25	9,688 74	402 09
Consolidated Imperial	1,698	22,080 50	4,416 10	183 57
Confidence	153½	1,989 00	397 80	16 50
Challenge	168½	2,190 50	438 12	18 19
Crown Point	5,405	80,263 21	16,053 57	666 23
Kentuck	500	4,615 00	461 30	19 14
Monte Christo	500	5,000 00	500 00	14 40
Total	11,964¼	$173,158 99	$34,416 75	$1,440 42

The amount of tailings reduced during the quarter was as follows:

Tailings Mills.	*Tons reduced.*	*Gross value.*	*Net proceeds.*	*Tax.*
C. C. Stevenson	2,442	$12,210 00	$2,442 00	$101 25
Mariposa Mill	5,545	26,006 05	3,351 32	164 21
Omega Mill	8,823	33,439 17	3,350 57	97 17
Courser Mill	286	2,431 00	243 10	7 05
Hitchcock Mill	300	1,200 00	120 00	3 48
Johannsen Mill	47	185 18	18 53	44
Jennings Mill	160	1,265 60	126 50	3 67
Pfeifer Mill	150	600 00	60 00	1 74
Secora Mill	47	160 00	16 00	46
Besel Mill	105	840 00	84 00	2 44
Total	17,898	$78,337 00	$9,812 22	$382 01

SUMMARY.

"Total tons of ore and tailings, 29,862, and 1,460 pounds. Total gross yield, $251,425.99. Total net yield, $44,228.97. Total tax, $1,822.43. Average gross value of ore per ton, $2.87. Average tax on ore per ton, about 12 cents. Average gross value of tailings per ton, $4.37. Net yield of tailings per ton, 55 cents nearly. Average tax per ton on tailings, 2.134 cents.

"The figures for the preceding quarter, that ending June 30, are as follows: Total tons of ore extracted, 21,744. Tons of tailing reduced, 4,645. Gross value of tailings, $22,734.38. Net yield of ore, $74,148.92. Net yield of tailings, $2,273.43. Tax on ore, $3,337.66. Tax on tailings, $96.57. Total tax on ore and tailings, $3,434.23. A comparison of the returns for the last two quarters gives the following result: Decrease in ore extracted during the last quarter, 9,780 tons. Decrease in gross value of ore, $199,269.28. Decrease in net yield of ore, $39,732.17. Decrease in tax on ore, $1,797.24. Increase in tailings reduced during the last quarter, 13,253 tons. Increase in gross value of tailings, $55,602.62. Increase in net yield of tailings, $7,538.79. Increase in tax on tailings, $285.46. Total decrease in tax on the net proceeds of ore and tailings extracted and reduced for the past quarter over that ending June 30, $1,611.80." The great need of Storey county, and, indeed, of the whole of the State, may be said to be a means of working low-grade ores at a low price. If this could be accomplished a new lease of life would be granted to the Comstock. Not only are the deeper workings in low-grade ore, but in many of the mines considerable reserves of the same exist in the upper workings; and could this be extracted and reduced at a fair profit, it might not be that dividends would be declared, but it would furnish means for prosecuting exploration to still greater depths without making a constant drain upon the stockholders. Unless some process for working low-grade ores should be introduced, or new, large, and rich ore bodies be shortly encountered, the prospect for continued exploration in the lower workings is not favorable; and the attention of the companies will sooner or later be turned to further exploring and working the upper levels and storing the waste rock in the deep excavations instead of raising it to the surface.

The following statement shows the assessments and dividends upon the Comstock mines from their discovery to the close of the year 1881:

Mine.	*No. of Assessments.*	*Amount of Assessments.*	*No. of Dividends.*	*Amount of Dividends.*
Alpha Consolidated	14	$390,000	None.	
Alta	22	1,587,600	do.

Woodville	6	3,030,000	do.	
Yellow Jacket	42	5,238,000	25	2,184,000
Total	1,036	$67,555,074	447	$119,824,700

From this table it will be seen that, taken as a whole, the Comstock lode has not been unprofitable. Fifty mines have been asssessed in the aggregate $67,555,074, and fourteen have paid dividends amounting to $119,824,700, leaving a balance in favor of the dividends of $52,269,626. Of the total amount of dividends paid, two mines alone, the California and Consolidated Virginia, paid $74,440,000.

The following is the assessed valuation of the mines and mills, with the amount of taxes paid by each in 1881:

VIRGINIA DISTRICT.

Mine or Mill.	*Valuation.*	*Tax.*
Best & Belcher	$4,200 00	$205 80
California	800 00	31 85
C. & C. joint shaft	82,820 00	4,058 18
C. N. S. shaft	112,000 00	5,488 00

The following mines of Storey county reported production during the fiscal year 1881: Union Consolidated, Belcher, Sierra Nevada, California, Consolidated Virginia, Monte Christo, Ophir, Hale & Norcross. The gross yield of the mines of Storey county for the calendar year 1881, as reported to the assessor, was 108,976 tons; value, $1,468,918.44. The gold and silver production of Storey and Lyon counties, for the year 1880, as reported to the Census Bureau, by districts, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
The Comstock	$3,109,151	$3,813,174	$6,922,325
Scattered	90,001	110,000	200,001
Total	$3,199,152	$3,923,174	$7,122,326

My estimate for the calendar year 1881, of the production of these counties, is: gold, $1,050,000; silver, $660,000.

Washoe County.—This county, in Western Nevada, is the oldest mining locality in the State; it was here that the first discoveries were made that have since rendered Nevada famous. The work done during the year has been chiefly for the purpose of development; but little ore was raised, the principal yield of the county being from the re-working of tailings. Reports were received from the Mansalond, Unit, Copper King, Consolidated Esmeralda, Antelope, Jones & Kinkead, and Ophir City (tailings).

The production of Washoe county during 1881, I estimate at $5,000 in gold and $35,000 in silver.

White Pine County.—White Pine county is in Eastern Nevada, bordering upon Utah. In *Cherry Creek district*, in the northern part of the county, and in *Ward district*, in the south, the most productive mines are found.

At the Star mine, considerable ore has been extracted above the 540-foot level. The mill has been kept constantly running, and the ore is accumulating on the dump. This mine is destined to become one of the most valuable properties in Eastern Nevada.

Although the Star Mining Company was reported to have produced, in 1880, bullion amounting to $307,235, in December it levied an assessment of $10,000. During the year 1881 it was a regular producer, shipping bullion in some months to the amount of from $30,000 to $40,000. The pay-roll averaged about $14,000, and the monthly expenses of the mill and mine $20,000. The mill has run as high as 600 tons each month, the ore yielding from $60 to $70 per ton. The total shipments of this mine, as reported by the *Engineering and Mining Journal* for 1881, were $294,743.

The financial condition of the company at the close of the year was reported as follows:

Receipts.	
Assessments	$106,146 88
Mine cost	100 00
Stores account	5,691 26
Draft account	2,383 28
Real estate account	118 59
Construction account	1,725 00
Lumber account	700 00
Wood account	648 39
J. Henry account	163 93
Coal account	75 00
Cash on hand August 1, 1880	7,740 06
Total	$125,392 39
Disbursements.	
Liabilities August 1, 1880	$10,214 37
Legal expenses	100 00
Taxes	100 00
Interest	2,649 68
Assessment work	400 00
Tunnel account	63,647 15
Timber account	578 78
Office expenses	4,658 65
General expenses	10,750 11
Company's stock	25,512 00
Cash on hand	6,504 91
Total	$125,392 39
Liabilities, drafts outstanding	$2,383 28

In the Bohemian Girl, a rich strike was made assaying from $80 to $400 per ton. The express shipments from Cherry Creek during 1881 were as follows:

January	$23,020
February	33,072
March	23,040
April	39,490
May	41,685
June	39,757
July	32,700
August	27,150
September	25,465
October	21,950
November	31,367
December	33,000
Total	$375,680

The gross yield of the mines of White Pine county for the calendar year 1881, as reported to the assessor, was: 8,991 tons; value, $364,784.37. According to the San Francisco *Bulletin*, the assessments of the mines of White Pine county were:

Mines.	*Assessments.*	*Amount.*
Martin White	3	$45,000
Star	4	40,000
Ward Beecher	1	20,000
Total	8	$105,000

Surveyor-General Hatch, in his report for 1880, says that from the Osceola placer mines $30,000 in gold dust was collected.

The amount of gold and silver produced in White Pine county by districts, as reported by the Census Bureau for the year 1880, was as follows:

District.	*Quartz.*		*Total Gold and Silver.*
	Gold.	*Silver.*	
Cherry Creek	$4,877	$344,199	$349,076
Ward	....	229,418	229,418
White Pine	....	129,288	129,288
Total	$4,877	$702,995	$707,782

My estimate of the production of this county for the calendar year 1881, is: gold, $40,000; silver, $325,000.

Summary of bullion production by counties in Nevada, as reported by Mines to the Superintendent of the Mint at San Francisco, during the fiscal year 1881.

Counties.	*Gold.*	*Silver.*	*Total.*
Elko	$44,846	$582,117	$626,963
Esmeralda	30,855	1,649,288	1,680,143
Eureka	1,258,805	2,300,999	3,559,804
Humboldt	28,304	118,394	146,698
Lander	1,200	1,330,966	1,332,166
Lincoln	7,779	117,048	124,827
Lyon	60,291	146,107	206,398
Nye	11,000	491,875	502,875
Storey	1,053,394	649,874	1,703,268
White Pine	33,046	301,284	334,330
Washoe	5,272	88,866	94,138
Total	$2,534,792	$7,776,818	$10,311,610

The following is the estimate furnished by Mr. A. M. Lawver of the production of Nevada during 1881:

Counties.	*Gold.*	*Silver.*	*Total.*
Elko	$30,183	$580,812	$610,995
Esmeralda	35,474	1,639,275	1,674,749
Eureka	990,661	2,680,860	3,671,521
Humboldt	237,000	70,000	307,000
Lander	2,050	1,524,291	1,526 341
Lincoln	70,333	346,139	416,472
Lyon	46,080	222,627	268,707
Nye	14,857	600,239	615,096
Storey	391,974	411,817	803,791
Washoe	5,000	100,000	105,000
White Pine	10,046	335,000	345,046
Total	$1,833,658	$8,511,060	$10,344,718

This estimate varies nearly $400,000 in gold, and $2,000,000 in silver, from mine, and is probably due to the value of the base metal in the bullion having been included.

Gross yield of the Mines of Nevada, by counties, during six months, periods, and for the calendar years 1880 and 1881.

[From reports of the State Comptroller.]

FOR THE SIX MONTHS ENDING JUNE 30.

OREGON.

GOLD was discovered in Oregon but a little later than in California, but the extraordinary richness of the gold fields in the latter State and the magnitude of its mining operations have attracted attention away from the progress and extent of the mining industry in Oregon. The production of the State, though steady but not large, has heretofore been principally from the placer mines, but recently the quartz lodes in Eastern Oregon, found in the counties of Union, Grant, and Baker, have been worked. In these counties, as well as in South Oregon, the gravel mining has been chiefly in shallow placers, but in Eastern Oregon a large amount of deep gravel or ancient river channels exist, varying from sixty to 200 feet in depth, which have been but little worked. Considerable capital is required to properly open and work the deep deposits, but when sufficient water is introduced the gold product will be greater than ever before. The production of gold and silver in Oregon during 1881 is estimated by counties to have been as follows:

Counties.	*Gold.*	*Silver.*	*Total.*
Baker	$250,000	$10,000	$260,000
Grant	280,000	20,000	300,000
Jackson	250,000	....	250,000
Josephine	200 000	....	200,000
Umatilla	50,000	....	50,000
Union	40,000	....	40,000
All others	30,000	10,000	40,000
Total	$1,100,000	$40,000	$1,140,000

Estimate of Mr. A. M. Lawver, of the bullion production in Oregon during the calendar year 1881, classified by counties.

Counties.	*Gold.*	*Silver.*	*Total.*
Baker	$265,414	$10,231	$275,645
Benton	2,260	16	2,276
Coos	8,634	12	8,646
Clatsop	1,514	36,135	37,649
Douglas	8,000	....	8,000
Jackson	199,406	....	199,406
Josephine	81,109	....	81,109
Lane	3,750	....	3,750
Polk	18,337	....	18,337
Union	80,000	....	80,000
Umatilla	30,995	8,223	39,218
Total	$699,419	$54,617	$754,036

Baker County.—Baker county comprises nearly the whole eastern border of the State adjoining Idaho. On Powder river and its tributaries there are a number of good placer mines, the principal being on Auburn creek. On Sutton creek the mines have been successfully worked, yielding better than was anticipated by the owners. No hydraulicing has been done, but only ground sluicing. There are a number of quartz ledges in this vicinity, but no reports of their condition have been received. The following is a list of the stamp mills of Baker county, with number of stamps of each:

	Stamps.
Connor Creek	20
Gold Hill	10
Moore & Estabrook	2
New England and Oregon	5
Virtue	20
Mammoth	5
Tom Paine	2
Total	64

The production of Baker county, as ascertained during the last census year, 1880, was $248,528 in gold and $5,968 in silver. I estimate that the total production during the year 1881 was $260,000.

Grant County.—Grant county is west of and adjoining Baker, and contains a great diversity of minerals. Upwards of 300 quartz mines are under process of development, prominent among which are the Cable Cove, Buffalo, Hazard, Silver King, California, Granite, and Silver Peak. Near Granite creek ledges of antimonial silver occur, the principal of which are the Monumental and Beagle. The ledges are small, but the ore is of high grade.

The chief placer mines are on Cañon creek and Prairie creek, which have been worked for a number of years and paid largely. The production of this county during 1880, as reported by the last census, was $359,622 gold and $13,639 silver. I estimate the total production during 1881 to have been $300,000.

Jackson County.—Jackson county is in the southwestern part of the State, east of and adjoining Josephine county. A few quartz ledges have been found, but no mills have been erected, and the mines are pretty much undeveloped. The whole gold production of the county is from its placers, which have been continuously worked for twenty-nine years, and are still far from being exhausted. Every process for gravel-mining, from the primitive rocker to the most improved hydraulic process, is in use, although the latter has been introduced only during the last few years. The mines are located on Rogue river and its numerous tributaries, and the mining season commences in November and lasts till May. Fully half of the men engaged in mining are Chinamen. It is difficult to ascertain the annual production, as gold dust is used as a circulating medium, and also finds its way out of the county by mail, express, and by private hands. The production during the census year 1880 was reported to have been $188,790. I estimate the production during 1881 to have been $250,000.

Josephine County.—Josephine county is west of Jackson, and, as in the latter, mining is almost the sole industry. The season was quite successful, although shorter than usual from a less amount of water. Very few large companies operate here, but the larger part of the gold extracted is by small operators and Chinamen. The yield of the county during the last census year was reported as $201,203. I estimate that during 1881 it was $200,000.

Union County.—This is the extreme northeastern county of the State, and mining is not extensively carried on. Near the head of Grand Ronde river are the Camp Carson mines, which cover a large area of placer ground. They are in charge of an experienced Chinese miner, who works about fifteen men. I estimate the total production of the county during 1881 to have been $50,000.

Wasco County.—In Wasco county, which is central in the State, the chief mines are located in the Ochoco Mountains, where the Ochoco Gold and Silver Mining Company are operating. A tunnel is being run to strike the ledge, which is in a distance of 200 feet. It is only within the past year that attention has been directed to this county, and from reports it would appear that the quartz lodes are worthy of a more extended prospecting than they have hitherto received.

WASHINGTON TERRITORY.

THE production of gold in Washington Territory has not increased during the year. There is reason to believe that heretofore the production has been overestimated, owing to the difficulty experienced in ascertaining the amount mined by Chinamen, and also on account of a portion of the gold yield of British Columbia being credited to Washington. The mining camps are widely scattered, the season is short, and although mineral-bearing lodes undoubtedly exist in various sections of the country, which, if properly opened, would make good paying mines, little or nothing has been done looking to their development. The chief mining operations are confined to Yakima and Spokane counties, and to Snake river flowing through Columbia, Garfield, and Whitman counties. The placer grounds on the latter are almost exclusively in the hands of Chinamen, and their production finds an outlet at Walla Walla. In Yakima county is *Peshastin district*, about forty miles north of Ellensburg. The ores of this district are low-grade but free-milling; some work has been done in a desultory manner, extracting ore and working it in arastras. Swauk mining district is located twenty-five miles north of Ellensburg, and is reported to have done moderately well. In the northeastern part of the Territory, in Stevens county, are the Mount Chopaco mines, or, as sometimes known, "the Smilkameen," situated near the line of British Columbia. They are reported to be silver-bearing ledges, which have been prospected to some little extent. The production of gold in the Territory during the last census year, 1880, was reported to have been $119,000. I estimate, from express returns and other sources of information, that the yield during 1881 was about $120,000.

Estimate of Mr. A. M. Lawver of the bullion production in Washington Territory during the calendar year 1881, classified by counties.

	Gold.
Columbia	960
Jefferson	1,845
King	3,539
Klikitat	2,000
Pierce	1,806
Spokane	23,656
Walla Walla	60,000
Whitman	47,941
Total	$98,747

ALASKA.

DURING the year 1881 there was deposited at the United States mint $13,374.70 in gold and $144.36 in silver produced in Alaska. This was placer gold from the Harrisburg settlement in Southeast Alaska. The following information, taken from the *Puget Sound Argus*, in regard to this but little-known region, will doubtless be of interest:

"At last the gold and silver mines of Alaska are becoming more known and their value demonstrated. We have always contended that in this unknown land would be found some of the richest mineral deposits on this continent; and if half the news is true which was brought by the last steamer from Sitka, our prophecy is already more than fulfilled. It is stated that rich placer diggings have been discovered at Takou, twenty miles long by eight wide, and that good pay-dirt is the result. No sufficient prospect has been made to speak definitely of their value, but those who are there are fully satisfied with results, and it is expected there will be a great rush there during the coming spring.

"On the mainland, outside the Coast Range, between Auk and Schuck, the most extraordinary and wonderful discovery has been made of gold, silver, and galena. The assays go into the thousands—one lot of ore showing $3,000 to the ton. The gold can be seen with the naked eye, and can be felt by a blind man. A new mining district has been formed and named after Harris, the discoverer. He has taken up a town site of 160 acres of land, situated on the coast. If these stories are true, next summer will behold there one of the most flourishing mining camps on the Pacific coast. A few men are now there at work—old Alaska mountaineers, inured to the hardships and cold of that peculiar climate.

"Our source of information is from the most undoubted authority. The steamer Favorite has gone to the new diggings, with George E. Pitz, the assayer and mining engineer, whose party of prospectors are amongst the first locators of the new mines. Several of the most experienced miners who are wintering at Sitka have also gone in the Favorite to ascertain the truth of the report. We have, ourselves, seen some of the rock, and it is fabulously rich in appearance. Still, until further advices are received, we would caution the public against putting too much reliance in the statements made. There will be plenty of time between this and spring to ascertain the truth. The season of the year is inclement; the winter even here has set in with unusual severity, and at Takou it is rigorous, boisterous, and very cold. An unprecedented rush at this season might result in untold hardships and disasters. It is better to wait until the spring opens, when, if these marvelous stories are substantiated, we shall look for an exodus equal to the Fraser river excitement in 1857.

"A number of valuable lodes of silver and argentiferous galena have also been discovered, located, and secured, north of Cross Sound, and merged into a company composed of experienced and go-ahead men. Some of the rock—an average lot—has been assayed, and realizes $180 in silver and $40 in lead to the ton. Specimens of this ore can be seen at the office of Major Morris, special agent. Samples have also been sent to the mining magnates of Boreel's building, New York. One mine of this kind only is needed to make all parties connected therewith independently rich. Major M. P. Berry, late collector at Sitka, is president of the company. He is an old miner, and a man of great caution and experience.

"We take pleasure in noticing the remarks contained in the recent report of the Secretary of the Navy regarding the establishment of some form of civil government in Alaska, and also congratulating our neighbors on the decided stand taken by the President in his last message, wherein he recommends this to Congress, fully indorsing the report of Secretary Thompson in every particular. Once establish the fact of productive mines in Alaska, and the question of population is settled. It will not be long before she will have as many white people there as there are in the State of Nevada. We shall keep our readers advised as we hear from that section."

Of Fish river mining district, the San Francisco *Scientific Press* says:

"This district was discovered in June of last year. It is situated in the 'Omiluk' range of mountains thirty miles north of Golowin Bay, on the north side of Norton Sound, and about ninety miles northwest from Saint Michael's, a trading station of the Alaska Commercial Company, and also of the Western Fur Company. Two locations were made by the discoverers of the district in the interest of the Alaska Mining Company, now incorporated as the 'Alaska Gold and Silver Mining, Milling, and Trading Company.' These locations or claims are 1,500 feet in length each by 600 feet in width, and join on the summit of the ridge, one being the Pioneer, on which a shaft was put down twenty-two and a half feet in ore, and a cut made some 600 feet below the shaft, finding the same character of ore as thus taken from the shaft. The other claim, the Omiluk, is situated on the opposite side of the mountain. On this claim a shaft was put down twelve feet in ore also, and of same general character as that in the first shaft. The ore is argentiferous galena, with some iron croppings. Limestone forms one wall and micaceous slate the other, and these walls seem to be separated about 200 feet where the ore body crosses the mountains, leaving no doubt that there is an immense body of ore at this point. Some fifteen tons of ore are now on the dump of the shafts.

"The ore carries a very high percentage in lead, as is evidenced by the following assays:

	Silver.	Lead. Per cent.
By Prof. Thos. Price, trace of gold	$121 28	83
Do	161 86	85
By Selby Smelting Works	143 51	80
By E. M. Cram, trace of gold	135 75	Not given.
Do	122 83	Not given.
Do	155 78	Not given.

"Giving an average of $140.16 in silver per ton; add value of lead, say $70, and we have over $210 per ton of 2,000 pounds.

"From the foregoing statement (and these assays were not made from selected specimens, for the entire body of ore taken out would give the same results) the percentage of lead is so great that no reduction works will be required at the mine. Should this ever become necessary, however, there is an abundance of timber near the mine for all practical purposes.

"The company propose to send up to the mine, in the spring, a working force, to remain a year or more and explore the mine to greater depth.

"The mine is about twelve or fifteen miles from a point on Fish river, whence scows or barges will take the ore to the vessel-landing. The river transportation is about fifty miles. A light-draught stern-wheel steamer will be used to tow the barges up and down the river.

"The ore will be moved to the river in the winter with horses and sleds, or by same process may be delivered at the vessel-landing by drawing it thirty miles overland.

"To mine and deliver this ore in San Francisco, it is estimated to cost not to exceed $50 or $55 per ton. Cost of delivering 1,000 tons in San Francisco, as above, will be $55,000. Value of 1,000 tons, at $210, would be $210,000, leaving a profit of $155,000. This, it is believed, will be about the result realized the first year, after which the ore will be handled and delivered for much less than the above estimate.

"Ultimately a railroad will be constructed from the mine to the harbor, a distance of thirty miles, when the ore can be moved at any and all seasons of the year.

"I notice in the *Press* of January 28, that a good account is given of the Baker mining district in Montana, by your correspondent 'Yebrek,' and in speaking of the Baker mine, the 'oldest location,' and most extensively developed of any in the district, he uses the following language:

"'Ore from the mine shipped to Omaha netted over $100 per ton. This is certainly a good showing for a 20-ton lot not closely selected. In this connection it must be borne in mind that, before starting it on its long voyage down the mighty Missouri, it was hauled in wagons two hundred and fifty miles.'

"The ore in the Baker district is both milling and smelting. The ore, then, from Alaska is more accessible, and makes a better showing than that from Montana.

"The climate of Northern Alaska is not unlike that of Maine and Michigan, and not as cold as Montana and Minnesota. For six or seven months the Esquimaux live in cloth tents, and in the winter many of them live in pole or log huts. The mildness of the climate in this high latitude is attributed to the warm ocean current that flows north, along the eastern coast of Asia, through Behring's Sea and Straits to the Arctic Ocean.

"In all that part of Alaska bordering on Behring's Sea and Norton Sound to the Arctic Ocean, there were not fifty white persons up to 1882; but, now that valuable and extensive mines have been discovered, this isolated region will soon fill up with enterprising miners.

"The natives are disposed to be friendly and willing to work, and the government cannot be too vigilant in suppressing the sale of spirituous liquors to them, for it is the most deadly enemy they have ever encountered.

"Under the present climatic condition, Northern Alaska will never be agricultural; its great wealth consists in its mines, furs, and fish. Belts of timber run through Northern Alaska, but there is no large or valuable timber north and east of the Aleutian Islands until you get up the Yukon into the interior."

IDAHO.

THE statistics of the yield of mines and reports of the deposits and shipments of bullion indicate the production in Idaho during the year 1881 of $1,700,000 gold and $1,300,000 silver from the different counties, as nearly as can be approximately estimated as follows:

Counties.	*Gold.*	*Silver.*	*Total.*
Ada	$5,000	....	$5,000
Alturas	170,000	$550,000	720,000
Boisé	300,000	30,000	330,000
Cassia	25,000	....	25,000
Custer	500,000	350,000	850,000
Idaho	260,000	....	260,000
Lemhi	285,000	100,000	385,000
Nez Percés	5,000	....	5,000
Oneida	40,000	....	40,000
Owyhee	50,000	270,000	320,000
Shoshone	60,000	....	60,000
Total	$1,700,000	$1,300,000	$3,000,000

Gold was discovered in Idaho in 1860, and the Territory was organized in 1862. The reported richness of the placers in Boisé Basin, those on Snake river in the southern part of the Territory, and of Salmon river in North Idaho, brought a large influx of miners and prospectors. The alluvial deposits were, for the most part, worked out in a few years with the exception of a few large tracts of mining ground that fell into the hands of companies who have brought water by long ditches and flumes and are operating on an extensive scale. The rest of the gravel workings have been largely abandoned to Chinamen, who, with the patience and perseverance of their race, are going over the ground with rocker and sluice a second and, in some instances, a third time. The richest portion of the placers having become exhausted, attention was given to working the quartz lodes which had been discovered and located, but not to any extent operated upon. These lodes vary in size from narrow, worthless seams to ledges of many feet in width, and the vein matter ranges from a free gold-bearing quartz on one hand to the most refractory sulphurets. Within the last two years a comparatively new mining section has been opened, that of Wood river, the mines of which contain an exceedingly high grade of smelting ores. From the beginning of lode mining, Idaho has labored under many disadvantages and mishaps. Nearly the whole of the mining section of the Territory is covered with rugged, abrupt mountain ranges and irregular peaks, rendering the means of access difficult and laborious. No mining camps in North Idaho are connected with the outside world by wagon-roads, but are reached by pack-trains from May to December; during the remainder of the year communication can be kept up only on snow-shoes. For several years the Indians were troublesome, and a thorough prospecting of the country they regarded as hunting and fishing ground could not be made until after they were compelled to go upon a reservation. The failure of the Bank of California caused a cessation of operations by most of the large companies in the southern part of the Territory, and long-continued litigations and suits for the possession of property discouraged the investment of capital, without which the best of ledges and quartz veins cannot be opened and rendered profitable. From the encouraging reports it would seem that a new era is about to dawn upon the mining interests of Idaho. Railroads are shortening the distance to the principal points of the East and West; good wagon-roads are being built and bridges constructed. No trouble is experienced from the Indians; litigation has to a great extent ceased and titles to property rendered thereby more secure, and capital is seeking investment that the rich metalliferous deposits will undoubtedly repay, besides giving remunerative employment to a large number of operatives, mechanics, and laborers.

Ada County.—There are no gold or silver mines in this county worth mentioning, but the cretaceous rock of the foot-hills of the Boisé Mountains, which traverse the whole length of the county in a northwesterly direction, are coal-bearing, and the lignite discovered in several places for a distance of thirty miles is of a superior quality. Tests made in the United States assay office at Boisé City show it to be almost free of sulphur. It burns with a long, yellow flame, leaving less than four per cent. ashes. It will not coke. The largest vein so far found near the surface is on the Payette river, where a solid vein from five to eight feet in thickness is reported; a smaller one, about twenty inches wide, was exposed on the military reservation of Boisé Barracks, and float coal of excellent quality has been found in several places above and below Boisé City. No efforts have so far been made to develop and utilize these coal-beds, owing principally to the lack of a good market, but undoubtedly the advent of the Oregon Short Line Railroad will give an impetus to this industry. In the same formation beds of very fine fire-clay are found, which in the near future will become valuable and a great benefit to the rapidly rising smelting business of Alturas, Custer, and Lemhi counties. For the year 1880, production of gold in Ada county was reported to the Census Bureau as follows: from various placers, $5,001. My estimate of the production during the year 1881 is, gold, $5,000.

Alturas County.—The mines of Rocky Bar (all gold mines) have been holding their own during the year, the main producers being the Bonaparte and Ada Ellmore mines.

In 1880 and 1881, quite a number of exceptionally large and fine veins have been added to the number originally discovered. All the machinery for two first-class quartz mills is on the ground now, and during the coming season this district will turn out considerable silver bullion. The ore is remarkably good, carrying over ninety-five per cent. of silica; the silver occurs principally in the state of ruby silver, stephanite, and silver glance, making a chloridizing roasting before amalgamation unavoidable. Timber, pasture, and water are there in abundance; a first-class road has been built from Wood river, at an expense of $15,000, and with increased travel it will not be very hard to keep up communication with the Lower Wood river country and the outside world, though for a year or two it may not be quite safe to rely on them.

The production of the Wood river mines for 1881 was upwards of $500,000, but it is safe to say that it will be at least four or five fold this year. The Hailey *Times* furnishes the following statement of ore and bullion shipments from the different centers in that quarter for the season beginning May 9 and ending November 30: From Bullion: The Mayflower shipped 970 tons, carrying 175 ounces silver and 70 per cent. lead per ton. The Bullion shipped 415 tons, carrying 225 ounces silver and 50 per cent. lead per ton. The Jay Gould shipped 375 tons, carrying 120 ounces and 65 per cent. lead. The Homestake shipped twelve tons, carrying 140 ounces and 70 per cent. lead. The Eureka shipped 74 tons, carrying 100 ounces and 65 per cent. lead per ton. The Idahoan, according to the reports furnished, is entitled to the first place in the list of local ore producers. During the past season it shipped 1,000 tons of ore, averaging 150 ounces silver and 75 to 81 per cent. lead. There remains on the dump 800 tons of ore, half of which assays from $138.58 to $3,100, besides carrying from 50 to 70 per cent. of lead; the other half will yield, clear of all expenses, $53.60. The yield of the Idahoan the past season it is said has exceeded $200,000. From Hailey: The Star mine shipped ore that sold for $37,500. The Ophir, Emma Fair, Japan, Bon Ton, Washington, Narrow Gauge, French, and other groups and mines are also shipping ore, but the figures are not known. The local smelter shipped about $75,000 worth of bullion, the result of a brief trial run. The Carrie Leonard shipped thirty-eight tons, averaging 200 ounces in silver. The Rooks, Black Horse, and Allen shipped thirty tons each, which averaged 144, 144, and 130 ounces respectively. The Connors shipped twenty-five tons, carrying 120 ounces. The Elk Horn shipped 600 tons, which averaged 120 ounces of silver. From the Vienna and Mountain King mines about thirty tons of fair milling ore were shipped to Ketchum, thence to Salt Lake. They yielded 271 ounces per ton. Mr. Smiley also shipped some ore to Salt Lake, but the figures have not been obtained. The total shipments from Ketchum will probably aggregate 500 tons, carrying an average of 130 ounces of silver. From Bellevue: Reports of the shipment of 281 tons have been received.. These are as follows: Minnie Moore mine 217 tons, averaging 101.62 ounces of silver and 67 per cent. of lead. Monday, five tons, averaging 622.70 ounces silver and 54 per cent. lead. Overland, fourteen tons, averaging 99.16 ounces silver and 70 per cent. lead. Queen Victoria, thirty-four tons, averaging 137.43 ounces silver and 64 per cent. lead. Mammoth, five tons, averaging 92 ounces silver and 67 per cent. lead. Morton, six tons, averaging 152 ounces silver and 68 per cent. lead. Besides the above-mentioned, the Queen of the Hills and five other mines shipped ore, but no reports have been received. The extreme southern portion of the county contains some of the Snake river placer mines, the balance lying in Cassia county. These mines are bar mines, and very productive when sufficient water can be obtained, but as this requires a large outlay of capital, mining operations have been conducted on rather a small scale, the whole product being probably less than $35,000. The difficulty experienced in former years to catch the extremely fine gold has been successfully overcome by the use of silver plates or blankets and gunny sacks.

The reduction works on Big Wood consist of a five-ton smelter at Bellevue, a ten-ton smelter at Hailey, a forty-ton stack at Ketchum, with a sixty-ton being added, and a twenty-five ton smelter at Galena. The first three have been in operation, and the others will go into blast by June 10. Another smelter is being erected near Hailey. Three are run by water-power. The fuel employed is charcoal, obtained close by the works. In smelting the Wood river ores each ton of ore requires sixty per cent. of iron ore and twenty per cent. of limestone as a flux, and forty-two bushels of charcoal, and the cost per ton is as follows:

42 bushels charcoal, at 14 cents	$5 88
1,200 pounds iron ore, at $6 per ton	3 60
400 pounds limestone, at $4 per ton	80
Labor, wear on machinery, interest on capital, etc	1 25
Total	$11 53

This is the actual cost per ton from a forty-ton smelter running on sulphide of lead ores. Timber for charcoal, water for power, iron ore and limestone for flux, are in close proximity or within a short distance of the mines, and there is no doubt but that the cost will eventually be reduced at least twenty per cent. Throughout the Lower Wood river country are fertile valleys, capable of producing good cereals and all kinds of vegetables, and in this respect it differs from many other mining regions, which have to depend for these supplies upon the more distant agricultural sections. The past season has been one of great prosperity in Idaho; the prospector and mine-owner have both been rewarded for their labors. Reliable reports from the entire stretch of country between Saw Tooth and Wood river to the British possessions on the north confirm the statement that it is one unbroken mineral belt, and for hundreds of miles nature seems to have lavishly distributed her mineral wealth, which is only awaiting the advent of capital and enterprise to be gathered and made subservient to the uses of mankind. The production of gold and silver in Alturas county for the year 1880, as reported to the Census Bureau, by districts was:

District.	*Gold.*	*Silver.*	*Gold and Silver.*
Bear Creek or Rocky Bar quartz	$5,149	......	$5,149
Buffalo or Atlanta	38,053	$62,936	100,989
Red warrrior	8,540	......	8,540
Banes diggings and various placers.	34,999	......	34,999
Total	$86,741	$62,936	$149,677

My estimate for the year 1881 is $170,000 gold, $550,000 silver.

Boisé County.—Some of the old mines have been steadily worked, and have kept up their annual production.

During the year some little excitement was caused by the discovery of silver-bearing veins on Upper Squaw creek, and over forty locations were made during the season. The Liberty is the principal mine, and the only one which has been developed to any considerable extent. A second shaft is being sunk fifty yards from the discovery shaft, in which the ore is much richer and the vein of fair size. The ore is chiefly copper pyrites, black oxide and carbonate of copper, and peacock ore. Numerous assays give an average value of 120 ounces of silver to the ton and twenty per cent. of copper, but these do not represent the quality of the ore in bulk. Mining facilities in this district, so far as timber and water-power are concerned, are excellent, but, owing to the refractory nature of the ores, it will not become productive until proper works for their reduction are erected or cheap transportation to commercial centers is secured, the nearest railroad point at present being three hundred miles distant. The production of Boisé county for the year 1880, as reported to the Census Bureau by districts, is shown in the following table:

District.	*Gold.*	*Silver.*	*Gold and Silver.*
Banner	....	$84,182	$84,182
Cañon Creek	$22,625	......	22,625
Gambranus	3,299	......	3,299
Granite or Quartsburg	169.999	......	169.999
Mammoth or Summit Flat	5.226	......	5,226
Shaw's Mountain	12.517	......	12,517
Various placers	622,644	......	622,644
Total	$836,310	$84,182	$920,492

My estimate of the production during 1881 is gold, $300,000; silver, $30,000.

Custer County.—Custer county, north of Alturas, and drained by the headwaters of Salmon river, is attracting the attention that the richness of its mines deserves. The Yankee Fork, Bay Horse, and Kinnikinik districts contain many promising mines.

My estimate of the production of Custer county during 1881 is $500,000 gold and $350,000 silver.

Idaho County.—Idaho County was originally the largest county in the Territory. Lemhi and Custer counties were cut off from its eastern end. Boisé county has taken a strip from its southern portion, and one-half of Washington county was originally within its limits. On the other hand, it gained in 1875 a strip from the eastern side of Nez Percé county, comprising the agricultural section known as Camas Prairie and the mining camps of Elk City and Newsome Creek. The only agricultural portion is Camas Prairie, on its western border; here there are six entire and several fractional townships of arable land that produces all the usual cereals in profusion. Its elevation is not over 2,500 feet. Along Salmon river there are also a few isolated flats of small extent, which are devoted to gardening and fruit-raising. The county is watered principally by the Salmon river and its tributaries, the eastern and southern boundary being the water-shed between the branches of the Salmon and the headwaters of other streams. The northern portion is drained by some of the forks of the Clearwater. Salmon river cuts a deep chasm through the county from southeast to northwest. Its valley is from 3,000 to 4,000 feet lower than the average altitude of the mining camps scattered through the adjacent mountains, causing a marked difference in climate. In the winter snow rarely falls before February, and frequently the ground is not whitened during the year, while in the surrounding mining camps the snow covers the mountain sides from four to eight feet in depth.

Idaho county is, however, essentially a mountainous region, the principal portion of the Salmon River Mountains being included within its boundaries. These mountains are in no well-defined range, but are a vast collection of irregularly-scattered peaks, overtopping a wilderness of lesser peaks, all of a rugged and forbidding aspect. The average altitude is about 6,000 feet, though many peaks have an elevation of nearly double that height. The town of Florence is situated 6,600 feet above sea-level, and Warren 6,200 feet. The Salmon River Mountains are chiefly of granite formation, and appear to have been upheaved at a comparatively recent geological period. The deep cañon of the Salmon river affords numerous excellent opportunities for studying the character of the subjacent rocks, as surfaces are frequently exposed from 1,000 to 2,000 feet high. At a point on the river near the mouth of Little Salmon, hornblende slates begin to take the place of granite, and gneiss farther to the eastward. There is an obscure stratification and a general north and south strike. A few miles further west, at Carver's Ranch, a huge ledge of very pure limestone crosses the river; it is from 100 to 500 feet wide, and extends in a general northerly and southerly direction for about forty miles, finally dipping under the lava a short distance east of Mount Idaho. West of this other varieties of slate, mica, and clay make their appearance, with occasional bunches of quartz, and at the mouth of John Day's creek the primitive rocks disappear beneath basaltic lava and are no more seen in the bed of the river from thence to the Pacific Ocean, excepting one place in Snake river, about fifty miles below Lewiston, at Granite Point. The soil of Camas Prairie is derived from the decomposition of lava, indentical with that which overspread most of the Columbia River Valley. Many fossil remains are found in digging wells, but no minerals of value, nor are any likely to be. The mountainous region to the eastward of the lava and the anterior slate formation is probably the source of the mineral wealth of the county.

Gold in paying quantities was first discovered in Idaho, near Pearce City, in what is now Shoshone county, in 1860. At that time Idaho was still a portion of Washington Territory. Communication from point to point was slow and difficult, and there was no great rush of miners, nor any great amount of money taken out during that year. By the following spring reliable information of extensive deposits in that section was widely spread, and the search for gold was diligently prosecuted. Gold was found in the banks and bars of all the forks of Clearwater, and led to the discovery of extensive placer ground at Elk City. Paying ground was also found in many places on Salmon river, and early in July in Florence Basin, in which place thousands of mines were located in a couple of months. On the north side of the Salmon nothing worth mentioning was or has since been found. South of the Salmon gold was found in August, 1862, in Warren's Basin, which is drained by Meadow Creek and its tributaries, and empties into the Salmon river sixteen miles north of the town of Washington. At the present time the ground worth working comprises the upper eight miles of the creek. The shallow portions of the creek and neighboring gulches were worked out in a few years after the discovery of gold. The lower portion of the creek was not abandoned by white men until 1870, at which time the Chinese came in, and have since monopolized the gravel workings, going over the mining ground a second and sometimes a third time. Quartz ledges were discovered and located in Florence and Warren in 1865. In the former district very few defined ledges were found, and none that are now esteemed of much value. Almost the entire district appears to be seamed with minute veins containing gold, which are generally conceded to be the source of the great quantity of placer gold that for a time rendered the section famous.

A close approximation of the amount of ore taken out of the different ledges of Warren district and worked during the last fifteen years is as follows:

	Tons.
From the Rescue	1,000
" Knott	600
" Charity	500
" Sampson	250
" Hic Jacet	150
" Knott Treasure	25
" Scott	150
" Alder	50
" General Grant	50
" Keystone	200
" Eureka	100
" Washington	25
" Bonanza	75
" Tramp	100
" President	50
" Bullion	100
" Other small lots and float-rock	250

The yield per ton has varied greatly. Large quantities of rock from the Rescue paid from $50 to $75 per ton. Selected ore from the Charity paid from $40 to $80, and from the Scott as high as $180 per ton. The Keystone ore paid quite uniformly from $50 to $65, and, on the other hand, some lots from other ledges scarcely paid for working. The average yield of the ores of this district is not readily estimated. The processes of extraction of the precious metals have been of the simplest character; at first arrastras were used, then stamps with copper plates of limited extent, and at present the arrastra follows the battery with blanket washings saved for future treatment. Assays of tailings have rarely been made, and it is not easy to estimate the percentage of gold and silver extracted. The ore is generally calcined prior to crushing, and the returns show that more silver is saved by this preparatory treatment. Bullion from calcined ore is usually from 300 to 350 fine, while that from the raw material is 600 to 650 fine. The gold from placer mines varies much in fineness. That from the small gulches and heads of the streams is from 625 to 675 fine; in the main creek from 700 to 760 fine, and is the common currency at $14 per ounce. A great extent of ground has been worked along Salmon river, principally by rockers and other primitive appliances; the gold is usually in small particles, known as flour gold, though sometimes in scales; it is current at $16 per ounce, being from 800 to 825 fine. Near John Day's creek a few bars of limited extent have yielded coarse gold, and nuggets of from $5 to $15 each, of high grade, over 950 fine, and current $19.50 per ounce. The yield of gold from Idaho county can only be approximately stated. Five Chinese companies in Warren's take out more than half the gold of the camp; from diligent inquiry made of the principal members, the following estimate may be stated as nearly correct:

Shun Lee Company	$7,150
Wing Wo Company	16,600
Hung Wo Company	9,800
Lin Wo Company	14,250
Fook Sing Hung	22,700
Twelve minor companies	22,800
Single Chinamen	2,000
White men	13,500
Four quartz mills	18,672
Total	$127,472

Along Salmon river there are eight bars worked by Chinese and five by white men, the product of the year being about $45,000. Nearly the same amount was produced in Florence and Elk City; the smaller camps may be estimated at $43,-000, making the total production for Idaho county $260,000.

For the year 1880, the Census Bureau received the following report for Idaho county:

Copeland and scattered, quartz gold	$9,999
Butte Bar and scattered, placer gold	60,000
	$69,999

I have placed the production during 1881 as that stated by Mr. Willey, viz.: $260,000 in gold.

Lemhi County.—Mount Estes, in the southwestern part of the county, contains a rich belt of quartz ledges.

Ten lots were worked at the Bay Horse smelter, with the following results:

Date.	*Quantity.* Pounds.	*Value.* Dollars.
July 2, 1881	12,377	12,487
July 2, 1881	16,678	6,010
July 2, 1881	9,529	5,172
July 23, 1881	21,841	10,030
July 23, 1881	12,536	6,752
August 16, 1881	4,410	2,001
August 16, 1881	21,781	7,060
August 27, 1881	17,533	5,401
September 3, 1881	7,698	2,079
September 4, 1881	11,099	15,255
Total	135,482	$72,247

Since the discovery of the Charles Dickens ledge the district has produced (including the ores shipped) about $2,000,000. The product for 1882, including the ore shipments, cannot fall short of $1,500,000. Wages in the district are $3.50 to $4. Several of the companies pay $100 per month and board, but this is only where the mines are paying largely over and above development, as with the Montana and Dickens, and probably one or two others. Living is expensive as yet, owing to the cost of getting in supplies. Freights from the railroad rate at $3\frac{1}{2}$ to 4 cents. Flour and vegetables are raised on the Salmon Valley adjacent to the mining camps, and are not unreasonably high. For the year 1880, as reported to the Census Bureau, we have the following production by districts in Lemhi county:

	Gold.
Bay Horse and scattered, quartz	$125,000
Bay Horse and scattered, placer	20,000
Total	$145,000

I estimate the production during 1881 to have been $285,-000 in gold and $100,000 in silver.

Oneida and Cassia Counties.—In these counties, on the southeastern and southern borders of Idaho, mining has been confined chiefly to the placers and bars along Snake river. The gold as found here is not in the usual form of grains or scales, but in exceedingly small particles, known as flour gold, and the trouble has been to collect it; the ordinary rocker or sluice not being adequate for separating it from the gravel or sand. A number of experimental processes, some of them of considerable ingenuity, have been introduced with moderate success, but all the conditions required for saving the gold have not as yet been fully met. A considerable number of claims have been worked near Blackfoot and in the vicinity of the mouth of Raft river. At Bonanza Bar, a few miles above Raft river, work has been steadily conducted during the mining season for several years past, with satisfactory yield; the ground is not yet worked out, and at the present rate of progress and with the same system of working is good for several years to come. Farther down the river, at Shoshone Cañon, a number of Chinamen and a few whites are working with sluice or rocker with reported success. At Salmon Falls, Davis & Co. are the chief operators, and by the use of amalgamators have been enabled to save a large portion of the gold in the gravel washed on their claim, which consists of 160 acres. The production of gold and silver during the year 1880, as reported to the Census Bureau, was as follows:

ONEIDA COUNTY.

District of	*Gold.*
Caribou and scattered, quartz	$9,999
Eagle Rock and scattered, placer	29,999
Total	$39,998

CASSIA COUNTY.

Bonanza Bar, Rock Creek, and scattered	$20,000

I estimate the production of these counties during 1881 to have been for Oneida $40,000 gold, and for Cassia $25,000 gold.

Owyhee County.—This county is the extreme southwestern county of Idaho, and contains the oldest and most productive mines of the Territory, but it has never quite recovered from the blow it received through the failure of the Bank of California in 1876, which resulted in the ruin and withdrawal from the field of nearly all the large companies. The mines, however, are as good to-day as they were then, but, being expensive to work, considerable capital is required to handle them properly and profitably. The chief districts are the War Eagle and Florida Mountains, near Silver City; Wagontown, northwest of the same place; Flint, southeast, and South Mountain, thirty miles south of Silver City.

The mines of this county, taken as a whole, give promise of large yields in the future, but good honest management, to give confidence to investors, and additional capital to re-open and put in working condition some of the best mines, are the chief desiderata.

The production of Owyhee county, as reported to the Census Bureau by districts for the year 1880, is shown in the following table:

District.	*Gold.*	*Silver.*	*Gold and Silver.*
Carson or Owyhee, quartz	$168,174	$170,799	$338,973
Wagontown, quartz	7,428	3,810	13,238
Scattered, quartz	2,499 }	2,499	56,998
Scattered, placer	52,000 }		
Total	$180,101	$177,108	$409,209

I estimate the production during 1881 to have been $50,000 gold and $270,000 silver.

Shoshone and Nez Perces Counties.—The mining interests of these counties and the condition of their mines do not differ materially from those of Idado county, the description of which may be taken as general for all of North Idaho. The *Oro Fino* district in Shoshone county gives employment during the mining season to from ninety to 120 Chinamen, and half that number of white men. Its yield does not exceed $60,000 per annum. Near Pearce City there are many croppings of quartz ledges, but no developments worth mentioning have been made. The chief vein mining in the county is by the Shoshone Company, some twenty or twenty-five miles northeast of Pearce City. Nez Perces county is north of Idaho county and south of Shoshone, and has no mines of present value, except some rocker claims on Snake river above Lewiston, which are worked by a dozen or more Chinamen, and a few gulches near the head of Palouse river which produce a few hundred dollars annually. The production of the counties in 1880, as reported to the Census Bureau, was as follows:

County.	*District.*	*Description.*	*Gold.*
Shoshone	Number One and scattered	Placer	$10,001
Nez Perces	Moscow and scattered	Quartz	4,500
	Various small placers		10,001
Total			$14,501

I estimate the production of Shoshone county for 1881 to have been $60,000 in gold, and of Nez Perces county $5,000 in gold.

Estimate of Mr. A. M. Lawver of the bullion production in Idaho during the calondar year 1881, classified by counties.

Counties.	*Gold.*	*Silver.*	*Total.*
Ada	$220,729	$135,000	$355,729
Alturas	164.317	450,499	614,816
Boise	175,000	35,508	210,508
Cassia	65,351	....	65,351
Custer	....	43,853	43,853
Idaho	60,000	2.147	62,147
Lemhi	425.896	578,777	1,004,673
Nez Perces	188.599	....	188,599
Oneida	76,500	....	76.500
Owyhee	50.800	200,458	251,258
Shosohone	85,000	....	85,000
Total	$1,512,192	$1,446,242	$2,958,434

MONTANA.

MR. R. B. HARRISON, assayer in charge of the United States assay office at Helena, who had charge of the collection of mining statistics for Montana, and has furnished the principal material embodied in this review of the mines of that Territory, estimates their yield for the year to have been $2,700,000 in gold and $3,350,000 in silver. Great credit is to be given to his conclusions because of personal opportunities for observation and knowledge of the mining operations carried on in that region, and of the disposition of bullion obtained from the mines. I am constrained, however, to reduce the figures he gives, for the reason that they are not sustained by the reports received by this bureau of the amounts deposited from that Territory at the mints, transported by express companies and by railroads as freight, or reduced from ores and base bullion by smelting works and refineries. From all the sources of information at my command, I estimate that the bullion production of Montana did not in 1881 exceed $2,330,000 in gold and $2,630,000 in silver. The general description of Montana is from Mr. Harrison, and also the review of the mines with some slight modifications as to details and production.

The organic act setting off that portion of the public domain now included within the boundaries of this Territory was approved on the 26th day of May, 1864.

The name.—It is undoubtedly the prevalent belief of those acquainted with the region, that, as its name implies, it is a land of mountains, and it is a fact that the main range of the superb Rockies, for a distance of three hundred miles, traverses this empire of the Northwest; but if it had been called River-source, the name would have been more distinctively appropriate than Montana.

The topography and geography.—Of its 90,000,000 acres, only 20,000,000 are classed as mountains, while three of the great rivers of the continent rise within its borders, one of which, the Yellowstone, navigable for a distance of four hundred and fifty miles, lies wholly within its boundaries; and the Missouri, from its source, the "Three Forks," or the union of the Jefferson, Gallatin, and Madison, is carried nearly a thousand miles on Montana soil, or about one-quarter its entire length, while in the valleys of the western slope gather the waters that unite to form the great Columbia that pours its flood into the Pacific. It is estimated that fully three-fifths of the surface of the Territory are suitable for agricultural purposes, and nearly another fifth could be added to cover the extent of surface adapted for grazing.

Occasionally we have a season, as in all parts of the middle temperate zone, when early frosts interfere with the ripening cereals, but as a rule the seasons compare favorably with those of the more southerly points on the eastern plains. The rainfall of this region is slight in comparison with many other districts on the same parallel, but the streams that flow from over mountain ranges furnish an abundant supply of water for purposes of irrigation, which, as a basis of agriculture, is far more reliable, and secures better results. The absence of excessive moisture in our atmosphere renders it not only less severe in its effects during the cold weather, but also secures immunity from the various forms of contagion that arise from the marshes of the low-lands in localities where rain is abundant.

The production of Beaver Head county, as reported to the Census Bureau by districts for the year 1880, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Bald Mountains	......	$8,000	$8,000
Bannack	$19,750	300	20,050
Trapper	......	721,308	721,308
Total	$19,750	$729,608	$749,358

Choteau, Custer, and Dawson Counties.—In the northern part of Choteau county silver is known to exist in paying quantities in the region of the Bear Paw mountains, but that locality is so infested with Indians as to render it dangerous, if not wholly impracticable at present, to develop the prospects found to any extent. If the time shall come when the reservations which now cover so large a part of the Territory are open to mining enterprises, doubtless Choteau will contribute a fair share of gold and silver to the aggregate of the Territory, but for the present its product is inconsiderable. Custer has been prospected in the southern part and gold found in the vicinity of Tongue and Powder rivers, but no systematic work has yet been done to test the value of the finds. Until quite recently all of Dawson county was reserved to the Indians. The south half is now open to settlers and its resources will soon, to a great extent, be known.

Deer Lodge County.—The first discovery of gold in Montana was made on Gold creek, in the year 1861, by an old Mexican miner who was known by the sobriquet of "Gold Tom." His first location was about five miles below the present site of Pioneer Village. During the year following James and Granville Stuart brought appliances from Walla Walla, and began the first systematic operations in placer mining in the Territory on what was appropriately named "Pioneer Bar." The extent of this region known to contain gold is about five miles in an easterly and westerly direction and two miles northerly and southerly, "Independent" district being on the east, "Pioneer" on the west, and "Pike's Peak" between them. Yam Hill or Pilgrim Bar, French Gulch, Gold Hill, Squaw Gulch, Woods Flat, Wilson's Bar, Trail Gulch, Prowse Bar, Windy Bar, Hart's Gravel, Rocker Gulch, and Dry Gulch are among the many districts now included in the region designated as Pioneer. Of the ditches constructed exclusively for the purpose of mining within the limits of this small territory, there are not less than one hundred and ten miles, aggregating a cost of about $300,000, and with a flowing capacity of 10,000 inches of water, miners' measurement. Mr. Ed. H. Irvine, the manager of the Rock Creek Ditch Company, and the best authority in the matter, estimates that during the past thirteen years there have been worked under these ditches in the various camps about 3,000 acres of land, with an average depth of fifteen feet and a gross yield of nearly $12,000,000.

The banking house of Donnell, Clarke & Larabie, of Deer Lodge, bought in 1871, $1,255,000, in 1872, $1,100,000, in 1873, $970,000, in 1874, $850,000, in 1875, $725,000, in 1876, $650,000, in 1877, $450,000, in 1878, $300,000, in 1879, $225,000, in 1880, $250,000, in 1881, $230,000, or $7,075,000 within the last eleven years, which, added to the amount bought by the First National Bank, owned and operated formerly by the same parties, aggregate nearly $10,000,000 bought by one house during the last thirteen years, and nearly all of it from Pioneer and Bear districts. According to the best estimates available, the product of Pioneer for the year 1881 was not less than $195,000, none of which found its way to market until the month of July. The indications are that this region will continue productive for many years to come. New ground has been opened and improved appliances introduced, while not more than one-half of the acreage known to contain the precious metal has been worked out. Lode mining has never been prosecuted to any extent in this immediate vicinity.

In Bear Gulch, placers were first discovered in October, 1865, by Jack Reynolds and party, and the first rush of miners began in March, 1866, and during that year the first quartz location was made by an old Mexican miner, who named it Guayness. This lode, which displays from eighteen to twenty inches of very rich ore, is the only location which is all in limestone. Many other locations have been made, but they are either contact veins or in granite. There is one lode known to extend for over three miles along the divide between Bear and Elk Gulches. It seems to be a contact vein, and many of the openings upon it show remarkably rich pay chutes of gold-bearing rock. There are nine locations upon it beginning with the Homestake and running westerly. In the Homestake it is impossible to penetrate beyond a depth of forty-five feet without good facilities for freeing the vein of water. H. Grant, the owner of this property, found a pocket from which he took $900 in gold in six hours by means of a common hand mortar, and afterwards during the season increased the amount to an aggregate of $3,000 by the same means. The narrowest vein worked in this district is ten inches, and the widest yet encountered is twelve feet. No galena of any consequence is found, and as a rule very little silver, almost the entire product being gold. Mr. James B. McMaster, the assessor of Deer Lodge county, returns the amount of gold yielded in 1881 from the placer mines as follows:

Bear Gulch	$46,500
Deep Gulch	6,500
Top o'deep	13,200
Bilk	4,000
Elk	38,500
Maginnis	10,000
Two China companies in tributaries of Bear Gulch	15,000
First Chance	3,000
Williams	7,000
Kernon's Fork	2,000
Phelan's	2,500
And other prospectors	5,000
Aggregating a yield of	$153,200

In 1866 and 1867, Bear Gulch contained a population of 1,000 men, and Reynolds City in Elk Creek, 500, or an aggregate of 1,500 in what was known as Bear district, and the yield of gold was not less than $500,000 per annum for those years. The yield of the placers in German Gulch for 1881 was $5,000; Henderson Gulch for 1881 was $18,000. Since the first work done in Ophir Gulch, a tributary of the Blackfoot river, one claim patented by Mason & Kimmerly, has produced a total of $311,000; another by Mason & Stone, $42,960, and still another by Davis & Mason, $61,450. Two of these claims were worked at a great disadvantage during the past year, owing to a scarcity of water. The former was not worked, and the others yielded $2,700 and $5,300, respectively.

In Upper Ophir

Montgomery & Alley took out	$2,500
S. Trotman	2,500
David John	700
Two China Companies	6,000
Total	$11,700

From Carpenter's Bar the yield was:

J. J. Downhour	$1,500
A. A. Whittier	6,000
Barnard & Willey	800
Otto Echols & Co	3,300
Williams & Whittier	3,700
Total	$15,300

From Carpenter's Bar Gulch:

Joshua Lincoln	$1,000
Quigley & Brown	2,500
Mason & Stone, not worked	....
Total	$3,500

Ohio Gulch, P. Hanley	1,000
Illinois Gulch, not worked	......
West Illinois Gulch, J. S. Hill & Emerson	1,200

Ballyrat Gulch, Lutzd Lutzd	$1,500
Head of Three-mile, Jordan Bros	250
Side Gulch, John Many	600
Snow Shoe Gulch, Rufus Johnson	2,500
Snow Shoe Gulch, two China companies	1,000
Deadwood Gulch, John M. Irving	1,000
Washington Gulch, Duncan Seaton, M. Stuart, Mark Easterly	2,000
Washington Gulch, Geo. Bone	500
Washington Gulch, Kating	1,800
Jefferson Gulch, P. G. Birdseye	5,100
Jefferson Gulch, M. C. Carter	500
California Gulch, H. C. Keye & Co	5,000
California Gulch, Rufus Mead	500
Nevada Gulch, J. B. Wilson	2,500
Tiger Gulch, John Ruloff	600
Madison Gulch, Geo. Hysman	1,000
McClellan Gulch, Shoupe & Blume	3,000
Lower Ophir Gulch, S. W. Ryerson	3,000
Lower Ophir Gulch, C. Van Alstune	1,000
Lower Ophir Gulch, two China companies	3,300

The gold dust shipped from Deer Lodge City by the Union Pacific Express, during the year 1881, amounted to $194,156. The total product of gold and silver in the county amounts to $850,000. The production of Deer Lodge county, as reported to the Census Bureau by districts, for the year 1880, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Flint Creek	....	$249,639	$249,639
Independence	....	63,582	63,582
Silver Creek	$168,000	7,001	175,001
Summit Valley	173,930	1,745,758	1,919,688
Total	$341,930	$2,065,980	$2,407,910

Gallatin County.—This county was organized by the Territorial Legislature during the winter of 1863–'64. In the event of the ratification of the treaty made with Crow Indians in 1880, that part of their reservation which includes the Clark's Fork mines will be comprised within the limits of this county. The lodes of this district, which is about twenty-five miles square in extent, and is called the *New World district*, are wide and strong, and, as a rule, produce heavy galena ores. The surface of the ground in some places was covered with bowlders of this kind of ore when the first locations were made in 1872, but as a rule there was not much silver found in them.

The great need of this region is the requisite facilities for reducing the product under proper metallurgical skill and sagacious business management. The yield of the county in the precious metals during 1881 may be estimated at $50,000, including placers, arrastra work, and the shipments of ore.

Jefferson County.—These mines, in what is known as Basin Gulch, the placers have produced as follows:

P. H. Parkes	$10,000
——— Winters	5,000

On the east side of the Crow range of mountains in the vicinity of Indian creek, the placers have yielded as follows:

Tandy & Co.	$3,500
William Hamillton	3,907
Pat. Bowen & Co	5,000
S. Collier & Co	9,000
O'Neill & Co. (estimated)	3,500
John Murray (estimated	5,000
The new ground opened on Clancy creek has yielded	700
Lump Gulch	500
Dennis Sheehy on the Boulder	3,300
——— Thomas	5,000
Other places in the vicinity	2,000
The Homestake near Wickes, about	1,500
Mitchell Gulch (estimated)	8,000

The total yield of the county for 1881 it is safe to place at $225,000. The works erected and ready to start with the year 1882, render it probable that the product of Jefferson county will be increased manifold over that of 1881. It is claimed that the Gregory company will produce $40,000 per month, and the Alta company estimate their capacity as still greater, while the many new mills contracted for, will add to the aggregate of bullion product. The production of Jefferson county, as reported to the Census Bureau by districts for the year 1880, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Cataracts	$5,290	......	$5,290
Cedar Plain	12,800	$1,600	11,000
Colorado	6,863	39,224	46,087
Elkhorn	......	34,908	34,908
Mountain	22,749	......	22,749
Scattered	8,701	100	8,861

Lewis and Clarke County.—Among the many rich placer grounds discovered in this Territory, those of Last Chance and tributary gulches are prominent. Since the year 1864, they have produced not less than $8,000,000. The city of Helena, located at the mouth of Last Chance, has become the metropolis of the Territory, and while much of the rich pay in the lower grounds will yet be worked, there will be considerable of the good ground left unworked on account of its great value as town property. A bed-rock flume is now approaching from the valley, and as soon as the richest ground can be drained by it, the amount of product taken out will be largely increased. During the last year, the gold taken from the ground in the immediate vicinity of Helena amounted to $40,000. At Park City, about five miles above Helena, gold dust was taken out of the different claims as follows:

Paxton & Co	$5,000 00
Kuhn & Dumphy	2,600 00
F. Kuhn	2,600 00
Tom. Connor	2,100 00
Frank Leedy & Co	2,000 00
Ray Hale & Co	3,500 00
At Unionville by	
H. C. Carpenter	3,500 00
From Tucker Gulch by	
R. S. Hale (estimated)	10,000 00
From Basin Gulch by	
Dingee & Co	3,163 00
Halford & Co	9,000 00
Brown & Co	1,200 00
From Ten Mile by	
Travis Bros	1,800 00
Ashley Head	1,500 00
From Try Again by	
Travis & Son	2,500 00
From Monitor by	
Brayman	1,000 00
From Eureka by	
Jones	400 00

Many of the placers of the Territory are lying idle, under the operation of the new mining law, which enables a few persons to obtain patents for large mineral tracts, which, under the old law would be worked by prospectors, and where now only an occasional claim is worked, numbers would be opened. The total of the precious metals shipped by the Pacific Express Company from Helena during the year 1881 was—

Gold	$660,533 37
Silver	91,790 00

The total yield of gold and silver in the county for the year 1881 will net $500,000. The production of Lewis and Clarke county, as reported to the Census Bureau by districts, for the year 1880, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Silver Creek or Ottowa	$91,967	$8,073	$100,040
Stemple	32,383	17,208	49,591
Owyhee	7,150	....	7,150
Total	$131,500	$25,281	$156,781

Madison County.—The principal yield of the precious metals in Madison county is from Alder Gulch and vicinity, probably the most noted of all the placers worked in the Territory. For a distance of nearly fifteen miles from the summit of the mountains to the Ruby river, the pay has been continuous and rich. The lowest estimate of the most conservative men who have personally known its history from its discovery, place the amount of yield in gold at not less than $30,000,000. During the past year, Henry Elling, one of the bankers of Virginia City, bought during the first six months $60,000, during the last six months $140,000, gold dust and gold bullion. Raymond, Harrington & Co., of the same place, bought during the first six months $30,000, during the second six months $90,000, of which $100,000 was from Alder Gulch, $15,000 other gulches, $5,000 mill retort. The last season was not favorable for the operation of the placers of this district, on account of the short supply of water, but the increased number and better arrangement of flumes have insured nearly the average yield from the large companies; and hereafter, when the supply of water is ample, the returns will be increased. Six of the principal flume companies produced as follows: one $30,000; three $20,000 each; one $15,000; one $12,000; and there are drifters, Chinamen, and small parties scattered along the gulch and its tributaries. The ground is worked to profit along the banks as high as the water can be carried, and it is known to be rich still above the highest elevation to which the water has reached. At one time it is estimated that fully 30,000 people resided in and were interested in the development of this gulch. At the time when it was most actively worked, wages were exceedingly high, and home products so scarce and transportation so difficult as to render the cost of living ruinously high, but the outcome of the ground was so rich as to pay large returns for the entire distance worked, and it will continue for many years to come to produce largely. Until recently, the placers have attracted the attention of miners almost exclusively, and lode properties, which in other places would have been considered of great value, were quite neglected.

It is safe to estimate the product of Madison county for the year 1881 at $450,000. The gold dust shipped from Virginia City during the year 1881, $182,500, express valuation. The mining claims recorded number 365.

The production of Madison county, as reported to the Census Bureau by districts for the year 1880, was as follows:

District.	*Quartz Gold.*	*Silver.*	*Gold and Silver.*
Hot Springs	$37,555	$80	$37,635
Mineral Hill	11,700	298	11,998
Red Bluff	72	......	72
Silver Star	43,951	......	43,951
Total	$93,278	$378	$93,656

Meagher County.—In the spring of 1866 some hunters discovered in the valley of Trout creek what proved to be rich deposits of gold. Within less than six months from the date of discovery of New York Gulch a city was laid out at the junction of this gulch with Trout creek, and on the opposite side another. The first was called New York, and the other, from its relative position, Brooklyn. The placers paid richly, but the quartz very little. Wages were high, and although much of the rock carried what in such times as these would be considered good pay, the average result was not satisfactory, and quartz mining was for the time abandoned. Under the new law the desirable portion of this district was covered by relocations, but in default of all milling facilities little progress has been made towards the establishment of a camp. The highest point of land in this vicinity is Kingsbury Mountain, and from it radiate Oregon, Clarke's, Cave, and Magpie Gulches on the south and east, and Rattlesnake, New York, and Kingsbury on the north, all of which have paid well, but are worked very little, comparatively, now. The aggregate of product for Meagher county may be safely placed at $100,000 for 1881, and mostly gold. Deer Lodge, Meagher, Beaver Head, Lewis, and Clarke counties, for the year 1880, as reported to the Census Bureau, produced placer gold to the amount of $1,162,906.

Missoula County.—Formerly, in what is known as the *Cedar Creek district*, about seventy miles north of the town of Missoula, there was considerable placer mining done, and recently some excellent gold quartz has been found in that locality. In the vicinity of Stevensville, in the Bitter Root Valley, there are several prospects which give promise of ultimate value. Seven miles southwest of that point is what is known as the *Sweathouse district;* ten miles southwest is Willow Creek; ten miles northeast is Woodchuck. The Lo Lo is fifteen miles northwest, and the Wallace fifty-five miles northeast. During the coming season there will be a large influx of prospectors, and the needed appliances for the reduction of the ore product will, to some extent, be supplied, and 1882 will doubtless see Missoula county among the large producers of gold, silver, and copper. The product of the mines for 1881 may be estimated at $100,000, mostly gold. The discovery of the silver-bearing lodes was of recent date, and only small shipments of ores have been made as tests of the properties.

Silver Bow County.—Silver Bow is the smallest county in the Territory, only about eight hundred square miles, and was organized May, 1881. The most prominent among its mines is the Alice, which has been most extensively developed and operated with adequate appliances. The company owning this mine is capitalized at $10,000,000, and besides the Alice, Magna Charta, and Valdemere, which are large ore producers, they own nine other locations, covering in all 6,368 linear feet of lode claims.

Within a radius of eight miles, in townships three north, seven west, and three north, eight west, there are over 400 distinct locations which have been patented or are in process of patenting; and from the discoveries already made it is claimed that there are nearly forty parallel lodes within this remarkable mining region of which the city of Butte is the center. The placers of Silver Bow county have not produced largely during 1881, but have helped to augment the product to some extent. The grand total of the county may be safely estimated at over $2,825,000 of bullion and ores shipped during the year 1881. The stamps now in Butte and vicinity are:

Alice mill, new	60
Alice mill, old	20
Moulton	40
Silver Bow	30
Dexter	15
Lexington	10
Centennial	10
Gagnou	10
Burlington	10
Clipper	10

REDUCTION WORKS.	*Tons per Day.*
Montana Copper Company	80
Parrott Copper Company	40
Colorado and Montana Copper Company	40
Bell Copper Company	40

The shipments of fine bullion by the Union Pacific Express Company from Butte for 1881 were: first six months, 67,708 pounds; last six months, 64,079 pounds; total, 131,787 pounds, besides $70,425 of gold dust, or a total express valuation of $1,300,425. The shipments by months, as published in the *Holiday Miner*, are as follows:

	Weight.	*Amount.*
January	8,441½	$71,535 82
February	11,253¼	112,400 35
March	13,036¼	131,483 01
April	12,835	129,292 24
May	11,738¾	106,599 47
June	10,409⅓	99,988 93
July	9,873	98,613 41
August	13,556	129,966 17
September	9,015½	78,520 11
October	11,035	94,239 28
November	9,951½	82,941 13
December	10,787¾	94,050 14
Total	137,787	$1,229,180 06

To which he adds $500,000 for other shipments, and the product of the smelters of the same district he places at about $1,271,000, which makes the total product about $3,000,000. The *Inter-Mountain* publishes the following:

"The total amount of silver, copper, and gold product in the Butte district in 1880 reached $1,428,088.26. An intelligent idea of the rapid rate at which the mining industry of the Butte district has increased since that time can be obtained from the following table of production during the year 1881: Alice Company, $1,120,937.50; Montana Copper Company, $1,042,640; Colorado Company, $864,000; Silver Bow Company, $500,000; Lexington Mill, $147,000; Dexter Mill, $76,293; Centennial and Clipper (estimated), $25,000; copper ore shipped, $197,000; gold shipped through banks, $102,280.20; total, $4,075,150.70. To this amount should be added the value of 5,000 tons of copper-silver ore extracted during the year and now at the Colorado smelter, awaiting reduction. Estimating the value of this ore at an exceedingly low figure, say $55 per ton, we have $275,000 as its total cash valuation. At the Alice mine is an extracted reserve of 4,000 tons, which, at $40 per ton, is worth $160,000. On many other mines of the district many hundreds of tons of high and low grade ore have accumulated, and the most conservative statistician would not estimate the value of the unworked ore extracted during the past year at less than $600,000."

The production of gold and silver in Montana during the year 1880, as reported to the Census Bureau, by counties was as follows:

Counties.	*Quartz Gold.*	*Silver.*	*Total Gold and Silver.*
Beaverhead	$19,750	$729,338	$749,088
Deer Lodge	341,930	2,065,980	2,407,910
Jefferson	56,403	75,892	132,295
Lewis and Clarke	131,500	25,281	156,781
Madison	93,278	378	93,656
Scattered placer mines	1,162,966	....	1,162,906
Total	$1,805,767	$2,896,869	$4,702,636

Mr. R. B. Harrison furnishes the following summary of his estimate of the gold and silver products in Montana for the year 1881:

Beaverhead	$950,000
Deer Lodge	850,000
Gallatin	50,000
Jefferson	225,000
Lewis and Clarke	500,000
Madison	450,000
Meagher	100,000
Missoula	100,000
Silver Bow	2,825,000
Total	$6,050,000

of which about $2,700,000 is gold.

This doubtless embraces the value of the base metals (lead and copper) contained, and for this reason, as well as those previously given, the amount should be reduced to that already stated, $4,960,000, of which $2,330,000 is gold and $2,630,000 is silver.

UTAH.

As early as 1863 discoveries were made in Utah of lead and copper ores of varying richness in gold and silver. The refractory nature of the vein matter for the ordinary and cheaper methods of treatment, the cost of transportation, the opposition to an immigration of a mining population by the self-constituted authorities, and, above all, the almost endless contests in the courts over mining property, discouraged investments of capital and retarded the development of the mines, and it was not until 1870 that operations commenced. In every county, and in the full extent of the mountains from the northern to the extreme southern limits of the Territory mines have been found. Many are but little worked, and some have been entirely abandoned; but with the increase of facilities for transporting and reducing ores their full development is but a question of time. At present the principal productive districts are at Park City, Cottonwood, American Fork, Sandy, Bingham, Tintic, Stockton, Frisco, and Silver Reef. At Sandy, in Salt Lake county, the large smelting and reduction works absorb most of the ore from mines accessible to that point by rail. New reduction works are being erected elsewhere; mills have been constructed, the development of the principal mines is vigorously conducted, and the prospect of future output of bullion from Utah is of the most promising character.

Washington County.—The mines worked in Washington county occur in sandstone, which seems to render necessary a revision of the received opinion that the precious metals, or silver at least, do not exist in sedimentary rocks. Mining began at Silver Reef in February, 1877. The output that year was $480,665; for 1878 it was $1,141,911; in 1879, 1,114,753. Since then it has been less on account of most of the mines changing ownership, and, later, from a strike on the part of the miners against a reduction of wages. There are four companies having mills, viz., the Darbee & Walker, the Stormont, the Christie, and the Leeds. These companies practically own all the mines, and all the ores mined in the county go through their mills. The total product of the mills of Silver Reef during the fiscal year 1881 was $798,200. The product for the last six months of the calendar year was $550,516, more than double what it was during the first six months, and for the whole year, $794,343.

Beaver County.—The production of Beaver county for the year 1880 was reported to the Census Bureau by districts as follows:

District.	*Gold Quartz.*	*Silver.*	*Gold and Silver.*
Bradshaw	$9,180	$38,383	$47,563
San Francisco	....	637,089	637,089
Star			
Total	$9,180	$675,472	$684,652

Juab County.—Two mills are in operation in this county, the Mammoth and that of the Tintic Mining and Milling Company. Prospecting is dull in Tintic, but will probably soon be stimulated by the introduction of the Swansea process, so as to get the copper, which is a valuable constituent in most of the ores of this region, and save a larger percentage of gold and silver. The precious metals, copper, and base metals are so combined in these ores that it is a great waste to mill them, as by this process alone all the copper and about half the gold and silver are lost. The Salt Lake and Western Railroad has been graded from Lehi, on the Utah Central, to and through the district as far as Tanner's Springs, and is being ironed as rapidly as possible. It is in contemplation to carry this road through the mining districts of Western Utah and of Nevada, by way of Silver Peak and the Big Trees, to Santa Cruz and San Francisco. The production of Juab county was reported to the Census Bureau by districts for the year 1880 as follows: In Tintic district—

Gold quartz	$60,238
Silver	11,200
Total	$71,438

Salt Lake County.—All the mines of Salt Lake county, except the gold mines of Bingham, ship their ores to the smelters at Sandy, in Jordan Valley, which divides the two ranges of mountains, twelve miles south of Salt Lake City. Some of the ore, however, is bought, after sampling, by agents of the Omaha Smelting Works, and of Selby & Co., of San Francisco, probably for its fluxing qualities.

The ores shipped to Omaha during the fiscal year contained $8,900 of silver, making the total output of Salt Lake county for that period $108,408 in gold and $1,164,634 in silver. During the succeeding six months to December 31, 1881, about 700 tons of lead ore were shipped to Omaha and San Francisco, which contained an average of fifteen ounces of silver per ton, equaling $13,545. The production of Salt Lake county by districts was reported to the Census Bureau for the year 1880 as follows:

District.	*Gold.*	*Silver.*	*Gold and Silver.*
West Mountain, placer	$116,329	$6,309	$122,638
West Mountain district, quartz	20,000	....	20,000
Total	$136,329	$6,309	$142,638

Toole County.—The production of Toole county for the year 1880 was reported to the Census Bureau by districts as follows:

District.	*Silver.*
Camp Floyd	$7,500
Ophir	1,001
Total	$8,501

Summit County.—Nearly the entire product of Summit county for 1881 must be credited to the Ontario Company, the Marsac mill and Park City smelter having been idle for the last half of the year; the Park City smelter has but one stack, and as its sources of supply were exhausted on account of litigation, it did not run long. The Ontario is in a condition to produce more ore than can be reduced by the present milling facilities, and a forty-stamp mill is to be erected. It is now sinking a new working shaft and putting in a Cornish pump of great capacity. Sinking with the aid of the windlass will be discontinued, and the work carried on by the pump-hoist engine until the heavy machinery is in position. In the second shaft, the vein at the 700-foot level has been run on upwards of 500 feet, all the way in ore, and the vein has been cut on the 800-foot level and reports 240-ounce ore, of two and a half feet thickness. Of projected developments, the Salt Lake City *Herald* says: "A tunnel is being run from the Ontario mill to the mines, a distance of 6,000 feet, which is intended to tap the main shaft of the mine at the 600-foot level. The object of the tunnel is to draw off the water from the mine, which will save the pumping 600 feet from all above and on the line of the tunnel. The shaft is down some 800 feet; therefore, instead of having to pump the water this distance, it will be necessary to pump it only 200 feet. In addition to running off the water it will be used for other puposes. Cars drawn by horses will be run in it to carry ore to the mill." During the fiscal year the Ontario produced $2,443,455 in silver. This mine has produced, to December 31, 1881, $9,356,290 worth of silver, valued in gold at the selling price of silver from month to month as taken out. It has paid 72 consecutive dividends, aggregating $3,925,000. The following exhibits in detail the product of this great mine, embracing that of the mine before the company had its own mill:

Date.	*No. of Bars.*	*Sold for Gold.*	*Total.*

			$9,356,290 02

During March and April, 1880, the mill was closed on account of repairs of an important character being made.

The production of Summit county for the year 1880 was reported to the Census Bureau as follows: Uinta district, $1,353,243, silver.

Production of Gold and Silver from the Mines of Utah from July 1 to December 31, 1880.

RECAPITULATION.

2,645,373 pounds refined lead, at 5½ cents per pound	$145,495 51
42,191,627 pounds unrefined lead, at $50 per ton	1,054,790 67
5,400,191 ounces silver, at $1.11	5,994,212 01
7,958 ounces gold, at $20	159,160 00
Total	$7,353,658 19

The above includes the ores received from Idaho, Montana, and Nevada, aggregating 3,969,440 pounds of lead, 441,846 ounces of silver, and 976 ounces of gold. Computing the gold and silver at the mint valuation, and lead at its value at the seaboard, it would increase the value of the product to $9,401,475.56.

Production of Utah, by Counties, during the calendar year 1881.

COLORADO.

THE assayer in charge of the Denver mint, H. Silver, Esq., obtained and forwarded a large amount of valuable and comprehensive statistical information in regard to the production of Colorado during the year, accompanied by an able sketch of the condition of mining in the several counties, prepared by Mr. Frank Hall, of Denver, who has given much attention to the condition of the mining interests of the State. The local press, as might be expected, in their daily and weekly issues not only record the history of mining in their own localities, but publish annual reviews and summaries of mining progress during the year. Mr. Silver also obtained returns from bankers and transportation companies, and from mine officers and owners, which, though not embracing all, have been found of considerable value in ascertaining the production of different counties. From these sources and personal observation, and by a comparison of these data with other information received, a detailed review of the progress of mining for the precious metals, and the production of the different counties in Colorado during the year, has been prepared at this office. The bullion production of Colorado has increased slightly over the yield of previous years, and still exceeds that of any other State or Territory. The total production of the State for the calendar year 1881 was $3,300,000 gold and $17,160,000 silver, which, from a careful comparison of the returns received at this office and estimates of those engaged in collecting statistics, appear to have been produced by the different counties as follows:

Production of Precious Metals in Colorado for the year 1881.

Counties.	*Gold.*	*Silver.*	*Total.*
Boulder	$200,000	$350,000	$550,000
Chaffee	50,000	165,000	215,000
Clear Creek	200,000	2,000,000	2,200,000
Custer	100,000	700,000	800,000
Dolores	5,000	90,000	95,000
Fremont	....	15,000	15,000
Gilpin	1,850,000	260,000	2,110,000
Gunnison	10,000	400,000	410,000
Hinsdale	10,000	160,000	170,000
Lake	300,000	10,300,000	10,600,000
La Plata	5,000	10,000	15,000
Ouray	70,000	135,000	205,000
Park	50,000	350,000	400,000
Pitkin	100,000	30,000	130,000
Rio Grande	290,000	10,000	300,000
Routt	20,000	....	20,000
Saguache	....	40,000	40,000
San Juan	5,000	25,000	30,000
Summit	35,000	2,120,000	2,155,000
Total	$3,300,000	$17,160,000	$20,460,000

The table presents many changes from the production of localities, as published for the previous year, although the total production of the State was but slightly changed. Several of the counties seem to have reached their maximum. The yield of Lake county is about $2,000,000 less than that of 1880. Many mines in other counties have, however, become producers, and hundreds of mines are scattered through the State which contain ore in quantity and character fully justifying its shipment and treatment as soon as cheaper and more expeditious facilities for that purpose are furnished. The yield of Gilpin, the principal gold-producing county, has slightly fallen off, on account of some of the old mines having been idle, but this has been compensated for by Rio Grande county, which is rapidly developing into a gold producer. In Summit county rich discoveries have been made in all quarters, and it promises to become one of the best mining sections of the State. The Gunnison and San Juan countries are rich in mineral, and with better shipping facilities, which will soon be accorded, the output of bullion will rapidly increase. Mining in Colorado has not been unsuccessful nor unprofitable. While much of the work done has made no great returns to individual operators, hundreds of good lodes have steadily been undergoing development, and the labor and money expended during the past year will bring their fruits in the future. In addition to the profits earned by individual enterprise, of which we have no record, and the improved condition of the mines, nearly three million dollars were paid in dividends. The *Rocky Mountain Review* publishes the dividends of seventeen mining companies in Colorado for 1881, which disbursed in the aggregate $2,951,750. The dividends were paid as follows:

	Dividends.	*Amount.*
Bonanza Development Company	4	$135,000
Catalpa	3	180,000
Chrysolite	5	500,000
Dunkin	6	110,000
Evening Star	18	475,000
Gem	.....	3,750
Glass Pendery	1	25,000
Hibernia	5	160,000
Iron Silver	4	500,000
Leadville Consolidated	.....	20,000
La Plata	12	195,000
Morning Star	1	50,000
Moore M. S. Company	.....	36,000
Polonia	1	12,000
Robert E. Lee	1	50,000
Robinson	9	450,000
Silver King	1	50,000
Total	71	$2,951,750

On the Catalpa, Dunkin, Glass Pendery, Hibernia, Polonia, and Robert E. Lee dividends were paid in the first half of the year, and none paid since June. The Evening Star and La Plata paid dividends regularly during the whole year. The Chrysolite, Morning Star, and Silver King paid dividends during the latter half of the year.

The first dividend of the year of the Robinson Consolidated was paid in June, and the last in November. The Iron Silver paid its first dividend for the year in June, and in December its fourth.

Boulder County.—This county, in addition to its well-earned reputation as the agricultural garden of the State, possesses some of the most extraordinary mines. Beginning at the east line, twelve miles from the foothills, we find the immense coal measures opened at Northrop and Canfield, which have furnished Denver, Boulder, and Golden with fuel from the date of their settlement, and supplied the railways for steam purposes since their construction. The State geologist (Prof. J. Alden Smith), in his last report, says of them: "They are lignitic, very dense, generally of a jet-black color, high luster, and wholly destitute of fibrous or woody structure, far superior to most lignites, and quite equal for most purposes to the best Pennsylvania coals. Their specific gravity varies from 1·28 to 1·40, averaging about 1·23. They are also remarkably free from sulphur, the quantity rarely reaching 1 per cent. and generally falling below 0·4 per cent. The quantity of ash, too, is very low, ranging between 2 and 7 per cent., averaging about 5½. Their heating power is very high, ignite readily, burn freely, and are largely used for domestic purposes and for making steam. They are used also in the manufacture of illuminating gas, roasting pyritous ores, blacksmithing, and to a limited extent in smelting." None of them are reduced to coke, because not well adapted for use in that form. The same quality is found in nearly all quarters of that division of the county which extends from the base of the mountains eastward. This section is already accommodated by six different railways, and several others are projected. In no other county of the State is lode mining carried on so near the open plains. The first fissures occur about two miles west of the town of Boulder, those nearest the valley carrying a fair percentage of copper and some silver. A little farther up, at an altitude of 8,000 feet, are the famous telluride veins, the largest and richest in the world. "Auriferous and argentiferous telluride ores were found here in quantity for the third time in the world's history, and in greater abundance than ever previously known. I may safely assert that a single mine in Boulder county has produced more tellurium, had it been reduced and saved, than any ten of the other mines of the world combined. Hundreds of tons of ore have been shipped to smelting works that would have yielded from 5 to 10 per cent. of tellurium, and thousands of tons containing from 1 to 3 per cent. Pieces of several pounds' weight may be selected which contain 75 per cent., and it is no uncommon thing to find masses containing from 15 to 25 per cent.

"As an illustration of the richness of these ores, it may be stated that the assay value of the first-class ores from the American mine varied from $2,000 to $12,000 per ton in bulk, the average being about $4,500. The second-class yielded about $800, and third quality $200 per ton. The largest number of the productive lodes are in granite, gneiss, several are in mica schist, and but two thus far opened are between porphyry and granite."

The *News and Courier* gives the following as the product of the Boulder county mines for 1881:

Caribou silver bricks shipped through the express office at Boulder	$227,982 88
Ore purchased by the Boston and Colorado Sampling Works	100,000 00
Ore purchased by the Golden Company Sampling Works	60,000 00
Ore and base bullion shipped to other parts via C. C. Railroad.	60,000 00
Retorts shipped by Ni Wot mine to Denver	40,000 00
Gold retorts and dust shipped through banks	37,500 00
Considerable gulch gold has been produced and carried out of the county by individuals, say	10,000 00
Total net product	$535,482 88

The general average of ore produced is $126.66 per ton. The above estimate is made principally from the books of express offices, sampling works, and banks, and as they are in round numbers, the probability is that they are somewhat under the actual amounts. The following mills and mines of Boulder county have returned reports of production, viz.: Church & Co., Clark & Johnson, Jones & Smith, Phillips & Wood, Caribou Consolidated Company, Golden Age, Columbus, Friburg, Gray Copper and Vanchus, Magnolia, Prussian, Yellow Pine, Ajax, Ivers Phillips, Sugar Loaf, Wood & Germain.

I estimate that the production of Boulder county during 1881 was $200,000 in gold and $350,000 in silver; a total of $550,000.

Chaffee County.—This county was created by a division of Lake county, by legislative enactment in 1879, with Buena Vista as a principal center of traffic, and the county seat. The latter point is thirty-five miles south of Leadville, one hundred and thirty-five miles west of Denver, and one hundred and twenty miles north of Pueblo, and is in the midst of a very fair agricultural section. Water for irrigation is obtained from Cottonwood creek on one side, and from the Arkansas river on the other. Owing to the discovery of valuable mines of gold, silver, and iron in the neighboring mountains, numerous small towns or camps have been established, and most of them are in a flourishing condition. Granite district, in the northern part of the county, and east of the Arkansas river, is one of the oldest mining districts in the State. The ore from the lodes was at first free gold bearing, but as depth was attained sulphuret of iron, with some copper and lead, made their appearance, and it became too refractory for the ordinary mill process. Suitable works for treatment of the ore have not yet been erected, and a large amount of mineral is now lying on the dumps awaiting the advent of an adequate process for reduction.

The Yankee Blade is the best developed mine, and is opened by three shafts 265, 70, and 140 feet respectively. The 100-foot level has been driven from the main shaft 280 feet, and the 200-foot level 185 feet. The Robert George, O. K., Massachusetts, Washington, Mamie, Jessie Johnson, Belle of Joplin, Alta, Hattie Jane, Santa Claus, Yosemite, Solex Tiyee, Free Gold, California, Base Range, Rocky Bar, Dana, Little Troy, Atlanta, Jack Rabbit, Trafalgar, Carbonate, Hudoo, and Hancock, are all opened by shafts or tunnels of from twenty-five feet to 100 feet. The veins are generally well defined and vary from one to three feet in width.

Many large and rich mineral veins which during the year were being merely developed, will soon produce and work considerable ore, and the yield of the county for the next near will doubtless exhibit an increase. The following mills and mines of Chaffee county have returned reports of production, viz.: Dry Placer Amalgamating Company, Columbus, Gaff, Monarch, Lake County Placer, Black Tiger. The production of the precious metals in this county in 1881 was $50,000 in gold and $165,000 in silver.

Clear Creek County.—The principal centers of mining in this county are Georgetown, Empire, Lawson's, Spanish Bar, and Idaho Springs. The yield for 1881 was $2,200,000, or about $450,000 less than for 1880, owing to the large amount of "dead work" performed in opening the principal lodes. Much of the shortage was owing to harassing litigation, which is always seriously detrimental to production. It is well understood that this is the oldest silver-mining section of the Rocky Mountains, having a greater number of mines well opened, and yielding a larger percentage of high-grade ore. While a majority of the veins are narrow in comparison with those of Gilpin, its nearest neighbor; the contained mineral, as a whole, is extremely valuable; they are easily worked, and many of them have been penetrated to great depths by shafts and tunnels. At Georgetown, the county seat, there are several sampling mills, one concentrating establishment, and one in which the ores are reduced to bullion. The major part are, however, shipped to Golden, Denver, and Pueblo for reduction by smelting. The mountains being very steep are admirably suited for deep tunneling. The middle and lower portions of the county have been unusually active for a year or two past. The mines about Idaho Springs, Freeland, Chicago Creek, and Spanish Bar have been more extensively developed than in any former season. Idaho Springs is becoming quite a brisk milling center as well as a popular health resort.

But little placer mining was done on Clear creek or elsewhere in the county, and the total product of individual operators would not exceed $5,000. The following mills and mines of Clear creek county have returned reports of production, viz.: Farwell Reduction Works, Clear Creek County Reduction Works, Washington Stamp Mill, Baxter, Colorado Central Consolidated, Colorado Diamond Tunnel Company, Dunadin, Equator, Frostburg, Hukill, Lincoln, Mendota, Pay-Rock Consolidated, Red Elephant, Stevens, Pelican, Dives, Cincinnati Consolidated, Hercules and Roe, Dunderberg, Good Luck, Horn and Errickson, Silver Plume Consolidated, Equitable, R. Orchard Old, Tunnel Silver. Of the total production, $200,000 was gold and $2,000,000 silver. The following estimate of the production of Clear creek county is taken from the local press:

Bought by Georgetown Mills	$1,564,978 60
Bought by Moore & Golden Smelting Works direct from miners	109,666 00
Product of Hukill, Freeland, and mines near Idaho Springs, not included in above	474,823 71
Geneva district	30,000 00
Dumont and Empire	14,000 00
Bought by A. P. Stevens, Lawson	10,000 00
Free gold bought by Bank of Idaho Springs	1,461 93
Total	$2,204,930 34

It has been impossible to separate the value of the different metals, as an aggregate is the only account kept by most of the sampling mills, but it probably will not vary much from 86 per cent. silver, 7 per cent. gold, 4 per cent. lead, and 3 per cent. copper, or, in round figures, about as follows:

Silver	$1,904,930 34
Gold	150,000 00
Lead	90,000 00
Copper	60,000 00
Total	$2,204,930 34

Custer County.—The first discoveries of paying mineral in this county occurred near Rosita. The largest yields have been obtained from the Bassick, at Querida, and the Humboldt, Pocahontas, and Leavenworth, at Rosita. Several others, the Virginia, Leviathan, Polonia, Ben Franklin, First Chance, and Silver King, have produced considerable amounts of marketable ore. Unquestionably the Bassick is, for the present, the greatest mine in all that region of country; but as it is under the control of a company which has managed thus far to keep its own secrets from the public, no one can obtain any information of its transactions. This much may be asserted, however, that the yields are neither so large nor the ores valuable as reported by the press. What has been produced during the past year is only a matter of conjecture, but it is not far from $400,000. Other prominent properties in the intermediate vicinity of Querida are the Hector, Midnight, Poorman, Ophir, and Copper Bottom No. 1. Of Custer county's production of gold, silver, and copper during the ensuing ten years, fully three-fourths will probably be produced within a circle four miles in diameter, of which Querida is the central point. Silver Cliff is the largest settlement in the county, and contains from 2,500 to 3,000 people. All of the mines which created its prestige as a thrifty center are idle. The mills of the Racine Boy, Plata Verde, and Bull Domingo, as well as the mines, are idle, and have been so for the greater part of the year. The mill of the Racine Boy is one of the largest and finest in the State. There is no doubt that these mines and mills, placed under honest, judicious, and careful direction, would soon become very productive and profitable. The ores are there in apparently illimitable quantities, and, though not largely of the class known as high grade, are still sufficiently valuable to give handsome returns under wise management. Other properties in the vicinity have been worked steadily, however, during the year. The Boulder and Buffalo Hunter Company is erecting a 100-ton mill, and the Duryee Furnace Company has completed a fifty-ton furnace nearer town. Should these new establishments be able to treat the peculiar ores of that locality, and should the corporations which hold the better properties come to an agreement, it is probable that the county of Custer will again resume its position as one of the important mining communities of the State. A few of the properties on which the most has been accomplished in the way of systematic development, are named below: Humboldt, 1,800 feet; Victoria, 625; California, 350; La Crosse, 310; Schoolfield, 120; Good Hope, 130; Fiskdale, 200; Peerless, 50; Belle of the Gulch, 225; Silver Run, 200; Copper Bottom, 150; Empire Tunnel, 350; Song Bird, 200; First Iowa, 100; Denver, 150; Zoo, 100; Iron Mountain, 260; Butterworth, 50; Hunter, 50; Brittle Silver, 65; Del Norte, 50; Silver Horn, 250; Eureka, 200; and Black Hawk, 65. The following mines reported production: Lucille Consolidated, Twenty-Six, Lady Franklin. I estimate the production during 1881 to have been $100,000 in gold and $700,000 silver; a total of $800,000. The following from the Silver Cliff *Mining Gazette* gives the total yield of the mines of Custer county up to January 1, 1881:

SILVER CLIFF SMELTING ORES.*	
Bull Domingo	$290,000
Milkmaid	
Silver King	1,000
Zoo	256
Del Monte	2,000
MILLING ORES.	
Silver Cliff Company	375,000
Plata Verde	2,500
Horn Silver	15,000
Buffalo Hunter	2,600
Boulder	
Hecla	5,000
Vanderbilt	20,000
Julian	2,000
Song Bird	6,000
Kate	1,600
Lone Star	2,000
Sitting Bull	
Total	$724,956
ROSITA SMELTING ORES.†	
Bassick	$500,000
Humboldt	335,000
Pocahontas	317,477
Leavenworth	120,000
Invincible	
Lucille	11,900
Polonia	$36,000
Twenty-Six	2,000
Horton	1,600
First Chance	3,000
Silver King	1,000
Ophir	
Ben Franklin	10,500
Silver Coin	1,000
East Leviathan	8,000
Virginia	8,548
Total	$1,366,025

* Founded in 1879. † Founded in 1871.

Dolores County.—This county, having Rico for its principal center, was set off from Ouray county, by act of the general assembly, in 1880. For some time past, the mines of that locality have attracted much attention because of their extent and value. It is estimated that fully two-thirds of the veins thus far discovered are true fissures, cropping out through alternate layers of eruptive and sedimentary rocks, porphyry, lime, and sandstone. The remainder are contact veins between porphyry and lime. The fissures are very large, containing almost every variety of mineral, gold, silver, copper, iron, lead, antimonial silver, heavy and calc spar, etc. In some of these, as well as in the contact veins, carbonate of lead is found in great abundance. The district was discovered and prospected late in the autumn of 1879, but the winter coming on so early, and with unusual severity, little could be done until the following spring, when prospecting was resumed and carried on quite extensively, until October, 1880, when another severe winter put a stop to out-door operations. By this time, however, a considerable settlement had been formed, and the basis of active development firmly established. Near Rico is the Newman group, probably the best developed mines of the county. It comprises the Newman, Chestnut, Swansea, Swansea Extension, Stephens, Parsons, Tip Top, and Ocean Wave properties. The main ore chute lies in the Chestnut, Newman, Swansea, Swansea Extension, and Stephens lodes. These mines lie adjacent to each other, on Dolores Mountain, about half a mile from the town. Permeating all is a great contact vein, containing a pay-streak from two to eight feet thick, cropping out in an abrupt bluff like an immense coal deposit. Below this great contact vein, and cutting vertically through the stratification, are five large fissure veins.

The production of Dolores county during the last year, I estimate to have been $5,000 in gold and $90,000 in silver. This comparative meager yield is no discredit to a rich section of the State, when it is considered that, until the latter part of the year, the railroad was one hundred and seventy-five miles distant, and to reach it, high ranges had to be crossed, and ore packed on jacks the greater part of the way By next season the railway will be completed to Rico, and during the year the developments will, probably be of such character as will insure a large yield of bullion. The following mines of Dolores county have returned reports of production, viz., Puzzle Extension, Grand View Smelter.

Fremont County.—This county is chiefly famous for its magnificent coal mines, from which nearly all Southern Colorado and the Rio Grande Railway have been supplied for years. It is a superior lignite, much denser, more durable, and giving out greater heat than those of the northern division of the State. Mixed with those found at Trinidad in equal parts, it is used for the manufacture of illuminating gas, and for smelting gold and silver ores at Denver, Pueblo, and Golden. It is estimated that the coal product for the year was about 200,000 tons. But two silver mines were operated at a profit in the county during 1881. A large number of claims have been located in this vicinity. But little work, however, has been done upon any of them. The sales of ore for the year, as reported by the superintendents, are as follows:

From the Gem mine	$12,493 50
From the Cetopaxi mine	2,042 00
Total	$14,535 50

Gilpin County.—Gilpin county, situated on the eastern slope of the Rocky Mountains, is the oldest gold producing section of the State. The veins are true fissure, varying in width from two to fifteen feet, averaging from three to four feet, and containing in some instances free milling ore, while in others it is refractory and best treated by the smelting process. The bullion returns of Gilpin county for 1881 were less than those of the previous year, owing to the temporary suspension of work on some of the greatest and most productive mines. Various causes led to this result, one of which was the necessity of providing much heavier machinery for raising ore and water from the great depths attained. None of these properties were closed because of insufficient paying ore. Among the number were the Kent County, California, and New York and Colorado, all having large reserves of good ore in their lower workings at the time of suspension. The Kent county has resumed operations, and is doing well, and before the middle of the present year it is expected that the others will be again in full blast. The merchants and other business men of Black Hawk, Central, and Nevada have been operating many mines in that section the past two years under the co-operative plan. They take an abandoned mine, which has a good record so far as developed, and by sinking and drifting upon new ore bodies, each member of the syndicate paying his just proportion of the expense, until the mine becomes profitable, and then sharing the gains. Notwithstanding the temporary depression incident to the causes mentioned, Gilpin is one of the strongest mining districts on the continent. All the better systems of mining and milling ore are in full operation there. There are in the county twenty-six stamp mills, with a total of 972 stamps, as follows:

	Stamps.
Waterman, Eureka Gulch	20
Mackey, Nevadaville	37
Consolidated Kansas, Nevadaville	52
Whitcomb Mill Company	25
Kip & Buell, Central	60
United Gregory, Central	50
New York and Colorado Company	40
Bobtail Mining Company, Black Hawk	125
Empire, Black Hawk	25
Kimber, Black Hawk	35
Bostwick	25
Fullerton, Black Hawk	40
Midas Mining Company, Black Hawk	20
Hidden Treasure	50
Fullerton, upper mill	37
Arrighi	10
Wheeler	25
Gregory	50
New York	75
Randolph	50
Cashier	35
Rollins	16
Golden Flint	15
Harkaway	10
Republic	25
Miner's Reduction Company	20
Total number of stamps	972

Of the above the following have been running during the year, the majority being custom mills, or run by lessees of mines, viz.:

	Stamps.
Consolidated Kansas, Nevada	20
United Gregory, Central	50
Bobtail Mining Company	125
Kimber	35
Fullerton	40
Hidden Treasure	20
New York	50
Randolph	50
Cashier	25
Empire	25
Total	440

In addition to the ores reduced in the county, the following amounts were produced from ores shipped to other points:

Smelting Works.	*Gold.*	*Silver.*	*Total.*
Moore	$117,650	$76,432	$194,082
Boston and Colorado	398,000	76,000	474,000
Golden	144,066	58,524	202,590
Miners	58,833	11,734	70,567
Pueblo (estimated)	....	....	35,000
Omaha	....	....	63,500
Miscellaneous (estimated)	....	....	125,000
Total			$1,164,739

The shipments by express from Central City, during 1881, were as follows:

For six months ending June 30	$495,425
For six months ending December 31	426,550
Total	$921,975

The following mills and mines of Gilpin county have returned reports of production, viz.: Briggs Consolidated, Empire, Gregory, Kansas Consolidated, New York, Randolph & Co., United Gregory, Whitcomb, Mead, Arrighi, Cashier, Quartz Hill, Bobtail Consolidated, Fullerton, Kimber, New York & Colorado, Rollins, Stanley and California, Humphrey Dressing Works, Ashtabula, Boss, Bull of the Woods, California, Carr, Clifford, East Flack, Forget-me-not, Gettysburg, Grizzly, Hard Money, Jones, Keystone, King of the Ranch, La Crosse, Nottaway, Perigo, Pleasant View, Prize, Rhoderick Dhu, Star of the Mountains, Susquehanna, Toronto, Wyandotte Consolidated, Cyclop, Friebergh, James Henry, Mary Graham, Ayres, Gunuell, Valley View, Albro & Knight, American Flag, Bates, Arctic, Champion, Decanter, Dripps, Jones & Co., Fanny Lyseer, Narragansett, Linden Castle, Little Gettysburg, Register Call, Roberts Bros., Wheeler Tunnel, Wyomad, Bass, Burroughs, A. G. Derby, Gilpin County, Kansas, Lewis, Midas, Roberts Bros., Saratoga, Saint Louis, Stevens & Devor. The total production of the county during 1881 was $2,110,000, of which $1,850,000 was gold and $260,000 silver.

The *Rocky Mountain Mining Review* publishes the following estimate of the production of bullion in Gilpin county for the past nine years:

1872	$1,389,289
1873	1,530,009
1874	1,631,863
1875	1,763,985
1876	2,240,000
1877	2,203,037
1878	2,257,000
1879	2,431,291
1880	2,680,090
1881 (estimated)	2,700,000

"From 1859 to 1878 gold only was found, but since the latter date many discoveries of rich silver lodes have been made, which are now being opened up and gotten into shape to output large quantities of silver in the near future. With the aid of these silver mines and the increasing richness of the gold lodes, Gilpin county's output must constantly increase for many years to come.

"The ore is found in true fissure veins, which increase in richness as depth is attained, and make deep mining profitable in this section. Extensive enterprises are being undertaken, and money for development work is to be had in any quantity desired. New claims are being located constantly. Six hundred and thirty-one lodes were put on record in 1880, and from January 1 to November 1 of the present year 421 different lodes have been recorded."

Grand County.—Placer mines have been worked in Grand county to a limited extent for a number of years. The first ones opened were on Willow Creek in the northern part of Middle Park. The ground is quite rich, but the gold is very fine and hard to save, and the alluvial deposits are deep, so that larger capital and greater skill are required to work them successfully than have ever yet been employed. The next placers opened were in the western edge of North Park, where there is a large extent of very rich ground. Some of it is shallow to bed-rock and has been worked profitably in a small way, but much the largest portion is composed of deep gravel beds that require extensive and costly work. There are also some small rich placers along Muddy river, in the northwestern edge of Middle Park. Within the last few years an extensive belt of gold and silver bearing veins was discovered in what is known as the *Rabbitt Ear district*, which is located in the Rabbitt Ear range, Middle Park, and, with the exception of one crude wagon-road across Berthoud Pass, almost completely isolated from the chief towns of the State. Mining has been carried on there some years by a small band of men who cling to their faith in its future with desperate tenacity. There are no markets nearer than Georgetown, and to reach them a high range, almost impassable six or eight months in the year, must be crossed. The most noted and probably the finest mine in the district is the Wolverine, which has been under active development for about two years. Large bodies of mineral are reported in the various levels, left standing to await the erection of reduction works on the ground, and thus save the heavy expense of transportation to distant markets. Perhaps a dozen other mines have been fairly opened, and their character demonstrated. Owing to the absence of mills or smelters, the owners can only hold on until the march of events brings the needed relief. One or two lines of railway are being constructed from Denver westward across the mountains, and will ultimately bring about the desired connection with the Rabbitt Ear district. Large veins of albertite or cannel coal, equal to that of Nova Scotia, and some bituminous veins, are found near the mines above referred to. None of these have been opened beyond mere surface prospecting.

Gunnison County.—This county in its original boundaries was large enough for a State. It was given organization and a name by legislative authority in 1877, at which time it became the scene of considerable excitement through the discovery of valuable mines of gold and silver. People rushed in by thousands from all parts of the State and of the United States during this and the ensuing two years. A large number of districts were settled upon the mineral belts as fast as discovered, most of which have been maintained to the present time. Very little development of the mines occurred, however, until 1881, from the lack of skill and their distance from supply points and ore markets. In the autumn of that year, the Denver and Rio Grande Railway was completed to Gunnison, and later to Crested Buttes, a few miles from Ruby camp, the present limit of settlement in that direction. Immediately beyond Ruby lies the vast region recently occupied by the Ute Indians, which remains to be carefully explored for mineral treasures. The most productive camp in the county is known as Tin Cup. Its practical development began in the summer of 1880, after a long and very severe winter, in which the whole county was literally buried in snow. The season was quite short, as the snows of 1880–'81 began the following October—only sufficient to prove that valuable mines existed. During 1881, however, practical results were achieved in the form of highly creditable yields of bullion. Two smelters have been erected, one by the Virginia City Mining and Smelting Company, and the other by the Willow Creek Reduction Company. The two have a capacity of about 50 tons per day. Both will be enlarged this year to meet the increased supply of ore from the mines. About 3,000 mineral locations have been made in this district since January, 1879, though only a small portion of these have been developed.

The following smelting works, mills, and mines of Gunnison county have returned reports of production, viz.: Virginia City, Avery, Bonanza, Drew, Green Mount, Iron Cap, Jimmy Mack, May Flower, Roaring Niagara, Standard, Terrible, Venango, Iron Bonnet, Ruby, Chiquita, Forest Queen, Lead Chief. The production of the county during 1881 was $10.000 in gold and $400,000 in silver.

Hinsdale County.—Hinsdale county comprises a portion of the San Juan country, rich in argentiferous minerals. Lake City is the county seat, and is situated in the valley of the Lake Fork of the Gunnison river. Although the mines are of exceeding richness, yet the distance from a market and the want of local facilities for the reduction of the ores have hitherto retarded their general development. The chief metallurgical works are those of the Crooke Mining and Smelting Company, situated three-fourths of a mile south of Lake City. The machinery is propelled by water-power derived from Granite Falls, in the channel of the Lake Fork; the production for 1881 was 600 tons lead and 75,000 ounces of silver. The Polar Star, Ute, and Ule mines have, up to the present time, almost entirely supplied Crooke's works to their full capacity, which have been periodically enlarged to meet the extension of operations on the mines. The Ule mine now has the deepest shaft in the county, and it has passed below the normal water-level of the country, with a great increase in the value of the ore. It is situated four miles west of Lake City. These mines supply ore to the present capacity of the works, therefore there is no local market for the products of other mines tributary to Lake City. The following mills and mines of Hinsdale county have returned reports of production, viz.: Crooke & Co., Highland Mary, Ocean Wave, Ohio Consolidated. The production of the county during 1881 is estimated at $10,000 in gold and $160,000 in silver.

Huerfano County.—Huerfano county is one of the southern counties of the State, and was settled at an early day in the history of Colorado. Prospecting has been carried on in the mountains on the western borders of the county for several years, chiefly in the vicinity of the Spanish Peaks, Huerfano Park, and Ojo. On West Spanish Peak there is a group of lodes, comprising the Whale, Iowa, Nonpareil, Goss, Jeffries, Western Queen, Treasure, Monitor, Highland Lass, and Lincoln, which are controlled by the Whale Consolidated Gold and Silver Mining Company. These lodes are true fissures, containing carbonate and galena ores which assay from 100 to 200 ounces of silver to the ton, and carry a fair percentage of lead. The company is engaged in driving a tunnel to cut the veins. The work done is of good character, and the prospects for these becoming paying mines are very fair.

Lake County.—The mines of Leadville constitute Lake county, the leading bullion producer in the State. Some of the principal mines have been practically idle during a large part of the year, and in others the yield, from a variety of causes, has been materially lessened, but the total production has been maintained to an amount equaling that of the preceding year. Many mines which heretofore have been in process of development have become regular shippers of ore; new strikes have been made in properties which had been but moderately productive, and the reduced cost of treatment of the ores has permitted large amounts of low-grade mineral to be extracted and worked which formerly were allowed to remain in the mine or go to the waste dump. To give a full description of the many extensive and valuable mines of the county would be not only difficult, but in many cases impossible. In some instances the managements keep the workings and condition of their mines to themselves, or to a select few; but from the powerful influence exerted, not only upon the interests of the State but of the county at large, by the annual production of such amounts of silver bullion as have been yielded by Lake county, it would seem that the producing mines deserve more than a passing notice. The first discovery of carbonate ore was made in the spring of 1878, on Fryer Hill, which, with Yankee, Carbonate, Iron, and Breece Hills, contains the most noted mines of this section. Probably the most progressive mine on Fryer Hill is the Robert E. Lee, which dates back to March of 1879. Since that time the developments and yield have been continuous. The ore is of exceedingly high grade. At one time a mill test was made of the ore that was extracted by thirty men in a run of seventeen hours, which gave $118,500 as the result. During the last year much trouble was experienced from a large and excessive flow of water, and new and powerful pumping apparatus was erected, during which time operations were confined principally to the upper levels of the mine. Since the completion of the pump the workings from the shaft have been systematically opened in new and hitherto unexplored ground. Strikes of rich ore, varying from three to twelve feet, have been exposed in four drifts, and the sampling works are kept fully supplied with ore; the machinery at the mine consists of a large pumping engine of 105 horse-power, a 45-horse-power hoisting-engine at the new shaft, a 45-horse-power engine at the main shaft, and a 25-horse-power engine at the sampler, all run by steam generated in two large boilers at the new shaft.

The following smelting and reduction works and mines of Lake county have returned reports of production, viz.: American Company's, Billings & Eilers, Cummings & Finn, Eddy & James, Elgin Company's, Fohr & Bunson Bros., Harrison, R. W., Ohio and Missouri, Tabor, Taylor & Brunton, Grant Company, Harrison Smelting Works, La Plata, Shield's Mill and Mine, Dry Placer Amalgamating Company, Annie Consolidated, A. Y., Catalpa, Climax, Crescent, Dunkin, Highland Chief, Iowa Gulch, Iron Silver, Little Pittsburgh, Long and Derry, Matchless, Robert E. Lee, Small Hopes, Wolf Tone and Agassiz, Chrysolite, Consolidated Pigar, Denver City, Silver Cord, Carbonate Hill, Colorado Prince, Evening Star, Hennett, Hibernia Consolidated, Leadville Consolidated, Little Emma, Silver Wave, Artora, Big Pittsburgh, Dyer, Henrietta, Little Chief, Miner Boy, Morning Star Consolidated.

The following from the *Mining Index* shows the bullion product of the Leadville smelters and mills for the third quarter ended September 30, 1881:

"Below will be found the third quarterly bullion report of the Leadville district. The figures are very gratifying, showing an export of over three million of dollars, and an immense gain in the amount of ore on hand at the smelters. In calculating the commercial value of the product, silver is figured at $1.12 an ounce, and lead at five cents per pound.

"*J. B. Grant & Co.*—The smelting works of J. B. Grant

& Co., during the past quarter, shipped 2,440 tons of bullion, containing 188 ounces of silver to the ton. The entire shipment also contained gold to the value of about $2,000. Ounces of silver contained in shipment, 458,720; ounces of gold, 100; pounds of lead, 2,849,000. Value of silver, $513,766; value of gold, $2,000; value of lead, $242,450. The total valuation of product, $758,216. The works have about 7,500 tons of ore on hand.

"Grant & Co., at the present time, have only five furnaces in blast, but they are all of the largest patterns, and during the past month reduced 4,300 tons of ore. The grade of the ore is evidently improving somewhat, as the average of the bullion during the last month was about 240 ounces, but owing to the low grade in the previous two months the entire product is reduced considerably.

"*The La Plata.*—The La Plata has been running very steadily during July, August, and September, producing and shipping 3,561,500 pounds of bullion, containing 3,542,000 pounds of lead, and 280,050 ounces of silver. Value of silver, $313,656; value of lead, $177,100. Total, $490,756. The establishment has about 3,300 tons of ore on hand.

"*Billings & Eilers.*—Billings & Eilers, during the third quarter of the present year, produced 3,906,000 pounds of bullion, averaging 180 ounces in silver to the ton. Total ounces of silver in shipment, 355,180; pounds of lead, 3,882,000. Value of silver, $397,801; value of lead, $194.100. Total value of product, $591,901. Ore on hand, 5,000 tons.

"*The American.*—The American Smelting Works, during the last quarter, shipped 888 tons of bullion, containing an average of 153 ounces of silver and two and a half ounces of gold to the ton. The shipment contained a total of 135,864 ounces of silver, 2,220 ounces of gold, and 1,765,000 pounds of lead. Their value was as follows: Silver, $152,167; gold, $44,400, and lead, $88,250. Total, $284,817. Ore on hand, about 5,000 tons.

"At the American Smelting Works there are four furnaces in blast, and a fifth will be added within a fortnight. The establishment has met with good success in treating the Leadville ores, and in the near future will rank among the first in the camp.

"*Cummings & Finn.*—Cummings & Finn shipped during the last three months, 38,798 bars of bullion, weighing 3,903,153 pounds. The shipments contained 371,480 ounces of silver and 3,878,000 pounds of lead. Value of silver, $416,057; value of lead, $193,900. Total value of product and shipment, $609,957. Ore on hand, 5,250 tons.

"*The Harrison.*—The Harrison Reduction Works shipped 343,116 pounds of bullion, containing on an average eighty-six ounces in silver and six-tenths of an ounce in gold to the ton. Total ounces of silver contained in shipment, 14,749; ounces of gold, 103; pounds of lead, 342,106. Value of shipment, silver, $16,518; gold, $2,060; lead, $17,105. Total, $35,673. Ore on hand, 3,500 tons.

"The Harrison Reduction Works, during the preceding ninety days, have been engaged in enlarging and improving the establishment, and the product given above is the yield of only one furnace, which has been in blast since September 6. In a few days, however, another large furnace will be blown in, and erelong two more furnaces will be added. During the summer months this establishment has added two fifty or sixty ton furnaces, and rebuilt its old ones, giving it four splendid furnaces. A 60-horse-power engine has replaced the old engine in the smelter, and a large new stack and dust-chambers were also built. Back of the smelter, one of the most complete sampling mills to be found in the State has been erected, supplied with crushers, rolls, sampling mills, and other modern appliances for reducing and sampling ores.

"*Eddy, James & Co.*—Eddy, James & Co., during the same period, shipped 3,321 tons of ore, having an assay value of $194,041.

"*Aug. R. Meyer & Co.*—Aug. R. Meyer & Co. shipped 594¾ tons of ore, worth $41,234. The ore was all sent to the Kansas City Smelting and Refining Works.

"*The Miner Boy.*—The Miner Boy quartz mill has kept no record of the value of the bullion produced, shipping its silver and gold bricks direct to the company's headquarters in New York. The mill having treated, on an average, about nine tons a day, it would, in the past three months, have passed 810 tons of ore under the stamps. Out of this amount about $15,000 worth of silver and gold were secured. Of this 500 ounces were gold and the balance silver.

"*Taylor & Brunton.*—The stamp mill of Taylor and Brunton shipped seventy bars of silver, of an average weight of 1,136 ounces, aggregating 78,820 ounces, worth $89,062. The mill has about 2,000 tons of ore on hand.

"*Tabor Mill*—The Tabor Milling Company shipped twenty-seven bars, containing 32,212 ounces of silver, worth $36,078. The works were idle a large part of July, consequently the decreased showing.

"*The Shield's Mill.*—This mill, situated in Colorado Gulch, with the exception of the last few weeks, ran very regularly, and reports a total product for the past quarter of 14,438 ounces of silver, worth $16,500.

"The mill suspended work owing to one of the roasting cylinders becoming disabled. An additional cylinder has been ordered and is expected daily. The worn-out parts of the idle cylinder have been replaced, and in a short time the mill is expected to resume work with an increased capacity. The ore product of the district has also had an influence on the suspension of the mill, but it is estimated that hereafter abundant ore will be supplied. The manager has also experienced difficulty in securing teams to haul ore, and in making favorable road contracts, all of which has now been obviated.

"*Gulch Mines.*—The placer mines of the district are estimated to have yielded about 350 ounces of gold, valued at $7,000."

SUMMARY.

J. B. Grant & Co.		$758.216
Cummings & Finn's Smelter		609,957
Billings & Eilers's Smelter		591,901

Tabor Milling Company		36,078
Shield's Milling Company		16,500
Miner Boy quartz mill		15.000
Eddy, James & Co., ore buyers		194.041
Aug. R. Meyer Sampling Company		41,234
Placer mining		7,000
Total		$3,170,245
Pounds of bullion	18,369,767	
Pounds of lead	18,258,106	
Tons of ore	3,915¾	
Ounces of silver	1,746.013	
Ounces of gold	3,273	
Value of silver		1,956,600
Value of gold		65.460
Value of lead		912,900
Value of ore		235,270
Total		$3,170,245
Total first quarter		3,099,587
Total second quarter		3,419,670
Total		$9,689,502

The Leadville *Herald* publishes the following table showing the bullion product of the smelters of Leadville for the year 1881:

	First Quarter.	*Second Quarter.*	*Third Quarter.*	*Fourth Quarter.*	*Total for Year.*
The Grant Smelt. Co.	$759,502	$786,105	$758,216	$773,191	$3,077,014
La Plata Mining and Smelting Co.	484,920	604,383	490,756	380,472	1,960,531
American Mining and Smelting Co.	128.721	204,248	284,817	348 889	966,675
Utah sm'r, G. Billings	672,175	545,626	591,901	694,258	2,473,960
Harrison Reduc. Wks.	24,232	....	35,683	277,829	337,744
Eddy, James & Co	250,522	231,511	194,041	202,174	878,248
Aug. R. Meyer & Co.	46,500	49,114	41,234	948	137,796
Cummings & Finn	364,247	366,669	609,957	623,188	1,964,061
Taylor & Brunton	79,991	107,155	89,062	125,460	401,668
Tabor Milling Co.	39,000	47,250	36,078	30,109	152,437
Shield's mill	....	14,000	16,500	12,000	42,500
Colorado Prince mill.	30,000	11.000	15,000	10,000	66.000
California smelter	218,000	260,240	....	....	478,250
Oro stamp mill	....	4,000	....	....	4,000
Ohio and Missouri	....	160,692	....	....	160,692
Gulch mines	....	12,000	7,000	50,000	69.000
Total	$3,097,820	$3,403,993	$3.170,245	$3,498.518	$13,170,576

From this statement, the production for the first half of the year appears to have been $6,501,813. The Leadville *Circular* gives the product for the same period as follows:

SMELTER PRODUCT.

Months.	*Tons.*	*Value.*
January	3,868	$864,887
February	2,429	851,983
March	3,098	1,036,445
April	2,507	749,626
May	3,784	1,120,068
June	3,507	1,180,179
Total	18,193	$5,794,179

MILL PRODUCT.

Taylor & Brunton	$187,146
Tabor	77,250
Oro	4,000
Colorado Stamp	41,000
Shields	14,000
Total	$323,396

ORE SHIPMENTS.

Eddy, James & Co	$482,033
A. R. Meyer & Co	95,611
Total	$577,644

TOTAL PRODUCT OF LEADVILLE, JANUARY TO JUNE, 1881.

Smelter product	$5,794,179
Mill product	323,395
Ore shipments	577,644
Placer workings	12,000
Total product	$6,707,218

The statement of the year's product, made up by the Leadville *Democrat*, shows a less production of some of the smelters and also in the total amount. It gives the number of mines supplying each smelter, and the number of ounces of gold and silver, with the pounds of lead, respectively, as follows:

Names.	*Number of Mines.*	*Ounces of Silver.*	*Ounces of Gold.*	*Pounds of Lead.*	*Coin Value.*
La Plata Mining and Smelt. Co.	12	1,135,598	695	15,178,000	$2,050,337
Utah smelter	12	1,508,475	....	17,381,000	2,560,469
Cummings & Finn	11	1,171,144	....	11,623,000	1,898,697
Grant Smelting Company	12	1,927,350	1,090	18,005,977	3,088,566
American Smelting Company.	11	508,507	5,955	6,014,760	691,898
California smelter	6	271 861	....	3,447,900	478,238
Harrison Reduction Works	4	207,000	1,035	2,758,580	577,804
Eddy, James & Co	12	....	....	....	964,064
A. R. Meyer Mining and Smelting Company	12	....	2,450	....	191,228
Tabor Stamp Mill	12	135,500	....	....	152,437
Leadville Gold and Silver Mining Company	12	285,674	....	....	370,383
Colorado Prince	6	....	....	....	41,000
Oro stamp mill	3	....	....	....	4,000
Shields' stamp mill	6	28,125	....	....	31,640
Total	131	7,174,234	11,135	74,409,217	$13,100,761

By adding to the *Democrat's* statement, the amount of gold production for the gulches, reported by the *Herald* at $69,000, the product of the year would be brought up to $13,169,761, or within $805 of the *Herald's* exhibit. The discrepancies, in what purport to be statements of the exact production of four of these smelters, render it uncertain which is correct. Deducting from the *Democrat's* statement of the total value the value of the lead, and adding the value of the gold obtained from the gulch mines, the production of Leadville was, gold, $300,000; silver, at its coining rate, $10,300,000.

The following extract from the *Mining Index* is a revision of that paper's estimate of the bullion output of Leadville, and may be taken as very nearly correct. This estimate, as those of other papers given, includes the value of lead:

"In order to ascertain more correctly the actual value of the bullion output of Leadville, the representatives of the *Mining Index* have been busy in gathering further figures whenever opportunity presented itself. During the past week, figures have been obtained showing an aggregate of $240,355 paid by Leadville smelters for ore, credited to Lake county, which properly belongs to other counties, as follows:

	Grant Smelting Company.	*La Plata Smelting Company.*	*Total.*
Summit County	$2,000	$152,543	$154,543
Park County	6,000	8,319	14,319
Chaffee County	2,000	24,869	26,869
Pitkin County	14,000	13,621	27,624
Clear Creek County	15,000	....	15,000
Other sources	2,000	....	2,000
Total	$41,000	$199,355	$240,355

"To this amount should be added about $15,000 paid by Cummings & Finn for Robinson ore early in the year, and probably $125,000 for the value of the Aftermath ore treated. While this mine unquestionably shipped a great deal more ore, it is still lying on the premises of the smelter, and its value was not taken into account in figuring the shipments of Lake county. The result shows that Summit county contributed $294,543 to Lake county's product. Park, Chaffee, Pitkin, and Clear Creek counties, as near as can be learned, actually shipped $83,812. To which, in order to be liberal, add $30,000 from all other sources, and we have a total of $408,355. Deducting this sum from the bullion and ore shipments from Leadville, and we have a net product for Lake county for 1881 of $12,738,902."

La Plata County.—This county embraces the extreme southwestern corner of the State, adjoining the Territory of New Mexico, and was organized in 1874. Durango, the principal town and county seat, was laid out by the Denver and Rio Grande Railway Company, and within two years has become a populous and prosperous center. It is destined to be the main supply point and ore purchasing market for all the neighboring mines of La Plata and San Juan counties. The bullion product of the county has as yet been limited from the fact that until lately no railroad facilities existed and transportation was costly. The means for reduction of the ores also have been totally insufficient, the San Juan and New York Mining Company's smelter at Durango being the only one in the county.

Several placer mines are situated on the La Plata river, below Parrott City, where a long flume has been erected and attempts made to put the mines in paying condition, but thus far without material success. In the Animas Valley, in connection with extensive coal measures, large deposits of brown hematite and magnetic oxide of iron are found. The coal is readily coked, and will doubtless prove of great value when smelters for the reduction of the ores of the county shall have been erected. The production of La Plata county in 1881 was $5,000 gold and $10,000 silver.

Ouray County.—Ouray county, in the southwestern part of the State, includes a portion of the San Juan country, which comprises the adjoining counties of Dolores, San Juan, Hinsdale, and La Plata. It is the center of an extensive mining section, but has made little progress because of its remoteness from competing markets, want of local facilities for reduction of ores, and extravagantly high rates for freight. No ores yielding less than $150 to $200 per ton will pay for shipping, and as but few mines carry higher grades than these, the total amount shipped has been comparatively small. The mines of Ouray yield both gold and silver; and two systems of lodes appear to exist, one carrying gold alone, or gold and silver, and the other is argentiferous only. The gold veins are usually of large size and intersect the others. The chief silver ores are gray copper, bismuth, antimony, ruby, brittle and native silver.

Ouray county, besides its lodes of gold and silver bearing ore, has considerable placer ground. In the valley of the San Miguel, the Keystone Company was engaged most of last season in erecting flumes and other preparations for washing on an extensive scale. They ran just a month before closing down and cleaned up $3,500 in gold, worth about $16 per ounce. On bar No. 1, the Saint Louis Company ran two or three weeks and cleaned up about $1,500 gold. A few other parties, working in a small way with toms, rockers, and sluices, obtained lesser amounts. At the head of the San Miguel a deposit of very rich float-rock was discovered, which was crushed in mortars and washed by hand, yielding, it is said, about $10,000. The tract of country carrying this float-rock is doubtless quite limited. A small extent of placers occurs on the Uncompahgre, near the mouth of the Dallas creek. Some very fine bituminous coal has been found on the San Miguel, in veins about three feet thick, but none of the deposits have been well opened. On the Uncompahgre, just north of the line of the county, in Gunnison, there are very large deposits of good bituminous coal. The Denver and Rio Grande Company have located a line from their main Utah road, which strikes the Uncompahgre at Cedar creek, twenty-five miles from the town of Ouray, and it is expected they will build and put it in operation next season. When this is done, a large number of rich mines, which are now unprofitable to their owners, will be rapidly developed and placed upon the list of paying mines. The following smelting and reduction works and mines of Ouray county have returned reports of production, viz.: Long & Stout, Mount Sueffles, Munn Bros., Cimaron, Nevada, Parsons, Lower San Miguel, Upper San Miguel, and Carpenter & Ohlwiler. The production of the county during 1881 was $70,000 in gold and $135,000 in silver, a total of $205,000.

Park County.—Park county is one of the oldest mining sections of the State. Early locations were made in the rich placers in the vicinity of Tarryall, Fairplay, Buckskin, and Mosquito which yielded largely, and are still paying fairly. Numbers of lodes were also discovered, the most noted being the Phillips, Excelsior, and Orphan Boy. They were all free gold bearing on the surface, but as greater depth was reached the ores became pyritous and refractory for the then known modes of treatment, and mining was conducted only in a desultory way until discoveries were made of silver-bearing ores, when a fresh impetus was given to the mining industry in the county. The first silver mines discovered were the Moose and Dolly Varden on Mount Bross. The Moose has been very extensively worked from the north face of the mountain and furnished extraordinary large chambers of ore, one single stope having yielded about $150,000. The formation is lime and porphyry, and the mineral lies in deposits and not in defined veins. Probably not less than five miles of levels, winzes, and stopes have been run on this mine, and the product has been considerably over $3,000,000. The company owning the property erected a smelter at Dudley, which, after running awhile and undergoing frequent changes, closed down, owing to mismanagement. During the last year the work done has been principally with a view to further exploitation of the mine, and the production, while small, has been steady.

At Como, in South Park, there are quite extensive deposits of excellent bituminous coal, which gives the best coke thus far made in Colorado. These mines are owned and operated by the Denver and South Park Railway Company. From this point the Breckinridge division of the main line is constructed. At Alma there are sampling works and two smelters, but the latter are not in operation. The following smelting works, mills, and mines of Park county have returned reports of production, viz.: Upper Platte, Dry Placer Amalgamating Company, Hall & Brunk, Hock Hocking, Kansas Consolidated, Lelon Peabody, Lizzie Abington, New York, Three Brothers, Whale, Kansas, Park County, Excelsior, Kansas City, London, Moose, Russia, Sacramento, Wilson, and Lime.

The production of bullion in this county in 1881 amounted to $50,000 in gold and $350,000 in silver, making a total of $400,000.

Pitkin County.—Pitkin county, organized in 1880, was taken from the eastern portion of Gunnison county. The principal mining districts are Independence or Chipeta, Ashcroft, and Aspen. In *Independence district* a belt of gold-bearing veins was discovered in 1879. The ores are similar to those produced in Gilpin county, and are readily reduced by the ordinary milling process. The Farwell Mining Company own all the best mines, among which are the Independence Nos. 1, 2, 3, and 4, Last Dollar, Last Dime, Legal Tender, Bennington, Choler, Sheba, Friday, Mammoth, Dolly Varden, Gatton, Minnie, Mount Hope, and Golden Champion. The company purchased a 15-stamp mill, which has been running since January, 1881, and, later, have built a 30-stamp mill, which was required to treat the amount of ores extracted in the process of developing their mines.

The following mills and mines of Pitkin county have returned reports of production, viz.: Farewell Consolidated, Camp Bird, Pourtellotte group. The production during 1881 was $100,000 in gold and $30,000 in silver.

Rio Grande County.—Rio Grande county lies in the western part of San Luis Park, and derives its name from the Rio Grande river, which crosses from west to east. There is but one mining district in the connty, Summit district, which includes North and South Mountains and Lookout Peak. This district has been organized for some years, but it was only during 1881 that deposits of ores of extraordinary richness were discovered. The formation is porphyry and granite, and much of the ore is free gold-bearing and readily reduced by the ordinary stamp process. In the midst of a group of the principal mines of the district is the Little Ida, the property of the San Juan Consolidated Mining Company. At the depth of about 100 feet the vein is reported to be seventeen feet wide, ten feet of which is a decomposed quartz, yielding from $1,500 to $2,500 per ton. In about four months after encountering this rich deposit $250,000 was taken out. Arrangements are being made to develop the mine at greater depth by tunnels, and also to put it in better shape for continuous working.

The yield of the principal mines during the portion of the year that they were in operation was $289,000. It is probable that during the coming season a vast amount of prospecting will be done, and that the development of locations already made will show that this county will be an important producer of gold in the future. At Summitville, the chief town of the district, are located the mills of the different companies, as follows:

	Stamps.
The San Juan Consolidated	30
Little Annie	10
Morey & Sperry	10
Golden Queen	10
Iowa and Colorado Consolidated	10
Missionary	10
Aztec	5

The Cropsey mill is situated in Cropsey Gulch, and has twenty-four stamps, making a total of 109 stamps. The Denver *Republican*, in its annual review, says of Rio Grande county:

The bullion product for the camp during 1881 is as follows:

Gold bullion shipped	$320,000
Ore shipped	7,000
Ores on dumps, estimated	50,000
Total	$377,000

It also states that the Iowa and Colorado Consolidated Company have ordered and contracted for a 50-stamp mill. The following mills and mines of Rio Grande county have returned reports of production, viz.: Missionary, Aztec, Summit, and Little Annie. The production of the county during 1881 was $290,000 in gold and $10,000 in silver.

Routt County.—Routt, the extreme northwestern county of the State, makes but a small addition to the production of precious metals in Colorado. For many years it has been the favorite hunting ground of the Ute Indians, who have jealously and successfully guarded it against the encroachments of prospectors—the advance guard of a mining population. During the fall of 1881 silver-bearing ore was found in the Gore range, and also in the mountains about Steamboat Springs, but no reliable reports have been received of quantity or quality. Placer mining has been conducted for some years, with varying results, in the vicinity of Hahn's Peak, in the northeastern part of the county. Most of the placers have been worked by two companies, the International and the Hahn's Peak Mining Company, the latter, under the superintendency of Messrs. McIntosh and Cody, having been quite successful during the year. It is probable that an increased force of men will be employed in placer mining during 1882, and that, as the Indians have been removed, systematic prospecting for gold- and silver-bearing lodes will be conducted in the many mountain ranges traversing the county. The only report of production received from Routt county was from the Hahn's Peak mine. The total production of the county I estimate at $20,000 in gold.

Saguache County.—Saguache county, as a mining section, is not more than two years old; the first location of a mineral-bearing lode being made on Kerber creek in May, 1880. It was called the Exchequer, and is considered to be one of the best mines in Kerber creek district, although for some months but little work has been done upon it, except for development. It is opened by two shafts of inconsiderable depth, and two tunnels, fifty and eighty feet long, respectively; the ore is a decomposed quartz, carrying both gold and silver, and yielding an average of $120 per ton. The Empress Josephine is perhaps the best developed of all the mines of the county. About 150 feet of levels have been run from the shaft, now 180 feet deep, and from five to six tons of ore per day have been taken out, although no stoping has been done. The ore has been shipped, and yielded an average of $100 per ton.

The production of the county in 1881 I estimate to have been $40,000 in silver.

San Juan County.—San Juan is a small county, formerly a portion of La Plata, and is located in the central part of the mineral belt of the San Juan Mountains. Mineral wealth was known to exist here for a number of years, and considerable mining has been done, but the great drawback to the prosperity of the county is its inaccessibility, and the consequent great cost of shipping ores or mining and milling machinery. The ores appear to exist in inexhaustible quantity, and much of it is of too low grade to ship at present, but will pay largely when the country is opened by railways and local facilities for reduction are afforded. The county seat and the center of the mining industry is Silverton, located in Baker Park and surrounded by mountain peaks—Sulton Tower, Boulder, Hazleton, Anvil, and Kendall Mountains, which are traversed by fissure veins carrying chiefly silver-bearing ores. The most productive mine is the North Star, in North Star Gulch, on Sultan Mountain, about two miles from Silverton. It has been extensively worked, and has about 2,500 feet of developments. Some 3,000 tons of ore have been extracted, a portion of which has been sent to Durango for reduction. The ore is gray copper and galena, carrying 40 per cent. of lead, and yields seventy ounces of silver to the ton.

The following mills and mines of San Juan county have returned reports of production, viz.: Cement creek, E. T. Sweet, Aspen, Belcher, Gray Eagle, North Star, Cuba, McKinnie, Pride of San Juan, Tabor. The total production of the county I estimate at $5,000 in gold and $25,000 in silver.

Summit County.—Summit county embraces a large area of mountainous country, with many mining camps scattered over it, some of which date back to the early days of mining in Colorado. McNulty, Georgia, French, Galena, and Humbug Gulches, Gold Run, and various tributaries of the Blue river, all contributed a large amount of placer gold, and were worked for years to their utmost capacity. They are not by any means exhausted, and during 1881 were worked to a considerable extent. Within the last two years lode mining commenced on an extensive scale, and during the last year assumed such proportions as to place Summit county high on the list as a bullion-producing county of the State.

The following table from the Denver *Republican* shows the output of the leading producing mines of Ten Mile district:

Name.	*Mountain.*	*No. of Tons produced in 1881.*	*Present daily Output.*	*Capable daily Output.*
Robinson Consolidated	Sheep.	....	115	
Gray Eagle	do.	....	.....	25
Wheel of Fortune	do.	2,500	.....	30
Crown Point	do.	....	.....	15
Tiger	do.	....	.....	60
Snow Bank	do.	....	.....	20
Kersarge	do.	....	.....	5
Aftermath	Elk.	....	25	100
White Quail	do.	9,000	10	100
Milo	do.	3,520	15	100
Badger	do.	4,800	35	70
Silver Wave	do.	....	.....	40
Eagle and Raven	do.	550	.....	150
Colonel Sellers' Consolidated	do.	....	.....	60
Queen of the West	Jack.	180	.....	4
May Flower	do.	150	.....	10
Ida L.	do.	....	.....	15
Gilpin	Fletcher.	....	.....	10
Matchless	do.	225	.....	2

The following is an approximate statement of the weekly output of the leading producing mines of Ten Mile, Colorado:

	Tons.
Aftermath	480
Badger	210
Eagle and Raven	60
Fletcher Mountain	20
Gray Eagle	30
Ida L.	90
Little Chicago	15
Milo	240
Robinson	800
Silver Wave	90
White Quail	150
Wheel of Fortune	180
Total	2,365

Chihuahua is one of the early camps, and contains a large number of valuable mines, which were worked to a greater or less extent during the year. Some ore was shipped, and a considerable amount extracted in process of development remains on the dumps awaiting shipment.

Name of Mine.	*Number of Months worked in 1881.*	*Amount of Development.*	*Character of Ore.*	*Average Value of Ore.*	*Number of Tons shipped to home smelters.*	*Number of Tons shipped out of County.*	*Number of Tons on dump.*	*Capable daily output, Tons.*
Delaware	5	300	Galena and copper	$100 00	25	......	75	10
Orphan Boy	3	325	Lead	92 00	20	25	30	10
Blue Lode	3	100	Brittle silver	694 00	4	10	2	1½

New Discovery	3	100	Gray copper	210 00	1	9	2	1
Frenchman	2	100	Lead	56 00	......	2	18	5

The following is a list of the stamp-mills in Summit county, with their capacity:

Name.	*Location.*	*No. of Stamps.*	*Remarks.*
Brooks & Snyder	Breckenridge	20	
Lawrence	Breckenridge	10	
Gold Park	Gold Park	40	Owned by the Gold Park Mining Co.
Little Chief	Red Cliff	30	Anglo-American mine.
Lincoln	Lincoln	10	

The smelters of the county, with their capacity and amount of production, are as follows:

Name of Works.	*Location.*	*Tons Capacity.*	*No. of Days in Operation.*	*Tons of Bullion.*	*Remarks.*
White Quail Smelter	Kokomo	30	140	950	Present owner took charge April 15. Value of bullion, $475,000.
Greer Smelting Works	Kokomo	40	76	240	Silver in bullion, 125 ounces.
Carbonateville Smelter	Carbonateville.	30	......	......	Never used.
Summit Smelter *	Robinson	80	180	......	Treated Robinson ore, using low-grade bullion for flux.
Wilson Smelter *	Breckenridge	...	......	......	Produces matt.
Boston and Colorado *	Breckenridge	...	......	......	No figures obtained.
Elyria *	Breckenridge	...	......	......	Do.
Battle Mountain *	Red Cliff	...	......	......	Do.
Sissapo *	Montezuma	...	......	......	Do.
Lincoln *	Lincoln	...	......	......	Do.

* Two stacks.

The Kokomo *Times* estimates that the ore output for Summit county for 1881 will run from $3,500,000 to $4,000,000. Of this immense production Ten Mile will furnish about $2,000,000, while the Battle Mountain district will probably be the next heaviest producer. Decatur and Montezuma have done reasonably well, and Breckenridge, coming in as she did in the summer and fall, will doubtless add materially to it.

The Breckenridge *Leader* publishes the following statement of the yield of the mines of Summit county for the years 1860 to 1881:

Gold from placers, 1860 to 1870		$5,500,000
Gold from placers, 1870	$100,000	
Gold from placers, 1871	70,000	
Gold from placers, 1872	60,000	
Gold from placers, 1873	101,000	
Silver and lead, 1869 to 1874	200,000	
		531,000
Gold from placers, 1874	76,408	
Silver and lead	50,000	
		126,408
Gold from placers, 1875	72,413	
Silver	50,000	
		122,413

Gold from placers, 1876	150,000	
Silver and lead	200,000	
		$350,000
Gold from placers, 1877	150,000	
Silver and lead	40,000	
		190,000

Silver, gold, and lead, 1881		3,250,000
A total for twenty-one years of		$11,315,595

The following smelting works, mills and mines have returned reports of production, viz.: L. W. Aldrich, Lincoln City, Summit, White Quail, Gold Park, Greer, Wilson, Badger, Belden, Central Fluming, Gray Eagle Consolidated, J. L. Fuller, Matchless, Robinson Consolidated, Silver King, Silver Wave, Blue River, Bell. The total production of the county in 1881 was $2,155,000, of which $35,000 was gold and $2,120,000 silver.

Various Estimates of Production.—The following is from the Denver *Tribune*, and a comparison made with the estimates of 1880:

County.	*1881.*	*1880.*	*Increase.*	*Decrease.*
Boulder	$535,483	$850,000	....	$314,517
Chaffee	100,000	111,500	....	11,500
Clear Creek	2,204,980	2,656,000	....	451,020
Custer	608,549	960,000	....	351,451
Dolores	125,000	....	$125,000	
Fremont	14,536	....	14,536	
Gilpin	2,150,700	2,680,000	....	529,300
Grand	10,000	....	10,000	
Gunnison	535,033	300,000	235,033	
Hinsdale	187,375	....	187,375	
Lake	13,502,029	12,958,000	544,029	
La Plata and San Juan	40,000	365,000	....	325,000
Ouray	78,000	....	78,000	
Park	350,000	430,000	....	80,000
Pitkin	120,000	....	120,000	
Rio Grande	251,000	....	251,000	
Saguache	40,000	....	40,000	
Summit	1,828,000	511,000	1,317,000	
Total	$22,680,685	$21,821,500	$2,921,973	$2,062,788

The *Mining Review* published the following summary:

Lake County	$11,000,000
Summit County	3,000,000
Clear Creek County	2,800,000
Gilpin County	2,400,000
Boulder County	533,500
Chaffee County	150,000
Park County	250,000
Ouray County	80,000
Custer County	1,500,000
Gunnison County	150,000
Rio Grande	385,000
Saguache County	62,000
Hinsdale County	125,000
Other sections	1,000,000
Total	$23,435,000

The following table is the result of careful collection and arrangement of reports of production and sifting of the various returns published by the press of Colorado, made by Messrs. Hall and Smith, mining engineers, of Denver, assisted by Henry W. Comstock, editor of the *Mining Gazette*, of Cañon City, and A. F. Wueuch, editor of the Leadville *Index*:

Boulder County	$535,482 88
Chaffee County	196,400 00
Custer County	755,600 00
Clear Creek County	$2,204,980 34
Dolores County	125,000 00
Fremont County	14,535 50
Gilpin County	2,150,700 00
Grand County	10,000 00
Gunnison County	535,033 00
Hinsdale County	187,375 00
Lake County	12,738,902 00
La Plata and San Juan Counties	40,000 00
Ouray County	78,000 00
Park County	350,000 00
Pitkin County	120,000 00
Rio Grande County	280,000 00
Saguache County	53,500 00
Summit County	1,828,000 00
Total	$22,203,508 72

Of the above $3,000,000 is estimated to be gold. The value of the lead and copper produced is also included. The Denver *Tribune* publishes the following as the mining product of Colorado from 1859 to 1882:

Year.	*Gold.*	*Silver.*	*Copper.*	*Lead.*	*Total.*
1859 to 1870	$27,213,081.00	$330,000.00	$40,000.00	....	$27,583,081.00
1870	2,000,000.00	650,000.00	20,000.00	....	2,670,000.00
1871	2,000,000.00	1,029,046.00	30,000.00	....	3,059,046.00
1872	1,725,000.00	2,015,000.00	45,000.00	$5,000.00	3,790,000.00

DAKOTA.

THE production of gold in Dakota during 1881 has been, approximately, $4,000,000. The Sidney and Black Hills Express Company shipped during the year $3,125,950. This, however, is the shipping valuation, the actual value being greater, probably at least fifteen per cent., which would make the amount transported by this company $3,594,842. To this should be added the amount carried out of the Territory by other conveyance and in private hands, which would not fall far short of $400,000 or $500,000. Competent local authorities estimate the production of 1881 to have been less than that of the preceding year, owing to a great scarcity of water, which caused a partial suspension of placer mining, and seriously interfered with the operations of the stamp mills. If the amount of gold deposited at the mint from this Territory can be taken as a guide to estimate or measure the production, it would appear that it is on the increase. During the year 1880, the deposits of Dakota gold amounted to $3,196,189, and in 1881 to $3,474,837, an increase of $278,648. Nearly the whole product is from the gold-bearing lodes, the gravel deposits being but secondary in importance. The lodes are of immense extent; the ore is free milling, requiring only stamp mills for its reduction, and there has been scarcely a mill erected which has had for its object simply the pulverizing of ore that has not been adequate for the purpose for which it was intended. Quartz mining, however, received a setback from the beginning of mining in the Black Hills, on account of the average low grade of the ores, and it was not until it was found necessary to increase the capacity of the mills to the fullest extent demanded by the quantity of ore, that lode mining became highly remunerative. In many particulars it costs but little more to run 100 stamps than half that number, and the best results are therefore attained by large mills, and this has been demonstrated by the practical operations of the miners who control the Homestake, De Smet, and other groups of celebrated mines. Silver ores were found in Dakota nearly as early as the discovery of gold, but the ease with which ores of the latter metal could be worked and their greater productiveness, led the miners to disregard silver, except so far as the mere location of lodes and claims was concerned. It was not until the placer mines were, to a considerable extent, worked out, and the gold-bearing lodes pretty well taken up, that the silver interests of Dakota began to receive that attention which the extent and richness of the deposits demand. The future prosperity of Dakota, as a producer of the precious metals, appears to be better assured at this time than at any previous period in her history.

