The TALKING MACHINE WORLD

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, January 15, 1911

The best-known trade mark in the world

“The Victor talking machine’s design, ‘His Master’s Voice,’ has become a household word, and the quaint little fox terrier at attention before the horn is familiar to more Americans than any of the world’s great masterpieces.”—COLLIER’S, May 22, 1909.

Zon-o-phone Records are pre-eminently the BEST that money, brains, and a thorough knowledge of the art of sound recording can produce.

They are justly famous for their remarkably clear, natural tones, absence of scratch and wearing quality.

The greatest care is exercised in combining the selections, each side of the disc presenting the latest and best in popular music or standard compositions. No extra charge for copyright selections.

ZON-O-PHONE INSTRUMENTS from \$20.00 to \$75.00

\$50.00, \$60.00 and \$75.00 Machines all equipped with Wood Horns.

Zon-o-phone Records will stand comparison with any make. A trial will convince you.

The Talking Machine World

Vol. 7. No. 1.

New York, January 15, 1911.

Price Ten Cents

A NEW CANADIAN HOUSE.

Canadian Talking Machine Supply Co. Organized in Winnipeg to Deal in All Kinds of Talking Machine Supplies and Accessories—A Live Manager at the Business Helm.

(Special to the Talking Machine World.)

Winnipeg, Man., Dec. 31, 1910.

One of the latest additions to the talking machine trade of this city is the Canadian Talking Machine Supply Co., which has been incorporated to deal in all accessories of the talking machine, including repair parts, record cabinets, dealers' stock and business follow-up systems, general supplies, etc. It is the intention of the new company to handle any new contrivance of importance or merit that may be put on the market in connection with the talking machine, and they will be ready to meet every demand of the trade by January 15, at the latest. Located as they are in Winnipeg, the center of Canada and the commercial metropolis of the West, they feel sure of making a success of the venture. H. O. Shuttleworth, a member of the Western Talking Machine Co., of this city, and an experienced talking machine man, is the manager of the new concern.

MODERN BUSINESS ESSENTIALS.

Organization and Specialization Vital Needs of a Concern Seeking Success Under Present Conditions.

The center-point of modern business success is found in organization and specialization. The larger a concern becomes, the more vital are the scientific modern methods. There was a time when an executive head considered it his duty to spread his activities over all the departments of the business. A half century ago this was possible in the day when a small business was run on a large percentage of profit. To-day, it is a big business, with a small profit.

Materials and mechanical processes have become so standardized that the concern which would push ahead must do so by first-class policies; by perfect organization, and by methods of efficiency that produce maximum results with a minimum of expense in time or money.

Increased efficiency; increased profits. They go together. Men trained for the special work stand at the heads of the various departments, whether of manufacturing or selling. There are few, even among close observers, who note how large a part the specially trained man plays in the business of to-day. No one man has time or opportunity to learn all there is to be known in a great factory or store; and even if he knew it all, he could not be in twenty places at once, running them all.

NEW CONCERN MAKES GOOD.

Doran Phonograph Co., Detroit, Handle a Heavy Holiday Trade That Cleans Out Stock.

(Special to the Talking Machine World.)

Detroit, Mich., Jan. 4, 1911.

The Doran Phonograph Co., Detroit's newest phonograph house, report that business has been exceptionally good for the past three weeks. They say they expected a large Christmas trade in Victor, Columbia and United States talking machines. "We bought heavily of all makes of talking machines, and I do not believe we had twenty-five of all makes in our store when the Christmas trade ended," said President Henry Doran. "We did not have a Victrola in our store for nearly two weeks before Christmas, and as a result we were forced to take orders for these machines and promise to deliver them as soon as we could after the first of the new year. Our wholesale business has also been very large, and for a new concern I can honestly say we have done all the business that we could possibly handle."

BALL-FINTZE CO. REORGANIZED.

Additional Capital Amounting to \$50,000 Placed in the Business—New Officers of the Company—Cincinnati Branch Closed.

(Special to the Talking Machine World.)

Newark, O., Jan. 8, 1911.

The Ball-Fintze Co. have been reorganized and \$50,000 additional has been placed in the business, which enables them to enlarge and complete their lines and open an aggressive campaign for business during the coming season.

James Fintze, sales manager and purchasing agent, has retired from the company, being succeeded by A. E. Caldwell, E. F. Ball continuing as secretary and treasurer.

The Cincinnati branch at 1108-110 West Third street, has been closed and the stock moved to Newark, in order to concentrate the business. As Cincinnati and Newark are only 150 miles apart, the officers believe that the benefit to dealers buying from Cincinnati, resulting from their being able to concentrate all their energies at Newark, will outweigh the small difference in transportation charges.

GOOD WORK BY CUPID.

Lawrence H. ("Bache'or") Lucker Announces Engagement to Minneapolis Belle.

(Special to the Talking Machine World.)

Minneapolis, Minn., Jan. 4, 1911.

How are the mighty fallen; the tiny shafts of Cupid have found and pierced the stony heart of another bachelor of the talking machine trade. The man who only a short time ago was heart and fancy free and had all the bachelor pleasures of great cities at his command, is heard repeating to himself:

"A book of verses underneath the bough,
A jug of wine, a loaf of bread; and thou,
Beside me singing in the wilderness,
Ah, wilderness were Paradise, enow."

Yep. It's true, boys, Lawrence H. Lucker, head of the Minnesota Phonograph Co., has seen the folly of his ways and has announced that he will soon begin traveling in double harness. Here is the proof from the "Engagements" column of the Minneapolis paper of December 25:

"Mr. and Mrs. Martin Pfaff, of Lincoln avenue, St. Paul, announce the engagement of their daughter, Mariam Jeanette, to Laurence H. Lucker, of this city. The announcement is of much interest in Minneapolis, as the young people are well known here. Miss Pfaff spent two years at the University of Minnesota and is a member of the Kappa Alpha Theta sorority."

It'll be no more "Bachelor Lucker." The World joins Mr. Lucker's many friends in and out of the talking machine trade in extending congratulations and best wishes for a long and happy wedded life. He deserves it.

FRANK STANLEY.

I.

I feel, somehow—now Stanley's dead—
As if the golden songs were o'er.
Before his voice all sorrow fled,
And joy returned for evermore.
But now gloom reigns—for Stanley's dead.

II.

I think it best—now Stanley's dead,
To lay his precious songs away.
To play them fills my heart with dread;
Dark clouds obscure the light of day—
The birds are still—for Stanley's dead.

III.

He's gone, 'tis true—Frank Stanley sleeps;
His voice, though, it will never die.
His audience still laughs and weeps,
Sweet records speed the hours by,
For they still live—though he is dead.

—Howard Taylor Middleton.

VALUE OF ENTHUSIASM.

A Factor in Talking Machine Retailing That Is as Important as Salesmanship Itself—A Contagious Trait.

Enthusiasm—that's the thing that gets the money, that makes the public believe in you and your proposition. Have you got that, Mr. Dealer? Are you enthusiastic over the machines you handle—over the new additions to the line—over the records by the leading artists that appear in the catalogs? If not, you're on the wrong track.

You can't sell gold dollars for 90 cents unless you are enthusiastic regarding that which you are offering to the buyer, but figuratively speaking, you can sell the same trade the gold dollars at 10 cents premium if you are enthusiastic over the proposition and can show where, besides the ownership of the dollar itself, they get over 10 cents worth of satisfaction.

Enthusiasm, real enthusiasm, means a great deal more than simply belief in the goods you handle. It means that you cannot see anything better than that line during the time you are handling it and center your whole-hearted interest in it. Enthusiasm means that whether you sell a man or not at the time, he will leave your store convinced that your line is a mighty good one. Salesmanship is the ability to persuade the customer to close the deal for an outfit, but it is enthusiasm that causes him to stick around long enough to let you get in the fine salesmanship.

On some bright and cheerful morning the talking machine dealer counts his cash and decides that he will invest to the extent of a nifty new suit of clothes for the spring, and at his tailor's picks out one of the latest patterns in stripes. When the salesman sticks his under lip out for about an inch and complains of how the fashion has decreed stripes when checks should really be the favorites, the customer is very likely to be highly pleased with his selection—yes he is!

If the talking machine dealer can't become enthusiastic over the advances being constantly made in the trade and see points to arouse his interest in the new records and machines put out by the companies he represents, he might as well close out and go into another line. He owes it to himself and those depending upon him.

Take any of the really successful jobbers and dealers of the day and they are all enthusiasts. They study the new machines and records and always find points in them that command their earnest attention, and even though there may be features of the trade which they do not particularly approve of, there are so many good features that the bad ones are lost in the shuffle when it comes time to do the business.

Enthusiasm is even more contagious than the smallpox, and one live dealer who possesses that trait can convey it to an entire community. If you haven't contracted the trait of becoming enthusiastic over your business and its details, now is the time to begin. Enthusiasm will help to make the coming year a prosperous one for the discouraged dealer and a record one for the dealer who was satisfied with the results in the past. You can't inject the enthusiasm feature into your 1911 business after 1912 is here, and you are suffering from vain regrets. As it says in the Rubaiyat:

The moving finger writes, and having writ,
Moves on. Nor all your prayers nor wit
Can call it back to cancel half a line,
Nor all your tears wipe out one word of it.

In other words, you can't alter what has been or is, but what's going to be depends a whole lot on what you make it.

A fire which gutted the building occupied by George C. Wills, a piano and music dealer in Salem, Ore., recently, caused \$4,500 loss, including the destruction of a large number of talking machines and records. The loss was covered to a large extent by insurance.

THE TALKING MACHINE TRADE IN JAPAN.

Interesting Letter from Tokio—Some of the Retailers of That City—Nipponophone Co. Handling Instruments Made by Japan-American Phonograph Co.—New Concern Which Is Capturing a Large Share of Trade in the Orient—Time'y Comment on Conditions in Japan.

(Special to The Talking Machine World.)

Tokio, Japan, Dec. 8, 1910.

It may be of interest to the trade in general to learn that Japan is developing a business in talking machines that in a few short years will add considerably to the already large sums invested and earned elsewhere in this industry. There are several important dealers in Tokio with attractive stores on the Ginza (the Broadway of Tokio). Jujiya & Co. handle various lines, but principally the Victor. Sankodo & Co. are making in their Tokio factory a very good copy of the Columbia BI graphophone. They sell records made by the Lyrophone Co., of Germany. The Standard Talking Machine Co. sell both imported and Japanese made records and machines. The Nipponophone Co. handle exclusively goods made in Japan by the Japan-American Phonograph Co. Tenshodo & Co. make a specialty of the Columbia line. They have a splendid location, and there is always a gaping crowd in front of their open doors listen-

JAPANESE NATIVES LISTENING TO CONCERT.

ing to the graphophone, which is kept playing to attract attention.

So far, only a few of the larger cities are being worked. There are branch stores in Yokohama, Osaka and Hakata, but other large centers like Nagasaki, Kyoto, Nagoya and Kobe are practically untouched. Little or no advertising is necessary or attempted, because the demand is just now larger than the supply. Up to the present there is only one concern manufacturing machines and records locally; this is the Japan-American Phonograph Co., a corporation financed and managed by resident American business men. They have a well equipped factory at Kawasaki and a recording laboratory at Tokio.

Here in Japan the business presents some novel features which are not met with in the trade in

LABORATORY STAFF OF THE JAPAN-AMERICAN PHONOGRAPH CO., TOKIO. J. O. PRESCOTT, GENERAL MANAGER, TO LEFT.

America and Europe. This is not to be wondered at. We expect some surprises in this topsy-turvy country. We have been brought up to believe that people on the other side of the world not only walk with their hands hanging downwards, but do everything else upside down.

The copyright question is interesting because

there is no printed music and there are no publishers of popular songs to be reckoned with. The songs are old, being handed down from master to pupil verbally. The framers of the recently enacted copyright law have interpreted it as applying to phonograph records, with the idea of preventing the copying or so-called "dubbing" of records made by competitors. They have held that

NATIVE MUSICIANS PREPARING TO MAKE RECORDS.

the singer has a copyright to his peculiar way of singing the song without filing an application for it. They hold further that when a singer accepts payment for singing for a phonograph company he thereby transfers to that company his copyright for the song as sung by him on that particular occasion. Consequently, the company paying for sole rights in this way is protected under the copyright law. A good deal of "dubbing" was going on, and copied records at a cheaper price were on the market, but when the law was interpreted as above it put a stop to it all without long law suits or legal red tape.

In the homes the people put the talking machine

in the center of the room on the floor, and then gather around it, sitting on mats, smoking their tiny pipes, and listen attentively in silence. The walls and windows are of paper, and the whole neighborhood gets the benefit of the entertainment. The ordinary type of machine, with its flower-shaped horn, is in most favor, because when placed on the floor the horn throws the sound out at about the height of the heads of the people squatting around. Some attempts have been made to introduce the hornless machine, but with small success. With the tall kinds, like the Victrola, the operator must stretch his legs and stand up each time to change the record and needle. But with the machine on the floor and the records and needles beside him, he can remain kneeling in comfort.

In the smaller hornless machines, in which the horn is concealed under the motor, in the bottom of the cabinet, the sound comes out near the floor and is not so easily understood. It has, however, the one advantage of portability. Talking machine parties are coming to be quite the fad, and the owner of a good phonograph is proud of it and wants to show off before his friends. With his machine and records he clambers into a "rickshaw" and goes in style to spend the evening at some friend's house, where the little mysterious mechanical geisha makes him a welcome visitor. The tea-pot is always steaming over the red charcoal in the "hibachi," and between sipping tea, nibbling sweetened rice cakes, smoking cigarettes or tiny pipes, and indulging between time in a little harmless gossip, the evening passes very pleasantly.

It is notable that there are no popular songs, such as we know in America. Not in either the

ONE OF THE FACTORIES OF THE JAPAN-AMERICAN PHONO CO. AT KAWASAKI.

war with China, or in the more recent war with Russia, was any popular war song written, as would have been the case in Europe or America.

Record will. Do yourself a good turn—
give one to every bigoted owner of a
disc talking machine and then book his
order for Columbia Double-Disc Records.**

Columbia Phonograph Co., Genl., Tribune Building, New York

THE TALKING MACHINE TRADE IN JAPAN.

(Continued from page 4.)

There are two principal schools of the old classical ballads, one called Nagauta and the other Gidayo. Sometimes in the past it has happened that a singer of one of the favorite ballads would be so jealous of his rights that he would teach it only to his son, bequeathing it as an inheritance. This was possible, because there was no native system of musical notation, and the music could not be written down, but must be taught verbally by teacher to pupil.

Up to the coming of the phonograph these songs were seldom heard except in private entertainments, in which paid singers or geishas were employed, or in the public performances in the theatre. Only the very rich could afford to give private entertainments, so that for the middle or poorer classes a visit to the theatre on rare occasions offered the only chance for a musical treat. For this reason the phonograph, which brings the favorite singers and best songs right into their very homes, has come as a boon to the populace and is bound to make big changes in the musical ideas of the nation. There being no printed scores of these songs, the phonograph will occupy the unique position of being the only means within easy reach to cater to the musical demands of the public, as our sheet music does at home.

The effect of this has already been felt in the trade and a good demand has been created for a medium-priced machine. During the time when all machines and records had to be imported from America or Europe the high price kept the market limited to the rich. But the Japan-American Phonograph Co., manufacturing locally and taking advantage of the cheap labor and fuel and raw material, are supplying both machines and records at a price well within the means of the masses. Their standard machine, corresponding to the average \$25 machine in America, sells here for 25 yen (about \$12.50 gold). Records retail at 25 yen each (about 60 cents gold). An idea of the demand may be gathered from the fact that since February, 1910, when this company first commenced to make deliveries, they have made and sold a little over 5,000 machines and 340,000 records. As this represents their first year of business and the boom has hardly started, it gives promise of big things for local manufacturers who have had the foresight to anticipate and prepare for the rush.

A few years ago the bicycle business somewhat resembled the phonograph market to-day. Two or three concerns were wise enough to read the signs correctly, and got ready. So that this year, when "century runs" are all the rage, as they were in America twenty years ago, the bicycle and tire factories are reaping a harvest. Japan seems entering an era of prosperity. She is striving by every means to develop her industrial resources along modern lines and encouraging the growth of manufactures of all kinds. In July, 1911, the new protective tariff law will come into operation. Already various Japanese syndicates are forming in anticipation of this, preparing to inaugurate new industrial enterprises and produce at home

cheaply what they have formerly bought abroad at high prices.

Even to-day the Japanese point with greater pride to their tall chimneys, telegraphs, telephones, arc lamps and electric street cars than to those native arts which are always most interesting to the visiting foreigner. Industrially Japan hopes to bear the same relation to the neighboring continent of Asia that Great Britain bears to the continent of Europe. The recent annexation of Korea has a significance which is somewhat more than political, though this latter aspect has received widest newspaper comment. But to be fairly understood it must be considered in its bearing on the commercial development of Japan. With rapidly increasing numbers engaged in manufactures, the local agricultural, timber and mining resources will not be sufficient to meet the needs. But Korea, only a ferry service of nine hours' away, will be able to supply the growing demands for food products and raw materials, and keep the profits in Japanese hands.

HEINEMANN'S AMBEROL RECORDS.

**This Famous German Lieder Singer Has Made
Eight Records Which Are Destined to Win a
Large Share of Appreciation.**

The National Co., Orange, N. J., recently announced that they had been successful in securing eight Amberol records by Alexander Heinemann, the famous German "lieder" singer, who is now on tour in this country, appearing in the large cities, where his records cannot fail to find a ready market. Mr. Heinemann is a native of Berlin and received his musical education in that city. He had made considerable headway as a violinist, giving promise of becoming a fine player, when he was found to possess a beautiful baritone voice, and was advised to educate himself as a singer. Jenny Meyer, then directress of the Stern Conservatory of Music, Berlin, undertook the development of his voice, continuing until her death, whereupon Mr. Heinemann finished his studies at the same conservatory under Adolph Schulze.

He made his first public appearance in Berlin in 1897 and achieved an immediate success. This success has since been steadily repeated in almost every country of the continent. His concert work has everywhere been recognized as being of a high order. Mr. Heinemann was appointed principal teacher of song at the Stern Conservatory of Music, where he officiated most successfully for about eight years, scholars coming to him from all parts of the world. Later he was compelled to limit the number of his scholars, owing to his extensive concert trips at home and abroad. These trips took him to Austria, Hungary, Denmark, Sweden, Norway, England, France, Holland, etc., and he was everywhere received with enthusiasm. Mr. Heinemann is the possessor of several orders and gold medals for art and science. He has been for some years singer to the Duke of Anhalt. He also has considerable talent as a composer of music.

Mr. Heinemann made his American debut at

Mendelssohn Hall, New York City, November 3, 1910, before a large and enthusiastic audience, in a recital which won him unstinted praise from the metropolitan press and critics. Said one of the latter: "Mr. Heinemann has more to his credit than merely a beautiful voice, great and agreeable as this asset may be. He is an interpreter of authority and of dignity, rarely passing the line of good taste by over accentuation of dramatic effects. Perhaps the most important thing to be said about the coming of an artist of this caliber is that he is an admirable example to singers of what tone reproduction, style, diction and artistic singing should be. He is not without mannerisms, but they suggest his individuality and personality rather than the post of an artist seeking personal effect. In

ALEXANDER HEINEMANN.

his selections, too, Mr. Heinemann revealed the musician, one willing to go out of the beaten path, as there were very few of what may be termed the war horses of the recital singer on the program. Mr. Heinemann is one of the most valuable of the exponents of the modern German song literature, and the more he is heard the more one is impressed by the truly dramatic and rarely musical qualities of his songs."

The Heinemann records, which represent selections carefully culled from his extensive repertoire, including not only favorite German folk songs but several numbers which will be recognized as being of standard quality, were shipped to Edison jobbers early last month and may go on sale as soon as received. The list follows: 15,150, "Die Uhr" (Loewe); 15,151, "In einem kühlen Grunde" (Volkslied); 15,152, "Fridericus Rex" (Loewe); 15,153, "Litanei" (Schubert); 15,154, "Trauungsgesang" (Roessel); 15,155, "Hans und Liese" (Volkslied); 15,156, "Herr, den ich tief im Herzen trage" (Hiller); 15,157, "Heinrich der Vogler" (Loewe).

INDIAN SONGS RECORDED.

Under Title of "Chippewa Music" Miss Frances Dinsmore Has Written Most Interesting Observations on the Songs of the Chippewa Indians, Which Has Been Issued in Book Form by Bureau of American Ethnology.

Indian music, it may be said, has failed to attract the interest of the general public, but for many years it has been carefully studied by scientific men and women who have taken advantage of the invention of the phonograph to preserve the records of aboriginal music.

"Chippewa Music" is the title of a bulletin just issued by the Bureau of American Ethnology. It is the result of two years' study of Indian music by Miss Frances Densmore.

According to the present author "Chippewa songs are not petrified specimens; they are alive with the warm, red blood of human nature." Every phase of Chippewa life is expressed in music. Many of the songs are very old and are found on several reservations; others are said to be the more recent compositions of certain men who composed them during a dream or upon awaking from a dream. It is still customary for the Chippewa Indians to celebrate an important event by a song.

An interesting fact concerning Chippewa songs is that the melody is evidently considered more important than the words. In a succession of several renditions of a song it is not unusual to find the words occurring only once. The idea is the important thing, and that is firmly connected with the melody in the minds of the Indians. It is permissible and customary to compose new words for old tunes, but so far as has been observed, these are always similar in general character to the words previously used.

CHARACTERISTIC CHIPPEWA MUSIC.

In her introduction Miss Densmore, under the heading, "Intonation," writes: "One of the characteristics of Chippewa singing observed during this study is that a vibrato, or wavering tone, is especially pleasing to the singers. This is difficult for them to acquire and is considered a sign of musical proficiency." She speaks of the rhythm and says: "The rhythm of a Chippewa song is as much a matter of composition as the melody and often expresses the idea of the song."

The songs described are classified as harmonic if their accented tones follow the intervals of a diatonic chord, and as melodic if their contiguous accented tones have no apparent chord relationship.

The songs of the Chippewa are usually accompanied by either the drum or the rattle, while the Chippewa lover intersperses his songs with the music of the flute. These instruments are fully described and illustrated.

Many of the songs are involved in the religious and medicinal ceremonies of the Chippewas, for they teach that long life is coincident with goodness, and that evil inevitably reacts on the offender. They have further, as their chief aim, the securing of health and long life to the Indians, and music forms an essential part of every means used to that end. The organization of the Grand Medicine Society is described and its ceremonies of initiation fully set forth.

These songs are depicted by graphic representations on birch bark, and a number of these are illustrated. Miss Densmore found that when a song had been phonographically recorded and the picture drawn on one reservation and later the phonograph record played on a distant reservation a member of the Grand Medicine Society would at once be able to reproduce the accompanying symbolical picture, identical with the original, differing only as one person draws better than another.

TWO HUNDRED SONGS PRINTED IN BOOK.

The songs themselves, which form the larger portion of the book, are two hundred in number. They include the initiation songs of the Medicine Society, followed by a series of ceremonial songs. Then follow the love songs, the moccasin-game songs and a number of unclassified songs. The last fifty songs are from the Red Lake reservation and include war songs, love songs, moccasin-game songs and a series of unclassified songs.

The treatment of these songs by the author is uniform. Thus, for instance, the Song of a Scalp Dance consists of four staves of music showing several bars, followed by the words, which in this case are:

Some will be envious
Who are in the sky;
I am dancing around
A man's scalp.

This is then elaborated with a narrative giving the story of the song and illustrated with the "song picture" of phonograph; then follows the "analysis" or description by Miss Densmore.

Some of the songs are suggestive of modern love-making. Thus, for instance, in one song the words are said to signify that "a young man asked a young girl to go and walk with him and said that if she did not come this evening he would come and ask her again to-morrow evening." Another is described as the "song of a lovelorn youth who meets another and asks if he has a bottle to cheer him up."

The bulletin is well illustrated with twelve plates and eight text figures in addition to the music. An excellent index accompanies the volume.

TO KEEP FARM HANDS CONTENT.

Missouri Farmers Are Trying a New Expedient to Combat Lure of the City by the Use of Talking Machines and Successfully They Say.

(Special to the Talking Machine World.)

Mexico, Mo., Jan. 9, 1911.

That the motion picture machines in small towns are responsible for luring boys and young men away from the farm and that the talking machine and the postcard reflector in the farmhouse will keep him there is the opinion of many farmers, and they are buying talking machines and reflectors in the hope of stopping the flow away from the farm.

Many of these men attribute the present high prices of necessities of life to the scarcity of farm labor. In fact, every condition, except weather,

that does not meet the approval of the tiller of the soil is being laid at the door of the famine in "hired hands."

In half the corn fields near here this fall women helped men to gather the crop. They were women, for the most part, not accustomed to such labor, but they saw the necessity of getting the harvest completed before the snow fell.

Last summer many women living on farms near here left their duties in the household to drive teams and help the husbands put the crop in. Many of these women were college graduates.

A few years ago farm hands received \$15 to \$18 a month with the occasional loan of a horse to ride to town. To-day "hands" are hard to find at \$30 a month with every Saturday off and a ride to town in the family motor car.

TALKING MACHINE EXPORTS.

The Figures for November Presented—Reports Show Strong Gain in All Departments of Industry—Some Interesting Figures.

(Special to the Talking Machine World.)

Washington, D. C., Jan. 8, 1911.

In the summary of exports and imports of the commerce of the United States for the month of November (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for November, 1910, amounted to \$316,960, as compared with \$193,641 for the same month of the previous year. The eleven months' exportation of talking machines, records and supplies amounted to \$2,455,874.

The best way to make sure that an account will not be collected is to give up trying to get the money. Nothing comes to him who waits for a delinquent debtor to call and settle.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

NEW YORK, JANUARY 15, 1911.

ACCORDING to reports from our corre-
spondents throughout the country,
talking machine dealers enjoyed a
tremendous trade during the holidays and
for December as a whole. In many respects
it far exceeded expectations.

While machines of all styles were in de-
mand, the higher priced hornless creations
had the call. The week before the holidays
jobbers in many instances found it impossible
to supply dealers with these instruments, and
a great many orders were carried over for
later delivery.

Since the opening of the year trade has
been somewhat quiet, but not unusually so.
As a matter of fact, there has been great
activity in the record business, due, of course,
to the call for records from purchasers of
machines during the holidays.

Talking machine manufacturers, jobbers
and dealers, as a whole, are most optimistic
regarding the general outlook for 1911, and
look for a constant betterment in business as
the months pass.

BUSINESS men generally have been
"putting their houses in order" during
the past year, with the result that the
entire business situation is in a healthier con-
dition than for many years past.

No one can overlook the fact that funda-
mentally the conditions are sound, for in the
background stands the wonderful material
resources of the country, which are exemplified
in the tremendous crops of last year. The
purchasing power which this wealth places
in the hands of the farming communities has
been evidenced in the demand for high-
priced machines, particularly in the West
and Northwest.

OF course, the talking machine mer-
chants who are indifferent to the
necessities of the business in the mat-
ter of equipment, advertising, and such
means as recitals for attracting customers,
may have some fault to find with the trend
of things, but they themselves are solely to
blame.

The talking machine men who have confi-
dence in their business, its present and its
future, are forging steadily ahead. There
are no complaints from men of this type.

They are not sitting down fault-finding,
but are forcing trade to come their way by
using original methods in the conduct of
their business and emphasizing in their lit-
erature and advertising the unique position
which the talking machine has won in the
musical world as an educator and entertainer.

THERE are possibilities on every hand
for business broadening, if the dealer
is keen enough to take advantage of
them. There are still millions of people who
are unaware of the tremendous influence
which the talking machine is exercising to-
day in our civilization, and how it is bring-
ing the very best in music into the home.

Clubs, hotels, churches, concert halls, res-
taurants, cafés and numerous other public
resorts are now using the talking machine
as an entertainer, and wherever it has been
placed it has impressed on its hearers how
marvelously the talking machine has been
perfected within recent years.

The dealers who are able to place talking
machines in such places as the above men-
tioned, are sure to reap rewards in increased
trade in their locality, because whenever the
talking machine is placed in suitable environ-
ment it at once becomes a business incu-
bator of no mean proportions.

In hotels particularly, where the talking
machine is used, not only alone, but in con-
junction with the orchestra, it has proven one
of the greatest favorites, and it is a common
thing to hear people remark that they had
no conception that the talking machine was
so perfect. A frequent hearing arouses en-
thusiasm, and this leads to sales. That is
how business is helped.

IT is an old saying that goods well dis-
played are half sold, and this is just as
true in the talking machine business as
in any other line. There is nothing so es-
sential to business augmentation as an at-
tractive store. Dealers cannot be too par-
ticular on this point. An expenditure along
these lines is money well spent.

One of the great factors in store display
is good lighting. People do not stop before
a poorly lighted store, while they always
linger before a brilliantly illuminated win-
dow, which they admire, and then they in-
variably enter the store. With the customer
once inside the fight is to be won. The mo-
ment he enters he should be properly served.
He may be in a hurry and slowness and in-
difference may irritate him.

A dealer should never impose his own taste
or fancies regarding his liking for styles of
machines or records on a customer. He
should be free to exercise his own apprecia-
tion, and should not be harassed with solici-

tations to select this or that thing in prefer-
ence to another.

NO matter what the character of the cus-
tomer or the extent of his purchase
an equal courtesy should be exhibited
to him. The best asset for a dealer is a sat-
isfied customer, and it will not pay to allow
anybody to leave the establishment with a
bad impression formed from lack of cour-
teous consideration.

At first glance it may seem as if the carry-
ing out of these simple matters were easy,
but as a matter of fact it oftentimes becomes
necessary for a dealer to do violence to his
own feelings—to be polite to disagreeable
people, to be pleasant with grumblers, to be
patient with the undecided, to be agreeable
and in good humor with everybody.

It is, however, a good habit for salesmen
to adopt.

IN the building of a business there is noth-
ing so essential as the employment of
system—it is the neatly arranged shelves
instead of miscellaneous bunching in the cor-
ner; it is the organized army instead of the
mob; it is calmness instead of confusion.

The systematic man works according to
method instead of in a haphazard way. He
proceeds logically instead of helter-skelter.
He knows where to find his things when he
wants them. He knows the what, the why,
and the where and the when of every phase
of his business.

HE knows the quantities of talking ma-
chines and records he has on hand,
how much was ordered, how much is
yet to come. He can tell from his books how
fast the goods are going, and how long it will
take to get a repeat order. He can show
what he wrote last year, and what the other
man said in reply. He has his hand always
on the lever.

The man who practices these precepts is
the man who is moving ahead—the man who
is not incurring liabilities without knowing
where the money will come from to meet
them. In other words, he is the man who
is successfully building up not only a large,
but a profitable business, which, after all, is
the sum and substance of merchandising.

THE form of salesmanship that was con-
sidered best fifty years ago was the
kind based upon the every-man-for-
himself principle, if that is a principle.
When the buyer and the seller came together
it was a case of "dog eat dog," or "diamond
cut diamond"; and the plan worked out more
satisfactorily than it would now, because
every man who set out to buy expected to be
"trimmed" if the seller proved to be the
sharper man. Nowadays there are so many
men in the business of selling things "on the
level" that the fellow who tries to follow the
old method soon finds himself stranded.

You positively cannot succeed now with any
kind of salesmanship but the honest kind.
No other sort is scientific, practical, or use-
ful in any way. It would not seem that there
is need to reiterate such a statement, but one
meets constantly with young men who have
yet to learn that straight honesty in selling
is of paramount importance.

INTERESTING NEW FIELD FOR TALKING MACHINES

Opportunities Offered for Pleasing Effects Through Their Use in Connection with the Player-Piano—Both Instruments Now Developed to a Point Where They Can Offer Much to the Real Musician When Played Together—Some Suggestions for Accompanying Talking Machine Records on the Player-Piano That Are the Result of Successful Experience—Some Programs That Will Appeal to the Uninitiated—Some Interesting Pointers.

An almost virgin and fruitful field for talking machines is their use in conjunction with player-pianos which are now so widely popular throughout the country and which are fast assuming a position in the matter of output equal to the pianos themselves.

As is well known, the talking machine of the day has been highly perfected. Not alone has the mechanism of reproduction been brought to a point where there hardly seems to be further opportunity for physical improvement, but in recording there has also been equal progress. As a result of this and of the experiments which the manufacturers of these devices are continually prosecuting, it is not at all an exaggeration to say that the modern talking machine is a marvel of ingenuity and practical efficiency.

It may safely be asserted that recording and reproduction of the human voice have become entirely satisfactory, even to critical ears. The greatest singers of the world have hastened to add their voices to the already vast collections controlled by the manufacturers of talking machines. One can now sit at home and enjoy a whole grand opera, with the solo parts sung by world-famous operatic artists, while the choruses and incidentals are filled in the most capable manner. "Pagliacci," "Faust" and other works now exist complete in the shape of talking machine records. This is a tremendous fact and one perhaps that has hardly yet been properly impressed upon the minds of intelligent music lovers.

In the accompaniments of such beautiful art songs as those of Schubert, Franz, Brahms, Hugo Wolf, Richard Strauss and others, which are composed with such exquisite attention to detail and such an understanding of the whole artistic effect, the player-piano is a very important factor in connection with the production of the records of these songs on the talking machine. For, as a matter of fact, the piano parts are as wonderful as the solo writing, and when one is enabled to hear clearly the instrumental settings a still greater enjoyment of the records of these beautiful songs is possible.

