Marigold
Gigantea
SUNSET
GIANTS

2155. Marigolds seem to be quite the vogue in flowers and much work has been done towards improving them. We offer Sunset Giants as the latest and finest development. Plants are very strong, grow 3 to 4 feet high and bear the largest flowers ever seen in Marigolds, usually 5 inches across. Colors range from primrose to deep golden orange, 60 to 65 percent double. The familiar Marigold odor is entirely replaced by a delicate sweet fragrance. Pkt., 25c.

Scabiosa
Grandiflora
ROSETTE

2708. Scabiosa (Mourning Bride) is one of our most charming flowers. It lends pleasing contrasts to beds and borders and is an ideal cut flower. Rosette is a glorious new color in Annual Scabiosas. Flowers are extra large and borne on long, stiff stems. Color is a beautiful shade of deep rose heavily suffused with salmon. A fine subject to plant with blue Larkspur or the new Blue Cockade Scabiosa. Pkt., 25c.

Beckert Seed and Bulb Company's Choice Lawn Mixtures

Your home deserves a lawn of smooth, velvety texture which will remain a deep emerald-green through the spring, summer and fall; a lawn that will bring out all the beauties of your shrubbery, trees and gardens, and provide the most appropriate setting for the house itself. Such a lawn is possible only by sowing the highest quality lawn mixtures that have been carefully tested time and again to prove their dependability.

B. S. & B. Co. Lawn Mixture

While our Evergreen Lawn Mixture surpasses by far the general run of Lawn Mixtures, we find there is a demand for a still better mixture. To meet this demand we have experimented with various formulas until we have developed a mixture which produces a lawn that compares favorably with the finest Bent Grasses but which at the same time does not require the special care and attention that Bent lawns require.

B. S. & B. Co. Lawn Mixture is composed of only the finest, thoroughly re-cleaned domestic and imported grasses in the proper proportions to produce a deep, springy, long lasting turf. Sow at the rate of one pound to 250 square feet.

Price, 1 lb., 60c; 2 lbs., \$1.10; 5 lbs., \$2.60; 10 lbs., \$5.00; 25 lbs., \$11.00; 100 lbs., \$42.00, postage or express extra.

Evergreen Lawn Mixture

Our Evergreen Lawn Mixture represents the utmost in quality Lawn Mixtures. The different grasses used are all extra re-cleaned seeds and are selected for their value in producing a lawn of fine-leaved, dwarf growing grasses.

Carefully tested for germination and purity, this mixture cannot be surpassed for quick and lasting results. On soil which has been properly prepared, Evergreen Lawn Mixture will produce a close, vigorous, turf remaining green throughout the season. One pound will sow 250 square feet.

Price, 1 lb., 50c; 2 lbs., 95c; 5 lbs., \$2.25; 10 lbs., \$4.25; 25 lbs., \$10.25; 100 lbs., \$40.00, postage or express extra.

Shady Lawn Mixture

A carefully blended mixture of those varieties of grasses whose natural habitat is shaded places. The best lawn seed to plant under trees and on the shaded sides of walls and buildings. Makes a thick, dense lawn where other grasses will not thrive.

NOTE.—Maple trees are gross feeders and large users of moisture, and their dense foliage keeps out both light and air. Particular care must be taken in fertilizing and watering to grow good grass close to the maples.

Price, 1 lb., 60c; 2 lbs., \$1.10; 5 lbs., \$2.60; 10 lbs., \$5.00; 25 lbs., \$11.00; 100 lbs., \$42.00, postage or express extra.

How to Care for Your Lawn

Nothing will add to the appearance and, for that matter, actually enhance the value of your home to such a degree as a well-made, well-kept lawn. It makes the most appropriate setting for trees, shrubs, and flowers, and helps to make a house "home."

SOIL. The soil for a fine lawn requires a very thorough preparation as the physical composition cannot be materially changed once the lawn is established. The ideal lawn soil is well drained, well fertilized and heavy enough to hold moisture without becoming soggy.

Raw subsoil exposed in grading should be covered or replaced by at least 8 inches of good top soil.

FLORIDA HUMUS is excellent material for making new lawns or repairing old ones. Florida Humus is 91.25 organic matter (Humus) and contains better than 3½ per cent Nitrogen, therefore it combines in one material the advantage of both Peat Moss and a fertilizer. 100 lbs., \$3.25; 200 lbs., \$5.50. Delivered in Pittsburgh.

FERTILIZING. Thoroughly rotted barnyard manure is the best fertilizer to mix with the soil before making a lawn, but unfortunately it is very difficult to obtain. Fresh manure is invariably full of weed seeds and should not be used. Pulverized Sheep Manure is an ideal lawn fertilizer. Apply at the rate of 100 pounds per 1000 square feet and as an additional fertilizer apply Bone Meal, 50 pounds per 1000 square feet. Sheep Manure and Bone Meal are best applied after spading and raked in. If barnyard manure is used, it should be dug in.