Lawrence County.—The chief group of mines is that known as the Homestake, the reputation of which has been long established. The principal mines are the Homestake, Highland, Deadwood Terra, De Smet, Giant and Old Abe, Golden Star, Palmetto, American Flag, Lincoln, Amicus, Prince Oscar, Nettie, May Booth, Independence, Mineral Point, and Pea Warmer. The owners of these properties are usually designated as the Homestake Company, while in reality there are several corporations, although, to a great extent, these are composed of the same individuals. The chief companies are the Homestake, Highland, Father De Smet, Giant and Old Abe, and Deadwood Terra. So far as local officers are concerned, they are under one management. Of the extent of the mineral deposits from which the ore is drawn, but little can be said; their immense extent, however, compensates for the low-grade quality of the ore, which mills from $4 to $6 per ton. By able and careful management, by a most thoroughly perfected system of mining and milling, and by the use of large mills with numerous stamps, which experience has taught to be economy, the working of this low-grade material is successfully and profitably accomplished. The Deadwood Terra has paid fourteen dividends, amounting to $560,000; the Father De Smet sixteen, amounting to $435,000; and the Homestake forty-one, amounting to $1,230,000. The assessments upon these mines, up to the close of the year 1881, have been, on the De Smet, $200,-000, making the excess of dividends over assessments $1,-

705,000. During the last year the capacity of the Father De Smet has been increased by twenty stamps, making it a 100-stamp mill. The Highland and Golden Star mills each have 120 stamps, the Homestake eighty, and the Deadwood Terra two eighty-stamp mills, making a total of 580 stamps. The total cost of the mills, hoisting works, tramways, cars, locomotives, ditches, reservoirs, buildings, railroads, etc., is reported at $1,345,000. The Homestake Mining Company paid for the titles to the mines and locations it has secured—some fifty in number—$2,000,000, of which $400,000 was paid for the Father De Smet—four locations; $115,000 for the Deadwood Terra; $75,000 for the Homestake; $50,000 for the Golden Star; and $250,000 for the Giant and Old Abe, which with the amount expended in improvements, mills, etc., make the total amount expended by the combination $3,345,000. Five hundred men are employed in the mines, mills, shops, and various departments, at average wages of $3.50 per day. Wood is consumed for fuel, and costs $4.50 per cord. The mills can reduce $3,000 tons of ore daily, as each stamp is capable of crushing three and a half tons, at an average expense, as is reported, of $1 per ton. The stamps are placed in batteries of five each, and so arranged that one or more batteries may be stopped for repair or clean-up without interfering with the work of the others, or stopping the engine, which continues its revolutions without intermission day and night. The ore, after first passing through the rock-breakers, is discharged into the automatic ore-feeders, and thence into the batteries, rendering but little handling of the ore necessary. The deepest shaft thus far sunk is upon the Giant and Old Abe, 450 feet, which is not yet in ore, but the vein dipping toward the shaft will soon be reached. The ore from the Homestake is being taken from the 240-foot level, milling about $5.50 per ton. That from the Deadwood Terra is said to average about $4, and that from the De Smet about $3.50 per ton, although some of it will not mill over $1 per ton. The north end tunnel of the Father De Smet, at the close of the year, was 357 feet in length, having been advanced forty-three feet in December. At the same time ore was being extracted from the first, second, and third levels. The Homestake Company also own the Savage Tunnel, purchased recently on an execution against the Dakota Mining Company. The tunnel is now completed 800 feet, and it is designed to be extended a total distance of 3,000 feet to the Rattler's shaft, 2,500 feet distant. The tunnel in its course cuts the Morning Star, Jupiter, Evening Star, Hidden Prize, Queen of the Valley, North Pacific, Comet, Atlantic, Golden Wreath, Echo, and Rosebud. This property, upon which over $100,000 have been expended, was purchased at the sheriff's sale for $15,000. The Savage tunnel, when finished, will be of great utility in draining the mines at Lead City.

The amount of gold and silver produced in Lawrence county by districts, as reported by the Census Bureau, for the year 1880, was as follows:

District.	*Gold.*	*Silver.*	*Gold and Silver.*
Bear Butte	$775	$29,238	$30,013
Lost Placer	535,045	5,974	541,019
Whitewood	2,717,554	35,351	2,752,905
Various placers	47,700	....	47,700
Total	$3,301,074	$70,563	$3,371,637

Pennington County.—The rich and extensive placers of this county are, for the most part, still lying in an undeveloped condition. The deposits are high, and cannot be worked without a large expenditure of money in carrying water by means of long ditches and flumes so as to make it available for hydraulic purposes. That the placers are rich in gold is indisputable. From their discovery to the present time a number of miners have made sufficient by carting the gravel down to the creeks to wash to induce them to continue operations in this laborious and unsatisfactory manner. The amount of gold and silver produced in Pennington county by districts, as reported by the Census Bureau, for the year 1880, was as follows:

District.	*Gold.*
Rockford	$1,600
Various placers	3,159
Total	$4,759

Custer County.—The placer mines of this county are similar to those situated in Pennington county, and the same difficulty exists in obtaining water at a sufficient height to properly wash the gravel. The *Black Hills Pioneer* furnishes the following description of the Harney Hydraulic Company, which may be taken as instancing the paying qualities of the gulches and bars in Custer county.

"The property of the company consists of about six miles of the bed of Battle creek, beginning a short distance below Harney City and extending to almost the foot of Harney Peak, together with all bar and hill diggings on both sides of the gulch for the same distance; also the placer ground of Grizzly Gulch. The claims include Harney and Everly Hills and the celebrated Mitchell Bar, which are considered the richest portions of the entire possession. Applications for patents upon four hundred acres have been made, and as there are no adverse claims the company will undoubtedly be successful. Several valuable water-rights have been located both upon Battle and Grizzly, insuring an abundant supply for the extensive working of the ground projected by the company. Preparatory work began July 8, and has been executed in the most indefatigable manner, and with results of which the superintendent and all connected therewith are justly proud.

"The main ditch or flume has a total length of six and a quarter miles, and the flume for what are known as lower workings a length of two and three-quarter miles. The first-mentioned flume down to Grizzly Gulch is twenty by twenty inches in dimensions, and below Grizzly (at which point the two flumes unite) the dimensions are thirty-six by twenty inches. A trestle, forty rods in length, with forty-foot spread at the bottom and thirty-two inches at the top, and 112 feet in height, supports the flume over Grizzly Gulch. It is constructed of square timbers, firmly braced, and is the most substantial and prettiest piece of work of the kind in the hills. A similarly constructed trestle and flume, but 250 feet high, will be constructed across Battle Creek this year, to convey the water to Everly Hill, a short distance back of Harney. The company, operating its own saw-mill, cut 900,000 feet of lumber for use in the two flumes.

"Three capacious reservoirs, two on Battle creek and one on Grizzly, insures an abundant water-supply even in the driest season. This, as already intimated, is carried at a great height at Mitchell Bar 213 feet—affording tremendous pressure for hydraulicing, which will be first resorted to, although, owing to the great depth of bed-rock in the main gulch, drifting will doubtless soon become the principal system of work. An average of fifty men has been employed during the season. The estimated total cost of the works is $42,000.

"The value of the ground may be inferred from the fact that previous owners of Mitchell Bar excavated between 500 and 600 cubic yards of gravel, carted to the creek, and cleaned up over $7.50 a cubic yard.

"The company proposes to put in a bed-rock flume, beginning at the lower end of the ground, and wash everything within reach. By this variey of working plans operations can be continued summer and winter, and for many years to come. The works are about complete, and the company in readiness to begin operations with the earliest opening of spring."

The amount of gold and silver produced in the Territory of Dakota, as reported by the Census Bureau, for the year 1880, was as follows:

Counties.	*Quartz.*		*Placer.*	*Total.*		
	Gold.	*Silver.*	*Gold.*	*Gold.*	*Silver.*	*Gold and Silver.*
Lawrence	$3,253,374	$70,563	$47,700	$3,301,074	$70,563	$3,371,637
Pennington	1,600	....	3,159	4,759	....	4,759
Total	$3,254,974	$70,563	$50,859	$3,305,833	$70,563	$3,376,396

MINES OF THE APPALACHIAN RANGE.

THE earliest record at the Mint of gold of the United States was in 1804. In that year a deposit was made of gold found in North Carolina. Small amounts, not exceeding an annual average of $2,500, were received from that year to 1823, after which date there was a yearly increase, which is stated in the Mint records as follows:

In 1824	$5,000
In 1825	17,000
In 1826	20,000
In 1827	21,000
In 1828	46,000
In 1829	134,000

During the latter year, $2,500 was received also from Virginia, and $3,500 from South Carolina. The rapid increase of production stimulated the search for and mining of gold in the whole range of mountains from Virginia to Georgia, and early in the ensuing year, 1830, gold began to be received from the latter State; the receipts for that year being, from Virginia, $24,000; from North Carolina, $204,000; from South Carolina, $26,000; and from Georgia, $212,000. In the following year small amounts, aggregating $2,000, were received from Tennessee and Alabama. The total amounts of the precious metals from the mines of the South, deposited at the United States Mint from 1804 to the close of the calendar year 1881, were as follows:

From Virginia	$1,689,797 00
From North Carolina	10,750,468 64
From South Carolina	1,429,751 55
From Georgia	7,869,282 60
From Alabama	220,892 25
From Tennessee	86,511 61
Total	$22,046,703 65

This does not represent the whole production of the States, a considerable portion, undoubtedly, having been used for other than coinage purposes, or having lost its identity, as to locality of its production, before being deposited at the Mint. During the last year, the production of the Carolinas and Georgia was about $275,000. For much of the material from which the following description of the mines in these States was prepared, I am indebted to Mr. G. B. Hanna, assistant assayer of the United States assay office at Charlotte, N. C., who personally visited and examined the several localities.

North Carolina.—The gold-producing area of North Carolina comprises upwards of 25,000 square miles, in which gold is found at intervals; but the portion productive on a working scale is embraced by the western half of about 12,000 square miles. This area contains three principal geological formations, and may be divided into three belts. The eastern belt is principally of argillaceous slates, and includes the counties of Warren, Franklin, Nash, Randolph, Davidson, Union, Stanley, Montgomery, Anson, and Moore. The middle belt is best described as granite or syenite. It has been known longer and worked more extensively than either of the others. It comprises the counties of Guilford, Rowan, Cabarrus, and Mecklenburg. The western belt is gneissoid in structure, verging into hornblendic and mica schist. The counties in which mining to any extent has been carried on are Gaston, Lincoln, Catawba, Burke, McDowell, Rutherford, and Polk. In the mountainous region the mineral resources have not yet received much attention, by reason of difficulty of access. The auriferous ores of the State consist for the most part of the hydrated peroxide of iron or brown ore and pyrites, and are refractory proportionate to the amount of sulphurets. Copper is found, chiefly chalcopyrite, though chalcocite and bornite occur in small quantity. Galena is also found, but rarely in working proportion, and frequently associated with zinc blende. Nickel, cobalt, antimony, and arsenic exist, but not to any noticeable extent. Gravel deposits are found throughout all the belts; those of the middle belt were for the most part exhausted years ago, but in both the eastern and western belts they are of larger area and deeper in extent; the want of water, however, has hitherto prevented them from being extensively worked. The best known mines of this character are in Franklin and Nash counties, to the east, and in Burke county in the western part of the State. The production of North Carolina during 1881 was approximately $115,000. Of this amount $58,483 was deposited at the mints and assay offices as native gold from that State; the identity of other deposits as to locality was not ascertained. A considerable amount went out in ores and concentrates for reduction at smelting works, and the production of mines worked by foreign capital was shipped directly abroad. On the eastern or slate belt great activity is manifested. Most of the mines are situated near the contact of the slate and the granite. In the extreme eastern section the chief gravel mines are in Franklin, Nash, and Warren counties.

The Hoover Hill mine, in Randolph county, comprising 250 acres, is seventeen miles southeast of High Point. It was reopened in May, and the work of refitting has been forwarded with rapidity and skill. The underground work thus far appears to have been done principally to ascertain the resources of the mine. Two of the old shafts, the Gallimore and the Briols, have been reopened, and a new shaft sunk into the ground, which past experience led the managers to believe contained ore. In the latter a cross-cut has been begun at the ninety-foot level, with the hope of striking the same vein on which is the old Hawkins shaft, that being abandoned as unsafe. The Gallimore is down 110 feet and the Briol 120 feet. In addition to these shafts a large tunnel is being run into the hill to cut all the ore bodies known. A very complete mill, storehouse, office, machine shop, etc., have been erected; the mill is provided with four five-stamp batteries, a Blake crusher and other appliances. The ore treated comes from the Gallimore shaft and is of good quality, but the amount which the mine can furnish is uncertain, as neither drifting nor stoping has been done to any extent; the present resources are inadequate to keep the mill constantly at work. The property is in the hands of an English company, and the bullion produced is shipped direct to London. The mine is not, however, likely to produce, for some months at least, any considerable amount. The Eureka, in the same county, has been closed for some months. The Jones mine, although possessed of considerable resources, has been idle during the year. It is fifteen miles southeast of Thomasville and contains nearly 300 acres, the principal part of which is covered with decomposed chloritic and talcose schist to an average depth of about thirty feet. This material is readily mined without underground work, and, although of very low grade, the facility with which it can be worked, provided a sufficient supply of water can be obtained, renders the property of great value. The Herring (formerly the Lafflin) is adjacent to the Jones, and is of similar formation. Work was commenced during the summer. The material is treated by a Howland pulverizer, and is so soft and easily disintegrated that a very large quantity can be handled. The superintendent thinks that the entire cost of treatment will not exceed fifteen cents per ton. The supply of water is the chief consideration, as the movement of so large a quantity of material requires a large amount to effect it; hitherto there has been a deficiency, but during the last season several streams were diverted and a reservoir constructed with capacity for the storage of a supply sufficient to last over the dry season. The mines will probably give a moderate yield of gold during 1882.

The North State, in Hoover county, is being reopened; it is in the hands of wealthy and energetic men, and probably will be rapidly put into a working condition. The following in relation to this mine is taken from the *London Mining Journal:* "The North State Mining Company, incorporated under the laws of North Carolina, with a capital of $10,000,000 or £2,000,000, have issued a prospectus with a view to place shares, which are of $25 or £5 each par value in this country, at £1 each. The principal mine appears to be the noted Copper Knob mine. This is a copper mine carrying gold and silver, and is a property of 350 acres covered with heavy timber. The vein is a fissure, and varies from fifteen inches to four feet in width. The mine is opened to a depth of 157 feet on the incline, and has already produced a large quantity of rich and valuable ore. The vein at the present time is four feet wide, and carries an average of twenty per cent. of copper and $40 in gold and silver per ton. This mine is fully equipped with modern machinery, steam-hoisting engine, air-compressor, air-drills, sixty-horse-power boilers, twenty-five-horse-power engine, and two smelting furnaces of twenty tons capacity are being constructed. In the ore-house there are about 300 tons of first-class ore, and not less than 600 tons standing in the incline and drifts on the foot-wall in the mine. The ore is the vitreous copper ore, bornite, malachite and chrysocolla, all carrying free gold and silver. The properties have been very favorably reported upon. An estimate of gross earnings and receipts shows £700,000, or thirty-five per cent., available for dividends, and £32,000 to form a sinking fund for the twenty-year railway bonds issued by the company for the line from Statesville to the company's mines."

The Conrad Hill mine, in Davidson county, six miles east of Lexington, was opened again in 1880, but it is only recently that the mine has been put into so forward a state that the future work can be confidently predicted. The property consists of 257 acres, on which there are seven well-known veins, four of which are now being worked. The shaft has been put down in such a manner as to allow ultimately the working of the three other veins. The greatest depth reached in November was nearly 250 feet on a vertical measurement; a series of levels have been run, aggregating several hundred feet, and opening up a large stoping ground. An examination of the underground work showed the veins to range in width from six to twenty feet. The ore is sorted into three classes: First, a copper ore (mostly copper pyrites) containing some gold. Second, "brown ore" carrying considerable gold and a little copper. Third, material intermediate between the first and second classes, containing some pyrites and "brown ore." Iron pyrites is not abundant in this mine. The first class is a true smelting ore, and will be treated at the mine. The second class will be milled to save the gold, and the tailings concentrated to collect the sulphurets, which will then be sent to the smelting furnace. No definite plan has yet been selected to treat the third class. There are 2,500 to 3,000 tons of ore on the dump, much of it of very good grade. Two stack furnaces with all the modern appliances are now nearly completed for smelting the copper ore to a matte; it has not yet been determined whether this matte shall be further concentrated and the extraction of the valuable constituents made at the place, or whether it will be shipped to smelting establishments, at home or abroad, which make a specialty of such work; probably, however, it will be reduced on the spot. The "brown ore" will be treated by mill process, for which a very suitable plant is in course of erection. The whole establishment is the nucleus of very complete works. One hundred and fifty men are employed. The mine and works are in the hands of managers long familiar with metallurgical business, and heretofore successful in mining enterprises, and the result of their work can hardly fail to add materially to the bullion product of North Carolina. The Spring Valley mine is eleven miles east of Lexington in the same county. The deposit at present worked was discovered in June, 1880, and is almost virgin ground. The mine is entered by an underlay or inclined shaft 150 feet deep, giving a vertical depth of a little more than 100 feet; the combined length of the levels is about 100 feet. The width of the vein is on an average five feet, although in places it widens to twenty feet. The ore is galena mixed with a small proportion of blende; it is always argentiferous and usually carries a little gold; the presence of the blende renders it somewhat refractory. A considerable portion of the ore is a compact though impure galena; the lower grade is stamped and concentrated, for which four five-stamp batteries of the most approved form are used, and nine buddles. The best concentrates are probably richer than the selected solid ore, both in lead and silver. There are about 1,500 tons of selected ore and concentrates and nearly an equal quantity of second-class ore awaiting treatment. The company employs ninety men, and are considering the feasibility of erecting furnaces at the mine to produce either base bullion or matte for shipment. Whatever the course of treatment ultimately adopted, the products will probably go out of the State in an unfinished condition unless metallurgical works should be erected and successfully treat the ore with the rich iron sulphurets of this section, the lead serving as a collector of the gold. The Silver Hill mine, twelve miles east of Lexington, long in litigation, but now freed from it, will, as is reported, resume operations on a more extensive scale. In November, 1881, only six men were employed, and little was done except sinking a prospecting shaft and keeping the water in the mine down to the 250-foot level, but there was no exploitation at that depth. The greatest depth reached in this mine is a little more than 700 feet, but the efforts of late years have been confined to that portion above the 250-foot level. The ore is a mixture of galena and blende carrying a few ounces of silver and a trace of gold per ton. Usually the zinc is in larger proportion than the lead; this combination makes the ore extremely difficult to work. Smelting treatment of this material is troublesome and expensive, and the little value of the raw ore prevents its shipment. In 1878 a large body of carbonates was discovered and a part shipped during the two succeeding years; about 500 tons are now on the dump, much of which is of the highest grade that the mine furnishes. A long course of experiments will probably have to be made ere the problem of successful treatment of the ore from this mine is solved, and then the valuable constituents will likely go out of the State in a concentrated form for treatment in other establishments.

Rowan County.—In Rowan county, near Salisbury, great activity is shown. Six miles east of the town is the Rhymer. The greatest depth attained in this mine is 160 feet in shaft No. 1, from which point a level has been started for shaft No. 2, 400 feet distant; shaft No. 2 is now being sunk. A level has been run from No. 1 to No. 2 at seventy feet, and it is proposed to open one at every fifty feet. Altogether about 650 feet of the course of the vein have been opened by the levels. The vein is on an average four feet wide; the ore is a very heavy compact sulphuret of iron, estimated to have at least 40 per cent. of mineral matter. The superintendent states that 1,300 tons had been treated during the year at the Davis chlorinating works at Salisbury, in connection with which works the mine is operated; in addition to this, 2,000 tons were estimated to be on the dump. Much of the ore is of too low a grade to bear the cost of hauling seven miles over the rough country roads, and to avoid this expense a concentrating and chlorinating works is in course of erection at the mine. Two six-inch Cornish pumps and two twenty-five-horse hoists lift water and ore. The property appears to have been managed with great energy and judgment. The Bullion is the eastward extension of the Rhymer, and is about a mile distant; the ore is quite similar in character, but from some unexplained cause work was suspended during the summer. At the Dunn Mountain mine, four miles east of Salisbury, no milling was done during the year. The accumulation of ore is quite large, the foreman at the mine estimating that at least 3,000 tons were on the several dumps. The ore for the most part is brown oxide of iron with quartz and slate, but carries considerable iron pyrites and some copper pyrites. Recent changes have been effected in the ownership and management of this property, and the mill will soon be set to work. There should be a considerable production of gold during the ensuing year, as in addition to the amount of ore above ground the underground works are in condition to furnish a steady supply. The Gold Knob, nine miles east of Salisbury, is composed of a group of three mines, viz.: the Holzhauser, the Knob, and the Haynes. Eleven veins are enumerated on the property, but only those mentioned are worked. A simple prospecting mill of five stamps is the only machinery in use at present. The three veins are large and capable of supplying an ample amount of ore for a much larger plant; it is, as a rule, of low grade, but chimneys of high grade may be expected in places. The material is largely free milling, but everywhere contains sulphurets of iron and copper to a small percentage. The yield of this mine cannot, with its present machinery, be large, even if worked at its fullest capacity; it will, therefore, probably be equipped with a larger plant. The Southern Belle is seven miles east of south of Salisbury. No work except for prospecting has been done. The shaft, seventy feet deep, has not yet reached the vein; an underlay shaft had previously been sunk in the vein to a depth of forty feet; but little ore had been found, although it was always good and sometimes of high grade. The only machinery erected is that necessary for pumping and sinking. Under the most favorable circumstances this mine could not be put in condition to produce bullion to any extent in 1882. The Yadkin, one and a half miles south of Salisbury and near the Davis Chlorinating Works, is partially filled with water, and no ore has been produced for some time. Nothing reliable can be learned of its prospects. A few other tentative efforts at mining have been made around Salisbury, but none of them with promising results. The Davis Chlorinating Works were operated to some extent during the year, about 1,300 tons of ore having been worked, but no authoritative statement has been received relative to the production of bullion.

The Gold Hill mine, sixteen miles southeast of Salisbury, was reopened by an English company in the summer of 1881, and they are working a force of English miners. The mine is unwatered to a depth of nearly 400 feet, at which point the company expects to draw its supply of ore. A very complete equipment of machinery, consisting of a new "Buckeye" engine and a Becket & McDowell 20-stamp mill, has been provided, and a considerable return may be expected in 1882, but the bullion will probably be shipped direct to London. The production of Rowan county is about $10,000 per annum.

At Concord, twenty miles south of Salisbury, Cabarrus county, five mines are at work; conspicuously among them is the Phœnix, seven miles east of the town. The deepest work done at present is at the 125-foot level; the vein is one and a half to two feet wide, and the ore, which is highly sulphureted, is distributed more uniformly than is usual in veins in this section. The mine is operated in connection with the Mear's Chlorinating Works, but in its present state of development is unable to furnish a full supply of ore. The Chlorinating Works adjacent to the mine have therefore been run much below their capacity, but the results have been very satisfactory. The superintendent states that ninety per cent. of the gold contained in the ore is extracted; the full capacity is about eighteen tons per diem. The plant is very complete, efficiently operated, and bids fair to be of great advantage to the section. The Tucker, formerly known as the California, one mile south of the Phœnix, was opened last May, and its development has been rapidly pushed towards a producing point. The milling has been done chiefly to test a 10-stamp battery, and the yield of gold is considered as satisfactory. The greatest depth reached in the mine is 175 feet, and levels have been driven aggregating 117 feet; the vein is from one and a half to two feet wide; the ore is heavily charged with sulphuret of iron and is reported to be of good grade. The North Barrier, in the same vicinity, is being reopened, but as the vein has not been reached, nothing definite can be said respecting it. The ore will be worked at the Mear's works; its old reputation was fair. The Quaker City, eight miles east of Concord and one and a half miles southeast of the Phœnix, is thought to be an extension of it. There are three shafts, down forty, sixty, and eighty feet, respectively, but only short levels have so far been driven. The ore is of the usual character yielded by most of the mines, largely sulphureted, with some brown free milling ore; two or three hundred tons are on the dump or at the mill. The old stamp mill has been torn down, and a new 10-stamp battery has been erected on Buffalo creek, two miles distant; besides this there are two Chilian mills and other suitable appliances. The Reed, so famous in the early history of the State as the first authenticated producer of gold, and still more notorious for having yielded an extraordinary number of large nuggets, was again opened in the summer; operations have been confined to low-grade material near the surface, the lack of water preventing much milling. The low-grade ore will at best allow but a moderate yield. The production of Cabarrus county has probably been $15,000 to $20,000 during the year.

Twenty miles south of Concord is the better known *Charlotte district* of Mecklenburg county, in which thirteen mines are producing gold, or in process of reopening. The principal of these, the Rudisil, has changed but little during the year, but it has no such reserves of ore as it had twelve months ago. The pump shaft has been extended to the depth of 265 feet, and a level driven south, which is now in high-grade ore, but neither the drifting nor stoping has yet determined the extent of the ore body. It is equipped with a 10-stamp battery. The Saint Catharine is the north extension of the Rudisil; a new shaft was projected in July last, to cut the vein at a depth of 300 feet; at the close of 1881, a depth of 100 feet had been reached. The mine cannot be put into a producing condition this year. The McDonald, one and a half miles southwest of Charlotte, contains 100 acres; it has been exploited to the depth of 110 feet; two levels, one at sixty and the other at 110 feet, have been driven forty feet each. The ore is brown free milling, carrying a small percentage of sulphurets; a small quantity of good ore has been raised. The mill-house contains an ore breaker, Howland pulverizer, Ball amalgamator, etc.

The Smith & Palmer, between the Rudisil and McDonald, was sunk upon until drowned out by the great influx of water, and the machinery being inadequate to control it, work was suspended for the winter; the ore body had not been reached. As the known body of ore was of a fair grade for milling, the mine may be in condition for production early in the ensuing summer. At the Simpson, ten miles east of Charlotte, only prospecting has been done this year; it is not likely to turn out any gold the coming year. The Smart, fifteen miles southeast of the same city, was reopened during the spring, and a good body of galena uncovered; the ore can be treated only by smelting. The Ray, nine miles southeast from Charlotte, is entered by four shafts; the deepest level is at eighty feet, and the aggregate length of the levels is something more than 400 feet. The vein averages two and a half feet wide and is filled quite uniformly with ore consisting of quartz, brown oxides of iron, and occasional bunches of sulphurets; at greater depth heavy sulphurets will probably be met; the lode shows a tendency to copper minerals; the present material is a good grade of free milling ore. Thus far the production has not been large, but the mine is in a good condition for steady work in 1882. The Black mine in Crab Orchard township, Mecklenburg county, is nine miles east of Charlotte; it was opened in June, 1881. It is worked by two shafts; the average width of the vein is fifteen inches, and it carries an unusually good grade of brown ore. Assays made of it at the United States assay office at Charlotte show it to be always good and much of it rich; the mine is in condition for good work in the immediate future. The Maxwell, two miles south of the Black, was also reopened early in 1881, but the reports of the lessees are not favorable either as to the quality or quantity of the ore. The Hopewell is ten miles northwest of Charlotte; it was opened in the summer of 1881, but work was not vigorously pushed, and has been suspended for the winter; ore of only very moderate grade was extracted, and as it is too highly cupriferous to be easily treated in a mill, it will probably require smelting. The Capps Hill mine, five miles northwest of Charlotte, has been lying idle for nearly thirty years, but during the last year preparations were made to resume work by pumping out the mine, but at the close of the year the ore bodies had not been reached. As this mine has been the most productive of any in this county, favorable results may be expected when mining and milling is fully resumed, and it should add largely to the bullion product of the district. In the Charlotte district, taken as a whole, the condition of the mining industry is much the same as in previous years, though the yield of gold was somewhat less, owing to the excessive drought, which was greater here than elsewhere in the South. In other respects, however, the mining interests have been unfavorably affected; the efforts made by two different companies to establish metallurgical works at Charlotte led the mine owners either to delay their work, or to arrange it with reference to the operations of these establishments; the older of the works has thus far failed to satisfy the expectations raised, and at present it is doing nothing, while the death of the president and the superintendent of the other company caused a suspension of operations. The best informed men are not hopeful respecting its future, of which nothing can be said with certainty. The usual number of "processes" were introduced during the last year, but none proved to be efficient, either through inherent defects or want of proper management. The total yield of Mecklenburg county is about $10,000 per annum.

Large operations at Vein Mountain, eight miles south of Marion, McDowell county, were commenced in May, and have continued, with some interruptions, through the year. The supply of water is taken from the upper reaches of the Second Broad river, and the company was thus, to a certain extent, independent of the drought. The company has at least 200 acres of good gravel on the above mountain, and late purchases have increased the area to 600 acres, all of which is commanded by the water from the ditch, which is thought to be capable of supplying three pipes, even in the least favorable season. At present work is confined to Puzzle and Holly gulches. A number of quartz veins have been cut on the property, which are likely to add to its resources. Preliminary work has been arranged for the Hard Bargain gravel mine, adjacent to the Vein Mountain. The Granville, to the southeast of Vein Mountain, was worked as long as water was obtainable.

The hydraulic work in Burke, McDowell, and Rutherford counties was brought almost to a stand-still during the summer of 1881, but resumed for a brief period towards the close of the year; the smaller and individual operators have had very poor returns. The production of these three counties for 1881 was, approximately, $30,000.

There are fourteen well-known localities in Polk county, commencing with the Double Branch mine and extending to the vicinity of Columbus, the county seat. They all had a good reputation in the former palmy days of mining in North Carolina so long as the deposits lay contiguous to the water supplies; but at present none can be worked on an extensive scale without a large amount of water. A sufficient supply could be obtained only from the North Pacolet, in the southwestern part of the county, by a ditch at least twenty miles long. No survey has been made to determine the details of such supply. At present the mineral area is worked at three points on a notable scale, but small parties and individual operators frequently work at odd times. The Double Branch mine, in the southeastern part of the county, has been at work most of the year, though a short supply of water somewhat curtailed the operations. Attention was given exclusively to the seams of quartz running through the strata, which is a variety of mica schist, thoroughly decomposed, and easily removed at trifling expense by hydraulic work or simple mining operations. The quartz, though forming but a small portion of the whole material, is a good ore and readily treated. The Prince mine, four miles south of the Double Branch, is a purely surface mine, and the entire work is hydraulic. The property embraces 360 acres; the gravel, although of good appearance, is rarely deep, sometimes not more than two feet. A sufficient amount of water to run one pipe, even in the driest season, is taken from the property itself; with a larger supply, a considerable return might be expected; it is doubtful, however, whether an additional amount of water could be obtained. The production of Polk county is about $3,500 per annum. In regard to the transmontane region of North Carolina, no reports have been received, and diligent inquiry failed in obtaining information of any steady work. An occasional deposit of gold at the United States Assay Office at Charlotte, from Cherokee county, shows that a little mining work has been prosecuted. At the Copper Knob mine, in Ashe county, no production of the precious metals was made during the year. A little underground work was done and the mine placed in better shape for continuous operation. The ore being rich in copper will require a smelting process, and the company expresses an intention of soon erecting a furnace, but it is not probable that anything more than making copper matte will be attempted.

South Carolina.—The State of South Carolina, in common with the whole mining area of the South, suffered last year from a drought, which seriously retarded work in every locality. The cultivation of cotton, having become more remunerative than other pursuits, has almost entirely diverted miners of small means from their mining work. Notwithstanding these adverse circumstances, the condition of the gold industry in South Carolina is favorable, and the yield is evidently increasing. The production of the State in 1881 is reported by Professor Hanna, of the Charlotte Assay Office, to have been $35,000.

The Brewer mine, in Chesterfield county, until last August, fully answered expectations, and would have produced from $25,000 to $30,000 during the year had the lack of water not brought work almost entirely to a close in August. The condition of the mine and the nature of the work remains about the same as described in my last report. It is probable that the work will be enlarged and a more ample supply of water be secured. There is no mine in this section in which the cost of working and the return of bullion can be so confidently calculated as in the Brewer, and this fact alone should insure its prosperity.

Georgia.—The gold belt of Georgia is upwards of one hundred miles in width, extending across the northern and part of the eastern section of the State, from northeast to southwest. Mines have been discovered from the line of Tennessee, in Fannin county on the north, to Columbia county in the south. The area of production has steadily increased year by year. Off the main belt, but little has been done, mining having been conducted principally in the counties of White, Union, Lumpkin, Cherokee, Dawson, and Rabun, situated in the northern section of the State. After the most careful inquiries, the yield of Georgia in 1881 is ascertained to have been about $125,000. In estimating this yield, two methods have been adopted: first, by careful inquiry at the producing points, and, second, by ascertaining the amounts shipped. Mount Airy, Gainesville, and Atlanta are the three main express points for the shipment of gold. The express agents at Mount Airy and Gainesville reported the shipments as $1,333 and $93,858, respectively. The agent at Atlanta declined to furnish any statement, but from the best information obtained, the amount cannot be large, probably not over $10,000, as Atlanta is somewhat remote from the principal producing area. The agent at Gainesville estimates that at least $12,000 was carried away during the year in private hands. Considerable gold produced in the section of country above Mount Airy is transported by mail, $2,700 being officially traced. A summary of the movement of gold from the State is as follows, viz.:

From Mount Airy, by express	$1,333
From Mount Airy, by mail	2,700
From Gainesville, by express	93,858
From Gainesville, by private hands	12,000
From Atlanta, by express (estimated)	10,000
Total	$119,891

This amount substantially agrees with that ascertained from independent observation at the mines.

In Rabun, the extreme northeastern county of the State, the J. P. Wilson mine, four miles from Burton, has been opened and will soon be at work on a large scale. This property, consisting of two sections of 490 acres each, has been worked on a small scale for many years. The surface of the country is extremely diversified with high mountains and deep gulches; the latter, cutting across the gold-bearing strata or receiving the wash and drift therefrom, have been long noted for their richness; for two generations, a few parties have operated on a small scale on this property, with rude and scanty apparatus, but the return has amply remunerated them for their time. The works now projected contemplate the hydraulic treatment of that portion of the gulches which have hitherto been beyond the reach of water, and of a mill treatment of the quartz from the seams or veins. A fair supply of water has been obtained from the upper reaches of the streams lying on the property, and more can probably be obtained if needed. The quartz veins or beds have been quite well exposed by the preliminary work of the last two years. The ore-channel of quartz, with the included decomposed slates, is two and a half feet thick, and connected with it are numerous seams and stringers of quartz in the adjacent slates. From assays made of many samples of the ore, at the United States Assay Office at Charlotte, N. C., it seems to be in richness fully up to the average of Georgia ores. The forwardness of the preparations and the condition of the work appear to justify the expectation of steady operations in 1882, and of a respectable yield; the running expenses of this mine will be small. The best information obtained in Rabun and Habersham counties points to a yield of $8,000 to $10,000 in 1881, and, from the present outlook, a return of $20,000 in 1882 is not improbable.

From Rabun county to Nacoochee Valley, in White county, the mining work is conducted almost exclusively by the country people, and on a small scale; those conversant with this intervening Territory believe that the returns to individual operators have rewarded them better than would have been done by other occupations. At Nacoochee Valley great activity is manifested; the work done is almost entirely hydraulic. The Bradley mill, erected to treat the quartz of the Runnel's vein and others in its vicinity, has been closed since the death of Professor Bradley, and is likely to remain so, as it is in litigation. The Nacoochee Company, which owns and controls twelve lots, is at present working on the grounds of the Lumsden Bros; the lease, however, is short, and as the company is involved in legal troubles the result of their work in 1882 is quite uncertain. Lot No. 38 has been vigorously exploited on the Chattahoochee slope of the Hamby Mountain belt; the facilities for water, however, are inadequate for properly working the resources of this property, and the summer drought still further diminished the usual small supply, consequently work has been hindered; the return for 1882 should be fully up to that of past favorable seasons; the mill employs five stamps. The Lumsden

Bros. are effecting arrangements for putting their property at work, or for disposing of it to other parties who will. In 1880 a very slight amount of work in their kitchen garden uncovered a remarkable deposit of nuggets, to the extent of several thousand penny-weights, and old miners, conversant with the course and characteristics of "ancient streams" in this neighborhood, think that other similar discoveries are probable; the ordinary resources of these lots are ample to give a good and constant return for a long time; at present there is a deficiency of water. Half a mile to the southwest E. R. Trimble is operating the Thompson place; he has a mill of five stamps, and is prepared for steady work, if the mine should continue to make a steady output of ore; the common run is regarded as satisfactory in quality, but rich chimneys are reported as existing. Many evidences of large resources are in this vicinity, but none, except possibly the Jarrett lots, Nos. 23 and 24, in district No. 3, are likely to be worked, except by individuals. The amount produced in this neighborhood can hardly be less than $15,000 in 1881; the yield is likely to be one-half greater the next year, if the ordinary conditions of water supply are maintained.

Between the Nacoochee Valley and Loudsville, Lumpkin county, mining is conducted on a small scale; the Loud's Ditch and Mining Company are at work, and, notwithstanding the scarcity of water, the yield was little affected. The principal mining operations of the Georgia gold region are in the vicinity of Dahlonega. The Barlow & Hand mine, two miles southwest of this town, has not materially changed, either in its ore supply or yield, except so far as the lack of water has checked work; during the summer only four of its eight batteries have been in operation. The ore channel of quartz seams is of great thickness, two having a combined width of 100 to 400 feet. In the belt now worked the seams are very numerous; at one point, within a distance of fifty feet, there are eleven, not counting those so small as to be mere strings. The quartz is of good grade, and, as the management shows the same skill and efficiency as noted on other occasions, the average yield will probably be maintained through 1882. The Ivy, adjacent to Dahlonega, and on the same belt as the former mine, is similar in character and operated in the same manner, though on a smaller scale; a description would be a repetition of the details of the Barlow & Hand. It employs twenty stamps; the yield has been satisfactory, and the prosperity is likely to continue. The Finley, one and a half miles southeast of Dahlonega, has been worked with little change. The quantity of ore at command is large, quite as much so as at the time of the examination made last year, but apparently it is of slightly inferior grade; this, however, is to be expected in every mine, and signifies nothing with reference to permanent work or value. Three bodies of ore of considerable thickness are available, but only two are now exploited, for which forty inches of water are being used. This mine is not so advantageously situated for hydraulic purposes as many others, as the natural head of water needs the reënforcement of pumping apparatus to enable it to reach the highest point of the mine. It is operated by two mills, one of thirty stamps run by water, and a second of twenty stamps by steam; the former only has been in operation during the summer. The blast, on the same belt, adjoins the Finley. As the ore is similar in character, no extended notice is necessary. For some months it has been consolidated with the Ivy, and worked under the same management with reported success. The Lockhart temporarily suspended operation for lack of water. A new shaft is sinking to meet the ore body at a greater depth, which is reported to be from seven to twelve feet wide and of more than ordinary richness. For a small mine, it has had unusual prosperity. It is operated by fifteen stamps. The Singleton, one and a half miles east of Dahlonega, is worked by ten stamps, under the same management as the Lockhart. It is supplied by water from its own special ditch, which is too small to allow of piping usually practised in hydraulic work in this section. The White, or Pigeon Roost, adjoins the Barlow & Hand, and the ore is much the same; its ten-stamp mill was stopped during a great portion of the year. The following summary shows the mines about Dahlonega and the number of stamps, viz.:

	Stamps.
Findley	50
Bast	20
Ivy	20
Lockhart	15
Singleton	10
Barlow & Hand	40
White	10

More reticence than usual was shown in communicating the production for 1881, but from the best sources of information, the yield of this district was $80,000. The work at Auraria, six miles southwest of Dahlonega, and on the same belt, is not so extensively conducted, nor has there been so much prosperity. The Chicago and Georgia, adjacent to the village, employs ten stamps; it is on lot No. 663, district 12; the ore does not seem so favorable as at other points on the belt, the well-known Pigeon Roost belt, and operations have been less vigorously conducted than during the preceding year. It has lately been leased to the efficient superintendent of the Findley, Ivy, and Bast mines, and under his energetic administration it will doubtless resume its former rank as a producer of bullion. The Auraria, one and a half miles southwest of the town of the same name, has recently been set to work. The summer has been spent in cleaning out the cuts, but only one experimental run to test the machinery, a ten-stamp mill, has been made, the vein has not been reached, and no trustworthy statement can be made respecting the prospective production, although a moderate yield is anticipated by those conversant with the resources of the belt. The Wells, half a mile south of Auraria, has also been opened; the ore body exploited is a quartz vein or seam eighteen inches to three feet thick, very laminated and coated with brown ore, and often very rich; at greater depth copper pyrites makes its appearance. The ore, although of good character, will prove refractory to the mill treatment; a ten-stamp battery has been brought here from the Hightown mine. Too little work has been done to determine the amount of available ore, so that no large yield of bullion should be anticipated in the immediate future. The Baggs Branch, or Cleveland, two miles south of the town, is situated on lots Nos. 172, 173, and the north end of 208. It is operated by twenty stamps, which can be driven by water-power in part or by steam. Both mine and mill are in good condition for work, but being at the extreme end of the Hand ditch, barely one-fourth of the requisite amount of water has been obtainable; the production, however, up to the time of the drought, had been fair. The Hightown, one mile west of Cleveland, has been idle nearly the whole year, and half the stamps have been removed to the Wells; the prospects are not very encouraging. The Bell is two miles southeast of Auraria; preparations are not yet sufficiently advanced for milling work; the mine has a good repute, but the water supply is neither abundant nor well-assured, and until that is settled, the yield of bullion cannot be large. The property is in the hands of energetic men, who seem determined to leave nothing undone to ensure success. The Calhoun, on lot 164, district 11, on the east side of the Chestatee river, and three miles south of Dahlonega, has recently been started. It was formerly worked by Hon. John C. Calhoun, for whom it was named. After lying in an abandoned condition for many years, it is now likely to be placed in the list of gold producers. The following mines about Auraria indicate the work of the section, viz.:

	Stamps.
Chicago and Georgia	10
Auraria	10
Wells	10
Cleveland	20
Hightown	10
Bell	10

The production of the district has not been over $8,000 during the past year. Before leaving this locality, mention should be made of a new enterprise. Near Leather's Ford, on the Chestatee river, four miles south of Auraria, a dredging-boat has been constructed by Captain Nobles; the intention is to raise the material from the bottom of the river, preparatory to extracting the gold. Of the worth of the process, or the value of the deposit at the point selected, no statement can be made, but of the accumulation of gold in the bed of the Chestatee there can be little doubt; the river runs for sixteen miles either along with, or across, the gold belt, and, together with its affluents along the same belt, must receive the wash and tailings from seventy-five or one hundred square miles of auriferous territory; at what point the gold has lodged, and to what extent, is however a matter of conjecture.

Dawson County.—This county is farther to the southwest and on the same belt. The only large mines are those controlled by the Cincinnati Consolidated Mining Company, the Baby, Magic, Gnome, Amicalola, and Kinmore; most of the known belts of the Dahlonega and Auraria districts are found on these properties. The Magic and Amicalola are the only mines worked to a noteworthy extent, but considerable preparations are projected for enlarged operations; the water supply is drawn from the immediate neighborhood of the mines and is insufficient; two ditches have been commenced, one to bring in the waters of Shoal creek, the other to run to the head of Amicalola river; when completed, they will give 2,200 inches of water; as some difficulties in construction have been encountered, several months will probably elapse before they are finished. Both of these mines have abundant resources, and will give ample occupation to the large supply of water contemplated; the belts are large and the ore good. Only hydraulic work has been done, though occasionally a run is made through the ten-stamp mill on the Magic. The associated properties are prudently managed and bid fair during the next twelve months to become producers on a considerable scale. The Franklin and Pascoe mines, twelve or fifteen miles southwest of the above properties, have recently changed hands, and will, it is thought, soon be put to work. These mines have had a famous history, but the work was mainly done on the surface; it remains to be seen how successful vein mining will prove; the ore appears to indicate much the same conditions existing to the northeast. Still further to the southwest, the operations are very desultory at the Strickland, Sixes, and Cherokee. The production of Dawson county has been about $10,000.

All of these mines were noted in the palmy days of placer mining, and some of them have yielded large returns; of what value they would be for deep mining, nothing can be said with certainty, but the ores exhibited at the Atlanta Exposition were of good character. The yield of these counties may be placed at $5,000. In reviewing the work in Georgia, in 1881, it will be seen that there has been but little change; the quantity and quality of the ore is substantially the same as it was a year ago. A few unstable companies have succumbed, and a few unwise enterprises have been set in operation, but the well-established companies have held their way with little change except so far as the scarcity of water in the summer and early autumn compelled an abridgment of their work.

STATISTICS.

Mr. Burchard furnishes, in his report, the following statistics:

Statement showing the Amount of Bullion and Locality of Production reported by the following Smelting and Reduction Works east of the Rocky Mountains* as having been treated during the calendar year 1881.

THE MINING COMPANIES OF THE UNITED STATES.

THE details of the mining companies that follow have been gathered with considerable trouble. Some of the companies it has been possible to induce to respond to our request for details. But they number only 118 responses to 10,000 accurately addressed circulars and requests. These, as being perfectly reliable, we have placed first. Those reports that follow are gathered from the *Mining Record*, the *Engineering and Mining Journal*, the *Mining Index*, the *Iron Age*, the *Coal Trade Journal*, the *Mining and Scientific Press*, the *Maine Mining Journal*, the *Rocky Mountain Mining Review*, the reports of Mr. Burchard, and other equally reliable sources. We do not present it as being an accurate record of the mining companies of this country, but as being a partial list, indicating the great importance of the mining industry.

The compiled list is obviously, however, only partially correct; but it is a beginning. To complete this list and to make it a reference work worthy of the highest credence, is the sincere wish of the compiler. He therefore earnestly and sincerely requests that mining companies and individuals in possession of information that will correct errors or supply omissions in this list will forward the same at once, that in subsequent editions of this book the list may more nearly represent what it is hoped to make it—a full and complete catalogue of the mine owners of the United States and their property. Unless otherwise stated, all reports are for April 1, 1882.

The Reported Companies.—The details of the one hundred and twenty companies that follow, and that were sent to us by officers of the companies, contain some facts worthy of remark. Fifty-nine of these one hundred and twenty report their capitalization, which foots up a total of $138,823,000 nominal capital. An enormous fact! This large sum represents 11,900,840 shares, which average, therefore, about $11.66 per share. These are noteworthy figures.

COAL.

Avenue (First) Coal-Mines, owned by Messrs. Thomas & Sons, are located at Evansville, Ind., on the Belt Railway, and cover an area of 147 acres. They are in first-class condition throughout, entries being all timbered, and having the necessary improvements to conduct the operations with safety and economy. The depth of shaft is 270 feet. Developments were commenced in 1875. The mine is capable of producing a maximum of 43,200 tons per year. The company is a private enterprise, not being chartered, and was organized in 1875, operations being commenced the same year. The yield (gross) during 1881 was 21,600 tons. This information was furnished by Mr. E. R. Thomas, of the firm of Messrs. Thomas & Sons.

Banner Mines (The) and the **Gas-Coal Mines,** comprising an area of 432 acres, are owned by Messrs. Gamble & Risher, who have offices at the works, the main office being at 116 Water St., Pittsburg. The property is located at White Mills Station, Monongahela Division P. R. R., Washington county, Pa., and is valued at $75,000, which represents the capital of the company, which was organized in June, 1879. Developments were commenced about the same date. In 1881, the company shipped 1,460,000 bushels of coal. The Banner Mines despatch by river and the Gas Coal-Mines by rail. This information was furnished by Messrs. Gamble & Risher.

Bennett & Everhardt Collieries (The), leased to and operated by Messrs. Waddell & Co., are located in Pennsylvania,—the Bennett at Mill Creek and the Everhardt in Jenkins township. Total extent of holding is about 850 acres. The Bennett colliery was opened in May, 1881, and arrangements are not yet completed. There are to be two shafts and a breaker; estimated cost of same, $100,000. From this colliery there were shipped during April 93$\frac{18}{20}$ tons coal, and during May 736$\frac{13}{20}$ tons. The Everhardt colliery belongs to the Everhardt Coal Co., whose offices are at Boston, Mass. The mine was commenced about 1865. It came into the hands of Messrs. Waddell & Co. in 1874, who have run it up to the present time. This colliery produced in 1881 $53,661$\frac{18}{20}$ (net). This information was furnished by Messrs. Waddell & Co., the leasees of the property.

Black Hills Mine (The), owned by Miller & Co., is located at the intersection of the Pittsburg, Virginia & Charleston Railway and the Monongahela River, and comprises an extent of 200 acres. The opening to mine is by tunnel 2,500 feet in length. There are two shafts. Developments were commenced in 1879. The gross yield during 1881 was 12,500 tons. Analysis of coal gives fixed carbon, 64; ash, 2.28; sulphur, 00.13, and bitumen, 33.59. Total, 100 parts. This information was furnished by Messrs. Miller & Co., of the Black Hills.

Boston Coal-Mining Company's (The) properties, not being operated at present, are located on Herbert river, Nova Scotia, and cover an area of ten acres, with privileges to the extent of two square miles. The average width of vein is two and one-half feet. The capitalization is $100,000, in 4,000 shares of $25 each. The above information was furnished by John Moffit, agent of the Boston Coal-Mining Company.

The Central Coal and Iron Company (The) is chartered under the laws of the State of Kentucky. The officers are B. Du Pont, Pres.; Thos. J. Tapp, V. Pres.; Banner Coleman, Sec. The annual election is held first Tuesday in June of each year. The Superintendent is H. Martin. Head office is at Louisville. Branches at Central City, Du Pont, Hamilton, Mercer Station, Ky. The company owns the following mines: Green River, Render, Guylena, Strand City, Muhlenberg, and has on lease the Richmond and the Mercer Mines, all located in Ohio and Muhlenberg counties, Ky., and covering an extent of 5,000 acres. The mine is of the fissure character and is worked by drift. The plant consists of machinery, stores, and dwelling-houses at each mine, valued at $258,382.55. There are three shafts each sixty feet deep, and all the other workings are drifts; $55,389.96 has been expended in developing the mines since operations were commenced in 1880. The cost of mining and putting on cars is from 87½ cents to $1.25 per ton. The maximum yearly capacity of production at April 1, 1882, was 4,000,000 bushels, and the weekly output at same date was 40,000 bushels. Principal market is Louisville, Ky., and the South. Organized June 1, 1880. Capitalization $1,000,000; shares each $100.00. Assessable basis yield to date (April, 1882), 4,000,000 bushels; number of divisions paid to April, 1882, one; amount of same, $5,788, paid July 2, 1881. No assessments have been levied. Bonded indebtedness, April 1, 1882, $15,000; stock, $247,000; floating, $71,000. The stock, held principally in Kentucky, is at par. Wages paid to all classes of labor per week, $2,500. This information was furnished by Banner Coleman, Secretary of the Central Coal and Iron Company.

Chipdale & Company (The), R. H. Chipman, owner; head office, 95 Liberty Street, New York. Name of mine owned, Coaldale: location of mine, Osceola, Clearfield county, Pa. Amount of property in acres about 297. Date of commencing developments, February 1, 1882. Thus far yielded about 7,000 gross tons per month, now extended to capacity of about 5,000 to 6,000 per month. Information furnished by Robert Chipman.

Coal Creek Mining Company (The) is chartered under the laws of the State of Tennessee. The officers are T. H. Heald, Pres., and Daniel Lee, Sec., and Treas. J. Rooney being Superintendent, with an experience of twenty-five years. The offices are at Knoxville, Tenn. The Empire Mine is located at Coal creek, Tenn., the property having an extent of 200 acres; developments were commenced on the 23d of March of the present year. Organized 23d of March, 1882; capitalization, $50,000; shares, $100 each; no bonded or other indebtedness. This information was furnished by T. H. Heald, President of the company.

"Edgar Coal Company" is chartered under the laws of the State of Illinois. The officers are James A. Eads, Pres.; F. E. Powell, Sec'y and Treas. Date of annual election, third Monday in July. Superintendent, H. P. Davis; two years' experience. Head office, Paris, Ills. Branch office, Coal Bluff, Ind. This company own the "Grant," "Coal Bluff," and "Perth" coal-mines, located at Grant, Coal Bluff, and Perth, Ind. Amount of property in acres, 275. The character of the coal is block and bituminous. The company have two hoisting engines and two pump engines on their property. Length of tunnels, "Grant" 100 feet, "Coal Bluff" 500 feet, "Perth" 800 feet. The company have just opened in the Perth mine a four feet vein of block coal. There is a six feet vein of bituminous coal at the Coal Bluff mine, where there are 100 men employed, and a four feet vein at the Grant mine, where fifty men are employed. The development of the property was commenced March 1, 1881, and $15,000 have been expended in developing property to date. The prospects of the property are good. Cost of mining and milling per ton 80 cents, 85 cents, and $1. Maximum yearly capacity of production, April 1, 1882, 60,000 tons. Output weekly at April, 1882, 1,300 tons. Indianapolis and C. C. C. & S. R. R. are the principal markets for the company's ore. The block coal at Perth has been thoroughly tested and pronounced the best in all this block coal district. The bituminous coal at Coal Bluff is very desirable for steam purposes, and the Grant coal is also good for steam purposes as well as domestic use. This company was formed June 9, 1882, from the Powell Coal Company, which had been operating the coal-mines since March 1, 1881. Date of organization, March 1, 1881. Capitalization, $24,000. Par value per share, $100. Yield (net) to April 1, 1882, $4,000, 28,000 tons. Yield (net) during 1881, $2,500. Yield (gross tons) during 1881, 1,800. Stock and bonds held principally in Edgar county, Illinois. This information was furnished by H. P. Davis, Superintendent of the Edgar Coal Company.

Etna Coal Company is chartered under the laws of the State of Tennessee. The officers are Wm. Morrow, Pres.; D. P. Pittsburg. Gen. Manager; J. T. Hill, Sec.; Wm. McConnell. Treas. Date of annual election, August 1st. Superintendent, D. P. Pittsburg. This gentleman has had an experience of ten years at this company's mine. Head and transfer office, Whiteside, Tenn. The Etna mines, owned by this company, embrace thirteen seams of coal, seven of which are workable, but only two are operated at present. They are located at Whiteside, Marion co., Tenn. They own 2,500 acres of land. The coal is the best quality of blacksmith coal in the United States, not excepting the Blossburg and Piedmont. Character of the mines, drift or tunnel, and cost of mining per ton is $1.75, including all expenses. Miners' wages, fifty cents, sixty cents, seventy cents, and ninety cents, according to thickness of vein. The coal finds a market throughout the entire South; some coal and foundry coke sold in New Mexico and Colorado. The Kelly, Black Hill, and Mire Creek mines are worked by tunnel; first is one mile in length; second, five hundred yards; and the third, one-half mile. Prospects of the property are good. The company's mine is the only one in the southern coal fields which produces a first quality of coal for blacksmith and foundry coke purposes. Both the coal and coke find a ready sale at the mines, free on board at 12½ cents per bushel. The coke is equal in every respect to the Conallsville, and many foundries prefer it, claiming that it will bear a greater burden in the cupola. An analysis of the coal made by J. G. Pohle, of New York, is as follows: Fixed carbon, 74.20; Volatile matter, 21.30; Ash, 2.50; Sulphur, .70; Water, 1.30. Total, 100 parts. Analysis of coke made by Prof. A. W. Kinzie, Hockendanque Valley, Pa.: Fixed carbon, 90.70; Sulphur, 1.24; Ash, 8.06; total, 100 parts. The average yield per month is about 3,000 tons. Development of property was commenced by this original company, 1855. Date of organization, August 1, 1881; capitalization, $300,000; par value, $100. Company free from indebtedness. No quotation of stock has been made; all stockholders hold stiff at par. Stock not listed. Stock held principally at Nashville, Chattanooga, and Whiteside, Tenn. This information was furnished by J. T. Hill, Sec. of the Etna Coal Company.

Sangamon Coal Mining Company (The), formerly Starne, Dresser & Co., is chartered under the laws of the State of Illinois. The officers are Frank W. Tracy, Pres.; Chas. A. Starne, Gen. Manager; Saml. T. Dresser, Sec. and Treas. Directors, F. W. Tracy, C. A. Starne, and S. T. Dresser. The annual election is held 31st December. Mr. Jos. Hann is Superintendent, with an experience of twenty years. The officers are at Springfield, Ill. The property, of which the company has only an underground lease, comprises an area of 700 acres, and is located at the junction of Ills. Central R. R. and Wabash, St. Louis & Pacific Railway. Near Springfield, Ill., a small parcel of land, about six acres, belongs to the company. The coal is bituminous and of good quality. The deposit is about six feet in thickness. There are three shafts: one main shaft 250 feet deep, and one escapement shaft; also another working shaft. The mining plant and other property comprises two top works (A. and B. shafts), two engine houses, two smiths' shops, one carpenter shop, six engines, and six boilers, etc. etc., one store, one warehouse, and thirty-two tenement houses. Developments were originally commenced by C. A. Starne, and afterwards, Starne, Dresser & Co., in October, 1878. Twenty thousand dollars were spent in developments from January 1 to April 1, 1882. The total cost per ton for mining is about ninety-five cents per ton. The maximum annual capacity of production on 1st April, 1882, was 250,000, or about 2,500 tons per week. The coal is sold to the Ills. Central and Wabash Railway Company, and in the cities and towns situated thereon. Organized in December, 1881; capitalization, $300,000, in 3,000 shares of $100 each. Gross yield during 1881, 125,000 tons; gross yield from January to April, 1882, 30,000 tons. The company has not yet paid any dividends. The bonded indebtedness is $10,000. The stock is held principally in Sangamon county, Ill. This information was furnished by S. T. Dresser, Secretary of the Sangamon Coal Mining Company.

Gray & Bell. Head office, Banksville, Pa. Geo. Scott, private clerk. Branch office, Pittsburg, Sontside, Pa., Robt. Gray, head clerk. Isabella Bell is the surviving partner of the firm and transacts all the business. Martin C. Gray is Superintendent, and has had thirteen years' experience. The mines owned are, the "Coal Ridge," "Venture," and "Chess," which are located at Saw-Mill Run, Bankaville, Union township, Allegheny county, Pa. The coal is excellent, being the Pittsburg No. 8 seam, bituminous. The mines are all drift mines with the one vein of coal. There are seven standing engines and a fan blast on the property. The firm own forty mules. There are four shafts, 2 0 feet deep, and five miles of tunnels. Length of adits—that is, levels—two miles. The vein has an average width of four and a half feet. There are five tunnels, "Coal Ridge, 1;" "Venture, 1;" "Chess, 2;" Miles 1. Underground workings, dip to west 2′ 10″. The development of the property was commenced in 186. In the "Venture" the outside engine hauls for one and a half miles from the inside engine. In the "Chess" there are three engines, two hauling from the pit and one hauling from there through a hill to an incline plane, which goes to another tunnel through Duguesne Heights to supply iron mills. This tunnel was pierced at an immense cost to the firm, for the purpose of supplying the mills with coal. Its length is 1,200 yards, with an average width of five feet and height of six feet. The cars are hauled through by a standing engine at the mills with a tail rope which enables the engine to haul them back when empty. The "Venture" employs in full working order some 150 diggers, with some thirty day hands and boys. The "Chess," ninety diggers with thirty day hands and boys. The "Coal Ridge," 100 diggers, with twenty day hands and boys. The firm have two car-shops employing thirty men. Date of organization, 1860. Yield (net) during 1881, $330,-542 80. Yield (gross tons) during 1881, 236,102. Maximum yearly capacity, April 1, 1882, 219,711 tons. Output weekly at April, 1882, 3,380 tons. Wages paid to all classes of labor per week, April 1, 1882, $3,837.86. Principal market for coal, Pittsburg and West. This information was furnished by Geo. Wm. Scott, private clerk to the firm of Gray & Bell.

H. V. Coal & Salt Co. (The) is chartered under the laws of the State of Ohio. The owners are Messrs. Henry & Lowery. Mr. Wm. Henry has the superintendence of the mines, with an experience of twenty years. The offices are at Chauncey, Athens co., Ohio. The property, having an extent of 350 acres, is located at Chauncey, Athens co., Ohio. The coal is good for steam purposes, but the salt is poor, and has not been worked at a profit. The shaft is down 100 feet, and the adits have an extent of about 450 feet, which is the length of the deposit on which the company depends for its mineral supply. The property on the ground consists of one salt furnace and minor plant. The salt is shipped to Ohio, the coal having a local demand. The maximum yearly capacity of production, January, 1882, is 10,000 barrels of salt. The mine is an adjunct of a salt furnace, a small quantity, say 1,000 tons, is available for local retail sales. Thus the business is merely nominal, the returns for sales of salt barely paying cost of production. Capitalization, $50,000, in fifty shares of $1,000 each. The net yield during 1881 was $2,400 for a gross tonnage of 3,200 tons of coal. The stock is depreciated. This information is furnished by Mr. Wm. Henry, Superintendent of the company.

Keystone Coal Co. (The) is chartered under the laws of the State of Pennsylvania. Officers, Henry H. Stiles, President; Francis H. Williams, Secretary and Treasurer. Annual election is held first Monday in May. Mr. T. O. Yarington is Superintendent. The offices are at Meyersdale, Pa., and at 209 S. Third St., Philadelphia, Pa. The company owns the Keystone Mines located near Meyersdale, Somerset county, Pa. The property covers an area of 1,200 acres. Organized 4th of December, 1879; capitalization, $570,000; 11,400 shares of $50 each; no dividends have been paid or assessments levied; stock indebtedness. $570,000; stock reserved in treasury $11,608.25. The coal bed is an extension of that great deposit which eight miles off is known as the Cumberland Big Vein, which is identical with the great Pittsburg vein of coal. Stratification is nearly horizontal and the coal is entered through an adit. The coal after being mined is transported over a 3-foot narrow-gauge road a distance of five and a half miles, where it is dumped into cars on the Pittsburg branch of the B. & O. R. R. for transportation to market. The company are mining themselves about 6,000 tons per month, and by lessees about 10,000 per month more. Yield per acre of marketable coal 10,000 tons. Cost of mining per ton of coal fifty cents. The quality is medium, it being used chiefly for steam purposes, though it makes a coke of quality equal to the Connellsville. This information was furnished by Thomas Weld, and Francis H. Williams, Treasurer of the Keystone Coal Company.

Keystone Coal Company (The) is chartered under the laws of the State of West Virginia. The officers are Joseph P. Brinton, Pres., and Geo. Brooke, Treas. The annual election is held on the 2d Wednesday of December; offices at Philadelphia Pa., and at Richmond, Va. The company owns the Kanawha Mines, the Union Coal Mines, and the Mount Morris Coal Mines, located at Coal Valley, Kanawha county. West Va., covering an area of 1,200 acres held in fee-simple. Developments were commenced in January, 1881. The three properties named are partly leased to companies at twelve and a half cents per ton. The principal markets for the coal are Cincinnati and Richmond. The maximum capacity of production at April 1 was 150,000 tons. Organization, January, 1881: capitalization, $150,000, in 1,500 shares of $100 each; non-assessable. Yield to April, 1882, 3,000 tons (about), net yield during 1881, $2,000 (about;) a gross yield during 1881, 16,000 tons. There is no treasury reserve of stock which is held principally in Pennsylvania and Virginia; no stock listed or on market. This information was furnished by Jos. P. Brinton, of Richmond, Va., President of the Richmond, Fredericksburg and Potomac Railroad Company, and of the Keystone Coal Company.

McLean County Coal Company (The) is chartered under the laws of the State of Illinois. Dr. T. F. Worrell is Pres., and J. B. Stevenson, Sec. and Treas. The annual election is held in April of each year. Mr. W. W. Stevenson is Superintendent, with an experience of seven or eight years. Offices are at Bloomington, Ill. The property of the company comprises three acres, and is located at Bloomington Ill.: entrance to min s by tunnel, from second to third vein 530 feet, depth of shaft 541 feet. The second vein is four feet four inches thick, and the third vein two feet six inches; one main shaft, the roof and bottom are poor. Developments were commenced in 1867, when the company was organized; capitalization, $90,000, in 900 shares of $100 each, non-assessable; yield during 1881, $71,000: yearly average capacity, 60,000 to 70,000 tons. This information has been furnished by Jas. B. Stevenson, Secretary of the McLean County Coal Company.

Mill Creek Coal Company (The) is chartered under the laws of the State of Pennsylvania. T. F. Walters. Pres. and Treas., Bertollette, Sec. The head office is at Mauch Chunk, Pa. The mines owned are Middle Lehigh Mines, located in New Boston Basin, Schuylkill county, Pa.; the total property having an area of about 700 acres. Organized in 1881; capitalization is 2,000 shares; par value, $50; capital stock, $100,000; gross yield during 1881, 135,475 tons. This information was furnished by J. S. Cox, a director of the Mill Creek Coal Company.

Newburgh Orrel Coal Company is chartered under the laws of the State of Virginia. The officers are C. Morton Stewart, Pres.;

Charles Mackall, Sec'y and Treas. Office, Baltimore, Md. The company's property is located in West Virginia, covering 4,000 acres of land. Date of organization, 1855. Capitalization, $500,000. Par value per share, $25. Basis non-assessable. Date of latest dividend, June 1, 1882, three per cent. This information was furnished by the Newburgh Orrel Coal Company.

Nova Scotia Coal Company is chartered under the laws of the Province of Nova Scotia. The officers are C. S. Maltby, Pres.; E. H. Townsend, Sec'y; C. S. Maltby, Treas. Superintendent, M. H. Angell. The company's mine, the "Black Diamond," is located at Westville, Pictou county, Nova Scotia. The extent of claim is four quare miles. Amount of property in acres, held in fee, 800. The company ceased mining coal in 1878. The railroad, with its equipment, extensive wharves, and tug-boat belonging to the company, are used in transportation for others. This information was furnished by M. H. Angell, Superintendent of the Nova Scotia Coal Company.

Osceola Coal Company (The), represented by John Shields, J. H. Dewees, and Margaret Shields, the owners, has offices at Osceola, Pa. J. H. Dewees is Superintendent, and John Shields, Secretary. The property comprises about seventy-five acres, located at South Versailles Township, Allegheny county, Penna. The company is not chartered. The mine is worked on lease. The length of entrance tunnel is one mile. Developments were commenced about 1877, the date of organization. Four dividends, aggregating $8,000, have been paid to April 1, 1882. Only one assessment has been levied, date of same, November 7, 1877. This information was furnished by J. M. Love, Bookkeeper of the Osceola Coal Company.

Penn Colliery. Owned by Reakirt & Company. Not chartered. D. E. Conrad, Superintendent. Eighteen years' experience. Principal office, 218½ Walnut st., Philadelphia, Pa. Branch, Dudley, Huntington county, Penn.; Houtzdale, Clearfield county, Penn. The Penn Colliery mine is located in Houtzdale, Clearfield county, Pa. Extent of claim, a lease ten years. 200 acres owned by the company. The quality and character of ore is bituminous coal. Character of mines are drifts. Shipped by rail. Coal three foot thick, Two drifts are used. Property consists of main gangway, cross headings, and rooms. The cost of mining and milling per ton, fifty cents; extras, twenty cents; in all seventy cents. Royalty fifty cents. Total $1.20. Date of commencing developments, 1869. The firm of Reakirt, Bro. & Company is only composed now of E. L. Reakirt, as his brother is dead, and Mr. Osterlow going out of the company, leaves E. L. Reakirt sole proprietor. The business is all done in the name of Reakirt, Bro. & Company. The mine has been run by three other parties with no success, owing to its being a faulty mine, full of rolls, clay veins, &c.; would not be worked at all, only for its coal being of the very best quality. The company was organized 1878, with present company. Yield net to April 1, 1882, annually, 20,000 tons. Output weekly, April, 1882, 400 tons. Wages paid for labor per week, April 1, 1882, $300. Principal market for the coal, Philadelphia and New York. This blank was filled out by Henry Cook, Houtzdale, Clerk of the firm of J. Reakirt, Bro. & Company.

Price Brothers' Mines (The). under the superintendence of J. E. Price, of ten years' experience, have offices at Jackson, Ohio, three and a half miles west of Jackson branch office. The owners are W. S. Price, J. H. Price, J. E. Price, and Benj. F. Price. The mines are located three and a half miles west of Jackson, Ohio, the property having an extent of of 400 acres; there are 300 yards of tunnels in the mine; the length of the main lode, on which the supply of mineral depends, is fifty feet; the deposit varies in thickness from thirty to thirty-six inches, no blasting required; good reef and good air and dry bottom. The coal is superior for domestic purposes and for smithy purposes. Four good veins of ore, one of limestone and one of small coal. Jackson, Ohio, forms the principal market. Organized, 1876.

Sand Run and Carbon Hill Coal Mines (The), owned by J. H. Somers, are located in Hocking county, O., with office at Columbus, O.; the property having an extent of 614 acres. The quality of the coal is A 1, and is adapted for all purposes. The vein is eight feet thick and is worked by four drifts. The present cost of mining is seventy cents per ton. Developments were commenced in 1879, since which $49,200 has been expended, including an item of $17,000 for railroad cars. He estimated that there are 4,250,000 tons of coal on the property, which, at fifteen cents per ton, the price offered for it, would bring $637,500. The maximum yearly capacity of production is 250,000 tons. The output for April last was 16,900 tons; wages for same month being $11,300. The coal is shipped to the northwest, which constitutes the chief market. The net profits to 1st January, 1882, were $122,000; yield during 1881, $43,000, the product of 142,000 tons of 2,000 pounds to the ton; 275 hands are employed. The screens are operated by steam. Payments are made monthly on or before the 15th. The coal is in great demand for railway and gas-producing purposes at from five to fifteen cents above the average or market prices. The firm has also a yard at Columbus, where about 47,000 tons are sold yearly. Funds in reserve on 1st April, 1882, $38,000; Indebtedness on 1st April, 1882, $31,000. Cash balance, $7,000. This information has been furnished by J. H. Somers, the proprietor.

Seattle Coal and Transportation Company (The) is chartered under the laws of the State of California. Officers are John L. Howard, Pres.; S. O. Putnam, Sec'y. Offices, 210 Battery st., San Francisco. Annual election held, January 20. Superintendent, Jas. Williams. The company owns the Newcastle mine, located in Newcastle, Washington Territory; extent of property 1,100 acres. The coal is a lignite. One vein, ten and a half feet clean, one four feet seven inches, and one five feet 10 inches. Developments were commenced in 1871. San Francisco forms the principal market for the coal. Organized, April 12. 1871. Capitalization, $30,000. 30.000 shares, $1 each. Gross yield in 1881, 138,454 tons. Stock all owned by Oregon Improvement Company. Stock not listed. This information was furnished by John L. Howard, President of the company.

Soddy Coal Company (The) is charcred under the laws of the State of Tennessee. The officers are M. H. Cliffe, Pres.; J. W. Cliffe, Sec'y; J. T. Williams, Gen. Manager, and A. Lloyd, Supt. Annual election is held May 24. Offices at Chattanooga. The company owns the Soddy Coal Mines and the Salt creek Coal Mines, situated on the Cincinnati and Southern Railway. The property has an extent of 10,000 acres. The mine is worked by levels, the prospects being promising. Developments were commenced in 1867. Organized 1866. Capital in 10,050 shares, non-assessable, which are at a premium. Stock held entirely in Tennessee. Not listed, now at a premium. This information was furnished by J. T. Williams, Gen. Agent of the Soddy Coal Company.

Carbon Hill Mine (The) owned by Sackett Smart & Co. Name of mine owned, Carbon Hill Mine; located on Sand Run, Hocking county, Ohio, on Monday Creek Branch of C. H. & F. R. R. Extent of claim, 208 acres; amount of property in acres, 203; date of commencing development April 1, 1881. Two tunnels; length of tunnel, 1,500 feet; amount expended in developing property to April 1, 1882, $12,000; yield net to April 1, 1882, 23,322.62, 20.15 tons. Information furnished by Sackett H. Smart & Co.

Spring Hill Mining Company is chartered under the laws of Nova Scotia, special act. The directors are Alex. Macfarlan, Pres.; J. Magee, C. G. Twann, S. S. Hall, Geo. E. Franklyn, R. P. Starr, J. L. Dunn. Date of annual election, last Tuesday in January; William Hall is Manager. Office, Springhill Mines. Nova Scotia; transfer office, St. John, N. B.; transfer days, any lawful day, except ten days before annual meeting. The company's mining property consists of the Springfield Mines, located at Springhill, Cumberland county, Nova Scotia. Extent of claim, seven square miles. Amount of property in acres, about 7,000 The coal mined is superior for steam purposes, and is used largely for locomotive and rolling mills. Character of the mines, bituminous coal. The company has all the necessary plant, including three locomotives, for putting out 200,000 tons of coal per annum, workmen's houses, offices, etc. A new Blake pump is being put in. There are three slopes about 800 feet each, average angle of thirty-five. Length of adits—that is, levels, about one and a half miles. The three seams average about ten feet each of coal. Developments were commenced during the year 1873. The prospects of the property are good, output (gross tons') weekly, at April 1, 1882, 3,790. The Dominion of Canada is the principal market for the ore. The mine is situated on the Intercolonial Railway, about half-way between St. John, N. B., and Halifax, N. S., and is largely depended on by the manufactories along the whole line for their fuel. It is also the nearest mine, by railroad, to the markets of Montreal and Quebec. The coal is shipped at Dorchester, Bay of Funday, and Pawslord Basin of Minas. Unlike most of the Nova Scotia coal-mines, it is worked to its full capacity during the winter months. Date of organization, April 18, 1870. Act passed. Capitalization, $641,000. Par value, $50. Basis. non-assessable. Yield (gross tons) during 1881, 151,723. Number of dividends paid to April 1, 1882, eight. Total amount of dividends paid, $203,332.50 Date of first dividend, June 1873. Amount, $1,561.50. Date of latest dividend, February 14, 1882. Amount, $44,870; per share, $3.50. Free from all indebtedness. No treasury reserve. No stock on the market. Stock held in London, Canada, and New Brunswick. This information was furnished by order of the Board of Directors of the Springhill Mining Company, under the direction of J. W. Starr, Acting Chairman, and W. E. Vroom, Sec. and Treas.

Sunday Creek Coal Company (The), Columbus, O., is chartered under the laws of the State of Ohio. Officers, J. S. Morton, Pres.; J. W. Jonde, Sec.; A. A Hall, Manager. General office, Columbus, Ohio. Annual election, February. Fred. Witler, Supt., four years' experience. Name of mine owned, Sunday Creek; located in Perry county, Rendville. Ohio. Eighty acres of land owned by the company; shaft forty feet: length of levels, 15,000 feet; length in feet of the main lode on which the company depends for its supply of coal, 900 feet; average height of vein nine feet; one shaft is used; property owned, hoisting engine, two pumps. Developments were commenced 1877; date of organization, 1878; cost of mining and milling, ninety-two cents; capitalization, 10,000 shares; par value, $50; non-assessable. Yield net during 1881, $40,000; yield gross during 1881, $30,000; number of dividends paid to April 1, 1882, one; amount $1,000; date of first dividend, February 1, 1881; per share, $10. Stocks held principally in Columbus, Ohio. Maximum yearly capacity, 55,000 tons. Output April, 1882, 1,500 tons. Wages paid to all classes of labor per week, April 1, 1882, $1,000. Principal market for ore, Toledo, and Chicago, Ill. This information was furnished by A. A. Hall, Manager of Sunday Creek Coal Company.

W. C. Lombard & Co. Office, Galesburg, Ill. Superintendent, T. Mure. This firm owns the W. C. Lombard & Co. mine, located six miles northeast of Galesburg, Ill. Extent of claim, fifty acres; mineral found is soft coal; the firm have a coal shaft engine at the works; the shaft is seventy-five feet deep; vein four and a half feet high; five miles of tracking have been made; developments of the property were commenced about the year 1865. Galesburg is the principal market for the coal; the company was formed about the year 1865: the mine yields 2,000 bushels per day. This information was furnished by W. C Lombard, Galesburg, Ill., of the firm of W. C. Lombard & Co.

COAL AND IRON.

Southern Ohio Coal and Iron Company (The) is chartered under the laws of the State of Ohio. Officers, A. A. Thomas, Pres.; E. A. Stewart, Sec.; John H. Patterson, Man.; F. J. Patterson, Supt. Principal office, Dayton, O.; branch, Cincinnati, O. Transfer office, Dayton; transfer days, all days. The names of mines owned are Mine No. 1, Mine No. 3. Mine No. 4, Mine No. 5. Mine No. 7; located in Jackson, O The iron ore is red hematite. Fifty thousand acres of land owned by the company assays per ton sixty per cent. Four drifts and one slope mine. Developments were commenced September, 1881. Amount expended, $140,000. The company mines four veins of coal, three bituminous and one cannel coal vein; also, three veins of iron ore and one ledge of limestone rock. The latter is used for smelting iron. Company own houses, farms, lands. The peculiar characteristic of this bituminous coal is that it makes no soot, and almost no ash, and smelts iron without being coked, making Jackson county, O., the cheapest point in the United States for making first class coal-cut iron. The company's net earnings already more than pay the interest on its bonds. Its work thus far has been chiefly of preparation. Date of organization, 1881. Stock and bonds held principally in Boston, Mass. and Dayton, O. Capitalization, 15,000 shares; par value, $100; bonds reserved in treasury, $61,000; bonded indebtedness, $400,000; stock indebtedness, $1,500,000; stock quotations, $30 per share; bonds, $10 par. Stock not listed. Principal market for ore, Jackson county, O. Weekly output, 2,500 tons. This blank was filled out by John H. Patterson, Manager of the company.

COPPER.

Minnesota Mining Company (The) is chartered under the laws of the State of Michigan. The officers are Geo. D. Pond, Pres.; J. Geo. Repplier, Sec. The annual election is held third Wednesday in March. Superintendent, Thos. D. James, of twenty years' experience. Transfer and general offices, 98 Broadway, N. Y., and Rockland, Mich. Transfers can be effected at all business hours. The company owns the Minnesota mine, located in Ontonagon county, Mich. (Lake Superior district). Extent of property, 5,000 acres. The ore is a virgin copper, assaying 1,400 pounds to the ton. The mining plant consists of three engines, stamp mill, dam, miners' houses, village of Rosendale, and dock at Ontonagon, etc., etc Lowest shaft is 1,200 feet down; length of adits, 280 feet. The length of main lode on which the company depends for its supply of ore, is 2,820 feet. There are eighteen shafts. Seventeen veins run through the property; longest, 5,280 feet. Developments were commenced in 1855.

England, France, and Germany form the principal markets for the ore. In 1857, a pure mass of metallic copper was found, measuring about forty-five feet by about eight to nine feet by eighteen and a half feet in the widest part, weighing about 500 tons, and worth, as laid, about $15,000. Organized, 1855; capitalization, $1,000,000, in 20,000 shares of $50 each; assessable. Yield to January 1, 1881, 17,325 tons; yield during 1881, twelve tons, 227 pounds refined copper; value of same, $4,421. Twenty dividends, aggregating $1,820,000, have been paid. Date of first dividend, 1854; amount of same, $90,000 at $4.50 per share; date of last dividend, 1876, fifty cents per share; amount of same, $10,000. Six assessments levied, aggregating $446,000; date of first assessment, 1849, at $3.30 per share; date of last assessment, 1881, at fifty cents per share. Stock held principally in New York, Boston, Lowell, and Providence; stock is listed on Boston Mining Exchange. This information was furnished by Geo. D. Pond, President of the Minnesota Mining Company.

Planet Copper Mines (The), owned by Oliver Augdahl. The names of the mines owned are the Planet, Ashley, Sentinel, Copper Hill, Galmets, located at Flacora mining district, Yuma county, Ariz. Carbonate ore assays fifteen and a half copper per ton. Veins are the character of the mines. The Planet mine has produced up to 1873 about 7,000 tons of copper ore, assaying twenty-seven per cent. The other locations, in all, about the same grain of ore. The cost of mining and milling is $4.00 per ton. The Planet copper mine was discovered in 1863, by Richard Boyland, and worked steadily till 1873; then, through bad management, was abandoned, but was again relocated August, 1879, by me, Oliver Augdahl; no work has been carried on since then, except a little prospecting, as the large amount of ore in sight is of too low a grade for shipping. There are a number of other lodes in the group, viz.: 1, Planet; 2, Ashley; 3, Sentinel; 4, Byron; 5, Galmets; 6, Copper Hill; 7, Blue Bell. They are all parallel lodes; average width of vein, five feet; four shafts. There is no use to describe an old mine; sufficient to say that capital is all that is needed to make the property worth millions of dollars. This property is situated one-half mile south from West Fork, twelve miles east from the Colorado river; therefore have the finest facility for mining than any district in Terneska. Yield net during 1881, $492; yield gross tons, 1881, seven tons, of a lack cut during the year. Principal market for the ore, San Francisco. This information was furnished by Oliver Augdahl.

Quincy Mining Company is chartered under the laws of the State of Michigan. The Directors are T. T. Mason, F. B. Wallace, T. G. White, J. Brown, B. F. Meservey. T. T. Mason, Pres.; W. R. Todd, Sec'y and Treas. Date of annual election, June 7. T. G. White is Superintendent, and has had twenty-five years' experience. Offices, 4 Exchange Court, New York; 4 Change Avenue, Boston, Mass., and Hancock, Mich. Transfer Agent, Nathan H. Daniels. Offices, New York and Boston. Transfer days at all times. The company's property, which includes 500 acres of land, is located at Portage Lake, Lake Superior, Houghton county, Mich. The company's machinery, buildings, etc., cost about $800,000. The shaft is 2,100 feet deep, and levels are 3,200 feet in length. The main lode on which the company depends for its supply of ore is 5,000 feet in length; the vein has an average width of eight feet. There are thirty levels opened. Developments were commenced during the year of 1848. Amount expended in developing the property to April 1, 1882, $10,570,008.28. Maximum yearly capacity of production, April 1, 1882, 6,000,000 lbs. refined copper. New York is the principal market for the ore. The Quincy is one of Lake Superior's valuable mines: it produced during the decade beginning Jan. 1, 1870, and ending Dec. 31, 1879, 27,252,250 pounds of ingot copper, the average cost of which was 16.24 cents per pound. The figures showing the cost for each year of the period will be found below, and are taken from the official reports of the company:

Year.	*Cost of Ingot per Lb.*	*Year.*	*Cost of Ingot per Lb.*
1870	14.90 cents.	1875	15.79 cents.
1871	16.60 "	1876	15.72 "
1872	22.93 "	1877	15.11 "
1873	18.15 "	1878	14.01 "
1874	15.13 "	1879	13.71 "

The lowest cost for any year, it will be observed, was 1.71 cents greater than the price with which the *Bulletin* says most of the valuable mines would be satisfied; the highest cost was 10.93 cents greater, and the average cost was nearly four and one quarter cents more than the selling figure which our contemporary asserts would be satisfactory to most of the valuable mines. The Quincy is commonly considered a valuable mine, has paid $2,710,000 dividends, and ranks second only to the Calumet and Hecla. How many dividends could it have paid with copper selling at "twelve cents, and even less"? Chartered, 1848. Rechartered, March 6, 1878. Capitalization, $1,000,000. Par value per share, $25. Basis, full paid. Yield (net) to Jan. 1, 1882, $13,709,685.61; 59,560,041 lbs. of refined copper. Yield (net) during 1881, $472,591.75. Yield refined copper during 1881, 5,702,606 lbs. No. of dividends paid to April 1, 1882, 27. Amount, 3,030,000. Date of first dividend, July 31, 1862. Amount, $60,000. $3 per share. Date of latest dividends, February 20, 1882. Amount, $320,000. $8 per share. Total amount of assessments levied, 300,000. No stock or bonds are reserved in the treasury; stock quoted April 1, 1882. Stock listed on the Exchange of Boston. This information was furnished by W. R. Todd, Secretary and Treasurer of the Quincy Mining Company.

Mass Mining Co. (The) of Pittsburg is chartered under the laws of the State of Michigan. The officers are C. G. Hussey, President; Jas. W. Brown, Secretary and Treasurer. Offices, 47 Fifth Ave., Pittsburg, Pa. Date of annual election, December 1, 1881. Superintendent, John Chynoweth; twenty-five years' experience. Names of mines owned, Mass mine, located Greenland, Ontonagon county; Lake Superior, Michigan, covering an extent of 600 acres. The ore is a native copper in a matrix of common quartz, calc spar and diorite. Assays 2 per cent. per ton. The mine is described as a fissure-vein running longitudinally with the trap formation. The plant comprises hoisting, compressed air, and stamping machinery, estimated value or cost of which is $75,000. The shaft is 480 feet down; tunnel, 1,600; length of levels, 2,500 feet: length of the main lode on which the company depends for its supply of ore is 1,600 feet; average width of vein eight feet; number of shafts three. Developments were commenced in 1856, the amount expended in same being $600,000. The present prospects are favorable. The mine is well equipped for continous working, and the character of the vein is about the same as in years previous when it paid more than expenses. Cost of mining and milling, $2 per ton. Cost per ton sorting, tramming, stamping, washing, $1.40; cost per foot sinking shafts, $19.90: cost per foot drifting levels, $12.96; cost per fathom stoping, $34.00; yield of mineral per fathom, 1,050 pounds. The mine is now the largest tributer in Ontonagon county; it was worked only at intervals, according to price and other circumstances, such as lack of water in dry times, and difficulty of holding it in wet times. Date of organization, 31st of March, 1856; capitalization, $500,000; 20,000 shares of $25 each; assessable; yield net to April, 1882, $415,425, being value of 1,105 tons; net yield during 1881, $75,000; gross yield during 1881, 310 tons; no dividends paid; ten assessments levied aggregating $149,202; date of latest assessment, August 21, 1877; amount per share, $1: no bonded or other indebtedness; no treasury reserve. This information was furnished by B. F. Chynoweth, Greenland, Mich., Superintendent of the company.

Ore Knob Copper Co. (The) is chartered under the laws of the State of North Carolina. The officers are John S. Williams, President; Washington Booth, Vice-President, and seven directors. Annual election is held on 1st of May. Mr. James E. Clayton is Superintendent, of fifteen years' experience. The transfer offices are at S. Gay St., Baltimore. Transfers can be effected daily. The Ore Knob Mines are owned by the company and are located in Aske county, North Carolina, extent of same being two and a half miles, or 1,600 acres. The ore is a sulphide of iron and copper, assaying from 5 to 6 per cent. The vein is true fissure, twenty to thirty feet in thickness. The mining plant and other property comprises ten blast furnaces, mills, etc., about $300,000 in personal property. There are seven shafts and about 4,000 feet of levels; the length of main lode on which the supply of ore depends is two and a half miles; average width of vein sixteen to twenty feet; the greatest depth attained is in one shaft 360 feet. Developments were commenced in April, 1873, and the sum of $500,000 has been expended; the prospects of the property are very large; the cost of mining is $1 per ton. New York forms the principal market for the ore. The maximum yearly capacity of production is $250,000. This mine was opened previous to 1860, but has only been worked systematically during the last five or six years. Organized July, 1873; capitalization, $1,500,000, in 150 000 shares of $10 each, non-assessable; yield to April 1, 1882, $1,600,000; yield during 1881, say $250,000; gross yield during 1881, say 30,000 tons ore; five dividends have been paid, total amount of same, $210,000; first dividend in 1880; last, of twenty-five cents, 1881; no assesments levied; no stock in treasury; stock listed at Baltimore: stock quoted $2.25, April, 1882. This information was furnished by James E. Clayton, Manager of the Ore Knob Mining Company, June 8, 1882.

GALENA.

Engineer Mining and Developing Company (The) is chartered under the laws of the State of Colorado. The officers are Hon. Franklin J. Rollins, Pres., Portland, Me.; Chas. J. Chapman, Treas.; Thos. J. Little, Sec. Directors, E. D. Eastman, Frank C. Payson, W. L. Bradley, Chas. H. True, F. G. Patterson. Date of annual election, first Saturday of March. Superintendent, F. G. Patterson, three years' experience; head office, Ouray, Col.; branch office, Portland, Me. The company owns the Mountain Monarch, Sailor Boy, and Frank Silence Mines. The first two are located in Ouray county, Col.; the last, in Hinsdale county, Col.; extent of claims, 301 by 1,300 each; amount of property in acres, 10 by 14 each: the character of the ore is galena, which assays per ton from $69,027 to $1,500; length of tunnel in the Monarch, sixty feet, and thirty feet in the Frank Silence; shaft in the Sailor Boy has reached a depth of twelve feet; the main lode on which the company depends for its supply of ore is 4,500 feet in length; the average width of vein in the Monarch is six feet, that of the Silence three inches, Sailor Boy twelve inches; developments were commenced July 1, 1881, and amount expended in developing property to April 1, 1882, $1,175.42. The Mountain Monarch is in ore the entire length of sixty feet tunnel; there are twenty tons of ore on dumps, and the mine promises to be a valuable property. The Sailor Boy shaft, eleven feet in depth, has twelve inches of ore. The Frank Silence has paid a handsome profit over all expenses from thirty feet tunnel, and only work done; cost of mining and milling per ton, $58. The company have been obliged to ship their ore over 300 miles to Argo; railroad within fifteen miles next year, (1883.) Principal markets for ore, Argo and Puches, Col. The object of the company is to buy promising properties, at low figures, develop sufficiently to show their value secure to State patents, and hold for capitalists and corporations desiring good properties, complete titles, at reasonable prices. Date of organization, January 3, 1881; capitalization, $1,000,000; par value per share, $10; basis, non-assessable: yield (net) to April 1, 1882, $617.32—10,376 lbs.; yield (net) during 1881, $617.32; no indebtedness; stock held principally, Portland, and State of Maine; stock quoted April 1, 1882, $1.00. This information was furnished by F. G. Patterson, General Manager of the Engineer Mining and Developing Company.

EMERALDS.

Emerald and Hiddenite Mining Company is chartered under the laws of the State of New York. The officers are Jas. D. Yerrington, Pres.; Chas. E. S. Simmons, V. Pres.; R. H. Roberts, Sec. and Treas. Date of annual election, first Wednesday of October. Superintendent, Wm. Earl Hidden. This gentleman has had an experience of five years: head office, 192 Broadway, N. Y.; transfer office, 192 Broadway, (company's office), N. Y. The Hiddenite Mine, owned by this company, is located at Salem Church, Alexander county, N. C., the gems are found in true fissure veins of very limited extent; the company own 152 acres; depth of shaft, forty-three feet; length of adits, that is levels, 261 feet; average width of vein, two inches. The company have one shaft and tunnel; nature of under-ground workings, hard gneissoid rock; date of commencing developments, July, 1880; amount expended in developing property to April 1, 1882, $3,500; the prospects of the property are good. New York is the principal market for the ore. This is the only mine in the United States worked exclusively for precious stones; the best quality of the Hiddenite has the value of diamonds; one emerald from mine, sold for $800. The work of uncovering the gem-bearing rock is now going on over quite an extensive area, and consequently the yield of the mine at this time is small. The present work is preparatory work for large developments of the property. Date of organization, February 9, 1882; capitalization, $200,000; par value per share, $100 each; basis, non-assessable; yield (net) to April 1, 1882, $5,000; yield (net) during 1881, $5,000; free from debt; stock quoted April 1, 1882, $25; stock not listed; stock held principally in New York city; wages paid to all classes of labor per week, $200. This information was furnished by W. E. Hidden, Superintendent of the Emerald and Hiddenite Mining Company.

IRON.

Conrad Iron Mining Company (The) is chartered under the laws of the State of Michigan. The officers are Geo. W. Short, Pres., and J. V. Painter, Sec'y, of Cleveland, O. The offices are at Cleveland, O. Transfers can be effected at pleasure of holder. The Conrad mine is located in Marquette county, Michigan. Extent of property, eighty acres, on twenty years' lease, at forty cents per gross ton; minimum amount 5,000 tons yearly. The ore is a hard micaceous. Ferruginate, suitable for the production of Bessemer steel, assaying sixty-eight per cent. The shaft is seventy-five feet deep and prospects continue good. Cleveland, O., and Pittsburg are the principal markets for the ore. Work at this mine has been temporarily suspended, but will start up again in July. Organized, 1880. Capitalization, $50,000. Shares each, $2.50. Fully paid. Total yield to date, July,1882, 7,300 tons. Floating indebtedness, $13,000. No stock or bonds reserved. Stock quoted, April 1, 1882, $2. This information was furnished by C. F. Conrad, Gen. Manager of the Dayton, Dexter, and other mining companies of Marquette, Mich.

Cox Magnetic Iron Ore Mines (The), owned by D. W. Cox, are located two miles east of Dellsburg, York county, Pa., and cover an area of 176 acres. The plant comprises twelve h. p. engine and twenty-two h. p. boiler, quite new. Two feet stroke six in. cyl. Smedley pumping engine for keeping the mine clear of water. Entrance is by slope, which is now down 170 feet in the vein. At sixty feet perpendicular below surface, vein averages six and one-half feet thick; width not proven. Output, 600 tons per month. The ore is magnetic iron, forty-six per cent. low in sulphur, with scarcely a trace of phosphorous. This information was furnished by the owner of the mine, Mr. Cox.

COKE AND IRON.

Connellsville Coke and Iron Company (The) is chartered under the laws of the State of Pennsylvania. The officers are Hon. John Leisensing, Pres.; E. B. Leisensing, V.-Pres.; Superintendent and Engineer, J. K. Taggart; Consulting Engineer, E. K. Hyndman; Sec. and Treas., W. B. Whitney. Directors, Hon. John Leisensing, E. B. Leisensing, Audenried, Mauch Chunk; F. A. Potts, N. Y. City; Saml. Dickson, Philadelphia; John S. Wentz, Eckley, Pa.; M. S. Kemmerer, Mauch Chunk; Henry McCormick, Harrisburg; Dan. Bertsch, Upper Lehigh; John Fritz, Bethlehem, Pa. Date of annual election every second Thursday in February. The Connellsville mines are located at Leisenring, Fayette county, Pa. The property having an extent of about 8,000 acres. Organized, March 5, 1880. Developments commenced same time. Shaft now 375 feet deep. The capital of the company is represented by 24,850 shares of $50 each. This information was furnished by W. B. Whitney, Sec. and Treas. of the Connellsville Coke and Iron Company.

IRON AND GOLD.

Summit Mining Company (The). Company not incorporated. Officers, E. K. Hill, Sec'y and Gen. Manager. Date of annual election, September 15, 1882. The name of mine belonging to this company is the Summit; located near Summit House, Fosten Barr, Juba county, California. Extent of claim, 3,000 feet. Thirty acres of land owned. Pure ferreous sulphurets, ore easily reduced, assaying $821 to $1,000 per ton. True fissure veins, carrying very little metal, except gold and iron. Shaft, ninety feet. Tunnel, 225 feet. Length of main lode, 3,000 feet. Average width of vein, three and a half feet. One tunnel and one shaft. Developments were commenced, September 1, 1881. Amount expended in developing property, $600; 2,000 tons in sight carrying nearly ten per cent.; sulphurets evenly distributed; lowest assay, $21 per ton; estimated to average, $30. Cost of mining and milling not over $4 per ton. Date of organization, September 1t, 1881. Floating indebtedness, $100. Stocks and bonds held principally in Yuba county, California. The mine is for sale on bond. This blank was filled out by E. K. Hill, Secretary Summit Mining Company, Brownsville, Yuba county, California.

GOLD.

Shawmut Gold Quartz Mining Company (The) is chartered under the laws of the State of California. The officers are Ira P. Rankin, Pres.; S. O. Putnam, Joel Merchant, Joseph S. Bacon, Sec., all of San Francisco, and Thos. H. Bacon, Treas., of Boston. The annual election is held last Thursday in October. Transfer office is at 316 California Street, San Francisco; the head and branch offices are at San Francisco and at 22 Congress Street, Boston. The company owns the Shawmut mine, located near Murphys, Calaveras county, Cal., and is supposed to be on the same lode with the famous Sheep Ranch mine, having an extent of 2,200 feet on the lode. The ore is of excellent quality, containing quartz, some quite disintegrated. Assays from working give from $15 to $51 per ton. All the mineral, consisting of gold quartz, is above the water level. The mining plant consists of a ten-stamp mill of most improved pattern, and the necessary buildings. There is a splendid water service of over 300 feet head, for operating, hoisting, and pumping machinery which dispenses with steam-engines and boilers and their attendant expenses and risks. The entrance to mine is by tunnel 302 feet in length and two adits 189 and 181 feet respectively. The pay streak varies in width from six inches to four feet. The three tunnels are connected by air shafts and ore shutes. Developments commenced in March, 1879, since which time, $23,170 has been expended; this amount includes the cost of the stamp-mill. The present prospect of the mine is considered favorable, although nothing has been done during the present year. The work so far has only been of a preparatory character, so that no report can be given as to cost of mining and milling or of the productive capacity of the mine. Organized in July, 1878; capitalization, $500,000 in 50,000 shares of $10 each, assessable; no dividends have been paid or assessments levied. Stock not listed, none in market; stock held chiefly in Massachusetts and California. This information furnished by Thos. H. Bacon, Treasurer of the Shawmut Mining Company.

Garfield Mining Company (The), of which the following are the officers, etc.: Directors, Galush Anderson, Pres.; John S. Williams, Vice-Pres.; Geo. H. Leonard, Sec. and Treas.; C. H. Anderson, Supt. of mines; Allen D. Griffith, C. B. Nelson, Geo. G. Allen, Richard A. Clark, Andrew Cummings, L. J. Burrell. Executive committee: John S. Williams, Allen A. Griffith and Geo. H. Leonard. The company owns the following claims: Charter Oak, Virginia, Bank of England, Columbia, Garfield, Chicago, Lincoln, Herlech, Queen of the Valley, King of the Valley, Boston, Jackson, Negaunee and Goldberg; all located in the Black Hills, Pennington county, Territory of Dakota, comprising a total area of nearly 140 acres. There is already a force of fifteen men engaged in prospecting and developments in which about $10,000 has been expended. Organized at Chicago early in spring of 1882; capitalization, $2,000,000, in 200,000 shares of $10 each. The company have a ten-stamp mill which will commence working in July. This information was furnished by Mr. C. H. Anderwood, Superintendent of the company.

South Spring Hill Gold-Mining Company (The) is chartered under the laws of the State of Massachusetts. The officers are G. T. Moore, Pres.; A. L. Richardson, Treas.; C. A. Parker, S. C. Morell and E. Hall, trustees; J. R Tregloan, Supt., with fourteen years' experience. The transfer office is at Boston, Mass. The property of this company, the South Spring Hill gold mine, is located at Amador City, in Amador county, Cal., and covers an extent of seventeen acres. The ore is a soft, ribbon rock. The mine has a true fissure vein, carrying quartz. The plant comprises steam hoisting works costing about $3,000. Depth of shaft is 350 feet; length of adits, 200 feet. The length of the main lode on which the company depends for its supply of ore is 1,500 feet. Developments were commenced in May, 1878, and about $16,000 has been expended in same. The prospects are very favorable on the Moehee lode. The estimated cost of milling is about $5 per ton. The company are now only prospecting, but have a good store for a valuable mine. Organized, May, 1878; capitalization, $5,000,000, shares, $50 each. This information was furnished by Mr. J R. Tregloan, of Amador City, Cal.

Singleton Gold-Mining Company (The) is chartered under the laws of the State of New York. Officers, Gen'l Thos. Jordan, Pres.; Sam'l Montgomery, Esq., V. Pres.; W. S. McGilton. Sec. and Treas. Trustees, G. E. Montgomery, W. B. Carpenter. Date of annual election, second Saturday in March. Joseph D. Reed, Esq., Superintendent, with several years' experience. Offices, 206 Broadway, N. Y. The property of the company consists of the following claims, Singleton, Gowdy, Luckhart, Hambleton, all adjoining and contiguous, and having a total length of one and a half miles, located one mile from Dahlonega, Lumpkin county, Georgia. The ore is free gold. The mineral is found distributed in veins and deposits. The company owns three mills, aggregating thirty-five stamps, and twelve miles of canal for hydraulic mining; two shafts, three tunnels also worked from open cuts. Length in feet of the main lode upwards of a mile, nine feet wide. Developments commenced in 1880, $75,000 having been expenses on same. The property is considered untrinsically worth more than its capitalization. Mining and milling costs fifty cents per ton. Maximum yearly capacity of production to April 1,1882, 100 tons per diem; output weekly, 600 tons. Dahlonega forms the principal market for the ore. Organized, 1880; capitalization, $300,000, or 300,000 shares of $1 each, non-assessable. No dividends have been paid, the proceeds of the mines have been expended in building millls and developing the property. No assessments have been levied; no bonded or other indebtedness. Stock reserved in treasury, April 1, 1882, $14,000. No stock quoted, none in the market. Stock and bonds held principally in the cities of New York and Philadelphia; ten stockholders owning all the mines of the company. This information was furnished by Wm. T. McGilton, Sec. and Treas. of the company.

Sierra Buttes Gold-Mining Company is chartered under the laws of England. Thomas Preston is Superintendent, and has had an experience of ten years. Offices, London and San Francisco. Transfer office, London, England. The company's mine the Sierra Buttes, is located at Lima City, Lima county, California. The ore is free milling quartz, yielding $6.00 per ton. The character of the vein is true fissure. The property includes mills, boarding-houses, and workshops. The tunnel is 5,000 feet in length; there are nine adits, that is levels; the main lode is 6,000 feet long. Development of the property was commenced during the year 1851. The mine has been worked since that time successfully without any assessments. The present company purchased the property from Reis Bros., in 1870, at a cost of $750,000. The company are only running one mill, fifty stamps now. Last March an avalanche carried away the Hawk Mill, (thirty-stamp.) The vein is from five to thirty feet in thickness, and is encased with slate on one side and serpentine on the other. The croppings of the Sierra Buttes Mine are situated on the top of a ridge 6,400 feet above the sea, fully 1,000 feet have been worked out. The main slopes are now about 1,100 below the croppings, and about 1,000 feet above the bed of the South Yuta River. The mine is worked entirely by adits or levels. The company have two main levels below the present works, that are being pushed ahead with energy. All the machinery is run with water-power. Turbine wheels are run with a face of 650 feet. The total yield of the mine since its discovery is not known, as regular accounts were not kept in early days, but the total yield is estimated, judging from the data obtainable, to be close upon $7,000,000. Mining and milling costs $4 50 per ton; weekly output April, 1882, 700 tons; current value of the mine is $937,000. Date of organization, 1870; capitalization, $225,000; par value per share, $10; basis, non-assessable; yield (net) during 1881, $323,822; yield (gross tons) during 1881, 47,423 tons; total amount of dividends paid to July 1, 1882, $1,407,496; date of latest dividend, July 1, 1882; free from all indebtedness; stock quoted April 1, 1882, $7.50; stock listed on the Mining Exchange of London; stock and bonds held principally in England and California; wages paid to all classes of labor per week, $2,000. This information was furnished by Mr. Thomas Preston, Superintendent of the Sierra Buttes Gold-Mining Company.

Riverside Gold Quartz Mining Company is chartered under the laws of the State of California. The owners are A. M. Starr and Samuel Grove. Office, Starr, Grove & Co., 330 Pine Street, San Francisco, California. Geo. A. Koch is Superintendent; he has had an experience of twenty-nine years. The company's mining property, the Riverside mine, is located in Tuolumne county, California, fifteen miles from Sonora wagon-road. The claim is 2,550 by 600 feet. The ore is gold quartz, free milling, with a small percentage of sulphurets. Easily saved, and assays from $5 to $50 per ton. Average yield $50. Character of the vein is "fissure," in slate formation with granite contact or crossing. Total depth from summit to level of tunnel now working, 800 feet, to bottom adit 450 feet more. The company's property includes one twenty stamp water mill, air compressor giving power for drilling, patent drill, one and a half mile of flume and ditch. There are three tunnels, each 600 feet in length, and the shafts are fifty and thirty feet deep. The main lode is 2,550 feet in length. The vein is from three to sixteen feet in width. There are four tunnels and two shafts. Date of commencing developments, 1852. There is a large amount of medium grade ore in sight, say $100,000. The bottom adit will give about 600 feet of ore to extract on slope of vein with a chute overhead of 500 feet in length. Cost of mining and milling at present, $2.25; $1.75, when adit is in to vein. Maximum yearly capacity of production, April 1, 1882, $75,000. The ore finds a market at the mill. The formation is tin slate, true fissure, without a fault, except two horses of vein matter, which split the ore and crowded it against each wall. It paid from surface to present level with shaft fifty feet below, that showing a large body of richer ore than above. On that showing adit was started. Chute of ore, 500 feet long, mostly slopes, out and milled; shaft on summit beyond the present chute shows large vein, and it seems advisable to drive the upper tunnels to the top of new chute, sinking shaft in tunnel to connect with bottom adit, and thus send all ore from above through shaft and adit to mill and have the mine in shape for sixty-stamp new mill in about two years. The Riverside Gold Quartz was discovered in 1852, and was successfully worked without intermission, in spite of high wages, until the mill was worn out, the ownership changing as circumstances demanded. Starr & Grove have improved the property to a great extent. About $10,000 is required to make a great property of it, and it is thought by the superintendent that with free water-power and tunnel facilities it will be one of the greatest gold mines on the coast. Capitalization, $100,000. Par value per share, $100. Basis, non-assessable. Yield (net) last three years, $78,000. No. of assessments levied, 1. Amount of assessment levied about $12,000. Date of first and latest assessment, during 1876, $12 per share. Bonded indebtedness, $95,000. This information was furnished by George A. Koch, Manager of the Riverside Gold Quartz Mining Company.

North State Mining Company (The) is chartered under the laws of the State of New York. The officers are Franklyn Coit, Pres.; Amos Howes, Vice-Pres.; B. M. Ennis, Sec.; J. P. Wortz, Treas.; which, with A. B. Ennis, constitutes the board of trustees. Principal office, 2 Morris Street, New York. The company owns the Hunnicutt mine, located at Gold Hill, Rowan county, North Carolina. The claim includes eight developed veins, the shortest being 160 feet on company's property, the longest, 1880 feet. The gold ore is a talc slate intermixed with quartz, iron, and copper pyrites, quality varying from low to very high grade, having produced from $10 to several thousand dollars per ton. The mine has true fissure-veins. Very little machinery owned by company in connection with mining plant. Depth of main shaft, 375 feet. Average of vein varies, one being twenty-eight feet. Developments commenced 1848 and were completed by 1856; amount expended on same being, to April 1, 1882, estimated at from $30,000 to $50,000; but much more work has been done than the largest of these amounts would pay for. Some so-called experts, who can see through a rock, have estimated that there is between one and two millions' worth of ore, which is absurd. There is simply a reasonably certain prospect that when worked the mine will produce fair average profits for many years. Cost of mining and milling will not exceed $1.50; much can be mined and milled for eighty cents per ton. There is an immense vein on this property twenty-eight feet wide, which carries very evenly $10 gold per ton of ore, while none of the veins are barren. Leads in carry at the rate of $50 to $75 per ton. All of this mass will be worked. So far the mining operations have always been conducted with profit. The company have not operated the mine, lack of capital to purchase machinery being the sole cause. Organized April, 1879; capitalization, $500,000, in 100,000 shares, of $5 each, non-assessable; stock held principally in New York. This information has been furnished by Franklyn Coit, President of the North State Mining Company.

Newcastle Gold-Mining Company. The directors are Charles E. Allen, O. C. Burgess, E. G. Mathews, J. A. Rudkin, and H. G. Kuhl. Office, rooms 33, 318 Pine Street, San Francisco, Cal. The company's property is located in Yankee Hill mining district, Placer county, California. Date of organization, May 5, 1882; capitalization, $50,000.

Nevada City Gold Quartz Mining Company is chartered under the laws of the State of California. The officers are M. J. Shoecroft, Pres.; J. W. Sprague, Vice-Pres.; B. N. Shoecroft, Sec. and Treas. Date of annual election, October 1. J. W. Sprague, Supt. Head office, Nevada City, Cal. The mines owned are the Schmidt, or Nevada City mine, the Luetje mine, and the Nevada City Extension mine, located in Wood's Ravine, one and a half miles west of Nevada City, Nevada county, Cal. Extent of claim, 3,000 linear feet. The company's property covers forty acres of land. The ore is bluish laminated quartz, carrying about four per cent. sulphurets. The ore assays on an average about $20 per ton. The character of the mines is described as true fissure vein on the contact between slate and granite walls, which are smooth and well-defined. The company's property includes one ten-stamp mill, three engines, two boilers, four fine concentrators, and the usual complete equipment for mining by steam-power, and complete equipment to run by water-power. The shaft was 450 feet deep June 1, 1882, and levels about 2,500 feet in length. The main lode is 300 feet in length, and the vein has an average width of three and a half feet. There is one main shaft. The company is running the third level as drain and exploration, and are approaching large ore bodies. The shaft is continued down with the intention of running levels at every 100 feet. Date of commencing developments, May, 1879. Amount expended in developing property to April 1, 1882, about $130,000. The prospects of the property are very flattering for the immediate future. Will soon reach by drain tunnel large bodies of ore hitherto untouched; ore in sight now about $180,000, but will soon be largely increased. More stamps will be added this summer. The ore is milled at the mine and bullion sent to the United States Mint. Cost of mining and milling per ton, $5. Maximum yearly capacity of production, April 1, 1882, 6,000 tons; can produce more if needed. The Schmidt claim was discovered in 1866; very slightly worked to 1879, when the present company bought it. The old owners took out about $30,000. The claim known as the Nevada City Extension was known and worked back to 1850; many rich specimens have been taken out; one pocket of ore yielded $7,000. None of the claims were worked systematically until bought by this company. The company have opened up and developed the mine and have it nearly on a dividend paying basis. Dividends are expected within six months from July 1, 1882. So far the proceeds have been used in paying for the mine, machinery, and developments, but the expectations are that it will make a large dividend paying property. Date of organization, September 30, 1878; capitalization, $3,000,000; par value per share, $30; yield (net) to April 1, 1882, $83,400; company free from debt; stock is not listed on any boards; stock held principally in New York and California; wages paid to all classes of labor, per week, $500. This information was furnished by B. N. Shoecroft, Secretary and Treasurer of the Nevada City Gold Quartz Mining Company.

Mono Gold Mining Company (The) is chartered under the laws of the State of California. The officers are W. P. Willard, Pres.; L. Teese, Jr., Vice-Pres.; Thos. Brown, Geo. W. Sessions and Joseph Clark. Annual election is held first Thursday in September. H. Aug. Whiting is Superintendent, of ten years' experience. No transfer office; main office at 62 Nevada block, San Francisco, Cal. The property owned by the company consists of the southern 750 feet of the same mines owned by the Bodie Consolidated Mining Company, viz.: Burgess, Bruce, Granger, Gilded Edith, Bodie Molly, Lucky Jack, and Fortuna, located in the Bodie mining district, Bodie, Mono county, Cal. Extent of claim, 1,095 feet by 750 feet, or, thirty-five and a half acres. The veins are fissure, in a true porphyritic diorite. The shaft is down 590 feet vertically; there are 1,760 feet of adits. Length of main lode on which the supply of ore depends, 750 feet. The underground workings consist of shafts, cross-cuts, drifts, winzes, and rises 5,550 feet of excavation. The lent shaft (in which the company has a half interest) is down 975 feet. Developments were commenced about August, 1879. No work has been done through the old shaft since September 1, 1880, the water inflow being so strong as to require long and powerful pumping machinery, accordingly, this company joined with the Bodie Consolidated Mining Company in the equiping and sinking the "lent" shaft for the purpose of reaching and exploring that portion of the Fortuna vein that extends into the Mono ground. Several quartz veins were explored by the working from the old shaft, nearly all carrying pay ore in small quantities, but not in any exploitable body. The most promising deposit was found at the 575-foot level, from which we were driven by the water; none of the old workings extended far enough east to reach the Fortuna, from the northern bonanza of which vein the Bodie Consolidated Mining Company has drawn its ore supply during the past three years. Organized, August, 1879; capitalization, $5,000,000, in 50,000 shares of $100 each; assessable; not yet productive. Seventeen assessments levied, total, $422,500; latest assessment, June 2, 1882, at twenty cents per share. No indebtedness; no stock reserve. Stock quoted June 21, 1882, $1 per share. Stock held principally in California. Stock listed on San Francisco Mining Exchange. Wages paid to miners, $4 per day; wages paid to carpenters, $5 per day; wages paid to smiths and other mechanics, $5 per day. This information was furnished by Henry Augustus Whiting, Superintendent of the Mono Gold Company.

Magnolia Gold-Mining Company, of South Carolina, is chartered under the laws of the State of New York. The officers are John Phillips, Pres.; John W. Gracrest, Sec. and Treas.; James B. Tooker, Superintendent; sixteen years' experience. Directors, John Phillips, E. S. Gross, John W. Seacrest, James B. Tooker, B. F. Crook. Date of annual election, May 1. Office, 48 Wall Street; room, No. 8, New York. The company's mines are the Broad river, Magnolia, and McSwain; located in Broad river Township, Hickory Grove, near Smith's Ford, S. C. The company's property covers 200 acres. The ore is crystalized honey-comb quartz, brown, carrying copper sulphurets. The ore assays $30, and sulphurets as high as $162. There are six fine fissure veins on the property. The company owns one ten-stamp California pat. mill, thirty-horse-power engine and buildings complete. The main shaft is 160 feet deep, and levels 600 feet in length. The vein has an average width of six feet. There are six shafts and two tunnels. This company commenced the developing of the property January 1, 1880, and have expended for this purpose $10,000 to April 1, 1882. The prospects of the property are the best, and improving every day. Estimated value of ore in sight, $20,000. Cost of mining and milling per ton, $2.90. The weekly output at April 1, 1882, was forty tons. The company find a market for their ore at home. The mine was worked in 1840-9 by a Chilian mill and arrastra, with good results; again in 1867-8, by a three-stamp steam-mill, and has been continually open and worked spasmodically, with profit until the organization of Magnolia company, which is now prospering. This mine also includes the old Arrow-wood mine, and has paid from its first opening, although worked under great disadvantages, and by crude and primitive methods and machinery. The ore seems inexhaustible. Date of organization, January 1, 1880; capitalization, $500,000; par value per share, $1.00; basis, non-assessable; yield (tons) to April 1, 1882, 10,000; no dividends have been paid, nor assessments levied; treasury reserve, $100,000; stock quoted April 1, 1882, twenty cents; stock listed on the Philadelphia Mining Exchange; stock and bonds held in New York, Pennsylvania, South Carolina, and Ohio; wages paid to all classes of labor per week, $40. This information was furnished by James B. Tooker, Superintendent of the Magnolia Gold-Mining Company.

Klamath Quartz Mining Company (The) is chartered under the laws of the State of California. The officers are Wm. Willis, Sec., and John Daggett, Supt. Directors, C. L. Waller, Pres.; Robt. Graves and John Daggett. The Superintendent has had an experience of twenty-two years. The offices are at San Francisco. The property of the company consists of the Klamath Mine, containing an area of 4,000 feet, and located on Klamath Hill, Siskiyou county, Cal. The ore is a gold quartz, free-milling. The mine is described as a true fissure vein, in black slate; it is worked by tunnels, five in number; the total length of adits 5,000 feet, average width of vein, five feet. The mining plant comprises a thirty-two stamp-mill, driven by water-power, but with an available steam-power in dry season, a double reverberatory furnace for roasting sulphurets. Organized June, 1869; capitalization, 30,000 shares of $1.00 each, $30,000; yield to April 1, 1882, 32,979 tons of ore, net value, $413,358.73; yield during 1881, 1,964 tons gross, net value, $12,679.52. This information was supplied by John Daggett, Superintendent of the Klamath Quartz-Mining Company.

Hillsboro Hydraulic Mining Company is chartered under the laws of Wyoming Territory. The officers are S. L. Miley, Pres.; W. W. Corlette, Sec.; E. G. Converse, Treas.; Adolfo Chandon, Assistant Sec. Date of annual election, May 13. G. M. Fuller, Supt. Head office, Cheyenne, W. T. Branch office, Hillsboro, N. M. Branch and transfer office, McKeesport, Pa. Transfer days at all times. The mines owned are the Hillsboro Placer Mines, located at Hillsboro, Dona Ana county, N. M. Extent of claim, about 2,500 acres, Character of the mines, placer. The washings during May showed an average of seventy-five cents' worth of gold for every cubic yard of gravel washed. The company have a fifty foot high dam, and eight miles lap-welded wrought iron pipe, manufactured by National Tube Works Company. Date of commencing developments, May, 1882. Amount expended in developing property, May, 1882, $200,000. Principal market for the ore, United States Assay Office, New York; $45,000 worth of gold was washed out by hand in a space less than 100 yards square. The gold is mostly coarse, and averages about 950 fine. Date of organization, May 13, 1881; capitalization, $1,000,000; par value per share, $50; basis, non-assessable; no dividends have yet been paid; company free from all indebtedness, April 1, 1882; no stock or bonds reserved in the treasury; stock and bonds held principally in Massachusetts and Pennsylvania; wages paid to all classes of labor per week, May 1, 1882, $14, average. This information was furnished by E. C. Converse, Treasurer of the Hillsboro Hydraulic Mining Company.

Highland Chief Consolidated Mining Company (The) is chartered under the laws of the State of Colorado. The officers are J. B. Grant, Pres.; S. H. Foss, V.-Pres.; Horace Steele, Sec.; Geo. W. Trimble, Treas.; Geo. C. Steel, Asst. Sec'y and Agent. The annual meeting is held first Monday of August. Head offices are at Leadville, Col. The company owns three mines, the Highland Chief, Highland Mary, and Bobbie Burns, located on Breece Hill, Leadville, Col., and having an extent of about thirty acres. The ore consists of sand and hard carbonates, chlorides, and bromo-chlorides, and some copper ore, assaying from $10 to $500. The deposit is a carbonate, carrying gold, silver, lead, and copper, lying under the porphyry and over the limestone; formation irregular and broken up where the main body of mineral lies. The entrance to mine is by tunnel, of 130 feet in length; there are 2,600 feet of adits. There are five shafts in addition to the entrance tunnel. The mining plant and other property comprises two shaft houses, one ore house, assay and office, smith's shop, and one thirty-horse power hoisting engine and one forty-horse power boiler. The cost of mining and milling varies from $8 to $18. Developments were commenced in August, 1879, since which time the sum of $85,000 has been expended. The amount of ore in the mine now in sight is estimated at $50,000. The ore is smelted at Leadville. Average weekly output about ninety tons. The main workings are at a depth of about 130 feet from surface. The main working shaft was sunk 290 feet deep, and the formation at bottom was broken mains of iron with lime, talc, porphyry, assaying the entire depth from three to twenty-seven ounces silver. It is believed that a regular formation lies still deeper, but on account of water encountered, the work of sinking was suspended for a time. Organized, July, 1879; capitalization, $500,000, in 50,000 shares of $10 each. The net yield to April 1, 1882, was $220,000, the value of 8,000 tons of ore. The yield during 1881 was $26,000; the gross yield during 1881 was 3,200 tons. No dividends paid or assessments levied. Bonded indebtedness, $50,000. No treasury reserves. Stock quoted April 1, 1882, $1.75; stock not listed; stock held principally in Colorado, Lake county, Boston, and New York. This information was furnished by Geo. C. Steel, Agent of company.

Hathaway Hydraulic Gravel-Mining Company is chartered under the laws of the State of California. The officers are J. O. Eldridge, Pres.; James H. Withington, Sec'y; Wesley Carroll, John M. Moore, Thomas Redmayne. Date of annual election, February 5. Superintendent, Wesley Carroll; number of years' experience of the same, 23. Branch and transfer office, 366 California Street, San Francisco, Cal. Names of mines owned, Wesley Carroll, J. H. Withington, J. O. Eldridge, J. M. Moore, and Thos. Redmayne, located at South Yuba river, Nevada county. California, near the town of Washington. Extent of claim, three miles in length, and from 300 to 800 feet wide. The company's property covers 640 acres. Nuggets are found, weighing from $1 to $300. Fine dust of gold is scattered all through the gravel, assaying $18.15 per ounce. Character of the mines, hydraulic, an ancient river bed, depth of gravel on an average eighty feet. They use about 3,000 inches of water, miners' measurement, under 315 feet of pressure in iron pipe and a six feet flume to catch the gold, and run off the gravel in. The company owns $12,000 worth of water ditches, with free water-flumes, etc.; value, $5,000. Date of commencing developments, February 23, 1879. Amount expended in developing property to April 1, 1882, $16,400. Prospects of the property are very good. The gravel is very rich in gold; $400 to the pan have been taken out in many places. Cost of mining per ton from five to ten cents. San Francisco U. S. Mint is the principal market for the ore. Output weekly at April, 1882, $2,500. The Hathaway mine embraces Scotchman's creek and all its tributaries, and it will require twenty years to work it out at the present rate of operations. The prospects are that the mine will pay much better when fairly opened. Nevada county has thousands of acres of heavy deposits of rich gravel, and hundreds of acres of gravel are from three to four hundred feet deep. The hydraulic mines are paying largely. The company have a number of good paying quartz mines. Date of organization, February 5, 1879; capitalization, $45,000. Yield (net) to April 1, 1882, $54,500, 3,000 ounces; yield (net) during 1881, $18,500. Number of dividends paid to April 1, 1882, two; total amount of dividends paid, $54,300; date of first dividend, September 5, 1881, amount, $18,300; date of latest dividend, March 7, 1882, amount, $36,000, per share, $3.60. Number of assessments levied, one; total amount of assessment levied, $25,000; date of first and latest assessment, February 5, 1879, amount per share, $2.50. Company free from indebtedness. Bonds reserved in the treasury, $5,000. No stock on the market; stock and bonds all held in San Francisco, Cal. Wages paid to all classes of labor, per week, $9 to $18. This information was furnished by Wesley Carroll, Superintendent of the Hathaway Hydraulic Gravel-Mining Company.

Golden Age Mining Company (The) is chartered under the laws of the State of New York. The officers are Samuel Eddy, Pres.; Joshua C. Sanders, Treas., and Israel E. Payne, Sec. Annual election is held 2d of May. Mr. James H. Pomeroy is Supt. Transfers can be effected during all office hours at the offices, 145 Broadway, N. Y. The company owns the Golden Age mine, located at Central City, Gilpin county, Col. The claim has an extent of 1,500 by 150. The ore is auriferous. Smelting, $1.00; milling, $15. There are two shafts, 260 and 125 feet deep, respectively. The vein, which is a true fissure, is of an average width of from two to four feet. The main lode on which the company depends for its supply of ore is 1,500 feet long. Developments were commenced in June, 1880, the sum of $28,499.31 having been expended on same. With regard to the present prospect of the property, disinterested parties say the showing is as good as any mine in Central City, considering the comparatively early stage of the developments. It is calculated that there are about $50,000 of ore in sight. The ore is sent to Central City to be milled, the company having no mills of its own. The mine is being worked in a careful and substantial manner, all the timbering in the shaft being for durability. The two large engines and boilers are new and in perfect order. The houses are fitted up in an improved modern fashion. There is also a large office, and everything is very complete. Organized June 7, 1880: capital, $500,000, in 100,000 shares of $5 each; net yield to April 1, 1882, $13,079; net yield during 1881, $12,894 56; no dividends paid; no assessments levied; no bonded or other indebtedness; stock not listed; stock held chiefly by three trustees in N. J. This information was furnished by J. E. Payne, Secretary of the company.

Faber Mine (The), owned by William Waldfred Faber, is situated in El Dorado county, Cal., about four miles north of Latrobe. The claim comprises two parallel veins about twenty feet apart, and the veins vary in size from six inches to two feet. Both veins are opened by inclined shafts. At a point some fifty feet from the surface occurs a nest, or chimney, from which the richest specimens of gold-bearing quartz have been taken, in which the metal greatly predominates over the mineral. The gold is of superior firmness, a mint certificate rating a lot of it at .935. Property owned, hoisting works and pumps, arrastras. Mr. Faber is superintendent, having had twenty-two years' experience. The shaft is 140 feet deep. Length of adits, that is levels, 200 feet. Date of commencing developments, 1880. Amount expended in developing property to April 1, 1882, $4,000. The mine is a very promising one: five tons of ore worked at a time with arrastras, paid as high as $88 per ton. Pieces of ore have been taken from the mine weighing seventeen ounces, that were found to contain twelve ounces gold, .935 fine. The property is free from any indebtedness. Yield (net) to April 1, 1882, $4,000. This information was furnished by William Waldfred Faber, sole owner of the Faber mine.

Monster Gold Claim (The), owned by John Dunn and John Eyrich, and the South Silver-mine, owned by Mr. Dunn, are located in Arizona; the first named claim is situated in Winnefred district, ten miles north of Phœnix, and the South Silver is located in Cave Creek district. This mine is down ten feet, and showing up good ore. The ore in the Monster Gold gives a gold assay of fifty-one ounces to the ton. Length of adits, that is levels, thirty-four feet. The main lode on which the company depends for its supply of ore is sixty-one feet. The vein has an average width of two feet. The development of the property was commenced January 1, 1882. There are plenty of good gold-mines in Winnefred district, fifteen miles north of Phœnix, but no capital to work on. The other mines, four miles north of them, are new property and show up well. The South Silver is a promising silver claim, with six feet of vein, gray copper, and bromine. A good investment. Any persons with a little capital wishing to invest will be given every show to do so. The company was organized January 1, 1881. Wages paid to all classes of labor per week, April 1, 1882, $24. This information was furnished by John Dunn, one of the owners of the property.

Dutch Creek Mining Company (The) is chartered under the laws of the State of North Carolina. The officers are, J. C. Pennington, Pres. and Treas.; J. J. Newman, Sec. and Supt.; directors, J. W. England, T. F. Haxsy, John C. Pennington. Wm. Pennington, J. J. Newman. The Superintendent, J. J. Newman, has had six years' experience in his occupation. Head and transfer office, Salisbury, N. C.; branch office, Sun Building, room 3, New York. The Dutch Creek Mine, owned by this company, is located ten miles south-east of Salisbury, N. C. To this company belong 166 acres of land. The ore found is brown ore, with gold, containing iron pyrites. It assays from $5 to $1,000 per ton. Character of the mine, fissure-veins, mostly quartz, with brown ore and iron pyrites, and some slate veins. The vein matter carries abundance of sulphurets, some silver and copper. Though most of the gold is in quartz, it is also found in talcose schists and argillaceous slates. Some of the ore is very rich, but calculations are based on working a large quantity of low-grade ore. There are about twenty parallel veins, mostly quartz. Will work ores by chlorination. Works erected, and will commence running about July, 1882. There are two shafts, forty-five and sixty-five feet. Length of adits, that is levels, 1,000 feet. Length in feet of the main lode on which the company depends for its supply of ore, 3,000. Average width of vein, three feet. Aggregate of shaft, winze, and tunnel, 1,200 feet. Date of commencing developments, 1881; amount expended in developing property to April 1, 1882, $5,000. It is estimated there are 20,000 tons of ore in sight, at $10. Cost of mining and milling, $2.50 per ton. Principal market for ore, home market. No milling has yet been done. Date of organization, October, 1881; capitalization, $150,000; par value per share, $100; basis, non-assessable; yield (gross tons) during 1881, 600; stock and bonds held principally in New York, New Jersey, and North Carolina. This information was furnished by J. J. Newman, Sec. and Supt. of the Dutch Creek Mining Company.

Consolidated Golden Development Company (The) is chartered under the laws of the State of Maine. The officers are Geo. F. Field, Treas.; S.W. Sargent, J. G. Philips, B. E. Perry, and C. D. Jenkins. Mr. Benton Jones, of thirty years' experience, is the superintending foreman. The offices are at Portland, Me. The company owns the Three Sisters, Nos. 1, 2, and 3 (gold), and the Jenkins (silver); located, the gold mines are at Oro near Clifton, Arizona Territory; and the silver mine at Silver City, N. M., covering a total area of 120 acres. The ore of the gold mines is a decomposed quartz, and that of the silver mine is metamorphic, yielding or assaying $116 to $198 gold, $60 silver. The gold mines are fissures between porphyry walls, the silver mines are contact veins between limestone and porphyry. The mines are thoroughly equipped, a twelve-stamp mill is just now being erected at the R. R. terminus; depth of shafts or tunnels respectively, 150 feet, forty feet, thirty-four feet, forty feet, twenty-eight feet, and thirty feet; average width of vein five feet. The underground workings are operated by tunnels. The length of main lode on which the company depends for its supply of ore is 4,500 feet. Developments were commenced in June, 1881, and about $80,000 has been expended on same. The first tunnel is 700 feet from the apex of the mountain, and has six openings five feet wide. The Silver City property, not sufficiently developed to warrant high expectations, but it adjoins the Old Timer, a valuable property. The cost of milling the gold ore is $5, and the silver ore about $10. The weekly output is about sixty tons of ore, which is milled by the company. In the Arizona mines the work can be done by tunnel and slope, and the mill driven by water-power. The fissure is well defined and developed the full length of the claim, 4,500 feet. It is intended to increase the working force as soon as the mill is completed. The Superintendent states that the amount of ore is limited only by the number of men employed. Organized, March, 1882; capitalization, $400,000, $2 shares; assessable or non-assessable at the discretion of the directors; stock reserved in treasury, $100,000; stock quoted $1, April, 1882; stock held principally in Massachusetts; stock listed, Boston Mining Exchange; wages paid to all classes of labor per week, April 1, 1882, $3 to $3.50. This information was furnished by one of the officers of the company.

Conrad Hill Gold and Copper-Mining Company (The) is chartered under the laws of the State of North Carolina. The officers are Jas. Bryce, Pres.; Washington Booth, V.-Pres. Date of annual election, May. The Superintendent is Mr. Jas. E. Clayton, who has had fourteen years' experience. The transfer office is at Baltimore. Transfer days every working day of the week. The company owns two mines, the Conrad Hill and the Dodge Hill, located in Davidson county, N. C. The claims have an extent of two miles, the acreage being 357. The ore is free-milling, and assays from $5 to $500 per ton. The character of the mine is described as fissure, there being seven main veins. Depth of shaft, 300 feet; length of adits, 1,200 feet; average width of vein from eight to nine feet. There are five shafts or tunnels. Developments were commenced in June, 1880, since which time there have been expended $125,000. There is a large body of ore in sight, but the value cannot be estimated. Cost of milling ranges from $2 to $2.50 per ton. The bullion yield is sent to the United States Mint. Organized, June, 1880; capitalization, $1,500,000; shares $5 each, non-assessable; mill just started has a capacity of $6,000 per month; about 18,000 tons on the dump; no bonded or other indebtedness; $150,000 reserved in treasury, April 1, 1882; stock quoted April 1, 1882, $190; stock held principally in Baltimore; stock listed in Baltimore; wages paid all classes of labor per week, at April 1, 1882, $2,000. This information was furnished by Jas. E. Clayton, Manager of the Conrad Hill Company.

Colorado Mining and Land Company (The) is chartered under the laws of the State of New York. There are thirteen trustees and the following officers: Matthew Wetbeck, Pres.; Gen'l W. F. Rogers, 1st V.-Pres., and W. H. Baker, 2d V.-Pres.; J. S. Buell, Sec., Treas., and General Manager; Franklin S. Buel, Assistant Sec.; Alex H. Brown, H. H. Heiser, and John Roberts, Finance Committee; Chas. H. Daniels, Attorney; Jas. Plant, 55 Pine Street, New York City, Financial Agent. Date of annual election, second Thursday in January. Thos. H. Kane is the Superintendent, his experience extending over a period of fifteen years. The head offices are at 50 East Seneca Street, Buffalo, N. Y. Branch office at Mineral Point, San Juan county, Col. The transfer office is at Buffalo, N. Y., and transfers can be effected any working day of the week. The company owns the following mines; The McIntyre, Elephant, Lake Park, Flora Temple, Buell, located at Mineral Point or City, San Juan county, Col., the claims each having an extent of 1,500 by 300 feet; total area, fifty acres. The ore is a sulphuret, free-milling, and contains slight traces of galena and copper pyrites, gold and silver, the latter predominating for the present. Assays range from $5 at surface to over $300 at a depth, and picked samples $1,500. The mines have true fissure veins, increasing in gold as depth is attained. Average elevation about 11,000 feet above sea level, surrounded on all sides by numerous rich mines, and within one mile of extensive and rich carbonate discoveries recently made upon Engineer Mountain, and probably in the richest and most extensive mineral region ever discovered. Developments, in which $55,870 have been expended, were commenced about the year 1874. The prospects of the property are exceedingly promising, there being a considerable body of ore in sight. Railroad facilities are gradually being brought nearer, and when completed a market for the ore will be furnished. No milling has so far been done. Organized, March 27, 1875; capitalization, $1,000,000; shares, $25 each, non-assessable. The company issued its entire capital stock in payment for the properties, with the tacit understanding that provision should be made for their primary development and equipment on a self-sustaining basis. To guarantee to the company that this would be done, 30,000 shares of the full paid stock amounting to $750,000 were placed in the hands of a joint trustee for sale, to provide means to carry out the objects contemplated. The company owns no stock whatever out of this reserve stock, 10,000 shares are only proposed to be sold, leaving 20,000 to be held as a guarantee fund to provide for future emergencies, or may be used in the purchase of additional property after dividends from the original mines have been reached. Bonded indebtedness, $3,000; stock indebtedness, $432,350; Floating indebtedness, about $1,400. Stock reserved in-treasury, $567,650. Bonds reserved in treasury $47,000; total, $614,560. April 1, 1882. Stock held at $15 per share; bonds held at par; stock principally held in Colorado, bonds in Buffalo, N. Y.; stock not listed, the company ignoring stock exchanges (as at present constituted) as inimical to the true interest of legitimate mining. The average wages paid to all classes of labor per week is about $3.50 per day. This information was furnished by J. S. Buell, Secretary and Treasurer of the Consolidated Mining and Land Company.

Castle Creek Gold Mining Company is chartered under the laws of the State of New York. The officers are A. P. Stanford, Pres.; John R. Murphy, Vice-Pres.; Justus C. Hall, Treas.; John R. Murphy, Sec. Date of annual election, May 29, 1882; Superintendent, E. S. Taylor. Mr. Taylor has had twenty years' experience in his occupation. Branch office, 58 Broadway, room 25, New York; transfer office, Mutual Trust Company, 115 Broadway, New York; transfer days, every day except Sunday, or when notice is given. The company's mines, or gravel bars, viz.: the Castle Creek, Sea Gull, Mud, Cornucopia, Diamond, and Taylor, are located in Ada and Owyhee counties, Idaho, on Snake river. Amount of property in acres, 680. The gravel is fine, with no boulders or large rocks, and the gold found is very fine and light; assays per cubic yard, thirty cents. The character of the mines is placer or hydraulic. The company own one canal, three and a half miles in length, capacity 1,000 inches, one set of sluices, and amalgamating plates and water rights. Date of commencing developments, November 1, 1881. The water supply and gravel bars are inexhaustible. The company are producing $136 per day with one set of sluices, and intend putting in five or six sets as soon as possible, which will increase production proportionately. Cost of mining per day is about $8, the work requiring but three men per day to the sluice, and some little quicksilver. Maximum yearly capacity of production, April 1, 1882, $43,200; weekly output at April 1, 1882, $900. The company ship their gold direct to Ogden, W. T. Since the opening of the mine, November 1, it has produced $3,600 monthly, but the company only claims dividends since the company was organized, the property previous to that time was owned by the original locators, and the product was retained by them. In addition to the located ground, the company's water-right controls 680 acres of the same quality of gravel. The gravel requires no treatment whatever, except to be washed through the sluices and over amalgamating plates, which take up the gold, while the gravel passes on with the water into the river as "tailings." This company had a clean-up of one of its sluices after a run of fifty-five days with three men, which yielded $7,505 to the company; this is an average of $136 a day. Date of organization, May 22, 1882; capitalization, $100,000; par value per share, $1; full paid, non-assessable; yield (net) to April 1, 1882, $18,000; yield (net) during 1881, $7,200. Date of first dividend, June 15, 1882; total amount, $3,000, per share, three cents; date of latest dividend, June 15, 1882. Stock and bonds held principally in New York; stock not listed, but held by private parties for dividends. Total pay roll per week, $42. This information was furnished by John R. Murphy, Jr., Secretary of the Castle Creek Gold Mining Company, of Idaho.

Atlanta Hill Gold Mining and Milling Company (The) is chartered under the laws of the State of New York. The officers are S. B. Johnston, Pres.; S. M. Cowpland, Vice-Pres. and Sec., and A. R. Chisolm, Treas. The annual election is held first Wednesday in May of each year. The mines are under the superintendence of Matthew Graham, who has a mining experience of thirty-two years to recommend him. The offices are at 61 Broadway, N. Y., transfer offices, same place. The company own the Last Chance mine, located at Atlanta, Alturas county, Idaho. The ore is free milling, carrying about three per cent. sulphurets, and assays about $100 per ton. The character of mine is described as a fissure vein. The property includes ten-stamp mill, twenty-horse-power engine and boiler, assay office, boarding-house, and five acres of ground at mill. Depth of shaft, 160 feet; length of tunnel, 980 feet; of winzes, 125 feet, of adits, 400 feet; length of the main lode on which the company depends for its supply of ore, 1,200 feet. Developments were commenced in August, 1881, about $18,000 having been expended. The prospects of the property are good, there being a considerable quantity of ore exposed. Cost of mining and milling, from $10 to $15. The company mill their own ore; the bullion is sent to New York city. Organized, 26 May, 1881; capitalization, $100,000; shares, each $5, non-assessable. Stock held principally in New York city. Average wages of miners per week of seven days, $28. This information was furnished by S. B. Johnston, Pres. of the Atlanta Hill Gold Mining and Milling Company.

GOLD AND SILVER.

Bodie Consolidated Mining Company (The) is chartered under the laws of the State of California. The officers are W. P. Willard, Pres.; Louis Teese, Jr., Vice-Pres. in San Francisco; L. M. Jones, Vice-Pres. in New York; Thos. Brown, W. F. Herrin, Geo. W. Sessions, and Jos. Clark. Annual election is held third Monday in June. Henry Augustus Whiting is superintendent; he has had ten years' experience. Head office is at 62 Nevada block, San Francisco; branch office, 137 Broadway, New York; transfer office, Laidaw & Co., New York. The company owns the following mines: The Burgess, Bruce, Granger, Gilded Edith, Bodie Mollie, Lucky Jack, Fortuna, and Euterpe; also, one mill site and three placer claims, all located in the Bodie mining district, Bodie, Mono county, Cal. The total area of claims is thirty-five and a half acres of quartz mining and about thirty-five acres of placer. The ore contains native gold, argentite, kerargyrite, carbon, "water level" and native silver in a quartz gangue and assays in gold, $47 and silver, $32=$79 per ton. This is the average of the ore milled during the year ending May 31, 1882. The vein is a fissure in a porphyritic diorite; it has a strike about North 30° West by South 30° East (mag.), with dip varying from 25° N. E. to 45° N. E., the steeper dip obtaining generally in the lowest workings. Both in dip and in strike the vein crosses the stratification or jointings of the country. The ore adheres tightly, or, in mining parlance, is "frozen" on to the walls, and the vein shows generally a combed structure. The pitch of the new silver ledge is very sharp to the east, and the rock hard. The Bodie's old shaft is 250 feet deep; Bodie new, 450 feet; lent shaft (6-22-'82), 975 feet, all vertical. There is also a main incline from 4,320-foot level, 332 feet long, the bottom of which is 618 feet vertically below collar of Bodie new shaft. Total length of adits, about 13,000 feet. The length of the main lode on which the company depends for its supply of ore is 500 feet at 640-foot level on which the shoot is longest. Average width of vein, about twelve inches. There are three shafts, named above. Since March 13, ore and waste have been brought to bank only through the lent shaft. The underground workings consist of three levels from new shaft at 206, 300, and 432 feet respectively, with cross-cuts, drifts, winzes, and rises. From 432-foot level to 618-foot level, extends a main incline 332 feet long in a westerly direction and under the Fortuna vein, and from it, at six incline levels, run drifts, cross-cuts, etc. These workings recently connected with those deeper from lent shaft. In all, with lent shaft and levels, etc. therefrom, there are about 1,675 feet of shafts (vertical), 600 feet of winzes and rises, 13,000 feet of drifts and cross-cuts; also, slopes from above the 206-foot level to the 640-foot level. Developments were commenced in July, 1877. The present expense of working, per month, is about $15,000. The mining plant and other property at surface consist of one ten-stamp mill with pans, settlers, etc., hoisting works at Bodie new shaft, complete, also, half interest in the lent shaft hoisting works, furnished with a horizontal, direct acting pumping engine, (40-inch cylinder, uncompounded eight-foot stroke), four twelve-inch plungers and one fourteen-inch lift pump. There is now in course of erection, a hoisting engine with two sixteen-inch cylinders, thirty-six-inch stroke, geared. The actual output, per week, is about 165 tons, which, at $59.26 per ton, realizes about $10,000. It may be interesting to mention that the main vein—the Fortuna—is faulted in many places, the throw varying from a few inches to about fifty feet, the latter fault is between the 550 and the 650-foot levels of the lent shaft. All of these faults obey Schmidt's rule of the obtuse angle. With the richest ore, the gangue is a mixture of quartz and porphyry, and frequently the wall-rock is enriched from the vein in a laminated casing from one to six inches thick. The necessity of sinking the lent shaft and of fully equipping the same with pumping and hoisting machinery capable of operating to a depth of 2,000 feet vertically, has operated to increase expenditures during the past two years much above the average of the ordinary mining. Organized, June, 1878, as successor of the Bodie Gold Mining Company, which was organized early in 1877. Capitalization, $10,000,000, shares each, $100, assessable. The production under the original company was $1,162,346.75; the production under the present company was $1,626,885.42; the total yield of the mines to April, 1882, being $2,789,232.17, all in silver and gold bullion. Yield during 1878, $1,042,236.80; yield during 1879, $764,067.12; yield during 1880, $429,817.80; total, $2,236,121.72; yield for fiscal year, 1881-2, was $406,158.25. Amount of dividends paid to April, 1882, $1,200,000; date of latest dividend, March, 1880, amount, at twenty-five cents per share, $25,000. Number of assessments levied, three; total amount of same, $125,000. Of the three assessments, the first and third were fifty cents each, the second, twenty-five cents. The company has no bonded or other indebtedness, and there are no stock or bonds in treasury. Stock quoted about $6 per share April, 1882; stock held principally in California and New York; stock listed at San Francisco and New York. The above information was furnished by Henry Augustus Whiting, Superintendent of the Bodie Consolidated Mining Company.

Ward Gold and Silver Mining Company (The) has property in the Virginia District, Comstock Lode, Nevada. Capitalization, $11,000,000, in 110,000 shares, of $100 each. No dividends paid; five assessments levied; total, $198,000; latest assessment, 10th December, 1879.

Buckeye Water and Hydraulic Mining Company (The) is chartered under the laws of the State of California. The officers are S. K. Holman, Pres.; W. A. Stephens, Vice-Pres., and W. H. Lowden, Sec. The annual election is held first Monday of May in each year. The President is acting as Superintendent. The head offices are at 213 Sansom Street, San Francisco, Cal. The transfer office is at same address. Transfers can be effected on all business days. The company owns the following mines or claims: Washington, Monroe, Madison, Jefferson, Cunningham, Tolly Hill, Buckeye, Centennial, Livingston, Lower Tolly, Blagrave, Hollman & Kipp, located in Trinity county, Cal., covering an area of 1,660 acres. The mines are described as "placer," or hydraulic. There is a saw-mill and the usual buildings necessary for mining. Developments were commenced in 1875, the sum of $328,333.49 having been expended in same. Prospects are good. The company have no milling machinery. Organized, 10th of May, 1875; capitalization, $3,000,000; shares each, $100; assessable basis; yield net to April 1, 1882, $18,070.25; yield net during 1881, $95.01; no dividends have been paid: number of assessments levied, four; total amount of same, $120,000; date of first assessment, October, 1875; amount per share, fifty cents; date of latest assessment, November 10, 1881; amount per share, fifty cents; bonded and other indebtedness at April 1, 1882, nil; stock and bonds reserved in treasury, April 1, 1882, nil; stock not listed; stock held principally in San Francisco and New York; wages paid to all classes, $285 per week. The above information was furnished by W. H. Lowden, Secretary of the Buckeye Water and Hydraulic Mining Company.

Columbus Consolidated Mining Company (The) is chartered under the laws of the State of California. The officers are A. G. Gudnett, Pres.; John D. Conghlin, Vice-Pres.; J. M. Buffington, Sec.; S. B. Melroy, Supt., of eight years' experience. Date of annual election, first Tuesday of August. The head and transfer offices are at 309 California Street, San Francisco. Cal. Transfers can be effected daily. The mines are the Leo, Secretary, Mountain Green, and Mount Castle, all located in the Columbus District, Esmerald county, Nevada. Extent of claim, 200 by 1,500 feet. The ore is free milling, a mill assay of 3,000 tons averaging 83 per cent. The character of the mine is described as a fissure-vein with slate and granite walls. The ore yields silver and a small percentage of gold. The mine is fitted with hoisting machinery with a sinking capacity of 1,000 feet. Depth of shafts, twenty-five feet, thirty-five feet, and sixty five feet, respectively. Average width of vein, seven feet. Developments were commenced in 1876, the sum of $8,650 having been expended on same up to April 1, 1882. The property is considered one of the best in the State of Nevada for amount of work done and money expended. The cost of milling is $14 per ton. Organized, July, 1880; capitalization, $100,000; shares each, $100; basis, assessable; no bonded or other indebtedness: stock reserved in treasury, $20,000; stock listed, San Francisco, Cal., but not called by order of the board of directors. This information was furnished by Mr. R. B. Milroy, Supt. of the Columbus Consolidated Company.