Now a great many people who have player-pianos also have fine talking machines. It has perhaps sometimes occurred to them that a combination of the two, if practical, would be a splendid idea. Such a combination is perfectly practical. The object of this article is to show how the trick may be done.

In the beginning it should be clearly understood that there are certain physical limits imposed on talking machine records by reason of the methods adopted in their manufacture. Up to date it has not been practical to make records, either disc or cylinder, with a reproducing duration of more than four minutes, or thereabouts. In consequence it is often necessary to omit a part of a long song or of an instrumental solo. The accompaniments, therefore, sometimes have to be altered in accordance. Hence one cannot be sure, except in the case of quite short songs or solos, that a given accompaniment is available for the player-piano.

One music roll manufacturer, however, has made up a number of arrangements from piano and orchestral accompaniments used by one of the great talking machine companies. These accompaniments include the piano parts to art-songs and arias from grand opera, as sung by great artists. Some of the arrangements thus made are the accompaniments to "Celeste Aida," from Verdi's "Aida," sung by Caruso; to Schumann's "Two Grenadiers," sung by Blass, and to Nevin's "The Rosary," sung by Schumann-Heink. Others of like character have been arranged or are in process of arrangement. There are also some accompaniments to violin and 'cello solos, arranged in the same manner.

When one undertakes, then, by means of such a special roll, to give a player-piano accompaniment, certain preliminary conditions must first be fulfilled. The most important is the matter of pitch. Very few pianos are tuned at any fixed pitch, and the A by which bands and orchestras tune also varies considerably. As a matter of course, therefore, one's first experience is usually that the pitch of the singer's voice on the record does not agree with that of the player-piano one is going to use. In order to adjust these variations it is necessary to increase or decrease the number of revolutions made by the turn-table of the talking machine. This is done by turning the pointer of the speed-regulator on the speed-dial. The pitch rises when the speed is increased and falls when it is decreased.

When attempting to play an accompaniment to the record, then, one must have the score of the song, making sure to get it the right key, and strike the first few notes of the accompaniment with one's fingers on the keyboard, while at the same time the talking machine is started. Thus one can soon find out whether the piano is sharper or flatter than the voice of the record, and by turning the handle to right or left the speed-regulator can be adjusted so as to bring the two into harmony. When the true pitch is thus obtained on the talking machine the number of revolutions required, as shown on the adjusted speed-regulator, should be written on the seal of the record as a reminder.

When this important matter has been adjusted the player-pianist can proceed with his accompanying, and very interesting work it will come to be. If one can read music a little the task can be rendered much easier. In this case one can sit down and read the score while the song is going on, noting here and there the pauses, phrasing or other points of interest. When one has done this two or three times the general plan of the work will be pretty clear in one's mind. Then one can take up the roll and start to study that, using one's copy of the score to keep track of progress. When one has obtained in this way a clear view of the accompaniment the player-piano and record can be tried together.

Now, the first thing that strikes one when attempting an accompaniment is that the voice of the singer seems to come out of nothing, as it were, and one misses at first the intimate feeling caused by having the actual person near one. But as soon as one has clearly gotten in mind the way the singer phrases the song, one finds that the player-piano accompaniment follows in good order. Of course, it must always be kept in mind that the music roll does not of itself furnish the phrasing of the accompaniment, and therefore the accompanist must remember that he has to phrase almost instinctively. The work is most fascinating and adds immensely to the beauty and interest of both instruments.

Perhaps the most interesting thing about the whole affair is that the accompaniment, standing out as it does when thus rendered, enables one to judge much better and appreciate far more clearly the truly artistic nature of a fine song. When the player-piano is used one gets the full benefit of the whole composition and is able to appreciate fully the complete intention of the composer.

For the purpose which we have been discussing it is well to use the best talking machine one can get. The finest of all are the large hornless machines, as in these the once annoying scratchy sounds have almost entirely been eliminated, and the purity of tone is wonderful.

All the considerations herein suggested apply as well to accompaniments for solo instruments as to songs. Such numbers as the "Berceuse," from "Jocelyn," by Godard, arranged for 'cello solo, are

very interesting, as well as the "Ballade and Polonaise" of Vieuxtemps for violin.

Manufacturers of talking machines and music rolls have hitherto given slight attention to this very interesting field, but we feel sure that if a number of player-pianists, who are also owners of talking machines, will interest themselves in this fascinating work we shall find that the manufacturers will not be backward in doing their part.

The following notice, extracted from *The Talking Machine World* of July 15, 1909, has reference to a player-talking-machine recital held in New York shortly before that date. It has some interest as marking the date of what we believe to be the first attempt to combine the two instruments:

"In many of the leading hotels all over the country it is a common sight to see the orchestra accompanying large talking machines in a very creditable manner and, as a rule, greatly enhancing the beauty of the vocal selections by prominent artists. The player-piano demonstrator in one of the large department stores of Greater New York, however, has succeeded in accompanying some very difficult arias and even the famous sextet from "Lucia," that marvel of recording, reproduced by a talking machine with a player-piano, in a way to bring the audience, consisting of people who were in a position to appreciate true musical quality, to its feet in one great ovation.

"In referring to the achievement this gentleman said: 'Whether the idea of accompanying grand opera selections, rendered by a talking machine, on a player-piano has ever been carried out before or not, I am unable to say, but in this instance it was of my own conception. For over a week preceding the recital I practically remained closeted with the talking machine and the player-piano.'

Each record had to be played over a number of times until the speed of the machine had been so adjusted as to render the pitch exactly that of the player-piano. Then the playing of the music rolls had to be studied until they could be played in exact accordance with the personal delivery of the singer.

"The music rolls could, of course, be so played as to exhibit the individuality of the accompanist; the records naturally displayed the individuality of the singer or singers. To get these two factors working in complete harmony was far from being an easy task.

"When accompanying a singer in the flesh it is a comparatively simple matter to follow him, for each note can be watched, as it were. Where the tone issued from the depths of the sound-box, from nowhere, so to speak, a most weird impression is forced upon the performer at the player-piano."

At the recital thus described the program included, among others, the following selections, accompanied on the player-piano:

"The Two Grenadiers," Schumann, sung by Robert Blass; "The Rosary," Nevin, sung by Schumann-Heink; Sextet from "Lucia," Donizetti, sung by Caruso, Scotti, etc.; "Who Is Sylvia?" Schubert, sung by Emma Eames; 'cello solo, "Berceuse," Godard, played by Joseph Hollmann.

POINTS FOR DEALERS TO OBSERVE.

To avoid confusion regarding orders for their horn equipment, the National Phonograph Co., Orange, N. J., recently sent out the following notification to Edison dealers:

"All Triumph orders, unless otherwise specified, are now being filled with Cygnet horn equipment. The omission of the straight horn equipment from the last machine catalog (form 1865), announced in sales department bulletin of August 6, 1910, would seem to preclude the necessity of further announcement; but confusion has arisen in the case of several orders recently because of misunderstanding on that very point. The trade is therefore urged to specify equipment when straight horns are wanted, as while the straight horn Triumph is still available, it will be supplied on special orders only."

Getting things done is a matter of first getting things started.

Convenience of Operation New Flexible Tone Arm

The phonograph that is gaining in popularity by
We have started the new year with magnificent pro
that the trade understands we mean business and that

U-S Combination Phonograph

is the greatest twentieth century innovation in phonographs—it is something entirely new—something different than anything you have ever seen in its line—something with many exclusive features, every one of which stands out so perceptibly as to proclaim its entire superiority over all competitors.

Every day finds new dealers added to our already large list—but frankly we are not satisfied—we won't be satisfied until every first-class dealer, however large or small, handles the U-S.

We offer the trade a phonograph that they will never regret handling—a phonograph that makes good, and doubly good in every particular—a phonograph that is built for economy—strength—and phonograph satisfaction in every way. A phonograph that carries with it a positive guarantee for each and every claim we make for it.

We claim U-S Phonograph superiority

- In its simplicity and convenience of operation.
- In its reproduction of tone absolutely true to pitch.
- In its quick changing to play two or four minute records.
- In its flexible tone arm.
- In its everlasting—indestructible—unbreakable records.

These are all strong, fast selling, exclusive features. They are features that must and do make pleased and permanent customers.

The U-S will thoroughly satisfy even the most critical.

The U-S will help you to keep your old customers, and will bring many new ones to your store.

It has such original and exclusive construction as to get all the music out of every record, no matter by whom the record is made.

U-S PHONOGRAPH CO

**Quality of Tone
Indestructibility of Records**

and bounds—day by day.

our holiday business was simply immense—all proving
e here to stay. The

**U-S
Everlasting
Records**

are made of a guaranteed indestructible material (not wax); a material
that no amount of hard usage can affect.

You can play the U-S beside any other phonograph—you can
interchange records (the U-S Records fit any phonograph, and vice
versa), and you will always find that the U-S stands out master of them
all. It will play its own records better than any other kind. It will play
any other record better than any other phonograph.

We never tie up a dealer in any way—we don't mind how many dif-
ferent makes of phonographs he handles—we don't ask him to favor the
U-S by any means—we do ask him to simply give the U-S the same
showing that he does any other make—we know it will stand out and win
out in comparison. We do not, we really cannot, fear honest competition.

**WE OFFER THE DEALER A MARGIN OF PROFIT
MUCH IN EXCESS OF ANY OTHER
PHONOGRAPH MANUFACTURER.**

Get in line for 1911 business now, by writing us to-day for full
information, trade terms, etc., and you will not hesitate to immediately
place the U-S in stock.

Fill out attached coupon, mail it to us to-day—we
will do the rest.

Now you can get the money of every man who has ever had a prejudice! The man with a check book is pretty likely to be the man who would "never have a talking-machine in the house." He is also the man who most quickly appreciates the Columbia Grafonola "De Luxe" or "Regent" at \$200, the "Mignon" at \$150, the "Elite" at \$100, or the "Favorite" at \$50.

Columbia Phonograph Co., Genl., Tribune Building, New York

NEWS FROM THE SAINTLY CITY.

Good Reports Anent Business—Cyclonic Trade in Victor Goods—Lehman Piano Co. Take Columbia Agency—Big Sales of Grafonolas—American Phonographic Record Co. Incorporated—Bollman Bros.' Talker Department—Many Visitors Recently—Good Reports from Koerber-Brenner as Well as Other Leading Dealers—Other News of General Interest.

(Special to the Talking Machine World.)

St. Louis, Mo., Jan. 9, 1911.

The talking machine trade for the past month was very active and satisfying to all the local dealers. High-grade machines sold the most readily and the record demand was very good.

"A cyclonic wind-up" is the expression used by the Aeolian Co. in describing their Victor business for the last month of the year. A record was set for Victrola sales and the only obstacle that prevented them from doing more was the factory shortage on this instrument. The Victor ready-made Christmas display was prominently featured in the Aeolian Co.'s window, and positive proof of the value of these ready-made displays was shown by the number of customers it attracted.

Thomas Cummins, of the Aeolian Victor department, was confined to his home recently, being severely ill, but is now "back on the job."

Visiting dealers at Aeolian Hall during the past month were Wm. Blumhoff, Wentzville, Mo.; J. A. Kieselhorst, Alton, Ill.; John Winkler, Mascoutah, Ill.; Lee E. Gilbert and C. S. Browning, special representatives of the Victor Talking Machine Co.

Manager Walthall, of the Columbia Phonograph Co., reports that their holiday trade and for the entire month was exceptionally heavy, and particularly so for the higher-priced machines—the best December they ever had here. He closed a big deal with the Lehman Piano Co., of East St. Louis, Ill., by which they purchased a full stock of the Columbia line, and also with Wm. Bauer, 2201 Gravois avenue, this city, the latter putting in a complete Columbia disc line.

This concern had a very original show window to influence Christmas shoppers, and it proved a very good attraction. Their largest display window was set to represent a living room with chimney, grate and a real Christmas tree, with a Regent and Mignon machine. A living Santa Claus gave demonstrations of the working of the different types of talking machines. It sold a number of machines. Mr. Walthall had an advertisement in one of the Sunday papers on December 11 featuring the new Grafonola Favorite, and on the following Wednesday he received a \$50 draft from Fort Worth, Tex., ordering one by express. This is proving to be a great seller.

P. T. Locke, Columbia dealer at Springfield, Mo., passed through here December 13 and visited the local store of the Columbia Phonograph Co. He is figuring on opening a piano and Columbia phonograph store in some town in Illinois in the near future.

The Silverstone Talking Machine Co. had a very busy month during December, which showed a very large increase over the same month a year ago.

This concern will install a handsome new grand opera talking machine booth in the next few weeks.

In our last letter we referred to J. H. Allgaier as the traveling representative of the Silverstone Talking Machine Co. It should have read "The National Phonograph Co."

The American Phonographic Record Co., of St. Louis, has been incorporated with a capital of \$5,000, fully paid. Incorporators—Bernard Manovil, 56 shares; Gustave L. Stern, Philip W. Haberman, I. Folger and Clyde W. Wagner, 1 each. To manufacture and deal in phonographic records.

The Bollman Bros. Piano Co., who recently established an elaborate talking machine department, report having had a very excellent trade during December. This firm had a particularly attractive holiday window display, the foundation being a snow scene. It was greatly admired.

The Thiebes Piano Co. had a fine trade on high-class machines and records during December.

The F. G. Smith Piano Co., one of the newcomers in the talking machine business had a very good December business.

The following visitors were here recently: C. H. Hawk, Pocahontas, Ill.; Tony Harpstrite, New Baden, Ill.; Wm. Allen, Allen Music Co., Columbia, Mo.; C. N. Lanhart, Mattoon, Ill.

The Koerber-Brenner Music Co. enjoyed a big business during the month of December, and their talking machine trade for 1910 shows a 30 per cent. increase over 1909.

D. K. Myers, the well-known Zonophone jobber, reports having had a very fair trade for December. J. K. Savage, his traveler, spent the holidays here and left January 10 for a three months' trip through the Southwest.

PENOBSCOT SONGS IN PHONOGRAPH.

University of Pennsylvania Has About 500 Records.

Dr. F. G. Speck, of the University of Pennsylvania Museum, received an invitation from Chief Michel Sabatis, of the Penobscot Indians, to attend the great election dance which was held by the tribe on the last night of 1910. The election dance is held only once every two years and marks the beginning of the reign of a new chief.

Dr. Speck spent all last summer living with the Penobscot Indians. He is greatly esteemed by them, because he can "make their voices talk again." Dr. Speck took with him a phonograph and into this phonograph he had the Indians sing their various songs. Altogether he has collected 200 different songs, which has brought the collection of Indian songs at the University Museum to 500.

"There," said Dr. Speck, to a correspondent, pointing to a score or more of pasteboard cases, "are the only real Indian songs. Such songs as 'Hiawatha' and similar popular airs are no more Indian than the Gregorian chants. No Indian would recognize them as his native music. All of us who are studying the Indian are struggling with the problem of Indian songs.

"I can whistle the air of some song to an Indian and he will recognize it, but if I attempt to

harmonize the melody by adding the bass the music immediately ceases to be Indian and the natives cannot recognize it. Thus far it has been absolutely impossible to harmonize the Indian melodies. All Indian melodies are in just the same state that European music was in the early part of the Middle Ages."

Dr. Speck has found that the Indian songs are older than the Indian languages. Tribes which have very different dialects will sing the same songs. For many years anthropologists have been trying to find the meaning of certain syllables and words which constantly appear in the Indian songs. By a comparison of the music of various tribes Dr. Speck has found that these interjections have no meaning at all, but are simply like the "hallelujah" of the anthems of the whites.

PHONOGRAPHS AT APPLE SHOW.

Edison Machines Used at Entrances to Boom the Show—Prove Most Effective.

(Special to the Talking Machine World.)

Spokane, Wash., Jan. 4, 1911.

At the recent National Apple Show, held in this city, two Edison phonographs were used at separate entrances, which ground forth facts pertinent to the great exhibition, which interested everybody on the Coast. The "line of talk" was made into a record by Bert Morphy, "the man who sings to beat the band," and is as follows:

"Step up, step up, good people! See the big show. See King Apple 2,000,000 strong. Say, he's a pippin! He's a la la. He's a lu lu. He's a la-lu-la!—2,000,000—count 'em—2,000,000—and every one a pippin! There's a Maiden Blush for you. General admission is 35 cents. Don't overlook your change. You may need it. No mistakes rectified after leaving box office. Children under 16, 15 cents. That don't mean you, young woman. Everyone hold your ticket. Stop holding hands. You must have a ticket; you ought to have a girl. Be sure and get your change; don't change partners.

"General admission, 35 cents. Don't forget your change. The apple family is there. There are others. There's the vaudeville—ten big acts—ten. Hear Morphy sing to beat the band. Mind your hat band. Eat apple pies. See the pretty cooks demonstrate. Drink apple cider—it won't be hard on you. See the professor spray the bugs and put them on the run. Learn now to grow apples and grow rich doing it. Children under 16 years of age, 15 cents. General admission is 35 cents. Don't forget your change. Everyone must have a pasteboard. Be sure and get your change. Don't leave your change at the box office. No mistakes rectified after leaving the window. This goes, see!

"The Enakops—it is to laugh. Did you see 'em pinch Bob Cosgrove? If Chief Doust's police were half as—now, don't get personal. Pry yourself loose from your money. It's the root of all evil. It's pretty near the root of the apple tree. Don't be stingy. Spend your money free with that girl. She don't like a tightwad."

The Edison jobbers of the city say the novelty of this bit of enterprise caught the crowds and proved a big success.

HOLLENBERG MUSIC CO. BURNED OUT.

Building Occupied by the Representative of the Columbia Phonograph Co., as Well as Contents, Totally Destroyed by Fire Causing Loss of \$70,000 to Building and \$60,000 to Stock—Partly Insured—New Quarters Secured—Will Rebuild on Old Site—What Col. Hollenberg Says.

(Special to the Talking Machine World.)

Little Rock, Ark., Jan. 8, 1911.

The Hollenberg building, five stories high, fifty feet by one hundred and forty feet, and one of the handsomest piano stores in the United States—taking into consideration its appointment and a ten thousand dollar music hall—was destroyed by fire on the morning of January 3 at 3 a. m. The building and entire contents are a total loss, and in addition one whole city block, perhaps the best appointed in Little Rock, if not in Arkansas, was entirely destroyed, as well as all the stocks of merchandise contained therein. The aggregate loss is approximately \$750,000. The building occupied by the Hollenberg Music Co. was valued at \$70,000. The stock of pianos, organs and Columbia graphophones contained therein and fixtures, all of which were a total loss, were worth \$60,000. Insurance, \$50,000. Not a single sheet of paper, catalog, desk or anything else was saved. Everything was absolutely cleaned out. The next morning the company did not have a new piano, except at the depot, and not a single second-hand instrument, except a few that were rented.

The Hollenberg Music Co. are now occupying premises at 604-606 Main street, just across from their former premises. Their new quarters are fifty feet by one hundred and forty, and after extensive alterations are made in the building, they will have a most attractive establishment.

In an interview with Col. F. B. T. Hollenberg, he said: "We expect to rebuild a little later and will try to build better than before. While we are covered for the actual loss and property destroyed, yet our loss will run into many thousands of dollars on account of the total destruction of everything we had in the way of accessories. Our vaults stood the test, and fortunately all book accounts, leases and everything of that kind were intact this morning when we opened up the vaults. We have received hundreds of letters and telegrams of sympathy, and we appreciate them very highly. We want to thank the entire trade for their kind expressions, and to assure them that they will be long remembered. It encourages us to increase our efforts, which have always been to have the best in the country, to earn the respect of all and to help everybody we can."

STANLEY BENEFIT ON MARCH 8.

Committee in Charge of Benefit for Widow and Family of Frank C. Stanley Have Secured a Great Roster of Talent for the Benefit to be Held at the Amsterdam Opera House.

The special committee selected to arrange the benefit for the widow and family of Frank C. Stanley (W. Stanley Grinstead), the deceased record artist of Orange, N. J., held a preliminary meeting in New York January 7. A conference of the full committee followed on the following Monday, those present being Walter H. Miller, National Phonograph Co.; Victor H. Emerson, Columbia Phonograph Co.; John S. MacDonald, representing C. G. Child, Victor Talking Machine Co.; John Kaiser, U. S. Phonograph Co., and Ernest R. Ball, the song writer, representing the music publishers.

The committee selected March 8 as the date on which the benefit will be given and have secured the Amsterdam Opera House, Forty-fourth street, New York, for the purpose. The following talent have volunteered their services: Harry Macdonough, Will Oakland, W. H. Thompson, W. H. Hooley, Billy Murray, Arthur Collins, Byron G. Harlan, Edward E. Mecker, Harry Burr, Dan Brunt, Frank Coombs, Peerless Quartette, American Quartette, Premier Quartette, Albert Denzler, Charles De Almaine, Charles Buano, Harry Hindemeyer, Harry Anthony, J. F. Harrison, Billy Golven, Steve Porter, Albert Campbell, Vess Osmani, Ada Jones, Len Spencer and others.

TALKING MACHINE DEALERS MEET.

Regular Meeting of the Eastern States Association Held in New York—Some of the Matters Taken Up—May Reduce Membership Fees at Next Meeting in March.

A meeting of the Eastern States Talking Machine Dealers' Association was held at the Cafe D'Or, West Twenty-fourth street, near Sixth avenue, New York, on Wednesday, January 11, with a large proportion of the membership in attendance.

In addition to the regular order of business a number of special questions were taken up, including the policy of the manufacturers in turning over the names of the prospects, who have written directly to the factory, to the nearest dealer in the territory in which the prospect lives. Some of the dealers cited instances where factory salesmen had sold machines and records, or the sale had been made through the nearest jobber, thus practically cutting into the dealer's trade. A resolution was passed to the effect that the companies be requested to make known their rule of procedure when names of prospects were received at the factories.

One of the interesting speakers at the meeting was R. B. Caldwell, vice-president of the Blackman Talking Machine Co., who, drawing upon his knowledge of the affairs of the jobbers' association, offered some excellent advice to the dealer regarding methods for increasing the strength of their organization and holding it together, thus making it a real factor in the trade.

The association is rapidly approaching its first anniversary and though excellent progress has been made both in securing members and in the results accomplished, the growth of membership has not been as fast as was desired despite the hard work of those at the head of the organization. It was therefore announced that at the next meeting, on the second Wednesday in March, a move would be made to reduce the active membership fee to \$3 and the associate to \$1.50.

After the regular session had adjourned the executive committee met for the purpose of discussing the new exchange propositions and other matters of importance to the entire body.

WANAMAKER'S BIG VICTROLA TRADE.

Sold \$100,000 of These Instruments in December in Philadelphia and New York Stores.

In December the talking machine department of John Wanamaker's New York and Philadelphia stores sold Victrolas to the amount of \$100,000. L. J. Gerson, the manager, said: "Every delivery was made as we had placed our order in the summer for our requirements, which we calculated from the preceding holiday business, and therefore was arranged on a very liberal basis. Further, every Victrola was paid for by us in advance of the deliveries."

ADVANCE NOTICE OF ADDITIONS.

At the suggestion of jobbers who are carrying the entire foreign catalogs, or part of them, the National Co. are now giving approximately thirty days' notice of each addition to such lists. This plan was inaugurated with the February supplement. This scheme gives the jobber plenty of time to place the records in stock and get them into the hands of his dealers before the selling date—the 10th of each succeeding month in each case—as the orders will be filled promptly upon receipt.

HANDLING THE VICTOR IN ALTON, ILL.

The J. A. Kieselhorst Piano Co., of 317 to 321 State street, Alton, Ill., have favored us with a photograph showing the interior of their establishment, with their Victor talking machine department strongly in evidence. The entire rear section of the store is given over to that department, and yet during the recent holidays it was found that the space allotted was hardly sufficient to meet the demands of the trade.

BLACKMAN SAVES MONEY FOR DEALERS

"LIVE" DEALERS ARE FOLLOWING HIS "SAVING" PLAN

YOU ARE WASTING TIME AND MONEY.

That's what you are doing if you handle EDISON and VICTOR but buy each line from a different jobber.

STOP THE LEAK AND INCREASE YOUR PROFIT.

Don't keep sending TWO orders, waiting for TWO shipments, and then pay TWO expressages.

ORDER BOTH EDISON AND VICTOR FROM "BLACKMAN."

Simply make out ONE order for anything you want for EDISON or VICTOR, send it to BLACKMAN and you will get the goods AT ONCE in ONE shipment instead of TWO. See the time and money it saves?

LET "BLACKMAN" DO THE WORRYING.

We say this because he won't do any. These "ONE LINE" Jobbers may tell you that "BLACKMAN'S" stock of EDISON or VICTOR is not as complete as theirs. Put the test in an order and we will ship you "BLACKMAN'S" answer.

YOU CAN'T AFFORD TO OVERLOOK THIS.

Watch your most successful competitors and see if they don't get the "BLACKMAN SERVICE."

We don't handle anything but EDISON and VICTOR and you can bet that we are there with the goods. You don't have to take our word for this. Send us an order and find out for yourself.

EVERYTHING FOR EDISON AND VICTOR

The Talking Machine Trade in New England

THE TRADE IN LOWELL, MASS.

The Closing Down of Mills Has Affected the Talking Machine Trade to Some Extent—Holiday Trade, However, of Good Volume—Great Activity at the Bagshaw Talking Machine Needle Factory—What Thomas Wardell Reports—Steinert's Victor Trade—Nelson Doing Well with the Columbia.

(Special to the Talking Machine World.)

Lowell, Mass., Jan. 7, 1911.

Mills—the main industry of the city—threaten to shut down for a considerable period. Some are shut down now for a brief time. This affects the talking machine retail business with the cheaper business particularly, and to some extent with the higher-priced goods. No one can forecast to just what volume depression will be felt. The public are feeling their way along, so to speak, and while the holiday business was good, the outlook for January is not any too bright.

Of course, local conditions do not in any way affect the big factories of W. H. Bagshaw, manufacturers of talking machine needles. Their output is scattered all over the country with jobbers, and they are doing more business to-day than for a long time. Speaking to *The World*, W. H. Bagshaw remarked: "The past year proved to be a good one with us. We are extremely busy, orders are coming in well, and it is more of a problem to us on the shipping end than for business. The trade appreciate 'quality' needles, and we won't allow any other kind to be made. Needles of this character may take a trifle longer to produce at a little extra expense to us, but the good will of permanent patrons who appreciate the highest grade in needle construction more than offsets the financial loss in profits. This extra supervision on needle making does not add to our prices at all, as our prices are as low or lower than any of the world's makers, quality considered."

Thomas Wardell, or "Tom," as the trade call him, the Edison jobber, reports a good holiday business, both wholesale and retail. "Tom" got interested in the Edison line way back at the beginning of the industry, when he used to sing for records. And by the way, "Tom" was once a real actor, being on the stage with Fanny Rice, and even now hangs on to his former art by belonging to a well-known quartet.

The Victor dealers, M. Steinert & Sons Co., attest

a very comfortable business right through the entire line. J. L. Hiser is the new manager of the department.

Columbia goods are being handled in a vigorous manner by Nelson's Department Store, one of the largest stores in New England.

George H. Bachelder is an old-time, experienced talking machine man, and is having deserved success with the Edison products.

EXPANSION IN MAINE.

New Dealers Started by the Columbia Phonograph Co.—Cressey & Allen Closed an Excellent Holiday Trade with the Victor—The Same May Be Said of the Portland Sporting Goods Co. Who Handle the Edison Line.

(Special to the Talking Machine World.)

Portland, Me., Jan. 9, 1911.

It is apparent that the pending few months will continue to be large for the talking machine trade. The past holiday trade was excellent, and a number of the dealers made some big scores in sales.

G. P. Donnelly, manager of the Portland branch of the Columbia Phonograph Co., says that they are starting many new dealers throughout the States of Maine and New Hampshire, with a view of strongly entrenching the Columbia Company in that territory. Mr. Donnelly added: "The new concert grand reproducer has certainly made a hit, and we are reaping the benefit of it in increased sales of both records and machines." Mr. Donnelly is showing his aggressiveness all right in the increased business that they are transacting.

The Victor jobbers, Cressey & Allen, are another well-known house to share in the December and holiday prosperity. Louis W. Frickett is the able manager of their talking machine department.

Portland Sporting Goods Co. is the local distributor of Edison products.

KILHAM'S AMBEROLA TRADE.

Had a Big Demand for These Instruments Before Christmas.

(Special to the Talking Machine World.)

Beverly, Mass., Jan. 9, 1911.

J. F. Kilham, the Edison dealer, sold five Amberolas the few days before Xmas. He is one of the

most enthusiastic Edison men in the country, and contends if dealers will only go after the "big" ones, they will surely get them. Of course, Mr. Kilham sells every type of a machine, but his aim is for the high-class trade, as not only will they buy the best machines, but are the people to buy a large number of records each month.

CONDITIONS IN VERMONT.

Many Dealers Not Alive to the Possibilities of the Talking Machine Trade—Now Time to Wake Up—Success of the American Phonograph Co. Worthy of Emulation.

(Special to the Talking Machine World.)

Burlington, Vt., Jan. 7, 1911.

W. A. Moulton, manager of the American Phonograph Co., Edison and Victor jobbers, is a most enthusiastic talking machine man, and is doing considerable to boom the business in Vermont. There are a lot of "dead" dealers in the Vermont territory; dealers who are suffering from lack of enthusiasm and effort. This, however, is not confined to the talking machine industry, but it is a condition that can be found in almost any line in Vermont. So what the whole State really needs, barring "live ones" like the American Co., is a tonic.

Mr. Moulton reports that business is good considering, although collections are off. There is a strong demand for machines particularly. The outlook is decidedly encouraging for a brilliant 1911.

The Columbia Phonograph Co. are the succeeding company to R. C. Smith & Co., and they are getting after the trade in good style.

LETTERS SHOULD BE ANSWERED.

A Boston jobber says he has a hard time getting answers to letters addressed to dealers. He adds: "Why dealers do not answer correspondence promptly, I cannot understand. It is the same as with conversation. If a man doesn't answer a question, you would consider him tongue-tied, or otherwise lacking in one of the five senses. But in letter-writing, they procrastinate again and again, and then when we meet them personally, they are full of apologies. The bigger the dealer the quicker he answers, but the main fault is with the smaller dealers." The above jobber's principal complaint is that letters are not answered at all. It is a well-known fact that correspondence should at least be acknowledged if not answered, and as the general tendency is to this end, the talking machine trade should be foremost.

BOSTON CYCLE & SUNDRY CO.

(Special to the Talking Machine World.)

Boston, Mass., Jan. 9, 1911.

New England dealers will be glad to know of the return of the Boston Cycle & Sundry Co., exclusive Edison jobbers, to their old established name. For the past few months they have been operating under the name of the Linscott Sporting Goods Co., named so in honor of J. M. Linscott, manager of the company, but the tremendous prestige enjoyed by their long establishment and thousands of dollars spent in advertising is the reason for the change. Charles R. Cooper is the general manager of the Edison department.

J. A. HOLOHAN IN CHARGE.

(Special to the Talking Machine World.)

Boston, Mass., Jan. 10, 1911.

James A. Holohan has been appointed manager of the Columbia department of the Henry Siegel Co. He is an experienced man in this line; has many friends in the city, and judging from his December sales, he will make this department the most successful it has ever been.

The past month has augmented the production at the needle factory of John M. Dean, Putnam, Conn. One of the features of the Dean plan is furnishing needles in special envelopes printed with the advertisement of jobbers.

BOSTON CYCLE & SUNDRY CO.

EDISON
JOBBER'S BOSTON

A New Year's Resolve—let us fill your next Edison order.

Every January appears a bunch of ads with "Start the New Year right," etc. Some are heeded, more are not.

This is New Year's advice in the HEED-CLASS, because it means money in your pockets.

Our Exclusive Edison Service is quick throughout the year; it provides for goods at an instant's notice—a service you must have to reap the largest profits.

Write, wire or phone us and get our interesting proposition.

BOSTON CYCLE & SUNDRY CO.
J. M. LINSOTT, Mgr.

48 Hanover Street
Boston, Mass.

FROM OUR BOSTON HEADQUARTERS

ROOM 12, 178 TREMONT STREET, G. W. HENDERSON, MANAGER.

(Special to the Talking Machine World.)

Boston, Mass., Jan. 9, 1911.

Without exception, jobbers and dealers unite in attesting that 1910 was the largest year in their history. This occurring in a none too good year is indicative of the tremendous growth of the talking machine industry in Boston. The year was not as large as it should have been simply because the goods were not available for the holiday rush; there was an unprecedented crush in orders—orders that were placed too late by dealers—and this disappointment was keenly felt, notwithstanding the month's sales were historically large. Those who lost thereby say that next year their orders will go in early. They said this a year ago when profits were held up in a similar manner, but will they in 1911?

Outlook Encouraging for 1911.

For a 1911 outlook the field is decidedly encouraging, and the trade are making a strenuous campaign for a big volume of business. The talking machine rests on a solid foundation of musical qualities; 'tis seldom that a slur is cast upon the usefulness of a machine, and then only by people absolutely incompetent to judge. What does this mean? Unquestionably the talking machine's recognition by practically everyone, whether rich or poor, is because the makers of machines have created instruments to dovetail with the lean or fat purse; not only is the latchkey hanging out of the public's house for the talking machine's reception, but they have battered down the door and it can walk in. The Boston or New England dealer, therefore, who does not use enthusiasm and energy in making 1911 a bountiful year and a "record" year is missing an opportunity like the near-sighted man who walked over a pocketbook bulging out with money.

Growth of Boston Houses During 1910.