PREPARATION. Spade or plow as deeply as soil conditions permit; then rake roughly to fill in hollow spaces, removing all rubbish, coarse lumps and stones. At this stage, particularly if much grading or filling has been necessary, allow the ground to settle for a week or ten days before the final fine raking. This will also give weed seeds, that have been brought to the surface, a chance to sprout so that they will be killed by the final raking.

CHOICE OF SEED. High grade dependable lawn mixtures will, as a rule, give better results than the separate grasses alone. **B. S. & B. Co. Lawn Mixture** contains one variety that sprouts quickly, one variety that makes dense lateral roots, another that is deep rooting, and still another because of its ability to withstand drought. Our other mixtures, Evergreen, Shadyland, and

Terrace are made with the same care and will be found to be the best in the market for their particular purposes.

SEEDING. To insure a thick, even stand sow plenty of seed, 1 pound for each 250 square feet or an excessive quantity will do no harm. The best way to be sure of sowing seed evenly is to divide it in half and go over the plot twice, making the second sowing at right angles to the first.

COVERING THE SEED. The seeds in our lawn mixtures are very fine and should be covered lightly, in fact rolling with a medium weight roller to press the seed into the soil is the best method.

WATERING. It is often necessary in dry weather to water the lawn. This should be done in the late afternoon or evening to prevent scalding and a thorough soaking twice a week is better than nightly light sprinkling.

MOWING. Frequent mowings will help to produce a fine thick turf. Do not set the blades too close to the ground in hot weather.

ROLLING. All lawns should be rolled in the spring to bring the roots in firm contact with the soil and to level out bumps and hollows that have appeared over winter. An occasional rolling in the summer is also beneficial.

FEEDING. All lawns, new and old, require a top dressing or feeding in spring and fall, and we know of no better fertilizer to use for this purpose than Bone Meal, applied at the rate of 50 pounds per 1000 square feet. For summer feeding use one-half the above quantity and water thoroughly after applying.

RESEEDING. Reseed lightly in the spring and fall, even on well established turfs. Large bare spots should be dug up, well fertilized and reseeded, while small bare spots need only to be scratched deeply with a steel rake so as to make a fine seed-bed.

THE USE OF LIME. Many of the finer turf grasses grow best on a slightly acid soil, so that lime should be applied only on very acid soil, as shown by the growth of green moss, plantain or sour grass. Apply at the rate of 50 pounds per 1000 square feet.

Terrace Mixture

Terrace Mixture is, as the name implies, a special mixture for slopes and terraces. It is made up from a number of deep rooting, drought-resisting grasses, and once established makes a thick, long lasting turf.

Prices, lb., 60c; 2 lbs., \$1.15; 5 lbs., \$2.75; 10 lbs., \$5.00; 25 lbs., \$11.50; 100 lbs., \$43.00. Postage or express extra.

Separate varieties of grasses are listed on page 58.

NON-WARRANTY. In accordance with the general custom in the Seed Trade, the Beckert Seed and Bulb Company gives no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds, bulbs or plants it sells, and will not be in any way responsible for the crop. If purchaser does not accept goods on these terms, they are to be returned at once.

Asparagus Seed

(SPARGEL)

An Asparagus bed can be started either from seed or roots. Sow seed early in the spring, $\frac{3}{4}$ inch deep, in rows $1\frac{1}{2}$ feet apart; thin out the plants to 6 inches apart. Transplant following season as given under roots.

One ounce of seed will sow 50 feet of row.

Giant Argenteuil. Purple tinted stalks. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c.

Palmetto. Large green stalks. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c.

Washington Rustproof. A new rust-resisting, heavy-producing Asparagus from the U. S. Department of Agriculture. Of rapid growth, large size, and very tender. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c.

Asparagus Roots

An Asparagus bed is permanent, so that much care should be taken with its preparation. The bed should be on well drained ground, heavily manured and spaded $1\frac{1}{2}$ to 2 feet deep. Place roots in trenches 1 to $1\frac{1}{2}$ feet deep and cover with 3 inches of soil. As the shoots come up, pull in soil from the sides from time to time until bed is level.

No Asparagus should be picked until the third year and then only sparingly. The bed should not be cut over after the first week in July, as the roots must have some time to store up strength for the following year. Top-dress each fall with manure, which should be dug in early the next spring.

Palmetto and Giant Argenteuil. 2-yr. roots. Bundle of 50. \$1.00; \$1.50 per 100; \$10.00 per 1000.

Washington Rustproof. 2-yr. roots. Bundle of 50, \$1.25; \$2.00 per 100; \$15.00 per 1000. If wanted by parcel post, add 10c per 100.

Artichoke.