Iowa and Arizona Gold and Silver Mining Company is chartered under the laws of the State of Iowa. The officers are H. L. Kan, Pres.; F. Hashman, Vice-Pres.; F. M. Kyte, Sec.; W. G. Agnew, Treas., and board of thirteen directors. Date of annual election, second Tuesday of September. Office, Osceola, Iowa. The mines owned are the Ostrich, Teresa, and Fresnol, located in Arivaca district, Pima county, Arizona, near Baboquoin Mountain. There are 1,500 by 600 feet in each claim. Their property covers sixty-two acres of land. The ore is free milling. Fire assay: Teresa, $28 silver, $5 gold; Ostrich, $45 silver, $10 gold: Fresnol, $316 silver, $10 gold. The above assays were taken at the surface. Character of the mines is described as fissure. The vein has a width of from two to four feet. No shafts have yet been sunk on the property, nor any underground developments as yet made; so it is impossible to say as to the prospects of the property. Date of organization, March 1, 1882; capitalization, $1,000,000; par value per share, $20; basis, non-assessable. Company free from all indebtedness, April 1, 1882. Stock quoted April 1, 1882, $5 per share. Stock held principally in the State of Iowa. This information was furnished by F. M. Kyte, Secretary of the Iowa and Arizona Gold and Silver Mining Company.

Lone Mountain Gold and Silver Mining Company is chartered under the laws of the State of Indiana. The officers are J. W. Booth, Pres.; James Martin, Vice-Pres.: James M. Watts, Sec.: Johnie Lathrop, Treas. Directors, J. W Booth, Johnie Lathrop, James M. Watts, James Martin, W. B. Booth, E. J. Booth, Judge Gould. Date of annual election, November 11. Superintendent, W. B. Booth. Offices, Delphi and White Oaks, New Mexico. Transfer office, Delphi, New Mexico. The company owns the Della, Lost Creek, Baby Mine, Opher, Anabel, Hidden Crown, Modest Queen, Colorado, Hoosier Boy, and Middle Lode Mines, located at White Oaks, New Mexico. Extent of claim, 600 by 15; amount of property in acres, 220. The minerals found are gold and silver. Highest assay per ton, gold, $500; silver, $300. The character of the mines is described as fissure vein with granite walls. The Della shaft is fifty feet deep, and the Colorado shaft forty feet. The tunnel on Hoosier Boy is seventy-five feet in length. The vein has an average width of six feet. Total number of shafts, five. Development of the property was commenced during the month of February, 1882, and $20,000 have been expended in developing property to April 1, 1882. The prospects of the property are good. Date of organization, November, 1881; capitalization, $1,000,000; par value per share $10; basis, non-assessable. Company free from indebtedness, April 1, 1882. Treasury reserve $1,000,000. No stock has been sold. Wages paid to all classes of labor, $3 per day, April 1, 1882. This information was furnished by the Lone Mountain Gold and Silver Mining Company.

Narragansett Gold and Silver Mining Company (The). The incorporators are Ebenezer Read, V. C. Halley, George Brooks, H. B. Chamberlain. The company's property is located at Clear creek, Col. The company has a capitalization of $2,000,000.

Newark Gold and Silver Mining Company. The company's property is locatedin Ely district, Lincoln county, Nev. The main lode is 800 feet in length. Capitalization, $3,200,000; par value per share, $100; number of assessments levied, fourteen; total amount of assessment levied, $312,000; date of latest assessment, March 13, 1878.

North America Mining and Developing Company is chartered under the laws of the State of Connecticut. Office, 61 Broadway, New York. The company's mine, the Fanny Barrett, is located at Loveland Hill, Col. The company has 240 acres of land. The ore carries silver, gold, and lead, and has a value of from $45 to $1,000 per ton. This company, by its charter, is authorized to examine, report upon, develop, own, work, and deal in mines and mining properties, and generally do all things necessary or incidental to the prosecution of the business of the company, and the proper management thereof. Under the charter, no individual liability attaches to the stockholders. No stock will be issued at less than its par value, and, being full paid, will not be subject to future assessment. Date of organization, March, 1882. Capitalization, $1,000,000; par value, $25; basis, non-assessable, full paid.

North Rapidon Gold and Silver Mining Company is chartered under the laws of Nevada. The officers are Geo. W. Keith, Pres.; John Lathrop, Sec.; J. D. Lewis, Treas. Trustees, C. Haub, William Maxwell, J. B. Matthews, W. Croninshieds. Date of annual election, October 1. Superintendent, William Maxwell. Head and transfer office, Dayton, Lyon county, Nevada. Transfer days, all legal days. The company's claim, the North Rapidon, is located at Palmyra and Indian Springs Mining district, Lyon county, Nevada. Their property covers twenty-one acres. The character of the ore is free quartz. The poor ore assays about one part in gold to six in silver; the rich ore assaying about two-thirds gold. Some cheap ore has been milled by free melting process, sixty-nine per cent. yielding $11.57 per ton. The character of the mine is true fissure vein. The company owns small hoisting works. The incline is 230 feet long, and drifts about 180 feet. The main lode on which the company depends for its supply of ore is at least 2,000 feet in length. The development of the property was commenced in the year 1879. Amount expended in developing to January 1, 1882, $6,000. It contains a large body of ore, assaying on an average, $11, with occasional pieces and bunches assaying from $106 to $250. The ledge is from fourteen and a half to twenty feet wide. The cost of hauling and working at Dayton in custom mill, $10. If the company had its own mill, it would not exceed $5. Dayton is the principal market for the ore. The company do not claim to have a mine, but do claim it is a good prospect, and are willing to give capitalists a good chance on it. 80,000 shares of the stock are held by five persons. Thousands of tons of low grade ore in sight, which will ultimately be worked at a profit. The claim is in good condition, so that a little money, say $5,000, would prove much. The title is A 1. In immediate proximity are four patented mines, which can be bought or bonded on reasonable terms. The stockholders invite an examination by competent judges. Date of organization, June 10, 1880; capitalization, $10,000,000; par value per share, $100; basis, non-assessable; yield (net) to April 1, 1882, about $2,000, 185 tons. No dividends paid to May, 1882. Floating indebtedness, $514.65. No stock or bonds reserved in the treasury. Stock and bonds held principally in Lyon and Storey counties, Nevada. Wages paid to all classes of labor per week, $9. This information was furnished by George Keith, President of the North Rapidon Gold and Silver Mining Company.

North Rowe Gold and Silver Mining Company. The officers are W. S. Janney, Pres.; W. J. Troth, Vice-Pres.; Samuel Conway, Jr., Treas.; W. H. West, Sec. Directors, W. S. Janney, J. M. Rigg, W. J. Troth, G. R. Vernon, W. H. West, R. Robertson, S. Conway, Jr. Offices, Second and Market Streets, Camden, N. J., and 430 Walnut Street, Philadelphia, Pa. The company's property is located at Cave Creek Mining district, Maricopa county, Arizona. Capitalization, $1,000,000; par value per share, $5; basis, non-assessable; amount of stock reserved in the treasury, 70,000 shares; amount of stock issued, 130,000 shares.

Harvey, Chicago, Vesta, Success, and Black Jack Mines (The), owned by A. B. Harvey, are located at Grantsville, Nye county, Nevada. Extent of claim, 1,500 linear feet by 600 feet in width. The Chicago shaft is seventy-two feet deep; Vesta shaft, 112 feet. Date of commencing developments, 1880. The Chicago, which is being developed, joins the famous Alexander mine in the south. This information was furnished by the owner, A. B. Harvey.

Alexandria Mining Company (The) is chartered under the laws of the State of Michigan. The officers are R. O. Wheeler, Pres.; S. Heavenrich, Vice-Pres. Trustees, S. Brady, H. P. Sanger, R. K. Staunton, and T. W. Noble (Sec. and Treas.). Frank Robbins, M. E., Superintendent and Resident Trustee. Mr. Robbins has had an experience of twelve years as Superintendent. Head offices are at Bank block, Detroit, Mich. Local offices, corner Clark and Main Streets, Eureka, Nev. Transfer offices, at Detroit. The annual election is held on January 15. The company owns the Alexandria mine, located in Prospect Mountain, Eureka district, Nev., extent of claim being 800 by 200 feet. The ore may be described as composed of quartz, and carbonate of lead, and galena, the assay value averaging about $45. The vein is a fissure in limestone, the limestone lying between shales. The property attached to the mine consists of lodging, boarding, and engine houses, and smiths' shop of stone, eighteen horse-power engine and twenty-four horse-power boiler. The sinkings are 400 feet down, the length of adits aggregates about 1,200 feet. The length of the main lode on which the company depends for its supply of ore is 800 feet. The underground workings consist of main shaft and drifts and cross-cuts from foot to hanging walls. The developments were commenced in April, 1880, the amount expended in same being about $40,000. The vein is cut by the Eureka tunnel and is producing ore as rapidly as it can be hauled away from the mine by the pack trains, which convey it to the Eureka company's furnaces, a ready market being thus afforded. This vein is one of the three true fissures found on Prospect Mountain, distinct veins lying in the broad ledge called The Gnat Belt, the latter being decided a ledge by the U. S. Supreme Court. Funds are reserved in treasury for purpose of building a road to the summit of Prospect Mountain, when ore can be hauled in wagons to Eureka. There is also a fund for the purchase of adjoining property. The company was organized January, 1880, on an unassessable basis, with a capitalization of $1,000,000, in shares of $25 each. The mine has yielded to date (April, 1882,) a gross product of $55,000 value. No assessments have been levied and the company is free from debt, with funds in treasury. At the beginning of the year the stock, held principally in Detroit and Eureka, was quoted at $4. The average rate of wages paid to all classes of labor is $4 per day. The above information was furnished by Mr. Frank Robbins, M. E., Resident Trustee of the Alexandria Mining Company.

Virginia Gold and Silver Mining Company (The) is chartered under the laws of the State of Colorado. The directors are T. M. Avery, Pres.; Samuel W. Allenton, Vice-Pres. and Treas.; Geo. Schneider, Sec.; C. O. Avery, General Manager; E. Florada, W. E. White, and W. Spooner. Date of annual election, second Tuesday in January. Edward Florada is Superintendent, and has had an experience of twenty-four years. Head and transfer office, Gothic, Col.; also, room 1, 76 E. Monroe Street, Chicago. The company's mining property consists of two claims, the Virginia, and West Virginia, 300 by 1,500 each, and one tunnel site, the Virginia, 1,500 by 3,000, located one mile from Gothic, Gunnison county, Col. The ore is black and gray sulphurets, carrying some native and wire silver, and assays from four ounces to 15,000 ounces silver per ton, with occasionally some gold. Average of general run, 800 ounces silver to the ton. The character of the mine is fissure. At a depth of fifty feet the vein is three feet wide between clearly defined walls. The property includes boarding-houses, etc. There are three shafts, one sixty feet deep, one 120 feet, and one forty-six feet. The tunnel is 460 feet in length. The other lower workings aggregate 200 feet. The vein has an average width of eight feet. Developments of the property were commenced September, 1880. There is ore enough at hand to keep an ordinary smelter furnace busy. The Avery smelter is only one mile away. Date of organization, March 13, 1882; capitalization, $2,000,000; par value per share, $10; basis, non-assessable; no indebtedness; treasury reserve, 30,000 shares; no shares on the market; stock and bonds held principally in Chicago, Ill. This information was furnished by the Virginia Gold and Silver Mining Company.

Aztec Mining Company (The) is chartered under the laws of the State of New Jersey. Officers are Chas. M. Town, Pres.; Edward S. Sears, Sec. and Treas. Directors, Chas. M. Town, M. M. Gillam, Chas. E. Colby, G. C. Noble, Edward S. Sears. James K. Herring, Supt. General and transfer office, 103 Market Street, Camden, N. J. The annual election is on the first Monday in July. The mines belonging to the company are the Katie and Mollie, located on Mineral Point, San Juan county, Col. The extent of claim each, 300 by 1,500 feet; character of ore, smelting; amount expended in developing property to April 1, 1882, $300; the ore assays for $15 to $100 per ton. The character of the mines is fissure. Assessment work only. Average width of shisk, eleven inches. The company was organized May 30, 1881. Capitalization, 250,000 shares; par value, $2, non-assessable; stocks and bonds in treasury April 1, 1882, 50,000 shares; no bonded indebtedness. Stock listed in Philadelphia held principally in Pennsylvania, Massachusetts, Vermont, and Canada. This information was furnished by M. M. Gillam, Secretary and Treasurer of the Aztec Mining Company.

Baxter Mining Company (The) is the name of a private company owning two mines, the Baxter and the Palmerston, located on Republican Mountain, in Clear creek county Col., two miles west of Georgetown, and covering an area of three and three-fourths acres. The quality of the ore varies from twenty ounces to 950 ounces of silver per ton, containing galena, sulphurets, and gray copper. The character of the mines is described as fissure. Property consists of one mill at Georgetown, and two engines on the lode. Entrance to mine is by Diamond Tunnel. There are two shafts 500 and 200 feet deep, respectively. Total length of adits, 3,265 feet. The length of the main lode on which the company depends for its supply of ore is 1,400 feet. Average depth of vein, seven feet. The underground workings are chiefly drifts and stops. Developments were commenced in 1866, and about $27,000 has been expended. The prospects of the property are fair, there being from four to twelve inches of ore in lower workings, and $10,000 in sight. Cost of mining and milling is about $65 per ton. The ore is sent to Golden and Argo, Georgetown, Col. Yield to April, 1882, 2,956,909 lbs. Net value, $209,154.58. The work is all done on a lease. The company is out of debt. Mr. John G. Roberts is the Superintendent, of twenty-five years' experience as a miner, ten years as Superintendent. To him we are indebted for the foregoing information.

Jessie Benton Consolidated Mining Company is chartered under the laws of the State of Pennsylvania. The officers are Alex. H. Sherrcod, Pres.; J. H. Rittenhouse, Sec. and Treas. The date of annual election is the first Monday in February. The Superintendent, W. H. Merritt, has had eleven years' experience in his profession. Head and transfer offices, Scranton Pa. Transfer days, any time except ten days preceding annual meeting or dividend days. This company is the owner of the Jessie Benton, Seraphine, Eagle, Sunday, Buckhorn, Desert, Peach and Sleeper mines, located in Owl Head district, Pinal county, Arizona. Total area of claims in feet, 7,200,000; amount of property in acres, 160. The ore shows rich chlorides, and is free-milling; no roasting. A twenty ton shipment assayed 253 ounces to the ton. To all appearances, judging from the south walls and polished surfaces of same, and also the clay gangue, the character of the mines seems to be true fissure. The company owns a five-stamp wet crushing silver amalgamating mill, one dwelling-house, shops, windlasses, tools, pumps, etc. The depth of shaft is 545 feet; length of adits, that is levels, 250 feet. The main lode on which the company depends for its supply of ore is 1,350 feet. The vein averages one foot in width. The company have six shafts; the deepest shafts are 200 feet apart; levels driving towards each other, also in opposite directions, shafts ninety, seventy, eighty, and fifty feet, and several of less depth. Development of the property was commenced in 1880, and the company expended $8,000 for this purpose up to April 1, 1882. The cost of mining and milling per ton is estimated at $35. The value of ore in sight, on a low valuation, is thought to be several hundred thousand beyond a doubt. The production for the year 1883 is estimated at 3,000 tons, and weekly output for the same year between fifty and sixty tons. Bullion is made on the grounds and sent to New York assay office. The veins are small but unusually rich. On the Benton, no barren ground has been struck, very little gold in ore shipped, only $4 per ton. The Eagle has considerable gold in it. The company now have a mill in course of erection, which will be running in July next. Everything has been outgo with the company up to the present time, and will be till mill begins to run. Company have sold treasury stock from date of organizing for 75 per cent. par, as full paid stock. They have several hundred tons of ore on the dumps that the Superintendent estimates will assay 150 ounces silver per ton, and large bodies of rich ore of about the same value, blocked out ready for stoping. Date of organization, January 30, 1882. Capitalization, $150,000; par value per share, $1; basis, non-assessable. Fully paid. Stock in the treasury April 1, 1882, $15,000; stock quoted April 1, 1882, seventy-five cents; stock and bonds held principally in Pennsylvania, Lackawanna county, and Pinal county, Arizona Territory. Wages paid to all classes of labor per week, $21. This information was furnished by J. H. Rittenhouse, Treasurer of the Jessie Benton Consolidated Mining Company.

Black Warrior Mining Company is chartered under the laws of the State of New York. J. S. Alexander is President. Office, 24 Cliff Street, New York. The Superintendent of works is A. A. Alexander, who has had four years' experience in the business. The Black Warrior mine, owned by this company, is located in Peck district, Yavapai county, Ariz. There are 1,500 feet in the company's claim. The ore contains galena, black sulphurets, and native silver; assaying $300 per ton. The character of the mine may be described as "fissure." Length of the tunnel is 800 feet, and the shaft is down 250 feet. There are three levels of 100 feet each. The main lode on which the company depends for its supply of ore is 100 feet in length; the vein varies from one to four feet in width. Underground workings are operated from levels run from main shaft. The development of the property was commenced in 1876. The estimated value of ore in sight is $100,000; cost of mining and milling per ton, $30. The output weekly at April, 1882, was thirty tons. Date of organization, November 1, 1882. Stock and bonds held principally in New York city. Wages paid to all classes of labor, per week, $4. Information furnished by T. J. Eaman, Agent of the company.

Bullion of Paradise Mining and Milling Company (The) is chartered under the laws of the State of Nevada. The officers are T. J. H. Corlan, Pres.; Chas. Kemler, Treas.; A. W. Siegel, Sec. The annual election is held May 10 of each year. Chas. Kemler acts as Superintendent; his experience extends over a period of eighteen years. The offices are at Kemler's block, Paradise City, Humboldt county, Nev. The company owns one mine, the Grand Bullion, located in the Mt. Rose district, Humboldt county, Nev.; extent of claim, 1,225 by 600 feet. The ore is a ruby and black metal, mostly free milling. Some of the base gives an average assay of $32 per ton. The mine is described as having a true fissure vein. There is a ten-stamp mill, boarding-house, and good road to mine, two and one-fourth miles long. The shaft is down 120 feet. The total length of adits is 2,362 feet. The length of the main lode on which the company depends for its supply of ore is 1,225 feet; average width of vein, six feet. There are three shafts and three tunnels. The main work is done through tunnels, the main drift or tunnel being now 950 feet on the ledge. From this tunnel are sunk three shafts to further explore the ledge. All of these shafts are in good ore, and the ledge increases in size as depth is gained. Developments were commenced in July, 1879, and have been prosecuted at an expense, to present time, April, 1882, of $115,000, including cost of prospecting. The prospects of the property are A 1, there being at least $165,000 worth of ore in sight, and improving with each foot in depth. The cost of mining and milling is $9.75 per ton. Weekly output at April, 1882, 140 tons; the company crush their own ore. It may be of interest to note that a tunnel has been started at the south end of the mine, which will tap the ledge 275 feet below any of its present workings. The three mine shafts will be sunk to connect with this tunnel. When this work is completed, the entire mine can be worked through this tunnel, and sufficient ore will be forthcoming from above to work the mills for at least three years to come. It is the general opinion of mining men, that when the tunnel is completed and the shafts sunk to same, the mine will be the finest on the Pacific coast. The estimated cost for completing the work is $12,500. Organized, May 13, 1879; capitalization, 122,500 shares of $10 each, assessable basis. Yield (net) to April, 1882, $264,831.52; yield during 1881, $78,374.50; number of assessments levied, three, total amount, $3,500; date of first assessment, October 24, 1880, five cents; date of last assessment, December 18, 1881, twenty cents. The floating indebtedness is $19,400; the stock reserve, 26,000 shares; stock not for sale unless the whole of the treasury reserve is taken at $1.50 per share. Stock is not listed; stock held principally at Paradise, Humboldt county, Nev. Wages paid to all classes of labor, per week, $725. This information was furnished by A. W. Siegel, Secretary of the Bullion of Paradise Mining and Milling Company.

Catamaran Mining Company (The). Names of mines owned are Catamaran and Inskip. Location of mines, Buena Vista mining district, Humboldt county, Nevada. Extent of claim, 1,500 linear feet on each claim, 600 feet wide. Character of ore, chloride; assays, from twenty-six to 300 per ton. Character of mines: Catamaran, fissure: Inskip, flat vein. Dimensions of workings: tunnel, 400 feet; levels, 700, feet; length of main lode on which the company depends for its supply of ore, 1,200 feet. Number of shafts or tunnels, three. Nature of under-workings, slopes, winzes, shafts, drifts, etc. Date of commencing developments, January 1, 1880. Amount expended in same $17.000. Cost of mining and milling per ton, $1,200. Prospects of the property very good. The mines of this district are all worked by the owners (miners); company having no mills, depends on custom mills, the owners doing all their own work, extracting ore, assaying, melting, etc. Ore valued from $40,000 to $70,000. Information furnished by Wm. Woolcock.

Canajorie Mining Company (The) is chartered under the laws of the State of New York. Officers, J. A. Howland, Pres.; H. J. Brogg, Jr., Sec. and Treas. Head and branch office, New York. Transfer office, 30 Broad Street; company's office, New York. Name of mine owned, Flat Creek mine. Located in Montgomery county, N. Y. Amount of property in acres, 120. Quality of ore, very fine. Character of mine, fissure; vein of galena. Property owned by the company, engines, boilers, pump, and washer; all that is required for working the property. The company have not yet developed the mine. All facts have been given that can be noted. Date of commencing developments, 1880. Date of organization, 1879; capitalization, 100,000 shares, par value; $10 per share; non-assessable; no dividends; no assessments; bonded indebtedness, none; stock indebtedness, none; stock and bonds held principally, New York State; weekly output, 250 tons. Information furnished by H. T. Brogg, Jr., Secretary Canajorie Mining Company.

Durango Mapimi Mining Company of Council Bluffs, Iowa, is chartered under the laws of the State of Iowa. The officers are W. F. Sapp, Pres.; Dr. J. B. Shultz, Vice-Pres.; Stewart Spalding, Sec.; John Herget, Treas. Executive Committee, W. F. Sapp, P. F. Bresee, Chas. F. Craven; Directors, W. F. Sapp, Joseph Knolts, John Herget, J. B. Shultz, P. F. Bresee, H. C. Sigler, Geo. F. Wright, T. J. Walker, Chas. F. Craven. Date of annual election, first Wednesday in October. Superintendent, Carl Dietmar, who has had ten years' experience in his occupation. Head office, Council Bluffs, Iowa, Branch office, 128 La Salle Street, Chicago, Ill. Transfer office, 128 La Salle Street, Chicago, Ill. Transfer day all the year. There are eight separate mines consolidated and owned by this company, viz., Ojuda, San Vicente, Socobon, Santa Rita, El Carmen, Santa Maria, La Soledad, and San Judas. These mines are located in the State of Durango, Mapimi District, Republic of Mexico. A mine in this district has a certain measurement which is called a possession. A possession measures 200 by 200 varas. A varas is thirty-three inches English measurement. These mines have from one to three measurements each. The character of the ore is lead carbonate, carrying both gold and silver, but chiefly silver. The lead amounts to 15 per cent. of the ore. Average yield per ton about $32. The character of the mines seems to be great veins widening in places to immense deposits, but always plenty of ore. The works consist of six smelters, two large and one small refining furnaces, with sufficient store-rooms for coal, two large ore yards, a water-power turbine and blower, blacksmith and carpenter shops, furnace for brass and copper foundry, a dwelling-house and store-rooms in good condition. A complete assay office with two Becker scales. The works, including dwelling-house and yards, cover a space of 137 by 137 yards. To the works belong about thirty acres of land. The turbine is moved by ninety cubic feet of water per minute on a fall of twenty-six feet. The vein varies from five to fifty feet in different mines. There are eight shafts and one tunnel. The underground workings are very extensive, they are old Mexican workings and the shafts vary in depth from twenty-five feet to 900 feet, but without water in any of them. This company took possession of property, March, 1882. Amount expended in developing property to April 1, 1882, by former owners, $80,000. The amount of ore in sight seems to me practically unlimited and is estimated to be worth at least $8,000,000. The cost of mining and smelting per ton is $20. Maximum yearly capacity of production of works, April 1, 1882, $144,000. Weekly output at April, 1882, $3,000. Principal market for ore is Mapimi. These mines are the principal ones of the Mapimi Dist. in Northeastern Durango. They are old Mexican mines and have been worked for perhaps two or three hundred years by the early Spaniards. They have been profitable at all times. The present company have had smelters made that will increase their reduction capacity from eighteen tons to 100 tons of ore per day. Date of organization, June 11, 1881; capitalization, $1,500,000; par value, per share, $100; basis, non-assessable; yield (net) to April 1, 1882, $6,000, 400 tons; stock indebtedness, $1,200,000; stock reserved in the treasury, April 1, 1882, $300,000; stock sold, April 1, 1882, $20; stock and bonds held principally in Iowa and Ills.; stock sold only by subscription; total wages paid to all classes of labor per week, $1,000. This information was furnished by J. H. Knolts, and certified by Stewart Spalding, Secretary of the Durango Mapimi Company.

Duncan Silver Mining Company is chartered under the laws of Canada. The officers are Thos. Appleton, Pres.; L. B. Stone, Treas. Date of annual election, first Monday in December. The Superintendent, W. Kapsey, has had nine years' experience in his occupation. Transfer office, 79 Water Street, Boston, Mass. The company's works are located near Prince Arthur's Landing, Province of Ontario, L. S. Canada. Extent of claim, 600 acres. The ore contains silver flecks, native silver, minute, and zinc blends. Veins thin and assays very uncertain. The character of the mine may be described as "fissure vein," and much resembling the ground at Silver Islet, seventeen miles distant, southeast. Property owned, real estate, stamp-mill, diamond-drills, steam-drills, pumps, compressor, hoists, etc. Depth of shaft, 800 by 200 feet, by diamond-drill; aggregate of holes bored by diamond-drill, 3606 feet. The vein is pockety and thin; aggregate of shafts, levels, crosscuts, and winzes, 2,926 feet; number of shafts, four; underground workings are all in rock; amount expended in developing property to April 1, 1882, $290,000. The property is not worth further expense to develop; abandoned November 1, 1881; machinery for sale; principal market for the ore, United States. There was found but one considerable pocket of paying silver ore; and the vein was then lost, though thoroughly sought. This pocket was near the surface and yielded $18,000, leading to the continuance of work four years longer. There are yet unissued 40,000 shares of capital stock and several thousand dollars in the treasury; all obligations paid. The machinery is unmoved—laid by in good order to be removed and put to work on other property for the present owners, or other proprietors, with or without uniting with the Duncan Company. This property is owned by an American company of stockholders, working at mining in Canada. Date of organization, October 15, 1873; capitalization, $2,000,000; par value, per share, $20; basis, non-assessable; yield (net) to April 1, 1881, about $18,000; no dividends paid; number of assessments levied, nine; total amount of same, $5; date of first assessment, October 15, 1873; date of latest assessment, June 9, 1880; stock indebtedness, $1,200,000; stock quoted April 1, 1882, 25c.; stock held principally in Boston; stock listed only in Boston. This information was furnished by L. B. Stone, Treasurer of the Duncan Silver Mining Company.

Gilmer-Salisbury Mining Company (The) is chartered under the laws of the State of California. The Trustees are J. T. Gilmer, M. Salisbury, S. D. Brastow, Alf. Eoff, O. J. Salisbury. Mr. J. S. Robeison is the Secretary, and Mr. A J. Blair is the Superintendent, of eighteen years' experience. Head offices are at San Francisco, Cal., and the branch offices at Bristol, Nev. The company owns seven mines or claims, viz.: the Tempest, Iron Mine, White Rock, National, Champion, Kentuck, and Manhattan, located in the Bristol mining district, Bristol, Nev., and comprising an area of 160 acres. The ore is of a quality suitable for smelting. Some high grades will average from $70 to $80. The vein is characterized as a true fissure. The Iron Mine shaft is 200 feet deep; the Tempest shaft is 300 feet deep; the Iron Mine skip tunnel is 227 feet deep; the Tempest first level is ninety feet at 100 feet depth; the Tempest second level is forty feet at 300 feet depth. Developments were commenced January, 1881; $25,000 has been expended in same. Whilst large quantities of ore have been developed, none has been extracted for reduction. All ore taken out in sinking drifting lies on dump; this is from the Iron and the Tempest mines, to which all the foregoing information principally refers. The ore will be reduced in the immediate locality. Organized, January, 1882; capitalization, $10,000,000, in 100,000 shares of $100 each; basis, assessable, but no stock issued nor listed; wages paid to all classes of labor, per day, $4 *i. e.* (at the rate of). This information was furnished by A. J. Blair, Superintendent of the Gilmer-Salisbury Mining Company.

Florence Mine (The) and 500 feet of the Elm City Mine, owned by John G. Roberts, are located at Republican Mountain. Extent of claim, one full claim, 1,500 by 150 feet, and 500 by 150 feet, or 2,000 feet in all. The ore carries silver, milling from ninety to 3,000 ounces per ton. The richest is worth $260 per hundred pounds; average assay, 460 ounces per ton. The character of the mines is described as "fissure." Length of adits, that is, levels, eighty feet. The vein has an average width of eight feet. Extent of underground workings, eighty feet drifting and thirty by forty slope. Date of commencing developments, 1876. Amount expended in developing property, tunnel, etc., to April 1, 1882, $5,000. No estimate of ore in sight can be made owing to repairs. Cost of mining and milling per ton is very irregular, varying from $3 to $125. Mr. Roberts has had no control of these veins until lately. He found them "gouged" badly; two men made $640, $960, $1,100, $1,982, and $400 per month there. Picked specimen worth $2.60 per pound. Five sacks taken out last month netted $404. Yield (net) to April 1, 1882, $21,000, forty-five tons; free from bonded indebtedness, April 1, 1882; labor all done by lease. This information was furnished by J. S. Roberts.

Granby Mining and Smelting Company (The) is chartered under the laws of the State of Missouri. The officers are Edgar T. Wells, Pres.; Solon Humphreys, V.-Pres.; A. S. Trevor, Sec. The annual election is held in March. Mr. Peter E. Blow is Superintendent, having had about six years' experience. The head transfer office is at St. Louis. Transfers can be effected at all business hours. The company own the Granby Mine in Newton county and the Joplin and Oronogo, in Jasper county, Mo.; the property having an extent of 15,000 acres. The plant comprises two furnaces ($25,000) and a quantity of machinery. St. Louis is the principal market for ore. Organized, April, 1865; capitalization, $2,000,000, in 20,000 shares of $100 each. No assessments have been levied. The company has no bonded or other indebtedness. No stock in treasury. Stock not listed, held chiefly in St. Louis. This information was furnished by the company.

Grand Trunk Mining and Smelting Company (The) is organized under the laws of the State of New Jersey. The officers are Chas. M. Town, Pres.; M. M. Gillam, Sec. and Treas. The annual election is held on the second Wednesday of June. Mr. Jas. K. Herring is Superintendent, with an experience of twelve years. The head and transfer offices are at 103 Market Street, Camden, N. J. The company owns three mines—the Grand Trunk, C. C. Colby, and Indian Chief—situated at Mineral Point, San Juan county, Col.; each claim measuring 300 by 1,500 feet. The ore is free smelting, and gives an assay of from $40 to $110 per ton. The character of the mine is described as "true fissure." The shaft is 101 feet down, with twenty feet of level. The average width of pay streak is five feet. The length of main lode, on which the company depends for its supply of ore, is 1,500 feet. Developments were commenced in June, 1881; about $3,900 having been expended; they are being vigorously pushed, and valuable ore is already being produced. Organized, May 13, 1881; capitalization, 1,000,000, in 200,000 shares of $5 each. No bonded or other indebtedness. Stock in treasury, 30,000 shares; stock listed in Philadelphia Mining Exchange, held principally in Pennsylvania, Massachusetts, Vermont, and Colorado. This information was furnished by M. M. Gillam, Sec. and Treas. of the Grand Trunk Mining and Smelting Company.

Gunnison Crystal Mining Company is chartered under the laws of the State of Colorado. The officers are J. H. Sinclair, Pres.; Dr. Jos. M. Gerhart, Vice-Pres.; Wm. Staith, Sec. and Treas. Date of annual election first Tuesday in May. Superintendent, A. B. Hart, five years' experience. Transfer office, Colorado Springs, Col. This company are the owners of the Crystal Belle, Clara, Achilles and Little Bonnie, Jose mines, located at Ruby Camp, Gunnison county, Col. Extent of each claim, 300 by 1,500 feet. The ore is free milling, the character of the mines, fissure. The Crystal shaft is eighty feet deep and the Clara thirty feet. Only assessment work has been done in others, but a pay 8,560 ounces on Crystal lode. The company have but just commenced to develop their property, but they have already expended $6,000 upon the same, April, 1, 1882. The prospects of the property are good. In the same belt with Forest Queen, Ruby Chief, Lead Chief, etc. Date of organization, October 23, 1879; capitalization, $828,000; par value per share, $100; basis, non-assessable; yield to April 1, 1882, after smelting, from 150 to 280 ounces. The company is free from indebtedness. This information was furnished by William Staith, Secretary of the Gunnison Crystal Mining Company.

Henderson Mine (The), owned by N. M. Thayer, J. H. Mason, and W. A. Russell, is located at El Dorado, Montgomery county, N. C. Amount of property in acres, 200. The ore carries gold, copper, silver, and lead, and assays about $50 per ton. Character of the mines, "fissure." The shaft is fifteen feet deep. Length of the main lode, half a mile. The vein has an average width of seven feet. Number of shafts, three. Developments were commenced April 1, 1882. Estimated value of ore in sight, $1,000. This mine has been lately discovered, and is considered by mining experts to be very valuable for gold, silver, copper, and lead. Company organized June 13, 1882. This information was furnished by N. M. Thayer, one of the owners of the Henderson Mine.

Henrage M. Griffin is the owner of the former property of the Consolidated Hercules and Roe Silver Mining Company. Office, Georgetown, Col. The names of the lodes, all contiguous, are: Hercules, 3,000 by 50 feet: West Hercules, 3,000 by 50 feet; 7.30, 700 by 50 feet; McClung, 3,000 by 50 feet; John J. Roe, 1,500 by 50 feet; Maggie, 1,500 by 150 feet; Jennie, 1,500 by 150 feet; John M. Wilson, 1,500 by 150 feet; Clifford, 1,500 by 150 feet; Cora B., 1,500 by 150 feet. All the above lodes are patented. Wreckin, 1,500 by 150 feet, and Pell Wall, 1,500 by 150 feet; receivers' receipt. Hercules tunnel site, 1,000 feet long. The property is located in Clear Creek county, Col. Character of the ore, galena, gray and yellow copper, silver glance, wire silver, zinc blende, ruby, and brittle silver. Character of the mines described as true fissures. Amount of property in acres, $33\frac{73}{1000}$. The main shaft is 300 feet deep. Hercules tunnel, 160 feet. Length of adits—that is, levels—6,000 feet. The main lode is 6,000 feet in length. The vein has an average width of from twenty-five feet to forty feet. Georgetown, Clear Creek county, Col., is the principal market for the ore. Yield (net) to April 1, 1882, $500,000; yield (net) during 1881, $100,000. This information was furnished by Henrage M. Griffin.

Hidalgo Town and Mining Company (The) is chartered under the laws of the State of Colorado. The officers are H. E. Austin, Pres.; O. E. Henry, Vice-Pres.; M. S. Adams, Sec.; A. W. McGovern, Treas. Trustees, J. A. Merriman, L. Hays, C. A. Smith, N. H. Heath, B. F. Baldwin, Thos. Hookey. Superintendent, Thos. Hookey. Experience, one year. Offices, Silver Cliff, Custer county, Col., and Hidalgo, Gunnison county, Col. Transfer office, Silver Cliff. The company's mines are the Ontario, Little Abbie, and Tillie Maria, located at Poverty Gulch, Elk Mountains, Gunnison county, Col. Extent of claim, thirty acres. The character of the ore is dark galena, with considerable antimony. Character of the mines, fissure. As yet the company's property consists only in log-cabins for the men employed. Tunnel is forty feet in length. Length of the main lode, forty feet. The vein has an average width of ten feet between the walls. The underground workings are between two solid granite walls. Development of the property was commenced August, 1881, and the amount expended in developing property to April 1, 1882, $2,000. The ore in sight in the Ontario is very rich. The others have not been developed enough yet to say what the prospects are. Mining costs about $16 per ton. Principal markets for the ore, Denver and Pueblo. The Ontario mine is undoubtedly a valuable mine, and mill-runs will be made at Pueblo this summer. Owing to the altitude, 13,000 feet, work was suspended in September, 1881, and operations cannot be commenced until near the 1st of July, on account of lateness of snow this season. The bulk of the stock is devoted to development, and the other stock is not negotiable at present, so all stock for sale is treasury stock, exclusively for developing the property. They also have coal property. No ore has been removed from the dump yet, April 1, 1882. Date of organization, April 28, 1881; capitalization, $100,000; par value per share, $10; basis, non-assessable; yield (gross tons) during 1881, about ten tons; number of assessments levied, none; date of first assessment, July, 1881, $3.33⅓ per share; date of latest assessment, August, 1881, at the rate of $3.33⅓ per share; the company free from bonded indebtedness, April 1, 1882; stock reserved in the treasury, April 1, 1882, $61,000; stock quoted April 1, 1882, par; stock not listed. Stock held principally at Silver Cliff and Pueblo, Col., and Coicheta, Kansas. This information was furnished by Thomas Hookey, Superintendent of the Hidalgo Town and Mining Company.

Hope Mining Company (The) is represented by Laveaga, Rutherford, Woolcock, and Fielding. The mines owned are the Hope, Lucky, Dog, Snow Flake, Huascar, Carbonate, Gem, located at Buena Vista mining district, Humboldt county, Nevada. There are 1,500 feet in each mine, The company owns forty-five acres mill sites and placer mines. The character of the ore is chloride black sulphurets, with some antimonial sulphurets of silver. Assays per ton, from $16 to $800. Character of the mines, flat vein, sometimes called blanket veins, by some, contact, country rock, and calicureous slate. The company have five tunnels on their property, total length, 1,100 feet. Length of adits, that is levels, 1,200 feet. The tunnel follows the lode from the surface. The vein has an average width of two and a half feet. Shutes from drift, two to number four. Date of commencing developments, August 15, 1879. Amount expended in developing property to April 1, 1882, $32,700. Estimated value of ore in sight by expert, $60,000; the owners think more. Cost of mining and milling per ton, $13. Rented mill, run two months or over, on short water, bond since under bond from July 1, 1882. Date of organization, August 15, 1879; basis, non-assessable: yield (net) to April 1, 1882, $42,000. This information was furnished by the Hope Mining Company.

Hope Mining Company (The) is chartered under the laws of the State of Missouri. The officers are S. Gaty, Pres.; E. Harrison, Vice-Pres.; John R. Lionberger, Treas.; John T. Field, Sec. Directors, the above named officers and James O. Broadhead, A. B. Ewing, J. L. January, H. J. McKellops, A. F. Shapleigh, Louis Deustrow, L. M. Rumsey, John C. Sevan, and Chas. Taussig. Executive Committee, E. Harrison, John R. Lionberger, A. S. Shapleigh, Louis Deustrow, and Chas. Taussig. The annual meeting is held 2d Monday in November. Frank L. Perkins is the Superintendent. The offices are at (Room 7) 427 Olive Street, St. Louis, Mo. Transfers can be effected during all office hours. The company owns several claims, including Hope, Cliff Mines, Little Emma, which are the three principal ones, located at Philipsburg, Deer Lodge county, Montana, comprising an area of 3,800,000 square feet. The ore is various, some being refractory and some free milling; this applies chiefly to the Hope. The assay gives about forty-five ounces. In the Hope mine the ore bodies are embedded masses in stratified magnesian limestone, broken by faults, displacing and separating the continuous veins. In the Cliff the vein is in dolomite, or it may be termed a fissure-vein in limestone, trends east and west. Ore croppings can be traced the length of claim. Other lodes and claims are not developed. The total length of drifts, etc., in the mine is 3,443 feet. The plant includes a ten-stamp, wet-crushing mill, amalgamating pans, six and two true vanners. Fully $600,000 has been expended in developments, the present prospects of the mine being excellent. There is a large body of ore in sight. Including the cost of development the cost of mining is about $12 per ton. Including treatment of tailings the cost of milling is about $7.75. The bullion product is sold on New York assay certificate. Organized, November 23, 1872; capitalization, $400,000, in 8,000 shares of $50 each, fully paid. In 1881 the yield of ore was 5,600 tons, giving a net product of pure silver, 113,099 ounces. Total dividends paid, $22,603.50; first dividend, January 3, 1882, of $1.50 per share; second and latest, April 4, 1882, of $1.50 per share; no assessments; no bonded or other indebtedness; stock in treasury, $23,135; stock held chiefly in St. Louis, Mo.; stock not listed; stock quoted at $40; wages paid to all classes of labor per week, April, 1882, $1,372.12. This information was furnished by John T. Field, Secretary of the Hope Mining Company.

Huascar Mining Company is represented by Laveaga and Rutherford. The mines owned are the Huascar, Carbonate Gem, located at Buena Vista miningdistrict, Humboldt county, Nev. There are 1,500 linear feet in the company's claim. The ore is antimonial sulphurets; assays from $20 to $800. Character of the mines, "fissure," serpentine rock, or, green rock. Cost of mining and milling, per ton, $20. Length of adits—that is, levels, 300 feet; length of the main lode on which the company depends for its supply of ore, 370 feet. The vein has an average width of six feet. There are two shafts and two tunnels. Nature of underground workings, drifts, winzes, etc. Date of commencing developments, August, 1879. Amount expended in developing property to April 1, 1882, $24,000. Estimated value of ore in sight, $80,000. The mine originally was known as the Peru, located in 1861; relocated several times. Ore base, winze from main drift down forty-five feet; at bottom of winze, ledge is thirteen feet between the walls. The company is organized under a non-assessable basis. This information was furnished by Geo. W. Rutherford, one of the Huascar Mining Company.

Humboldt Mining Company (The), of New Mexico, is chartered under the laws of the Territory of New Mexico. The officers are David Branson, Pres.; Edmund Webster, Vice-Pres.; Ed. S. Lowry, Treas.; R. Evans Peterson, Sec.; the office of Superintendent is temporarily vacant. Annual election is held third Wednesday in March. Transfer office is at 330 Walnut Street, Philadelphia, Pa.; head office, Engle Post Office, Socorro county, N. M., on line of Atchison, Topeka & Santa Fe Railroad. Mines and mining property of Humboldt Mining Company in New Mexico, in Cuchillo Negro Mountains, Black Range, Socorro county: Garfield, Gift, Little Luella, John G. B., Providence, Sunnyside, Reward, Lookout, Little Hope, and Telegraph. In upper and middle Caballo Mountains, near Palomas, Socorro county: Gift, California, Nevada, Grammis, and Terry. In lower Caballo Mountains, near Rio Grande, Socorro county; Golden Fleece, first extension south of Golden Fleece, first extension north of Golden Fleece, Ella, Frank W., and Summit. In San Andreas Mountains, Dona Ana county: Leviathan, Kahler, Cincinnati, Chrysolite, Chloride, Adriatic, Corbit, Hembrillo No. 1, Hembrillo No. 3, Timbuctoo No. 1, Timbuctoo Discovery, Morocco, and four mill sites at Hembrillo, Cottonwood, Cincinnati, and Sulphur Springs. The property, as per particulars given above, is located in Cuchillo Negro and Caballo Mountains, Socorro county, and in San Andreas Mountains, Dona Ana county, New Mexico; the total extent is 650 acres. The ore is an argentiferous, galena, copper, and lead carbonate and chloride, and some argentiferous rock assaying from $2 to $195 per ton. The mine has true fissure and contact veins and carbonate deposits. Depth of shafts, 685 feet; length of tunnels, 308 feet. Including the whole of the claims, the total length of the main lode on which the company depends for its supply of ore is 46,500 feet. No mining plant yet erected. Developments were commenced only in December, 1881, since which, to April 1, $20,000 has been expended. The policy of the management now is to concentrate most of their efforts and expenditures on one of the groups which is most likely to prove speedily remunerative, and as soon as it becomes so, to push developments on another, and so continue until as many as can be profitably worked under one management are in full production; the surplus property to be partly developed from time to time, and sold for the benefit of the company's treasury. The claims are all on United States Government land, and were discovered in 1880 and 1881 by daring prospectors during the war with the Apache Indians. Gold, silver, copper, and lead are all contained in these properties, in some cases all four metals in the same vein. Good coal has been found near the Caballos, and abundant timber, both along the Rio Grande and in the Cuchillo Negro Mountains. Mill sites have been located in connection with them, and all are favorably situated for economical working; they are within a day's drive of the main line of the Atchison, Topeka & Santa Fe Railroad. Socorro is the principal market for ore. Organized, March 13, 1882; capitalization, $6,000,000, in 240,000 shares of $25 each, non-assessable; stock reserved in treasury, $3,000,000; stock not listed or quoted; stock held principally in Philadelphia, Pa., Socorro county, N. M., and Albuquerque, N. M. Weekly wages paid to all classes, $700. This information was furnished by David Branson, President of the Humboldt Mining Company.

Indian Queen Mining and Milling Company (The) is chartered under the laws of the State of New Jersey. The officers are G. W. Warren, Pres.; M. Dyer, Jr., Treas.; C. C. Lane, Sec. Directors, Wm. Cogswill, G. P. Langer, H. Z. Hill, T. H. Ford, John G. Webster, and W. O. Fiske. The annual election is held on November 22. Mr. M. Carey is the Superintendent, with an experience of twenty years. The transfer and other offices are at 15 Pemberton Street, Boston, Mass. Transfer days irregular. Books close ten days before dividend days. The company owns the following claims or mines: Indian Queen, Nos. 1, 2, 3, 4, and 5, Justice, Hiskey, and Darbrow, located in the Oneata Mining district, Emerald county, Nevada, covering a total extent of 7,500 feet. The ore is argentiferous, assaying from $90 to $127 per ton. The mine is a fissure of talcose slate formation. There are five entrance tunnels, aggregating 5,000 feet in length. Average width of vein two feet. Total extent of underground workings about one and a half miles. The length of main lode, on which the company depends for its supply of ore, 2,500 feet. The mining plant comprises one 8-stamp mill, a White-Howell furnace, boarding-house, stores, etc. Developments were commenced in 1870, since which time the sum of $250,000, or thereabout, has been expended. The mine is showing well for continued dividends. Cost of mining and milling is $40 per ton. The maximum yearly capacity of production in April last would be about 200,000 tons. Organized November 22, 1880; capitalization $250,000, in 125,000 shares of $2 per share, non-assessable. The net yield during 1881 was $182,439.21. $337,500 has been paid in dividends to April, 1882, total number being twenty-four. The last dividend of five cents per share, amounting to $6,250, was paid June 25, 1882. No assessments have been levied; no bonded or other indebtedness; no stock reserved in treasury. Stock listed at American Mining Exchange, New York, and Boston Stock Exchange. Quoted April, 1882, $3 per share. This information was furnished by C. C. Lane, Secretary of the company.

Knotts Silver Mexican Mining Company (The) is chartered under the laws of the State of Iowa. The officers are President, Rev. P. F. Bresee, Council Bluffs, Iowa; Vice-Presidents, Dr. J. B. Shultz, Logansport, Ind.; John Herget, Pekin, Ill.; Secretary, Stewart Spalding, Chicago, Ill.; Treasurer, J. P. Lyman, Grinnell, Iowa. Executive Committee, Rev. P. F. Bresee, C. F. Craver, J. Herget Dr. J. B. Shultz, and J. B. Knotts. Directors, Rev. P. F. Bresee, Council Bluffs, Iowa; C. F. Craver, Grinnell, Iowa; B. N. Curtis, Esq., Bloomington, Ill.; Hon. Jos. Knotts, Council Bluffs, Ia; John Herget, Esq., Pekin, Ill.; Dr. J. B. Shultz, Logansport, Ind.; J. B. Knotts, Indianola, Iowa; J. B. Gregg, Esq., Red Oak, Iowa; Hon. H. C. Sigler, Osceola, Iowa; D. G. Phillips, Esq., Madison, Ind.; J. T. Walker, Great Bend, Kan.; J. A. Harvey, Des Moines, Iowa. Annual election is held second Wednesday of June. Mr. A. B. Sawyer, of twenty years' experience, is Superintendent. The transfer office is at 128 Lasalle Street, Chicago. Transfer days all year round. Offices also at Osceola, Iowa. The company owns the consolidated mines of Parral and several mill sites in the State of Chihuahua, Republic of Mexico; extent of property, forty-five acres. The ore is a black, hard quartz, containing both native and ruby silver; average at bottom of shaft, ninety-nine ounces. The mine is described as having true fissure veins. Tunnel length, 317 feet; shaft, depth, 410 feet; length of adits, 200 feet; average width of vein, fifteen feet; length of main lode on which company depends for supply of ore, 3,960 feet. The plant comprises engines, boilers, hoisting machinery, tracks, and reduction mill; cost, $80,000. The sum of $50,000 has been expended in developments, which were commenced on the first of January, 1880. Cost (estimated) of mining and milling is about thirty dollars per ton. Value of ore in sight is variously estimated at from eight to twelve millions of dollars. The mining property of this company consists of a group of Spanish mines that have never been worked for more than a century past, yet have yielded about $60,000,000, as shown by Spanish records. The work done by the company so far has been directed towards cleaning out the mines and putting them in good working order. This has now been accomplished, and the company is now preparing for active operations. The principal market for the ore is Parral. Organized August 23, 1875; capitalization, $750,000, in 7,500 shares of $100 each, non-assessable; one stock dividend of 2,250 shares; date of said dividend, October, 1878. No assessments have been levied. Stock indebtedness, $60,000; stock reserved in treasury, $150,000; stock on market, none; stock sold only by subscription; stock held chiefly in Iowa, Illinois, and Indiana. This information has been furnished by J. B. Knotts, one of the directors of the company.

Lincoln Mining Company (The) is not a corporated company. The company owns two mines or claims, Fred Rogers and Government. Extent of same being 1,220 by 50, and 1,275 by 150, both located on Democrat Mountain, in Upper Union Mining district, Clear creek county, Col. The ore is a rich argentiferous galena, assaying an average of 250 ounces silver per ton. The mine is described as a true fissure vein. Depth of shaft, 280 feet; length of adits, about 1,800 feet; average width of crevice five feet; of pay streak six inches, about 1,660 fathoms stoped out. The length of the main lode on which the company depends for its supply of ore is 740 feet. Georgetown, of Clear creek county, Col., is the point to which the ore is forwarded. The mine is wet at present, but will soon be drained by a tunnel. Ore vein is narrow but rich. Work has been done by lessees. The two veins unite. The ore vein is pockety, not continuous. The output of ore is necessarily irregular, but has been quite good for the amount stoped out. The value of the mines will be considerably increased when thoroughly drained. The yield to April 1, 1882, was $192,912.04. The yield during 1881, was $28,043.46; (gross) yield during 1881 was 122½ tons. To April 1, 1882, twenty dividends paid, aggregating about $40,000: first dividend on December 4, 1874; amount of same, $960. Latest dividend, 5th December, 1881; amount of same, $1,600. Two assessments have been levied; total amount of same, $5,120. First assessment February 1, 1876; amount of same, $4,000; date of latest assessment, June 22, 1882; amount of same, $1,120. This information was furnished by W. A. Burr, agent of the Lincoln Mining Company.

Martin White Mining Company (The) is chartered under the laws of the State of California. The officers are Chas. H. Stanyan, Pres.; J. J. Scoville, Sec. The directors are C. H. Stanyan, Annis Merrill, W. E. Norwood, E. D. Sawyer, and R. P. Clement. Mr. Henry Sweetapple, who has had an experience of twenty years, is Superintendent. The annual election is held 3d Thursday in August. The head office is at room 59, Nevada Block, San Francisco, Cal. The company owns the following claims: Mountain Pride, Paymaster, Young America, Defiance, Mammoth, and Caroline, all patented; also the following: (the patent papers for which, excepting Wisconsin and Ben Voirlick, are now in Washington, no adverse claims filed against them) Merril Latima, one-half Juno, Alumida, Ward & Henry, Ben Voirlick, Ben Lommond, and Wisconsin, all located at Ward, Ward Mining district, Nev. The total extent of property has an extent of two square miles or 3,000 acres. The ore is argentiferous, with some gold, gangue quartz, assay (average) $100 per ton. The mine may be described as having fissure veins and deposits of sand. The tunnel has now attained a depth of 3,250 feet; length of adits including tunnel, 8,050 feet. The length of the main lode on which the company depends for its supply of ore, is 10,000 feet; average width of vein eighty feet. The workings consists of four tunnels, upraises, winzes, crosscuts, etc., in all, say 10,750 feet. Developments were commenced in June, 1876, the sum of $456,000 having been expended in same. The mining plant and surface property consists of twenty-stamp mill, (new,) with four White-Howell furnaces attached, two Water Jacket Smelting furnaces, and four Capelling furnaces. Rich ore has been struck in several places during the past few months, and it is estimated that $1,000,000 is in sight. Necessary dead-work will be completed by July 15, 1882, after which the various ore bodies will be actively explored and ore taken out. The maximum yearly capacity of production April 1, 1882, 95,000 tons. The product is marketed at San Francisco, Cal. The company owns by purchase all the water and water-rights in the district, the land conveying same being secured by United States patents. The policy of the company is to always keep out of debt, and no claims of any kind will be allowed to accrue against the property. All the business of the company is conducted upon a cash "pay as you go" basis, and the rights of the stockholders in and to their property will be protected to the utmost. The company expects to start its mill soon upon the rich ores from the recent find. Four or five Ingersoll power drills will be kept constantly at work prospecting the ore bodies. The facilities for reduction are such that the company is prepared to work any kind of ores, either milling or smelting. Organized August 17, 1874. Capitalization, $10,000,000, in 100,000 shares of $100 each; basis, assessable. Yield $961,707 to April 1, 1882. Three dividends paid, $90,000 to April 1, 1882. Date of first dividend, May 27, 1879. Amount per share, thirty cents; total amount, $30,000. Date of latest dividend, July 28, 1879. Amount per share, thirty cents: total amount, $30,000. Twelve assessments levied, $925,000. Date of first assessment, May 28, 1877; amount per share, $2. Date of latest assessment, May 9, 1882; amount per share, twenty-five cents. Stock listed on the Mining Exchanges of San Francisco, Cal., and New York. Stock held chiefly in California, New York, Pennsylvania, and Massachusetts. Stock quoted April 1, 1882, $4.50. Weekly wages, $1,250. This information was furnished by J. J. Scoville, Secretary of the company.

Monitor Mill and Mining Company (The) is represented by Robert Briggs, W. G. Lyons, Wm. McGill, and the property is managed by the above private individuals as a private enterprise, the parties in question having had large experience in mining on the Pacific Coast. The company's property covers sixty-five acres of land. Office, Steptoe Creek, White Pine county, Nevada. The company's mines are the Monitor, the Gow, the Yellow Bonanza, and the King Bee, located in Taylor Mining district, White Pine county, Nevada. Amount of property in acres, sixty-five. The ore carries free chloride of silver, very little base of any kind, and assays $45 per ton. The character of the mines is described as an immense outflow of quartz, assaying not less than $20 per ton, and containing chambers of very high grade ore, with a value of $150 to $200 per ton. The company's property includes one ten-stamp quartz mill, assay office, retort room, machine shop, store-houses, main office, boarding-houses, carpenter shops, barns for horses, eighty acres of land, and ten years' lease of 400 inches water from Stephens creek. The shaft is 125 feet deep. Length of adits—that is, levels—200 feet. The main lode is 1,500 feet in length. Developments were commenced January, 1881, and $15,000 was expended in developing the property to April 1, 1882. The ore on dumps and in sight in mine is sufficient to yield $1,000 per day for the next ninety days, besides two years' run upon low grade ore that is already exposed. Cost of mining and milling per ton, including freight, $13. The weekly output at April 1, 1882, was eighty-three tons. The ore is milled at the company's mill. The property was first located in 1872 by an Indian, who sold it for $40 and a horse to Messrs. John Platt and John Taylor during the latter portion of the year 1875. These parties sold the property to a San Francisco company, which was incorporated under the name of the Alamida Mining Company, for the sum of $18,000. This latter company worked the property for the period of two years, and expended on the same $15,000, and then abandoned the property. In 1881 it was relocated, and in the following January commenced the actual development of the property. The bullion is very pure, .990 fine. Yield (net) to April 1, 1882, $61,000; yield (net) during 1881, $15,000; yield (gross tons) during 1881, 400. Date of latest dividend, May 1, 1882; amount, $10,000. No assessments have been levied to June 1882. Wages paid to all classes of labor per day, $4. This information was furnished by Monitor Mill and Mining Company.

Mount Pleasant Mining Company (The) is chartered under the laws of the State of New Jersey. J. H. Smith, Superintendent. The Mount Pleasant mine is owned by the company. Located on Grizzly Flat, El Dorado county, Cal. Extent of claim, 5,135 feet—293·60 property in acres. Fine quality two per cent. sulphurets, iron pyrites, zinc, and galena ore; fissure veins; depth of shaft, 400 feet; levels are 4,619 feet; average width of vein, five feet; tunnel, 130 feet; one twenty-stamp mill, run by steam; double engine; hoist with cage in shaft. This blank was filled out by J. H. Smith, Superintendent of Mount Pleasant Mining Company. Any further information may be had at company's office, Room 47, No. 18 Wall Street, New York.

New Street Albans Silver Mining and Smelting Company. The Directors are M. Chase, Pres.; John H. Gordon, Treas. and Sec.; G. A. Litby, D. H. Smith, D. N. Ewell, Irving Rice, D. W. Keyes. The company's property is located at Saint Albans, Maine. The company was organized April, 1880, and has a capitalization of $500,000, in shares, with a par value of $5 per share.

Nigadoo Silver Mining Company. The officers are Jas. Hickson, E. Hickson, R. Ellis, J. H. Harding. Office, Bathurst, Glocester county. The company's property is located in the British Province of Canada. The company has a capitalization of $150,000, in 300,000 shares, with a par value of $5 per share.

North Star Mine (The) is owned by Messrs. Ragel, Nichols & Co. The property consists of two claims, the North Star and Nevada, located at McMillen, Gilo county, Arizona. The ore is a high grade chloride and horn silver, assaying from $1,000 to $7,500 per ton. The mine is a true fissure, traceable for three miles, from four to ten feet wide. The shaft is down about seventy feet, and tunnel is driven 148 feet. The length of the main lode, on which the supply of ore depends, is 1,500 feet. No mining plant exists. Developments were commenced in 1877, since which time $1,500 has been expended. The prospects of the mine are considered good, providing capital will take bold and develop. Cost of mining and milling, $35 per ton. There was a pocket of ore found in this mine five years ago which ran over $7,000. Since then it has changed hands, and very little more than assessment work has been done. We are expectant of making a sale of the property soon for $50,000. The company is not chartered, and consequently not assessable. This information is furnished by J. R. Nichols, one of the owners.

Norombega Silver Mining Company. W. P. Hubbard is Treasurer. The company's property is located in Maine, and $2,321.05 expended in developing the property to August, 1881. Real estate does not include title to the surface, and mineral rights are not taxable. The company's capital is divided into 200,000 shares. Floating indebtedness August, 1881, $750,000.

Papago Chief Consolidated Mining Company (The) is chartered under the laws of the State of Iowa. The officers are W. W. Merritt, President; A. C. Hinchman, Vice-President; B. F. Remmels, Treasurer; R. M. Roberts, Secretary. Directors, W. F. Mitchell, Robert Coles, E. B. Young, Jacob Myers, and Smith McPherson. Annual election second Tuesday in August. Jacob Myers, Superintendent. The transfer and head offices are at Red Oak, Iowa. No branch offices. Transfers can be effected at any time except during the ten days previous for general meeting. The property of the company consists of three mining claims or mines. The Longarina, Papago Chief, and Sacramento, all in Pima county, Arizona, each claim having a length of 1,500 feet; total area, 50 acres. The ore is an argentiferous galena. Battery assays were $96 to $124 per ton. The vein is true fissure with both walls perfect. There is no mining plant as yet that is worth speaking of. Two shafts each 100 feet down; length of adits or drifting, 350 feet. The length of the main lode on which the company depends for its supply of ore is 500 feet. Average width of vein, twenty-four inches. Developments were commenced in 1878, $10,000 having been expended in same. The vein at the bottom of the west shaft is in good shape, in good ore; soft gouges can be used; about $50,000 worth of ore in sight. Cost of mining and milling, twenty-six dollars per ton. The mine Longarina was opened and worked by the Spaniards many years ago. The Colt Company built a camp near it called Franita about 1865. In reference to this mine, Mr. J. H. Fawcett, treasurer in charge of the Arivico mill, says: "From the best information I can get from those best posted in regard to the Longarina and good miners who have worked in the mine, all seem to be unanimous in the opinion that it is a good mine, and that a few thousand dollars judiciously expended would set it to producing bullion and paying dividends. It is believed to be one of the best properties in this part of the territory. The only available mills at work or being built in this part of the territory are worked by free milling or amalgamation; these mills leave fully forty per cent. in the tailings, and we cannot sacrifice so much in working, and the company has not means to go ahead with developments without utilizing the ores taken out as work progresses. The level between the two shafts is run at the forty-foot level, is in the vein; the ore above this has been stoped out to within twelve feet of surface. The drift east from the east shaft is in ore vein. The incline on the west of west shaft was taken out by Mexicans. The Papago Chief and Sacramento are claims which have not as yet been developed to any extent. My report has reference generally to Longarina mine." Organized August 10, 1878; capitalization, $2,000,000, in 100,000 shares of twenty dollars each, non-assessable. Yield, net, to April 1, 1882, 177½ tons of ore; value, $8,000. Only waste or dead work done in 1881. No dividends paid. No bonded or stock indebtedness. Floating indebtedness about $2,500. Treasury stock, 12,000 shares; value, about $241,000. Preferred stock quoted at five dollars; not listed; held chiefly in Iowa and Illinois.

Paradise Gulch Mining Company is chartered under the laws of the State of Colorado. The officers are S. S. Scribner, Pres.; A. M. Searles, Sec.; F. M. Fox, Treas. J. W. Goodspeed is Superintendent; he has had a mining experience of three years. Head office, Chicago, Ills. Western office, Gothic, Cal. The mines owned are the Pride of Chicago, the Paradise, the Scribner, the Independence, and Nonesuch mines, together with five other claims, located between the heads of Slate river and Rock creek, Gunnison county, California. The ore is described as galena. The character of the mines are fissure veins and deposits. Date of commencing developments, 1880. Elko is the principal market for the ore. Date of organization, February, 1881; capitalization, $2,000,000; par value, per share, $10. This information was furnished by J. W. Goodspeed, Superintendent of the Paradise Gulch Mining Company.

Queen Bee Mining Company. The managers are Fred. Griffin, Edwin Locland, and James Jacoby. Mr. Jacoby is Superintendent, and has had an experience of ten years. Office, Rapid City, D. T. The company's property includes the Queen Bee and Telaphone mines. The property covers ten acres. The Queen Bee has turned out some of the finest specimens in the Black Hills, D. T. There is a specimen taken from this mine on exhibition at the New York College that is said to be very fine. The Telephone mine is located on Slate creek, and is one of the finest prospecting mines on Slate creek, will run $20 on twenty inches of water. The ore mined in the Bee Queen is free milling and assays as high as $2 000 to the ton. The vein is true fissure, three pounds of rock have yielded twenty-six pennyweights. Tramway has just been completed. The shaft is eighty-four feet deep. Length of levels, fifty feet. Date of commencing developments, November 1, 1878. Amount expended in developing property to April 1, 1882, $10,000. Cost of mining and milling per ton is estimated at $2 10. Date of organization April 1, 1882; yield (net) to April 1, 1882, $1,000, 100 pounds; number of dividends paid to April 1, 1882; amount of dividend paid, $400; wages paid to all classes of labor per week, $18. This information was furnished by James Jacoby, Superintendent of the Queen Bee Mining Company.

Riverside Tunnel and Mining Company (The) is chartered under the laws of the State of New York. The officers are J. S. Davenport, Pres. and Treas.; James B. Davenport, Sec. Trustees, J. B. Davenport, S. E. Church, W. H. Bosworth, James A. Monell, A. S. Briggs, C. Barcalow. Date of annual election, May 7. H. G. Burt Superintendent. Office, 24 Park Place, New York; transfer office, 24 Park Place, New York. The company's mines are the Riverside, the Follet, the Henderson, the Bosworth, the New Jersey, the Cornwall, the Empire, the Monell, the Church, the Adella, Fonda, and Mill Site, located at Uncompahgre mining district, on Red Mt. creek, Ouray county, Col. The character of the ore is galena, and iron pyrites, and some gray copper. Character of the mines are fissure. The company expects to have a mill when the railroad gets to them. Extent of underground workings is about 900 feet in all; shaft, 175 feet; balance in tunnel of 234 feet, and drifts on vein, two levels. The developing of the property was commenced September, 1878, and from $35,000 to $40,000 have been expended in developing the property to April 1, 1882. This company is a sort of close corporation, all work done and paid for by the trustees. No outside subscriptions have been solicited for working capital. The trustees take the working capital stock as fast as money has been needed for development. The trustees paid $2.50 per share for the working capital. Sales to outsiders made at those figures and higher, but only in small lots to friends. Date of organization, August, 1879; capitalization, $2,000,000; par value per share, $10; basis, non-assessable; yield from mill runs sent for sample, $78.90 per ton; free from all indebtedness. This information was furnished by J. B. Davenport, Secretary of the Riverside Tunnel and Mining Company.

San Juan and New Jersey Discovery and Mining Company (The) is chartered under the laws of the State of New Jersey. The officers are B. A. Vail, Pres.; F. W. Jacobs, Vice-Pres.; J. C. Coddington, Treas.; J. Weaver, Sec. Directors, B. A. Vail, F. W. Jacobs, J. C. Coddington, Frank L. Sheldon, William Blanchard. Date of annual election, first Tuesday in April. Superintendent, James A. Drummond; experience, twenty years. Branch and transfer office, Exchange Building, Rahway, New Jersey. The company's claims are the Western Bell, Jersey State, Chris. Marsh, Weaver, Black Crystal, Grand Falls, Carrie Coddington, Sheldon, Diamond Tunnel, Jersey Flat, Iron Cap, Lady Franklin, Brewster, Seek No Farther, Great Whale, Sadie, Sunnyside, Rahwegian, all located in the Uncompahgre district. The Pitkin, Father Abram, Redemption, Little Cave, B. A. Vail, Nasby, Meridian Sun, Earl of Pearth, Poughkeepsie Spray, located in Poughkeepsie Gulch, Uncompahgre district; Silver Bell, Crystal Spring, Jupiter, Young America, located in Pioneer district; F. A., Sampson, Jupiter, Glencar, Menduza, and Neptune, located in Rico district, State of Colorado. Extent of claim, 60,000 by 300 feet, together with three additional mill-sites. Amount of property in acres, 400. The character of the ore is various, assaying from thirty to 100 ounces of silver per ton. The veins are mostly all true fissure, some are contact veins, carrying carbonates. The property includes three cabins for the men, storehouses at the mines, and a house and lot in the town of Ouray. Total amount of work is done in open cut, cross-cut, drifting, and tunnelling, on all the claims together about 1,000 feet. The greatest amount of work on any one claim being 150 feet on the Western Belle. Developments were commenced July, 1880, and a little over $20,000 expended in developing property to April 1, 1882. The prospects of the property are very satisfactory, but my estimate has been made as to value. The object of the company is to secure all the good mine claims possible in the San Juan district, and develop sufficient to demonstrate their character, and offer for sale at compensatory prices. Date of organization, April 2, 1880; capitalization, $1,000,000; par value per share, $10; basis, non-assessable; no ore reduced or sold as yet; stock indebtedness, $765,000; stock reserved in the treasury, April 1, 1882, $235,000, par value; stock held principally in Union county, N. J. This information furnished by John Weaver, Secretary of the San Juan and New Jersey Discovery and Mining Company.

Senate Mining and Smelting Company (The) is chartered under the laws of the State of New York. The officers are Willoughby Weston, Pres.; A. T. Tinker, Treas.; Edward Green, Gen'l Man.; Ed. McCulloch, J. C. Weston, Supts. Offices, 6 Pine Street, New York, and at works, Galena, Idaho. The company owns three mines, Senate, Red Cloud, and Chief, located in Galena, Alturas county, Idaho. Extent of property, 237 acres. The ore is a galena and carbonate, assaying from $50 to $250 per ton. Twenty-ton smelter, saw-mill, and engine Depth of shaft, fifty feet. Developments were commenced in 1880. Amount expended in same, $20,000. The prospects of the property are considered A 1. Organized May 1, 1882; capitalization, $2,000,000; shares, 200 000, $10 each; non-assessable. Yield to January 1, 1882, 300 tons; treasury reserve, 50,000 shares. Stock held principally in New York.

Silver Ledge Consolidated Mining Company is chartered under the laws of the State of Colorado. The officers are G. W. Brown, Pres.; E. Townsend, Vice-Pres.; I. R. Childs, Treas.; G. W. Zaneway, Sec. Date of annual election, third Tuesday in March. W. F. Rowen is Superintendent, and has had an experience of nine years. Head office, Chihuahua, Summit county, Col. Branch and transfer office, 125 South Third Street, Philadelphia, Pa. The company's mining property consists of five claims, viz., the Silver Ledge, the Silver Queen, the Grand View, the Transylvania, and the Penby Mountain, located in Peru mining district, Summit county, Col The ore mined is smelting ore, and averages $60 to the ton. The character of the mines are fissure veins. The main vein is about thirty-five feet wide, containing pay-streaks varying from six inches to two and a half feet in width. The company's property, covering twenty-six acres, includes boarding-house and ore-house. The shafts (three) are 100 feet deep. Length of adits—that is, levels—700 feet. Four tunnels are being driven. Developments were commenced May 25, 1881, and $20,000 expended in developing property to January 1, 1882. The prospects of the property are most excellent. The company could to-day ship ore so as to pay handsomely, but are waiting for the railroad facilities so as to get full value of ore. Maximum yearly capacity of production, 20,000 tons. Argo and Denver are the principal markets for the ore. Date of organization, March 4, 1881; capitalization, $3,000,000; par value per share, $10; basis, non-assessable. No dividends paid to April 1, 1882. Company free from debt. No stock reserved in the treasury. Stock not listed held in Pennsylvania and Colorado. Wages paid to all classes of labor per week, January 1, 1882, $200. This information was furnished by P. J. Zaneway, Secretary of the Silver Ledge Consolidated Mining Company.

Silver Hill Mining Company is chartered under the laws of the State of North Carolina. The company's mine, the Silver Hill, is located nine miles southeast of Lexington, in Davidson county, North Carolina. The property covers an area of 1,300 acres. The ore is a combination of lead, gold, zinc, copper, and sulphate of iron—massive and very heavy—carrying native silver. The ore assays from $10 to $100 per ton. The mine consists of two leading fissure veins running parallel, about twelve feet apart, with other smaller veins of same character on either side. The property includes one large stamp battery, one set Cornish rolls, one of Blake's rock-breaker, three steam-pumps, and one forty-horse power steam-engine. The shafts are 800 feet deep. Length of adits—that is, levels—1,000 feet. The main lode is 160 feet in length, and the vein has an average width of eight feet. Number of shafts, four. The development of the property was commenced during the year 1840. The prospects of the property are very flattering. Estimated value of ore in sight, $500,000. Cost of mining and milling per ton, $6. The mine is beautifully and pleasantly situated in the heart of the great mineral district of North Carolina, with all the advantages of wood, lumber, etc., and is easily drained, with water. Seemingly inexhaustible supply of ore. It is not at present in active operation, but the company are perfecting arrangements for resuming active operations soon. The property is said to be one of the finest mines opened in the State, and has produced greater quantities of ore than any other mine in the country. It was worked by the Confederate government during the rebellion, and was one of the main sources of supply of lead. Date of organization (original company), 1840. No assessments have been levied. This information was furnished by J. M. Prim, Superintendent of the Silver Hill Mining Company.

Old Guard Mining Company (The) is chartered under the laws of the Territory of Arizona. The officers are Fordyce Roper, Pres.; Francis G. Burke, Vice-Pres.; J. V. Vickers, Sec. and Treas.; Sumner P. Vickers, Supt. The annual election is held January 28. The transfer and head offices are at Tombstone, Arizona Territory, and 120 Water Street, New York. The company owns the Old Guard Mine, located in Tombstone, Arizona. Extent of claim, 600 by 1,500 (about twenty acres). The ore contains chlorides, carbonates, and sulphates; assaying $15 to $300 per ton. The vein is true fissure; shaft, 230 feet deep, and adits, 300 feet. Main lode on which the supply of ore depends, 800 feet in length; average width about four feet. There are two shafts and four tunnels. Developments were commenced in November, 1881, and $10,000 has been expended on same. The prospects are very flattering, probably $20,000 worth of ore on dumps and $100,000 worth in sight. Cost of mining and milling, $20 per ton. This is one of the most popular young mines in Arizona. Many men of moderate means, including miners employed in the mine, have taken working stock without solicitation at forty to fifty cents per share, and from the general formation of the vein and its regularity, it stands as good a chance of being a peer to the Contention and Grand Central as any in the district. The weekly output at present is thirty tons, which is sent to Custom Mill. Organized, January 28, 1882; capitalization, $2,000,000, in 200,000 shares of $10 each; non-assessable. Net yield to April 1, 1882, 300 tons; treasury stock, 400,000 shares; stock held principally in New York, Philadelphia, and Arizona. Not listed on Eastern boards: quoted at fifty cents per share, April 1, 1882. This information has been furnished by Sumner P. Vickers, Superintendent of the Guard Mining Company. The Old Guard was one of the finest mines located in the Tombstone, in 1878, by Scheffelm Bros. & Gird, the pioneers of the camp, and is one of the few properties in this district whose title is beyond dispute.

Pelican and Dives Mining Company (The) is chartered under the laws of the State of New York. The officers in 1880 were Norvin Green, Pres.; Theodore N. Vail, Vice-Pres.; R. H. Rochester, Treas.; Geo. C. Wilde, Sec. Date of annual election, April. W. A. Duff is Superintendent. Office, 197 Broadway, room 26, Western Union Building, New York. Transfer office, Farmer's Loan and Trust Company, New York. The company's mines, the Pelican, Dives, Unicorn, Zillah, Billweather, Eagle Bird, Leddon, Andes, Waverly, Bertha, Convention, and Lancaster, are located at Georgetown, Clear Creek county, Colorado. The character of the ore is silver, and the ore has given an actual average for two years of 145 ounces of silver per ton. The character of the mine is fissure vein. The main shaft is 900 feet deep, and levels several miles in length. The length of the main lode is 2,000 feet. There are two shafts and four tunnels. The underground workings are very extensive. The vein varies from fifty to 100 feet in width. Georgetown is the principal market for the ore. Date of organization, April 6, 1880; capitalization, $5,000,000; par value, per share, $10; basis, non-assessable; stock not listed; wages paid to all classes of labor per week, $21. This information was furnished by G. C. Wilde, Secretary of the Pelican and Dives Mining Company.

First National Mining Company is chartered under the laws of the State of New York. The officers are J. C. Watson, Pres.; Philip Highley, Sec. and Treas. Date of annual election, June. The Superintendent, Mr. W. H. Gardner, has had three years' experience. Branch office, 66 Devonshire Street, Boston, Mass. Transfer office, Broadway, New York. The company's mine, the First National, is located at Iowa Gulch, California district, Lake county, Col. Their claim is 1,500 feet by 300 feet. Amount of property, ten acres. The ore is low grade, galena mixed with iron. This mine is on the south side of Psalter Boy hill, one vein of galena dips into the hill at about 45°. Of this low grade ore the company can take out 100 tons a day, at seventy-five cents per ton. All that is required is concentration to make this a very valuable property, and works have been ordered. The company owns one twenty and one thirty horse engine, a baby hoister, and No. 4 Cameron pump. The shaft is 220 feet deep, and length of adits, that is, levels, 300 feet. Date of commencing developments, July, 1881. Amount expended in developing property to April 1, 1882, $20,000. There is a twenty-foot vein of galena exposed. Average assay, twelve ounces silver, fifteen per cent. lead, mixed with white iron. Leadville is the principal market for the ore. In sinking shaft, the company first cut vein at a depth of 145 feet, and found it low grade, upon which they decided to sink about sixty feet, then drift into the hill, and again cut vein. This work they are now doing with good prospect of getting an improved grade of mineral. Date of organization, May, 1882; capitalization, $200,000; par value, per share, $2; basis, non-assessable; bonded indebtedness, April, 1882, $50,000; stock reserved in the treasury, May 1, 1881, 25,000 shares, $50,000; stock quoted June 1, 1882, $2; stock not listed; stock and bonds held principally in Boston, Mass. Wages paid to all classes of labor per week, $21. This information was furnished by W. H. Gardner, Superintendent of the First National Mining Company.

Yale Mountain Mining and Milling Company (The) is chartered under the laws of the State of Colorado. The officers are John E. Faunce, Pres.; C. R. Early, Vice-Pres.; Fred. Gaston, Sec. and Treas. Directors, Jas. Wm. Newlin, Wm. Newell, Wm. P. Schell, and John W. Anthony. Annual election, June 6. Superintendent, John Greenbank, of six months' experience. Head and transfer office, 506 Walnut Street, Philadelphia, Pa.; main office, Buena Vista, Col. The property of the company includes five claims, Mt. Carmel, Bucks, Delaware, Westmoreland, and Last Chance, which, with two mill sites and twenty acres of land on Cottonwood creek, are located in Chaffee county, Col. The claims, each, have an extent of 1,500 by 300 feet. The ore consists of low grade galena, sulphurets of copper and iron, carrying silver and some gold, and assaying twenty to fifty ounces per ton. The veins are regular fissures. Mt. Carmel and Last Chance are the only claims developed—135 feet tunnel and fifty feet shaft on Mt. Carmel; 120 feet incline on Last Chance. The length of main lode, on which the supply of ore depends, is 1,500 feet; width of same, twenty-two to twenty-three feet. The workings consist of crosscut on vein Last Chance, and two levels on Mt. Carmel and crosscuts at foot of shaft. The mining plant includes a mill containing an Alden crusher and a concentrator; also saw-mill on Cottonwood creek. Developments were commenced in 1881, and about $25,000 has been expended in same. The Mt. Carmel ore ranges from twenty to four ounces per ton; Last Chance ore ranges from ten to twelve ounces per ton, with streaks of galena at fifty and seven-eighth ounces per ton; cost of mining, $3.00, and milling, $7.00, equal to $10 per ton. Denver and Pueblo form the principal markets for the ore. The mill has been erected especially for the purpose of developing this district, the mines of which are mostly low grade ore. The works were completed in the spring of the present year (1882); and on trial the crusher has a capacity for sampling work of sixty tons a day, and for concentration of thirty tons per day. Capitalization, $2,000,000, in 200,000 shares, of $10 each; organized, May 26, 1881, on a non-assessable basis; no dividends have been paid; the stock, held principally in Pennsylvania, is listed at the Philadelphia Stock Exchange, Philadelphia, Pa. This information was furnished by John Greenbank, Superintendent of the Yale Mountain Mining and Milling Company.

THE COMPILED COMPANIES.

THOSE companies which follow here are those whose record has been obtained from the columns of the mining press. The figures have therefore no further responsibility, yet are in the main correct, though not possibly quite up to date.

COAL.

Alliance Coal Mining Company (The). Officers are Rossiter W. Raymond, President; Fred. A. Potts, New Jersey, Vice-President; Abraham S. Hewitt, Treasurer. Mines located in the Schuylkill Valley, Pa.; $400,000 is set apart for opening up the lands of the company. Hewitt & Co. retain stock in the Alliance Coal Company to the amount of $300,000; Jersey Central, taken, $100,000; capitalization, $2,000,000; money paid in, $1,500,000.

Abbey Coal and Mining Company (The). E. J. Crandell, Manager, 100 North Fourth Street, St. Louis, Mo., and Collinsville, Ill., is where the general office and branch office may be found.

Acadia Coal Company (The) is chartered under the laws of the Province of Nova Scotia. The officers are J. W. Glendenin, President, and P. Harris, Secretary, having offices at 145 Broadway, New York. The mines are under the superintendence of H. S. Poole, formerly Government inspector of mines. Annual election is held on the 27th of March. The company own the Acadia and other mines. The Acadia at Westville is the only pit at present working. The properties, comprising an area of six square miles, are located in Picton county, Nova Scotia. The coal is of a quality suitable for both steam and domestic purposes and has a preference in the local markets. The seam is regular, dipping northeast at twenty degrees to twenty-eight degrees, without faults so far as proved in Acadia ground. Entrance is by slope 1,900 feet long. The levels are 5,000 feet in extent. The seam on which the company depends for its supply of coal is 5,000 feet longitudinal measurement by about ten feet wide. It has two slopes. The company was organized in 1865 on an assessable basis, with a capitalization of $1,500,000 in 15,000 shares of $100 each. The average yearly output of coal is 90,000 tons gross. The company is out of debt.

Addenda Coal Company (The). Located Mono county, Cal. Shaft 324 feet in depth, the bottom in vein matter carrying bright, lively quartz and seams of mineral bearing clay. Indications very good.

Aden Coal Company (The). Mines located near Wanomie. This company is composed of Lehigh capitalists, who have purchased many acres of valuable coal lands near Wanomie.

American Coal Company is chartered under the laws of the State of Maryland. The company has a branch office located at 110 Broadway, New York. The company's mines are located in Alleghany county, Md., the character of the coal being semi-bituminous. The company was organized in 1855, having a capitalization of $1,500,000, in 60,000 shares of $25 each, non-assessable. Total amount of dividends paid up to 1877, $1,222,-500. The latest dividend paid being at the rate of two and a half cents per share. The main vein has a width of fourteen feet.

American Coal Company (The). A. Jackson Clark, Manager. Principal office, 110 Broadway, New York. Name of mine owned, the Jackson; located opposite Lonaconing. Very little has been done during the past year 1881. Prospects are good at present. John Bradburn, mining boss. Employing about 190 men. The coal is shipped from Alexandria, Baltimore, and Jersey City. Capitalization, $1,500,000; number of shares, 60,000; par value, $5.

Ansted Coal Mines (The). Mr. Page, Superintendent. These mines are located at Hawk's Nest, West Va. The prospects for the extension of the mines are good. Have a good vein of coal from which they mine between seven and eight feet in the bottom. Miners have steady work. Mr. Page is building 100 coke-ovens. The coal makes a good grade of coke, have about three feet of coal in the bottom. The miners receive forty cents per ton for running the mine. Seventy-five men are emplyed.

Argyle Coal Company (The). Located in Cambria county, Pa. Yield per annum, 3,253 tons.

Atlantic and George's Creek Consolidated Coal Company (The). Officers, J. H. Taylor, Pres.; George Stearns, Sec. Directors, S. Rosenburg, E. S. Myers. Location of coal mines, West Virginia. Mr. Taylor purchased a valuable piece of property, on the West Virginia and Pittsburg Railroad, in Mineral county.

Aurora Coal Company (The.) Located, Cambria county, Pa.

Austin and Central Texas Coal Company (The). Francis B. Forster, Pres.; R. J. Swan Coat, Vice-Pres.; Austin M. Robinson, Sec. and Treas. and Gen. Manager. The mines of this company are located near Rockdale, Milan county, Texas. First mine struck, forty-five feet below the surface, five and one half feet thick. Capitalization, $250,000.

Baka Coal Mining Company (The). Officers, Juan Jose Baka, Pres.; J. M. Chavez, Vice-Pres.; Capt. R. A. Darst, Sec.; P. A. Simpson, Treas. Mines located near San Pedro, on the opposite side of the Rio Grande, Socorro, New Mexico.

Banner Mines and Gas-Coal Mines (The), owned by Gamble & Risher, are located at West Pittsburg, Pa. Head office, 116 Water Street, Pittsburg, Pa.

Beaver Creek and Cumberland Coal Company (The). Officers, J. W. Procter, Treas.; H. C. Ferris, Gen. Supt. Organized at Cincinnati, by Judge Van Winkle, of Danville. This company has 17,000 acres of coal lands, and is already sinking a shaft.

Beaver Dam Mining Company's works are located in Montgomery county, N. C. Yield during 1881, $5,000. The principal markets for the ore are Philadelphia and New York.

Beaver Run Coal Company (The) is chartered under the laws of the State of Pennsylvania. The officers are Henry C. Terry, Pres.; C. W. Hughes, Sec.; Jas. E. Moore, Treas. Date of annual election, fourth Monday in March. C. W. Hughes, (Min. Eng.) Superintendent, of fifteen years' experience. The head and branch offices are at 136 Walnut Street, Philadelphia, Pa.; the transfer offices are at 11 Duane Street, Boston, Mass. The Beaver mines are located at Houtzdale, Clearfield county, Pa. The coal is of the bituminous description, and is worked on the drift and slope system, the usual plant of a bituminous coal-mine. Developments were commenced April 10, 1880. Cost of mining is eighty-five cents per ton. The maximum annual capacity of production is 50,000 tons. Weekly output, April, 1882, 1,500 tons. Boston and the Eastern States form the chief market for the produce. Average wages paid to all classes, per week, $12 per head. Organized April 10, 1880; capitalization, 6,072 shares of $10 each, non-assessable. Yield (net) to April, 1882, 97,830 tons; yield during 1881, 42,200 tons, gross; yield during 1881, 37,680 tons, net. Number of dividends paid to date, six; total amount, $8,500.80; date of first dividend, July, 1880, twenty cents; total $1,214.40; date of latest dividend, April, 1882, thirty cents, total, $1,821.60; no assessments have been levied; no bonded or floating indebtedness. Stock and bonds reserved in treasury, April 1, 1882, $139,280; stock listed on the Stock Exchange, Boston, Mass. Stock and bonds held principally in Philadelphia and Boston.

Belvidere Coal Company (The). Location of mines, Mono county, Cal. Main shaft, thirty-five feet below the 400 feet station. East wall carries two feet of bright, lively quartz. Assays range from $15 to $20 per ton. Three feet of irregular seams of quartz; porphyry giving seven feet between the walls.

Belmont Coal Company's Works (The). Located near Bellaire, Ohio.

Bennett Coal Mines (The). Located at Maccan, Cumberland county, Nova Scotia. Steel Company of Canada. Forty tons of coal are now being taken out. Old shafts are to be pumped out, new ones sunk. Mr. Redpath is underground manager.

Benwood Iron Works (The). Located at Benwood, Marshall county, W. Va. The company, during 1880, mined some 27,400 tons of bituminous coal in a five-foot bed. The mine has a capacity for producing some 40,000 tons per year.

Betts Cove and Little Bay Coal Mines (The). The above mines are located in Nova Scotia. Work in the Little Bay Coal Mine was carried on in 1881 on a large scale. From ninety to one hundred men are employed by the company.

Birmingham Coal, Coke, and Iron Company (The). Officers, J. C. Neely, of Memphis, Tenn., Pres.; Thomas H. Milburn, Tenn., Sec. and Treas. Location of coal works is Birmingham, Allegheny county, Pa. The company have purchased 50,000 acres of coal and iron lands, and also own several large furnaces. Date of organization, at Decatur, Ala., August 12, 1881; capitalization, $2,000,000; yearly yield, 183,545 tons.

Bird Coal and Iron Company (The). Location, Northumberland, Pa.

Black Ball Coal Company (The). Location of works, Pennsylvania.

Black Diamond Coal Company is chartered under the laws of the State of Tennessee. The officers are E. C. Locke, Pres.; E. F. Wiley, Sec.; T. H. Heald, Treas. Date of annual election, January. Superintendent, B. F. Rooney. This gentleman has had twenty-five years' experience in the business. Transfer and head offices, Knoxville, Tenn. Transfer days, any time. The company owns the Franklin and Black Diamond Mines, located at Cool Creek, Tenn. Their property covers 375 acres of land. The company commenced developments September 1, 1872, and have expended $50,000 in developing their property to January 1, 1882. Date of organization, September 23, 1873; capitalization, $50,000; par value per share, $100; basis, non-assessable; floating indebtedness, $2,000.

Black Diamond Coal Company (The). Wm. J. Murdock, Gen. Supt. Location, near Palmyra, Ohio. The mines are reached by a shaft 110 feet deep, and are in charge of Mr. Abel Dore, Jr. Sixty men are employed.

Black Diamond Coal Company (The). W. J. Jackson, Manager. Principal office, 19 and 21 Nassau Street, room 2, New York. Agent, R. H. Chipman. Mines located in Osceola and Mt. Carmel counties, Pa. Shipping wharves in Philadelphia, Baltimore, and South Amboy. J. C. Guin, eastern agent, 15 Doane Street; P. O. Box, 1572, Boston Mass. Wm. Schwenk & Co., operators. The coal produced in 1880 amounted to 26,125.15 tons.

Blair Iron and Coal Company (The). The location of the coal works and mines is in Blair county, Pa. Yield per annum, 113,039 tons.

Blossburg Coal Company (The). Officers, O. M. Bump, Sec.; D. S. Drake, Genl. Supt. General office, Elmira, N. Y. The property owned (the Arnot Mines) is located in Pennsylvania. Date of organization, 1866. The product of their mines is known as the Blossburg semi-bituminous coal. Six drifts are open. Yearly yield, 380,883 tons.

Boulder County Coal Company. The property is located in Boulder county, Colorado. Product during 1881, 302,660 tons; number of men employed, 700.

Braceville Coal Company (The). Located in Grundy county, Illinois. Capitalization, $500,000.

Bridge Coal Company (The). Names of mines owned by the company, Diamond Rock and the Big Vein. Located in Pennsylvania. Number of acres, 150. Double breaker with a double set of rolls, capacity of from 500 to 600 tons per day. The Bridge Coal Company entered into a contract with the Delaware and Hudson Company for a supply of 100,000 tons. Product, 1881, 56,700 tons.

Brewster Coal Company (The), of Akron, Ohio, is making an opening opposite the Weaver Shutes. Coal will average about five feet in thickness.

Buck Mountain Coal Company (The). William Spencer, Superintendent. Location of mines, Pennsylvania.

Buck Ridge Coal Company(The). Location of works, Hazleton, Pa.

Buffalo Coal Company (The). Location of works, McKean county; 16,000 acres of coal land are to be connected with the McKean and Buffalo Rail by a narrow-gauge road, at a cost of $300,000.

Bulwer Consolidated Coal Company (The). Located in Mono county, California. North drift is in from the tunnel 135 feet; ledge two and a half feet wide; looks well. South drift is in 131 feet; ledge in the stone wall slopes two feet wide. In Ralston slope the ledge is three and a half feet wide and looks well. Very good ore in the Stonewall slopes.

Burlingame Mutual Coal Mining Company (The). The property is known as the Ramskill Shaft, located half a mile south and east of Carbondale across Switler creek. Depth of shaft, ninety feet.

Burnett Coal and Coke Company (The). The mines are located in Butler county, Pa. Yearly yield, 34,200 tons.

Butts Coal Company (Limited) (The). Officer, Charles J. Butts, Secretary and Treasurer. Located at Cleveland, Ohio.

Cahaba Coal Company's Works are located in Shelby county, Alabama. The company owns 1,700 acres of land in several contiguous tracts. The quality of the ore is rich bituminous, suitable for gas. Analysis gives: moisture, 166; vol. comb, 33.28; fixed carbon, 63.04; ash, 2.02; total, 100 parts. The character of the mines may be described as a bed of bituminous coal, about thirty-two feet thick, with good top and bottom, generally free from slate partings so detrimental to clean mining. With a run of three miles is given a width of 1,000 feet and a thickness of four feet, with a yield of 1,000,000 tons. The properties are well located, one of the slopes being not more than 200 feet from the main line of the N. & S. Alabama Railroad, and is connected therewith by a siding. Plant required, heavy engine, boilers, pump, and hoisting machinery. The slope is already driven, and all that is necessary is to empty it of water and start the gangways, a matter of sixty days' work.

Cameron Coal Company (The). George W. Cole, Supt.; John Little, Inside Manager. The coal field is located about 125 miles from Buffalo, N. Y. Five feet vein, with four feet three inches of good coal. The company owns a good saw-mill, under the superintendence of W. McConnell. Prospects fair. Capitalization, $2,500,000; number shares, 50,000; par value, $50.

Cambria Mine (The) is operated by Mr. Wm. T. Williams, and located at Dennison, Ohio.

Cannel Coal Mines (The). Messrs. Heron, owners. The mines are located at Little Sinking, Carter county, Ky. Very superior coal. 1,200 bushels cannel coal sent to Lexington, Ky., where it readily sold for twenty cents per bushel.

Cape Breton Colliery Association of Coal Mines (The). Owners and officers, R. H. Brown, Pres.; David McKeen, Vice-Pres.; W. Purves, Sec. and Treas. Capitalization, $50,000.

Carbon City Coal and Iron Company (The). Incorporators, Daniel Hamilton, Edward A. Scoville, Daniel W. Cross. Peter F. Black, Charles P. Scoville. Principal office, Cleveland, O. Location of works, Cleveland, O. Business will be carried on in Island creek Township, Jefferson county, and at Carbon City, Pa. The company has a capitalization of $25,000.

Carbon Hill Coal Company (The). James O. Somers, Supt. Name of mine, Carbon Hill. Located at Carbon Hill, O. About 100 men are employed.

Centerville Coal and Mining Company (The). Henry Johnson, Supt. The mines of this company are located in Iowa.

Central Gas-Coal Mines (The) are owned and operated by Jackson Oliver. The property is located at Fairmount, Marion county, West Va. About twenty men are employed in the mines. About eight feet of bituminous gas-coal have been taken out of the vein. The maximum capacity of the mines in February, 1881, was 6,000 tons. Chicago, Tiffin, O., Newark, O., and points on the Baltimore and Ohio Railroad, are the chief markets for the product.

Central Illinois Coal Company (The) is the name of a new company, the preliminary organization papers only of which have been filed so far. The principal office will be at Chicago, at present at Springfield. The company owns property in Kankakee county, Ill., and have already commenced developments. Capital, $500,000, in 5,000 shares of $100 each. Stock is held chiefly in Chicago and Springfield.

Chippewa Coal Company (The). This property is situated in Clinton, Ohio. The company is operating a drift mine, in charge of Geo. Smith. Coal averages six feet. About sixty men are employed. Coal shipped on the Mt. Vernon road.

Chicago, Wilmington, and Vermillion Coal Company (The). A. E. Sweet, Gen. Man. Principal office, 210 La Salle Street, Chicago, and Streaton, Ill.

Clearfield Coal Company (The). The property belonging to this company is located in Clearfield county, Pa. Yearly number of tons, 11,400.

Clear Spring Coal Company (The). Officers, A. M. De Witte, Pittston; John R. Davis, Pittston; Joseph L. Cake, W. H. Gerhardt, Esq., Scranton; Joseph L. Cake. Supt.; M. De Witte, Chairman; J. R. Davis, Treas. The works are located in Virginia. Their capacity will be from 1,000 to 1,200 tons per day. There are five veins of coal—the smallest seven, and the largest fourteen, feet in thickness, aggregating forty-five feet of superior coal.

Clinton Coal Company (The). The location of these works is in Jefferson county, Pa. Yearly number of tons, 25,567.

Coalport Mine (The). Owned by a party of Greensburg operators —Messrs. Huff & Coulter. Mr. Steak is looking at the inside work. The location of the works is at the terminus of Bell's Gap Road, Pa. The quality of the coal is good.

Coalton Coal Mines (The). David Ramsey and Jacob Schugh. Location of mines, near Coalton, Ky. Are working very well, with prospects of a good season; shipping from 12,000 to 15,000 bushels of coal daily; miners receive seventy cents per ton for screened coal. The coal-bed varies from three and one-half to four feet in height; shipped to Ashland; company employs 400 men in and about the mines.

Coal Valley Coal Company (The). Mines located in West Virginia. This company sent to the exhibition at Yorktown a block five and one-half feet in height, three feet two inches in width, two and one-half feet in depth.

Coke Company (The). Stockholders, Henry J. Davis, Wm. Keyser, Robert Garrett, Asman Latrobe, Henry L. Keyser, Ferdinand Latrobe, all of Baltimore, Md.; Malcom Hay, D. N. Stewart, of Pittsburg, Pa. Principal offices, Baltimore and Connellsville. The mines belonging to this company are located in Fayette county, Pa. Capitalization, $1,000,000.

Colorado Anthracite Coal Company (The). Officers, Hon. James B. Belford, Colorado, Pres.; W. J. McKnight, Sec.; Francis T. Brunkey, Treas. Trustees, Hon. J. B. Belford, Hon. Allison White, A. L. Roberts, H. E. Road, J. Howard Mitchell, Henry P. Sloan, Francis T. Brinkley, Samuel R. Shipley, Thos. P. Sargent. Principal office, 37 South Third Street.

Colorado Coal and Iron Company (The). The property of this company is under the supervision of Mr. W. S. Omertz, and is located at Hauman, Gunnison county, Col., covering an area of 1,200 acres. The vein now being worked has a clear six feet of coking coal. The company is now contemplating the building of a number of coke ovens, about 100.

Columbia Coal Company (The). Mr. Foster, Allegheny City, Gen'l Manager. Sixty men employed.

Central Mining Company (The). Mr. Josiah Wells, Manager. The mines are located in Columbus, Ohio. Three of the Lechner coal-cutting machines are used in these mines. Operated day and night.

Confidence Coal and Mining Company (The). Messrs. Seybt & Bandelich. Principal office, 22 South Commercial Street, St. Louis, Mo., and at Collinaville, Ill.

Consolidated Coal Company (The) of Maryland has its offices at 13 German Street, Baltimore, and 71 Broadway, New York. The properties are located in Maryland. The shipments are made at Georgetown, D. C., and Baltimore Md. Messrs. Roussell & Hicks, of Broadway, New York, sales agents. The company has recently begun a work at Ocean Mine, which will greatly increase its capacity. Nearly all the coal that can be reached through the present openings has been taken out.

Consolidated Coal Mining Company (The) has properties located at Camden, Mason county, West Va. Mr. W. H. Fogel being Supt., and residing at West Columbia, (P. O. address.) The head offices are at N. W. cor. Walnut and Second Streets, Cincinnati, O.

Consolidated Coal Company (The). Name of mine owned, Sand Run. Location in Ohio. Good coal taken from the mine daily. The company owns 180 acres. The coal averages seven feet deep. Fifty men are employed.

Consolidated Coal Company (The). Officers, Marvin Hughett, Pres.; Albert Keep, Vice-Pres.; J. B. Redfield, Sec.; H. W. Kirkman, Treas. Directors, Albert Keep, Marvin Hughett, H. W. Kirkman, H. W. McNeill, J. B. Redfield. Location of mines, Oskaloosa, Iowa. Extent of claim consists of 2 000 acres of land, estimated to contain 20,000,000 tons of coal. The Chicago and Northwestern Railroad Company have purchased the property, opened and equipped with mines, yards, telegraph-lines; all machinery and appliances. The present annual capacity of 1881 is 30,000 car loads. Amount of coal weekly, 104 tons; amount of coal yearly, 144,-059 tons.

Consolidated Coal Company (The). James B. Thomas, Supt. Mines located on George's creek, Cumberland region. Operations are progressing steadily over five mines, and from 16,000 to 18,000 tons per week are being shipped. The mines are located on the line or branches of the Cumberland and Pennsylvania Railroad.

Connellsville Gas Coal Company (The). Mr. H. Wickham, Superintendent. This company's property is located in Connellsville region, Pa. Have sunk a shaft, and found coal at a depth of 304 feet. Veins nine and a half feet thick. About 1,000 acres of the company's land have been leased to the Cambria Iron Company, for the use of 500 ovens. An analysis made by Charles P. Williams shows 28.50 volatile, 64.18 fixed carbon, 1.20 water, 6.12 coke, 70.30 sulphur.

Consolidated Coal Company (The). John Ford, Manager. Name of mine owned is the Ocean Mine, located five miles from Frostburg. The mine is entered by a drift brought forward by a small locomotive. 100 men are employed.

Consolidated Coal and Mining Company (The). Officers, John Sheriden, Pres.; John Wilson, Jr., Sec. Directors, John Sheriden, R. K. Snyder, John Wilson, Jr., of Piedmont; R. D. Wilson, Bridgeport, W. Va.; P. E. Haddeman, of Cumberland. The mines of the company are located two miles west of Bridgeport, W. Va. The company have 250 acres of land underlaid by a nine feet vein of gas coal.

Consolidated Coal and Mining Company (The). George W. Brashes, Superintendent. Mines located at Cincinnati, O. This company owns a number of mines in different parts of the country. The mine is in good condition. About 170 men are at work.

Connelton Coal Company (The). E. Tatnall, Treasurer. General offices, 230 South Third Street, Philadelphia; 41 South Street, New York; 91 State Street, Boston, and Baltimore. P. O. Box, 1747 New York. This property is located in West Virginia. Perkins & Co., Daniel W Job & Co., Mayer, Carroll & Co., sale agents.

Connellsville Coke and Iron Company (The). Officers, Hon. John Leisenring, Pres.; W. B. Whitney, Sec and Treas. Directors: Hon. John Leisenring, Mauch Chunk; Fred. A. Potts, New York; Samuel Dickson, Philadelphia; John S. Wentz, Eckley; E. B. Leisenring, Audenried; W. S. Kemmerer, Mauch Chunk; Henry McCormick, Harrisburg; Daniel Bertch, Upper Lehigh. The extent of claim is 8,000 acres. The company contemplates the erection of a large coke crusher, with a capacity of not less than 250 tons per day. It owns thirty-five blocks of tenement houses, and before the closing of the year, (1881) seventy blocks of houses will be required at the new shaft. The stockholders are well pleased with their property. Capitalization, $1,250,000.

Coons Iron, Coal, and Sand Company (The). Location of works, Park county, Colorado. Property owned, fifty acres of iron, and 320 acres of coal lands.

Co-operative Store Company (The). The mines of this company are located in Kansas; consists of nineteen members, all of whom are working miners. Stock was subscribed, shares of $100 each; one-fourth shares, $25, were sold. Company was organized, June, 1881.

Coos Bay Company (The). Owned by D. O. Mills and several capitalists of San Francisco. Name of mine owned, Southport; located in Oregon; explored to the depth of 3,000 feet; output, seventy-five tons per day; thirty men are employed.

Crafts Iron Company (The). Grove Stoddard, Superintendent. Location of works, Hocking Valley, Ohio. Furnace has been in blast since the summer of 1881, averaging about thirty tons daily. The mine is in charge of Robert Guess, who has twenty-six men at work.

Crescent Coal Mines. Capt. W. R. Johnson, owner. Location of mines, Great Kanawha, Crescent Station, W. Va. Prospects of the property excellent. About 80,000 tons of Kanawha coal were sent to market in 1880. Output first six months, 1881, about 5,000 tons.

Crooke Coal Mining Company (The). Mines located at Glenmary, Tenn. Large quantities of coal are being shipped.

Crown Hill Splint Coal Company (The) owns the Coalburg mine, located near Paint Creek Station, W. Va. The seam yielding the noted splint coal ranges in thickness from four feet on the top of the shaft at river front to six feet four inches on the back line. Mr. Brewer Smith is the mining superintendent.

Cumberland Region Borden Mining Company (The). The company owns two mines, the Old Drift and New Hope, opposite Borden shaft, and operated by A. C. Green. The Borden shaft is in charge of G. McMillan. The company has fine machinery for hoisting coal, and employs 200 men. Over 120,000 tons of coal have been shipped since January 1, 1881.

Cumberland Coal Mining Company (The). The property belonging to this company is located at Greenwood, Pulaski county, Ky. The company is shipping about 5,000 bushels per day. Coal is taken from five or six entries in the hills; 180 miners at work; wages, two to four dollars per day. Capitalization, $50,000; per share, four dollars. A dividend has been declared of eight per cent. per month.

Cumberland and Elk Lick Coal Company (The). Officers, Alex. Shaw, President; Alonzo Chamberlin, Vice-President; C. M. Hoult, Secretary and Treasurer. Directors, Lloyd Lowndes, Jr., C. C. Baldwin, and William A. Fisher. These mines are located in Pennsylvania.

Dayton Coal and Iron Company (The). John Ferguson, Gen. Manager; Sir Titus Salt, of Saltaire, England, principal stockholder. Location of works, Dayton, Tenn.; 128,000 acres; double shifts are worked on the entries air-shafts. The company is sinking an incline 1,100 feet; quality of coal, very fine; lower vein, four feet five inches; upper vein, four feet eight inches; fifty or sixty coke-ovens will be used.

Decatur Coal Company (The). Location of works is in Clearfield county, Pa. Yearly number tons of coal, 59,510.

Despard Coal Company are the owners of the Despard mine, located at Clarksburg, Harrison county, W. Va. There is a nine-feet bed of gas-coal, worked by drift under a cover of seventy-five feet. The company employs about sixty men. Maximum yearly capacity of production, February 1, 1881, about 40,000 tons. The principal market for ore is Baltimore and points along the B. & O. R. R. Some is sold to the Baltimore and Ohio Company, to whose railroad a branch leads from the mine.

Detmold Coal Mines (The). Owned by the Maryland Coal Company. Mr. F. E. Brackett, Superintendent. Mr. James Little is in charge of the mine as Mining Boss; prospects fair; 200 men employed.

Diamond Coal Company (The). These mines are located at Centerville, Iowa; struck coal in their new mine at the depth of 135 feet; first-class engine is owned by the company.

Dubois Allegbany Valley Company (The). A. J. McHugh, Supervisor. These works belong to Messrs. Bell, Lewis & Yates. The company owns plenty of cars; they have a large crusher and washer, fifty-six coke-ovens, capacity for 100 cars daily; vein averages five to six and one-half feet thickness; 400 men employed; miners receive forty-five cents per net ton, run of mine.

Eagle Coal and Coke Company (The). This company is located in Coal Valley, W. Va. Their works are operated by Wm. Wyant. Eagle vein, 120 feet below gas vein, contains rich bituminous coal—vein averages five feet in thickness. There are two openings by an incline 300 feet in length. 250 tons are shipped daily. Mining department is in charge of Mr. James Whitney, and is in good condition.

Excelsior Coal Company (The). The directors of this company are John H. Dravo, Wm. A. McClintock, Wm. Van Kirk, Denion Begmer, Geo. Wantman, R. B. Brown, J. H. McCreery, A. M. Sutton, A. D. Smith, A. Dempster. The mines of this company are located in Pennsylvania. They already own 1,500 acres of bituminous coal lands, situated on Street's Run, within five miles of the city of Pittsburg. Capitalization, $350,000; par value, $50.

Excelsior Coal Company (The). These mines are situated in Medina county, Ohio, near Wadsworth. The company owns 371 acres of coal land, and the coal is excellent. Vein ranges from five feet six to ten feet. Coal will be shipped to Cleveland.

Enterprise Coal and Coke Works (The). Hutchinson Bros., owners. The works are located at Mount Pleasant, Westmoreland county. Property owned by the company consists of 400 acres of coal land, worth $240 to $260 per acre.

Fairland Gas Coal Mine (The). The mine is located in Clarksburg, Harrison county, W. Va. It is owned by D. J. Adams, and leased by D. T. Farland. The mine is in nine feet seam. Forty men are employed. Output, 12,000 tons. The coal is sent to Chicago and other Western markets.

Fairmount Coal and Iron Company is chartered under the laws of the State of Pennsylvania. The directors or board of managers are F. R. Potts, Thos. Rutter, Jos. H. Harris, B. K. Jamison, John A. Wilson, Chas. C. Baird, J. H. Kershaw, De June & Co., W. C. Hall, and Chas. Broadhead. Officers, B. K. Jamison, Pres.; John A. Wilson, Vice-Pres.; Geo. H. Miller, Sec. Office, financial, New York city. The company's mines are located in Clarion and Armstrong counties, on the Red Bank creek, Pa. They own 4,800 acres of land. The coal is bituminous, excellent for gas and steam purposes. The whole tract of 4,800 acres is underlaid with veins of coal, iron ore, and beds of limestone, and also fire clay are found. Five coal veins; the top upper, Freeport, four feet thick; next lower, Freeport six feet thick; next two but two feet thick. 175 feet below the Freeport vein is lower Kittanning, four to five feet thick; an excellent steam coal, yields a fair coke. The iron is found twenty-five feet below the Kittanning. The company own thirty coke-ovens, with full machinery, crushing and washing machine attached. The property holds within itself all that is necessary for the manufacture of pig iron, so accessible as to render the cost of same cheaper than is possible in any other locality. Colliery has been worked profitably since 1873. All veins drift in and require no artificial drainage. Is sold for gas and steam purposes, and used for gas in Buffalo, Albany, and other cities. Production about 3,000 tons per week, affording more than enough profit to pay the interest of the bonded debt, without further increase of the business. Output weekly at July, 1882, 3,000 tons. Capitalization, $1,500,000; bonded indebtedness, January 1, 1882, (thirty years, six per cent. gold) $650,000.

Fall Brook Coal Company (The). Officers, Geo. J. Magee, Pres.; John Lang, Sec. and Treas. General office at Corning, Steuben county, N. Y. The mines of this company are located near Blossburg, Pa.

Fall Creek Coal Company (The). The location of this company's works is in Bradford county, Pa. Yearly number of tons of coal, 2,000.

Fayette Coal and Coke Company have their works located on the Chesapeake and Ohio Railroad, West Virginia. N. M. Jenkins is Superintendent. Application has been made for more than 30,000 tons of this coal for delivery during the present year. Ohio is the principal market for the ore. The mine has been worked since 1866. It works about sixty men, and is said to produce about 50,000 tons a year of rich bituminous gas coal that makes a 17.5-candle-power gas. This coal contains volatile combustible matter, thirty-seven to five; sulphur, 2.840; ash, 9.400 and moisture. It is marketed in New York and Washington, and belongs to the Burr Wakeman estate.

Fox Coal Mining Company's (The) property is located near Langford, Boulder county, Col. They own forty acres of land, and have a vein on their property nine feet in thickness of pure coal. The Superintendents are Mr. Fox and Col. Paul. During 1881 the mine produced over 20,000 tons of coal. Pay roll numbers sixty men.

Fox Lake Coal Mine (The). The location of the Fox Lake Coal Mine is in Ohio. Wayne county. Coal from this mine is pronounced by experts to be the finest Massillon, and is expected to find a market in Cleveland under the name of The Fox Lake Massillon coal. The mine is in charge of Mr. Evans, and is in full operation; 100 men are said to be employed. An opening has been made into four and a half feet coal at a depth of ninety-five feet.

Franklin Coal Company (The). These works are located in Alleghany county, Pa. Yearly number of tons, 1,800.

Frank Williams Coal Company. These mines are located in Armstrong county, Pa., above Fairmont Company's property. Hill contains three veins of coal; lower averages five feet. Kiltenning Vein, better known as Catfish Vein, averages five and a half to four feet; built on inclined plane 2,000 feet long from the mouth of the bank. Expects to ship largely by July 1, 1882.

Gaston Gas-Coal Company's Mine. The Gaston is located at Fairmont, Marion county, W. Va. The coal is bituminous gas from the nine-foot bed, eight feet of whidh are taken. About fifty men are employed. The prospects of the property are promising. Maximum yearly capacity of production, February 1, 1881, about 20,000 tons. Principal markets for the ore, Baltimore, Washington, Chicago, and St. Louis.

Gauley River Iron Company. The company's property is located in Fayette county, Gauley river, W. Va.

Gaymont Coal Company (The). Mr. J. S. McHugh, Manager. The East Gaymont mine is awned by this company; located one mile from Hawk's Nest, W. Va. Presided over by Mr. Fred. Effinger, of Staunton, Va. Coking vein is reached by an incline 300 feet in length. Averages three feet. Company intend building sixty or seventy coke-ovens. Twenty-five men employed. Output shipped East.

George's Creek Coal and Iron Company (The). The new mine, owned by this company, is located above Lonaconing. Operating two large companies. The underground work is in charge of John Douglas, Supervisor. Mine reached by an incline 300 feet in length. Coal brought out by a small locomotive. Charles Douglas has charge of the new mine, reached by an incline 500 feet in length; 150 men are employed.

Girard Mammoth Colliery (The). The names of the mines are Girard Mammoth, and Cuyler. This colliery is located in the Shenandoah Valley, and is owned by the Philadelphia and Reading Coal and Iron Company; purchased by the Girard Mammoth Coal Company, December, 1880. Water reached to a height, fifty feet deep on the slope. It has been drowned out for some time. The Cuyler colliery is operated by Haton & Co.; worked fifteen years; gives employment to 400 boys; has a capacity from 150 to 200 cars per day.

Glen White Coal and Lumber Company (The). Location of works is in Blair county, Pa. Yearly number of tons, 47,807.

Glascow Port Washington Iron and Coal Company (Limited) (The). The mines of this company are located near Port Washington, Ohio; 1,200 acres owned.

Gould Coal Company (The). These mines are located in Stanton, Ill. Very valuable coal mines; 500 additional miners will be placed at once to work. Purchased by Jay Gould. Cost $65,000.

Grand Canon Coal Company (The). Directors, George H. Nelson, St. Denis' Hotel, N. Y.; Colonel James Burt, 44 Pine Street, N. Y.; A. L. Hatch, 59 Liberty Street, N. Y.; George C. Keep, 24 New Street, N. Y.; Colonel Hector D. McKay, Denver, Col.; A. M. Cassidy, 52 Broadway, N. Y.; James Gondolpho, banker, 52 Broadway, N. Y. The property belonging to this company is located near Canon, Fremont county, Col.; 3,580 acres of coal land are owned by them.

Grass Creek Coal Mines (The). Owned and operated by the Union Pacific. This company's mines are located in Utah. The coal is distributed to Park City, Salt Lake, and Ogden. Total output from these mines, December, 1881, was 7,217 tons, 235 tons of which went to the Parks.

Great Bend Coal Company (The). These mines are located on Edmiston farm near Lloydsville, Pa. Good coal four and a half feet deep. Mine is opened by a drift. Mr. John Cann, of the Bells Gap, is to take charge of the inside work.

Greenock Coal Company (The). The works belonging to this company are located in Alleghany county, Pa. Number of tons per year, 3,258.

Greenburg Coal and Coke Company (The). Incorporators, Hon. James C. Clark, Gen'l Dick Coulter, Col. Geo. F. Huff, Wm. A. Huff, John Zimmerman. The mines belonging to this company are located at Greensburg, Westmoreland county, Pa. Owns 500 acres; new company.

Grant Coal Company (The). Mr. James E. Montell formerly President. The property belonging to this company is located in Eckhart, Md.

Grant Coal Company (The). The works belonging to this company are located in Alleghany county, Pa. Yearly number of tons, 41,850.

Gunnison Coal Company. D. F. Verdenal is Secretary. Office, 39 Broadway, New York. The company's mine, Castle Mountain, is located in Colorado.

Halifax Coal Company (The). The property belonging to this company is located in Nova Scotia. The company are reopening their mines at Stellartown, Nova Scotia.

Hamilton Coal Company (The). These works are located near Reynoldsville, Va. Coal averages five feet. Drift opening reached by an incline.

Hamilton Coal Company (The). A. V. Armstrong, Gen. Man. and Supervisor. This company's mines are located near Youngstown, Ohio. The mine is reached by a short incline up the hill, where it is opened, and five feet of clear coal mined. John D. Lowther, charge on the hill. Works in fine condition. Eighty men employed. The mines receive forty-five cents per net ton for run of mine; sixty-seven and a half for screened coal.

Hampshire and Baltimore Coal Company (The). Officers, J. G. Repplier, Pres.; E. L. Bowles, Vice-Pres.; Geo. D. Pond, Sec. Directors, E. S. Boylles, Henry L. Henry, J. George Repplier, George H. Potts, George B. Satterlee, James L. Merriam, Edward Bothout.

Hampton Coal Company (The). These works are located in Alleghany county, Pa. Yearly number of tons, 85,650.

Hartford City Coal and Salt Company (The). Location of works, near Hartford City, Mason county, W. Va.

Harlem Coal Company (The). These works are located in Washington county, Pa. Yearly number of tons coal, 61,306.

Hawk's Nest Coal Company. Mining Engineer, William N. Page. Office, Ansted, Fayette county, W. Va. The company's property is located at Gauley Mountain, Fayette county, W. Va. It is reported that the company is preparing to erect, from drawings made in England, eighty copper coke-ovens, having the same capacity as 160 bee-hive ovens, to meet the increasing demand for New River coke. Maximum yearly capacity of production, 1880, 49,438 tons of coal. Principal market for the ore, Portland, Maine.

Henrico Coal Company (The). Opened extensive mines on the Alleghany river. The coal company works also at Richmond, Va.

Hoboken Coal Company (The). General office, Bank Building, cor. Newark & Hudson Streets, Hoboken, N. J., and Nos. 40 & 111 Broadway, New York.

Hocking Coal and Railroad Company (The). Incorporators, Henry H. Brown, Wm. J. McKinney, Wm. B. Saunders, Henry Fenninger, W. F. Rutman. Principal office, Cleveland, O. This property is located in Cleveland, O. The mines are operated chiefly in Hocking, Perry, Athens, and Vinton counties. Capitalization, $3,000,000.

Home Coal Company (The). The Echo Mine, operated most exclusively for the Ontario Company. The mines, viz., Crismon, Spriggs, and Wahsatch, are worked under the consolidations. Location at Coalville, Utah. Yield for December, 1881, 2,218 tons clear coal. Sixty to seventy men employed.

Howard Anthracite Coal Company. Location of mines, three miles northwest of Crested Butte, Cal. The company's property covers 640 acres of land. The coal is a pure anthracite, of 1·43 specific gravity and eighty-eight per cent. carbon, and assays $75 per ton. Report says 15,000 tons were mined during the past winter. The tunnels into the vein are on the south side of the mountain, and enter the veins at the lowest point; consequently, the mines can be kept entirely free from water and worked successfully throughout the year. An extension of the D. & R. G. Railroad is to be run to this bank.

Huntington and Broad Top Mountain Railroad and Coal Company (The). Officers, B. Andrews Knight, Pres.; Rathmell Wilson, John Devereux, J. V. Williamson, James Long, James Whitaker, Joseph H. Trotter, Wm. P. Jenks, C. W. Wharton, Samuel Field, Thos. R. Paton, Jacob Naylor, Spencer M. Janney.

Imperial Coal Company (The). The Montour mine, belonging to this company, is located on the Pittsburg and Lake Erie Road, Alleghany county, Pa., at Imperial, Alleghany county. Company owns 325 acres of surface land, 500 acres of coal; mine is reached by a heavy grade to the chutes, then by an incline, 800 feet in length, to the mouth of the drift; coal bed averages five and one-half feet in thickness; coal good, but troubled with clay veins; 200 men employed; receive seventy-five cents per ton for screened coal.

Indian Territory Coal Company (The). Principal office, No. 100 N. Fourth Street, St. Louis. This property consists of the Choctaw mine, located in Newark and Shawnee, Ohio.

Industrial Coal and Mining Company (The). These mines are located in Scranton, Kansas. Organized in 1880; consists of twelve members, all miners; shaft.

Iron Mountain Company (The). The mines are located in St. Louis; is a close corporation, vested in the heirs of the three original owners. Capitalization, $3,600,000; shares, 1,000; annual dividends, varying from fifteen to eighteen per cent., have been regularly paid.

Isabella Furnace Coal Company (The). Location of the works of this company is in Westmoreland county, Pa. Yearly number tons of coal, 120,000.

John Henry Coal Company (The). Hiram Thornton, Supervisor. This company is better known as the Thornton Mine, Mineral Ridge, Ohio, located about a mile from town. The mine is entered by a shaft 127 feet in depth. Coal ore will average about three and a half feet. Fair prospects of doing well. Stephen Thornton has charge underground, employing about 100 men.

Jackson Coal Mine Company (The). This property is located in Jackson township, and is being run to its utmost capacity.

Johnson Coal Mine (The), near the Borden shaft; owned by the Central Coal Company. Mr. Thomas Hammell has charge of office. This mine is located near Lonaconing. Mr. James Thompson has charge of the underground work. The mine is entered by a slope 400 feet in length. Mine running full time. Average probably better work than any other mines in the region, About 100 men employed.

Kanawha Consolidation Coal Company (The) is chartered under the laws of the State of Virginia. The offices are at Staunton, Va., and Charlestown, W. Va. The property of the company is located in West Virginia. Capitalization, $800,000, in 8,000 shares of $100 each.

Kemble Coal and Iron Company (The). These works are located in Alleghany county, Pa. Yearly amount of coal, 13,753 tons.

Keystone Coal Company (The). Officers, Henry A. Stiles, President; Francis H. Williams Secretary and Treasurer. Principal office, 209 South Third Street, Philadelphia. This company are miners and shippers of Cumberland coal.

Knob Coal Company (The). Location of works in Washington county, Pa. Yearly number of tons of coal, 18,497.

La Cygne Coal and Mining Company (The). The mines of this company are located at La Cygne, Kansas. Choice coal; vein, 116 feet from the surface; deposit, three feet thick.

Lake View Coal Company (The). These mines are located six miles south of Akron. This company is composed of Youngstown capitalists; they have taken out from ten to fifteen cars of coal per day; shipped to Cleveland, Ohio.

Land Run Coal Mine (The). James O. Somers, Supervisor. The location of Sand Run Mine is on Carbon Hill, Ohio; 100 men are employed.

Two Large Mines, one owned by the Reynoldsonville Mining and Manufacturing Company, the other by Powers, Brown, & Co. James Powers, Supervisor. These mines are located at Soldier Run, near Reynoldsonville, Pa. This company own a large tract of coal land, recently opened (1881) into a fine piece of coal, averaging four to five and one-half to seven feet; tipple machinery, etc.

Large Coal Works. Mr. Wm. M. Page, Manager. The mines of the above works, on Gauley Mountain, 901 feet above New river, Va. The coal works are situated eight miles from the mouth of New river, on Chesapeake & Ohio Railroad. They are operated by the Hawk's Nest Coal Company, composed exclusively of English capitalists. The same company have purchased ore lands in Eastern Virginia; building two 150-blast furnaces at Goshen. Vein nine feet thick, seven of which are mined; 600 tons daily is expected. Miners receive forty cents per ton. Coal shipped East.

Leattle Coal and Transportation Company (The). The company own the Newcastle mine, located in Oregon, S.E. of Leattle, King county, W. T. Opened, 1866, by Rev. Daniel Bagley. Shipments very large.

Laurel Hill Coal Mines (The). Operated by Mr. T. P. Marshall. The Laurel Hill mines are situated in Hocking Valley, Ohio. They have done very well the past season (1881); have orders for all the coal they can get cars to ship in. The mine is reached by an incline. The underground work is in charge of J. M. Stillwell. Sixty men employed.

Lehigh Coal and Navigation Company (The). Location presumably in Pennsylvania. This property, under the supervision of Messrs. Powell & Boyd, has become one of the most valuable in the valley. The company has declared a semi-annual dividend of two per cent. Capitalization, $10,448,550; number of shares, 208,971; par value, $50; latest dividend, November, 1881, three per cent.; rate per annum, five per cent.

Lehigh Valley Coal Company (The). Officers, Harry E. Packer, Pres.; Charles Hartshorne, Vice-Pres.; Israel W. Maris, Sec.; John R. Fanshawe, Gen'l Supt.; Frederick Mercer. Tonnage various collieries fourteen in number: total production, 1,386,033 tons; shipped to northern markets. 432,555 tons; tons furnished to the line and tide water, 958,478 tons; shipped by tenants controlled by the company, 842,412 tons.

Little Fire Creek Coal Mine (The). Owned by Wm. Blury Cooper & Co. Little Fire Creek Coal Mine. The property belonging to this company is located at Caperton Station, W. Va. They have also a fine shipping mine up the mountain, reached by an incline 1,480 feet in length; fine coal three and one-half to four feet in thickness. 120 men employed. Shipping coal to James river, and to the works of the Lowmoor Iron Company.

Little Alps Coal Company (The). Snow Hill mines belong to this company. Location of coal works on the Monongahela opposite California. 130 acres of land are owned by the company.

Locust Mountain Coal and Iron Company (The). Directors, 1882, John Biddle, Pres.; Jacob P. Jones, Israel Morris, Charles Hartshorne, Wm. F. Jones, Israel W. Morris, Richard H. Downing. John Biddle re-elected President. Edward Swain, Sec. and Treas. of the company. These mines are located in Pennsylvania.

Long Valley Coal Company (The). This property is located in Bradford county, Pa. Yearly number of tons of coal, 15,970.

Louisville Coal Company (The). The mines owned by this company are located in Massillon, O. Machinery owned, one pump and boiler.

Lucas Coal Company (The). These mines are located near Scranton, Pa. Shafts sunk 140 feet; pumps used. Shaft is ten by thirty feet, accessible to coal, amounting to at least five or six millions of tons.

Lukens Valley Coal Company (The). Wicomico mines belong to this company, located in Pennsylvania. They are developing new workings in the above mines. Old tunnel in North Mountain opened, gangway driven 1,500 yards. Large deposits of coal are supposed to be deposited in the veins.

Lykens Valley Coal Company. The directors are Geo. B. Roberts, Pres.; T. J. Weston, Vice-Pres.; A. J. Cassatt, Edmund Smith, S. Kneass, W. Morris, N. P. Shortridge, J. N. Du Barry, John P. Green, Jas. W. Johnson, E. P. Worster, A. Mordecai, Sec.; T. P. Haviland, Treas. Location of works, Dauphin county, Pa.; 807 persons are employed.

Manaska Coal Company (The). This property is located in Iowa. It is the only explored coal field in that section. It is a six foot continuous vein, with a nine inch roof and floor, and no water in it.

Maple Hill Coal Company (The). The property of this company is located near Nelsonville, Ohio. Coal averages six feet in height.

Marshall Coal Mining Company (The). Officers, A. G. Langford, Pres. and Man.; Victor Robertson, Sec. and Treas. The mines belonging to this company are located in Colorado. Own over 3,000 acres, mostly under lease, January 14. 1882. Two hundred men are employed.

Maryland Coal Company (The). James Boyce is Secretary. The office is at 104 Broadway, New York. The Kingsland mine is worked by this company, located in Maryland. Large furnaces and air shafts belong to the company. Capitalization, $4,400,000; par value per share, $1; date of latest dividend, March, 1876; yield during 1881-2, 24,963 tons coal.

Maryland Union Coal Company (The). James Boyce, Treas., Baltimore. Principal offices, American Building, Baltimore. M. D. Smith Buildings, Cortland Street, New York, adjoining Coal and Iron Exchange. Shipping wharves, Locust Point, Baltimore, M. D. The mines belonging to this company are located at Flemington and Fairmount, West Virginia.

Mashannon Coal Company (The). The location of these works is in Clearfield county, Pa. Yearly output, 115,252 tons.

Massillon Region Run Coal Company (The). O. Young, General Manager. J. H. Grinnell has charge of office. These mines are located near Massillon, Ohio. Shaft, 180 feet deep. The mine has been kept running steadily. Mordecai J. Morris has had charge of the underground work; 200 men employed.

Massillon City Coal Company (The). M. J. A. Wilson, Superintendent. The mines owned by this company are located on Foltz Slope, near Massillon, Ohio.

Mattoon Coal Company (The). The mines of this company are located at Mattoon, Ill. The company have expended the sum of $65,000 sinking a shaft 466 feet deep. Expect to reach a paying vein at the depth of 600 feet.

Milwaukee and St. Paul Coal Company (The). These mines are located in Grundy county, Ill. Three shafts were sunk during the last year, 1881; 100 tenant-houses built; cost $335,000.

McIntire Coal Company (The). The company's offices are at Elmira and Buffalo, N. Y. This company's works are located in Lycoming county, Pa. Yearly number of tons of coal, 236,924.

Mill Creek Coal Company (The). Officers, T. W. Walter, President and Treasurer; F. Bertolette, Secretary. Directors, Warren Delano, Newburg, N. Y.; James S. Cox, Orange, N. J.; Joseph F Hitch, New York; T. F. Walter and Fred. Bertolette. The mines of this company are located in Pennsylvania.

Milton Furnace and Coal Company (The). Officers, H. S. Willard, President; J. E. Farrel, Secretary. These mines are located near Wellston, Ohio.

Millen Furnace and Coal Company (The). This property is located in Jackson county, Ohio, adjoining Bundy's farm. The depth of shaft, sixty feet.

Manor Valley Coal and Manufacturing Company (The) is chartered under the laws of the State of Pennsylvania. Officers, A. O. Tinsman, Pres.; W. J. K. Kline, O. B. McLain, A. B. Rutledge, Willy McCullough, A. B. Kline. Principal office, Pittsburgh. The mining property of this company is located in Westmoreland county, Pa. This company is authorized to mine coal, quarry limestone, and manufacture coke. Capitalization, $50,000.

Milesville Coal Company (The). Located in Alleghany county, Pa. Yearly number of tons of coal, 18,953.

Miller Coal Mining Company (The). Date of organization of this company, October 7, 1882, at Portland, Maine; capitalization, 500,000 shares.

Mineral Ridge Coal Mines (The). The above coal mines, at Mineral Ridge, Ohio, are all running steadily, with work every day.

Mocanaqua Colliery (The). These works are located near Shickshinny, Susquehanna river, Pa. Leased by Col. Conyngham, John Leasdale, of Wilkesbarre, Pa. Preparations are being made to resume operations in full force as soon as the new bridge across the Susquehanna is ready.

Monongahela Mine (The), owned and operated by H. J. Davis & Co., is located at Wilsonburg, Harrison county, W. Va. The mine was opened in 1872, in the nine feet seam, which yields eight and a half feet of coal. Some eighty men are worked. Most of the coal is used by the Baltimore and Ohio Railroad. The company owns a large body of coal land in this locality. Maximum yearly capacity of production, February 1, 1882, 20,000 tons.

Montauk Gas Coal Company (The). Principal office, New York city. The mines of this company are located in Flemington, Taylor county, W. Va., on the Baltimore and Ohio Railroad. Mine opened, 1878, is on what is called the nine feet vein, seventy-five feet below the surface of the country; furnishes eight feet of available coal; 200 men employed. 60,000 tons of coal are sent yearly to market, mostly to New York.

Montreal Gas Coal Company's (The) property is located at Flemington, Taylor county, W. Va. The mine opened in 1878 is on what is called the nine feet vein, which is here some seventy-five feet below the general surface of the country, and furnishes about eight feet of available coal. Maximum yearly capacity of production, February 1, 1881, over 60,000 tons. New York is the principal market for the ore.

Morris Run Coal Mining Company (The). W. S. Nearing, Superintendent. The mines belonging to this company are located in Pennsylvania. The property owned is three pumps and one of Harrison's coal-cutting machines.

Morris and Essex Coal Company (The). Capitalization, $15,000,000; number shares, 300,000; par value, $50. Latest dividend, rate per annum, seven per cent.

Mount Carbon Coal Company (The). These mines are located in Colorado. The directors have purchased from the locators 640 acres, paying therefor one-half capital stock of the company. Eighty tons daily taken out. Amount can be increased to 1,000 tons per day, if necessary.

Mount Braddock Coke Works (The). Owned by A. O. Tinstman, Esq, of Pittsburg. The property consists of 420 acres of coal, fifty acres of surface, 127 coke-ovens, and thirty-five houses. Amount paid, $165,000. The new proprietor proposes to erect fifty additional ovens at once.

Mount Diablo Coal Mines (The). The New Castle Mine owned by this company is located in California. The output in 1880 aggregated 188,723 tons.

Murphy Run Mine (The). Owned by the Burr Wakeman estate. The Murphy Run mine is located in Clarksburg, Harrison county, W. Va. A rich bituminous gas-coal that makes a 17.5-10 candle-power gas. The coal contains fixed carbon, 49.080; volatile combustible matter, 37.105; sulphur, 2.840; ash, 9 400, and moisture, 1.575. The mine has been worked since 1866; employs about sixty men. It is in the nine-foot seam, which yields eight and one-half feet of coal. Maximum from 15,000 to 20,000 tons annually. Principal market, New York, Washington, etc.

Newburg Orrell Coal Company. Superintendent, Morgan D. Orr. This company owns and operates the Palestine and Tyrconnel mines. The Palestine is located at Palatine, Marion county, W. Va., and the Tyrconnel, in Taylor county, W. Va. The character of the coal is bituminous gas. The coal is mined from the nine-foot vein, seven feet of which is here worked in two headings, with about 1,000 feet of working face. The bed mined in the Tyrconnel is the Pittsburg vein, which, there, furnishes eight feet of gas-coal. The mine was opened in 1872, and now works about fifty men, and mines some 30,000 tons of coal a year, which is marketed in Baltimore, and at places on the Baltimore & Ohio Railroad.

New Central Coal Company. The officers are W. S. Jackques, Pres.; E. J. Sterling, Vice-Pres.; Geo. H. Adams, Sec. Office, 6 and 6½ Trinity Building, New York. Robert E. Boyd, Superintendent. Big Veins and Koontz mines—this property, belonging to this company, is located near Lonaconing, Md. Koontz mine is reached by a tram-road, two miles in length; small locomotive hauls the coal to the chutes; incline, 970 feet in length; August Ricker in charge of the underground work; employs about 170 men. The Big Vein, near Lonaconing, is operated by the Central Coal Company; mine reached by an incline 550 feet in length; Wm. Powell has charge; employing about eighty men.

New Colliery of Linderman, Keen & Co. (The). Wm. Airey, Superintendent. This colliery is located at Stockton, Pa., known as West No. 1 Stockton. Slope sunk 50° 217 yards from the surface. The first left gangways are opened, 300 feet main air-ways; area, forty-two feet. Mine Inspector, Mr. Roderick.

New York and Cleveland Gas-Coal Company (The). Wm. A. McIntosh, Pres.; H. Casnegie, Vice-Pres.; W. P. De Armit, Treas.; Thos. Axworthy, Agent, Cleveland, O. Castner & Co., limited, 203 Walnut Street, Philadelphia; 111 Broadway, New York; 21 Exchange Place, Boston, and 10 South Holliday Street, Baltimore, Md. Location of mines at Pittsburgh, Pa. Youghiogheny gas-coal mined by the above company.

New York and Ohio Coal Company (The). Thomas Hall, of Eberdale, Superintendent. Principal office, Cleveland, O. The mines belonging to this company are called New Hazelton coal mines, located in Carroll county, O., half a mile from Sherretsville. Operated by the New York and Ohio Company. Everything moving in good shape.

Nuttalburg Coal and Coke Company (The). The property belonging to this company is located at New river, West Va. No 1 mine reached by an incline 1,400 feet in length; opens into a vein averaging three feet three inches. Fifty-one coke-ovens are in full blast; miners receive sixty cents per ton. No. 2 mine opened last year, 1881, at Keeney's creek. Reached by an incline substantially 1,350 feet in length; three openings made, thicker coal, averaging three feet six inches, in some places four feet.

Ohio and Pennsylvania Coal Company (The). Mr. M. Bloomer, Manager. The company owns the Yorkville mines, located at Yorkville Station, O. Mr. Bloomer, Manager, owns one-half interest in the mine. Coal is reached by an incline 190 feet in length. Vein averages five feet. Mining department is in charge of Wm. Mack; sixty to 100 men employed.

Ohio Central Coal Company (The). Col. W. C. Lemert, General Manager; Thos. Cockran, of Shanee, Mining Sup. These mines are located near Corning, O. They are all numbered. Nos. 3, 5, 7, 13, 15, and 19 are all reached by shafts ranging from thirty to seventy feet in depth. Nos. 2, 4, and 12 have drift entrances. This company employs miners and day laborers of all classes; about 500 colored miners, 350 Germans, 300 mechanics, carpenters, etc.; 300 new arrivals, 1881; eighty cents per ton for screened coal. Shafts average from eight to nine feet, and in the drifts from four to six feet; 300 neat dwellings. Hoisting apparatus machinery of the most substantial kind, having been erected regardless of cost.

Okanville Coal Mining Company (The). The property belonging to this company is located in Illinois. Capitalization, $15,000.

Old Bank Mine (The). Operated by J. S. Doe & Co. The mines are located in Columbus, Ohio. Coal brought out by a small locomotive. 100 men employed.

Old Company's Lehigh Coal. Frederick A. Potts, Agent. Offices, 110 Broadway, New York: 25 Westminster Street, Providence; 81 Church Street, New Haven, Connecticut; 14 Kilby Street, Boston, Massachusetts.

Osborne Coal Company (The). Wm. H. Warner, Supervisor. The works of this company are located near Mineral, Ohio. Underground work in charge of John B. Williams, reached by a slope 100 yards in length. From seventy to ninety men employed.

Otis Coal Company (The). Mr. Ralph Wainwright, Manager. These mines are located in Edenberg Coal Company, Ohio.

Paint Creek Mining Company. The officers are L. L. Conrad, Pres., Baltimore; G. W. Riggs, Treas. Directors, L. L. Conrad, G. W. Riggs, H. H. Parker, J. S. Barbour, James F. Patton, W. H. Edwards, I. N. Smith. Engineer, Oscar A. Veazey. The company's property, covering an area of 10,000 acres, is located at Paint creek, Kanawha county, W. Va. The principal splint coal seam averages ten feet.

Palmyra Coal Company (The). The coal works belonging to this company are located near Palmyra, Ohio. Sunk a shaft eighty feet deep, three to four and a half feet in thickness. Machinery good. Output may be increased at any time. Large pumps. Underground workings are in charge of E. T. Bowen. 100 men employed. Large quantities shipped to Chicago. Known as the Brier Hill coal.

Pancoast and Washington Collieries (The). The location of these mines is four miles from Reynoldsonville, Va. Operated by Messrs. Frank Williams & Co. Coal seam averaging four to five feet in thickness. Mines get seventy-five cents for screening coal.

Peach Orchard Coal Mines (The). Morris Lee, Superintendent. The Peach Orchard mines are located in Kentucky. Seventy-five men employed. Tunnel used.

Pennsylvania Coal Company (The). Officers, Geo. O. Hoyt, Pres.; W. E. Street, Sec.; E. H. Mead, Treas. General office, 111 Broadway, New York; Buffalo office, 64 Pearl Street; Chicago office, 94 Dearborn Street. H. S. Van Ingen, Superintendent; Thos. Hodgson, Western Superintendent.

Penn Coal Company (The). Capitalization, $5,000,000; number of shares, 100,000; par value, $50.

Pittsburg and Walnut Hill Coal Company (The). This company's works are located in Washington county, Pa. Number of tons of coal annually, 40,000.

Pennsylvania Gas Coal Company (The). These works are located in Westmoreland county, Pa. Yearly number of tons of coal, 468,240.

Pennsylvania and Ohio Coal Company (The). These mines are located at West Newton, Pa. Shaft sunk; struck a four feet vein at 100 feet searching for the Pittsburg vein.

Penny Coal Company (The). The location of this company's property is in Alleghany county, Pa. Yearly number of tons, 15,873.

Percy Mining Company (The). Location of works in Fayette county, Pa. Number of tons of coal per year, 194,176.

Phœnix Iron Company (The). These works are located at Phœnixville, Pa. They are now heating their furnaces with gas manufactured from anthracite.

Phœnix Colliery (The). The property belonging to this company is located at Pittston, Pa. Shaft sunk; found red ash coal bed; excellent quality and of encouraging depth.

Philadelphia and Reading Coal and Iron Company (The). The mines of this company are located in Shenandoah Valley, South Buck Mountain. Nineteen feet of good coal has been reached in the Norwegian shaft. Largest shippers in the region.

Pine Ridge Colliery (The). John L. George, owner, Home and Union Coal Works. Location of works on the Delaware and Hudson county, Monongahela river, Conshockon, Ohio.

Pittsburg and Kiskiminetas Coal Company (The). This property, consisting of the Bagdad and other mines, is located near Pittsburg, Pa. Since May, 1881, have a shipping capacity of 150 tons per day; 350 acres of Westmoreland coal; two veins; four feet worked by drift; other seven feet, 173 feet below the four-feet vein. Mine worked by double entry 150 yards apart. Bagdad mines, capacity 150 tons. Two veins; top vein, four feet. Own 700 acres at Leechburg.

Pittsburg and Westmoreland Coal and Mining Company (The). Stockholders, John Schwalen, Alfred Hyicks, of Leechburg; E. S. Golden, L. S. Singer, W. D. Patton, Kittanning. Capitalization, $100,000.

Pittsburg Coal Mining Company (The). Location of works in Clarion county, Pa. Yearly number of tons of coal, 47,544.

Pioneer Coal Company (The). These mines are located at Paint Creek, W. Va. Capt. Henry W. Reynolds and Wm. Lovell, Esq., are opening a cannel coal vein at Paint Creek.

Pioneer Coal Company (The). The mines located at Campbell Creek, W. Va. The company have introduced a Letchner mining machine, which can bore in six or seven feet by means of a number of revolving diamond drills. It will dig more coal in a day than ten or fifteen men.

Pittston Coal Company (The). Michael J. Langan, boss of the shaft. The trim shaft is located at the Junction, Pa. Eight feet excellent coal.

Potomac Coal Company (The). Geo. W. Lyons, Man. The Swanton mine is owned by the company. Located at Barton. Mine in charge of Archibald McDonald; employing about fifty men.

Raney Bank Coal Company (The). Thomas St. Johns, Supt. These mines are located in Ohio, near the Pittsburg and Cleveland Railroad. The mine is reached by an incline. Two openings into about five and a half feet of coal. Miners receive seventy-five cents per ton for screened coal. The mining department is in charge of John Thompson. Prospects are very good. 120 men employed.

Raton Coal and Coke Company (The). The name of the mine owned by this company, Dillon Cañon, located at Raton, N. M., two miles this side of Blossburg. Quality of the coal unsurpassed. A fine vein has been discovered, six feet ten and a half inches wide. Vein discovered by R. J. Goade.

Rend Coal Company (The). The mines of this company are located at Rendville, above Corning, Ohio. The coal is of the same character as the Ohio Central Coal Company.

Reynoldson Coal Company (The). This company's works are located in Jefferson county, Pa. Yearly number of tons, 32,582.

Rich Hill Coal Company (The). Rich Hill and Carbon Center mines. These mines, belonging to this company, are located in Bates county, Mo. The coal here is in considerable quantity and good quality. The Rich Hill Coal Company intend also to work their leased mining property at Bradford station. Veins, two to six feet. The grand total of their coal shipments for the month was 600 car-loads. The shipments by the Galf road for January, 1881, amounted to 1,500 car loads, principally from the Rich Hill and Carbon Center mine.

Ridge Vein Coal and Coke Company (The). Works located at Bradenville, Pa., along the P. R. R. Company's line. New corporation.

Robbins Block Coal Company (The). This property is located in Washington county, Pa. Yearly number of tons of coal, 75,000.

Robinson Coal Company. Neil Robinson is Manager. The property belonging to this company is located at Coalburg, W. Va., and covers an area of 1,428 acres. An analysis of the coal is given as follows: sixty-two per cent. fixed carbon; 32·50 volatile; 150 ash; 400 water; total, 100 parts. The coal has been used by Eastern gas-light companies. The mines, during 1880, turned out 70,208 tons of coal, the bulk of which went westward.

Rochester Colliery (The). These works are located in Pennsylvania; operated by Messrs. Bell, Lewis & Yates; coal averages six and one-half feet; double drift openings; averages 600 tons daily; last year's product (1881), 28,000 tons coke. The company owns a large crusher and Stulz washer; 400 men employed.

Rochester and Pittsburg Coal and Iron Company (The). Directors, Frederick A. Brown, New York; Walston H. Brown, New York; Thos. F. Wentworth, New York; Augustus Kountz; Messrs. Brown, Callery, and Kountz. Fred. A. Brown, Treas. Principal office located at Brookville. The mines are located in Young and Snyder townships, Jefferson county, Pa., embracing an area of 6,000 acres, 3,100 in Snyder township. Capitalization, $4,000,000; shareholders, Herbert C. Brown, New York; James Callery, Pittsburg; Geo. A. Jenks, Brookville.

Rocky Point Mining Company (The). Principal office, 314 Bush Street, San Francisco, Cal. The property owned by the company is located in Placer county, Cal.

Rodes Coal Company (The). Mr. P. Keller, Supervisor. The mines belonging to this company are located near Massillon, O. Mountain shaft is the largest; underground works in charge of Geo. Swire; 225 men employed; coal is reached by a shaft 133 feet deep.

Redstone Coke Company (The). General Manager, Col. Shoemaker. The company's property is located three miles south of Greensburg, Pa., on the line of the South-West Railway, in South Union township, just at the end of the mountain. The company has 600 acres of coal and 500 acres surface. The coke is superior. The property is worked by slope, flat headings, and butte headings. Slope is now in 1,000 feet. A new slope is now being started from the southern end, July, 1882. The company's property includes 171 ovens, tipple, and several dwellings, and 142 ovens in course of erection. The development of the property was commenced during the year 1880. The surface property is judiciously farmed and is a source of great revenue to the company. The coke manufactured is sold in the market, the company owning no furnaces to require its use. Daily average production, 275 tons. The mine is well ventilated, and supplied with water from Redstone creek. Stock and bonds are held exclusively by J. W. Moore, Greensburg, Pa., Col. J. M. Schoonmaker, Pittsburg, Pa., and P. H. Moore, of Redstone, Pa. Wages paid to diggers per day, July 1, 1882, $2.

Salisbury Central Coal Company (The). Thos. Gemmel, General Agent, 8 South Gay Street, Baltimore, Maryland. This company are miners and shippers of the Big Vein Cumberland Coal.