To return to the first paragraph, here are some of the Boston houses who stand in the leader class in comparison of the past year's growth. E. F. Taft, general manager of the Eastern Talking Machine Co., Edison and Victor jobbers, said the year was remarkable and there exists a fair margin over the volume of their previous best year—1907. The latter year, by the way, was the standard for sales until it was replaced by the 1910 standard.

Charles R. Cooper, manager of the Edison department of the Boston Cycle & Sundry Co., adds his words of praise for a generous patronage, particularly in the wholesale field, which likewise created a new high-water mark.

Progress with Oliver Ditson Co.

The Oliver Ditson Co., the "largest Victor jobbers east of Chicago," according to Henry Winkleman, manager of the talking machine department, made tremendous strides in both wholesale and retail branches.

Herbert L. Royer, manager of the Victor end of M. Steinert & Sons Co., was very optimistic over the 1910 achievement; one factor interfering with a still better showing being his inability to secure sufficient goods.

100 Per Cent. Increase with Columbia Co.

The Columbia Phonograph Co.'s December business alone increased over 100 per cent. in comparison with last year, due undoubtedly to a variety of reasons, and particularly to the energetic work of Manager Arthur C. Erisman. For the year there is a tremendous gain. Mr. Erisman is mapping out a 1911 campaign that he feels sure will make a big stride over their 1910 performance.

The Situation with the Dealers.

The foregoing is but individual proof of the 1910 "goodness" with the jobbers. With the dealers, including various stores having talking machine departments, it is equally brilliant. Wm. F. Howes, manager of Houghton & Dutton's department, featuring the Columbia, Edison and Victor lines; Manager Sylvester, of the C. E. Osgood Co., Victor, Edison and Columbia dealers; Manager Hoimes, of the Victor department at Jordan,

Marsh Co., and James A. Holohan, the new head of the Henry Siegel Co.'s Columbia department, all unite in declaring that they surpassed the previous accomplishments during any year.

With the Retailers of the Hub.

Here are still more of Boston's enterprising talking machine houses with a similar rank: Geo. Lincoln Parker, Victor dealer, department managed by Charles P. Trundy; F. S. Boyd, speaking for the Iver Johnson Co., Edison distributors; Sam Katz, the Conclave Phonograph Co.; Harry Rosen, the School street dealer; the Tosi Music Co., the big North End house; Henry F. Miller & Sons Piano Co., Victor department managed by C. Alfred Wagner. Harry Bennett, the Columbia dealer in East Boston, had a good business, but as he has been in business only a short time, had no previous mark to compare with. But Harry says, "Wait for the close of 1911!"

Some Unprogressive Concerns.

There are a few other concerns handling various makes of instruments who don't know whether they are in the business or not; they are held more as a side line than anything else. Of course, if they sell a few machines a year to people who would buy, anyway, at some live talking machine store, it may make a small figure total, but it is absolutely sure that they are not aggressive promoters of the industry itself. People don't as a rule come into talking machine stores to buy goods like they run into news stands; some of the dealers are laboring under the delusion that they will, and as dreams go by opposites, the sooner they wake up so much more quickly will it be appreciated by the live members of the trade.

Re-Adopt Old Name.

The Boston Cycle & Sundry Co. have again been adopted by the officers as a firm name, according to Charles R. Cooper, manager of the Edison end. For the past few months they have been operating under the name of the Linscott Sporting Goods Co., assuming the name of the general manager of the entire concern. The former name—the Boston Cycle & Sundry Co.—has become so well known throughout New England, and in fact throughout the country, with a contingent business asset, it was the only thing to do. Dealers had become so

accustomed to saying "Boston Cycle" when they want their Edison goods that the change seemed too radical.

Doesn't Like the Term.

If you want to get the real Boston talking machine man's angora, just refer to talking machine music as "canned music." He might excuse the first offense but the second time you would need a brush broom for the pieces. Why, one man refuses to give a local paper advertising because they use occasionally the term, "canned music."

A Salesman Who Has Succeeded.

T. N. Mason, with the Columbia Phonograph Co., is a young looking fellow, but he has been in the business since the industry started. He is the youngest old talking machine salesman in the city, and at the beginning of his career spent three years making machine records. Since then he has had great success making sales records.

Guy R. Coner's Trip.

Guy R. Coner, with the Boston Cycle & Sundry Co., leaves to-day for an extended trip through northern New England, where he will cover Maine, New Hampshire and Vermont with a fine-tooth comb. Mr. Coner says he has been able to convince a number of dealers as to the efficiency of their Edison service.

Many Suits on Hand.

Constantino, the Boston Opera House tenor, has a wardrobe of suits on hand covering various sums and difficulties, something over \$300,000 being asked altogether.

Eastern Co.'s New Record Cabinet.

The new record cabinet of the Eastern Talking Machine Co. is ready for delivery and is mailed free anywhere. E. F. Taft, general manager, says these cabinets are of the very best manufacture and are being offered at a figure that is really low for "quality goods." Both A. W. Chamberlain, manager of the Edison department, and S. J. Freeman, manager of the Victor division, are elated at the result of their large 1910 business.

Columbia Used in Contest.

A local newspaper is giving away sixty Columbia machines to people who receive the largest number of votes, a vote being published in each paper.

After your efforts, your time, your money, have built a business—what? John H. Competitor comes along and camps next door with the same line of goods? *Columbia exclusive selling rights*—a policy introduced into this business and upheld only by the Columbia—secure for you all the returns, on all your investment, all the time.

Columbia Phonograph Co., Genl., Tribune Building, New York.

THREE MORE COLUMBIA ARTISTS.

Recent Acquisitions to the Operatic Staff Are Olive Fremstad, of the Metropolitan Opera Co., Lydia Lipkowska and George Baklanoff of the Boston Opera Co.

A strong addition to the Columbia list of exclusive artists has just been announced in the persons of Olive Fremstad, the eminent soprano of the Metropolitan Opera Co.; Lydia Lipkowska, the charming Russian coloratura soprano, and George Baklanoff, one of Russia's most famous baritones. These artists are well and favorably known, not

OLIVE FREMSTAD.

only in this country but throughout the entire musical world. Olive Fremstad has been with the Metropolitan Opera forces for eight years or more, and is an artist of the highest attainments.

Lydia Lipkowska, the prima donna of the Boston Opera Co., is one of the youngest and most

GEORGE BAKLANOFF.

LYDIA LIPKOWSKA.

accomplished artistes now appearing in grand opera. She is a native of the province of Poltava, Southern Russia, where she was born twenty-six years ago. She is a graduate of the St. Petersburg Conservatory of Music and made her debut in grand opera at the St. Petersburg Imperial Opera House some five years ago. In Paris, when she made her debut in "Lakme," she duplicated the sensation created in Russia's capital. She made her American premiere last year and has won fame wherever

she has appeared, whether with the Boston, the Metropolitan or Chicago Opera companies. She has a voice of unusually warm quality, combining rare dramatic elements. She excels in fioriture music, like that of "Lucia," "Traviata" and operas of the old Italian school, and in dramatic music, like that of Massenet's "Manon" and "Thais." The prediction is made by many of our eminent critics that roles like Elsa in "Lohengrin" and Eva in the "Meistersinger" are destined to be among her best.

The addition of George Baklanoff is an important one, as he ranks high as a baritone. He made his debut at the famous Moscow Opera House, and made his first appearance in America last year with the Boston Opera Co., when he won a tremendous success, which he duplicated last spring when he sang at Covent Garden, London.

In securing these artists the Columbia Phonograph Co. have displayed their usual alertness in business-making opportunities.

PHONOGRAPH AT FUNERAL.

Widow of Turfman Had Asked That It Supply the Music.

Phonographic music took the place of singers at the funeral held in Lexington, Ky., recently, of Mrs. Byron McClelland, widow of a widely known turfman and one of the wealthiest women in the South.

While dying, Mrs. McClelland heard a phonographic record of sacred music by a quartet of noted singers, and she requested that the machine be used at her funeral. It was the only music at the service.

BREAK RECORDS IN SALES.

G. T. Williams, manager of the New York Talking Machine Co., 81 Chambers street, New York, the other day said: "Our business in 1910 equals the banner year of 1906, and we feel 1911 will go still higher. There is no reason why it should not, in our judgment." The company have introduced an innovation in the "Victor dog" species, which is represented in its normal condition as a fox terrier. They go a step further and turn out a canine of golden hue possibly to match the Vernis Martin Victrola.

MAX LANDAY'S WESTERN TRIP.

Max Landay, of Landay Bros., 400 Fifth avenue, New York, general manager of the Talking Machine Supply Co., starts on a country wide trip Feb. 1. He will also visit the principal points in Canada, and altogether will stop in 45 cities, and if time serves, will get over into Mexico.

To supply insistent demands, the National Phonograph Co. have issued four Bohemian records (sung by Frances Masopust) and two Hungarian records (sung by Izso Sajo) which have been carefully prepared in both Amberol and Two Minute records. These selections will be forwarded with the March advance records and should find a large sale.

TRADE HAPPENINGS IN LONDON.

General Summary of Conditions in the Trade During 1910—The Holiday Business Handled in Wide-Awake Manner—New Machines That Made Their Appearance During the Year and Their Chief Features—Notable Advances Made in Both the Cylinder and Disc Record Fields—Advertising Done on Broader Scale—Much Litigation in the Trade—Monckton Loses Suit Against Gramophone Co.—The New Record Lists of the Month Offer Much of Interest to the Dealers and the Public—Effects of Sousa's Tour on Record Sales—Progress in the Wireless Field—Recent Books Reviewed—Regarding the International Voice Museum—New Patent Law in Holland—Praise for the Amberola—New Sapphire Sound Box Introduced—Some New Lauder Records—Activities of the Various Manufacturers in the Different Branches of the Trade—News Gleanings of Interest.

(Special to the Talking Machine World.)

London, E. C., Jan. 4, 1911.

From whatever standpoint we look back upon Christmas, there can only be one verdict in connection with trading results, and that verdict, as far as talking machine and record sales are concerned, is generally interpreted by traders throughout the kingdom as excellent. It cannot be denied that up to the present the season has been a most prosperous one, not only from the manufacturers' viewpoint, but from the wholesaler and dealer likewise. Outside a few Provincial centers, where trade has been upset by local labor disturbances, this satisfactory condition of business obtains with retailers both in London and in all the Provincial centers of activity, despite the gloomy forebodings engendered by the political situation just prior to Christmas. Another phase of the situation, and which, needless to say, had a great bearing upon sales, was the amount of local advertising and other little publicity schemes put out by some of the most enterprising dealers. The keynote of it all being that talking machines made the best Christmas presents, much business naturally resulted from this alone, but no doubt owing to the increased newspaper advertising by the large manufacturers and the educating effect thereof, the total number of inquiries passed on to dealers reached quite a substantial figure, and it is safe to say that over 50 per cent. resulted in immediate orders. On the average, seasonable window displays were no more in evidence than at Christmas, 1909, but some nice shows were made by the more enterprising dealers, who, however, comprised but a fraction of the trade as a whole. These matters were dealt with at greater length in my December report, and it will therefore be as well perhaps if we pass on to a short review of trade progress during 1910. From the scientific point of view it must be confessed that little progress of a material nature has been accomplished. In one or two directions this statement may not hold good, but let it be understood that I am speaking broadly, and I think it will then be generally conceded that no very great improvement is noticeable in either machines or records as applied to the one and only consideration—natural reproduction. Not that one can say our present system of recording and manufacture is anything but good. It is. Yet, compared with 1909, the headway made this past year is infinitesimal. Here and there some little advancement is noticeable, and this I propose to analyze as we proceed. Let us review the machine situation first. One particular feature is the declining popularity of the interior horn cabinet machines. When these were first introduced to the trade they created quite a furore, but after a month or two the demand fell off, and while a fair amount of business still prevails in the better class

neighborhoods, it is an unprogressive trade nevertheless. A very natural state of things perhaps, especially when one considers the price of these instruments. One prominent trader expressed the opinion that "the 'hornless' tone is muffled, while that of the horn machine is open and clear. Wherefore the cabinet instrument appeals to one only as a nice piece of furniture—in the majority of cases." Except from the view point of better construction and general value, no scientific progress worth mentioning has been made with the ordinary disc instrument, but coming to the so-called hornless type there is something to talk about. The best evidence of improvement is found in the Zonophone Co.'s "Cinch," which is built upon an entirely different principle to other instruments of this class. Here the tone arm support, or bracket, is ingeniously utilized as a sound-carrying channel to the interior aperture which forms the sound amplifying chamber. Another feature is the metal screen or shutter fixed to the front of the instrument. This screen not only purifies and brightens the tone, but makes it the equal in all respects of the horn machines. The Gramophone Co. have adopted a somewhat similar arrangement for their series of hornless instruments, and in both instances the result has been a greatly increased demand. Partly owing to their convenience for carrying about, it was generally thought that these hornless machines would strongly appeal to the trade as a summer line only. Time and public opinion has proved the contrary to be the case, for they are as much, if not more, in demand during the winter months, than in the summer. An all-the-year-round line in fact, and one which the trade evidently appreciate.

Advance of Phonograph Cut Records.

Coming next to the examination of trade conditions in the disc record field, I observe that the phonograph-cut type is rapidly advancing in popular favor, and from evidence disclosed to me I should be well on the right side in saying that 1910 business amounted to quite four times that of 1909. The high standard of recording and quality of artists is well maintained, but beyond that no improvements of a material nature have been offered, unless I except the recent introduction of a 9-inch double record of this type. But that hardly comes under the heading of improvements, although it certainly constitutes a progressive trading line, since it is of general good average quality and sells at a remarkably low figure.

Turning now to the needle-cut disc, we find that the most noticeable improvement made last year was in the matter of surface. Gradually and surely the scratch, which detracted so much from the musical value of the needle disc a year or so ago, is less noticeable. Under the present system its entire elimination is, of course, a scientific impossibility, but 1910 has the credit of seeing important developments in the direction of smooth and noiseless surface. Anyway, our manufacturers are making good progress, and are accomplishing improvements—be they ever so small—all the time. One concrete instance of this is found in the Edison Bell Velvet-Face disc marketed last year. As its name suggests, it is a record of a really fine surface, free from clicks and harsh scrape, and, needless to say, dealers and the public alike have accorded it a pleasing reception. The trade has come to realize, too, the wonderful value now centered in the 12-inch double-discs, so much so in fact, that a goodly proportion of the up-to-date retailers have built up quite a big trade—particularly in the Columbia record of this size. Inquiries from authoritative sources reveal the fact of there being a growing demand for long-playing records—the longer the better, and a strong feeling exists among talking machine men-of-affairs that sooner or later all the leading manufacturers will cultivate this particular class of trade. Broadly speaking, it offers many advantages in the way of extra

profit all round, gives greater satisfaction to the public and certainly raises the influence of the talking machine among men-in-the-street.

A Long-Playing Flexible Disc Record.

These remarks anent the disc would scarcely be complete without a reference to the very latest, which is nothing less than a long-playing flexible disc record. It is the invention of Henry Seymour, and although only in its experimental stages, the fact remains that such a record has seen the light, after careful and exhaustive experiment, necessarily spread over a fair period of time. A few general particulars will be interesting. Apart from being very light, compared to the weight of ordinary composition records, durable and of average standard tone quality, it can be folded up and dispatched by post without fear of damage. Indeed, it is said that several could be thus folded, put in a cardboard tube and sent anywhere in the United Kingdom for one penny. It is made of a material closely allied to zylonite, and the process of duplicating is by fluid pressure. The cost of production, I understand, would be very small, for these records can be turned out almost as easily as bills from a printer's press.

Developments in Phonograph Trade.

As far as phonograph trade is concerned, things are about the same, and no development of any importance, outside the new Edison reproducer, has been accomplished. The cylinder trade cannot be said to be a progressive one, but for all that, sales are well up to the average, which is the more satisfactory in view of the increasing competition of the disc. There would still seem to be some little prejudice existing in the mind of the talking machine public against the indestructible cylinder, for although it is pleasing to note that sales are making good headway, the fact remains that trade is not so progressive as one would naturally expect for a record which is of good average quality, and unbreakable into the bargain. It is strongly advertised and a little more effective spade work on the part of dealers themselves should result in the indestructible record rising in public favor during the new year.

Increase in General Advertising.

One very special feature of 1910 was the valuable assistance afforded to dealers and the educational work accomplished by, and as a direct result of, the increased expenditures on general press advertising undertaken by the chief manufacturers. In this regard great credit is due to the Gramophone, Columbia and Edison companies, whose ad-

The STROH VIOLIN

☞ A new instrument possessing a VIOLIN quality of tone of great beauty and remarkable power.

☞ The "Stroh" is constructed largely of aluminum but the absence of any metallic quality of tone is another notable feature.

☞ All interested should write for an illustrated booklet to the Sole Makers.

FROM OUR LONDON HEADQUARTERS—(Continued)

vertisements are prominently before the public all the time. Inquiries from the public are passed on to the company's agents for handling, and apart from the direct benefit of this, it has also directed the dealers' thoughts to the value of advertising, with the result that many spent larger amounts upon space in the local newspapers, the distribution of leaflets, etc., than in former seasons. And in addition one or two of the manufacturers offered free service in the preparation of newspaper copy and other forms of publicity. Its evident that dealers have just got to wake up!

Much Litigation During Past Year.

Another aspect of the situation which obviously calls for a brief mention only, since it is of no material advantage to anyone for me to traverse the matter in detail, was the exceptional amount of litigation indulged in last year. In the States disputes at law seem to be quite common, but here it is different. If only in respect of litigation, 1910 has seen the making of history in this trade, and it is a matter of comment that never was litigation seasoned with more important results to the future of the talking machine industry. As phonograph is generic to all cylinder machines, so now is the work gramophone free to be attached to all disc instruments. But far more reaching in its result was the tone-arm case, in which the judge held that an arm tapering by sections fitted one into the other was not an infringement of the continuous taper one-piece arm. Had the decision been otherwise it would have meant that all disc machines constructed and fitted with a sectional taper arm would be so much material for the scrap heap. My inquiries among the manufacturers leads to the belief that from first to last there was never a fear of such a contretemps, but it doesn't need a very vivid imagination to picture what a terrible setback it would have been to the whole industry had it come to pass. I make these remarks in good faith, in no party spirit and with respect for every endeavor to uphold one's legitimate rights. That is the attitude of all fair-minded men, and in the hope that the quarrels of the old

year may be forgotten, I wish all my readers a right happy and prosperous New Year.

Verdict for Gramophone Co. in Monckton Case.

The test action recently brought by Lionel Monckton, music composer, for an injunction to restrain the Gramophone Co. from reproducing on a record the song "Moonstruck," which he had written for "Our Miss Gibbs," and for damages, ended in a verdict for defendants. Mr. Monckton claimed that he had a common-law right of proprietorship in his own work, both before and after publication, while defendants submitted that as a matter of law they were entitled to make records and to sell them without the consent of, or payment to, the composer. The song was registered under the copyright act. His Lordship remarked that he did not understand plaintiff's case. When a man had written a song or got a trade mark he seemed to think that the whole world belonged to him. Counsel submitted that under the copyright act a man had the exclusive right to the product of his own brain. His Lordship: The act does not give that right. It merely stops other people from making use of it. Counsel: In justice a man is entitled to the product of his brain. His Lordship: What have I got to do with abstract justice? I cannot make a law for you. You are trying to find a right outside statute. Without calling upon counsel for the Gramophone Co. His Lordship entered judgment for defendants with costs.

First Gramophone Records for 1911.

Accompanying the list of titles for January, the Gramophone Co. make the following remarks: "We have much pleasure in beginning the year 1911 with a supplementary list comprising records which were selected as the result of open competition. This fact in itself should stamp these records as being something quite out of the ordinary. They represent not only titles wanted by the public, for they have all figured on many voters' lists, but titles which have met with the approval of such great musicians as Madame Clara Butt, Henry J. Wood and Landon Ronald. We give you, there-

fore, something unique to offer to the music loving public, at the most opportune time of the year." The prize winner is Miss M. B. Rubil, and her list of titles is as follows: "Eliore" (Coleridge Taylor), Walter Hyde; "Trottin' to the Fair" (C. Villiers Stanford), Thorpe Bates; "Deep in the Heart of a Rose" (Landon Ronald), Madame Kirkby Lunn; (a) "Deep in My Heart a Lute Lay Hid" and (b) "The Bird I Love the Best" (F. Aylward), Miss Perceval Allen; "Ocean, Thou Mighty Monster," "Oberon" (Weber), Miss Agnes Nicholls; "She Alone Charmeth My Sadness," "La Reine de Saba" (Gounod), Robert Radford; "Capriccio Italien, Op. 45" (Tschaiakowsky), the Grand Opera Orchestra; "Preludium" (Järnefell), the Grand Opera Orchestra; "The Druid's Prayer Waltz" (Davson); Herr Gottlieb's Orchestra; "Variations Symphonique" (Boellman), (cello), J. Renard; "You'll Get Heaps o' Lickins" (Coningsby Clarke), Miss Margaret Cooper; "La Poupu," Selections I and II (Andran), the band of H. M. Coldstream Guards; "Star of My Soul," "Geisha" (Sidney Jones), Robert Michaelis; "My Old Shako" (Trotere), Harry Dearth; "Nobody's Satisfied" (Bennett Scott), Alfred Thomas; "The Oddfellow's Song," Peter Dawson; "One of the B'hoys" (Scott), Mark Sheridan, and "Our Farm," "Our Miss Gibbs" (Caryll and Monckton), by W. H. Berry.

Sousa's Tour Helps Record Demand.

Commencing on January 2 and in continuation of his world tour, Bandmaster Sousa intends to visit all the chief towns in the United Kingdom, where his famous band of instrumentalists will give a series of popular concerts. In this connection the National Phonograph Co. have issued a special supplemental containing a complete list of 21 Edison records, both Amberol and Standard, made by Sousa and his band. Needless to say, there will be a great demand for these records following on the visit of this famous instrumental organization and every live dealer will carry big stocks.

The New Amberol List.

Another very fine list of titles appear in the advance list for February as follows: Grand Opera Amberol Records—"Die Meistersinger—Preislied" (Wagner), (sung in German), Leo Slezak; "Amico Fritz—Son pochi fiori" (Mascagni), (sung in Italian), Carmen Melis; "Pagliacci—Vesti la giubba" (Leoncavallo), (sung in Italian), Florencio Constantino; "Lohengrin—Elsa's Traum" (Wagner), (sung in German), Marie Rappold; "Barbiere di Siviglia—Una voce poco fa" (Rossini), (sung in Italian), Selma Kurz; "Grand Mogul—Valse des Serpents" (Audran), (sung in French), Blanche Arral, and "Elisir d'Amore—Una furtiva lagrima" (Donizetti), (sung in Italian), Aristodemo Giorgini. Edison Amberol Records—"Cradle Song Medley" (violin solo), J. Scott Skinner; "Standing at the Corner of the Street" (Hunt and Formby), George Formby; "Like Stars Above" (W. H. Squire), Samuel Hemsall; "On the Silvery Sands" (Darewski), Miss Florrie Forde; "I'm Shy, Mary Ellen, I'm Shy" (Stevens and Ridgwell), Jack Pleasants; "Your Eyes Have Told Me so" (Carr Hardy), Stanley Kirkby; "Wallaparoo" (Osmond), Arthur Osmond; "Excelsior" (concertina solo), Alex. Prince; "Breakfast in Bed" (Lauder), Harry Lauder; "A Southern Wedding" (Lotter), National Military Band; "Alma, Where Do You Live?" (J. Briquet), Miss Spencer and Mr. Ormsby; "Asthore" (H. Trottere), Reinald Werrenrath; "I'm Looking for a Nice Young Fellow Who Is Looking for a Nice Young Girl" (S. R. Henry), Miss Ada Jones and chorus; "The Fishermen" (V. Gabussi), Anthony and Harrison; "Military Life Two-Step" (K. L. King), New York Military Band; "The Gateway City March" (K. L. King), (xylophone solo), Charles Daab; "The Lord Is My Light" (F. Allitsen), Berrick von Norden; "Drink to Me Only With Thine Eyes," Stanley and Gillette; "Kiss Me, My Honey, Kiss Me" (T. Snyder), Miss Ada Jones and Billy Murray, and "We're Tenting To-Night" (W. Kittredge), Knickerbocker Quartette. Edison Standard Records—"Father of Victory March" (Louis Ganne), National Military Band; "Something Missing" (Wincott and Leighton), George Formby; "A Factory Lass" (Murphy and Letters), Stanley Kirkby; "What a Pity" (Osmond), Arthur Osmond; "Torchlight Parade" (Morley), (banjo solo), Olly Oakley; "The Corcoran Cadets March," Sousa's Band; "In Dear Old Tennessee" (H. L. Newman), Miss Elizabeth Spencer; "Oh, You Dream" (J. Schwartz), Miss Ada Jones and Billy Murray; "There's a Light in the Window" (B. Newcomb), Will Oakland, and "Alpine Rose" (H. J. Lincoln), (bells solo), Charles Daab.

Cable Companies Consolidate.

A matter of great interest to traders having business relations with American firms is the recent announcement made by the chairman of the Western Union Cable Co. This was that negotiations had now been completed for an amalgamation of the Western Union and Anglo-American Cable companies. The Western Union will now have control over seven of the sixteen cables that span the Atlantic. It is expected that the negotiations

with the Postmaster General for acceptance of half rate for messages in plain language will shortly reach a successful conclusion.

Some New Wireless Marvels.

An Italian inventor, Professor Cerebotani, recently demonstrated in Paris a number of new and astonishing wireless discoveries, if anything in wireless wonders is still capable of astonishing us. Thus we are told of a portable pocket wireless apparatus, a wireless teleprinter, on which we can learn to send messages as readily as writing on a typewriter, and a wireless teleautograph, by means of which people in Europe could instantly sign cheques or contracts in America and vice versa. The teleprinter is a simple little instrument with a keyboard like a typewriter, which can be fixed to any telegraph or telephone installation. This transmits messages which appear on printed slips at the other end, but it has the advantage of being infinitely more simple than anything yet invented and, besides, can be used with wireless. The professor has also a marvelous instrument in the teleautograph, a most simple apparatus, which can be fixed to any telephone or telegraph line. By this a signature, a drawing, or a holograph manuscript written with a pencil fixed to a flexible carriage is copied exactly on a machine at the other end. Hence a man in Paris could sign a document in Algiers, or a signature in Algiers could be verified from Paris. As if these wonders were not already sufficient, we are further assured that the greater the distance the better the machine will work, though we have not been told why this should be so. The tracing of one's signature seems to be no more difficult than with a pen, and a pencil repeats it automatically wherever we want it, even should it be at the Antipodes. No wonder that, as we are told, the experts stood in ecstasy at these results. Another very marvelous invention of the professor is an instrument for preserving the secrecy of wireless messages.

Book Reviews.

"Piano-Playing Hints," by Henrich Becker, and published by R. H. Allen & Co., Ltd., 32-34 Theobald Road, London, W. C., at the price of two shillings. This is an intensely interesting work appealing to the amateur pianist. It covers in its twelve chapters an exhaustive field of study, both of a theoretical and practical character, and the chapter dealing with practice, fingering, the pedals and how to use them, and list of studies and pieces will prove an invaluable guide to the student anxious to gain a complete mastery of the art of piano playing. Another instructive chapter deals with the choice of a piano, what to pay and how to care for it. In fact, the whole work teems with useful information, instructive alike to the amateur, professional, or musical instrument trader, and it is to be strongly recommended.

The Music Trades Association Directory, published at one shilling by W. T. Peat, 100 Sheen Road, Richmond, Surrey, is of great interest to my readers the world over, for it is brimful of valuable information anent the music trade of this country. Nearly fifty pages are devoted to a list of bona fide musical instrument dealers, and as it is compiled by agents and members of the association

it may be accepted as quite reliable. In addition there is a complete list of pianoforte manufacturers, accessory and supply houses, timber merchants, wire, key, frame and other makers, not to mention the agents, importers and musical press, etc. The book is a veritable storehouse of useful knowledge, and its compilation bespeaks care and thoroughness right the way through.

All the way from India comes a paper-cover book containing a verbatim report of the Gramophone Co.'s trade mark action and, in addition, the full text of the judgment in the tone-arm case. The book is published at the remarkably low price of two annas, by the Talking Machine and Indian Record Co., of Calcutta, Bombay and other cities.

Late Columbia-Rena Novelties.

A decided novelty in recording is included in the new list of Columbia-Rena records, it being a very popular music hall sketch played within the limits of a double-sided 10-inch record—the sketch being "Parker C," which, in the hands of Chas. Austin and his talented company, has probably had more re-bookings in London and provincial halls within the past two years than any other known sketch.

The sketch is one long scream of laughter and it was this that decided the Columbia Co. to engage Chas. Austin to play his sketch for Columbia-Rena records. The necessary excisions were done by Mr. Austin himself, so that all the characteristics of the sketch have been duly preserved.

The story of the play is entirely retained and all the comic element is strongly in evidence. The plot is quite easy to follow and Chas. Austin makes as big a hit on his fine records as he does in person. A printed souvenir accompanies each record and gives the story of the play.

An admirable descriptive record, which appeared in time for the Christmas trade, is that of the "Symphony Rehearsal" on Columbia-Rena. It describes a German band conductor's effort to get his orchestra to play his new symphony to his liking, with the result that the most weird cacophony is produced by each soloist in turn. Coupled with it is another diverting sketch in which Albert Whelan plays the part of leader of a German band,

with his company of trained (!) musicians demonstrating the powers of their respective instruments.

The New Klingsor List.

The latest Klingsor supplementary list of records, issued in December, contains about the finest collection of titles which the company have recorded. There are no less than twenty-four selections by the band of H. M. Irish Guards, some of the titles being, to mention only a few: Waltz song, selection from "The Chocolate Soldier;" "Musical Inexactitudes," Nos. I and II, introducing well-known musical compositions, selection from "Our Miss Gibbs" and "The Arcadians," "Overture 1812," "Eileen Alannah," with cornet solo by Sergeant Hunt, "Serenade d'Amour," and selection from "The Girl in the Train," "Peer Gynt," "Anitra's Dance" and "In the Hall of the Mountain King," etc. The Klingsor Symphony Orchestra is responsible for some nice records: "The Blue Danube Waltz" and "Sphinx Waltz" and the "Raymond Overture," part I and II, among others of an equally pleasing nature. There are six nice renditions by the Slavonic Balalaika Orchestra, while Pipe Major Forsyth has made eight bagpipe records of Scottish pieces. Coming to the vocalists we find they have made some of the most up-to-date titles, all of a quick selling character. Apart from the excellence of the artistes and the titles, it may be of interest to my readers to know that the Klingsor record is the embodiment of good recording, characterized by high quality of tone, detail and volume in reproduction.

A Question of Liability.

The following judgment in a recent bill of exchange dispute case is self-explanatory and of interest to traders. Judge Smith said that if the defendant had signed "as director" he would have been exempt from liability without question. He, however, found that the acceptance was that of

the company and not of the defendant personally. Judgment would therefore be entered for the defendant.

The International Voice Museum in Paris.

Are we to have a great national and international voice museum in Paris? Yes, says Professor Brunot, of the Sorbonne. It must be founded at once and no time is to be lost, as the year is so near its close and otherwise 1911 would have the glory. The managers of the Paris Opera House, we know, have already begun a collection of phonographic records of their best singers. M. Gailhard inaugurated it shortly before the end of his directorship and a score or so of discs were placed one day with appropriate ceremonial in one of the vaults in the basement of the opera, and a rule was established that none of these discs were to be taken away "before twenty years." But a collection of operatic voices is not sufficient, says Professor Brunot. We must have the voices, speeches, etc., of all our prominent men preserved at the Sorbonne. It will be interesting for the future to know how M. Jaurès spoke at the chamber during the railwaymen's interpellation, and how M. Briand replied. Why should not the voice of all our famous men, artists, writers, statesmen, scientists, generals, etc., be preserved, as well as those of actors, actresses and singers?

The professor suggests the establishment of what he calls a Phonetic Institute.

Excellent January Beka List.

Some particularly fine selling titles figure in the January list of Beka records, and their favorable reception is a foregone conclusion. The following are fair examples: Introduction to Act III from "Lohengrin" and "Bridal March, from Lohengrin" (Wagner); "Salome, Intermezzo" (Loraine), and "Amena, Egyptian Serenade" (Paul Lincke), by Beka London Orchestra; "On the Silvery Sands" and "I Wonder Who's Kissing Her Now," by

Jack Charman; "The Volunteer Organist" (H. Lamb), and "Marie, My Girl" (G. Ailken), Harry Thornton; "Billy Whitlock's Nursery Rhymes" and "Billy Whitlock's Village Blacksmith," Billy Whitlock; "Dance of the Satyrs" (Le Thiere), and "The Deep Blue Sea" (M. Brewer), (piccolo solo), W. G. Smith, and "Go as You Please"—and "Medley of Popular Airs" (Fairy Bells), by Max Witte.

The New Zonophone Records.

The Zonophone Co.'s impression for January contains an attractive list of titles, the majority of which, judging from the advance orders of the factors, bid fair to be quick sellers. The following are to hand: Ten-inch—"By the Sea," Mark Sheridan; "Silver Bell," Stanley Kirkby; "Valse Septembre," the Peerless Orchestra; "My Treasure," Violet Elliott, and "Tobermory," Harry Lauder. Twelve-inch—"He Shall Feed His Flock," by Mme. Edna Thornton.

Action Withdrawn.