Broccoli,
Early Green Sprouting.

Artichoke (ARTISCHOKE)

One of the vegetable aristocrats and well worth growing if you care for something "different." Edible portion is the large, thistle-like head. If started indoors very early will bear first year. Same culture as for cabbage, and as Artichokes are perennial, plant where they need not be disturbed.

LARGE GREEN GLOBE. The standard variety. Pkt., 25c; $\frac{1}{2}$ oz., 50c; oz., 90c.

Broccoli (SPARGEL-KOHL)

Quite similar to cauliflower but will produce fine heads in localities where cauliflower cannot be successfully grown. Same culture as cabbage.

Early Green Sprouting Improved

A most delicious new variety, bearing loosely arranged heads, somewhat similar to cauliflower. Both flower heads and stalks of heads are edible, having a distinctive flavor. Flower heads are light green in color and ready for the table 60 days from time of sowing. Pkt., 15c; $\frac{1}{2}$ oz., 35c; oz., 60c.

Broccoli White Cape. Pure white heads. Pkt., 25c; $\frac{1}{2}$ oz., 40c.

Brussels Sprouts

(ROSEN-KOHL)

A delicious and easily grown Fall vegetable, and one of the few that may be enjoyed in late Fall after frost has killed the less hardy kinds. Produces miniature cabbage heads at the base of each leaf. Use same cultural directions as for the late cabbage, and when the sprouts commence to form, break off the lower leaves.

Long Island Half Dwarf. Covered with tender sprouts of good flavor. Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., \$1.10.

GARDEN and MANGEL BEETS

Crosby's Egyptian Beet.

GARDEN BEETS

(*Roten Rube*)

Beets are easily the favorite of all root crops. Best results are obtained in well drained, loamy soil, although any soil will do if it is deeply dug and cultivated frequently. Sow as early as the ground can be prepared, in rows $1\frac{1}{2}$ feet apart, 1 inch deep, pressing the soil down firmly over the seed. When large enough to use as Beet greens, thin out to 2 inches apart.

A continuous supply can be had throughout the season by sowing seeds every two weeks up to early August. Make a liberal planting in July to provide roots for Winter use.

One ounce of seed will sow 50 feet of drill.

CROSBY'S EGYPTIAN, SPECIAL STRAIN.

No finer strain is grown than the stock we offer of this largely used Beet. It is of rapid growth, with small tops, the roots taking on their deep turnip shape at an early stage; flesh blood-red and of fine quality. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c.

EARLY WONDER SPECIAL. A handsome early Beet of deeper turnip shape than Crosby's Egyptian. Recommended for both market and home gardens. Flesh blood-red, tender and of good flavor. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c.

Perfected Detroit. A very superior strain of Detroit Dark Red. Roots are slightly smaller but much deeper red in color. Fine grained and very sweet. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c.

Detroit Dark Red. An ideal main crop Beet, universally planted. Large, globe-shaped roots, sweet, fine grained, and dark red in color. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c.

Beets All Winter

Late sown Beets may readily be kept for winter use, if packed in a slightly moist soil or sand in a cool cellar. We recommend Detroit Dark Red for this purpose.

Mangel or Stock Beets

(*Mangel Wurzel*)

Excellent food for cattle or chickens during the winter when other green food is not available. Sow in May or June, in rows $1\frac{1}{2}$ feet apart, 5 to 6 pounds of seed per acre. Thin to stand 12 to 15 inches apart and cultivate frequently.

Golden Tankard. An enormous yielder; flesh and skin deep yellow. Oz., 10c; $\frac{1}{4}$ lb., 25c; lb., 60c.

Giant Sludstrup. Reddish yellow, long oval shape. Food value higher than any other Mangel. Oz., 10c; $\frac{1}{4}$ lb., 25c; lb., 60c.

MAMMOTH LONG RED. Grows to an immense size, roots often weighing to 35 pounds. Oz., 10c; $\frac{1}{4}$ lb., 25c; lb., 60c.

SWISS CHARD

(*Spinach Beet*)

A most satisfactory vegetable for the small garden. A short row is sufficient to supply greens all Summer, and if not cut too close, additional leaves will come up from the roots. Use same culture as for Beets and for best results thin out to at least 4 inches between plants.

One ounce of seed will sow 50 feet of drill.

GIANT LUCULLUS. Large, dark green, thickly crumpled leaves with white midrib which may be used the same as asparagus. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c.

GREEN LYON. A handsome dark green Swiss Chard with smoother leaves than Lucullus. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c.

Perpetual Summer (Spinach). Similar to Swiss Chard but bears all summer. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c.

Lucullus Swiss Chard.

BEANS — DWARF or BUSH (BOHNEN)

Giant Stringless Green Pod Beans

Grow Bush Beans in your garden and get more meals per square foot. They are easy to grow, thrive in almost any soil, and produce big crops in little space.