Sandy Lick Gas and Coal Company (The). Frank Williams, General Manager. These mines are located in Alleghany Valley, Pa. Operated by Heim Goodwill. Seam five feet thick; output 200 tons daily; mining in charge of Henry Williams; 60 men employed. The Washington mine, a short distance away, is under the same supervision; forty men employed. The miners receive sixty-two and one-half cents per ton for screened coal in these two mines.

Sandusky and Shawnee Coal and Iron Company (The) has property located at Shawnee, Perry county, Ohio, consisting of the Shields Coal Mine, under the supervision of A. W. Mason; also smelting furnace, under the charge of Mr. John Bailey; twenty-eight men and boys being steadily employed.

Screader Coal Company (The). Location of works in Badford county, Pa. Yearly amount of coal, 210,415 tons.

Sharp Mountain Colliery (The). These works are located in Pennsylvania. Slope sunk to the Bancroft vein.

Shenango Coal Company (The). R. J. Wicks is Superintendent. These works are located near Brookfield, Ohio. The underground work in charge of Thos. Maxwell. Slope 225 feet in length; 150 men and boys employed. The coal, like other mines, varies in thickness from three to four feet.

Shimmel Run Mine (The). Owned by D. W. Holt & Co. The Shimmel mine is located in Philipsburg, Pa.; 2,100 acres coal land under the control of the company.

Silver Creek Coal Mining Company (The). Officers, E. G. Loomis, Pres. and Gen. Supt.; D. V. Hoffman, Gen. Mang. (mining boss); John Burgess, Mang. The property of this coal mining company is located in Doylestown, Wayne county. Operating two mines, and sinking a new shaft near Wadsworth. G. D. Hoffman has a man at each mine under his supervision. About forty men employed.

Silver Brook Coal Mine (The). The Silver Brook mine is located at Summit Station, Audenried, Pa. Splendid coal, twenty-one feet thick; 1881 started to sink a trial shaft.

Silver Star Mining Company (The). Officers, E. W. Ashby, Pres.; S. T. Lathrop, Vice-President; J. F. Broadhead, H. J. Spear, A. M. Wing, J. W. McClurg, Secs. The mines of this company are located in Gila county, Arizona.

Sippo Coal Company (The). Officers, Clement Russell, Pres.; M. W. Wilson, Sec.; George Phillips, Supt. The mines are located in Tuscarawas Valley, near Massillon. Coal excellent; 125 men employed. The entries are being driven double shift. A good producing mine. The underground works are reached by a slope 300 feet in length; are in charge of Matt. English. 100 men employed.

Skinner and Jefferson Coal Mines are owned by Mr. Thomas M. Skinner, Mr. E. H. Jefferson, and Mr. D. Lands. The mines are located at Crusted Butte, Gunnison county, Col. The property covers 880 acres, the greater part of which is underlaid with coal. The coal in lower veins is good coking, that in the upper veins being best quality of the bituminous for domestic purposes. There are five distinct coal veins, two and a half, five, five, eight, and ten feet thick respectively. Veins dip 10° to 15° to the west, and 2° to 3° to the north. The four feet are opened by an entry of nearly 500 feet, from which three large chambers are being worked out. The mine as opened is well arranged as to ventilation. Large bodies of unstratified building-stone are lying between the lower beds. Maximum daily capacity of production, July, 1882, 100 tons.

Snyder Coal Company (The). The property belonging to this company is in Mercer county, Pa. Yearly number of tons, 32,810.

South Forks Coal Works (The). The property belonging to this company is located in Cambria county, Pa. Total number of tons of coal per year, 11,502.

Southwest Coal and Coke Company (The). Incorporators, H. Clay Frick, E. M. Ferguson, W. Ferguson, W. J. Hitchman, D. W. Shyrock, Jacob E. Stoner, Joseph W. Stoner, William Stoner, George W. Stoner and P. R. Tarr. Principal office, Mt. Pleasant, Pa. Branch office, Pittsburg. The mines are located in Westmoreland and Fayette counties, Pa. Maximum yearly capacity, 52,625 tons. Capitalization, $400,000.

Spring Hill Mining Company (The). Officer, Senator McFarlane, President. The mines are located in Canada. Total output of coal for the year 1881, 170,000 tons; ten feet. Superior coal. Entrance to the mines by tunnel.

Southwest Coal Company (The). These works are located near Tarrs, Westmoreland county. A shaft; coal lies 100 feet from the surface; will sink a shaft. Morewood branch railroad will be extended to these works.

Spring Hill Mining Company (The). Location of the mines of this company is in Nova Scotia. At 100 yards north of the west slope a new seam of coal has been found twelve feet six inches in thickness. The west slope will be driven down 400 feet farther.

Steubenville Coal and Mining Company (The). Officer, James Wallace, President. Company operates the mines in Ohio successfully.

Straight Creek Coal Company (The). Officer, Jessie H. Baker, President and Superintendent. This company have opened a new mine, located on the line of the Big Sandy Railroad, 103 miles from Lexington, Ky. Capitalization, $100,000.

Straitsville Coal and Iron Company, 1881 (The). J. D. Martin, President; James Coyle, Manager. This company own the Plummer Mine, located in Hocking Valley. Have 160 cars of their own. They are building a revolving screen and putting up a small engine to enable them to take pea coal from their stack; 160 men employed.

Straitsville and Shawnee Town Mines (The). The name of these mines are Upson, Smith, New York, and Manly Mines, located at Straitsville and Shawnee Town, Ohio. All large mines, employing a large force of men; are kept in constant operation.

Standard Coal and Iron Company (The). Officers, General Samuel Thomas, Pres.; Oliver Ames, Treas.; J. Henry Brooks, Sec. This company's mines are located in Hocking Valley, W. Va. The property consists of 30,000 acres of well selected land; controls all the prominent coal mines in the valley, producing 5,000 tons of coal daily. 160 net tons to the foot of thickness per acre in the great vein. Average thickness, seven feet; amount available runs into hundred millions of tons. Capitalization, $25,000,000.

St. Bernard Coal Company (The). Officer, J. B. Atkinson, Sec. and Treas. The mines are located in Earlington, Ky.

St. Clair Coal Company (The). Incorporators are John Russell, Hugh Means, A. R. Fennacy, of Ashland, Ky.; Wm. Wyant, Thomas Wharton, of the Eagle Works. The location of these mines are near Coal Valley, W. Va. Under the superintendence of Wm. Wyant, Eagle vein will be opened at once. Thirty coke-ovens will be built this spring. Coal mined will be manufactured into coke. 1881.

St. Mary's Coal Company (The). Location of works in Elk county, Pa. Yearly output, 84,000 tons.

Sugar Creek Coal Company (The). Anthony Howell, Gen. Mang., formerly State Treasurer. The property of this company, 1882, is located eight miles south of Massillon, Ohio. Shaft, 150 feet in depth.

Summit Branch Railroad Company (The) has property in Dauphin county, Pa. The officers are Geo. B. Roberts, Pres.; Isaac J. Wistar, Vice-Pres.; A. Mordecai, Sec., and T. P. Haviland, Treas. Directors, Geo. B. Roberts, I. J. Wistar, A. J. Cassatt, Ed. Smith, Strickland Kneass, Wistar Morris, N. Parker Shortridge, J. N. Du Barry, John P. Green, James W. Johnson, Ed. P. Worster. The mine employs 803 persons. Organized with a capital of $500,000, in 100,000 shares of $5 each. Net profits in 1881, $121,258.12.

Superior Coal and Mining Company (The). The mines belonging to this company are located at Osage City, Kansas. It is a joint stock enterprise, composed of forty-one members, all miners. Organized, 1879. The company owns fifty-six acres of land. Mines worked successfully.

Susquehanna Coal Company (The). Officers, Frederick Fraley, Pres.; Richard Wilkins, Sec. and Treas.; John V. Hutchingson, Charles W. Whaton, George Brooks, Charles Baker. Managers, Michael Ward, Thos. R. Patton. The mines of this company are located in Pennsylvania. Receipts during 1881 were $364,359.77; payments, $319,024.88.

Susquehanna Coal Company (The). Officers elected for 1882; George B. Roberts, Pres.; I. J. Wistar, Vice-Pres. Directors, George B. Roberts, I. J. Wistar, John B. Green, A. J. Cassatt, Strickland Kneass, Wistar Morris, N. P. Shortridge, J. N. Du Barry, Edmund Smith. Alfred Mordecai, Sec.; Thomas P. Hoaviland, Treas. The mines belonging to this company are located in Luzerne county, Pa. Preparing, shipping, exclusive of royalties, taxes, insurance, charge for exhaustion of land, in 1880, 1.20\frac{88}{100}$, and in 1881, $1.22; this increase of one per cent. per ton was due partly to an inconsiderable strike in August, and partly to a slight excess over last year in the improvement expenditures, which in this company are charged to cost of mining. Not only the financial advantage, but the practical policy of selling surface lots, on easy terms of payment, to employees, has produced the best results both from them and the company, and should be adhered to and encouraged by liberality in every way, and strikes, discontent, and difficulties invariably originate with those who possess no such stake in the vicinity, as was clearly illustrated during the difficulties which suspended production for a short period in August. Under head of casualties in company's report for 1881, it states that twelve men were killed during the year. Yield net profits, during 1881, $431,362.94; yield gross tons, 852,676.17; date of latest dividend, December, 1881; amount, $85,472; 2,341 persons employed, wages paid to all classes during year 1881, $881,446.

Towanda Coal Company (The). The property belonging to this company is located in Bradford county, Pa. Number of tons of coal per year, 228,471 tons.

Tennessee Coal and Railroad Company (The). This is known as the Sewanee Seam Coal. Semi-bituminous, easily broken. Located at Tracy City, Tennessee. Classed, the upper coal measures, main entry 1,922 feet above sea level.

Terragenta Iron and Coal Company (The). Officers, S. R. Early, Pres., New York city; J. W. Blake, Sup't. These works are located on Davis Creek, Kanawha, W. Va. The lands are north-west of the property of the Black Iron and Coal Company.

Tinsalia Coal and Iron Company. Gen. J. D. Imboden is Superintendent. The company's property, covering 60,000 acres of land, is located at Big-Stone-Gap coal basin, Wise county, Va. One bed yields a coke with less than ·03 per cent. of ash, and is exceptionally rich in carbon. The company has ample funds to carry out its plans.

Thompson's Anthracite Coal Mines, owned by L. R. & H. C. Thompson, I. Brown, and M. O. Rollins, are located on the south fork of Anthracite creek, three miles south of Irwin, Gunnison county, Col. The property covers 640 acres of land. The coal is pure anthracite; analysis giving ninety-two to ninety-three per cent. fixed carbon, and only three to four per cent. of ash; considered equal to the Lehigh of Pennsylvania; two distinct veins, of three to four feet each, are now opened in some dozen different places; permanent works at creek, where coal can be sloped down to a tunnel below. It is said that this is the only true anthracite of Colorado. The land over this coal is covered completely with good pine timber, of considerable value. The town of Irwin is supplied from these mines. The development of the property was commenced during the year 1879; and several thousand dollars have been spent in developing the mines, construction of roads, etc.

Tyrconnel Coal Mine (The). Owned and operated by the Newburg Orrel Coal Company. These mines are located in Tyrconnel, Taylor county, W. Va. The Pittsburg vein furnishes eight feet gas-coal; mine opened 1872; fifty men employed; production, 30,000 tons of coal per year; forwarded to Baltimore and to places on the B. & O. R. R.

Union Coal and Coke Company (The). The location of the coal works of this company is at Coalville, Butler county, Pa.; 260 men employed.

Union and Central Pacific Company's (The) mines are located at Alma, Wyoming. Alma is situated on the Union Pacific Railroad, seventy-five miles east of Ogden, is noted for its immense coal mines, operated by the Union and Central Pacific Companies. The former has several mines, which are worked to supply the road with coal, besides selling great quantities in Salt Lake, and other cities and towns. Most of the coal used on the Utah and Northern is taken from the Union Pacific mines, at Alma. The Central Pacific own and operate two mines there, which are opened up to such an extent that, when it is required, they can turn out 700 tons of coal per day, but the quantity mined is graduated by demand for operating the road and supplying the shops and offices with fuel. At present the output is 500 tons per day, which is taken to the various points along the road, as far as Truckee, California, and is used for making steam to operate six hundred miles of road. Two hundred and fifty men are employed in and around the two mines.

Union Coal Company (The). The mines belonging to this company are located at Cuba, Illinois. Air-shaft sixty-seven feet deep and runs through thirty-three feet of rock; was sunk from the bottom, up, and all done in twenty-eight days, by Daniel Burbridge & Son.

United Coal and Coke Company (The). Mines located in Pennsylvania; ninety feet deep; vein, eighty-five feet; three shifts of men at work.

Ursina Coal Company (The). Officers, J. M. Reid, Pres.; W. P. Thompson, Sec.; E. M. Read, Treas. Directors, J. F. Dravo, Dr. F. Le Mayne, W. K. Gillespie, E. H. Reid. Geo. B. Sterritt, W. M. Thompson, J. M. Reid, also owner of the company. The mines are located in Pennsylvania.

Victor Coal Company (The). Officers, D. W. Holt, Pres.; S. P. Griffiths, Treas.; O. Perry Jones, Sec. This company is operating in the Clearfield Mine, upper end of Campbell branch, two miles from Phillipsburg. John Walton is in charge of the mining affairs. Coal ranges from four to four feet ten inches in thickness.

Wadsworth Coal Company's Mine (The). Fred. Reese, Manager. The works of this company are located at Akron, Ohio; 100 men employed.

Wyoming Valley Coal Company (The). Directors, J. H. Foster, Stamford, Conn.; S. A. Caldwell, Philadelphia; Wm. S. Hillard, John C. Phelps, John S. Law, J. G. Snoyer, Wilkesbarre; Abram Nesbitt, Kingston, Luzerne county, Office, Wilkesbarre, Pa. The mines are located in Luzerne and Lackawana counties. Wyoming coal fields' head-quarters are located at Wilkesbarre, Pa. Capitalization, $1,200,000.

Walnut Hill and Primrose Coal Mines (The). The Walnut Hill and Primrose mines, also the Yellow Grove mines of Noblestown—the former located at Midway, Pa.—are operated by T. Burr Robbins, and under the supervision of Chas. McDonald. Mines in good condition; well worked; 150 men employed. Coal bed will average, 1881, about four and a half feet in thickness.

Watson Coal and Mining Company (The) is chartered under the laws of the State of Indiana. The officers are Thos. Watson, Pres., and M. D. Watson, Sec. and Treas. The annual meeting is held the second Tuesday in January. John Watson, Supt., with fifteen years' experience. The officers are at Brazil, Ind. The shafts are each down about ninety feet. Yield during 1881, 154,000 tons, the market being Chicago. The property has a total extent of 1,996 acres, including four mines known as the Etna, Gartsberrie, Garfield, and Cornwell. Organized October 1, 1871; developments commenced same time. Capitalization, $1,500,000, in 30,000 shares of $50 each.

Webster Coal Company (The). These works are located in Westmoreland county, Pa. Yearly number of tons, coal, 194,176.

West Fairmont and Marion Consolidation Coal Company (The). Mr. Davidson, Agent. Location of works at Fairmont, Marion county, W. Va. Working seven and a half feet of the nine feet vein; 50,000 to 75,000 tons of coal are mined yearly. Twenty-six men are employed. Marketed chiefly in Baltimore and New York.

Westmoreland Coal Company (The). Officers, Edward C. Biddle, Pres.; F. H. Jackson, Vice-Pres. and Treas. Directors, Messrs. Samuel Welch, Henry Windsor, P. P. Morris, Stephen H. Brooke, George A. Wood, Horace Magee, P. S. Hutchinson.

West Newton Coal Mines (The). Mr. W.H. Watt, Supervisor. The West Newton mines are located at West Newton, Pa., 1881. These mines have been idle for a long time; are now ready to go into operation, having been refitted with new engines, pumps, and other improved machinery.

Whitebread Coal Mining Company (The) is chartered under the laws of the State of Iowa. Officers, J. C. Osgood, Pres.; C. M. Schench, Vice-Pres.; J. S. Mauss, Sec.; T. J. Phillips, Supt. Transfer office, Ottumwa, Iowa; general office, Lincoln, Nebraska; branch, head and branch offices, Ottumwa, Iowa. The Cleveland Mine No. 1 and Cleveland Mine No. 2 belong to this company, Located in Whitebread township, Lucas township, Iowa. 1,366 acres owned by the company. Amount expended in developing property, April 1, 1882, $225,000; shaft, 250 feet; width of vein, five and a half feet. Three shafts, underground workings, 325 rooms, working. Date of organization, January 16, 1876; capitalization, 1,500 shares; par value, $100; non-assessable; yield (net) to April 1, 1882, 749,000 tons; yield (gross tons) during 1881, 205,627; assessments levied, none; bonded indebtedness, April 1, 1882, $40,000; stock indebtedness, $150,000; floating indebtedesss, $35,000. Stocks and bonds held principally in Burlington, Des Moines county, Iowa. Maximum capacity of production, April 1, 1882, 500,000 tons; output, weekly, 6,500 tons. Wages paid to all classes, April 1, 1882, $8,000. Principal market for the ore, Iowa and Nebraska.

Wilmington and Grove Coal Mines (The). J. M. Schuckers, Supt. This company owns the Warmington and the Grove mines. Mines good, yielding a fine quality of furnace coal. 100 men employed in the Warmington mine. The Grove shaft, in charge of David Naysmith, has about ninety men employed.

Windsor Coal Company (The). The mines are located a short distance from Foltz Slope, Mansellon City, Ohio. Thirty men employed under the same management; have had some difficulties; hope to get over them. They are operating a drift near Philadelphia, Tuscarawas county; forty to fifty men employed.

Youghiogheny River Coal Company (The). Wm. L. Scott, of Erie, President. The coal lands of this company are located in Alleghany and Westmoreland counties, Pa. There are nine shareholders. Capitalization, $1,000,000.

Young Coal Company (The). O. Young, General Manager; Joseph Collier, Mining Superintendent. This property is located one mile from Pigeon Run, Ohio, near Navarre Station; it is better known as the Camp Creek shaft. Coal averages about five feet, reached by a shaft 179 feet deep; about 165 men employed.

Youngstown Coke Company (The). This company's works are located in Fayette county, Pennsylvania. Yearly number of tons, 120,157.

Winifrede Coal Company (The). Has offices at 307 Walnut Street, Philadelphia, Pa. The incorporators are E. M. Davis. James Albright, Theodore Wright, H. H. Houston, A. R. Little, all of Philadelphia, Pa. James A. Wright, Treasurer. The property of the company is located near the Great Kanawha, between Field and Slaughter creeks, Virginia, having an area of 12,000 acres. Capitalization, $150,000.

COPPER.

Albany and Boston Mining Company is chartered under the laws of the State of Michigan. The company's works are located in Houghton county, Mich. Property owned includes thirty-three dwelling-houses, warehouses, and store, engine-house, hoisting and pumping engine, winding machinery, etc., etc. The prospects of the property are said to be rather disappointing. Company was organized and commenced developments in 1860. Worked on tribute since 1869, and that only limited.

Franklin Mining Company (The) is chartered under the laws of the State of Michigan. Capt. Thos. Dennis is Superintendent. The company's works are located in Houghton county, Mich. They own 850 acres of land. They have machinery plant, buildings, etc., and the surface improvements are good. It is estimated that the cost of manipulating the ore, per ton, is about $2.34. The mine was worked on tribute for a few years prior to 1874, when, under a new management, prosecuting a vigorous policy, with the effect of enhancing the value of the stock sixfold. Have not sunk deep enough to give it a fair trial. Current value of mine is $715,000. Date of organization, April 23, 1857; number of shares, 54,000. Yield to January 1, 1881, 15,052 tons; yield during 1881, $488,722.69; yield during 1880 to December 1, 2,876,519 pounds of mineral, yielding $82,767. Product of refined copper in 1881, 1,338 tons. Total amount of dividends paid, $240,000; date of latest dividend, June 24, 1882; date of first assessment, 1857, amount per share, fifty cents. Stock quoted, May 1, 1882, $11.

Lake Superior Mining Company. D. L. Demmon, Sec. and Treas.; Superintendent, S. B. Harris, Greenland Mich. Office, Boston, Mass. The company's property is located at Ontonagon, Mich., covering 895 acres. They have horse-whims on their property and a few dwelling-houses. The mine was worked on tribute for some time subsequent to 1874. The company was organized in 1859; yield to January 1, 1882, seven tons, 821 pounds; total amount of assessments levied, $40,000.

Schoolcraft Mining Company is chartered under the laws of the State of Michigan. The officers are S. L. Smith, Pres.; Jessie Hoyt, Sec. and Treas.; W. Harris is Superintendent. Office, New York. The company's property is located in Houghton county, Mich., and includes two hoisting engines, and pumping engines, and one stamp-mill, with thirty-two Gates' stamps, all intact. Developments of the property were commenced during the year 1869; prospects of the property are reported as very promising. Date of organization, 1863; capitalization, $1,000,000; par value per share, $25.

Tecumseh Mining Company was organized March, 1880; Chas. H. Palmer is the Superintendent. The company's property, covering 480 acres of land, is located in Houghton county, Mich. The property includes dwelling-houses, and a forty-horse-power engine for pumping and hoisting. The property is crossed by the Calumet Conglomerate and the Osceola Amygdaloid, and other important lodes.

Adventure Mining Company (The), chartered under the laws of the State of Michigan. The officers are Thos. F. Mason, Pres.; W. Hart Smith, Sec. and Treas. Head office is at Exchange Place, New York city. S. B. Harris, Supt.; residence, Greenland, Mich. The mines are located at Ontonagon county, Mich. The company was organized in the year 1870; capitalization, 1,000 shares; par value, $20. The mine has yielded to date, 1881, $1,368.75; during same year, three tons, 1,500 pounds. This mine is worked on the tribute system. Amount of property in acres, 480.

Allouez Mining Company is chartered under the laws of the State of Michigan. Emmerson Coleman, Pres., and W. C. Stewart, Sec. and Treas.; Fred. Smith is Supt. Branch office, No. 29 Drexel Building, 25 Wall Street, New York. The company's works are located in Keweenaw county Mich., covering an area of 2,000 acres. Ore found is copperiferous, assaying $767 per ton. The lode may be described as conglomerate. Company owns mining plant, buildings, etc. Burleigh drills in use, also stamp-mill. Estimated total value, $500,000; shaft 1,060 feet down; length of main lode, 3,000 feet. Date of organization, September, 1880; capitalization, $2,000,000; par value per share, $25; yield during 1881, $268,823.67; 736 tons after smelting). Date of first assessment, September, 1880; $1 per share; stock quoted July, 1882, $2.25.

Amygdaloid Mining Company (The) owns a mining property of the extent of 1,760 acres, located in Keweenaw county, Mich. The ore yields 72½ per cent. of ingot copper. The character of the mine is described as true fissure, there being three veins. The main mine is in what is called the Drexel, south of the Greenstone. The mining plant and other property comprises a large number of miners' houses, thirty-two stamp-mill, (Gates' pattern,) inclined railroad, pumping and winding machinery and engine for operating the same, offices, rock-house, and six rock-breakers. In June, 1863, the surface stock was nearly all destroyed by fire, including all the tenements. By November following, forty-one new houses had been constructed through the untiring energy of the Agent, Mr. A. C. Davis. Again, in 1864, the company suffered another blow in the bursting of two boilers, causing great inconvenience and delay at a time when copper was at its maximum price. Organized, July 1860; capital, $500,000; shares each, $25. Latest assessment was levied in 1872; amount per share, fifty cents.

Ash Bed Mining Company (The) is chartered under the laws of the State of Michigan. The officers are W. Hunt, Pres.; W. C. Coffin, Sec. and Treas. M. A. Delano, Agent; Capt. Petherick, Superintendent. The offices are at Boston, Mass. The company owns two mines, the Hill and the Copper Falls mine, located in Keweenaw county, Mich., covering an extent of 1,200 acres. There is a stamp-mill attached to the mine, but the ore prospects have not yet been realized. Date of organization, 1861. In 1881 the yield of pure metal was six tons, 1,984 pounds, of the value of $2,552.08.

Atlantic Copper Mining Company (The), of which Jos. E. Gray is Pres., and J. M. Stanton Sec. and Treas., and Capt. W. Tonkin, Superintendent, has its offices at 76 Wall Street, New York. The property is located in the Lake Superior district, Houghton county, Mich. The ore is a native copper, yielding seventy-two per cent. metal. The property, in mining plant, consists of engines for hoisting and pumping, boilers, shaft-house, R. R. locomotive, compressor, and five drills, 113 dwelling-houses. Depth of shaft at end of 1880, about 1,000 feet. Developments were commenced in 1872. The mining plant is first-class and adapted for carrying on operations to an almost unlimited extent. A saving of $7 per fathom is effected by the use of air drills. There are 5,200 feet of adits, levels, etc. The cost of ingot copper produced and marketed by the Atlantic mine was as follows in the five years undermentioned:

Year.	*Cost of ingot copper per lb.*
1875	19.92 cents.
1876	18.11 "
1877	15.74 "
1878	15.51 "
1879	12.20 "
Average cost	16.29 cents.

Organized; capital, $1,000,000; shares each, $25; yield to January, 1881, 9,084 tons; yield (gross) during 1881, $461,361.65; yield net during 1881, 1,264 tons; dividends, total paid to June, 1882, $220,090; date of last dividend, February 1, 1882; amount per share, $2; total assessment levied, January, 1881, $280,000; first assessment levied, February, 1873; amount per share, $2; date of latest assessment, April, 1882, ten cents per share. In 1880, the cost of different operations was as follows: stamping, washing, etc., 87.96 cents per ton of rock; sinking shaft, $38 per foot; sinking winzes, $19.78 per foot; drifting, $19.09 per foot; stoping, $22.28 per fathom.

Aztec Copper Company (The). A. A. Page, Sec. and Treas. of the company. Principal office, Boston, Mass. Capt. John Chynoweth, Superintendent. Mines owned are located in Ontonagon county, Mich. Amount of property (in acres), 1,208, in addition to mining location. Quality, etc., of ore of irregular veins, and difficult to trace. Developments were commenced 1852. Prospects of the company are very fair. Were organized in 1880. Total amount of assessments levied, $150,000: capitalization, $1,000,000; yield net to January 1, 1881, 351 tons, 734 pounds; yield during 1881, $1,619.50; yield (net) refined copper, four and two-fifths tons.

Bisbee Copper Mining and Smelting Company (The). Officers elected June 14, 1881: Directors, D. H. Brisbee, S. L. Milliken, Secretary and Treasurer; for agent, Isaac Coombs, Auditor of Accounts; W. E. Grindle and G. F. Wood, Belfast, Me. Principal office, Belfast, Me. Character of mines, extension of Douglass lode.

Black Bear Copper Mining Company of Chicago (The). Names of officers: W. L. Barnum, President; Anson Gorton, Vice-President; Amos T. Hall, Secretary and General Manager; F. E. Morse, Assistant Secretary; George W. Huddleston. Directors, W. L. Barnum, H. N. Hibbard, Amos T. Hall, Anson Gorton, John R. Hoxie, and F. E. Morse. W. F. Witherell, Superintendent. Names of mines owned by the company: Youngstown, Excellent, Boss, and Black Bear; all full claims. Location, Ash Cañon, Huachuca, Mountains, Cachise county, Arizona. Date of organization, August 10, 1881; capitalization, $1,000,000; shares, 100,000; par value, $10. Non-assessable. Stock full paid.

Bonanza Development Company's (The) works are located in Colorado. This company, whose property is a portion of the Santa Reita grant (for half of which $1,000,000 has recently been offered), has paid since its organization four cash dividends aggregating $225,000, and, according to its last statement issued September 1, 1881, it has $633,186 in cash assets on hand. It owns, besides, several large tracts of land and one-half of the capital stock of the Santa Reita Copper and Iron Company, which is now producing and shipping from seventy-five to 100 tons of ingot copper per month. Date of latest dividend, January 3, 1882.

Boroa Copper Mining Company is chartered under the laws of the State of New York. The mines owned by this company are the Boroa, Chausun, Sunrise, and Sunset, located in Arizona. These mines improve as developments progress. Work has been steadily carried on, and the foreman reports the mines in condition to take out seventy tons of ore per day. Assays average twenty-three per cent. of copper. Capitalization, $1,000,000; par value per share, ten dollars; non-assessable; full paid.

Boston Copper Mining Company is chartered under the laws of the State of Massachusetts. Edward B. Earle, President; George D. Eldridge, Treasurer. Office, 79 Milk Street, Boston, Mass. This property is thoroughly developed, the dead work is done, and it is all ready to be put on a dividend paying basis. The value of the mine has been proved, and with the low capitalization and small number of shares it takes its place as an investment rather than a speculative stock. The ore assays seventeen and a half to twenty per cent. copper. Capitalization, $50,000; par value per share, ten dollars.

Brooksville Copper Mining Company. The officers are M. G. Palmer, President. Directors, M. G. Palmer, George Burnham, Jr., J. S. Winslow, W. H. Sanborn, and G. F. Gould. Secretary and Treasurer, G. A. Gould. Office, 85 Exchange Street, Portland, Maine. Capitalization, $500,000; par value per share, five dollars; cash in treasury March, 1881, $1,000; shares in treasury March, 1881, 38,000.

Calumet and Hecla Consolidated Mining Company (The) is chartered under the laws of the State of Michigan. The officers are Alex. Agazziz, Pres.; Chas. W. Seabury, Sec. and Treas.; J. N. Wright, Sup't. The head offices are at 67 Milk Street, Boston. The company owns extensive properties in the Lake Superior district, Houghton county, Mich. A parcel of 120 acres has recently been purchased at cost of $1,250,000. It is expected this will prolong the life of the mine for many years. It is estimated that in about forty of these acres there are from five to twenty millions' worth of copper. The copper is nearly pure, the mixture being a species of rock of a reddish color and very hard. The main vein is a conglomerate from eight to eighteen feet thick, dipping into the earth at an angle of about 38°. It runs north-east and south-west, extending the entire length of the Keweenaw Peninsula, and is supposed to be the same vein that passes under Lake Superior and crops out at Isle Royal seventy miles distant. The mining plant and surface improvements are the finest in the world. One of the engines is 4,700 horse-power. The stamp-mills are lighted by electricity. There are eight shafts of an aggregate depth of 2,650 feet. There are twenty-five miles of drifts. The main lode on which the company depends for its supply of ore is 1,300 feet. Developments were originally commenced in 1867. The maximum yearly capacity of production is 31,595,300 pounds of ore. The current value of the mine is about $24,000,000. By new and improved processes of smelting, the company is able to profitably concentrate the tailings. Date of organization or consolidation of the Calumet with the Hecla company, May, 1871; capitalization, $2,500,000; shares each, $25; yield of refined copper to January 1, 1881, 126,558; yield during 1881, 15,680 tons refined copper = 5,723,342; amount of dividend paid to July, 1882, $21,350,000; date of first dividend, 1869 (Dec.); amount of same, $5 per share, paid regularly every quarter; date of latest dividend, May 15, 1882; amount of same, $5 per share; total assessments levied, $1,200,000; amount per share of last assessment, fifteen cents; bonded and other indebtedness, none.

Calumet Belt Mining Company (The) have their works located in Keweenaw county, Mich., covering an area of forty acres. Red and blue ore are found. An amygdaloid and conglomerate belt extends two and one-half miles on the property. No work has been done yet. Capital stock, $250,000.

Carp Lake Mining Company (The) is chartered under the laws of the State of Michigan. Mines are located in Ontonagon county, Mich. Character of the mines; copper occurs in fine particles, disseminated in a belt of altered sandstone, 500 feet thick, this being underlaid by a belt of amygdaloid. Property owned, log huts, machinery for stamp-mill. Dimensions of workings: levels, 250 and forty feet. Operations suspended in 1881. Efforts now being made by Mr. A. Meads to revive an interest in the locality with a view to the resumption of mining operations. Yield net to January, 151,135 tons.

Central Copper Mining Company (The) is chartered under the laws of the State of Michigan. The officers are Dr. C. G. Hussey, Pres.; Waterman Palmer, Sec. and Treas. Directors, S. W. Hill, John Slawson, A. A. Bennett, John Robingson, and Waterman Palmer. Mr. A. A. Bennett is Superintendent. The offices of the company, formerly at Eagle Harbor and Pittsburg, are now at New York. The properties of the company are located in Keweenaw county, Mich. The ore yields seventy-two per cent. of pure copper, and is found in masses. The plant and other fixtures of the mine consist of several miners' houses, twenty of them being new. New pumping and hoisting machinery and engine, rock-breakers and stamping machinery. The aggregate depth of shaft is about 4,180 feet, of adits 22,979 feet. The total length of lode on which the company depends for its supply of ore is 5,280 feet. Developments were commenced in 1855, since which time there has been paid in developments and working expenses, the sum of $6,932,317.25, to Jan. 1, 1881. Up to July, 1855, this was the first instance of a mine yielding a surplus in the first year of its existence. The surface improvements during this year consisted of three houses and horse-whim. The capital was, therefore, not absorbed in expenditure on machinery and improvements. The deposit has subsequently proved to be one of the richest of the Lake Superior district. The cost of smelting the ore in Detroit is, or was, about $18.32 per ton. The general expenditure to the end of December, 1880, was $2,958,132.22; total sales of copper to same date, $3,904,496.51; average cost of sinking shafts and winzes was $24.86 per linear fathom; average cost of drifting, $13.16 per linear fathom; average cost of stoping, $18.71 per cubic fathom. The Central is one of our most valuable mines, and produces its copper at a very low cost, as will be seen by the following official figures:

Year.	*Cost of Ingot per lb.*
1874	14.82 cents.
1875	15.81 "
1876	12.95 "
1877	13.19 "
1878	11.23 "
1879	11.16 "
1880	11.85 "

Average yield in mineral per cubic fathom, 614 pounds = 473 refined copper; total cost per ton for breaking and tramming to mill, .14$\frac{86}{100}$ cents; total cost per ton for stamping and washing .98$\frac{34}{100}$ cents. Organized, November, 1854; capitalization, 20,000 shares of $25 each; yield to January 1, 1881, 14,510 tons refined copper; yield during 1881, 709 tons refined copper; value of product for 1881, $258,869.86; total dividend paid to February 1, 1882, $1,660,000; date of latest dividend, February, 1882; amount of same $50,000, or $2.50 per share; total of assessments levied, $100,000, to September, 1861; date of latest assessment, September 10, 1861; amount, of same, sixty-five cents per share; stock quoted July 1, 1882, $30 per share; (average) wages paid to all classes of labor per week, $13.18.

Cliff Copper Company (The) is chartered under the laws of Michigan. James Wilson, Supt. Location of mines, Keweenaw county, Mich. Amount of property in acres, 1,000. Dimensions of workings are, by tunnel, 135 feet; length of levels, 1,700 feet. Date of commencing developments, 1859; date of organization, 1858. Yield (net) to January 1, 1882, nil; yield during 1881, $14,487.21; yield tons during 1881, 39 tons, 1,382 pounds.

Conglomerate Mining Company is chartered under the laws of the State of Michigan. The officers are Henry C. Davis, Pres.; Edward Hoopes, Pres. pro tem.; Chas. M. Foulke, Treas.; Geo. H. Lewars, Sec. Directors, Chas. W. Trotter, Edward Hoopes, Samuel Simea, Edward Lewis, W. P. Thomas, Chas. M. Foulke, Henry C. Davis, and Jos. E. Gillingham. Main office, 205 Walnut Place, Philadelphia; mine office, Delaware Mine P. O., Keweenaw county, Mich. The company's property is located in Keweenaw county, Mich. They own 19,000 acres of land. There is an amygdaloid bed running east and west through the mines, yielding one per cent. ore. The company own a new compressor-house, built of stone, 150 by 50 feet, costing, with its equipment, some $63,000. $21,000 have been expended in erecting dwelling-houses, $27,735 in fitting up the general running plant, and $19,644 for stamp-mill additions. Tramways connect the rock-house with the several shafts, and the cars are propelled by a small locomotive, which facilitates the transmission of rock from the mine to the mill. The company have in their compressor-house a set of Babcock and Wilcox boilers of 320 horse-power, and have room left for another set of like power. They have also a very spacious and convenient store, among other improvements. The shafts number six, though at present but four are actively worked. They are numbered from the west, and have been sunk respectively as follows: No. 1, west of the northwest vein, 330 feet; No. 2, on vein, 740 feet; No. 3, east of northwest vein, 515 feet; No. 4, east of northwest vein, 270 feet; No. 5, east of northwest vein, 345 feet; No. 6, east of northwest vein, 270 feet; total sinking, 2,470 feet. Length of the main lode, 3,500 feet. The levels have stretched themselves out with marvelous rapidity, until they offer the underground traveller a promenade of nearly a million avenues, twelve feet wide by eight feet in height. Adit level, 2,000 feet; ten fathom level, 893 feet; twenty fathom level, 880 feet; thirty fathom level, 830 feet; forty fathom level, seventy feet. There are numerous winzes in the neighborhood of the No. 2 shaft, on the ten, twenty, and thirty fathom levels. Development of the property was commenced January, 1881. Amount expended in developing property to April 1, 1881, nearly $2,000,000. The stoping field is a block of ground 141 fathoms in length, seventy-two fathoms in height, and (as regards the copper-bearing portion of the belt) about two fathoms in thickness, which gives 20,104 cubic fathoms. 250 men are employed, 200 being miners. At time of writing, we learn that conglomerate has been struck on the fifth level, better than any above, showing that at 1,000 feet depth the vein is improving in strength. Date of organization, October, 1880; capitalization paid in, April 15, 1881, $2,-500,000. Par value per share, $25. Yield during 1881, $70,461.60; yield refined copper 1881, 193 tons, 91 pounds. Total amount of assessments levied, $1,500,000. Whole number of shares (100,000) have been issued. 50,000 shares have $6 paid on each, and liable for $19 more. The reserve in the treasury is the amount per share that can be called on the 50,000 shares assessable stock, or $19 on 50,000 shares equals $950,000.

Copper Belt Mining Company (The). Location of mines, Marysville, Puck county, Utah. Date of commencing developments, 1881; date of organization, October 1, 1881; capitalization, 100,000 shares. Stock and bonds held principally in Connecticut.

Copper Falls Company is chartered under the laws of the State of Michigan. John T. Heard, Pres.; Horatio Bigelow, Sec. Office, Boston, Mass. W. P. Merick is the Superintendent. This company are the owners of the Hill and Copper Falls Mines, located in Keweenaw county, Mich. They own 4,261.5 acres of land. The ore is mixed with considerable silver, and assays twenty-one per cent. per ton of rock. The character of the mines may be described as fissure, chiefly stamp rock. The company have twenty dwelling-houses, two boarding-houses, offices, shops, engine-house, boiler-house, saw-mill, washers, and slime tables, three locomotive boilers, and machine-shop with requisite machinery. Length of adits—that is, levels—5,300 feet. The prospects of the property are favorable. Cost of mining and milling of rock per ton, $3.64. Output weekly, June, 1882, 1,750 tons. In 1874 several men were killed by a large portion of hanging wall. After that time the product declined. Date of organization, 1845; capitalization, $2,000,000; par value per share, $50. Yield to January 1, 1881, 6,754 tons, 1,157 pounds; yield refined copper, January 1, 1881, 334 tons, 1,121 pounds. Number of dividends paid to August, 1871, three; total amount of same, $100,000; date of latest dividend, August, 1871. Total amount of assessments levied, $620,000; date of latest assessment, October 4, 1881.

Copper Harbor Mining Company (The) (formerly the French Copper Mining Company) are the owners of the Agate Harbor, Clark, Montreal, and Bell mines, located in Keweenaw county, Mich. Amount of property, 2,500 acres. The character of the ore is black oxide, and is found in masses. The company have a stamp-mill, and hoisting and pumping engines at the works. Date of organization, May 14, 1858.

Copper King Mining Company (The). Incorporators are Milo A. Smith, Thomas L. Drake, Sam'l S. Griswold. The mines are located in Park county, Col. Capitalization, $2,000,000.

Copper Queen Mining Company is chartered under the laws of the State of New York. The officers are A. A. Hayes, Jr., Pres.; Louis Zeckendorf, Sec. and Treas. Trustees, C. C. Martin and W. H. Martin. Offices at 34 and 36 Thomas Street, New York. Transfer books close June 28 and open July 3. This company owns the famous Copper Queen mine, located at Bisbee, Ariz. This mine was located December 13, 1878, by G. A. Ealham and M. Herring. Subsequently G. W. Anschultz, G. Kleim, G. W. Atkins, and D. B. Rea became interested in the property; and these parties bonded the mine to E. Reilly for $18,000. The transaction was perfected September 24, 1879, by the sale of the Copper Queen to W. H. Martin & Co, and work was begun in April, 1880. The erection of a thirty-ton smelter was begun on July 1 of that year; on September 11 the first bullion was shipped; during the month 160,829 pounds were turned out by the smelter; since then the shipment has been as follows: October, 1880, 335,408 pounds; November, 316,000 pounds; December, 353,340 pounds; January, 1881, 308,118 pounds; February, 316,000 pounds; March, 305,972 pounds. For each fourteen car-loads of coke there have been produced from the mines twenty car-loads of copper. The coke is made from English coal, and laid down at San Francisco at a cost of $27 per ton. The gross average price received for the copper has been eighteen and one-half cents per pound, profit, over and above all expenses. April 1, 1882, the company smelted 17,651 tons of ore, which yielded 5,753,235 pounds of black copper, which, refined to ninety-six and one-half per cent., produced 5,551,871 pounds of refined copper, the value of which, in New York, was $1,020,859.72. During March, 1882, the mine produced 694,181 pounds; and the first two days of April yielded 82,000 pounds. The current value of the mine is $1,500,000, and was purchased by a New York company for $1,250,000. Amount expended in developing property to April 30, 1882, $532,733.33. Property consists of two water-jacket furnaces, capable of smelting from eighty to ninety tons of ore per day. Extensive improvements have been made in the way of new buildings, steam-hoisting and other machinery; flow of water is now from 10,000 to 12,000 gallons; while the capacity of the Cameron pump, purchased recently, is capable of handling 100,000 gallons. The Superintendent estimates the amount of ore now in sight above second level, at 63,000 tons. Capitalization, $2,500,000; par value per share, $10; total amount of dividends paid, $400,000; date of latest dividend, July 1, 1882, forty cents per share; yield (refined copper) for fiscal year ending April 20, 1882, $1,020,859.72; stock quoted June 17, 1882, $6 per share.

Copper Prince Mining Company is chartered under the laws of the State of New York. The officers are Hon. A. H. Cragin, Pres.; A. H. Ward, Vice-Pres.; C. J. Brushnell, Sec. and Treas. Office, Room 64, 35 Broadway, New York. The company's works are located at Digby Gut, Nova Scotia. They own mining plant, and have buildings in course of erection; specimen of ore taken from the surface shows great richness in virgin copper; stock and bonds held principally in New York.

Copper King Mining Company (The). Pres., Hiram Preble, of Bangor; Treas., J. H. Smith, of Bangor. One of the chief owners is Mr. Isaac Stevens, of Bangor, where the offices are also located. The mines are located at Clifton, Graham county, Ariz. Date of organization, March 11, 1882; capitalization, $500,000; stock held principally in Bangor, Me.

Copperopolis Mining Company (The). Officers, Geo. E. Harrington, Pres.; S. L. Symonds, Treas.; W. Oscar Arnold, Sec. Directors, Geo. E. Harrington, Geo. West, Francis Tuckerman; Salem, P. Muller, L. W. Hodgkins; Ellsworth, John Shornbar. Head office, 4 Sear's Building, Boston, Mass. Character of ore, high grade copper, thirty per cent. copper; prospects of property, will soon be equipped with engines, boilers; depth of shaft, 110 feet down. Capitalization, $500,000; shares, 200,000; par value, $2.50; stock quoted March 1, 1882, four to five cents; stock quoted July 1, 1882, 003 asked.

Copper Mountain Mining Company (The). Officers, W. A. Healey, Pres.; I. T. Stogund, E. B. Brown, Sec.; M. S. Taft, Supt. Location of mines, Big Bug district. The mine of this company is showing up well, considerable quantities of high grade oxides and carbonates of copper having been developed. Date of organization, 1882; capitalization, $300,000.

Crescent Copper Mining Company (The), of which George W. Smiley is Pres., is located in Del Norte county, Cal. The ore consists of green carbonates. The mine consists of two claims. each 1,500 feet in length by 600 feet in width. The developments consist of one shaft thirty feet deep; one open cut, twenty feet on the ledge. and twenty-eight feet northerly on the ledge; one shaft 100 feet deep, with level from the foot. 100 feet north on the ledge; one shaft forty feet deep, with level running thirty feet north on the ledge; and five prospect shafts from five to ten feet deep. With the ore in sight, and improvements in progress, 1,000 tons of ore can be extracted in sixty days, when smelters will be ready. Capitalization, $2,000,000, in shares of $10 each; 200,000 shares, non-assessable.

Dominion Mining Company. The officers are James Richards, Pres.; F. F. Hale. Sec.; A. T. Parker, Treas. Directors, James Richards. H. S. Bacon, A. T. Parker, T. V. Wright. This company was organized at Portland, June 9, 1881. Capitalization, $500,000.

Douglass Mining Company (The), of which Mr. J. H. Foster is Supt., is located in Houghton county, Mich. Organized in 1863. Net yield in 1868, eighty-five tons refined copper. Stock quoted May, 1882, one-half cent; June, three-fourths cent per share.

Ely Copper Mine (The) is located at Vershire, Vt. Mr. Smith Ely has control, holding 96,000 of the 100,000 shares of the company. The quality of the ore is three and a half per cent., and cobbed up to seven per cent. It assays ninety-five per cent. to the ton. The ore-body, 300 feet in length, varies from five feet massive to twenty-five feet disseminated. Depth of shaft, 3,000 feet. The company have a large engine of 400 horse-power, to do hoisting, about 100 houses, and three new boilers, Jarvis setting. They have twelve furnaces running, and employ 700 men. The Superintendent is Wm. Long. Mining and milling can be done under $6 per ton. Maximum yearly capacity of production. 3,000,000 pounds copper ore. Output, weekly, to January, 1882, 1,500 tons of ore. About thirty-seven and a half tons ingots.

Evergreen Bluff Mining Company (The) is chartered under the laws of the State of Michigan. F. W. Capon, Sec. and Treas.; L. Collins, Supt. Principal office was originally Detroit, but lately removed to New York. The mines are in Ontonagon county, Mich. The ore assays about seventy per cent. Property owned by the company consists of five engines, all in place, house (occupied), working plant, machinery, etc. Developments were commenced 1853. Organized in the same year; worked since 1870 on tribute at seven cents per pound. Yield (net) to January 1, 1881, was 675 tons and 206 pounds; during 1881, $176.66. Yield refined copper during 1881. 968 pounds. Stock of this company held in Michigan, Detroit, and Pontiac.

Falmouth Copper Mining Company (The). The officers are James N. Winslow, Pres.; Wm. S. Thomas, Treas; George H. Blake, Sec. The mines being worked by this company are held on lease of ninety-nine years. They are located at Falmouth, near the city of Portland, Me. Two assays of the ore gave respectively five and thirty-three per cent. copper. The company own steam-pumping and hoisting apparatus.

Flint Steel Mining Company. Walter Ferguson is Sec. and Treas.; Stephen Martin, Agent, Greenland, Mich. Superintendent, Dr. McKinnie. Office, 35 Sear's Building, Boston, Mass. The company's mines are the Flint Steel and the Caledonia, located in Ontonagon county, Mich. The company have twenty-five houses on their property. The prospects of the property are very moderate. The mines were leased to Captain Martin in 1873, and worked only at intervals. Date of organization, 1871; yield to January 1, 1881, 413 tons, 318 pounds; yield during 1881, $985.86; yield, refined copper, during 1881, two tons, 400 pounds.

Fulton Mining Company (The) have their works located in Keweenaw county, Mich. They run 3,000 acres of land. The ore found yields considerable silver. Property is crossed by kearsage, conglomerate, and kearsage amygdaloid. The ore is found in masses.

Globe Copper Company have their works located at Globe, Arizona.

Grand Portage Mining Company (The) is chartered under the laws of the State of Michigan. Peter Ruffe, Esq., is Secretary and Treasurer; the Mining Superintendent being M. L. Tallon, who has had fourteen years' experience. The property of the company is located in Houghton county. Mich., and has an area of 800 acres. The ore is found in masses, the usual form of the copper deposits of Michigan. There are twenty-seven houses on the property. The shaft is 350 feet deep, and the adits extend about 350 feet. Prospects of the mine at present are highly favorable. Date of organization, 1860; capitalization, $500,000. Yield during 1881, $4,793; yield during 1881, thirteen tons and 264 pounds.

Eagle Harbor Mining Company is chartered under the laws of the State of Michigan. W. Hart Smith, Secretary and Treasurer. Office, No. 4 Exchange Court, New York. The mines owned are the Waterbury, Eagle Harbor, and Connecticut, located in Keweenaw county, Mich. The company owns 7,000 acres of land. The property is worked partly on tribute. The character of the mines is described as fissure veins.

Gregory Copper Mining Company. The Directors are H. Gregory, Jr., Pres.; Maynard Sumner, S. M. Bird, A. T. Ames, Geo. Gregory, J. Fred. Merrill, Henry Spaulding, H. T. Beveridge, Treas. Office, Rockland, Maine. The company's property is located at Gardner Mountain, N. H. They have a capitalization of $500,000, in 100,000 shares, at a par value of $5 each.

H. A. Lee Mining Company (The). The officers are Dr. Horn, Pres.; W. M. Farnan, Vice-Pres. and Supt.; Dr. Lee, Treas.; H. Lee, Sec. The company owns twelve claims, Domingo, on Poverty Gulch, Col., the Castle Group of nine, on Brush creek, the Sunnyside, on Locolli Mountain, and one on Rock creek. The character of the ore is gray copper, sulphuret and bromide. Mill run of 400 pounds, gave 184 ounces to the ton. The Domingo is opened by a fifty-foot tunnel, exposing a six-foot vein between walls, with an eighteen-inch pay streak. Bonded indebtedness, January 1, 1882, $21,000. Stock quoted, July 1, 1882, twenty-seven and a half cents. Stock and bonds are held principally in Colorado and Illinois.

Hancock Mining Company (The) is chartered under the laws of the State of Michigan. The officers are Ed. Ryan, Pres., and August Mette, Sec. and Treas. The offices are at Hancock, Mich. The property of the company is located in Houghton county, Mich. The deposit is amygdaloid, about four feet wide, yielding about two per cent. copper. The shaft is 610 feet deep. It is reported (July, 1882) that good ore has been struck. The company was organized about the end of 1879. Capitalization, $100,000, in 40,000 shares of $2.50 each. Yield to January, 1881, 1,403 tons of refined copper: yield during 1881, 285 tons 1,897 pounds of refined copper, of the value of $104,371.20. Stock held principally in Hancock, Chicago, Milwaukee, and Cleveland. Wages paid to all classes of labor per week, $10.75. Sinking costs about $23 per foot; stoping costs from $6 to $12 per fathom.

Harrisburg Copper Mining and Smelting Company is chartered under the laws of the State of Pennsylvania. Geo. R. Hursch, Pres.; H. C. Chisholm, Sec. Office, No. 26 Third Street, Harrisburg, Pa. The company own 3,000 acres of land, most of which is located on the southeast side of South Mountain, on the mineral belt running through southern Pennsylvania, Indiana, and Virginia. The company have a capitalization of $100,000, in shares at a par value of $1 each. Basis, non-assessable; full paid.

Hilton Mining Company. Location of property, Ontonagon county, Mich. The ore assays 72 per cent. copper per ton. The veins are composed of epidote and quartz, bearing but little copper. The company owns hoisting apparatus consisting of horse-whim or man-power. They have several houses, change house, and smith's shop; there are two shafts 100 feet deep; levels, 350 feet. Date of commencing developments, 1863; amount expended in developing property to January 1, 1881, $45,000. This company's property has been worked at intervals on tribute, on a small scale after 1865, when work on the company's account was definitely suspended. There is no water on property for stamping purposes. Date of organization, 1863: yield to January 1, 1882, twenty-one tons, 1,819 pounds; total amount of assessments levied, $50,000.

Huron Copper Company is chartered under the laws of the State of Michigan. D. L. Demmon is Sec. and Treas.; Capt. Johnson Vivian is Supt. Office, Boston, Mass. The company's property is located on the south side of Portage Lake, Houghton county, Mich. The prospects of the property are favorable under vigorous and intelligent management. There are about eighty men at work. Date of organization, 1880; capitalization, $1,000,000; par value per share, $25; yield to January 1, 1881, 3,847 tons, 431 pounds. Yield during 1881, $46,448.98; yield refined copper, 1881, 127 tons, 575 pounds. Stock quoted July 1, 1882, $1.73.

Isle Royal Mining Company (The) is chartered under the laws of the State of Michigan. F. W. Chapin is Sec. and Treas.; Graham Pope, of Houghton. is Supt. The offices are at New York. The property is located in Houghton county, Mich., and comprises an area of 501½ acres. The ore is an almost pure metal of 80 per cent. The shaft is 800 feet deep. Length of adits, 3,000 feet. In January last, the property, mining plant, etc., was reported in somewhat ruinous condition. Developments were commenced in 1852. The net yield to January 1, 1881, is 4,538 tons; yield during 1880, 45,860 pounds ingot copper; during 1881, twenty-three tons, 1,308 pounds; refined copper, $1,500,000 has been levied for assessments.

Knowlton Mining Company (The) is chartered under the laws of the State of Michigan. Capt. Dunn, Supt. The property of the company, consisting of 600 acres, is located in Ontonagon county, Mich. The ore is an epidote quartz, calcic chloride, etc., assaying 62 per cent. The length of the main lode on which the company depends for its supply of ore is 1,100 feet. Since 1867 the mine has been worked on tribute, producing from three to forty-five tons per year. The company was organized in 1853. Developments commenced 1862. Yield (net) to January, 1881. 263 tons, 973 pounds.

Linden Mountain Mining Company. The officers are M. H. Hegarty, Pres.: office, 8 and 10 Pratt Street, New York. J. W. Kalley, Treas.; office, 211 Montague Street, Brooklyn, N. Y. The company's property is located in Colorado. The company's mine is rich in gray copper, reported to be among the richest mines in San Juan district, Hensdale county, Col. Capitalization, $1,000,000; par value per share, $5.

Schmidt Madison Mining Company (The) has its offices in Boston, Mass. Chas. H. Ward is Sec. and Treas.; Mr. Jos. Snell is now Supt. The property of the company is located in Keweenaw county, Mich. The mine is described as fissure, the working being on three veins. This mine seems to have been worked in an unskillful manner, but will probably be worked more cautiously in future. Organized, 1859; capitalization, $1,000,000, in 40,000 shares, of $25 each; yield of refined copper during 1881, 1,534 pounds; value, $279.95. Six assessments levied. First assessment levied March, 1863, $1 per share.

Megantic Consolidated Copper Mining Company of Canada has property in the township of Leeds, Megantic county, Province of Quebec, covering an extent of 4,000 acres. Mr. W. G. Bunham is Supt. The mine furnishes talcoid, mica slates, lenticular mass, and interstratified beds of copper ore. The mining plant and other property comprises buildings and machinery of the most improved construction; 150 horse-power engine, main shaft house, smith and machinery shop, saw-mill and carpenter shop, three large store-houses, barn and two stables, harness and tool house, twelve tenement houses, and one boarding house, store and office. Total cost of same, $100,000. Capitalization, $3,000,000, in 300,000 shares of $10 each.

Meadow Mining Company (The) has property located in Keweenaw county, Mich. The mine or property is crossed by transverse fissure veins, which, when first discovered, were lined with ancient pits containing considerable copper. The company was organized in 1853.

Mesnara Mining Company (The) is chartered under the laws of the State of Michigan. The officers are A. M. Byers, Pres.; W. H. McCurdy, Vice-Pres.; J. H. Outhwaite, Sec. and Treas. The offices are at Boston, Mass. The property of the company is located in Houghton county, Mich., having an extent of 160 acres, held under lease from the Atlantic Iron Company. The ore, a hard hematite, has an epidote matrix. The vein is true fissure. The mine has a fifty-foot shaft and other workings. Operated since 1876, when it passed into the hands of the Pewabic. The company originated from the discovery of an eighteen-ton mass. This mass had been moved forty-eight feet from its original bed by the ancient miners, and was buried beneath the earth, on which was growing trees corresponding in size with those of the surrounding forest. Organized, 1862; non-assessable. The stock of this company is taken by individual shareholders of the Atlantic Iron Company; said stock or shares being subject to additional assessments not to exceed $1.50 in all.

Minong Copper Company (The) has its offices in Detroit, Mich. Hiram Walker, Pres.; E. W. Hudson, Sec. and Treas. The property of the company is located near W. McCargoe's Cove, Isle Royal, Houghton county, Mich. There is little being done, the work being done on tribute. The company was organized in 1874. The yield to January 1, 1881, was 230 tons; in 1881, the yield was seven tons, 1,897 pounds refined copper of the value of $2,809.95.

Michipicoton Native Copper Company (The) has property located in Michipicoton Island, Lake Superior district, Canada. The ore is stamp rock, averaging two and one-half per cent. copper. There are several shafts, varying from sixty to 100 feet in depth. One hundred men are employed. Developments, so far, have not been rewarded with success. The stock of the company is quoted in London, England. at £1 1s. 8d. to £1 1s. 4d. per share, equivalent to from $5.20 to $5.12.

Mendota Mining Company's property is located near Lac la Belle, Mich. They own 4,300 acres of land, and have a grant of 100,000. The character of the ore is sulphuret of copper, and carries gray, black, and copper pyrites. The company owns hoisting-engine, rock-crusher, and fifteen houses.

Metropolitan Iron and Land Company. The officers are

S. P. Burt, Pres.; R. C. Hanna, Sec. and Treas.; Superintendent, Jeff Day. The company's works are located in Marquette county, Mich. Leasehold, 520 acres. The ore is high grade, hard, and of a bluish color. Analysis gives sixty-four to sixty-eight per cent. metallic iron, low in phosphorous. The extent of deposit has not been ascertained, but has every appearance of being large. The company has a new plant of machinery, consisting of 310x12 duplex Rochester engines, with six and one-half foot drums. Length of adits, that is, levels, 1,000 feet. A force of fifty men are employed.

National Copper Company (The) is chartered under the laws of the State of Michigan. D. L. Demmon, Esq., is Sec. and Treas. Ed. Parnell, of twenty-five years' experience, is Superintendent. Offices are at No. 19 Congress Street, Boston, Mass. The property of the company is located at Rockland, Ontonagon county, Mich.; extent of same, 1,514 acres. The ore gives an assay of seventy-two per cent. Developments commenced in 1855; ceased working in 1870; recommenced on tribute, 1871. Long and costly litigation with the Minnesota about the title of 115 acres of land; decided finally in favor of National, but the mine, at present, is not working, although plenty of ore is obtainable. The company prefers waiting for railway facilities b fore expending anything more in developments. This may account for the neglect and dilapidation everywhere apparent about the mine. Organized, 1848; capitalization, $500,000, in 20,000 shares of $25 each. $360,000 total of dividends paid to November, 1877, the date of latest dividend. $18,000 levied on assessments; date of latest assessment, October, 1877. Stock quoted January 1, 1882, $1.25 per share.

Nepiune Mining Company. The officers are Charles Deering, Pres.; John M. Reck, Treas.; Dr. Sylvester, Sec. Office, Portland, Maine. The company's property is located at Cross Island, Macheas Bay, Maine. Samples of the ore shown, are the purest copper sulphurets, thirty-three and one-half per cent. The company has been offered $120. Prospect shaft is twelve feet deep. The main lode on which the company depends for its supply of ore is 1,500 feet in length.

Nonesuch Mining Company (The). The officers are R. P. Wade, President; J. H. Wade, Secretary and Treasurer. Office, Cleveland, Ohio. The company's property is located in Ontonagon county, Mich. The ore yields a low percentage of copper, assaying about sixty-two per cent. per ton. The lode has a uniform width of seven feet, copper being distributed through the bed with remarkable uniformity. The company's property includes a twenty-five-horse-power engine, washing apparatus, (after pattern of lead washing apparatus used in north of England), turbine overshot wheel, twelve good log dwelling houses, offices, store houses, etc., etc. The prospects of the property are favorable under the practical and able management of Captain Hooper. In 1876 Mr. Wade died, when work was discontinued. About 1878 the property was leased to Captain Theo. Hooker for seven years, conditionally to owners receiving twenty-five per cent. of product. Date of organization, 1867; capitalization, $1,000,000; par value per share, $25; yield during 1881, $21,728.63; yield, refined copper, 59 tons, 1,061 pounds. Stock and bonds held principally at Cleveland, Ohio. Average cost for stoping, ten to eleven dollars per cubic fathom; average cost for sinking, ten dollars per foot; drifting, five dollars per foot.

North American Mining Company (The) is chartered under the laws of the State of Michigan. The officers are Thomas Dickwell, President; Waterman Palmer, Secretary and Treasurer; Superintendent, Captain W. E. Dickinson. Office, Pittsburg, Pa. The company's property is located in Keweenaw county, Mich., covering an area of 2,400 acres. The vein is irregular and variable in width; seems to be split in three parts. The company's property includes a pumping engine, three hoisting engines, and a number of houses, including shaft houses; 150 acres of land is said to be under cultivation and producing excellent crops. The shaft is 415 feet deep. The prospects of the property were favorable at first. Date of organization, 1848; capitalization, $300,000; par value per share, $50; yield to January 1, 1882, 446,000 pounds after smelting and refining; total amount of assessments levied, $233,864, in addition to original capital of $500,000.

Ogima Mining Company (The). Officers, Samuel Cooper, Secretary and Treasurer; L. Collins, Agent, Greenland, Mich. Principal office, New York. The mining property of this company is located in Ontonagan county, Mich. The ore assays per ton seventy and seventy-five per cent. The property owned by the company consists of twelve dwelling-houses, stamping, pumping, and hoisting machinery. Operations were stopped in 1868; since worked by a few tributers where not prevented by water. Tributers paid seven cents per pound for copper got out. Capitalization, $500,000; yield, net, to January 1, 1881, 472 tons 167 pounds; yield during 1881, 3,061 tons 62 pounds; yield, gross tons, to 1881, refined copper, 8 tons 776 pounds; amount latest dividend, $15,000.

Old Dominion Copper Mining Company (The) is chartered under the laws of the State of New York. Officers are George W. Dunn, Pres. Stockholders, Jessie R. Grant (son of Ex-President Grant), J. Reilly, J. Cooke (of H. D. Cooke & Co.). Bankers, Washington. Principal offices, 72 Broadway, New York. The names of mines owned by the company are, viz.: New York, Chicago, Copper Mine, and the Old Dominion, located at Glove district, Gila county, Arizona. Each mine is 1,500 by 600 feet. Titles, perfect. The ore is very rich, chiefly red oxides, blue and green, carbonates and glance, assaying $57 in gold to the ton. Company own three furnaces. Length of tunnel, 375 feet. Width of level, five feet. After going ten feet, found the body of ore, coming from the level above, fully three and a half feet in width, pitching in the same direction with the level. Work was resumed on the level, which is now in eighty-eight feet. It still carries with it the free gold. In cutting through from tunnel to shaft we struck some of the best ore yet found in the mine, assaying forty to fifty per cent. copper. The ore vein steadily improving, and width of vein increasing as we advance into the hill; eight hundred feet all told of shafts and tunnels have been run, which are in ore most of the distance. Open cuts disclose a very wide vein—in fact, so wide in places as to appear incredible. Some forty tons of ore taken from an open cut some two years ago yielded, as I am informed, over thirty-five per cent. of copper. There are two veins running entire length of mine, making in the three properties over a mile of ore vein, yielding an average of over thirty-five per cent. copper. The Old Dominion has shipped 170 tons of copper of the value of $61,500 for twenty-one days ending July 8, 1882. Every day increases; immense value of property, and is very favorable. Capitalization, $2,000,000; shares, 200,000; par value, $10; non-assessable; full paid.

Omega Copper Mines (The), opened by Hummel & Meng, of Philadelphia, and Tully & Co., F. G. Hughes, and T. J. Jeffords, New York, and of which Mr. Fred. Hughes is Supt., are located in Santa Reita Mountains, Arizona, twenty-five miles south of Tucson.

Original Hidden Treasure Company (The). The mines are located on Measure Hill, White Pine county, Nev. Capitalization, $2,133,000; shares, 21,333; par value, $1; number of assessments levied, 11; total amount of same, $330,000; date of latest assessment, October 12, 1874; 2,600 feet in mine.

Osceola Consolidated Mining Company (The) has its offices at 178 Devonshire Street, Boston. The officers are Jas. D. Clark, Pres.; A. S. Bigelow, Sec. and Treas. Mr. John Daniels, Osceola, Mich., is Agent. The property of the company is located in Houghton county, Mich. The plant comprises stamping-mills, rock-house, engines, machinery, buildings, etc. Developments commenced in 1873, prospects at present promising; report says that fresh discoveries of ore are being frequently made as developments progress. Organized, 1873 (originally); re-organized, February, 1880; capitalization, $1,250,000, in 50,000 shares of $25 each. In 1881 the product of the mines was 4,797,396 pounds of mineral, which being smelted yielded 87,130-1000 per cent., or 4,179,976 pounds of refined copper, for which at about 17.76-100 cents per pound has been realized the sum of $742,585.84; from sales of silver, $2,604.25; from receipts of interest, $8,894.96, making gross receipts, $754,175.05; expenses at mine were $439,491.08, other expenses, $88,178.99, making total cost of copper, $527,670.07, leaving a mining profit of $226,504.08; deduct amount of construction, $46,128.38, leaves as net profit $180,376.60, add balance of assets January 1, 1881, $301,041.39, less dividends paid in 1881, $225,000, $166,041.30, leaves as balance of assets January 1, 1882, $346,417.99, from which a dividend of $50,000 was declared payable January 2, 1882. Date of latest dividend, April 1, 1882, $1 per share; date of latest assessment, November, 21, 1879; stock quoted from thirty to thirty-seven per share; current value of mine, $1,650,000; saving of forty per cent. effected by stoping with powder drills; saving of twenty per cent. effected by drifting with powder drills; current value of the mine now, $1,850,000; capital stock, $1,250,000.

Pewabic Mining Company. D. L. Demmon is Sec. and Treas.; Capt. J. Vivian, Superintendent; J. Hay, Mining Engineer. Office, 0 Congress Street, Boston, Mass. The company's works are located in Houghton county, Mich. Amount of property in acres, 1,205. The company owns four Ball's stamps, Collum's washers, Evans' slime tables, new compressor and engine, pumping, hoisting machinery and engines, houses, offices, etc. The development of the property was commenced in 1853. The mine was worked on tribute part of the time, after 1868, under Capt. Wren. Date of organization, 1853; capitalization, $400,000; par value per share, $100; yield to January 1, 1881, 11,519 tons, 320 pounds; yield during 1881, $342,414.53; yield refined copper during 1881, 938 tons, 244 pounds; number of dividends paid to January 1, 1882, one; amount of dividend paid, $460,000; first assessment was levied in 1855, amount, $15,000; stock quoted, July 1, 1882, $10 asked, $9.50 bid.

Phenix Copper Company (The) is chartered under the laws of the State of Michigan. Directors, A. W. Spencer, J. W. Ward, Mark Healy, B. W. Balch. Residence, all Boston, Mass. Simon Mandlebaum, Eagle River, Pres.; H. W. Spencer, Gen'l Treas.; Horatio Bigelow, Simon Mandlebaum, former Superintendent. M. A. Delano, Superintendent at present. Eastern business office, 8 Pine Street, Boston. The mines are located in Keweenaw county, Mich. The former extent of property in acres consisted of 34,500; company own at present 2,477 acres. Developments commenced 1850. The ore assays 144 pounds to the ton. The character of mines consists of five distinct veins, low percentage of stump rock. Property owned—stamp-mills, hoisting and pumping machinery, etc., also productive farm land. In 1878 work progressing rapidly and the property gradually improving. Minimum product, 640,555 pounds, yielding seventy-five and one-half per cent. ingot = 521,081 refined copper at $30\frac{63}{100}$ cents per pound. Profit about $5,000, expended in improvements. In this year a terrible explosion of dualine occurred at the mine killing six men, including Captain John Haalston, who was succeeded by Captain Edward Parnell, as mining captain. The cost of mining and milling per ton, $347.20. The company was organized on the 31st of March, 1849. Capitalization, 3 000 shares; par value, $100; yield net to January 1, 1881, 2,971,450 pounds; yield net during 1881, $74,707.65; yield gross tons during 1881, refined copper, 201 tons, 132 pounds; number of dividends paid to January 1, 1882, one; amount, small.

Piedras Verdes Copper Mining Company. The officers are W. L. McAfee, Pres.; E. M. Knox, Vice-Pres.; S. M. Hamilton, Sec. and Treas. Office, 31 United Bank building, corner Broadway and Wall Street, New York. The company's property is located in the district of Alamos, State of Sonora, Mexico. 5,000 shares of the working capital placed on first allotment at the price of $2.50 per share, the proceeds of which it is estimated will be sufficient to procure smelting furnaces. Capitalization, $2,500,000; par value per share, $25.

Ridge Copper Company is chartered under the laws of the State of Michigan. The officers are Thomas F. Mason, Pres.; W. Hart Smith, Sec. and Treas.; Capt. S. B. Harris, Greenland, Mich., is Superintendent. Office, 4 Exchange Place, New York. The company's property is located in Ontonagon county, Mich., and covers an area of 1,494 acres of land. The ore assays seventy-two per cent. to the ton. The prospects of the company are reported as very favorable. The mine is remarkable for contortion of the veins. Date of commening developments, 1849. Date of organization, April, 1850; capitalization, $500,000; yield to January 1, 1881, 2,175 tons, 1,775 pounds; yield during 1881, $42,998.10; yield refined copper, 117 tons, 1,606 pounds; total amount of dividends paid to January 1, 1881, $100,000; date of first dividend, 1872; amount, $50,000; date of latest dividend, January, 1880, fifty cents per share.

Rockland Mining Company is chartered under the laws of the State of Michigan. J. B. Townsend is Superintendent. The company's mining property is located at Ontonagon, Mich. Amount of property in acres, 760. The ore assays seventy-two per cent. to the ton. Developments were commenced during 1853. The mining property has been worked on tributes since about 1870. Date of organization, September 27, 1853; capitalization, $500,000; par value, $25; yield to January 1, 1882, 3,105 tons, 309 pounds; yield rough copper during 1880, 47,000 pounds.

San Francisco Copper Mining Company. Jeffery Queen, Pres.; A. Boel, Treas.; Superintendent and Manager, W. E. Ellis. The company's mine is located in Nevada county, (near Spenceville,) Cal. The company has worked the mine for several years, and report says, May 20, 1882, has recently brought it to a paying basis. The ledge is becoming richer as depth is attained. The first dividend was paid May 20, 1882.

Santa Reita Company's property is situated in the Black Range, New Mexico. The company has about 15,000 tons of ore on hand that is expected to run high in copper. The mill is running steadily on copper ore from the mines. It is found that the coarse copper, as saved and cleaned up from the batteries twice a day, is running ninety-five per cent. fine, and of sufficient purity to ship direct without smelting. The number two concentrations from jigs run ninety-five per cent. to seventy-five per cent. fine copper, and the number three slime concentrations run from thirty to forty per cent. fine; both numbers two and three concentrators go to the smelter. The company employs 100 men, who mine 200 tons of ore per day.

Seneca Mining Company (The) has offices at 198 Devonshire Street, Boston, Mass. The officers are Joseph W. Clark, Pres.; A. F. Bigelow, Sec. and Treas.; Superintendent, Capt. Daniels. The property is located in Keweenaw county, Mich. The mines are described as a conglomerate belt. The mining plant includes hoisting and pumping engines, machinery, and twelve dwelling-houses. The ground is low and somewhat wet.

Sheldon and Columbian Mining Company (The) is chartered under the laws of the State of Michigan. The property is located in Houghton county, Mich., and is controlled by J. H. Forster, of Houghton, Mich. The copper assays 71⅛ per cent. There is no mining plant or other property about the mine, all having been disposed of. The buildings certainly remain. The mine is therefore in a forlorn condition, with little prospect of a change for the better. Developments were commenced in 1853. Since 1870 it has occasionally been worked on tribute. Capitalization, $500,000, in 200,000 shares of $25 each; yield to January 1, 1881, 696 tons 1,394 pounds; yield during 1881, five tons thirty-one pounds refined copper; value of same, $1,830; $460,000 levied in assessments; stock held principally in Michigan.

Star Mining Company (The). Officer, J. B. Maas, President. The Star mine, belonging to this company, is located in Houghton and Keweenaw counties, Mich.; fine-looking hematite ore; deposit lies in low ground; property owned, one four and one-half inch Knowles' pump, sufficient to keep workings dry; small engine drum does the hoisting; railroad and Eastport close at hand; developments were commenced in 1851; some interest recently awakened by the discovery of a deposit of black oxide of copper, Harbor Vein, which was soon worked out; yield during 1881, $138.33; yield during 1881, refined copper, 758 pounds.

Toltec Consolidated Mining Company. Joseph Vild is Sec. and Treas. Office, Boston, Mass. The company's property is located in Ontonagon county, Mich. Depth of shafts, 1,000 feet. Length of adits—that is, levels—1,700 feet. The development of the property was commenced March 8, 1851, and $300,000 is said to have been expended in developing the property to January 1, 1881. The property includes houses, stamp-mill, and pumping machinery. There are considerable expensive surface improvements. Date of organization, 1850; yield to January 1, 1881, 206 tons, 1,433 pounds. Stock in its infancy quoted well in market, $18 to $20 per share.

The St. Genevieve Copper Company, of which Frank Nicholson, Esq., is Supt., has property located at St. Genevieve, Mo. The product will rank in purity with the celebrated Lake copper. Prof. Potter, of Washington Ter., is making an analysis, and thus far is able to pronounce it the finest produced in America. Capitalization, information not obtained.

U. S. Copper Mining Company (The). The company's property is located at Somerville, N. J. The ore is said to be of excellent quality.

Warrior's Mark Mining Company (The). Officers, George Puterbaugh, Pres.; J. J. Loomis, Gen. Man. Principal office, Breckinridge, Col. The names of the mines owned by the company are Snow Drift Mine, located near Breckinridge Pass, Summit county, Col. High grade gray copper ore, assaying 9,220 ounces per ton. Fissure veins extend 700 feet to the south, at an angle of fifteen degrees, 1880. The most remarkable mineral development is found at the quarry; here the county rock on both sides of the vein is the red micaceous sandstone of the belt. The vein expands to a width of 200 feet. The ore here found is, however, much of it as rich in silver as any of which record has been made. Many of the veins of gray copper are found to extend up through the drift to the grass roots, the drift varying in thickness from one to two feet. Capitalization, 300,000 shares; par value, $10.

Washington Copper Mining Company (The) has property located in Somerville, N. J. Operations proceeding day and night, said to be developing an extensive body of ore of excellent quality.

Yakoma Copper Mining Company (The) is chartered under the laws of the State of New York. The officers are Wm. S. Hoyt, Pres.; Henry Cummins, Vice-Pres.; J. H. Work, Treas. Directors, C. J. Franklyn, John J. Safely, R. Foster; Sec., E. Washburn. The offices are at 120 Broadway, New York, room 40 Equitable Building. The property of the company is located at Globe City, Arizona. Capitalization, $1,200,000, in 48,000 shares of $25 each. Treasury stock consists of 8,000 shares.

GOLD.

Ætna Mining Company is chartered under the laws of the State of California. The officers are J. F. Weatheriner, Pres.; A. F. McGrew, Vice-Pres.; F. M. Blackstone, Sec. Office, 420 Montgomery Street, San Francisco, Cal.; transfer office, 140 South 4th Street, room 6, Philadelphia. This company are the owners of the Ætna Mines, located in Globe district, Arizona. The ore is of a porphyry formation, thoroughly impregnated with oxide of iron, giving a gold assay of $361 per ton. Vein of quartz is more than three feet in width; croppings show entire length of claim, traceable for more than a mile. Capitalization, $10,000,000; par value per share, $100; assessable. Stock reserved in treasury, 10,000 shares. Stock listed on the Philadelphia Mining Annex and California Stock Exchange.

Alamosa Mine (The), owned by Mr. M. M. Giles. The mines are located at El Dorado district, Utah. Assays as high as $540; main shaft forty feet, penetrated a ten-foot vein carrying free gold in paying quantities.

Albington Gold Mining Company (The). Mr. Platt McDonald, Manager. The name of mine, owned by this company, is the Lizzie Abbington, located in Colorado. Quality of ore very fine, composed of gold, silver, and copper. Character of mine are veins, three to five feet in width. The mineral carries from two to five ounces in gold, seventy-five ounces in silver, about 15 per cent. in copper.

Alexander Mining Company. Branch office, 328 Montgomery Street, San Francisco, Cal. Annual election held during October. The company's mine, the Alexander, is located in Grantsville, Nye county, Nev. Large bodies of pay ore are in sight, and it is thought to be one of the biggest mines ever opened in Eastern Nevada. The quartz assays $93 per ton. Length of main lode is 4,500 feet. The company have a capitalization of $5,000,000, in 50,000 shares of $100 each. Yield during 1880, $236,152. Paid their first dividend, January, 1882; amount of which was $100,000, being at the rate of $2 per share. First and only asssessment levied, October 31, 1881; amounting to $150,000.

Alpha Mine (The). Messrs. Kirkham and Hitchcock, owners. Name of mine, Alpha. Located in Idaho, Nevada county, Cal. Character and quality of ore, yielding rock so exceptionally rich that the owners realize big wages. Working only an arrastra and hand mortar. Mohican turning out ore that goes about $30 to the ton. 1880.

Amador Consolidated Gold Mining Company (The). Location of mines, Amador county, Cal. Capitalization, $3,000,000; 30,000 shares; par value, $100. Number of dividends paid to January 11, 1879; total amount, $3,347,500; date of latest dividend, January 14, 1879; twenty-six cents per share. The last set of timbers has been placed in the shaft, and prospecting for the ledge will commence in due course. Twelve men were employed in sinking shaft; this force will be increased in proportion as developments proceed and permit. The company has a five-stamp mill, which ran a short time on ore from the St. Louis mine.

Antioch Mining Company. Messrs. Wood and others, owners. Location on Breece Hill, Colorado. Quality and character of ore, gold and silver; very fine. The property owned by the company, engine mill, shaft house. Prospects of the property, etc., substantial preparations are being made for working the mine properly. The old quartz mine at Oro City has been secured, and will pass into the possession of the Antioch owners, January, 1882; it will be improved, and the facilities for shipping the ore down the hill to Oro will be provided.

Argentine Quartz Mine (The). Thompson Bros., owners. Located in Plumas county, Cal. Company own a five-stamp mill. Gold is very fine; will sell at $18 per ounce; $400 and $500 has been received from the mine, result of a ten days' run of the mill.

Aurora Gold Mining Company is chartered under the laws of the State of New York. Office, 31 Broad Street, New York. The company's property is located at Whitewood, Black Hills, Dakota. The ore gives a gold assay of $19 per ton. Date of organization, December 20, 1878; capitalization, $500,000; par value per share, $10; basis, non-assessable.

Aurora Gold Mining Company (The) owns a group of mines, comprising the Charter Oak, Gem, North Eclipse, Ezra White, Effie, Blagden, and Augusta May, all located in Gilpin county. The Charter Oak has been reopened and cleaned out to a depth of 110 feet. The shaft, regardless of expense, has been put into proper condition for deeper working. New hoisting and milling machinery has been erected. The main shafts of the Gem and North Eclipse have also been put into good working condition, and the result of the current year should be a large and profitable production.

Bald Mountain Extension Company. Their property is located at Forest City, Sierra county, Cal. The company have now completed their preparations for bringing down water from the pliocene shaft, and ten inches are steadily flowing into the reservoir at Forest City. There are 800 car-loads of gravel in the lower dump, a large portion of which is rich. As soon as the lengthy run of sluices is finished, the lower dump will be cleared; and when the new iron air-pipe is all received, and put up in the main tunnel, 3,600 feet to the incline and gangways, the main tunnel will be turned up the ridge, through the center of the channel, and gangways run to the right and left, affording constant employment to a large force of men. The future prospects of the mine are encouraging, as it is being demonstrated that the extension of the main lead of the noted Bald Mountain claim comes through the extension ground for three miles, and beyond to Gold Lake. The gross yield of the Bald Mountain for the past eight years has been very close to $3,000,000, half of which was dividends on the trifling investment of $20,000 for opening the mine.

Baltic Gold Mining Company. The officers are Henry D. Morse, Pres.; J. W. Brady, Treas. Office, 31 Milk Street, Boston, Mass. The company's works are located at Grass Valley, Cal. Amount expended in developing property up to 1882, $12,000. Organized at Saco, March 19, 1881; capitalization, $200,000; par value per share, $2; basis, non-assessable.

Banner Mining Company (The). The officers are Samuel Conover, Pres.; Thomas P. Malony, Sec. Office, room 36, 63 Broadway, New York. This company's property consists of the Banner mine, of Inyo county, Cal., which is 1,500 by 600 feet, and its appurtenances. This mine was located in December, 1879, by John H. Ely, and is situated in latitude 37° North, and longitude 118° West, on the Inyo Mountains, in southeastern California, about fifty miles north of Owens lake, and two miles from Owens river. This property being in a county of fabulous mineral deposits and adjoining the famous Union mine, which has given out $17,000,000 in ten years, is well worth attention. The company have a capitalization of $1,000,000, in shares worth a par value of $5 each.

Bechtel Consolidated Mining Company. W. H. Lent, Sec., 309 Montgomery Street, San Francisco, Cal. This company's property is located in Bodie district, Cal., covering an area of 900,000 square feet. The lowest grade rock in the Bechtel Consolidated mine will give a milling average of $18 per ton. The cost of reduction is $10, leaving $8 as net profit per ton. There are inexhaustible bodies of low grade ore in old workings. The three ledges of this mine show a disposition to unite into one solid bed at a depth of from 600 to 800 feet. The company have commodious hoisting works, erected with powerful machinery, capable of working to a depth of 2,000 feet. The old shaft has reached the depth of 700 feet; the present, that of 513 feet. The first clean-up after a three weeks' run amounted to $53,952. It is reported that this company will be joined with the Bodie Tunnel to form one company. Capitalization, $10,000,000; par value per share, $100. Yield of the Bechtel Consolidated:

1878	$58,634 93
1878—crude bullion in October	1,550 00
1879	11,506 05
Total	$71,690 98

Number of assessments levied, eight; total amount, $215,000; date of latest assessment, December 3, 1882, twenty-five cents per share; bonds reserved in the treasury April 1, 1882, $1,128; indebtedness February 1, 1882, $8,930.53; working expenses, $3,500 per month. The financial statement shows the annual working expenses to be $765,813.66, $35,000 of which is for mine labor.

Black Bear Quartz Gold Mining Company. The officers are Thomas Bell, Pres.; S. Heydenfeldt, Vice-Pres.; Alpheus Bull, F. Logan, J. Daggell, Wm. Letts Oliver, Sec. The company's works are located at Black Bear Gulch, Siskiyou county, Cal. There are 4,500 feet in mine. Capitalization, $3,000,000; par value per share, $100; yield to January 1, 1881, $129,400; total amount of dividends paid to July, 1882, $878,500; number of assessments levied, fifteen; total amount of same, $15,000; shares not in market.

Black Hawk Gold Mining Company (The). Officer, H. A. Charles. Principal office, 419 California Street, San Francisco, Cal. Location of mines, Brodie district, Cal. Amount of property in acres, 410 by 1,500 feet. Character of mine, three veins, ore better grade on upper level than below and less mixed, say $40 per ton. Hoisting works belong to the company. Dimensions of workings is by tunnel, 450 feet in length. Working expenses per month, $3,000. 100 tons of mineral on the dump; 1,000 in sight in the mine. 1,500 feet in mine. Capitalization, $5,000,000; shares, 50,000; par value, $100; assessments levied, thirteen; dividends, none; total amount assessments, $185,000; date latest assessment, November 9, 1881; amount per share, ten cents; stock quoted January 1, 1880, $5, reached highest point; cash on hand February 1, 1882, $148.77; cash on hand April 1, 1882, $273.

Blue Tent Hydraulic Mining Company (The) have consolidated with the Fall Creek Lake Water Company, and will be known as The Yuba River Gold-Washing Company, Limited. The consolidation owns about thirty-five miles of ditches. The Blue Tent claims, located in

Nevada county, Cal., are among the principal hydraulic mines in the county, and employ about 100 men, using five monitors for washing, with a head of water amounting to 2,500 inches.

Bonanza Mine (The) owned by Sidney C. Brown. The Bonanza Mine is located in Calaveras county, Cal., near Copperopolis. Quartz mining.

Bobtail Consolidated Gold Mining Company (The) owns property located in Gilpin county, Col. The Bobtail mine, owned by this company, is one of the principal producers of this district. The shaft is now about 1,000 feet in depth. The mine is a labyrinth of drifts and levels, total extent of same being 2,260 feet. The shaft is cut at the 500-foot level by the main tunnel, 1,440 feet from its mouth, and the ore raised to the tunnel-level is run out on a tramway direct to the mill, which has a capacity of 125 tons per day. Many improvemeuts are added to the mine, machinery, etc., which facilitate operations, and reduce the expenses of working. About 250 men are employed. The current value of the mine is $454,652. Capitalization, $1,136,630; par value per share; $5; non-assessable. Number of dividends paid to March 30, 1880, four; total amount of same, $147,161; date of latest dividend, March 30, 1880—ten cents per share. Stock quoted June 10, 1882, $2.

Bonanza Chief Gold Mining Company is chartered under the laws of Montana Territory. The officers, in 1880, were W. W. Wicks, Pres.; Michael Snow, Vice-Pres.; R. F. Brooke, Sec. Office, 35 Broad Street, New York. The company's property is located eight miles from Helena, Montana. The character of the ore is gold. Value per ton, $10. The company are pushing mining operations with great energy, employing 300 men. The furnaces are turning out about two car-loads of base bullion per day. Company owns twenty-stamp mill and steam hoist, etc. Date of incorporation, 1879; capitalization, $1,000,000; par value per share, $1; non-assessable.

Booth Gold Mining Company (The). Principal office, No. 314 Pine Street, San Francisco, Cal. Mine located at Auburn, Placer county, Cal.

Boston and Halifax Gold Mining Company's (The) works are located near Fifteen-Mile Stream, New Glasgow, covering an area of 130 acres. The company owns a fifteen-stamp crusher, and it is intended to furnish a first-class plant at a cost of $100,000. The government has made a grant of $800 towards repairing the road to the gold field. Company was organized at Boston, May, 1882, having a capitalization of $500,000.

Boston and Montana Gold Mining Company. L. R. Nettin is Supt. The company's works are located in Montana. Character of the ore found is all pay ore. The vein is from twelve to fifteen feet wide between walls. Rock is followed for a distance of 1,100 feet. The mine is well timbered, with a security that admits of no fear of accidents. There are 115 tons of milling ore on the dumps. The company have the latest improved machinery, including two mills, one a twenty-stamp, of twenty ton capacity; the other, a sixty-stamp, crushes eighty tons per day of twenty-four hours. Sectional area of shaft, six feet by sixteen feet, 1881. Capitalization, $2,000,000; par value per share, $10; total amount of dividends to July 1, 1882, $360,000; date of latest dividend, July, 1882, ten cents per share.

Brewer Mining Company (The) are the owners of the Brewer Mine, located in Chesterfield county, S. C., twenty-nine miles south from Monroe. The character of the mine is gravel, admirably fitted for hydraulic treatment. The company have an abundant water supply, pump supplying 1,000 gallons per minute.

Briggs Consolidated Gold and Silver Mining Company (The). Location of mines, Colorado. Capitalization, $2,000,000; shares, 200,000; par value, $10. Number of dividends paid to December 10, 1879, amount, $8,000. Date of latest dividend, four cents per share.

Buffalo and Idaho Gold and Silver Mining Company (The) have property located in the vicinity of Atlanta, Alturas county, Idaho. The Superintendent, Mr. W. W. Miller, speaks enthusiastically of the prospects of the company. It must be remembered that it is in a rich or gold producing locality.

Buena Gold Mining Company (The) is chartered under the laws of the State of Colorado. Officers, Thos. H. Gill, Pres.; M. Newkirk, Vice-Pres.; E. H. Green, Treas. Directors, Jos. C. Murphy, D. R. Patterson, John M. Fox, James A. McCowlas, William Rosengarten, J. H. C. Whiting. Principal office, Jamestown, Colorado. Transfer office rooms, 27 and 29 312 Stock Exchange Place, Philadelphia, Pa. Names of mines owned by the company are Buena, Michigan, Ben Franklin, Bouncer. A mill site belongs to the company, with a capacity of twenty-four tons per day. Four shafts each, of 100 feet, seventy feet, fifty feet, and twenty feet; tunnel 255 feet. About 2,000 tons of ore on the dump. Capitalization, 615,384 shares; par value, $10; non-assessable.

Bullion Mining Company. A. J. McDonnell is Secretary. Office, 328 Montgomery Street, San Francisco, Cal. The Bullion mine owned by this company is located at Gold Hill district, Comstock Lode, Nevada. Capitalization, $10,000,000; par value per share, $100; number of assessments levied, twenty-four; total amount of assessments levied to December, 1880, $352,000; date of latest assessment, May 29, 1882; amount per share, twenty-five cents; depth of workings, 2,450 feet; length in feet of the main lode on which the company depends for its supply of ore, 943½ feet; indebtedness March, 1, 1882, $20,431.

Bulwer Consolidated Mining Company (The). Principal office, 309 Montgomery Street, San Francisco, California. Names of mines owned, the Ralston Ledge and the Stonewall. Located at Bodie, Mono county, Cal. Amount of property in acres, 200 feet by 500 feet. Quality and character of ore; low grade at 400-foot level, better quality lower down. In September last (1881) the shaft was down 650 feet. Gold and silver assays $10 to $20 per ton. Character of mine: three ledges from one to four feet wide. Thirty-stamp mill is owned by the company. Stonewall tunnel 1,850 feet; Ralston tunnel 500 feet. Expenses of the company are nominal, accompanied with results and prospects; a small number of men employed. Date of organization, April, 1879. Current value of mine $200,000, 3,000 feet in mine. Capitalization, $1,000,000; yield net:

1879	$241,094 38
1880	117,498 33
Total	$358,592 71

Number of shares, 100,000; a fiscal, 1880, $122,247; par value, $100; number of dividends paid July 12, 1882, total amount, $10,000; date of latest dividend, July 12, 1882; date latest assessment, December, 1877; amount, $50; per share, $10; number of assessments levied, one; total amount of same, $30,000; stock quoted June 10, $2; cash on hand, February 1, 1882, $89,112.81; cash on hand, April, 1 1882, $82,247.00.

Bunker Hill Gold Mining Company (The) is chartered under the laws of the State of New Jersey. Officers are Francis W. Kennedy, Pres.; W. A. Leavitt, Vice-Pres.; Nelson F. Evans, Treas.; Henry H. Kennedy, Sec. Directors, F. W. Kennedy, W. G. Warden, Wm. A. Leavitt, Nelson F. Evans, Peter B. Simons, J. W. Knox, W. L. Palmer. Principal office, 103 Market Street, Camden, New Jersey. Names of mines owned; Bunker Hill, May Flower, and 2,614 feet on Mother Lode. The mines are located at Amador, Amador county, Cal. It is one of the richest and oldest gold quartz mining districts in the State. Amount expended developing property underground $300,000, above ground about $100,000. Property owned by the company: one mill site and superior water privileges; forty stamp-mills with a capacity of from eighty to 100 tons, entirely new, have been built. Prospects of the property: free from all incumbrances, with a surplus fund of $40,000 beyond all current liabilities. Capitalization, 300,000 shares; par value, $10; non-assessable. The shaft is down 500 feet; the bottom of the ledge is about eighteen feet wide with an average quality of about ten per cent. per ton. The Blatchley, Hendy, and True processes for saving sulphurets have all been tried, and the preference given to the True. A Mear's chlorinating furnace is said to save about seven per cent.

Calaveras Water and Mining Company is chartered under the laws of the State of New York. J. P. Marshall, Pres.; R. K. Southerick, Sec. Office, 25 Broad Street, New York. The company's property is located in Calaveras county, Cal. They have a capitalization of $300,000, non-assessable.

Caledonia Gold Mining Company (The). Officers, Thomas Bell, Pres.; F. Locan, Vice-Pres.; W. Litts Obion, Sec. Head office, No. 327 Pine Street, San Francisco, Cal. Mr. W. W. Allen, Supt. Date of annual election, June 7. Mines located in Whitewood district, Dakota. Property owned by the company: pumps, machinery, all working nicely. Prospects of property, etc. Improvement in the appearance of the ore. 1,500 feet in mine; depth of shaft, 107 feet. Yield during 1880, 102,422. Capitalization, $10,000,000; shares, 100,000; par value, $100. Number of dividends paid to January 1, 1882, none. Number of assessments levied, eleven; total amount of same, $440,000; date of latest assessment, March 17, 1881.

Canada Consolidated Gold Mining Company (The) is chartered under the laws of the State of New York. The officers are Henry Loveridge, Pres.; J. W. Loveridge, Sec. and Treas. Wm. H. Doughty, W. B. Walker, C. Butler, Austin Gallagher, Walter Shanley. Date of annual election, January 13, 1881. Head office, room 59, Smith Building, New York. The company's mine is located at Marmora, Ontario, Canada. They own from 800 to 1,000 acres of land. The ore is very rich and remarkably uniform. It yields the large average net profit of from $9 to $12 per ton, without sorting. The gold is of very fine grade, 960 to 980 fine. The main vein has been shown to be continuous over a length of more than 3,000 feet; thickness of from eight to twenty-five feet. The Geological Survey of Canada, from twelve samples taken from this property, found an average assay value of $39.47 gold per ton. The mine has been carefully and thoroughly tested. It is a fact, that in all these tests never has a single sample been found which did not contain sufficient gold to have paid for mining and milling, and often to have left a margin for profit. There are reserves of ore now in sight sufficient to supply 100 tons a day for nearly two years, having a net value of $8,700,000 after deducting expenses. The company own a twenty-stamp mill and boarding-houses. This property has magnificent water-power. Wood costs $1 to $1.25 per cord delivered; labor, $1 to $1.25 per day. Titles perfect, no taxes on mine or mineral, and within twenty-four hours of New York. Capital stock, $500,000, in shares $1 each; fully paid.

Carrahee Mining and Milling Company (The), Georgia, is chartered under the laws of the State of New Jersey. Officers, Henry McConnell, Pres.; Juhu Woods, Jr. Directors, Henry McConnell, Charles N. Selser, Juhu Woods, Jr., Josephus Robert, Wm. R. Thompson, J. S. Doughty, Isaac A. Braddock. Head office, Camden, N. J. Name of mine, Burton Tract. Located in Harrington, Thompson, and Hall counties, Georgia. Amount of property in acres, 700. Quality and character of ore, good. Large percentage in galena, sulphuret, and free gold. Assays per ton, from $18 to $460. Character of mines, four feet vein with assays, from $18 to $460 per ton. Property owned by company: five-stamp mill, with eighteen-horse power engine and boiler. Dimensions of workings, main shaft, down, forty feet; tunnel, 500 feet. Capitalization, 100,000 shares; par value, $1; non-assessable. Amount of stock issued, 87,500 shares; amount reserved in treasury, 12,500 shares.

Castle Creek Hydraulic Company. The property is located in Pennington county, Dakota. The company are engaged in cutting a 500-feet tunnel through a granite promontory, through which it is proposed to drain over a mile of a bend in Rapid Creek, for the purpose of obtaining deposits of gold believed to be very rich upon the bed-rock of the stream. The company own some sixty claims on the creek.

Cataract and Wide West Gravel Mining Company (The). Principal office, 26½ Kearny Street, San Francisco, Cal. Location of mines, Eho mining district, Calaveras county, California.

Charter Oak Gold Mining Company (The). Location of mines, Lawrence county, Dakota. Property owned by the company, ten stamps. Date of organization, April 19, 1881; capitalization, $500,000.

Chaparral Gold Mining Company (The), of California. Head and branch office, Mr. Aldersly, Supt., 61 Broadway, rooms 7 and 8, New York. Registrars of transfers, Farmers' Loan and Trust Company, John Adams, Contractor. Names of mines owned, Chaparral, Champion, Excelsior, Claims. Located in Kelsey Mining district, El Dorado county, Cal. Character of ore, free-milling quartz gold, impregnated with sulphurets, showing some fine free-gold. Character of mines, vein uniform and regular, about five and a half feet wide, all pay ore. Property owned by the company, ten-stamp mill, steam hoisting machinery, and all necessary apparatus. Everything in first-class order. Mines now clear of water, September, 1881, and work resumed. Purchased by Mr. Bernard Lands, for $45,000; $5 per foot for tunnel drawing. Capitalization, $2,000,000; shares, 200,000; par value, $10; non-assessable.

Cherokee Gold Mining Company (The) is chartered under the laws of the State of New York. Head office, 18 Wall Street, New York. The Cherokee mine is located at Greenville, Plumas county, Cal. The ore is free-milling, carrying gold and assays, $10 to $20 per ton. The Cherokee, which was reopened under a new management, has been developed to a considerable extent. A new shaft, the Garfield, has been sunk 204 feet, and a ledge averaging three feet, struck. The shaft is a double compartment, with a cage and guides on one side, at a depth of 100 feet. A cross-cut was run into the hanging wall, which intersected two strong veins of quartz, which milled well. A new level, No. 3, was started, and a fine vein of ore found. The lode is from three to six feet thick, and of excellent quality. Enough is being taken out now to keep the mill running steadily, and the ledge continues to open well. This mine has now been developed enough to prove that it is of great value. Within a distance of 240 feet, four separate ledges have been found, known respectively as the White, Josephine, Kettle, and Old Bach ledges. The first is irregular in thickness, varying from six to twelve feet; the second is about two and a half feet thick; the third five feet, and the fourth about the same. Enough of these have now been opened to furnish work for the mill for a long time to come. The ore is reduced by a twenty-stamp mill run by water-power, situated about a mile and a half from the mine, and below the dam of the Round Valley Reservoir. The mill is valued at $30,000. The main lode is 4,000 feet in length. The yield heretofore has been large, but the property was worked at a disadvantage, no depth was gained. Now, with the help of modern improvements in mining machinery, and with good management, the owners will open up one of the richest mines in the country. Date of organization, January 9, 1880; capitalization, $1,500,000; par value per share, $10; basis, non-assessable. Treasury reserve, January 1, 1882, $4,000; stock held principally in New York.

Challenge Consolidated Mining Company (The) is chartered under the laws of the State of California. The offices are at San Francisco. The properties are located at Gold Hill, Nev. Organized, November, 1879; capitalization, $5,000,000; shares each, $100. Cash on hand April, 1882, $273; total amount of assessments levied to 1881, $10,000.

Cheyne Consolidated Mining Company (The). Officers, Col. G. M. Totten, Pres.; A. C. Edgerton, Vice-Pres.; R. McNaught, Sec. and Treas. Offices at 55 Broadway, New York. The mining properties are located in the Black Hills district, near the Homestake and Father de Smet Mines. The mine is being fitted with an improved hoisting works, and a new thirty-four inch boiler. In the opening of a new cut in the Hoodleberg Mine to connect with old cut, a splendid body of ore was struck, showing a good deal of free-gold. Capitalization, $300,000; shares each, $1; non-assessable, full paid.

Cincinnati Consolidated Mining Company. The property is located in Dawson county, Georgia, and consists of the Baby, Magic, Gnome, Amicolola, Kinmore mines. Most of the known belts of the Dahlonega and Auraria districts are found on these properties. The Magic and Amicolola are the only mines worked to a noteworthy extent, but considerable preparations are projected for enlarged operations.

Cisco Consolidated Gold Mining Company is chartered under the laws of the State of New York. The directors are P. S. Van Renselaer, E. M. Walker, W. L. Oliver, Chas, D. Fink, Charles Kaufman. This company owns eight mines, viz.: the Badger, Riddle, Black Hawk, Charlotte, Last Chance, Cisco, Reynolds, and Keystone, located in Placer county, Cal. The quality of the ore is good, assaying $290 per ton. Some of it running as high as $690. The company own a mill. The tunnel is thirty-four feet in length, and the shaft is down seventy feet. Date of organization, March 23, 1882; capitalization, $10,000,000; par value per share, $100.

Clifton Hydraulic Company (The). Location of mines, on San Francisco river, near Clifton, Ariz. Amount of property in acres, 10,000. Quality and character of the ore, coarse; gravel yields from five cents to $2 per pan. Capitalization, five shares.

Clio Gold Mining Company. The officers are G. B. Flint, Pres.; B. Heath, V.-Pres.; W. Brandreth, Treas.; R. Hall, Sec. Office, 52 Broadway, New York. The property is located at Jacksonville, Tuolumne county, Cal. Capitalization, $500,000; par value per share, $1.

Colombo Quartz Mining Company. Their property is located in Sierra county, Cal. The company are running a tunnel to reach their ledge. They have progressed 170 feet through slate rock. The shaft is thirty-one feet in depth, with rich quartz in the bottom.

Commodore Gold Mining Company (The) is chartered under the laws of the State of New York. Incorporators, F. Shepard, T. J. Van Wyck, P. W. Hohines. Trustees; T. J. Salter, S. Mead, H. Dayton, A. F. Phelps, F. Shepard, T. J. Van Wyck, P. W. Hohines. Location of mines, Goochland, and Fluvanna counties, Va. Capitalization, $250,000; par value, $1. Term, fifty years.

Consolidated Gold Mining Company's works are located at Georgia, Ga. They have a capitalization of $500,000, in 100,000 shares at a par value of $5 each; basis, non-assessable. Total amount of dividends paid to April 18, 1882, $275,000.

Consolidated Yankee Fork Gravel Mining Company (The). Officers, E. B. Hinsdale, Pres.; Silas C. Hay, V.-Pres.; J. Milnor Decker, Sec. Principal office, 31 Broad Street, New York. Capitalization, $500,000; par value, $1.

Constantine Gold Mining Company. Directors, David Porter, N. C. Fassett, A. F. Main, H. W. Jacobs, Geo. Storey. Location of mines, Mariposa county, Cal. Capitalization, $4,000,000.

Columbia Gold Mining Company (The). Officer, Hon. A. M. Keiley. Name of mine owned, Tellurium, located near Columbia Station, Fluvanna, Goochland county, Va. Amount of property in acres, 344. Character of ore, the gold-bearing matrix is slate, quartz, brown oxide of iron, tellurium, etc. An assay of fifty tons of Tellurium ore gave, the lowest $4.80, highest, $137.60, averaging $51.12. Deepest shaft, 120 feet. Professor Stone, of Washington, D. C., assayed some Tellurium mine ore by crushing it and passing it through a sixty holes to the inch seive, then agitated in water and allowed thirty seconds to settle: the water was then poured off, filtered, rinsed, and dried, when it yielded 38.98. This with the gold that subsided made the ore worth 88.06. There are three veins here, the big sandstone, the middle, and the little veins. The average value of the ores from the little and middle veins during the years of the Fisher-Bowles lease was $100 per ton, the minimum $5, the maximum $300.

Crowell Gold Mining Company (The) is chartered under the laws of the State of New York. The officers are G. B. Flint, President, New York city; G. R. McCarty, Vice-President, and W. Brandreth, Secretary. The offices are at 52 Broadway, New York, Room 52. The property is located near the famous Gold Hill mine, in North Carolina, Stanley county, having an area of 850 acres. The ore is highly auriferous and assays $6.72. The mineral track is covered by an unknown depth of disintegrated quartz bearing gold in large quantities. Nuggets weighing from five dollars to $800 have been found. The plant comprises a five-stamp mill, a twenty-horse power engine and boiler. Fuel costs one dollar per cord, delivered at mill. Water is abundant. Wages average $1 per day. Organized March, 1880; capitalization, $1,000,000; shares each, $2.50; unassessable.

Dahlonega Gold Mining Company is chartered under the laws of the State of New York. Office, 40 Broadway, New York. The company owns a ten-stamp mill. The company's works are located in Dahlonega district, Ga. They own eighty acres of land. Date of organization, 1877; capitalization, $250,000; par value per share, one dollar; basis non-assessable; no dividends have yet been paid.

Dardanelles Consolidated Gravel Mining Company. The Directors are Fred. O. Prince, Boston; Peter W. French, John Hitchcock, W. B. Mack, W. E. Smith, George T. Coulter, and Joseph McGillivary. The company's works are located at Forest Hill Divide, Placer county, Cal. A report from the superintendent says they are taking out considerable good gravel. The output has been increased considerably, and will be increased regularly from now on, as they open wider breasts. They are now breasting it out some seven feet high, and will have to increase that. The gravel pays richly. The Rerenhart tunnel is progressing rapidly considering the hardness of the rock. At times they have taken out for days in succession over twenty dollars a day of gold. The ore shows splendid-looking coarse gold. Rock very hard. The company has a capitalization of $1,000,000.

Davenport Placer Mining Company. The officers are Dr. A. S. Maxwell, President; Thomas Thompson, Vice-President; J. B. Carmichael, Secretary; W. O. Bennett, Treasurer and General Manager. Directors, E. S. Bennett, A. W. Bowman, J. H. Maxwell, William Batchelder, and W. S. Handy. The company's property is located near Golden, New Mexico. The property covers 520 acres. From eleven assays made from specimens secured at different parts of the claim, and at depths varying to seventy-six feet, an average of $7.50 per cubic yard was secured. The company has an artesian well on their lands 250 feet deep. Capitalization, $50,000; par value per share, $500; (all shares are taken up.) Stock and bonds reserved in the treasury, April 1, 1882, $10,558.

Deadwood Terra Mining Company is chartered under the laws of the State of California. H. B. Parsons, Secretary. Transfer office, 65 Broadway, New York; branch office, 18 Wall Street, New York. The company's property is located at Whitewood, Black Hills, Dakota. The ore is rich sulphate, assays from ninety to 130 ounces per ton. The company have 580 stamps, offices, and boarding houses. Depth of shaft, 112 feet. Current value of mine, $1,200,000. Date of organization, October 4, 1878; consolidated, December, 1880; capitalization, $5,000,000; par value per share, $25. Total amount of dividends paid to July, 1882, $710,000; date of latest dividend, June, 1882, fifteen cents per share. Stock quoted July 1, 1882, $6.

Defiance Gold Mining Company (The), California. Officer, W. H. Lent, Secretary. Principal office, 369 Montgomery Street, San Francisco.

Diamond Flume and Hydraulic Company. Their property is located at Confederate Gulch, Meagher county, Montana. Operated by James King. This company has built two flumes, one three feet and the other four feet. Their ditches are about eight miles in extent and carry nearly 4,000 inches of water, and have a pressure, if necessary, of over 400 feet.

Dudley Gold Mining Company are the owners of the Dudley mine, located in Bodie district, Mono county, Cal. The quality of the ore is low grade. The mine shows strong ledge formation, and will require considerable depth to make it pay. Increased in width from two feet at surface to ten feet at 400-foot depth. From wall to wall, it is one solid mass of quartz, samples of which assay from $600 to $6,000 per ton, and will give a milling average of $65 per ton. Feet in mine, 1,125. Capitalization, $6,400,000; par value per share, $1. Number of assessments levied, eleven; total amount of assessments levied $182,400.

Durango Gold Mining Company is chartered under the laws of the State of New York. The officers are Alexander McDonald, Pres.; Geo. E. Spencer, V.-Pres.; Effingham Lawrence, Treas.; Willis A. Barnes, Sec. Superintendent, Walter G. Gates. Office, room 43, 115 Broadway, New York. The Durango, located in Lawrence county, Dakota, is a cement deposit, the bed-rock pitching into the mountain; the ore from this mine has been worked at a custom mill, yielding $8 per ton. Capitalization, $500,000; par value per share, $5. Date of latest dividend, June, 1881; seven and a half cents per share.

Eintracht Gravel Company (The). Principal office, 209 Sansome Street, San Francisco, Cal. Date of annual election, December 6. The mines of this company are located in California. Nine assessments levied; latest assessment, May 2, 1882; amount per share, five cents.—*Mining Record*, June 17.

El Dorado Hill Company (The). These mines are located in Nevada. The Quartz mine, owned by E. J. McCoon, has very rich specimens of quartz. A mill is the property of the company.

Empire Gold Mining Company (The) is chartered under the laws of the State of New York. Head office, 58 Broadway, New York. The Empire is one of the oldest quartz mines in the State that is still at work. It was discovered in 1852. It has been worked successfully since 1871. Location of mines, Plymouth, Amador county, Cal. Character of mines, gold; assays about $15 per ton. Property owned by the company, eighty-stamp mill, actuated by either water or steam. Dimensions of workings, 1,900 feet. Ore is chiefly got from 1,200-foot level. Litigation with the Pacific company and other circumstances have interfered with the regular workings of the mine. Date of organization, July, 1878; capitalization, $2,000,000; shares, 200,000; par value, $10; number of dividends paid to March 5, 1880, eleven; amount, $478,000; date of latest dividend, May 5 1880; amount per share, seventeen cents; yield during 1880, $481,000; stock quoted 1882, July 1, $2.

Empire Mine (The), owned by Hon. Thomas Fowler. The Empire Mine is located in Tulare, Nevada county, Cal. Mill in good working order. This mine has been one of the chief producers of gold for twenty-five years, and is now being extensively worked. Heavier pumps have recently been introduced, and improvements have been made to boilers and machinery which have reduced the consumption of fuel nearly one-half. There are nearly 190 men at work in the mine.

Empire Gold Mining Company. Name of mine owned, Empire, located at Grass Valley, Nevada county, Cal. This mine produces good milling ore and some very rich specimens. Length of levels, 1,200 feet. Length of main lode on which the company depends for its supply of ore, 3,600 feet. The mine has been drained of water to the 800-foot level; to accomplish this the pumps had three months of incessant work. Tributes at work taking out rock from the levels that are drained. Capitalization, $2,000,000; shares, 20,000; par value, $100; number of dividends paid to January 20, 1878, sixteen: date of latest dividend, January 20, 1882, amount, twenty-five cents; amount, $146,000; number assessments levied, 40,000; date of latest assessment, August 5, 1871; stock quoted July 1, 1882, $2.

Empire Mining Company (The) is chartered under the laws of the State of New York. Transfer office, 52 Wall Street, New York. The Empire mine is owned by this company; located in Utah mining district, Park City, Utah. Capitalization, $10,000,000; shares, 100,000.

Empress Gold Mining Company (The). Officers, Charles H. North, Pres.; C. F. Hall, Treas.; Clar. Hale, Sec.; Dr. Red, Superintendent. Name of mines owned, none named. Location of mines, Renfew, Nova Scotia. Amount of property in acres, 102. Capitalization, $60,000; par value, $1.

English and Blue Gravel Company (The). The mining property belonging to this company is located on Galice Creek, Oregon.

Esperance Company is represented by Messrs. Coleman, McLean, and others. The company have something like a half a mile of ground, situated in Nevada county, Cal., below the famous Milton mine, and supposedly on the same channel. The bed-rock tunnel is now in about 200 feet, but will probably have to be pushed 1,800 feet before reaching the gravel deposit being searched for. A full force of men are working on it day and night, Sundays as well.

Eastern Mining Company (The). The Whiskey Slide mine is owned by this company. Located in Calaveras county, Cal.

Essex Consolidated Gold Mine (The). M. Smart, Supt. Location of mines, Lyman, Grafton county, N. H. Quality and character of ore, impregnated with rich sulphates, being a porous, iron-stained, honey-combed quartz. Character of mine, vein eight to ten feet wide. Entrance by tunnel, 120 feet. Timbered.

Eureka Consolidated Drift Mining Company. The property is located in Sierra county, Cal. The company have actively prosecuted work. The tunnel, which is in blue cement, has been run a distance of 230 feet.

Eureka Gold Mining Company. This company was chartered under the laws of the State of Colorado. Location of mine on Calaveras river, Calaveras county (Grass Valley), Cal. The company own about 6,000 feet of pipe and a flume. During the last season about four acres of surface, averaging sixty feet in depth, were washed and yielded about $40,000. Capitalization, $2,000,000; shares, 20,000; par value, $100; number of dividends paid to April 29, 1878; amount, $2,149,000; date of last dividend, April 29, 1878; amount per share, twenty-five cents; stock quoted, January 1, 1882; shares not in market.

Excelsior Water and Mining Company (The). chartered under the laws of the State of California. Office is in San Francisco, Cal. The mines owned by the company are in Smartville, Yuba county, Cal. 525 acres belong to the company. Gold is the character of ore. Length of main lode, on which the company depends for its supply of ore, 521 feet. It is the leading mine of the county, one of the most extensive hydraulic enterprises of the State, and the principal supply of water is through its ditches. Company used in year ending March, 1880, 418,000 inches of water. In addition to the 525 acres of gold-bearing gravel, the company owns a farm of 2,300 acres, 300 of which are irrigated, and all well equipped and stocked. The improvements and appliances embrace six tunnels, the construction of which, before the acquisition of the property, had cost $441,000; 23,000 feet of the rock-paved flumes and undercurrents that had cost $50,000; 115 miles of ditches, which, with their strong, well-placed dams, had cost originally $1,000,000; two distributing reservoirs, having the capacity to store 13,000 inches of water over night; a complete hydraulic equipment, with all the buildings necessary for the most advantageous exploitation of so extensive a property. About 350 men are constantly employed to collect the tailings, and prevent their emptying into the Yuba river. The company has constructed a dam fifteen feet high and 800 feet long across the mouth of a ravine one mile and a half below their mines. It is intended to make the dam eighty feet high, and 2,000 feet long, with a slope of four feet to one. It is calculated that it will form a basin covering an area of 140 acres. The dam is formed principally of pine trees, covered with rock laid upon a foundation of stone, brush being placed upon the upper side, through which the water sweeps, retaining the débris. The company expect, by means of the dam, to be enabled to continue the workings of the gold gravel without violating the injunction suits or damaging the property of farmers in the Sacramento Valleys. Date of organization, March 9, 1879; capitalization, $10,000,000; shares, 100,000; par value, $100. Number of dividends paid to September 6, 1880, $850,000: date of latest dividend, September 6, 1880, twenty-five cents per share; number assessments levied, 18; total amount of same, $300,000; date of latest assessment, May, 1882; amount per share, twenty-five cents; yield (net) during 1880, $111,000. Stock quoted July 1, 1882, $4.50.

Fairview Gold Mining Company is chartered under the laws of the State of Colorado. The officers are J. L. Sprogle, Pres.; Jos. L. Fryer, Sec. and Treas. Directors, J. L. Sprogle, Jos. L. Fryer, T. J. Stewart, Thos. Barrett, A. Wasserman, D. P. Southworth, E. Klantscheck. Office, 310 Chestnut Street, Philadelphia, Pa. The company's property is located in Colorado. Capitalization, $2,500,000; par value per share, $5; basis, non-assessable; amount of stock issued, 200,000 shares; amount reserved in treasury, 25,000 shares.

Father De Smet Gold Mining Company is chartered under the laws of the State of California. The officers are J. B. Haggin, Pres.; J. Clark, Vice-Pres.; H. Deas, Sec. Offices, 404 Montgomery Street, San Francisco, Cal., and 14 Wall Street, New York. The company's mine, the Father De Smet, is located in Whitewood district, Black Hills, Dakota. The ore gives a gold assay and has a value of $10 per ton. The ore body shows a width, in some cases, of twenty-six feet. The company has an eighty-stamp mill, crushing at the rate of 2,318 tons of ore per week. The main lode is 1,500 feet in length. A rich strike was recently made on the second level of the Father De Smet mine. The ore body, showing a width of twenty-six feet, gives promise of widening to seventy-five feet. For the week ending June 8,625 tons of ore were extracted from the first level, 1,500 from second level, and 100 tons from third level. The North End tunnel is in 621 feet. The ore has an average assay of about $3.50 per ton. Current value of mine, $600,000. The annual report of this mine shows the gross receipts to have been $502,360.80, and the expenses $314,665.82. From March to December dividends were paid to the amount of $174,995, and there was a balance on hand January 1, 1882, of $42,826.65. The Superintendent says in a report of January, 1882, the ore is low grade, but our facilities for handling it are such that we can and will for the ensuing year run at a profit. Date of organization, January 23, 1878; capitalization, $10,000,000; par value per share, $100; yield during 1880, $277,730; yield (gross tons), 90,754, equal to 600,011; number of dividends paid to July 1, 1882, twenty; total amount of dividends paid, $520,000; date of latest dividend, July 1, 1882, twenty cents per share; number of assessments levied, two; total amount of assessments levied, $200,000; date of latest assessment, November 13, 1878, $1 per share; stock quoted July 1, 1882, $7.

Ferguson Consolidated Gold Mining Company is chartered under the laws of the State of California. Company's office, Sonora, Cal.; branch office, 17 Milk Street, Boston, Mass. The company's property is located in Mariposa county, Cal. The ore has a value of $10 per ton. The company have a ten-stamp mill, houses, shops, etc., valued at $30,000. Date of incorporation, 1879; capitalization, $5,000,000; par value per share, $30; basis, non-assessable. Total amount of dividends paid to 1881, $5,000; date of latest dividend, 1881, five cents per share.

Findley Gold Mining Company (The) is chartered under the laws of the State of New York. Geo. F. Peabody, Secretary. Office, 70 Broadway, New York. The company's mine is located in Lumpkin county, Ga. The mine is well developed, with ample ground to supply its two mills, 50 stamps. The quantity of ore at command is large. Three bodies of ore, of considerable thickness, are available, but only two are now exploited, for which forty inches of water are being used. Date of organization, June 25, 1878; capitalization, $200,000; basis, non-assessable; par value per share, $1. Yield during 1881, about $35,000. Total amount of dividends paid to May 26, 1879, $400,000; date of latest dividend, May 26, 1879. Stock quoted July 1, 1882, seventeen cents.

Franklin Gravel Mining Company have their works located at Dutch Flat, Placer county, Cal. Office, 310 Pine Street, room No. 44, San Francisco, Cal.

Franklin and McDonald Mining and Manufacturing Company. The Directors are A. O. Tinstman, Pres.; J. McCreighton, V.-Pres.; A. H. Moore, Gen. Mang.; Geo. F. Huff, Geo. W. Shallcross, R. Spencer, Sec. and Treas.; F. R. Shamuck, Asst. Sec.; Alex. P. Colesberry, Solicitor. Office of financial agents, Ladner Bros., bankers and brokers, 30 S. Third Street, Philadelphia, Pa.; transfer office, 38 S. Third Street, Philadelphia. The company's mines are located on the Etowah river, Cherokee county, Ga. These mines have been worked on a small scale in a primitive manner for over forty years, and hundreds of thousands of dollars have been coined from the Franklin mine alone. The company own 1,300 acres of land. Character of the ore, sulphurets predominate in quantity and richness. The poorest ores assay from $10 to $110; higher grade as high as $230 per ton. There are seven gold-bearing quartz veins running through the property for a distance of about three miles. The company have water-power on the spot. The main lode on which the company depends for its supply of ore is 500 feet in length. Capitalization, $10,000,000; par value per share, $100; basis, non-assessable. Stock reserved in the treasury, January, 1882, 20,000 shares.

Fresno Enterprise Company. The Directors are Judge James Grant, Pres., Leadville: Captain T. J. Lane, George H. Parker, W. H. McCormick, I. N. Farwell, David Kelly, J. D. Parker, George Elwood, H. Anderson, J. T. Warre. Henry Fisher, C. A. Toering, and James Thompson. The company's mine, the San Francisco, is located five miles from Merced, Cal., on the stage route to the Yosemite. The main lode is 1,500 feet in length, running northwest and southeast, and dipping to the southwest near the surface. Formation, slope. The developments under present company are four tunnel levels, two machine shafts, winzes. Ore is now being extracted which averages $163 per ton. The reduction works consist of three arrastras, of crushing capacity of 100 tons per month. Actual yield of ore crushed, $160 per ton. During last two years, $200,000 has been taken out, and $125,000 paid in dividends. Capitalization, $5,000,000; par value per share, $50. Total amount of dividends paid, $100,000; date of latest dividend, December 20, 1881, twenty-five cents per share. Yield during 1880, $102,086.

Fricke and Davis Mine (The). Messrs. Fricke and Davis, owners. Fricke Davis and Sebastian mines are owned by the above gentlemen. H. E Willey, Fred. Diner, Henry Dore, McConnell. These mines are located near Deadwood, Shasta county, Nevada. There are various mines, paying well, near Whiskeytown, and the recent developments (reported) in quartz near Deadwood has made French Gulf a prosperous town. The shaft's quartz ledge is on French Gulf and Deadwood, from which (1880) is cleared $1,500 per week.

Frost and Rule Mining Company's (The) property is located in Butte county, Cal., and is considered very valuable. It was purchased by Boston capitalists for $200,000. All stock is now bought up. The company have ten miles of ditch and flume, finest work of the kind in the State. There is a face of gravel 200 feet high and one to one and a half miles wide, extending back over the ridge for over five miles; an inexhaustible supply of gold-bearing ground. The stock and bonds are held principally in Boston, Mass.

Green Mountain Company (The). H. G. Bidwell, Pres. Green Mountain mine is owned by this company. Located in Plumas county, Nevada. The mill recently (1881) cleared $8,300 for a run of twenty days with thirty-two stamps, $10 per ton.

Gallibar Gold Mining Company. The officers are H. R. Fisher, Pres.; C. R. Titcomb, Vice-Pres.; H. M. Willis, Treas.; A. J. Savage, Sec. Directors, H. R. Fisher, H. M. Willis, A. J. Savage, G. H. Shultack. Superintendent, J. W. Douglass; has had a long experience in California and Nevada. Office, Portland, Maine. The company's property is located at Isaac's Harbor, Nova Scotia. The company own substantial mill buildings, boiler houses, mining machinery of the most approved pattern, including steam drills, air compressor pumps, and hoisting engines, superintendent's office, with director's parlor, and sleeping rooms. The shaft is 190 feet deep. The company's property promises to be a very productive mine. Eighty-six men are employed at the works. The company exhibit a bar of gold, weighing 149 ounces, taken from fifty-one tons quartz, and valued at $2,993. A body of quartz is in sight sufficient to supply mill for twelve months. Stock and bonds are held principally in the State of Massachusetts.

Glyn Dale Consolidated Gold Mining Company. Office, 115 Broadway, New York. The company's property is located in Bodie district, Mono county, Cal. It is situated on the western side of the cone of Silver Hill, just west of the Oro and Addenda, and is a consolidation of the Glyn and Dale locations. It has steam-hoisting works, the necessary buildings, and a shaft down 240 feet, work only having been commenced in the spring of 1881. The veins cut so far are not of a paying character.

Gold Alda Mining Company (The). Directors, P. A. Barney, W. H. Stanley, Joseph Nash, J. C. Plunkett, A. W. Blair. Location of mines, Nevada. Capitalization, $1,000,000.

Godfrey Gravel Mining Company. The Godfrey Gravel mine is located in Nevada county, Cal. This mine, after making fair returns, has been closed. It has been worked by the drifting method, the gravel having been crushed by mill process. Mr. Godfrey reports that as the gold cannot be increased, nor the expenses, at the present rate of wages, reduced, there are no immediate prospects of the mine being opened.

Gold Cliff Mining Company. Nathaniel Niles, Pres. and Treas. Transfer office, 61 Broadway, room 42, New York. The company's property is located in Calaveras county, Cal. They have a capitalization of $250,000, in shares at a par value of $2.50 each.

Gold Gravel Hydraulic Company (The) has its offices at 155 and 157 Broadway, New York. The officers are John H. Mortimer, Pres.; Geo. W. Warner, Treas.; Monroe E. Babcock, Sec. The properties of the company, comprising an area of 2,295 acres, are located in Plumas and Sierra counties, Cal. Capitalization, $1,000,000, in 200,000 shares of $5 each. In January last a proposal was made to reorganize on an assessable basis.

Gold Medal Mining and Milling Company's (The) works are located in Boulder county, Col. They have a capitalization of $1,000,000.

Gold Prize Mining Company (The). This property is located at Silver creek, Col. 1881. Produces a 3,600 gold retort from a recent seven days' run.

Gold Stripe Mining Company. L. D. Cartwright, Vice-Pres. Office, 18 Wall Street, New York. The Gold Stripe mine, owned by this company, is located in Greenville district, Plumas county, Col. The gold quartz is high grade, easy to mine and mill; it assays from $8 to $10 per ton. Two mills of fifteen and twenty-four stamps, respectively, are running steadily upon the ore. The prospects of the property are constantly improving. The recovery of the Goodwin ledge is an important strike. It was feared the vein was lost, but careful development work has succeeded in recovering it at the greatest depth of working in the mine. This gives 175 feet of unworked reserve of ore to the upper tunnel, where the vein averaged about twelve feet in width. The incline on this ledge has encountered a strong body of ore, eight feet wide, which assays very uniformly. They have drifted along thus for 130 feet, and the workings through the Kerr tunnel will give them about 200 feet of backs: the grade of ore at this point has always given good returns. The current value of the mine is $45,000. Forty tons of ore are being crushed per day. The mine has been worked for years, and has never failed in making a monthly shipment; twenty-two men are employed. The mill had been running six and a half days when the works were visited, June 30, 1882. The plates had hardly got in first-rate order, but on applying the hose with water they appeared to be covered well with amalgam. From the first day the yield from the plates alone would give a profit over all expenses. Capitalization, $1,500,000; par value per share, $10. Yield during 1880, $42,294. Total amount of dividends paid, $76,250. Date of latest dividend, June 30, 1881, fifteen cents per share. Stock quoted July 1, 1882, forty cents per share.

Go Slow Company. Their property is located just above the Kanaka claim, at Virginia Bar, Sierra county, Cal. This is a new organization. They are prospecting above the Kanaka claim, for the purpose of finding rich gravel at bed-rock, by sinking a shaft and drifting preparatory to building a wing-dam, and putting up a derrick.

Governor Group Gold Mining Company (The) is chartered under the laws of the State of Colorado. The officers are Fred'k M. Adams, Pres.; J. H. C. Whiting, Vice-Pres.; H. D. Hughes, Sec.; R. M. Blakemore, Treas. Directors, F. M. Adams, J. H. Whiting, R. M. Blakemore, H. D. Hughes, W. H. Drake, J. Warren Coulston, and W. C. Cranmer. The offices are at Jamestown, Boulder county, Col., and at 312 Stock Exchange Place, Philadelphia, Pa. The company owns the following mines: President, Governor, Denver Vein, Fannie H. Charter, and Star of the North, all patented except last named. Located in Boulder county, Col. The plant comprises a first-class roasting and amalgamation mill, of twenty-four tons' capacity, now in running order with all necessary machinery. There are two shafts, 244 and 262 feet deep respectively. The workings are all well timbered. The capitalization is $2,000,000, in 200,000 shares of $10 each, non-assessable. Bonded indebtedness, $25,000, secured by first mortgage bonds running three years from September 1, 1880, bearing 7 per cent. interest. Amount of stock issued, 185,000 shares; amount of stock reserved, 15,000 shares. Stock quoted July, 1882, twenty-five cents.

Granville Gold Mining Company (The) is chartered under the laws of the State of New York. Office, 23 Dey Street, New York. The company's property is located in McDowell county, N. C. The ore yields about $18 per ton. Character of the mines, gravel; hydraulic. There are 1,200 feet in the mine. The company have ditches twenty miles long, with a head of sixty feet of water. Date of organization, November, 1876; capitalization, $300,000; basis, non-assessable.

Graphic Mining Company. The officers are Col. Rush H. Field, Pres.; J. J. McRobbin, Treas. Mr. Youman is Supt. The company's mines, the Graphic Group and Champion, are located at French Mountain, Col. They own a number of claims in Little Half-Moon Gulch. The gangue of the vein is composed of porphyritic quartz, carrying galena sulphurets of iron. There are rich gold-bearing quartz leads. The company have several mills, and they have a tunnel 300 feet in length, which is located at right angles with the majority of the veins. This company own thirteen locations. Capitalization, $4,000,000; par value per share, $10.

Gravel Mining Company. Elisha Riggs, Pres. and Treas. Office, 18 Wall Street, New York, rooms 48, 49, and 50. The company's property is located at Black Hills, Custer county, Dakota. They have a capitalization of $5,000,000.

Great Eastern Gold Mining Company is chartered under the laws of the State of New York. Office, 31 Broad Street, New York. The Great Eastern, Flora Belle, Golden Rule, Badger, and Elgin are the property of the Great Eastern Company, located in the Black Hills, Dakota. The company also own the Exchequer, American No. 2, and several placer claims on Deadwood Gulch. Forty men are employed. The total product since July, 1877, is 50,000 tons of ore, crushed, and the value of the bullion, $200,000. The company's twenty-stamp mill, valued at $20,000, was one of the first erected in the Black Hills. The Flora Belle is reported to be of as good quality as the famous Belt mines, and would, with equal mill capacity, make large returns. The character of the ore mined is gold, having a value of $7 per ton. The main lode on which the company depends for its supply of ore is 1,200 feet in length. Current value of mine is $25,000. Date of incorporation, March 26, 1879; capitalization, $500,000; par value per share, $1; basis, non-assessable. Total amount of dividends paid, $24,000. Stock quoted July 10, 1882, five cents.

Green Mountain Gold Mining Company is chartered under the laws of the State of New York. The officers are H. C. Bidwill, Pres.; J. Jay Pardee, Sec. Office, 18 Wall Street, New York. The company's mine, the Green Mountain, is located at the north end of Indian Valley, Granville district, Plumas county, Cal. They own three contiguous claims and an extensive timber tract, all held under U. S. patents. The ore is free milling, assaying from $8 to $10 per ton. Vein is increasing in width as depth is attained; now about 100 feet wide. The company now owns ninety-two stamps, having lately purchased a new stamp-mill of sixty stamps, supplied with an ore-breaker and automatic feeders, involving an expenditure of $60,000. The stamps are about 800 pounds' weight with aprons eight feet long. The plates are all silver, and all silver plates extend down the sluice boxes opened. The company have also extensive water privileges applied through a six-foot Knight water-wheel under 400-foot pressure through eleven-inch iron pipes. The mill dump has a capacity of 1000 tons; mine cars, from which cars are loaded, a capacity of 800 tons. The current value of mine is $262,000. The mine is situated on the point of a high range of hills which rise on the southwest side of the valley. The average width of the lode is about fourteen feet, although it widens in places to thirty or forty feet. The country rock is granite, but at some points on the line of the lode it changes to porphyry, and at others to a stratified slaty material. The main tunnel is in upwards of 3,000 feet, and over 1,000 feet of pay ore have been penetrated. The lode crops at various places along the line, but has not been sloped to the surface. The west hanging-wall of the lode is found carrying a gouge, but the east foot-wall has not been found. A cross-cut is to be run to cut the same if possible. The ore is free milling and is worked by the ordinary stamp process, no concentrators nor stamps being necessary. The output of the mine is 150 tons per twenty-four hours. The mills crush the same. The quality of ore now taken from the shaft that is being sunk on the white ledge is superior to any milled for some time, and it is confidently expected that good results will be given. The mine shows a strong and permanent ledge, and when the lower Bidwell tunnel reaches the ledge it will give good reserves of ore to last for many years to come. The mine is in fine condition, and the indications in the face of the main drift of number five tunnel continue highly encouraging. Cost of milling is estimated at $2.50, including cost of delivery. The company have let a contract for running the number six tunnel 100 feet, at $6 per foot. The sulphuret ledge, east of the main ledge, has widened out from fifteen inches to thirteen feet, the quartz being of bluish color. Between numbers four and five tunnels two levels have been opened nearly 100 feet apart, and run further on the vein, exposing a good grade of ore. Date of organization, June 2, 1879; capitalization, $1,250,000; par value, $10 per share; basis, non-assessable; yield during 1880, $159,313; total amount of dividends paid, $212,375; date of latest dividend, November 26, 1881, seven and a half cents per share.

Headlight Mining Company. A. W. Rose, Secretary. Office, 302 Montgomery Street, San Francisco, Cal. The company's property is located in California.

Halle Mining Company (The) have two mines, the chief of which is the Blauvelt, located in Lancaster county, S. C., about thirty miles south of Monroe, N. C. The ore carries about three per cent. iron pyrites and is somewhat refractory; assays from $7 to $15. The character of the mine is described as one vast bed of talco-chloritic and micaceous schists, with alternations of siliceous schists. Ore masses, lenticular in shape, and with a width varying from six to sixty feet, and alternating with heavy bodies of nearly pure iron pyrites, sometimes eight feet thick. Mining plant includes a ten-stamp battery with other minor appliances to a more thorough treatment of the ore. An increased plant is contemplated, the present being adequate only for a production of 1,000 tons per month. The present administration is energetic and apparently supported liberally by capital.

Harney Hydraulic Company. The property of the company is located in Custer county, Dakota, and consists of about six miles of the bed of Battle creek, beginning a short distance below Harney City, and extending to almost the foot of Harney Peak, together with all bar and hill diggings on both sides of the gulch for the same distance; also, the placer ground of Grizzly Gulch. The claims include Harney, Everly Hills, and the celebrated Mitchell Bar, which are considered the richest portions of the entire possession. Applications for patents upon 400 acres have been made, and, as there are no adverse claims, the company will undoubtedly be successful. The main ditch has a total length of six and three-fourths miles. Three capacious reservoirs insure an abundant water supply even in the driest season. An average of fifty men have been employed during the season. The estimated total cost of the works is $42,000. Mitchell Bar has yielded $7.50 per cubic yard. The company propose to put in a bed-rock flume, beginning at the lower end of the ground, and wash everything within reach.

Haverley Golden Group Mining Company (The). Officers, J. H. Haverley, Pres.; Hon. H. H. Walker, Vice-Pres.; Col. N. P. Richmond, Sec.; C. N. Pratt, Ass't Sec.; A. F. Armstrong, Treas.; Richard Hieucheon, Supt. Head and branch offices, 116 Dearborn Street, Chicago, Ill.; Nos. 1151 and 57 Broadway, New York; 205 Washington Street, Boston, Mass.

Henrietta Gravel Mining Company. Location of works, California. Office, 309 California Street, San Francisco, Cal.

Hite Gold Quartz Mining Company. J. R. Bothwell, Sec., 2 Nassau Street, cor. Wall Street, New York. The company's mine, viz., the Hite, is located at Hite's Cove, Mariposa county, Cal. There are 1,000 feet in the mine. The prospects of the property are good. The mine has been worked successfully for the last fifteen years, and is still yielding ore in large quantities. The main shaft is opened into the 900-feet level. The company has completed several important improvements, consisting in putting in one of the largest compressors ever made, rebuilding the dam, repairing the flume, putting in new plates, and reconstructing the machinery of the mill, and other improvements belonging to the mine. A compressor-engine has been placed at the lower dam, and a mile of four-inch pipe has been laid to conduct the air to the pump, hoisting-engines, and power-drills in the mine. Shaft is being sunk to 500 feet. Capitalization, $2,000,000: par value per share, $10; basis, non-assessable. Number of dividends paid to August, 1878, thirty-eight; total amount of dividends paid, $1,370,000; date of latest dividend, August, 1878, ten cents per share. Stock and bonds held principally in New York.

Homer Land, Mill, Water Mining Company (The). The mines belonging to this company are located on Mill creek, Mono county, Cal. These mines embrace the best properties in the county. Tunnel used and shaft.

Hunters' Flat Gravel Company (The). The property owned by this company is located in Calaveras county, Cal.

Idaho Gold Mining Company. The officers are E. Coleman, Pres.; E. C. Creller, Vice-Pres.; J. C. Coleman, Treas.; Geo. W. Hill, Sec. E. Coleman, Superintendent. Office, 324 Pine Street, San Francisco California. In Grass Valley district is situated the well known Idaho mine, Nevada county, Cal., which may be considered as one of the representative gold mines in this State. We give some figures concerning this mine from their last annual report, as it will give readers a broad idea of the expense of running such a mine. After an expenditure of about $90,000 on the property, the Idaho mine commenced paying dividends in 1869, and with but few intermissions has paid regular monthly dividends ever since, the total number of such being 136, amounting to $2,830,300 out of a total yield in the twelve years of $6,140,188.02. The yield of the past year has been $440,445.59, out of which dividends to the amount of $127,100 have been paid. There has been paid out in dividends to the stockholders as follows:

Year.	*Dividend.*	*Per Cent.*	*Amount.*
1869	11	55	$170,500
1870	7	12	31,200
1871	12	75	232,500
1872	11	52½	162,750
1873	12	220	683,000
1874	12	102½	317,750
1875	11	55½	172,050
1876	12	82½	255,750
1877	12	77½	240,250
1878	12	85	263,500
1879	12	54½	168,950
1880	12	41	127,100

Being for twelve years 136 dividends, aggregating 913 per cent. on the capital stock, and amounting to $2,830,300. The ore worked during the year amounted to 28,072 tons. Of this amount 6,270½ came from the 800 level; 134½ from the 900 level; 6,051½ from the 1,000 level; 14,776½ from the 1,100 level; and 739 from the 1,200 level. This gave a yield of

24,457 ounces of bullion	$426,938 46
Sixty-eight tons of slime sold	1,252 00
Estimated cost working same	1,005 00
Tailings worked on shares	5,068 12
Thirty-six and three quarters tons tailing sulphurets	4,580 72
Fifty tons of buddle sulphurets	4,317 04
Sold ten and one-eighth tons sulphurets	689 85
Estimated cost of working same	202 50
Specimens sold	65 00
	$444,118 69

Yielding an average of \$15.82 per ton; average cost of milling per ton, \$9.29½. Following is a table of expenses for the year:

Milling, mining, repairing	\$260,611 43
Grinding tailing on per cent.	1,428 17
Exhaust fan for air shaft	425 00
Iron bobs for underground	719 00
Three plunger poles and castings	1,225 00
Steam capstan	1,648 64
Sinking incline	7,496 00
Prospecting on 1,000 level and cross-cut	1,578 25
General account	12,821 62
Saving sulphurets	2,542 50
Total expenses	\$290,795 61

The Idaho Quartz is the leading mine here. It has been a large gold producer for many years, and is at the present time one of the best in the State. We learn that the product of this mine has shown a marked increase in the last three or four months, and the future prospects are most excellent. Recent operations are reported in the Idaho as follows: a new fourteen-inch pump has been put in the Idaho mine, reaching from the surface to the 700 level, to take the place of the twelve-inch pump heretofore in use, which will increase the pumping capacity about twenty-five per cent. There are also being set up two steam capstans to aid in setting the pumps and making repairs to them when necessary, and as an auxiliary to the big pumping engine when extra power is required. During the extraordinary rains of last April a large amount of surface water had to be contended against, which found its way into the Idaho from the old workings of the Eureka mine, and it was all the Idaho pumps could do to hold the water. In fact, for several days they could not do so, as the pump tanks on the seventh and eighth levels were filled beyond their capacity, and the surplus water that escaped and fell below filled the workings of the mine up to the number ten level and interfered with work for some days. By putting in a pump of increased size all the surface water, which is troublesome as far down as the 700 level, can be handled easily and do away with all danger of flooding the mine. From the seventh to the eighth a nine-inch pump will be continued in use, and below the eigthh level a six-inch pump is as large as there is any necessity for. The company's principal mine is the Mayflower. The ore carries considerable quantity of sulphurets. Three distinct fissure veins present the peculiarity of being opened by levels to a depth of 1,070 feet and a length of 2,000 feet. At a depth of 1,200 feet the lode presents a clean regular face of four feet of quartz. Capitalization, \$3,100,000; par value per share, \$100; basis, non-assessable. The mine was opened in 1869, since which time the receipts from all sources have been \$6,780,295.60; amount paid in dividends, \$3,101,550. The success of the mine has been due as much to wise and judicious management as to the quantity and quality of the ore. During the year 1881, 27,945 tons of rock have been crushed, which have yielded an average of \$22.95¾ per ton; average cost of mining and milling during the year, \$9.51¼.

Idaho Springs Company (The). The mines owned by this company are Althea, Little Etta, Bulger, Manchester, Cleopatra, Garoo, Underwood, Alma Brooks, Helen Bassett, Winning Horse, and Gilbert. This property is located in Spring Gulch, Idaho. Cleopatra shows about sixteen in. ore, assaying \$210. Bulger, eight or ten in. vein, yielded fifty per ton in gold. Shaft on Little Etta, ten feet deep, width of three feet, gives a return fifty-nine per ton, specimens as high as \$800 recently reported so.

Indiana Hill Company. Their property is located in Placer county, Cal. The company have been running a mill for crushing the lower strata of gravel which, while generally very rich, is too hard or too thoroughly cemented to wash to advantage.

Indian Valley Mining Company. The property consists of the Indian Valley and Union mines, located in Plumas county, Cal. The mine is a mile above the town of Greenville, at an elevation of 500 feet above the valley from which it takes its name. A well-timbered tunnel has been run 1,000 feet under the old shaft of the Indian Valley into ore averaging eighteen feet in width. New hoisting and pumping machinery has been put upon the Blood shaft. This shaft is 700 feet deep, being 300 feet deeper than the tunnel leading to the mill. At the point where the tunnel intersects the shaft a level has been run eighty feet to the west and sixty feet to the east, all through low-grade ore. From the top of the shaft a way is graded to the upper tunnels; from these the ore will be run out and dumped down the shaft 400 feet to the inner end of the tunnel. The space left by the old stopes gives room for shutes, at which the cars will be loaded for the mill. The upper tunnels are being cleaned out and timbered so that ore can be taken from them as wanted. In the old condition of the mine no system could be discerned; now there is a comprehensive plan connecting all these tunnels and the shaft in one design. The arrangement is so good that all ore containing over \$2 per ton in gold can be worked at a profit. The mill has twenty-four stamps with Hendy automatic feeds. The ore is run through a rock-breaker and then passes directly to the batteries. There are six batteries of four stamps each, fifty-horse-power engine. Water is obtained from the Round Valley Water Company, whose ditch passes around the mountain 1,000 feet above the mill.

Iowa and Colorado Consolidated Mining Company (The) is chartered under the laws of the State of Colorado. The officers are Ex-Gov. John H. Gear, Pres.; Geo. Millard, Treas.. both of Burlington, Iowa; B. S. Ferris, Princeton, Ill., Vice-Pres.; Geo. A. Bailey, Glenwood, Iowa, Asst Sec.; John H. Shaw, State Agt. for Colorado; John Gibson, Creston, Iowa, Sec.; Bancroft, Gulch & McGaughan, attorneys and counsel. Directors, Hon. John H. Gear, W. Hale, Geo. Millard, James Callanan, Mr. McArthur, John Gibson, E. S. Jenison, John H. Shaw, B. S. Ferris, R. P. Smith, Geo. A. Bailey, Hon. W. D. Lucas. The company owns numerous claims (seventeen), mostly small; total area of same being about 529 acres. The character of the main lode running through the property is described as a true fissure vein. The ore is mostly free milling; estimated yield about \$12 per ton. The property is located in South Mountain Summit district, Rio Grande county, Col. The mining plant is complete, including thirty stamps. Capitalization, \$10,000,000, in 500,000 shares of \$20 each; non-assessable; 40,000 shares of treasury stock now on the market at \$1.50 per share.

Johnson Mine (The). Messrs. Sneden, Spence & Bennell, owners; D. H. Sullivan, manager and lessee. The Johnson mine is located in Inyo county, Cal., opposite Bishop creek. Mines consist of gold ledges, known as the Golden Era, Tender. Buena Vista. and Luella.

Jordan Creek Mining Company (The). This mining property is located at Yankee Fork, Idaho; is very rich in gold; reached bedrock, twenty-four feet; drain, 1,600 feet long, with an open cut, 550 feet; remainder, 1,050 feet. Is under cover and well timbered. Prospects are favorable.

Julia Gold Quartz Mine (The). Messrs. Sloan & Dunn, owners. The Julia quartz mine is located on Deer creek, Nevada county, Cal., above the Merrifield and opposite the Providence mine. Incline, sixty feet deep. Tunnel, forty-five feet. Good mill sight north of tunnel. The owners express themselves as satisfied with their claim; 1880.

Keystone Hydraulic Mining Company (The) owns property located in Colorado. The officers are J. A. L. Whittier, Pres.; C. C. Carpenter, Sec. and Treas.; D. T. Thompson, Gen. Manager. The annual election is held on January 16. Offices at 306 Pine Street, San Francisco, Cal. Capitalization, \$300,000.

King Bee Mining Company (The) has offices at 115 Broadway, New York city. Mr. T. W. Buzzo is Superintendent. The officers are A. J. Severance, Pres.; C. F. Collins, Vice-Pres.; D. C. Ferris, Treas.; and E. D. Barnes, Sec. The property of the company is located at Bodie, Cal. Capitalization, \$5,000,000, in 100,000 shares of \$50 each; non-assessable.

King Solomon Mountain Tunnel and Mining Company (The). Principal office, Howardsville, Col. The mining property belonging to this company is located at San Juan, Col. Capitalization, \$500,000; shares, 10,000; par value, \$10.

King's Mountain Mining Company (The) has property located in Gaston county, N. C. The ore is an impure limestone, with small percentage of galena and blende, iron and copper pyrites, etc. Two veins or ore bodies are being worked at present; they range from eleven to fifteen feet in thickness, and have but a trifling proportion of refractory sulphurets to lessen the yield of gold. The mining plant includes double batteries and other machinery capable of treating sixty to eighty tons per day. It is one of the most completely equipped establishments of the State. It has been a most productive mine. Depth of shaft, 320 feet.