Under date of December 15 Messrs. Barnett, Samuel & Sons, Ltd., advise me that the action commenced against them by the Gramophone Co. last April has now been withdrawn. This action was started as a result of Messrs. Barnett, Samuel applying the word gramophone to their series of Dulcephone machines. The Gramophone Co. based their case upon common law rights, which Mr. Justice Parker remarked, in the trade mark case, in his opinion remained unaffected. The importance of this withdrawal to the talking machine dealer is obvious.

Patents to Enjoy State Protection in Holland.

The Dutch Parliament has just agreed to a bill of much commercial interest to foreigners. It enacts that commercial patents, which enjoyed no protection whatever in the Netherlands, where any foreign invention can be copied or imitated without compensation, shall henceforth enjoy State

protection on payment of a fee of twenty-five florins. In the same way a bill is pending to protect foreign literature against the piracy to which it has always been subject in the low countries, where anyone could reprint or translate foreign works without incurring financial responsibility.

The New Lauder Records.

In connection with the issue of two new Lauder records, "Hey Donal" and "Queen Among the Heather," the Gramophone Co. have produced a special list complete with all the titles made by the famous comedian, who, by the way, has written the company the following brief though sweet appreciation: "My dear Gramophone—I have only to say my last records are simply to the life, and as long as the Gramophone lives I will never die." The Gramophone Co. announce that they have been able to obtain records—sung by two great artistes—of the latest London sensation, "Salome," as the ban so long placed upon this scriptural play has now been withdrawn.

Pays High Tribute to the Amberola.

A fine tribute was recently paid to the Amberola by a well-known picture hall proprietor. In a recent letter to the National Phonograph Co. he said: "For many months we have featured the mechanical reproduction of songs at the Central Hall, and in order to obtain the most satisfactory results we have installed the best machines, both disc and cylinder, regardless of cost and with varying degrees of success. In our opinion the "Amberola" is by far the most satisfactory, it possesses many points for which we have searched the market in vain. The record is longer, which at once out-distances every other device, while the reproduction is beautifully distinct, full and pleasing in tone, and quite free from harshness of mechanical noise, which are all features of the greatest importance."

This sale was made by an enterprising Edison dealer, and it is a fact that the better class talking machine trader looks upon the Amberola as a fine business asset, for the demand is on the increase all the time.

A New Sapphire Sound-Box.

A new sapphire sound-box was recently introduced to the trade by Messrs. Pathé Frères. It is of much the same pattern as the "Majestik" sound-box and will be known as the "Pathé Concert." In order not to be too heavy for the smaller sized Pathé discs—8½, 10, 11 and 14-inch, it has been constructed of aluminium. An original feature of this new sound-box is the improved stylus bar, which is so set as to be entirely responsive to the minutest vibration, and thus good volume, quality of tone, etc., is assured, that is, so far as this particular feature of construction is concerned, and in all other respects I have found this sound-box to give perfect results. It retails at a guinea, and each one carries a guarantee that it will be overhauled at any time free of charge.

PROVINCIAL NOTES.

Trade reports from the chief Provincial centers indicate very strongly that the retail trade has experienced great prosperity right throughout Decem-

ber. Talking machine sales the week prior to Christmas were exceptionally great, and the opinion is freely expressed that never was such a time since the boom which existed about four years ago. Having regard to the liberal advertising which certain of the manufacturers have planned for the first few months of the new year, it should have a very stimulating effect upon the dealers' activity. 'Twere useless to deny that trade does slacken off a bit after Christmas, it is inevitable, but for all that there is not the slightest reason why the majority of dealers should not handle a good trade, especially in records, during the first few months of the year. As a matter of fact, they have great encouragement in the exceptionally fine demand for the pantomime titles, and already things in this direction are very satisfactory. The Provincial factors have placed large orders for the pantomime records and the fact that renewals are being received in London every day is evidence enough that the stuff is selling.

Traders in Newcastle and surrounding districts have enjoyed a very satisfactory trade the last few weeks, cylinder and half crown discs and medium priced machines having been sold freely.

The North country will rejoice to see that Eric Foster has made a further series of "Tyneside" descriptive records for Columbia-Rena, another three just having been issued on a special supplement. The fun is fast and furious, the titles being specially chosen and composed for Columbia-Rena by Mr. Foster. The new records are Eric Foster's "Pitman on His Holiday" and the "Fishwife at the County Court."

In the great county of Lancashire for the most part Christmas trade has been exceptionally bright, but in one or two districts musical instrument traders naturally suffered from the effects of the great colliery disaster.

All the chief makers of records and machines, both cylinder and discs, have been in great demand, and the Manchester and Liverpool factors—Richardson's, Christian Duwe, Burrows, Robinsons' and others, had a very busy time, indeed, in satisfying the demands of the local traders.

A pleasing feature of the situation up North is the settlement of the protracted labor disputes in the shipbuilding industry. There is abundance of work, and the boilermakers' immediate return to duty has caused great satisfaction to the local talking machine dealers. In Leeds, Bradford and other Yorkshire centers talking machine trade during December was well up to expectations, and as the general industries would appear to be in a very healthy condition, the outlook presents the very brightest prospects for the new year.

Coming down to the Midlands we find an equally satisfactory state of things. The demand for Twin, Edison, Zonophone, Columbia and other well-known products has been unprecedented.

All things considered, talking machine trade has been very well maintained in Wales, and a happy augury of the future is the peaceful conclusion of the coal strike, which at one time threatened to reach very serious proportions indeed. As it is many dealers have eked out a precarious existence this last few months, and many have unfortunately been forced to put up the shutters. Outside the immediate strike districts, however, dealers have enjoyed a splendid Christmas trade, particularly in Edison, Zonophone, Beka and Twin records.

T. E. Osborne, of Belfast, reports having experienced a rattling good time during December, and I should say that his smart local advertising of Gramophone and Edison goods has had a lot to do with it. One of his newspaper advertisements actually gave the number of cylinder and disc records delivered at his premises during a particular week. This is certainly a novel form of advertising and is to be heartily commended.

**Don't Buy Needles
That Damage
Records**

Grain of
Bad Needles Cleopatra Needles

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Cleopatra Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

**Finest Reproduction,
No Ruin of Record.**

ROYALTIES ON RECORDS.

The Money Paid by Manufacturers of Records Amounts to Big Sum for the Year.

The royalties being paid by the record manufacturers to owners of copyright music, as provided under the Federal act, have run into large amounts of money. When the law went into effect, on July 1, 1909, and for some time subsequently, little copyright music was reproduced, but it was only a question of time when its reproduction—especially of the popular variety—could not be avoided and still keep the bulletin selections up-to-date. The manufacturers are disinclined to mention figures in this connection, but intimate the copyright charges are heavy.

HANDLING THE CUSTOMER.

Every Buyer, No Matter How Small the Purchase, Should Receive Special Attention and Have His Needs Studied.

Take special interest in every customer no matter how small the purchase may be. Some time he may be a large buyer and, remembering the courteous treatment he has received at the clerk's hands, throw large sales to the latter's house. A satisfied customer will pass along the good word and bring other trade.

Don't hurry your customer. Wait on him, thoroughly and well. Learn his face and value and remember both. Show him the new goods in which he may be interested, but do not bore him by using more of his time than he cares to devote to you.

Many customers are most difficult to deal with. They may be unreasonable or overbearing, but the clerk who can "tame down" such as these is winning a reputation with his employer and nearly always makes good customers out of the "grouches."

Pull together with the other clerks. Help them and they will help you. Good fellowship among the employes makes a store bright and attractive and is appreciated most by the customers.

ACCOMPLISHMENT.

We are moving in the shadow of revelation each day.—Thomas A. Edison.

Beyond,
The light shines;
Beyond and still beyond
Each forward step man takes;
And revelation ever casts
Its shadow on the path
Between the runner and his goal.
Yet, runs he on,
Surmounting one
To see another still beyond
Between him and the light.
The unrevealed is infinite,
And revelation's shadow falls
Upon the path of finite man
Until time ends.
Beyond, the light still shines,
And where the light is
Shadows are,
If there be aught
For light to fall upon.

W. J. LAMPTON.

TO INCREASE AMBEROL LIST.

Beginning with their April record supplements the National Co., Orange, N. J., have increased the Amberol list from twenty numbers to twenty-five, and have decreased the Standard list from ten to five. This ratio will continue until further notice, which, when it comes, will, of course, announce the retirement of the Standard list—or, rather, the discontinuance of further additions to it, which means its inevitable abolition though it be gradual. This result was predicted when the four-minute record made its appearance on the market a little over two years ago.

It is the intention of the company to list all the best Standard sellers in the Amberol list. This policy is being pursued with every supplement. Where the selection is too short to be listed as an Amberol, two selections of the same character will be listed on the same record. This is an innova-

tion in Edison recording, and it has already been put into effect, the March list including three records of this character.

STRONG ARTICLE BY GEO. P. METZGER.

Advertising Manager of the Columbia Phonograph Co. Handles an Interesting Subject in the Columns of Printer's Ink This Week.

The issue of Printer's Ink appearing this week contains a most interesting article by George P. Metzger, advertising manager for the Columbia Phonograph Co., under the caption of "The Mooted Subject of Co-Operation of Sales and Advertising." Mr. Metzger emphasizes the importance, or, rather, real necessity, of perfect team work and harmony between the advertising and the sales manager and the importance of the personal equation in successful business building. It is certainly an article that tends to stir up earnest thought regarding the subject handled.

COLUMBIA CO. VS. VICTOR CO. SUIT.

(Special to The Talking Machine World.)

Trenton, N. J., Jan. 13, 1911.

On December 23 the suit of the American Graphophone Co. (Columbia Phonograph Co.) Bridgeport, Conn., against the Victor Talking Machine Co., Camden, N. J., charging them with infringing the Jones patent, was filed here. In addition to the foregoing, the defendants were also charged with having repudiated a license which it obtained from the complainants for the manufacture of disc records under the patent.

The defense, claiming that the United States Circuit Court for the District of New Jersey had no jurisdiction in the action, filed a demurrer to the suit. On the same ground, Eldridge R. Johnson, of Merion, Pa., president of the Victor Co., demurred to the suit brought against him by the complainant. Other grounds of demurrer were stated by the defendants, namely, that the complainants should not sustain the suit in that court because they have a complete remedy at law; that the bills of complaint are deficient in certainty; that the bills do not allege that the defendants infringed the patent jointly and that a case had not been made out in either suit.

The court on January 3 sustained the Victor Co.'s demurrer in part, and the order to this effect was signed the 9th following. Yesterday the order for an appeal by the American Graphophone Co. was signed by the judge to the United States Circuit Court of Appeals, Third District, which sits in Philadelphia.

A PAYING SIDE LINE.

Old talking machine men will recall the prominence which C. A. Ray, Louisville, Ky., occupied in the trade years ago. Mr. Ray is now at the head of the Sanitary Specialty Co., manufacturers of electric suction sweepers, Louisville, Ky.

In the opinion of those best qualified to judge Mr. Ray has a sweeper proposition of unusual interest, and his old friends in the talking machine trade will do well to correspond with him. His product blends well with the talker line.

THE PAST AND THE PRESENT.

"The salesman must be a child before he can be a man," says a business authority. "And the best management implies catching him when he is young."

"Every employer and manager looks to his selling force for results—sales and customers, dollars and cents. The necessity for looking in this one direction often leads the boss to think chiefly of the salesman in connection with what he can do. But what the salesman is seems to be the cardinal point. For the true salesman is seldom a practical dollars-and-cents person. The manager who pays no attention to what he is, but follows a policy of hiring him by his record of results under some other employer is usually a bitterly disappointed man, and a close relative of the farmer who buys a record cow and tries to keep up her butter-fat yield on sawdust."

MAKING FOR LOYALTY.

Present Policy of Large Corporations in Offering Truthful Employes the Opportunity of Becoming Stockholders Means Much from the Strictly Business Standpoint.

It is becoming the policy of a number of large corporations to encourage their employes to invest their savings in stocks of the concerns with which they are connected, with an underlying intention that while the men are financially benefited by this arrangement, the corporation expects to reap a large indirect benefit of its own, through the absence of strikes, in the loyal co-operation of its employes, and in the personal interest they may take in a concern in which they have a part ownership. It has been the policy of many large corporations to encourage their official help.

An employe who owns stock in a mercantile or manufacturing company, even though it may be but a few shares, naturally has an interest in the business and an attachment to the same that could not be aroused in another way. There are endless pleadings to store and factory employes to develop and exhibit an interest in the business in which they are engaged, and to make of it an object of worshipful attention. It is but simple justice to a body of hardworking men to say that so far as the hardware trade is concerned there is little ground for complaint in this respect. One sees everywhere a loyalty that is not measured alone by the size of salaries.

With the beginning of a New Year it may not be amiss to suggest that the employer in a concern of any importance has it within his power to vastly accelerate and increase the enthusiasm and working power of a selected number of his employes. There are ways by which he can aid them to stock investments in his concern without loss, or risk of loss, to himself.

In doing so, he may see some of the dividends diverted from his own money chest, but in the long run he stands to gain more than he loses. He has held out a hand of encouragement; he has taught his men to feel that this is "our business" and not "your business"; he has diminished the chances of his trained force being deflected in the interest of a rival; he has trained men who are likely to stand by him; he is binding men to him upon whom he may lean in the days when the load becomes too heavy for his shoulders.

This method is no experiment. It has been successfully tried in many cases, to a mutual benefit.

THE COMMERCIAL TRAVELERS.

Reservoirs of Energy and Encyclopaedias of Information, Says John T. Graves, Have Bettered Every Condition in the Country.

"The commercial travelers," says John Temple Graves, "are reservoirs of commercial energy and encyclopaedias of public and private information. They are the envoys extraordinary and ministers plenipotentiary from the monarchs of business to the principalities of trade. Their tongues are ten thousand, their bosoms are one for the country and its weal."

"In their organized life they have bettered every condition of the country. There is not a traveler of any kind who does not have to thank their vigorous protests for the existence of better hotels in the interior towns. Their is not a passenger who is not their debtor for improved conditions on railroads, nor a merchant who does not recognize their aid in the facilities of shipping. They have eyes like eagles to 'mark the sparrow's fall' in politics. They thrash out with incisive vigor between stations all the imminent questions of government, and the rise and fall of many a public man has been referred to their favor or condemnation."

There should be a reason for making any and every statement that goes into your advertising matter. Have a double entry system with your advertising. For every sentence that goes into it there should be a reason why—to offset each. If your reasons are good and sufficient ones the advertising ought to pull.

EXPANSION IN CINCINNATI.

A Great December Trade Reported—Famine in Victrolas at All the Leading Jobbers—Anent the Lyric Co.'s Talking Machine Shop—R. J. Whelen Describes the Holiday Trade as a Grafonola Christmas—Dealers and Jobbers Now Reordering Stock—Other Items of News Worth Recording.

(Special to The Talking Machine World.)

Cincinnati, O., Jan. 9, 1911.

There was a decided increase in business here during December over the corresponding month in 1909. Several of the dealers who were almost convinced that the day of the talking machine business had gone by now are most enthusiastic over last month's results. In some instances the gains were 50 to 100 per cent. over the same period of 1909. Naturally this state of affairs will have a most beneficial effect upon this year's business, particularly in the record field.

The Aeolian Co.'s Victor department, under the management of Louis Ahaus, succeeded in depleting the entire stock of Victrolas and records during the holiday season. The phenomenal development of the Victor department is such that Manager Black has plans under consideration for larger and more spacious demonstration rooms.

The prospective purchase of three Victrolas by a prominent Cincinnati broker was one of the prize sales of the holiday trade and most eagerly sought for, being fought out competitively, and the placing of the order with the Aeolian people is claimed by them to be an acknowledgment of the efficiency of its service. January, it is claimed, should be a splendid record month, inasmuch as the company's new customers will have the record fever. With proper encouragement all should be sold a large number of Red Seal records.

The following snappy letter by President W. H. Stever, of the Lyric Piano Co., shows the trend of their new Talking Machine Shop:

"In the month that has just passed we are very well pleased with the results that we obtained from our Talking Machine Shop which we added to the Lyric Piano Co. warerooms just a few weeks ago. We were a little discouraged in the beginning of this proposition, as we never had any experience in selling anything but pianos, but we must say that we have figured out the space which it occupies and we are more than pleased with results in December.

"We find that it brings in a class of customers that very seldom visit a piano wareroom since they have purchased a piano for their home, but that having a very nice Victor machine for their home, of course will visit once in a while to obtain new records for their library, and by having a talking machine department with the line of pianos, it brings in people who have a very nice piano in their home, but who have no one to play it, and therefore is what we call a 'dead' piano. Upon a couple of occasions we have got acquainted with them and have had the opportunity to talk player piano with them. We doubt whether it ever occurred to them before about purchasing a player-piano for their home in exchange of their silent piano until they came in to get some new records for their machine that they depend upon for their entertainment. We believe that the field for a good talking machine department is greater to-day than it has ever been known, because you are kept in touch with the best artists at all times and educate yourself and home with the finest artists, while otherwise you only get to hear them about once a year. So we look at this proposition as quite an educator to every class of people, and we feel satisfied that our adventure in a talking machine department is a success."

Manager R. J. Whelen, of the Columbia Phonograph Co., had a big, broad smile on his face when the writer called to see him, and said: "Business is great. The Christmas trade was enormous, the demand being mostly for the Grafonolas, many being ordered as Christmas presents for friends and relatives, and with every Grafonola a fine assortment of grand opera records was always ordered. The smaller machines came in for their share of popularity, but this was in truth a Grafonola Christmas. We could have sold twenty

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

The Music Master Wood Horn

Beyond question is the greatest advancement ever made in phonographic horn construction, not only from the standpoint of workmanship and finish, but from scientific principles of acoustics, it is made from SOLID Oak, Mahogany and Spruce.

The horn of a Talking Machine is the sounding board and amplifies the tones from the records the same as the music shell in a band stand sends forth the beautiful strains of the band and orchestra; you never heard of a music shell made of tin or veneered wood, did you?

Why don't you investigate the merits of the MUSIC MASTER?

Should your jobber be unable to supply you, write us, and we will send you a sample line of oak, mahogany or spruce, disc or cylinder horns on approval.

If you are not satisfied with the merit of the MUSIC MASTER you can return them for credit.

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

times the number of Grafonola Favorites if we could have secured them from our factory, but the demand was so great that we simply could not fill our orders. We ordered heavily in all goods, anticipating the Christmas rush, and were able to take care of the trade in good shape on most types of machines and records, except the Favorite.

"Geo. W. Lyle, general manager, from our New York office, paid us a very pleasant visit in December, and while we were able to give him a splendid report of our business in Cincinnati, he also gave us equally as good reports from the other cities he had recently visited. During Mr. Lyle's visit with us he decided to take one of our Cincinnati men away from us, and C. P. Herdman, who has been our traveling man for several years, will go to Indianapolis in January as assistant manager of our Indianapolis store, and this promotion is well deserved. Geo. R. Howard, a Cincinnati man, will take Mr. Herdman's place on the road for us.

"The dealers have already commenced to reorder both machines and records to replenish their stock after the holiday trade, and we predict that Janu-

ary business will be almost on a par with the fine December just past."

A change in the management of the Krolage & Greene Co., which handles Edison goods, took place this month, the business being bought by the Joseph Krolage Co., which has a capitalization of \$20,000. The new owners propose giving considerable attention to talking machine goods.

J. E. Poorman, Jr., of Main street, this morning estimated that the increase in business during December amounted to 75 per cent. over the same period last year. "This gain," he said, "was a complete surprise and we are just tickled to death. Let's hope 1911 will be just as good."

John Arnold, dealer at Fifth and Elm streets, found business to be better during the holiday week than before Christmas. This demand for goods, particularly records, continued after New Year's day, making Arnold most happy over his holiday results.

Hand service, head service, heart service. These are golden aids to a young man in business.

When you analyze the ready, steady sales, you find it is Columbia Double-Disc Records that have kept your clerks busy, and kept the monthly average up.

Columbia Phonograph Co., Genl., Tribune Building, New York.

AROUND THE CLEVELAND TRADE.

Talking Machine Dealers and Jobbers Well Pleased with Trade for Holidays and the Year—W. H. Buescher & Sons Co. Incorporate—Jobbers Couldn't Secure Sufficient Victrolas to Supply Demand—U. S. Phonograph Co. Make Excellent Report Anent Business Expansion—McMillen Divides Responsibilities—Probeck Reports Big Sales of Grafonolas—Dealers Busy Replenishing Machine and Record Stock—The Month's News.

(Special to the Talking Machine World.)

Cleveland, O., Jan. 6, 1910.

The beginning of the year 1911 finds the Cleveland talking machine dealers in a happy frame of mind. The end of the old year and the beginning of the new has been a surprise in that the business has kept up more actively and longer than in any previous period. The dealers, both wholesale and retail, were busy all through the holidays, and the only trouble experienced was their inability to obtain a sufficient number of some of the high-priced machines to meet the demand. There was a very much larger demand for the high-grade, expensive machines than was anticipated, and results evidence the phenomenal popularity of the hornless machines and the development of a high artistic taste by the general public, who have come to realize that the talking machine is a genuine musical creation.

Incorporation papers of the W. H. Buescher & Sons Co., Cleveland, were filed at Columbus recently by A. J. Holle and others. The capital stock is \$45,000 and the company are to do a talking machine business.

The wholesale trade is not as brisk as it was in December, but the volume of business continues

good, a sure indication, says Mr. Towell, of the Eclipse Musical Co., that dealers depleted their stocks during the holiday season and are now replenishing. The demand for both machines and records was, and continues to be, unusually good. "We experienced considerable difficulty and were somewhat handicapped in securing Victrolas sufficient for the demand," said Mr. Towell. "Dealers in this section have done, and are still doing, a very good business, and prospects at the present time point to continued prosperity."

All departments of the U-S Phonograph Co. are busy and working overtime to fill orders covering the entire list of machines and records. One of the officers stated that it was very gratifying to know that the dealers all over the country were showing their appreciation of the "square deal" policy of this company, and that a great many progressive dealers have taken on the improved U-S line. "They realize," said the officer, "that the consumer is bound to demand the best class of goods he can get for his money, and the wise buyer will from this time on insist on a comparison of the various makes before he invests his money. We expect to make every month of this new year a banner month in the sales of our improved product, and dealers who desire to make their talking machine department more profitable and more satisfactory in every way, and who have not investigated this proposition, would do well to do so at once. The full protection given to dealers by this company is proving to be one of its strongest talking points."

One of the very busy places during the holidays was at McMillen's. The management stated they had enjoyed by far the best Christmas business of their career, not only in talking machines but in all departments. Their stock of Victrolas was all sold three days before Christmas, while the other style Victors were in big demand. Over four thousand Victor records were disposed of. Edison machines and records were a prominent feature of the trade, principally Standards and Firesides.

At the annual banquet of the McMillen employes, December 28, H. E. McMillen announced that owing to the expansion of the business it has been deemed best to divide the management with his son, H. E. McMillen, Jr., as general manager, and O. E. Kellogg, as sales manager.

W. H. Buescher & Sons report the heaviest holiday trade in the history of their house, with a tremendous demand for Victrolas. It was almost impossible to secure a sufficient supply from the factory, and a number of orders were still unfilled on New Year's eve.

The Goodman Piano Co. enjoyed a splendid holiday trade in Victor talking machines and records and Edison Amberolas.

In talking machine circles none has more reason to be satisfied with results of the past year than the G. J. Probeck Co., Columbia jobbers and retailers. A. W. Robertson, of the company, said: "December rounded up a very successful year, and especially was the Christmas trade good. Both machines and records were in active demand. Many of the new type of Grafonolas were sold

almost before they were out of the packing cases. The output of records from the 65-cent record up to the grand opera field has been exceedingly satisfactory. Especially popular of the latter are those of Celestina Boninsega, the dramatic soprano, and Jose Mardones, basso. We look forward to continued activity for some months to come."

Just after Christmas the talking machine display room of Collister & Sayle looked as though they were closing out that department of the business. Not a Victrola of the usual large number in stock was to be seen, and Mr. Dorn said he could have sold a number more if he'd had them or could have obtained them. He said business in both the wholesale and retail departments had exceeded his expectations all through the holiday season.

What is true of the foregoing concerns is true practically of every talking machine house in Cleveland. Manager Friedlander, of the Bailey Co.'s department, expressed surprise at the volume of business which completely cleaned him out of stock.

The May Co. not only had an active holiday trade, but since Christmas the demand for Victor machines and records has exceeded expectations.

Chas. I. Davis also made a most encouraging report regarding the Victor and Edison lines, which he represents, as did S. A. Mintz, Victor and Edison representative, and John Reiling, West Side Columbia dealer, who was kept busy replenishing his stock to meet demands.

Others who reported gratifying progress were the Aldrich-Howey Co., Brown Bros., Flesheim, Smith Co., as well as other dealers, all of whom expressed themselves in the most enthusiastic manner regarding trade for the closing days of 1910.

The effective, simple little "Hays Stop," for use on disc machines, is in high favor with all who are using it. The Cleveland dealers say "it sells on sight."

THE SALESMAN'S RESPONSIBILITY.

Real Burden of Business Rests Upon the Shoulders of the Man Who Sells the Goods.

The stockholder who puts his money into a selling business does so in the expectation that there will be enough goods sold at a profit to pay him interest on his money. The manager of the store engages employes whom he believes can either sell goods, or aid those who are engaged in the selling.

A buyer is selected on his supposed ability to so buy his goods that they can be sold at a substantial advance. A sales manager is put into his place of responsibility with the understanding that he will so manage the salesmen as to get out the best there is in them. The credit man must prevent losses on goods sold on credit. The advertising man has no other use except to aid the salesman in the selling of goods.

Thus everything is up to the salesman. Thus every appliance, department, personality and purpose of the store is to sell the goods. And that is the chief end of business!

Makes a Phonograph Sound Life-Like

A REMARKABLE little device made to fit in tube between reproducer and horn of phonographs.

It renders the sound loud, clear and lifelike, and eliminates that unpleasant metallic effect which is more or less common to all phonographs, regardless of price; largely eliminates blasting and splitting of high notes.

MILWAUKEEANS OPTIMISTIC.

Great Holiday Trade—Poor Collections the Only Blotch on Good Year—McGreal Discusses Outlook—Ornstein Entertains Western Victor Salesmen—Talking Machine Jobbers Developing Plans for Convention—Behrend Piano Co. Secure Columbia Agency—Hoeffler Handling U. S. Phonographs.

(Special to The Talking Machine World.)

Milwaukee, Wis., Jan. 9, 1911.

A highly satisfactory holiday business is reported by wholesalers and retailers alike. Milwaukee retailers are almost unanimous in saying that the holiday trade was the most successful in their history, while reports from about the State are almost as optimistic. While wholesalers experienced most of their rush during the first half of December, rush orders arrived up to Christmas night from dealers about the State who found demand better than they had anticipated.

One of the brightest features of the holiday business was the fact that cash sales seemed to be more in evidence than a year ago. Considering the fact that some lines of business in Milwaukee are at a rather unsatisfactory stage just at the present time, particularly the steel and machinery trade, which is all important in this city, dealers feel that they have occasion to congratulate themselves on the good business which they rounded up before Christmas. Of course money came in more freely outside of Milwaukee, where general business was perhaps better. The smaller cities and towns all seemed to meet with an especially fine business, due, no doubt, to the fact that crops in the State were almost record-breaking last year.

Just at the present time retailers and wholesalers are in the midst of their annual inventories, and figures which are being disclosed are generally satisfactory. While in many cases total business for 1910 was about the same in volume as for 1909, reports generally indicate a larger volume of trade for the twelve months just closed. The only disquieting feature of the past year was the fact that collections were often unsatisfactory. Just at the present time, however, conditions in this line seem to be showing improvement.

Everywhere predictions are being made that 1911 will be a banner year, despite the rumors that are heard in some lines that conditions will be below normal.

"The outlook for 1911 is exceedingly bright," said Lawrence McGreal, the well-known jobber. "Everything is now on a solid basis and I can see no chance for any disastrous slump in any line. Judging from the way dealers all over the State are ordering after the holiday rush, most of them have plenty of confidence in the coming year. It is true that there are no abnormal gains in business being made, but the improvement has been steady and normal and everything indicates a prosperous period ahead.

"One of the best proofs of the statement that the talking machine business about the State has been forging to the front is the fact that demand for higher-priced machines has been increasing steadily. There is no denying the fact that larger and more expensive machines sold better during the past twelve months than during the previous year."

A decidedly interesting gathering was held at the Hotel Pfister in Milwaukee on December 21, when George D. Ornstein, manager of salesmen of the Victor Talking Machine Co., entertained a number of his western salesmen at a banquet in the Fern room. Following the repast a most profitable discussion on trade matters was carried on by Mr. Ornstein and his guests. Those in attend-

ance included: George D. Ornstein, Lester Burchfield, W. A. Barsh, L. E. Gilbert, V. B. Taylor, S. W. Goldsmith, Joseph F. Gannon, Rosco Gorham, H. W. Woodward, J. E. Allen. Besides the salesmen, Lawrence McGreal, Milwaukee jobber, and Mrs. McGreal, Miss Gannon, Mrs. McGreal's sister, and Mrs. Sarah Gaffney were included in the party.

The meeting of the arrangement committee of the National Association of Talking Machine Jobbers will be held in Milwaukee January 11, 12 and 13, when the members will confer with Lawrence McGreal in regard to the coming convention, which will be held in Milwaukee, July 11, 12 and 13. Mr. McGreal has completed all the hotel arrangements for the July gathering and is now making preparations for the coming committee meeting.

F. K. Dolbeer, general manager of the National Phonograph Co., was in Milwaukee last month, conferring with local jobbers on the new Edison exchange plan, which was put into operation on January 3.

News has reached Milwaukee that a son was born to William J. Voss, Edison and Victor dealer at Appleton, Wis., on Christmas day. Mr. Voss plans to have the young man aid him in next year's holiday trade.

W. J. Augustine, of Fond du Lac and Oshkosh, and F. William Diedrich, of Ripon, Wis., were among the up-State dealers who were Milwaukee visitors recently.

Talking machines from the McGreal store were featured at various celebrations at the Elks Club and the Knights of Columbus new club house on New Year's eve.

"Our holiday business exceeded our highest expectations," said L. C. Parker, manager of the talking machine department of Gimbel Bros. "The Victrolas were in heavy demand, so much so that so far we have been unable to fill all of the orders and have been obliged to substitute horn machines for the time being. To fill several orders it was necessary to ship the machines into the city by express. The sales of records have also been heavy."

A. G. Kunde, the Columbia jobber, 516 Grand avenue, has located a new Columbia branch with the Behrend Piano Co., 526 Mitchell street. This store is located in the heart of the South Side business district and should prove a profitable proposition. "Taken as a whole our business this year has been 25 per cent. larger than it was during 1909," said Mr. Kunde. "The holiday trade was all that could be desired and we were rushed to death. We have received our first Grafonola Favorite, which sells for \$50, and it looks like the greatest thing of the season. I am now completing arrangements for establishing several additional branch stores in Milwaukee," he concluded.

The Hoeffler Mfg. Co. have secured the representation of the U. S. Phonograph Co., of Cleveland, and a number of machines have already been placed. "The Christmas business was better than ever," Manager J. H. Becker, Jr., said. "The call for high-priced machines was so large that I believe that we could have sold fifty more Victrolas, No. 11, had we had them on hand. Edison machines also sold well during the holidays and we disposed of a number of Zonophones."

EDISON EXPECTS AIR MAIL LINE,

Says Man Has Conquered the Air and Is Now Master of the Elements.

Thomas A. Edison predicts that aerial transportation and parcel carrying to all parts of the world will soon be practically solved. Man has conquered the air, he says, and is now master of all the elements. The greatest work of the near future will, he thinks, be that of developing aerial transportation.

"I believe aerial navigation will become practical," continued Mr. Edison, "not as a means of personal transportation alone, but for the transportation of the mails and small articles intended for quick delivery. By aerial transportation remote sections in the far and distant parts of the globe may be reached.

"I do not believe that the government will take up the problem of the development of aerial navigation. I think it will be done by private com-

panies. These companies will use the aeroplane to reach points in Alaska and other places that would be almost inaccessible by ordinary means of transportation."

TO RECORD INDIAN LANGUAGE.

Medicine Man Will Make Phonograph Records for California University.

(Special to the Talking Machine World.)

Berkeley, Cal., Jan. 9, 1911.

To preserve the languages, legends, religions, traditions and lore of the North American Indians, the Department of Anthropology of the University of California has engaged Achora Hungara, a Mojave Indian, and Capt. Jack Jones, an interpreter of the tribe, who will hold positions in its faculty. Hungara is known in the Southwest as one of the wisest of the medicine men. His knowledge of the history of his race is said to be vast. His lectures are to be placed on phonograph records and kept for study.

SONORA

The Instrument of Quality

Highest Class

Talking
Machines

and
Records

The handwriting on the wall in the talking machine line indicates several things which are bound to assert themselves universally.

The **Invisible Horn** in all grades of machines.

The **Record of tenfold wear**, because its surface is not cut through by a needle point.

The **Sapphire Stylus**, which is perpetual.

The **Tone Moderator** of exquisitely pleasing modulation.

The **Automatic Stop**.

The **Covered Case** to eliminate the scratching noise of the stylus.

SONORA represents all these—and some more, of which the trade will learn shortly.

And of one thing be assured, Mr. Dealer, Sonora does not, with its purpose to father the Sapphire stylus and the Sapphire record in this country, have to—and does not—encroach on the rights of others.

And its position is as unassailable as it is dignified.

The Only Hornless Machine

The Columbia Grafonola "Favorite"

The Columbia Phonograph

Line on the Market at \$50

—two years ahead of the times

The Columbia Grafonola "Favorite" is the *first* hornless instrument of any make ever offered to the American public at \$50—or near it.