The seed should not be sown until danger from frost is past. Sow in rows $1\frac{1}{2}$ to 2 feet apart, dropping the seeds 4 inches apart, and covering 2 inches deep. Cultivate frequently and do not work around the plants while they are wet, lest they "rust." Pick the pods before they are fully developed and the plants will produce several good pickings.

For a continuous supply, make successive sowings every two weeks up to mid-July. Plenty of pulverized sheep manure and watering in the dry spells will greatly increase the yield. Apply water to the soil between the rows, not to the foliage.

One quart of Beans will plant 100 ft. of row.

If wanted by parcel post, add 8c per pt., 10c per qt.

Green-podded Bush Beans

Delicious Lima Beans (SPARGELBOHNE)

The late Summer and Fall vegetable supreme. Their food value is twice that of milk and their savoriness second to none. A light soil suits them best, and the seed should not be planted until the weather is warm and dry. The bush varieties bear earlier and require less space, while the pole varieties produce larger crops. Spray with Bordeaux Mixture as a preventative for mildew.

Fordhook Bush
Lima Beans.

Bush Lima Beans

More hardy than the pole varieties and therefore may be planted earlier. Make rows 2 feet apart and plant the Beans, eyes down, every 2 to 3 inches. Cover about 2 inches deep. Thin to 6 inches. Note: In very wet or unusual weather Bush Lima Beans will sometimes send out runners about 2 feet long.

One quart of Lima Beans will sow
100 feet of row

If wanted by parcel post, add 8c per pt.;
10c per qt.

Pole Lima Beans

Pole Lima Beans are more prolific than the Bush Lima Beans, but are not so hardy and therefore cannot be planted as early. About the end of May set out stout poles 8 to 10 ft. long, in hills 3 to 3½ feet apart each way. Plant 6 to 8 beans in each hill, eyes down, and cover with 2 inches of soil. When the plants have made 2 true leaves, thin out to 3 plants to a hill.

SELECTED CABBAGE (KRAUT).

Early Jersey Wakefield Cabbage.

To grow good Cabbage, a fairly rich soil and plenty of moisture are required. Apply an abundance of manure or other fertilizer high in humus and nitrogen.

For early crop, start the seed in a hotbed or seed flat indoors in January or February, transplanting to another bed or flat when the second pair of leaves appear; harden the plants off and set them out in the garden as soon as frosts are past. For second-early crop, sow in March or April and set out in May; for late crop, sow in May and transplant in July. Set Cabbage in rows $2\frac{1}{2}$ to 3 feet apart and space the plants $1\frac{1}{2}$ to 2 feet in the rows. Cultivate frequently and make several applications of nitrate of soda during the growing season. Insecticide soaps and Slug Shot are good remedies for Cabbage pests.

One ounce of seed will produce 3000 plants.

Sugar or Sweet Corn (MAIS)

Barden's Wonder Bantam Corn—A Giant Golden Bantam and Just as Sweet.

Sweet Corn is a favorite crop in most American gardens, and one of the easiest to grow. A deeply dug, moderately rich, well drained soil will give best results. Wait until soil and weather are warm before sowing; the middle of May is generally safe for the yellow varieties and two weeks later for the whites.

Sow in rows $2\frac{1}{2}$ to 3 feet apart; scatter seeds 3 to 4 inches apart and cover 2 inches deep, later thinning out to 1 foot apart in the rows. Corn is also grown in hills 3 feet apart each way for horse cultivation, leaving three strong plants in each hill. Frequent shallow cultivation is important—more necessary with Corn, perhaps, than with any other garden crop.

For succession, make sowings every 10 days up to July 15. To insure good pollination and well filled ears, grow Corn in several short rows, side by side, rather than in one long row.

One quart of seed will plant 200 hills.

If wanted by parcel post, add 8c per pt., 10c per qt.

HEALTHFUL LETTUCE (SALAT)

Dig the soil deeply for Lettuce, using plenty of manure or nitrogenous fertilizer, and adding sand or humus if the soil is heavy. For a very early crop, start seed indoors or in a hotbed in early March, thinning or transplanting the seedlings as soon as they are large enough to handle; harden them off and set them out in the garden in early April.

The first sowing outdoors may be made as soon as the ground is fit. Make the rows 15 to 18 inches apart and thin the plants out as they develop, so that they eventually stand 10 to 12 inches apart. Timely thinning and plenty of room is especially important in growing Head Lettuce. For the first crops grow Loose-Leaf or Early Butterhead varieties; follow these with the late Butterheads; and for hot weather use, grow the Crisphead or Cos types.

GARDEN PEAS (ERBSEN)

Laxtonian Peas.

There are two classes of Peas, the smooth-seeded kinds, which are very hardy and may be planted as early in the spring as the ground can be prepared, and the wrinkled Peas, which are less hardy but much better in quality. Wrinkled Peas should not be sown much before mid-April.