Lady Emma Gold Mining Company (The). Officer, F. R. Bunker, Sec. Principal office, 606 Montgomery Street, San Francisco, Cal. The mining property belonging to this company is located in California.

Lilly White Mining Company (The). Officers, George White, President; Mr. G. W. Hodge, Superintendent. The mines owned by this company are Hortense No. 2, Silver Cliff, and others located on Mount Princeton, Colorado. The ore is gold chlorides, galena, and lead; assays \$100 per ton. The mineral is deposited in veins. Property owned by company is a mill (Waitz). The properties owned by the Lilly White Company are capitalized as follows: Stock, \$1,000,000; company has \$20,000 cash; stock in treasury, \$40,000.

Little Maud Mining Company (The) has offices at Boulder, Colorado, and at 42 S. Third Street, Philadelphia, Pa., Dunn, Smith & Co., bankers. The officers are Edwin Booth, Pres.; R. M. Townsend, M. D., V.-Pres.; Chas. D. Powell, Sec. and Treas. Directors, Edwin Booth, R. M. Townsend, M. D., C. C. Dunn, Jr., Sparta Fritz, and F. C. Arnold. The company owns two full claims, the Pickwick and Little Maud, located in Boulder county, Col. One shaft is down 110 feet, with drift 100 feet, to a second shaft of ninety feet. Capitalization, \$2,000,000, in 200,000 shares of \$10 each; non-assessable. Stock quoted January 1, \$1.

Little York Company (The). The property belonging to this company is located in Placer county, Nev.; running from hydraulic claims, one at Little York, Christmas Hill, Liberty Hill, and one at Remington Hill.

Louisiana Mine (The). Owned by Mr. Lombards. The Louisiana mine is located near Summersville, Tuolumne county, Nev. A new eight-stamp mill, hydraulic; vein ranging in width from one foot upwards is anticipated; will pay \$60 per ton; 250 tons are already on the dump, (1881.)

Magnolia Gold Company. Location of property, California. Total amount of dividends paid to September, 1881, \$15,000; date of latest dividend, September, 1881.

Manhattan Mining Company. The Directors are A. K. P. Harmon, C. E. Gibbs, E. B. Pond, M. Curtis, R. W. Paxton. Superintendent, Walter Birmingham. Office, 327 Pine Street, San Francisco, Cal. The company's property is located at Austin, Lander county, Nev. The main lode on which the company depends for its supply of ore is 129,810 feet in length. During the year 1881 the company received \$2,354,049.52 and disbursed \$2,358,892.15. Capitalization, \$5,000,000; par value per share, \$100; yield during 1880, \$997,400; number of dividends paid to February 1, 1877, eight; total amount of dividends paid, \$400,000; date of latest dividend, February 1, 1877. Number of assessments levied, three; date of latest assessment, July 16, 1879; cash on hand, February 4, 1882, \$4,160.25.

May Belle Gold Mining Company. W. J. Taylor, Secretary. Office, 310 Pine Street, San Francisco, Cal. Capitalization, \$10,000,000; par value per share, \$100; total amount of assessments levied, \$84,000; date of latest assessment, December, 1881, 20 cents per share.

Mayflower Gravel Company. J. Morizo, Secretary. Office, 328 Montgomery Street, San Francisco, Cal. The company's property, covering an area of 450 acres of ground, is located in the State of California. Character of the mine, fissure vein. Sixteen assessments have been levied. Date of latest assessment, May 31, 1882; amount per share, ten cents.

Maxwell Gold Mine (The). The Maxwell mine is located at Stockbridge, Wis.

Mendocino Flume and Mining Company. The officers are Albert W. Mann, President; W. A. Travis. Treasurer; John Chelvet, Secretary; W. T. Reily, Superintendent. Office, 79 Milk Street, Boston, Mass. Robert Harrison, attorney for the company on the Pacific coast; office, 430 California Street, San Francisco, Cal. The company's mines comprise 300 acres of valuable placer claims near Capella. Hardly a pan of gravel can be taken up in hundreds of acres at Catalpa, Mendocino county, Cal. (where these mines are located), that has not the color in it. The gravel is calculated for free working, as it is free from pipe clay. Mr. John Simpson, mining engineer, made a thorough examination of the property, and says he found gold from top to bottom in the prospect openings, yielding from thirty cents to \$1 per cubic yard. Leonard's Lake, owned by this compsny, has an area of sixty acres and an average depth of ninety-six feet, perfectly land-locked. Smith tract, which is also the property of this company, is covered with a dense growth of Oregon pine and redwood, also oak, alder, and mountain mahogany. This tract comprises 454 acres. The company will erect a saw-mill here. Reeves tract, owned by the company, contains 1,103 acres of the finest timber. This timber the flume brings to market at a cost (including cutting, manufacturing, and delivery) of \$6 per thousand, where it will find ready sale on delivery for from \$15 to \$35 per thousand, cash, according to kind of lumber. The reports of practical miners who have prospected the placer claims, place the receipts of the company from this source at over \$500 per day. The machinery, mills, houses, etc., belonging to Reeves' tract are valued at \$10,000. Date of organization, November, 1880; capitalization, \$1,000,000; par value per share, \$10; stock quoted July 14, 1882, 14 cents per share.

Menlo Gold Quartz Company, of New York. The property is situated between the New York Hill and Allison Ranch mines, Nevada county, Cal.; consists of seven mines, among which are the Homeward Bound, Wisconsin, Illinois, White Oak, Bowery, and Pennsylvania. The company is running a deep drain tunnel to tap all of these mines. On the Homeward Bound, the main shaft is sunk to the tunnel level 230 feet, and drifts are being driven both ways on the line of the tunnel. Two pumps, one eleven inch and the other eight inch, will be used to drain the lower levels. On the Pennsylvania, work has also commenced. This ledge has been quite extensively worked on the surface, the croppings having been taken out and worked for about 900 feet. The ground, however, was always wet, and as the Pennsylvania company had no pumping machinery, no great depth was ever attained. The Menlo company have purchased for this mine the pumping machinery and hoisting works formerly belonging to the Alaska company, which have sufficient capacity to sink a shaft at least 800 feet. The new shaft is a double compartment one, and heavily timbered.

Merced Hydraulic Company (The) is chartered under the laws of the State of New York. The offices are at 33 Wall Street, New York. The property of the company is located in Mariposa, Cal. The ore or gravel is auriferous. In February, the new cut of the company struck the old river bed, which was looked on as a valuable discovery, and from the appearance of the gravel bank, good developments are expected for some time to come. Capitalization, $600,000, in 120,000 shares of $5 each; non-assessable.

Milbourn Consolidated Company. The property covering an area of 600 acres of ground is located in Sierra county, Cal. Their gravel mine is three miles north of South Forks, at Bassett's, toward Gold Lake, ten miles north of Sierra city. They have been sinking a shaft, having let the contract for 800 feet at $1.99 per foot. The shaft when sunk 140 feet, was in good-looking quartz gravel. Many boulders were encountered in sinking the shaft, which impeded its progress.

Monte Christo Consolidated Mining Company (The). Butler Burris is Sec. Principal office is at 309 Montgomery Street, San Francisco, Cal. The company's mining property is located at Spanish Peak, Plumas county, Cal. Work is going on satisfactorily. Every cross-cut and shaft more thoroughly proves the value of the property. A building for the engine has been put up, and the engine and air-compressor are being put in place. A large Burleigh drill is also being fitted up. The main tunnel is to be run ahead several hundred feet this winter, and it is calculated that room for a large force of miners will be made by spring. The developments lately made show that the rich blue gravel is plentiful, and all that is necessary is time to open it and put it in a shape to handle rapidly. This winter will be devoted to that purpose.

Massachusetts Mining Company (The). The property is situated in Yuba county, Cal. The company are opening Garden Valley claim, on Willow Creek, between Comptonville and Bullard's bar, which property was mined to some extent in the early days, but the tailings from the mines above drove out the miners, and covered the pay-gravel up from twelve to twenty feet deep. It is now proposed to rework the whole deposit.

Nevada Mining Company (The). The mines belonging to this company are located at Richland, Nevada. Free gold and sulphurets is the character and quality of the ore. Depth of tunnel is 200 feet; tunnel drifts, 400 feet; ledge, eighteen to twenty inches in width—1881. Very encouraging prospects.

Nevada Reservoir and Ditch Company. The property is located at Smartsville, Yuba county, Cal. The company is associated with the Golden Gate company, and reports the second largest production in the county. The gravel of this mine can all be worked from the bed-rock to the surface, and will pay an average of forty-two cents to the cubic yard. The Golden Gate claim has, during about ten years' work, washed away some seven acres of land, which has produced $1,250,000.

New York Hydraulic Mining Company. Their property is located at Morristown, Sierra county, Cal. The company have commenced drifting in one of their claims, which is the first mining done by that process in the camp. Storage dumps have been built, and everything is in readiness for operating on an extensive scale. Sixteen men are employed at present, but this force will be increased as soon as a sufficient quantity of water can be procured. A large portion of the company's ground can only be worked profitably by the hydraulic process.

New York Hill Gold Mining Company (The) has property located in Grass Valley, Nevada county, Cal. The New York Hill mine has continued successful operations during the past year. In the spring there was some falling off in the receipts, owing to the bad condition of the roads, caused by stormy weather, which prevented the hauling of ore to the mill; but the quartz crushed yielded an average amount of bullion. The workings of the mine are all in a favorable condition, and the prospects are that it will continue to pay its regular dividends. Capitalization, $5,000,000, in 50,000 shares of $100 each; $195,000, amount of eight dividends paid to September 1, 1881, the date of latest dividend, which was at the rate of twenty cents per share: six assessments; total, $55,000 levied to March 26, 1878, date of latest dividend; treasury reserve, June 10, 1882, $14,539,86; no stock in the market.

Niagara Irrigating and Water-Power Manufacturing Company (The). The company's property is located in Bent county, Col. The company has a capitalization of $100,000.

North Carolina Gold Mining and Reduction Company (The) has offices at 205 Walnut Street, Philadelphia, Pa. The officers are Wm. Morris Davis, Pres.; Henry C. Davis, Sec. and Tress. Directors, Wm. Morris Davis, Chas. Gibbons, Edward M. Davis, Jr., W. J. Ladd, J. N. A. Griswold, Henry C. Davis, Benj. Jacobs, and Edward M. Davis. The property, comprising an area of 737½ acres, is located at Salisbury, N. C. The company was organized at Portland, Maine, February 9, 1881. Capitalization, $1,000,000, in 200,000 shares of $5 each.

North Hite and Yosemite Gold Mining Company (The) has offices at rooms 22 and 23, 58 Broadway, New York. The agents in Boston, Mass., are H. Whitney & Co., 17 Milk Street; agents in Philadelphia, Pa., Tracey & Vall, 312 Stock Exchange Place. The officers are H. Spooner, Pres.; L. F. Leaman, Sec. and Treas.; H. Williams, Gen. Agent; W. W. Clewell, Financial Agent. The property of the company is located in Mariposa county, Cal., and lies adjacent to the famous Hite mine. It lies between two of the most celebrated and best paying mines, and possesses extraordinary advantages of timber: mill site and water privileges equal to any in the State. Capitalization, $1,000,000, in 500,000 shares of $2 each.

Ogden Gold Mining Company (The). Officers, James E. Thomas, Pres.; John H. Avery, Sec. and Treas., Chicago, Ill. Headquarters of the company, Chicago, Ill. The mining property of this company are located in Ogden, Utah. Eight claims of 600 and 1,500 feet are owned by the company. Property lies between Taylor and Waterfall Canyons, and within three miles of the depot of Ogden City. Organized in the year 1880 by Judge Brewster; capitalization, $1,000,000; per share, $10.

Old Gold Mining Company (The). Date of organization at Kiltory, October 22, 1881; capitalization, $500,000.

Olsen Gold Mining Company (The). Officers, Milton S. Latham, Pres.; A. T. Beach, Sec. Principal office, 18 Wall Street, room 23, New York. The mining properties of this company are located in Tuolumne county, Cal. Capitalization, $2,000,000; shares, 200,000; par value, $1; stock quoted July 1, $34.75.

Ontario Mine (The), owned by Lieutenant-Gov. Tabor. The location of Ontario mine owned by Gov. Tabor is in Summit county, Col., near French Gulf. The developments are by shafts. The ores met with are of good quality.

Oregon Hydraulic Gold Mining Company (The) has offices at 414 California Street, San Francisco, Cal. The property of the company is located in Oregon. Organized with a capitalization of $60,000, in 3,000 shares of $20 each; dividends paid to December 10, 1881; aggregate, $2,250; amount of latest dividend, December 10, 1881; twelve and a half cents per share; stock quoted.

Original Gold Hill Gold and Silver Mining Company (The). Officer, J. M. Buffington. Principal office, 309 California Street, San Francisco, Cal. The mining property of this company is located in Nevada.

Oriental Company (The). The mines are located on what is known as the Canada Hill Channel, Placer county, Cal. They have sunk a prospect shaft in the cement eighty feet to bed-rock, and drifting from it found ground warranting the running of a bed-rock tunnel next season. The Canada Hill Channel is at an elevation of about 7,000 feet, and, contrary to the ordinary course of the buried river channels of the Sierras, runs from west to east. The gold is a coarse quartz, very little washed, and often connected with its original quartz matrix. The sources from which this quartz comes are evidently ledges in the immediate vicinity, Several of these ledges have been prospected, and yield well.

Oriental Mining Company (The) has property located in Nevada. The total length of main lode on which the company depends for its supply of ore is 1,500, the size of the claim being 300 by 1,500 feet. The company is organized with a capital of $2,000,000, in 200,000 shares of $10 each.

One Thousand and One Gravel Company (The). The property is located in Sierra county, Cal. The company is steadily driving its main tunnel, now 950 feet long, and contemplate also sinking for the bed-rock, which is supposed to be about twenty feet below the tunnel-level. A scarcity of water has somewhat retarded their operations.

Ourang Outang Quartz Mining Company (The). The mines owned by this company are located at Shaker Ridge, Amador county, Cal., southeast from the Golden Gate mine. Mr. Heath, from Whitmore's mill, struck some very fine ore and diggings on Mill creek.

Painsville Company (The). Their mining property is located in Ord district, San Bernardino county, Cal. The ore is of rather low grade for milling, yielding principally gold. The company has spent over $35,000 in developments, and now contemplates building a mill on the Mohave, twenty miles away, and also a tramway from mines to mill. The chief claims are the Painsville and the Rio Vista, on which shafts have been sunk with communicating tunnels and horizontal drifts. Besides these, there are the Coupon, Last Chance, Central, Modesto, Josephine, etc., all belonging to the same company, and upon all of which some work has been done.

Park Range Mining and Prospecting Company (The). Stockholders, A. W. Campbell, George H. Robinson, W. D. Chapman, James H. Hawley, Wm. M. Glassou, F. B. McNorton, E. N. Fenkell, and others. One hundred and sixty acres owned by the company, mill run two and one-half to 176 ounces in gold. Veins showing 700 feet above the primitive rock. Capitalization, $50,000; shares, 5,000; par value, $10.

Phœnix Company (The). The property is located in Sierra county, Cal. The company have developed a chimney 250 feet long; the ledge is from three to six feet wide, and the ore averages $30 to the ton. It is reported that the owners lately refused $125,000 for this mine, which speaks well for the confidence they have in its richness and permanency.

Placer Mines (The). Quirolo & Co., owners. The Placer mines are located in Amador county, Cal. More work has been done around Pine Grove than for years. Quirolo & Co. have a hydraulic claim in full blast. Grass Valley running a good force under the management of J. Bradshaw. J. L. Wheeler is operating a claim near the Grove. W. R. Hayes and others have been employed on a placer mine on the Stanley branch.

Plumas Eureka Gold Mining Company. Office, Merchants' Exchange, San Francisco, Cal. The company's mine, the Plumas Eureka, is located in the State of California, near Jamisou city, Plumas county, on the top of a mountain some 3,000 feet from or above the creek, and is said to be one of the best imbedded quartz mines in the State. The tunnel is 3,400 feet in length. The quartz is drawn out in large iron cars by mules, each car containing one and a half tons of quartz, and five cars are taken out each trip. The lode is from four to twenty feet in width. At the mouth of the tunnel is a large steam-boiler; the steam is forced in through iron pipe, driving two engines in the mine used for hoisting ore. There is no waste rock, everything is crushed. Their mills are run by water-power. A lake is located on the top of the mountain from which water is obtained. The company built a new sixty-stamp mill at the foot of the mountain. It has sixty stamps, three ore-breakers, self-feeder, twenty-four pans, and all modern improvements for saving gold. All the machinery is run by a turbine wheel. A tunnel is now running from the mill to the lode, and will tap the lode at least 1,000 feet lower than it has ever been worked before. This mine is systematically worked, and appears to be on a sound financial basis. The mine has a current value of $510,812. Capitalization, $4,062,500; par value per share, $100. Total amount of assessments levied, $1,509,219. Date of latest dividend April 14, 1882, seventy-five cents per share. Stock quoted June 10, 1882, $12.50.

Plumas National Quartz Mining Company's property is located at Loda creek, Plumas county, Cal. The ore is quartz, rich in sulphurets. The company's property includes seven fine concentrators, to collect sulphurets, and it is their intention to add a furnace and chlorination works. Total value of plant, $300,000. Valuable developments are reported in the lower tunnels. Main pay shute is over 600 feet in length, with rich pay ore still in the face. There is a supply of ore many years ahead of present capacity for crushing. Capitalization, $1,000,000; par value per share, $10. Total amount of dividends paid, $141,000. Date of latest dividend, July 22, 1879, eight cents per share. No assessments have been levied. Stock quoted July 1, $1.00.

Prince Albert Gold Mining Company (The), of which T. B. Donaldson is the Supt., and D. J. H. Rae, Pres. and Man., is organized with a capital of $60,000, in 60,000 shares of $1 each.

Pigeon Roost Mining Company (The). The property belonging to this mining company is located in Lumpkin county, Georgia. Machinery operated by a turbine water-wheel. The mine is well developed and provided with the best appliances to secure economy and efficiency. Considered the richest mine of the section in which it is located. Yield, gross, during 1879, $35,000; probably same for 1880.

Paradise Mining Company (The). The mining property belonging to this company is located at Paradise district, Nevada. Very rich ore; eighteen tons daily. This company employ forty men. Ships nearly 200,000 tons monthly. Property owned is a twenty-stamp mill; fifty cents per share.

Pacific Consolidated Mining Company. The company's property is located in the State of California. Capitalization, $600,000; par value per share, $100; total amount of assessments levied, $126,000; date of latest assessment, January, 1882, twenty cents per share.

Rappahannock Mining Company is chartered under the laws of the State of New York. Office, 60 Broadway, New York. The company's property is located in Stafford county, Virginia, and covers an area of 345 acres, including buildings worth $6,500, and machinery valued at $10,000. The ore is free milling and carrying gold, and has a value of $12 per ton. Date of organization, July 22, 1879; capitalization, $250,000; par value per share, $1; basis, non-assessable.

Red Hill Hydraulic Mining and Water Company. This company's property is located at West Branch, Feather river, near Magalia, California. The Red Hill is one of the oldest claims in the country, its location dating back to 1852. Late expenditure of $30,000 has been made in dams, flumes, giants, pipes, buildings, etc. The property is under the direction of experienced miners. Six assessments have been levied, the latest was levied May 10, 1882, at the rate of ten cents per share.

Renfrew Gold Mining Company (The) is chartered under the laws of the State of Maine. Dr. Julio H. Rae is General Manager. The company's property is located at Renfrew, Nova Scotia, covering an area of 134 acres. There are ten good veins of free gold quartz. The company owns one eight stamp-mill, hoisting and milling machinery driven by water-power, houses, shops, and tools. Date of organization, October 30, 1881; number of dividends paid to March 1, 1882, three; date of first dividend, January, 1882; amount, $600,000; date of latest dividend, March 20, 1882, paid at the rate of one per cent. of capital stock.

Resumption Mining and Smelting Company is chartered under the laws of the State of New York. Office, 35 Wall Street, rooms 7 and 8, New York. The company's mining property consists of the Niwot Gold and Silver mine, located at Ward mining district, Boulder county, Col. The company has a capitalization of $500,000; par value per share, $1.

Ricci & Company's Mine (The), Mr. George Bowen, owner. This property is located at El Dorado, Cal. Remunerative since 1866.

Rising Sun Gold Mining Company is chartered under the laws of the State of New York. L. D. Cortright is Secretary. Office, 18 Wall Street, New York. The company's mine, the Rising Sun, is located in Placer county, Cal. The ore is high grade, free milling quartz, and assays $28 per ton. The ledge is three and a half feet wide. The company owns a new twenty-stamp mill, which was reported to be running on full time July 1, 1882. The engine is being replaced by a new and larger one; self-feeders will be put in; another pair of Eureka rubbers will be added, and the concentrating machinery will be increased in proportion to the increased capacity of the mill. The pumping engine is also to be replaced by a larger engine. In order that there may be no doubt about keeping the twenty-stamps employed, a new hoisting shaft is being sunk on the ledge some 800 feet west of the present works. This shaft is now down a little more than 150 feet on a large, well-defined ledge of highly sulphureted ore, showing considerable free gold, which is reported as surpassing the best ore ever mined in the eastern part of the mine. It has gradually been improving in condition the past month. The ledge in the 500 level west has also gradually improved since it was struck both in strength and richness, and if it holds out as it gives promise, the production will be very largely increased. The mine has a current value of $23,000. Capitalization, $750,000; par value per share, $5; basis, non-assessable; total amount of dividends paid to May 31, 1881, $51,875; date of latest dividend, May 31, 1881, at the rate of seven and a half cents per share.

Robinson Gold Mine. The officers are Lewis Robinson, Pres.; George G. Fryer; Treas.; Daniel Carhart, Sec. The directors are L. W. Robinson, G. G. Fryer, E. P. Roney, Alfred H. Cordey, G. C. Fitzgerald. Ed. P. Roney is Superintendent. This property lies in the gold belt in Spottsylvania county, Virginia, about eighty-two miles from Washington, and five miles from the Potomac, Fredericksburg, and Piedmont (Narrow Gauge) Railroad. The gold belt in this section of Virginia is from fifteen to twenty miles in width, running in a north-east and south-west direction, and belongs to the Montalban group of the Archæn formation, the strata being composed of a series of slates interstratified with trap-dykes, veins of gold-bearing quartz, seams of iron, manganese and copper ores, and overlaid in many places by the debris of the same carrying much free gold forming placers, which have been worked profitably during the past fifty years with very rude and simple processes. Little prospecting has been done so far owing to the property being so heavily timbered. No developments except a dam and a few sluices.

Rocky Point Mining Company. The company's works are located a few miles above Auburn, on the middle fork of the American river, Placer county, Cal. They are putting in full time prospecting their claim, working day and night. Some paying gravel has been taken out of this mine.

Sierra Nevada Company (The). Mr. John Steel, Mang. The property belonging to the company is located at Cedar Hill, Cal. Rich quartz gold. The mines are entered by drifts. The whole hill is reported to be so rich in gold that, could water be obtained, it would pay to sluice down everything sluicable found on its surface.

Sailor Flat Hydraulic Mining Company. The property is located at Blue Tent, Nevada county, Cal. They made their first clean up in March, taking out for the season a considerable amount of gold.

Sacramento Mining Company is chartered under the laws of the State of Colorado. The officers are W. B. Frue, Pres.; J. Hobson, Vice-Pres.; R. G. Lay, Sec. and Treas. Offices, 62 Broadway, rooms 12 and 13, New York, and Sacramento, Cal. The company's mining property is located six miles west of Fairplay, at the head of Sacramento Gulch, Park county, Col. The property embraces seven mining claims, covering seventy acres. The ore body varies from one-half foot to nearly six feet in thickness, mainly argentiferous galena. Value per ton, $260. Date of organization, December 21, 1878. Capitalization, $2,000,000; par value per share, $10. Basis, non-assessable. Stock, full paid.

Sam Christian Gold Mining Company. The officers are G. A. Benson, Pres.; C. W. Schwartz, Vice-Pres.; H. B. Carpenter, Sec. and Treas. Directors, G. A. Benson, C. W. Schwartz, H. B. Carpenter, N. S. Higgins, W. R. Stockham, J. R. Vallance, W. I. Sharpless. The Superintendent is N. S. Higgins. The company's property is located in Montgomery county, N. C. The property embraces the Placer and Creek deposits, on the Wilson Moor and Gains' tracts, besides those of the original South Carolina tract, 1,200 acres, on Rock and Clark creeks. The company has a capitalization of $600,000. Par value per share, $10.

Sampson Flat Mines (The), owned by Little, Beebe & Co. The Big Sampson mine, belonging to this company, is located in Fresno county, Cal. Assays $90 to $100 in gold per ton. Ledge, eight feet wide.

Seaton Gold Mining Company. A. Warren is Treas. Office, 528 California Street, San Francisco, Cal. The Seaton mine, owned by the company, is located at Dayton, Amado county, Cal. Number of assessments levied, one; date of assessment, June 6, 1882. Fifteen cents per share.

Senate Mine. Owned by Hon. James Moynahan. Location of mine, near Alma county, Mosquito Town, Col. Character of ore, gold. Assays per ton, $50. Vein is from three to five feet in thickness.

Sir Roderick Dhu Gold Mining Company. John McGinnis, Jr., is Pres. The company's property is located at the Black Hills, Dakota, adjoining the Father De Smet mine. The company have a fine 100-stamp mill at the works. Capitalization, $2,000,000; par value per share, $10.

South Hite Mining Company (The). Officers, F. A. Berlin, Sec., California; J. T. Fowler, Assist. Sec., New York. Date of meeting, annual election, January 9. General office, 429 Montgomery Street, room 29, San Francisco, Cal. Rooms 44 and 45, No. 35 Broadway, New York. The mines are located in Hite's Cove, Mariposa county, Cal. Capitalization, $2,500,000; shares, 100,000; par value, $100. Date latest assessment, May 3, 1882; amount per share, 10 cents. Mining Record, June 17.

South Side Milling and Mining Company (The). Officers, J. F. Tabor, Pres.; John J. McGowan, Sec. General office, Nos. 4 and 5 Boston Block, Leadville, Col. The mining property belonging to this company is located in Lackawana Gulch, Lake county, Col. Gold-bearing quartz veins. Capitalization, $3,000,000; par value, $10 per share.

South Idaho Quartz Mining Company (The.) Directors, A. Teal, E. E. Webster, W. A. Nygle, C. H. Moore, A. St. Paul. The mining property of this company is located in Nevada county, Cal. Company was organized March 3, 1880; capitalization, $300,000.

South Zuba Water Mining Company (The) of New York. The mines of this company are located in Nevada and Placer counties, Cal. Medium grade ore ledge, four feet thick. Property owned is Richmond power-drills. Fine concentrators in mill, which is kept running night and day. Canals and ditches in thorough repair. The Fordyce and the many other reservoirs of this company contain 1,800,000,000 cubic feet of water, or capacity for such a quantity. Length of upper level, 300 feet; lower or main, 700 feet. Organized at New York. Amount of dividends paid to October 15, 1881, $82,000; date of latest dividend, October 15, 1881, seventy-five cents per share.

Spring Valley Hydraulic Company (The) is chartered under the laws of the State of New York. Directors, A. K. P Harman, Isaac L. Regna, Thomas H. Williams, C. C. Frank. The mining property, consisting of the Cherokee Flat Blue Gravel mine, located in Oreville, Butte county, Cal.; 1,200 acres of land owned by the company. Ore slightly mixed with platinum of the finest quality, assaying 950 to 985, fine gold. Current value of mine, $580,000. Upwards of a million dollars expended in constructing ditches and reservoirs, purchasing farms, which were covered with tailings, and for other improvements which are intended to give permanency to the mines. There are eighty miles of ditches and several miles of iron pipe, carrying over 2,000 inches of water. A tunnel nine feet by nine feet high is being run, which will open the mine 100 feet deeper, so that from fifty to eighty feet of bottom gravel can be worked; and, as this is very rich, it is estimated that the production will be increased to $700,000 per annum. A large force of men are employed, and about fifteen hydraulic chiefs are at work. The mines are lighted by electricity, reports say, with perfect satisfaction. Property owned, 100 miles ditches, 400 acres of reservoirs, 3,300 acres of put-up ground for tailings. Date of organization, March, 1879; capitalization, $200,000, par value, $1 each. Yield during 1881, $74,500. Amount of dividends paid to January 5, 1881, $50,000; date of latest dividend, January 5, 1881; amount, twenty-five cents per share. Stock quotations, July 1, 1882, $2.75. Maximum yearly capacity of production, January 1, 1882, $500,000. Wages paid to all classes, $2,500.

Standard Consolidated Mining Company (The) is chartered under the laws of the State of California. The officers are R. Cook, Vice-Pres., and W. Willis, Sec. Offices at 26 Exchange Place, New York, and room 29, 309 Montgomery Street, Nevada Block, San Francisco, Cal. The company owns the Standard and Bulwer claims, 1,200 by 1,500, located on Bodie Bluff, Mono county, Cal. The ore is of fair average grade, assaying about $60 per ton. Ledges of this ore vary from five to twenty-five feet in width; the rock is somewhat hard; depth of workings, 2,400 feet; length of drifts and cross-cuts, 1,139 feet. The company has seven mills aggregating 120 stamps, including Bulwer Standard of thirty stamps averaging 120 tons per day; total capacity of stamps about 400 tons per day; yet insufficient or inadequate to present requirements, April 26, 1882. During past week the company crushed 1,306 tons of ore, from which was received, crude bullion, 3,265 ounces, worth $15,420. This company has also a foundry and machine-shop, prepared to do all kinds of casting and machine work for mills and mines; the cupola and crane of full capacity of heat for all present demands; two steam hoisting works; large air-compressors; Cornish pump, etc., of capacity to sink 2,000 feet; 150 men are employed; developments were commenced in 1877. The present condition and prospects of this great mine are too well known to need comment. Only in January last (1882) the mine produced in gold, $145,954, and in silver, $14,190. Current value of the mine is $1,725,000. The mine was purchased for a nominal sum a few years ago by the Cook Bros., who still retain a controlling interest. It was not incorporated until it was sufficiently developed to show a business proposition. In this respect it differs from scores of other mining corporations. Usually, the incorporation of a claim takes precedence of its development. That is a strong point with a certain class of operators, who think they have nothing of value until the certificate book is ready. The Standard has never been assessed. The Standard paid fifty-three dividends in fifty-one consecutive months. The dividends of the Standard have been as follows:

September, 1877	$50,000	March	$50,000
October	50,000	April	50,000
November	50,000	May	50,000
December	50,000	June	50,000
January, 1878	50,000	July	50,000
February	50,000	August	50,000
March	50,000	September	50,000
April	50,000	October	50,000
May	50,000	November	50,000
June	50,000	December	50,000
July	50,000	January, 1880	50,000
August	50,000	February	50,000
September	50,000	March	75,000
October	50 000	April	75,000
November	50,000	May	75,000
December	50,000	June	75,000
January, 1879	50,000	July	75,000
February	50,000	August	75,000

September	$75,000	May	$75,000
October	75,000	June	75,000
November	75,000	July	75,000
December	150,000	August	75,000
January, 1881	75,000	September	75,000
February	75,000	October	75,000
March	75,000	November	75,000
April	75,000	December	150,000
Total			$3,300,000

Organized, April 11, 1877; capitalization, $10,000,000, in 100,000 shares of $100 each; yield to January, 1880, 51,239 tons of ore; value in gold, $2,990,000; in silver, $179,386; total, $3,169,386.

1877	$784,522 80
1878	1,025,383 35
1879	1,448,845 47
1880	1,858,763 46
Total	$5,117,515 08

Total dividends paid, $4,125,000, to June 12, date of latest dividend of seventy-five cents per share; $50,000 was levied in assessments to July 1878, the date of latest assessment; stock reserved in treasury, $267,494; stock quoted July 1, $18.25. The yield during 1881 is estimated at over $2,000,000.

State Line Gold Mining Company (The) is chartered under the laws of the State of New York. Officers, Lee R. Shyrock, Pres.; George D. Roberts, Treas.; D. F. Verdenal, Sec.; Isaac M. Taylor, Supt. The names of the mines owned by the company are State Line Gold Mining Company, Nos. 1, 2, 3, 4, located on Gold Mountain district, Esmeralda county, Nevada. The following assays of State Line ores were made at our request by Professor Richards, of the Institute of Technology. These assays are from samples taken at random from a shipment of ore recently received from the mines, represented as the average sample rock in the drifts. Much of the ore runs into the thousands, as reported by Professor Kaufman. The assayer at the mines represents the average ore as considerably over $100. Sample No. 1 assayed $477.48; No. 2, $409. 27; No. 3, $31 gold. So far as appearances go, one could not detect any difference in the sample of quartz. The quartz is of peculiar structure, showing no free gold. Capitalization, $5,000,000; shares, 200,000; par value, $25.

Star Consolidated Gold Mining Company (The) of Maine. The mines belonging to this company are located in Boulder county, Col. Capitalization, 250,000 shares; $14,000 paid in.

Steep Hollow Gold Mining Company. Office, 310 Pine Street, San Francisco, Cal. Location of works, Liberty Hill district, Nevada county, Cal.

Summit Gold Mining Company (The). Officers, W. H. Lent, Sec. Office, 309 Montgomery Street, San Francisco, Cal. The mines of the Summit Mountain Company are located in California.

Swamp Angel Gold Mining Company (The). Officer, Charles W. Badger, Sec. Office, 315 California Street, San Francisco, Cal. The mines belonging to this company are located in California.

Sonora Consolidated Mining Company (The) is chartered under the laws of the State of New York. The officers are O. G. Dawson, Pres.; H. K. Adams, Sec., and C. P. Wood, Treas.; Geo. S. Herrick, Supt.; Offices, 43 Exchange Place, New York. The company owns seven mines; the Sonora, Polar Star, War Eagle, Pogonip, Pocosillo, Ontario, and Margarita, located in Bodie, Cal. The location is considered most favorable. The developments consist of a double compartment shaft, timbered to a depth of 107 feet, now cross-cutting on the vein formation. Capitalization, $10,000,000, in 100,000 shares of $100 each; non-assessable for ever. Title complete; $12,000 has been paid in dividends.

Stein's Pass Mining Company is chartered under the laws of the State of New York. The officers are W. Barker, Pres.; A. Daprat, Treas.; J. S. Sherburne, Sec. Office, 66 Broadway, room 46, New York. The company's mine, the Alaska, is located in New Mexico. A very rich body of ore has been uncovered in the Alaska mine, situated in the vicinity of Hard Money mine. This is one of the most important strikes made in this vicinity for some time. The shaft is 200 feet deep. Capitalization, $1,000,000; par value per share, $5; basis, non-assessable; full paid. Treasury reserve, 80,000 shares.

True Mining Company (The). The mines owned by this company are the Young Harman, True, and Halleck, 300 feet. Located in Placerville, El Dorado county, Cal. Assays per ton, Young Harman, $6 to $8 per ton. True mine, $8 to $15. Property owned, a stamp-mill, water-power, 1,000 feet seven-inch pipe, and fall of 500 feet, requiring only thirteen feet of water to run the mill. Cost of milling per ton, $1.25.

Tuolumne Gold Mining Company (The). Officers, George R. Eager, Pres.; Charles Wendall, Sec. General office, 69 Milk Street, Boston, and 21 Nassau Street, New York. Located in Tuolumne county, Cal. The company has 125 miles of ditches, six miles of flumes. Grade of ditches, eleven to thirty-two miles; total cost of plant, $300,000; ditches cost about $4.50 per yard, flumes, $14 per yard, and pipes $6 per yard. Capitalization, $1,000,000; shares, 200,000; par value, $5.

Taylor Plumas Gold Mining Company (The) has its office at 62 Broadway, (basement,) New York. The officers are O. D. Russell, Pres.; J. G. Moody, Sec. and Treas.; W. B. Bransford, General Supt. The company owns the Taylor Plumas mine, located in Greenville district, Plumas county, Cal. A tunnel is being driven into the mountain along the line of the lode, which daily improves both in width and richness. The face of the drift now shows five feet of high grade ore. Capitalization, $1,000,000, in 200,000 shares of $5 each; non-assessable.

University Gold Mining Company. W. L. Oliver is Sec. Office, 328 Montgomery Street, San Francisco, Cal. The company's property is located in Bodie district, Cal. Extent of claim, 200 by 1,500 feet. The ore is much mixed, and low grade, assaying from nominal sum up to $900 per ton. There are five different veins cut, varying from two to twenty-two feet in width. The quartz from the twenty-two-foot vein averages about $30 per ton, principally gold. The company has machinery for operating the mine to a depth of 1,800 feet. The prospect shaft is 328 feet deep, and the main shaft 670. Capitalization, $10,000,000; par value per share, $100. No dividends paid to June, 1882. Number of assessments levied, ten; total amount of assessments levied, $107,500.

Utah Consolidated Mining Company is chartered under the laws of the State of California. The directors are J. Meyers, Pres.; J. Ressayre, Vice-Pres.; C. H. Redmond, J. H. Kavangh, S. B. Henderreich. Office, 309 Montgomery Street, San Francisco, Cal. The company's mining claims are the La Belle, Bredemyer, Meacoque, Wacht am Rheim, Ladie Anna, Borussia, and Cologne, located in Virginia district, Nevada. The character of the ore is carbonate of lead and galena, carrying free gold. The ore assays on an average $67 to the ton. The main tunnel, Queen of the West, is 300 feet in length, and there are six other tunnels, aggregating 1,000 feet. Depth of workings, 2,500 feet. The main lode on which the company depends for its supply of ore is 1,000 feet in length. Date of organization, April 9, 1872; capitalization, $200,000; par value per share, $100; number of assessments levied, thirty-nine; total amount of assessments levied, $1,300,000; date of latest assessment, May 4, 1882; amount per share, $1. Floating indebtedness, April 1, 1882, $4,172.

Vallecito Hydraulic Mining Company (The). Directors, A. J. Bryant, E. P. Pond, Wm. Dumphy, C. H. Livingston, H. M. Mitchell. The mines belonging to this company are located in Calaveras county, Cal. It was organized April 5, 1880; capitalization, $1,000,000.

Vein Mountain Mining Company's (The) property is located eight miles south of Marion, on West N. C. Railroad, North Carolina, covering an area of 6,800 acres. The character of the mine is hydraulic, gravel, auriferous. The ditch is six miles long, and the company has 150 feet head of water.

Whitehall Mining Company (The). William A. Clear, Superintendent. The Whitehall mine is located in Spottsylvania county, W. Va. It is announced that the mine has been bought by a company, among the members of which are Senator Call of Florida, Senator Jones of Louisiana, Congressmen Springs and Berry, Delegate Luna of New Mexico, and H. B. Clifford, a mining expert of Arizona. Commodore Stockton worked the mine from 1848 until just before the war. The mine is said to have yielded $1,800,000 in pure gold since its discovery, as shown by the books of the Philadelphia Mint. Within a space of three square feet, at a depth of twenty-eight feet, $160,000 worth of pure gold was taken out. Yield surprising anything known in the annals of mining. Gold was first found there in 1806.

Wilderness Gold Mining Company (The) is chartered under the laws of the State of New Jersey. Officers, William Reed, President; J. T. Salter, Secretary. Directors, William Reed, S. Lawrence French, J. D. Sargeant, George W. Dyer, C. H. Graham, and J. T. Salter. General office, 333 Chestnut Street, Philadelphia, Pa. The Belzara and Catharpion mines, belonging to this company, are located in Virginia. The number of acres owned, 1,090, Belzara mine, 374 acres; Catharpion, 716 acres. The ore is very profitable to work. All necessary steam appliances. Capitalization, 100,000 shares; par value, $5; non-assessable; amount of stock issued, 100,000 shares; amount reserved in treasury, 50,000 shares.

Winona Gold Mining Company (The). Officers, B. Findley Anderson, President; T. A. Roundey, Secretary and Treasurer. General office, 61 Broadway, New York, room 7. The location of the mining property of this company is on Gold Hill, Boulder county, Col. Capitalization, $2,000,000; shares, 200,000; par value, $10; non-assessable.

Willshire Hydraulic Gold Mining Company (The) is chartered under the laws of the State of New Jersey. In 1880, officers J. S. Bailey, President; Thomas L. Watson, Treasurer; Edward F. Bailey, J. S. Bailey, Jr., Treasurer; William Potts, Director. General office, 60 Wall Street, New York. The mining property belonging to this company is located at Cox's Bar, Trinity county, Cal. Own 104 acres. Two-thirds of the mineral lands owned by this company are covered by banks of gold-bearing gravel. A ditch and tunnel with a capacity of conveying 2,000 miners' inches of water; four feet bottom, six feet top, two and a half feet deep; blacksmith shop, iron pipe giant. The grade of gravel is about thirty cents per cubic yard, though under favorable conditions five cents per cubic yard would leave a margin above expenses.

Yuba Gold Mining Company (The) has property located in Nevada and Placer counties, Cal. The company has paid $4,000 in dividends to September, 1881, date of latest dividend of $1 per share. The length of the main lode on which the supply of ore depends is 1,200 feet.

Yreka Creek Gold Mining Company (The). These mines belonging to the above company are located in Siskiyou county, Cal. The Cranston hydraulic elevator used. It is stated they are going to work in earnest, having set aside 15,000 shares of their stock as working capital. Expect to be able to work ground thirty-five or forty feet deep. Capitalization, 50,000 shares; each share, $150.

IRON.

Annandale Iron Company is chartered under the laws of the State of New Jersey. The officers are Lewis Barnes, President; E. P. Carpenter, Secretary. Directors, John M. Robbins, E. P. Carpenter, Lewis Barnes, W. J. String, W. A. Wade, and J. M. Halton. Branch office, 113 South Fourth Street, Philadelphia. The company own four mines, viz.: The Sharp, Haver, Welsh, and Hoffman. The mines cover an area of 150 acres. Depth of shaft, fifty feet. Haver mine is now producing twenty tons of iron ore per day. The company have a capitalization of $10,000,000, in shares of $25 each; non-assessable; amount of shares reserved in treasury, 1882, 1,400.

Argyle Iron Company (The), formerly the Pittsburg and Lake Angeline Company, have their works located at Humboldt, Marquette county, Mich. The officers are Don. M. Dickinson, President; Ligmund Rothschild, Vice-President; Alexander H. Day, Treasurer; D. R. Show, Secretary; W. W. Wheaton, General Manager. There is reported to be a large show of ore on the company's property. Their plant includes one of Merritt's 18 by 30 engines and 4 by 5 feet V-friction drums. There are about seventy-five hands employed. Stock and bonds are held principally in Detroit. Product has been as below:

	Gross Tons.		*Gross Tons.*
1866	2,843	1874	2,849
1867	4,928	1875	12,804
1868	17,360	1876	19,330
1869	19,151	1877	10,419
1870	24,232	1878	10,351
1871	26,437	1879	5,455
1872	28,380	1881	4,584
1873	38,968		
Total			228,091

Battle Mountain Mines (The), viz., the Black Iron, Silverware, Eagle Bird, Kingfisher, and Little Olive mines, are located at Bell's Camp, Col. The ore contains carbonate and sulphate, lead ore, and iron.

Black Band Iron Ore Company (The). Officers, John Woolridge, President; F. A. Dearborn, Treasurer, and W. S. Denny, all of Boston, Mass; J. H. Huling, of Charlestown, W. Va. Mines are located at Davis Creek, Kanawha county, W. Va. Amount of property in acres, 3,500. The ore is compact and resembles in appearance cannel shale. It contains a large percentage of iron which is in the form of a carbonate. The principal coal is always found at about fifteen feet below the base of the ore, and the thin streak of coal above the deposit seems always to be purest. The ore is always between three and four feet in thickness. Interesting facts relative to the mine are: Six beds of coal, ranging in thickness from three feet five inches to ten feet, have been opened on the land of this company. A bed of splint coal three to five feet thick has been found under the black flint. Forty feet below this is a bed of black band iron ore. Twenty feet below this is the ten-foot coal bed. Two coal beds, one of them four feet thick, have been exposed beneath, the last above water level.

Breece Mining Company (The) is chartered under the laws of the State of New York. Geo. W. Dunn, Pres. Head office, 72 Broadway, New York. Location of mines, Colorado. Prospects of the property are good. The mine is looking extremely well, showing an abundance of fine iron ore in nearly all the workings. The face of the incline and the breasts of all the cross-cuts and stopes show magnificent iron ore. Two stopes in mine, one about sixty feet by ninety feet; the other, forty by ten feet. Depth of shaft, 340 feet. Interesting facts; at this mine there is an excellent hematite of great purity, containing but a trace of silica and other substances mixed through it; for this reason Breece iron is in great demand, the mine shipping thirty tons per day. Capitalization, 200,000 shares; par value, $25; non-assessable. Number of dividends paid to January 1, 1882; total amount, $2,000. Date of latest dividend, February, 1880. Stock quoted July 1, 1882, $1 per share.

Calumet Iron Company. The officers are W. B. Cornell, Pres.; Geo. H. Cornell, Sec.; R. McCurdy, Treas.; John R. Wood is Supt. The company's property is located in Marquette county, Mich., developments of which were commenced July, 1881. The company owns two seven by ten duplex Rochester engines, with three foot drums, to which will be added Lane plant, with two drums of larger size. The Calumet, on the Fitch Mountain range, is proving a veritable bonanza. The cross from foot-wall of No. 2 shaft was fifty-four feet in ore on the 13th of July, 1882, with no signs of the hanging-wall being near. Sixty-five men are employed, and more are added daily, and the force will be considerably augmented as soon as the railroad reaches the mine, which is expected in a month or two. The management expect to ship 20,000 tons of ore this season.

Cambria Iron Company (The). This company's property is located in Cambria county, Pa. Yearly amount of coal, 260,142 tons.

Champion Iron Company (The) is chartered under the laws of the State of Michigan. Capt. James Pasco is the mining Supt. The company owns the Northampton and the Champion mines, located in Marquette county, Mich. The walls of the belt are quite regular. The machinery and other plant is of the most improved pattern and of ample capacity. There are machine, carpenter, and other shops and buildings. A Rand twenty by forty-eight duplex compressor now being added to present plant. The prospect of the mine, under the supervision of Capt. Pasco, exceedingly promising; ore showing in abundance. This mine stands fourth on the list in regard to its productive capacity. Scenery in neighborhood of mine highly picturesque. The mine was discovered in 1867. Drill explorations are in continual progress. 450 men employed. Organized, 1869; capitalization, $500,000; shares, each, $25. Since 1867, in which year the Champion deposit was first discovered, the annual product of the mine has been as follows:

	Gross Tons.		*Gross Tons.*
1868	6,255	1875	56,877
1869	21,535	1876	66,002
1870	73,161	1877	70,883
1871	67,588	1878	73 464
1872	68,408	1879	94,027
1873	72,782	1880	112,401
1874	47,097	1881	145,427
Total			957,907

Total yield to 1881, $1,454,270.

Cherry Valley Iron Company (The). Works located at Lectonia, Ohio. Employ 6,000 workmen, use 6,000 tons of coal per month.

Clancy Iron Company. The officers are John Clancy, Pres.; M. W. Bates, Sec.; J. M. Watson, Treas. The company's property is located at Marquette, Mich. A force of men are employed in prospecting in search of the wheat vein.

Cleveland Iron Company (The). J. C. Morse, Agent, Marquette, Mich.; D. H. Bacon, Superintendent, Ishpeming, Mich. Name of mines owned, New York mine, and South Sunday. Location of mines, Marquette county, Mich. Character and quality of ore, iron, first-class. Property owned by the company, mining plant, machine shop, carpenter shop, two locomotive engines, new stone engine house with new pumping plant. Date of commencing developments, 1854. Date of organization, 1853; yield net to January 1, 1882, $2,067,197. The following table shows the annual production of the Cleveland during a period of thirty years:

	Gross Tons.		*Gross Tons.*
1852–1854	3,000	1868	102,112
1855	1,449	1869	106,133
1856	6,343	1870	132,884
1857	13,204	1871	142,658
1858	909	1872	151,724
1859	15,787	1873	133,265

1866	42,680	1880	212,748
1867	75,864	1881	198,569
Total			2,381,959

Columbia Iron Company (The). Officers, P. B. Shumay, Pres.; B. H. Jones, Sec. and Treas.; C. M. Nicker, Gen. Mang.; A. B. Meeker & Co., Sales Agents. Name of mine owned, Kloman. Location of mine, Marquette county, Mich. Character of the mine, vein of ore said to vary from five to thirteen feet in thickness. Yield, net, to January 1, 1882, 70,311 tons; yield, gross tons, during 1881, 11,158. The Columbia mine produced in

	Gross Tons.
1873	21,065
1874	35,088
1875	8,059
1880	6.663
1881	11,158
Total	82,033

Commonwealth Iron Company (The). Officers, Alexander Nimick, Pres.; W. W. Masters, Vice-Pres.; W. H. Harvey, Sec. and Treas.; H. A. Tuttle, Gen. Mang. Agent, W. E. Dickinson. Annual election, May 3. Captain Dickinson, Supt. Head and branch office, Cleveland, O. The mines are located in Menominee county, Mich. Amount of property in acres, 3,000. Quality and character of ore improving. In progress of shaft downwards, hard, bluish-black color, velvety texture, and conchoidal, splinting fracture. Property owned by the company. Machinery consists of four drums—Frazer and Chalmers. Expect to use power-drills soon. The property is yet in a crude state of development. 17,200 tons of ore ready for shipping May 1, 1881. Yield (gross) to January 1, 1882 $608,812.50; yield (gross tons) during 1881, 97,910.

Conrad Iron Company (The). Officer, J. C. Morse. Pres. Operated by the Davids Brothers. Alexander Grant, Supt. Name of mines owned, Two North Range, and another, probably the Sterling mine, located at Marquette, Mich. Property owned by the company. Considerable surface improvements, chiefly at North Range. Prospects of the property are considered promising, June, 1882. After having been idle for some time, operations at this mine are about to be renewed.

Cranberry Iron Company (The). Mines located in Mitchell county, N. C. Cranberry company have discovered on their property in Mitchell county, N. C., two veins of the finest magnetic ore, one eighteen feet, the other thirty-four feet. They have tunnelled through the veins in building a railroad.

Crystal Falls Iron Compony (The). Officers, N. K. Fairbanks, Pres.; J. H. Howe, Vice-Pres.; F. H. Head, Sec. and Treas. Superintendents, E. P. Mills (of Crystal Falls mine) and J. H. Ellinore (of the Fairbanks mine). The company owns the Crystal Falls and the Fairbanks mines, located at Crystal Falls, on Paint River, southwest of Marquette county, Mich. The character of the mine is somewhat peculiar, the vein being twisted and distorted. There are railway facilities to the mine, but no shipments of ore have been made.

Dalliba Iron Mining Company (The). Officers, James H. Dalliba, Pres.; W. S. Pollock, Sec.; D. Z. Morton, Treas.; E. D. A. Skinner and Walter Fitch, Local Agents. Mr. John Foley is Supt. The company own the Dalliba or North Dalliba mine, located in Marquette county, Mich. The mine possesses the ordinary plant of an iron mine. There are about ninety men employed. Gross yield during 1881, 10.986 tons; value, $60,423; all of which was mined from a single pit, the hanging wall of which has not yet been found. The daily yield at present, December, 1881, is at the rate of 130 tons per day of twenty-four hours. There is now on the ground, and ready for erection, a hoisting-plant, consisting of engine and two thirty-inch drums.

East Champion Mining Company's works are located in Marquette county, Mich. The directors are A. Kidder, Jas. Pascoe, J. R. Case, F. B. Spear, and R. V. Travus; Superintendent, Capt. Edwards. The East Champion shipped her first cargo of the season the 1st of July, and will send more after it in the near future, though no more work is being done at present than is necessary to put the mine in good shape for future operations. They are now raising thirty tons of ore per day, with a force of less than twenty-five men. Property is fully equipped; notwithstanding its past vicissitudes, the property now promises to become one of the best of the smaller mines of the district. There are 5,000 shares of stock, 2,000 to be sold at once to supply working capital, and balance as necessities of company demanded. Product has been as below:

	Gross Tons.
1873	10,426
1874	227
1875	3,346
1876	7,715
1877	14,495
1878	5,401
1879	4,029
1880	10,217
1881	3,408
Total	64,264

Emmett Mining Company (The). Officers are S. Kimberley, Pres.; Geo. Boyce. Vice-Pres.; R. Williamson, Sec. and Treas.; E. P. Foster, Agent.; M. Harrington, Supt. The Keel Ridge Mine is owned by this company. Located in Menominee county, Mich. Very fine situation for mining purposes. The yield net during 1881 consisted of 66,007 tons ore. The gross tons for 1881 was 648; value, $3,564.

Erie Iron Company's (The) officers are E. H. Wright, Pres.; Peter Pascoe, Vice-Pres.; W. A. Wright, Sec. and Treas. Directors, E. H. Wright, W. W. Wright, Peter Pascoe, Byron H. Andrews, and F. H. Kearney. Superintendents, Messrs. Wright, Martin, and Welch. The Erie mine, owned by this company, is situated on the west side of the Michigan river, Marquette county, Mich. Property on lease. The character of the ore is slate, magnetic, martite, quartz, etc. The ore body is large, but is cut up with alternate stratifications of soap-stone. Yield to July, 1882, under present company, 3,000 tons.

Florence Mining Company. Mr. Alex. Kempt is General Manager and Superintendent, with Capt. Budder, an experienced miner, in charge of the underground work. The company's property is located in Wisconsin. The mine is worked on the underground plan; 350 men are employed, fifty of them on the surface. Since the first shipment was made, less than two years ago, the output has been as follows: gross tons, 1880, 14,143; 1881, 100,501; total, 114,644.

Forest City Iron Mining Company. The officers are C. A. Otis, Pres.; T. H. Brooks, Treas.; F. A. Bates, Sec.; G. R. Tuttle, General Agent and Supt. The company's property is located in Marquette county, Mich. They own sixty acres of land. The ore is hard and soft hematite, 60 per cent. metal. The company's surface plant is small, consisting of small engine and larger engine in course of erection. The mine is now shut down, supposed to be worked out. Development of the property was commenced in 1880. Yield during 1881, 1,895 gross tons; value, $10,422.

Glengary Consolidation Mining Company (The). Officers, Albert Sherwin, Pres.; W. K. Clay, Vice-Pres.; S. D. Wilder, Sec. and Treas. J. W. Kennedy, Manager. Directors, Albert Sherwin, S. D. Wilder, Max Boehmer, J. W. Kennedy, W. K. Clay, J. G. Bedford, Leadville, Col.; M. B. Newcombe, Breckenridge, Col.; J. M. McCutcheoson, Monmouth, Ill. The company own the Glengary, Eclipse, Yates, portion of Hidden Treasure, Little Vinnie, and Fulton lodes. The location of these mines is on Breece Hill, Colorado; twenty acres owned. Very promising specimens of mineral have been obtained. Depth of shaft, ninety to 110 feet, showing from three to five feet of auriferous iron, 1881. Several deep shafts have been sunk on the property.

Goodrich Mine (The), is owned and operated by Capt. Goodrich of Chicago, is located in Marquette county, Chicago. Capt. H. Davis is the Mining Superintendent. The ore is of a peculiar character and the formation is very irregular. A new three-foot Lane drum has lately been added to the plant. The staff of men is about forty-five. The prospects are good under the able superintendence of present Capt. Davis. To

January 1, 1881, the yield was 31,361 tons; during 1881 the yield was 10,245 tons; total, 41,606 tons. Below is given the annual yield since 1873:

THE GOODRICH YIELD.	Gross Tons.
1873	3,258
1874	1,300
1875	1,780
1877	503
1878	7,547
1879	3,992
1880	11,181
1881	10,245
Total	41,606

An observer has suggested with much earnestness the use of Bullock's diamond drills on this tract as a most profitable field, believing that a rich slate will be revealed.

Grand Rapids Iron Mining Company. The officers are I. J. Whitfield, Pres.; Marcus W. Bates, Sec.; Isaac Philips, Treas. The company's works are located at Marquette, Mich.; they have forty acres on lease. The ore is second-class silicious ore, and is found in deposits. The use of the diamond drill is suggested as the easiest and most economical means of discovering good ore.

Great Western Mining Company. The officers are Sam'l C. Hall, Pres.; J. M. Case, Vice-Pres.; S. D. Hollister, Sec.; Geo. Runkle, Treas. and Gen'l Supt. This company was organized this year (1882). Their property is located in Marquette county, Mich.

Halston Iron and Steel Company (The.) The property of this company is located in Virginia. Capitalization, $500,000.

Hecla Iron Company. The officers are E. Breitung, Pres. and Treas.; B. D. Jones, Sec. Location of works, Marquette county, Mich. The character of the ore is given as very fine, soft, blue specular, high in metallic iron, and low in silica and phosphorus. Character of the mine; trend of formation from north-east to south-west, and the dip to the south-east. Diamond drill employed in searching for and determining the character of the veins.

Hematite Mining Company (The). The officers are S. F. Joseph, Pres.; Rich. S. Fay, Treas.; A. C. Towns, Sec.; C. H. Hall, Agt. The company's works are located in Marquette county, Mich.; 500 sixteen-power drills are employed. Maximum yearly capacity of production, 1881, 40,000 tons.

Humboldt Iron Company. General Manager, John B. Maas; Superintendent, John Hosking. The company owns the Washington mine, located at Marquette, Mich. The ore is rich specular schistose in structure, often friable, and sounds leaden when struck with a hammer; other portions magnetic. The ore is between conglomerate and jasper walls. Plant of machinery embraces one 16x24 engine, two four-foot clutch drums, etc. Ingersoll's power drills are extensively used. The prospects of the property are most promising; mining force about 160. Since the commencement of operations in 1864, the annual product of the Humboldt has been as follows:

	Gross Tons.		Gross Tons.
1865	4,782	1873	38,014
1866	15,150	1874	27,890
1867	25,440	1875	9,642
1868	35,757	1876	3,333
1869	58,462	1877	16,545
1870	79,763	1878	23,920
1871	48,725	1879	18,204
1872	38,841	1880	14,726
		1881	26,302
Total			485,495

Indiana Iron Company (The). John A. Kruse, Pres.; D. W. Irwin, Treas.; R. C. Flannigan, Sec.; R. P. Travers, Gen. Mang. The property of the company is located in Menominee county, Mich., and comprises an area of eighty acres. The ore is of uniform good quality, average analyses giving 69.3 per cent. of metallic iron; silica, forty-five per cent., and barely a trace of phosphorus. The first cargo of ore is reported ready for shipment. The face of the vein shows rich ore. The weekly output July, 1882, 600 tons. Developments were commenced on the west 40 in 1880. During 1880 the yield was 14,000 tons of rather inferior quality. Yield during 1881, 583 tons; value, $3,166.50.

Iron Duke Mine (The), owned by Messrs. Wylie & Hall, is located in the township of Darling, Lanark county, Ontario. These parties control about 1,200 acres of iron lands on which timber is plentiful, both pine and hard wood. Main roads are good, though hilly, and good winter roads can be got between the hills in any direction. The ore is said to be of good quality, magnetic, free from titanic acid and other injurious substances. Surface sample assays per ton 62.90 per cent.

Iron Cliffs Mining Company (The) is chartered under the laws of the State of Michigan. Capt. Sedgwick is the superintendent of one of the chief mines, the Barnum. The company owns four mines; the Barnum, Salisbury, Foster, and Section Twelve, all located in Marquette county, Mich. The ore is high grade, especially that of the Barnum, which has an extensive plant and employs about ninety men. The tunnel is 375 feet. Below is given the yield of the four mines during the various periods of their existence, to the end of 1881. During the past fourteen years the annual product of the Barnum has been as follows;

	Gross Tons.		Gross Tons.
1868	14,380	1875	43,209
1869	33,484	1876	37,632
1870	44,798	1877	37,509
1871	45,939	1878	26,680
1872	38,381	1879	24,015
1873	48,076	1880	24,522
1874	41,403	1881	27,883
Total			487,906

Since the mine was opened in 1872, the Salisbury yield has been as follows:

	Gross Tons.		Gross Tons.
1872	545	1877	37,869
1873	11,023	1878	52,155
1874	6,370	1879	39,293
1875	4,571	1880	21,457
1876	20,510	1881	43,690
Total			237,843

Product of Foster mine:

	Gross Tons.		Gross Tons.
1865–8	6,000	1874	4,719
1869	14,540	1875	847
1870	23,458	1876	125

1872	18,684	1880	1,122
1873	18,107	1881	3,011
Total			108,949

The output of Section Twelve mine has been as follows;

	Gross Tons.
1879	5,027
1880	330
1881	13,243
Total	18,600

Iron Duke Mine (The). Owned by Messrs. Tingley and others. The Iron Duke mine is located in Colorado.

Iron Mine (The). Owned and operated by Messrs. C. M. Wheeler and J. H. King, the former residing in Marquette county, Mich., Mr. King in Ohio. The mining property is located in Marquette county, Mich. Soft hematite ore; deposit all fifty feet wide. Yield net to January 1, 1881, 65,606 tons ore.

Iron Mining and Smelting Company (The), of which H. F. Smith is Superintendent, has property located at Crested Butte, Gunnison county, Col. The surface property comprises the smelting works, etc. The company has a treasury reserve of 40,000 shares of the company's stock.

Iron Mountain Pig Iron Company (The). Incorporated by G. W. Applegate, B. F. Ruyers, A. C. Neall, John R. Brown. The mines belonging to this company are located in Como district, Clipper Clap Station, Nevada. (1880). This property was recently purchased by J. E. Judson. "Giant Powder Man" works will be put up at once for making pig iron. The company was organized in the year 1864. Capitalization, 500,000 shares.

Iron River Mining Company (The) has offices located in Florence. Officers, John Stambaugh, Pres.; Geo. Boyce, Vice-Pres.; R. McCurdy, Sec. and Treas.; J. P. Jones, Gen. Agent. Jas. N. Porter is the Superintendent. The property, held on lease, is located in Marquette county, Mich. The ore is a hard hematite, rich in metallic iron (about sixty-two per cent.), and low in silica. The mine has a belt of clean ore (mostly), averaging 100 feet in width by half a mile in length. 200 men are employed, mostly in grading on the railroad, for which the company has the contract. To February last, date of latest dividend, the mine has paid $1,660,000 in dividends.

Jackson Iron Company (The) has for its officers Abm. V. Berry, I. M. Everett, S. T., G. W., and F. W. Carr, E. M. Rockwell, F. W. Kirtland, W. H. Munroe, A. W. Ernst, and F. Farrand. The mines are under the able supervision of Capt. H. Merry, who has had an experience of twenty years or more. The company owns three mines, the Pioneer, the North Jackson, and South Jackson, located in Marquette county, Mich. The quality of the ore is superior. The formation of the vein or deposit is much contorted. There is a new skiproad at an angle of 66° to the perpendicular. Developments were commenced in 1850. The men are working in all directions wherever the ore leads them. The North mine was surrendered to the Iron Cliffs Company at end of year 1881, in exchange for the Pioneer, opening of which that company held a lease, in which the ore is reported to have been exhausted. The company was organized in 1848; in 1881 the gross yield was 118,939 tons; value, $1,024,500.50. Since the commencement, the annual production of the Jackson has been as follows:

	Gross Tons.		Gross Tons.
1856 and previous	30,000	1869	125,908
1857	12,442	1870	127,642
1858	10,309	1871	132,297
1859	28,377	1872	119,910
1860	41,295	1873	130,131
1861	12,919	1874	105,600
1862	46,096	1875	90,568
1863	77,237	1876	98,480
1864	83,905	1877	80,340
1865	65,505	1878	83,121
1866	92,287	1879	103,219
1867	127,491	1880	120,620
1868	130,524	1881	118,939
Total			2,195,162

Jim Pascoe Mining Company (The). Walter Fitch, Agt. Capt. Foley is Superintendent. The company's mine, Jim Pascoe, is located in Marquette county, Mich. The character of the ore is hematite. The average width of stope is nearly fifty feet by thirty feet, and is one of the largest deposits of hematite ore in the country, with perhaps one or two exceptions. The workings are chiefly on the surface. The company's property includes large mining plant, Merritt's hoisting engine. About fifty men employed, July 1, 1882.

Keystone Iron Company (The) owns property in Marquette county, Michigan. The ore contains a rather large proportion of phosphorus. The formation of the deposit is somewhat irregular. Developments were commenced about 1873. In the spring of last year the prospects of the mine were not promising. During 1881 the yield was 3,408 tons; value, $27,264.

Laxey Mining Company (The). The officers are J. Q. Adams, Pres.; P. B. Kirkwood, Sec. and Treas.; H. M. Atkinson, Gen. Manager. The company's works are located at Marquette, Mich. The ore is the best quality of hematite, and assays per ton 64.70 per cent. metallic iron, and only .028 per cent. phosphorus. The extent of the deposit is not yet known. Property owned consists in a small hoisting plant. The shaft is seventy feet deep, and drift of thirty feet from the same is all the way in ore. A fine show of ore is reported. Stock quoted June 17, 1882, thirty-five cents per share.

Lake Superior Mining Company (The) has property located in Marquette county, Michigan. The mines are Lake Superior, Lothian, and New England mines. Mr. C. H. Hall is the General Agent, and Mr. John McEnroe the Underground Captain. The ore is a hematite. The adits are 560 feet in length; width of vein, about twenty feet. The mining plant and other property consist of new stone engine house and a hoisting apparatus second only to Calumet and Hecla. Ore is abundant and prospects continue to improve. The principal pits are lighted by electricity. Maximum yearly capacity of production, 300,000 tons. Organized, 1853; capitalization, $500,000, in 200,000 shares of $2.50 each. Gross yield during 1881 was 262,235 tons; value of same $2,185,576.50. Yield since 1858, when shipments first commenced:

	Gross Tons.		Gross Tons.
1858	4,658	1870	166,582
1859	24,668	1871	158,047
1860	33,015	1872	185,070
1861	25,195	1873	158,078
1862	37,769	1874	114,070
1863	78,976	1875	129,339
1864	86,763	1876	111,766
1865	50,201	1877	127,349
1866	68,002	1878	109,674
1867	119,935	1879	173,938
1868	105,745	1880	204,094
1869	131,343	1881	262,235
Total			2,666,456

Number of dividends paid to August, 1881, $100,000; date of latest dividend, August, 1881; amount per share, fifty cents.

Licking Iron Company (The). Jacob Opperman, Supervisor. These mines are located in Shawnee, Ohio. Two furnaces, one in full blast, under Mr. Opperman's supervision; No. 1 has a forty-eight-foot stack, twelve and a half foot bosh, and six tuyeres; No. 2, in blast, is averaging twenty-five tons daily on all native ores. Their mine, in charge of Wm. Richards, employs twenty-five men.

Longdale Iron Company. The Manager is John McGuffin. The company's mine, the Sewell, is located in Alleghany county, Va. The vein is three to four feet thick, and has a capacity of 160 tons per day. Maximum yearly capacity of production, 1880, nearly 13,000 tons of coal. The company has been mining the Sewell seam, the bottom one of the middle measures, but it has recently been opening one of the lower measures beds, probably the Fire Creek, which it will mine before long.

Lowmoor Iron Company (The), of which Mr W. H. Sadler is Superintendent, has the following officers: Col. H. W. Goodwin, General Manager; C. F. Conrad, Resident Engineer. The company owns the Stack mine, located at Dunlap creek, Alleghany county, Va., the property covering an extent of 1,000 acres.

Lumberman's Mining Company (The) owns the Ludington and the Stephenson mines. Mr. Geo. E. Stockbridge is the General Manager and Superintendent; M. W. Brise, Mining Capt. The officers are Hon. H. Ludington, Pres.; S. M. Stephenson, V.-Pres.; Isaac Stephenson, Treas.; Jos. Flesheim, Sec., and Geo. E. Stockbridge, General Manager. The property is located in Menominee county, Mich. The ore of the Ludington mine is soft, blue specular. A new plant is being erected with a view to work the mine on a large scale, and a large body of ore is now being operated on. The gross yield of ore to January 1, 1881, was 33,000 tons. In 1880, the Ludington produced 8,816 tons; in 1881, the Ludington produced 3,374 tons.

Magnetic Consolidated Iron Company (The) of New Jersey is chartered under the laws of the State of New Jersey. Officers, D. L. Wood, Pres.; E. P. Carpenter, Treas. Directors, David L. Wood, J. M. Richmond, H. B. Fowler, E. P. Carpenter, J. O. Marshall. Principal office, 134 South Fourth Street, Philadelphia, Pa. The Hazen, Duckworth, and Eckel; 150 acres is the extent of property owned. Four shafts from forty to seventy-five feet. Tunnel seventy feet; 1,000 tons of ore on the dump. Capitalization, 30,000 shares; par value, $5; non-assessable.

Manhattan Iron Company (The) has property located in Marquette county, Mich. The officers are E. Breitung, Pres.; J. H. Onthwaite, Sec. and Treas.

Marine Iron Company (The) has property located in Marquette county, Mich. The mine has an ore deposit about eighty feet wide by 150 feet long, and lies at the mouth of a deep ravine; trend nearly east and west. Skip-roads are now being constructed. The plant includes an engine and two Merritt's thirty-inch interior gear drums but recently added. Mine possesses important facilities for shipping both by water and rail, and promises to develop into a paying mine.

Mastodon Mining Company (The) has property located in Marquette county, Mich. The officers are E. Breitung, Pres.; Joseph Austrian, Sec. and Treas. The Superintendent, Mr. Richard Polkinghorn, has had considerable experience. The outcrop was discovered by Jack Armstrong, about 1879. Developments are proceeding, and although there are no shipping facilities at present time, the mine promises to grow into a profitable undertaking.

McComber Iron Company (The) has property located in Marquette county, Mich. The officers are S. L. Mather, Pres. and Treas.; Fred. A. Morse, Sec.; J. C. Morse, Gen. Agent; Capt. H. Merry, Local Agent; Capt. Charles Fox, with fourteen years' experience as a foreman in the Jackson mine, is the Mining Superintendent. There are seventy-five men employed. The plant is simple and inexpensive but sufficient for present requirements. The ore is a soft hematite of superior quality. The prospects of the property are promising, as ore is revealed at various points. Product for 1882 estimated at from 35,000 to 40,000 tons. The workings are only on the surface at present, but preparing for underground working in the near future. Organized, 1872; capitalization, $500,000, in 20,000 shares of $25 each. Yield to January, 1882, 224,312 tons of ore; yield during 1881, 23,051 tons of ore; value of same, $154,280.50.

McCulloch Iron Company (The). Delaplaine McDaniel, Pres. The mining property belonging to this company is located in Delaware.

Menominee Mining Company (The) is chartered under the laws of the State of Michigan. The officers in 1880 were J. J. Hagerman, Pres.; J. H. Van Dyke, Sec. and Treas; A. C. Brown, Gen. Agent; N. P. Hulst, Superintendent; Jeff. D. Day, Asst. Superintendent. The company owns, or owned, seven mines, viz., the Florence, Chapin, Quinnesec, Cyclops, Norway, Vulcan, and Lowell, located in Menominee county, Mich. These mines or claims are the choice of the range. The company is considered the wealthiest in the world, although it has only been organized about four years. It was during the summer of 1873 that H. D. Fisher, one of a party of three, rested himself on a robust hill less than half a mile from the present village of Florence. He was looking for iron, and was wellnigh despairing of success in the search, when he stumbled against a substance which attracted his attention; this proved to be iron ore, and further prospecting showed the existence of a rich deposit. This was subsequently developed, and is now known as the Florence mine. Mr. Fisher may be said to be the founder of Florence. The excellent quality of the ore is well known. All the different mines are amply furnished with the most improved mining apparatus. Some of them are lighted with the Brush electric light. A new saw-mill is being constructed. There are 500 men employed in the Vulcan and about 900 in the Chapin, which has now, July, 1882, a capacity for producing at the rate of about 50,000 tons per month. Here is the largest single deposit of iron ore in the upper peninsula, barring none of the great mines of Marquette county. The total yield of all the mines to the first January, 1881, was 707,000 tons of ore.

	1860. Tons.	1881. Tons.
Yield of Florence	13,936	100,501
Yield of Chapin	34,556	*
Yield of Quinnesec	52,237	43,711
Yield of Cyclops	14,268	12,644
Yield of Norway	198,165	137,077
Yield of Vulcan	72,571	*
Yield of Lowell	14,571	*

* Returns not obtained.

The annual output of the Vulcan, of which Curnow is Captain, since the beginning, has been as follows:

	Gross Tons.
1877	4,593
1878	38,799
1879	56,975
1880	86,976
1881	85,274
Total	272,617

Mexican Iron Company (The). Officers, W. F. Swift, Pres.; Geo. W. Hayden, Sec. and Treas.; Geo. Berringer, Superintendent. The Old Carr mine belongs to this company on lease, with option of purchase. This company was organized in the fall of 1881. Not working at present. Yield net during 1872, 2,380 tons; second-class ore.

Michigameme Iron Company (The) is under the superintendence of Mr. J. C. Fowle, of Michigamme, Mich. Hon. W. H. Barnum, Pres.; John Rood, Sec. and Treas. The property of the compony is located in Marquette county, Mich. The ore is specular and magnetic. The mine is furnished with a superior plant in excellent condition. There were about 200 men employed in January last (1882). Since 1872 the annual product has been as follows;

	Gross Tons.		Gross Tons.
1872	141	1877	28,238
1873	29,107	1878	58,622
1874	45,294	1879	56,970
1875	44,763	1880	52,766
1876	70,074	1881	57,272
Total			443,247

The value of the yield for the last year was $544,084.

Mike and Starr Company. The directors are W. D. Lewis, Pres.; Geo. C. Harrington, Treas.; C. F. Mackenzie, W. J. Mann, Geo. West, H. R. Gardner, and Geo. F. Ropes; Horace T. Starr, Sec.; John Shoenbar, Superintendent. Office, 4 Sear's Building, Boston, Mass. The company's mine, the Mike and Starr, is located at Leadville district, Col. The ore carries galena, copper, iron, and pyrites, all rich in silver. Fine hematite samples show sixty-seven and one-half per cent. metallic iron. Three samples assayed 387 ounces, 422 ounces, and 458 ounces to ton silver, and twenty to thirty per cent. in lead. It is said that only four men working on ore body broke and sent to the surface in twenty-four hours about sixteen tons of ore. Twelve tons have been shipped and results are awaited. The company has a capitalization of $1,000,000; 200,000 shares; par value per share, $5.

Milwaukee Iron Company (The) has property located in Marquette county, Mich. James A. Foley is Superintendent; R. S. Fary, Pres. and Treas.; A. Kidder, General Agent. Analysis of ore shows sixty-one per cent. metallic iron; one per cent. phosphorus, and five per cent. silica. The deposit is irregular. The plant includes two double engines, one fifty and one seventy horse-power; also a small portable hoisting engine. The main shaft is now being cribbed out. The prospects of the mine are reported good and ore abundant. Mining can be carried on cheaply. The company was organized in 1878, and developments were commenced same time. To January, 1881, 14,083 tons of ore were extracted; in 1881, the yield was 31,635 tons; value, $173,992.50.

Mitchell Iron Company (The), of which Capt. Thos. Walker is the Superintendent; S. Mitchell, Pres.; Chas. Merryweather, Sec. and Treas. The property of the company is located in Marquette county, Mich. The ore is of a fine quality, remarkably clean, soft, blue hematite, high in metallic iron and low in phosphorus and silica. Veins in contact with drift overlying, to a depth of from seventy to eighty feet. The mining plant includes a new steam-engine. Ninety men are employed. The following is the yield since 1872:

	Gross Tons.		Gross Tons.
1872	197	1878	4,259
1873	8,658	1879	11,131
1874	7,549	1880	13,297
1876	5,596	1881	21,146
1877	3,989		
Total			75,731

The company was organized in 1877. Value of product in 1881, $116,303.

Mount Lincoln Consolidated Mining Company (The). The Kingfisher and Little Ollie mines belong to this company. Located on Battle Mountain, Colorado. The ore is exceedingly pure carbonate, and sulphate, and oxides of lead ore, mixed with oxides of iron and manganese. The mines are worked by a shaft and drifts. The shaft is sixty-five feet deep. Capitalization, $1,000,000; shares, 6,000.

Nanaimo Iron Company (The). Officers, John S. McDonald, Pres. and Treas.; John Spence, Sec.; Thomas Luxmore, Supt. The mines of the Nanaimo Iron Company are located in Marquette county, Mich. There is a leasehold on the property. Small plant of machinery is owned by the company.

National Mining Company (The). Captain Samuel Mitchell is Superintendent, and Captain Williams, Local Superintendent. The National Mine, owned by this company, and located in Marquette county, Mich., is leased from the Lake Superior Iron Company. The company have 240 acres of land. The ore is hard, granular and very pure. The deposit is fifty feet thick. The company's property includes twenty good dwellings, hoisting, pumping, and other machinery plant. Developments were commenced in 1878. 100 miners are employed. The annual product of the National has been as follows:

	Gross Tons.
1878	4,191
1879	33,310
1880	29,351
1881	24,833
Total	91,685

Stock quoted July 1, 1882. $2.00 asked, $1.38 bid.

New York Mining Company. John C. Cutter, Sec. and Treas. Lawrence McClosky is Superintendent, and Augustus Burling, Assistant Superintendent. The company's property is located in Marquette county, Mich. Mr. Samuel J. Tilden, is chief owner. The property covers forty acres of land. Character of ore, rich specular. Formation of the mine is considerably contorted, but all the workings are in admiable condition. The past gratifying history of the mine may be expected to be repeated for twelve years to come. Mining force, 200 men. Date of organization, 1865. Annual yield since 1864:

	Gross Tons.		Gross Tons.
1864	8,000	1874	77,017
1865	12,214	1875	70,103
1866	33,761	1876	58,863
1867	43,302	1877	55,581
1868	45,665	1878	21,903
1869	71,456	1879	57,528
1870	94,809	1880	58,000
1871	76.381	1881	50,489
1872	68,950		
1873	70,882	Total	974,489

Stock and bonds are held principally by Mr. Samuel J. Tilden, New York.

North State Mining Company (The) is chartered under the laws of the State of North Carolina. Edwin Mulford is Secretary. The head offices are at Salisbury, N. C.; branch offices at 52 Broadway, New York city, and at 115 Broadway, New York, in office of the Mutual Trust Company. The property of the company is located in Aske county. N. C. The ore is a pure magnetic, free from sulphur, phosphorus. and titanic acid, assaying $60 and twenty per cent. copper. The deposits are of immense extent, the veins vary from four to sixteen feet wide on the surface, and their elevation above the level of the watercourse varies from 200 to 400 feet. The mine is equipped with the most improved machinery. Furnaces are now being erected for the manufacture of charcoal blooms and loop iron, upon which a profit of at least $20 a ton can be made. Special furnaces are building for the manufacture of steel directly from the ore by the new process owned by this company. Capitalization, $10,000,000, in 400,000 shares of $25 each; the latest dividend was on May 9. 1882, $1 per share.

North Western Iron Company (The) has property located in Marquette county, Mich. The officers are S. D. Rees, Pres.; Ed. Breitung, Vice-Pres.; J. N. Glidden, Sec. and Treas. The tract is held in lease from the Beavor Iron Co. A number of charcoal kilns are being erected, with a view of treating the low grade ores on the spot. The mining plant comprises a twelve-stamp mill, hoisting machinery, stamp mill engines with capacity of 24 stamps, with surplus for saw mill, a great convenience to the neighboring counties, four more stamps recently added, dwelling-houses increased to twenty-four. Later accounts report the property in a dilapidated condition. Capitalization, $300,000.

Norwich Iron Company (The) is chartered under the laws of the State of Michigan. C. E. Roberts is Superintendent. The company's property is located in Ontonagon county, Mich., where they own forty acres of land in fee. The character of the ore is hematite. The company owns stamp mill, hoisting engine, portable saw mill, agent's house and office, warehouse, shops, and seventy miners' houses. Developments were commenced during the year 1850, and $230,000 have been expended in developing the property to January 1, 1882. Yield to January 1, 1882, 1,496 tons, 1,360 lbs.

Ohio Valley Iron Mining Company (The). Officers, Thomas Axworthy, Pres.; D. McGarry, Vice-Pres.; John T. Hayes, F. W. Judd, Superintendents. The location of the mines belonging to the above company is near Crystal Falls, Marquette county, Mich. The company was organized 19th of May, 1882, in Cleveland.

Paint River Mining Company. The Directors are Max Wineman, Pres.; Jos. Austriana, Sec. and Treas.; E. Breitung, John McKenna, and Dr. Bond. C. Y. Roberts, Superintendent. Mines worked by the company are leased from Hon. E. Breitung. The property is located at Crystal Falls, Marquette county, Mich.

Pennsylvania and Virginia Iron and Coal Company. The mines belonging to this company are located in Fayette county, West Virginia. Quinnimant furnace used in 1880.

Penn Iron Mining Company (The). Officers, W. H. Barnum, President; James Rood, Jr., Treasurer; John Q. Adams, Secretary; A. W. Maitland, General Manager. Directors, W. H. Barnum, James Rood, A. W. Maitland and Joseph Winter; Superintendent, A. W. Maitland. Mr. A. Bristow, of Philapelphia, acts as Resident Manager; Mr. Powell Stackhouse as General Superintendent. Lake Superior mines. This company was originally called the Cambria Iron Company: changed to its present name July 1, 1882. The names of mines owned are Quinnesec, Cyclops, Norman, Vulcan, Lowell, (formerly owned by the Menominee company,) all located in Marquette county, Michigan. 50,000 acres of land owned by the company. Fine quality of ore, consisting of soft hematite, 66 per cent. metallic iron. Property owned is an engine house, engine and boiler, two three-foot and friction drums. Yield (net) to January 1, 1881, 34,267 tons. Yield of the Cambria since

1874	2,610 tons.
1876	6,329 "
1877	10,083 "
1878	3,754 "
1879	6,724 "
1880	6,958 "
1881	19,245 "

Philadelphia and Reading Coal and Iron Company (The). General offices, 227 South Fourth Street, Philadelphia. Thomas M. Richards, Philadelphia, general coal agent. New York office, 7 Courtland Street; Buffalo, 14 Main; Providence, 5 Customhouse.

Pictou Iron Drill Company (The). This company own the Spring Hill mines, located in Nova Scotia.

Pilot Knob Iron Company (The). The mines belonging to this company are the Pilot Knob, Shepherd Mountain, Cedar Hill, Russell Mountain, Buford Mountain, Shuton Mountain, etc., located in the State of Missouri. Ore formed in the mines is very valuable in the manufacture of steel. Capitalization. $2,000,000.

Pittsburg and Lake Superior Iron Company (The). Officers, James Laughlins, Pres.; J. H. Outwaite, Sec. and Treas.; Harvey Diamond, Supt. Principal office, Cascade. The Dalma mine is owned by the company, located in Marquette county, Mich. Quality and character of ore, superior specular slate and granular specular, latterly ore changing to soft hematite of excellent quality. Lens trending E. W.; walls, hard and firm, dipping to N.; vein, uniform. The length of workings about 1,000 feet. Mining plant has been recently increased by a new boiler and a Bullock diamond drill, also a new steam saw-mill and shingle-mill, lathe machine, and planer. Developments commenced 1863. Yield (net) to January 1, 1882, 525,637 tons. Yield of Pittsburg and Lake Superior during the following years, viz.:

	Gross Tons.		Gross Tons.
1871	4,171	1877	20,211
1872	40,655	1878	5,929
1873	50,418	1879	24,633
1874	19,560	1880	28,881
1875	4,071	1881	39,276
1876	15,324		
Total			263,129

Average daily output, 150 tons of ore. Diamond drill in use.

Republic Iron Company. The directors or trustees are S. O. E. Ely, E. Breitung, E. D. Parsons. Capt. Peter Pascoe is Supt. The company's property is located in Marquette county, Mich. The ore mined is very rich. The ore stratum sharply folded by latteral pressure from N. W. to S. E. Massive gray quartzite, similar to that in all hard ore mines. The company's plant, complete in every particular, was built in the Iron Bay foundry, Marquette. Ore of good quality is abundant. The mine is in the best possible condition for rapid and economical working. Date of organization, October 20, 1870; capitalization, $500,000; par value per share, $25. The mine has produced as follows:

	Gross Tons.		Gross Tons.
1872	11,025	1877	165.839
1873	105,453	1878	176,221
1874	122,639	1879	135,231
1875	119,726	1880	235,387
1876	120,095	1881	233,786
Total			1,425,399

Rocky Mountain Coal and Iron Company (The). The mines of this company are located at Alma Station, Wyoming Ter.

Rossett Mine (The), owned by T. B. Clare, and operated by C. S. Hurd, is located at Ironton, Taylor county, W. Va. The mine is worked by drift, and furnishes hard and still ore from the same stratum. It is not worked to more than half its capacity. Maximum yearly capacity of production, February 1, 1881, 12,000 tons.

Saint Clair Mining Company (The). Officers, John Brooks, Mr. Delano, Sup't Gen'l. Office, Boston, Massachusetts. The mines belonging to this company are located in Keweenaw county, Mich. Date of re-organization, 1879–1880. Property owned: fifteen houses, hoisting engines and rock crusher, twelve head stamp-mill, and wash house. Depth of shaft, 300 feet; yield, net. during 1881, $22,902.59; yield, gross tons refined copper during 1881, sixty-two tons, 1,493 pounds; date latest assessment, 1880; amount per share, thirty-seven and one-half cents.

Saginaw Mining Company. The officers are Henry Chisholm, Pres.; S. H. Chisholm, Sec. and Treas.; S. Mitchell is Superintendent. The mines held on lease by this company were bought from Messrs. Maas & Co. for $300,000. The company also holds a section of the Nineteen mine. The property is located three and a half miles south of Ishpeming, Marquette county, Mich. The character of the ore is specular, containing some magnesia. The vein was pinched in old workings. New discovery at depth of eighty-five feet, promises compensation for loss of old deposit. Shaft is now being sunk. The company's property includes 110 dwellings, several stores, saw-mill, etc. About 100 men are employed. The development of the property was commenced during the year 1879. The show of ore by drill is said to warrant high expectations. The Saginaw has produced as follows, annually:

	Gross Tons.		Gross Tons.
1872	18,503	1877	44,005
1873	37,188	1878	54,097
1874	45,486	1879	43,396
1875	55,318	1880	35,059
1876	56,979	1881	30,793
Total			420,774

Sierra Iron Company (The). Officers, F. McKnight, Pres.; P. N. Lilienthal, Sec.; Charles Kohler, Treas. Trustees, P. N. Lilienthal, J. Benjamin, H. P. Bush.

Shenandoah Iron, Lumber, Mining, and Manufacturing Company (The) is chartered under the laws of the State of Virginia. The officers are Alfred Creveling, Pres.; John Milnes. Treas.; Wm. Milnes, Jr., Gen. Mang.; L. S. Boyer, Sec. The property of the company held in fee-simple and being 31,483 acres in extent, or forty-nine square miles, is located on the Shenandoah Valley Railroad, Page county, Va. The real estate on the property consists of dwelling-houses for officers and employees of company, carpenter and smiths' shops, forty-horse stable, forge, refinery, coal-house, reservoirs, stores, offices, and warehouses. etc. Mining operations are now in progress at each of the mines, there being about eighty men employed. The original incorporators were Wm. Milnes, John Fields, Thos. Johnson, and Wm. Milnes, Jr. Organized June 30, 1880; par value of shares, $100.

Sleepy-Hollow Iron Mines (The) are owned by A. S. Burford, President, Richmond and Danville R. R.; John P. Branch, Thos. Branch, and others. Attorney for owners, Richard Irley, of 1214 Main Street, Richmond, Virginia. The property is located on a small stream running down to James river, two miles from Richmond and Alleghany R. R., 105 miles off Richmond, and thirty-six from Lynchburg; total extent of same, 1,800 acres. The ores are hematite, specular, and magnetic. The quality is sesqui-oxide 73.53 per cent. = 51.47 metallic iron. The main vein of hematite widens with depth. Magnesia supposed to exist on the property. There are on the property one and two story dwelling-houses, and water-power can be had on liberal terms. Limestone for flux, and timber in immediate locality. Coke for smelting by rail.

Spur Iron Mining Company (The). W. B. Davis, Agent and Superintendent. The mines belonging to this company are located in Baraga county, Mich. Property owned, new boiler, a compressor; six power drills have recently been added to the plant, diamond drills not in use. Company organized, May 12, 1881; gross net to January, 1882, 146,612 tons. The annual product of the Spur has been as follows:

	Gross Tons.
1873	31,933
1874	42,068
1875	23,094
1876	20,276
1877	22,801
1878	2,225
1879	1,409
1881	2,746
Total	146,612

Sturgeon River Mining Company (The). John M. Douglas, Pres.; G. C. Benton, Sec. and Tres. The mines belonging to this company are located in Menominee county, Michigan. Amount of property in leasehold. Trends of the formation is nearly east and west, dip supposed to be high to the north. About 8,000 tons of ore in sight. Developments were commenced in 1881. Shaft, fifty feet; drifts, 100 feet; length of levels, fifty feet; all in ore.

Titan Iron Company. The officers are H. C. Young, Pres.; W. F. Swift, Sec. The company's mines are leased from the Michigan Land and Iron Company, and adjoin the Beauport, Michigan. The company was organized at Ishpeming, May, 1882.

Thomas Coal and Iron Company (The). Mr. Wm. Iot, Manager. The Troy mine is owned by this company, location at Straitsville, Ohio. Mr. Joseph Mitchell has the underground work in charge, also charge of the business and financial departments for the company, employing 200 men; expect to start forty men in the new mine at an early day.

Virginia Iron and Coal Company (The). Officers, Ex-Gov. Hartranft, of Penna., Pres.; Mayor James F. Lewis, New York, Vice-Pres., and Gen'l Manager of the works. This company own a number of mines located at Ferrol, Virginia. They own the Quinimont furnace, cake works, and 1,000 acres of land. They also own the Grace furnace, with 7,000 acres of fine ore land; have an average of twenty-eight tons of good iron daily. The company has a capitalization of $1,500,000.

Vulcan Iron and Steel Company (The). This company is capitalized with $1,000,000; sustained with a bonded indebtedness of $1,000,000; formerly yielded ten per cent.; now pays to the bondholders seven per cent. on their investment.

Wampum Iron Company (The). These works are located in Lawrence county, Pa. Yearly number of tons, 14,118.

Wellston Coal and Iron Company (The). The mines belonging to this company are located at Jackson, O., discovered by Hon. H. S. Bundy. Shaft sunk and two furnaces built. Wellston, which had no existence in 1873, contained a population of 1,200 souls in the year 1875. The two furnaces were built on the Bundy territory in 1874.

Wenona Iron Company (The). E. R. Green, Supt. Location, Ohio. Has a good record since lighting up, producing an average of twenty-seven tons daily, using native and lake ores and mill cinder. Stack fifty feet high.

West Republic Mining Company (The) has property located in Marquette county, Mich. The officers are J. N. St. Clair, Pres.; E. G. St. Clair, Sec. and Treas.; Captain George Mitchell, Supt. The ore is specular; the rock hard and difficult to work. Yellow ochre is sometimes met with. The mining-plant includes the shaft-house and contents. Diamond drills are in operation here. About eighty men are engaged. Prospects at present are considered hopeful. The company was organized in October, 1880. Yield during first half of current year, 11,000 tons; 25,000 expected by end of year; yield during 1881, 7,354 tons; value, $69,863.

Wheat Iron Mining Company (The). Officers, Daniel McGarry, Pres.; T. Axworthy, Sec. and Treas.; Captain Prant, Supt. The mining property of this company is located in Marquette county, Mich. The ore consists of metallic iron, sixty-five per cent. by analysis. Property owned, a dwelling-house and plant. A new and important discovery has recently been made of a large deposit of hard, blue hematite, of sixty-two to sixty-three per cent. of metallic iron. The location is convenient for approach. Yield (net) to January 1, 1882; yield (gross tons) during 1881, 17,000 tons of ore; actual, 9,040; expected, 10,000; value, $76,840. Thirty-five men employed.

Winthrop Hematite Company (The) is chartered under the laws of the State of Michigan. Officers, J. O. St. Clair, Pres.; E. G. St. Clair, Sec. and Treas.; G. A. St. Clair, Supt. The mines belonging to this company are located in Marquette county, Mich. The ore is soft hematite. Property owned, two engines, thirteen boilers, thirty-five houses. Developments commenced 1870. Date of organization, 1870. The mine fell in fall of 1881, owing to the heavy rains causing the supporting pillars to give way, a body of 150,000 tons of rock being thus let down into the workings, burying the pumps and blocking the skip-roads. A large portion of this rock is yet to be removed; 150 men employed.

The annual product of the Winthrop during the past twelve years has been as follows:

	Gross Tons.		Gross Tons.
1870	3,469	1876	27,236
1871	11,088	1877	12,549
1872	14,239	1878	23,740
1873	33,456	1879	26,595
1874	7,549	1880	45,247
1875	7,502	1881	43,630
Total			256,300

Youngstown Iron Mining Company (The), of which Mr. F. P. Mills, Jr., formerly Mining Engineer and Assistant Supt. of the Cleveland mine is the Superintendent. Owns the Youngstown mine, located in Marquette county, Mich. The ore is a hard hematite, averaging well in metallic iron, but too high in phosphorus for Bessemer purposes. The character of the mine is not correctly ascertained; surface indications show vein extending 1,200 feet by forty-five feet in width, trend east and west. Prospects are promising, and a great mine is looked for. The ground is very wet, being recently covered with a dense growth of timber. It may be mentioned that explorations are conducted by drill, and are progressing favorably. Organized in June of the current year (1882).

KAOLITE.

W. Robinson & Co. This company's property is located in the bluff on the east bank of the Ontonagon river, Mich. The quality of the mineral is superior, and is excellent for polish and for the manufacture of fine earthenware. Maximum yearly capacity of production, one vessel load. There is an extensive deposit on the property. The prospects are promising. The company was organized during the year 1875.

LEAD.

Amador Gravel Mining Company (The). Located in Amador county, Cal. Lead of blue gravel. Prospects, excellent drifting.

Arizona Mining Company (The) is chartered under the laws of the State of New York. The officers are, viz.: Edward K. Moulton, James H. Kidder, Fred. G. Swazey, Trustees. There is found a very wide ledge of lime-rock, near the center of which is a vein, fully fifteen feet wide, carrying iron spar, carbonate of lead. Work is being carried steadily forward, the ore being left on the dumps until the smelter starts up in summer. Capitalization, $100,000.

Belden Mining Company (The). C. H. Thompson, Manager. Names of mines owned, Mamie and Cora; located on Battle Mountain, Col. Extent of claim, twenty-seven acres. (31) Beckett & McDonald, of New York, are building a forty-horse-power engine for the purpose of the present hoister at the mine, just completed, and a cast-iron pipe, two and a half feet in diameter, sunk in the ground. There will be but little fear that work will stop during the winter for want of water. (31) Where the Battle Mountain formations are exposed, showing the granite quartzites, shales limestone, ore deposit, and porphyry, and limestone has been followed in a northeasterly direction into the mountain for a distance of 540 feet. The dimensions of workings, Cora shaft down at 145 feet. The general appearance of the mine is very satisfactory, the ore deposits being large and continuous, though there is considerable change throughout in the actual masses of ore. Billings & Eiler have contracted for 10,000 tons of ore from this property, which is thirty per cent. of lead. Interesting parts of this mine, are the ground between the levels No. 1 and No. 2, cross-cuts from the main incline, shows ore, which for the main part is made up of iron and manganese oxides mixed throughout with galena and carbonate of lead ore. Company was organized at Portland, February 15, 1881; capitalization, 50,000 shares; par value, $10. Thirty men employed; monthly expense, $6,000.

Black Mountain Mine (The) is owned by D. B. Belden, Esq. Mines owned are Silver Wave, Eagle Bird; located on Battle Mountain, Col. Quality and character of ore, very fair mineral; character of mine, veins consisting of carbonate, sulphate, and oxides of lead. Very fine prospects of the property. Steel rails are laid, and an iron car is in use. The breast of this incline shows a solid mass of ore, the thicknes of which is not yet known with certainty. Length of tunnel, 130 feet.

Consolidated Pacific Mining Company (The). Capt. Isaac Cooper, owner, Denver, Col. Names of mines owned by the company, Yellow Boy, Unicorn, Sedalia; location, Colorado. Quality and character of the ore, leads of remarkable promise.

Fisher Mining Company (The). The mines of this company are located in May Flower Gulch, Col. Four hundred tons of fine lead ore have been received.

Lead Mine, owned by Wylie & Cram, is located in the township of Ramsay, county of Lanark, Ontario, Canada. The company owns 100 acres of farming land. The gangue calc spar, a very pure dense sulphate of baryta, three assays, made by Dr. Girard Wood, were as follows: 1st, seventeen ounces silver, three-fourths ounces gold; 2d, four ounces silver; 3d, one ounce silver. There are about forty tons of ore on the dump. The owners are not in position to work the property extensively themselves, but will probably develop it further during the summer. 1882.

New River Mineral Company have their property located in Wythe county, Va. The company, working six men for four months, raised twenty-five tons of lead ore and fifty tons of zinc ore, the latter carbonates and sulphurets.

St. Joseph Lead Company. The officers are J. W. Jones, Pres.; H. N. Camp, Sec. C. B. Parsons is Superintendent. Office, 152 Broadway, New York. The company's mine, the Gem Silver Prize, is located in St. Francis county, seventy miles south of St. Louis, Mo. The ore has a high percentage of nickel and cobalt, combined with native silver, contained in the ores. The nickel is in black and green oxides, mixed with feldspar and silica. Horizontal disseminated vein in limestone. The ore is under eighty feet of cap rock. The rock runs from five to fifteen per cent. ore, and is cut out twenty-five feet deep, and the roof supported by pillars left standing; 200 tons of rock are excavated daily; thirty acres have been bored through, equally rich. There are twelve stockholders. This is said to be the largest lead mine found yet in Europe or America. The mine has a current value of $750,000. The property includes fire-hose and apparatus and new crushers. St. Louis is the principal market for the ore. Date of organization, at St. Joseph, February, 1882. Capitalization, $1,000,000; par value per share, $10; total amount of dividends paid to June 12, 1882, $350,000; date of latest dividend, June 12, 1882; twenty cents per share; stock quoted, June 17, 1882, $7.50 per share.

MANGANESE.

Crimora Manganese Mine (The). Leased by Messrs. Davis & White, of Pittsburg, Pa. S. M. Donald, Jr., Superintendent. The Crimora mine, located in Shenandoah Valley, Augusta county, Va., is considered to be one of the most productive mines in the country.

Hopewell Manganese Company is chartered under the laws of the State of Maine. The Directors are S. W. Pollard, Pres.; F. W. Prescot, Sec.; E. H. Hastings, Ambrose Leed, E. F. Dole, E. H. Peck, W. A. Travis. The company's property is located at the Parish of Harvey, Albert county, New Brunswick. Amount of property in acres, 250. The character of the ore is said to be compact black oxide, as high as ninety per cent. Capitalization, $40,000; par value per share, $5; stock and bonds are held principally in Massachusetts.

MICA.

Anglo-American Mica Company (The). Officers, Mr. Palmer, Pres.; Col. H. L. Dunkle, Superintendent and Gen. Manager. Name of mine owned, Bald Eagle. Location of mine, Black Hills, Dakota.

Black Hills Mica Mines, owned by H. C. McMackin, Esq., are located at Custer. The mineral is of superior quality; the largest sheets, eight by sixteen inches; average, five and one-half by six inches. The weekly output at June, 1881, was 600 pounds. Cleveland, O., constitutes the chief market for the product.

Crystal Mica Mining Company. The officers are Earl A. Shissell, Pres.; A. T. Atherton, Treas.; J. Y. Bradbury, Sec. Office, Lowell, Mass. This company's property is located in the town of Groton, N. H., and is but a short distance from the town of Rumney, on the B. C. & M.

R. R.; and is but a short distance from the Ruggles mine, which has for a number of years furnished a large portion of the mica used in this country.

Mica Mine (The). Owned by prominent officials of the Atchison, Topeka, and Santa Fe. Mr. Solomon Teal, Superintendent. The Mica mine is located near Currant Creek, Colorado.

GOLD AND SILVER.

Ada Elmore Gold and Silver Mining Company owns the Ada Elmore mine, located on Bear creek, Idaho.

Alpha Consolidated Gold and Silver Mining Company (The). The names of officers (Directors) are John W. Coleman, J. S. Wall, J. B. Russell, Joseph Clark, O. L. Weller, William Willis, Secretary and Treasurer. Head office, 309 Montgomery Street, San Francisco, California. Date annual election, June 16. The company own the Alpha mine, located at Gold Hill district, Comstock Lode, Nevada (ore looking well), composed of fine gold and sulphurets. The mine continues to look well. Vein about two feet in width; linear feet in mine, 306; capitalization, $3,000,000; shares, 30,000; par value, $100; number of assessments levied, sixteen; total amount of same, $420,000; date of latest assessment, March 20, 1882; cash on hand April 1, 1882, $523; company in debt February 1, 1882, $6,459.

Alta Montana Company (The). The officers were in 1880 W. W. Wickes, President; Michael Snow, Vice-President; Cole Saunders, Assistant Manager; R. F. Brooke, Secretary. Directors, A. S. Barnes, Alanson Trask, L. M. Sheldon, Michael Snow, New York. Head office, 35 Broad Street, New York. The company own eleven mines, located at Wickes, Montana. Ten of these extend on the Alta vein two miles. Four are developed from both sides of the mountain by the silver tunnel 1,700 feet. Width of vein, five feet; latest assays average 140 to 240 ounces per ton. The company have also purchased the Comet mine, and erected concentrating works upon it. The product of this mine is a heavy galena, intermixed with sulphides of iron and zinc and mispickel. The vein is wide and regular, and has produced largely. Capitalization, $5,000,000; shares, $10; par value, $100; yield (net) to January 1, 1880, $435,980.

American Flag Mining Company is chartered under the laws of the State of New York. Office, 59 William Street, New York. The company's works are located at Ely district, Lincoln county, Colorado and Arizona. The ore found contains gold, silver, and copper, assaying $30 per ton, average width of vein being seven feet, and length of main lode 5,300 feet. The width of the pay streak is two feet, the ore giving an assay of $100 to the ton. It has been opened by shafts and drafts to the extent of 2,000 feet or more, and has produced a large amount of the richest ore ever mined in the country, most of which has been sent to San Francisco for reduction. Date of organization, February 17, 1864; capitalization, $4,000,000: par value per share, $100; number of assessments levied, ten; total amount of same, $280,000; date of latest assessment, April, 1882, ten cents per share.

American Mining Company (The). The mines are located in Nevada county, California. Quality of ore, copper high grade ore. Ledge two feet wide. Rich in gold and silver, which assays per ton, $100.

American Gold and Silver Mining Company (The). Location of mines, Colorado. Number of dividends paid June 24, 1882, total amount, $90,000.

Anglo-American Company (The). Location of mines, Horn Silver Mountain, near Red Cliff, Col. A mill is owned by the company. The character of the ore is very fair, consisting of quartz and clay. Fair assays silver and gold; assays per ton, $16.22; 119,118 ounces gold per ton. Prospects of the property are very good. The assays have given results far beyond the most sanguine expectations.

Anglo-Celt Silver Mining Company is chartered under the laws of the State of Iowa. The officers are Hon. Jas. Harlan; B. N. Curtis, Sec. Main office, Mount Pleasant, Iowa. The Anglo-Celt and Emperor mines, owned by this company, are full claims, and located in Oro Blanco district, Peria county, Ariz. The Emperor ore is yellow and blue chlorides of silver, bearing both gold and silver, and is about eighty per cent. free milling. The Anglo-Celt ore is mostly gold and silver-bearing quartz, with an unsually large percentage of the former. Emperor mine shows a true fissure vein as does also the Anglo-Celt. Capitalization, $2,000,000; par value per share, $20.

Antelope Gold and Silver Mining Company (The). This company owns ten claims on two groups, viz.: Wild Horse, Belle, Texas Ranger, Point, Tenderfoot, Time, Francis Fisher, Atlantic, and Grand Army. They are located near the base of Red Mountain, Aspen city, Roaring Forks district, Gunnison county, Col.

Argenta Mining Company. The directors are J. L. Brown, J. E. Dixon, Thomas Cole, Geo. Congdon, W. H. King; E. M. Hall, Sec. Branch office, 327 Pine Street, San Francisco, Cal. The company mines are located at Tuscarora, Elko county, Nev. The length in feet of the main lode, on which the company depends for its supply of ore, is 1,500. The Argenta mine has been working on its 600-foot level, where rich ore has been found, the vein being ten inches wide at the bottom. Free gold is plainly discernible in a considerable portion of the quartz. The silver ore on either side of the gold streak is of a good quality, and will pay handsomely for mining and milling. Capitalization, $10,000,000; par value per share, $100; yield during 1880, $118,870; total amount of dividends paid to February, 1880, $40 000; date of latest dividend, February, 1880, twenty cents per share; number of assessments levied, five; total amount of same to November, 1880, $110,000; date of latest assessment, April 12, 1882, at the rate of ten cents per share: stock in the treasury, April, 1882, $485; stock quoted, July 1, 1882, twenty-five cents.

Arizona Gold and Silver Mining Company is chartered under the laws of the State of New York. They have an office located at 61 Broadway, New York. The company's mines are located in Mohave county, Ariz. The ore is both auriferous and argentiferous, assaying $67.60 per ton. Organization of company, May, 1879; capitalization, $2,500,000; par value per share, $25; non-assessable.

Arizona and New Mexico Prospecting, Developing, and Mining Company is chartered under the laws of the State of New Jersey. The officers are E. Joy Morris, Pres.; J. W. Brown, Treas.; George C. Barber, Sec. Main office, 407 Linden Street, Camden, N. J.; local office, 311½ Walnut Street, Philadelphia, Pa. The company is not confined to the mining of precious metals alone, but extends to operations in pre-emptions of lands, towns, mill and water sites. The company has for sale gold, silver, copper, coal, iron, and other valuable metals, and mineral bearing veins, singly or in groups. This company have a capitalization of $1,000,000, in 200,000 shares of $5 each. Non-assessable. Stock reserved in treasury, 77,000 shares.

Arizona Southern Mining and Milling Company (The) is chartered under the laws of the State of New Jersey. The officers are James W. Kems, Pres.; George B. Dresher, Vice-Pres.; W. H. Dresher, Treas.; James Cohoun, Sec.; H. B. Ring, Asst. Sec. The Superintendent is H. S. Searle, of six years' experience. Annual election is held first Monday in March. The principal offices are at 106 Market Street, Camden, New Jersey; branch office, 174 South Fourth Street, Oro Blanco, Arizona. Transfer offices, Camden, N. J. Transfer days, every week day. The company owns five mines, the Searle, Pilot, Herman, Arizona Southern, and Silver Wing, located in Oro Blanco, Pima county, Ariz., covering an area of ninety-six acres. The ore gives a silver assay of $74.21, and gold $19.25, and yields a net profit of about $54 per ton. Developments were commenced in June, 1881, and are consequently not far advanced, $3,100 having so far (to June, 1882) been expended. Experts pronounce property valuable and prospects excellent; cost of mining and milling is $27 per ton. The company will mill its own ore. Experts who have made careful examination of the mines suggest that no time should be lost in prosecuting the developments, suggesting a beginning on the Silver Wing, the ore of this mine being of the highest grade; its productions would not only develop the others, but would probably leave a margin from which to pay a dividend, and the development of the group would no doubt within a short time increase the dividends very largely. Organized, 25th February, 1881; capitalization, $300,000; shares each, $1; unassessable; bonded indebtedness, June, 1882, nil; stock indebtedness June, 1882, $179,915; floating indebtedness June, 1882, nil; stock in treasury June, 1882, $120,085; stock qutoations, 27½ cents; stock held principally in Pennsylvania and Arizona; stock listed at Mining Annex, Philadelphia; wages paid to all classes of labor per day range from fifty cents to $5; work is done by contract.

Associate Mining and Investment Company is chartered under the laws of the State of New York. The officers are William Guild, Pres.; Edward M. Parker, Vice-Pres.; Henry E. Maline, Sec.; Samuel Thompson, Treas. Office, 40 Broadway, New York. This company has been organized for the purpose of not only transacting a general mining business, but more especially for organizing, developing, and negotiating the sale of mines and mining claims. Capitalization, $1,000,000; par value per share, $1.

Addenda Gold and Silver Mining Company. T. H. Dixon, Sec. Head and branch office is located at 328 Montgomery Street, San Francisco, California. The mine is located on the very crest of Silver Hill, Bodie district, Cal. Amount of property owned by the company in acres are 200 and 1,500, generally of a low grade, too low to pay, but occasionally developing quick, rich spots and streaks. The property owned by the company, steam hoisting, costing $6,000. Depth of shaft, 500 feet; total length of level, 1,000 feet; ledge, fifteen to twenty-five feet in width; blue clay wall in places one foot thick; also strata of pure, white granulated quartz, carrying traces of gold and silver. The shaft has recently been repaired and work actively resumed. Capitalization, $10,000,000; par value, $100; five assessments levied, total amount of the same, $90,000; commenced by sale of $2,000 stock, and twenty cents assessment applied. Date of annual election, September 7, 1881.

Ætna Mining Company (The) are the owners of the Ætna mine, located at Carbonate Hill, Colorado. The Manager, Mr. J. R. Loker, has been employing fifty-three men and taking out about forty tons of ore per week. The company's property covers ten acres of land. The character of the ore may be described as lead carbonate. It is very rich, giving a silver assay of from one to twelve ounces per ton, and a gold assay of from six-tenths to 176 ounces per ton. The total profits of mine since discovery have been $161,666. Capitalization, $2,200; par value per share, $1; date of latest dividend, January, 1881; surplus on hand, $60,000.

Alaska Gold and Silver Mining, Milling, and Trading Company. The company's claims, the Pioneer and Omiluk, are located in Fish River mining district, situated in the Omiluk range of mountains, Alaska. They are 1,500 feet in length, each, by 600 feet in width, and join on the summit of the ridge. On the Pioneer, a shaft was put down twenty-two and a half feet in ore. On the Omiluk, a shaft was put down twelve feet in ore, also, and of the same general character as that in the first shaft. The ore is argentiferous galena, with some iron croppings. Limestone forms one wall and micaceous slate the other. These walls seem to be separated about 200 feet where the ore body crosses the mountains. Some fifteen tons of ore are now on the dump of the shafts. The ore carries a very high percentage in lead, and gives an average of $140.16 in silver per ton. The percentage of lead is so great that no reduction works will be required at the mine; however, there is an abundance of timber near the mine for all practical purposes. To mine and deliver this ore in San Francisco, it is estimated to cost from $50 to $55 per ton. After the first year, the ore will be hauled and delivered for much less than the above amount.

Alder Gulch Placer Mining and Water Company. The Directors are Edward W. Knight, Alex. A. Beattie, Joseph K. Toole, Theodore H. Kleinschmidt, E. W. Toole, Chas. Rinda, James McEvily. This is a new company, the object of which is to construct a water ditch from Wigwam Gulch, in Madison county, Montana, to cover the mineral bars and gulches in and about Alder Gulch, in said county, to work placer and lode claims, etc. The mines covered by the proposed ditch, the right to which has been secured by the company, have been long known to be very valuable, and nothing but the want of water has left them undeveloped so long. Capitalization, $100,000. Par value per share, $1.00.

Alice Gold and Silver Mining Company. The officers are Joseph R. Walker, Pres.; Benjamin C. Raymond, Sec.; and W. E. Hall has the general superintendence of affairs, having had thirty-four years' experience in Europe and America. They have a branch office located at Salt Lake City, Utah, and transfer office at 47 Broadway, New York. The company's chief mines are the Magna Charta, Valdemere, and Alice. They own eight other claims, which are as yet undeveloped. The mines are located at Waterville, Butte district, Montana, covering an area of ninety acres. The ore gives a silver assay of 46 oz. per ton, and of gold 30 oz. per ton. The gangue of the ore is white quartz, containing gold and silver, silver glance, argentiferous gray copper, native silver in thin plates and wire form, and zinc blende. Dip 68° to 70°. True and well defined fissures in granite. Rock very hard, rendering progress in drilling slow. The richest thing known now in Butte is the ore body on the second level of the Magna Charta. North of the shaft a ten-inch body averages $1,000 to the ton. On the first level of the Alice mine are immense reserves of free ore, some of it low grade, but assays show it to be of good working quality. Ledge wide and ore clean and compact. On the second level an abundance of ore is in sight, somewhat more base than that of the first level, but susceptible of profitable reduction. On the third level, a big winze has been started on a body of base ore, measuring fully seven feet across, and assays from 60 to 100 oz. per ton. Further east, stope shows nine feet of ore, some assaying $33, but all rich enough to pay a handsome profit. The company owns two stamp mills, one twenty-stamp and one sixty-stamp. Also plant of sufficient capacity to sink to the depth of 2,000 feet, together with Cornish pumps, Rower drills, hoisting engine, heavy boilers, and other machinery, buildings etc., including shaft houses. The depth of shaft in the Magna Charta is 400 feet, while that in the Alice has reached a depth of over 700 feet. Since commencing operations, the company have expended about $200,000 in developing their property. Prospects of the property are excellent. The company is free from debt, and facilities will be greatly extended, and double the present income is predicted. Cost of mining and milling per ton is $20.25. Capitalization, $10,000,000; par value per share $25; non-assessable. Yield to January 1881, $1,120,937.30. Yield (gross tons) 2,040,780 $\frac{55}{100}$. Number of dividends paid to December 15, 1881, ten. Total assessment of same, $400,000. Stock quoted July 5, 1882, $2.85 per share.

Booker Consolidated Mining Company (The). J. M. Brasell, Sec. Principal office, 203 Bush Street, San Francisco. Mines located in California.

Boston Consolidated Mining Company is chartered under the laws of the State of California. F. F. Luty, Sec. Office, 330 Pine Street, San Francisco, Cal. The company's works are located in Mono county, Cal. The ore found gives an assay of both gold and silver, and averages about $60 per ton. Formation, chiefly porphyry rock, firm, and filled with iron pyrites. Ledge shows clearage at 300-feet level. Average width of vein in 1881, four feet. Ore from 200-foot level assays from a few dollars to $1,500 per ton. Other ores of high, uniform grade. Value of property owned, viz., large, whim, w. h. shops, etc., $4,000. Date of incorporation, July 14, 1879; capitalization, $10,000,000; par value per share, $100. Number of assessments levied, three; total amount of two assessments, $50,000; date of latest assessment, May 23, 1882, twenty cents per share.

Boston Gold and Silver Mining Company is chartered under the laws of the State of Colorado. The officers are E. H. Goff, Pres.; Col. R. W. Thyng, Vice-Pres.; H. E. Irvine, Sec.; James B. Potter, Treas. Superintendent, Col. A. J. Ware. Head office, Goff, Hastings & Co., Bankers and Financial Agts., 292 Washington Street, Boston. The company own the Dolly Varden mine, located on the southern slope of Mount Brass, Park county, Col. Property covers some 860 acres of land; ore assays about thirty ounces per ton. Property owned, boarding-houses, smith-shops, ore-houses, stable, and office. There are two cross-cut adits, one 320, and one 100, feet. The Dolly Varden mining estate was purchased for $400,000. Date of organization, July 23, 1880; capitalization, $2,000,000; par value per share, $10; non-assessable; full paid. Bonds issued for $350,000, and placed on London market, ninety-seven per cent.

Boulder Mountain Mining Company. President, C. S. O. Tintsman, Pittsburg, Pa. The Salem, Brooklyn, and North Star mines, belonging to this company, are located at Tower Mountain, Col. The Brooklyn lode has a drift on the vein of eighty feet, showing a pay-streak of spar and telluride ore of about three feet in width, and assaying high in silver and gold. The Salem mine has a fifty-foot drift on the vein, and now shows a pay-streak of eight inches of galena, carrying silver and a large per cent. of lead. Number of assessments levied, twelve; date of latest assessment, May, 1882, ten cents per share.

Boulder Mining Company (The). E. S. Rice, Pres.; Dr. J. C. Shultz, Vice-Pres.; J. K. Waltz, Sec.; A. R. Schroyer, Logansport. Directors, E. S. Rice, Dr. J. C. Shultz, S. A. Vaughn, A. R. Shroyer, John Brown, J. K. Waltz, W. H. Snyder, Dr. J. H. Shultz, Logansport; C. C. Clements, New Castle, Ind.; Joseph V. Lawson, Salt Lake City; Sheridan Cox, Kokomo. Head office, Logansport, Indiana. Name of mine owned is the Boulder, located in Cataract district, Jefferson county, Montana (near Butte City). A ten-stamp mill on Basin Creek is the property of the company. Developments commenced February, 1880. Prospects of the company are very good. Many thousand tons of ore are now in sight, carrying both gold and silver, some assaying as high as $1,200 to $1,500 in gold per ton, and from eighty to 150 ounces in silver. The average assay value $25 per ton. Interesting facts of the mine; there are six shafts varying from twenty-five to 150 feet in depth, levels are run to the bottom of these shafts, and by a tunnel 250 feet in length along the vein.

Brook Snider Consolidated Gold and Silver Mining Company (The) is chartered under the laws of the State of New Jersey. John Crump, Pres.; Geo. W. Brattan, Vice-Pres.; Henry J. Crump, Sec. and Treas. Directors, John Crump, Geo. W. Brattan, S. P. Griffits, Albert Foster, Ephraim Young, Col. T. W. Brooks, Alex. Muckle. Superintendent, Rufus H. Snider. Office, Breckenridge, Col. Transfer office, 711 Walnut Street, Philada. Mines owned by this company are the Illinois, Fannie Barrett, and Peerless, located at Schock Hill, Spaulding district, Summit county, Col. Amount of property in acres, thirty-two and one-half. The company owns a twenty-ton stamp-mill, which will soon be increased to forty-stamp. There over 1,300 tons of ore on the dump. Capitalization, $2,000,000; par value per share, $5; non-assessable.

Buckeye Mining and Tunnel Company is chartered under the laws of the State of Colorado. The company's mines are located at Silver Cliff, etc., Colorado. Ore contains gold, silver, lead, and coal, and assays from $20 to $75 per ton. Company owns hoisting works, machinery, etc.; value, $40,000. Date of organization, February 5, 1876; capitalization, $2,000,000; par value per share, $5; non-assessable; stock quoted July 14, at three cents.

Buffalo and Hamburg Mining Company is chartered under the laws of the State of New York. Trustees are Simon P. Swift, Pres.; Joel P. Lewis, Vice-Pres.; F. F. Fargo, Sec.; Jos. Maycock, Treas. Zeneas M. Swift, Attorney; Herman Poole, Assayer. The company's property is located at Hamburg, Erie county, N. Y., in the centre of what is known as Potter's Farm, on Wolf Creek, covering an area of twenty acres. The character of the ore may be described as slate rock, yielding a gold assay of $31.83, and silver, $110.32, which makes the total value per ton, $142.15. The mine shows dark slate interspersed with crystals of iron. Pyrites holding the precious metals, generally distributed in very fine particles. The cost of extraction per ton is estimated at $5. Date of organization, October 13, 1881; capitalization, $100,000; par value per share, $10: non-assessable; paid up.

Bangor Gold and Silver Company is chartered under the laws of the State of New York. Office, 60 Liberty Street, New York. The company's works are located at Nevada City, Col. The company have a capitalization of $2,000,000, in 200,000 shares, with a par value of $10 each. The company was incorporated October, 1879; basis, non-assessable.

Barcelona Mining Company is chartered under the laws of the State of New York. Office, 115 Broadway, New York. The company's mines are located at Spanish Belt, Nev. The ore contains silver, gold, and cinnabar, and assays $85 per ton. Property owned, diamond drills, hoisting works, etc. Date of incorporation, June 30, 1880; capitalization, $5,000,000; par value per share, $25; non-assessable; stock quoted July 13, 1882, eight cents.

Bassick Mining Company is chartered under the laws of the State of New York. The officers are F. G. Brown, Pres.; Dennis Ryan, Vice-Pres.; W. S. Hoyt, Sec.; W. F. Van Pelt, Treas. Office, 44 Wall Street, New York. The company's mine, the Bassick, is located at Rosita, Custer county, Col., being the most important in the district. The ore contains tellurides of gold and silver, and assays $200 per ton. Property owned, hoisting works, engine, and boiler-house, ore-house, etc. Crushing capacity, seventy tons per day, fully kept going by the output of the mine. The mill and mine are lighted by the Brush electric lights, and work proceeds uninterruptedly week in and week out. Little information of a definite character can be obtained respecting the productive capacity of this mine. It is believed to be close upon $400,000 for the past year. Date of organization, July 15, 1879; capitalization, $10,000,000; par value per share, $100; basis, non-assessable; total amount of dividends paid to February, 1880, $25,000; date of latest dividend, February, 1880, twenty-five cents per share; stock quoted July, 1882, $13.

Belcher Gold and Silver Mining Company is chartered under the laws of the State of California. J. Creackett, Sec. Office, 327 Pine Street, San Francisco, Cal. The company's works are located at Gold Hill district, Nev. The ore is both auriferous and argentiferous, the former predominating. Length in feet of the main lode, 1,040. Date of organization, November 2, 1868; capitalization, $10,400,000; par value per share, $100; number of dividends paid to April 10, 1876, thirty-eight; total amount of same, $15,397,200; date of latest dividend, April 10, 1876, $1 per share; number of assessments levied, thirty; total amount of same, $2,580,000; date of latest assessment, April, 1882, twenty-five cents per share. Floating indebtedness, April, 1882, $25,000.

Belle Isle Mining Company (The). Office, 327 Pine Street, San Francisco, Cal. The Belle Isle mine is situated in Elko county, Nevada. The company has been working in the 250-foot level. An open-cut shaft has been completed, which exposed a well-defined ledge of green carbonatea, intermixed with black oxide. Green copper is found in a prospect shaft, 200 feet to the left of the cut, which is considered favorable to the permanency of the deposit, and being found on the summit of the mountain, indicates that the ore body extends through the entire mountain. The vein at the 240-foot level averages five inches in width of high-grade ore. The 250-foot level shows a vein about six inches wide, of low-grade ore. Capitalization, $10,000,000; par value per share, $100. Yield during 1880, $21,560. Number of dividends paid to December 6, 1879, six; total amount of dividends, $300,000; date of latest dividend, December 5, 1879. Total amount of assessments levied, $65,000; date of latest assessment, May 23, 1882. Stock quoted July 14, 1882, forty-eight cents. Cash on hand April 1, 1882, $1,345; company in debt, March 1, 1882, $146.

Belvidere Mining Company is chartered under the laws of the State of California. C. D. V. Hubbard is Secretary, and has his office at No. 310 Pine Street, San Francisco. This company owns the Belvidere mine, which is located in Bodie district, Mono county, Cal. Extent of claim, 200 feet by 1,500 feet. The ore found assays both gold and silver. The mine shows four well-defined ledges, four feet wide in some parts. The company are the owners of a whim. The main lode on which the company depends for its supply of ore is 1,500 feet in length. There are 4,000 feet of excavations. Shaft is down 650 feet. Date of incorporation, November 1, 1877; capitalization, $6,000,000; par value per share, $100. Yield during 1880, $25,901.26. Total amount of assessments levied, $282,000; date of latest assessment, February, 1882, twenty-five cents per share. Working expenses about $2,000 per month.

Berkshire Consolidated Gold and Silver Mining Company. The officers are K. B. Cheeney, of Lee, Mass., Pres.; Henry Pike, V.-Pres.; Wellington Smith, Treas.; J. B. Crosby, Sec.; Asst. Supt., M. P. McNamee. This company owns the Hailstorm, Homeward Bound, and Silver Bell mines, located at Black Hills, Dakota. A rich strike is reported in one of the mines, at Bald Mountain; the ore assaying $8,000 in gold and silver, principally the latter. Three hundred tons of ore on the dump will assay from $50 to $150 per ton. Capitalization, $2,500,000; par value per share, $5.

Best and Belcher Mining Company (The). Officer, W. Willis, Secretary. Principal office, 309 Montgomery Street, San Francisco, Cal. The mines are located in Virginia district, Comstock Lode, Nev. Character of ore, gold and silver. Depth of workings is by tunnel, 2,220 feet. Length in feet of main lode, on which the company depends for its supply of ore, 545 feet. Capitalization, $10,080,000; shares, 100,000; par value, $100. Dividends, none. Number of assessments levied, twenty-three; total amount, $1,243,390; first assessment, amount per share, fifty cents; date of latest assessment, April, 1882; amount, fifty cents. Floating indebtedness, $7,629. Cash on hand, March, 1882, $4,629.—*Mining Record*, June 17.

Black Range Company (The), of Carrollton, Ill. Officers, David Dodgson, Pres.: Wm. M. Fry, V.-Pres.; Wm. L. Orr, Sec.; John J. Sharon, Treas. Directors, J. K. Sharon, L. R. Lakin, Adam Gimmy, David Dodgson, Wm. M. Fry, H. C. Sieverling, Lewis F. Gimmy, S. A. Vedder, John J. Sharon, J. B. Nulton, Superintendent. Names of mines owned, Dreadnaught, Ivanhoe, Buffom, Colossal, Mail Line. Location of mines, Dry creek, Socorro county, N. M. Buffom has a shaft 184 feet, Colossal shaft, 100 feet; Dreadnaught shaft, twenty-five feet; Mail Line, thirty feet. The Colossal property is being worked under bond; it shows four feet of mineral, sampling $300 in silver, and some gold. Some assays give a result of 1,200 ounces in silver. The Dreadnaught shows a five-foot vein of ore, assaying 200 ounces of silver to the ton, and forty per cent. copper. The ore in the Mail Line assays high.

Black Horse Gold and Silver Mining Company (The). Location of mines, Portland, Me. Date of organization, May 5, 1881. Capitalization, $200,000.

Bloomer Gold and Silver Mining Company. The Trustees are J. E. Bloomer, W. J. Bloomer, E. W. Wallace, E. H. Coffin, E. L. Hall, A. W. Bliss, and F. Wooster. The company's mines are located in Vermont. They have a capitalization of $1,000,000.

Bodie Queen Gold and Silver Mining Company (The). Officers are William H. H. Hart, Leander Shores, George S. Carrier, A. H. Todd, and J. L. Armstrong, Directors. The mine is located in Bodie, Mono county, Cal. This company was organized March 5, 1880.

Bonanza Gold and Silver Mining Company. The organizers were James C. Cline, E. W. Banker, C. S. Jennings, G. L. McCuen, and F. J. Sweeney. The company's property is located in Lake, Pitkin, and Summit counties, Col. The company has a capitalization of $2,500,000. The mining property of this company is located in Colorado. The ore body is said to be in splendid condition, and the mine, the Empress Josephine, well developed. The depth of shaft is 185 feet. Length of levels, 208 feet.

Bonanza and Union Tunnel Company (The) is driving the Bonanza tunnel, which penetrates Maryland or Bonanza Mountain in Gilpin county, Col., its entrance being from Chase Gulch and its course nearly due north. The Union tunnel is heading toward Central under Castro Mountains from the opposite site of Chase Gulch. So far twelve well-defined gold and silver veins have been cut and crossed by the tunnels. The Maryland, the Bonnell, and the Henry B. Hyde veins each showing remarkably large, true fissures from which 1,000 tons of ore were taken. The company purposes developing each of these veins so as to increase the output to the greatest possible extent.

California Water and Mining Company (The) is chartered under the laws of the State of New York. Office, 115 Broadway, New York. The French mine, owned by this company, is located at Georgetown Divide, El Dorado county, Cal. The reservoir has a capacity of 600,000,000 cubic feet. Pilot Creek and Leon Lake are the sources of supply. The company have 250 miles of ditches; grade, six to sixteen feet per mile; 1,200 inches; flumes, two and a half miles; total cost of plant, $600,000; date of incorporation, May, 1880; capitalization, $10,000,000; par value per share, $20.

California Gold and Silver Mining Company is chartered under the laws of the State of California. The company's Secretary is C. P. Gordon. Office, 309 Montgomery Street, San Francisco. The company's property is located in Virginia mining district, Storey county, Nevada. There are 600 linear feet in the mine on Comstock lode. The ore contains gold and silver in about equal parts, and assays $23.21 per ton. The cost of working mine per ton is thought to be about $17.60. The production of ore for 1880 was 37,454 tons, which amounted to about 890,515 ounces of fine silver. Date of incorporation, December 31, 1873. Capitalization, $54,000,000; par value per share, $100; ounces of fine silver to date (January, 1881), 1,812,237,340, equal to 664 tons 450 pounds; number of bars to date (January, 1881), 11,020; total production of gold to January 1, 1881, $23,310,281.98; total production of silver to January 1, 1881, $23,432,490.12; yield during 1880, 26,475,790 ounces of fine silver; number of dividends paid to December 16, 1879, thirty-four; total amount of same, $31,320,000; date of first dividend, May, 1876; date of latest dividend, December 16, 1879, fifty cents per share; number of assessments levied, four; total amount of same, $432.00; date of latest assessment, June 10, 1882, ten cents per share; indebtedness March 1, 1882, $3,549; Stock quoted July 7, fifty cents; wages paid to all classes of labor per week averages $24.

Candalaria Mining Company (The). Trustees, J. B. Russell, Oscar R. Jones, Wm. E. Norwood, Cornelius Reilly, S. Igland. Directors, S. Reinhart, H. M. Levy, R. P. Keating, T. M. Luce, P. J. White. Mines located in Esmeralda county, Nevada. Organized, March 17, 1880. Property owned, mill. Capitalization, $10,000,000.

Carmine Hill Gold and Silver Mining Company (The). Officers, Saml S. Campbell, Pres.; Charles M. Campbell, Treas. Directors, S. S. Campbell and Charles M. Campbell, Otto F. Gehricke. Head and branch offices, Portland, Me. Capitalization, $500,000; shares, 100,000; par value, $5; total amount of assessments levied, $15,000.

Central Arizona Mining Company (The) is chartered under the laws of the State of New York. The offices are at 30 Broad Street, New York city. The properties of the company are located in Maricopa county, Arizona. The Vulture mine, owned by the company, is the oldest and most important in the county. It was discovered in 1863, and steadily operated for about ten years, when it was abandoned on account of the expense attending the hauling of the ore to the mill, a distance of ten miles. In 1878, it came into the hands of the Central Arizona, under whose management it has been systematically opened and worked. The main shaft has attained a depth of nearly 400 feet, and is otherwise opened by working levels and cross-cuts. The ledge is gold quartz, from fifty to 100 feet in width, between well-defined walls of porphyry and talcose slate. The ores are low grade, assaying from $10 to $12 per ton, but can be worked for about $2.25 per ton. An eighty-stamp mill has been erected, and the necessary water is piped from the Hassayampa, a distance of some fifteen miles. The product amounts to about $20,000 monthly, according to official statement of company. The average product of ore and waste milled was $269¼ per ton; average cost of operating, $241⅞ per ton; average total expenses, $281⅝ per ton. The ore is argentiferous and free milling, assaying from $12 to $15 per ton. The buildings connected with the mine are of stone and are in excellent condition. Organized, November, 1878; capitalization, $10,000,000; shares, $100 each; non-assessable; full paid; stock quoted July 14, 1882, seventy-seven cents. The product for the fiscal year 1879–80 was as follows: gold, $90,072; silver, $238,119; total, $328,191.

Central City Gold and Silver Mining Company (The) owns the Scandia mine, located in Gilpin county, Col. The shaft is double compartment four by nine, and 300 feet deep. Considerable excavations have been made, but no ore bodies of consequence have been met with. The mine is, however, in good condition for the prosecution of further developments.

Certat Mill and Mining Company (The), owned by John Barry. Location of mines, Certat, Mohave county, Arizona. A mill is owned, doing excellent work from the mine, which is one of the best in the country.

Champion Mining Company (The), of which M. B. Burris is Secretary, has its offices at 327 Pine Street, San Francisco, Cal. The company owns the Champion mine, located at Bodie, Nevada county, Cal., the extent of claim being 200 feet by 1,500 feet. In a winze sunk eighty-seven feet below the 400-foot level, vein matter was encountered which gives promise of much more than average value, doubtless ledge formation, including clean quartz dipping under the cap from the direction of the Bodie and Mono. The main shaft is 600 feet deep. Total extent of excavation, about 1,500 feet. The mine is fitted with a Cornish pump of twelve-inch column, of sufficient capacity to carry the workings to the depth of 1,500 feet. The length of the main lode on which the company depends for its supply of ore is 1,500 feet. For six months in the year 1880, the mine was water-logged on 500-foot level. The Champion has been doing prospecting and development work in the mine; the production has consequently been small for past six months. Two cross-cuts have been driven from the main tunnel, one east and the other west. These cross-cuts are 300 feet below the surface, and 1,653 feet from the mouth of the tunnel, and will give excellent drainage. Five quartz ledges will be cut, three of which have been satisfactorily prospected by shafts. The work in the tunnel was commenced five years ago, and has continued ever since without intermission. It is mostly through hard rock, which requires constant blasting, and timbers are only required in a few places. The formation previously was granite, but at the face of the tunnel it is in slate, which is considered an indication of permanency. Capitalization, $10,000,000, in 100,000 shares of $100 each; number of assessments levied, ten; total, $245,000; date of latest assessment, January 12, 1882, twenty-five cents per share; no dividends have been paid.

Charles Dickens Mining Company. The owners are W. A. Norton and John Rohrer, of Yankee Fork, and Fred. Phillips, of Salmon city, Idaho. The Charles Dickens mine is located in Yankee Fork district, Lemhi county, Idaho, and is the first ledge of note discovered in the district, and probably the most extensively developed in Yankee Fork country. It has been worked steadily for a period of five years, and has paid from the date of its discovery. The ore is free-milling. The shipping class sampled from $1,000 to $3,700. At the depth of 300 feet the vein carries gold and silver in nearly equal proportions, but nearer the surface gold greatly predominates. The ledge is opened at different points on the surface, covering nearly the entire length of the location. The character of the mine is true fissure. The main Dickens vein is from two to twelve feet in width, and a new vein has been encountered, which in point of quality and quantity of the ore, is fully as important as the original Dickens vein. The quartz shows much free-gold and silver. The first-class ore in the new vein, as sampled a few days previous to the closing of the report on the mines of the Yankee Fork district, gave $3,681.48; second-class, $1,972.54. The ore is free-milling. The value of the ore now in sight in the mine above the lower tunnel is estimated at $1,500,000. The company has a large two-bed arrastra, with a crushing capacity of two to two and a half tons of quartz per day. A pan and settler are attached. The machinery is propelled by water-power. The company employs ten to twelve men in the mine.

Cherry Creek Mining Company (The). The mines are located at Cherry creek, White Pine county, Nev. 1,000 linear feet in mine. Capitalization, $3,000,000; shares, 30,000; par value, $100; no dividends. Number of assessments levied, eight. Total amount of same, $63,000. Date of latest assessment, January 10, 1877.

Cheyenne Mining Company (The). Officers, Col. G. M. Totton, Pres.; A. C. Edgerton, Vice-Pres.; R. McNaught, Sec. and Treas. Principal office, 55 Broadway, New York city. Mines located at Dakota Territory, situated on Black Hills.

Chicago Enterprise Gold and Silver Mining Company (The). Officers, F. A. Griswold, Pres.; E. S. Hunt, Sec. Office, 110 Dearborn Street, Chicago, Ill. The company's works are located in San Juan, Col. They have a capitalization of $120,000, in shares at a par value of $25 each.

Chollar Gold and Silver Mining Company (The). Location of mines, Nevada. Capitalization, $11,000,000; shares, 110,000; par value, $100. Number of dividends paid to July 19, 1880, $224,000. Date of latest dividend, July 19, 1880. Amount, $50 per share. Number of assessments levied, eight. Date of latest assessment, May 9, 1882; amount per share, twenty-five cents. Stock and bonds in treasury, April, 1882, $14,378.

Chicago Enterprise Gold and Silver Mining Company (The). Officers, Francis A. Griswold, Chicago, Pres.; N. N. Hurst, M. D., Vice-Pres., Chicago; Charles H. Lawrence, 2d Vice-Pres., New Orleans, La.; Edward S. Hunt, Sec., Chicago; Oliver H. Perry, Treas., Chicago. Principal office, No. 110 Dearborn Street, Chicago. Location of mines, Animas Forks, San Juan, Colorado. 40,000 shares reserved in treasury for developing fund. Balance of the block of treasury stock ordered to be sold at $2.50 per share. Capitalization, 120,000 shares; par value, $25, full paid; non-assessable.

Cincinnati Gold and Silver Mining Company (The) is chartered under the laws of the State of New Jersey. Officers, Wm. H. Wright, Pres.; Wilson Lloyd, Treas.; O. J. Rinsley, Sec. Principal office, 138 South Fourth Street, Philadelphia, Pa. Capitalization, 200,000 shares; par value, $10; non-assessable.

Cleora Mine (The) is located in Chaffer county, Col. The tunnel in mine has been pushed to a depth of 230 feet, and is under contract for a farther advance of 50 feet. The ore in this lode, which is about three feet wide between walls at the outcrop, is a white quartz carrying gold, silver, and copper. The ore is free milling. This mine contains numerous lodes of copper.

Columbia Gold and Silver Mining Company (The). Principal office, Indianola. Mines located in Iowa. Capitalization, $1,000,000; shares, 100,000; par value, $10.

Columbia Consolidated Gold and Silver Mining Company (The) is chartered under the laws of the State of California. The officers are A. G. Garnett, Pres.; J. D. Coughlin, Vice-Pres.; J. M. Buffington, Sec.; Wells, Fargo & Co.'s Bank, Treas.; Estee & Boalt, Attorneys; Trustees, A. G. Garnett, J. D. Coughlin, H. B. Wright, Jas. McCord, and John R. McKenzie. The head offices are at 309 California Street, San Francisco, California. The property is located in the Columbus mining district, and comprises four claims, viz.: the Leo, Mountain Queen, Mr. Castle, and Secretary, in Esmeralda county, Nev., at an elevation of about 6,400 feet. The ore is free milling. The lode has an east and west course, the general trend of all the paying mines of this district, and has a northerly dip or inclination of about 45°; walls of slate formation, of light gray color, impregnated with lime. There are four distinct ledges or veins running parallel, two and a half to fourteen feet in width. The mining plant includes a quartz mill, costing $116,000, in course of erection for custom work. Organized July, 1880. Capital, $5,000,000; shares, each, $50; non-assessable. 20,000 shares in treasury; when sold, work will commence active operations.

Colorado Springs Silver Company (The). Name of mines owned, Crystalline mine, only one developed. Location, Gunnison county, Col. Quality and character of ore, gangue of white quartz, ruby wire and native silver, in connection with zinc, iron pyrites, and white iron; assays 123 to 2,023 ounces per ton, with a heavy trace of gold. Character of mine, vein nine feet wide, with a pay streak from five to eighteen inches wide, surrounding rock of slate lime; streak grows richer and wider with depth. Dimensions of workings, three shafts aggregating eighty-three feet. Date of commencing developments, June, 1879.

Consolidated Imperial Mining Company, W. E. Dean, Sec. Office, 309 Montgomery Street, San Francisco, California. This company are the owners of the Consolidated Imperial mine, located in Virginia district, Comstock lode, Nev. The main lode, on which the company depends for its supply of ore, is 468 feet in length. Capitalization, $50,000,000; par value per share, $100. Yield (gross tons), 1881, 25,484 pig. Number of assessments levied, seventeen; total amount of assessments levied, $1,377,000; date of first assessment, July, 1880, ten cents per share; date of latest assessment, January 4, 1882, ten cents per share. Stock quoted, July, 1882, at five cents.

Consolidated Imperial Company (The). Names of mines owned, Alpha. Location, Washoe district, Nev. Character of ore, quartz and porphyry. Length of levels, 2,800 feet; total length, 260 feet.

Consolidated Treasure Company (The). The mines owned are the Central Treasure and Bay mines, located at Treasure Hill, White Pine district, Nev. The mines are worked by drifts.

Consolidated Pay Rock Mining Company. The officers are W. G. Steinmetz, Pres.; Capt. J. R. Riley, Vice-Pres.; A. B. Mullett, Sec. Office, 30 Broad Street corner Exchange Place, New York. The company's property, the Pay Rock mine, is located in Griffith district, Clear Creek county, Col. The ore is of very high grade, assaying $26.70 per ton. The ore vein in the north wall is four inches wide, running 800 ounces, and indications excellent for catching the same vein in the east drift of the north wall. A party visiting the mine says: "We found in the different levels no rocks or piles of debris to impede work; all is kept clean." Some 300 sacks of ore were shipped November, 1881, amounting to $7,000. A force of forty-two men are employed at Pay Rock mine, thirty being lessees. Lode No. 5, which was cut February, 1881, has been opened by a level that has been driven sixty-five feet eastward and forty feet westerly. This lode shows large quantities of ore of good grade in the level, and along the back level solid ore is found in a gorge vein, which shows the best pay is above the level. The winze shows a three-inch vein of smelting ore. Capitalization, $2,500,000; par value per share, $10.

Consolidated Virginia Mining Company (The), of which Charles H. Fish is Pres., and A. W. Havens, Sec., has its offices at room 26, 309 Montgomery Street, (Nevada Block,) San Francisco, Cal. The date of annual election is 12th January every year. The Consolidated Virginia mine is on the great Comstock lode, Nevada. The ore is argentiferous and auriferous and mills freely. Assay value $31.76. There is a blast furnace provided for reducing the ores. Aggregate depth of workings, 2,500 feet. The length of the main lode on which the company depends for its supply of ore is 710 feet. The cost of working mine for twelve months from January to December, 1880, was $946,759.52; cost of extraction and reduction about $17.04 per ton; maximum yearly capacity of production on January 1, 1880, $1,756,536; current value of the mine, $199,800. Organized 7th June, 1867; capitalization, $54,000,000; shares, $100 each. The net yield for the seven years preceding June, 1879, was, gold, $28,029,925; silver, $35,184,316; total, $63,214,241; yield during 1880, fine silver, 54,977,650, $1,755,020; the total product to 5th March, 1880, was 2,768,356,030 ounces fine silver; number of dividends paid to date, fifty-one; total of same, $42,930,000; ten of these were at the rate of $3 per share; thirteen of these were at the rate of $10 per share; date of first dividend May, 1874; date of latest dividend, August 16, 1880; amount, fifty cents per share; number of assessments levied to June, 1875, seventeen; total amount of same, $411,200; date of latest assessment, January 31, 1882; amount per share, thirty cents; floating indebtedness, $17,600; stock and bonds reserved in treasury, April, 1882, $106,762; from this has since been paid an indebtedness of $25,883, for a judgment of Supreme Court of Nevada. Stock quoted July 1, forty-five cents.

Consolidated Amador Mining Company. The Amador Consolidated mine owned by this company, is located in Amador county, California.

Consolidated Pacific Mining Company. F. E. Luty is Secretary. Office, 330 Pine Street, San Francisco, California. The Pacific mine, owned by this company, is located in Bodie district, California. Eighty-one tons yielded $4,137.60, or a little over $51 per ton, and mill test of 301 tons assayed $46 per ton. There are five ledges about five feet wide at 400 feet depth. The company have on their property very fine hoisting works, costing $18.000. Working expenses are about $2,000 per month. Extent of claim, 438x1,400 feet. Capitalization, $6,000,000; par value per share, $100; total amount of dividends paid, $17,000; number of assessments levied, four; total amount of assessments, $126,000; date of latest assessment, January 28, 1882; amount per share, twenty-five cents.

Copper Knob Mining Company is chartered under the laws of the State of New York. The officers are G. B. Flint, President; Wm. Brandreth, Vice-President and Treasurer; Edwin H. Mulford, Secretary. The Superintendent of the works is R. M. Evans, M. E. Branch office, 52 Broadway, New York. The company's property is located in Ashe county, North Carolina. They own 366 acres of land. The ore found assays copper, gold, and silver. The average value per ton is $70. 600 pounds of ore of this company were found to produce by working test of 100 pounds, gold, 465 cwt.; copper, 47½ per cent.; silver, nineteen ounces per ton. Date of organization, 1879; capitalization, $500,000; par value per share, $2; basis, non-assessable; number of dividends paid to November, 1880, two; total amount, $15,000; date of latest dividend, November, 1880; two cents per share.

Criterion Mine (The), owned by W. H. Kingsbury and others, is located in Colorado. The quality of the ore is high grade. A mill run of eighteen to twenty tons gave twenty-four ounces silver, $5 gold, and 50 per cent. iron. Estimating a profit of $10 per ton, there are several hundred thousand dollars in sight. The tunnel is 150 feet in length. Length of adits (that is, levels), from 125 to 130 feet.

Crown Point Silver and Gold Mining Company. The officers are C. L. Willer, President; A. K. P. Harmon, Vice-President; James Newlands, Secretary; J. H. Dobinson. J. P. Jackson, R. F. Morrow. Appointed Superintendent, Sam. I. Jones. This company are the owners of the Crown Point mine, located in Gold Hill district, Comstock Lode, Nevada. Length of the main lode upon which the company depends for its supply of ore, 600 feet. Capitalization, $10,000 000; par value per share, $25: number of dividends paid to January 12, 1875, fifty; total amount of dividends paid to January 12, 1875, $11,688,000; date of latest dividend, January 12, 1875, $2 per share; number of assessments levied, forty-seven; total amount of same, $2,673,370; date of latest assessment, February 16, 1882; company in debt, March 1, 1882, $544; cash on hand, April 1, 1882, $18 270.