We believe it is the *best* hornless instrument that can ever be made and sold for \$50.

Every prospect who walks into your store and doesn't get a chance to see a Columbia Grafonola "Favorite" with a \$50 price card on it, is being shown the way to some other dealer's store.

Don't let it happen !

There is only one \$50 hornless machine—the Columbia Grafonola "Favorite"—and if you want to make the sales that can only be made with a \$50 hornless machine, you must get the Grafonola "Favorite" on display.

Dealers Wanted: Exclusive selling rights granted where we are not actively represented.

everything asked for on demand, they will enter the new year with very little stock on hand, and have found it impossible to fill orders for some of the newer and more popular lines of machines. The retailers have bought both early and often, and might be expected to have a fair amount of stock left a week after Christmas, but the numerous orders which have already been received show that the trade as a whole is unusually well cleaned up. While there was a heavy Christmas business in records, the enormous number of new machines sold gives promise of a steady run in the record department during the latter part of the winter. Retailers are just now giving considerable attention to record advertising, and already note an increasing demand. Following the increased sale of high-class machines the call is generally for the more expensive records, and fine selections are certain to be in great demand throughout the year.

Babson Bros. opened their new store at 65 Post street early in December, though they had made a start in the mail order business before that time. The store has a frontage of 30 feet, with a large and well-lighted space in the rear for the display of stock. A couple of demonstration rooms have already been installed, and further improvements are to be made within the next few weeks. S. E. Babson is in charge of the branch, and expects to remain here permanently. He states that the local retail trade has opened up as well as could be expected, and believes the firm will find this territory an extremely profitable field. W. A. Lynch, a well known talking machine man in San Francisco and Oakland, is associated with the new store. He has been for some time in Chicago, and on his way back visited the trade at a number of points through the South.

Andrew G. McCarthy, of Sherman, Clay & Co., says: "The holiday business this year has been without exception the best we have ever had, in both the wholesale and retail departments. December brought an enormous increase over the preceding month, and on Christmas eve we had only three Victrolas left in the house." Mr. McCarthy states that about 80 per cent. of the business in machines is now on the Victrola, attributing the rapid advance of this machine to the constant campaign of advertising which has been carried on. A delayed carload has arrived since Christmas, and in less than a week was almost cleaned out. The company have been well supplied with everything but the new \$75 machine, and are now making deliveries on this line. Regarding the entrance of Babson Bros. into the field, Mr. McCarthy considers this a strong Victor territory, and does not believe that there will be any real competition between this and the Edison line.

The Pacific Phonograph Co. added six extra men during the holiday season to help out on deliveries, and the rush lasted up to the last moment, the force being worked overtime for the last two weeks. Late orders from outside made it necessary to send out a great deal of goods by express. Things have quieted down a little since Christmas, but orders are still coming in on a large scale, especially for records. Mr. Pommer says that while he cannot compare this year's trade with past seasons, the company's business has been extremely satisfactory. He feels that the arrival of Babson Bros. and the increased competition resulting will really be a good thing for the Edison business, as it will bring this line into more prominence than it has ever had in the past.

Mr. McCracken, outside man for the Pacific Phonograph Co., has just returned from a holiday visit to Minneapolis.

The Edison business in Sacramento, Cal., has been unusually good. The line is handled there in a large way by three houses, the A. J. Pommer Co., the Drake Music Co. and the J. W. Boulton Music Co., and all of them have moved a large amount of goods.

The Wiley B. Allen Co. devoted a large amount of space to their holiday display of Victrolas, and this line came very near leading all others carried by the house in the sales record for December, the stock being practically cleaned out at present.

Mr. Grob, who has charge of the talking machine business of Benj. Curtaz & Son, reports a very satisfactory holiday run, but says the business was

materially limited by inability to get the new model Victrola, many buyers preferring to wait until these machines could be delivered.

Mr. Scott, of the Columbia Phonograph Co., characterizes December as the best month for Columbia goods in the city for the last two or three years, the sales being far ahead of last December. He reports a lot of large orders from outside agents since Christmas, which he regards as an unusually promising sign in the country trade. The local house is entirely sold out of the Grafonola Favorite, for which new orders are coming in all the time. It is hoped that deliveries can be completed before the end of January. Mr. Cyrus, the road man, was in the city for the holidays, after covering the Sacramento Valley territory for Kirk, Geary & Co., and says conditions in that district are very promising. He is just starting out for another visit to the Southern district.

W. S. Gray, Coast manager for the Columbia Phonograph Co., will leave early in January for New York. He will be accompanied by Wm. F. Stidham, manager of the Los Angeles branch, and his family.

Clark Wise feels greatly encouraged over the outlook for the talking machine department, which after a rather quiet season ended the year with the best month he has ever had. He says there seems to be a better feeling all around, and believes a material improvement will be noted in 1911.

The Hauschildt Music Co. have made a big feature of their talking machine department, which has gained a strong foothold, considering the short time the house has been established in San Francisco. This department carries a general line of goods, and for the last month has had about all the business it could take care of.

The Oakland Phonograph Co., 472 Eleventh street, Oakland, have the only exclusive phonograph shop in that city, carrying both Victor and Edison lines. The company report a very satisfactory year, with an exceptionally fine holiday season.

HELPING THE SALESMAN.

How the Sales Manager Can Increase the Efficiency of His Force by Using a Little Tact.

"Every sales manager," says one who has had a long experience in both buying and selling, "ought to be human, wise and sympathetic enough to lift his young men out of the sinks of depression when they fall into them.

"One error constantly made is that of praising the salesmen who is selling the most goods, and nagging the fellow who sells the least. Saleswork is competitive. A man not only competes with rivals of his own house, but each of the house's salesmen is also a rival.

"A star performer's records are held up as an incentive to others on the staff. But they have seldom an effect on one who has become discouraged. One thing alone is certain to stimulate him, and that is a record of his own. The shrewd sales-manager helps him to get one.

"The manager of a sales department of one large commercial concern, with hundreds of men under him, makes it a point seldom to praise the star performer. Let him run on his own steam, he advises; praise him unwisely and he may feel that he is indispensable. The manager, on the other hand, gives his encouragement to those who need it."

ANENT CONSTANTINO'S SUIT.

Reference has been made in the daily newspapers to Constantino's \$200,000 suit against the Columbia Phonograph Co. The suggestion that the Columbia company have failed to pay Constantino the royalties it is claimed they owe him is indignantly denied by the Columbia people, who say that his claim is absolutely unfounded, absurd and will be fought to a finish. They also said that if Constantino, who is under contract to sing for them exclusively, wants the advertising the lawsuit will bring him he is welcome to it.

"Grit makes the man; the lack of it the chump. Boys who win, catch hold, hang on and hump."

It's a wise man who always has a wise excuse.

**Doing business without the \$50
Grafonola "Favorite" is like trying to
run the Pennsylvania Railroad with
Pullman cars only.**

Columbia Phonograph Co., Genl., Tribune Building, New York.

INDIANAPOLIS TRADE NEWS.

Excellent Holiday Trade Reported from All Quarters—Changes and Improvements in Columbia Store—Strong Demand Noted for All Lines of Goods—Aeolian Co.'s Good Victor Business—Wulschner-Stewart Co. Cleaned Out of Stock—Kipp-Link Co. Have Good Location—Other News of Interest.

(Special to The Talking Machine World.)

Indianapolis, Ind., Jan. 6, 1911.

The talking machine dealers of Indianapolis, having had a satisfactory business for the last year, are preparing for an active campaign for the year now with us. The handlers of the Edison line, the Kipp-Link Co., are counting on a good wagon trade for 1911, and are also counting on the promised Edison disc machine. The Victor men are looking to a largely increased sale of the various Victrola styles, now having something unusually interesting to offer at a popular price. Manager Devine, of the Columbia store, is making many changes, including the employment of a new assistant manager, namely, E. P. Herdman, who has been road salesman for the Cincinnati store of the company. With the new blood in the Columbia force and the exclusive right to the Dictaphone in the Indianapolis territory, he is expecting a greatly increased business during the coming year. In Indiana the year 1911 is one year out of four when there will be no election, and this in itself is counted on to aid business generally. Elections always disturb business to a greater or less extent.

In Terre Haute there are four brothers, the Archibalds, who have been singing as a quartet for several months and have been making records for the Columbia Co. These records have proved to be good sellers not only on their merits, but because they were produced by Indiana men.

B. Feinberg, wholesale representative of the Columbia Co. in the Middle West, paid his semi-annual visit to the Columbia store in Indianapolis.

The Columbia Co. reported an unusually good Christmas business, especially in the higher-priced outfits. Manager Devine, of this company, says that the trade among the people who are able to buy high-priced outfits is getting better year by year. The grand opera records, he says, are interesting more people each year.

He also reports that the demonstration record is proving to be a great hit and the demand for it is big among all classes of people.

The Aeolian Co., with the Victor line, have been giving daily concerts, which have been successful and well patronized during the pre-holiday season. The talking machine business of the Aeolian Co. went ahead of expectations for the holiday season. On December 24 this company had just four Victor machines on the floor unsold.

Mr. Jones, manager of the Aeolian Co.'s Victor department, visited relatives at Delphi during the holiday season.

The talking machine department of the Wulschner-Stewart Music Co. has sold out its Edison stock and will quit the Edison business, devoting all energies in the future exclusively to the Victor line.

The Wulschner-Stewart talking machine depart-

ment had a nice holiday trade, and the company are planning to push the talking machine business hard during the next year. The company have been in the talking machine field now about one and one-half years. The business of the talking machine department during the six months of this year up to December 25 was about 100 per cent. better than it was during the corresponding six months of the previous year. In spite of the fact that the company made unusual preparations for the Christmas trade and laid in an unusually heavy stock, they were about cleaned out after the Christmas rush was over.

The Kipp-Link Co., who handle Edisons and Victors, had the advantage of large holiday crowds, as Massachusetts avenue, where the company are located, had larger Christmas crowds than ever before. With excellent lighting facilities and other conveniences, the crowds that patronized this avenue rivaled those of Washington street, the main thoroughfare of Indianapolis. The Marott department store, one of the most compete in the city, is right across the street from the store of the Kipp-Link Co.

R. B. CALDWELL A COMMUTER.

R. B. Caldwell, vice-president of the Blackman Talking Machine Co., has deserted the City of Churches for a home amid the sylvan glades of Rutherford, N. J., and has already developed the commuter's gift of eloquence which manifests itself whenever he discusses the advantages of that pleasant suburb. And the Marathon down the

street each morning in order to see the tail flags of the 7.37 $\frac{3}{4}$ express waving defiantly as they are hauled Gothamward seems to agree with Mr. Caldwell. Nothing like it, boys.

A LIVE ARIZONA CONCERN.

Fischer's Music Store Handles the Edison and Victor Lines with Great Success.

It has been our privilege to inspect several views of the interior of Fischer's Music Store, of which George T. Fischer is the proprietor, in Tucson, Ariz., where the complete Victor and Edison lines are handled in addition to the large line of pianos, small goods and sheet music.

Besides the sections devoted exclusively to the handling of talking machines, various cabinet models are placed in vantage points throughout the piano and small goods departments, where they may attract the attention of purchasers in those departments. The entire equipment of the store is up-to-date in every particular, attractive cases being provided for the small goods and conveniently arranged racks for the talking machine records and sheet music. In addition to sound-proof record demonstrating rooms there is provided a commodious recital hall, where Victrola and Amberola recitals are given every Saturday evening the year round. On these occasions vocal, piano, violin or pipe organ solos are programmed, it being found that such features draw larger crowds than where the program is made up wholly of talking machine selections.

When in need of Talking Machine Needles

FR. REINGRUBER
Schwabach, Bavaria

who manufactures every kind,
without exception, at prices
that will surprise you, and of
the Best Quality only.

A CONFIDENTIAL CHAT

With Dealers Regarding Unique Advertising Which Is Pertinent at Opening of New Year.

Mr. Dealer, the winter of 1911 should prove a banner one to all talker men who are in a position to embrace golden opportunity. As was the case last year at this time, the new material offered you by the manufacturers is particularly enticing, every company being represented by some accessory which, when applied to the machines now in use, will materially enhance the already brilliant reproduction of records.

The Victor people have come forward with a fiber needle which does away entirely with record wear, and at the same time softens and sweetens the tone.

The National Co. are putting on the market their new Model O Reproducer, thereby revolutionizing the phonograph. With this reproducer applied, their machines take on the mellowness and volume of an Amberola, it is said.

The Columbia concern has a new cabinet machine that can be sold as low as \$50—think of it—and also a reproducer of which they claim great things.

Then there is a jewel needle for disc talkers, which costs but \$2 and is guaranteed for one year, besides other desirable and clever attachments which are awaiting your consideration.

Summing up we find that never before in the annals of talkerdum were there so many good things to choose from.

Now let us take up the subject of the best and most convenient way to get Dame Public interested to the extent of opening up her purse and heart to you. Of course, the solution of the problem resolves itself into one word, *Advertising*, and it remains for the writer, in his modest way, to endeavor to show the dealer along what paths to tread in order to achieve the most far-reaching results.

When you advertise, Mr. Talkerman, put sufficient snap into your publicity to create interest. Be unique, and thereby deal a solar plexus blow to the other fellow who persists in following the old and worn-out trail of bygone years. The advertising game is an intricate one, and while the player's chances were never more promising, he must be keenly alive, well schooled and alert to win out. He must make use of his own intellect and not depend entirely upon his manufacturer's publicity departments for aid along this line. Nothing pleases a talking machine company more than to find one of their jobbers or retailers branching out

into advertising ideas of his own. They hasten to congratulate him by letter, or in person, and print an account of his exploits in their house journal, thus spurring him on to still greater efforts for their mutual good.

Therefore, Mr. Dealer, let us see what we can do, you and I, to achieve success in unique advertising, taking as a subject for experiment, the new fiber needle, and try to win a reward of merit from the powers that be by lauding it somewhat in this wise:

Hear Victor Record 16,113b. Battleship Connecticut March. Played by Pryor's Band in a Style Never Dreamed of Before! Why? Because of the Fiber Needle!

So sweet and natural is the reproduction, so stirring the martial melody, brought out by the new needle, that while listening, your mind's eye will glimpse the stars and stripes flying jauntily from the peak of Uncle Sam's gallant dog of war as she plows her triumphant way up New York harbor. You will see the smiling salute outflung from the lofty torch bearer on Bedloe's Island, and over all, you will hear the inspiring refrain, nobly rendered, from a multitude of golden horns.

Victors on land and sea perform at your pleasure in our talker shop, through the marvelous fiber needle which does not wear the records and can be used over and over again.

Call! See Demonstration!! Hear Battleship Connecticut March!!! Be Convinced!!!!

John Jones,
No. 1 Broad Street,
City.

The Home of Elite Talking Machines and Supplies.

To add an additional force to this advertisement it might be illustrated thus:

and below the sketch, the following jingle could be used to advantage:

1866

1910

NYOIL

FOR

Talking Machines' Typewriters, Phonographs, Adding Machines, Cash Registers, Guns and Tools, and on all Polished Instruments. The Finest Oil Made.

It Absolutely Prevents Rust.

NYOIL

Now Sold Everywhere By All Hardware Men

WILLIAM F. NYE NEW BEDFORD, MASS.

(Air, "When Love Is Young.")

The ship steamed up the harbor;

Its band played loud and clear.

We deemed it so alluring,

*We've canned it for you here.

The horns, the drums, the bugles;

They've caught the wond'rous tune.

There's music in the very air;

Come hear it soon.

*The band, not the ship.

You see by this form of publicity, Mr. Dealer, you are stringing your business bow with three strings, all capable of flying an advertising arrow straight and true to the heart of Dame Public. One dart represents the fiber needle, the second the machine upon which it is played, while the third will mean a great many sales of that beautiful march, "Battleship Connecticut," or whatever other selection you may deem worthy of such elaborate specialization.

The other subjects I have mentioned above, and of which lack of space prohibits further details, can all be treated in much the same manner, always making the word *unique* your battle cry.

HOWARD TAYLOR MIDDLETON.

A GREAT VICTOR CATALOG.

The New Publication Alphabetically Arranged, a Remarkable Compilation.

One of the largest, best arranged and most satisfactory record catalogs has just been sent the trade by the Victor Talking Machine Co., Camden, N. J. It is the alphabetical list, with thumb index in margin, so that any selection may be turned to instantly and without confusion. In connection therewith the company address a circular letter to Victor dealers, in which they say:

"These catalogs, although dated November and marked to include the November supplement, really include the December supplement. We were unavoidably delayed in the printing of the pages for this catalog after the covers had been printed and decided to add the December supplement.

"We believe that you will find this catalog to be as complete and convenient as possible. The pages have been slightly enlarged to allow a better margin and the alphabetical thumb indexes are a feature that greatly facilitates the finding of any selection. These catalogs are not for general distribution to the public, but are for the exclusive use of Victor dealers. Only a limited supply has been printed and we caution our dealers to be careful of the copy enclosed as we cannot furnish additional copies."

The records in foreign languages contained in the Victor's foreign booklets will be found in the second section of the "Alphabetical Catalog," to be issued this week.

Salesmanship is the ability to sell goods. It ought to be the ability to sell goods so that they will give satisfaction to the buyer.

A Suggestion for 1911

What it means NOT to have a Cabinet for your records } **LOST
BROKEN
DUSTY**

Any owner of a machine will admit that he ought to have a cabinet.

He knows how exasperating it is to want a certain record (know that he bought and paid for it) and have to paw around in a pile of Disc or Cylinder Records and find the record missing, or that the baby broke it or find it covered with dust. What a pleasure to have a nice cabinet (a fine piece of furniture itself) and be called on for a certain record, refer to the index card and in a jiffy have it on the machine.

It's fine to have a Cabinet, and you, Mr. Dealer, must talk machine and cabinet simultaneously. A firm in Indianapolis, Ind, The Udell Works, to be explicit, have been making Cabinets for years. Thoroughly dependable and absolutely guaranteed are Udell Cabinets. Patterns and Prices that will care for all demands.

Write these people for illustrations and quotations. To-day is better than to-morrow.

Address them

Indianapolis, Indiana**

We make Mahogany and Oak Cabinets for the New Victrolas No. 10 and No. 11

NO. 435 DISC RECORD CABINET. Height, 34 inches; width, 21 inches; depth, 17 inches. Mahogany top, front and back. Golden Quartered Oak top and front. Will hold 170 12-inch Disc Records.

NO. 435 1/2. Same as above, with horizontal shelves. Will hold 126 12-inch Disc Records in envelopes.

"BY A MAIL ORDER MAN."

Under That Head T. K. Babson, of Babson Bros., Chicago Makes an Interesting Contribution to a Series of Letters from Successful Men Published in System.

Among a recent series of letters appearing in the magazine System, under the head of "How I Started in Business for Myself," and contributed by a number of successful men, was one by T. K. Babson, of Babson Bros., the prominent Chicago mail order house, who do a large business in talking machines, which they sell through the mail in all parts of the country. Mr. Babson's story reads as follows:

"It was the suggestion of an advertising agent that led us brothers to establish a business of our own. We were working on a salary but were in positions which brought us in contact with an advertising man. One day when we were talking together he asked us why we didn't start a mail order business. The idea, although not new, was put up to us in such a way that it set us thinking.

"Although we knew nothing about the mail order game, we were desirous of getting in business for ourselves and decided we would resign and start on the lines suggested by our advertising friend. We first put in only \$5,000 as a basis for a tryout. When we say that there was no definite plan at the beginning except to advertise judiciously, we are naming what we consider the chief element leading to what success we have attained. That element is advertising.

"Our first move was to place with the advertising agency whose representative had suggested the proposition some advertising that we thought was within our means and rightly distributed. This proved a wise move, as later results showed the wisdom and experience of the advertising agent in the campaigns he mapped out. Then we opened a very small office down town in Chicago to await the first returns from our publicity. As soon as the orders began to come in as a result of our advertising, we went out in the open market and bought the goods, which consisted of phonographs, clothing, watches and cream separators, in such quantities as we needed them. With the money we had we were able to pay cash and secure the customary discounts which afforded us the maximum profit from our sales. These discounts we have always continued to take.

"Just as fast as orders came in we filled them. At the same time we increased our office force just in proportion as it was necessary to take care of the expanding business.

"As soon as we were assured that the first advertising was pulling successfully we placed more—as much as we felt able from the showing in returns as a result of the first try-out. This step by step process we kept up, and it was not long before we were on what we considered a solid basis.

"That was just five years ago. We then placed our advertising as we do now, entirely with the magazines and farm journals. Our strong selling point was the guarantee of satisfaction to each customer. We offered a free trial of our goods, and gave a choice of cash or instalment payments. The instalment method proved especially popular and helped materially in bringing orders. On this basis we built up a patronage that now runs into the millions annually.

"When we began we had a force of four people. Now we employ over 400 and are housed in a large building of our own.

"One thing that gave us great opportunities to broaden our selling field was the fact that we required no especial recommendation from a customer before sending him goods on approval. Any Tom, Dick or Harry could send in a request for a watch or a phonograph and we would assume that he was honest and intended to pay. Although we have lost many hundreds of dollars by this policy, yet the general percentage of profits is high enough to make this a powerful and paying lever for business.

"We have built this big business, not through any extraordinary ability of our own, but largely

through advertising that pulled, backed by satisfactory goods. Of course, we could not have started had we not saved when on a salary, but on top of that, attention to business and keeping the advertising in paying channels have won us success. Of the advertising we keep close track. We keep a record of what every advertisement produces in inquiries and orders every month. Any publication too expensive in point of returns we cut off the list for the time being, though we may try it out again some other time. In this way we keep our percentage of profits on an even basis."

COLLEGE PRESIDENT USES "TALKER."

Henry C. King of Oberlin College Sends Message Thousands of Miles to Alumni Associations in the West.

(Special to The Talking Machine World.)

Cleveland, O., Jan. 13, 1911.

The talking machine record has been used many times in the past in voicing messages, but it is not recorded that the president of a college has heretofore made use of it. The president of Oberlin College visited the demonstration rooms of McMillin's, December 30, and dictated the following message to the Oberlin Alumni Association, of Spokane, Wash., at the annual banquet on January 21. After its use at Spokane it will be sent to the Seattle Association for their delectation. The record is fine, giving a distinct, natural enunciation, and will prove an enjoyable treat to those far-away friends of the college. The president's mention of the mode of communication is interesting, illustrating as it does the lofty purposes to which the talking machine may be put:

Fellow Alumni and Friends of Oberlin—One who has made as much of the personal element in education ought not to object, I suppose, to the attempt on the part of distant friends to get into this semi-personal touch with the college—the attempt to get at least within the sound of the voice of its president. I am submitting, therefore, with reluctant cheerfulness, to this first endeavor to 'can' my voice, with the understanding that you are acting on the well-known principle of the western fisheries—that you consume direct what you can, and what you can't you 'can.' And after all, the transportable phonograph record is only one illustration of the marvelous way in which the world of our time has become unified. The unity has been made tangible, visible, audible, to an extent of which an older generation would not have dreamed, and it only thereby partially expresses that brotherhood—that membership one of another—that sense of the inestimable worth of every son of man—to which Oberlin, from the first, has been dedicated. No thoughtful survey of the world's life to-day can leave one in doubt that the world is moving steadily forward toward a completer, more consistent and more reverent democracy, and the college man who has allowed himself to fall out of that forward movement has forgotten his primary obligation to return to his fellows a service commensurate with the special privileges that have been his. The college itself cannot forget this primary obligation, and the doubling of its resources in the last ten years doubles its obligation, not only to do work of the highest educational efficiency, but to be still more sure that that efficiency cannot possibly be reached where the spirit of a genuine democracy does not permeate all its life. Because the college is committed to this goal it asks your confidence, your love and your loyal support in the years to come as in those that are past."

DICTAPHONES FOR HARRIMAN RAILROADS

(Special to The Talking Machine World.)

Salt Lake City, Utah, Jan. 2, 1911.

Last week forty-two Dictaphones were placed in the offices of the Oregon Short Line, in this city, by George D. Smith, in charge of the railroad and navigation business of the Dictaphone Co., of New York. This last sale makes a total of 333 machines used in the various offices of the Harriman lines. The Southern Pacific recently bought 210 machines.

RETAIL ADVERTISING.

What One Successful Dealer Considers as the Proper Method for Reaching the Local Public—What and What Not to Say.

"To me, the ideal way of advertising a retail business," said a successful dealer, "is to use the home newspapers, changing the advertisement each week, and calling the attention of the public to seasonable goods in their season.

"But one must guard against saying anything that is not true. Business that endures must have confidence as its basis. If you lose the confidence of the public to which you are appealing, you might as well sell out and leave the neighborhood.

"The one problem in business is to get the buyer and the seller together; for the one to show what he has, for the other to make known his wants.

"I write out my advertisement in such manner as will appeal to the readers and set them to thinking about my goods. When the farmer sits down to his evening paper, when his wife picks it up to look over after the children are in bed, then it is that I hope to get in my talk.

"I have these two in mind, and the things that they are most likely to read. I try to imagine myself in their places, and to tell them the things I would then have the greatest desire to know. I see the direct effects of this system in my sales."

ENLARGE TALKER DEPARTMENT

The Robert D. Sharp Music Co., Denver, Col., have enlarged their talking machine department and have removed it from the basement to the main floor of the store, where generous show window space is available. The department, in charge of W. H. Davis, has met with great success.

HYMAN LANDAU MARRIED

Hyman Landau, assistant manager of the talking machine department of Samuel Landau, the music dealer of Wilkesbarre, Pa., who handles the Edison and Victor lines of machines and records, was married on January 1 to Miss Mollie Michlosky, sister of Harry Michlosky, general manager of Landau's talking machine department.

An employer who never disagrees with you adds nothing to the brains of the business.

64% Discount On Cabinets

petitors compete with *each other*.

Columbia Phonograph Co., Genl., Tribune Building, New York.

TWO FAMOUS ORGANIZATIONS.

New Records by the Johann Strauss Orchestra and the Garde Republicaine Band Issued by the National Phonograph Co.

The National Phonograph Co. have just issued forty-seven records made by the Johann Strauss Orchestra of Berlin, and twenty made by the Garde Republicaine Band of Paris, concededly organizations of high rank. Of Johann Strauss it is hardly necessary to speak, as Strauss and music are inseparable. Johann is the third of his family to

JOHANN STRAUSS.

bear that illustrious name, and he ranks among the foremost composer-conductors of Europe. It is interesting to note that Mr. Strauss acts as critic and adviser of the National Phonograph Co.'s recording laboratory in Berlin, and the records made by his orchestra are of high artistic quality.

Space prevents us from reprinting the list of the records of these two organizations, but we are sure that the mention herewith will interest dealers sufficiently to write and secure these records if they have not already done so. In addition to the records before referred to, thirty-four additional records by Strauss are to be found in the German catalog and more than two hundred by the Garde Republicaine Band in the French catalog.

IS IT THE LANGUAGE AFTER ALL?

Some Pertinent Remarks by T. H. Bauer on the Question of Opera in English—It Would Seem That to Make the Latter Popular People Must Speak English so That They Must Be Understood.

(Special to the Talking Machine World.)

Boston, Mass., Jan. 7, 1911.

Theodore H. Bauer, press representative of the Boston Opera House, gives The World an inter-

esting remark when he says that it is all nonsense when people say they would go to the opera if they could only understand the words. "Most all opera is given in a foreign tongue, but even admit that one is the most fluent Italian speaker, he cannot understand opera productions in Italian unless he knows the words," continued Mr. Bauer, "and this applies to English opera. I heard the rehearsal of an English opera the other day, and I could only catch two words. Opera should be listened to like the strains of a violin; both are music of the very highest character. More enjoyment can be secured by operagoers if they will become familiar with the words, but if people really like music as music, not knowing the words will not prevent their appearance at the opera. So when you hear persons saying, 'I would go to the opera only I do not understand the words,' it is more of an excuse than a reason for their not attending."

QUEER PHONOGRAPH RECORDS

Owned by the Academy of Sciences in Vienna—Rapidly Increasing the Collection of Idioms and Dialects—Means for Studying Human Speech.

As is well known, the Academy of Sciences of Vienna possesses a very generous collection of phonograms. Those in charge of these archives are now working zealously to increase the series of idioms and variations of dialects; and for this purpose is preparing delegations to all countries. The first of these will be for Sweden and Nubia. The proposed records, however, will not be made merely for purposes of culture, and of the history of language. The authorities have greatly enlarged the field of work of the phonograph, and have made of the instrument an indispensable inventory of the science of sounds. In this respect the phonograph serves as an "acoustic microscope," so to speak, for small sections of the records on the plate are magnified a thousandfold, and so form an invaluable comparative material for the theory of the formation of sound and speech and noises.

One of the latest results of investigation in accordance with this method may be mentioned as an instructive instance of the importance of this kind of microscopical study. Who that has the finest aural perception is able to decide whether the "a" of human speech concurs acoustically with the "a" sound, with its astonishing similarity, which is uttered by the frog in its croaking tone? Here the observer, says Science Siftings, in the absence of the aid of the phonograph, is restricted to his sensibility, and is exposed to subjective errors, and for this reason such investigation must lack an exact basis.

But such tonal emission magnified a thousandfold shows promptly that the "a" sound of a frog is intermitted at brief intervals, a fact which the human ear cannot grasp under ordinary circumstances, and that unlike the "A" of human speech it is a tone of interruption. From this point of view may be recognized also the keen importance this method has for examination of pathological disturbances of speech, for instance, and for the differentiation of dialects even to their smallest details.

THOUGHT THEY HEARD EDISON SPEAK

Members of the Fifty Club of Philadelphia Hoaxed by a Fellow Member Who Impersonated the "Wizard" and Delivered an Address.

At a meeting of the Fifty Club, in Philadelphia, Pa., Christmas night, a joke was perpetrated on the members by Herman Logue, made up to impersonate Thomas A. Edison. As everyone knows Mr. Edison never speaks in public, but the alleged address was accepted as genuine until the "fake" was subsequently exposed. The so-called "speech" follows:

"I am here to-night at the earnest request of your president and vice-president. I was on my way to Washington to personally present to the patent office my latest invention. I dropped off here that I might say a few words to you, see the airship flights and continue on my way. But while I am here it is no more than fitting that I should here and now make the first public announcement of my very latest, and to my mind, the greatest invention ever offered to suffering mankind. It has everything wiped off the map and this is what it is. I have called it my Radium Rejuvenator, and it works wonders. Given to a man of 60 it will make him as mischievous and as full of life as a boy of 10. Given to a lady of 80, it will make her as kittenish as a schoolgirl, and given to a man of 100, it will cause him to at once change into a man youth of 21. And the greatest part of it all, it can be worked backward, to bring about the opposite result. Isn't it a wonder? Think of the great boon to poor humanity, think—"

At this point of the "remarks" the cat was let out of the bag, a good laugh went around, but a rousing toast was given Mr. Edison by all present. The Fifty Club is made up of members of the Manufacturers' Club, composed of leading business men of the city.

EDISON ATTACHMENT PROPOSITION IN CANADA.

The National Phonograph Co., Orange, N. J., have extended their combination attachment proposition to Canada, and the trade across the line are now given the opportunity of cleaning up the "un-amberolized" machines in the Dominion. The provisions and restrictions of the Canadian arrangement are identical with those which govern the plan in the United States, with the exception that the prohibitive Canadian custom duty prevents the delivery of the special packages of ten records, for attachments already in the hands of the trade, at special net prices, as was done in the United States. The company say this is unfortunate, of course, but as it is irremediable, there is little doubt that the Canadian trade will waste no time in vain regrets over the matter, but with customary aggressiveness will apply themselves to the task of making all Edison owners in the Dominion steady, profitable customers for the Amberol records.

Enthusiasm is an explanation of what happens when the brain and heart meet and explode at white heat.

TIMELY TALKS ON TIMELY TOPICS

The manufacturing companies have from time to time proceeded against both licensed and unlicensed dealers for selling their product at less than list price. In every case the Federal courts throughout the country have sustained the contention as to the manufacturer's right to formulate a selling price and maintain it legally under the judicial interpretation of the scope of their patents. Now, the National Phonograph Co., Orange, N. J., have obtained an injunction against a second-hand dealer in Philadelphia, Pa., restraining him from selling new or old Edison records at less than the agreement price. In last month's issue of *The World* this case was referred to briefly, and since then the full decision of Judge Holland, handed down November 9, has been received. It is unnecessary to quote in extenso from this lengthy opinion, as he cites liberally from other decisions of this same nature in support of his own holdings.

A few facts, however, may be noted, namely: Weinberg was a second-hand dealer, and admitted that he had bought second-hand records from users and sold them at reduced prices; and it was proved that he had also been buying new records from licensed jobbers or dealers of the National Phonograph Co. or from other parties, and selling the new records as well as the second-hand records at cut rates. By this decision an injunction is granted restraining the defendant from cutting prices on new and on second-hand Edison records as well. This is the first decision of this kind at final hearing, although similar decisions have been made on motions for preliminary injunctions against the defendants, Charles Frederick and J. J. Dixon, of Brooklyn, N. Y. As stated, this is the first time that this precise question as to second-hand records has been before the courts on final hearing. There was no defense set up that he was not familiar with the conditions of the notice printed on the Edison record cartons; but even if he had, observed the court, "he would nevertheless be conclusively presumed to have knowledge thereof." And again: "The complainants here may entirely suppress the use of their records, or their patent monopoly may be parceled out or divided up in any convenient way they may conclude is for their benefit in the manufacture, use or sale of the article, and the right of the patentee to control his patented article by contract entered into, both with respect to price to be charged and to the person to whom it may be sold, has been determined in a number of cases. The courts have uniformly restrained jobbers and licensed dealers from selling the patented article in violation of their agreement, and have held that a violation of license agreement does not restrict the patentee to his right upon the contract, but that he may bring suit for infringement, notwithstanding the fact there may also be involved an interpretation of a contract." The petition of complainants for an accounting and an injunction restraining Weinberg from dealing in new or second-hand records was granted. Dealers and others should not overlook the importance and pertinence of Judge Holland's decision.