Sow in drills about 3 feet apart and 3 inches deep. Tall-growing kinds may be grown in double rows, allowing 6 inches of space between in which to place brush or trellis to support the vines.

By planting 1 or 2 varieties of smooth-seeded Peas as early as possible and then a selection of wrinkled sorts that will mature in succession, a constant supply of tender green Peas may be had. Varieties are listed in the order in which they mature.

Set the plants in the garden, 3 to 4 feet apart in late May. A rich, moist, loamy soil is best for Tomatoes. An occasional application of nitrate of soda will push the young plants along rapidly. YOUR FLOWER GARDEN

There are two big classes of flowers: **Annuals** which bloom the same season seeds are planted and **Biennials** and **Perennials**, which for the most part do not bloom until the following year after sowing seeds. (Biennials bloom the second season and then die; Perennials continue to bloom each year for an indefinite period).

Perennials, as a whole, have a longer blooming period but there are so many places where the annuals fit in and fill out that their importance in the general garden scheme cannot be overlooked. Therefore the well balanced garden will have a border of perennials, possibly interspersed with annuals, to fill out during the summer months, one or more beds of annuals for mass effect and in less conspicuous place a bed of annual flowers for cutting purposes. We give below a comparison of annuals and perennials which will aid you in making your selection.

ANNUALS

- 1 Bloom in a short time from sowing.
- 2 Annuals must be planted yearly.
- 3 Period of bloom possible from annuals is roughly five months.
- 4 Most varieties of annuals bloom over a period of from 6 to 8 weeks.
- 5 Annuals give their best display from July 15th until frost.
- 6 Annual seeds are usually low priced but must be bought yearly.
- 7 Annuals are very free blooming and when picked usually send out new flowering spikes.
- 8 Many annuals are quite fragrant.
- 9 The range of colors is very large, even in the same species.
- 10 For giving quick effect, annuals are unsurpassed.

PERENNIALS

- 1 Bloom second year from sowing.
- 2 Perennials come up each year.
- 3 Period of bloom possible from perennials, including bulbous plants, is nine months.
- 4 The blooming period of most of the individual perennials is short, usually 2 to 3 weeks.
- 5 May and June see the perennials at their best with another display in late fall even after frost.
- 6 Perennial seeds are more expensive than the annuals, but need only be bought once.
- 7 Perennials are not so free blooming as annuals and with few exceptions, do not send out another crop when picked.
- 8 Few of the popular perennials are fragrant.
- 9 The range of colors is limited, especially in the same species.
- 10 Perennials will not give a quick effect, but are of a permanent nature.

TIME TO SOW. Sow hardy annuals outdoors as soon as the ground can be worked. The tender annuals can be started indoors in March or April or outdoors after danger from frost is past. Biennials and Perennials, which do not bloom the first season, are generally sown in a seed bed in June, July or August, and transplanted in late summer to the place where they are to bloom the following season. Perennials which bloom the first season should be sown in a box indoors in February or March, and transplanted to the garden late in May.

SOIL AND PREPARATION. Flowers can be successfully grown in practically all soils. Some good fertilizer, such as Florida Humus, Pulverized Sheep Manure, or Bone Meal should be dug in and thoroughly mixed with the soil when it is prepared for planting. The surface should be made as fine and level as possible.

PLANTING. The first thing to remember in planting flower seeds is not to plant them too deeply. The very fine seeds such as Petunia, Snapdragon, etc., should be scattered on the surface and pressed into the soil with a flat board. Sow larger seeds in shallow drills.

TRANSPLANTING AND THINNING OUT. With but a few exceptions, notably Poppies, young flower plants may readily be transplanted, so that they may be started in a hotbed or cold frame, or even in boxes in a sunny window, for later transplanting to the place where plants are to bloom.

As soon as the seedlings are large enough to handle they should be transplanted or thinned out to prevent overcrowding. Set plants slightly deeper than they were before lifting and be sure to firm the soil around the roots. A good rule for spacing plants in the garden is to set them apart half their full grown height.

Explanation of Symbols

Immediately following the names of the different flowers will be found the letters AH, PH, etc. These are to be interpreted as follows:

- AH.** Annual hardy. Sow seed outdoors as soon as ground can be worked.
- AHH.** Annual half hardy. Sow early indoors or outdoors after May first.
- BH.** Biennial hardy. Requires very little winter protection.
- BHH.** Biennial half hardy. Best to winter in a cold frame.
- BT.** Biennial tender. For greenhouse use.
- PH.** Perennial hardy. Requires very little winter protection.
- PHH.** Perennial half hardy. Best to winter in a cold frame.
- PT.** Perennial tender. For greenhouse use.