Dahlgren Mining Company. The officers are G. E. Hutchinson, Pres.; A. W. Masterson, Sec. and Treas. Office, 63 Broadway, room 31, New York. The Morning Star mine is the property of the Dahlgren Mining Company, and is located in Pittsburg district, Lander county, Nev. It is worked by means of a tunnel and incline shaft. The tunnel level is forty-eight feet in length where it strikes the ledge. All of the workings are in ore from two and a half to five feet in width. The ledge increases as depth is attained, is well-defined, and lies between the two walls in an unbroken mass, rich in both silver and gold. Seventeen miners are employed. Considerable good ore has been taken out and piled up on the flat above the mine. Capitalization, $2,000,000; par value per share, $10; basis, full paid; non-assessable.

Davenport Consolidated Mining and Smelting Company (The) is chartered under the laws of the State of New Jersey. The officers in 1880 were E. S. Douglas, Pres.; R. Da Parrott, Vice-Pres.; J. C. Todd, Treas.; Superintendent, Nathan Cornish. The offices are at 229 Broadway, New York, room No. 18; 203 Pine Street, St. Louis, Mo. The company owns the four mines or claims, the Davenport, Wicker, Ashtabula, and Palermo, located in San Juan county, Col. The ore contains galena, gold, and silver, and gives an average assay of $60. Organized, January 6, 1880; capitalization, $1,000,000, in 200,000 shares of $5 each.

Dayton Gold and Silver Mining Company's (The) property is located at Devil's Gate, Lyon county, Nev. The main lode, on which the company depends for its supply of ore, is 1,600 linear feet in length. Capitalization, $10,000,000; par value per share, $100; no dividends paid to June, 1882. Number of assessments levied, ten; total amount of assessments levied, $750,000; date of latest assessment, April 2, 1878.

Decatur Silver Mining Company is chartered under the laws of the State of New York. The officers are Walter K. Marvin, Pres.; Horace Winans, Sec.; R. H. Gordon, Treas.; Superintendent, Jas. H. Pomeroy. Branch offices, 64 and 66 Broadway, and No. 19 New Street, New York; transfer office, 66 Broadway, room 43, New York. The company owns 1,500 feet on the Decatur, 1,500 feet on the Paul, and 3,000 feet on the Helmer, in Willis Gulch, located in Gilpin county, Col. The ore assays about two-fifths gold and three-fifths silver. Value per ton, $104.42. Work has been prosecuted only on the Decatur and Helmer. On the former, a depth of 110 feet has been attained. The Helmer workings are 185 feet down, at which point levels are being driven east and west. The ore is first concentrated and then sold, bringing $45 per ton of concentrates. A Cornish pump controls the water inflow. Date of organization, March 5, 1880; capitalization, $1,000,000; par value per share, $20. Basis, non-assessable.

Delano Gold and Silver Mining Company (The). Their property is located at Deer Creek, Tulare county, Cal. The company have been successfully developing their mine, and putting it in a condition for extracting a large quantity of ore. Originally an incline was sunk on the ledge to a depth of forty-three feet, showing the presence of ore the entire distance, varying in width from four inches to eighteen inches. A vertical shaft was afterwards sunk to the west of the ledge to a depth of seventy-five feet, when a cross-cut was run east, and to the ledge, eighteen feet, when drifts were run north and south on the vein, aggregating forty-five feet, and were only discontinued for the purpose of concentrating the labor at the straight shaft, the extremes of the drift showing the same character and quality of ore as is exposed in the incline. In the meantime, the incline was sunk to a depth of seventy-five feet from the surface, showing an unmistakable ledge formation, carrying quartz the entire distance. The extent of the ore-body, laterally, has never been determined, as only forty-five feet (in the drifts) have ever been explored, but the samples have been assayed, and show that they are as rich as in the upper drift. No difficulties are encountered in mining, as the mine has ample machinery, pumps, etc., to keep it dry, and extract ore at minimum figures. The ledge-matter is soft and yielding, and rapid progress can be made in drifting and stoping.

Del Monte Gold and Silver Mining Company is chartered under the laws of the State of Colorado. The officers are V. G. Edwards, Pres.; J. C. Turner, Vice-Pres.; C. P. Johnson, Treas. Directors, V. G. Edwards, F. Sheip, J. C. Turner, A. Hallowell, H. W. Peters, Wm. Cheattey, Wm. Spotts, Robert Storey. Office, 136 South Fourth Street, Philadelphia. The character of the mines are true fissure vein. The vein three and a half feet wide, which indicates most promisingly the existence of gold and silver, with copper tracing at 110 feet. Depth of shaft, 130 feet. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable.

Devil's Rapids' Gold Mining Company is chartered under the laws of the State of Maine. The officers are Geo. Ames, Pres.; H. K. Flagler, Treas.; E. C. Spinner, Sec. Directors, Geo. Ames, H. K. Hagler, Theo. S. Very, Chas. F. D. Vabasco, H. R. Gardner, Andrew Telfer, and W. Home. The company's property is located at St. Francis, Bence county. The ore is both auriferous and argentiferous. Date of organization, June, 1881; capitalization, $500,000; par value per share, $5.

Dominion Mining and Silver Company (The). Location of mines, Hukill Gulch, Col. Quality and character of ore, $387 per ton in gold, silver, and lead, latter running $35. Specimens assay $600. Character of mines show a pay-vein eighteen inches in width, consisting of iron pyrites, copper pyrites, and galena. Dimensions of workings opened by four shafts aggregating 165 feet in depth.

Dragoon Gold and Silver Mining Company is chartered under the laws of the State of Pennsylvania. The officers are Charles Mathews, Pres.; John H. Schreiner, Treas.; Jos. R. Black, Sec. Office, 430 Walnut Street, rooms 5 and 6, Philadelphia, Pa. The company's mines are the Paymaster, Osceola, Pysche, Mazeppa, and Southern. Capitalization, $5,000,000; par value per share, $50; non-assessable; amount of stock, issued, 80,000 shares; reserved in treasury, 20,000 shares.

Eastern Oregon Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are T. E. Farrish, Pres.; A. B. Stanton, Sec. Directors, T. E. Farrish, Willard Brown, I. Van Orden, G. F. Geise, of Philadelphia; E. M. Zulick, Gen. R. V. Aukeny, and P. H. Cummings. The company own two claims on the Monumental lode and seven on lodes struck in the tunnel, all located in the Granite creek mining district, Grant county, Oregon, on the Blue Mountains, forty miles from Baker City. The ore is chiefly a ruby and antimonial silver, and contains auriferous iron pyrites. The actual average assays are from $70 to $80, about one-fourth being gold. The veins are characterized as true fissure, varying from one to forty feet in width, and from forty-five to eighty-five degrees in dip. Strike being nearly due north and south. The principal vein is the Monumental, with a ledge from two to three feet. The various workings are of considerable extent. The length of lode on which the company depends for its supply of ore is 3,000 feet. The plant includes a ten-stamp mill, fitted with Thompson's chloridizing roasting furnace, and driven by eighty-horse-power engine, fed by two sixteen-foot tubular boilers. It is claimed that ore, of quality specified, in sight will suffice to keep a twenty-stamp mill going for two years. Present cost of mining and milling is $24 per ton, but this is expected to be reduced by $5 upon completion of the Monumental Railroad to Baker City. The prospective weekly output is calculated at $25,000. Capitalization, $2,500,000.

Echo Consolidated Gold and Silver Mining Company (The). Incorporators, 1880, James L. Grub, Wm. Flint, A. M. Peel, J. J. Wilbraham, James G. Peel. The property belonging to this company is located in Colorado. Capitalization, $400,000.

Edgar Gold and Silver Mining Company (The), of Kentucky. Principal office, Denver, Col. Wm. S. Marshall, Pres. and Agt.

Eldorado Gold and Silver Mining Company (The). Officer, A. C. Hammond, Sec. Principal office, 401 California Street, San Francisco. Mines are located in Nevada.

Elko Consolidated Milling and Smelting Company is chartered under the laws of the State of New York. The officers are W. W. Wakeman, Pres.; M. A. Miller, Vice-Pres.; Geo. H. Everett, Sec. and Treas. Office, 152 Broadway, room 2, second floor. The company's property is located in Elko county, Nev. The ore contains silver, gold, and lead; value per ton, $75. The vein is 2,200 feet in length, tested by ten shafts and five tunnels. The company have furnace, etc., complete ready for active operations. Date of organization, November 19, 1879; capitalization, $1,000,000; par value per share, $10; basis, non-assessable; no incumbrances.

Elmira Company own the following mines, Crown Point, Wolverine, Banner, Idaho, Star of the West, and Washoe, located in Bosie county, Idaho. The ore from these ledges is found in pockets and contains chloride and ruby silver. The company have a fine twenty-stamp mill, rock breaker, roasting furnaces, and other appliances for working their ores, all in excellent condition of equipment. In the Crown Point a shaft was sunk to the depth of thirty feet, and drift run east from the bottom of it. The face of the drift is in a body of ore seven feet wide, the battery assays of which give $90 per ton. Four men are kept at work taking out rock, ten or twelve tons per day are being extracted. 100 tons are on the dump at the Crown Point, and thirty at the Banner. The company have thirty-eight men employed in all.

Emerson Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. Officers, Charles H. Emerson, Pres.; John S. Hulin, Treas.; Charles A. Burgess, Sec. Principal offices, 115 Broadway, New York, and 31 Milk Street, Boston, Mass. Location of mines, Clear Creek, Colorado. Capitalization, 200,000 shares; par value, $10.

Escondido Mining Company. The property consists of the Escondido, Comet, Lyon, Moses, and Wral mines, located in Lawrence county, Dakota. The company are driving a tunnel to strike the mother ledge of the district. The tunnel is already in 650 feet, and has encountered many rich seams, some of which are reported as high as 800 ounces to the ton.

Eureka Consolidated Silver Mining Company (The). W. W. Taylor, Sec. Head offices, Laidlow & Co., 14 Wall Street, New York, and 309 Montgomery Street, San Francisco, Cal. Thos. J. Read, Superintendent. Annual election, October 17. The Eureka Consolidated mine belongs (1882) to this company, located in Eureka county, Nev. The ore is about 55 per cent. gold, and from 20 to 30 per cent. lead. The assays are various; some give from $80 to $120. The property consists of two new hoisting engines, two pumping engines, six large boilers, and other appliances connected with the hydraulic work. The pumping capacity is estimated at 30,000 gallons per minute on a rise of 8,000 feet. Besides the company's regular forces, considerable work has been done by tributers, and ore taken out from the twelfth level up. The mine is explored to the fourteenth level, but the water will not allow much work to be done until after the new pumping machinery is in operation. The principal extraction of ore was from the eighth and ninth levels. The financial statement for the month of May shows that the base bullion out-turn was nearly 524½ tons, yielding $176,985.17. Among the expenditures were, for mining, $44,895.48; smelting, $34,368.32; freight, refining, etc., $25,598.68; construction of new shaft, $10,140.27. The report of the Secretary contains some interesting facts. The out-turn of base bullion for the month yielded $79,324; the expenses amounted to $33,154. The cost of construction of a new shaft was $10,455. The resources are, estimated value of base bullion on hand, $41,364; cash, $111,274. The liabilities are $8,515; the approximate net resources, January, 1882, were $144,123; net earnings for December were $7,335. The mine looks better now than at any time for several years. Plenty of ore in sight to continue two furnaces running. Two men working on fourth level cleaned up each between 2,000 and 3,000 tons within eight months. March 18, 1882. Eureka Consolidated sold on Monday an advance of $14 per share, within a few weeks having sold as low as $9.00. Capitalization, $5,000,000; shares, 50,000; par value, $100; yield during 1880, $1,553,394; number of dividends paid to July, 1882, 73; total amount of dividends to July, 1882 $4,780,000; current value of mine, $800,000; latest dividend, July, 1882; assessments levied, 2; total amount, $100,000; latest assessment, May 26, 1877, $1.00; cash on hand, May 12, 1882, $194,504.63; floating indebtedness, $16,038.20; stock quoted July 1, 1882, $15.25; stock quoted July 16, 1882, $16.50; yearly capacity of production, about 36,634 tons.

Excelsior Company (The). The company owns the Russler and Excelsior mines. The property owned by this company is situated on American Fork, Utah. The company employs eight men. The ore is free gold, carbonate of lead, and galena; average value, $87 per ton. The property is developed by two shafts, and levels, and drifts. There are three lodes on the property.

Exchequer Gold and Silver Mining Company's Mine (The), the Exchequer, is located on Comstock Lode, Nevada. The main lode on which the company depends for its supply of ore is 400 feet in length. Property in acres, 400. Capitalization, $10,000,000; par value per share, $100; no dividends have yet been paid; number of assessments levied, eighteen; total amount of assessments levied, $680,000; date of latest assessment, January 12, 1882; indebtedness, February 1, 1882, $4,572.22; cash on hand April 1, 1882, $10,558.

Eureka-Nevada Mining Company. This is an English organization that has secured the Eagle series, comprising the War Eagle, Spread Eagle, White Eagle, Bald Eagle, Gray Eagle, Black Eagle, Golden Eagle, Silver Eagle, Double Eagle, Eagle Bird, Eaglet, and Eagle's Nest, all on the east slope of Prospect Mountain, in Eureka county, Nevada. They have commenced to develop the property with energy. These mines have all yielded well, considering the desultory manner in which they have been operated. The company have also secured the Williamsburg mine on Adams Hill which is being systematically exploited.

Frisco Company (The). Their property in Utah consists of the carbonate mine, concentrating works, and a fifty-ton smelter at Frisco, Beaver county, the Cave mine in Bradshaw district, the Bigelow in Lincoln district, and several undeveloped mines near Marysville, Piute county. The carbonate mine has attained a vertical depth of over 500 feet. The company produced during the fiscal year, $14,866 of gold and $297,921 of silver, and during the calendar year $8,785 of gold and $286,831 of silver. The mill was idle four out of the last six months of the year.

Fidelity Gold and Silver Mining Company is chartered under the laws of the State of New Jersey. C. G. Stoddart, Sec. Office, 201 Chestnut Street, Philadelphia, Pa. This company own the New York and Clara mines (full claims), located at Los Cerillos district, New Mexico. Assays from the Clara show sixty-three ounces silver, with trace of gold; depth ten feet. Quartz taken from the surface show 132 ounces of silver, one-half ounce gold. From the New York, assays show at ten feet deep, thirteen ounces gold, ten ounces silver; surface quartz has run as high as thirty ounces gold and thirty-seven ounces silver. The company was organized, November 3, 1881, and is free from debt of every kind. There are 80,000 shares reserved in the treasury.

First National Mine (The) is located at Iowa Gulch, Colorado. The character of the ore is black galena. It gives assays of forty-five ounces of silver per ton, four-tenths of an ounce of gold, and forty-seven per cent. lead. There is a mill engine and shaft house on the property. The shaft is 165 feet deep.

Flora Morrison Gold and Silver Mining Company (The) is chartered under the laws of the State of New Jersey. Joseph F. Bailey, President; Hamilton Disston, Treasurer; H. B. Ring, Secretary. Principal office. 105 Market Street, Camden, N. J. These mines are located in Arizona. Gold and silver ore. Capitalization, 250,000 shares; par value, $2; non-assessable.

Freeland Mining Company (The) is chartered under the laws of the State of New York. The officers are R. C. McCormick, President; Theo. M. Lilienthal, Vice-President; Bank of Nevada, Treasurer; Edw. W. Willett, Secretary. Trustees, J. P. Jones, R. C. McCormick, Henry Rosener. Office, 115 Broadway, New York. The company's property is located at Idaho Springs, Clear Creek county, Col. The ore is free milling and carries gold, silver, and copper assaying $60 per ton. There are 5,000 feet in mine. The company have a concentrating mill; capacity, 100 tons daily. The output of the Freeland for one month in June, 1881, was 600 tons of ore; 100 men are employed about the mine. Twenty stamps and four circular buddles are employed and eight to ten men are required to run the mill. The mine yields a profit of between $2,000 and $3,000 per month. A powerful hoisting engine has been supplied to this mine, it being found that the supply of water was insufficient to run the dressing works of the company to their full capacity. Date of organization, June 18, 1879; capitalization, $5,000,000; par value per share, $25: basis, non-assessable; total amount of dividends paid to May 20, 1880, $50,000; date of latest dividend, May 20, 1880; amount per share, twenty-five cents.

Glengary Mines (The), owned by Messrs. Clint Rondebush, James Campbell, H. A. Butters, and O. K. King. The Glengary mines are located on Cross Creek, Col. The ore is gold and silver. Highest assay, 188 ounces silver; gold, six and one-half ounces to the ton; copper, six per cent. Lowest assays, silver, twenty-two ounces; gold, one and nine-tenth ounces to the ton; copper, six per cent.; lead, twenty-three per cent. Fissure veins, eighteen inches is the length of levels, 1880. These mines have been worked with vigor all summer, showing up splendidly. The developments consist of an adit driven in on the vein for a distance of 100 feet. At the entrance of the adit the pay streak shows to a width of eighteen inches, widens gradually until at the face it discloses three feet nine inches of pay mineral in over twelve feet of quartz, which constitutes the gangue.

Golden Age and Group Gold and Silver Mining Company (The) is chartered under the laws of the State of New Jersey. The officers are Richard F. Donovan, Pres.; B. Trautman, M. D., Vice-Pres.; O. J. Kinsley, Sec.; C. B. McKean, Treas. Directors, R. F. Donovan, B. Trautman, M. D., Wm. Maybaum, T. Henry Asbury, C. B. McKeon, John Muldoon, and H. K. Whitner, M. D. The offices are at 140 South Third Street, Philadelphia, Pa. The company owns the following mines or claims: the Orlando, Saginaw, and Bay City, located. Capitalization, $600,000, in 300,000 shares of $2 each; non-assessable.

Gold Hill Mining and Smelting Company. Office, 292 Washington Street, Boston, Mass. The company owns twenty-one claims. Their property is located at Ten Mile district, Colorado, adjoining the famous Robinson company mines. They have a capitalization of $3,000,000. The company have a small amount of treasury stock for sale to meet current expenses.

Gold Park Mining Company's mine, the Little Mollie, is located in Colorado. The quality of the ore is good. The shaft is eighty feet deep.

Gazelle Mining Company (The). The mines belonging to this company are located near Meadow Lake district, Nevada county, Cal. Ledge thirty feet wide. Good assays.

Gila Mining Company (The) has property located in Revelle, Nye county, Nev. The officers are G. W. Handy, Pres.; John Hammond, Vice-Pres., and J. J. McGeoghegan, Sec. The length of the main lode on which the company depends for its supply of ore is 1,500 feet. Capitalization, $10,000,000, in 100,000 shares of $100 each. The yield during the fiscal year of 1879-80 was $12,413. Total of dividends paid to August, 1875, $50,000. Date of latest dividend, August 16, 1875. Eight assessments have been made, aggregating $195,000. Date of latest assessment, July, 1881.

Great Mountain Mining Company's works are located in California. Capitalization, $1,250,000; par value per share, $10. Total amount of dividends paid, $212,000; date of latest dividend, November, 1881. Stock quoted July 1, 1882, $2.30.

Gould and Curry Mining Company (The), of which Mr. Alfred Durbrow is Secretary, has its offices at 69 Nevada Block, and 309 Montgomery Street, San Francisco, Cal. The date of annual election is December 19. The property is located in the State of Nevada. The workings of the mine are 1,900 feet deep. The length of the main lode on which the company depends for its supply of ore is 612 feet. The capital of the company is $10,800,000, in 108,000 shares of $100 each. Total dividends paid to January, 1881, $3,826,800; date of last dividend, August 4, 1880; amount of same, $1.50 per share. Number of assessments levied, forty-two; total amount of same, $3,206,000; date of last assessment, May 23, 1882; amount of same, fifty cents per share. Floating debt, February, 1882, $22,594. Stock in treasury, April 1, 1882, $21,199.

Golden Development Company (The) is chartered under the laws of the State of Maine. The officers are C. D. Jenkins, Pres.; C. A. Homans, Treas.; J. F. Coles, Sec. Directors, B. E. Perry, John G. Phillips, Geo. F. Field and C. D. Jenkins. The offices are at 40 Water Street, rooms 52 and 53, Boston, Mass. The company owns four mines, three gold and one silver; the former, viz., the Pinafore, Colchis, and Jason, are located at Clifton, Ariz., and the latter, the Jenkins, at Silver City, N. M. The ore is a carbonate, free milling, and assaying $116.54, viz., gold $104 and silver $12.54. At some depth, the lode is eight feet thick. The rocks are chiefly feldspar and porphyry. The plant, comprising a water-wheel and mill-machinery, is now in course of construction, and will soon be ready for operation. There is enough free-milling ore to keep a ten-stamp mill running for one year. Date of organization, May, 1881; capitalization, $400,000, in 200,000 shares of $2 each. $20,000 reserved in treasury.

Goodshaw Mining Company's (The) mine, the Goodshaw, is located in Bodie district, Cal. Extent of claim, 300 feet by 1,500 feet. The ore is high average grade, averaging $41.50, with streaks ranging from $200 to $5,000 per ton. The ledge is about four feet wide. Ledges of this district show a tendency to unite by depth. Depth of shaft is 500 feet; stopped by water. Total excavations, January 1, 1882, 2,000 feet. The company have new hoisting works in course of erection; original, destroyed by fire; pump costing $20,000. The water having disappeared from the mine, it has been started up again. Shaft is now down 695 feet, and sixty or seventy-five feet more are expected to bring the sinkings to the ledge. The work is progressing rapidly. The formation in the bottom of the shaft being blue porphyry, seamed with quartz and of a hard character, with an occasional stratum of clay running through it; all the material carrying a large percentage of iron; a very desirable formation for gold-bearing ledges. Capitalization, $10,000,000. No dividends paid to June, 1882. Number of assessments levied, eleven; total amount of assessments levied, $180,000; date of latest assessment, June 1, 1882, ten cents per share. Working expenses per month, $2,500.

Grand Union Gold and Silver Mining Company (The) is chartered under the laws of the State of Colorado. The officers are W. Dunlap, Pres.; J. J. Wilbraham, V.-Pres.; J. V. Tullaway, Treas.; Enon M. Harris, Sec. Directors, W. Dunlap, J. J. Wilbraham, W. H. Wade, Jos. Pettit, Chas. Lockrey, Jr., J. V. Tullaway and J. W. Anthony. The company owns the Grand Union, Monroe, Adams, Gov. Curtin, Madison, and Washington, located at Cottonwood district, Chaffee county, Col. The tunnel of the Monroe is 750 feet long, and of the Adams, fifty feet long, and developments are rapidly progressing. Capitalization, $2,500,000, in 250,000 shares of $10 each.

Granite State Gold and Silver Mining Company. The officers are Wm. C. Tallman, Pres.; H. L. White, Treas.; James Anderson, Sec.; Superintendent, M. Millesnn, M. E. Office, 31 Milk Street, Boston, Mass. The company's property is located in Cheshire county, New Hampshire. They have a capitalization of $2,500,000, in shares at a par value of $25 each; basis, non-assessable.

Gunnison Exchange and Silver Mining Company. The officers are Seth P. Bryant, Pres.; W. D. Middleton, Vice-Pres.; E. S. Carl, Treas.; H. M. Martin, Sec.; A. P. Doe, Genl. Mang. Directors, A. P. Doe, J. H. Murphy, A. Moritz, S. P. Hobson, and Geo. Paul. Superintendent, P. G. Gates. Office, Davenport, Iowa. This company control a number of mining properties in Gunnison county, Col., three on Treasury Mountain being best known, the Eureka, Garfield, and Hancock. The group is known as the Eureka mine. They control all of the Bryant mine at the foot of Crystal Mountain, parts of Friendship and Bouton mines on Galena Mountain, in Rock district, parts of the Gunnison Exchange, Silver Beauty, and Ada mines in Ruby district, parts of the Black Jack and Iron mines on Crystal Mountain, a placer claim of twenty acres, suitable for a town site, near Scofield, which is to be called Silver Center, a one-half interest in a coal field of 160 acres in size near the town of Crested Butte. The properties are not in the market, and facts concerning them are obtained with difficulty. Date of organization, 1880; capitalization, $600,000; par value per share, $25.

Gunnison Improvement Company is chartered under the laws of the State of Colorado. The officers are August Moore, Pres.; J. L. M. Duffield, Sec. Transfer office, 203 Walnut Place, Philadelphia, Pa. The company's property is located in Cochetopa and Spring creek districts, Colorado. The value of this company's property consists in coal lands, gold and silver mines, buildings, town sites, toll roads, and water powers. They are now pushing developments on coal property. The company is interested in the following properties in the Cochetop a district: The Maple Leaf, gold lode, Little Nellie, gold lode; Accidental, gold lode; John Harley, (placer claim and town site) John V. Gault, (placer claim and town site,) the water claim of the Cochetopa creek. The first three are well-defined gold bearing veins, and the first mentioned a well known and very valuable lode. The property is now being developed. In the Spring creek district are the following carbonate claims: The King, the Princeton, the Capital. Amount of stock issued, 70,000 shares; capitalization, $1,000,000; par value per share, $10; basis, non-assessable; stock reserved in the treasury, 1882, as working capital, 30,000 shares.

Giant and Old Abe Mining Company (The) is located at Whitewood, Lawrence county, Dakota. Capitalization, $10,000,000, in 100,000 shares, of $100 each; the mine produced during the fiscal year of 1879 and 1880, $2,750; no dividends have been paid; six assessments have been made aggregating $300,000; date of last assessment, September 3, 1881.

Girard Gold and Silver Mining Company (The) is chartered under the laws of the State of New Jersey. The officers are W. H. Wright, Pres.; Wilson Lloyd, Treas.; and A. J. Kimsley, Sec.; Messrs. Hamilton Disston, W. H. Wright, W. H. Tabor, Wilson Lloyd, J. F. Bailey, W. Cochrane, and Chas. Disston being the chief stockholders. The offices are at 138 South Fourth Street, Philadelphia, Pa. The property is located in the Tombstone district, Ariz., and has an area of about eleven acres. The claim being contiguous to the Tranquillity, Good Enough, Tough Nut, etc., the mine should, with proper development, become a good producer. It is opened by a shaft to a depth of about 450 feet. The main working-shaft is double compartment and supplied with steam hoisting works of improved pattern. The ore is taken chiefly from the 350-feet level and below. Vein, four to eight feet wide. From 3,000 to 4,000 tons of ore on dump ready for twenty-stamp mill in course of erection. About twenty-five men are employed. The company also owns the water-power in the Tombstone district, and report says that it will prove a considerable source of profit. The quality of the ore increases as depth is obtained. Capitalization, $2,000,000, in 200,000 shares of $10 each; non-assessable, full paid. The receipts of the company last year were $171,478.92, and there is now a balance of $154.86 in the treasury. All the shares have been disposed of.

Givin Mining Company (The). The Givin mine is located near Mokelumne Hill, Calevaras county, Cal. It is one of the finest pieces of mining property in the State, and one which for many years past has been yielding its wealth of precious metal. There are complete hoisting works on the mine, and two quartz-mills, the upper mill having thirty-two stamps, and the lower one twenty-four. Also sulphuret works, and in fact everything that is necessary for working their ore. The pumps are in excellent order, and running regularly, no trouble being experienced from the water. The work of retimbering the old shaft is now completed down to the 600-foot level, the tunnel repaired, and everything is about ready to commence hoisting ore. There is a large reserve of good quality ore in the level, which will supply 100 tons of rock a day for a year. Work is still being done in the 400-foot level, showing very rich rock in the upper slopes of the level. Some difficulty is experienced in getting it, owing to the heavy caves in the lower slopes. Work is also being done in the 400-foot level in the north shaft. A large body of ore was tapped in the Smith ground, recently purchased by the company. A tunnel on the surface of the Smith ground was run about fifty feet on the ledge, which is from six to eight feet in width and fair grade ore. The prospects of the mine are very favorable.

Glasgow Gold and Silver Mining Company's (The) property is located at Devil's Gate, Lyon county, Nev. The main lode, on which the company depends for its supply of ore, is 1,500 feet in length. Capitalization, $9,000,000; par value per share, $100; number of assessments levied, five; total amount of assessments levied, $45,000; date of latest assessment, February 11, 1878.

Glass Pendery Consolidated Mining Company (The), of which R. Vogel is Vice-Pres. and C. A. Manners, Sec. and J. W. Wallace, Manager, has its offices at 55 and 57 Boreel Building, Broadway, New York. The company owns two mines, the Glass Pendery and the Rough and Ready, located at Carbonate Hill, Leadville, Lake county, Col. Extent of property about sixteen acres. In the old Pendery a new strike of great richness has been made; a vein of eighteen inches in thickness of rich chloride ore was struck, which will run as high as 3,000 to 6,000 ounces of silver to the ton; the main ore body showing a thickness of four to six feet. Sufficient ore has been taken out to pay all current expenses of the mine, including development work. The ore-bins at both shaft-houses are well filled, and shipments are being regularly made. The ore is a carbonate of lead of high grade, assaying from sixty to 150 ounces per ton. Recent developments show large quantities of ore to the north in the Pendery claim. Besides the ore bodies an immense amount of iron and lime exists, both of which carry some silver, and are valuable as a fluxe for smelting. The shipment of these alone returns a large profit to the company, and leaves the entire product from the ore a profit. A special engine is employed in hoisting the product from this rich vein. The weekly output is about 180 tons. Capital stock, $5,000,000, in 250,000 shares of $25 each; dividends paid to April, 1881, $25,000; date of last dividend, April 8, 1881, ten cents per share: stock quoted July 1, $2.15 per share; surplus fund on hand, $70,000; total profits of mine since discovery, about $9,000; twenty men employed.

Hailstone Gold and Silver Mining Company (The) is chartered under the laws of the State of Colorado. The officers are Jas. S. Lever, Pres.; Wm. Flint, Treas.; H. W. Kelly, Sec. Directors, Jas. S. Lever, Wm. Flint, H. W. Kelly, H. Fricke, J. C. Barnitz, Geo. V. Magee, and H. Rea. The offices are at 14 S. Third Street, Philadelphia, Pa. Organized on a non-assessable basis; capitalization, $2,500,000, in 250,000 shares of $10 each.

Hale and Norcross Silver Mining Company (The) has offices at 309 Montgomery Street, San Francisco, Cal. The officers are Geo. Congdon, Pres.; Walter E. Sell, Vice-Pres.; Nevada Bank, Treas.; Joel F. Lightner, Sec. The property of the company is located in the Virginia district, Comstock lode, Nevada. Depth of workings, 2,400 feet. Total length of main lode (Comstock), on which the company depends for its supply of ore, is 400 feet. To January 1, 1882, the sum of $90,000 has been expended in developments. Fifty-nine men are employed at the Hale and Norcross mine. Capitalization, $11,200,000, in 112,000 shares of $100 each; number of dividends paid to April, 1871, thirty-six; total amount of same, $598,000; latest dividend, April 10, 1871, $5 per share; seventy-four assessments levied; total, $3,950,000; latest assessment, May 16, 1882, fifty cents per share; floating indebtedness, $18,962, April 1, 1882; cash on hand March 1, 1882, $2,164; preferred stock reserved in treasury.

Happy Camp Hydraulic Mining Company. The property is located in Del Norte county, Cal. The company are running their mine night and day with two pipes. Considerable river-bed mining has been done with profit during the past season along both the Kalmath and Smith rivers by means of wing damming. A dam is constructed half-way across the river and then continued down the stream to any desired distance, thus turning the whole body of water into one-half of its channel. The water enclosed by the dam is then pumped out by the force of the current acting on wheels attached to shafts projecting beyond the dam, and the gravel on the portion of the river bed laid bare is raised with derricks and emptied into sluice-boxes for washing.

Harper Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are Lewis Jones, Pres.; Geo. G. Terry, V.-Pres.; Rollin M. Morgan, Sec.; Giles Blagan, Treas. The Trustees are Lewis Jones, Egbert Guernsey, M. D.; R. M. Morgan, Geo. H. Burrows, G. S. Terry, Giles Blagen, and Thos. H. Cathart. The annual election is held in May. Geo. W. Burrows is the Superintendent. The offices are at 120 Broadway, New York city. The property of the company, comprising the Imperial Bower mine, is located at San Juan, Hinsdale county, Col., on the southeast slope of Ida Mountain, head of American Basin, Park Mining district, ten miles northeast from Silverton. The area of the claim is 300x1,500 on the Imperial lode. The ore is argentiferous galena, containing much brittle silver, sulphurets, and gray copper; yields from thirty-four to 100 ounces silver and thirteen ounces gold per ton. It is said that the ore of the adjoining mine, at a depth of thirty-five feet, averages nearly $200 per ton, and, as the ore of the two mines is the same in character, it is reasonable to suppose that the Bower will prove equally rich at an equal depth of development. The vein is described as a true fissure from eight to twelve feet thick, and exceptionally rich, chiefly with silver. It extends downwards nearly vertically, its trend being west about ten degrees south. The extension of the Denver and Rio Grande Railroad runs within about three miles of the mine at Eureka, in San Juan county. Capitalization, $400,000, in 40,000 shares of $10 each; fully paid; non-assessable; treasury reserves consist of 11,500 shares.

Hastings Consolidated Gold and Silver Mining Company. Messrs. C. C. Hastings and G. Newton are the directors. The Surpriser mine, owned by this company, is located at Hastings, Arizona. Property owned, extra fine twenty-stamp mill.

Haverley Golden Group Mining Company (The) is chartered under the laws of the State of Colorado. Officers, J. H. Haverley, Pres.; Hon. H. H. Walker, V.-Pres.; Col. N. P. Richmond, Sec.; C. N. Pratt, Asst. Sec.; A. F. Armstrong, Treas.; Richard Hiencheon, Supt. Principal offices, 116 Dearborn Street, Chicago; 1151 and 1157 Broadway, New York; 205 Washington Street, Boston, Mass. The mining property belonging to this company is located on Bear creek, head of San Miguel river, Ouray county, Southwestern Colorado. Gold and silver ore; assays per ton, $145.88 upwards. Have large bodies of high-grade, free-milling ore. The property owned by the company consists of a first-class twenty-stamp mill. This mine has adopted the plan of placing their treasury stock at $2.50 per share, and guaranteeing seven per cent. par value of $10 each, which dividend takes precedence over the ordinary or common stock of the company. At a meeting of Directors held at office of said company in city of Chicago, 8th December, 1880, the following resolution was passed and unanimously adopted: "*Resolved*, That the 160,000 shares of the company set aside as development stock, upon which a dividend of seven per cent. per annum shall be paid annually out of the net earnings of the mine of the said company, before any dividends shall be declared on the common stock, and that 20,000 shares of the preferred stock be placed on the market at the price of $2.50 per share." Incorporated, February 11, 1880; capitalization, $6,000,000; shares, 600,000; par value $10; non-assessable forever; owe no debts; dividend-paying mine.

Hawkeye Consolidated Mining and Milling Company. The officers are Robert Law, Pres.; O. F. Gibbs, Vice-Pres.; Robert H. Law, Sec. and Treas., all of Chicago, Ill. S. C. Robinson, the discoverer, is Superintendent. This company owns five claims, viz., the North, East, West, and North-West Hawkeye, and Alpha, located in Colorado. The character of the ore is black tellurium sulphide, antimonial and ruby silver, galena and gold. Mill runs give 100 to 250 ounces to ton. The ore vein stripped on the surface for over 200 feet, and it can be traced 3,000 feet. The pay streak is about eighteen inches. The property is developed by tunnels. Date of organization, 1882; capitalization, $600,000; par value per share, $50.

Hidden Treasure Mining Company. H. H. Power, Sec. The company's mine, Hidden Treasure, is located at Sunny South, Placer county, Cal. The company has laid a new track through the entire length of the tunnel in the mine, and work has been renewed with a great display of activity.

Homestake Mining Company (The) is chartered under the laws of the State of California. H. B. Parsons, Esq., is Secretary. The offices are at San Francisco, Cal., and at 18 Wall Streets, New York, the latter being an office for effecting transfers. The property of the company, including the Homestake mines, is located in the Black Hills, Deadwood, Dakota. The ore is a ferruginous quartz, intermixed with chloritic slate and small quantities of iron pyrites, low grade, but soft and easy milling, each stamp is capable of crushing three and one-half tons per day at an average cost of $1 per ton. Assay value, $7 to $10 per ton. The mine is a true fissure. The chief vein, called the Golden Star, has large bodies of low grade ore, varying in width from five to 150 feet, and of great depth. The mining plant comprises two stamp-mills aggregating 200 stamps, costing $503,475; a 300-horse-power Corliss engine, fly-wheel of which weighs 26,000 pounds, 4-54. in. boilers sixteen feet long in each mill. Steam drum heaters, with six Ludlow hydrants for protection against fire. The hoisting machinery is supplied with all the latest improvements. Gold is smelted in laboratory connected with the mill. When its appointments are completed, the metal will leave the mill in bars ready for the mint. The length of the main lode on which the company depends for its supply of ore is 2,850 feet. Nearly $1,000,000 has been expended in developments to January, 1881. Present prospects are excellent, a large amount of high grade ore being exposed. A monthly clean-up of the six mills was made recently, and the resulting bullion, $123,000, was shipped to New York. The current value of mine is $1,738,000. The mine is well timbered, no caves or movements of the hanging-wall having taken place. The cost of mining is $2.48 per ton. The fact of the mines being surrounded by forests necessitates great precaution against fire, for which the company is well provided in the possession of six hydrants, an ample supply of water, and a properly organized brigade of volunteer firemen, all employees of the company. Organized, November 5, 1877; capitalization, $10,000,000, in 100,000 shares of $100 each; yield during fiscal year 1879–80, $1,033,272; yield during 1881, $1,239,600; dividends paid to June, 1882, $1,420,000; (No. 46) last dividend paid June 26, 1882; forty cents per share; another dividend (No. 47) is declared for July 25, of the same amount; two assessments have been levied, total, $20,000; latest assessment, April 8, 1878, $1 per share. The stock, held principally in San Francisco, is quoted at $17.38 per share.

Home Ticket and Two-Jack Mines (The). Messrs. Frost & Palmer, owners. The mines Home Ticket and Two Jack mines are located in Lone Mountain district, New Mexico. Splendid ore taken in large quantities. Give returns of forty ounces in silver, seven-tenths of an ounce in gold, and twenty-four per cent. in lead. Netting $5,444 per ton over smelting charges. Mill four tons. These two mines show a batch of three tons, worked by J. W. Holson, returned over 500 ounces to the ton.

Hopewell Company. M. J. Hudmett, Manager. The Michigan mine owned by this company is located at Sheep Mountain, Col., from which report says there have been taken some handsome specimens of copper. The ore assays nineteen ounces in silver, seventy per cent. lead, and some gold and iron. The company have hoisting machinery and shaft house at the works. The shaft is 120 feet deep. During March, 1882, it was reported a level had been started from the drift to avoid the inconvenience of working through the uprise, and facilitate the extraction of ore. Shipments were expected to be made at an early date. The ore is said to differ from most of the Sheep Mountain ores inasmuch as it is not refractory—analysis showing no zinc, antimony, or arsenic.

Hukill Gold and Silver Mining Company is chartered under the laws of the State of New York. The officers are J. L. Brownell, Pres.; S. V. White, Treas.; E. W. Willett, Sec. Trustees, Nath'l A. Boynton, Geo. H. Seeley, Benjamin Blair. Superintendent, F. F. Osbiston. Office, 115 Broadway, Boreel Building, rooms 58 and 60, New York. The company's property, the Hukill mine, is located in S. Bar district, Clear Creek county, Col. The character of the ore is gold, silver, and copper, in quality first class. Value per ton, $80. The mine is shipping twenty tons of ore daily to the concentrator. Sending out one car-load of smelting ore per week (worth $80 a ton), and two car-loads of concentrated ore (worth about $40 a ton). Some fine bodies of mineral have been struck in this mine. The company own mill and hoisting works. The main lode is 3,288 feet in length. Capitalization, $1,000,000; par value per share, $10; basis, non-assessable; yield during 1880, $133,000; total amount of dividends paid, $210,000; date of latest dividend, December 10, 1878, ten cents per share; stock quoted July 7, 1882, thirty-five cents.

I. X. L. District Bayfield Company (The). The mining property of this district are located in Nevada. Extraordinary high grade ore. Mr. Bayfield has just received the results of three assays made by Mr. R. S. Day, of Oreana. Highest, $1,700 in silver, $3,300 in gold, making a total of $5,000 per ton.

I. X. L. Mine (The). Owned by Messrs. Casey & McLain. The I. X. L. mine is located in Laurel district, Mono county, Cal. Large quantities of ore taken from a shaft only sixteen to eighteen feet deep. Free gold in quantities, and seam also shows chlorides of silver.

Isabella Gold and Silver Mining Company (The), of which Lewis Chalmers, Esq., is Superintendent. owns the Stella mine located in Inyo county, Cal. Extent, 1,019 acres. The company are now operating at Silver Mountain. They are driving a tunnel upwards of 8,000 feet, for the purpose of developing three ledges, the Isabella, I. X. L., and Exchequer. A new mill has been built and is crushing ore, of which there is sufficient to keep it running to its full capacity. The company is English.

Iron Hill Company. The company own a group of mines located in Lawrence county, Dakota. They have sunk shafts to the depth of fifty, thirty-one, and twelve feet in the Utica and Ultimo. Rich ore, consisting of gray carbonate, containing horn silver, is said to have been struck, but the extent of the deposit had not been determined. To the east of this carbonate belt is a wide and rich vein of gold-bearing ore, from which assays have run as high as $2 to the ton.

Ida L (The), Queen of the West. Officers, J. B. Bissell, Pres.; J. M. Wallace, Vice-Pres.; R. H. Buck, Sec.; L. M. Dwight, Treas. The Mayflower mines are owned by this company. Located in the Ten Mile district, Col. The ore consists of gold and copper. A tunnel cross-cutting the vein, at a distance of 130 feet, at which point a winze was sunk in the vein to a depth of twenty feet, and then drifts run east and west along the vein, a distance of seventy feet in all, 1881. Arrangements have now been made to prosecute vigorously the works of opening the mine. Mill four tons. Gave returns of forty ounces in silver, seven-tenths of an ounce in gold, and 24 per cent. in lead, netting $5,444 per ton over smelting charges. Capitalization, 150,000 shares: value, $10 each; working capital, $30,000.

Ilesite Mine (The), owned by F. T. Hughes and others. The Ilesite mine is located at Middle Swan creek, Summit county, Col. Gold and silver ore, assaying per ton $10 to $20 in gold and silver. Drifts and veins are the character of the mine. Vein over thirty feet wide.

Intervener Gold and Silver Mining Company (The) is chartered under the laws of the State of New Jersey. The officers are T. Henry Ashbury, Pres.; Wilson Lloyd, Treas.; L. W. Klahr, Sec. Offices are at 138 South Fourth Street, Philadelphia, Pa.

Jackson Mining Company (The) owns property located in Eureka, Nev. Capitalization, $5,000,000, in 500,000 shares of $100 each. No dividends have been paid; thirteen assessments have been levied; total amount of same, $262,500; latest, November 23, 1880. Cash on hand, February 1, 1882, $5,330.43.

Juniper Mining Company (The). E. C. Master, Sec. Principal office, 309 Montgomery Street, San Francisco, Cal. The mines belonging to this company are located in California.

Julian Mine (The). Mr. Dubois, Supt. This mine is located near New Castle, Placer county, Cal. The company own one twenty-stamp mill. The Superintendent was formally in charge of the Extra mine, Copper City, Shasta county. The mine cost $200,000. The mill run by a hurdy-gurdy wheel, with 140 feet of water from the Bear River ditch. Shaft is down 700 feet.

Justice Mining Company (The) has offices at 419 California Street, San Francisco, Cal. The officers are J. P. Cavallier, Pres.; H. M. Levy, Vice-Pres.; R. E. Kelly, Sec.; Bank of California, Treas. Office, 419 California Street, San Francisco. The property is located on the Gold Hill district, Nevada. The length of the main lode on which the company depends for its supply of ore is 2,100 feet. Capitalization, $10,500,000, in 105,000 shares of $100 each. Yield during fiscal years 1879, 1880, was $5,300; no dividends have been paid: thirty-six assessments have been levied; total amount of same, $3,206,500; date of last assessment, May 22, 1882; amount per share, twenty cents; cash on hand, February 1, 1882, $21,056.99; cash on hand, March, 1882, $15,564.

Julia Consolidated Mining Company (The) has its offices at 419 California Street, San Francisco, Cal. H. A. Charles, Secretary. The annual election is held August 10. The property is located on the Comstock lode, in the Virginia district. Nev. The depth attained on the workings is 2,450 feet. The length of the main lode, on which the company depends for its supply of ore, is 3,000 feet. Capitalization, $11,000,000, in 110,000 shares of $100 each; no dividends have been paid; seventeen assessments have been levied; total amount of same, $1,457,500; latest assessment, twenty cents per share, January, 1882; cash on hand, March 1, 1882, $1,066.

Jupiter Mining Company (The) owns property in the Bodie district, Cal. Extent of claim, 200 by 1,500 feet. The ore is rather low grade, but possesses good milling qualities. The mine has a vein formation over forty feet in width, assaying strong in gold and silver, which has been exciting much curiosity. The shaft is 500 feet deep. The length of the main lode on which the company depends for its supply of ore is 1,500 feet. There are in the mine nearly 2,000 linear feet of excavation, including shafts. The mining plant includes a new hoisting apparatus of 1,200 feet capacity and costing $20,000. Capitalization, 64,000 shares; no dividends paid; twelve assessments levied; total amount of same, $216,000.

Kansas Mining Company (The). Mr. J. W. Whitlatch, Superintendent. The Catalpa and Crescent mines are owned by this company and located in Park county, Col. Quality and character of ore are gold and silver, 1880. There is but little doubt (so reported) that it will soon rank among the foremost producers of gold and silver in Park county. The depth of shaft is thirty feet. Averaging the depths of the shaft, cuts, and levels on the mine at thirty feet, and the ore streak at only two feet in width, there are now in sight 4,125 tons of ore, having a value of $32,000, after deducting the percentage of loss in treatment. A mill is owned by the company, California pattern. Will run ten 750-pound stamps, having engine and boiler capacity sufficient to use twenty. The mill will run almost automatically, being supplied with self-feeders and other improved labor-saving appliances. The mines are located upon one of the largest and best-filled fissures of the district, and are opened from the surface by means of fifteen different shafts, cuts, and levels in the vein. In addition to the fine location, there are two cross-cut tunnels run in to tap the vein lower down; one at seventy-seven, the other 150 feet. Throughout the workings of the mines there is not a pinch or barren spot shown, and the full meaning of this statement can be better understood when we say that the surface openings given are extended to a total length, along the vein, of 825 feet, several of them being long open cuts, or rather trenches, exposing ore for their entire length. At each of these openings there are many tons of ore, and a close estimate of the total amount upon the different dumps places it at 300 tons. Mining and milling cost $12 per ton. The ore will be found equally as plentiful and rich in the lower levels, as is shown in the working of the well-known Nova Zembla mine, which joins the Kansas upon the same vein, and which has been exploited to a depth of over 200 feet. At that distance from the surface the Nova Zembla is productive of ore, having a value of $200 per ton in gold and carrying some silver. Yield, net, to January 1, 1882, $12 per ton; yield, net, during 1881, $82,500.

Keystone Mining Company's Mine (The), the Keystone, is located in Amador county, Cal., and appears to be a valuable and profitable property. The mill has been recently rebuilt; it has forty stamps, self-feeding, rock-breaker, large ore-bin, with a capacity of 3,000 tons, to hold in reserve in case of accident in the mine, and Hendy concentrators giving satisfactory results.

Kearsarge Silver Mining Company (The) is chartered under the laws of the State of New York. The offices are at 54 Wall Street, New York. The property of the company is located near Salt Lake City. The ore is gold, silver, and lead. Organized in 1877; capitalization, $2,000,000, in 200,000 shares of $10 each; non-assessable. Yield during fiscal year 1879 80, $2,150.

Kentuck Mining Company (The) has offices at 234 Montgomery Street, San Francisco, California. J. W. Pew, Esq., is Secretary. The property is located on the Comstock lode, Nevada. The length of the main lode or which the company depends for its supply of ore is ninety-five feet. Fifteen men are employed at the Kentuck mine. Capitalization, $3,000,000, in 30,000 shares of $100 each; thirty-two dividends were paid up to March 10, 1870, date of last dividend; total amount of same, $1,252,000; amount of last dividend, $5 per share; seventeen assessments have been levied; total amount of same, $342,000; date of last assessment, November 23, 1881, at thirty cents per share.

King's Mountain Mining Company (The) is chartered under the laws of the State of New York. The offices are at 52 Broadway, New York city. The property of the company, consisting of 500 acres, is located in Gaston county, N. C. The ore is auriferous with some silver. Organized September 10, 1877; capitalization, $1,200,000, in shares of $10 equals 120,000 shares; non-assessable. To May of the current year, no dividends had been paid.

Lacrosse Gold and Silver Mining Company is chartered under the laws of the State of New York. Office, 59 Williams Street, New York. The company's property is located in Colorado. Character of the ore is gold and silver, and has a value of $40 per ton. Date of incorporation, June 16, 1863; capitalization, $1,000,000; par value per share, $10.

Last Chance Mining Company is chartered under the laws of the State of California. Office, San Francisco, Cal. The company's property is located at Bodie, Mono county, Cal. The ore carries both gold and silver, and has a value of $30 per ton. The company owns whim, hoisting works, etc. Date of organization, July 3, 1879. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable.

Lady Helen Gold and Silver Mining Company (The) has its offices at No. 29 Broad Street, New York. The officers are Paul O. d'Esterhazer, Pres.; Robt. Rayner, Sec.; R. G. Anderson, Supt. The company owns the Lady Helen mine, located near the Senate mine, Colorado, and employs in it a considerable staff of men. The prospects of success are at present promising. Capitalization, $500,000, in 100,000 shares of $5 each.

Lawler Gold and Silver Mining Company (The). Principal office, Leadville, Colorado. The mining property belonging to this company is located in Park county, Colorado. Capitalization, $5,000,000; shares, 500,000; par value, $10.

Leeds Mountain Gold and Silver Mining Company (The) is chartered under the laws of the State of Colorado. The offices are at Topeka, Kansas, and Maysville, Colorado. The directors and officers are

Gov. John P. St. John, Pres.; Hon. A. H. Horton, Vice-Pres.; A. B. Jetmore, Gen. Mang.; Owen T. Welch, Treas.; W. H. Ward, Sec.; Col. P. S. Noble, Hon. Ed. Knowles, Hon. J. O. Pickering, and C. M. Johnson. The Executive Committee consists of Hon. A. B. Jetmore, Hon. G. B. Johnston, and W. C. Edwards. Organized April 21, 1881; capitalization, $2,000,000, in 200,000 shares of $10 each; non-assessable. Stockholders not individually liable.

Lida Gold and Silver Mining Company (The). Officer, A. C. Hammond, Sec. Principal office, 401 California Street, San Francisco. The above mines are located in Nevada.

Little Bobtail Gold and Silver Mining Company (The) own a group of mines comprising the Little Bobtail, Salt Lake, Dovetail, Little Chance, Mary, Flint, Railroad, Baltic, Juanita, and Marion, all located in Gilpin county, Col. The Baltic at a depth of sixty feet has a sixteen-inch pay streak. The Railroad mine at its junction with the Baltic has a shaft 230 feet in depth, also a sixty-foot shaft. On the Flint, the shaft is down 130 feet, with ten inches of vein matter at the bottom. This mine produces a good smelting ore from the ninety-foot level. The incorporators were John H. Boen, John H. Matthews, M. G. Ferguson. The company has a capitalization of $1,000,000.

Little Piney Gold and Silver Mining Company is chartered under the laws of the State of Colorado. The officers are Edwin G. Fay, Pres.; Geo. G. Magee; Vice-Pres.; E. P. Graves, Sec. and Treas. Superintendent, F. C. Fay. Office, Corning, New York. The company's property is located in California mining districts, Col. Amount of property in acres, 320. The company's property consists of Placer and Lode mining claims. They have a capitalization of $1,000,000. Par value per share, $10. Basis, non-assessable.

Little Rapid Placer Mining Company (The) is chartered under the laws of the State of New York. The President of the company is Benjamin Homans. Office, 251 Broadway, New York. The property of the company is located in the Black Hills, Dakota. The ore is free smelting. A rich pay streak shows in the breasts of all the drifts and levels in the mines, generally about two feet in width. It consists of a fine-looking brown and gray quartz ore, containing much copper in a carbonized condition. Capitalization, $1,000,000, in 200,000 shares of $5 each.

Long and Derry Hill Mining Company (The) is chartered under the laws of the State of New York. Officers are Hon. Wm. Fullerton, President; Wm. E. Redding, Vice-President; Gen. John A. Anderson, Treasurer; D. Olyphant Talbot, Secretary. Mr. J. L. Sprogell, Jr., is Superintendent. Offices are at 145 Broadway, New York, and 310 Chestnut Street, Philadelphia, Pa. The company owns two mines, Little Canada and Mount Carbon, located in Colorado. The mineral ranges in value from $1 to $500 per ton. Seams of carbonate are reported to have been met with. After standing idle for some time, operations in the mine were recommenced May 1, under most favorable circumstances. About forty men are now employed, and regular shipments of about eighteen tons of ore per week are being made. Organized March, 1880; capitalization, $5,000,000, in shares of $10 each, 500,000 shares; floating debt, March 1, $13,116; 300,000 shares issued, 200,000 reserved in treasury.

Lyon (or Robinson) Mining Company (The). The Lyon or Robinson mine is located near Placerville, El Dorado county, California, and has been worked for a number of years with great success. The mine consists of an immense gravel deposit, and the principal work has thus far been done upon what appears to have been an old channel running from northeast to southwest, and varies from 1:0 to 250 feet in width. Heretofore operations have been confined to the eastern portion of the claim, and to the flat in the immediate vicinity of the mill, until within the past year, since the property came into the hands of the present company, who built new hoisting works. The gravel bed, interspersed with large, smoothly washed boulders, is about four feet in depth, all of which, save the boulders, is milled. The mill consists of twenty stamps, with a capacity of fifty tons of gravel every twenty-four hours. Good gravel also exists in the Cedar Spring mines, formerly the Dickerhoff and Goyan claim, the property of the same company.

Leviathan Mining Company. The officers are H. A, Deming, President: L. W. Boyer, Vice-President; B. B. Smith, Secretary; R. W. Hent, C. F. Tolford, G. P. Theller. The company's property is located at Gold Hill district, Comstock lode, Nevada. There are 2,000 linear feet in their mine. Capitalization, $10,000,000; par value per share, $100; number of assessments levied, twelve; total amount of assessments levied, $355,-000; date of latest assessment, March 23, 1881.

Leopard Mining Company. Location of the property, Cornucopia, Elks county, Nevada. The main lode is 1,500 linear feet in the company's mine. Capitalization, $5,000,000; par value per share, $100; yield during 1880, $10,178; number of dividends paid to December 11, 1876, six; total amount of dividends paid, $162.50; date of latest dividend, December 11, 1876; number of assessments levied, thirteen; total amount of assessments levied, $347,500; date of latest assessment, April 5, 1880.

Leviathan Mining Company (The). F. A. Frisus, Sec.; principal office at San Francisco, Cal. The mines belonging to this company are located in Nevada.

Tom Moore Mining Company. R. S. Cross is Superintendent. This company own the Tom Moore and Byron lodes, and also others on Jones Mountains, San Juan county, Colorado. They are on a large vein whose general bend is northeast and southwest. This vein is about seventy-five feet wide. There are several pay streaks; one near the hanging wall is fourteen inches wide, carrying a solid body of galena and gray copper ore, which will run 251 ounces of silver per ton. The pay streak near the foot wall is nine inches thick, carrying galena which mills sixty-eight ounces of silver per ton. The main or centre pay streak is three to seven feet wide, carrying galena, gray copper, native copper, and gold quartz; assays $100 gold, from 700 to 800 ounces in silver, and about twenty-five per cent. copper. This vein has been opened at short intervals by cross-cuts throughout its whole length, showing good mineral in each opening. There is also a tunnel 165 feet in length on the Tom Moore, from which a drift has been run sixty feet on the hanging wall.

Melvina Mining Company (The). Officer, T. A. Bryant, Asst. Sec.; principal office, 108 Washington Street, Chicago, Ill. The locality of the mines of this company is at Salina, in Boulder county, Col.

Mt. Potosi Consolidated Mining Company (The). Officer, E. A. Holmes, Secretary. Principal office, 318 Pine Street, San Francisco, Cal. The mining property belonging to this company is located in Nevada. Capitalization, $10,000,000; shares, 100,000; par value, $100. Yield during 1880, $21,900. Number of dividends, none; number of assessments levied, eight; total amount of same, $175,000; latest assessment, October 20, 1881.

Mackey Gold and Silver Mining Company (The). Officer, J. M. Buffington, Secretary. Principal office, 309 California Street, San Francisco, Cal. The location of the mines belonging to this company is in Nevada.

Manhattan Gold and Silver Mining Company (The) has property located in Clear Creek county, Col. The company owns the following lodes: Thompson, Sterling, Ringgold, Thunderbolt, Beaver, Lennox, Kenton, Lamar, and Melverne; located on the junction of Ute creek. They will be worked through the Manhattan tunnel, which is now in a distance of eighty-seven feet. The company are working the group very systematically, showing excellent management, with good prospects of success. The tunnel will cut the whole of the lodes and at a depth where the best ore is to be found. The Thunderbolt is considered the best of the group, and is developed by a shaft which is now down ninety-six feet; this exposes a true fissure vein, nine feet between the walls, which is producing very fine mineral.

Mariposa Gold and Silver Mining Company (The). Directors, Mr. H. H. White, J. F. Brown, W. E. Brown, J. W. Snyder, E. S. Utter. D. Walton Birmingham, Superintendent. The mines belonging to this company, the Succedo mine, the Pine Tree, Josephine, Princeton, Green Gulch, Mexican, Oro, Mount Ophir, Linn, Mariposa, New Britain or Mariposa, are located in Mariposa county, Cal. Very little has been done at them lately, but preparations are being made for active work. Reports say that the fresh developments will commence at the north end of the estate, in the river tunnel, in the vein known as the Succedo mine. An immense vein of quartz, some thirty feet in thickness, has been struck. The quartz is irregularly stratified, but resembles in a measure that of the Josephine mine, breaking apart without difficulty at the points of stratification, which are more or less charged with fine sulphurets containing gold, and showing a strong presence of auriferous lead. The ore is refractory to work by the ordinary process, and the company propose to introduce other methods by which low grade and rebellious ores are rendered profitable to work, and it is hoped that this large body of ore will not have to be passed by as worthless. The company have levied twenty-two assessments. Date of latest assesmeent, December 23, 1881, being levied at the rate of twenty-five cents per share. Capitalization, $2,500,0000.

Maryland Consolidated Gold Mining Company (The). Principal office, 219 Sansome Street, San Francisco, California. Annual election, December 23. The mines belonging to this company are located in Brodie district, Cal. They are immediately south of and adjoining the Noondays. Amount of property in acres consists of 400 by 1,500 feet. This is a property of great value. Fair grade of ore, assaying $30 to $150 gold and silver. There are five ledges, varying from one to three feet in thickness, containing very fine ore. Shaft is double compartment, 550 feet deep; 5,000 feet in mine. An engine cabling of best steel, guaranteed to sink 1,500 feet, using cars and cages; 6 000 feet in mine. The ores are chiefly decomposed quartz mixed with clay, carrying about three-quarters gold and one-quarter silver. Capitalization, $12,000,000; shares, 120,000; par value, $100; shares sold for working capital, 20,000. No dividends paid to January 1, 1882. Number of assessments levied, two; total amount of same, $60,000. Not listed.

Mayflower Consolidated Gold and Silver Mining Company is chartered under the laws of the State of New York. The officers are G. Burt, Pres. and Robert White, Sec. Office. 161 Broadway, New York. The company's property is located at Idaho Springs, Clear Creek county, Col. The ore carries gold and silver. It is claimed by parties interested that 8,000 tons are practically developed. Date of incorporation, May, 1879. Capitalization, $1,000,000: par value per share, $10. Basis, non-assessable; full paid. There is a limited number of shares for sale at $4 per share. Stock quoted July 12, 1882, twenty cents per share.

McElroy Gravel Mining Company (The) is chartered under the laws of the State of California. The officers or directors are Southard Hoffman, Clerk U. S. District Court; James Phelan, capitalist; Geo. Schultz, merchant; W. R. Sloan, real estate; D. V. B. Henarie, merchant. President, Southard Hoffman; Secretary, Lewis Lillie. Date of annual election, first Tuesday in June. The present Superintendent is Jos. Eadley. The offices are at 607 Washington Street, San Francisco. The property of the company is at Altarvile, Calaveras county, Cal., and has an extent of 440 acres. The ore is found in the deep gravel of a river drift or bed. The shaft is 210 feet down. Tunnel for drainage, about 600 feet. The length of the deposit on which the supply of ore depends is 3,000 feet. Developments were commenced in 1874, $30,000 having been expended on the same, and the prospects of the property are favorable. Organized December 18, 1872. Capitalization, $5,000,000, in 500,000 shares of $10 each. Stock assessable. Balance stock of the corporation, 14,683 shares. Five assessments have been levied, aggregating $12,543.19; date of first assessment, July 23, 1878; amount per share, ten cents; date of latest assessment, January 24, 1882; amount per share, ten cents.

Michoacan Syndicate Mining Company. The officers are H. A. W. Tabor, Pres.; Alex. McDonald, Vice-Pres.; Bernard Whitman, Sec.; all of New York. Morelia committee, Senor Don Gustavo J. Gravenhorst, Pres.; Senor Don J. M. Sorlozano, Vice-Pres. General Agent, Senor Don Pedro Gutierrez. David Ferguson, Esq., Agent in City of Mexico. Offices, Morelia. State of Michoacan, Mexico, and 115 Broadway (rooms 53 to 61), New York. The company's property consists of a group of developed and producing gold and silver mines in district of Chapatuato; group of developed and producing silver mines in district of Oznmatlan; group of undeveloped working gold mines in district of Sinda; and group of gold prospects in the district of Tiquio. The company's capitalization is divided into 300,000 shares. Full paid and non-assessable.

Midland Mining Company. The property of this company, the John Lee, Little Johnny, Cimarron, Niegold, Begole, Ashurst, Thoran, Grace Clifford, Pemberton, and Roedel mines, is located in San Juan county, Col. They also own the Roedel tunnel site, which was located in 1876, which has already been driven in over 450 feet, and will cut the Little Johnny at a depth of 500 feet from the surface. Veins are strong and well defined, and enclosed between granite walls. The vein material is galena copper pyrites, and carbonate, carrying gold, silver, and lead, varying from thirty to sixty per cent. lead, and from ten to 100 ounces silver.

Mexican Gold and Silver Mining Company (The) is chartered under the laws of the State of California, C. L. McCoy, Esq., is the Secretary. The offices are at 309 Montgomery Street, San Francisco, Cal. The property of the company is located in the Virginia district, Comstock lode, Nevada. The ore is gold and silver, low grade. The workings are 2,600 feet down. The length of the main lode (Comstock) on which the company depends for its supply of ore is 600 linear feet. Sixty-three miners are employed at the Mexican mine. Organized, December 8, 1874; capitalization, $10,800,000, in 108,000 shares of $100 each. No dividends have been paid. Nineteen assessments have been levied; latest, June 6, 1882, of fifty cents per share. Indebtedness, April 1, 1882, $43,590; cash on hand, February 1, $1,809.82.

Minerva Gold and Silver Mining Company owns the Minerva mine located in Butler county, north-west of Orrville, Cal. The company's property consists of 150 acres lode claims, and 320 placer. The ore is mostly of a sulphuret nature, and pays about $16 per ton. Length of the main tunnel is 600 feet, or 500 feet from the mouth of the tunnel of the mine. The main lode is 39,000 feet in length.

Minnie Lee Gold and Silver Mining Company (The). The property belonging to this company is located in Summit county, Col. Capitalization, $2,000,000; par value, $10.

Mint Gold and Silver Mining Company (The). The mining works of this company are located in Virginia district, Comstock lode, Nevada. 6,200 linear feet in mine. Capitalization, $5,000,000; shares, 50,000; par value, $100; number of assessments levied, twenty-four; total amount of same, $165,000; date of latest assessment, July 28, 1880.

Mohave Mining and Milling Company is chartered under the laws of the State of New York. The officers are Edward M. Clark, Pres.; W. D. Crapin, Treas.; R. W. C. Merington, Sec.; Superintendent, Major George Clendon. Office, 120 Broadway, New York. The company's property is located at Mineral Parts, Mohave county, Ariz. The ore carries gold and silver; value per ton, from $60 to $150. Date of organization, November, 1879; capitalization, $1,000,000; par value per share, $10; basis, non-assessable.

Morning Star Consolidated Mining Company. W. L. Ward is Manager. Office, 331 Montgomery Street, San Francisco, Cal. The company's mine, the Morning Star, is located at Carbonate Hill, Mosquito Gulch, Leadville, Col. It is the first southern extension of the Gunsight Mining Claim. Amount of property (in acres) twenty-six. It is opened by a shaft sixty feet in depth, all in good ore. Assays give $101 to the ton; 100 tons now on the dump. The ore carries silver, gold, lead, and sand carbonate, assaying eleven ounces of silver, and one and a half ounces of gold per ton. The mines are worked by drift and level. The ore (body) is reported to be twenty feet in thickness. The company is shipping regularly, and paying regular monthly dividends. Plenty of ore is said to be in sight. Output weekly January, 1882, 100 tons. The current value of the mine is $2,200,000. A rich strike is reported to have been recently made in the lower workings of the mine. About 100 men are employed. Organized December, 1881; capitalization, $1,000,000; par value per share, $10; basis, non-assessable. Number of dividends paid to July 6, 1882, ten. Total amount of dividends paid, $490,000. Date of latest dividend, July 6, 1882; amount, $25,000. Surplus May 20, 1882, $80,000. Stock quoted June 10, 1882, $22. Weekly output of ore, 700 tons. Monthly expenses about $10,000.

Mountain Monarch Silver Mining Company (The) is chartered under the laws of the State of Iowa. Officers, Hon. James Harlan, Pres., Mt. Pleasant, Iowa; Wm. E. Mason, Chicago, Ill., Sec.; J. B. Coate, Mt. Pleasant, Iowa, Treas.; A. S. Hunter, Mt. Pleasant, Iowa. Directors, James Harlan, W. M. Stone, E. H. Winans, Hamilton White, W. H. Mason, J. B. Coate, S. F. Bangham, Ex-Gov. J. G. Newbold, A. S. Hunter. E. H. Winans, Gen. Agent. Principal office, Mt. Pleasant, Iowa. The mines belonging to this company are the Mountain Monarch, Island Lode, (each 1,500 feet long by 300 feet wide.) Located at Spanish Peaks, La Veta, Huerfano county, Col. True fissure veins, nine feet wide, filled with decomposed vein matter, with streaks of mineral, which assays $66 in silver, and $20 in gold. The ore, galena and pyrites, grows richer at every foot advancement, and the chimney widens with depth. Stock has advanced to $10. All necessary buildings and tools for the proper development of the property. Specimens of ore from the lower drift assayed 59$\frac{3}{10}$ ounces of silver, or $66.41. This assay does not include the gold, of which there is a considerable quantity, amounting to about $90 per ton *in toto*. Four tunnels on different levels have been driven into the distance of about 130 to 200 feet each. The private property of stockholders is exempt from liability for corporate obligations, and the company has no power to contract debts in excess of the money unappropriated in the treasury, nor to water its stock; 25,000 shares of the stock, of the denomination of $20 each, aggregating the par value of $500,000, have been placed in the treasury of the company as working capital stock for the common benefit of private stockholders, to be disposed of and the proceeds applied to the development of the mines until they shall be on a dividend paying basis, when the residue of said working capital stock will be distributed *pro rata* to all individual stockholders. The articles of incorporation are iron-clad. The stock can never be assessed, and under no consideration any indebtedness in excess of cash in the treasury. Individual property of stockholders can never be held liable for any action of the company. Amount expended developing property, January 1, 1882, $20,000; capitalization, $2,000,000; shares, 100,000; par value, $20; non-assessable. Number of assessments levied, no account.

Mount Diablo Mining Company (The) has offices at 318 Pine Street, San Francisco, Cal. Date of annual meeting, December 19. The company's property consists of the Mount Diablo claim, located in Candelaria district, Nev. The ore is a rotten quartz mixed with chlorides, the ore from drift assaying from $60 to $98 per ton. The present prospects of the mine are promising, the vein having a pay streak of about six inches wide. Length of main lode on which the supply of ore depends, 1,400 feet. Capitalization, $5,000,000, in 50,000 shares of $100 each; yield during 1880, $126,000; no dividends paid; three assessments levied, total, $137,500; latest assessment, June 22, 1880; floating indebtedness, $10,120, March 1, 1882.

Murchie Gold and Silver Company (The). Officer, S. D. Roger, Sec. Principal office, 328 Montgomery Street, San Francisco, Cal. The mines belonging to this company are located in California.

Nevada Chief Gold and Silver Mining Company (The). A. C. Hammond, Sec. Principal office, 401 San Francisco, Cal.

New York and Idaho Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are Hon. Ed. J. Curtis, Pres.; Jas. Turner, Vice-Pres.; Richard Sterling, Treas. The offices are at 42 Pine Street, New York. The company owns one mine, the Pacific, located at Atlanta Hill, Alturas county, Idaho Territory. The claim is 2,300 feet in length by 600 feet in width, and the property also embraces a fine mill-site, with wood and water in abundance. Organized on a non-assessable basis; capitalization, $1,000,000, in 200,000 shares of $5 each. A limited amount of stock for sale at $2 per share.

Northern Light Gold and Silver Mining Company (The). F. S. Monroe, Sec. Principal office, 310 Pine Street, San Francisco, Cal.

North State Mining Company (The) is incorporated under the laws of North Carolina. The principal mine appears to be the Copper Knob mine, located in North Carolina. This is a copper mine carrying gold and silver, and is a property of 350 acres, covered with heavy timber. The vein is a fissure, and varies from fifteen inches to four feet in width. The mine is opened to a depth of 157 feet on the incline, and has already produced a large quantity of rich and valuable ore. The vein, at a width of four feet, carries an average of 20 per cent. of copper, and $40 in gold and silver per ton. This mine is fully equipped with modern machinery, steam-hoisting engine, air-compressor, air-drills, 60-horse-power boilers, 25-horse-power engine, and two smelting furnaces of twenty tons capacity are being constructed. In the ore house there are about 300 tons of first-class ore, and not less than 600 tons standing in the incline and drifts on the foot-wall in the mine. The company has a capitalization of $10,000,000; par value per share, $25.

Noonday Mining Company (The) has its offices at 310 Pine Street, San Francisco, California. The annual meeting is held on August 25. The company's property comprises the Noonday mine, located in the Bodie district, California. Extent of claim, 600x1500 feet. The ore assays $24 per ton, gold and silver. The mine has two, well-defined fissures, one averaging two feet, and the other five to eight feet in width. Ledges run in the main ridge and dip to the east. The mining plant includes hoisting works, air-compressor, patent drills, etc., costing $30,000, with capacity for sinking probably 1,500 feet, thirty-stamp mill, costing $100,000. Main shaft is joint, three-compartment, 500 feet in depth. The length of the main lode on which the company depends for its supply of ore is 1,500 feet. Powerful pumping apparatus is required to contend with the water, which accumulates rapidly at 500 feet depth. A 350-horse-power engine has been introduced, and ten stamps have been added, making forty in all, and as the water prevents the extraction of the ore, they are running on Bechtel Consolidated ore. A rich vein of ore has recently been struck in this mine, with a ledge of five feet of clean ore, three assays from which give the following results:

	No. 1.	No. 2.	No. 3.
Gold	$50.23	$46.44	$46.44
Silver	348.73	659.78	342.43
	$398.96	$706.22	$388.87

Outside of this vein, the walls of which are of clay, there is a harder quality of quartz of lower grade, so that really the width of this vein is unknown. Capitalization, $10,000,000, in 100,000 shares of $100 each; no dividends have been paid; five assessments levied, $118,000; yield during fiscal year 1879-80, $12,350; stock has been quoted at $5.

Niagara Gold and Silver Mining Company (The) has offices at 409 Montgomery Street, San Francisco, California. Mr. O. C. Miller is one of the officers. The company owns property in the Gold Hill district, Nevada. The length of the main lode on which the supply of ore depends is 1,500 feet. Capitalization, $6,000,000, in 60,000 shares of $100 each; no dividends have been paid; six assessments have been levied; total amount of same, $117,000.

Norwich Gold and Silver Mining Company (The) has offices at 310 Pine Street, room 15, San Francisco, California. The Secretary is W. L. Perkins, Esq. The mines and property are located in the Glencoe mining district, Calaveras county, Cal.

North Noonday Mining Company (The) has its offices at 316 California Street, San Francisco, Cal. The company own two claims, the North Noonday and Orient, comprising an area of 600x1,500 feet, 900,000 square feet, located in the Bodie district, California. The North Noonday Company seems to be working in conjunction with the Noonday, as the working-plant of the latter company is used in common. The length of the main lode on which the company depends for its supply of ore is 1,500 feet. Capitalization, $10,000,000, in 100,000 shares of $100 each. No dividends have been paid. Five assessments have been levied; total amount of same. Yield during 1880, $293,385.

North Bloomfield Gold Gravel Mining Company (The) has property located at North Bloomfield, Nevada county, Cal. The company owns two claims, the Omega and the Extension, located on the western slope of the Santa Reita mountains, twenty-five miles from Tucson. They were located some six years ago, and have been recently patented. Several thousand dollars have been expended in developments which show up a vast deposit or vein of high-grade copper ore. A large cross-cut into the vein, twenty-five feet, shows a solid body of ore, and the foot wall has not yet been reached. The average assay for all ore is from thirty to forty per cent. on copper, free smelting carrying its own flux. Facilities for taking and smelting ore are all favorable. Smelter will be located in the valley about one mile from the mines, where a good water supply is available. It is hoped to have the smelters in working order by 1st October, 1882. The mines present the largest body of high-grade ore in the Territory. One hundred men are employed at present. The company have 157 miles of ditches, including reservoirs. Capacity, 3,200 inches; grade, twelve to sixteen feet per mile. Cost of plant, $708,841. It costs $13,463 per year to keep the reservoirs and ditches in repair. This company light their mines and mills by electricity, having 12,000 candle-power in use. It is found to be both effective and economical. The company recently shipped the largest bar of gold ever sent through Wells, Fargo & Co.'s office at North Bloomfield. Over 4,000 inches of water are used in daily washings. The length of the deposit is 1,800 feet. Capitalization, $4,500,000, in 45,000 shares of $100 each. Yield during 1880, $275,766. Total dividends to November 5, 1880, $225,000; latest dividend to November 5, 1880, $1 per share. Forty-four assessments levied; total, $1,590,000; last assessment levied, January 23, 1877, $33.33⅓ per share. No stock in the market.

Newcastle Mining Company. The property is located east of Pino, Placer county, Cal., and has been put in good shape.

Ochoco Gold and Silver Mining Company. The property is located in the Ochoco Mountains, Wasco county, Oregon. A tunnel is being run to strike the ledge which is in a distance of 200 feet.

Organ Mountain Mining and Smelting Association (The). The officers are Isaac W. Heysunger, M. D., Chairman; Ellis Branson, Vice-Pres.; William Brice, Treas.; W. C. Carrick, Trustee. W. H. Skidmore, of Las Cruces, New Mexico, is Superintendent. Office, 821 Cherry Street, Philadelphia, Pa. The company's mining property is known as the Organ mines, (some fifty or sixty in number,) and is located twelve and one-half miles east of Las Cruces. The names of the mines of the different groups are as follows: Cueva Group, Lipan and Apache; Fillmore Pass Group, Excelsior, Dos Arroyos (mill site); Colorado Group, Colorado Grande, Plata Verde, Plata Grande, Colorado Chiquito, Mina del Ray, Mesa Colorado, Empire, Pennsylvania, Jersey Blue; Alto Group, Fulton, Alto, Basso, Eagle; Stephenson Group, McClellan, Leadland, Stephenson East, Dona Ana, Panther, Alamo, Regina; Memphis Group, Mill Site, Memphis East, Mexican Girl; Black Quartz Group, Valley Green, Tremont, Continental, Short Cut, Black Quartz, Girard, Keystone, Quaker City, West Philadelphia, Schuylkill, Lehigh; Rio Grande Group, Acejarah, two-thirds interest, Rio Grande, one-half interest, Southern Cross, two-thirds interest, North Star, two-thirds interest; Chippewa Group, Comanche, Chippewa, Copper Belt, Copper King; East Side Group, Philadelphia, Washington, Silver Belt, Black Diamond. The Cueva Group comprises forty-one and one-third acres. The mines each measure 1,500 by 600. The central mineral-bearing ledge is exposed from four to eight feet wide for nearly the entire 3,000 feet. Specimens taken from various points all gave silver in the assays. No work has been done upon these properties except with the hammers. The Fillmore Pass Group comprises over eighty acres in the well-known Fillmore Pass, from the western entrance of which it is distant something over one mile. The properties here show immense masses of silver ore in limestone. Pieces kicked off with the boot-heel assayed $25 per ton in silver, and the supply upon at least three of the properties is said to be inexhaustible. In the Colorado Group each property is 1,500 by 600 feet, and they comprise in all 1.86 acres of ground. From a pinnacle of rock upon the Colorado Chiquito immense ledges of metamorphic limestone, seamed with red hematite and copper oxides, extend down across the Colorado Grande and the Mesa Colorado. Upon the Plata Verde and the Plata Grande the limestone carries the yellow varnish caused by the action of subterranean heat upon deposits of zinc ore beneath. The Pennsylvania and Jersey Blue show large and fine silver-bearing ledges at the surface. The Alto Group comprise over eighty acres of ground and is believed to be of very great value by the Association. The Fulton and Alto cover 3,000 linear feet lying upon and including the great mother lode of the district, where developed to its greatest extent. The vein matter at the surface is more than thirty feet wide, and extends for 3,000 feet upon this Association's grounds without a break. A blue rock, which does not show up especially well, runs fifty-six ounces in silver. The Stephenson Group comprise an area of more than 140 acres. These properties lie about two and a half miles south of San Augustine Pass, and immediately alongside of and all around the celebrated Stephenson mine, which has been fully recognized for nearly thirty years. As will be seen, the Stephenson East lies immediately east of and against the Stephenson mine, taking the southern part of the formation upon which the principal shafts are sunk, further to the east, on the same property, appears an enormous vein which has been pronounced by good judges to be the true mother vein of the formation. It lies between granite and limestone, and at the surface is more than twenty feet in width. The Association propose to push the work upon these mines energetically, and instructions have been given to that effect. The Memphis Group comprise an area of sixty-two acres, and are situated to the east of the Memphis mine. The mineral outcrop on the Mill Site property extends along the edge of a great syenite precipice, and reveals several outcrops of argentiferous galena in a gangue of limestone and porphyry, and will doubtless develop into a valuable mining property. the veins being large and well defined and crossing each other at various angles. There are four fine springs on the property, hence its name. The Memphis East adjoins the celebrated Memphis mine in its whole extent, lying parallel with and against it on the eastern side. Advices received announce that the main shaft of the Memphis is down over 100 feet, and that at this depth a rich strike has been made in carbonates and sulphurets. It is said that the ores now assay in the mass from $32 to $160 per ton in silver, and that the entire mass of ore, which apparently covers a surface of 200 feet in width by 1,000 in length, will average over $50 per ton in this metal alone. The Association think there is little doubt they can, by sinking, strike the Memphis mineral in this property, the Memphis East, and will open this property shortly by a shaft nearly opposite the main outcrop of the neighboring mine. The Black Quartz Group comprise an area of 222 acres, all the mines being full-sized except the Black Quartz, which measures 1,050 by 600 feet. This group is the centre of the Association's mining operations. The Superintendent lives here. The Black Quartz was opened July 12, 1881, and work has been going on vigorously ever since, and the Short Cut was opened early in August, and the Girard in September. There are three shafts down upon the Short Cut, one to a depth of seven feet, another twelve, and the third twenty feet, with a twenty-foot drift from that depth along a nine-foot vein of excellent white quartz which assays $10 per ton in gold from unselected specimens, and shows up well in argentiferous galena. It bears every appearance of running into native silver at no great depth. The veins in this district constantly enlarge as depth is gained. A fine vein has been opened on the Short Cut. There are four shafts down on the Black Quartz; one of these, a prospect shaft, only uncovered a two-feet vein of iron at a depth of four feet, which grows wider as it descends. Another opening shows up ferruginous vein matter and argentiferous galena. Upon the west slope of the eastern hill a shaft was put down in close-grained porphyry, and a fine vein was struck which the Association propose to connect with their main shaft on the opposite hill by a drift already commenced, and to work both from a central shaft upon the neck of the two hills. The main Black Quartz shaft is down fifty feet. The ore is nearly a pure argentiferous and auriferous galena, much of it in masses weighing from fifty to 200 pounds apiece. In opening the mine this silver-bearing lead ore lay just beneath the surface in an almost solid bed. A new vein has been discovered on the Girard property. The lode is rapidly widening, being at last advices a vein of solid ore six feet thick, and specimens consist of masses of gold- and silver-bearing galena. The Rio Grande Group. The properties are all full sized excepting the Southern Cross, which is 1,100 by 600 feet. The most important mine of this group is the Rio Grande. The shaft is now down to a depth of fifteen feet, and at this depth the vein is now fuel five feet wide, and the pay streak of gold- and silver-bearing lead and copper ore is over two feet wide. It is a true fissure vein in solid granite. The Chippewa Group comprises ninety-three acres in extent. There are three prominent north and south parallel outcrops exposed along the greater part of the Chippewa. All these are exceedingly fine and large copper- and silver-bearing ledges. The East Side comprises an area of eighty-two acres. The cross ledge is a black iron outcrop, and pieces knocked off resemble freshly broken cast iron. The shares of the Association are 1,000 in all.

Oriental Consolidated Gold and Silver Mining Company (The). Officer, H. C. Hinman, Sec. General office, 411 California Street, San Francisco. The mines belonging to this company are located in California.

Original Summit Mill and Mining Company (The) is chartered under the laws of the State of New York. Officers, J. S. Ellis, Pres.; J. G. Holbrook, J. J. Kelly, Vice-Pres.; J. S. Ellis, Treas.; A. M. Ellsworth, Supt. Principal office, 21, 22, 23 Mutual Building, 95 Mill Street, Boston, Mass. The location of the mines belonging to this company are in Bodie, California. Capitalization, $10,000,000; shares, 100,000; par value, $100.

Ornament S. S. Mining Company (The). Fulton Haight, Esq., Supt. The names of mines belonging to this company are the Ohio, Ornament, and Group, located on Rock creek, eight miles west of Hailey, Idaho. One shipment of fifteen tons returned 800 ounces of silver to the ton. Ore carries ruby sulphates and native silver. Main shaft down 120 feet. The most extensive hoisting works on the river were put up on these mines last fall, and twelve men have been steadily at work during the winter. One tunnel is 180 feet, with an incline down eighty feet on the ledge.

Overman Mining Company (The). Officer, G. D. Edwards, Sec. Principal office, 414 California Street, San Francisco, Cal. The Overman mine belongs to the company; is located on Gold Hill district, Comstock Lode, Nev. Capitalization, $11,520,000; shares, 115,200; number of assessments levied, fifty-three; total amount of same, $3,604,700; date of latest assessment, May 1, 1882; amount per share, twenty-five cents. Depth of workings by tunnel, 2,275 feet; length in feet on which the company depends for its supply of ore, 1,200 feet; company in debt, February 1, 1882, $15,624. Mining Record, June 17.

Panther Consolidated Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are J. R. F. Bell, Pres.; T. J. W. Cooper, Vice-Pres.; Charles G. Walstrom, Sec. and Treas. Directors, Dr. J. R. F. Bell, T. J. W. Cooper, Chas. G. Walstrom, Gen. Geo. R. Vernon, Albert Gaw, C. W. Cunningham, Alex. T. Wilson. The offices are at 133 Bank Avenue, Philadelphia, Pa. The property of the company comprises two full claims, Panther No. 1, and Panther No. 2, located in Maricopa county, Arizona. The shaft is down 100 feet on the ledge. Capitalization of company, $500,000, in 200,000 shares of $2.50 each; non-assessable; amount of stock issued, 200,000 shares; amount reserved in treasury, 50,000 shares.

Permanent Gold and Silver Mining Company is chartered under the laws of the State of Colorado. The officers are J. J. Wilbraham, Pres.; William Flint, Secretary; H. F. Smith, Treasurer. Directors, J. J. Wilbraham, William Flint, H. F. Smith, John Cochran, E. Clinton, A. M. Peel. Office, 14 South Third Street, Philadelphia, Pa. The property of the company is the Up Hill mine, in the Lackawanna district, Lake county, Colorado. Operations have been commenced, and will be pushed vigorously. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable.

Pine Tree Gold and Silver Mining Company (The.) Officers, Peter Fish, Pres.; J. Edward Fay, Treas.; E. P. Reed, Sec. Principal office, No. 162 Washington Street, Chicago, Ill., rooms 49 and 50. Capitalization, $150,000; par value, $10; stock full paid; non-assessable: 30,000 shares reserved for working capital by order of the board of directors; the first 5,000 of working capital will be sold at fifty cents per share.

Pittsburg Gold and Silver Mining Company (The). Officers, A. Martin, Pres.; J. W. Dale, Sec.; J. Murphy, Canon City, Col., M. D. Patton of Pueblo, Col., Superintendent. The principal claims belonging to the company are the Della May, the Emma, Decomplsy, Neptune, Austin, and William Lee, all located on Slak river, Colorado. The ore is various, both silver and gold, the former predominating. The company was organized in Danville, Ill.

Pizarro Gold and Silver Mining Company is chartered under the laws of the State of Colorado. The officers are V. G. Edwards, Pres.; Alfred Hallowell, Vice-Pres.; Charles P. Johnson, Treas.; Seth Smith, Sec.; Gen. Manager, A. A. Freeman. Directors, V. G. Edwards, Alfred Hallowell, C. P. Johnson, W. Klemm, Jesse Tomlinson, Seth Smith, John C. Turner, W. Cohlman, W. H. Cheatley. Office, 136 South Fourth street Philadelphia, Pa. The company's property is located at Central City, Gilpin county, Col. The company has a capitalization of $2,000,000 in 200,000 shares; par value per share, $10; basis, non-assessable.

Plumas Mining and Water Company (The) has property located in Plumas county, Cal. The company was organized with a capital of $150,000 in 1,500 shares of $100 each; yield during 1880, $5,592; dividends paid, $41,300 to July 8, 1881, date of latest dividend of $5 per share; total assessment to date, $30,000; latest assessment, October 4, 1875. Stock quoted July 17, five cents per share; current value of mine, $750.

Potosi Mining Company is chartered under the laws of the State of California. W. E. Dean, Sec., 309 Montgomery Street, San Francisco, Cal. The company's property is located in Virginia district, Comstock lode, Nevada. The ore carries gold and silver assaying $28 per ton. The main lode is 700 feet in length. Date of organization, March 31, 1879; capitalization, $11,200,000; par value per share, $100. No dividends paid to April, 1882; number of assessments levied, eight; total amount of assessments levied, $448,000; date of latest assessment, April 12, 1882, at the rate of fifty cents per share. Treasury reserve, April 1, 1882, $14,417; stock quoted June 15, 1882, $5.

Plumas Mining and Water Company (The) is organized with a capital of $1,000,000 in 100,000 shares of $10 each. The property is located in California. Total amount of dividends paid, $151,000; date of last dividend, July, 1879, eight cents per share.

Providence Mining Company. The Providence mine is located in Nevada City district, Nevada county, Cal. After having been for a long time retarded in its operations by experimenting with various reduction processes, and by the destruction of its hoisting works by fire, it has recommenced operations with new and efficient mine machinery, and a new mill and chlorination works. The mine presents the peculiarity of being opened by levels to a depth of 1,070 feet, and a length of over 2,000 feet, while very little ore has been extracted, except between the 600 and 700 foot levels; and now the mill is supplied entirely from the 100-foot level, which, opening on the steep banks of Deer creek, is also the drainage tunnel. The several levels were driven through ground which supplied the old mill of twenty stamps with profitable ore, and encouraged the prosecution of work; but the true character and size of the lode were probably not suspected; for it is now known that large bodies of ore lie to the right and left of the levels, imbedded in a decomposed granite, the ore bodies themselves being quartzose, lenticular in shape and interlocking. From such lenticular masses, attaining (though rarely) twenty feet in thickness from the 100-foot level, eighty tons of ore are daily extracted. The width of the lode, assuming it to consist of this decomposed granite carrying these isolated quartz masses, is supposed to be 150 feet. The new mill of the company is of forty stamps, fed by Hendy feeders, the rock having previously been broken by a Blake rock-breaker. The mill is large, well-lighted, and commodious. This company has effected an arrangement for obtaining its motive-power from the Snow Mountain ditch, which carries a full head summer as well as winter. By the arrangement, the owner of the Snow Mountain will make a branch ditch leading from their main one, a distance of a mile to the edge of the Champion ground, where a tank will be constructed. From this tank, the Providence company will lay about 3,500 feet of pipe across the Champion and over Deer creek to their forty-stamp mill. The Champion company have given the right of way for a period of fifteen years, and it will result advantageously to both companies. It is reported that a large portion of the stock of this company is held in London.

Quartz Hill Consolidated Mining Company (The), of which William Hanson, Jr., Esq., is the Agent, is an English company, which purchased the mines formerly worked by the Monmouth, Kan., company, consisting of a portion of the Kansas, Kansas Extension, Irish Flag, and Camp Grove. The principal work consists in developments. The shaft is down 1,280 feet, and an aggregate of 9,800 feet of excavations have been made. The mineral from a sixteen-inch vein in the 1,275-feet level is entirely smelting. An average sample treated at the Boston and Colorado Smelting Works gave an average of $102 per ton. A lack of water for battery purposes has been experienced. The ore is conveyed by tramway from the mine to the mill, which numbers fifty-two stamps.

Querida Gold and Silver Mining Company (The). Incorporators, J. H. Kerr, Henry Kellogg, and F. L. Martin. The location of the mining property of this company is in Custer county, Col. Capitalization, $1,000,000; shares, 10,000.

Queen Bee Mining Company (The). Officers, G. W. Fisher, 324 Pine Street. Principal office, San Francisco, Cal. The location of the mining property of this company is at California.

Phil. Sheridan Mining Company's property is located in Virginia District, Nev. The main lode is 1,200 feet in length. Capitalization, $10,000,000; par value per share, $100; no dividends paid to April, 1882; number of assessments levied, ten; total amount of assessments levied, $170,000; date of latest assessment, June 22, 1880.

Red Cross Mining Company. The company's property is located in Storey county, Nev. There are 1,300 linear feet in the mine. No dividends have been paid, nor assessments levied, to April, 1882. Capitalization, $10,000,000; par value per share, $100.

Rara Avis Gold and Silver Mining Company. The officers are J. Stewart, Jr., Pres.; A. G. Postlethwaite, Vice-Pres.; J. C. McNaughton, Treas.; G. Stark, Sec. Directors, J. M. Taylor, E. Young, A. Warthman, C. H. Jordan, L. Conwell, G. Stark, J. Stewart, Jr., A. G. Postlethwaite, J. C. McNaughton. H. H. Bucher, Mining Engineer. Office, room 30, No. 306, Stock Exchange Place, Philadelphia, Pa. The company's mines are at Rara Avis, the J. P. Whitney, and the Little Mac mines, located on Prosser Mountain, in Gilpin county, Col. The company's property includes steam hoisting works, and they are about to erect reduction works, the machinery being already on the ground. There are three shafts; No. 1 is down 320 feet. Levels have been run at 40, 100, 150, and 300 feet. With present openings from thirty to forty tons of ore a day can be stoped out. Capitalization, $2,000,000; par value, $10 per share; basis, non-assessable; treasury reserve, $75,200; amount of stock issued, 124,800 shares.

Red Cloud Mining Company. Office, 310 Pine Street, San Francisco, Cal. The company's property is located in Bodie district, California. The company's claim, patented, is 600 by 1,500 feet. There are five ledges, varying in width from eighteen inches to nine feet: have been drifted on in the 250 and 400 levels. Total excavations, 4,000 feet. The company owns steam works costing $30,000, 1,500 feet sinking capacity. The prospects of the property are favorable. Capitalization, $5,000,000; par value per share, $100; no dividends paid to April, 1882; number of assessments levied, ten; total amount of assessments levied, $155,000.

Red Jacket Gold and Silver Mining Company (The). Directors, J. M. Tash, P. G. Vibbard, C. H. Wakelee, G. W. Spencer, S. C. Curtis. This company was organized March 24, 1880. Capitalization, $1,000,000.

Rex Gold and Silver Mining Company is chartered under the laws of Arizona. The officers are S. S. Campbell, Pres.; John H. Shrei, Treas.; Wm. Gladding, Sec. Office, 430 Walnut Street, Philadelphia, Pa., rooms 5 and 6. The company owns five mines, viz.: the Golden Shield, Republic, Tycoon, Mansworth, and San Jacinto. Mines located in Arizona. Capitalization, $5,000,000; par value per share, $5; basis, non-assessable; treasury reserve, 20,000 shares; amount of stock issued, 80,000 shares.

Richardson Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. The Directors are D. D. Baldwin, Pres.; T. J. Barbour, Sec. and Treas.; L. Jones, Vice-Pres.; R. Guernsey, M. L. Jones; E. E. Pray, Supt. Office, Financial agents, Gold, Barbour & Swords, Bankers, 92 Broadway, New York. The company's property is located in the heart of Gilpin county, on the Gold belt, Col. There are 3,900 feet in the property. The ore is rich smelting ore, and assays without concentration $23 per ton. The price ranges from $20 to $80. It is doubled by concentration. The vein is five feet in width, and all mineralized, nearly ready to commence stoping. The management expresses a sure expectation of paying back to the stockholders in one year every dollar of their investments. The cost of mining and milling per ton is estimated at $5. Date of organization, October, 1879; capitalization, $500,000; par value per share, $10; basis, non-assessable; fully paid; yield to June 1, 1882, $8,000.

Rock Island Gold and Silver Mining Company. The company's property is located in Gold Hill district, Comstock Lode, Nev. There are 1,200 linear feet in the mine. Capitalization, $10,000,000; par value per share, $100; no dividends paid to June, 1882; number of assessments levied, thirteen; total amount of assessments levied, $365,000; date of latest assessment, January 9, 1878.

Rollins Gold and Silver Mining Company is chartered under the laws of the State of New York. G. W. Barrett is Supt. Office, 137 Broadway, New York. The company's mining property is located in Gilpin county, Col. The company controls a large area of mining ground. Their lines extend from Gold district and Perigo Mountains on the south to the South Boulder on the north. A large amount has been expended in the construction of a ditch and flume, for the conveyance of water to their placer claims in the South Boulder valley. The piping, elevators, and giant hydraulics have now been placed in position. The product of the Perigo mine from July 1, 1881, to December 31, 1881, was $30,000. A mill of from forty to sixty stamps is proposed for Rollinsville, where an eighty-foot fall of water is available. The ore has a value of $1.37 to $5.93. The fissure vein is from four to seven feet wide. The company owns large mill, machinery, hotel, houses, etc. Date of incorporation, August 8, 1879; capitalization, $5,000,000; par value per share, $25; basis, non-assessable; total amount of dividends paid to January 1, 1881, $1,000,000.

Ruelana Consolidated Company (The). The officers are J. Thompson, Pres.; Fred. H. Hancock, V.-Pres.; J. D. Fidlar, Sec.; E. C. Chapin, Treas. Directors, or Trustees, E. C. Chapin, F. H. Griggs, H. Egbert, A. J. Holmes, W. S. Hobart, W. E. Sell, R. E. Wilson, J. E. Dixon. Henry Cooper, of Leadville, Superintendent. Office, Davenport, Iowa. This company owns the Nick-of-Time mine and part of seven claims, one mile south of it, located in Los Cerillos district, N. M. The ore carries zinc, galena, blende copper, green and blue carbonates of copper, chlorides of silver, iron pyrites, native silver, sulphides and gold. The company has a forty-horse-power hoisting works on the ground. The mine shows about three feet of galena ore. The shaft is 250 feet deep. The pay-streak in level running south, sixty feet down, is eighteen inches wide. At a depth of 200 feet is an important level with improved ore, showing galena and sulphurets of silver. This company is a close corporation, comprising many wealthy citizens of Davenport, Iowa.

Russell Gold and Silver Mining Company is chartered under the laws of Arizona. The officers are A. C. Harmer, Pres.; John H. Schreiner, Sec.; J. R. Black, Treas. Directors, A. C. Harmer, G. F. Wiggan, L. K. Rishel, J. Grove, J. H. Schreiner, C. F. Matthews, J. R. Black, S. S. Campbell, W. Glading. Office, 430 Walnut Street, Philadelphia, Pa. The company's mining property includes the Peabody, the Dona Ana, the Copper King, the Highland Mary, and the Tam O'Shanter mines located in Pima county, Ariz. Some of the ores smelted give sixty-one per cent. of copper. A concentrator is being erected. Capitalization, $5,000,000; par value per share, $50; basis, non-assessable.

Rara Avis Extension Gold and Silver Mining Company is chartered under the laws of the State of Colorado. The officers are A. Warthman, Pres.; H. K. Schoch, Treas.; G. Stark, Sec. Directors, A. Warthman, H. R. Shoch, G. M. Wright, C. H. Jordan, J. C. Shoch. Office, room 30, No. 306 Stock Exchange Place, Philadelphia, Pa. The company's property is located in the State of Colorado. The tunnel run in the Rara Avis to lap the shaft at a depth of 300 feet, was completed the 21st of June. This puts the property in shape for ready and economical working. The shaft is sixty feet deep; pay-ore in sight. Capitalization, $100,000; par value per share, $1; basis, non-assessable. Treasury reserve, 35,000 shares. Stock issued, 100,000 shares; stock quoted July, 1882, $1.25.

San Juan di Dias and Refugio Mines (The). Owned by R. H. Chase, H. M. Atkinson, Surveyor-General of New Mexico; S. H. Lucas, C. R. Pearson, A. Scott, J. B. Gifford and S. A. Chaboyga, are located near Hermosillo, capital of Sonora, Mexico. The property owned covers 44,000 acres. The ore is one-half smelting and one-half free-milling. It is said specimens valued at several hundred dollars run upward of $10,000 to the ton. The San Juan di Dias has an ore body, at a depth of 140 feet, ten feet wide. The Kefugio mine is a true fissure vein, with an ore body varying from seventy-five to 100 feet in width, and can be traced with the eye for over 400 yards. From the surface, it runs from twenty-five to seventy-five per cent. in lead, from forty to 300 ounces in silver, and as high as $45 per ton of gold. The ore is a carbonate. The company have every convenience of mining import.

Steel Gold and Silver Mining Company (The) has property located in Clear Creek county, Col. The company owns the Daybreak and Sterling mines, situated in the Columbia Mountain.

Santiago Gold and Silver Mining Company. The property is located in Los Angeles county, Cal. The company have displayed considerable energy and enterprise in developing their mine in Santiago Cañon. The ore extracted is argentiferous galena and chloride. The company erected a Mexican roasting furnace, and the lead bullion produced yielded $500 to the ton. Arrangements have been made for a more extensive working of the mine.

Savage Mining Company. E. B. Holmes is Secretary. Date of annual election, July 21. Superintendent, M. Ball. Office, 3 Montgomery Street, San Francisco, Cal. The company's property is located in Virginia district, Comstock Lode, Nev. The character of the ore is horn silver, chlorides, and magnesia. The country rock carries silver. The main lode is 800 feet in length. Pay-streak, eighteen inches; the ore being worth about $200 per ton. Two shafts, one forty and one fifty feet. Capitalization, $11,200.00; par value per share, $100; total amount of dividends paid, $4,460,000; date of latest dividend, June 11, 1879; $3 per share; number of assessments levied, fifty-one; total amount of assessments levied, $5,608,000; date of latest assessment, May 4, 1882; fifty cents per share; stock quoted, July 1, 1882, $7.88 per share.

Shakespeare and Quaker Mines (The), owned by Messrs. Keeler, Read, and others. The Quaker mine is ten feet wide, showing at the depth of ten feet, where the vein is cut, a pay streak of from five to six feet, carrying both gold and silver, which collectively averages about $70 per ton. The Shakespeare is also the large vein, showing an average cropping from three to eight feet wide.

Sierra Nevada Mining Company. E. L. Parker is Secretary. Office, 309 Montgomery Street, San Francisco, Cal. The company's mine, the Sierra Nevada, is located in Virginia district, Comstock Lode, Nev. Depth of workings, 2,700 feet. The main lode is 3,650 feet in length. Seventy-six miners and fourteen surface men are employed at this mine. Capitalization, $10,000,000; par value per share, $100; yield during 1880, $46,422; yield during 1881, 6,077 tons, $195,213.53; total amount of dividends paid, $102,000; date of latest dividend, January, 1871, $1 per share; number of assessments levied, seventy-three; amount, $4,350,000; date of latest assessment, May 17, 1882, $1 per share; floating indebtedness, April 1, 1882, $27,500; cash on hand, February 1, 1882, $15,534.63; stock quoted, July 14, 1882, $5.

Silver Bow Mining and Milling Company. James A. Talbot is Business Manager. The property is located in Silver Bow county, Montana. Their twenty-stamp mill was enlarged to thirty stamps during the latter part of 1881. Yield during 1881, $500,000.

South Comstock Gold and Silver Mining Company (The). Principal office, 309 Montgomery Street, San Francisco, California. Date of annual election or meeting, November 23. The mines belonging to this company are located in Gold Hill district, Comstock lode, Nev.; 636 linear feet in mine. Capitalization, $10,000,000; shares, 100,000; par value, $100. Dividends, none. Number of assessments levied, six; whole amount, $79,000; date of latest assessment, September 9, 1879.

Southern Nevada Gold and Silver Mining Company (The). Directors, H. L. Coye, J. G. Lavery, H. L. Fox, E. E. Elliott, J. J. More. The location of the mines belonging to this company is in Esmeralda county, Nev. Capitalization, $10,000,000.

South Star Gold and Silver Mining Company (The). Officer, J. F. Atwell, Sec. General office, 606 Montgomery Street, San Francisco, California. The mining property belonging to this company is located in Nevada.

Specie Paying Gold and Silver Mining Company (The) has offices at La Porte, Indiana. The directors of the company are J. N. Whitehead, John J. Steadman, Ed. Geo. M. Dakin, and A. G. Stevenson. The property of the company is located in Pinal county, Ariz., being the first southern extension of the Alice claim. The mine has been opened by several shafts, and gives promise of developing into a valuable mine. One of the openings has exposed a fine body of galena ore, carrying $30 silver to the ton. One shaft and cross-cut at a depth of 140 feet shows fourteen feet of ore, assaying from $700 to $800 per ton. Work is being pushed with vigor.

Spaulding Gold and Silver Mining Company (The) has property located in the Bodie district, Cal., consisting of two claims, one, 100 by 1,500 feet, the other, 400 by 1,500 feet; total area, 750,000 feet (square). The ore is fair grade. The length of the main lode, on which the company depends for its supply of ore, is 3,000 feet. The ore-vein in the north drift, first level, has widened to five feet, and the south drift is also showing improvement. The mill was started, and the pipes, pumps, and everything found to work well. There is a large supply of ore at the batteries, and considerable quantities broken down in the mine ready for hoisting. Capitalization, $10,000,000, in 100,000 shares of $100 each. No dividends paid. Two assessments levied; total amount of same, $10,000. Date of latest assessment, June 28, 1882; amount of same, ten cents per share.

Star Mining Company (The). Officers, William Stuart, Secretary; office, 320 Sansome Street, San Francisco, Cal. The Star mine is located in White Pine county, Nev. There are 1,500 linear feet in the mine. This mine is destined to become one of the most valuable properties in Eastern Nevada. During the year 1881 it was a regular producer. The mill has run as high as 600 tons each month, the ore yielding $60 to $70 per ton. The total shipments of this mine, as reported by the *Engineering and Mining Journal* for 1881, were $294,743. The monthly expenses of the mill and mine averaged $20,000. Capitalization, $10,000,000; par value per share, $100; number of assessments levied, ten; amount of nine, $190,000; date of latest assessment, March 22, 1882, ten cents per share; indebtedness February 1, 1882, $8,901.65.

Stevens' Gold and Silver Mining Company. A. Wartenurlen is Manager. The Stevens mine is located in Silver Bow county, Cal.

Over 1,500 feet of levels have been opened. Fine specimens of wire gold and native silver are found in this mine. The first work done on this property was for the gold. The mine is equipped with a steam hoist, a double plunger, Knowles' pumps, and a sinking pump. The company is capitalized at $4,000,000.

Succor Mine and Milling Company (The) has property located in the Cold Hill district, Nev. Capitalization, $6,840,000, in 68,400 shares of $100 each; two dividends, amounting to $22,800, paid to October 16, 1871, date of latest dividend. Twenty-four assessments have been levied; total amount of same, $763,800; date of latest assessment, August 30, 1879.

The Swansea Lode, owned by Messrs. V. Shaw, Kennedy, and Charles Ellethorpe. The Swansea Lode is located on Ewing Mountain, Colorado. Silver and gold ore assaying per ton, eleven ounces of gold, fifty-two ounces of silver, and five per cent. lead.

Tilden Mining Company. Office, 43 Exchange Place, New York. The company's property is located in Clear Creek mining district, Chaffee county, Col.

Tellurium Gold and Silver Mining Company. J. M. Litchfield, Sec. Principal office, 415 Montgomery Street, San Francisco. The mines belonging to this company are located in California.

Town Talk Grand Mining Company (The) have been prospecting in the gravel ridge running through Sutton's ranch, west of Town Talk House, Nevada county, Cal., for the last year, and the prospects for opening a good mine there are considered excellent. A tunnel was run into the ridge on the south side a distance of 550 feet, and a bed of blue gravel struck which prospered well: but, owing to the pitch of the bed rock for the last fifty or sixty feet that the tunnel was run, it was found that the mine could not be worked to advantage on account of the water. The company then commenced running a new tunnel on the lower grade to bottom the channel, and this tunnel is now in a distance of nearly 550 feet, and with a further extension of fifty feet it will be in the blue gravel, and the channel can be completely drained. Six men have been constantly engaged in draining the channel, working on regular shifts.

Tuscarora Mining and Milling Company (The). Office, 309 Montgomery Street, San Francisco, Cal. The property of the company consists of five claims, the Raven, Atlas, Castle No. 1, Castle No. 2, and the Whale, situated a short distance west of the town of Tuscarora, in Elko county, Nevada. A large amount of work has been done upon these locations during the years 1880 and 1881, but as yet but little bullion has been produced. The Raven has a shaft down 100 feet, and at the bottom a drift runs forty feet to the north, encountering considerable water. So far the ore found has been of low grade, with here and there high-grade ore, but not in sufficient quantity to pay for extracting. The shaft on the Whale has been sunk ninety feet, finding upon drifting 200 feet only low-grade ores. Capitalization, $10,000,000: par value per share, $100.

Tybo Consolidated Mining Company (The) has its offices at 318 Pine Street, San Francisco, Cal. The property of the company is located in the Tybo district, Nye county, Nevada. The length of the lode on which the company depends for its supply of ore is 6.275 feet long. Capitalization, $15,000,000, in 150,000 shares of $100 each. No dividends have been paid; no assessments been levied.

Tyrone Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. Officers, John H. Strickler, Pres.; P. M. Stackhouse, Sec. and Treas. Directors, John H. Strickler, David Hardie, James F. Kennedy, Amos Burton, P. M. Stackhouse. Principal office, 303 Walnut Street, Philadelphia, Pa. The location of the mining property of this company is in Arizona. Capitalization, 200,000 shares; par value, $5; non-assessable.

Union Consolidated Mining Company. A. B. Walker, Sec. Office, Council Bluffs, Iowa. The company's mining property consists of the Cross, Seaman, Ewing, Convict, Walker, Garfield, Gleason, Butte, General Grant, Hero, Little Harry, Hattie, Little Pet, and Bullion claims, located in Carbonate mining district, Minta county, Utah. Report says the Cross lode has heavy iron and copper croppings. It can be traced the entire length, 1,500 feet, of the claim. It is from three to six feet in width, and the ore assays from ten to eighty ounces in silver and from thirty to sixty per cent. copper. There are two shafts ten feet deep. The character of the ore is improving rapidly and the vein is increasing in width. The Convict embraces two ledges, one a vein of copper glance two and one-half feet in width, carrying from thirty to eighty ounces of silver; the other an eight-foot vein of feldspar and quartz carrying gray copper, and contains both gold and silver. On the first ledge there are two shafts, one twenty and the other sixty feet deep. The Ewing has two good veins running the entire length of the claim. On one there is a shaft forty feet deep, the ore assaying forty per cent. copper and fourteen ounces in silver. The ledge in the bottom of the shaft is about three feet wide and still increasing in width. On the other ledge is a shaft twenty feet deep. Surface croppings about ten feet wide, consisting of copper and iron; and the amount of silver contained in the ore is increasing with depth. Average of ore from bottom of shaft assayed $6.25 in silver. The company have acquired by location the Walker, Garfield, Gleason, and Butte lodes. The Garfield is from fifty to 150 feet in width, the Butte from ten to twenty feet, and the Gleason two feet. The Butte assays $1.56 in silver and $8 in gold. They also own one-half of the Bonanza, and three-fourths of the Leonore. The Bonanza croppings are chiefly galena, and an average of the ore assayed $5 in silver and twenty-four per cent. lead. The Leonore assays at three feet $3 in silver, and at five feet, $11.30. It shows fifteen per cent. galena and a small amount of gold; shaft is eight feet deep. The General Grant has a shaft seven feet deep. The Little Harry has a shaft ten feet, with considerable amount of feldspar. Surface assays gave $5 in silver. Walker samples assayed $7.54 silver and $3 gold. The Bonanza, on assay test, gives lead, twenty-four, $7.54 silver, and $3 gold. Some of the ore of the Convict ledge runs ninety high in silver, and some at least thirty per cent. The company's property includes water privileges, mill sites, town sites, and placer claims.

United States Gold and Silver Mining Company of Colorado is chartered under the laws of the State of Illinois. The officers are H. Kaerhen, Pres.; J. C. Meyer, Vice-Pres.; W. E. Johnson, second Vice-Pres.; W. P. Nixon, Sec.; Henry Furst, Treas. Date of annual election, January 7, 1882. J. W. Warren is Superintendent. Office, 355 Clark Street, room 10, Chicago, Ill. The company's mines are the Little Winnie, the Virginius, and the Free American, located at Little Ella Hill, South Evans, three and one-half miles from Leadville, Col. Extent of claim is about 600 by 2,500 feet. The property covers an area of eighteen acres. The ore is lead carbonate, and assays twenty ounces silver, and thirty-seven per cent. lead. Cost of mining and milling per ton, $17. The character of the mine is contact vein. Date of commencing developments, August, 1879. Amount expended in developing property to April 1, 1882, about $25,000. No machinery or mills owned. Date of organization, June 5, 1879; capitalization, $2,000,000; par value per share, $10; basis, non-assessable; yield to April 1, 1882, 29,896 pounds; mine was not worked during 1881; bonded indebtedness May 15, 1882, $50,000; treasury reserve, $750,000.

Vulcan Gold and Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are Hon. Lewis Jones, Pres.; Meredith L. Jones, Sec. and Treas. The above named and Egbert Guernsey, M. D., constitute the board of directors. The offices are at 120 Broadway, New York. The property of the company is located on Mt. Sneffelz, Ouray county, Colorado; extent of claim, 1,500 feet by 300. The ore is ruby and brittle silver, and fine galena full of gray copper. The low grades show more or less zinc, but mineral in rock is high grade, gangue is light calc spar and quartz. An excellent average of fourteen samples taken from dump assayed $184. The lode runs east and west across the mountain, dips south into mountain, varies in width from eight to twelve feet. Pay-streak is from one foot to two feet six inches wide, carrying the following kind of ores—ruby and brittle silver, fine galena, full and gray copper. The tunnel is five feet six by six feet seven high, and sixty-six feet long. The expenditure of a small amount of capital will provide all necessary storehouses, etc. Capitalization, $300,000, in 30,000 shares of $10 each; non-assessable; full paid.

Wales Consolidated Company. They own eleven claims, embracing about 4,200 feet, located in Eureka county, Nevada, between the end lines of the Albion and Richmond properties, and that of the Silver Lick company. This company, which lost their works by fire, have erected new hoisting works with a capacity for sinking 2,000 feet. A large amount of work has been done during the year.

West Comstock Gold and Silver Mining Company (The) is chartered under the laws of the State of California. The officers are W. A. H. Hart, Pres.; J. C. Beatty, Sec.; trustees, Chas. Moss and Leander Shires. Annual election, 23d December. Transfer office, 230 Montgomery Street, (room 24) San Francisco. Head office, 250 Montgomery Street, (room 23.) Property located in Storey county, Nevada. Extent of claim, 3,000 feet. The ore is argentiferous, and assays from $20 to $50 per ton. The veins are quartz, running about four feet in width. There are 3,000 feet of tunnel; lead is struck at about 400 feet deep. The vein averages about three feet in thickness. Drifts run on ledge about 200 feet each way from the tunnel. The mines were originally located and developed about twenty years ago, having been recently reorganized. The mine is not worked at present. Organized 1873 (June); capitalization, $1,000,000, in 100,000 shares of $10 each; assessable; latest assessment levied, December, 1880, twenty-five cents per share; stock listed on Pacific Stock Board, San Francisco, Cal.; stock quoted twenty-five cents per share. The information was furnished by J. C. Beatty, Secretary of the West Comstock Gold and Silver Mining Company.

The Ward Gold and Silver Mining Company. Officer, Jacob Stadfeld, Sec.: general office, 419 California Street, San Francisco, Cal. The names of the mines belonging to this company are not known. The location is in Nevada.

West Camden Gold and Silver Mining Company (The) has property located at West Camden, Me. The officers are G. E. Williams, Pres.; J. A. Clark, Sec. and Treas. Directors, G. E. Williams, T. Lord, Jr., A. R. Soloman, Jas. Walden, J. H. Williams, I. B. Pratt, and F. F. Phillips. Acting Supt., G. E. Williams. Organized, May, 1880; capitalization, $500,000, in 100,000 shares of $5 each; 36,000 shares constitute the treasury reserve.

Western Union Gold and Silver Mining Company (The). The mines belonging to this company are located in Clear Creek county, Col. Capitalization, 20,000,000 shares; par value, $10.

Western World Mine (The). Owned by Messrs. Owsley, Allport, Ransome, and Frank. The Western World mine is situated directly west of the Andy Johnson mine. Fine shafts have been sunk to water level. Ore assayed 45 ounces in silver, $7 in gold.

West Virginia Mining Company (The). Mr. Otto Linzoos, Manager. The mining property owned by this company is located in Colorado, viz., Berkeley, Danuba, Ironi, and Alice mines. Beautiful specimens of silver and gold ore.

Whale Consolidated Gold and Silver Mining Company (The) is chartered under the laws of the State of Colorado. The officers are Senator Jas. Harlan, Pres.; D. D. Ryus, Sec. The original incorporators were F. L. Martin, D. D. Ryus, Jas. A. Maynard, G. W. Frederick, and Jas. Harlan. The head offices are at La Veta, Col. The property of the company, located in West Spanish Peak, La Veta, Col., comprises the Whales Nos. 1, 2, and 3, and the Iowa, in all 5,250 feet long and 300 feet wide. The company also owns the lodes Nonpareil, Goss, Jeffries, Western Queen, Treasure, Monitor, Highland Lass, and Lincoln, all true fissure veins, containing carbonate and galena ores assaying from 100 to 200 ounces of silver to the ton, and a fair percentage of lead; also an interest in several other claims. The main lode is a true fissure from four to twelve feet wide, with perfect wall rocks on each side (in Whale No. 1). The shaft on this lode uncovers a large body of "lead carbonates," and argentiferous galena ore, assaying from twenty to sixty ounces of silver and from forty to sixty per cent. of lead per ton. A tunnel driven in twenty feet and a shaft sunk thirty feet at inner end of tunnel on Whale No. 2, uncovers mineral from wall to wall a width of five feet, which assays fifty-five ounces of silver and forty-six per cent. of lead per ton. A cut thirty feet long and twenty-five feet deep on the Iowa section of Whale lode reveals solid vein of mineral assaying from 103 to 225 ounces of silver, and a little gold, some copper, and fifty-five per cent. of lead per ton. Capitalization, $2,000,000, in 100,000 shares of $20 each; non-assessable; 30,000 shares constitute the working capital.

White Mountain Water Company. The property, the Princess mine, is located in Esmeralda county, Nev. Only development work was done during the year, the mine being opened to the depth of 300 feet, and a large amount of ore exposed. A new sixty-stamp-mill has been under course of construction, and a steam hoist erected. After the surface improvements are completed, the work of extracting and milling the ore will commence, and, from all appearance, it will not be without profit.

Wood River Smelting Company (The) has its offices at 61 Broadway, New York. The property comprises the Keystone mine, May Queen, Evergreen, Highland Chief, Scorpion, Julia, Red Bird, and Emma, all located at Bellevue, Wood river, Alturas county, Idaho. The ore is high grade, assaying $150 per ton. Owing to the inconvenience of having to ship the ores to Salt Lake City to be smelted, several smelters are now being put up for treatment of ores from the surrounding mines. The mine was visited by the owners (chiefly of Philadelphia) in May last (1882). Notwithstanding the cost of $50 per ton incurred previously to the smelters being erected, by sending to Salt Lake City, a handsome profit was obtained. The bullion will be refined at Tatham's works, on Windmill island, on the Delaware. The Keystone mine (upon condition of the net profits over the cost of mining and smelting), has been let on a lease. Capitalization, $100,000, in 4,000 shares of $25 each.

Winnebago and O. K. Mining Company (The) is chartered under the laws of the State of New York. Officers (1880). Wm. F. Buckley, Pres.; Thomas J. Buckley, V.-Pres.; Henry W. Ford, Treas.; Drake De Kay, Sec. J. W. Davis, Superintendent. General office, 115 Broadway, New York, and 51 to 57 Borcel Buildings. The mines belonging to this company are located in Central City, Gilpin county, Col. The ore is composed of gold and silver and copper, smelting and milling. Organized, November, 1879; capitalization, $2,000,000; shares, 100,000; par value, $20; non-assessable.

Wyandotte Consolidated Gold and Silver Mining Company (The). Officers, Hon. Lewis Jones, Pres.; E. C. Pray, Treas.; Dr. Levi Harsh, Supt. General office, 16 Broad Street, New York. The company owns a group of mines, of which the Wyandotte is the principal; located in Gilpin county, Col. Extent of claim, 12,270 feet. Amount of property in acres, forty. Veins approach each other at an acute angle, and can be mined and operated through main shaft; sunk at focal point of all; elevation above sea level 9,600 feet. The management are prosecuting developments without attempting to make dividends, which will not be done until the mine is thoroughly opened. Twenty-one men are employed, taking out about 600 tons of iron ore per month. The working shaft of the Wyandotte is 400 feet deep. West of this, the company has a working shaft on another claim, the Crawford County, 265 feet deep, both being connected by a level 245 feet in length, and a cross-cut north from the former vein 140 feet in length. Some developments have also been made on the Leavenworth lode and others. The average of the smelting ore raised is $80 per ton net. The mines generally are in good working condition. The average output is about 100 tons of ore per month. Auriferous banks of gravel to washing out the free gold. It requires no chemical or mechanical process, no stamp-mills or furnaces. The mine is in active operation and under the local management of Mr. F. T. Hawley, of Brooklyn, New York. Capitalization, $50,000; par value, $1; non-assessable. Stock registered with the Mercantile Trust Company, 120 Broadway, New York.

Yellow Jacket Gold and Silver Mining Company (The) is chartered under the laws of the State of Nevada. The offices are at Gold Hill, Nevada. The property of the company includes the Yellow Jacket mine, located in the Gold Hill district, Comstock Lode, Nev. The ore is auriferous and argentiferous, in the proportion of thirty-three per cent. and sixty-seven per cent. The length of the main lode on which the company depends for its supply of ore is 957 feet. The main shaft was down, March 18, 1882, 3,000 feet, and is the deepest of all the deep mines on the lode, and, indeed, in the United States. Organized, February 17, 1863; capitalization, $12,000,000, in 120,000 shares of $100 each. Twenty-five dividends have been paid; total, $2,181,000; to August 10, 1871, the date of latest dividend, which was at the rate of $3 per share. Forty-three assessments have been levied; total, $5,358,000; to February 7, 1882, date of latest assessment, of $1 per share. No indebtedness.

Young America Mining Company (The) has property located in Tuscarora, Elko county, Nev. The length of the main lode on which the company depends for its supply of ore is 1,000 feet. Capitalization, $3,000,000, in 30,000 shares of $100 each. No dividends paid. Ten assessments levied; total, $57,000; last assessment, June 27, 1878.

SILVER.

Abbott Mining Company is chartered under the laws of the State of New York. Branch office, 48 John Street, New York. The company's works are located in Ouray county, Col. Extent of claim being ten lodes and mill sites. The property is undeveloped. Date of organization, May 12, 1879; capitalization, $2,000,000; par value per share, $10; basis, non-assessable.

Abbott Mining and Milling Company's (The) property is located at Chaffee county, Col. Capitalization, $150,000; par, per share, $10.

Abington Mining and Milling Company (The). Branch office, Leadville, Col. Location of mines, Boulder county, Col. Capitalization, $1,000,000, divided into 100,000 shares; par value, $10 each.

Acme Mining Company (The) is chartered under the laws of the State of Colorado. Officers and directors are G. P. Smith, F. M. Hibbard, Dr. T. Cummings, Geo. W. Stoner, R. Mickle. Principal office at Denver, Col. The mines are located in Colorado. Capitalization, 100,000, shares; par value, $10 each.

Alaskan Mining Company (The). Name of mine owned by the company is the Alaskan, located at Alaska, Col. Quality and character of ore eighty-three and eighty-five per cent. lead, and $121 and $161 silver; almost pure galena, which contains eighty-six per cent. lead. The country rock is mainly a micaceous slate; no gold found. The mountain seems to be composed of a white spar, which some supposed to be lime. There are great dikes of granite extending for miles. No sulphurets of iron were found; plenty of mica in great scales and sheets.

Albion Mining Company. The officers are L. L. Robinson, Pres.; Clinton Gurnee, Vice-Pres.; D. B. Chrisholm, Sec.; California Bank, Treas.; X. W. Robinson, Supt. The company's mines are located in Eureka district, Nevada. Aggregate of drifts, shafts, levels, etc., 6,000 feet Capitalization, $1,000,000; par value per share, $10; number of assessments levied, ten; total amount of same, $397,500; date of latest assessment, March 6, 1882. Indebtedness March 1, 1882, $19,276; funds reserved in the treasury April 1, 1882, $1,789.

Algonquin Mining and Milling Company (The) is chartered under the laws of the Territory of Montana. The officers are H. A. Stiles, Pres.; F. H. Williams, Sec. and Treas. Directors, H. A. Stiles, John F. Smith, E. C. Markley, James Fuller, M.D., D. C. Spooner. Name of mines owned are Algonquin, Salmon, Belle, Estelle. Amount expended in developing property to January 1, 1882, $200,000. Property owned by company, one 24-stamp mill, steam-hoist on two lodes, pumps, etc. Capitalization, 200,000 shares; par value, $10; assessable.

Alice Mining Company (The), whose property is situated in Utah, have a promising mine; the vein of which is over forty feet in width. The ore is good milling but hard, being rich in silver, yielding per ton as follows: First grade, sixty-five ounces; second grade, forty ounces; third grade, thirty ounces; fourth grade, twenty ounces. The property consists of two engines and tubular boilers; twenty-stamp dry crusher (Blake's); forty others, making a total of sixty stamps. The mine has a vertical three-compartment shaft, 712 feet down. The staff of hands employed aggregates 100.

Allied Mines (The). The company is chartered under the laws of the State of New York. The Directors are Gen. Thomas Ewing and Geo. Bissett; General Manager and Mining Engineer, W. M. Weston. Office, 63 Broadway, New York. Their mines are the Gertrude, Yellow Norma, Hidden Treasure, Rose, Talisman, Crusader, Emily. Located at Imogen Basin; Ouray county, Colorado, covering an area of seventy acres. The properties are all true fissure veins, which cannot be exhausted in depth. Capitalization, $10,000,000; par value per share, $10; non-assessable (no personal liabilities).

Alturas Gold Hill Mining Company. The officers are W. M. Little, Pres.; L. A. Richter, Vice-Pres.; E. Webb, Sec.; L. A. Richter, Treas. Office, 63 Broadway, New York. This company owns the Alturas, Bonanza, Buffalo, and Bullion mines, located at Rocky Bar, Alturas county, Idaho. The property is in first-rate condition in every way. Capitalization, $1,000,000; par value per share, $5.; non-assessable.

Alonza Mining Company (The) is chartered under the laws of the State of California. The officers are A. D. Oakley, Pres.; A. F. McGrew, Vice-Pres.; F. M. Blackstone, Sec.; and A. F. McGrew, Treas. The transfer office is at room 6, No. 140 S. Fourth Street, Philadelphia, Pa. The company owns the Mammoth mine, located at West Tintic mining district, Juab county, Utah. Organized, March, 1880. Capitalization, $10,000,000; shares each, $100; assessable. Stock reserve, 10,000 shares; stock has been quoted as high as $2.50; stock listed, Philadelphia Mining Annex.

Alpine Silver Mining Company is chartered under the laws of the State of New York. Office, 51 Broadway, New York. The company's works are located at Chalk Creek, Col., covering an area of 115 acres. Date of incorporation, January 6, 1879. Capitalization, $2,000,000; par value per share, $10; non-assessable.

Alta Montana Mining Company is chartered under the laws of the State of New York. Office, 76 Wall Street, New York. This company owns eleven mines (two of which are the Alta and Comet); ten of them extend on the Alta vein two miles, and four are developed from both sides of the mountain by seven tunnels aggregating 1,700 feet. This property is located in Jefferson county, Montana. The ore gives a silver assay of $80 per ton. The average width of vein is two feet. Company own extensive reduction works, which they value at $500,000, also stamp-mill, railroad, etc., valued at $350,000. Aggregate of tunnels and levels up to 1882, 3,000 feet. Shafts down from sixty feet to 300 feet. Date of incorporation, July 16, 1879. Capitalization, $15,000,000; par value per share, $10; non-assessable.

Alta Silver Mining Company. W. H. Watson, Sec.; office, 302 Montgomery Street, San Francisco, California. This company owns the Alta mine, located in Gold Hill district, Comstock lode, Nev., in which the workings have attained the depth of 2,250 feet. Amount expended in developing property has probably been about $150,000. Seventy-four miners are employed in the Alta mine. Capitalization, $10,800,000; par value per share, $100. No dividends paid up to 1882. Number of assessments levied, twenty-four; total amount of same, $1,641,600. Date of first assessment, August, 1880, fifty cents per share; date of latest assessment, May 2, 1882, fifty cents per share. Bonds reserved in the treasury, April 1, 1882, $16,485.

American Mining and Smelting Company (The). Andrew Wallace, Supt. Name of mine owned, Little Ellen, located in South Evans gulch, Col. Dimension of workings—line shaft, 180 feet, the wheel, sixteen feet in diameter (1881). The works are undoubtedly the largest of the kind in Colorado.

Amie Consolidated Mining Company (The) is chartered under the laws of the State of New York. The offices are 57 Broadway, New York. The company owns three mines, the Amie, the Climax, and the Deer Lodge. Located at Leadville, Freyer Hill, Col. The ore is very rich, containing iron and more or less chloride of silver, an assay in 1881 giving $78 per ton. Property owned by the company is $50,000 worth of machinery, all first-class (year 1881). Depth of shaft, 180 feet. East of the Amie mine is the Deer Lodge, showing a few little stopes from which the lessees have just taken March, 1881, $18,000 within the past few weeks. The ore has been followed west and south until the Amie and Climax were reached, and the lessees are now engaging in working toward the north with almost encouraging prospects. The interesting facts of the mines are, that the ore from the Deer Lodge, or Amie shaft, No. 5, is still holding out remarkably well, and the general prospect is that it will continue mineral, increasing in size. The drift running east sixty feet from No. 5, north shaft, shows a vein of very high grade ore six inches to two feet in thickness. This vein averages 400 ounces of silver to the ton. Outside of this is a large body of iron, impregnated with mineral, that yields $30 to $40 a ton net; eighty men employed, and ships some sixty tons of carbonates daily. Product will soon exceed 200.

Amie and Climax Mines. Rich pockets have been found in both, which have been succeeded by vein streaks; its output reached fifty tons of ore per day, and a very good grade. Climax has been very erratic in its performance, sometimes outputting considerable quantities of fine ore, and then again running into almost barren iron. This company was organized June 30, 1879; capitalization, $5,000,000; shares, 50,000; par value, $10; non-assessable. Total amount of dividends, July 15, 1881, $305,000; latest dividend May 17, 1880; amount, $10. Current value of mine, $115,000. Stock quoted, twenty-eight cents per share, March, 1882.

Andes Silver Mining Company. Officer, Butler Berris, Sec. 309 Montgomery Street, San Francisco, Cal., is the location of principal office. The mines are located in Virginia district, Comstock Lode, Nev. Capitalization, $10,000,000; 100,000 shares; par value, $100; assessable. Number of assessments levied, nineteen; date of latest assessment, June 14, 1882; amount per share, twenty-five cents; linear feet in mine, 2,000; cash on hand February 1, 1882, $2,991.37; April 1, 1882, $11,640. Eighteen assessments. Mining Record, June 17. Stock and bonds reserved in the treasury April 1, 1881, $11,640.

Anglo-American Mining Company (The), of Chicago, has property in Chaffee county, Col. The company owns the following mines or claims, viz.: Ocean Wave, Dolly Varden, and Eight Wonder, all of which are opened by shafts from twenty to forty feet deep, showing good veins of mineral.

Argent Mining Company (The) are the owners of the Iron Hill, Leadville Consolidated, La Plata, Silver Cord, Iron Group, Gilt Edge Strike mines. Located at Yankee Hill, Col., covering an area of thirty-five acres. Ore assays fifty-one ounces of silver to the ton. The iron mines are shipping fine carbonate ores. La Plata mine shows large stopes of lead ore, and has yielded sixty tons of ore per day. Capitalization, $5,000,000; par value per share, $10.

Argent Mining Company is chartered under the laws of the State of Colorado. The officers are A. G. B. Hinkle, Pres.; M. T. Vandever, Vice-Pres.; Chas. H. Graham, Treas.; B. Huckle, Sec. Directors, A. G. B. Hinkle, M. T. Vandever, Chas. H. Graham, J. B. Wilson, J. T. Hampton, Henry Leipman, Jas. Fuller, Wm. Carp. and Chas. Kleinirt. Office, 360 Stock Exchange Place, rooms 27 and 28. The Vining, Chieftain, Baltimore, and Frank C. Shipman mines, located at Leadville, Colorado, are owned by this company. Capitalization, $400,000; value per share, $10; non-assessable. Bonded indebtedness January 1, 1882, $21,000.

Argentine Mining and Smelting Company (The) is chartered under the laws of Colorado. Officers are M. J. Dunne, Pres.; J. A. Roach, Treas.; J. A. Roche, Sec. Head office, room 1, No. 78 Dearborn Street, Chicago. Name of mine owned is Garfield. Location, Sheep Mountain, Summit county, Col. The Garfield is surrounded on all sides by paying mines in close proximity thereto. All the veins on the eastern slope of Sheep Mountain are Blanket contact veins, and the probability of the Garfield becoming a large paying vein is very strong. A few shares of the Working-Fund Stock remain to be sold, and are preferred. The length of shaft is 115 feet. Capitalization, 30,000 shares; par value, $10, full paid; non-assessable.

Arizona Southern Mining and Milling Company (The) is chartered under the laws of the State of New Jersey. Officers are Samuel White, Jr., Pres.; Wm. H. Dresher, Vice-Pres.; Geo. B. Dresher, Treas.; Edw. B. Williams, Sec. Solicitor, E. A. Armstrong. Head office, 106 Market Street, Camden, N. J. Branch office, 407 Locust Street, Philadelphia, Pa. H. S. Searle, Supt. Names of mines owned are Silver Wing, Herman, Searle, Pilot, Arizona Southern. All full claims. Located at Oro Blanco mining district, of Pima county, Arizona. The amount of property consists of ninety-six acres. Character of ore, Silver Wing, sulphuret of silver, carrying silver glance, or argentite, stephanite, black sulphuret, chloride of silver, and gray carbon. Herman, gray and yellow carbonates. Searle, antimonial sulphurets of lead and gray. Assays per ton, $93.46. Average samples, $186.91. Character of mines are lenticular masses of quartz. The veins are strong, large, well-defined lodes, formed by ore. Waters entering from below give every indication of permanence of depth. Pilot, yellow carbonates, sulphuret of silver, containing antimonial sulphuret of lead and gray copper and carbonate of copper, with a gangue of quartz. A mill site is owned by the company. Date of commencing developments, June 8, 1881. Cost of mining, $400 per ton; milling, $23.00 per ton. There is a development of shaft of over fifty-five feet on Silver Wing claim. Company organized March, 1881. Capitalization, $300,000; par value, $5; non-assessable. Amount of shares issued, 240,000; reserved in treasury, 60,000 shares; capital stock now reduced to one dollar, par value. Amount of stocks and bonds reserved in the treasury January 1, 1882, $300,000. Stock indebtedness, $1,200,000. Wages paid for labor, 1882, from $1 to $4 per day.

Armstrong Gulch Consolidated Silver Mining Company's works are located in Colorado. Company have a capitalization of $1,250,000, in shares of $25 each.

***Atlantic and Pacific Tunnel Company (The).** Mr. Brick Pomeroy, of Denver, Pres. and Treas. The company's property is located at Clear Creek, Clear Creek county, Col., and contains numerous rich veins of minerals, the product of which is expected to pay cost of driving the tunnel 4,000 feet. The tunnel is being driven from the base of Kelso Mountain on Quail Creek to a point near Decatur, on the western slope, a distance of four miles. Operations are progressing at both ends. They will open a very large number of fine lodes at great depth, and measurably solve the yet unsolved problem of the downward tendency of these silver fissures. Commenced development of property during the year of 1880. Capitalization, $7,000,000; par value per share, $10; stock reserved in the treasury, October, 1881, 300,000 shares, at $2.50 per share; bonds reserved in the treasury, October, 1881, $300,000.

Atlanta Mining Company is chartered under the laws of the State of California. The officers are John Oppenheim, Pres.; A. F. McGrue, Vice-Pres.; F. M. Blackstone, Sec.; O. W. Thompson, Treas. Transfer office, 140 South Fourth Street, room 6, Philadelphia. The company owns the Noon lode, which is located at West Tintic, Juab county, Utah. The ore found resembles that of the celebrated Ontario mine in Utah. Character of the mine is described as showing a true fissure vein. Company own one mill-site and water-power. Capitalization, $10,000,000; par value per share, $100; assessable; stock reserved in the treasury, 20,000; stock listed on the Mining Exchange of California and Philadelphia.

A. Y. Mine (The), located at Iron Hill, Leadville, Col., is the property of Graham & Co., and is one of the recent accessories to the list of the producing mines of Leadville. The character of the ore is lead carbonate, grade in silver low. The mine is now yielding from fifty to seventy tons of ore per day. The average value is low, and nets from $3 to $30 per ton. The company own four oil Greek pumps. The mine shows good surface improvements and extensive underground developments, disclosing considerable quantities of ore. Mine well timbered.

Bay Horse Mining and Smelting Company. Location, Lemhi county, Idaho. This company have now in operation smelting works which are manipulating the ores of fifteen mines in neighboring districts, thus affording an important facility to mining speculations in that locality.

Belding Mining Company (The) own property in Esmeralda county, Nev. Stock and bonds reserved in the treasury, April, 1882, $523; cash on hand, April 1, 1882, $523.

Bald Mountain Mining Company (The) is chartered under the laws of the State of New York. The offices of the company are at 21 Nassau Street, New York. The company owns the Gold Cup group of mines, located in the Tin Cup district, Gunnison county, Col. Owing to some misunderstanding among the stockholders, these mines have been idle for a while, but are expected to be opened again shortly. They are said to contain a fine body of high-grade ore, characteristic of the district, which has a porphyritic and calcareous formation, and the veins carrying sulphides of silver, lead, and copper carbonates. The mineral of these mines is said to run from 240 to 1,800 ounces per ton (silver). They have been large producers in the past, and there is little doubt that with judicious management they will again be made to pay handsome dividends. Capitalization, $10,000,000, in 100,000 shares of $10 each.

Banker Lode (The), on Breece Hill, Col. has been working incessantly for the past year. The lower workings show a vein of quartz opened to a width of four and a half feet, without disclosing the foot-wall (81). The ore gives a silver assay of forty-seven ounces per ton. The company have a five-horse-power engine, ten-inch pump, and baby hoister; shaft, 208 feet in depth.

Barbee & Walker Silver Mining Company is chartered under the laws of the State of New York. Office, 59 Drexel Buildings, New York. This company own the Barbee & Walker mines, located at Silver Reef, Utah. The mine is situated on the margin of the camp, and has the advantage of receiving its ores directly from the hoisting works. The ore is argentiferous and very fine, assaying $32 per ton. The average width of vein is eight feet. A body of ore lately opened up in the north and south drifts gives promise of a most satisfactory product. The face is in a strong four-foot ledge of $50 ore. The company own a five-stamp mill, two pans, and one settler, hoisting machinery, and other buildings. The lode on which the company depends for its supply of ore is 2,817 feet. The main incline has attained a depth of 303 feet, and at the bottom the ledge continues intact. Contracts have just been let to develop both the front and back ledges on the fifth levels north and south. The lower workings show to good advantage, and the prospects are very favorable. The monthly output of bullion has averaged $100,000, and is increasing. The drift from the bottom of the 100-foot winze has been advanced 110 feet in excellent ground, and now shows a four-foot facing of ore that samples from $100 to $700. Date of organization, 1879; capitalization, $1,000,000; par value per share, $10; basis, non-assessable; yield during fiscal year 1881, $170,154; calendar year, $205,524; total amount of dividends paid to November, 1880, $60,000; (six yearly dividends of $10,000 each, equal to twenty-four per cent. per annum on capital); date of latest dividend, November, 1880; amount per share, ten cents; stock quoted July 1, 1882, ten cents per share; stock and bonds held principally in New York.

Ben Franklin Silver Mining Company The officers are Robert Crane, Pres; Wm. Curtiss, Vice-Pres.; Dr. Henry Carpenter, Treas.; F. X. Kelley, Sec. Directors, Robert Crane, F. X. Kelly, Jr., Wm. Curtiss, Henry Carpenter, C. S. Kauffman, J. F. Frueauff, J. W. Anthony, J. H. Stelle, A. W. Stone. Main office, Leadville, Col. Branch office, 319 Walnut Street, Philadelphia, Pa. The property is located in Custer county, Col. One month's working shows a production of $2,500. Date of organization, November, 1881; capitalization, $500,000; par value per share, $25. There will be an assessment of five cents levied quarterly until fifty cents have been levied on each share.

Battle Mountain Silver Mining Company is chartered under the laws of the State of Colorado. The officers are D. J. Chapman, Pres.; J. H. Hunter, Vice-Pres.; P. J. L. Carberry, Treas.; Chas. N. G. Felten, Sec. Office, 218½ Walnut Street, room 23, Philadelphia, Pa. The company's mines are the Grief and Evening Star.

Bay State Silver Mining Company's works are located in Nevada. J. W. Pew, Sec. Office, 310 Pine Street, San Francisco.

Bay View Silver and Copper Mining Company. The officers are W. T. Rearson, Pres.; R. W. Kimball, Sec. and Treas. Directors, E. C. Hincks, W. T. Rearson, J. W. Milliken, R. W. Kimball. Date of organization, at Bangor, February 7, 1881; 370,302 shares of stock reserved in the treasury.

Belcher Silver Mining Company (The). Officer, John Crockett, Sec. Principal office, 203 Bush Street, San Francisco. Location of mines, Nevada, Washoe district. South drift ore vein, 115 feet; excellent vein material; 3,000 feet level; the south drift, east crescent, on this level, was pushed eighty feet into a fine vein formation carrying bunches of good quartz.

Bellevue Mining Company (The). Officers are O. B. Johnston, Pres.; O. M. Copeland, Treas.; D. C. Butterfield, Sec. John Horton, Supt Names of mines owned, Dead Shot, Noonday, Chicago, and Eadle. Location of mines, Mineral Hill district, Wood River, Idaho. Character of ore, dry carbonate; assays as high as 600 ounces in silver, and running heavy in lead. Three tunnels and shaft used. Character of mines: ledge, five feet wide; pay streak, two feet wide at top of tunnel, and two and a half feet on the floor; mineral is easily worked, one shot loosening tons, which can be taken out with the pick and shovel; walls solid, requiring little timbering. The claim known as the Dead Shot, was discovered in 1880, by S. A. James, now foreman of the company. The Noonday is thought to be the richest mine on the river, according to Mr. Horton's statement, March 25, 1882. Capitalization, $1,000,000; shares, 200,000; par value, $5.

Belmont Consolidated Mining Company (The). Officers, B. W. Lewis, Pres.; J. W. Harrison, Sec. Local Representative, J. M. McDougal, Attorney for the company. Names of mines owned, Black King Mountain and Lyon's Lode, located in Gunnison county, Col. There is a vein on Lyon's Lode some fourteen feet in width. This and the other two veins are cut by Belmont Consolidated Mining Company's tunnel. The properties are being worked energetically, with prospect of certain yield. Date of latest assessment, May 20, 1882, ten cents. Yield during 1880, $26,419.

Belmont (Monitor) Mining Company. J. W. Pew is Secretary. Office, 310 Pine Street, San Francisco, California. This company's property is located at Philadelphia, Nye county, Nev. There are 3,500 linear feet in mine. Capitalization, $5,000,000; par value per share, $100; number of assessments levied, thirty-two; total amount of thirty-one, $707,500; date of latest assessment, May 20, 1882, ten cents per share.

Betty O'Neal Mining Company (The). D. P. Pierce is Superintendent. The Betty O'Neal property is about half a mile from Lewis, Lander county, Nev. The main working-shaft is down about 160 feet, from which the lower level has been run on good ore some 200 feet. A body of ruby and wire silver has been struck, portions of it assaying as high as $1,000 per ton. A new pump has been put in which has a capacity for raising water from 450 feet. Yield during 1880, $31,474; bonded indebtedness, March, $6,329.54; floating indebtedness, April 1, 1882, $9,953; company in debt, April 1, 1882, $9,953.

Big Half-Moon Mining Company's works are located near Leadville, Colorado. The ore assays from five to fourteen ounces in silver and half an ounce in gold. The veins in the Big Half-Moon vary from one to twenty feet in width.

Big Chief Mine (The), Neils, Larsen, McComte & Co., owners. Name of mine owned, Big Chief; located in Carbonate Hill, Colorado. This mine is located just above the Morning and Evening Stars, and has proved one of the most valuable developments made about Leadville in the past year. Much of the owners' attention has been devoted to the erection of buildings and machinery, also to preliminary developments; and although an inroad on the ore has only just commenced, a considerable quantity has been shipped. Amount of property, ten acres. Quality and character of ore, very fair—lead carbonate. Character of mine, drifts twenty to twenty-five feet in width; depth of shaft, 500 feet. The indications, 1880, as far as the developments in the Big Chief mine admit of judging from appearances, are certainly very favorable. Passing along to the north-east portion of the workings, a rather chaotic mass of carbonates, sand, iron, and porphyry was disclosed to view. Weekly output, seventy-eight tons.

Big Pittsburg Mining Company (The). Mines located in Lake county, Col. Capitalization, 200,000 shares; par value, $100.

Black Jack Mining Company (The). Mines located in California. Capitalization; 100,000 shares; par value, $2.50.

Black Metal Mine (The). owned by Mr. Blake and others. Name of mine, Linda; mines located at Tucson, Ariz. Character of ore, silver and copper; assays 400 in silver, and 312. At the bottom of the shaft, at the depth of twenty-two feet of metal, has widened to eighteen-inch assay from the top. Linda mine has two pieces of ore; one assayed $300, the other $500.

Bear Creek Mining Company is chartered under the laws of the State of New York. The officers are Hon. Abram Wakeman, Pres.; Hon. John Cummins, Vice-Pres.; R. D. Wood, Sec.; Chas. S. Bunn, Treas. Office, 145 Broadway, room 11, New York. The company's works are located in San Juan district, Col. They have a capitalization of $300,000.

Brockman and Black Rock Mines, (The) owned by C. Leavitt, T. Pendergast, and other residents of San Francisco. The Brockman mine is located near Greenwood, El Dorado, Cal. The company owns a five-stamp mill.

Black Rock Mining Company (The) has property located in Yuma county, Ariz. The company owns two mines, which adjoin each

* Practically, a Temperance organization.

other, the Black Rock and Pacific, the purchase-price of which was $175,000. By a cross-cut through the ledge, the ore of the latter was proved similar in quality to the Black Rock, which is a rich, black galena. It is claimed, on behalf of the Black Rock, that it has developed a richer and larger body of ore than was ever shown by any of the best Nevada mines. Work is carried on in shifts by night and day. The erection of steam-hoisting works and additional reduction works is contemplated. A new wagon-road is being constructed for the conveyance of the ore to the mill on the river. In a cross-cut of the Pacific, at a depth of thirty-three feet, a four-foot vein, containing four inches of ore, assaying $300 per ton, was encountered.