From January to March is the best part of the year for the sale of records, with the present month leading. New customers were created during the holidays by the sale of machines; and now while the spirit of enthusiasm is still at fever heat is the time for keeping the record end of the business up to the highest pitch. One of the best and most effective methods for attracting new customers and developing trade is the employment of concerts or recitals, depending upon the size and impressiveness of the dealer's premises. Those who have given the question of concerts special attention and handled them from an artistic standpoint have never regretted the innovation; they pay and pay handsomely.

As much as has appeared in print as coming from Thomas A. Edison, unless duly authenticated, it is safe to say nine-tenths is pure fiction; fragments of the writers' fanciful imaginations. Recently, however, articles have commenced to ap-

pear in a Chicago paper devoted to electric affairs, and which were credited as interviews with Mr. Edison. Knowing the distinguished gentleman's well known aversion to talking for publication on questions with which his name is indissolubly connected as one of the world's authorities, unless, as above stated, proper introductions precede the meeting, inquiry was made of people in a position to know if those "stories" had any foundation in fact.

It was then learned that Mr. Edison gave out these "talks" to the paper in point because Samuel Insull is financially interested in the publication; in fact, president of the publishing company. To those who know, Mr. Insull is not only president of the Edison Consolidated Co. of Chicago, and many times a millionaire, but was also one of Mr. Edison's earliest friends and supporters in the young days of electric lighting. Unless the writer is in error, Mr. Insull was one of five men who had every faith in Mr. Edison's discoveries in the practical application of electricity and its commercial possibilities, and provided the capital for its development. Of course, this fortunate and far-seeing group was richly rewarded for their confidence, and it is understood the friendliest relations were always maintained between the famous inventor and his friends.

As the informant of *The World* said: "You can now understand why the 'old man,' as T. A. E. is affectionately termed by his factory assistants and intimate business associates, furnishes interviews to Sam Insull's paper. In short, he will grant any favor within reason which Insull should ask." Whether the latter was ever interested in the phonograph has never been made public, though Mr. Insull has invested some money in a plant for the manufacture of perforated music rolls—is president of the company.

The President of the United States has issued a proclamation extending the right of copyright to German citizens under section 1, paragraph c, relating to the reproduction of music in talking machine record form. This is in compliance with the statute adopted by the German empire, which confers the same privilege on our citizens. The law, succinctly related, is to the effect that when any foreign government enacts legislation in conformity with the American copyright statute the same privileges will be extended. As the President is required to make this formal announcement when such action is taken, the proclamation above referred to carries out the provisions of the law.

Among the unique requests that float into the offices of *The World* one of the latest pertains to the personality of Ada Jones, whose name is familiar to every dealer throughout the country as an artist whose records are always in demand. A woman has written *The World* stating she would become a subscriber providing the private life name of the popular record singer would be furnished together with the information as to how many times she has been married. Perhaps the lady herself will answer these queer inquiries, because *The World* does not pretend to know anything whatever about the personal affairs of the record artists for publication. Just why our female correspondent should want this information is also beyond us. But it is likely the reader will recall the old story of a famous lawyer who once upon a time said: "There are two things in this world I never could fathom and they are, what will be the verdict of a petit jury? and what a woman will do next?"

The merchant who is continually fretting about the cost of his advertising had better throw up the sponge and retire from the ranks of business and competition to drag out an unmolested, rural existence as a tiller of the soil, in which vocation prevailing custom and energetic enterprise will not be forever hounding him with that factful warning, "Advertise or Rust."

HOW ADVERTISERS ARE HELPED.

An Unsolicited Letter from the S. B. Davega Co., Which Tells How Advertising in *The World* Brings Results.

Many evidences of *The World's* extraordinary efficiency as an advertising medium have been received from time to time. The general high character of *The World* has also been acknowledged by firms, companies, individual dealers and jobbers in every section of the globe where English is used or spoken, and even from countries where foreign languages are used exclusively. It has been a source of pleasure to thank its many friends. The appended letter, from the S. B. Davega Co., 126 University place, New York, one of the oldest Edison and Victor jobbers, is a fair sample of what is referred to above, but its tone of candor is also very gratifying, to say the least. It follows:

"New York, January 11, 1911.

"*The Talking Machine World*, 1 Madison avenue, New York:

"Gentlemen—It gives us great pleasure to inform you that we have received more replies to our last month's 'ad' and had greater results therefrom than any 'ad' we ever had in your paper.

"Almost two carloads of cabinets were disposed of in one month's time; in fact, one complete carload of our No. 100 cabinets alone were sold.

"The results obtained from our Simplex Needle Box 'ads' in previous issues were also very gratifying, and we do not hesitate to say that *The Talking Machine World* has been our best medium for advertising all of our specialties. Respectfully,
"S. B. DAVEGA Co."

JOIN JOBBERS' ASSOCIATION.

The R. S. Williams Co., Toronto, Can., and R. L. Penick, of Montgomery, Ala., are recent accessions to membership of the National Talking Machine Jobbers' Association.

Booths For Sale

FOR SALE—Two very fine booths, built of mahogany and plate glass, each about 7 feet 7 inches deep, 10 feet 10 inches wide and 10 feet 8 inches high. Practically soundproof, suitable for demonstrating rooms. Will sell very cheap. For particulars address "G. T. L.," care *Talking Machine World*, 1 Madison avenue, New York City.

Salesman Wanted

Wanted—Salesman, retail Victor business. Experience necessary. Prefer man who has done both inside and outside work. Good opportunity for anyone who can show results. Location, New York State, large city. State age, present employment and give references. Address "C. A. M.," care *Talking Machine World*, 1 Madison Ave., New York City.

Manager Wanted

For branch office of graphophone department, at Meridian, Miss. Reference required. Experienced man and a live wire, with executive ability. Good salary and commission to the right party. Position must be filled immediately. Apply Graphophone Dept., A. E. MORLAN, Gulfport, Miss.

Edison Repair Man Wanted

An experienced Edison repair man wanted. Steady work, short hours, good pay. Every incentive for promotion with one of the biggest houses in the country. BOSTON CYCLE & SUNDRY CO., J. M. Linscott, Mgr., 48 Hanover St., Boston, Mass.

Disk Records Wanted

A couple of thousand single side disks wanted. Must be in English and cheap for cash. Could use any kind of phonograph stock at job prices. Address C. HURLING, 65 Arthur St., Toronto, Ontario, Canada.

For Sale or Trade

3,000 Edison records, new stock. Will trade for Zonophone records or Columbia records or machines. A. J. DENINGER, 335 North St., Rochester, N. Y.

THE TRAVELING MAN.

How He Measures Up in the Esteem of Those Who Really Know Him—Some of His Trials and Tribulations.

"A commercial traveler," says one who has traveled, "was once supposed to be a man who told stories of dubious morality, and of even worse taste; a man of bibulous habits, a man who hardly ever went to bed, a man whose private life would not bear close investigation. When I remember the many illustrations that have been borne in upon me of the men I know, I do not see these evidences that were once thought to be universal. I do not see noses blushing for the sins of the mouth. I do not see in eye or in feature, or in general air and bearing the unmistakable symptoms of a life of dissipation. To me the moral progress of mankind for which we fervently hope, that means to all generous spirits, practical religion, that means optimism, that means the improvement of the race, indeed that means to the trust in men, I take it that our system of credit to-day powerfully and logically increases our belief in the progress of morality in the commercial world of to-day. And when I face men who are not the heads largely of commercial houses, but who are its hands and its feet, its bone and sinew, the very marrow of its strength—I realize that the morals of trade are the morals of the traders, and if that be true I have no fears for the ethical future of the commercial interests of our nation and of those in whose hands they rest.

"A word to the salesmen: You are salesmen. You are not largely employed at home, where round about every man are thrown the safe-guards of public opinion, of friends who know you, who look upon you with a certain watchful interest. You are not in a little neighborhood as you would be in your home city, when your every act is transparent to the daylight. You are away from home. You are traveling. You have many lonely evenings. You are tempted sorely. And yet if I know anything of our common humanity by dint of my little experience I look upon these men in vain for the signs of coarse dissipation that in the past were wont to be considered characteristics of your vocation.

"I honor these tireless men who endure surliness, the boorishness of customers, who smile when they feel very far from smiling, who talk to deaf ears, who move the reluctant, who melt the stony hearts of unwilling buyers."

COLUMBIA CO. IN SAN FRANCISCO.

(Special to The Talking Machine World.)

San Francisco, Cal., Dec. 31, 1910.

Another lease for two years has been taken on their store in this city by the Columbia Phonograph Co.

Phone, Columbus 99

graph Co., which is located at 334 Sutter street. The business, under the management of W. S. Gray, has increased at a rapid rate, of which the best evidence is the renewal of this lease.

IMPORTANT VICTOR LETTER

Bearing on the Expiration of the Berliner Patent Recently Issued by the Victor Co., Camden, N. J., Is of General Interest.

(Special to The Talking Machine World.)

Philadelphia, Pa., Jan. 3, 1911.

The Victor Talking Machine Co. have issued a letter in which, after calling the attention of the trade to the scope of the Berliner patent, they say in part:

"There has never been a time in our history when we were in as strong a position from a patentable standpoint as we are to-day, and our legal department advises us that our chances for sustaining sufficient of our patents to protect the splendid business that our inventions have created is as sure as anything can be before the final decisions are given in the matter.

"There is a common impression, which has been industriously circulated by parties having motives to which such a report is in harmony, that our basic Berliner patent expires in February, 1911. The term of this patent does not expire in February, 1911, but has a considerably longer time to run. It cannot be held as having expired, or as invalid, save by process of law. We have defeated every effort of numerous infringers to invalidate or evade this Berliner patent in the past; and we certainly feel that we will be able to continue to successfully maintain our rights up to the regular date of expiration.

"The Victor Co. is protected, and fully protected, by many patents based on the improvements which have made the disc talking machine what it is, and the time is far off when disc talking machine records, or machines, of a quality equal to ours commercially, or of a quality that warrants serious consideration by the trade, can be manufactured or marketed without licenses under our existing United States patents."

WHAT REAL SERVICE MEANS.

Some Methods and Policies Worth Studying of Retail Houses That Have Met with Success.

"Service to customers," says an eminent student and teacher of business ethics, "is the keynote of modern merchandising." The stores that are achieving notable success and making rapid gains are those that not only furnish honest values at reasonable prices, but which also strive to render an efficient personal service to their patrons. The one-price system has come to stay, together with a liberal policy as to exchanges and the making good of deficiencies of any kind."

All this has changed the spirit and character of the selling organization. The day is rapidly passing when the salesman endowed with a strong higgling and bargaining propensity and nothing else can succeed. Intelligence, courtesy, thorough knowledge of the stock and ability to adapt that stock to the customer's need—these are the qualifications one must have who would make good under the new order of things.

The result of this tendency in the retail field is a growing demand by the stores for properly equipped salesmen. Equipment here might be taken to mean (1) a good elementary education, (2) the right kind of personal qualities and habits, and (3) technical training for the work of the store. For the person possessed of the right combination of qualities and training—and these are not difficult to develop—the opportunities for agreeable work and substantial returns in the retail houses are numerous and attractive. Good business demands fair and courteous dealing and efficient service, and these in turn demand well-trained employees.

The next time you feel grouchy start a conversation with a "smiling fellow"—you'll catch his smile and be the better man.

THE COST OF CREDIT.

How Indiscriminate Credit Encourages Dishonest and Careless Customers and Helps to Increase Cost of Living.

Indiscriminate credit helps to raise the cost of living.

The abuse of credit encourages careless persons to order beyond their needs. It assesses upon prudent and honest customers the cheatings of the dishonest who will not pay, and of the foolishly extravagant who cannot.

The dead-beat and the harassed improvident are far more frequent among people of comfortable income than among those of narrower means. This is one reason why prices are higher in stores surrounded by pretentious houses and apartments than in tenement regions, where plain working people dwell.

Some of the causes of the high cost of living are beyond the power of individual thrift to remedy, but a general return to the use of the old-fashioned method of "pay as you go" would help.

RAILROADS LOSE APPEAL.

Initial Carrier Liable for Losses to Shipper on Other Lines—Will Interest the Trade.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 3, 1911.

The so-called "Carmack amendment" to the Hepburn law, making the initial carrier liable for loss of interstate shipments during transportation, not only on its lines, but also on those of connecting lines, was declared constitutional to-day by the Supreme Court of the United States in a decision handed down by Justice Lurton.

The constitutionality of this provision was attacked by several railroads on two broad grounds. One was that it interfered with the liberty of contract not only of carriers, but of shippers. The other was that it imposed liability upon the initial carrier for loss on connecting lines when it had no part in the management of the latter.

NEW INCORPORATIONS IN 1910.

Some Facts and Figures Regarding New Corporate Enterprises Launched During the Year Just Ended.

New companies organized in the Eastern States during 1910, of \$1,000,000 capital or more, as well as increases in capital, have involved \$1,967,617,450. This sum is much larger than the total of any previous year since 1906, when the amount was \$2,297,970,000. The largest year on record was 1901, when the United States Steel Corporation was formed, and the charters taken out in different States reached a total of \$3,714,105,000.

Incorporations outside of the Eastern States increased the 1910 total to \$2,222,757,850. Adding companies in all States of a capital of \$100,000 and over but under \$1,000,000, the grand total is brought up to \$2,869,073,742.

A SOUTH AMERICAN VISITOR.

Ernesto Tosi, with Jose Cagini, one of the largest talking machine houses in South America, of Buenos Ayres, Argentina, arrived in New York on Dec. 24 direct. He brought with him a number of native artists, who will make recordings at the Columbia laboratory while here for the export department of the Columbia Phonograph Co., General, whom Senor Cagini represents in that part of the world.

The R. Wurlitzer Co., Cincinnati, say the month of December was the best month they ever experienced in the talking machine line. Both the wholesale and retail departments did an excellent business, notwithstanding the fact that there was a great shortage of Victrolas. The increased demand for high-grade records was far in excess of any month previous and makes the future outlook for Purple Label and Red Seal records very promising.

CURING DISEASES WITH MUSIC.

Ancient Vina Used Extensively in India to Produce Quieting Melodies in Curing Certain Ailments—Vina Music Now Obtainable in Talking Machine Records.

The Vina is the oldest musical instrument known to humanity. Vina in Sanskrit means larynx, and the instrument is so called because it was constructed with the idea of imitating human voice and expressions, which the instrument actually does.

A Vina 600 years old which was played before the Great Mogul Emperor Akbar of India is now in the possession of Satyabala Devi, of New York.

She knows from memory 288 different melodies and several pieces of Vina music in each melody. The music played on this instrument is the oldest music known to humanity.

It has hitherto been transmitted simply from memory, and is not yet put to notation.

In ancient India music was extensively used for the treatment of such diseases as are now called hysteria, neurasthenia, sleeplessness, mania hypochondriasis and mental and spiritual depressions. The Great Mogul Emperor Akbar of India never took medicines, but was always cured by Vina music. His Highness the present Nawab of Rampur in India, only takes musical treatment when he is ill. The attention of the medical profession in this country is being lately drawn to music as a therapeutic and curative agent. Numerous Sanskrit books have frequent references to the treatment of diseases by music.

The talking machine records of this wonderful, charming and restful Vina music are now on sale at Messrs. Fuller, Bagley & Beers (Victor Talking Machines and Records), 2106 Broadway, New York City, the price of each disc being \$2.50.

The music on the records is very restful and is a specimen of the oldest music known to humanity. This piece was played before Emperor Alexander the Great of Greece by a Punjaub musician of India, when Alexander the Great invaded India and conquered Punjaub. The record in question has lately appeared in India and is being extensively used by the nobility and ruling chiefs of India for the treatment of numerous ailments, including those before mentioned.

PHONOGRAPH TOLD IT ALL.

Letters Between Sweethearts Barred, They Adopt Substitute in Form of Phonograph Record—Father Overheard, However, and Proposed Elopement Is Off for Good.

When Cupid slipped up on the job in this case—which has for its chief figures Miss Minnie Evans, James Stone Smith and a phonograph—one of the prettiest of romances there, like many another well-laid plan, "agley."

There won't be any elopement from the Elizabeth, N. J., home of Miss Minnie, who is seventeen and mighty good looking. James Stone Smith won't be able to chuckle at the irate parents of the youthful innamorata.

This is the story from the beginning. The young man, who is a Philadelphian, aged twenty-five, was forbidden last summer either to call upon the girl or to write to her. She was too young, her folks said. The situation looked hopeless for a time;

but young Mr. Smith's brain evolved a brilliant scheme. He sent a mutual friend over to Elizabeth, and the friend explained the plan thus:

"Your parents know that you're awfully fond of your phonographs, don't they? Well, Jim has one, too, and he suggests that he'll speak a whole record full of talk to you each week and then send the record to your local phonograph shop. You get some blank records and talk on them to him. Then every time you go to the phonograph shop you can get one which he'll send, and the people in the shop will send yours to him."

The scheme worked splendidly. Every night in the Evans homestead the ordinary phonograph records caroled merrily about "Kelly" and such subjects, while the elders listened approvingly, and then later, in Miss Minnie's room, behind closed doors, the special records breathed the tenderest of love monologues.

At last, in September, came a record bearing just one sentence: "Will you be my wife?" In return there journeyed to Philadelphia a record of only one word: "Yes."

Yesterday Miss Minnie received a record and hurried to her room. She did not notice her father behind her. The phonograph started:

"Let me hear your new song, Minnie," asked Mr. Evans genially.

Miss Minnie looked the two records over, gambled on which was which, and then put one on. After a few preliminary whirs this emerged from the funnel:

"Ever since we have been engaged, Minnie dearest, I have been trying to get a chance!"

"What's that?" demanded Papa Evans. Minnie switched off the machine and tried to get the record out. "Oh—it's a little love sketch or something," she stammered.

"Go on with it!" ordered Papa.

"—for us to elope," continued the machine. "Now everything's ready. Next Tuesday night at 10:30 I'll have an auto a block down the street. We'll run to Rahway and take a train, and in a couple of hours you'll be Mrs. James Stone Smith!"

There were all kinds of Evans fireworks and Evans tears, then a complete confession, the production of all the other records, and lastly a scorching letter to James Stone Smith saying that everything was over.

GRAFONOLA REPLACES ORGAN

In the Chapel Attached to a Prominent Undertaker's Establishment in Richmond, Va.

The appended letter was sent by James Cowan, of the Talking Machine Co., Richmond, Va., to H. C. Grove, manager of the Columbia Phonograph Co., Washington, D. C.: "I see in the December 15 issue of the Talking Machine World an article under the heading 'Undertakers' Attention,' wherein the possibility of using the graphophone in an undertaking establishment is referred to. It may be of interest to know that I sold a Grafonola Elite to A. W. Bennett, the leading undertaker of this city, for just the purpose outlined in the above mentioned article. This was bought to be used instead of the organ in the chapel and is giving entire satisfaction."

CROMELIN ON COPYRIGHT IN ENGLAND.

Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, who went to Europe last October, getting back just before Christmas, said he soon ascertained there would be a dissolution of Parliament and that no copyright bill would be introduced. Of course, the present Parliament may reach the question, but a new bill would be prepared, of which he could not now tell what would be the provisions. Possibly it may be more favorable to the talking machine trade.

Don't stock up on styles of records which are likely to become shelf warmers. To do so gives you about as good chances of making a profit as you would have if you made an outside display of stick candy in July.

Finding Money!

Here is money coming your way!

Every business man knows the enormous demand to-day for electric suction sweepers.

But the right sweeper—We have it!

The Sanitary Suction Sweeper

has advantages which will be plain to every business man over any similar creation on the market.

It is light and easily handled; weighing only 14½ pounds as against other sweepers of from 50 to 100 pounds.

It is all aluminum—bright and beautiful to look at. Equipped with double fans, and the price is less than one-half other machines on the market of similar efficiency.

We will give exclusive territorial rights to jobbers and dealers.

Machine retails for \$40 as against \$75 and \$100 for other makes.

Talking machine men can develop a big trade with the agency for this sweeper.

It is like finding dollars. Take the word of an expert talking machine man for that.

Do not put off investigation, but write now to

The Sanitary Specialty Co.

Manufacturers

Comments on the Passing of the Old and the Opening of the New Year—Reunion of Edison Travelers—Aeolian Co.'s Handsome Quarters—Talking Machine Co.'s Greatest Year—Press Committee of Jobbers' Association—Energetic Members of the Talking Machine Co. Force—Lyon & Healy Progress—Other Items of General Trade Interest Worthy of Special Mention in This Section.

(Special to the Talking Machine World.)

Chicago, Ill., Jan. 7, 1911.

The story of the year from the Chicago viewpoint can be told in brief paragraphs.

Nineteen ten made a satisfactory showing. The increase of business done by the jobbers, as compared with the previous year, was somewhere between 15 and 20 per cent.

The smaller country towns came up well, and showed a fair increase, but the largest gains occurred in cities of from 50,000 upwards.

Generally speaking, the increase was in dollars, rather than in number of machines, except, perhaps, in the central districts of the large cities. Concealed horn machines, and especially the more expensive types, have been in the ascendancy.

A rough estimate of sales of talking machines of all types and makes, in and from Chicago, for the past year, puts the figure at about \$3,000,000.

Interviews with leading men in the trade would indicate that the developments of the present year will be in all likelihood along the same lines of 1910. There may be a replacing to a great extent of horn machines, with the lower-priced hornless types, but it is not believed that these sales will greatly interfere with the \$200 instruments.

One hunts in vain for pessimists, as to the general business outlook. People do not believe that the business year will be without its cloudy days, but that the sun of prosperity will be found doing business pretty steadily at the old stand during 1911 seems to be the general belief.

Edison Travelers Meet.

On December 20 and 21 there was a conference of the Western travelers of the National Phonograph Co. with General Sales Manager E. K. Dolbeer and C. E. Goodwin, manager of traveling salesmen. These conferences are of semi-annual occurrence and furnish occasion for a general going over of matters of mutual interest, the planning of a six months' campaign, and incidentally for some delightful socializing of a legitimate nature. This time the sessions were held at the Chicago Athletic Club. There was also a good dinner and a theater party afterwards.

Walter E. Kipp, president of the Kipp-Link Phonograph Co., Indianapolis, and B. G. Caldwell, of the Quincy Phonograph Co., Quincy, Ill., came to the city to meet Mr. Dolbeer. Both are exclusive Edison jobbers and report conditions as excellent.

The Western salesmen present at the conference, together with their territories, were as follows: George H. Renner, Colorado, Nebraska and southern Wyoming; C. A. Briggs, Kansas; W. H. Hugg, Ohio; E. A. Neff, Michigan; W. A. Voltz, California and Arizona; G. H. Allgier, Missouri and southern Illinois; M. G. Kreusch, Indiana; H. G. Hinckley, Iowa; W. P. Hope, Wisconsin and northern peninsula of Michigan; Jay D'Angelis, Canada, and last, but no wise least, A. V. Chandler, Chicago and northern Illinois. Messrs. Dolbeer and Goodwin both express themselves as highly pleased with present business and the outlook.

Prior to coming to Chicago Mr. Dolbeer visited the Edison jobbers in Detroit, Toledo, Milwaukee, Minneapolis, St. Paul, Omaha, Lincoln, Neb.; Des Moines, Kansas City and St. Louis. Of course, he wanted to look over conditions in a general way, but he also had a special mission in placing before the jobbers a proposed plan for a permanent record exchange between dealer, jobber and manufacturer, the details of which will be revealed in due time. Generally speaking, Mr. Dolbeer found conditions of a very satisfactory nature.

Booming Edison Phonograph Co. Trade.

The company's wagon proposition is being taken hold of eagerly by numerous dealers. It is one of the pet hobbies of Mr. Edison, and "The Wizard" is following its progress with great eagerness. The very restrictions with which it has been found necessary to surround the wagon proposition, form one of its merits in Mr. Dolbeer's opinion, as they furnish great incentives to the dealers to push sales. Although the number of Edison phonographs sold reaches an immense figure, it is a fact that only a small proportion of the 18,000,000 families in the United States own talking machines of any kind. Consequently, the field has been little more than scratched. Mr. Dolbeer believes that every dealer who makes an unprejudiced investigation of the situation in his immediate vicinity will be surprised at the sales opportunities awaiting him.

Mr. Goodwin's only regret was that he was unable to stay in the city long enough to greet all his old friends here. He is a very enthusiastic Edison man, and looks forward to a big year. All of the travelers attending this conference are fine fellows, and they constitute a most interesting bunch of personalities. They not only got good points from Messrs. Dolbeer and Goodwin, but were able to offer many suggestions born of practical experience in the field, which were carried back to Orange.

Jay De Angelis is a cousin of Jeff De Angelis. He covers Canadian territory, and recently made a good jobber at Calgary in the R. S. Williams & Sons Co. Temporarily he is covering Minnesota territory.

Aeolian Co.'s Artistic Warerooms.

Thoroughly artistic, and thoroughly unostentatious are the remodeled talking machine warerooms of the Aeolian Co.'s Chicago branch. They occupy the mazzanine floor of the company's building at 202 Michigan avenue, and constitute as conveniently arranged an apartment as can be found anywhere. T. H. Fletcher, the general manager of the Aeolian business in Chicago, and O. M. Searles, manager of the Victor department, deserve a great deal of credit for the manner in which the department has been fitted up. It is true that Mr. Fletcher received valuable suggestions from New York, as the general design of the booklets, etc., follows somewhat the plan of the Victor department at the New York Aeolian Hall, but the manner in which the idea is worked out in Chicago, adapting itself to the size of the space available, etc., is very admirable.

The woodwork throughout is of white enamel; the upper wall panels are of artistic Japanese brass cloth and gold, the whole scheme corresponding with the ornamental ironwork on the elevator doors, which is in white picked out in gold. The lighting fixtures are of colonial design with glass lustres. The booths, four in number, are of pleasing architectural design, and are mainly of glass. The white enameled woodwork, with the exception of the coping, constitutes little more than a frame. The immense plate glass panels, in fact, extend down to the floor with the exception of a shallow footboard. Partitions between the booths are also of glass. The big plate glass panels, however, are set into the framework in felt, and the booths are as near sound-proof as any which your correspondent has inspected.

The record shelving extends along the entire side of the room, back of the booths, and is of the horizontal type, thus preventing warping of records and dogearing of the envelopes in which they are enclosed. Cupboards in the base of this shelving provide space for supplies, literature, etc.

The general reception room is handsomely rugged and furnished with library tables, chairs and divans in mahogany. The big windows overlooking Michigan avenue and the lake are equipped with French puffed shades and a reflector lighting system, which sheds an indescribable radiance over the beautiful cabinets of the Victrolas there exhibited.

Is It a Benefit?

This is an actual fact. A west side mother, of whom the World knows personally, went to hear

"Carmen" at the Auditorium a few weeks ago and, very naturally, went around the house the next day singing or tra-la-la-ing, or humming, or doing something or other, to the Toreador song. Her two boys, aged eleven and thirteen, respectively, were attracted by the hypnotizing strains and asked their mother what it was all about. She sat down and told them. The same afternoon she heard sounds as of mighty carnage from an adjoining room. She hurried to the scene, and after disentangling the kids from a mass of furniture, portieres, shattered vases, etc., proceeded to appraise the damage. It included one broken nose and one broken arm. An investigation revealed the fact that the youthful hero lovers had been giving a vivid and, as it proved, a realistic sanguinary impersonation of a bull fight.

The incident raises a serious point. We prate of the educational advantages of the talking machine, but is there not a reverse side of the shield? Is it not possible that in listening, for instance, to the Morte de Otello some immature or overmature individual might not be incited to self-slaughter? Possibly a total abstainer might be sent pirouetting down the primrose by listening to a "Brindisi." Promising voices may be ruined by trying to imitate the vocal chord disintegrating, chest-bursting tones of a Caruso, or the resounding thunders of Aramondi.

Nevertheless, we opine that in spite of these possible catastrophes that the talking machine will proceed in its educational, new life giving, morality promoting and very joyous mission.

Schumann-Heink Recital.

Mme. Ernestine Schumann-Heink gave a recital at Orchestra Hall yesterday (Sunday) afternoon. It was a distinct artistic triumph, and the famous contralto seemed to be in better voice than ever. She sang the Handel "My Tears Shall Flow" from Rinaldo, and the "Ach, Ich Habe Sie Verloren" aria from Orpheus, the renditions of which have been immortalized through red seal records. She also sang a number of German lieder, some of which, it is sincerely to be hoped, will some day be sung for the Victor by this wonderful artist.

Talking Machine Co.'s Year.

The Talking Machine Co. of this city report that 1910 was one of the largest years of their history. December was the largest December and the largest month they have ever had. On the 23d of the month they had shipped more goods than during all of December of the previous year. As an indication of the immense demand for Victrolas, the company carried over unfilled orders for no less than 724 of these fine instruments, and yet the Talking Machine Co. made a magnificent record so far as filling orders was concerned, as a careful canvass of conditions will show.

Manager Geissler's Trip.

Mr. Geissler recently made a little trip to Michigan. He visited Mr. Ashton, of the American Phonograph Co., of Detroit, and was particularly pleased with the company's beautiful store. He also found Mr. Smith, of the Flint Music Co., of Flint, doing an excellent business. At Ann Arbor he called on his new dealer there, Mrs. M. M. Root, who recently opened a fine music store and is having a prosperous trade. Mr. Geissler was accompanied on his trip by his wife. They both hail from California, and during their visit to Ann Arbor enjoyed their first sleigh ride. Arthur D. says that he would be perfectly willing to travel the rest of his life's journey via the jingle bell route.

They certainly had a merry-merry around the Talking Machine Co.'s warerooms. Mr. Geissler was agreeably surprised by receiving a handsome imported steamer rug from his employes. It will

(Continued on page 40.)

We didn't fill all our orders during the Holidays—

We couldn't—physical impossibility.

Hope you got your share—we didn't get ours, but every Victrola we did get went to our dealers.

We went into 1911 with 724 unfilled orders for Victrolas on hand.

In spite of our inability to fill orders 1910 was the biggest year we ever had by 22 per cent.

You made that increase—stick with us and we will beat 1910 by a bigger margin.

We know we make mistakes—made some bad ones during the rush, but we're TRYING. TRYING all the time in an

**EXCLUSIVELY
WHOLESALE
MANNER.**

We are getting Victrolas now—a few—try us on them.

come in very handy when he benzenes it down to the office this zero weather. Furthermore, be it mentioned that the famous impersonator of Annette Kellerman is somewhat tinged with socialism, that is he believes in equality of reciprocity at Xmas time at least. Everybody in the employ of the company, irrespective of position, color or length of servitude, received a box of fine handkerchiefs and a five-dollar bill. All are using the handkerchiefs, and none misused the V.

Back Up Their Employes.

There are finer things in life, Horatio, than may be found in mere self-boasting. Wookey & Co., of Peoria, have found this out. As related in The World recently, they secured the services of O. M. Kiess as manager of the talking machine department. The Chicago World office has received a handsomely gotten up folder, announcing Mr. Kiess' assumption of office, printing his picture and referring to him as one of the ablest and best informed talking machine men of the country. Of course, he who boosteth others boosteth himself, and this is particularly true when the boostee is an employe. Not all firms take this broad minded view, however, and Wookey & Co. are to be congratulated on their enterprise and foresight.

Two Progressive Talking Machine Men.

We take pleasure in presenting herewith photographs of two energetic hustlers for the Talking Machine Co. of Chicago.

H. S. Conover went through grammar school and high school like a house afire, picking up all sorts of honors on the way, took a whirl at business college, absorbed everything that the Great Armour Institute had to offer and then went into business with his father under the firm style of George Conover & Son, dealers in telephone supplies. For three years he was western representative of the Equipose Arm Co. Now the Equipose telephone arm, as everyone knows, has a mighty good reach, and Conover's three years association with it imparted to him the genuine business reach. When H. S. puts forth his arm for an order, the latter has to do a whole lot of expert dodging if it wants to get out of the way, and it usually does not. Mr. Conover spent a year traveling in Europe and on his return joined the Talking Machine Co.'s force, covering Illinois, Wisconsin and Indiana for them. He is a member of the Chicago Yacht Club, and has sailed in the Lipton cup races. He resides in Roger's Park and is good to his family.

George Cheatle is a graduate of Cambridge College, England. They say of him that he only dreads one thing and that is finding himself at loss for want of a word. If that ever happens he will probably die of the shock. For five years after he came to America he was engaged in the insurance business and made a distinct success

H. S. CONOVER.

thereof. Like every man connected with the Talking Machine Co., he is a living exemplification of the fact that a college education helps a man in business, providing he is the right sort of a man. Mr. Cheatle resides in Evanston, is a member of

GEORGE CHEATLE.

the Country Club and is a fine, companionable gentleman, in every sense of the word.

It may be said that these men do not simply go after orders from the dealers, but they spend time with the latter not only in closing deals, but actually in creating business. This is the policy established by General Manager Arthur D. Geissler and Sales Manager Roy J. Keith, and in the carrying out of which Messrs. Conover and Cheatle co-operate most thoroughly.

Press Committee Send Greetings.