REARRANGEMENT OF FLOWER SEEDS

For greater convenience in ordering we have grouped the Hardy Perennials and Biennial Flower Seeds on pages 48 to 57 inclusive.

B. S. & B. Co.'s Supreme Asters

American Beauty Aster

Many flower lovers omit Asters from their gardens, under the impression that they are difficult to grow, but during the past summer we have seen them growing side by side under what appeared to be the worst possible conditions with such hardy care-free flowers as Callopsis, Poppies and Bachelor Buttons; there was even one lot interspersed, with a most brilliant effect, in a shrubby border.

Culture. Plant Aster seed indoors or in a hotbed in March for early blooms. When plants are 2 to 3 inches high, thin out or transplant to stand 4 inches apart each way or into 2½-inch pots. When 6 inches high, plants should be set in their permanent position, never closer than 12 inches apart.

Excellent results are also obtained by sowing seed where plants are to bloom. We have found that in many instances Aster-wilt and the yellows are less prevalent on plants raised in this manner. Sow seed in same manner as other annuals in a fine seed bed and do not cover too deeply. When large enough, thin out or transplant as given above.

Aster Diseases. Damping-off and Aster-wilt may be prevented by treating the seeds with Semesan before planting, or the roots may be dipped in a normal solution of liquid Semesan when transplanting.

The Aster Beetle has not been so bad the past few years, but is easily kept in control by the use of an arsenical spray.

B. S. & B. Co.'s Supreme Asters

WILT RESISTANT ASTERS. The dreaded Aster wilt has caused many gardeners to omit this beautiful flower from their gardens. Now with these wilt-resistant strains, developed after years of work, it is again possible to grow these lovely annuals, no matter how badly the soil is infested. No treatment of seed or soil is necessary before planting. These Asters are not resistant to the Aster Yellows, which is a disease carried by leaf-hoppers, the same as malaria is transmitted by mosquitoes, but the leaf hoppers can be controlled by frequent spraying with Ever Green Spray. See page 64.

WILT RESISTANT ROYAL ASTERS. Bloom early and over a long period, flowers are fairly large and are borne on long stems suitable for cutting.

Exquisite

Dahlia-Flowered Zinnias

We believe that we offer on this page the finest assortment of Zinnias to be had anywhere. If you have only been growing one type of Zinnias there is a treat in store for you. From the charming little Mexicana variety, charming in Rock Gardens, to the Giants of California, each has a place of its own in the garden and all make the finest of cut flowers.

Cultural Note: While Zinnias are quite a hardy plant and very easy to grow, it must be remembered that they are natives of Mexico and like hot weather and full sunshine. Do not plant too early as when the young plants are subjected to frosts or a period of cold weather, they receive a check which often causes mis-shapen flowers and also causes extreme variations in color.

New Mammoth Dahlia Flowered

This wonderful new class is named from the resemblance of the flowers to the big double decorative Dahlias. Flowers often measure 6 inches in diameter and 3 inches in depth. Plants broad and robust. Height 3 feet.

3190 **FANTASY MIXTURE.** A distinct departure from the formal type of Zinnia. Flowers are medium sized, double, with half-curved, raylike petals. Zinnia, Improved Mexicana Haageana

3152. In the mad rush for the large and giant-flowered strains of many of our flowers, the smaller varieties have been neglected. This charming little Zinnia has always held a very high place in our esteem. It is easily grown in almost any location, practically free from insects and blooms continuously until killed by frost. Best results are obtained by planting seeds where they are to bloom and thinning out to 6 or 8 inches apart. Sturdy plants, 9 to 10 inches high, with stems long enough for cutting. It is excellent for use either in the rock garden or for low beds or borders. Pkt., 15c; 2 pkts., 25c.

Dwarf Giants of California

Petunias, in the fine strains available today, are one of our finest summer flowers. For bedding they are unsurpassed, and are almost indispensable for porch and window boxes.

CULTURE. The Giant varieties are best started indoors in February or March, and transplanted in May to the place where they are to bloom, while the Bedding sorts will give excellent results if sown in the open in April or May.

Petunia seeds are very fine and should be sown in very shallow drills. The best method is to sow on top of the soil, press down firmly with a smooth board, water, and then cover with cheesecloth or paper until the seedlings show. Keep well watered at all times, and transplant as soon as large enough to handle.

Sweet Peas AH

It is not difficult to grow fine Sweet Peas, even in our trying climate. The secret of success lies in getting an early start and, by thorough soil preparation, insuring a strong deep root-growth to keep the plants well supplied with water. If you want to grow the largest and finest blossoms, start as early in the spring as the soil can be worked—early in March, if possible.