Boar Mining Company. The officers are J. A. Greenlaw, Pres.; H. R. Calkins, Vice-Pres.; and H. F. Smith, Sec. H. M. Danielson, Superintendent. The Mountain Star, Charles 12th, Centennial, Little Stella, and Louisiana mines, owned by this company, are located at Looland Hill, near Leadville, Col. The character of the ore found is very rich sulphuret, mill-run showing from 200 to 250 ounces to the ton. A vertical vein of galena has been opened up that mills forty-five per cent. in lead. A shipment of ore to the Alta Smelting Company gave a return of $274 to the ton. Length of adits in the Charles 12th mine, 125 feet.

Bob Ingersoll Mining Company owns the Bob Ingersoll mine, located in Arizona. The claim lies near to and west of the Survey and Tribute claims. During the year, some $15,000 worth of bullion was produced by the Boston mill from ores of this mine; this constituting its entire production to the present time. The dump, however, contains over 3,000 tons of ore, that are expected to average about $80 to the ton. The shaft is down 250 feet, and is opened by the necessary levels, drifts, etc. The hoisting apparatus consists of a whim, which at present depth answers every purpose. After the construction of the mill proposed by the company, the hoisting facilities will be proportionately increased. The ore shows gray and yellow carbonates and green chlorides, with some bunches of rich galena. The reports of this mine are of a very satisfactory nature. A good body of very high-grade ore is reported to have been disclosed. There are 2,200 to 2,300 tons of ore on the dump. The richest ore extracted from the Ingersoll was discovered accidentally, in an ore-body on the eighty-foot level, by the side of an old stope. About ten tons of ore are hoisted daily.

Bonanza Company's Mine (The), the Delmonico, is located at Jack Mountain, Ten Mile district, Col. The ore found may be termed both sulphuret and carbonate. Mill run of 700 pounds assayed 136 ounces in silver per ton. Tunnel, 160 feet deep.

Bonanza King Consolidated Mining Company's works, of which Mr. Gillette is manager, are located in California. The character of the ore is high grade. The average, which seems almost incredible, for the month of June being about $400 per ton for all the ore extracted. The company own a ten-stamp mill.

Bonanza Queen Silver Mining Company's (The) works are located in Chaffee and Pitkin counties, Col. Capitalization, $50,000; par value per share, $100.

Boston, Burning Moscow, Hickory, Cortez, and Esmeralda Mines (The), owned by Messrs. W. L. Searles and C. C. Woodhouse, of Beaver, Pa. These mines are located in Star district, Utah. Ore body at a great depth. Burning Moscow presents an immense body of low-grade ore. The Boston, owned by W. L. Searles (1880), has been surveyed and patent granted. The Rebel mine, perpendicular shaft, 200 feet down, and a drift produced $120,000 in ore (recently reported). Hickory is one of the first patented mines in Star district, once sold for $80,000. Mill used. The Cortez and Esmeralda mines, owned by C. C. Woodhouse, have been patented, and are true fissure veins. The Chief of the Hill has been sold. Mammoth mine also in the district; tunnel used; worked by Matthew Cullen.

Boston and Sheep Mountain Mining Company. The officers are Edward H. Goff, Pres; Silas Gurney, Vice-Pres.; H. E. Irvine, Sec. and Treas.; Superintendent, Thomas Gowenloch. Office, 131 Devonshire Street, Boston, Mass. This company owns eight full claims immediately adjoining the famous Robinson Consolidated mines of Leadville, Col., a large portion being located on the same ore chute. The development work of this property is being pushed with all possible rapidity, with the expectation of soon striking the extensions of the rich ore bodies now being worked in the Smuggler and the Checkmate claims of the Robinson Consolidated. Capitalization, $2,000,000; non-assessable.

Bowman Silver Mining Company's (The) works are located in Nevada. The company was organized March 1, 1881, having a capitalization of $100,000. Property not yet developed.

Bradshaw Silver Mining Company (The) has properties located in Arizona, in the Tombstone district (western portion), near the San Pedro. It is opened by a shaft to the depth of about 400 feet. The vein is from two to six feet in width. The ore is rich chloride, and carries horn silver assaying from $80 to $100 per ton. The mine is fitted with improved hoisting machinery and all necessary appliances. A ten-stamp mill has been erected. The mine has produced about $50,000 worth of bullion since first opened. Capitalization, $2,250,000, in 225,000 shares of $10 each.

Bristol Silver Mining Company. The officers are Geo. H. Keith, Pres.; F. A. Lewis, Vice-Pres.; T. E. Hughes, Sec.; Mark W. Lewis, Treas.; General Manager, H. M. Goodhue. The company owns the Mayflower mine, located in Nevada. Ore in bottom of winze turning from milling into heavy gray carbonate, averaging three per cent. in lead, and running all the way from $65 to $2,400 in silver. Capitalization, $175,134; value per share, $25; non-assessable; total amount of dividends paid to July, 1882, $28, 824; date of latest dividend, July, 1882, at the rate of $2 per share.

Brittle Silver Mining Company. The officers are H. O'Neil, Pres.; Archilles Falco; General Manager; W. A. Hall, Sec. Office, 8 Broad Street, New York. This company owns eight mines, viz., Iowa, Isabel, Brittle Silver, Good Hope, Maringo, Alvaredo, Ontario, and Atlantic, located at the head of Quartz creek, Gunnison county, Col. Amount of property in land, thirty-eight acres. The mines show true fissure in porphyry. The Brittle Silver mine has a vein of eighteen inches of sulphide of silver, running from $150 to $1,200. Prospects of the property are good. Rich showings of minerals are to be seen in all the workings. The company is assured of dividends by August, 1882. A force of sixteen men is working on the property. Capitalization, $500,000; par value per share, $1.25.

Buckeye Mining Company (The). Officers are J. K. Holman, Pres.; Wm. A. Stephens, Vice-Pres.; W. Bayard Cutting, James Heron, Henry Wadsworth. The mines are located at Devil's Gate, Lyon county, Nev. 3,000 linear feet in mine. Capitalization, $4,800,000: shares, 48,000; par value, $1.00; number of assessments levied, nineteen; total amount of same, $332,000; date of latest assessment, November 25, 1878.

Bull Domingo Consolidated Mining Company (The) is chartered under the laws of the State of New York. The officers are W. H. Barnum, Pres.; D. S. Draper, Vice-Pres., and N. B. Stevens, Sec. and Treas. The head and transfer offices are at 115 Broadway, New York. Branch office at mines, Silver Cliff, Col. The books are always open. Date of annual election, 3d Monday in November. The company owns the following mines: the Domingo, Johnnie Bull, Little Dorritt, Little Dorritt No. 2, and Thomas Paine, located in the Hardscrabble district, about three miles from Silver Cliff, in Custer county, Col., covering an area of about fifty acres. The ore is a galena, thirty per cent. lead, and fifteen ounces silver to the ton. The character of the mines are described as true fissure, wide, filled with conglomerate of boulders. The ore adheres to the boulders, or rather is in the space between the boulders, and is mainly confined to the hanging wall running from it into the fissure about thirty feet, and in it about sixty feet. The property consists of hoisting works, concentrating mill, saw-mill, blacksmith and machine shop, ore house, office, and several dwellings. A depth (sinking) of 350 feet has been reached; length of adits, 120 to 225 feet. There are two shafts or tunnels. The vein varies considerably in width at different points. The three levels and a number of drifts aggregate 1,000 linear feet or more. Developments were commenced 1st of January, 1880, since which about $415,000 has been expended. Although the ore body is lost for the present, the prospect of finding it again is favorable. The cost per ton for mining and milling is $6. Organized November 17, 1879; capitalization, $10,000,000; shares, $50; non-assessable. Yield, net, to April, 1882, $275.000; Yield, net, during 1881, $275,000; no dividends have been paid. Bonded indebtedness, $300,000: stock indebtedness, $10,000,000; floating indebtedness, $20,000; stock in treasury, $135,000, April 1, 1882.

Bulwer Consolidated Mining Company (The). The Ralston and Stonewall mines are owned by the company. Located in Mono county, Cal. Vein, 125 feet. Ledge, Ralston vein, two feet wide. One Stonewall ledge, two feet; one Ralston ledge, four feet. Entrance is by tunnel, 119 feet in length. The chief source of revenue of this company is from its fine mill. Capitalization, $10 000,000; par value per share, $100. Yield during 1880, $101,736. Total amount of dividends paid to June 12, 1882, $70,000: date of latest dividend, June 12, 1882, ten cents per share. Total amount of assessments levied to December, 1880, $352,000; date of latest assessment, December, 1880, $1 per share. Bonds reserved in the treasury April, 1882, $82,247; stock quoted July 1, 1882, $2 per share. Current value of the mine, $195,000. On the 1st of December, 1881, a cash balance of $100,000 was reported.

Colorado Consolidated Mining Company. Incorporators, W. R. Hunt, C. C. Hughes, and John Jennings. The company's works are located in Georgetown district, Clear Creek county, Col. Capitalization, $1,625,000; par value per share, $25; basis, non-assessable. Total amount of dividends paid to July, 1875, $251,875: date of latest dividend, July, 1875.

Climax Mining Company's (The) works are located at Leadville, Col. Current value of mine, $44,000. Capitalization, $2,000,000; par value per share, $10: total amount of dividends, $180,000; date of latest dividend, August 20, 1880, thirty cents per share; date of latest assessment, December 12, 1877.

Chicago Consolidated Silver Mining Company (The). Directors, F. H. Wells, E. C. Freeland, Wm. Irelan, John Nutall, P. B. Bowles. Mines located in South Fork, district Shasta, Cal. At Igo, the company completed its mill and reduction works. The machinery was put into successful operation and ore worked ever since, yielding from $30 to $500 per ton. About 200 tons of ore were taken out last summer and fall, which will be sufficient to keep the mill and reduction works running for several weeks, and until the company takes out more ore. The shaft is down twenty feet, and a tunnel run in about 400 feet, which taps the ore body near the bottom of the shaft. The ore now being worked yields about eighty-five per cent. of silver, and continues to be of a superior quality.

Caledonia Silver Mining Company. R. Wagner, Sec. Office, 414 California Street, San Francisco, Cal. The company's works are located in Gold Hill district, Nev. There are 2,188 linear feet in mine. Capitalization, $10,000,000; par value per share, $100; number of assessments levied, 38; total amount of same, $2,710,000; date of latest assessment, December 6, 1881.

Catalpa Mining Company. H. W. Wesson, Treas. Office, 66 Broad Street, New York. This company owns the Crescent and Catalpa mines, located in Lake county, Col. The ore is very fine. The Crescent will be connected with the workings of the Catalpa mines by a series of cross-cuts from the main incline, and all the hoisting will be done through shafts. To the northwest, where the bulk of the company's property extends, a level is running through this portion of the mine, from which great results are confidently expected. The mine is keeping up its shipments, shipping from twelve to fifteen tons of ore per day, and is reported as in fine condition and outlook encouraging, there being considerable territory yet to be explored. A tour through the underground workings of the mine is said to reveal considerable fine sand-carbonates, especially in west or lower shaft. A fine body of iron was brought to light running well in silver, some carrying as much as 100 ounces. The vein has an average width of from four to six feet, and the ore is said to have a value of $100 per ton. Date of organization, February, 1880; capitalization, $3,000,000; par value per share, $10; basis, non-assessable. Number of dividends paid to June 15, 1881, 3; total amount of dividends paid, $180,000; date of latest dividend, June 15, 1881, twenty cents per share; stock quoted July 1, 1882, fifty cents. Stock held chiefly in Boston, Mass. About seventy men are being worked. From 250 to 300 tons per week are being shipped. In 1881 the production was 3,856 tons, and 1,888 lbs. of ore averaging $56.44 per ton over smelting expenses, or $217,823.92. The running expenses were $83,531.69. From the net amount, $120,000 has been paid on dividends. After payment of every expense, the company had January 1, 1882, cash on hand, $55,161.45.

Caribou Mining Company is chartered under the laws of the State of New York. Office, 18 Wall Street, New York. The company's property is located in Boulder county, Col. The ore gives a silver assay of $75 per ton. The vein is from two to eight feet wide. Property owned (building, machinery, etc.), all first class; value over $150,000. The length of the main lode is 1,400 feet. Date of organization, April 23, 1879; capitalization, $1,000,000; par value per share, $10; basis, non-assessable. Number of dividends paid to February 20, 1880, 6; total amount of dividends paid to February 20, 1880, $60,000; date of latest dividend, March 20, 1880, at the rate of ten cents per share. Stock quoted July 1882, $2.50.

Carbonate Hill Mining Company (The) is chartered under the laws of the State of New York. Mr. Geo. Summers is the Manager. Office, 115 Broadway, New York. This company are the owners of the Brookland, Catalpa, Crescent, Wolf Tone, Modoc, and the Glass Pendery mines, all of which are located in Colorado. Amount of property, ten acres. The ore gives a silver assay of from ninety to 150 ounces per ton. Weekly output of ore about seven tons, and monthly expense account is estimated at $1,000; six men have been employed. Date of incorporation, 1879; capitalization, $4,000,000; par value per share, $10.

Cascade Mining Company. Jacob Hoopes, Pres., and Thomas M. Skinner, Superintendent. Office, Crested Butte, Col. The company's mines, viz., the Beaconsfield, Big Elephant, and Big Strike, all adjoining each other, are located in Gunnison county, Col. The character of the ore may be described as bromide of silver; mill tests giving seventy to 150 ounces of silver and sixty per cent. lead. The Beaconsfield vein is six feet wide; that of the Big Elephant, twenty feet, and the Big Strike mine shows a nine-foot vein. Prospects are good. Recent work exposed a large body of bromide of silver. Capitalization, $500,000; par value per share, $25.

Castine Copper and Silver Mining Company (The). Head office, Castine, Me. Mines located in Bagadirce mining district, New England. Stock and bonds held in Castine.

Castle Dome Silver and Mining Company (The). Trustees, John M. Wells, Henry K. Southwick, John W. King, Wm. Bond, James E. Hayes, Geo. A. Miner, Andrew H. Carghill. The company owns the following mines, which are the most profitable in the district: the Railroad, Flora Temple, William Penn, Pocahontas, and Caledonia, all located in Yuma county, Ariz. The William Penn has a strong vein of good ore. It is opened by two shafts, each of which is over 200 feet in depth; these shafts being connected by a tunnel 400 feet in length. The Flora Temple is well opened, and has a main shaft of 300 feet in depth; its ledge shows a four-foot vein of good ore, which yields an average of thirty ounces of silver and seventy-eight per cent. of lead per ton. The Pocahontas and Railroad are connected by a drift of 200 feet, and their shafts are about 250 feet each in depth. The total production of these mines is given as $2,000,000. Capitalization, $1,000,000.

Catskill Silver Mining Company (The) have properties in Nevada. Share capital, $1,500,000; shares, 300,000; shares, $5 each.

Centennial Mining and Milling Company (The) is chartered under the laws of the State of Connecticut. The officers are Wm. A. Simmons, Pres.; M. S. Pollard, Vice-Pres.; Nelson C. Parker, Sec.; Jas. M. Shute, Jr., Treas. Office, 31 Milk Street, Boston, Mass. The company's works are located in Tombstone district, Arizona. They have a capitalization of $5,000,000 in 200.000 shares, at a par value of $25 each.

Centennial Silver Mining Company is chartered under the laws of the State of New York. Office, 115 Broadway, New York. The company's works are located in Pinal county, Arizona. The ore gives a silver assay, with some gold and copper; value per ton, $125. Date of incorporation, July, 1880; capitalization, $2,500,000; par value per share, $10; basis, non-assessable.

Champion Mining and Milling Company (The) have property located near Pitkin, in Gunnison county, Col. Capitalization, $5,000.000; shares, 50,000, each $100.

Cherryfield Silver Mining Company (The). Officers, Sam. M. Campbell, Pres.; W. Freeman, Sec., Treas., and Man. Directors, J. A. Milliken, S. M. Campbell, Wm. Freeman of Cherryfield, Thos. Dolby, F. H. Williams of Boston Head. Office, Cherryfield, Maine. W. A. Leonard, Supt. Names of mines owned, Cherryfield, located at Cherryfield, Maine. Property owned, concentrating mill. Dimensions of workings; tunnel, 175 feet; length of levels, 200 feet. Principal market for the ore, Newark, N. J. Capitalization, $500,000, divided in 100,000 shares; par value, $5; non-assessable. Stock quoted Jan. 1, 1882, $1.

Chihuahua Silver Mining Company (The). Officer, W. H. Snyder, Sec., Indiana. Principal office, Logansport, Indiana. The mines are located in Chihuahua, Mexico. Par value shares, $100.

Christy Mining Company (The). Name of mines owned; Maggie, Uncle Sam, Silver Point, Silver Crown, Hillside, Great Western, and Northern Light. Location, Silver Reef, Utah. Length in feet of the main lode on which the company depends for its supply of ore, 10,000 feet; 10,000 feet in mine. Capitalization, $6,000,000; shares, 60,000; par value, $100; non-assessable. Yield during 1880, $272,100; number of dividends paid January, 1882, ten; number of dividends paid Dec. 9, 1881, nine; total amount, $54,000; up to Jan. 12, $6,000; amount. $60,000; date of latest dividend, Jan. 7, 1882; amount per share, ten cents.

Chrysolite Silver Mining Company is chartered under the laws of the State of New York. Mr. R. Neilson Clark is the present Superintendent, and Mr. Robinson, Engineer. Secretary, Henry C. Cooper. Offices, 18 Wall Street, and 115 Broadway, New York. The company's mines, viz., the Old Vultnre, Vulture, Kit Carson, Fairview, Colorado, Chief, Muldoon, Chrysolite, and Chrysopolis, are located at Fryer Hill, Lake county, Col. The company have a property of sixty-six acres. The iron ore is showing noticeable improvement in gravel. Ore assays per ton, 64.88 per cent. Company owns fine and complete saw-mill, ore-house, shafting, etc; value, $150,978.39. Developments disclose a large number of fine ore faces. A handful of the sand is nearly as heavy as so much bird-shot. The cost of mining and milling per ton is estimated at $64. The Chrysolite mine, since its first discovery in the fall of 1878 to the present time, has produced 50,270 tons of ore. Of this amount, 12,806 tons were produced before the Chrysolite company obtained a control, covering a period of one year ending October 9, 1879. Nearly two miles of shafts and cross-cuts have been made underground. Ore in some places, thirty to forty feet in thickness. The telegrams from the Superintendent have been, April 3, 1882, shipped fifty-two tons, remitted $4,000; April 4, shipped fifty tons: April 5, fifty tons, remitted $5,000; April 7, shipped last two days, seventy-seven tons, remitted $8,500; April 9, twenty-one tons shipped; April 10, twenty-six tons; April 11, shipped forty-five tons; average output being about forty-seven tons per day. The receipts of the mine per month a little over $50,000. The Chrysolite mine contained some time since over 31,000 linear feet of drifts and levels, or about six miles. The two levels of the mines are fifty feet apart, one at the depth of 100 feet, and the other, 150 feet. Altogether, in the mine, there are 52,000 to 53,000 feet of drifts. Current value of mine is $700,000. There are 534 men employed at the mine. Date of organization, December, 1879. Capitalization, $10,000,000; par value per share, $50. Number of dividends paid to December 10, 1881, eleven; total amount of dividends, $1,600,000. Date of latest dividend, December 10, 1881, fifty cents per share; date of latest assessment, December 12, 1877.

Climax Silver Mining Company is chartered under the laws of the State of New York. Office, 62 Broadway, New York. The company's mines are located at Leadville, Col., and cover an area of six and a quarter acres. The ore gives a silver assay; value per ton, $200. The current value of the mine is $56,000. Date of organization, September 22, 1879. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable. Number of dividends to date, five; total amount of same, $180,000. Date of latest dividend, August 20, 1880, thirty cents per share. Stock quoted June 10, 1882, twenty-nine cents.

Collateral Mine (The). Owned by Messrs. Bedell, Witherell, Smith, and others. Name of mine, Collateral. Located on Iron Hill, Col. The indication of the mine is most flattering. Shaft, 145 feet deep; drift, 112 feet. Best kind of ore; sixty ounces in silver, fifty per cent. in lead.

Colorado Central Consolidated Mining Company is chartered under the laws of the State of New York. The officers are Paul Lichtenstein, Pres.; Herm. R. Battzer, Vice-Pres.; Paul O. d'Esterhazy, Sec.; Alb. Krohn, Treas. Office, 29 Broad Street, New York. The company's works are located in Georgetown, Clear Creek county, Col. The character of the ore is silver; value per ton, $150. The company own two engines, pumps, and buildings, valued at $46,200. They have five tunnels, which range all the way from 200 feet to 1,500 feet in length. Date of organization, November, 1879. Capitalization, $3,000,000; par value per share, $10; basis, non-assessable.

Colorado and New Haven Mining Company (The). Mr. H. Remington, Manager, one of the stockholders. Name of mine owned, Bullion. Location of mine, situated on the north spur of Lincoln, beyond the Russia mine. December, 1881. The Bullion is a new mine, having been opened up during the last season. This mine is now listed as one of the steady producers of this district. It is shipping from ten to thirty tons per month of ore that mills 150 ounces.

Confidence Silver Mining Company (The). Location of mines, Gold Hill district, Nevada. 130 linear feet in mine. Capitalization, $2,496,000; shares, 24,960; par value, $100. Number of dividends paid to May 1, 1865, six; total amount, $78,000; date of latest dividend, May 1, 1865; number of assessments levied, twelve; total amount of same, $268,-800. Date of latest assessment, February 12, 1881.

Continental Divide Mining Company (The). Officers, Trustees, 1881, B. Mark Wheeler, Davis H. Waite, Arthur R. Waite. Head office, Aspen, Pitkin county, Col. Capitalization, $10,000,000; shares, 1,-000.000; par value. $10.

Connell Mining Company (The). A very rough country, covered with snow, and impassable for six months in the year. Throughout the region are found fissure veins of silver-bearing rock and beds of anthracite coal of good quality. Capitalization, $500,000. Date of organization, May 9, 1881.

Columbia Consolidated Mining, Milling, and Smelting Company (The). Directors, E. H. Mack, Jacob Fleischer, Simon Doran, Wm. Franklin, and Jacob A. Fischer. Offices at Denver, Col. The property of the company is located in Summit county, Colorado. The capital stock is $5,000.000; number of shares, 500,000; shares each, $10.

Consolidated Rico Mining and Milling Company (The) owns the Cleveland and Dolores lodes on Expectation Mountain, and the Elgin Boy and Lady Elgin on Horn Gulch, all of which have been worked during the past year with satisfactory result.

Contention Consolidated Mining Company (The). Vice-President, W. Hart Smith. This company owns the Contention (formerly the Western), the Flora Morrison, and the south-east half of the Sulphuret. The consolidation of these properties was effected during the past summer. The Contention, the most important of these mines, has long been known as one of the principal mines of the district. It was opened by several shafts, the deepest being 700 feet, and by levels, drifts, winzes, cross-cuts, etc., aggregating many thousands of feet. Ore is being extracted from various parts of the mine, and gives various assays ranging from $100 to $200 per ton. Total production for year 1881, $1,500,000, as per statement in *Tombstone Epitaph*. The Flora Morrison is a valuable property. The working shaft is down more than 500 feet. The yield of this mine and the Sulphuret is included in the general yield of the company's property. Ore has been traced to water level, and galenites and pyrites begin to appear in quantity. The dike itself is now solid and dioritic, and is accompanied with ore of a high grade, giving promise of continuance downward with the dike. This company, known as the Western, up to December 10, 1881, paid $1,475,000. Capitalization, $12,500,-000; shares each, $50. In the year 1880 the mine yielded $1,214 055: gold, $224,448; silver, $989,607. Amount of dividends paid to July, 1882, $562,500; date of latest dividend, May 27, 1882. Amount per share, 25 cents. The Farmers' Loan and Trust Company are their agents in the city of New York for the transfer and registration of stock certificates at the office, No. 26 Exchange Place.

Continental Mine (The). George Clark, owner. This mine is located on Finkey creek, Arizona. Quality and character of ore, very fine silver; some very fine specimens have lately been discovered, 1880.

Contra Casta Silver Mining Company (The). Date of organization, October 24, 1881, at Portland, Me.; capitalization, $50,000.

Cora Silver Mining and Smelting Company (The) is chartered under the laws of the State of New York. The officers are W. Henderson, Pres.; H. H. Marks, Vice-Pres.; R. S. Yardley, Sec.; R. B. Leake, Treas. Trustees, W. Henderson, W. H. Marks, R. T. Yardley, R. B. Leake, and J. Leake. Supt. of mine, Nathaniel Primrose. The offices are at 63 Broadway, (room 14) New York. The properties of the company are located in Dakota. Capitalization, $1,000,000, in 200,000 shares of $5 each; a limited number of shares offered at fifty cents per share.

Corihuirachie Silver Mountain Company (The). Location of mines, at the foot of Silver Mountain, Mexico. Character of ore, silver. Ore yields about $60 to the ton of silver. Two mills turn out about $4,000 per week silver bullion. Property owned by the company, two mills and two smelters, one a fifteen-stamp mill, the other a twenty-stamp mill. Company employ about 420 men.

Crooke Mining and Smelting Company (The) has property located in Hinsdale county, Col. The company owns the chief smelting works in the district, which are situated three-quarters of a mile south of Lake City. The machinery is propelled by water-power derived from Granite Falls in the channel of Lake Fork. Production for 1881, 600 tons lead and 75,000 ounces of silver.

"**Crown Mining Company (The)** is chartered under the laws of the State of New Jersey. Officers, J. L. Sprogle, Pres.: Jos. L. Fryer, Sec. and Treas. Directors, J. L. Sprogle, Jas. L. Fryer, A. M. Peel, M. Cullis, Charles De Haven. Principal office, 310 Chestnut Street, Philadelphia, Pa. The property owned is the Charlotte and Judson lodes; location on Prospect Mountain, Little Evans Gulch, Lake county, Col. Capitalization, 200,000 shares; par value, $5; non-assessable.

Cunard Mining Company (The) owns the Lucky Mine, located near Breckenridge, Col., about one mile northwest of Lincoln. About $10,000 has been spent in developments, and there are on the dumps at the present time about 400 tons of galena ore, valued at sixty dollars per ton. The mine is located at an altitude of 11,000 feet. The vein is a fissure, the ore soft and good for milling, assaying forty-five ounces of silver, at the rate of sixty-five per cent. lead. The stock is held by three Chicago parties, who bought it for $5,000 in October last.

Cushing Mine (The) is located on Yankee Hill, Dake county, Col., the owners being J. M. Dougherty, Lucius Cushing, Simon Wheatley, and W. R. Holly. A strike of good ore has been made. It is said to be of higher grade than any yet found on the property, running about $50 to the ton, sixty-eight per cent. of lead and twenty-one ounces of silver. The vein shows an irregular streak from two to five feet in thickness. Twenty tons of ore have been shipped to Meyer's Reduction Works. Developments are being energetically prosecuted.

Day Silver Mining Company. The officers are H. A. W. Tabor, Pres.; Dennis Sullivan, Vice-Pres.; Geo. R. Fisher, Treas.; J. F. Wellhorn, Sec.; T. Foley, Gen. Mang. Directors, N. H. Bush, Chas. L. Hall, Thos. G. Gibson, and J. W. Gaynor. Date of annual election, September 20. Office, 310 Pine Street, San Francisco. The company's property is located in Jack Rabbit district, Lincoln county, Nev. Capitalization, $10,000,000; par value per share, $100. No dividends paid to date (June, 1882.) Number of assessments levied, 10; total amount of same, $180,000; date of latest assessment, January 28, 1882; amount per share, 50 cents. Floating indebtedness, April 1, 1882, $85,000.

Decker Mine (The). Owned by Messrs. J. S. Morris, G. S. Price, and J. M. Brooks. The Decker Mine is located in Placer county, Cal., near Bloomer. Old shaft down sixty-five feet. Thirty tons of rock have recently (September, 1880) been sent to Pugh's Mill to be crushed. The claim is 1,500 feet in length and 100 feet on each side of the ledge. Have taken up the eastern extension of 1,500 feet and are sinking a second shaft. Fifteen men employed.

Defiance Mining Company (The) has property located in Chaffee county, consisting of twenty-four claims in a group, nearly all of which are worked by three cross-cut tunnels, named respectively the Whale, Victoria, and Arkansas. The Whale is in forty feet, the Arkansas fifty feet, and the Victoria 150 feet. The lodes to be cut all show the mineral characteristic of the section, and the veins are usually strong and well defined.

De Frees Mill and Mining Company's (The) property is located at Tuscarora, Elko county, Nev. There are 1,300 linear feet in mine. Capitalization, $5,000,000; par value per share, $100; number of assessments levied, eleven; total amount of assessments levied, $162,500; date of latest assessment, July 21, 1881.

Denver City Consolidated Silver Mining Company is chartered under the laws of the State of Colorado. The officers are J. Whitake Wright, Pres.; C. E. Johnson, Vice-Pres.; Edward D. Cope, Treas.; Geo. L. Smedley, Sec.; Superintendent, Robert Bunson. Offices, Third and Walnut Streets, Exchange Building, Philadelphia, Pa., and Post-Office Building, Leadville, Col. Transfer office, Exchange Building, Philadelphia. The company's mines are the Denver City, Shamus, O'Brien, and Quadrilateral, located at Fryer Hill, Leadville, Lake county, Col. Depth of shaft, 250 feet. Amount expended in developing property to January, 1882, $200,000. Capital stock all issued. The Denver City ships about fifteen tons of ore per day; eighty men employed in mine, and two shafts worked. Capitalization, $5,000,000; par value per share, $10; basis, non-assessable, full paid; stock quoted July 1, 1882, thirty-two and a half cents to thirty-five cents.

Denver and Rainbow Mining Company (The) has property located in Chaffee county, Col. The company owns the Denver and Rainbow mines, situated at head of Taylor Gulch. The developments on Denver consist of a sixty-eight-foot shaft, and tunnel 344 feet, showing a fifteen-inch streak on the Denver vein, which assays seventy-eight ounces of silver. A drift has been run from this tunnel to the Rainbow vein, a distance of 156 feet, exposing twenty-six inches of mineral galena and carbonates, assaying seventy ounces of silver and thirty-two ounces of gold. Assays from the mineral in the Rainbow shaft range from 225 to 1,420 ounces.

Derby Mine (The). Owned by Willey, Shane, Lowell, Adams, Bardwell, and others. The Derby mine is located one mile above Sunny South, Placer county, Cal. Is being prospected.

Diamond Queen Mining Company (The) has property located in Chaffee county, Col. The company owns the Diamond Queen mine, on Boulder Mountain, and the Alpine and Betsy Link mines, on the same mountain (Boulder). The incline shaft of 135 feet and two levels are all in heavy galena ore with eight feet of vein matter, and neither wall developed. The workings show about ten inches of pyrites, coarse galena, oxide of copper and carbonate of iron. Other streaks carry fine galena and copper, making a total pay-streak of four feet; the average value of which is twenty ounces of silver, and in some instances as high as seventy-two per cent. of lead, and in others as high as thirty-seven per cent. copper.

Dolores Valley Mining Company (The) is one of the Pioneer enterprises of Dolores county. The property comprises numerous groups of mines scattered over the entire mining district of Rico. The Deadwood Gulch group contains fifteen mines; the Brunette Gulch group, ten mines; Expectation Mountain group, eleven mines; Silver Creek group, nine mines; Telescope Mountain group, nine mines; Dolores Mountain group, three mines; Concord group, eleven mines; C. B. & Q. group, four mines, and several others situated in various parts of the district. The Dolores group is being developed by a large cross-cut tunnel about 800 feet in length. It is proposed to operate the Silver Creek group also by a tunnel (cross-cut), running north into Telescope Mountain to cut some of the veins, hundreds of feet below the outcrop.

Dolly Varden Mine (The) is located in Pitkin county, Col. Mr. Geo. W. Brunt is General Manager and Capt. Andrew Gallagher, Superintendent. The property is looking well. Ore assays from 100 to 700 ounces per ton. The Dolly Varden is employing a force of about twenty-five men, and is shipping from thirty to forty tons of ore per month.

Dolphin Mining Company (The). Dennis Sullivan, Manager. The Dolphin mine, owned by this company, is located on Fryer Hill, Col. About six acres of property owned. Dry silver ore. (1880.) This mine, adjoining the Matchless on the west, under Mr. Sullivan's management, is rapidly gaining prominence as a productive and profitable property. At present the mine is yielding, from accounts, about seventy-five tons of ore per week; low in lead, but of very high grade in silver. There is quite a pile of medium grade ore on the dump, or in the shaft-house, running from $80 to $100 to the ton. The mine has done a creditable amount of work, considering the time it has been in operation. Thirty men are employed. Capitalization, $2,500,000; shares, 250,000; par value, $20. Total profits of mine since discovery, $75,000. Weekly output of ore, tons, 200. Monthly expense account, $4,500.

Dry Mountain Silver Mining Company, of Terre Haute, Ind., is chartered under the laws of the State of Indiana. The officers are J. B. Schultz, Pres.; David Kern, V.-Pres.; D. N. Taylor, Sec.; J. P. Lyman, Treas. Superintendent, Dr. James Wright. Office, 302½ Main Street, Terre Haute, Ind. This company are the owners of the La Luz and Prieta mines, located at Parral, State of Chihuahua, Mexico. The ore assays from $30 to $80 per ton. Capitalization, $1,000,000; par value per share, $100.

Duncan Silver Mining Company is chartered under the laws of Canada. The officers are Thos. Appleton, Pres.; L. B. Stone, Treas. Transfer office, 79 Water Street, Boston, Mass. Transfer days, any.

Dunderburg Silver Mining Company is chartered under the laws of the State of New York. Office, 62 Broadway, New York. The company's property is located at Georgetown, Clear Creek county, Col. The ore assays both silver and lead; value per ton, $200. Total extent of claim, six lodes, 7,900 feet. The company's buildings are first-class; value, $100,000. Date of organization, May, 1879; capitalization, $1,500,000; par value per share, $10; basis, non-assessable; stock held principally in New York.

Dunkin Mining Company is chartered under the laws of the State of Colorado. Office, 60 Broadway, New York. The Dunkin mine, owned by this company, is located at Leadville, Col.; extent of claim being about nine acres. The ore contains silver with lead. The Dunkin mine was purchased in April, 1879; mining operations were commenced at once, and mineral was soon struck. A report under date of May 28, 1881, says of this mine, since August the Dunkin mine has been turning out from $21,000 to $33,700 per month, while the expenses for the same time have averaged only $6,500 per month. Ore now worked nets from $22 to $35 per ton, and there is said to be considerable ore in sight. The company have on their property, engine, ore house, and shaft house. The current value of the mine is $70,000. At a comparatively short distance from the surface, the company has recently found a deposit of extremely high-grade ore (chloride), a ton of which, selected, assayed 4,673 ounces of silver to the ton. Four tons more, not so carefully selected, have been shipped, and there are several more tons in the ore house. The streak of very rich chloride is carefully sacked and kept separate. The iron ore outside the pay-streak is broken up into fine pieces and selected. There are thus three grades of ore produced. The first-class will run 4,000 to 5,000 ounces; the second class, 500 to 1,000 ounces, and the third class about 100 ounces to the ton. There are also other deposits which will pay handsomely for shipping. Date of organization, 1879; capitalization, $5,000,000; par value per share, $25; basis, non-assessable; yield during 1880, $179,278; number of dividends paid to June 2, 1881, fifteen; total amount of dividends paid, $200,000; date of latest dividend, June 2, 1881, seven and a half cents per share; stock quoted July, 1882, fifty cents.

Durango Parrott City and Fort Lewis Toll Roll Company (The). Trustees, A. P. Camp, Charles Merrin, Otto Mears. Mines located in Colorado. Capitalization, $15,000, shares, 150; par value, $100.

Eagle Smelting and Silver Mining Company is chartered under the laws of the State of Colorado. The officers are P. P. Gustine, Pres.: A. H. Woodward, Sec.; Dr. E. S. Perkins, Treas. Office, 125 South Fourth Street, Philadelphia, Pa. Capitalization, $3,000,000.

Eagle Mine (The), owned by Messrs. George Desalier and Philip Carter. The location of this mine is in Canyon, California. Ore, smelting character; assays over 100 ounces of silver per ton. Shaft sunk on a fine vein of ore two feet in width, traced several hundred feet on the surface.

Eagle Consolidated and Silver Mining Company (The). Officer, F. W. Ulter, Sec. Principal office, No. 112 Leidesdorff Street, San Francisco, Cal. Location of mines, California.

Eagle Rock Silver Mining Company (The). Officers, S. N. Doten, Pres.; A. N. Hawls, Treas.; Dr. S. A. Packard, Sec. Location of mines, Sedgewick, Maine. Capitalization, $500,000; shares, 100,000; par value, $5.

Eagle Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are William S. Clark, Pres.; John R. Bothwell, Sec. and Treas. Superintendent, G. W. Bothwell. Office, 2 Nassau Street, New York. This company's property is located at Lewis Camp, Lander county, Nev. Capitalization of $2,000,000, in shares at a par value of $10 each.

El Guebic Mining Company (The). Officers, R. W. Thyng, Pres.; S. P. Wardell, and H. E. Irvine, Sec. and Treas. Directors, the above officers and Geo. A. Wadley, J. Y. Mainland, Geo. J. Wilder, A. B. Foster, J. W. Smith. Financial Agents' office, Goff, Hastings & Co., No. 292 Washington Street, Boston. The mines of this company are located in the State of Sonora, Mexico. It was organized at Saco, Maine, May 7, 1881. Capitalization, $500,000.

Elk Mountain Mining Company. Offices, Central City and Leadville, Col. This company owns the Nevada mine and half of the Last Chance. Their works are located above timber line, six and a half miles from Gothic, between Eureka and Cliff mines, Gunnison county, Col. The company has good water-power, sufficient to run largest class of concentration works. They have a capitalization of $1,000,000, in 100,000 shares at a par value of $10 each.

Elm Tree Silver Mining Company (The). Officers are R. R. Call, Pres.; W. Muirhead, Jr., Treas.; W. A. Hickson, Sec. Directors, R. R. Call, W. Muirhead, Jr., John Sadler, John Ellis, W. R. Payne, John J. Adams, New York; W. A. Hickson. Principal office, Chatham, N. B. These mines are located on branch of Elm Tree river, Gloucester county. The ore is chiefly galena, associated with zinc blende; it assays $100 to $250 in silver and lead. The character is gangue of quartz; to wall of slate; no wall of white stone, apparently. Extent of deposit, unknown. Capitalization, $500,000; shares, 100,000; par value, $5.

Empire Mining Company (The). This company owns the Empire mine, located in the Tombstone district, Arizona. This mine is in the same group with the Girard and Tranquillity, both productive mines. It is opened by a double compartment shaft to a depth of 450 feet, and by working levels, drifts, winzes, etc., to a considerable extent. On the 200-foot level the vein has been intersected by a cross-cut, and a drift has been driven along it several hundred feet. The mining plant consists of good buildings and excellent steam hoisting words of sufficient capacity to sink 1,200 feet. The ore is very fine. A large body on the 450-foot level is steadily enlarging. No stoping is at present done, all work being in way of development. As far as explored, the ore body on the forty-five level is from twenty-five to thirty feet in width. About seven tons of ore are hoisted daily.

Endomile (The) is located in Grand county, Colorado, and prospects of the property are favorable; the ore body increasing in size as development progresses. Depth of shaft, 300 feet; length of adits, that is levels, 168 feet.

Engineer Mountain Silver Mining and Smelting Company. Mr. Charles L. Hill, Manager. Location of mines, Hinsdale, Col. Capitalization, $200,000.

Exchange Silver Mining Company is chartered under the laws of the State of New York. The officers are W. H. Jarvis, Pres.; W. H. Howell, Treas. Office, 34 Broad Street, New York. The company's property is located in Nevada. Capitalization, $1,000,000; par value per share, $10. Total amount of dividends paid to July, 1882, $18,000. Date of latest dividend, July, 1882.

Evening Star Mining Company (The), under the supervision of Mr. W. S. Ward, is one of the most valuable properties on Carbonate Hill. The mines owned by this company are located in Leadville, Lake county, Col. The property has an extent of five acres, only two of which have been developed, and this chiefly by drifts, the manager stating that it is his intention to continue drifting while the entire property is being developed. The output is about eighty tons per day, netting $42 a ton, or a total of $100,000 per month. Developments were commenced 1879. $400,000 were expended May 20, 1882. During 1880, the performance of the mine was very erratic. 150 men employed. Capitalization, $500,000, in 50,000 shares; par value, $10; non-assessable. There were forty-three dividends paid to June 17, 1882; total amount, $1,175,000. Latest dividend, June 9, 1882, $1 per share. Stock quoted July 1, 1882, $50. Working expenses per month, $15,000.

Empire Mine, owned by W. H. S. Wright. The Empire is located in Los Currillon district, about one mile from Bonduza city, New Mexico. Gray ore, sixty-five per cent. copper, assaying per ton, $200.

Falco Silver Mining Company (The) has property located in Chaffee county, Colorado. The company owns the Black Crook, in the Chalk Creek district. The main shaft is down 150 feet, and a drift has been run at the 100-foot level. The vein is a strong one, being from four to ten feet in width, and though the ore is low grade, it improves with depth; and where so large a body of ore is found, there is little doubt that, with proper development, it will become a dividend-paying mine, or at least self-sustaining.

Falcon Silver Mining Company's (The) property is located at Alpine district, Colorado. The company's mine is an auxiliary of the Brittle Silver. They have a capitalization of $1,000,000.

Forest Queen Mining Company (The). The officers are Gen. Palmer, Pres.; R. W. Woodbury, Vice-Pres.; R. F. Woodward, Sec.; B. C. Dodge, Treas. Superintendent, Ira Brown. The company's mine is located in Ruby district, Gunnison county, Col. In the early history of the mine the ore had to be packed and hauled to Alamosa, 175 miles distant, then shipped to Pueblo and Denver for treatment, incurring a total cost of transport of $100 per ton, and even then a heavy margin was left the company. On the dumps of 1879 and 1880 large quantities of 100 and 130 ounce ore can be selected, while that mined to-day by rough sorting will easily produce 200 to 500 ounces per ton. The mine is now in a condition to stope out and suck up from the surface from fifty to sixty tons per day. There is no stock in the market.

Fort Meade Silver Mining Company. The property is located in Lawrence county, Dakota, and consists of the Fort Meade, San Joaquin, San Jacinto, Red Cloud, and a portion of the Mammoth mines, and operations upon the same are being energetically conducted. The Superintendent, in his report of the operations in the Red Cloud for November, says, a large body of non-mineral-bearing rock has been removed from the tunnel, and the vein uncovered, exposing ore 180 feet in length, and from four to nine feet in width, and of unknown depth. The rich brown sulphurets found about seventy feet from the mouth of the tunnel are still found in wide strata as far as new work has progressed, and the gray carbonates so noticeable on the west side of the vein are still present in about the same proportion as when first discovered. More chloride and native silver appears as the work proceeds under the heavier portion of the hill, while the oxides and sulphurets of iron are found in all parts of the vein. Galena of a high grade in silver is now present in larger proportions than at any previous time, and from the oxide of iron present larger bodies of the lead ores are looked for as depth is attained. Beyond the 180-foot station, a drift is being driven to the east. This has already progressed some fourteen feet, and is in a fine body of ore. This, with the exception of a very large proportion of oxide of iron, closely resembles the other ores; but where the oxide occurs, the ore by assay shows $100 in gold per ton, and 104 ounces, $116.48, in silver. This drift is about four feet in ore, and will be continued until a wall is reached upon the east side. During the month of November, 21,150 pounds of ore were shipped to Omaha from this mine, yielding on an average $205 per ton. The freight on the same was about $30 per ton; reduction, $25 per ton, less 85 per cent. of the value of lead, reducing smelting charges to about $15 per ton, and making the total cost, delivered in Omaha and reduced to bullion, about $45 per ton, and leaving a net profit over mining, freighting, and reduction of over $150 per ton.

Frank Hough Mines (The), owned by J. W. Watson, J. H. Dudley, J. F. Sanders, Col. Hall, Wm. Parker, and Phil. Golding, are located in Engineer Mountain, Hinsdale county, Col. Mr. Blaisdell was appointed Superintendent in 1881. The ore is extremely solid and heavy mineralized. Its great uniformity of value is very remarkable, for the nets all show very near the same results. Hundreds of tons of ore are now out on the dump of the mine, and an almost unlimited amount can be mined from developments already made. The ore from the mine is of a very peculiar character. It much resembles the copper matter produced at the Argo smelting works, and has the appearance of having been already smelted. It is very solid ore. Numerous tests made show its value to be about thirty per cent. in copper and carrying about eighty ounces in silver to a ton.

Gaff Mining Company (The) has property located in Chaffee county, Col. The company owns the Cache Creek, which is the principal of the rich placer mines of the Hope district which lies west of Granite and extends from the Arkansas river to Lost Cañon Mountain. The property comprises about 1,000 acres. The mine is worked by a bedrock flume nearly two miles in length.

Galena Gulch Mining Company (The) owns the following mines: the North Star, Narrow Gauge, Muldoon, and No. 3, which together constitute a fine block of property located in Galena Gulch, Gunnison county, Col. The North Star is a granite and lime contact on which three shafts have been sunk to pay material. The character and quality of mineral varies in the different workings. The Muldoon is a granite and lime contact, at fifty feet down, all in vein matter, mostly iron with manganese and some copper. No. 3 is a lime contact, showing eighteen feet by three and one-half feet of soft carbonates, with a six-inch streak carrying galena. The company have shipped from 50 to 60 tons of mineral during the season of 1881, giving mill returns ranging from $30 to $70 per ton, and have built a good wagon-way from the town of White Pine to the mines.

Geneva Consolidated Silver Mining Company (The). The company's works are located at Cherry Creek, White Pine county, Nevada. There are 3,000 linear feet in the company's mine. Capitalization, $5,000,000; par value per share, $100; number of assessments levied, seven; total amount of assessments levied, $82,500; date of latest assessment, March 6, 1876.

Gilpin County Mining Company (The) owns 550 feet of the valuable property situated in Lake Gulch, Gilpin county, Col. The mine has been worked with a small force during the last two and a half years. The improvements are of a substantial character. The mine was discovered in the early mining days of the county, and produced large quantities of free milling ores before the smelting facilities were introduced. From July, 1877, to December 31, 1881, the production was about $140,000, and the company have at the present time a reserve of about $150.000 in the treasury. The discovery shaft is 568 feet deep and has never been out of pay, there being at the bottom at the present time thirty-five inches of good ore; over 1,500 feet of excavations, chiefly levels, have been worked, all in good ore. The average value of the smelting ore is $75 per ton.

Glascow Silver Mining Company (The). This company owns the Iron mine, located in Buckskin Gulch, Loreland Hill, Col. The character of the ore is iron, 262 ounces in silver per ton, mill run, six tons. The character of mines consist of veins, 1881. The company intends to commence work on this property and to prosecute the same at once.

Glasgow Silver Mining Company. Principal office, Leadville, Col. Branch office, Boston, Mass. The company's works are located in Colorado. They have a capitalization of $1,000,000.

Golconda Silver Mining Company is chartered under the laws of the State of Colorado. They have a capitalization of $500,000.

Golden Fleece (The). Mine located on the Bobtail Hill, is owned by A. G. Elliott. The mine has been a large producer, and is well opened by a 400-foot shaft, and levels to an extent of 550 feet. The vein is four feet wide, carrying both milling and smelting ore; the latter averaging $140 to the ton.

Gold Field Consolidated Mining Company. Mr. R. Vogel is Vice-Pres. and Mang. The company was organized in 1880. Their property is located in Colorado. The ore is a mixture of gray copper, galena, and sulphide of silver. Sometime since the company developed a streak of ore three feet in thickness, mill run giving returns of 118, seventy, and fifty-five ounces in silver. Character of the mines; veins and drifts. The company have hoisting machinery and machine drill at their works.

Gold and Silver Mining Company (The). Incorporators, E. H. Wiley, W. S. Edwards, J. C. Chalmers, Frederick Frank, H. P. Wood. The Virginia mine is owned by this company, located on Little Ellen Hill, Col. First-class ore, silver and lead, twenty-two and a half ounces silver, 46 per cent. lead. Assays, seventeen and a half ounces silver, 30 per cent lead (second class). This company is owned by the United States.

Good Hope Silver Mining Company. Office, Leadville, Col. The company's property is located in Park and Lake counties, Col. The company has a capitalization of $300,000, in shares at a par value of $10 each.

Grand Central Silver Mining Company (The) is chartered under the laws of the State of Ohio. The Grand Central mine, one of the most important properties in the district, is located in the Tombstone district, Cachise county, Ariz. The mining plant comprises all known improvements, including thirty stamps, sixteen pans, eight settlers, and one agitator, through which comes all pulp that comes from the batteries. The main shaft is 600 feet deep, and a new working shaft 500 feet deep. The workings are in excellent condition, ninety tons of ore are shipped daily, the mill being gained on at the rate of ten tons per day. There are 185 men employed. The mill is driven by a 140-horse-power engine, fed by four large boilers. On the 300-feet level, there is a continuous body of ore several hundred feet long, widening from ten to forty feet, all good milling ore. Up to November, 1881, there were mined 20,000 tons of ore, 18,000 of which, when milled, yielded $848,176.46. Capitalization, $10,000,000; to July 1, 1882, ten dividends paid, total amount of same, $250,000; amount of last dividend, $1 per share. The weekly yield of ore is about 500 tons. Production for the nine months prior to December 31, 1881, 1,061,520.

Grand Prize Mining Company (The), of which E. M. Hall is Sec., has its offices at 827 Pine Street, San Francisco, Cal. The annual election is held on September 20. The property is located at Tuscarora, Elko county, Nevada. The mine is filled with the usual plant of machinery, etc. The length of lode on which the company depends for its supply of ore is 1,500 feet. Capitalization, $10,000,000, in 100,000 shares of $100 each. The yield during 1880 was $281,604. Amount of dividends, $450,000, to September, 1880, date of last dividend, September, 1880; amount per share, twenty-five cents; eight assessments levied; total, $315,000; last assessment, May 2, 1882, ten cents per share. Floating indebtedness, $32,872; stock and bonds reserved in treasury, $146,501. Since October, 1881, the mine has been shut down, and is now in the hands of the creditors. Preparations are now being made to resume work, as there is rock-milling ore below the 600-foot line. Stock was quoted at eighteen cents, July 14, 1882.

Grand Victory Mining Company (The), formerly known as the Grose, has property located at Diamond Springs, El Dorado county, Cal. The ore is low grade, containing sulphurets and a low percentage of silver, making the amalgam worth from $3 to $5 per ounce. Average assay value from $3 to $8 per ton. Single specimens of bunchy ore assaying as high as $700 per ton. The lode is from twenty to thirty feet wide. The quartz being frozen to the side walls of hard porphyry rock. The mining plant comprises a fine fifty-stamp mill, with all modern improvements, run by cheap water-power. The main shaft is down 100 feet. There is considerable ore in sight that will keep the stamp-mill going for a long time to come.

Grand Central Mine (The). Owned by Messrs. Marks, Goldtree & Co. The Grand Central Mine is located in Arizona. Depth of shaft, 175 feet; has some very rich ore. Assays run very high. Contention taking out chlorides, and getting ready for the mill. The Rattlesnake and Emerald located near the property of the above owners, 1880. Shaft will be sunk. Same party have begun work on the Blue Jacket, which shows a fine ledge of ore, averaging about $125 per ton. Own an interest in the War Up mine, on which they will sink a fifty-foot shaft.

Granby Mining Company (The). Offices, Silverton and Denver, Col. The mining property owned by this company consists of the Granby, Mountain Rain, Rough and Ready Basin, and Little Albert lodes. The property is located in Needle Mountain mining district, La Plata county, Col. The company has a capitalization of $1,000,000.

Grand View Mining and Smelting Company (The) own the Grand View mine, situated on Nigger Baby Hill, Dolores county, Col., which is developed by an incline shaft 160 feet in two drifts, 153 feet and eighty feet, respectively. The pay-streak gives iron and manganese, and is from two to three feet in width, and mills from fifty to 500 ounces per ton in silver, with traces of gold. About 300 tons of this ore have been treated at the company's smelter with good results, the iron in it forming a good flux.

Granger Mining Company (The). The officers are Albert E. Clary, Pres.; Dexter H. Follett, Treas. Col. Granges and Mr. Nahum Hinkley, Superintendents. The company's works are located at Blue Hill, Maine. They own about seventy acres of land. The ore assays 100 pounds of copper, and nine ounces silver to the ton. They own shaft house, engine house, ore house, and smith's shop. Depth of shaft, 150 feet. The main lode is 2,640 feet in length. Date of organization, December, 1881; capitalization, $100,000; par value per share, $1; stockholders are subject to an assessment of five cents quarterly till fifty cents have been paid; stock reserved in the treasury, April, 1882, 25,000 shares; stock quoted, November, 1881, six cents per share.

Great Basin Mining and Smelting Company. Gen'l P. E. Connor, Mining Director. The Great Basin mine, owned by this company, is located at Mineral Hill, Utah. The ore assays 100 ounces per ton. The company has a smelter at Stockton; concentrating works lighted by electricity and best appliances are being introduced. The main lode is 2,100 feet in length. In 1881 the average yield of this mine per day was reported to be about twenty-five tons of good merchantable ore, besides forty tons of jigging ore, with present facilities for hoisting. Supply of water is furnished by a four-inch galvanized pipe which is laid for a distance of about six miles. They have one stack in operation reducing about twenty-five tons of ore per day, turning out about five and one-half tons of bullion, which runs 100 ounces per ton. The company's concentrating works reduce about 100 tons of ore per day to twenty tons of concentration by the web process. The yield of mine, at present about twenty-five tons, will be considerably increased on completion of large combination shaft, now eighty feet down. Stock and bonds are held principally in Boston, Mass.

Great Baltic Silver Mining Company (The) is chartered under the laws of the State of New York. Office, 17 Dey Street, New York. The company own three full claims, (total extent of claims, 1,800 by 1,500 feet,) and a mill site, located at Reece River Ditch, Lander county, Nev. The ore has a value of from $60 to $80 per ton. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable; full paid.

Great Sierra Mining Company is chartered under the laws of the State of New York. The company's property is located in Tuolumne and Mono counties, Cal. They are the owners of the Mt. Dana mine. The ore is high grade, running from $40 per ton up into the hundreds, with a touch of refractory elements that prevent free milling, but these are readily expelled by the Frue concentrator The Mount Dana is one of the largest silver-bearing ledges in the country, carrying an ore vein sixty-two feet in width and vein matter to a width of nearly 200 feet. The company own a twenty-four-stamp mill. Date of organization, June 26, 1881; capitalization, $10,000,000; par value per share, $10; basis, non-assessable.

Great Vein Silver Mining Company (The). Incorporators, Frank J. Moody, A. K. Bonta, A. J. Strand. The location of the mines of this company is in Summit county, Col. Capitalization, $5,000,000.

Great West Mining Company (The). G. W. Kellogg, Gen. Manager. The location of the mining property belonging to this company is on Mount Bross, Col.

Guadalupe Silver Mining Company (The) have their works located at Urique, State of Chihuahua, Mexico. Wm. Rockwood is Sec. Office, 109 California Street, San Francisco, Cal. The company have levied twenty-eight assessments; date of latest, April 28, 1882.

Gunnison Mining, Milling, and Smelting Company. Location of property, Colorado. Capitalization, $2,000,000.

Gunsight Consolidated Silver Mining Company is chartered under the laws of the State of New Jersey. The officers are S. T. Latham, Pres.; G. P. Matthews, Treas.; W. H. H. Graham, Sec. Directors, S. T. Latham, B. F. Bivius, W. R. Warner, W. H. Graham, G. P. Matthews, H. A. Colburn. Office, N. E. cor. Broad and Chestnut Streets, Philadelphia, Pa. This company owns the Gunsight, Silver Girt, and Eastern mines, located in Myers district, Pima county, Arizona. All full claims. The property is situated on the slopes of the Sierra de la Esperanza, the ledge dipping into the mountain at an angle of 45°. An inclined shaft, sunk on the ledge, has reached a depth of 200 feet, where an abundance of low or medium ore is available. The assay is about $40 per ton. Improved steam-hoisting machinery is now being erected over the main shaft, which is triple compartment. A forty-stamp mill is proposed as soon as circumstances will permit, and it is estimated there is sufficient ore in sight to keep this number of stamps in operation for a year. Capitalization, $2,000,000; par value per share, $10; basis, non assessable.

Gunnel Consolidated Mining Company (The) owns an area of 7,055 feet on the Gunnel, Gunnel No. 2, Wheeler, Marine, and Hattie, located on Prosser Mountain, Gilpin county, Col. The improvements effected during the past year in the mine consisted of sinkings in the main shaft to the extent of 228 feet, giving a total pumping depth of 1,228 feet. A new counter-balance bob has been put in at the 700-foot station, and the eight-inch Cornish-pump carried down 200 feet, the sinking of the main shaft still being continued. The total development work was 1,550 feet. The ore on an average has been low grade. The Marine lode, on the south slope of the mountain, has a main shaft down 220 feet, which has been sunk under contract. At 100 feet a level is driven west sixty-five feet, striking a mineral vein of ore similar in character to that of the Whitney.

Hall and Brink Silver Mining Company (The) own the Dolly Varden mine, located on Mount Bross (eastern slope), Park county, Col., and adjoining the Moose; the property comprising eighteen claims. The ore body varies from one foot to twenty feet in thickness, and is found for a distance of 150 feet below the surface. The country rock on this mountain is a hard, blue limestone, and carries a baryta gangue with galena and antimony, though the ore is principally sulphuret. The developments are by tunnels, shafts, and inclines. The greatest vertical depth is 200 feet, and the greatest horizontal length is 350 feet. Total depth of shafts, 350 feet; total length of tunnels, etc., 2,800 feet. A tunnel run 200 feet below the main workings has opened a fine body of ore, and the mine is in a good condition for producing largely. The total yield to date is $1,300,000.

Hambleton Silver Mining Company (The). The mines of this company are located in Mariposa county, Cal. Messrs. John Hambleton, James Hambleton (his son), and Capt. E. T. Cady, owners. Incorporated in 1880. Each have a claim of 1,500 feet, consolidated into one company. One of these claims was discovered twelve or fifteen years ago. A shaft was sunk to a depth of 125 feet by J. H. Neal and A. W. Jee, known as the Rockwell shaft.

Hancock Silver Mining Company (The) is chartered under the laws of the State of New Jersey. The directors are E. Silverstein, A. S. Carter, Aaron Teller. David Loewen, Sec. and Treas. The offices are at Camden, N. J., and at 23 S. Third Street and 310 Chestnut Street Philadelphia, Pa. The company owns the Hancock lode, located in Colorado. Character of mine, a true fissure vein, increasing in width as depth is attained. The shaft is down only twenty-five feet. Organized on a non-assessable basis; capitalization, $2,500,000, in 250,000 shares of $10 each.

Harshaw Silver Mining Company (The) has property located in Arizona. Capitalization, $10,000,000, in 100,000 shares of $100 each.

Head Centre Mining Company. J. W. Pew, Secretary. Office, 310 Pine Street, San Francisco, Cal. The company's property is located at Tombstone, Ariz. The mine is very thoroughly developed to a depth exceeding 600 feet. The weekly output is about 200 tons per week, which is about the capacity of the ten-stamp mill. The mine is being worked with vigor and energy, and promises to become at an early day one of the dividend-paying mines of the district. Average width of vein from four feet to eight feet. Ore, free-milling and containing a heavy percentage of gold. The mining plant is complete and first class in its appointments. The company has a capitalization of $5,000,000, in 200,000 shares, with a par value of $25 each. Yield during 1880, $17,000. Number of assessments levied, three; amount of two assessments, $120,000; date of latest assessment, May 25, 1882; amount per share, twenty cents. The production averages about $25,000 per month.

Hecla Mining Company (The). Their mining property, of twenty claims, is located in Trapper district, Beaver Head county, Montana. Among the most important of their mines are the Cleopatra, Atlantics, True Fissure, Mountain Sheep, and Silver Quartz; the others, however, all give promise of becoming equally as good as any of the named properties. Besides the supply of ore in the mines, it is estimated that at least 50,000 tons of second-class ores are now on their various dumps waiting to be concentrated; this carries from twenty to forty ounces of silver per ton. The mines are all worked through adit levels, and the cost of extracting the product is comparatively small. Ten miles below the mines, on Trapper creek, are the reduction works of the company. A water-power, under a pressure of 140 feet, equivalent to 125 horse-power, and two water-jacket furnaces, each rated at thirty tons per day, with all necessary auxiliaries, constitute the principal features of the plant. About 300 men are employed. The company also owns the iron mines, twelve miles distant, from which fluxing ore is taken. In the vicinity of the works, lime is found in abundance. Capitalization, $1,500,000; par value per share, $50. Total amount of dividends paid to July, 1882, $402,000; date of latest dividend, July 1, 1882.

Hibernia Mining Company. A. T. Gorman, Sec. Office, 115 Broadway, rooms 51 to 61, New York. The company's mine is located at Leadville, Col. The ore is high grade, mineral, chloride of silver. The ore has a value of $50 per ton. The amount of mineral in sight is quite considerable and very rich, much of it showing a great deal of chloride of silver. The company has two shaft-houses and machinery, valued at $20,000. The shaft is 200 feet deep. At the May Queen shaft on this mine there is a forty-horse-power boiler and a twenty-horse-power boiler. At the bottom of the shaft a steam-pump is placed, and drains shaft from water. All along the line bordering the property a continuous breast of ore is exposed, averaging about ten feet in thickness. About one-half of the ore is first class, running from 500 to 1,000 ounces in silver to the ton; the remainder contains from 200 to 300 ounces to the ton. A prospect shaft has been driven southward, which shows ore the entire length. Mr. Cone has leased this mine, and has quite a number of miners and mechanics at work putting the machinery in repair and retimbering and clearing out some of the more important of the old workings. The mine having been lying idle for a considerable time, the workings have fallen into bad repair, and cannot be worked with safety till the work in question is accomplished. The current value of the mine is $24,000. Output weekly at January, 1882, about sixty tons. Date of organization, April, 1880. Capitalization, $7,500,000. Yield (net) during 1881, $33,464. Par value, $25 per share; number of dividends paid to July, 1881, six; total amount of dividends paid, $200,000; date of latest dividend, July, 1881, ten cents per share. Stock quoted, July, 1882, eleven cents.

Highbridge Silver Mining Company. The company's property is located in Philadelphia district, Nye county, Nev. The main lode on which the company depends for its supply of ore is 6,000 feet in length. Capitalization, $10,000,000; par value per share, $100. Yield during 1879–80, $65,550, fiscal year. Number of assessments levied, one; amount of same, $30,000; date of latest assessment, June 23, 1880.

High Line Silver Mining Company (The). Incorporators, A. H. Bonta, A. J. Strand, Frank J. Moody. The company has property located in Lake and Summit counties, Col. Capitalization, $5,000,000.

Hooker Silver Mining Company. The officers are T. J. Fitzgerald, Pres.; Robert Hook, Sec.; W. L. Henry, Treas. Office, room 53, Reaper Block, Chicago, Ill. The company's mines are the Hooker and Solomon, located at San Juan, Col. The company has a capitalization of $1,500,000, in 75,000 shares, at a par value of twenty dollars each.

Humboldt Mining Company (The) has its offices at Engle Station, Atchison, Topeka, and Santa Fe Railroad, New Mexico. Office of the financial agents, 330 Walnut Street, Philadelphia, Pa. The officers are David Branson, Pres.; Edmund Webster, Vice-Pres.; Edward S. Lowry, Treas.; John H. Edwards, Asst. Sec.; A. Evans Peterson, Secretary and Financial Agent. The company owns a large amount of excellent and favorably situated mining property in various stages of development, which, it is claimed, are now being worked on sound business principles. These properties are located in Socorro and Dona Ana counties, New Mexico. Capitalization, $6,000,000, in 240,000 shares of $25 each; non-assessable; fully paid. Yield during 1881, $35,000.

Hidden Treasure Mining Company (The) has its offices at 40 Congress Street, Boston. The property is located in San Juan county, Col. Capitalization, $500,000, in 200,000 shares of $2.50 each.

Hidden Treasure Mining Company (The) has its main office at Armenia, N. Y. The mines owned by the company, Big Chief and Quick Relief, are located in Yavapai county, Arizona. The company has had a mill run of 450 pounds of selected ore, from which they have derived a silver brick worth $242.88. The mine is opened by a shaft of about fifty feet in depth on a ledge of twelve feet in depth, which assays from $27 to $200 per ton, gold and silver.

Highland Chief Consolidated Mining Company (The) owns a group of mines situated on the summit of Breece Hill, three and a half miles from Leadville, the property having an extent of thirty-three and a half acres, only about one-fourth of an acre of which has been explored around the Highland Chief shaft. A more thorough development recently commenced, by sinking a new shaft (Central), will connect the Robert Burns and Highland Mary shafts, 900 feet apart, with the present workings and tunnel outlet. Considering the immense ore bodies discovered in its limited development, this property is justly regarded as one of the most promising on the hill.

Henriette Mine (The), owned by Moffat, Tabor & Co., is located at Carbonate Hill, Leadville, Col. The company's property covers ten acres of land. Thirty-eight workmen have been employed at the works.

Hillside Mining and Milling Company. E. Frankenthral, Sec. Office, 380 Pine Street, San Francisco, Cal. The mines owned are the Can, Mayflower, Hillside, and Mendha, located at Bristol, Lincoln county, Nev. The ore assays $50 per ton. The company owns a ten-stamp mill, artesian well apparatus, capable of sinking to depth of 3,000 feet, and a fifty-five-ton water-jacket furnace. The shaft is 120 feet deep, all in ore. Length of adits, 100 feet. The main lode is 5,000 feet in length. The company has expended $25,000 fitting the property up for operations. The weekly output at January, 1882, was about 150 tons. The ore is sent direct to the smelter. Date of organization, 1881; capitalization, $10,000,000; par value per share, $100; yield during 1880, $139,892; number of assessments levied, five; total amount of assessments levied, $310,000; date of latest assessment, July 20, 1881.

Holland Mining and Milling Company (The) has property located in Yuma county, Arizona. The company have a smelter located at Lower Noria. Much difficulty has been experienced in handling the ores, but since those that are especially refractory have been subjected to the roasting process, success has been complete. Late reports from the works show that they are producing from two to two and a half tons base bullion per day.

Homer Mining Company. Hon. James D. Minor, Supt. Location of works, Bodie district, Cal. Number of assessments levied, two. Date of latest assessment, June 1, 1882, twenty cents per share.

Homestake Mining Company is chartered under the laws of the State of New Jersey. The officers are E. Klautscheck, Pres.; W. J, Radcliff, Sec.; Thos. J. Stewart, Treas. Directors, Thomas Barnett, Wm. Torry, W. J. Radcliff, H. P. Nulter, Jr., Elvin Klautscheck, T. J. Stewart, A. Wasserman, C. I. Fireng, J. L. Fryer. Offices, Leadville, Col., and 310 Chestnut Street, Philadelphia, Pa. This company owns the Homestake mine, located at Homestake Mountain, Col. The mineral improves as developments are made. There are well defined fissure veins sixteen feet in width on the property. Capitalization, $1,000,000; par value per share, $5; basis, non-assessable.

Honora Consolidated Mining Company. The company's mines, viz.: Iron Rod, Warriors' Mark, and Silver King, are located at Breckenridge, Col. The company has a capitalization of $1,500,000.

Hoosier Girl Mining and Milling Company (The). Office, Leadville, Col. Location of works, Lake county, Col. Capitalization, $2,-000,000.

Horn Silver Mining Company (The) is chartered under the laws of the Territory of Utah. The officers are C. G. Francklyn, Pres.; F. G. Brown, Vice-Pres.; W. S. Hoyt, Sec.; W. F. Van Pelt, Treas. Directors, A. G. Campbell, M. Cullen, D. Ryan, and A. Bryain. The offices are at 44 Wall Street, New York city. The company owns the Horn Silver mine, located in Frisco, Beaver county, Utah. The ore is a high-grade carbonate of lead with silver, giving about seventy ounces of silver per ton. The mining plant includes smelting and refining works. The amount of ore in sight has been reported at $50,000,000. The length of the main lode on which the company depends for its supply of ore is 1,400 feet. Current value of mine is given as $4,000,000. Cost of reduction, $28 per ton. Prof. J. S. Newbury, of the Columbia School of Mines says, "The mine contains the most valuable body of silver ore known to exist in any mine in the world. It stands, to-day, as having a greater ascertained value than any other silver mine known." As an indication of the richness of the ledge, it may be mentioned that it produced in the first nine months of the year 1881 nearly $1,000,000, the quarterly dividends amounting to $300,000. Organized February 7, 1879. Capitalization, $10,-000,000, in 400,000 shares of $25 each. Yield during 1881, 16,341,995 pounds of lead, and 1,259,903 ounces of silver. Total amount of dividends paid to July, 1882, $1,700,000. Date of last dividend, July, 1882.

Iron Silver Mining Company is chartered under the laws of the State of New York. Mr. James McKenn, Captain of the Iron mine; Mr. Huber, Engineer. Office, 11 Broadway, New York. The company's mines, the Iron mine and Rock and Stone, are located at California Gulch, Leadville, Col. The company's property covers seventy acres of land. Character of the ore, good grade, lead, carbonate, and galena, with a streak of iron. The ore yield on an average was 20.34 ounces of silver per ton, and 31.1 per cent. lead, or in the aggregate, 1,169,495 ounces of silver, and 17,628 tons of lead. In one year 11,600 feet of drifting and 2,065 feet of sinking was done, and the stoping is estimated at 1,089,000 cubic feet. Amount expended in developing property to 1880 is reported to have been $754,728. This company is reported to be reliable and permanent, and it is said that since the advent of new machinery and a good ore market, the company's mines have produced with remarkable regularity. Considerable ore is said to be in sight. The current value of mine is $1,075 000. Several important developments have been made under many of the old stopes; large bodies of mineral, report says, were uncovered, and the indications are that the lime rock will be found gashed with veins of rich carbonate ore. 200 tons of ore are being shipped per day, and 510 men are employed. Monthly expenses, $37,000. Date of organization, March, 1880. Capitalization, $10,000,000; par value per share, $20; basis, non-assessable. Yield (net) during 1880, $729,525; yield during 1881, 63,583 tons, $1,241,014.98. Number of dividends paid to June 26, 1882, seven. Total amount of dividends paid, $700,000. Date of latest dividend June 26, 1882, twenty cents per share. Stock and bonds reserved in the treasury April 1, 1882, $183,001.04. Stock quoted June 17, 1882, $2.15

Income Mining Company is chartered under the laws of the State of Maine. The officers are Levi Newcomb, Pres.; C. J. Rich, Treas.; Hon. W. A. Simmons, Sec. Office, 40 Water Street, rooms 51 and 52, Boston, Mass. The company's property is located at Silver City, New Mexico. They have a capitalization of $500,000. Treasury stock for sale at $2. No shares in market.

Independent Mining Company (The), of which E. M. Hall, Esq., is Sec., has its annual election on the 15th of August. The offices are at 327 Pine Street, San Francisco, Cal. The property of the company is located at Tuscarora, Elko county, Nevada. Total length of lode on which the company depends for its supply of ore is 1,500 feet. Capitalization, $10,000,000, in 100,000 shares of $100 each. In 1880 the yield was $23,330. Total amount of dividends paid, $225,000, since September, 1879, which was the date of the first dividend of twenty-five cents per share. Nine assessments have been levied, aggregating $185,000. Date of latest assessment, February 24, 1882; amount of same, fifteen cents per share. Floating indebtedness to April, 1882, $6,697. Stock quoted at thirty-eight cents per share.

Iron Bonnett Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are A. C. Brownell, Pres.; A. G. Hutcheson, Sec.; Apollos Smith, Treas.; H. M. Beaver, Manager. The offices are at 21 Nassau Street, New York city. The company own three mines, Iron Bonnett, Excelsior, and Albino, all located in the Tin Cup district, Gunnison county Col. Each of them is a full claim of 300 feet by 1,500 feet The company also owns in the same district, a mill site of five acres, making a consolidated interest of thirty acres of land. The ore is high grade, containing chlorides and sulphurets, and giving assays of $145 per ton. Some five-ton parcels unearthed have yielded as high as 146 ounces to the ton. General H. B. Bearce, speaking of the Iron Bonnett mine, says: "The present developments show a very strong vein of from twelve to thirty inches in thickness, regular in its course and dip, and of extraordinary richness, considering the depth attained, the incline being in but twenty-five feet. An average of twenty-four assays made from time to time under my (Gen. Bearce's) direction gave 391 ounces per ton silver and one-fourth of an ounce of gold." In Aug., 1881, the manager writes: "We have a splendid vein of rich ore on number three incline over four feet in thickness." The working expenses are small, and can be provided for by sale of treasury stock. Organized on non-assessable basis. Capitalization, $1,000,000; in 200,000 shares of $5 each; one assessment levied of twenty cents per share, April 28, 1882; no floating indebtedness.

Jocuista Mining Company (The) have offices at 18 Wall Street, New York. R. P. Lounsbery, Treas. The property of the company is located in Mexico. The cost of mining and milling is $21.22, and average cost of smelting, $18.13 per ton. Current value of mine is $1,800,000. Capitalization, $10,000,000, in 100,000 shares of $100 each; yield to January 1, 1881, 7,581 tons; 188,481$\frac{66}{100}$ pounds of ore sent to smelter produced 87,967$\frac{54}{100}$ ounces of silver, which sold for $99,489.53, the principal buyer being the Castle Dome Company; $500,000 has been paid in dividends up to date of last dividend, May 31, 1882, which was one dollar and fifty cents per share.

Jack of Clubs Mine (The), owned by McGowan, Reynolds & Co., is located in Chaffee county, Colorado. An incline has been run sixty feet, showing a well-defined vein, and about twelve inches of flesh-colored quartz, assaying over 2,000 ounces. Mill runs have been obtained from picked lots.

Kansas City (The). Owned by O. L. Lightburn, and others. Kansas City mine, the property of Mr. Lightburn, is located on Democrat Mountain, Alma, Col. The mineral has a mill return of 150 to 1,000 ounces per ton. Tunnel, 500 feet in length. This is a strong fissure vein, and the mineral, of which there is a large amount, runs from 150 to 1,000 ounces per ton by mill returns. Eight workmen employed.

Keystone Consolidated Mining Company (The) is chartered under the laws of the State of Wisconsin. The officers are Nath'l McBride, Pres.; C. D. Hooker, Vice-Pres., H. H. Armstead, Sec.; B. F. Newcomb, Treas., and C. F. Brewster, Supt., with an experience of four years. Annual election is held January 11. Transfer and main business office, 155 Washington Street, Chicago, Ill. General office at Madison, Wis. Transfers can be effected at all business hours. The company owns thirteen claims—the Keystone, Governor Tabor, Allegheny City, Mt. Vesuvius, Tabor Mount, B. F. Smith, J. B. McDonald, C. G. McDonald, Consolidated, General Custer, Fleur de lis, Rosebud, and the Keystone Consolidated lodes, located at Red Cliff, Summit county, Col., in the Battle Mountain mining district. The thirteen claims in contact cover an area of seventy-nine and three-quarters acres The ore is a sandy carbonate, average assay of which is $110 per ton. The mine has horizontal contact veins. The shaft is 165 feet deep. The length of the main lode on which the company depends for its supply of ore is 18,000 feet. Average width of vein, twenty-four feet. Number of shafts and tunnels, thirteen. The underground workings consist of inclines, cross-cuts, and tunnels. To April 1, 1882, the sum of $25,000 had been expended in developments which were commenced June 20, 1881 The prospects of the property are reported as A 1, and the amount of ore in sight as $3,000,000. Cost of mining and milling is about $6 per ton. The ore is shipped to Red Cliff and to Leadville, Colorado. The company claims to have a blanket vein which they think will average twenty feet in thickness, and the value of such a vein of sand carbonates covering eighty acres in extent must be considerable. Organized, January 17, 1881; capitalization, $3,000,000, in 300,000 shares of $10 each; non-assessable; yield to April 1, 1882, 200 tons; yield during 1881, 200 tons; no assessments levied; no bonded or other indebtedness, 150,000 shares of stock reserved and now in company's hands, stock quoted $3, April 1, 1882; stock held principally in Illinois; wages paid to all classes of labor per week, $175.

King Bullion Silver Mining Company (The) is chartered under the laws of the State of New Jersey. The officers are Scott A. McKenzie, Pres.; Chas. Benson, Treas.; M. M. Swaab, Sec. The offices are at 117 Market Street, Camden, N. J., and 402 Walnut Street, Philadelphia, Pa. (room 6). The property of the company is located in the Ten Mile district, Summit county, Col., having an extent of ten acres. Capitalization, $2,000,000, in 200,000 shares of $10 each; non-assessable. Stock reserved in treasury, 50,000 shares.

King of the Valley Mining Company (The) is incorporated under the laws of the State of New York. The officers are Martin B. Brown, Pres.; Geo. H. Moller, Vice-Pres.; R. H. Rochester, Treas.; Oliver W. West, Sec.; Hon. S. W. Fullerton, Counsel. The Trustees are Gen. L. B. Faulkner, M. B. Brown, G. H. Moller, Hon. R. H. Strahan, R. W. Rochester, Oliver W. West. The offices are at the Equitable Building, (28 and 29, 7th floor,) 120 Broadway, New York city. The company owns one mine located at Silver Cliffs, Custer county, Col., 8.000 feet above sea-level. Extent of claim, 1,500 by 300 feet, or about ten acres. The ore is low grade, free milling chloride of silver and oxide of iron, assaying fifty-three ounces per ton. There are no fissure veins on this formation, the deposit being the result of volcanic action. There are two shafts, forty feet and 163 feet deep respectively. Developments were commenced in July, 1878. The mining plant includes steam-hoisting works, valued at from $5,000 to $6,000, shaft-house, smith's shop, and all conveniences for prospecting the claim. It is estimated that there are in sight at present $2,300,000 worth of free milling ore. The cost of mining and milling is $5 per ton. This mine being only in a partly developed condition, the information regarding it is necessarily of a speculative character. A forty-stamp mill is suggested, built on the latest California style. Mining is suggested by means of open cuts about 200 feet in width. Organized April 20, 1880. Capitalization, $2,000,000, in 200,000 shares of $10 each; non-assessable.

Kohinoor Silver Mining Company (The) is organized with a capital of $200,000, in 200,000 shares of $1 each.

Little Silver Mine (The). Owned by Mr. Kearney and others. The Little Silver mine is the property of the above company. The ore is of medium grade and chloride-bearing. Shafts have been sunk—1881. Mr. Kearney, of the Leadville Gold and Silver Milling Company, with a number of other gentlemen, have secured a lease on the Little Silver property. It is thought they would do well in working the silver.

Link Silver Mining Company (The). Officers, Gov. Richard J. Oglesby, Pres.; Judge Hanna, Vice-Pres.; J. B. Grant, Sec.; Wm. Tingley S. Wood, Gen'l Man. Principal office, Leadville, Col. The mining property of this company is located in Lake county, Col. Capitalization, $2,500,000; shares, 250,000; par value, $10.

La Consolidated Silver Mining Company. Agent, Charles A. Porter, 201 Walnut Place, Philadelphia, Pa. The company's property is located in Batopolis district, Mexico. The capital is divided into 500,000 shares; basis non-assessable.

La Plata Mining and Smelting Company (The) is chartered under the laws of the State of New York. The officers are Nathaniel Wetherill, Pres; Theodore Berdell, Vice-Pres.; A. Landon, Sec.; M. G. Smith, Mang Mr. F. W. Day is Supt. The offices are at rooms 12 and 13, No. 58 Broadway. New York. The company owns one mine, the Ora La Plata, located at Leadville, Lake county, Col., the property having an extent of twenty-seven acres. The ore is silver and lead, assaying $30 per ton. There is a tunnel 840 feet in, and shaft 155 feet down. The company have six furnaces in blast, with capacity for smelting 150 tons per day. Main works consist of ore houses, and outlaying buildings, and have a frontage 2.650 feet, and occupy thirty-two acres. The resources of the mine are sufficient to admit of continuous shipments for some time. Current value of the mine is given as $1,600,000; sixty men are employed. Organized, June 13, 1879; capital, $2,000,000, in 200,000 shares of $10 each; non-assessable. Yield during 1881, $2,320.183; thirty-three dividends have been paid to July, 1882; total amount of same, $550,000. Date of latest dividend, June 1, 1882; amount per share, ten cents. Stock is quoted at $9, (July, 1882).1

La Providence Mining Company. The officers are A. L. Snowdon, Pres.; Thos. Cochran, Vice-Pres.; M. H. Hoffman, Sec. Directors, Henry Lewis, D. Haddock, Jr., Rich. Wood (all of Philadelphia), Dr. J. Morrell, of Johnstown, Pa., and Jules A. Rice, of Parral, Mex. The company's mines are located at El Oro, State of Durango, Mex. In the Murculago, there is a six-foot vein of smelting ore; paying-streak runs thirty-two ounces of silver, sorted ore going up to fifty-one ounces per ton. Estimated amount of ore in sight, 5,555 tons, valued at $222,200. The old workings are partly under water, and the estimated cost of reopening and developing the same is $100,000.

Lawrence Silver Mining Company. The officers are John S. Jenness, Pres.; Jacob Stern, Vice-Pres.; W. E. Brown, Sec. Directors, W. D. Swazey, John S. Jenness, Hiram B. Williams, W. Oscar Arnold, Jacob Stern, Manley G. Trask, and Geo. W. Sweetser. The company's property is located at Hampden, Maine. The company was organized in the year 1880, with a capitalization of $500,000; par value per share, $5; yield (net) during 1881, $39,955.87; yield (gross tons) during 1881, $193,989.12; stock reserved in the treasury, 20,000 shares; wages paid to all classes of labor during 1881, $336,043.39.

Leadville Consolidated Mining Company (The) is chartered under the laws of the State of New York. The officers are L. M. Lawson, Pres.; T. W. Shannon, Vice-Pres.; A. Ebert, Sec. and Treas. Trustees, L. B. Elkins, J. B. Chaffee, L. M. Lawson, Y. W. Shannon, R. C. Shannon, H. B. Bacon, P. A. Heyeman. Mr. J. W. Plummer, Superintendent. The offices are at 115 Broadway, New York. The property of the company is located in the California district, Lake county, Col. The ore is silver and lead of high grade. The total length of the lode on which the company depends for its supply of ore is 1,500 feet. Length of north or main level is 600 feet, south incline 200 feet, and combination 235 feet down; all three levels are worked by one engine. Current value of mine is given at $260,000. Organized, 1880; capitalization, $4,000,000, in 400,000 shares of $10 each; non-assessable. The total output for the first half of 1881 was 164,700 tons, taking eleven per cent. of this, the actual lead yield would be 18,100 tons. The total amount of dividends paid to June 15 is $210,000; last dividend, June 15, 1882, ten cents per share; stock quoted June 17, 1882, sixty-five cents per share.

Leadville and Gunnison Mining Company (The). 1881, Mr. O. S. Strothers, Superintendent; Mr. E. Lewis, Financial Agent. The Seguin mine is located on Rock Hill back of the Dome mine, Leadville, Colorado. Very fine ore, composed of carbonates of lead. Depth of shaft, 425 feet, 1881. Fine prospects for a productive and prosperous future. At 375 feet the shaft struck a large body of carbonates of lead, from which shipments have been made with considerable regularity for some time.

Lee Basin Mining Company (The). The officers are Edward D. Cope, Pres.; Charles E. Johnson, Treas.; Geo. L. Smedley, Sec. Mining Engineer, Robert Bunson. Head office, Leadville, Lake county, Col. Transfer office, Exchange Building, Philadelphia, Pa. The company's property is located at Fryer Hill, Lake county, Col. Report says the right shaft has encountered quite a body of fine-grained carbonate ore similar in appearance to that usually found overlying the richer deposits in the Robert E. Lee mine. Late developments in this shaft are very favorable; a depth of 325 feet has been attained. Capitalization, $5,000,000; par value per share, $10; basis, non-assessable.

Victor Mining Company (The) is chartered under the laws of the State of New Jersey. Officers by last election, President, J. L. Sprogle; Secretary and Treasurer, Joseph L. Fryer. Directors, J. L. Sprogle, Jos. L. Fryer, George Y. Magee, A. M. Peel, M. Cullis, J. J. Wilbinham, John L. Smith. Head office, 5 Boston Block, and 310 Chestnut Street, Philadelphia, Pa. The location of the mines belonging to this company are in Texas Creek, Col. Galena ore, containing antimonial silver, assaying 860 ounces of silver to the ton, 1881. They own twelve claims. Capitalization, 200,000 shares of $5 each = $1,000,000; non-assessable; 175,000 shares issued; 25,000 reserved.

Leeds Silver Mining Company (The) owns mining property at Silver Reef, Utah. The length of the main lode on which the company depends for its supply of ore is 3,000 feet. The company is organized on an unassessable basis. Capitalization, $6,000,000, in 60,000 shares of $100 each. The mines yielded in 1880, $29,255. Dividends to amount of $78,000 have been paid to October 10, 1878, date of last dividend of fifteen cents per share. Six assessments have been levied; total amount of same, $57,000. Date of first assessment, January 17, 1880; amount of same, ten cents per share. Date of latest assessment, February 23, 1882; amount of same, thirty cents per share. About 5,000 shares of treasury stock are in the market at $2 per share: proceeds of sale are to be devoted to the purchase of additional machinery

Lehigh Valley Mining and Smelting Company. The officers are T. H. Freeland, Pres.; John T. Giviner, Sec. and Treas.; R. E. James, Atty.; W. H. Kinney, Supt. and Mang. The company owns ten claims located at the upper part of O be Joyful Gulch, Col. A tunnel of 500 feet is now being driven.

Little Chief Mining Company (The) is chartered under the laws of the State of New York. Tingley S. Wood, Manager; S. C. Dean, Sec. Principal offices, 22 California Street, San Francisco, Cal. The Little Chief mine, owned by the company, is located on Fryer Hill, Col. At Leadville, ten acres of land are owned by the company. A tour through workings shows numerous fine streaks of ore, silver and lead carbonates. First-class ore gives 200 ounces silver to ton; second-class, fifty to sixty. Lead, from ten to forty-five per cent. Great probabilities of a prosperous and productive future. The ore face on some parts twelve feet high; the richest points being near No. 2 shaft. Property owned by the company, shaft houses, smelter, etc. (value, $45,000), hoisting works. Shaft used; ninety men employed. The Little Chief mining company was organized December 16, 1879. Current value of mine, $130,000. Capitalization, $10,000,000; shares, 200,000; par value, $50; non-assessable; yield net during 1881, $1,103,311; number of dividends paid August 24, seven; total amount, $700,000; number of assessments levied, one; total amount of same, $50,000; amount per share first assessment, $5; date of latest assessment, January 13, 1882; amount per share, $5; quotations, June 15, sixty-five cents; July 14, fifty-one cents. Total profit of mine since discovery, $2,200,000; net profit for 1881, $135,000; surplus on hand, $120,000.

Little Pittsburgh Silver Mining Company (The) is chartered under the laws of the State of New York. The officers are David S. Draper, Vice-Pres.; H. A. Kirkham, Sec. Mr. E. C. Gilman is the Superintendent. The company owns one mine, the Little Pittsburgh, located at Leadville, Col.; extent of claim, thirty acres. The ore is silver and lead of high grade, assaying from $35 to $50 per ton. There are six shafts in the mine. The trend of the ore is to the east, slightly pitching to the north. The vein varies from eighteen inches to three feet in thickness; No. 6 shaft has a depth of 275 feet. The plant includes two Knowles' pumps. There are 125 men employed; the average amount of wages paid per month is $17,540. Work is now progressing rapidly in No. 6 shaft, where the hopes of the management are centred for the present. From this shaft, No. 6 or the new discovery, the company is shipping about thirty tons of ore a day, which runs from $80 to fifty ounces. The output at Jan., 1882, was about 100 tons. Organized, April 25, 1879. Capitalization, $20,000,000, in 200,000 shares of $100 each; non-assessable; net yield during 1880 was $377,428; total amount of dividends paid, $1,350, to March 1, 1880, the date of last dividend of fifty cents per share. On April 22, 1882, the company had a cash surplus of $88,893.60. Total profit of mine since discovery, $2,457,321. Monthly expense account, about $9,000. Weekly output of ore, 150 tons; seventy-five workmen employed.

Little Sue Silver Mining Company. The Directors are H. B. Mason, Pres.; L. W. Hodgkins, Sec. and Treas.; B. O. Cutter, K. H. Sivett, Jas. W. Davis. The company's property is located at Lamoine, Me. The company was organized January, 1880, with a capitalization of $500,000. Par value per share, $1.

Livingstone Silver Mining Company (The) is chartered under the laws of the State of Colorado. The officers are Jas. W. Latta, Pres.; Thos. V. McCurdy, Vice-Pres.; Lewis C. Green, Sec.; Chas. S. Green, Treas. Directors, J. W. Latta, D. H. Kochesberger, E. Irwin Scott, Thos. V. McCurdy, F. S. Christian, P. A. Snell, and C. G. Greene. Prince A. Snell is the Superintendent. Offices at 154 S. Fourth Street, Philadelphia, Pa. The company owns one mine, the Livingstone, located at Alpine, Col. There are four chief veins; the shaft is down 195 feet; from it run two cross-cuts, which are developing a vein, some fifty feet wide, of rich material. Capitalization, $6,000,000, in 600,000 shares of $10 each; non-assessable; 300,000 shares issued; 300,000 shares reserved in treasury.

Lowland Chief Consolidated Silver Mining Company (The). Officers, S. W. Dorsey, Pres.; John Stanton, Vice-Pres.; T. W. Torrey, Sec. and Treas. Gen. office, 115 Broadway, New York. Capitalization, $1,000,000; shares, 200,000; par value, $50.

Lucerne Mining Company (The) is chartered under the laws of the State of New York. The offices are at 60 Broadway, New York. The property is located in Clear Creek and Gilpin counties, Col. The ore is auriferous and argentiferous. Incorporated October 20, 1880. Capitalization, $5,000,000, in 500,000 shares of $10 each; non-assessable.

Luona Mining Company (The). of which C. H. Garstin is Superintendent, has the following officers: A. B. Hough, of Cleveland, O., Pres.; F. Oscar Reuter, of Denver, Sec. The company owns the Luona mine and one-third interest in the Hancock, an adjoining claim, the property being located in Tescolli mountain, near the head of Brush creek, six miles east of Gothic, Col. The ore is a silver glance, carrying native silver in large quantities and smelting freely, and assaying from 90 to 4,000 ounces per ton. Mill runs range from 400 ounces to 800 ounces. The veins have an average width of from four to five feet, with a two-foot pay-streak of ore in each. The ore of the Hancock is of the same character as that of the Luona. One shaft is down forty feet; two tunnels driven, one fifty feet and the other 100 feet. The property in connection with mine consists of ore-house, boarding-house, smith's shop, etc. It is expected that when this district is fully supplied with concentrating facilities, the Luona mine will stand among the first of the Gunnison producers.

Mackey Mining Company (The) has property located in Storey county, Nev. Length of main lode on which the company depends for its supply of ore, 2,400 feet. The company is organized with a capital of $10,000,000, in 100,000 shares of $100 each. No dividends paid; five assessments levied, aggregating $70,000; latest assessment, November 23, 1880.

McClintock Mining Company (The). Wm. Lent, Secretary. Office, 309 Montgomery Street, San Francisco, Cal. The location of these mines are in Bodie district, California. The amount of property, 300 and 1,500 feet. Well-defined ledge of fair grade ore two to three feet wide. Hoisting works are owned by the company. Tunnel is 600 feet in length. Length of levels are 3,000 feet of excavations. Length on which the company depends for its supply of ore, 1,000 feet. $1,500 expended in developing property 1,000 feet in mine. Capitalization, $6,000,000; shares, 65,000; par value, $100. No dividends paid to January 1, 1882. Number of assessments levied, seven; total amount of same, $123,000; date of latest assessment, October, 1880; amount per share, five cents. Stock quoted January 1, 1880, $2.50, highest point reached.

Madre Silver Mining Company (The) has its offices at 61 Broadway, New York (rooms 41 and 42). The officers are J. H. Williams, Pres.; J. B. Barnes, Vice-Pres.; W. M. Tileston, Sec.. The National Park Bank, Treas. The property is located in the Ward district, White Pine county, Nev., right in the great ore channel of the district, and such developments as have been already made expose a deposit of unusual quantity of carbonate ore. The company is a consolidation of the Ready Cash and Jew Peter mines. Capitalization, $1,000,000, in 100,000 shares of $10 each; non-assessable.

Magnet Mining and Milling Company (The). Officers, Charles Tate, Pres.; A. G. Woodward, Vice-Pres.; Edgar H. Peck, Sec. and Treas. Directors, Charles Tate, Edgar H. Peck, O. C. Hainsbrough, and General Manager; Attorneys-at-Law, Ingersoll & V. Crates. Principal offices, Denver, Colorado, Sims' Block; Boulder office, Hainsbrough Block. The mining property owned by this company is located in Colorado. This company was reorganized January 18, 1882.

Marion Mining Company (The) owns the Cyclope mine located on the south side of Shay Horse Gulch. Work has been prosecuted on this property almost incessantly since its first discovery, and, although not always productive, there has been some valuable ore mined. It is now being worked on base with fair results.

Matchless Mine (The), owned by Gov. Tabor, is located on Fryer Hill, Lake county, Col., adjoining the well-known Robert E. Lee. The ore consists of hard and sand carbonates. The principal workings are in shafts Nos. 2 and 3. In branches of the former, the mineral matter, while not showing any chloride, is remarkably rich, and gives returns of from 400 to 600 ounces to the ton. Outside of this streak, which is quite narrow, are also a large amount of iron which runs high, and occasional deposits of hard carbonates that are very rich. The Leonard shaft has been closed down and its machinery and shaft-house taken to No. 3, which is near the line of the R. E. Lee. Connection is here made with the Lee workings, and along the line fine ore is exposed which runs from 200 to 600 ounces of silver to the ton. The ore-body is very strong to the north, and has been worked out but little. Altogether, the developments show immense deposits of high-grade ore that must prove a source of revenue for some time to come. The property has an extent of four and one-half acres. Mr. S. C. Leonard is Manager. Total production from discovery, $500,000.

Mayflower Mine (The), on Anna Mountain, is the property of Messrs. Hansling & Co. The property is located in Gunnison county, Col. The vein is two and a half feet in width, with a pay-streak of twelve inches carrying black sulphurets, brittle silver, and galena. There are two shafts, 102 and seventy-two feet respectively. The vein is exposed at several points on the surface. Four mill-runs gave as follows: first, 197 ounces silver and ½ ounce gold; second, 190 ounces silver and 1¾ ounces gold; third, 184 ounces silver and 2 ounces gold; fourth, 321 ounces silver and 3¼ ounces gold.

Mercantile Mining Company (The). Mr. Adams, Manager. The Silver King mine is owned by the company. Located near Komoko, Silver Cliff, Colorado. The ore consists of solid galena and carbonates of silver. Entrance to mine is by tunnel; shaft, 100 feet. The opinion of the men at work in the shaft is that the ore body discovered is of considerable extent.

Mexican Guadalupe Mining Company (The). Henry G. Fox, Pres.; H. H. Reed, Treas.; A. C. McCurdy, Sec.; E. S. Butcher, Supt. Principal office, 427 Walnut Street, Philadelphia, Pa. The mines belonging to this company are located in Nueva Leon, Mexico. Character of ore is silver, assaying $200 per ton.

Mexican National Exploring and Mining Company (The) is chartered under the laws of the State of New Jersey. The officers are Henry J. Fox, Pres.; W. D. Frismuth, Jr., Treas.; Joseph R. Livezey, Sec. Directors, Henry J. Fox, W. D. Frismuth, Jr., Henry H. Reed, Evan Morris, B. Frishmuth, Jos. R. Livezey; all of Philadelphia, Pa., and Casper S. Butcher, of Candela, Mexico. The General Manager in Mexico, Frederick Russell, Lampazos, Mexico. Financial Agents, Daniel Milmo Bros. & Co., bankers, Lareda, Texas. The offices are at 427 Walnut Street, Philadelphia, Pa., also at Camden, N. J., and at the cities of Lampazos, Candela, Villaldama, and Monterey, in the States of Cohahuila and Nuevo Leon, Republic of Mexico. The company owns the following claims: The San Juan Chico, a silver claim known as the Philadelphia; the Pedro Yman mine, the Boludo Mountain, a copper claim; the Guadalupi silver claim, the Bolsa de Judes silver claim, the Yguana silver mines, the Panuco claims, the Minas Vejos silver claim, the Rasario, and others, making a total of sixteen claims, all located in the States of Nuevo Leon and Cohahuila, in the Republic of Mexico. Each claim contains from four to six pertinencias, each pertinencia being 200 yards square. Several of the claims have from one to four mines each. $20,000 has been expended in developments which were commenced in June, 1881. Two dividends have been paid; one July 1, 1882, $88,000; one August 1, 1882, $66,000; total, $154,000. No assessments levied. No bonded or other indebtedness. 20,000 shares of Mexican Guadalupe company stock reserved in treasury.

Micawber Silver Mining Company (The) is chartered under the laws of the State of Colorado. Officers, O. L. Garver, Pres.; J. W. Mulford, Vice-Pres.; William Dunlap, Treas.; Enon M. Harris, Sec. Directors, A. L. Garver, J. W. Mulford, S. H. Crawford, A. Hazlet, W. P. Hill, J. V. Fullaway, Joseph Pettit, W. H. Wade, Charles G. Weller, R. Robbins, Charles Klein, Wm. Charleton. Principal office, 113 S. Fourth Street, Philadelphia, Pa. The Micawber mine is owned by this company, located in Colorado. The ore is silver. Two shafts about 100 feet each in depth. Capitalization, 175,000 shares; par value, $10; non-assessable.

Miller and Mormon Canyon Mine (The). Owned by Marks & Co. The mines owned by Marks & Co. are located in Huachuca Mountains, Ariz. The ore gives an assay of forty per cent. copper, and from $230 to $250 per ton in silver. Valuable copper leads. The W. C. Davis mine has been sold to California parties for $45,000. Some very rich discoveries, showing very fine ore, on the north side of Mowery Hill.

Miner Boy Miner Company (The). Principal office, 63 Broadway, New York. The location of the mines belonging to this company are located in Colorado. Entrance to the mines is by tunnel, 270 feet in length.

Mineral Creek Mining Company (The). Officers, Charles G. Rodgers, Pres.; Alvin S. Hill, Sec. Principal office, 202 Broadway, rooms 50 and 52, New York. The mining property of this company is located in Arizona. The company has a five-stamp mill. Capitalization, $2,000,000; shares, 200,000; par value, $10.

Monitor Silver Mining Company owns the Galena, Regatta, and Bonanza mines. They are situated between the Robinson Consolidated and the Gray Eagle mines, Col., and their location and promise, it is reported, are among the best undeveloped properties in the Ten Mile district. All the lodes have abundant timber, and the claims have prospect shafts upon them, ranging from forty to 200 feet in depth.

Monitor Consolidated Mining and Milling Company (The). Officers, Thomas M. Patterson, Pres., Denver, Col.; J. Keating, Denver, Col., Sec. and Treas. H. F. Richardson, Crested Butte, Superintendent. The Monitor Chief, Neptune, Reality, Be Joyful, Richardson, Herentez, are the mines' names belonging to the company. The ore is galena, gray copper, and iron pyrites, assaying fifty ounces silver to the ton. The vein of twelve feet, with a spar gangue rock—rock bearing galena.

Montana Copper Company. The property is located in Silver Bow county, Montana. Their principal mine is the Colusa, which averages fifteen to eighteen feet of width of pay, and is developed to the depth of about 300 feet. Recently, samples have been found carrying as high as seventy ounces of silver per ton, and sixty-five per cent. copper. Besides the Colusa, the company owns the Harvey, Green Mountain, Parrott, and four other locations. Capitalization, $200,000. This property produced during 1881, $1,042,640.

Montana Silver Mining Company (The). This company is chartered under the laws of the State of New Jersey. Officers, L. W. Klahr, Pres.; W. L. Barnum, Vice-Pres.; Anson Gorton, Treas.; Amos T. Hall, Sec.; F. E. Morse, Gen. Mang.; George W. Huddleson, Asst. Sec. Directors, W. L. Barnum, W. N. Hibbard, Amos T. Hall, Anson Gorton, F. E. Morse, Major S. M. Whiteside, John R. Hoxie. Principal office, 138 S. Fourth Street, Philadelphia. This company's mining property is located in Arizona. Capitalization, 200,000 shares; par value, $10; non-assessable.

Montezuma Mine (The). Owned by Tabor & Co. The location of the Montezuma mine is in Ashcroft, Pitkin county, Col. The ore consists of rich veins of minerals. Vein forty feet wide, with a large rich pay-streak.

Montezuma Mine and Milling Company (The) is chartered under the laws of the State of New Jersey. Officers, Ephraim Young, Pres.; Joseph E. Tate, Vice-Pres.; Gen. James Stewart, Jr., Sec. Directors, Ephraim Young, Joseph G. Tate, Gen. James Stewart, Joseph E. W. Mathews, Dr. H. Graham Reed, Dr. J. Lehman Eisenbrey, Edward P. Borden, Lewis A. Connell, Allen Middlebrook. Principal office, Camden, New Jersey. Inquiries made at 312 Stock Exchange Place, Philadelphia, Pa., room 15. The names of the mines owned by the company are Montezuma and McClelland, both full claims, located in Arizona. The Montezuma mine is opened by a shaft of fifty feet in depth, along the incline of the ledge. The vein is ten feet in width, between fine, smooth walls. There is a second ledge, but its size and value have not yet been determined. The Silver Girt lode is said to pass through this claim. The ore from the McClelland will assay $60 per ton. There are about fifty tons of this ore on the dump. Shaft on the McClelland, fifty-four feet down, with cross-cut thirteen feet. Capitalization, 300,000 shares; par value, $10; non-assessable. Amount of stock in treasury, 93,000 shares.

Montgomery County Smelting Company (The). These mines are located in Mono county, Cal. Bish & Co. are erecting smelting and other works on the Walnut mine.

Moore Mining and Smelting Company. The company's property is located in California. The company has paid in dividends $72,000; date of latest dividend, January 6, 1882.

Moose Mining Company is chartered under the laws of the State of Colorado. Office, Dudley, Col. The company have a group of mines located at Mount Bross, Park county, Col., chief among which is the Moose mine. The ore has a value of $93.58 per ton. The company owns 160 acres of mineral ground. The main lode is 2,025 feet in length. The Moose mine has been very extensively worked from the north face of the mountain, and has furnished extraordinarily large chambers of ore, one single slope having produced about $150,000. The formation is lime and porphyry, and the mineral lies in deposits and not in veins. The total extent of excavations will probably aggregate five miles, and the product has been considerably over $3,000,000. A smelter erected by the company at Dudley has proved a failure, owing to mismanagement, and has been closed down. Date of organization, 1872. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable. Yield to January 1, 1881, $3,000,000. Total amount of dividends paid, $550,000; date of latest dividend, March 5, 1881, twenty cents per share. Total amount of assessments levied, $4,000. Stock quoted July 1, 1882, twenty cents per share.

Moose Mining Company (The). Officers; Directors, J. Whitaker Wright, Charles L. Hall, J. A. Rosecrans, C. C. Kellogg, Charles I. Thomas, J. L. Loomis, John Q. Savage, L. G. Kent, Wm. McCafferty. Moose mine is located in Alma, Colorado, 1881, shipping from fifteen to twenty tons of ore per month. Fifteen men employed. The Russia mine, located near, has about ten men employed, shipping about ten tons per month. C. W. Bailey has the management of the mine.

Native Silver Mining Company (The) is chartered under the laws of the State of New York. The offices are at 31 Broad Street, and 18 Wall Street, New York. The property of the company is located in the Grand Island mining district, Boulder county, Col. The ore is argentiferous, assaying about 188 ounces to the ton. The mine is well furnished with complete mill and other necessary buildings. Organized, November 15, 1879; capitalization, $1,000,000, in 200,000 shares of $5 each; non-assessable.

Navajo Mining Company (The) has its offices at 310 Pine Street, San Francisco, Cal. J. W. Pew is Secretary. The property of the company is located in Tuscarora, Nev. The ore is high grade, consisting mostly of chloride. Length of main lode, 500 feet on claim. The company was organized with a capital of $10,000,000, in 100,000 shares of $100 each. Yield during 1880, $30,420. Total of dividends, $25,750, paid to March 25, 1881, date of latest dividend of twenty-five cents per share. Thirteen assessments have been levied, aggregating $235,000; latest assessment, 7th March, 1882, twenty cents per share. Stock quoted 14th July, 1882, $4.50. Current value of mine, $270,000.

Nevada Mining and Milling Company (The), of Chicago, has offices at 153 La Salle Street, Chicago, Ill. Mr. W. Orledge is Superintendent. The annual meeting is June 21. The officers are B. W. Goodhue, Pres.; Gen. G. N. Reece, Vice-Pres.; A. Larrabee, Sec.; F. H. Brown, Treas. Directors, B. W. Goodhue, J. K. Moore, Wm. Orledge, Joseph Schweder, R. Nevers, J. H. Roberts, R. W. Dunston. The company has levied five assessments. The last assessment of four cents per share was levied on May 6, 1882.

Newton County Mining and Smelting Company is chartered under the laws of the State of Illinois. The officers are E. W. Strout, Pres.; W. H. Yeaton, Sec.; F. C. Hoyt, Treas. Directors, F. W. Strout, G. A. Purdy, R. I. Henderson, J. M. Purdy, F. C. Hoyt, W. H. Yeaton. Superintendent, F. W. Strout. This company has leased 1,160 acres of land from the St. Louis and San Francisco Railroad, lying in the mineral belt, almost on a direct line between Granby and Joplin, Newton county, Mo. The principal deposits are at a depth of seventy-five feet. The mines have been examined and pronounced equal to those at Joplin. Date of organization, May 8, 1882; capitalization, $500,000; par value per share, $10.

New York and Colorado Mining Company. Location of property, Colorado. Amount of dividends paid to July, 1879, $25,000. The last dividend was paid July, 1879, at the rate of ten cents per share.

Niagara Consolidated Mining and Reducing Company (The) has offices at 356 Superior Street, Cleveland, Ohio. C. E. Stanley is the Secretary. The company is organized with a capital of $1,000,000, in 100,000 shares of $10 each; non-assessable; full paid. Treasury reserve, 66,400 shares, for a working capital.

Northern Belle Mining Company (The). Officers, W. Willis, Secretary. Office, 309 Montgomery Street, San Francisco, Cal. The mining property of this company is located in Nevada.

Northern Belle Silver Mining Company (The) has property in Columbus district, Esmeralda county, Nev. The mine operated is the Northern Belle, the ore of which is high grade, assaying from $100 to $200 per ton. The vein increased in width to about seven feet. The main shaft is down to 1,300 feet. The length of the main lode on which the company depends for its supply of ore is 1,600 feet. Weekly out-put, April, 1882, from four to five hundred tons. Weekly bullion shipment, June 22, 1882, $18,569.68. Current value of mine, $375,000. Capitalization, $5,000,000, in 50,000 shares of $100 each. Yield during 1880, $1,314,367; $2,188,500 paid in dividends to April 15, 1882, the date of latest dividend, which was at the rate of fifty cents per share. The first assessment levied June 5, 1882; amount per share, twenty cents. No indebtedness. Stock in treasury, $87,074. Dividends paid during 1881, $400,000; equal to $8 per share.

North Horn Silver Mining Company (The) is chartered under the laws of the State of New York. The Trustees are Thos. J. Hurley, of Bamburgher, Hurley & Co., Salt Lake City, Utah, and J. T. Hurley & Co., 18 Wall Street, New York city; Chas. L. Wright, shipping merchant, 56 South Street, New York city; Wm. Smedley, Exchange Buildings, Philadelphia, Pa. Offices at 115 Broadway, New York (the offices of the Mutual Trust Company), and at 18 Wall Street, New York (the offices of J. T. Hurley). The company owns six mines or claims, Gt. Republic, Spanish, Wolcott, Rosa, Comstock, and Vanderbilt, located in Fisco, Utah, being an extension of the famous Horn silver, which is reported having a splendid show of ore at a distance of only about 1,500 feet. The workings consist of four tunnels and two shafts, now in mineral. The Republic and Wolcott veins are from 150 to 200 feet wide. In the tunnel of the Spanish there is a fine showing of low-grade galena ore. A rich strike has been made on an uprise from 130-feet level, a six-inch vein being encountered, assaying $260.91 of silver, with a trace of gold. The average of assays taken from a four-foot ledge was $81. Capitalization, $4,000,000, in 400,000 shares of $10 each; non-assessable, full paid; treasury stock, 100,000 shares.

Oak Silver Mining Company (The). These mines are located in Gunnison county, Col. Capitalization, 600,000 shares.

Occidental Mining Company (The) has property located on the Comstock lode, Nevada. Length of main lode on which the company depends for its supply of ore 1,706 feet. Capitalization, $4,000,000, in 40,000 shares of $100 each. Six assessments levied, aggregating $112,500; date of latest assessment, March 9, 1879; cash on hand, March 1, 1882, $7,064.

Occidentine Mine (The). Owned by the Hon. Nelson Halleck and J. W. Happy. The Occidentine mine is the property owned. Located on Mount Lincoln, Col. The character of the ore is porphyry, dike, and lime. Mill run, assays per ton seventy-five to 500 ounces. Three drifts are run. Depth of shaft, eighty feet, 1882. The owners have shown remarkable grit and perseverance in working this property. Some time ago they worked with discouraging results. All mines that have been worked during the past winter have been looking well. They must have now in sight over $5,000 worth of ore.

Old Colony Silver Mining Company (The). The names of mines owned by this company are the Golding Group. Located in Mosquito Gulch, Col.

Oneida Mine (The). Owned by Nabob & Peterson. The company's claims are the Northern Light, Silver Star, Orphan Boy, Paymaster, and Virginia. These mines are located in Caribou district, Idaho Ter., south side of the mountain. Rich tractable ore claims located on the north side of the mountain. Mines are opened by a tunnel driven on the course of the vein.

Ontario Consolidated Mining Company (The) has offices at Denver, Col. The officers are H. A. W. Tabor, Pres.; Dennis Sullivan, Vice-Pres.; Geo. R. Fisher, Treas.; J. T. Wellborn, Sec.; Timothy Foley, Gen. Mang. Directors, W. H. Bush, Chas. H. Hall, Thos. G. Gibson, and J. W. Gaynor. Superintendent, S. S. Austin. The company owns two mines, Ontario and Capitol, located at Breece Hill, Lake county, Col.

Ontario Mining Company (The) is chartered under the laws of the State of California. Officers, J. B. Haggin, Pres.; Jos. Clark, Vice-Pres.; H. B. Parsons, Asst. Sec. Transfer office, 65 Broadway, New York; San Francisco, and 18 Wall Street, New York, are the general offices. The mines owned by the company are the Last Chance, Ontario, and Switzerland, Mintah, Summit county, Col. There are sixty-three acres of property owned by the company. The ore is silver, soft, pliable, and easily mined, it cleaves readily from the walls, is separated from gangue without difficulty. Assays $70 to $80 per ton. Vein fills a strong, well-defined fissure, having a course nearly east and west, the dip being northerly, varying from 79° to vertical. The fissure traverses the belt of quartz, cutting through the layers of the formation. The mine is worked through two vertical shafts, sunk in the hanging wall connecting. The mill is provided with a steam-engine of 250-horse-power, forty stamps, arranged for dry crushing. Two Stetefeldt furnaces, each with a capacity of chloridizing twenty-five to thirty tons of ore daily. From measurement of the stope, the amount of ore in sight between the second and fourth levels in Last Chance ground, and between the fourth and sixth levels in Ontario, Last Chance, we estimate at 33,964 tons, in addition to which there are 2,050 tons in the ore-bins, making in all, 36,014 tons, sufficient to supply well for two years. Current value of mine, $4,325,000, 3,000 feet in mines, 1,800 feet on Comstock lode. Last current value of mine, $5,062,000. The Ontario mine has yielded nearly $2,000,000 per annum since work fairly began for the year 1880. This company was organized on September 16, 1876. Capitalization, $15,000,000; shares, 150,000; par value, $100. It is announced that the sixty-third successive monthly dividend of 50 cents a share aggregates $30,000. Total dividends to date, January, 1881, $3,150,000. Number of dividends to July 15, 1881, total amount, $4,475,000. Date of latest dividend, June 15, 1882. Amount per share, fifty cents.

Ophir Silver Mining Company (The). Officers, C. L. Weller, Pres.; A. K. P. Harmon, Vice-Pres.; C. A. Fish, J. H. Robinson, C. L. McCoy, Sec.; W. H. Patton, Supt. Annual election, December 21. Principal office, 309 Montgomery Street, San Francisco, Cal. The location of the mines belonging to this company is in Virginia district, Comstock lode, Nevada. Depth of shaft, 2,600 feet. Length of the main lode on which the company depends for its supply of ore is 675 feet. Seventy miners and 19 surface men are employed at the Utsh mine. This company was organized December, 1879. Capitalization, $10,000,000; shares, 100,000; par value, $100; number of dividends paid to January 17, 1880, twenty-three; total amount, $1,596,400; date of latest dividend January 17, 1880; amount, $1; number of assessments levied, forty-one; latest assessment, November 5, 1880; amount per share, $1; total amount of same, $3,294,200; yield, net, during 1880, $75,948; cash on hand February 1, 1882, $1,651.09; stock quoted July 1, $8.50; floating indebtedness, April, $40,960.

Original Keystone Silver Mining Company (The). E. E. Lutz, Sec. Principal office, 530 Pine Street, San Francisco, Cal. The location of this mining company's works is in Nevada.

Orion Mining Company (The) is chartered under the laws of the State of Pennsylvania. H. Disston, Pres.; J. H. Asbury, Treas.; B. F. Hart, Sec. General office, 138 S. Fourth Street, Philadelphia. The company has property located in Pima county, Arizona. The property comprises the Warsaw mine, the most extensively developed of any in the district, one of the shafts being down 212 feet, besides an incline of 100 feet, and drifts that will aggregate 400 feet more. The ore on the dump, about 1,400 tons, is principally sulphides and chlorides of silver in character and of good grade. The vein is from three to five feet in width. At a depth of seventy-five feet in another shaft a ledge of five feet in width was struck which proved to be rich ore, giving an average assay of $600 per ton. The ledge proved to be all ore between smooth walls of porphyry and sienite. The ore is a black sulphuret with ruby, native brittle and wire silver, besides chloride and gray copper. The mill of the company has been closed part of the year owing to a scarcity of water. It is claimed that mill runs of $300 to the ton have been had from the ores obtained. The company has a capitalization of $2,000,000; par value per share, $10; basis, non-assessable.

Ontario Mining Company (The). The property belonging to this company is located in Utah. Production for year 1880, 1,439,542 ounces silver.

Oro Blanco Silver Mining Company (The) is chartered under the laws of the State of Iowa. Officers, Ex-Gov. W. M. Stone, Pres.; P. K. Bone, Vice-Pres.; J. D. Gamble, Sec. Knoxville, Iowa. Principal office, Knoxville, Iowa. The mines belonging to this company are located in the Oro Blanco mining district, Arizona. Capitalization, $2,000,000; par value, $20.

Overman Silver Mining Company (The). Officer, George D. Edwards, Secretary. General office, 414 California Street, San Francisco. The mines of this company are located on Comstock lode, Nevada.

Palmetto Mining Company (The) has property located in Hinsdale county, Col. The company owns the Palmetto, Ruby Queen, and Miner's Bank, mines which are all on one vein, measuring 3,123 feet in length. Forty men have been employed at the mines. The developments now show 430 feet of shafting, the main vertical shaft being 230 feet, with about 1,600 feet of drifting. From that part of the work done on the vein there have been sent to the mill 400 tons of ore, yielding $28,000 worth of silver. The ore ran to eighty-six per cent. of the assays.

Paramint Mine (The). Messrs. James Irvin and Benjamin Miller, owners. The Paramint mine, owned by Messrs. Irvin and Miller, is located near Banner, Idaho. Quartz mill struck seventy or eighty feet. Tunnel is in 110 feet, vein two feet wide. Immensely rich in silver.

Peabody Silver Mining Company (The) has its offices at 386 Washington Street, Boston. The officers are J. W. Johnson, Pres.; E. C. Nichols, Vice-Pres.; L. P. Johnson, Sec.; E. R. Walker, Treas. Directors, J. W. Johnson, S. C. Hursh, W. C. Bradley, N. W. Gannet, C. T. Plumpton, A. C. Gass, E. C. Nicholls. The property of the company is located in Columbia Mountain, Colorado. Basis of organization, unassessable; five assessments levied; latest, May 6, 1882, four cents per share.

Pembina Consolidated Mining and Milling Company is chartered under the laws of the State of Colorado. The officers are James W. Latta, Pres.; Lewis C. Greene, Sec. and Treas. Directors, James W. Latta, N. F. Lightner, D. H. Kochesberger, John Ruhl, J. M. Vanderslice, John Taylor, Mahlon Preston, M.D., Robert L. Orr, P. A. Snell, C. G. Green, J. K. Caldwell. Prince A. Snell, Superintendent. Office, 154 S. Fourth Street, Philadelphia, Pa. The mines owned are the Moccasin, the Red Rover, the Pembina, and the Monroe, located in Chaffee county, in the State of Colorado. The company's property includes one concentrating mill kept constantly employed on custom work and ore from their own properties. The Clifton mine is also owned by this company. It has four well-defined veins from four to six feet wide, extending the entire length of the claim. Assays of the different specimens of ore show from twenty to 280 ounces of silver, and one-half ounce to one ounce of gold. Drifts are being made with a view of cutting all the veins and then working them by levels. A tramway is being constructed 1,750 feet long, to carry the ore from the tunnel to the foot of the hill, where there is a good road to haul to any place desired.

Pennsylvania Consolidated Silver Mining Company (The). D. F. Hoag, Manager, one of the owners. Principal office, Oil City. The Excelsior mine is owned by the company, located at Alma, Colorado, 1881. The past summer has been spent in retimbering and improving this property, to put it in shape to commence shipping ore. Ten workmen employed.

Pentagost Mining and Smelting Company (The). Officers; Directors, John L. Hodsdon, G. H. Emerson, W. E. Carleton, Philip Evans, E. C. Smart, F. H. Clerque, and J. W. Leavitt. Date of organization, June 28, 1881; capitalization, 500,000 shares.

Perry and Park Mines. Owned by Messrs J. A. Park, Leighton, and T. Otto. The Perry & Park mines are located in Hassayampa district, ten miles south of Prescott. Extent of claim is 1,500 feet each. Sulphuret and antimonial ore, assays $375.90 per ton, as sold in San Francisco, Cal. Character of mines are fissure, sienite, and granite. Depth of shaft, 175 feet; average width of vein, eighteen inches to twelve feet. Two tunnels and one shaft used. Property deemed very good; valued at about $6,000. Bonded indebtedness, none.

Philadelphia Mining and Milling Company (The) is chartered under the laws of the State of New Jersey. Officers, E. J. Mathews, Pres.; E. F. Green, Sec. Directors, Henry Whelan, J. F. Bailey, J. T. Owen, P. A. B. Widener, Hamilton Disston, H. A. During, and E. J. Mathews. Main office, Camden, N. J.; branch office, north-east corner Third and Chestnut Streets, Philadelphia, Pa. The names of the mines belonging to this company are West Fork No. 1, West Fork No. 2, Satellite, Black Hawk, Yellow Jacket, and Ten Broeck, all located in Alluras county, Idaho. The Black Hawk is the company's chief mine. It was undeveloped in June, 1881, but up to November of that year produced 600 tons of ore yielding 200 ounces of silver to the ton. The company's capitalization is divided into 200,000 shares; non-assessable.

Pizarro Extension Silver Mining Company is chartered under the laws of the State of Colorado. The officers are J. O. Eberhard, Pres.; Seth Smith, Vice-Pres.; Robert Storey, Treas. Directors, J. O. Eberhard, V. G. Edwards, C. P. Johnson, H. W. Peters, D. B. Herbine, Wm. Tweed, Seth Smith, Wm. Cheatley, and Wm. Spotts. The company's mining property consists of one claim, 150 by 1,500 feet, located in Colorado. The shaft is eighty-five feet deep. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable; stock reserved in treasury, 90,000 shares; amount of stock issued, 110,000 shares.

Plata Pedra Mining Company (The). The Plata Pedra mine is owned by this company. Located at Silver Cliff district, Col. A force of men has been put on for the purpose of getting out a mill run of ore. Mill owned by the company.

Plata Verde Mining Company (The) is chartered under the laws of the State of New York. The officers are J. R. Bartlett, Pres.; Geo. E. Cole, Vice-Pres.; Geo. H. Stayner, Treas.; Andrew W. Kent, Sec. Office, 25 Nassau Street, New York. The company's property is located at Silver Cliff, Custer county, Col. The company has a capitalization of $1,000,000; par value per share, $100.

Plymouth Rock Mining Company (The) has offices at 7 Exchange Place, Boston. Officers are Isaac B. Rich, Pres.; Geo. Haskell, Sec.; J. E. Abbott, Treas.; W. H. Newcomb, Gen. Mang. The property of the company is located in Silver City, New Mexico. Prospecting is conducted by means of a diamond drill and complete outfit with which they can reach a depth of 1,000 feet. Capitalization, $2,500,000, in 100,000 shares of $25 each.

Polonia Mining Company. The company's property is located at Silver Cliff, Colorado. Capitalization, $200 000; par value per share, $25; total amount of dividends paid to June 17, 1882, $12,000; date of latest dividend, June 17, 1882, $1.50 per share; production for four months in 1880 was $25,000.

Queen of the West Company (The). The Russler and Pittsburgh mines are owned by this company. Located in Utah, under the negotiations to the old telegraph company.

Randolph Mining Company. Location of property, Tombstone district, Ariz. Twenty-five miners are employed, and about seven tons are being hoisted per day, and developments are under way.

Red Elephant Mining Company is chartered under the laws of the State of New York. Office, 33 Broad Street, New York. The company's mining property includes the White, Boulder Nest, Free America, and Free America Extension Lodes. Located at Red Elephant Mountain, Clear Creek county, Col. The ore gives a silver assay. The company owns engine and shaft houses. Reports says heavy shipments are made daily, varying from eighty to 100 tons per day. High-grade ore is shipped to the reduction works at Golden. The mines have been worked during the year in a very satisfactory manner. A forty-horse-power engine and a sixty-horse-power boiler have been placed at the Schwarz shaft on the White. The shaft has been retimbered and connected with Clery adits. A new fifteen-horse-power engine has been put up at the Free America shaft, and at the Barrett shaft a new large and more convenient ore-house has been built on the site of one destroyed by fire. The Bush Wills shaft on the Boulder Nest has been successfully worked since the early spring, and the Wheeler shaft on the White extension has also yielded good ore. The Free America extension east has been worked extensively for development during the year, a force averaging about thirty men having been employed. A new fifteen-horse-power engine and thirty-horse-power boiler have been placed at the gulch shaft. The mine has been opened systematically, and large reserves of ore are exposed. Capitalization, $5,000,000; par value per share, $10.

Real del Monte Mining Company is chartered under the laws of the State of California. C. V. D. Hubbard is Secretary. Office, 203 Bush Street, San Francisco, Cal. The company's property is located in

Esmeralda county, Nevada. The ore mined carries silver. The main lode is 3,000 feet in length. The company owns hoisting works, etc. Date of incorporation, October 15, 1877. Capitalization, $10,000,000; par value per share, $100. Number of assessments levied, fifteen; total amount of assessments levied, $505,000; date of latest assessment, March 28, 1881.

Richmond Silver Mining Company. The company's mine, the Richmond, is located in Eureka county, Nevada, and has a current value of $3,172,500. Capitalization, $1,350,000; par value per share, $25. Yield during 1881, $409,131.42. Yield (tons) during 1880, 39,634=$1,582,214. Amount of dividends paid to February 9, 1882, $3,907,587; date of latest dividend, February 9, 1882, $2.50 per share. Stock quoted June 17, 1882, $58.75.

Rico Mountain Mining Company (The) owns ten mines, one of which, the Sixty-six lode, adjoins the Puzzle on the east. The others are the Broadway Broker, Ruby Crown, Crystal Crown, Herrick, Lowell, Dyke, Dunn, Triangle, Comet, and Carbonate.

Robert E. Lee Mining Company is chartered under the laws of the State of New York. J. G. Marshall is Manager. The company's mine, viz., the Robert E. Lee, is located at Fryer Hill, Lake county, Col. The company's property covers thirteen acres of land. Developments were commenced in March, 1879, since which time the yield has been continuous. The ore is unusually high grade. At one time, in 1881, there was a mill-test made of the ore that was extracted by thirty men in seventeen hours, which gave $118,500 as the result, which is unparalleled in the history of American mining. An excessive inflow of water necessitated the introduction of new and powerful pumping apparatus, viz., 105 horse-power engine, since which the workings have been conducted in new and unexplored ground. The ore carries dry silver; mill returns, 900 ounces to the ton. The mine is worked by drifts. The company's works are thoroughly equipped with ample machinery and sampling works. The shaft is 269 feet deep. Large ore reserves are developing in this mine. The mine is producing twenty-five tons daily of very high-grade ore, and is shipping eighty to 100 tons high-grade ore per day to the reduction works at Golden. Assays made on the sand have returned from twelve to fourteen ounces in silver. About 150 men are listed on pay-roll. The pay-roll of the Robert E. Lee for month of January, 1882, amounted to $8,600, while the receipts of the mine aggregated about $75,000. Shipments of 1,000 tons of ore were made. Capitalization, $5,000,000; par value per share, $5. Yield (net) to January 1, 1882, $1,867,855.

Robinson Consolidated Mining Company is chartered under the laws of the State of New York. The officers are Hiram A. Johnston, Pres.; W. M. K. Lathrop, Vice-Pres.; James K. Shilleck, Sec.; Geo. J. Gordon, Treas.; J. B. Stevens, Manager. Trustees, H. A. Johnston, T. J. Richmar, E. C. Hine, W. W. Harris, G. E. Hutchinson, G. J. Gordon, Wm. K. Lathrop. Office, 115 Broadway, New York. The company's mines are the Smuggler and Checkmate, located at Leadville, Col. The ore carries silver and lead, iron pyrites associated with blende, and a small portion of galena. Assays ninety ounces per ton. The company's property includes shaft and engine-house. The prospects of the property are very encouraging. New ore body in the main tunnel is opening well and is twelve feet thick. Five dollars and three cents are the estimated cost of mining and milling. The Robinson mine is one of great promise. The ore was first encountered sixty-eight feet from the incline, and consists of white iron pyrites. From the first it was of a fair grade, assaying from twenty to thirty ounces in silver. The most encouraging feature in the ninth level is a seam of galena ore, which may be of great value and importance. The total expenses of the Robinson mine are from $8,000 to $9,000 per month. The current value of the mine is $200,000. Output daily to December, 1881, about 115 tons, averaging $25 per ton. Date of organization, March 5, 1880. Capitalization, $10,000,000; par value per share, $50; basis, non-assessable. Yield during 1881, $353,-558. Number of dividends paid to November 15, 1881, eleven; total amount of dividends paid, $700,000; date of latest dividend, December 15, 1881. Stock quoted June 17, 1882, $1 per share.

Royal Silver Mining Company is chartered under the laws of the State of New Jersey. The officers are E. P. Carpenter, Pres.; J. M. Richmond, Secretary. Directors, E. P. Carpenter, H. B. Fowler, J. M. Richmond, S. Schofield. Offices, 134 South Fourth Street, Philadelphia, Pa., and 33 Market Street, Camden, N. J. The company owns one claim, 300x1,500 feet, located in California district, Lake county, Col. The shaft is forty feet deep and timbered. Capitalization, $1,000,000; par value per share, $5; basis, non-assessable; treasury reserve, 50,000 shares; amount of stock issued, 200,000 shares.

Ruby Chief and Blue Bird Lode (The). Owned by Messrs De Laverne and others. These mines are located near Venango and Blind King Tunnels, Col. Quality and character of ore, solid body of mineral, eighteen inches in width, rich ore. Mill returns 291 ounces to the ton. Character of mines, veins and drifts. Prospects very fair, indeed, regarding the property, 1881. The ore sent to the smelting works has averaged higher than any other mine in the camp. The quantity of ore will run 500 or 600 ounces to the ton. The principal work at present is on the west drift, which has reached a length of 125 feet.

Ruby Silver Mining and Smelting Company (The). These mines are located in Boulder county, Col. Capital stock, $200,000.

Rudesie Mining Company's property is located in the county of Mecklenburg, N. C. The ore mined is suitable for milling and smelting. Repeated visits to the lower level, and a careful examination of the formation of the mine, leads to a confident expectation that several chimneys of shoots of good ore will be found. The company owns a ten-stamp mill.

Russia Silver Mining Company (The) owns the Pague, Russia, Hoosier, and Buckingham mines, on Mount Lincoln, Park county, Col. On the Russia, work has been conducted systematically since it was first opened, principally for development. The ores, galena and gray copper, carrying copper pyrites, brittle silver, and sulphurets, 2,000 tons of which have been sold to the smelters, whilst an equal quantity of ore of a lower grade remains on the dumps. The mine is opened by a main tunnel 620 feet in length, and numerous lateral drifts.

Raymond & Ely Mining Company. The company's property is located in Meadow Valley, Lincoln county, Nevada. There are 5,000 linear feet in the mine. Capitalization, $11,200,000; par value per share, $100; yield during fiscal year, 1879 and 1880, $98,669. Number of dividends paid to September 10, 1873, twenty-three; total amount of dividends paid, $3,075,000; date of latest dividend, September 10, 1873. Number of assessments levied, sixteen; total amount of assessments levied, $955,000; date of latest assessment, August 27, 1880; amount per share, $2.

Smuggler Mountain Mining Company (The). Officers, John Wilson, Pres.; Dr. A. A. Smith, Treas., Col.; John L. Bartow, Vice-Pres.; B. E. Shear, Superintendent. Principal office, Leadville, Col. The location of the mines belonging to this company is on Smuggler Mountain, Aspen, Col. Company organized March 24, 1880; capitalization, $1,000,-000; par value, $10.

Snow-Drift Consolidated Mining Company is chartered under the laws of the State of New York. Offices, 30 Broad Street, rooms 77 and 78, New York, and 57 S. Third Street, Philadelphia, Pa. The company's claims, the Snow-Drift and Daniel Peters, are located in Griffith district, Clear Creek county, Col. Ten shafts have been sunk on the Snow-Drift lode at various points. There is said to be a large ore body in sight. Tunnel is 150 feet in length. Capitalization, $2,500,000; par value per share, $10.

St. Lawrence Mining and Milling Company (The) owns the Brooklyn Girl and the St. Lawrence mines, located in Gunnison county, Col.

San Juan and New York Mining and Smelting Company owns the Aspen, Susquehanna, Mammoth, and Victor mines, located in San Juan county, Col. The Aspen is said to be one of the best developed mines in San Juan county; some 2,000 feet of tramling and drifting having been run on it. The vein, although not very wide, is very regular in character, the pay-streak averaging about one foot in width. One of the chief features of this vein is the presence of a streak of fluor-spar, a mineral only rarely associated with San Juan ores.

Santa Rita Silver Mining Company's Mines, the Expert and the Merrimac, are located in Tyndall district, Peoria county, Arizona. The Expert is an extension of the Laura, and report says, as far as it has been opened, shows rich chloride ore, carrying considerable horn silver. Four hundred pounds of this ore recently gave an average of $332 per ton. Several assays have been made running from $700 to $4,300 per ton. Stock in this company recently sold at an advance of 100 per cent.

San Xavier Mining and Silver Company (The). Officer, F. A. McGee, Secretary. Office, 32 Merchants' Exchange, San Francisco, California. The mining properties owned by this company are located in Arizona.

Segregated Silver Mining Company. Office, 419 California Street, San Francisco, Cal. The company's property is located in Gold Hill district, Nev. Capitalization, $640,000; par value per share, $100; no dividends paid to April, 1882; number of assessments levied, twenty-one; total amount of assessments levied, $289,600; date of latest assessment, February 15, 1882, $1 per share.

Sierra Apache Mining Company (The). The officers are E. D Cope, Pres.; S. L. Smedley, Treas.; G. L. Smedley, Sec. Directors, E. D. Cope, S. Smedley, J. Haines, C. Middleton, J. Wright, P. Garrett, J. W. Wright. D. H. Jackson, M. E., is Supt. Office, Sierra City, New Mexico. Transfer office, Exchange Building, Philadelphia, Pa. The company's claims are the Kohinoor, Surprise, Crescent, and Grace Darling. Located at Lake city, Dona Ana county, New Mex. The property covers an area of ninety acres. Report says the outcrop of ore on the Sierra Apache property is more extensive than on any of the others. It extends east and west across the Kohinoor to the centre of the Crescent 900 feet, and north and south on the Kohinoor and Surprise, at one point 900 feet. On the Kohinoor a more silicious and probably less valuable outcrop extends 300 feet further north along the middle of the claim. On the Crescent irregular outcrops appear at many points over a tract 600 feet in a north and south direction. The above mass of ore has been merely prospected, and no shafts have been sunk to more than twelve feet in depth on it. The probability is that the ore body is larger on the Sierra Apache property than on either of the three others. Assays from the surface of the Kohinoor run to 190 ounces. On the Crescent are found the high-grade ores of the Plata and Grande. At other points on the Crescent, there are rich veins of galena. Capitalization, $5,000,000; par value per share, $25; basis, non-assessable; fully paid.

Sierra Bella Mining Company (The). The officers are W. H. Miller, Pres.; P. C. Garrett, Treas.; J. L. Smedley, Sec. D. H. Jackson, M. E., is Supt. Office, Sierra City, Dona Ana county, New Mex. Transfer office, Exchange Building, Philadelphia, Pa. The company's mining property includes the Columbia, the Emporia No. 2, and the Struby mines. Located at Sierra City, New Mex. The ore body is thirty-five feet deep, and includes portions of extraordinary richness. An average sample taken by the manager from one of the faces is said to have assayed 445 ounces to the ton. An average of fourteen assays of samples taken from the Sierra Bell property averages 601 ounces per ton. This is raised by the rich ores of the Columbia shaft, which is said to be so impregnated with chloride of silver as to be best cut with a saw. Capitalization, $5,000,-000; par value per share, $25; basis, non-assessable; fully paid.

Shawnee Silver Mining Company (The). Officers, George H. Long, Pres.; Mr. Fox, Treas. Principal office, Equitable Building, corner of Milk and Devonshire Streets, Boston. The mines owned by this company are located in Egypt, Southern Ill. Capitalization, $250,000; par value per share, $10; non-assessable; 3,000 shares of treasury stock for sale at $3 per share. Land, buildings, machinery, tools, and mining labor paid for to date.

Sierra Grande Mining Company (The). The officers are B. A. Shoemaker, Pres.; J. C. Sinclair, Treas.; G. A. Smedley, Sec. D. H. Jackson is Mining Engineer. Head office, Sierra City, Dona Ana county, N. M.; transfer office, Exchange Building, Philadelphia, Pa. The company's mining property includes the Sumpter, Lincoln, and Emporia No. 1 claims, located at Sierra City, Dona Ana county, N. M. The Lincoln and Emporia No. 1 claims may be considered together, as they are identical in character. The ore outcrop here is 200, 100, and fifty feet in width. Fifty feet south of the main outcrop a series of shafts have been sunk across the two claims in which the ore was reached at the following depth, passing from east to west, two and one-half feet, sixteen feet surface, eighteen feet. The assay value of the ore is very good. An average sample taken from one side assayed 440 ounces, and an average piece from a hole near the foot of the southern end assayed 750 ounces. It is estimated that the ore-body in the Sierra Grande is of at least as large dimensions as that of the Stanton claim of the Sierra Plata, and of high grade. The company's mill has a capacity of sixty tons per day, and it is running day and night. Enough ore is stacked to keep the mill busy for eight months, exclusive of the large amount of the highest grade of smelting ore, running from $10,000 to $20,000 per ton, housed under guard. Competent engineers state that the works should be trebled, in order to meet the capital output. Capitalization, $5,000,000; par value per share, $25; basis, non-assessable.

Sierra Plata Mining Company (The). The officers are P. C. Garrett, Pres.; H. A. Duhrig, Treas.; G. L. Smedley, Sec. D. H. Jackson is Superintendent. Office, Sierra City, N. M.; transfer office, Exchange Building, Philadelphia, Pa. The company's mines are the Golden Gate, the Crown Point, the Stanton, the Silver Reef, the Eureka, and the Plata mines, located at Sierra City, N. M. The property covers an area of 100 acres. Report says: "The ore of the Stanton is of the highest quality, and that already taken out will average, according to the assays of Mr. Kadish, 200 ounces to the ton. Not a little of it assays over 500 ounces, and it is easy to select specimens which yield 1,000 ounces, and even larger percentages of silver. This body has been opened to a depth of ten feet. Supposing, what is really inadmissibly small, that its depth is only ten feet, there is an ore body measuring 600 feet by 300 feet by ten feet, and averaging 200 ounces per ton." Capitalization, $5,000,000; par value per share, $25. Basis, non-assessable; full paid.

Silver Cliff Mining and Milling Company (The). The location of the mines belonging to this company is at Silver Cliff district, Utah. Sixty tons of ore conveyed to the mill daily averages $50 in silver to the ton. Tramway and mill are owned by the company.

Silver Cord Combination Mining Company is chartered under the laws of the State of Colorado. The officers are J. B. Grant, Pres.; W. W. Weigley, Vice-Pres.; C. H. Gross, Treas.; David Conrade, Sec.; A. J. Volrath, Asst. Sec. Directors, J. B. Grant, D. Conrade, B. Burchard, W. W. Weigley, T. S. Wood, R. C. Broadbent, C. H. Gross, J. C. Bissell, J. H. Hassenblug. The Superintendent is T. S. Wood. Main office, Iron Hill, Leadville, Col. Transfer office, room D, 305 Walnut Street, Philadelphia. The company's mine, the Silver Cord, is located at Iron Hill, Leadville, Col. The company's property, including eight locations, covers sixty acres. The ore is high grade in lead carbonate, assaying $28 to $30 per ton, with considerable gold. The mine possesses a vein of rich auriferous quartz. The company has a hoisting apparatus over No. 3 shaft. Mr. Wood, the Superintendent, reports the prospects of the property good and improving. The earnings are from thirty to thirty-five thousand dollars over expenses, the ore yielding $20 to $30 a ton net over expenses of smelting. The mine has produced some remarkable specimens, it is said, of chlor-bromide of silver (emhelite) in a variety of silicious oxide of iron. The out-put weekly at January, 1882, was 350 tons. Some 225 men are employed. Length of lode on which the company depends for ore supply, 900 feet. It would be difficult to make any estimate of the resources of this mine. Date of organization, July, 1881; capitalization, $5,000,000; par value per share, $10; basis, non-assessable, full paid. Ore shipments 1,200 tons a month, yielding a net product of $30,000. Bonded indebtedness, January 1, 1882, $150,000. Treasury reserve, 50,000 shares; monthly expenses, $22,000; stock quoted January 1, 1882, sixty-five cents.

Silver City Mining Company (The) has property located in the Gold Hill district, Comstock lode, Nev. The ore is fair grade. There is an incline shaft on the ledge 350 feet, with fair grade ore. The mining plant includes hoisting works, costing $5,000, with 700 feet capacity; a ten-stamp mill, costing $30,000. About $40,000 have been expended on developments. The total length of the main lode on which the company depends for its supply of ore is 3,800 feet. Capitalization, $6,310,000, in 63,100 shares of $100 each. Stock not listed; held partly in Boston. Two assessments levied; total amount of same, $6,310. Latest assessment, May 2, 1881; amount of same, ten cents per share.

Silver Cluster Mining Company (The). Location of mines in Summit and Lake counties, Colorado. Capitalization, $2,000,000; shares, 200,000.

Silver Crescent Mining Company (The) is chartered under the laws of the State of Indiana. The officers are Joseph R. Hale, Pres.; J. Redenour, Vice-Pres.; M. Hatfield, Sec.; J. Elliott, Treas. and Resident Manager. The offices are at Indianapolis, Ind. The company owns a group of mines, the Monday being most developed. The ore is very high grade; dry carbonate, seventy per cent. lead of a superior quality. Formation in shale. The shaft is down sixty-five feet, and has a cross-cut ninety-five feet on the vein. Considering amount of work done, the prospects are very flattering. The location is advantageous for successful working of mine.

Silver Dollar Mining Company (The) owns the Silver Dollar and Piper Heidseick mines, located in Gilpin county, Col. A double compartment shaft has been sunk on the Silver Dollar 205 feet deep, and the 150-feet level has been driven 235 feet, at which point it intersects the Piper Heidseick 175 feet from the surface. The ore is rich in silver, and carries about twenty-seven per cent. copper. A strong inflow of water necessitated the introduction of two new engines for pumping, and which also assist in the hoisting, and the mine is now in good working condition. It is well timbered and ventilated, and all the work done is with a view to permanency.

Silver Era Mining Company is chartered under the laws of the State of New York. Office, 3 Broad Street, New York. The company's claims are the Silver Era, the Etna, and the Caledonia, located in Globe district, Pinal county, Arizona. Extent of claims, 1,600 by 1,500 feet. The ore carries silver. Value per ton, $150. Date of organization February 12, 1880. Capitalization $10,000,000; par value per share, $100; basis, non-assessable.

Silver Glance Mining Company (The) is chartered under the laws of the State of Colorado. E. S. Perkins, Pres.; A. H. Woodward, Sec. and Treas. The company's property is located in Graham county, Arizona. The mine carries a two-feet vein that gives assays of $80 to the ton in silver. Capitalization, $5,000,000; par value per share, $10.

Silver Hill Mining Company's (The) property is located in Gold Hill district, Comstock lode, Nevada. There are 4,000 linear feet in mine. Aggregate of workings, 1,500 feet. Capitalization, $10,800,000; par value per share, $100; number of assessments levied, seventeen; total amount of assessments levied, $1,809,000. Date of latest assessment, February 2, 1882. Treasury reserve April 1, 1882, $5,989. Cash on hand April 1, 1882, $5,989.

Silver Key Mining Company is chartered under the laws of Utah Territory. W. J. Wenner, Pres.; Mandus Thomas, Sec. The company's claims are the Tigur, the Silver Key, and the Old Judge, located in Utah. The Tigur is the principal claim. It was located in June, 1879. It is situated on Penyon Hill, just south of Walker and Buckeye mines. Several very prominent mining men and good judges of ore have examined underground workings of the Tigur, and pronounce the ore to be of the same grade and character as the Penyon mine, and are unanimous in their opinion of its being a continuation of the vein of this mine. Date of organization, January, 1882. Capitalization, $2,000,000; par value per share, $10. Basis, non-assessable for three years from date of organization.

Silver King Mining Company is chartered under the laws of the State of New York. Office, 60 Broadway, New York. The company's mine, the Silver King, is located one-third of a mile from Montezuma, Col. The ore is silver minute, ruby silver, and gray copper, and assays from four ounces to 500 ounces to the ton. The mine shows a fine vein of quartz, fourteen inches in width, inclosed in solid walls. This mine is turning out the usual quantity of concentrations and bullion. The company has a furnace; also, lixiviation works and one ten-stamp mill. About seventy tons of ore are reduced every twenty-four hours. The shaft is about 730 feet deep. The principal mining is being done on the 700-feet level. Work is also being done on the Tilden and Mewey Consolidated. On the latter, steam hoisting works are being erected. Current value of the Silver King, $1,000,000. The mine was discovered in 1867, and came into possession of above company in 1880. Date of organization, December, 1880; capitalization, $1,000,000; par value per share, $2; basis, non-assessable; total amount of dividends paid, $50,000; date of latest dividend, August 19, 1881, ten cents per share; stock quoted June 17, $2 per share.