L. C. Wiswell, chairman of the press committee of the National Association of Talking Machine Jobbers, has sent the following greeting to the trade:

"As the normal function of the press committee is to act as the mouthpiece of the officers and directors of the National Association of Talking Machine Jobbers, we feel without formally consulting with them, that we voice their sentiments in wishing the members of this association and, in deed, the entire talking machine trade of the United States, a most happy and prosperous New Year.

"In so doing, we believe that our wish will come true. While 1910 may not have been one constant pean of joy in a trade sense, it was certainly a good year, and business as a whole showed a marked increase over last year. We believe that the jobbers of the United States will agree with

us in saying that the excellent business done during December showed that the purchasing power of the people, at least of that contingent desiring high grade goods, is greater than ever. Consequently, we enter the new year with lively hopes of good things to come.

"True, there are still unsolved problems, some of them of quite a serious nature. On the other hand, our association is larger and stronger than ever and its solidarity is assured. We are prone to believe that all of the things that now vex us can be disposed of by concerted action. What our association has accomplished in the past an earnest of still greater accomplishment in the future. We trust that every member of this organization will impress these undoubted facts upon those who are not now within the fold, and urge them speedily to join the ranks of the faithful.

"Before the January issue of The World appears we hope to be able to place before you the details of the arrangement for the next annual convention to be held in Milwaukee in July. At any rate these particulars will certainly be forthcoming for the February issue.

"In the meantime we want to assure our members that provisions are being made which should insure not only a most delightful time, but a convention of unusual interest and value. However, it is a matter of tradition that a production of Hamlet, the play, is not worth three whoops in Avernus without Hamlet, the Dane, and the most herculean efforts of the officers and of the various committees on arrangements will go for naught if the attendance is not forthcoming. Consequently we say, 'Come ye all and be blest,' and don't forget to say to the non-member with whom you may come in contact 'Come with us and we will do thee good.'

"Again wishing you a happy New Year and that you may put many of them behind you, we remain, sincerely,

THE PRESS COMMITTEE.
Per L. C. Wiswell

Columbia Items.

The Columbia Phonograph Co. are now pretty well settled in their handsome new Chicago headquarters at the corner of Wabash avenue and Washington street. The advanced description of the arrangement and equipment of the new store, printed in The World, was not a bit exaggerated. In fact, it failed to do full justice. The company, as previously stated, retain the old store at 210 Wabash avenue as branch retail warerooms until May 1, when their lease on that location expires. The retail business transacted during December was excellent and showed a marked increase over that of last year. The wholesale business for the month also scored a material gain; in fact, Manager C. F. Baer states that the Chicago office showed a good increase for each month of 1910 as compared with the corresponding month of the previous year.

C. W. Smith, formerly manager of the Kansas City office of the Columbia Co., has come to Chicago to accept a responsible position at the company's headquarters here.

An unusual number of new Columbia dealers were established in this territory during December.

STOP THROWING AWAY MONEY

There isn't a bit of use of your throwing one penny away. Every extra cent that you spend for postage, every extra dollar that you pay for cartage and incidentals mean just that much less profit for you.

Please stop and think of how much you could save in a year's time if you ordered your Victor and Edison Machines from a concern that can furnish in one shipment everything needed by a live music store. It means both a time and a money saving for you. When you are ordering, one letter will fill your entire needs.

We are America's foremost distributors of Victor Talking Machines and Edison Phonographs, the two great acknowledged leaders in the Talking Machine field as well as musical instruments of all kinds. We have, through years of experience, built up an organization without a peer.

Our stock of machines, records, cabinets and other equipment is complete in every detail. Our experienced working force has been picked with the central idea of utmost efficiency. No order is so small but that it merits our best attention; an order can hardly be too large to tax our ability to fill it satisfactorily and complete on day of receipt.

Every time that you order goods where you will not be accorded the same service obtainable at our hands you are throwing away money.

Make your orders read LYON & HEALY and you are bound to please your customers and yourself.

Write to-day for our special Six Months' Offer to reliable dealers.
We furnish your capital. It is the greatest offer ever made to the trade.

FROM OUR CHICAGO HEADQUARTERS.

(Continued from page 40.)

W. C. Fuhri, district manager for the Columbia, is on a trip through a portion of the extensive territory under his supervision. He arrived in Little Rock, Ark., a couple of days after the disastrous fire which destroyed the buildings covering an entire block in the heart of the city, including that of the Hollenberg Music Co. Col. F. B. T. Hollenberg and his associates have the Columbia jobbing agency for the entire State of Arkansas and also have a branch at Memphis, covering the western part of Tennessee. The stock of graphophones at Little Rock, it is understood, is a total loss, but was well covered by insurance. Business will be resumed at the earliest possible moment and Col. Hollenberg states that he expects that they will rebuild in the very near future.

Big Lyon & Healy Business.

The talking machine business of Lyon & Healy during December was something terrific. It showed a strong increase, both for the wholesale and retail, as compared with December, 1909. The year as a whole was a most satisfactory one, and the percentage of gain exceeded the expectation of the officers. Manager L. C. Wiswell, of the talking machine department, left this week for a short trip to St. Louis and other points.

Visitors.

Geo. Ornstein, manager of travelers for the Victor Co., was in Chicago prior to the holidays on his way to Milwaukee, his home. He was joined at the city of beer and beauty by the various Western Victor missionaries and they talked about how they did it and how they are going to do it next year.

Sam Goldsmith, manager of Victor travelers for this district, will, it is understood, make his headquarters in Chicago in the future.

Lawrence McGreal, the well-known Victor and Edison jobber of Milwaukee, was a Chicago visitor this week.

Lyon & Healy's Special Travelers.

The special travelers for the talking department of Lyon & Healy were in during the holidays, ate their Xmas and New Year's birds in Chicago, and consulted with the manager, L. C. Wiswell, of Dept. H, and the powers that be, concerning the campaign for the new year. They constitute a scintillant trio

of genuine selling excellence and have every reason to be proud of the result of their year's work. They are Lawrence Ridgway, who covers Illinois; J. Meagher, who covers Wisconsin, and P. Van de Roovart, Indiana and Michigan. These three put up a petition for something unique in "expect me" cards and the accompanying cuts show what they got.

RECORD SALES SHOULD BE PUSHED.

Dealers Should Follow up Purchases of Machines and Build up Trade in Records—Some Timely Words in Letter from A. D. Geissler, Talking Machine Co., Chicago.

A letter recently sent out by A. D. Geissler, president of the Talking Machine Co., Chicago, Ill., to his dealers has come under our notice, and we deem it worthy of publication, because it is full of vital suggestions regarding the sale of records which many dealers do not follow up as persistently and intelligently as they should.

Dealers should never forget that the sale of a talking machine means a lot of subsequent business provided they are alive to the situation. The record end of the talking machine business should be given especial consideration by dealers and a resolution adopted, now at the opening of the new year, that they will interest people to whom they have sold machines either by personal calls or by letters in the record question. If they do so it will be found, after a fair trial, that the record end of their business will pay them as large a profit as do the machines.

This letter of the Talking Machine Co. of Chicago strikes us as a good business getting communication and one that might be taken as a model by other jobbers desirous of developing the record business.

"Dear Sir: Are you one of those dealers who exerts much time, energy and money consummating a Victor sale and then deliberately abandons all thought of this customer's future purchases?"

"It is not right. That new customer incessantly plays the half dozen or two dozen records you originally sold him and must tire of his selections and his machine.

"That initial enthusiasm of the Victor owner must be conserved. Your most important work, and the work that will pay you the biggest dividends, is to see that your customer has a proper

assortment of records—not all popular stuff and not all grand opera. Enclosed is the advance list of February records.

"If you are not doing it conscientiously, start now to follow up every known owner of a Victor machine every month. If you can get that customer to buy only a few of the new monthly records—even one—you have accomplished a good deal. You have re-enthused him—you have kept alive the prospect for the sale of a better machine—you have forced him to play that new record to his neighbor who has "dropped in" and does not own a Victor.

"This record game, if worked properly, is the biggest end of the talking machine business. The Victor company sells more in dollars and cents in records by far than they do in machines.

"With best wishes for a happy and prosperous new year and hoping that it will bring you greatly increased record sales, we beg to remain, etc."

One of the most important objects of doing business is not only to make sales, but to make continuous sales, and in order to do this customers must be kept in touch with continually. Dealers will find that there is no better means of holding their customers than by developing an interest in the new issues of records each month. It will pay to send out nicely worded letters inviting customers to call at the showrooms when new records will be played for them, or if necessary take the records to the customer's house, and it will be found that before leaving a good order will be secured.

There is not enough attention given to the record business by dealers at the present time. They are too content with making sales of talking machines, and letting it end there. Why not institute an endless chain by keeping the party to whom you sell machines on the books for a long period? This can be done if the record question is studied. It is up to the dealers to act.

Walter Stevens, of the National Co., who has been in Mexico since last October, has returned to headquarters.

The National Phonograph Co., complying with the demands of the trade, have now adopted the model "O" reproducer, which is giving such splendid results as part of the equipment of the other types, for use on their concert type of phonograph.

TRADE IN THE OAKER CITY.

December Business Proves Very Satisfactory to the Talking Machine Men—1910 a Record Year and the Prospects for This Year Are Excellent—New Edison Exchange Pleases Dealers—Waiting for Opening of the Opera Season—Banquet of Columbia Men.

(Special to the Talking Machine World.)

Philadelphia, Pa., Jan. 10, 1911.

The talking machine business in Philadelphia during the month of December was extremely good. Business kept up from the very first of the month. There was no cessation, and it continued good until the very end, there being much buying, especially in records, during the week between Christmas and New Year's. The first week of January started in such a way as to give the dealers assurance that there was going to be exceptional business right along, unless something unforeseen were to happen.

All the Philadelphia dealers agree in saying that 1910 was the best year the talking machine trade ever had. It was the best year by from one-third to one-half that any of the dealers ever before enjoyed, and consequently the best of spirit prevails among the dealers. They are starting in the new year with great hopes for the future, and they are especially well satisfied with the present arrangements with the manufacturers. Manufacturers, jobbers and retailers have never before gone so hand in hand as at present, and the Philadelphia jobbers have only the kindest words for the manufacturer, not only with the way they took care of them during the busy holiday season, but with the agreements they have made whereby the jobbers feel that they will be receiving their full share of profits, and that the manufacturers are willing to share with them the losses through exchange of records.

Louis Buehn & Bro. report that their December business was a record-breaker. It was the largest they ever had.

Frank Madison and Frank Stanton, from the National Co., were Philadelphia visitors this week.

The new Edison exchange scheme, which went into effect the first of January, is well thought of by the local jobbers. By this scheme the jobber and dealer can return to the National Co., at fixed periods, records of any character to the amount of 10 per cent. of his purchase. "The advantages," one of the jobbers says, "are primarily in the fact that if your purchases are large your returns are large, and if purchases are small, naturally returns are small. It takes care of the situation automatically, and will never bring about such conditions as we had last year."

The Penn Phonograph Co. also report that their last year was fine. With the rearrangement and enlargement of their warerooms they have been able more satisfactorily to handle their business, and 1910 was quite the most profitable year the firm ever had. December was the largest month they had since they were in business. It also marked the greatest sales of Victor machines.

The Philadelphia dealers are looking forward to the opening of the regular opera season in this city on the 20th of January to bring a largely increased business in the higher-priced records. Up to this time much of the music that has been sold has been of the more popular sort, but they are expecting a largely increased sale on the classics as soon as the opera starts four performances a week. The Victor, National and Columbia companies are all increasing their opera record lists, and as there are to be many novelties heard in America this season, they are expecting a big increase in sales on these records as soon as they are ready for the market.

There is no doubt that the retail business in talking machines is going to be considerably increased in a short time. There were no new firms to start with the new year, but there are several large piano houses who are contemplating the adding of talking machines to their stock in a very short time. The large profits that have come to the few firms in Piano Row who handle the instruments seem to be an incentive for others to enter the business.

The past week one of these men said to me that they would like to go into the talking machine

business, but they knew nothing about it. That would seem like a natural way to feel, but, on the other hand, a jobber said to me, when I told him this, "well I will be very glad to go to such a dealer and volunteer to put in such a department, with a man in charge and help share expenses and profits with such a dealer." This seems fair enough.

The Hepe Co. have had an unusually large Christmas business on talking machines, and it was as profitable and satisfactory a part of their business last year as was any other of their lines.

The Columbia Phonograph Co. had a letter from a party up the State the past week asking them to send them a selection of phonograph records suitable for a wedding. Some wag in the store made out the following list: "Bridal March from 'Lohengrin';" "Oft in the Stilly Night," "Every Little Movement," "Three Twins" and "On the Way to Reno." What records were sent remains to be ascertained.

The Columbia Phonograph Co. report that during December they had the biggest month, the biggest week and the biggest day they ever had in the history of the house. They are 100 per cent. ahead of last year on sales. The new "Favorite" has been making a big hit at the Columbia. It has been a remarkable seller. They have been receiving some new Alice Neilsen records, which have been very well received. Manager Henderson was in New York all of last week doing special work, and will spend next week in Boston. Mr. Henderson expects to be away a great part of the time during the next few months. Robert B. Robinson and Mr. Cope go out this week to cover their respective territories.

The first annual banquet of the Philadelphia store of the Columbia Phonograph Co. was held at Boothby's on January 4. There were about forty present, and previous to the banquet the entire party went to see the "The Girl in the Train" at the Forrest. The following was the menu served at the banquet:

Oyster cocktail Elite
Blue label Olives Gherkins with Orchestra Accompaniment
Consomme Grafonola
Double-Faced fried oysters Columbia
Pepper sauce A La Lina Cavallieri
Filet Mignon of tenderloin Boninsegna
Indestructible peas Potatoes (one side Copyrighted)
Ice cream De Luxe A. Twelve-inch fancy cakes.
Coffee Regent

H. A. Yerkes, the wholesale manager, was present at the dinner, and made a few encouraging remarks in his usual interesting style. Edward D. Easton sent the diners a very nice letter of congratulation, which was read at the banquet. Thomas K. Henderson, the Philadelphia manager, presided. Mrs. Cope has just presented her indulgent husband with twins, and members of the Columbia office foree say that ever since Cope has been connected with the company he has been seeing everything double. The fellows wrote an appropriate stanza by way of congratulations:

There is a young papa named Cope,
Who has surely been mixing his dope,
They are coming so fast, that sometimes he's aghast,
But as long as there is life there is hope.

The Columbia Co. have planned a Grafonola recital for the Travelers' Protective Association on Friday, January 13, at 1122 Girard street; at the Tioga Baptist Church on the 17th, and at the West Side Presbyterian Church, Germantown, on the 20th.

Norbert Whitely and Mr. Doerr, of the talking machine department of the H. A. Weymann firm, have both just returned from the road, having taken trips through Pennsylvania and New Jersey in order to fill up gaps made by the holiday rush. They report that business on the road looks very good. The Weymanns have had a splendid 1910, and had the best holiday business the firm ever had. They have been selling a great many of the new cabinet disc filing cabinets—Brown system—and say that they are making a great hit with everybody.

Ability in nine-tenths of the cases is developed, not born. Some men are developed beyond the stage of others because they have had the application to make themselves do it. Men who possess ability are those who have studied to get where they are.

RESOLVED

That hereafter I will not disappoint my customers

"Stand pat" on your new year resolution

You won't find it hard to live up to if you have the right kind of a jobber—if you can depend upon him to fill your orders promptly.

All of our customers know they can swear by us, for we ship every order the same day it is received, and they can figure out just when the goods will arrive at their stores.

Wouldn't you like to enjoy this service? Wouldn't it be a good thing for your store, and tend to draw your customers closer to you?

We're ready for you at any time. We always have a complete line of Victors, Victor-Victrolas, Victor Records, record cabinets, fiber cases, horns, repair parts and accessories of every sort, and never keep you waiting.

Write to-day for our catalog and our booklet, "The Cabinet That Matches," and when you get them send us a trial order, and see if we don't "make good."

ELEVATING THE PUBLIC TASTE.

What the Introduction of the New Grand Opera Record by the Columbia Phonograph Co. Means from a Musical Standpoint—The Lifelike Qualities of Nielsen Records Appeal to the Artiste Herself and Puzzle Her Friends.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 7, 1911.

When one considers that probably sixty million people of the United States must rely upon talking machines for a "taste" of grand opera as sung by artists like Alice Nielsen, the widely known star soprano of the Boston Opera House, the announcement that a number of her new Columbia records are ready for distribution must be welcomed, not only by the people away from the operatic centers, but those in the cities of Boston, New York and Chicago.

ALICE NIELSEN.

Miss Nielsen is an artist of international fame—an artist who has sculptured her career on a solid block of highest excellence, and she considers the records that she recently made her best efforts. The writer was with Arthur C. Erisman, the Boston Columbia man, while on an "operatic tour" to-day, and our last but not least call was on Alice Nielsen, who greeted us with a cordiality on par with her ability sopranoic.

Occupying a conspicuous spot in her apartment was a Grafonola "Regent," and Miss Nielsen delights in playing over and over again those of her records which she has received. While pouring tea Miss Nielsen remarked that she thought the Grafonola a most wonderful musical instrument, and that the members of the Columbia Co. were most kind.

"Can you list any of your new records as 'preferred?'" asked The World representative, to which Miss Nielsen answered: "I like them all. I consider that every way in which you read the list the best is first, as I have studied most carefully the science of making records. The reproduction of my voice is perfect, as far as I can hear. I am glad to learn that the first purchaser of my records in Boston was Lucius Tuttle, ex-president of the Boston & Maine Railroad, a most devoted opera lover."

A little evidence showing how "lifelike" the new Nielsen records are can be cited in the fact that Miss Nielsen was playing one the other evening and another opera singer living in the same apartment hotel came in and asked her if she was not doing an unwise thing to be singing so near the performance time. You can imagine the astonishment of the singer when she was shown the Columbia Grafonola and the same record was re-played. If a

record can "fool" an opera singer, her new records must certainly reflect her wonderful singing and personality to an extraordinary degree.

Here are Miss Nielsen's first six records, which are creating such a tremendous hit: A-5,245, "Annie Laurie," in English, with orchestra; "Kathleen Mavourneen," in English, with orchestra. A-5,246, "La Boheme" (Mimi's Farewell), in Italian with orchestra; "Il Bacio" ("The Kiss"—Waltz), (Arditi), in Italian, with orchestra. A-5,247, "Faust" ("The King of Thule"), in French, with orchestra; "Carmen," Michaela's Aria—"I say that no fears shall deter me"), in French, with orchestra; A-5,248, "Mefistofele" (Boito), ("The other night into the deep sea"), in Italian, with orchestra; "Tosca" (Puccini), Preghiera, (Prayer—"For love and art I've lived"), in Italian, with orchestra. A-5,249, "Don Giovanni" ("Chide me, chide me"), in Italian, with orchestra; "Le Nozze Di Figaro" ("Oh, why so long delaying?"), in Italian, with orchestra. A-5,250, "Madama Butterfly" ("There is one step more"), in Italian, with orchestra; "Madame Butterfly" ("One fine day"), in Italian, with orchestra.

TRADE NEWS FROM BALTIMORE.

Year of 1910 Ends with Rush for Talking Machine Men—December a Banner Month—What the Various Houses Have to Report Regarding the Present Situation and the Outlook—I. Son Cohen Banquets Employees.

(Special to The Talking Machine World.)

Baltimore, Md., Jan. 10, 1911.

The year 1910 ended in a blaze of glory in so far as the talking machine dealers of this city are concerned. "It was undoubtedly one of the greatest years we have ever had," said a well-known dealer in commenting on the trade conditions. "While there were several periods during the year, particularly during the late summer, when things were not quite as lively as we would have liked them to be, each month, as a whole, showed improvement over the corresponding periods of the year before. But December was the banner month of the year. Things started to bustle right from the first day and they have not ended yet. The week before the holidays was one of the heaviest I have ever experienced. What makes us feel so good is the fact that there has been no abatement in business conditions, nor are there any signs of such a thing taking place for some time to come."

Summing up the statements by the dealers as a whole it would seem that the expensive machines were the most sought after during the holidays. Of all the large sales the Victrolas of the \$200 type and the various styles of Columbia Grafonolas made the best showing.

Cohen & Hughes, who handle the Victor and Edison machines, did things up in fine shape during

the holidays. Besides having a big rush of buyers, Manager Morris Silverstein had one of the prettiest window displays in the shopping district. The best description of the affair that could be given is that it represented Victrolaland at Christmas time. Just 1,000 vari-colored incandescent lights were used to make the display a handsome one. Then there were a number of the Victor Victrolas and other Victor machines arranged artistically about the window, while beneath and on the floor of the window was an elaborate layer of snow and greens that blended handsomely with the other displays. Then, best of all, in so far as the children were concerned, Santa Claus was there and he wore a happy smile while playing one of the Victrolas, which demonstrated how well he thought of the music played by these machines.

I. Son Cohen was so pleased with the splendid work and co-operation of his employes during the holidays that he gave a substantial, old-time banquet in their honor at Niederhofer's Hotel. The entire second floor was given over to the banqueters. A Hardman piano was sent over from the store and Frank Feldmann, Jr., who has charge of the piano department, presided at the keyboard after all of the eatables were disposed of. Mr. Cohen made an address in which he expressed his appreciation of the work accomplished by his employes. Others made appropriate responses. Among those present from the store were I. Son Cohen, Frank Feldmann, Jr., Morris Silverstein, head of the talking machine department; N. C. Holmes, R. Ansell, John W. Lohrfinck, Warfield Dorsey, Robert Price, Frank Moss and Abe Berlin. The invited guests were Prof. Frank Feldmann, Sr., John C. Wilhelm, Dr. Raymond Hughes, William F. Emrich, E. T. Lumpkin, J. H. Walker, Albert Boden, Hugh Trader and George Claridge.

Manager W. C. Roberts, of E. F. Droop & Son Co., like all the others, declares that December was a record breaker and that the Victor Victrolas made a great showing. In order to facilitate matters and make it more easy to handle the Christmas rush, and a multitude of customers in the future, Manager Roberts has had the first floor arranged as two parlors, so that there will not be so much confusion when several customers are being waited on at one time. While the Victrolas took the lead, Manager Roberts did a good business in \$75, \$100 and \$150 machines. Edisons also were in good demand.

The Columbia products were greatly in demand, according to Manager Laurie, of the local branch of the Columbia Phonograph Co. While the big machines were more sought after the latest production of the Columbia plant, the \$50 Grafonola Favorite, really upheld its name, for it certainly was a favorite with most of those to whom it was demonstrated. The only trouble was that he could not get enough of them.

THE TRADE SITUATION REVIEWED.

Results for the Past and Outlook for 1911 as Viewed by Louis F. Geissler, Geo. W. Lyle and F. K. Dolbeer—Views That Carry Weight—What Prominent New York Jobbers Have to Report Anent General Conditions—The Business, Past, Present and Future Discussed at Some Length.

Without any question the business outlook for the talking machine trade in the year just opened is excellent. The supply of high price goods from the factories was inadequate for holiday trade and for certain lines even the distributors are unable to state when the shipments will be equal to the demand. Of the opinions sought regarding the prospects of 1911 the following may be quoted:

Louis F. Geissler's Interesting Review.

Louis F. Geissler, general manager of the Victor Talking Machine Co., Camden, N. J., writes: "Regarding business results for 1910 and prospects for 1911, I would say that 1910 has been a most prosperous year. We are simply inundated with business, and are carrying over into the year 1911 enough orders (20,830 in Victrolas alone, we understand.—Ed. World) to consume our present factory capacity for several months to come, and orders continue to arrive in almost unabated volume. I believe that the entire country has done a greater business, even outside of the talking machine line, than they are willing to admit. I recently read that the entire volume of the business of the world was 9 per cent. greater in 1910 than in any other year of the world's history; and, notwithstanding the clouds in the sky, such as railroad legislation, Sherman anti-trust law legislation, the tariff and politics, which same clouds have been hovering over us now for several years past (the results of which, I believe, have already been discounted in the trade), I think that 1911 will be an excellent business year, and that we will all go out of it being compelled to admit that we have enjoyed a full portion of American prosperity; and I believe that all merchants should simply go ahead doing things just the same as they always have been—pushing for trade and believing in prosperity."

G. W. Lyle on Columbia Co.'s Business.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., General: "Briefly the Columbia business has been very satisfactory in all parts of the country. Our December sales are over 30 per cent. ahead of last year, and while this may be doubted, it is absolutely true. We have every reason to believe that 1911 will make a new high record. The policy of the company as far as exclusive territory is concerned is so far in advance of any other concern that the dealers appreciate its liberality and success. We will not permit one dealer to interfere or cut in on another's territory. Our advertising policy, as you know, has created a large volume of new business; and the character of our product supports the excellent work done in that direction.

"Of course, as you may understand, the engagement of Henry Russell, director of the Boston Grand Opera Co., means not only a great deal for

the Columbia Co., but is indisputable evidence of what this means in an educational way. This step on our part we consider the most important that has been accomplished by any company in the world."

Dolbeer on Prospects for 1911.

F. K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., writes: "The year just closing has been a remarkable one in many respects, the results exceeding our expectations, particularly when you come to consider the very unusual conditions existing, the volume of trade very materially surpassing that of the previous year, and compelling us at certain times to work extra shifts in order to supply the demand. Of course some of the demand has been created by novel selling plans, which have been inaugurated and are now being more fully developed, and the improved quality of the product as now produced. The outlook for the coming year was never brighter, and the indications are (if we can judge by reports being received from all sections of the country) that the jobber and dealer alike are anticipating a heavy trade in our line. If quality, up-to-date goods and fair business dealing are a factor in merchandising, the results for the coming year are fully assured."

What Some Leading Jobbers Report.

G. T. Williams, general manager of the New York Talking Machine Co., 81 Chambers street, New York, said: "Judging from what we have been doing and so far as it is possible for us to say, business for 1911 will be fine. As you know, it has not been possible for the factory to meet the actual needs of the trade. The demand for Victrolas has been and is beyond ours or anybody's calculations. Just how soon the Victor Co. will be in a position to fill every order for their goods and the new lines is up to the factory. We are in no position to say, more than other Victor distributors, when the company can turn the trick; although we are satisfied they will leave no stone unturned to meet every demand as soon as they can."

J. Newcomb Blackman, president of the Blackman Talking Machine Co., stated that their business for the calendar year of 1910 showed a substantial gain over that for the preceding year and that the efforts of the sales staff had resulted in the signing up of a large number of new dealers, all of whom were well taken care of during even the height of the holiday rush. He offered it as his belief that the product of the factories had made a real and distinct advance during the past year and the prospects were that the future would be marked by still further advances in the quality of the products.

As to the prospects for 1911 from the jobbers' viewpoint, Mr. Blackman said that he believed that the indications were for another year of conservatism and carefulness in business. "The business of the country is now on a solid foundation," said Mr. Blackman, "and there is no possibility of a sudden and disastrous slump though, on the other hand, general conditions, affected as they are by the political situation, will not permit of any sudden exhilaration of business. Of course,

it is a trifle early to make any definite prophecy as to business in 1911, but as for this company, we are going ahead just the same, observing the same policy and working just as hard to play fair with the factories and the dealers and to increase our own business."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 10, 1911.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

DECEMBER 12.

Berlin, 96 pkgs., \$1,986; Bombay, 33 pkgs., \$346; Callao, 7 pkgs., \$616; 2 pkgs., \$107; Cartagena, 32 pkgs., \$892; Chemulpo, 3 pkgs., \$130; Genoa, 4 pkgs., \$650; Guayaquil, 3 pkgs., \$199; Havana, 31 pkgs., \$1,162; Hong Kong, 265 pkgs., \$11,438; London, 9 pkgs., \$3,845; 108 pkgs., \$2,695; 40 pkgs., \$4,795; Montevideo, 4 pkgs., \$129; Naples, 3 pkgs., \$100; Rio de Janeiro, 70 pkgs., \$2,735; Stuttgart, 3 pkgs., \$100; Trinidad, 8 pkgs., \$425; Vera Cruz, 131 pkgs., \$7,387; Vienna, 24 pkgs., \$873; Yokohama, 5 pkgs., \$309.

DECEMBER 19.

Barcelona, 2 pkgs., \$100; Berlin, 100 pkgs., \$3,583; Callao, 6 pkgs., \$110; Cartagena, 64 pkgs., \$4,477; Gothenberg, 6 pkgs., \$1,348; Havana, 18 pkgs., \$592; Havre, 128 pkgs., \$2,079; 4 pkgs., \$388; London, 10 pkgs., \$203; 310 pkgs., \$6,308; 8 pkgs., \$619; 30 pkgs., \$2,065; Nassau, 6 pkgs., \$123; Para, 12 pkgs., \$791; Port Limon, 7 pkgs., \$171; Progreso, 51 pkgs., \$1,821; Rio de Janeiro, 36 pkgs., \$1,201; Sydney, 10 pkgs., \$328; 1,131 pkgs., \$16,120; Tampico, 16 pkgs., \$500; 9 pkgs., \$563.

M. Boras, who is well known on the road for his connection with several talking machine manufacturers and also in the export trade, recently returned from a trip to Europe. He visited London, Berlin and places in Switzerland noted for specialties in the line. Mr. Boras brought back several interesting things.

COLUMBIA ADVANCE DURING 1910.

Some Interesting Achievements That Have Made for Progress with the Columbia Phonograph Co. Gen'l—Best Record for Several Years—Development the Rule in Every Branch of This Establishment.

While in some lines of business the volume of trade for 1910 was not as good as the preceding year, the Columbia Phonograph Co., General, of New York, as a striking exception, report that the past year was the best the company has experienced in four years or more. During that period they have succeeded in establishing their business on a firmer and more profitable basis than ever before. They have added to the excellence and prestige of their products, and increased their representatives and agencies by some 1,800 new accounts. This has been brought about largely by the company's consistent and progressive policy of doing business, the prominent features of which they have so well set forth as: "The offering of product of quality backed up by an intelligent advertising campaign—aiming to serve the best interests of the dealer—providing distributing points equipped and suited to the dealer's requirements—the granting of exclusive selling rights and aggressive selling methods."

Added to this, specially vigorous efforts have been made in establishing responsible dealers throughout the United States, where previously the company had not been properly represented; and the results have been extremely gratifying. The large number of piano dealers included in the new accounts—piano dealers in all parts of the country—is a sure sign of the awakening of the conservative, high-class dealer to the possibilities of the talking machine trade.

The Columbia Co.'s policy of exclusive selling rights has been greatly appreciated by the trade, and since its incorporation as a vital part of the general policy the Columbia position has been plainly strengthened.

No unimportant part of the year's work has been the action of the Columbia Co. in proceeding against irresponsible dealers who have indulged in price-cutting. No less than fifteen instances of this kind during the past six months alone have been taken up by the company, with a view to restraining the sale of their goods under list price.

The Columbia Co. have also taken vigorous action in protecting their patents, a summary of which is as follows: "During the year the American Graphophone Co. (Columbia Phonograph Co.) won many legal victories. In June, 1910, an injunction was sought against the Columbia Co. charging them with infringing an Edison reissue patent for a particular construction of reproducing stylus. Judge Lacombe refused the order. In three other suits decrees were sought on the assertion that the American Graphophone Co. had been making molded cylinder records by certain processes of the Joyce and the Miller and Aylsworth patents. In December last Judge Keller, in the

Federal Court in West Virginia, dismissed all three suits with costs on the complainants. In a third suit proceedings against the American Graphophone Co. had been brought by the Victor Talking Machine Co. because the former had acquired certain Leeds & Catlin disc records and had subsequently disposed of them, claiming this was an infringement of their Berliner patent. The lower court accepted this view as correct. In December, however, the United States Circuit Court of Appeals reversed this holding with costs. The Circuit Court of the United States, sitting in New York, in a fourth suit, after proofs and an accounting, awarded the American Graphophone Co. a judgment for \$80,000 against the Leeds & Catlin Co. for infringing the Jones patent process now universally used for making disc records. Besides, the American Graphophone Co. in 1910 has won a number of important decisions in interferences in the Patent Office relating to talking machine and disc record features."

The improvements in the Columbia product ranks in the achievements of the past year and have an important influence on the business for 1911. The possibilities of the hornless type of graphophone, as demonstrated by the Grafonola de Luxe and the Grafonola Regent, appealed to many dealers. Each succeeding model, such as the Grafonola Mignon, Grafonola Elite, and the very latest, namely, the Grafonola Favorite, have more firmly entrenched the hornless machine in the favor of the dealer and the public alike. During the holidays the orders for the "Favorite" alone came in by the hundred from the various distributing branches of the Columbia Co., taxing the resources of the factories to the utmost.

The growing tendency toward the hornless machine finds its parallel in the increasing appreciation of high-class recorded music. The almost sensational development of recording as demonstrated in the double-disc record has in no small measure contributed to the now extensive business in Columbia grand opera records. The issuing during the past year of the Columbia "New Celebrities Series," the recordings of famous artists, has been the other great factor in creating and satisfying an increased and much desired business.

A significant recognition of the excellence of Columbia recording is the association of Dr. Henry Russell, director of the Boston Opera Co., as consulting director of opera to the Columbia Phonograph Co., the details of which have already appeared in *The World*. This is supplemented with the recent announcement of exclusive contracts with famous artists, namely, Lillian Nordica, Mary Garden, Alice Nielsen, Olive Fremstad, Lydia Lipkowska, and others yet to be announced.