Choose an open location and dig a trench $1\frac{1}{2}$ feet deep and a foot wide. Mix with the soil a liberal quantity of fertilizer (sheep manure with a little bonemeal is an excellent combination). Refill the trench with this mixture to within 6 inches of the top. Scatter the seed about an inch apart on this layer and cover them with 2 inches of soil. When the plants are 4 to 6 inches tall, gradually fill in around them until the top of the trench is reached. By this method the roots are assured a plentiful supply of food in the dryest spells.

The vines may be supported with brush, strings, wire or any handy form of trellis that will allow free circulation of air. Of course, good Sweet Peas can be grown without trenching, but extra attention is always well repaid with larger flowers, more of them, and a longer blooming season. Keep the flowers picked and the vines will bear longer.

We offer the best of the Spencer or Orchid-flowered Sweet Peas, these being far superior to the older Grandiflora type.

Summer-flowering Spencer Sweet Peas

We offer, this year, a completely revised list of this ever-popular flower. All the newer really worth-while varieties are included and a few of the old standbys that have defied improvement. Flowers are of huge size, gracefully waved, and are generally borne four to a stem.

HARDY FLOWER SEEDS

For the convenience of those of our customers who are Hardy Garden enthusiasts, we have grouped the Hardy Perennial and Biennial flower seeds on this and the ten following pages. Hardy Flower Seeds may be sown out-of-doors in the open ground, in this locality, any time from about May 1st until August 15th, and transplanted to their permanent location in the late summer or fall. After August 15th it is advisable to sow in cold frames, and winter the plants in the frames, transplanting to their permanent position in the spring. During the extremely hot days of July and August the seedlings (whether transplanted or not) should be shaded from the direct rays of the sun. Light frames covered with cheesecloth or lath spaced one-half inch apart may be used for shade or even branches with a few leaves on.

Seed sown in May will give blooming plants in the fall. Space Pansy plants at least a foot apart and keep the faded flowers picked.

Miscellaneous Grasses

As a rule mixtures are better than separate varieties of grasses, as two or more varieties when properly blended will withstand adverse weather conditions better than a single variety. For exceptional soil conditions, it is sometimes necessary to draw up formulas.

We list below the various grasses used for lawns, hay and pastures, together with short descriptions of the uses of each. All have been specially grown, cleaned and re-cleaned, and are guaranteed to conform with the Pure Seed Laws of the various States.

Prices subject to market changes.

Creeping Bent, Seaside. (*Agrostis stolonifera maritima*). A true Creeping Bent of remarkable purity. Makes a thick, dense turf on heavy, sour soils, and is unexcelled for fine lawns and putting greens. Lb., \$1.35; 10 lbs., \$12.50; 100 lbs., \$120.00.

Creeping Bent, European. (*Agrostis stolonifera*). Largely used for fine lawns and putting greens. Does well on wet, sour soils. Lb., \$1.35; 10 lbs., \$12.50; 100 lbs., \$120.00.

Crested Dog's Tail. (*Cynosurus cristatus*). A fine leaved grass that does well on hard, dry soil and in shady places. Should be used only in mixtures with other varieties. Lb., 75c; 10 lbs., \$6.00; 100 lbs., \$55.00.

Kentucky Blue Grass. (*Poa pratensis*). One of our finest lawn seeds, and also useful for hay and pasture. Particularly adapted for rich limestone soil, but will do well on any rich soil. Lb., 50c; 10 lbs., \$4.50; 100 lbs., \$40.00.

Orchard Grass. (*Dactylis glomerata*). A hardy, quick-growing grass that gives a large yield of excellent hay, and may be cut several times during the season. Not recommended for lawn use. Lb., 40c; 10 lbs., \$3.00; 100 lbs., \$25.00.

Red Fescue, Chewing's. (*Festuca rubra*). Of particular value for sandy or gravelly soils, also does well in shade. Spreads by underground stems. Lb., 60c; 10 lbs., \$5.50; 100 lbs., \$50.00.

Red Top, Fancy Recleaned. (*Agrostis alba*). One of the "Bent" grasses which spread by creeping roots, but makes a rather loose turf when used alone. Especially valuable on acid soils. Fine for lawns, meadows and pastures. We offer only fancy quality, recleaned seed. Lb., 50c; 10 lbs., \$4.50; 100 lbs., \$40.00.

Rough Stalked Meadow. (*Poa trivialis*). One of the finest grasses for shady places. Leaves flat and light green, very dwarf growing. Does best on medium soils. Lb., 60c; 10 lbs., \$5.00; 100 lbs., \$45.00.

Eye Grass, Perennial, Facey's Imported. (*Lolium perenne*). A very rapid grower and used as a nurse crop in mixtures. Excellent for quick lawns and pastures, but not long lasting. Does well on all moist soils. Lb., 40c; 10 lbs., \$3.50; 100 lbs., \$30.00.

Timothy. (*Phleum pratense*). The most widely grown and profitable hay grass. Its nutritive value is increased by sowing one of the clovers or Red Top with it. If sown alone 15 pounds per acre. Not recommended for fine lawns. Write for prices.