Silver King Mining Company is chartered under the laws of the State of California. The officers are B. W. Barney, Pres.; J. L. Jones, Vice-Pres.; J. M. Barney, Treas. and Gen. Manager; J. Nash, Sec. Date of annual election, January 11. Office, 328 Montgomery Street, San Francisco, Cal. The company's mine, the Silver King, is located in Tombstone district, Arizona. It was discovered in 1874, and is by far the richest mining property of this district—in fact, it is generally regarded as one of the most valuable discoveries of the Pacific slope. The ore is very rich, yielding an average silver assay of $100 to the ton; and some of the ore is said to average $1,000 per ton by assay. The 510-foot level is regarded as the richest, native and antimonial silver and zinc blende being predominant. At the extreme depth reached (730 feet), the ledge is found to be an enormous mass of ore, indicating increasing richness as depth is attained. New workings have been started 200 feet west and below the old ones. A two-compartment vertical shaft has been sunk to a depth of nearly 200 feet, and still sinking; splendidly timbered. The company owns a twenty-stamp mill, three lix roasters. These roasters or furnaces are on a much improved principle, consisting of a revolving cylinder. Two fires are used, each alternately, with a gratifying result, the ore receiving a uniform heat, and the chlorination being effected with a loss of from two to three per cent. only. This furnace is the work of Mr. Ottakar Hoffman. After a permanent run of three and one-half months, not the slightest repairs were required; and two more of similar construction have been built. The mill is situated about five miles from the mine, near Pinal city, as are also all the other accessory works. The battery of stamps (twenty) is kept constantly in operation, and it is claimed that the producing capacity of the mine is sufficient to keep 100 stamps going. Weed and water are abundant; and when these are exhausted, recourse can be had to a reserve of coal lying imbedded in the immediate locality. Extensive improvements have been made in the mine and above ground. The mill is kept running to its full capacity. At the 400-feet level a chamber has been opened over 100 feet in width. Virgin silver everywhere protrudes or lies imbedded in the walls in curls, twists, and flakes, while here and there large pockets of polybasite, which is eight to eighty-five per cent. silver, are uncovered. The prospects of the mine are said to be most favorable. Current value of the mine is $1,650,000. Capitalization, $10,000,000; par value per share, $100; total amount of dividends paid to July 1, 1882, $1,100,000; date of latest dividend, July 1, 1882, twenty-five cents per share; number of assessments levied, four; date of latest assessment, January 10, 1880, ten cents per share; stock quoted June 17, 1882, $16.50. A correspondent of the *Arizona Star* at Casa Grande says (December 31, 1881) the bullion shipment from this mine during 1881 was $1,800,000.

Silver Mountain Mining Company. The officers are H. E. Townsend, Pres., Boston, Mass.; G. S. Firnald, Sec., Portland, Maine; G. A. Bruce, Treas., Somerville, Mass. E. Copley is Superintendent. The company owns four claims—the Zuma, the Anilgo, the Chicomo, and Tacomo—located in Summit county, Colorado. Shaft is 230 feet deep. The Chicomo vein can be traced three miles.

Silver Mining Company (The). Officer, W. F. Dana, Sec. Gen'l office, 60 Broadway, New York. The property belonging to this mining company is located in Montezuma, Summit county, Colorado. Capitalization, $1,000,000; shares, 500,000; par value, $2.

Silver Plume Mine (The). Owned by Wm. H. Bull & Co. This mine is located on Bald Mountain, Dakota. Tunnel over 100 feet. The Trojan mine, higher up the mountain, shows up richer ore and more of it than any other mine.

Silver Plume Mining Company. The officers are S. A. MacKenzie, Pres.; M. M. Swab, Sec.; C. Benson, Treas. Offices, 33 Market Street, and 117 Market Street, Camden, N. J. The company's property is located in Central mining district, Boulder county, Colorado. The ore gives a silver assay of 150 ounces to the ton. The character of the vein is true fissure, four feet in width, with pay-streak two feet in width. The shaft is forty-five feet deep. Capitalization, $3,000,000; par value per share, $10; basis, non-assessable; treasury reserve, 50,000 shares.

Silver Queen Consolidated Mining Company (The). Incorporators, B. F. Fields, Charles Bobb, J. A. Goodwin, O. Sands, H. F. Smith, Marshall D. Lyle, Levi L. Ashbrook. Gen'l office, Gothic City. The location of the mines owned by this company is in Gunnison county, Colorado. Clay and quartz ore. Capitalization, $1,000,000.

Silver Rock Mining Company (The) is chartered under the laws of the State of Colorado. The officers are Geo. O. Magee, Pres.; A. M. Peel, Vice-Pres.; W. J. Radcliffe, Sec. and Treas. Directors, W. J. Radcliffe, Geo. O. Magee, A. M. Peel, J. J. Wilbraham, J. C. Barnitz, H. J. Paterson, and H. T. Smith. The offices are at 310 Chestnut Street, Philadelphia, Pa. The company owns the Texas Ranger, located in Colorado. Capitalization, $1,250,000, in 250,000 shares of $5 each; non-assessable; treasury reserve, 54,000 shares.

Silverton Mining Company. The officers are W. R. Walkley, Pres.; M. C. Ogden, Vice-Pres.; S. H. Wilcox, Treas.; W. E. Warkley, Sec. The Superintendent is Mr. O. P. Posey. The company's property is located in the State of Colorado. In debt, April 1, 1882, to the amount of $27,500.

Silver Wave Mine is owned by Messrs. George W. Lull, Thomas Weeds, and others. The Silver Wave mine is located in Alma, Colorado. Veins opened on the mine for forty feet or more.

Silver Wing Mining Company (The) is a chartered organization. The company owns the Silver Wing mine and ten additional claims, located in the Eurekas district, Animas river, San Juan county, Col. The property is an aggregation and contiguity of thirty to forty large true fissure veins of silver-bearing ore, all of which can be cut by one tunnel located at the base of the mountain, and 1,100 feet in length. The Silver Wing has been developed to the extent of over 400 feet. The ore is of an average grade, with a gangue of quartz and iron pyrites; is an arsenical, argentiferous, gray copper, occurring in small crystals, granulated and compact galena, sulphurets of copper, copper pyrites, and sulphurets of zinc, assaying $300 gold and $500 silver; width of lode, two to twenty feet. The pay-streak is from eighteen to twenty-four inches wide, greenish hard rock, being compact and tough mixture of Labrador and orthoclase feldspar with angite and chlorite, containing, besides, very finely divided lime, and principally, where veins occur, much magnetic and common iron pyrites. It is, in fact, an immense conglomeration or ganglion of veins of silver ore.

Small Hopes Mining Company (The) has property located in Lake county, Col. The company owns the Robert Emmett and other mines, from which, under the direction of Col. Bohn, considerable ore is being taken, fully seventy-five tons per week being shipped, and a force of thirty-five men being employed. A large chute of chloride-bearing ore has been struck about 100 feet from the shaft. The Robert Emmett has been worked incessantly for three years past, and has produced largely. It has an immense deposit of iron ore, some of which carries enough silver to make it profitable to work. On the Forest City, another of the company's mines, work is proceeding under the direction of Col. Bohn, a staff of three men being employed in development, only occasional pockets of good chlorides being encountered.

Solomon Silver Mining Company (The) has its offices at room 37, No. 157 Washington Street, Chicago, Ill. The officers are Adolph Berend, Pres.; Eugene J. Fellowes, Sec. Directors, Adolph Berend, C. O. Born, T. M. Atkinson, Eugene J. Fellowes, and Sylvester Linn. The property is located in San Juan county, Col. Capitalization, $1,000,000, in 50,000 shares of $20 each; non-assessable.

South California Silver Mining Company. The company's property is located in Gold Hill district, Comstock lode, Nevada. There are 1,500 linear feet in the mine. Capitalization, $5,000,000; par value per share, $100. No dividends paid to June, 1882. Number of assessments levied, one; total amount of assessments levied, $10,000; date of latest assessment, February 16, 1877.

South Half-Moon Mining Company (The). Owned by W. S. Ward, T. S. Wood, G. R. Fisher, O. H. Harker, Thomas Lyles. The names of the mines belonging to this company are the Susquehanna, Monarch, Iron Duke, located on Red Mountain, Col. Yielded about fifteen tons of ore, averaging over 100 ounces in silver. A three-foot quartz vein was found at twenty feet in. Tunnel, 100 feet. Two tunnels are being built, driven one about 150 feet above the other. Quartz rose porphyry and white quartz, sienite gangue, or gouge, iron-stained porphyry and white quartz. The ore, black sulphurets, in honey-combed quartz, with some specks of galena, very little copper, and iron pyrites. Fissure veins. The mine is worked day and night. The upper one is about seventy-five feet in length, has produced ore enough to more than cover the expenses of running it; the lower, also on the vein, has not reached pay-ore, 1881. J. T. Needles, Barnes & Co. are working on a tunnel intended to cross-cut several veins belonging to that firm. Developments were commenced in 1880. Yielded about fifteen tons of ore during the year. The South Half-Moon district was prospected by Southwest Missouri miners. Specimen assays ran very high from the start. Developments, however, remained for a long time so insignificant that no energetic parties could be found to push the matter, December, 1880. When Mr. Bauman left the mine last week, the breast of the upper tunnel showed sixteen inches of No. 1 ore, which runs 250 ounces in silver, and only a trace of gold. Occasionally, the white quartz is well sprinkled with sulphurets, making it an ore, but, on the whole, the honeycombed quartz contains the best mineral. In July, 1881, Mr. Bauman examined the district, and induced Messrs. T. S. Wood, and W. S. Ward to try their chances there. On account of the failure of other parties interested in the claim, by direct purchase, to come down with the money for their share of the work, the mine will be idle this winter.

South Horn Silver Mining Company (The). Officers, R. C. McCormick, Pres.; R. G. Morrison, Vice-Pres.; A. V. K. Stafford, Treas.; H. Bradstreat, Sec. Principal office, 115 Broadway, New York city. The location of the mining property belonging to this company is in Frisco, Utah. Capitalization, $2,000,000; shares, 200,000; par value, $10.

Sovereign Silver Mining Company (The) is chartered under the laws of the State of Colorado. The officers are S. L. Smedley, Pres.; E. D. Cope, Vice-Pres.; W. Smedley, Treas.; G. L. Smedley Sec. Robert Bansen is Mining Engineer. Offices, Post-office Building, Fifth and Harrison Avenues, Leadville, Col., and Exchange Building, Third and Walnut, Philadelphia, Pa. The company's property is located at Leadville, Lake county, Col. Capitalization, $5,000,000; par value per share, $10; basis, non-assessable; full paid.

Spar Mine (The). Owned by Messrs. Gillespie & Reed. Mr. Thomas, Mang. The Spar mine is located one mile from Aspen, Col. Fine silver ore; richest mineral yet discovered, 620 ounces to the ton; seventy-five feet incline sunk on the vein; drift, sixty feet; shaft, seventy feet; twenty-five-foot tunnel (1881). Work has been suspended a short time. The efficient efforts of Mr. Thomas have increased the value of the mines fully $40,000. It will soon be worked to its fullest capacity. There is now on this tunnel fifty tons of ore for shipment.

St. Elmo Mine (The). Owned by Colonel Burichinell, of Leadville, Col.; Messrs. Frank Ganson, Charles L. Clare, M. J. Y. Marshall, Captain Jacque. The St. Elmo mine, owned by the above gentlemen, is located in Colorado. Very rich; mineral, silver glance; assayed 500 to 16,000 ounces to the ton. Vein seventeen feet four inches in width, seventy feet deep. Shaft seventy feet deep. Cost $33 per ton for mining and milling; $9 per ton to mill it (1880). It was stated some time ago that $50,000 had been offered and refused for the St. Elmo mine.

Starr Grove Silver Mining Company is chartered under the laws of the State of New York. The officers are W. S. Clark, Pres.; J. R. Bothwell, Secretary. G. W. Bothwell is Superintendent. Office, No. 2 Nassau Street, New York. The company's mining property includes the Henry Logan and Duasang lodes, located at Lewis Mountain, Nev. The character of the ore is silver. Assay value per ton, $65. The mine is a large fissure vein or ledge, some fifty or sixty feet between the walls, with about three feet of clay gangue on the hanging wall, next to which is the pay-streak or pay-ledge, which is five feet thick and of a very uniform grade. From the pay-ledge to the foot of the wall, about forty feet, is the gangue or white quartz, which will carry about ten ounces in silver to the ton, being, of course, practically worthless. The main incline has reached the depth of 180 feet, and is in good ore. The company's property includes ore house, boarding house, engine house, shaft house, blacksmith shop, boiler and engine for condensing air, an air tank, and an air hoister. The company's fifteen-stamp mill, and furnished with three Bruckner roasters, is located at the foot of the mountain on Lewis creek. The mine is some two miles up the creek, on the side of the mountain, about 500 feet higher than the creek. The climate is mild, free from snow all the year. The Henry Logan lode is 1,500 feet in length by 600 feet in width; the Duasang lode, 350 feet in length by 600 feet in width, both located in the Starr and Grove vein. Current value of mine is $100,000. Date of organization, October, 1880. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable. Total amount of dividends paid, $160,000; date of latest dividend, January 12, 1882, ten cents per share.

Sterling Silver Mining Company (The) is chartered under the laws of the State of New Jersey. Officers, Gen. James Stewart, Jr., Pres.; Barclay J. Woodward, Treas.; John S. Worman, Sec. Directors, Gen. James Stewart, Jr.; Barclay J. Woodward, John S. Worman, David W. Davis, Lewis A. Conwell. Principal offices, 110 Market Street, Camden, N. J., and Georgetown, Col. Capitalization, 200,000 shares; par value, $10, non-assessable.

Sterling Silver Company (The) is chartered under the laws of the State of New Jersey. Officers, John Dailey, Pres., Garden Grove, Iowa; A. B. Page, Vice-Pres., Ottumwa, Iowa. Directors, P. F. Breese, Council Bluffs; J. Knolte, Murray, Iowa; J. T. Walker, Great Bend, Kansas; Hon. Joseph Knotts, Council Bluffs; J. B. Knotts, Indianola; Rude Daily, Lucas, Iowa. Date of annual election, September 21. The names of the mines owned by the company are viz., Nogalito, Santiago, Los Muertos, San Juan, and Quebradillas, all located in Hidalgo district, Chihuahua, Mexico. True fissure veins, with a dip of forty-five degrees into the hill. Depth of shaft, 550 feet. The mines were consolidated under the name Quebradillas mines. Situated on the Minas Mueras lode, they are, perhaps, the oldest of North America, and were uniformly the best paying in the world. They yielded as high as $60 per ton to the Mexicans under their rude methods, have been mined for several centuries, and the lode has been worked to depths varying from seventy-five to 1,000 feet. The shaft of the San Juan is about 110 feet deep, at the bottom of which the lower vein is over thirteen and a half feet wide, and in the Santiago, at the depth of 190 feet, the upper vein is twenty-two feet nine inches wide. Milling ore is found on these mines, carrying on an average forty ounces per ton, and smelting ore carrying 100 ounces.

Stormont Silver Mining Company is chartered under the laws of the State of New York. The officers are W. S. Clark, Pres.; J. R. Bothwell, Sec. Office, 2 Nassau Street, New York. The company's mines are the Savage, the Buckeye, Last Chance, Thompson, and McNally, located at Silver Reef, Utah. The character of the ore is argentiferous sandstone, assaying $32 to the ton. The Savage shaft is being lowered another 100 feet on the ledge, from which depth levels will be driven north and south. A uniform output, it is said, of about fifty tons per day, is maintained, which is raised principally through the Savage shaft. The lower workings in the Buckeye, report says, continue in excellent ore. As the fourth south level from the Savage shaft has advanced, the ore has improved very considerably, and shows a strong four-foot vein of characteristic Buckeye ore in the faces. This is considered of more than ordinary importance from the fact that the same kind of ore was encountered above, and in each of which the grade improved with depth. In Last Chance mine $150,000 was received up to 1880. Half a million dollars' worth of silver was taken from a single bed in the Buckeye mine. Prospects are encouraging, ore being abundant. The cost of mining and milling per ton is small, say $5. Output weekly at January, 1882, 300 tons. The company owns a ten-stamp mill. Date of organization, July, 1879. Capitalization, $1,500,000; par value per share, $10; basis, non-assessable. Yield during 1880, $484,110. Total amount of dividends paid, $155,000; date of latest dividend, November 1, 1881, five cents per share. Stock quoted July 1, 1882, fifty cents.

Surprise Silver Mining Company (The) is chartered under the laws of the State of Iowa. The officers are Hon. Geo. T. Wright, Pres.; J. B. Gregg, Red Oak, Iowa. The offices are at Red Oak, Iowa. Mr. Casey is Superintendent. The company owns the Laura, Surprise, and Arnold mines, located in Tyndall district, Pima county, south-eastern Arizona. From the Laura mine the ore is chloride, and contains considerable horn silver. Selected ore assays from $500 to $2,500 per ton. Unassorted ore gave $256 per ton. At a depth of thirty feet the rich ore is about three feet wide, and carries chlorides, platinum, horn silver and native silver. Little progress has as yet been made with developments, the B shaft of the Laura being down eighteen feet and six feet in the vein. This mine, the Laura, is probably the richest mine in south-eastern Arizona. The Superintendent reports taking $3,000 in ore from the mine in one day. Capitalization, $2,000,000, in 100,000 shares of $20 each.

Sylvanite Mining Company (The). The property of the company, the Sylvanite mine, is rather inconveniently located near the top of Elk Mountain, Lake county, Col. Twenty tons of the ore milled 775 ounces per ton. The vein is from two and a half to four feet in width, with a rich pay-streak of from eight inches to two feet, containing considerable ruby and native silver. The developments of the company were commenced in 1879. Total extent of excavations, 1,000 feet. Owing to some difficulty with the stockholders, the mine is now standing idle. Yield (net) to July 1, 1882, $50,000.

Syndicate Mining Company's property is located in Bodie district, Mono county, Cal. The extent of property is 1,200 by 1,500 feet, covered by United States patent. The ore is low grade, free milling, assaying from $20 to $25 per ton. It is estimated that 25,000 tons can be extracted right along, and milled at a profit of $15 per ton. Expenses of running the mine have averaged $11,000 per month. The vein is well-defined, from two to six feet thick, and very hard, requiring powder for breaking it down. The company has one twenty-stamp mill valued at $100,000, with a capacity of forty tons per day, of twenty-four hours Commenced crushing ore, December, 1879. Monthly shipments are from $25,000 to $30,000. Length of adits, 2,500 feet. Date of organization, 1876; capitalization, $10,000,000; par value per share, $100. Yield during 1880, $24,800. No dividends paid to June, 1882. Total amount of assessments levied, $25,000. Stock quoted January 1, 1879, $10; highest point reached.

Tioga Consolidated Mining Company (The). W. H. Lent, Secretary. General office, 309 Montgomery Street, San Francisco, Cal. Trustees, A. J. Ralston, Wm. M. Stewart, R. N. Graves, John F. Boyd, J. M. Quay. Annual election, September 14. The Tioga mine is located in California (Bodie district), the property having an extent of 600 by 862 feet. The ore is quite free of waste, and will probably mill $25 per ton. Ledge varies from four to six feet in thickness. The main shaft is 720 feet down. The length of the main lode on which the company depends for its supply of ore is 1,500 feet. The mine is furnished with a hoisting capacity to sink 1,500 feet (barring water), costing $20,000. It is expected the Standard pumping apparatus will draw the mine, and save the Tioga company the expense of erecting a pumping apparatus. Capitalization, $10,000,000, in 100,000 shares of $100 each. No dividends have been paid. Fifteen assessments, aggregating $290,000, have been levied. Date of latest assessment, November, 1880; fifteen cents per share. Cash on hand April 10, 1882, $8,055.21. Stock quoted as high as $12. Receipts during the year 1881, $58,224.74; disbursements during the year 1881, $42,218.32. The financial arrangements are said to be good.

Tip-Top Silver Mining Company. Thomas Brown is Superintendent. The company's property is located at Black Canyon, Yavapai county, Ariz., being situated on one of the outlying spurs of the Bradshaw Mountains. The ore is reported to assay $215.34 to the ton. The prospects of the property are favorable. There is said to be a good face of ore on the north drift. The mine has a current value of $250,000. The main lode is 1,500 feet in length. It is developed by a shaft upwards of 600 feet deep, and thoroughly opened by levels, tunnels, drifts, winzes, and showing a pay-streak of from one foot to eighteen inches in width. The ore is high-grade sulphuret and ruby silver assaying about $300 to the ton, and improves as depth is attained. The mine has been a constant producer since its discovery. The output for the calendar year will be little short of $300,000, and the total production will exceed $1,200,000 in value. A ten-stamp-mill and roaster at Agua Fria have reduced the greater portion of the ores produced by this and the neighboring mines. Capitalization, $10,000,000; par value per share, $100; yield during 1881, $238,312, all in silver. Number of dividends paid to November 26, 1881, five; total amount of dividends paid, $100,000; date of latest dividend, November 27, 1881, twenty-five cents per share. Total amount of assessments levied, $170,000; date of latest assessment, March, 1880; amount per share, fifty cents. Stock quoted June 17, 1882, $2.50 per share.

Toltec Silver Mining Company (The) is chartered under the laws of the State of New Jersey. Officers, Watson Twining, Pres.; M. M. Gillan, Vice-Pres.; Edward S. Sears, Sec. and Treas. Directors, Charles

C. Colby, Guy C. Noble. General office, 163 Market Street, Camden, New Jersey. Transfer office, 431 Walnut Street, room 131, Philadelphia, Pa. The Vermont, Canada, and Viga mines are the property of this company, located on Mineral Point, San Juan county, Col. The Canada and Vermont are producing rich ore. Capitalization, 300,000 shares; par value, $3. Amount of stock issued, 90,000 shares; amount in treasury, 60,000 shares.

Tombstone Mill and Mining Company is chartered under the laws of the State of Connecticut and Arizona Territory. The officers are G. Burnham, Pres.; W. J. Cheney, Sec. Directors, G. Burnham, T. Cochran, G. J. Corbin, J. R. Bothwell, W. J. Cheney, B. F. Hart, P. Corbin, C. T. Parry, W. J. Neilson, M. Hullings, W. J. Hulings. Offices, 39 Wall Street, New York; 432 Walnut Street, Philadelphia, Pa., and 309 California Street, San Francisco. Prof. John A. Church is the Treasurer. The property of the company, comprising the following mines, eleven in all, viz.: Tough Nut, Lucky Cuss, Good Enough, Survey, Defence, West Side, Tribute, East Side, Owl's Nest, East Side No. 2, and Owl's Last Hoot, covering an area of about 169 acres, is located in the Tombstone district, Cachise county, Ariz. The company works five perpendicular shafts and two inclines on two of their principal mines. The ores lie in blanket ledges at comparatively moderate depths. The system of levels, drifts, winzes, and cross-cuts is complete in all their properties. This is specially true of the Tough Nut and Good Enough, the principal mines. The main shafts are fitted with steam-hoisting machinery and improved appliances of all kinds. The two mills, twenty and fifteen stamps respectively, are located at Charlestown, on the San Pedro, nine miles from the mines. The production of the fiscal year, 1880-1881, as reported by the *Tombstone Epitaph*, was $1,586,000. The weekly production is about 300 tons of ore. The company owns two stamp-mills, thirty-horse-power engine, buildings, etc. Mills working well, and up to their full capacity. This mining property has an enviable reputation, good climate, tractable formations, and ore, the latter on or near the surface, while water and timber have offered no great obstacles. Cost per ton of mining and milling is about $23.43. Current value of mine, $500,000. The main lode is 4,500 feet in length. Date of organization, 1879-1880. Capitalization, $12,500,000; par value per share, $25; basis, non-assessable. Total yield during 1881, $1,376,047.13, 29,211.66 tons; expenses during the year 1881, $794,170 90. Total amount of dividends paid, $1,250,000; date of latest dividend, April 15, 1882; number of assessments levied, one; amount, $10,000; date of latest assessment, January 9, 1882. Stock quoted June 17, 1882, $1 per share.

Tranquillity Mining Company (The) has property located in the Tombstone district, Cachise county, Arizona. The company owns the Tranquillity mine, which is one of the celebrated mines of the district, although it has not yet been much of a bullion producer. It is opened by two shafts; one, the old, is 300 feet deep; the other, which is new and the main working shaft of the mine, has attained a depth of over 500 feet. The shaft is double compartment, thoroughly timbered to the 500-feet level, and is furnished with the best steam-hoisting machinery. The ore bodies are not remarkably large, but the quality of the ore is superior. Some two hundred tons are now on the dump. The location of the claim is a guarantee of its value, as the north extension of the great ore body of the Contention must pass through it. Drifting, to strike this ledge, is now being done. This ledge, with two already uncovered, will make this mine one of the largest producers. The company is said to be rich, and the management in capable hands. About twenty men are constantly employed.

Tremont Silver Mining Company (The). Date of organization, March 22, 1881. Capitalization, $500,000.

Trinity Mining Company (The) has its offices at 61 (room 42) Broadway, New York. The officers are J. G. Cooper, Pres.; B. A. Oxnard, Vice-Pres.; D. B. Horton, Sec. H. M. Francis, Treas. (cashier of Wells, Fargo & Co.). The property of the company is located at Galena, Nevada. Capitalization, $12,000,000, in 120,000 shares of $100; a limited number of shares on the market.

Tucker Group (The). Owned by Messrs. Tucker and Makin, of Irvin, and W. H. Kirlgsberry, of Leadville, Col. The mining property of this company consists of the Lost Treasure mine, Tucker, Smuggler, White Quartz, and Horse-Shoe lodes, located on Pine Gulch, above Crystal lake, Slate Mountain Range, Ashcroft, Col. Gray copper and galena silver assaying 125 to 200 ounces in silver. The Lost Treasure, with a fifteen-foot shaft, shows gray copper and galena, assaying from 100 to 1,500 in silver. Entrance by tunnel, sixty feet deep. A sixty-foot tunnel has been run on the Smuggler, cutting the vein at a depth of sixty feet, following the vein fifteen feet. A shaft has been sunk ten feet. The vein, which averages two feet in width, assays from forty to 100 ounces, and gains in richness as depth is obtained in the shaft.

United States Gold and Silver Mining Company (The). Mr. J. W. Warren, Manager. The Virginus mine is owned by the company. Second-class ore, assaying per ton seventeen and a half ounces silver and thirty per cent. lead, 1881. The first-class ore of the United States Gold and Silver Mining Company has settled for on a basis of twenty-two and a half silver and forty-six per cent. lead.

Union Consolidated Silver Mining Company (The) holds its annual meeting on May 1. J. M. Buffington, Esq., is Secretary. The offices are at 309 California Street, San Francisco, Cal. The property of the company comprises the Union Consolidated mine, located in the Virginia district, Comstock lode, Nevada. The ore assays $47 per ton from car samples. The depth of the workings is about 2,600 feet; the length of the main lode on which the company depends for its supply of ore is 800 feet. The ore now obtained is chiefly from the 2,500-feet level, where the developments are now being prosecuted with success, the ore there found being of superior quality. The mine is now self-sustaining. The weekly out-put is from 350 to 400 tons. Capitalization, $10,000,000, in 100,000 shares of $100 each. Yield during 1881, $905,924. No dividends yet paid; nineteen assessments, aggregating $1,360,000, have been levied; latest assessment, March 21, 1882, $1 per share. Cash in hand February 1, 1882, $1,380.

Union League Silver Mining Company (The). George W. Dickson, Sec. Office, 90 William Street, New York. The company's property lies 800 feet north-west of Mack Morris mine, Richmond basin, Globe mining district, Arizona. Capitalization, $1,000,000; par value per share, $10. Basis, non-assessable.

Union Mountain Silver Company. The officers are I. May, Pres.; E. Shepard, Vice-Pres.; J. K. Hornish, Sec. and Treas. Directors, I. May, E. Shepard, J. K. Hornish, E. La Fountaine. Carl Anderson is Superintendent. Office, Denver, Col. The company's mining property consists of six claims, located at Union Mountain, consolidated, Ten Mile district, Summit county, Colorado.

Utah Silver Mining Company (The). Officer, A. G. Pratt, Sec. General office, 309 Montgomery Street, San Francisco, Cal. The mines owned by this company are located on Comstock lode, in Nevada. Twenty-four miners and eighteen surface men are employed at the Utah mine.

Vanderbilt Silver Mining Company of Utah. The officers are F. H. Myers, Pres.; E. H. H. Murry, Vice-Pres.; A. Morris, Treas.; L. L. Davis, Sec. The company's claims, the Vanderbilt and Jenny Lind, are located at East Fork, Warm Spring mining district, Alturas county, Idaho. Capitalization, $2,500,000; par value per share, $25.

Venango Silver Mining Company (The). Nathaniel Tooker, Pres.; J. F. Seldomridge, Sec.; Ed. Copley, Superintendent, of twenty-three years' experience. The property of the company comprises five claims, the Venango, South-west Extenison, Tioga, Souri, and Siskiyou, located at Irwin, in Gunnison county, Col. Seventy-five tons of roughly sorted ore assayed 175 ounces per ton. The mine consists of leads of ruby, brittle and native silver, zinc, and galena ore. Developments were commenced in 1881. A tunnel of about 500 feet is now being driven, and a shaft at its termination will afford excellent ventilation. Cross-cuts are being run to cut the veins, and the workings are kept free from water; this work is now close upon completion.

Vermont and Colorado Mining Company (The) is chartered under the laws of the State of Colorado. Directors, Edward H. Goff (of Goff, Hastings & Co.), Boston; Hon. H. A. Tabor (late Governor of Colorado), Denver, Col.; Hon. Alex. McDonald (Pres. Wabash Mining Co.), New York: Chas. E. Folsom (Chas. E. Folsom & Co.), Boston; J. B. Rhodes, Banker and Broker, Boston; Silas Gurney, Tremont House, Boston; Col. A. J. Ware (Supt. B. B. Smelting Works), Breckenridge, Col.; B. F. Stickley (Pres. Mt. Royal Mining Co.), Leadville, Col.; Col. H. M. French, Breckenridge, Col. Pres., G. E. Goff; Sec. and Treas., H. E. Irving; Vice-Pres., Hon. H. A. W. Tabor; Supt., Thomas Gowanlock. The offices are at Denver, Colorado, and at 292 Washington Street, Boston, Mass. The property of the company is located in the Consolidated Mining district, Col., having an extent of 160 acres. Quality of ore very fine, and supply abundant. Capitalization, $2,000,000, in 200,000 shares of $10 each; non-assessable forever.

Vizina Consolidated Mining Company (The) has offices at 30 Pine Street, New York. The officers are J. E. Haskell, Vice-Pres.; James Amm, Sec. The company owns the Vizina mine, located in the Tombstone district, Cachise county, Arizona. The mine has been a very considerable producer, but until the past year its development has been by no means systematic. The ores in the shallower workings occur in horizontal or blanket veins; but as depth is gained, they become more vertical and the ore bodies are larger. The developments consist of three shafts, the deepest or main working shaft having attained to a depth of nearly 500 feet. During the month of October, only 300 tons of ore were treated, eighty of which yielded an average of $454 to the ton, and the remainder, $107, making the bullion production for the month, $60,000. The average of the entire output operated to December 31, 1881, aggregating 5,887 tons, is at the rate of $93 to the ton. The main working shaft is furnished with the latest improved hoisting apparatus, all protected by a substantial building. Carpenters' and blacksmiths' shops are also comfortable buildings, conveniently located. Everything about the mine is done in a thorough and permanent manner, which is warranted by the rich developments of mineral. It is proposed to build a mill, the ore having hitherto been operated by the Boston twenty-five-stamp mill, located at Emery, on the San Pedro, the item of transportation of the ore being, as usual, a considerable drawback. For the fifteen months ending December 31, 1881, the production of the Vizina company's property is reported by the *Tombstone Epitaph* of December 4, 1881, to be $526,717 in value. In addition to the Vizina mine, the company also owns the Yreka, Poor X, and other mines, besides some 400 lots in the town of Tombstone, which are rapidly increasing in value. The above would indicate an excellent financial standing of the company, especially considering that it has only been actively at work for fifteen months. The ore assays, on an average of 675 tons, $92.07 per ton. The shaft is down 231 feet. Ore is being got from the lowest workings, and matters are progressing satisfactorily. The mine has paid its expenses from the grass roots, having produced in three months, $211,216, and since its first shipment of bullion, $42,500 from 4,595 tons of ore, an average of $92.50 per ton. There are sixty men employed. The current value of the mine is $230,000; capitalization, $5,000,000, in 200,000 shares of $25 each; total dividends, $140,000, paid to April 1, 1882, the date of latest dividend of ten cents per share; treasury reserve, December 31, $106,000; stock quoted, June 17, $1.15 per share.

Voltaire Silver Mining Company is chartered under the laws of the State of Nevada. The directors are A. H. Frank, H. H. Bend, T. Coffin, R. L. Shepard, J. G. Cohoe. Date of annual election, 3d Tuesday in July. Superintendent, J. G. Cohoe. Number of years' experience of the same, three. Transfer office, Carson City. The company's mine, the Voltaire Silver mine, is located in Ormsby county, Nev. The ore is silver-bearing based with copper. Average from battery, $56. The character of the mine is fissure vein. The company owns a ten-stamp mill, complete with O'Harra roasting furnace. The shaft is 300 feet deep; length of adits, that is levels, 600 feet. The main lode on which the company depends for its supply of ore is 1,000 feet in length. Developments were commenced July 1, 1880, and $40,000 has been expended to April 1, 1882, in developing the property. The stock is not for sale; it is held by a few individuals, who have confidence in the mine and work it on its merits. The mill is running now with good results, but it is too early to report definite figures. Date of organization, July 7, 1880; capitalization, $10,000,000; par value per share, $100; basis, non-assessable. Yield (gross tons) during 1881, 700. No dividends paid or assessments levied as yet; company free from indebtedness; stock held principally in New York; wages paid to all classes of labor per week, $500. This information was furnished by J. G. Cohoe, Superintendent and Secretary of the Voltaire Silver Mining Company.

Western Star Mining Company (The) is chartered under the laws of the State of Pennsylvania. The offices are at 109 S. Front Street, Philadelphia, Pa. The property of the company, comprising the following claims, Crœsus, Exchange, Golconda, Western Star, Rothschilds, and Fortunatus, is located in Montana Gulch, near Diamond City, Montana, and has an extent of ten acres. The veins are true fissure, widening as the shafts descend. A part of the company's claims is patented. A shaft has been sunk on one fifty feet, and another fifty-five feet in ore. Two tunnels are also driven, and considerable money has been expended in general developments. In the opinion of experts, the property contains the mother vein that supplied Montana and Confederate Gulches with their rich placer diggings from which millions have been taken, and the yield still continues. The company has a ten-stamp mill and necessary buildings erected and in operation. The company may be described as a close corporation, the greater portion of the stock being owned by a few mercantile gentlemen of Philadelphia. The mill property and improvements are all paid for, and the company is free of all bonded or other indebtedness. Stock listed on the Philadelphia Stock Exchange. Capitalization, $1,000,000, in 200,000 shares of $50 each.

White & Shiloh Company (The). The property owned by this company is the Trinity mine, located in Galena district, Nev. Veins four feet of argentiferous galena on the 530-feet level of the mine.

White Quail Mining and Smelting Company (The). Mr. H. R. Austin, Pres. of the company. The White Quail mine, owned by the company, is located on Elk Mountain, Kokoma, Col. Best quality for smelting. Company own a mill, 1881. Mr. Austin has returned east much pleased with the result of his examination. He states that the body of carbonates recently developed in the incline has been cross-cut above the point where it was cut by the incline, and shown to be continuous for a distance of 100 feet in this direction. The ore will enable the smelter to draw upon the company's mine for the bulk of its supply. The smelter will be started up as soon as the condition of the roads permits ore hauling, and will henceforth be kept steadily in operation. It is probable that it will also be enlarged and otherwise altered and improved.

Woronoco Mining Company (The) has property located in the Tombstone district, Cachise county, Arizona. The company owns the San Diego mine, which is being developed with considerable energy. The main shaft is down 347 feet. On the 266-foot level, and about ninety feet north from the shaft, a three-foot vein of carbonates was struck, and found to be very rich. Drifting along this ledge about thirty feet shows gradual improvement of the vein, which in places is partially capped by a quartz ledge which shows chloride stains and copper. In the south drift on the same level, and about sixty feet distant from shaft, rich deposits of galena and gray carbonate ores were also struck, which gave an assay of $180 in silver to the ton. The work is being prosecuted by double shifts of men.

Woodstock Consolidated Silver Mining Company (The) is chartered under the laws of the State of Nevada. Directors, E. B. Dickinson, Shelbourne; Frank B. Dole, John J. Hayes, John D. Morton, Monroe T. Quimby, Jonathan R. Gray, Edward F. Hager, Boston, Mass. Principal office, Shelbourne, White Pine county, Nevada. The mining property of this company is located at Shell Creek mining district, Nevada, and will soon commence work on them. White Pine seems to be attracting attention. Capitalization, $1,000,000; par value, $10.

QUICKSILVER.

Great Western Quicksilver Mining Company (The) has property located in Lake county, California. The length of the main lode on which the company depends for its supply of ore is 3,000 feet. Capitalization, $5,000,000, in shares of $100 each; total amount of dividends paid to September 4, 1881, $250,000; date of latest dividend, September 4, 1881; amount per share, twenty-five cents; $35,500 has been levied in assessments; date of latest assessment, August 25, 1873; amount of same, fifteen cents.

Napa Consolidated Quicksilver Mining Company (The) has property located in the Hill district, Napa county, California. Office, 330 Pine Street, San Francisco. The length of the main lode on which the company depend for its supply of ore is 28,500 feet. Capitalization, $10,000,000, in 100,000 shares of $100 each; paid on capital, $69,882.88; twenty-four dividends paid, total $250,000, to May, 1882, date of latest dividend, which was ten cents per share; total assessments levied, $69.88; stock quoted July, 1882, $5.25.

Quicksilver Mining Company (Preferred). The company's property, which covers 8,500 acres, is located in the State of California. Capitalization, $4,300,000; par value per share, $100; total amount of dividends paid to August, 1868, $535,391; date of latest dividend, June, 1882, at the rate of $6 per share; stock quoted June 15, $47.

Reddington Quicksilver Mining Company. The company's property is located in the State of California. Capitalization, $31,500; par value per share, $25; total amount of dividends paid to July, 1878, $1,052,100; date of latest dividend, July, 1878.

UNCLASSIFIED MINES.

WE have collected the following as a basis for future lists; but as the information when obtained failed to give us officially the mineral, we have put them together, rather than run the risk of wrongly classifying the product of some company.

Alpha Mining Company's (The) works are located in Michigan. Total amount of assessments levied, $420,000. Last assessment levied, March, 1882, at the rate of fifty cents per share.

Ancient Mine. W. A. & Joseph K. Clark, owners. Name of mine is the Ancient mine, located at Black Chief lode, Montana. Considerable ore extracted; mill owned by the company. Depth of shaft, forty feet. Tunnel, 200 feet.

Argonaut Mining Company (The). Officer, J. Pentecost, Sec. Principal office, 702 Market Street, Philadelphia. Mines located in Arizona.

Arivaca Mill Company's works are located in Pima county, Arizona. Officers, Hon. H. N. Hibbard, Pres.; T. H. Bryant, Asst. Sec. Office, 108 Washington Street, Chicago, Ill. Amount of property in acres, 160; capitalization, $300,000; par value per share, $10.

Arkansas Valley Smelting Company (The) is chartered under the laws of the State of Missouri. The names of the officers are F. L. Underwood, Pres.; August R. Myer, Vice-Pres.; E. E. Wilson, Sec.; Louis Virdin, Asst. Sec.; Justice Tungk, Treas.; Chas. T. Limburg, Gen. Mang. The mines are located in Colorado. Property owned is Billing's Smelter, Arkansas Valley Smelting Company, formerly Billing's Smelting works. Capitalization, $500,000; shares, 50,000; par value, $10.

Atlas Mining Company (The) is chartered under the laws of the State of California Officers are M. Goldman, Pres.; John Oppenheim, Vice-Pres.; F. M. Blackstone, Treas.; A. F. McGrew, Sec. Main office is 316 Montgomery Street, San Francisco, Cal.; branch office, 140 S. Fourth Street, room 6, Philadelphia, Pa. The mines are located at West Tintic, Utah. Assays per ton from $35 to $65. Capitalization, $100,000; par value, $100; non-assessable; stock listed on the Mining Exchange at San Francisco, Cal., at a cost of $1,000; amount of shares issued, 100,000; reserved in treasury, 10,000.

Atlanta Mining and Milling Company. A. F. McGrew, Secretary. Principal place of business, 420 Montgomery Street, San Francisco, Cal. The mines are located at West Tintic mining district, Juab county, Utah.

Aurora Tunnel and Mining Company. C. V. Hubbard, Secretary. Principal office, 203 Bush Street, San Francisco, Cal.

Azora Mining Company (The) is chartered under the laws of the State of New Jersey. Lewis Barnes, Pres., J. V. Fullaway, Vice-Pres.; Milton T. Bailey, Sec. and Treas. Directors, Lewis Barnes, J. V. Fullaway, Edward A. Carpenter, Milton T. Bailey, Geo. W. Bratton. Transfer office located at 113 S. Fourth Street, Philadelphia, Pa. Names of mines owned by the company are the Azora and Commodore B., located at Central mining district, three-quarters of a mile from Jamestown, Boulder county, Col. J. B. H. Janeway, Superintendent. Capitalization, $750,000; shares, 150,000; par value, $5; non-assessable.

Bakeman Mining Company. The officers are Hannah M. Mayo, Pres.; S. M. Bakeman, Treas.; Alice R. Johnson, Sec. Directors, H. M. Mayo, S. M. Bakeman, A. R. Johnson, Mrs. A. Smith. Agent, Geo. H. Blake. Office of agent, 93 Exchange Street, Portland, Me. The company's works are located at Cape Rosier. They own 300 acres of land, and have a capitalization of $500,000 in shares, with a par value of $5 each.

Ballarat Mining Company's (The) property is located in Lake and Summit counties, Col. They have a capitalization of $2,000,000. This company's incorporators were H. A. W. Tabor, J. W. Chipley, John Law, and J. A. Cooper.

Baltimore Consolidated Mining Company's Works (The) are located in Gold Hill district, Comstock lode, Nevada. There are 1,050 linear feet in the company's claim. This company has a capitalization of $8,400,000, in 84,000 shares, with a par value of $100 each; nineteen assessments were levied up to April 30, 1879; total amount of same being $1,037,600.

Beehive Mining Company's incorporators were Joseph Bardine, G. H. Plumwell, and G. W. Meyers. This company's property is located in Fremont and Pueblo counties, Col. They have a capitalization of $1,000,000.

Belle Mining and Milling Company (The). Mines located in Custer county, Colorado Capitalization, $100,000; shares, 10,000; par value, $10.

Bertrand Mining Company (The). Names of mines owned; Hudson, Geddes, Nos. 2–34, Bertrand, Nos. 1, 2, 3, and 4, Calico, Stockton, Secret Valley, Eliza, and Ostorne. Location of mines, Secret Canyon, Nevada. Capitalization, $10,000,000; par value, $25.

Big Four Mining Company (The). The mines belonging to this company are located in Colorado. Capital stock, $1,200,000.

Bismarck Mine (The). Vaughn & Co. The mining property of this company is located on Hunt's Gulch, between Jackson and Mokelumne river, California.

Black Range Mining Company (The). Incorporators, C. E. Johnson, J. C. Sinclair, J. M. Chadsey, W. H. Chadsey, A. F. Childs, Geo. C. Garrison, W. S. Hoge, Thomas J. Gardner, Edwin S. Holmes, S. L. Stephenson, H. C. Stein, N. Peters, T. Luna. Location of mines, Colorado. Capitalization, $5,000,000.

Black Rock Mining Company (The), California. N. T. Root, Sec., 225 Beale Street, principal office.

Black Warrior Mining Company is chartered under the laws of the State of New York. Office, 24 Cliff Street, New York. J. S. Alexander, Pres. Superintendent, A. A. Alexander. This gentleman has had four years' experience in this line of work. The Black Warrior mine, the property of this company, is located in Peck district, Yavapai county, Arizona. There are 1,500 feet in the company's claim. They own twenty-one acres of land.

Bobtail Tunnel Company's (The) works are located in Gilpin county, Col. The main lode, on which the company depends for its supply of ore, is 2,500 feet in length. Capitalization, $100,000; par value per share, $5; number of dividends paid up to December, 1879, four; total amount of dividends paid up to December, 1879, $72,000; date of latest dividend, December, 1879; amount per share, fifteen cents; total amount of assessments, $52,000; date of latest assessment, July, 1873, at the rate of thirty cents per share.

Bonanza Consolidated Mining Company (The), Eureka district, Nevada. Names of mines owned, Star of the West Nos. 1 and 2, Pride of the West Nos. 1 and 2. Main shaft is down 150 feet, from which point 300 feet drift has been run, encountering the most encouraging prospects.

Bosco Mining Company is chartered under the laws of the State of New York. The officers in 1880 were Gen. Egbert L. Ville, Pres.; E. W. Andrews, Vice-Pres.; Wm. H. Franklin, Treas.; John T. Banker, Sec. Superintendent, H. K. Ville. The company's property is located in Colorado. They own the Bosco, William, Rome, and Elizabeth mines; and developments have been pushed to the extent of determining beyond question the great value of this property.

Boston and Sonora Mining Company (The) is chartered under the laws of the State of Iowa. Officers, H. G. Curtis, Pres.; P. R. Johnson, Vice-Pres.; J. S. Gill, Treas.; W. E. Wood, Sec. Superintendent of the works, E. G. Barker. Office, 31 Milk Street, Boston, Mass. The mine owned is the Mena Grande, located at Alter district, Sonora, Mexico. This property is an extensive one and makes a very rich showing. Date of commencing developments, February, 1881; date of organization, December, 1880; capitalization, $2,500,000; par value per share, $25; non-assessable.

Boulder Mining and Developing Company. Directors, O. C. Hainsburgh, Chas. Tate, A. Peck, A. G. Peck. Chas. Tate, Pres.; A. G. Woodard, Vice-Pres.; Edgar A. Peck, Treas. and Gen. Manager. Office, Lymes Block, Denver, Col. The company's works are located in Boulder and Gilpin counties, Col. Date of organization, January 18, 1882; capitalization, $500,000; par value per share, $10.

Bristol Mining Company (The), Minneapolis, Minn. Mines owned, Mayflower and Cave. Located at Bristol district, Nevada.

Brothers' Mine (The) is owned by Messrs. B. N. Brajevich and Joseph Sresovich. The Brothers' mine is located in Calavaras district, Arizona. This mine is near the Gold Hill mine, situated in the Mohave Mountains, near Santa Cruz river. Rock is rich, and constantly improving in quality.

Brown & Urton. Property located in Nevada. Stock, 100,000 shares. Total amount of dividends paid up to July, 1881, $8,350; latest dividend, July, 1881, eight and one-half cents per share.

Blue-Bird Mill and Mining Company. Office, No. 10 Market Street, San Francisco, Cal. Location of works, Globe district, Pinal county, Arizona.

Blue Top Mine (The) is owned by Messrs. Williams & Topliff. The location of this mining property is in Arizona.

Brookland Mining Company (The) are the owners of the Brookland mine, which is located at Carbonate Hill, Col. Property owned, ten-inch Cornish pump and engine, etc. Main shaft is 480 feet deep.

Cabinet Mining Company's (The) property is located in Gold

Hill district, Nevada. Total amount of assessments levied, $4,000; latest assessment levied, October 8, 1877.

Cadillac Mining Company (The). The mines belonging to this company are located on Ball Mountain, Col.

Capps Mine (The). Owned by John Wilkes, of Charlotte, N. C. The name of mine, Capps, located five miles north-west of Charlotte, N. C. Amount of property in acres, 125; two veins, 1,200 feet; now developing on the 145-feet level; production large; when last worked, as low as seventy-five feet. Other statistics of little value. Not being worked at present, July 17, 1882. Mr. Wilkes is also proprietor of the Mecklenburg Iron Works. Production large when last worked.

Caledonia Consolidated Company, of Nevada, embraces the Helmes, Baker, Ashburn, and other companies. It is on the same range of gravel as Blue Tent, Quaker Hill, and Little York.

Carboca Mining Company (The). Directors, S. F. Gashwiler, J. W. Roberts, C. A. Burgess, C. F. McDermott, G. W. Grayson. Location of mine, Sonora, Mexico.

Carbonate Mining Company (The). Name of mines owned, Yankee Doodle, located on Carbonate Hill, Col. This mine was recently transferred to the above company for the sum of $300,000.

Carolina Queen Mining Company's (The) properties are located in North Carolina. Capitalization, $200,000, in 100,000 shares of $2 each. Amount paid in dividends January 1, 1882, $2,000. Date of latest dividend, June, 1882; amount per share, one cent. Stock quoted July 14, eighteen cents per share.

Cataract and Wide West H. Mining Company (The). Officer, Wm. B. Lake, Sec. Principal office, 26½ Kearney Street, San Francisco, Cal. Location of mines, Nevada.

Champion Mining Company (The). Officer, J. Crockett, Sec. Office of company, 302 Bush Street, San Francisco, Cal. Mines located in Nevada.

Chippewa Consolidated Mining Company (The). Officers, Directors, John J. Savage, J. Whitaker Wright, Chas. L. Hall, L. G. Kent, J. A. Rosecrans, C. C. Kellogg, Chas. J. Thomas, W. McCafferty, J. L. Loomis. Location of mines, Colorado. Twenty-five men employed.

Clifton Consolidated Mining Company (The). Directors, 1880, Geo. A. Leaverns, A. A. Munger, Jacob Weil, A. L. Weston, J. Henry Weil, J. A. Stanton, Geo. W. Bittenger. Location of mines, Colorado. Capitalization, $600,000; shares, 60,000; par value, $10.

Colorado and New Mexico Company (The). Name of mine owned, Rose of Breckinridge. Located on Mineral Hill, Colorado. Character of the ore, galena. Character of mine, veins. Depth, 500 feet. Tunnel used, 1881. Will begin shipments to Leadville as soon as the railroad reaches Breckenridge.

Columbus Consolidated Mining Company's property is located in Esmeralda county, Nev. The directors are Simon Reinhart, H. M. Levy, F. M. Luce, R. P. Keating, P. I. White. The company has a capitalization of $10,000,000.

Combination Mining Company (The). Location of mines, Black Mountain, Esmeralda county, Nev. Date of first dividend, none. Number of assessments levied, two; total amount of same, $20,000; date of latest assessment, May 18, 1878.

Comprise Mining Company (The), of Philadelphia. Location of mines, on Yankee Hill, Col. Amount of property, five acres. Prospects of property very favorable.

Conquest Mill and Mining Company is chartered under the laws of the State of New York. The officers are Sheridan Shock, Pres.; A. J. Dittenhoefer, V.-Pres.; Wm. A. Darling, Treas.; James B. Morey, Sec.; A. H. Kidney, Financial Agent. Office, 115 Broadway, New York. The company's property is located in Nevada. Capitalization, $1,000,000; par value per share, $5; basis, non-assessable.

Consolidated Yankee and Breece Hill Company (The). Officers, J. A. Rosecrans, Pres.; C. C. Kellogg, Sec. and Treas.; John Meagher, Superintendent. Principal office, 607 Harrison Avenue, Leadville, Col. The mines are located in Colorado, on Yankee and Breece Hills. The mines are worked by drifts. The shaft is 270 feet deep. This property consists of eight promising locations situated on Yankee and Breece Hills. Capitalization, 300,000 shares; par value, $10.

Cornorvan Mine (The). Messrs. Hustin & Cornorvan. Names of mine owned, Cornorvan; location of mine, Cooper Gulch, Alma county, Col. Most valuable mines; assays per ton (mill-run), $108.50; character of the mines, on the vein, about twenty-five feet, and now a vein three feet in width. Date of organization, September, 1881.

Cosmopolitan Mining Company (The). Location of mines, Gold Hill district, Nevada. 1,800 linear feet in mine. Capitalization, $10,000,000; shares, 100,000; par value, $100. Number of dividends to January 1, 1882, none. Number of assessments levied, five; total amount of same, $125,000; date of latest assessment, October 11, 1877.

Curtis Consolidated Mining Company (The). H. P. Stone, Sec. Principal office, No. 419 California Street, San Francisco, Cal. Mines located in Nevada.

Dauntless Mining Company is chartered under the laws of the State of Colorado. The officers are Wm. R. Thompson, Pres.; Geo. W. Turner, Treas.; W. D. Huntly, Sec. Directors, John S. Doughty, Wm. R. Thompson, Geo. W. Turner, Isaac Bennett, Geo. S. Adams, John D. Ruoff, N. H. Anders, H. C. Off. Superintendent, S. S. Campbell. Office, 333 Chestnut Street, Philadelphia. The Dauntless mine, owned by this company, is located in Colorado. Depth of shaft, 100 feet. Length of tunnel, 110 feet. Capitalization, $5,000,000; par value per share, $10; basis, non-assessable. Bonded indebtedness, January 1882, $10,000. Amount of stock reserved in treasury, 2,500 shares.

Devonshire Mining Company. Office of company, Boston, Mass. This company has a capitalization of $1,000,000, in 100,000 shares, with a par value of $10 each.

Diamond State Mining Company. The officers are Henry C. Conrad, Pres.; Joshua Maris, Sec.; J. W. Allen, Supt. Offices, Wilmington, Del. The company's works are located near Breckenridge, Col. They have a capitalization of $1,000,000.

Deville Mining Company's (The) works are located in Esmeralda county, Nevada. The company was organized March 21, 1880. The Directors are R. N. Graves, A. Hayward, W. H. Sheriden, W. Kobl, and J. Epstein. The company has a capitalization of $10,000,000.

Eagle Mining Company's (The) property is located in Saguache county, Col. The company was incorporated in 1880. The incorporators were Geo. B. Nevins, J. C. Loomis, M. E. Kincaid, J. C. Goodwin, and C. L. Gilingham. The company has a capitalization of $150,000.

Eberhardt and Aurora Mining Company's (The) works are located in White Pine county, Nevada. Capitalization, $1,175,000; par value per share, $50; total amount of dividends paid to December, 1877, $174,500; date of latest dividend, December, 1877, seventy-five cents per share.

Eclipse Mining Company (The). Incorporators, S. D. Prescott, A. M. Barnhart, S. G. Stein, Warren Barnhart, G. W. Barnhart. The company own mines located in Chaffee county, Col. Capitalization, $32,000. The capital stock is named at $32,000, with the privilege of increasing it to $500,000 by a two-thirds vote of the stockholders.

El Carmen Mining Company is chartered under the laws of the State of New York. The officers are E. A. Schroeder, Vice-Pres.; Edgar E. Salters, Treas. Office, 125 Broadway, New York, rooms 6, 7, and 8. The company's works are located at Michoacan, Mexico. Date of organization, June, 1877. Capitalization, $6,000,000; par value per share, $20; basis, non-assessable; full paid.

El Dorado South Consolidation Company (The). The mines of this company are located in Philadelphia district, Nye county, Nevada. 2,600 linear feet in mine. Capitalization, $4,000,000; shares, 40,000; par value, $100. No dividends. Thirteen assessments levied, with a total amount of $567,000; the latest assessment, July 27, 1878.

Electro-Magnetic Mining and Developing Company (The). Incorporators, Robert Brown, Edgar A. Peck, Mills H. Smith. The mines are located in Colorado. Capitalization, $1,000,000.

Emmett Mining Company (The). This company's mine is located in Colorado. Capitalization, $5,000,000; shares, 500,000; par value, $10.

Empress Mining Company (The). Name of mines owned, Empress. Location, Gilpin county, Col. Depth of shaft, 475 feet. Prospects of property encouraging.

Enterprise Mining and Developing Company (The) is chartered under the laws of the State of Pennsylvania. Wm. H. Wade, Pres.; Enon M. Harris, Sec. and Treas. Directors, Wm. H. Wade, A. J. String, T. A. D. Forster, M. D.; Wm. Dunlap, E. P. Carpenter. Principal office 113 South Fourth Street, Philadelphia, Pa. Location of mines, Nash county, N. C. Amount of property in acres, 1,000. Capitalization, 320 shares; par value, $2,500; full paid.

Enterprise Mining Company (The). Mines located in Colorado. Stocks quoted, July 13, 1882, sixty-five cents.

Evergreen Lakes and Mineral Springs Company (The). Simon Desmarchais. Principal office, Leadville, Col. Location of mines, Lake county, Col. Capitalization, $100,000; shares, 2,000; par value, $50.

Farland Mine (The) is the property of D. J. Adams, and is located at Clarksburg, Harrison county, W. Va. The mine is now leased by J. T. Farland. It is in the nine-foot seam. Some forty men are employed. Maximum yearly capacity, February 1, 1881, 12,000 tons. The West is the principal market for the ore.

Farwell Consolidated Mining Company. The property is located in Independence district, Pitkin county, Col., and includes the Independence, Nos. 1, 2, 3, and 4, Last Dollar, Last Dime, Legal Tender, Bennington, Choler, Sheba, Friday, Mammoth, Dolly Varden, Galton, Minnie, Mount Hope, and Golden Champion mines. The company purchased a fifteen-stamp mill, which has been running since January, 1881, and have recently built a thirty-stamp mill.

Fairfax Mining Company's (The) works are located in Nevada, Comstock lode. There are 8,000 linear feet in the company's mine. Capitalization, $10,000,000; par value per share, $100. No dividends as yet paid. Number of assessments levied, April 1, 1880, two; total amount of same, $35,000; date of latest assessment, April 1, 1880.

Flora Morrison Mine (The) is located in Tombstone district, Arizona. Shaft is 632 feet deep.

Florida Mining Company's (The) property is located at American Flat, Nevada. There are 1,200 linear feet in the mine. Capitalization, $5,000,000; par value per share, $100. No dividends paid yet. Number of assessments levied, eight; total amount of assessments levied, $225,000; date of latest assessment, February 14, 1877.

Garfield Mining and Milling Company (The). Incorporators, Daniel C. Coffman, James N. Croft, E. P. Martin, Louis K. Heker, Wm. La Shell. The company's property is located in Boulder county, Col. They have a capitalization of $100,000.

Gem Mining Company. The company's works are located in Colorado. They have a ten-stamp mill on their property. The company has expended $10,000 in developments to January 1, 1882. They have 125,000 shares; basis, non-assessable; fully paid; total amount of dividends paid to July, 1882, $7,450; date of latest dividend, July, 1882, which was at the rate of one cent per share.

Over 1 000 feet of development have been made. Prof. T. B. Comstock is Manager.

Northern King Mining and Milling Company (The). Officer, E. A. Holmes, 310 Pine Street, San Francisco, Cal. The mining property of this company is located in Arizona.

North Sulphurets Mining Company (The) is chartered under the laws of the State of New Jersey. Officers are Hamilton Disston, Pres.; Wm. Kohl, Vice-Pres.; H. B. King, Sec.; Jesse W. Neal, Treas. Capitalization, $200,000, in 200,000 shares of $1 each; non-assessable.

North Belle Isle Mining Company (The), of which E. M. Chapin is Superintendent, holds its annual meeting on the 28th of June. The officers are T. B. Dayton, Pres.; T. L. Brown, Vice-Pres.; E. M. Hall, Sec. The property of the company is located in Nevada, Tuscarora district, Elko county. Current value of mine is $20,000. The North Belle Isle sent to the mill considerable ore of good quality extracted from the upraise on the 150-foot level. The vein has been followed on this level over 700 feet, finding ore of good quality, and the vein averaging about ten inches in width. Capitalization, $10,000,000, in 100,000 shares of $100 each. Yield net during 1880, $51,720. Dividends paid to August 19, 1881, two; the total amount, $30,000; latest dividend, August 19, 1881; amount per share, $15; total assessments levied, $25,000; latest assessment, February 5, 1880; amount per share, 15 cents; cash on hand, April 1, 1882, $1,476; stock quoted June 10, $20 per share.

North Star Mine (The). Owned by Fenwick, Rape, Converse, and Lewis. The North Star mine is located in Fresno county, Cal. Assays from $150 to $200 per ton. Three feet in width.

North-Western Mining and Exchange Company (The). The location of these mines is in Elk county, Pa. Property owned by the company consists of five Harrison's machines; 1,300 tons daily; amount will be increased to about 3,000 tons per day.

North Standard Mine (The) is located in California. The company has a capitalization of $10,000,000, and No. 11 dividend of $1 per share has been declared payable July 1, 1882. The total amount of assessments levied is $20,000. The last assessment was levied November, 1881, at the rate of ten cents per share.

Numa Mining Company (The). D. Wilder, Sec. Principal office, 328 San Francisco, Cal. The location of the mines of this company is in Nevada

Ocean Seneca, Mining Company (The). S. J. De Lau, Manager. The location of the mines belonging to this company is in South Evans Gulch, Col. Shafts are used. Low grade of ore.

Oshkosh Consolidated Mining Company (The). Chartered under the laws of the State of Maine. Officers, E. C. Nichols, Pres.; C. T. Plimpton, Treas.; L. P. Johnson, Sec. Directors, E. C. Nichols S. P. Johnson, D. W. K. Knowles, John R. Mason, C. T. Plympton, H. A. Piper, G. W. Way. A. Mullen, Superintendent. The location of the mines owned by the company is in Lawson, Col. Capitalization, $500,000; shares, 100,000; par value, $5.

Oregon Squaw Lake Company (The). This company owns the Palmer Creek and Oregon mines, located in Arizona, Toughnut county. Toughnut, 703 feet; levels, 1,529; cuts, 404. Goodenough, 147 feet; levels, 419; cuts, 45. West Side, 113 feet. Total shaft, 986 feet; levels, 1,938 feet; cuts, 440 feet. Cost of operating mines and mills, per ton, mining, $2.50; to mill, $4.15. Mill has been in operation six months. Bullion produced, $300,000.

Oriental Company (The). J. T. Bradbury, Superintendent. These mines are located in Alleghany, Sierra county, Cal.

Oro Blanco Mining Company. W. O. Gould, Sec. General office, 214 Sansome Street, San Francisco, Cal. The location of these mines is in Arizona.

Osceola Mining Company (The). The Osceola and Peelstick mines are located in Arizona. 1880. They are now working the Peelstick, which has a 115-feet shaft, from which a seventy-five feet cross-cut has been run. The cross-cut has reached a body of ore five feet in width. Same company are commencing a shaft on the Osceola mine.

Providence Consolidated Mining Company (The). The names of mines are Rose and Providence, located near Volcano, Amador county, Cal. Amount of property in acres, 2,010.

Palmetto Extension Mining Company is chartered under the laws of the State of New Jersey. The Directors are Judah Isaacs, Henry Mitchell, David Mitchell, David Loewen. Office, 106 Market Street, Camden, N. J. Transfer office, 23 South Third Street, Philadelphia, Pa. The company's mine, the Lillian, is located in Colorado. Shaft is down fifty feet. Capitalization, $350,000; par value per share, $1; basis, non-assessable. Treasury reserve, 50,000 shares; stock issued, 300,000 shares.

Paris Mining Company (The). Principal offices, 310 Pine Street, San Francisco, Cal. The mines of this company are located in California. The company has a capitalization of $10,000,000.

Penasquito Mining Company (The) is chartered under the laws of the State of New Jersey. Officers, L. D. Filbert, M. D., Pres.; Gen. R. Thayer, Vice-Pres. and General Manager; A. R. Shepherd, Treas.; Joseph J. Martin, Sec. Directors, John A. Bell, L. S. Filbert, M. D., Charles A. Porter, Gen. Russell Thayer, Ex-Gov. Alexander R. Shepherd. Samuel L. Smedley, R. Stewart, M. D., Joseph J. Martin, J. E. Kingsley, L. H. Stevens. Principal office, Camden, New Jersey. Address, care of C. A. Porter, room 6, No. 201 Walnut Place, Philadelphia, Pa. Mines owned by the company are El Sacramento, La Pieto, Veta Plomosa, Todos Santos, La Bonita, La Hermasa, Santo Domingo, Penasquito, Veta Grande, La Libertad, all located at Batopilas, Mexico. Length of tunnel, 169 feet. Capitalization, 200,000 shares; par value, $5; non-assessable. Amount of stock issued, 200,000 shares. Stock issued in payment of company's property.

Penn-Breckenridge Consolidated Mining Company (The) is chartered under the laws of the State of Colorado, Herman Burgin, M. D., Pres.; John M. Taylor, Treas.; Charles B. Miller, Supt. Directors, Herman Burgin, M. D., Charles B. Miller, James Thatcher, Stephen D. Harris, J. Thomas Harrop, John M. Taylor, John J. Ziegler, D. P. Ladd, Thomas M. Longcope. Price W. Janeway, Sec. The property belonging to this company consists of nine full claims, all located in Colorado. Capitalization, 400,000 shares; par value, $10; non-assessable.

Penry Mining Company (The) is chartered under the laws of the State of New Jersey. George W. Camblea, Pres.; E. B. McKeon, Vice-Pres.; Isaac A. Lee, Treas.; H. K. Whitner, M. D., Sec. Directors, F. A. Rosengarten, George W. Cambles, C. B. McKeon. Isaac A. Lee, H. K. Whitner, M. D. Transfer office, 134 South Fourth Street, Philadelphia, Pa. The name of the mine owned by the company is the Crystal Lake lode, located in Colorado, Horse-Shoe, Peru district, Summit county. Capitalization, 400,000 shares; par value. $1; non-assessable. Amount of stock issued, 350,000 shares; reserved in treasury, 50,000 shares.

Pinal Consolidated Mining Company (The). Officer, J. W. Taylor, Sec. General office, 309 Montgomery Street, San Francisco, Cal. The mining property of this company is located in Arizona. Date of latest assessment, April 3, 1882; amount of same, $30.

Pine Forrest Mining Company (The). Leadville, Col., is the general office. The mining property of this company is located in Park, Lake, and Summit counties, Col. Capitalization, $300,000; shares, 30,000; par value, $10.

Pioche Mining Company. Location of works, Pioche, Lincoln county, Nev. There are 1,000 linear feet in the company's mine. Capitalization, $2,000,000; par value per share, $100. Number of dividends paid to August 5, 1872, three; total amount of dividends paid, $60,000; date of latest dividend, August 5, 1872. Branch office, 407 Locust Street, Philadelphia, Pa. This company's mining property consists of the Little Eagle, the Tennessee, the Jack Bull, the Legal Tender, and Legal Tender Tunnel mines, located at Sheep's Mountain, Summit county, Col. Date of organization, 1881; capitalization, $5,000,000; par value per share, $10.

Ricco Mining Company (The), of New York. Amos Lane, Superintendent, and J. Coy of the Bon Ton. The location of the property belonging to this company is in Ouray county, Col.

Rico Pioneer Mining Company is chartered under the laws of the State of Colorado. The officers are W. L. Boswell, Pres.; Sparta Fritz, Vice-Pres.; S. H. Alleman, Sec. and Treas. Directors, W. L. Boswell, Sparta Fritz, S. H. Alleman, E. H. Green, E. C. Irvin. Office, 37 South Third Street, Philadelphia, Pa. The company owns the Philadelphia, Marguerite, Kirke M. Keim, and Harcourt mines, located in Colorado. The company has forty-one acres of land. 33,000 shares are reserved in the hands of trustees as working capital. Entire capital stock has been used in payment for property. Capitalization, $1,000,000; par value per share, $10; basis. non-assessable.

Ruby Lode (The). Owned by Judge Pendery and others. The location of the Ruby lode is Iron Hill, Colorado. The character of the ore is similar to the sulphurous ores in the A. Y. & Gilt Edge lodes in California Gulch, 1881, while the mineral in the shaft is of a refractory nature. Shaft, 470 feet deep. Small hoister machinery. Mine located, 1878.

Royal Arch Mining Company. The officers are L. H. Simpson, Jr., Pres.; R. C. Combs, Treas.; E. P. Moore, Sec. Office, 137 Broadway, New York. The company's property is located at the Black Hills, Dakota. Average of ten assays from promiscuous ore, per ton, $47.94; average of four assays from selected ore, $265 per ton. Yield of Portland Mill, adjoining property, $50,000. The company has a capitalization of $1,500,000; par value per share, $5.

Rye Patch Mining Company's property is located in Nevada. The company has a capitalization of $5,000,000 in shares, with a par value of $100 each. Total amount of dividends paid, $67,500. The last dividend was paid December 31, 1877, at the rate of twenty-five cents per share.

St. Paul Sulphuret Consolidated Mining Company (The). Location of mines, Colorado. Capitalization, $2,000,000; shares, 200,000; par value. $10.

Salida Mining and Milling Company (The). Gen'l office at Salida, Colorado. The location of the mines owned by the company is in Chaffee county, Colorado. Capitalization, $100,000; shares, 10,000; par value, $10.

Saltmarsh Mining Company. Location of mines, Sterling Creek, Oregon.

Sappho Mining Company (The). J. L. Emerson, Manager. The mining property of this company is located on Yankee Hill, Colorado.

San Pedro Consolidated Mining and Milling Company is chartered under the laws of the State of New Jersey. The officers are J. Groesbeck, Pres.; C. A. Brady, Vice-Pres.; F. T. Weldon, Sec.; J. Becker, Treas. Directors, J. Groesbeck, C. A. Brady, J. Becker, J. W. Kerlin, F. L. Welden, J. L. Borsh, R. T. Donovan. Transfer office, 148 S. Fourth Street, Philadelphia, Pa. The company's property is located in Saddle Mountain district, Pinal county, Arizona. The shaft is 364 feet deep. Capitalization, $2,000,000; par value per share, $10; basis, non-assessable; number of assessments levied, five; date of latest assessment, May 17, 1882.

Santa Fe Bonanza Mining and Tunnel Company. The officers are S. T. Reed, Pres.; G. Gordon Pasey, Sec.; W. C. Rogers, Treas. C. Wells, General Manager. The company's mining property consists of the Bottom Dollar mine, together with eighteen good claims and one tunnel location. The property is located in Santa Fe county, Las Callas mining district, New Mexico. The shaft is 110 feet deep. At a depth of seventy feet a level has been run a distance of fifty feet, with a face of twenty-five feet. The distance between walls is seven and one-half feet, over five feet being solid galena ore. There are over 600 tons of ore on the dump and in sight.

Santiago Mining Company. The company's property is located at Devil's Gate, Lyon county, Nevada. There are two thousand linear feet in the mine. Capitalization, $11,200,000; par value per share, $100; no dividends paid to April 1, 1882; date of latest assessment, June 11, 1869.

Savage Mining Company (The). Officer, E. B. Holmes, Secretary. Gen'l office, 309 Montgomery Street, San Francisco, California.

Silver Islet Mining Company have their property located at

Thunder Bay, Lake Superior, Mich. Capitalization, $1,000,000: par value per share, $25; basis, non-assessable; number of dividends paid to January 26, 1880, twenty-three; date of latest dividend January 26, 1880.

Senator Mining Company (The). Officer, L. Reynolds, Secretary. Principal office, 309 Montgomery Street, San Francisco, California. The mines belonging to this company are located in Nevada.

Scorpion Mining Company (The). Officer, R. Spinney, Secretary. Gen'l office, 310 Pine Street, San Francisco, California. The mines belonging to this company are located in Nevada.

Shields Mine (The). Mr. C. F. Barber, stockholder of the company. Mr. G. M. Seymour, Manager. The above mine is located in Colorado Gulch, Colorado. The quality and character of the ore is silver, gold, and carbonate quartz. Fissure veins. New incline shaft sunk on the pitch of the vein over 100 feet. Entrance to the mine by tunnel. Property owned, engine and shaft. 1881, the Shields mine is doing effective development work, the fruits of which will soon be apparent, October 22, 1881. Last week the shaft-house and engine were removed from the old to the new shaft, and hereafter much more headway may be expected. Weekly output, seventy tons. Capitalization, $500,000; shares, 5,000; par value, $100.

Snake River Consolidated Mining Company (The). Incorporators, C. R. Fish, L. W. Aldridge, G. Drown, C. E. Clark, L. R. Vredenbery, Jr., Fred. C. L. Buck, Thomas A. Tobs. The location of the mining property owned by this company is in Fremont and Pueblo counties, Colorado. Capitalization, $1,000,000.

Sombretillo Mining Company. Their works are located at Altar, State of Sonora, Mexico. The company has large quantities of mining machinery. Capitalization, $5,000,000; non-assessable; fully paid.

Socorra Mining and Milling Company's property is located in New Mexico. The company has a capitalization of $250,000; par value per share, $100. Amount of dividends paid to July, 1882, $8,375. Date of latest dividend, July, 1882.

South Barcelona Mining Company (The). The company's property is located in Nevada. There are 1,500 linear feet in the mine. Capitalization, $600,000; par value per share, $100. No dividends have been paid, June 30, 1882. Number of assessments levied, five; total amount of assessments levied, $114,000. Date of latest assessment, August 15, 1879.

Southern Belle Mining Company. The officers are H. F. Hawkes, Pres.; D. A. Lighthill, Vice-Pres.; A. W. Mann, Treas. Office, 79 Milk Street, Boston, Mass. The company's property is located in Rowan county, North Carolina. Capitalization, $125,000; par value per share, $1; basis, non-assessable.

South Evans Gulch Mining and Milling Company (The) is chartered under the laws of the State of Colorado. Officers, H. Graham, Pres.; A. Coates, Vice-Pres.; A. Coates, Sec.; Isaac Warner, Treas.; A. Guggenheim. General office, 237 Chestnut Street, Philadelphia, Pa. Little Lille mine is owned by the company. Shaft, eighty-five feet deep. Property owned, necessary machinery and houses. Capitalization, 200,000 shares; par value, $10. Amount of stock issued, 180,000 shares; amount reserved in treasury, 20,000 shares; non-assessable.

South Standard Mining Company (The). Officer, C. A. Sankey, Sec. General office, 331 Montgomery Street, San Francisco, Cal. The mines belonging to this company are located in California.

South Utah Mining Company (The). W. S. Hinkle, Sec. General office, 207 Sansome Street, San Francisco, Cal. The location of the mines belonging to this company is in Nevada.

Seven-Thirty Consolidated Mining Company. J. H. Hosmer, Treas. Offices, 64 and 40 Water Street, Boston, and 115 Broadway, New York. The company has a capitalization of $5,000,000; par value per share, $10. The property of the company is located at Poughkeepsie Gulch, San Juan county, Col. Ore assays per ton, $418 and $15.

Spanish Peaks Mining Company (The) is chartered under the laws of the State of Colorado. Officers, Hon. E. W. Keys, Madison, Wis., Pres.; Dr. C. T. Miller, Sec. The names of the mines owned by the company are Grand Reserve, Aztec, Rising Sun, and Bonanza. Located on West Spanish Peak, Huerfano county, Col. The mines are situated in the close vicinity of some of the best-paying developed mines in the State. The lodes are continuations of veins which have been greatly developed. They are about ten miles from La Veta.

Specie Payment Mining and Milling Company (The). Incorporators, Messrs, M. A. Lathrop and Almon P. Newton. The mining property of this company is located in Gilpin and Clear counties, Col. Rich, good milling ore. Capitalization, 50,000 shares; par value, $10 each; non-assessable.

Squaw Lake Company (The). Officer, Wm. Hippel, Superintendent. The location of the mine belonging to this company is in Oregon.

Standard Mining Company (The) is chartered under the laws of the State of New Jersey. Officers, A. Wasserman, Pres.; H. P. Nutter, Jr., Vice-Pres.; W. J. Radcliffe, Treas.; Thomas J. Stewart, W. J. Radcliffe, Edwin Klautsheck, H. P. Nutter, Jr., C. J. Fireng, J. L. Sprogle, Joseph L. Fryer, George H. Van Dyke. Gen. office, 310 Chestnut Street, Philadelphia, Pa. Company owns the Bellevue mine. Capitalization, 200,000 shares; par value, $5; non-assessable: amount of stock issued, 200,000 shares; amount reserved in treasury, 30,000 shares.

Star of the West Mining Company. The mines belonging to this company are located near Monarch mine, Col. It is claimed the prospects of the Star of the West Mining Company are very good (1881).

Stevens Consolidated Mining Company (The). Directors, Hon. Lewellyn Morse, Pres.; W. B. Hayford, C. F. Bragg, E. B. Nealley, B. B. Thacher, J. J. Stevens, and another. The location of this mining property is in Clifton, Arizona. Date of organization, March, 1881; stock and bonds reserved in treasury, 1881, $25,000; non-assessable.

Sulphuret Mining Company (The) is chartered under the laws of the State of New Jersey. The officers are Hamilton Disston, Pres.; Wm. Kohl, San Francisco, Vice-Pres.; H. B. King, Sec.; Jesse W. Neal, Treas. The offices are at 105 Market Street, Camden, N. J. Capitalization, $5,000,000, in 200,000 shares of $25 each; non-assessable.

Sultan Mining Company is chartered under the laws of the State of New Jersey. Office, 30 Broad Street, New York. The company's property is located in Sugar Loaf district, Boulder county, Col. Capitalization, $1,500,000; par value per share, $5.

Sultan Mining Company (The). Location of mining property owned by the company is in San Juan county, near Silverton, Col. Capitalization, $2,500,000.

Summit Mining Company (The). The mines belonging to this company are located in Ouray county, Col. Capitalization, $1,000,000. Shares, 100,000.

Sweet Home Mine (The). Owner, Mr. Findley Anderson, New York. W. J. Mullen, Manager. This mine is located on Buckskin Gulch, Col. This property will be opened in a systematic manner, so as to be able to place the mine on a paying basis. 1881. With a small outlay the Sweet Home mine can be made one of the best paying mines in Colorado.

Tabor Sheep Mining Company (The). Officers, John F. Tabor, Pres.; Dr. J. M. Newell, Treas.; John J. McGorman, Sec.; J. A. Stanton, Supt. General office, No. 5 Boston Block, Leadville, Col. The mines belonging to this company are located on Sheep Mountain, Ten-mile mining district, Col. Capitalization, 3,000,000 shares: par value, $10.

Telegraph Consolidated Mining Company (The) has property located in the Pioneer district, Pinal county, Arizona. The officers are Ernst A. Des Maretz, Pres.; C. C. Murphy, Vice-Pres.; Lindley F. Leaman, Sec. and Treas. Board of Trustees, Theo. Williams, Vernon Seaman, C. C. Thompson, Hon. A. W. Blair. F. C. Benton, Supt. The transfer of shares can be effected at 198 Broadway, New York, the office of the New York Union Trust Company. Counsel, Remington Vernan. Capitalization, $2,500,000, in 100,000 shares of $25 each.

Telfair Mining Company (The). J. Pentecost, Sec. Principal office, 702 Market Street, San Francisco. The mines belonging to this company are located in Arizona.

Tennessee and Los Cerrillos Mining Company. The company's claims, the Bonanza, No. 3, and a number of other claims, are located in the State of Tennessee, near Nashville. The ore is a fine-grained galena and copper, assaying quite high. The shaft is 300 feet deep, at which depth water was reached; a cross-cut was then run, showing forty-two feet of mineral between walls. There is a fine hoisting-plant of forty-horse-power on the ground.

Thor and Bright Point Mining Company (The). Directors, George W. Deltzler, Wm. C. Pease, P. Franklin, Wm. S. Campbell, Samuel Purdy, J. D. Lomax. The mines belonging to this company are located in Utah. Company organized March 16, 1880; capitalization, $3,000,000.

Trenton Mining Company. This company's property is located at Devil's Gate, Lyon county, Nev. There are 1,200 linear feet in company's mine. Capitalization, $10,000,000; par value per share, $100.

Tranquillity Mining Company is chartered under the laws of the State of New Jersey. The officers are J. W. Neal, Pres.; W. Kohl, Vice-Pres.; Hamilton Disston, Treas.; H. B. Ring, Sec. Office, 105 Market Street, Camden, New Jersey. The company's property is located in Arizona. Capitalization, $5,000,000; par value per share, $25; basis, non-assessable.

Twin Lakes Consolidated Mining and Milling Company (The). Directors, Col. A. J. Sterling, Warren Cutler, Moses L. Bruner, John Steel, F. S. Schrapp. This company owns seven claims, viz.: the Major, Steamboat, Mandana, Little Major, Clarison, Little Daniel, Little Kate, and others, all located in Colorado. Capitalization, $1,000,000; shares, 100,000; par value, $10 each.

U. S. Grant Tunnel Company (The). Trustees, William B. Stone, Edward F. Browne, John Sawyer, R. R. Dremon, C. M. Osburn. Principal office, Denver, Col. The location of these mines is in Colorado Capitalization, $1,500,000; shares, 150,000; par value, $10 each.

Valley Forge Consolidated Mining Company. The officers are H. Booth, Pres.; G. Anderson, Vice-Pres.; J. M. Eddy, Second Vice-Pres.; J. H. Hamilton, Treas.; D. W. Gale, Sec. Office, 108 Washington Street, Chicago, Ill. The company's mining property, the Bed Rock, is located in Big Bug mining district, Arizona. The property covers an area of 240 acres. Capitalization, $1,500,000; par value per share, $10.

Vizina Mining Company (The). The company owns the Vizina, Ureka Poor, and other mines. They are located in Colorado.

Ventura Mining Company (The). The mines belonging to this company are located in Marion county, Cal. The company was organized, March 4, 1880; capitalization, $10,000,000.

Venture Series of Mines (The). Owned by Captain Potter, Superintendent of the British Mining and Milling Company. The Venture Series, consisting of three claims, are located on Adams Hill, Eureka district, Nev.

Wade Mining Company (The). Directors, G. D. Keeney, U. T. Smith, Oliver Merrill, H. T. Fairbanks, W. W. Myers. The location of the mines belonging to this company is in Fresno county, Cal. Date of organization, March 23, 1880. Capitalization, $5,000,000.

Wappello Mining Company (The). The mines belonging to this company are located in Agency City, Iowa. Capitalization, $500,000; shares, 50,000; par value, $10.

Waeomah Mining Company (The). Officer, L. L. Conrad, Pres. The principal office is located at 15 Lexington Street, Baltimore, Md. The mines belonging to this company are located at Kanawha county, W. Va. They own 4,700 acres of land.

Wall Street Mining Company (The). of Washington, Col. Robert Ingersoll one of the incorporators. The location of the property of the Wall Street Mining Company is in Colorado and New Mexico. Capitalization, $2,000,000; par value, $10.

Ward Beecher Mine (The). Owned by Mr. B. Work. Mr. Work owns the following mines, viz.: Ward Beecher, Hidden Treasure, Mammoth, Manhattan, and Big Smoky Mills. Located in White Pine district, Nev. Good milling ore. The Mammoth mine is said to contain, already exposed, a vast amount of thirty and thirty-five ore, which will pay a mill.

Washington and Virginia Mining Company (The) has property at Madison Run, on the Virginia Midland Railway, in Orange county, Va. Stock in treasury, April 1, 1882, $523.

Wells Fargo Mining Company (The) has property located at North Virginia, Nev. The length of the main lode on which the company's supply of ore depends is 1,500 feet. Capitalization, $10,800,000, in 108,000 shares of $100 each. No dividends paid. Fourteen assessments levied; total amount of same, $228,600; date of latest assessment, 26th May, 1880.

Western Mining Company (The) has property located in Arizona. Capitalization, $10,000,000, in 100,000 shares of $100 each; total dividends, $1,475,000 paid to December 22, 1881; date of latest dividend of $1 per share; total assessments levied, 100,000; date of latest assessment, January 28, 1880; amount of same per share, $1.

West Ontario Mining Company (The) has its transfer office at 309 Harmony Street, Philadelphia, Pa. The officers are W. H. Dole, Pres.; Geo. R. Stansberry, Sec. and Treas. The property of the company is located in the Unitah district, Summit county, Utah, and comprises three claims—West Ontario, Engineer, and St. Julian. Capitalization, $200,000, of 200,000 shares of $1 each; non-assessable.

Western Reserve Mining Company (The). Principal office, Jefferson county. The location of the mines belonging to this company is in Colorado. Capitalization, 50,000 shares, divided into shares of $100 each.

Wheeler and Extension Mining Company (The). Incorporators, Derrick F. Hamlink, Charles Fulton, Alvin H. Roudebush. Capitalization, $1,000,000; shares, 200,000; par value, $5 each.

White Cross Mining Company (The). The location of the mining claims of this company is in Storey county, Nev. Capitalization,

$10,000,000: shares, 100,000; par value, $100; no dividends paid; no assessments.

White Gulches Mining Company (The). Principal office, Leadville, Col. The mining property belonging to this company is located in Colorado.

Whitlock Consolidated Mining Company (The). The mines are Margarittia, Golden Fleece, Berrin, Collins, Fortuna, and Goodman, located five miles north of Mariposa, near head of Whitlock creek, California. The mines have recently been surveyed by R. B. Thomas, Deputy to W. S., mineral surveyor, and re-located by Higman Schofield, etc., with a view to further developing said mines, which have lain idle for the past eighteen years.

Wide Awake Mining Company (The). Officer, C. Hildebrandt, Secretary. Principal office, 232 Sutter Street, San Francisco, Cal. The mines of the Wide Awake Company are located in Arizona.

Willis Creek Mining Company (The). Officers, Philip L. Fox, Pres.; Joseph R. T. Coates, Vice-Pres.; Samuel Schofield, Treas.; J. D. Wood, Sec. Directors, Philip L. Fox, C. E., D. J. Wood, Samuel Schofield, Edward P. Carpenter, D. F Evans, R. Evans Peterson, Joseph A. T. Coates, George V. Case, Theodore Burnham. Main office, 420 Library Street, Philadelphia, Pa. Branch office, 117 Market Street, Camden, N. J. The Willis Creek mine is owned by the company, located in Buckingham county, Va., 100 acres. The property of the company, buildings, 25 horse-power engine and boiler, pumps, concentrators, steam hoister, tools, etc., four shafts, viz.: thirty-seven, twenty-five, sixty-three, and fifty-six feet. Drifts or tunnels connecting shafts, three and four. Drifts are all timbered. Capitalization, 60,000 shares; par value, $5; non-assessable. Total capital stock issued for property purchased. 30,000 shares reserved in treasury.

Windsor Mining Company (The). Officers, directors, T. L. Stanley, O. W. Randolph, Horace Webster, John Sprunance, W. E. Norwood. The location of the mining property belonging to this company is in Columbus, Nev. Date of organization, March 22, 1880; capitalization, $10,000,000.

Woodville Mining Company (The) has property located in the Gold Hill district, Comstock Lode, Nev. Length of lode or claim, 700 feet. The officers are T. P. Cavallier, Pres.; H. M. Levy, Vice-Pres.; R. E. Kelly, Sec.; Bank of California, Treas. Capitalization, $12,000,000, in 120,000 shares of $100 each. No dividends paid. Six assessments levied; total, $3,030,000. Last assessment levied, January 23, 1878.

Woodstock Consolidated Mining Company (The) is chartered under the laws of the State of Michigan. Incorporators, Joel H. Smith, Joseph P. Steele, William M. Heazlit. The mines belonging to this company are located in Buckskin district, Park county, Col. Capital stock, $1 000,000.

Ypsilanti Mine (The). Owned by Colonel J. B. Stone. The Ypsilanti mine is located in Hall's Gulch, Park county, Col. Extremely rich ore, wire and leaf-silver; some of the finest specimens of native silver ore exhibited ever seen.

MINING COMPANIES OF MAINE, NEW HAMPSHIRE, AND THE PROVINCES.

THESE we have separated from the others because the Maine mining industry has in a measure been "a thing apart." When it is remembered that two years ago there were 124 companies organized to do business in Maine mining—each company being organized with a nominal capital of from $100,000 to $300,000 (the limit by law is $300,000), and that there are now only seventeen in operation—the reader may well pause for reflection. Upon this subject of Maine mining, Mr. F. L. Bartlett, State Assayer for Maine, writes as follows:

Mining is a comparatively recent business in the State of Maine, scarcely five years having elapsed since its first blow was struck. Out of 102 mining companies incorporated in the State, only seventeen are now in active operation. Of this number, ten are producing considerable quantities of merchantable ore, some are shipping regularly, others irregularly. Of the ores produced, copper ranks first, zinc second, silver third, lead fourth, gold fifth.

Little confidence has been felt in the ultimate success of the mines, consequently capital has been exceedingly difficult to obtain. As a result, progress in development has been intermittent and slow, characterized by extreme caution, and carried on by men possessing little knowledge of the business. Nothing but its very surprising and encouraging results obtained by development could have kept the business alive.

The total amount of money expended in Maine mines for lands, buildings, machinery, labor, and other things connected with its mines, will not exceed $1,200,000. The amount realized for ores and bullion sold thus far is not far from $70,000. The value of ores on hand and unsold is about $120,000. There are four sets of dressing works, and three sets of smelting works in the State. It will be noticed that, compared with its amount of capital invested, the production is already quite respectable. At this time it is safe to say that at least ten mines in the State will eventually become dividend paying. Many exceedingly promising mines have been abandoned for want of capital to work, mines which are worthy of exploitation, and which warrant the output of capital.

The exploitations thus far have developed several large beds of copper ore, at least one true silver-bearing lode of large dimensions, several good silver, lead, and zinc lodes, and one gold lode. Large tracts of land exist in the State which have never been explored at all, indeed, but a comparatively small portion has been explored as yet for minerals, probably not more than one-seventh of the 37,000 square miles of territory included in the State. The cost of mining in this State is small compared with that of the Western States, certainly not more than one-half. Low grade copper ore exists in the greatest abundance, and offers especial inducements to the mine adventurer. Of the future of the Maine mining industry, it may now be said with certainty that the copper and zinc production will be steady and increasing. Silver seems likely to be steady, but small; lead and gold do not promise to amount to anything.

Only one mine in the State has reached a depth of 500 feet, nearly all the others are yet inside of 200 feet in depth. The mines generally are well equipped with modern and effective machinery. All employ steam-power, and in good part use steam-drills. The ore thus far treated has not, contrary to expectations, proved very refractory. On the whole, the industry may be said to be finally established, and in a very satisfactory condition.

PORTLAND. July 11, 1882.

Acton Consolidated Silver Mining and Milling Company. The company's officers are Hon. George Walker, Pres.; John S. Morris, Vice-Pres.; S. Jennings, Treas.; Charles D. Clark. Sec. Directors, G. R. Wescott, J. S. Morris, W. F. Milliken, B. Barnes Jr., Jas. Baily, C. McCarthy, F. Haines, H. Gregory Jr., F. B. Blackett, George Walker, S. Jennings. Office, located at 22 Exchange Place, Portland, Maine. The company's mines are located at Acton, Yorks county, Maine, containing yellow-like Nevada ore, assaying $330 per ton, and shows a true fissure strongly mineralized from wall to wall with argentiferous galena, sulphuret of antimony, copper pyrites, zinc blende, and other elements peculiar to the ore deposits of the local system. The length of the main lode on which the company depends for its supply of ore is 2,000 feet. Property owned consists of frame ore house, water-power, blacksmith shop, etc. The property has been idle nearly two years, owing to the general depression in Maine mining matters, and the difficulty of obtaining sales of treasury stock. The non-assessable principle of organizing companies is a mistake. This system having proved a financial failure, the assessable plan is being generally adopted, and the companies are obtaining funds for development. Capitalization, $1,200,000; par value per share, $5; floating indebtedness, $800,000. Supplies can be procured at merely nominal prices. Laborers at $1.25 per day; wood, delivered at $2 per cord; coal, delivered at $5 per ton; building lumber, $13 per M; shaft lumber, $6 per M; July 1, 1882, not in operation for want of funds.

Ashley Silver Mining Company (The). Officers are J. R. Grose, of Boston, Pres.; T. Dalby, of Boston, Treas.; Wendell Horne, of Sullivan, Sec. Directors, J. R. Grose, T. Dalby, W. Horne, J. W. Tuttle, and J. Farwell, Jr. W. Horne, Superintendent. The company's property is located at Sullivan, Maine. Date of organization, July, 1879; capitalization, $400,000; shares, each, $10; July 1, 1882, not in operation for want of funds.

Blue Hill Copper Mining and Smelting Company is chartered under the laws of the State of Maine. Officers, S. C. Blanchard, Pres.; W. M. Jewett, Treas.; John M. Merrill, Sec. Superintendent, J. H. Moyle. Offices, rooms 14 and 15, Simmons' Building, and 17 State Street, Boston, Mass. This company owns the Blue Hill mine, which is located at Blue Hill, Maine. Sixty men are now employed (July 14, 1882), and the probability is the force will soon be increased. There are over 300 tons of ore roasted, which will keep smelters going for some time. Company have lately purchased new boiler for shaft house. Capitalization, $500,000; par value per share, $5; number of assessments levied, three; date of latest assessment, June, 1882, twenty-five cents per share; stock quoted July, twenty-five cents.

Cherryfield Silver Mining Company. Office, Cherryfield, Me. Mines, Cherryfield Me. Capital, $500,000; 100,000 shares; par value, $5; unassessable. Samuel N. Campbell, Pres.; Wm. Freeman, Treas.; Wm. Freeman, Sec. and Gen'l Manager. Directors, James A. Milliken, Samuel N. Campbell and Wm. Freeman, of Cherryfield; Thomas Dalby and F. H. Williams, of Boston. Wm. A. Leonard, Supt.

Consolidated Hampden Silver Mining Company. The officers are Hon. F. M. Loughton, Pres.; W. H. Strickland, Vice-Pres.; E. C. Hill, Treas.; C. F. Bragg, Sec. Charles H. Dunton is Superintendent. The company's property is located in Hampden, Maine. Capitalization, $1,000,000; par value per share, $5; July 1, 1882, not in operation for want of funds.

Coxheath Mining Company (The.) The location of mines is in Coxheath, near Sydney, Cape Breton. Amount of property in acres, 640. Character of ore, eight to sixteen per cent. copper. Dimensions of working, 1,000 feet. Prospects of property, etc., favorable; labor cheap, coal procurable within five miles, at about $2 per ton. Date of organization at Portland, Me., October 24, 1881. Capitalization, $500,000.

Deer Isle Silver Mining Company (The). the officers of which are A. H. Harris, Pres.; G. F. Gould, Treas. and Sec. Directors, A. H. Harris, N. Y.; Nathan Cleaves and F. C. Crocker, Portland; C. W. Bryant, of Deer Isle, and Geo. D. Greely, of Boston. Mr. S. Z. Dickson is Superintendent. The offices are at 63 Broadway, New York. The mine is located at Deer Isle, Me., and is fitted with a shaft-house and an assay office. The ore is shipped to England. There are at present about sixteen men employed. Capitalization, $500,000, in 100,000 shares of $5 each. Treasury fund of 52,000 shares. Stock quoted May, 1882, twenty cents; stock quoted July, 1882, twenty-four bid, thirty asked.

Douglass Copper Company (The) is chartered under the laws of the State of Maine. The officers are Hon. Liverus Hull, Pres; F. H. Williams, Sec. and Treas. Directors, Hon. Liverus Hull, Stephen Jennings, W. D. Swazey, Hansen Gregory, Jr., Gen. Chas. Hamlin, J. S. Johnson, and John C. Watson. The offices are at Blue Hill, Maine, and at 28 State Street, Boston. Mr. Thompson is the Superintendent. The mines are located at Blue Hill, Maine. The company has 800 tons of ore roasted and waiting for new furnace smelting works. Incline tunnel, 252 feet. Main shaft sinking at rate of eighteen feet per month. About $133,066.87 has been expended on developments. A new opening has recently been made to the west of the shaft, and about forty feet from the surface, and a fine large body of high-grade copper has been encountered. If same continues west to any distance, capacity of mine will be doubled. A concentrating mill is being prepared for work. A cargo of 300 tons of roasted ore shipped to Orford Nickel and Copper Company, at Bergen Point, N. J., and another cargo of 230 tons now loading for same place. There are at present time, June, 1882, about 100 men and boys working in the shaft. Weekly product 1st of July, 1882, $5,216.77. A cargo of desulphurized ore from Acid Works of Boston, for use as flux in smelting Douglass ore. The ore is a mixture of the Milan mines, New Hampshire, and the Orford mine in Canada, and is found to be just what is required for the purpose. Two tons are used to ten of Douglass ore. This company was the result of a reorganization in November, 1881. Capitalization, $500,000, in shares of $5 each; assessable. The latest assessment was made 15th of July, 1882, of fifty cents per share, payable by instalments. Stock quoted July 1882, fifty cents.

Edgemaggin Silver Mining Company (The). Officers, S. Z. Dickson, Pres.; Mr. Libbey, Treas.; John S. Morris, Sec. Directors, S. Z. Dickson, A. H. Harris, F. H. Williams, F. F. Hale, H. W. Sargent, W. H. Miller, Superintendent. Principal office, 7 Exchange Place, Boston, Mass. Location of mines, in Sedgwick, Me. The company was organized October, 1879. Floating indebtedness, none. Capitalization, $500,000; par value, $10. Stock and bonds reserved in treasury, January 1, 1882, $3,000. Stock quoted July 1, 1882, three cents asked. July, 1882, not in operation for want of funds.

Faneuil Hall and Sullivan Mining Company is chartered under the laws of the State of Maine. The officers are Charles H. North, Pres.; F. W. Morrill, Sec.; L. A. Emery, Treas. Directors, C. H. North, M. B. Boynton, Henry Farnum, F. A. Morrill, F. S. Tuttle, and A. A. Hayward. Superintendent, A. A. Hayward. Office, 107 Faneuil Hall Market, Boston, Mass. The company's property adjoins the Waukeag, at West Sullivan, Me. The stock is all owned by seven men, and the business conducted strictly as a private enterprise. About the end of May last, this mine was flooded by the miners cutting into the vein, from which the water came with a gush and a roar, so rapidly as to scarcely give the men time to be drawn safely to the surface. Attempts to free the mine from water have been made, but it has been found that the mine cannot be pumped without the aid of machinery of almost Herculean magnitude, and operations at the mine have been discontinued. The shaft has reached the depth of 160 feet. The company had recently introduced a new air-compressor, and have a fifty-horse-power boiler, and Kendall & Roberts' double hoisting engine. Capitalization, $500,000; par value per share, $5; basis, non-assessable forever. July 1, 1882, not in operation for want of funds.

Glen Ellis Mining Company. The directors are Samuel W. Thompson, Pres.; S. Pitman, V.-Pres.; F. Osgood, Sec.; L. Julian Ricker, Treas. The company's works are located at Pinkham Grant, near the Jackson Line, and Glen Ellis Falls, N. H. The ore is argentiferous. The company was organized at North Conway, N. H., February, 1881.

Globe Mica Mining Company (The) is chartered under the laws of the State of New Hampshire. The officers are Charles A. Taylor, President, and F. H. Raymond, Treasurer. The offices are at 103 Milk Street, Boston. The property of the company is located at Springfield, N. H., and has an area of 123 acres, as yet undeveloped. The company was organized June 4, 1880; capital, $125,000, in 25,000 shares of $5 each.

Gold Mining Association of Canada (The) is chartered under the English Joint Stock Company's Act. The Hon. J. A. Chaplean is local Director, and Mr. A. A. Humphrey, of Quebec, is the Treasurer. The property of the company is located at Riviere de Loup, Bence county, Can. The mine is of both characters, gravel and quartz, latter in fissure veins. Organized in London, England, January, 1881; capitalization, $250,000.

Golden Circle Mining and Milling Company (The), of which the Directors are Geo. Gilman, Pres.; Amos S. King, Sec. and Treas. T. O. Winslow, John M. Mitchell, Chas. S. Bickford, Elias Chase, Foster E. Swift. Superintendent, R. B. King. The offices are at Portland, and the American Mining Bureau, 63 Broadway, New York. The property of the company is located at Steward's Island, Handcock county, Maine. The ore is mainly a rich telluride (sylvanite and foliated tellurium assaying 18.81 to 163.16). The mining plant and surface property comprises good boarding house, assay office and outfit, powder house, smith shop, shaft house, and wharf. Ore extracted during the prospecting work of 1880 and 1881, yielded by simple battery amalgamation over $800 in bullion, and fifty tons of ore remain on the dump. Developments now show free gold the entire depth of shaft. An incline has been driven from the bottom eighty-three feet, at an angle of 25° following dip of ore body. During past month ore has steadily improved in richness, numerous small veins uniting with main vein. The stock is held principally by residents of Portland, Me.

Gouldsboro Silver Mining Company (The), of which the following are the officers, Judge A. P. Wiswell, Pres.; C. C. Burrill, Treas.; J. B. Redman, Sec.; Frank Worcester, Manager. Directors, A. P. Wiswell, C. C. Burrill, Eugene Hale; all of Ellsworth. Mr. W. A. Leonard is the Superintendent. Head and transfer offices at Ellsworth, Me. The property is located at Gouldsboro, Me. There are now about fifteen men employed. The company is organized with a capital of $500,000, in 100,000 shares of $5 each. Stock quoted January 1, 1881, $1; stock held principally in Maine.

Haviland Copper Mining Company. The officers are G. Burnham, Jr., Pres.; R. O. Conant, Treas.; Geo. S. Winn, Sec. Office, 28 Congress Street, Boston, Mass., and 22 Exchange Street, Portland, Maine. The company's property is situated at Lyman, N. H. They have a capitalization of $500,000 in shares, at a par value of $10 per share.

Hall Anderson Gold Mining Company (The) has offices at 43 Exchange Place, New York. The property of the company is located at Fifteen-mile Stream, Nova Scotia, and covers an extent of 600 acres. The ore assays $60 per ton. The property is intersected with auriferous veins, varying in width from four to forty-eight inches. The shafts have a total depth of 210 feet. Length of adits, 200 feet. The plant includes steam pumping and hoisting works in course of erection, ten-stamp gold mill running, water power in abundance. Regular shipments of bullion are being made. Capitalization, $150,000, in 150,000 shares of $1 each. Total amount of dividends paid to July, 1882, $14,500; latest dividend, January, 1882, five cents per share.

Harbor View Gold Mining Company (The), of Nova Scotia, is chartered under the laws of the State of New Hampshire. The officers are, Directors, E. S. Bliss, J. W. Condon, P. E. Bryant, C. H. Huddleston, O. F. Winslow, J. W. Sayer, T. W. Grafton, G. W. Smith, all of Boston, and H. T. Bowman, Bedford, and C. Richardson, of Nashua. E. S. Bliss is the Superintendent. The property of the company is located in Nova Scotia, Canada. The company was organized at Nashua in January, 1881.

Hercules Mining Company (The) has offices at Portland, Me. The officers are E. Dana, Jr., Pres.; J. N. Lord, Treas.; B. Barnes, Jr., Sec. Directors, E. Dana, Jr., J. N. Lord, John M. Peck, J. R. Bodwell, Hanson Gregory, Jr., E. P. Havilland, and H. H. Emmerson, who is also the Supt. The company owns mining property, 1,805 acres in extent. Date of organization, 1882.

Hibbard Antimony Mining Company. The officers are Howard F. Smith and Dr. Bell, of Manitoa. Superintendent, W. J. Smart. The mines owned are the Hibbard, Prince William, and Brunswick. The company's property covers 800 acres of land. The quality of the ore is reported to be A 1, and improving. Assays per ton about fifty per cent. The vein is five feet wide at present depth of 240 feet, and enlarging downwards. Total sinking, 400 feet. Length of adits, that is levels, 800 feet. Property owned, Bradford's jigs, concentrating machinery, and ore-crusher. Boston, Mass., is the principal market for the ore. Eighty men are employed at the works.

Lawrence Antimony Mining Compnay (The) has offices at St. John, Nova Scotia. The officers or originators are Isaac P. Gray, R. C. Nichols, H. S. Loring, Jas. A. L. Whittier, of Boston; David W. Child, of West Newton; Elias Garritt, of Ashland, and Geo. W. Young, of Lowell, Mass. The property of the company is located at fifteen-mile stream, Nova Scotia. Capitalization, $500,000, in 100,000 shares of $5 each.

Mascot Mining Company (The) has offices at Bangor, Maine. The officers being Hon. F. M. Laughton, Pres.; M. S. Gibson, Vice-Pres.; F. H. Williams, Treas.; C. W. Hobbs, Sec. Directors, Hon. F. M. Laughton, M. S. Gibson, T. H. Williams, John S. Jenness, and E. H. Osborne. F. H. Williams & Co., Financial Agents. Superintendent, J. M. Johnson. The company own three mines, the Galena King, Galena Queen, and the Mascot, located near Mascot, Lake Gorham, New Hampshire. The ore is an argentiferous galena and copper, rich in silver. It is susceptible of oxidization, rendering it applicable to the manufacture of white lead. Assay value, $75 per ton. The mine has 800 feet of tunneling. The mining plant and other property includes ore-house, office, smiths' shop, stable, hotel, machinery buildings, thoroughly equipped with all necessary pumping and hoisting apparatus, tools, etc. Forty miners are employed. Developments commenced in August, 1881. Work progressing vigorously. The weekly output at January, 1882, was thirty to forty tons. The cost of reducing ore is $27 per ton. Capitalization, $500,000, in 100,000 shares of $5 each; forever unassessable.

Mammoth Copper Mining Company (The) has its offices at Bangor, Me. The officers are Eugene M. Hersey, Pres.; John R. Mason, Sec.; G. W. Pickering, Treas. and Transfer Agent; W. D. Lewis, Asst. Sec. and Treas. Directors, E. M. Hersey, T. N. Egery, and Sam'l Stevens, all of Bangor; W. Lewis, of Boston; and Chas. Duff, of Blue Hill, who also acts as Superintendent. The property of the company is located at Blue Hill, Me. The quality of the ore may be described as twenty-eight to thirty per cent. metallic copper. Capitalization, $500,000, in 250,000 shares of $2 each. Treasury stock consists of 100,000 shares, July, 1882; stock quoted at five cents per share, July 1, 1882; not in operation for want of funds.

Mascomo Mining Company (The) has property located at Concord, N. H. The officers or Directors of the company are Sylvester Marsh, Geo. E. Jencks, Geo. H. Emery, J. D. Prescott, Jas. R. Hill, of Concord, and Thos. Binns, of Boston. Total extent of property is 210 acres, there being three chief veins on it. The main shaft is down about 100 feet; and prospects at present are said to be brilliant. The company was organized in the beginning of the year, and developments are in progress.

Milton Mining Company. Wm. D. Lewis, Pres.; Geo. E. Harrington, Treas.; Horace T. Starr, Sec. Directors, Wm. D. Lewis, Geo. E. Harrington, C. F. Mackenzie, Wm. J. Mann, Geo. West, Henry R. Gardner, and Geo. F. Ropes. John Shoenhar, Superintendent. Office, 4 Sears' Building, Boston, Mass. Mines, West Sullivan, Me. Capitalization, $1,000,000; shares, 200,000; par value, $5.

National Mining and Investment Company. The officers are M. G. Palmer, Pres.; B. Barnes, Jr., Sec.; M. E. Moore, Treas. Directors, M. G. Palmer, B. Barnes, Jr., M. E. Moore, J. A. Strout, E. D. Eastman. This company owns the Alton Lode mine, located in Yorks county, Me. The character of the ore is low grade. Galena largely mixed with iron and considerable silica, and contains refractory elements. The character of the mine is true fissure. The veins are ten to twelve feet wide at junction. The shaft is over thirty feet deep. The main lode, on which the company depends for its supply of ore, is 2,400 feet in length. Two veins unite on this location; the fact is regarded as a favorable indication; and the property is spoken of in the highest terms by Col. Thyng, a successful and practical engineer. The property should be developed to a depth of 200 or 300 feet, where the ore-body will evidently be found very extensive, and will improve as depth is attained. Date of organization, July 5, 1881; capitalization, $500,000; par value per share, $5; company free from indebtedness, January 1, 1882; treasury reserve, 42,084 shares.

Oriental Mining Company (The) of Newburyport, has its offices at 235 Washington Street, Boston. The officers are Chester Downer, Pres.; and W. H. Harrington, Treas. Directors, Chester Downer, W. H. Harrington, D. Gilbert Dexter, A. Gould, Prof. T. Binns, John G. Pratt, and E. B. Towne. Prof. A. H. Kidney, Supt. The property of the company is located near Newburyport, Mass., and covers an area of thirteen acres. The ore is a rich, argentiferous galena, assaying from $93 to $132. The mine has two shafts, eighty-five and sixty-five feet, respectively. Capitalization, $2,500,000, in 125,000 shares of $2 each.

Pine Tree Mining Company (The). Directors, Gen. John M. Corse, Pres.; Robert E. Cutting, Jr., of New York, Treas.; Col. Charles H. Lewis, Sec.; W. Oscar Arnold. A. A. Messer, Supt. Principal office, 24 Broad Street, New York. The location of the property of the Pine Tree Mining Company is in Sullivan, Maine. Property owned, shaft house, boiler house, office, hoisting frame, reservoir, wharfage. Preparing for rapid development. Capitalization, $500,000; shares, 100,000; par value, $5; non-assessable. July 1, 1882, not in operation for want of funds.

Rosier Consolidated Copper Company. The officers are R. G. Beardslee, Pres.; E. H. Kervey, Vice-Pres.; Ernest Grosbeck, Treas.; J. B. Miller, Sec. Trustees, Col. Lewis Carr, E. Grosbeck, E. H. Kervey, Grant B. Schley, W. S. Poor, E. C. Preiss, C. C. Dodge, G. D. Schofield, and J. H. Drummond. Superintendent, T. Pollard. The company's property is located in Hancock county, Maine, covering fifty acres of land. The ore assays forty per cent. zinc, or about $8 per ton, and yields a copper assay of $12 to $18 per ton. The vein is of good copper ore twelve feet wide. The company's property includes number one shaft-house, engine-house, machine and carpenter shop, dressing-house, two large boilers, seventy-five horse-power horizontal engine, Blake crusher, and Cornish rolls, jigs; number two shaft house, cobbing house, sheds, etc., fifteen horse-power engine for hoisting, office, powder magazine, three good houses and camps for miners. The main lode is 2,700 feet in length. The weekly output at January, 1882, selected ore, 150 tons. New York is the principal market for the ore. 105 men are employed. Capitalization, $2,000,000; par value per share, $10; treasury reserve, 75,000 shares.

San Marcial Mining Company was organized at Portland, Maine, June 28, 1882, with a capitalization of $500,000.

Silver Lake Mining Company (The) is a chartered organization. The owners are (or were in 1880) Wm. Murdoch, Pres.; E. D. Goodrich, Vice-Pres.; D. L. Dodge, Treas.; E. H. Hastings, Sec. The property is located at Madison, New Hampshire. Capitalization, $1,000,000, in shares of $10 each; non-assessable; fully paid.

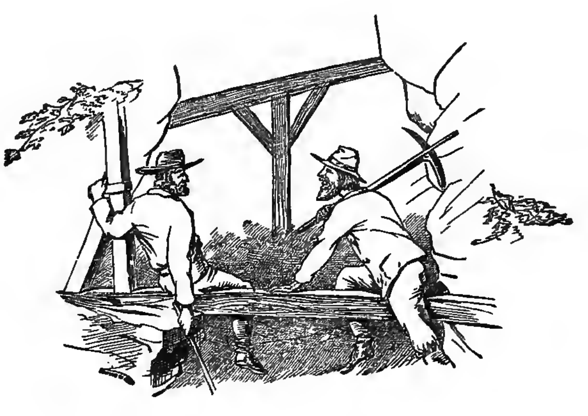
Stewart Copper Mining Company. Office, Bangor, Maine. Mines, Blue Hill, Maine. Capital, $500,000. Shares, 100,000. Par value, $5. Hon. Frederick M. Laughton, Pres.; C. F. Bragg, Sec. and Treas. Directors, Frederick M. Laughton, F. W. Hill, C. F. Bragg, and Thomas White, of Bangor; S. N. Stockwell and G. B. Putnam, of Boston. Daniel Dunn, Superintendent.

Sullivan Mining Company. The Directors are G. B. Brown, Pres.; B. S. Grant, C. F. Farrington, J. G. Russell, Dudley R. Child, E. A. Birchard, Fred. R. Nourse, Treas.; Charles L. Perrin, Sec. Mr. Stephens is Superintendent. Office, 17 Tremont Bank building, Boston, Mass. The company's mine, the Blue Ridge, is located at Sullivan, Maine. The ore is good grade, and character excellent. Assay taken February, 1882, showed $16 gold to the ton. Recent developments have given an ore assaying from $25 to $200 per ton, silver. Character of the mine, true fissure, carrying a well-defined clay seam under hanging wall; continues strong in lower levels; pay-streak preserving a width of from one and a half to four feet. Dip of the vein is changeable. The company's property includes a large Cornish pump, being put in vertical shaft for pumping (water hitherto a source of annoyance), boarding-house, superintendent's and engineer's house, wharf, coal-shed, carpenter shop, and powder-house, all built during the past year (1881), hoisting-engines, and air-compressor, sufficient for present needs. It is estimated that the surplus from the bullion product of the mill will be from $2,000 to $3,000. After paying all expenses of mining and milling, a final dividend of twenty-five cents proposed. All parts of the mines are well timbered, and said to be absolutely safe; and the appliances for raising and handling the ore are simple and of great capacity. Winzes and shaft are 791 feet. Length of adits, 2,400 feet. Capitalization, $500,000. Par value per share, $5. Number of assessments levied, three; twenty-five cents each. Total amount of assessments levied, $74,995.50. Date of latest assessment, July, 1882. Treasury reserve, July 1, 1882, $224,986. Stock quoted, July 1882, $2.

Sunburst Copper and Silver Mining Company (The). Directors, J. W. Davis, Pres.; M. Donelan, Sec.; Dr. S. W. Hodgkins, Major-Gen. Conyers Tower, Esq., James F. Davis, W. W. Clark, H. B. Mason. M. Donelan, Superintendent. Gen. office, Ellsworth, Me. The location of the mining property belonging to this company is located in East Surrey, Me., near Ellsworth. Assay of cobbed ore, 100 pounds, by W. W. Fisk, B. S.; gold, $5.31; silver, $15.41; copper, $67.32; total, $88.04; eleven ounces in gold; assays per ton in gold, $43.96. Depth of shaft, sixty-five feet. Property owned, a pump to raise water 200 feet. Recent test of Sunburst ore for copper gave 150 pounds pure copper per ton of 2,000 pounds. Five men employed; and house for hoisting, equipped with all necessary tools, etc. Propose cutting the work. Buildings erected plain but strong. Facilities for loading and unloading very good. Not troubled with water. Capitalization, 500,000 shares; par value, $1 each; non-assessable; stock and bonds reserved in treasury, 368,500 shares.

Twin Lead Mining and Smelting Company (The). Directors, E. M. Hersey, Pres.; S. Stern, Vice-Pres.; John S. Jenness, Jacob Stern, T. H. Williams, Thomas N. Egery, of Bangor, Charles Duff, of Blue Hill. The latter Superintendent also. Principal office, Bangor, Me. The mines are located on Blue Hill, Me. Capitalization, $500,000; shares, 125,000; par value, $4; date of latest assessment, January, 1882; amount per share, five cents; stock quoted January 1, 1882, five cents; seven cents asked. July 1, 1882, not in operation for want of funds.

Young Hecla Mining and Smelting Company (The) has offices at Bangor, Me. The officers are John S. Jenness, Pres.; Chas. Hamlin, Vice-Pres.; C. B. Wiggin, Sec. and Treas. Directors, John S. Jenness, Chas. Hamlin, W. D. Swazey, F. M. Laughton, Ruel Smith, Horace P. Tobey, Frank H. Williams. The property of the company is located at Blue Hill, Me. The ore is high grade. The ore in the bottom of the shaft continues to improve with increasing depth; and ore is becoming richer and more massive. Capitalization, $500,000, in 100,000 shares of $5 each. Reserve of stock in treasury, 20,000 shares. Stock has been quoted at seventy-one cents, but has depreciated considerably. July 1, 1882, not in operation for want of funds.



PART XII.

EXPLOSIVES—THE USE OF POWDER—THE MANUFACTURE IN THE UNITED STATES—A GROUP OF MINES—INSTRUMENTS OF PRECISION IN ENGINEERING

LAST but not least of all this volume concerning THE MINES, MINERS AND MINING INTERESTS OF THE UNITED STATES is PART XII. In the opening of this part we present some matters to which our publishers desire to draw the reader's attention, matters that pertain to the publisher's, not the compiler's department. The matter of explosives is a very important one and deserves the closest attention. The very interesting account of the Humboldt Mines will be read with profit. The question of engineering instruments of precision is of the highest value, and in the article under that title, the reader will find that information that will pay for perusal.

The PART closes with a fine Index to this volume. This index is in and of itself a reference volume on American Mining. It has been compiled under the compiler's supervision, and is elaborate, thorough and complete. All matters worthy of note will be found therein.

EXPLOSIVES.

THE actual discovery of Gun-powder is lost in obscurity. The Chinese claim to have used it long before it was known in western Europe, where its discovery *was* made by Berthold Schwartz. An explosive powder was known in Europe for use in heavy cannon in the 10th century, but its composition was not accurately defined and its power understood until the 13th century. It was not until three centuries later when Martin Weigel first proposed its application in the Mines of Freiburg in the year 1613, that powder was used in mines as an explosive. In 1630 its use became general in the Hartz and Erzgeberge Mines. Forty years later, or about 1670, it was first used in England at the Ecton Mines, on the borders of Stafford and Derby, where it was employed, not so much to break down the rock under ground, as to split the great blocks of stone that had been brought down by the old method of fire and wedges. Early in the 18th century it was introduced in the Mines of western Cornwall by two men, Bell and Case, who came from the western coast and who had learned the secret from the Germans. Since then the use of gun-powder became almost universal in Mines, and until recently was the only explosive ordinarily employed. It was used in the United States very early in the development of its Mining industry but gave place, quite as promptly as it did in Europe, to the various compounds of Nitro-glycerine, its immediate successor.

The discovery of nitro-glycerine by M. Sobrero in 1847, led almost immediately to a new group of mining explosives of the most wonderful force. The power of powder and, indeed, of all explosives, to rend asunder the substance within, or upon which they are placed, depends on the ignition, the moment they are liberated, of those enclosed gases which are multiplied many times their bulk, as they exist in the constituent parts of the powder. The more instantaneous the ignition of the whole mass, the greater the rending force—hence, the superiority of an explosion by detonation over one by simple ignition. M. Berthold, a French chemist, estimated the relative explosive force of the different kinds of powder, and substances which form the base of other explosive compounds as follows:

Blasting Powder	88
Artillery Powder	137
Powder, with base of Nitrate of Soda	190
Powder, with base of Chlorate of Potash	309
Gun Cotton	402
Gun Cotton, with Chlorate of Potash	680
Nitro-Glycerine	939

M. Berthollet, a French experimenter, endeavored, towards the close of the last century, to increase the force of blasting powder by the use of chlorate of potash as a base, but the destruction of his workmen and part of his family, with the miraculous escape of himself, by an explosion caused by striking his cane on a grain of powder lying on the floor, put a stop to his experiments. Since that time various efforts have been made in the same direction, and compounds have been introduced as being both safe and powerful, but the extreme danger attending the manufacture, carriage and storage of such compounds have thus far prevented chloratic powders from coming into general use. Nitro-glycerine is formed by the chemical action of certain proportions of nitric and sulphuric acids in combination, on glycerine. The latter is a thick syrup-like looking compound, rather sweet to the taste, obtained chiefly from the fatty substance used in the manufacture of candles and soap. When by the action of the acids named it becomes nitro-glycerine, it is an oily liquid, resembling olive oil with a sweet and rather aromatic taste, but almost inodorous. It is poisonous when taken into the human system, whether by the stomach or absorbed through the pores of the skin Its vapors, when liberated by an explosion, cause violent headache and nausea, if inhaled. It explodes spontaneously if exposed to a temperature of 368° F., and at a lower temperature even, if the heat is applied suddenly. In exploding, nitro-glycerine gives out double the amount of heat generated by ordinary gun powder. It has, therefore, been estimated that, if a volume of powder will give 200 volumes of cold gas, expanded by heat say to four times its original volume, or 800—a volume of nitro-glycerine, giving 1,300 volumes of cold gas, will, when expanded by heat, yield 10,400 volumes.

Its explosive power, therefore, is consequently about 13 times greater than that of ordinary gun powder. Practically, it has been found that the use of nitro-glycerine in its unmixed and liquid state was attended with such extreme danger that a substitute combining the nitro-glycerine with a comparatively safe absorbent has been generally adopted in all countries where its manufacture has been carried on.

The advantages of nitro-glycerine-powder over that of ordinary blasting powder are as follows:

1st. The amount of work which can be performed in a given space in a Mine is quite double.

2d. The consumption of steel in the use of the tools employed to drill the holes is about one-half.

3d. The consumption of hammers for the same reasons is also about one-half less.

4th. The consumption of candles in the time taken to drill the holes is about one-half.

5th. The width of drifts or slopes is about one-half and consequently requires a much less quantity of material to be hoisted from the Mines.

6th. The mine timbers required are much shorter.

7th. The ore is broken much finer by the force of the powder and requires less work at the mill.

8th. Progress of the work in the mine is expedited at least forty per cent. and in wet mines the progress of the work is increased fully fifty per cent. if not more.

The amount of high explosives manufactured in the United States, east of the Rocky Mountains, during the year ending July 1st, 1882 was fully 10,000,000 pounds.

The Repauno Chemical Co., whose extensive works are situated at Thompson's Point, New Jersey and main office at 305 Walnut st. Philadelphia, manufactured of this large total during the above year, nearly three and one-half millions of pounds.

This enormous consumption of high explosives is indicative not only of growth in our mining industries but an appreciable progress in the methods and systems of American mining.

The operations of the Repauno Chemical Co., are illustrative of this growth and progress. The company began active operations in June 1880. From June 1881 to June 1882 they doubled their first year's output, and there is every prospect of their doubling the amount of their present business in the year to come, as the sale of high-explosive compounds is increasing with marvelous rapidity. For instance, a half dozen years ago the construction of a railroad required an army of workmen equipped with picks and shovels; today the men with picks have almost disappeared as the work they performed is now accomplished in a great measure by the use of a low grade of high-explosive. If there is an embankment to remove it is blasted out and the dirt is afterward handled with shovels. In this way it is done much more cheaply and rapidly.

Blasting with a low grade of high explosives does not throw the dirt out but seems to disintregate the entire mass and render the removal of it an easy operation. The simplicity with which "Atlas" powder can be used under such circumstances requires nothing better in the workmen than ordinary intelligence, with that, any embankment or rock-work can be removed with comparative ease and without the slightest danger.

One valuable feature to be considered in connection with a high explosive is its safety in transportation.

"Atlas" powder unlike other compounds of a similar class, seems to unite the qualities of strength and safety in a very great degree. Its composition is made up of certain proportions of nitro-glycerine, nitrate of soda, wood pulp and magnesia. The last named ingredient is used to neutralize any free acid which may possibly exist in the nitro-glycerine after washing and which renders compounds of this class quite dangerous.

The nitrate of soda is received by the Repauno Chemical Co. by the cargo from South America, and delivered at their wharf on the Delaware River in its crude form, where it is stored in commodious buildings prepared for that purpose.

In the process of making powder, it is taken to the drying house where it is placed on large iron pans and subjected to a high degree of heat for the purpose of evaporating the moisture which it may contain. It is then conveyed to large pulverizing mills where it is ground nearly as fine as flour. Then certain proportions of nitrate of soda are combined with sulphuric acid, and upon being exposed to great heat in retorts made for that purpose give forth dense fumes which are condensed in specially adapted receivers, and when so condensed the result is the well known article of commerce called nitric acid.

The nitric acid is then sent to the nitro-glycerine house, where it is combined in certain proportions with sulphuric acid and glycerine, and the chemical combination produced is nitro-glycerine.

At another house wood-pulp, which this Company receives in very large quantities, is thoroughly dried, and that with the nitrate of soda and nitro-glycerine is taken to a building where they are mixed together in certain proportions, and the final result is the high explosive known as "Atlas powder." As a measure of safety as before mentioned a certain proportion of magnesia is added. The reason of this admixture of magnesia is found in the fact that nitro-glycerine even after a thorough washing will at times attach to itself small molecules of what is known as weak acid, and the tendency of magnesia is to neutralize this weak acid and thus prevent decomposition, and thereby remove in a measure a not unusual cause of danger.

In this chemical fact, the presence of free acid in nitro-glycerine compounds, will be found, very frequently, the explanation for so many serious and otherwise unaccountable explosions.

It is manufactured of different degrees of strength which are indicated, as mentioned in the following table:

F +	containing	15	per cent.	nitro-glycerine.
E	"	20	"	"
E +	"	25	"	"
D	"	30	"	"
D +	"	35	"	"
C	"	40	"	"
C +	"	45	"	"
B	"	50	"	"
B +	"	60	"	"
A	"	75	"	"

The powder is made into cartridges, either six or eight inches in length, and from ⅞ to 2 inches in diameter, and is packed in either 25, 50 lb. short and 50 lb. long boxes, the last for convenience in handling, containing the powder in 5 and 10 lb. cartoons placed inside of the wooden boxes.

Of these many grades the greatest demand is for the "C" grade, which is used extensively in the mines of Colorado and New Mexico and in heavy rock-work incident to railroad construction. The lowest grade, "F," can be used to the best advantage in dirt blasting and gravel pits. For submarine work and harbor improvements "A" powder is the most suitable. "Atlas" powder and compounds of this class have entirely superseded what is technically known as Dynamite. The former contains nitrate of soda as an absorbent, which gives it an additional explosive force, while in the latter the absorbent is composed of an inert matter, and the force exerted is simply that of the nitro-glycerine. To the ordinary reader it may seem strange to say that soda possesses inherent explosive power, but he may realize that such is the fact, when it is remembered that that chemical enters largely into the composition of ordinary gunpowder. Table sugar also contains a strong explosive force which is nearly as great as that of gunpowder, if confined and exploded by a detonating cap. As we have had occasion to before remark, the extreme care taken in the manufacture of "Atlas" powder by the Repauno Chemical Co., has been so marked and the adherence to the standard adopted by them so absolute, that the railroad companies have granted them special privileges in the way of transportation.

Their compound is so prepared, that it can be transported and stored in almost any climate without danger of premature explosion or deterioration in strength.

Some of the powder which they manufactured when their works were first started, is now stored in one of their magazines, and upon recent examination was found to be in its original state and fully as effective when used in blasting, as when it was first compounded.

Above we have called attention to the important interest so closely allied with the mining industries of this country, as exemplified in the product of the Repauno Chemical Co. There is no doubt that "Atlas" powder is as safe as ordinary blasting powder, and if the holes are placed with judgment, it will do several times the work of ordinary powder. But in a great many mines, almost a new generation of miners will be needed before "Atlas" powder will be able to perform all the work of which it is capable. It has often been found, that men if not watched, will persist in drilling holes just as they did before high explosives were used, and consequently bring no more rock down with a charge than they did with the ordinary system of powder blasting.

This is particularly the case in English mines. To obviate it, the plan has been adopted in many American mines, of appointing one or more intelligent foremen to direct where the holes are to be drilled and to explode them. When the holes are deep enough the drills are removed to another part of the mine for similar work; the drillers being paid per foot for drilling. The foreman then charges the holes and fires the blast. Then the drillers return and remove the débris, and the process is repeated.

In addition, we desire to briefly call the reader's attention to some of the apparatus furnished by the same company, for the proper and successful explosion of their compound. Of the utmost importance to the miner and operator, is the necessity of being provided with the best electrical goods which the market will produce. Unlike ordinary gunpowder, nitro-glycerine compounds can only be exploded by a a detonating cap, fired either by the insertion in it of a piece of safety fuse, or by an electrical current generated by machines constructed for that purpose. This company sells a blasting machine eminently adapted for that purpose. It is light in weight, consequently portable, and certain in its results. For use with this, magneto-battery, as it is called, are platinum fuses, which are constructed with great care and sold in enormous quantities for that purpose.

Many miners still adhere to the old custom of firing by fuse and blasting caps. These goods are also kept in stock by the Repauno Chemical Co. The success attending the use of platinum fuses, and *Magneto* blasting machines is very marked, and their use has rendered the operation of sinking a shaft, tunnelling a hill, and removing obstructions under water an exceedingly simple and safe task.

One great advantage in having a business connection with this company is that its product and accessories can be obtained of responsible agents in all sections of the country. To all of our readers, therefore, in view of the foregoing facts, we can conscientiously and cordially recommend "Atlas" powder for all mining purposes where an explosive of that character is needed.

A MINING PROPERTY.

THE mining property and mines owned and operated by the Humboldt Mining Co., of Engle, Socorro County, New Mexico, are the most prominent in the several localities in which they are situated. They were secured at a period in the history of that territory when choice of localities was to be had. Col. Branson, now President of the Company, and his associates took advantage of the scare that was occasioned by the Apache raid in the summer of 1881, when almost everyone was fleeing from the mining districts, visited the most important points and secured those properties they thought desirable, in the Cuchillo Negro, upper Caballo, lower Caballo, and San Andreas Mountains.

The three first named are located west of the Atchison, Topeka & Santa Fe Railroad in Socorro County and the latter about twenty miles east in latitude 33° on the line dividing Socorro and Dona Ana counties.

What is popularly known as the Black Range, are really the Miembres, the real Black Range or Negreta Mountain being known as the Cuchillo Negro, after a chief of that name, signifying Black Knife. On leaving the railroad at Engle, and facing west, one cannot see the Cuchillo Negro Mountains through the space between the southern end of the San Christobals and the northern end of the Caballos, but the Miembres looms up 40 miles away, black with its covering of evergreens, hence the *misnomer* by the rush of new prospectors in 1881. The company's mines are located as follows: Two on Mount Hancock called, "Gift" and "Garfield," four on Mt. Garfield called "Little Luella," "John G. B.," "Providence," and "Sunny Side," two in Mount Arthur called "Little Hope," and "Reward," and two on the foot hills east of Mt. Garfield called Lookout and Telegraph, at an altitude of about 6,500 feet above sea level. These are all within a few miles of the towns of Grafton, Chloride, Robinson and Fairview.

Shafts have been sunk on all these properties from ten to fifty feet in depth and a tunnel in the "Little Luella" 140 feet that will cross cut when extended all the veins and carbonate deposits in Mount Garfield. The character of the ores in this region are argentiferous galena, lead carbonates carrying silver, goldbearing quartz, and carbonates of copper. A sufficient quantity of fluor spar and limestone is found in combination to make flux for such of these ores as require smelting. Many of them are free milling ores, and can be worked very cheaply, there being abundance of fine timber and water in the immediate vicinity. The ores of this region are mostly high grade.

The developments made are with a view to permanent work in the most economical and productive manner. It is confidently believed by all those capable of forming an opinion that at about two hundred feet the ores in this district will prove to be very rich; assays of $126 to the ton were made of ores taken a few feet from the surface, and it is expected when the tunnel now being driven reaches the same vein that they will be of greatly increased value.

A branch railroad has been twice surveyed, and is about to be built, that will connect this region with the A. T. & S. F. R. R. at Engle.

The Caballo Mountains are east of the Rio Grande, which flows at their base.

In the Upper Caballo near Palomas Gap are located five claims called California, Nevada, Gift, Grammis and Terry.

Shafts have been sunk in all these claims, and the Grammis has been developed by a tunnel of about ninety feet, the entire distance in mineral of varying richness. A great variety of ores are found in these properties, which are only fifteen miles distant from Engle. Veins of good coal have been found within a few miles of this camp. In the Grammis tunnel, gold, silver, copper carbonates, free copper and lead have been found.

In the Lower Caballo the Company own five claims, called "Golden Fleece," "First Extension North," "First Extension South," "Ella," and "Frank W." These claims are all continuous and are located about one mile from the river. The Golden Fleece lode is remarkable for its prominence; it can be clearly traced for miles as a prominent feature in the landscape as it crops from two to thirty feet above the surface, varying in width from four to seven feet. the vein matter is fluor spar and quartz filled through with argentiferous galena. It resembles the celebrated Comstock, and is most favorably located, with plenty of timber and only one mile from the river, with a ranche adjoining that is capable of raising all necessary provisions, and is fifteen miles distant from the A. T. & S. F. R. R. Several shafts have been sunk, the deepest ninety feet, on this vein, which is nearly perpendicular, the mineral increasing in richness as depth is attained. It is the purpose of the Company to drive this shaft to a depth of 300 feet.

The Rio Grande is here about 4,500 feet above sea level, and has an average descent of five feet per mile, rendering easy the construction of irrigating ditches, a pipe line or other water power. These mines are from 200 to 700 feet above the river.

In the San Andreas Mountain 25 miles east of the A. T. & S. F. R. R., six miles from the proposed line of El Paso and White Oaks R. R., soon to be constructed along the eastern slope of this range, the Company secured twelve very desirable claims named Leviathan, Kahler, Cincinnati, Chrysolite, Chloride, Adriatic, Corbit, Hembrillo No. 1, Hembrillo No. 3, Timbuctoo No. 1, Timbuctoo Discovery, Morocco, and four mill sites at Hembrillo, "Cottonwood," Sulphur and Cincinnati Springs, the latter in a secluded gorge near the claim in connection with which it is located, and also within one-half mile of the Kahler mine, which mine has been opened to a depth of 70 feet, and shows large amounts of pay ore. The Adriatic at a depth of only 10 feet assays well in silver, gold and lead. The Chrysolite shows higher grade carbonates and quantities of beautiful Fluor Spar filled with galena but the lead on which the Morocco, Timbuctoo and Hembrillo claims are continuous is evidently the one that is destined to make the greatest return in that locality. It is clearly defined two feet wide at the surface, five feet at 15 feet deep, and steadily increasing in width and richness. A large per centage of lead, fair return of silver, and with every necessary flux, water, timber, and coal not far off makes it a very cheap mineral district to work.

Between these mountains and the Organs on the east, and the San Christobals and Caballos on the west, 5,000 feet above the level of the sea, lies the Jornada del Muerto, or Journey of Death, an apparently barren plain 100 miles from north to south and 40 miles from east to west, which, on examination, proves to have several lakes in it, except in very dry seasons, and many thousands of acres of good pasturage, over which range herds of antelope and other deer, and now the cattle of the enterprising herdsmen. It is much cut up by ravines, and while in some portions large marine deposits are found, on others beds of lava cover the ground.

The A. T. & S. F. R. R. traverses its entire length, and at Engle station, near its centre, is the head-quarters of the Humboldt and other mining companies, only four days' ride from Philadelphia, and one day's drive from any of their mines.

The general development of this country has been very rapid since the advent of the Atchison, Topeka & Santa Fé R. R., which will soon be the direct route from London to Australia, *via* steamer from Guaymas, Mexico, to Sidney, thus avoiding the Suez Canal and "Arabi," and saving several days in the trip.

New Mexico contains more miles of R. R. than any one of the New England States, all built during the past three years, with many hundred more miles projected.

The mineral veins of this territory are much nearer the surface and its mountain ranges not so high as in other mining regions, hence pay ore is much easier reached.

The climate is dry and healthy, warm days and cool nights the seldom varying rule. Work out doors is carried on every day in the year.

No Spanish, Mexican or other land grants mar the titles or embarrass the work of this company as is unfortunately the case in so great a portion of this rich territory.

The policy of the company is to concentrate most of their efforts and expenditures on one of the groups which is most likely to prove speedily remunerative, and as soon as it becomes so, then to push developments on another, and so continue until as many as can be profitably worked under one management are in full production; the surplus property to be partially developed from time to time, and sold for the benefit of the Company treasury.

ENGINEERING AND OTHER INSTRUMENTS OF PRECISION.

THE instrumental work required by engineers, more especially for use in mining interests, where the results of scientific knowledge and skill must be accurate underground, as well as on the surface, is more varied and numerous to-day, than a few years ago. Now, the question of transportation must be considered as well as the question of precise results, and the most perfect and delicate instruments are necessitated; from this necessity has arisen the extraordinary progress made in this country in the production of the various scientific appliances, and we are now in advance of Europe in perfection of instruments of precision. In the early history of Philadelphia are found the names of Godfrey, inventor of the quadrant; Franklin, Fitch, Evans, and other skillful mechanics, engaged in the invention and construction of scientific instruments; Rittenhouse made the first telescope in this country, and in the museums of the American Philosophical Society and Franklin Institute may be seen models of works showing the highest mechanical and mathematical genius, serving as incentives in improvements by the later generations. That worthy successors of those time-honored mechanics continued among us, to add to the scientific wealth and reputation of Philadelphia and this country, by their constructive skill, has an interesting and valuable illustration in the productions of the house of Young and Sons, 43 North Seventh St. This firm is the oldest, largest, and most widely-known manufacturers of the finer kinds of mathematical, astronomical, and civil-engineering instruments in the United States. The business has continued in the same family for three generations, the founder being the late William J. Young, who established the works in 1820, and carried it on for 50 years, when at his death in 1870, the business passed to his son, Alfred Young, the latter being succeeded at his death in March, 1882, by his son, Alfred C. Young, who now conducts it, assisted by valuable skilled mechanics, one of whom has been connected with the house for forty-three years. William J. Young invented the transit instrument in 1831, a long stride in the improvement of engineering appliances, and that it retains to-day its almost identical first form, proves the value of its introduction and the good judgment of the inventor. The English Theodolite, capable of performing the same work, was not in favor with the earlier American engineers, its workings being slow and inconvenient, and its use attended with many discomforts, although many English engineers cling to it to this day. From the theodolite the change was to the magnetic compass, made to read full circle angles, independent of needle; it did close work, and while valuable for speed in preliminary "runs" of railroads and surveying, it was too uncertain for location, the needle producing too much trouble by "playing." The transit made by Mr. Young was graduated to read by vernier to three minutes, it being a favorite idea of the inventor that graduations of three minutes could be easily read to one minute, and be less perplexing to use; the needle was about five inches, the telescope nine inches, of low power; the standards of almost the identical pattern now used by some makers. For whom the first transit was made is not positively known, engineers claiming its use on the State works of Pennsylvania, as also on the Baltimore and Ohio Railroad. About one year ago, one of Mr. Young's transits was sent into his factory for *repairs*, having been *forty years* in service, a greater part of the time in the hands of assistants and in rough wooded country. Messrs. Youngs' *Mining Transits* differ from ordinary ones, principally in being of smaller size for greater portability, in having telescopes admitting more light and completely enclosed, having a greater range of vertical angle, in the vernier and needle being more accessible to read, improved vernier, giving greater accuracy of readings, and its position to one side of the standards very preferable where the engineer is working in confined situations; a GRADENTIER ATTACHMENT measures (where the grade is not too steep) the inclination with *accuracy and speed*, besides distances and differences of level. Messrs. Youngs lately built a GRADUATING ENGINE costing $7,000, and four years were occupied by three of their best workmen in testing and correcting it, that it might be, as intended, a manual of precise scientific mechanism, and enable them to guarantee their astronomical instruments as the finest work of the class produced in this country, and equal to the best European work; instruments with circles as large as forty-four inches can be graduated on their engines. In their line of manufactures Young & Sons admittedly lead the trade in the United States, and with confidence in their superiority, can request the attention of colleges, institutions of learning, civil and mining engineers, and private parties to their facilities and ability to produce perfect work in their specialties. They solicit correspondence and will be pleased to mail their manual and catalogue on application.

ADVERTISEMENTS

The Mining Industrial Publishing Bureau:

MINING COMPANIES, individuals or corporations desiring prospectuses, reports, bonds, shares, letter-headings, receipts, checks, mine blanks, wages books, and all and every kind of Printing gotten up in the most acceptable style of typography, should send their orders to

The Mining Industrial Publishing Bureau.

All Printing furnished by the Bureau will be characterized by originality and taste, and will be furnished at very low rates. The mechanical appearance of this volume is a guarantee of only good work.

The Mining Industrial Publishing Bureau

will undertake the preparation of maps, plans, illustrations, diagrams of every description, for geologists, mining companies, experts, &c., &c. The best work guaranteed on all orders, together with promptness and low prices. For estimates, mining companies and all others should address

THE MINING INDUSTRIAL PUBLISHING BUREAU:

427 WALNUT STREET,

PHILADELPHIA.

American Watch Company,

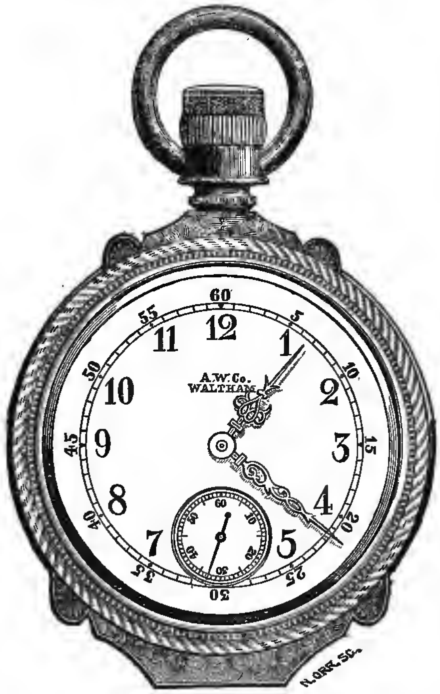
Waltham, Mass.

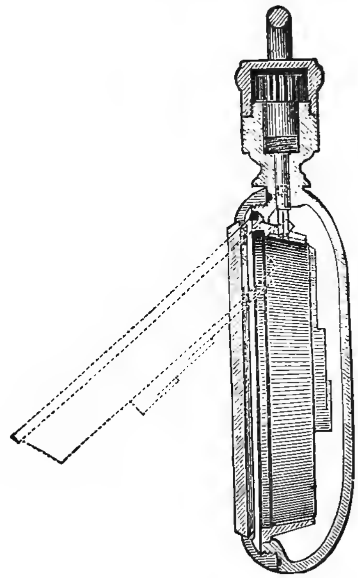
MANUFACTURERS OF THE CELEBRATED

PATENT DUST-PROOF WATCH CASES,

OPEN-FACE,

Especially adapted for use in MINES where Dust-Proof Cases are required.

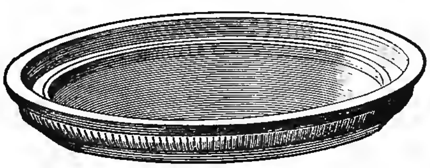


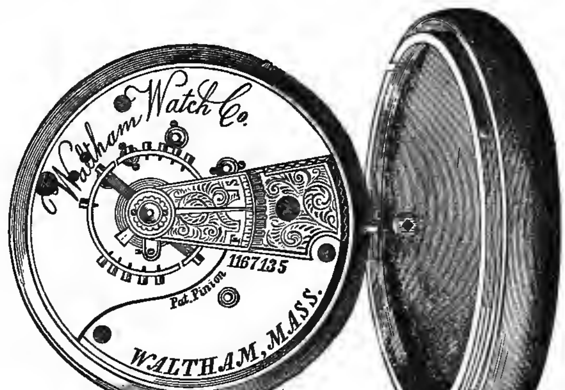


THE continuous construction of the body of this case avoids the opening of the watch in the back, does away with the interior cap, and greatly conduces to the strength of the case.

The movement is hinged to the case in a dust-proof ring of great strength.

The watch winds by the crown which must be screwed back upon the pendant socket, thus guarding the watch against dust at this part





The Bezel into which the crystal is cemented, is attached to the case by screwing it thereon ; the ring of the bezel is formed with an internal screw-thread which meshes with a corresponding thread on the shouldered rim on the face of the case; and as the Bezel is thus tightly screwed down the level-edge of the rim, forms the airtight joint with the shouldered rim of the case, which is thus proof against the entrance of dust.

These combined features of construction form a watch which, while being simple and complete, has the great advantage of being

IMPERVIOUS TO THE ENTRANCE OF DUST,

which quality will be found of great importance to those persons who most use this class of watches.

ROBBINS & APPLETON, GENERAL AGENTS,

Waltham Buildings, No. 5 BOND STREET, NEW YORK.

Core-Barrel or Spiral Grooved Guide and Bit.

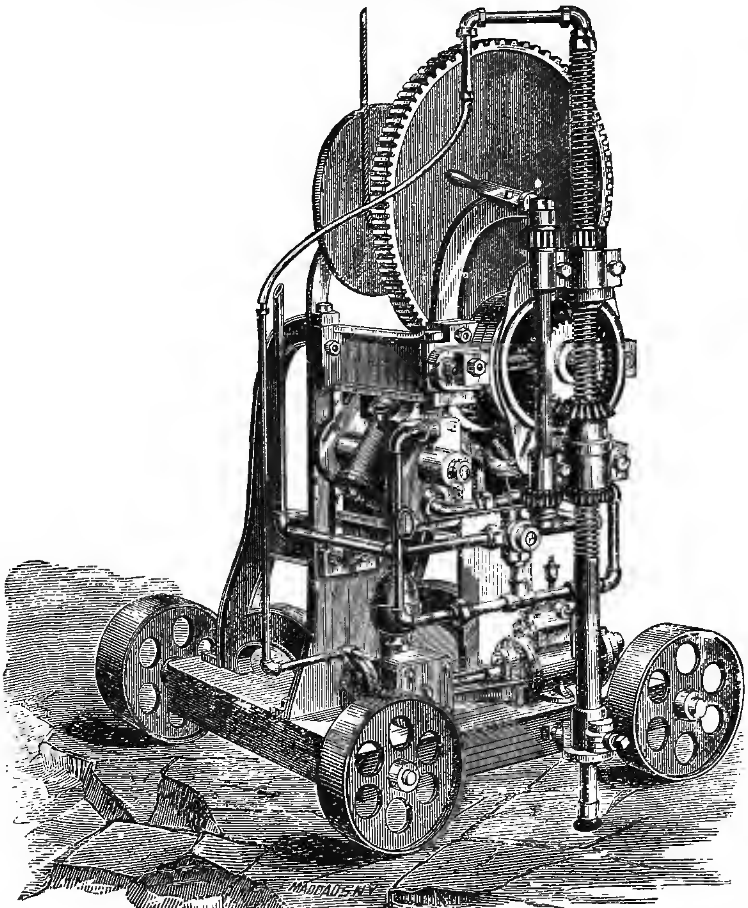
Perforated or Solid Bit Set with Diamonds.

Annular or Core Bit, Set with Diamonds.

IMPROVED
Prospecting Diamond Drill.

Core-Barrel or Spiral Grooved Guide and Bit.

Core-Barrel or Spiral Grooved Guide and Bit.



THE above machine is especially adapted for prospecting mineral veins or deposits, boring vertically, horizontally, or at any angle, to any desired depth, taking out a cylindrical section, or core, the entire distance, showing exact character, and giving a perfect section of the strata penetrated. The exact location, width, dip, extent and value of mineral veins can be accurately determined in a very short time, and at a comparatively small cost. Special machines for underground prospecting in mines. Also, for sinking shafts, driving levels, and for tunnelling.

AMERICAN DIAMOND ROCK BORING CO.,

No. 15 Cortlandt Street,

P. O. Box, 1442. **NEW YORK.**

New Catalogue, with Price-List, furnished on application.