Clovers

White Dutch Clover. Our grass seed mixtures do not contain White Dutch Clover, as it does not mix well with grass seeds, which are lighter in weight. However, White Dutch Clover has a definite place in lawns, as it produces a quick sod and helps to feed the other grasses. Unless a very heavy seeding is required, as for poor soils, 1 lb. per 2000 square feet is sufficient, $\frac{1}{4}$ lb., 25c; $\frac{1}{2}$ lb., 40c; 1 lb., 75c; 5 lbs., \$3.25.

Alfalfa. Purest Northwestern grown seed only. The most valuable hay crop and soil enricher. Requires well drained, limestone soil and should be inoculated with Nitragin. Sow in Spring or late Summer, 20 lbs. per acre.

Alsike. Excellent hay Clover, thriving on poorly drained and slightly acid soils. Sow in early Spring, 6 to 8 lbs. per acre.

Fertilizers

Plants are constantly drawing nitrogen, phosphorus, potash and other elements from the soil, and when your farm or garden produces a crop of vegetables, flowers, cereals or fruit, a certain portion of these important plant foods are removed from the soil. Continued planting and removing of crops would soon exhaust the supply of these necessary plant foods, were it not that by the use of commercial fertilizers, stable and barnyard manure, we are able to replenish the supply and thereby keep up the fertility of the soil.

Florida Humus

The growth of your lawn depends on moisture and available plant food. If your soil does not contain moisture retentive humus, the growth is bound to suffer during dry spells regardless of the amount of water applied. If soil bacteria is lacking, the grass will also suffer, for it is the soil bacteria that reduce plant foods to a form that can be assimilated by the roots.

Florida Humus is pure decayed vegetable matter, containing approximately 3% organic nitrogen (the best source of nitrogen for plants). **Florida Humus** absorbs 5.81 times its own weight in water. **Florida Humus**, when mixed with Bone meal and composted for one week showed three times as many soil bacteria as the best dairy manure, proving that it is an ideal medium for the growth of soil bacteria, so necessary to the growth of all vegetation.

ADCO MAKES MANURE. Adco when applied to a pile of vegetable matter makes excellent manure. See page 63.

Growell Peat Pots. Have an early garden this year by using Growell Peat Pots.

These pots are made from Pure Peat Moss and are used the same as ordinary clay pots. Their advantage lies in the fact that they are very retentive of moisture and do not dry out as quickly as clay pots; also, instead of becoming pot bound, the roots can grow through the Peat Pot and plants can be planted pots and all.

Florida Humus

Florida Humus is obtained from a natural deposit of decayed, aquatic vegetation, which has accumulated for ages. It differs from Peat Moss and ordinary humus in that it consists almost entirely of organic matter and is practically free from sand, soil or coarse fibre.

Florida Humus is taken from under the water by a suction dredge and is entirely free from weed and grass seeds, gravel, clay or foreign matter; clean and odorless, it is packed in wire bound boxes and does not have to be broken up and screened before using.

Florida Humus contains approximately 3% organic nitrogen (the best source of nitrogen for plants). **Florida Humus** absorbs 5.81 times its own weight in water. **Florida Humus**, when mixed with Bone Meal and composted for one week showed three times as many soil bacteria as the best dairy manure, proving that it is an ideal medium for the growth of soil bacteria, so necessary to the growth of all vegetation. **Prices, delivered in Pittsburgh, 100 lbs., \$3.25; 200 lbs., \$5.50; ton, \$45.00. Write for car lot prices.**

Antirrhinum or Snapdragon

A Beckert Seed and Bulb Company Specialty

Purple King

Apple Blossom

Copper Shades

Campfire

We offer this year a complete new listing of Antirrhinum or Snapdragons, all of which with the exception of the forcing and Tom Thumb varieties are Rust-proof or Rust Resistant. The Giant Colossal type includes colors not offered previously and besides being rust resistant are even finer than they have been in the past. The same holds true for the Half Dwarf varieties. The Forcing varieties are all standard and especially grown for forcing under glass. Antirrhinum Tom Thumb is an excellent subject for rock garden work.

Snapdragons are general favorites, bearing long spikes of various colored flowers all summer. The half-dwarf varieties are splendid for low beds or borders, and for window boxes. The tall kinds may be grouped very effectively in the general border and are unexcelled as cut flowers.

Seed started indoors in February or March will bloom in early July or if started later outdoors will bloom in August. Plants may be wintered in a cold frame to bloom the following year.

Giant Colossal Flowering

This type of Antirrhinum has always been a specialty with us and now that we are able to offer it in the improved rust-proof varieties and grand new shades it should prove more popular than ever. Plants are 2 to 2½ feet tall with nice long stems for cutting.