The making of a double-disc record for demonstration purposes on the part of the dealer is also another notable achievement of the Columbia Co. during the past year. The company affirm that as an advertising feature it has not been approached in any other line of business, and is only one of the advertising features of this progressive organization, which at all times stands ready to co-operate

with the dealers in promoting publicity. The outlook for the new year is reported by the Columbia Co. as most favorable, viewed from every standpoint.

HELPING THE BUSINESS GROW.

How the Clerk, by Studying the Details of the Business He Is in, Can Help His House to Succeed and Consequently Succeed Himself.

This is a big subject, but one which every clerk who wishes to succeed should study. Think it over not once, but lots of times. "How can I make myself of more value to my employers?" The more you consider this subject the more ways you will find whereby you can make money for him by increased business, and in the end more money for yourself. There are not many merchants who will not give you more money soon as you earn it, but the question is—how, says Wm. J. Illsey in the *Hardware Dealer's Magazine*.

First get it into your whole fiber that you are hired by your employer to attend to his business, and not your own. If any friends wish to visit with you during business hours, cut their visit politely short. The time belongs to someone else.

Second, make it your business to know the business you are in. Keep posted on all lines of old and new hardware which you are selling. Always keep in your mind the lines of goods which are moving slowly. Push them and keep your stock clean and fresh. If a customer asks you why this or that article is made as it is or where it is manufactured, be able to tell him. Such knowledge can be had by either talking to the traveling representative of the manufacturers or by reading up-to-date trade journals. Never neglect the latter's perusal each week or month. There is knowledge to be gained from them and you need the knowledge.

Third, consider yourself a part of the firm for which you are working and act as such. Work hard and all the time to please your customer and make him come again. He will do so if properly treated. Humanity the world over is fond of attention, and by giving it properly to your patrons you will make fast friends for your house and for yourself also.

Fourth, be courteous always. By this I mean "put yourself in the place of the person outside the counter and use his as you would be used." You are not favoring anyone by serving them. Rather are they favoring you and the man for whom you are working by coming to your store to trade. Make every customer feel that you are glad to serve him. Get to know him and what he enjoys most in life. Maybe he is a keen sportsman, and if you can talk intelligently about sports, there is at once a bond of fellowship formed. If he prefers machinery or mechanical work, let him know that you are interested and get him to talk of it. This need not interfere with the doing of business and makes him feel more genial toward you. Know your customers.

WE ARE HEADQUARTERS

It is "going some" in making this statement, but we have the facts to prove that the

Talking Machine Supply Co., 400 Fifth Avenue, New York
are in a position as manufacturers to furnish the **Jobbing Trade Only**—

Repair parts for all kinds of Talking Machines.

Also high-grade English **Steel Needles**, put up in lithographed envelopes and tin boxes in cartons.

Further, our specialties—and we stand at the head of the list so far as these goods are concerned—include **Feed Nuts, Sapphires, Belts**, etc. In fact, all the essential supplies needful in any branch of the business. Our new catalog for the asking.

TALKING MACHINE SUPPLY CO., 400 FIFTH AVENUE, NEW YORK

LATEST PATENTS RELATING TO TALKING MACHINES AND RECOEDS

(Specially Prepared for The Talking Machine World.) Washington, D. C., Jan. 8, 1911.

AUTOMATIC PHONOGRAPH OF THE WAX CYLINDER TYPE. James Irwin Gemmill, Cleveland, O. Patent No. 978,014.

This invention relates to automatically operated mechanisms, and particularly to a multiple cylinder record phonograph.

The object of said invention is to produce a talking machine of the character described, which shall be continuous in its action and shall operate

for the purpose of reproducing a continuous discourse of music or speech of an indefinite length, as impressed on a series of tablets or phonographic records, which are operated automatically by the machine without any attention or attendance in any way by the operator, and in so operating these tablets or records to do so with the least possible

expenditure of time during the silent period of the said mechanism, which occurs between the finishing of one record and the commencement of the next adjacent one.

Reference being had at this juncture to the drawings, Figure 1 is a vertical view of the machine as seen from the front. Fig. 2, a vertical view of the machine as seen from the right hand side of the aforementioned view, Fig. 1. Fig. 3 is a plan view of the top of the mechanism, the bottom of which represents the side of the machine as seen in the front of Fig. 2, and serves to disclose the arrangement of the inclined planes or ways, serving to conduct records from one side of a magazine to a playing position, and thence to the other side of said magazine. Fig. 4 serves to show the preferred form of record or tablet supporting means. Fig. 5 discloses a portion of Fig. 4, being an elevation of the section shown at the right hand side of said Fig. 4. Fig. 6 is a

view of a drum cam which will appear obvious in Fig. 1. Fig. 7 is diagrammatic, and serves to show a broken portion of a record supporting means in position on means for revolving same, the whole being supported by a movable platform, and in connection with a lever; the whole forming a part of the mechanism in connection with the upper part of the machine, as seen in Figs.

1 and 2. Fig. 8 is an end view or plan of Fig. 7, further disclosing relative positions of the several parts. Fig. 9 is a view of the top plate of the machine together with the mechanism necessary for actuating the sound box to and fro over the record tablet being played. Fig. 10 serves to show in detail some of the parts that are disclosed in Fig. 9.

RECORD. Otto J. Fajen, Stover, Mo. Patent No. 978,722.

This invention relates to records for sound reproducing machines and particularly that type of records which are tubular in form.

The object of the invention is to provide a sound record of this type with a pair of sound grooves starting respectively at opposite ends of the record; and in further providing said record with a bore tapering from each end toward its center whereby same may be reversibly mounted upon a holder in order to seat a stylus in the starting end of either groove.

Figure 1 is a perspective view of a tubular record constructed in accordance with the invention; and Fig. 2, a longitudinal section of same.

TALKING MACHINE. Ami Jaccard, New York, assignor to T. Ephrem, La Montague, same place. Patent No. 978,891.

This invention relates more particularly to that class of talking machines in which the record is upon a flat circular disc, and consists in means whereby to prevent those portions of the disc which do not have any record upon them from being brought in contact with the needle, and also in means whereby to prevent the needle from being carried radially across the record or from being improperly brought against the disc, which improved features may be used together or separately and in some cases in connection with talking machines of a different character, illustrated in the accompanying drawing, in which:

Figure 1 is a side elevation showing sufficient of a talking machine to illustrate the improve-

ments, the parts being in the position which they occupy when the needle support is held in place by a detent adapted to be automatically shifted by the disc; Fig. 2 a plan view; Fig. 3 an edge view of the stationary portion of the shifting device; Fig. 4 a transverse section on the line 4-4 Fig. 1.

MULTIPLE-RECORD GRAMOPHONE. Alphonse J. K. Genella, New Orleans, La., assignor by mesne assignments to George H. Underhill, Boston, Mass. Patent No. 979,466.

This invention relates to improvements in talking machines, particularly to that class of the multiple record type.

It is obvious that it may be desirable to run off several records successively without interruption and without assistance of an operator, and this may be especially true in slot machines, and more particularly in cases where the machine is used for purposes of dictation wherein the subject-matter to be dictated would cover a number of record members.

The principal object of this invention is to provide mechanism, automatic in its operation, which will subserve this end.

While in the following specification, for the purpose of simplicity, the invention is described more particularly with reference to graphophones of the ordinary type employing the usual reproducer and cylindrical record, it will be understood that the invention is not limited to this particular

type of a reproducing machine, and the term "stylus" is employed to cover a recorder or a reproducer as the case may be, while the term "record member" or "record" is used to cover any kind of a record member before or after the record has been produced thereon, or whether the record member be used in connection with a machine of the graphophone or gramophone type, it being quite immaterial whether or not the undulatory grooves of the record are of varying depth or width, respectively.

A Columbia Grafonola sale opens the door to a regular business in Columbia Grand Opera Double-Disc Records. Size up the new Columbia *exclusive* artists and the extraordinary quality of the new series of Columbia Records, and get an idea of what that business means.

Columbia Phonograph Co., Genl., Tribune Building, New York

Figure 1 is a side elevation of the operating mechanism of the improved machine, certain minor parts being broken away. Fig. 2 is an end elevation looking to the right in Fig. 1, parts being broken away. Fig. 3 is a sectional view in detail of the rotary disc and one of the record members thereon, the disc, the record spindle and the supporting axis being broken away. Fig. 4 is a transverse section on the line 4-4 of Fig. 3. Fig. 5 is a fragmentary detail partly in section and an end view of the inner end of the stylus feed screw. Fig. 6 is a view in elevation, showing the operating members for returning the stylus to its initial position and holding the same

raised until a new record has been placed in position, certain positions of the parts in this view being shown in dotted lines. Fig. 7 is a detail perspective view of the pawl member for automatically operating the revoluble disc. Fig. 8 is a plan view of the crank shaft and parts connected therewith, the hanger bars being shown in cross section. Fig. 9 is a detail view of an end of the plunger rod, and Fig. 10 is a detail view of means for rotating the rotary disc independently of the automatic means, and indicating the position of the records thereon.

SOUND-BOX FOR TALKING MACHINES. Johann Veit, Hanau, Germany. Patent No. 979,231.

This invention has for its object to provide a sound-box for a talking machine which shall in shape resemble, as closely as possible, that of the human mouth. This end is attained by shutting off from the membrane the hollow portion of the sound-box (that is to say, the portion which is connected with the horn) by a thin apertured wooden diaphragm and providing the hollow cavity with three thin strips of wood whereof a pair are fixed to the diaphragm as well as to the walls of the cavity, while the third, which occupies a position between the other two, is in the form of a tongue

and being attached to the diaphragm only and not to the walls of the cavity. In this construction the two fixed strips correspond to the human cheeks, the flexible strip corresponds to the tongue, and the remaining hollow space at either side corresponds to the gums. It has been ascertained by experiment that surprising results, in respect of fullness and purity of tone, can be obtained by an arrangement of this kind and that the usual objectionable jarring noise emitted by talking machines is entirely done away with.

In the accompanying drawing, which serves to illustrate the invention, Figure 1 is a front elevation of the improved sound-box of the invention, and Figs. 2 and 3, sections on the lines 2-2 and 3-3 of Fig. 1, respectively.

METHOD OF MAKING TALKING MACHINE DIAPHRAGMS. William W. Young, Springfield, Mass. Patent No. 980,470.

This invention relates to improvements in methods of manufacturing reproducing diaphragms for talking machines.

Broadly, the new method consists in perforating thin sheet material, and when deemed necessary in producing burrs thereon by punching instead of cutting out the perforations, and if desired in upsetting such burrs.

More specifically the new method may consist in perforating imporous material, in filling the perforations in the imporous material and in coating the latter with a material or materials, while in a liquid state or plastic condition, which possess the necessary characteristics and qualifications or qualities, in partially drying the imporous material thus treated, and in subjecting the same to pressure. The coating, drying and pressing operations in the order named are usually repeated one or more times and a thorough and complete drying by subjection to heat is given after pressing.

In the accompanying drawings, which form a part of this application and in which like characters of reference indicate like parts through the several views—Figure 1 is a side view of a sheet

metal disc perforated and represents the unfilled diaphragm; Fig. 2, a view of a diaphragm as it appears when the burrs left by the perforating punch have been upset or pressed into small bosses, and when seen from the side upon which such bosses

are located, the appearance being practically the same whether said diaphragm be filled and coated or not, provided that, in the former instance, the coating be transparent; Fig. 3, an enlarged fragment in section of the disc or diaphragm shown in the first view, and, Fig. 4, an enlarged fragment in section of a diaphragm which has been filled and coated and pressed.

PHONOGRAPH. George H. Underhill, Boston, Mass. Patent No. 980,459.

This invention relates to sound-reproducing or sound-recording machines. While many features thereof have useful application to other types of such machines, and to those employing but a single record, this invention is particularly applicable and is here illustrated with reference to one type of multiple record machine employing a plurality of cylindrical records adapted automatically and successively to be brought into reproducing or re-

ording relation with reference to suitable reproducing or recording mechanism, the latter being caused automatically to traverse the face of each record as the same is presented.

In the drawings—Figure 1 is a central, vertical section, partially broken away, showing the principal operating parts of a phonograph embodying one form of the invention; Fig. 2 is a partially broken away end elevation showing the support and traversing mechanism for the sound box; Fig. 3 is a side elevation showing the flexible linked record carrier and its relation to the driving sprockets of the machine, and Fig. 4 is an end view of the same linked carrier.

THE BEST TRADE MAKERS ON THE MARKET ARE THE LINE OF

ELECTRIC-PLAYERS

MADE BY

THE ELECTROVA CO., 117-125 Cypress Ave., NEW YORK

As a side line for Talking Machine Dealers they are unequalled. They mean easy money and big profits. We will send the arguments that will convince you and your customers.

HANDLING VACUUM CLEANERS.

One House Handling Cleaners as a Side Line Become Enthusiastic Over the Results.

We consider our agency for vacuum carpet cleaners as one of the most valuable specialty features of our business, said a prominent dealer.

The advertising campaigns conducted by various manufacturers have educated the people to the many virtues of the vacuum cleaner, and the business is now only in its infancy. In our estimation the cleaner has established itself in the household as an absolute necessity equal to the kitchen stove. We have handled the ——— for over a year and enjoyed a splendid business. Sales are,

of course, heavier in the spring, but we sell them right along and feel justified in practically keeping an advertisement standing in our local dailies.

EDISON'S GREAT INVENTION

Of Successful Storage Battery Car Places His Name First in the Domain of Scientific Research for the Year.

Commenting on the world's scientific attainments during the year just closed the New York *Herald* says: "The name of Thomas A. Edison stands first in the field of scientific research for the past year, his invention, after years of experimenting, of the successful storage battery street car, having practically revolutionized the construction of street railways, eliminating the most expensive items of construction and operation, the underground conduit and the overhead trolley wire, with the costly power plant necessary to supply current. Mr. Edison has succeeded in producing a car, operated by storage batteries, which needs nothing more in the way of equipment than a set of tracks to run on and a comparatively inexpensive charging plant, and which costs less to operate than the old horse car. His invention is already in use on the Twenty-eighth and Twenty-ninth street crosstown line.

"Another wonderful invention now in use in the Police Headquarters and other places, is the dictograph, a machine which records all the conversation which takes place in a room and reproduces its faithfully elsewhere.

"A microphone attachment to the telephone, invented by Dr. Tardieu, of Arles, France, which by means of drums raises the voice two and one-half octaves, has been tested and has conveyed

the human voice 1,825 miles over the ordinary telephone wires.

MAKING THE OPPORTUNITY.

A Valuable Business Lesson to Be Found in Method of Successful German Knife Grinder—Always on Hand at the Right Time.

This is the story of the blackboard and a piece of chalk—and their part in the upbuilding of a business. "Knives Ground Here," was the sign over a ramshackle shop in a small tobacco town in Kentucky, and in this mean little shop was hung the blackboard. The proprietor, a German, knew nothing of business science. His bookkeeping was of the most primitive character—single entry in a partly used copy-book which a child in school had outgrown. He had never heard of the card index, had this German. But he was not lacking in initiative, and somehow, perhaps intuitively, he had devised a crude method of accelerating trade.

His vocation was the grinding, repairing and making of knives used by the tobacco manufacturers of the locality, says a writer in *System*. With a piece of chalk he wrote the names of his regular customers on the blackboard and opposite the dates when their knives were last sharpened. At just the right time he would send his wagon to each customer and collect the cutlery for grinding and repairing. He expended no unnecessary energy of man or beast, and yet he did not neglect any opportunities. Indeed, he made his opportunities, largely. For this German kept another record—an up-to-date report on the condition of every knife in use by his customers. Before any of these knives had worn out, he made new sets

The Talking Machine World

Vol. 7. No. 2.

New York, February 15, 1911.

Price Ten Cents

ARE DEALERS DEVELOPING TRADE PROPERLY?

An Analysis of the Situation in New York Demonstrates That a Great Number of Them Are Not Taking Full Advantage of Their Opportunities for Developing Trade in the Greatest Market of the World—This Statement Based Upon Practical Experience—Only Few Talking Machine Dealers Alive to the Necessity of Attractive Stores, Recitals and Advertising.

In any line of business, whether it be the selling of shoe-strings or the selling of locomotives, the main factor in ensuring success is the manner in which the seller can win the confidence of the public, and impress them with the fact that he is in a regular business and has the faith in the undertaking to stick to it.

How does that doctrine apply to the talking machine trade in the large cities, for instance in New York?

Take a score of dealers at random, who are located off Fifth avenue, and out of that number it is safe to say there are five who are taking full advantage of their opportunities for making and keeping their stores attractive.

The small confectioner or stationer, the butcher, the baker, the haberdasher and even the saloon keeper all realize the fact that the general appearance of their stores must be attractive if they are to win and hold trade, but the talking machine man in all too many instances feels that a few cheap signs over the door and a few dust-covered machines and records in the window, on rickety counters, or on shelves is all he need offer to capture the business.

The writer was greatly impressed by an experience of his in a talking machine store on the upper west side recently. He had passed along the street in which the store is located every day for perhaps three or four months before he was aware of the fact that a talking machine store was in the vicinity at all.

Close study of the exterior of the store and of the section of the interior visible from the street failed to offer any proof of great business ability of the owners and the writer thereupon took the opportunity of following a couple of casual customers into the store that he might get a line on the business methods of the concern.

One of the customers wanted a machine, and the excitement was intense. A \$17.50 model was taken down from the shelf, dusted off and started playing one of the more popular records of the day. The lady wanted something better and practically had to insist in seeing and hearing one of the more expensive styles selling at \$50.00. The effort of taking the machine from the window, removing two or three ounces of dirt and coaxing the mechanism, that had so long been idle, to work, actually seemed to pain the salesman, who in this instance happened to be a member of the company.

The lady seemed pleased with the machine, but discovered that it was badly scratched and appeared shopworn generally. There was no duplicate in stock and the dealer stated that it would be a week at least before he could get a new machine from the jobber.

The whole affair, including the lack of enthusiasm of the salesman finally got on the nerves of the customer, even though she was of the easily suited kind, and she left without buying or leaving an order for the machine.

Had that dealer been half awake and catered to the better class of trade, as urged by the factories and the successful members of the trade at large, he would have had several of that particular style of machine in stock, or, if he had sold out the balance suddenly would have seen to it that the remaining one was in salable condition. Admitting, however, that accidents will happen and that the machine was out of order, how many hours would it have taken for him to have ordered a duplicate from his jobber, located downtown as it happened, sent a messenger for it and delivered it to the customer's house? A little expense and trouble at this time would have meant the gaining of a customer.

The second customer brought in a list of seven

grand opera records, records that have proven popular since they were first introduced and which are considered in the light of staples by the wise ones. By accident more than intention two of the records were found in stock, though one of them looked as though it had been massaged with a hammer and sounded a great deal like it when played. The customer left with the two records and one other which she had picked at random from the catalog. Three records sold where at least six should have been disposed of without any trouble, and where half way decent salesmanship, coupled with a fair stock, would have meant the sale of a dozen or more; the woman was interested and had the money.

The writer took a chance on asking for a Tetravini record, feeling sure it wasn't in stock. He wasn't disappointed and consequently had a good excuse for walking out.

Sounds like the dream of a rarebit fiend, doesn't it?

And yet it all really happened in Little Old New York, the metropolis of the New World, among the men who claim that to live five miles away from Broadway and Forty-second street is simply camping out.

This particular type of dealer, we believe and know, is decidedly in the minority, but there are too many others who are close to the same stamp in the larger cities, not men who handle talking machines as a side line, and who consider a sale in that line as just so much velvet, but men who are supposed to devote all their attention to that business and depend for their living upon the profits it gives them.

If the dealer is disgusted with the business, why not get out of it altogether? If he is in the boat of business let him row or sit still, be a worker or a passenger; it's the fellow who leaves his oar in the water idle in order to complain who hinders progress. If one is only the "smell" in the game of automobile, it's a credit if he can be a good "smell."

It has been proven that recognized business methods are as necessary in the talking machine business as in any other line of retailing. A representative stock must be carried in the first instance and must be displayed and handled in the proper manner with a regard for general appearances and the convenience and accommodation of the customer. There is no real honest business from which one can gather profits without making a proportionate investment. A minimum amount of stock naturally means a minimum profit.

To carry a representative stock does not necessarily mean a large amount of money tied up in dead goods, it simply means that the live dealer drawing upon his knowledge of the business and the conditions which are to be met (and he should possess this knowledge if he is to succeed), must carry a stock which will be most likely to meet ordinary demands.

Customers who get the proper service in ordinary matters are willing to show forbearance when they desire some special machine or record and allow the dealer time to procure it for them from the manufacturer or jobber.

Being prepared at all times is a mighty big factor in any business, and what if a hundred dollars or so is tied up in stock for which there is little or no demand, if the business as a result of the preparedness which that stock proves shows a substantial increase during the year? The writer knows of one of the prominent druggists of the city who between his two stores destroys from \$5,000 to \$10,000 of drugs each year, drugs which must be renewed frequently to ensure their quality and

which, though expensive and little called for, must be carried in order to maintain the reputation of the stores for keeping everything in the line of drugs. The policy that has meant the keeping of this dead stock and the consequent loss each year has been the means of building up an immense business, wherein the value of the goods destroyed is only an insignificant item. So much for being prepared.

Another thing is advertising. Take any of the big New York papers and hunt for talking machine advertisements. Once each week or maybe twice, the big manufacturers take a liberal space for the general exploitation of their lines, and they have suggested that the local dealers profit by the big announcements by having their own cards inserted in the same issue of the papers so that the public may learn where the goods may be obtained in their own vicinity.

With this opportunity of making their inch or two card have the effect of a half page ad. perhaps three dealers take advantage of it. What about the rest?

The Sunday papers when delivered in the residential sections contain many advertisements of concerns in the neighborhood who do not feel that they can endeavor to reach all the readers in the city at heavy cost, but who through a little "money talk" with the newsdealer prevail upon him to slip a generous sized advertising sheet in each of his papers. The cost of the printing is insignificant, as is the newsdealer's tip, and the results are direct. We see small department stores, laundries, liquor stores and cigar stores advertised in this manner, but never a talking machine store.

What's the matter with the talking machine dealer?

We hear of dealers who get together and talk about the bad features of the business—how their records pile up and the difficulties met with in cleaning up dead stock—the mistakes made by the manufacturers and jobbers, etc. It's a good thing to get together and discuss these things. Admitted that the manufacturers and jobbers are not always right. They're only human. Grant there are bad features in the trade—there are in all lines of business. But why dwell upon the subject continually?

A grouch is a bad partner in business. Make it a silent partner during business hours and exercise it at odd times if you must. When the dealer is doing all he can to get more business and keep what he already has, studying the talking machine business as a business and acting accordingly, then he'll be too busy to spare time to kick.

TALKING MACHINE EXPORTS.

The Figures for October Presented—Reports Show Strong Gain in All Departments of the Industry—Some Interesting Figures.

(Special to the Talking Machine World.)

Washington, D. C., Feb. 3, 1911.

In the summary of exports and imports of the commerce of the United States for the month of October (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies appear:

The total exports of talking machines, records and supplies for December, 1910, amounted to \$254,058, as compared with \$210,629 for the same month of the previous year. The twelve months' exportations of talking machines, records and supplies amounted to \$2,709,959, as against \$1,195,828 for the same period in 1909.

He who lifts his life successfully into his work must be a good business carpenter and joiner. His thought-tools must be sharp and to the point, and his tool-chest contain all modern thought-tools. His brain must be filled with constructive ideas. Then he who buys will be attracted to him who sells.

TRADE IN SOUTHERN CALIFORNIA.

The Busiest Holiday Season Ever Experienced by Talking Machine Men—High Priced Machines and Records of All Makes Have the Call—Working for Exposition—Prominent Record Artists on the Coast—Talking Machines for Los Angeles Schools.

(Special to The Talking Machine World.)

Los Angeles, Cal., Jan. 30, 1911.

Southern California has just passed the busiest holiday season yet experienced in these parts. The talking machine trade shows a great increase over all preceding times, and all dealers, notwithstanding the many newly established, have had far greater returns than were contemplated.

The popular demand was most entirely for high-priced goods, such as Victrolas, Amberolas and Grafonolas. This point seems to mark the passing of the horn machines, which are losing popularity very rapidly. The question of price seems a later consideration, for since the proposition of installment plan selling has become so well known there seems to be little demand for low-priced machines. Several of the larger dealers are conducting the talking machine business on the same principle as is applied to the piano trade, which shows very plainly that more dignity and interest is added to the line.

Sherman, Clay & Co. have had a great demand for the new Victrolas, which played an important part in the holiday trade. Edison Amberolas were shipped in large numbers from the Southern California Music Co.; the new Triumph, with Music Master horn equipment, also showed great popularity. The \$50 Favorite Grafonolas, although too late to arrive for the holiday trade, were an attraction to the Columbia dealers.

The proposition of an exposition for the celebration of the completion of the Panama Canal in 1915 is keeping most of California busy trying to pull it to the coast. San Francisco and San Diego are both working like Trojans, while Los Angeles is working like a beaver. Only a few days remain before Congress will decide on either New Orleans or San Francisco. Our northern sister has sent out great quantities of well-written literature, which set forth her many advantages, and spent much time and money in efforts to bring about co-operation on the part of all western cities. The music trade in general is deeply interested.

(Since this was written Congress has favored San Francisco in the exposition matter.)

Several famous record-making artists have appeared in concert in Los Angeles and Southern California towns during the last season, among whom are Sig. Antonio Scotti, Liza Lehmann, Jaroslav Kocian, Emilio de Gogorza, Mme. Germaine Réache and Mme. Luisa Tetrizzini. Their records have been in demand. Sig. de Gogorza made an extended visit, spending several days at the aviation field during the recent meet.

The School Board of Los Angeles have adopted plans to install talking machines in the public schools for educational purposes. Miss Katherine Stone, who is in charge of music in schools, is a hearty enthusiast and has given the proposition her earnest support. Several months ago a Victrola and a splendid collection of records were presented to the Covina High School by F. S. Allen, the architect who designed and built the new building. Several other rural districts have been using the talking machine for educational purposes and great success has resulted. A Victrola is used in the music department of the new Polytechnic High School in this city.

A very important trade item is the removal of the Geo. J. Birkel Music Co. to their new building on Broadway, which is expected to take place within a few days. The new store will be, when complete, one of the finest in the West, having been very carefully planned. Many setbacks have been encountered in the completion of the building, which was to have been ready for occupancy early last November. The Birkel Co. had a holiday business unrivaled by any previous season.

The Wiley B. Allen Co. report their best holiday season, and find, as do most of the dealers, a popular demand for high-priced goods.

The Fitzgerald Music Co. are very much satisfied with the splendid holiday trade experienced. A great many Grafonolas were reported sold.

Irving Andrews, of Andrews & Son, wears a satisfied smile and says he is selling all the Tetrizzini records he can get hold of.

Los Angeles jobbers are having a hard fight for trade in the San Joaquin valley. A recent decision of the State Railroad Commission granted Los Angeles and San Francisco equal freight rates. This decision has been appealed by the northern jobbers, and a hearing will be given late in March. Steps are being taken to have Los Angeles adequately represented at the next hearing and to have the equal rates put in force immediately. The San Joaquin valley is one of the best fields in the State, is growing rapidly, and has many small towns. The new oil fields are situated in this section. The trade in general from these parts is worth \$15,000,000 to Los Angeles.

Mr. Pfafe, of the Angelus Talking Machine Co., was the busy man delivering Amberolas during Christmas week. Many splendid sales were made by the J. B. Brown Music Co., including Victrolas and table Grafonolas.

The Barker Bros. Furniture Co. was recently added to the list of Columbia dealers. They will handle a complete line of disc goods.

Hamberger's Department Store have discontinued their talking machine department.

The Los Angeles Music Co. is the name of a new concern located at Eighth and Hill streets. They are exclusive Victor dealers.

The Kennedy Talking Machine Co., on West Fourth street, have had a splendid Edison business.

There is much activity in the business phonograph trade at present, as several large deals are in view. W. W. Quantrell, of the Edison Business Phonograph Co., is in this city in the interest of his concern.

Mr. Volz, of the National Phonograph Co., is traveling in Southern California. His reports of trade conditions are very good.

W. J. Stidham, of the Columbia Phonograph Co. local wholesale branch, is now visiting the factory at Bridgeport. Mr. Farquason is in charge of affairs during his absence.

Mr. Purser, proprietor of the Brown Music Co.'s talking machine department, is one of the last year's debutantes who has done a surprising holiday business.

W. J. Reynard, of the Southern California Music Co., is making a very successful journey among the country dealers. Mr. Reynard is an Amberola

specialist and well deserves the name, after his splendid success with that instrument.

R. B. Johnstone, of Yuma, Arizona, is in this city investigating various lines of talkers. He expects soon to install a full catalog in his furniture store.

TO MAKE RECORDS AND MACHINES.

The Sapphire Record and Talking Machine Co. to Come Into the Market with a New Line—D. Tauber Becomes General Manager.

D. Tauber, who recently resigned as manager of and buyer for the talking machine department of R. H. Macy & Co., the well known department store of New York, has taken the general managership of the Sapphire Record & Talking Machine Co., of this city. The latter concern are getting ready to come into the market with a vertical cut disc record and machines and other supplies. Their laboratory, just established, is in charge of Fred. W. Matthews, formerly of the Indestructible Record Co.

OPPORTUNITY NOT A KNOCKER.

Has to Be Trailed and Run Down, as is the Case with Any Game Worth the Hunting.

The man who waits for Opportunity to come knocking at his door will wake up some morning, discover that he has outlived his usefulness and grown gray doing it. He will discover that he has made nothing of himself and that the other fellows who started in life with him at the same time and who were not misled with the old libel about Opportunity being a knocker are flying around in the air ships and getting their pictures on the front page of the afternoon papers.

The man who wants success in any line to-day is the one who rolls up his sleeves, starts out with a club, a gun, a steel trap or whatever is most likely to catch the game, and himself lays in wait for Opportunity. He will be following Opportunity every minute he has. He will be striving and working, pushing and hustling. Sometimes he may lose sight of the game, but he will keep on and on.

When a man goes hunting in the woods, he tramps where game ought to be until he finds tracks. Then he follows the tracks. Maybe he gets a glimpse at the game occasionally, but he keeps on and on. Probably not more than once or twice in a while will he see what he seeks, but finally he comes upon it in the open and it is his. Just so with Opportunity.

“Grand Opera” pays Victor dealers

The Victor has been a tremendous force in creating the popular demand for grand opera.

It has made grand opera a permanent institution in every city, town and village in every part of the land.

It has created in the hearts of the people a greater love for music and educated them to a proper appreciation of the world's best music—especially grand opera.

Victor dealers everywhere are pushing “grand opera” and selling an ever increasing number of Victor Red Seal Records.

Are you getting your share of the rich profits by satisfying this great and growing demand for Victor Red Seal Records in your locality?

The Columbia Demonstration Double-Disc Record is the answer to every "show me"; as a 10-cent investment for every possible record customer it is a sure "lead" to increased record sales and new customers.

Columbia Phonograph Co., Genl., Tribune Building, New York

ABOUT THAT FOREIGN CATALOG.

And a Few Other Things of Interest to the Talker Fraternity.

I found my old friend, the jobber, perusing the pages of a trade publication as I entered his sanctum, and motioning me to a seat, with a suggestive nod toward the cigar box, he remarked:

"Mighty glad to see you; you're just in time for the lecture."

"Pleased to hear it," I replied heartily; "I adore lectures."

"All right, son, unlimber your note book, for this is sure going to be a pippin."

When I was ready for the fray with fountain pen poised and cigar lighted, he began:

"I've just been looking at 'A Page of Good Resolutions With Which to Start the New Year,' on the cover of The Edison Phonograph Monthly, and there is one bit of logic there that reads like this: 'I shall explore the possibilities of the foreign catalogues.'"

"Take it from me, son, that's a mighty good thing to do. I know, for I've always done it, and the results were extremely satisfactory. The average dealer does not think it worth his while to burden his shelves with a lot of unsalable stock, as he terms foreign records, and consequently refuses to consider them to any extent. Right here is where he makes the one big mistake of his life, for this reason: A patron comes into his store and congratulates him upon the one or two beautiful harp solos in the domestic catalogue, and expresses the wish that there were more of them. Does the dealer open his foreign list to Mexican records, and explain how easily his customer may obtain as many harp solos as he desires? Does he? No! Emphatically no! He may not know there are any, but if he does, he will not go to the trouble to investigate, and thereby loses a sale.

"Occasionally the manufacturers list a foreign record in their domestic catalogue as bait, and the public would bite all right if the dealer would only do his part, but in nine cases out of ten he falls down on the proposition.

"The foreign lists abound with records of the harp, 'cello, mandolin, guitar, saxophone, etc., which are rare in the domestic catalogues, and if all dealers would do as I have done and push foreign records vigorously, they would not only gratify the wishes of their best customers, but add greatly to their profits as well.

"The poor foreigner who cannot afford the high priced operatic selections, is forced to be content with records of his native songs in a cheaper setting, and if the dealer would only create a demand for them by judicious advertising and keep them in stock in sufficient quantity and variety to interest this class of trade, he would gain by so doing.

"When I desire to boost a certain class of foreign records I get up an attractive poster emphasizing their value. For instance, if I'm booming the music of our friends across the Rio Grande I use something like this:"

He laid before me a drawing showing Uncle Sam and Mexico clasping hands above a talking

machine, while over them, with folds intertwined, hung their respective flags.

"You see," he explained, tapping the sketch with his finger by way of emphasis, "it conveys to the talking machine trade the correct idea that we are on a footing of sincere friendship with these warm-blooded neighbors of ours, and that their music is appreciated here, as ours is with them. How cordially Mexican musical organizations are received in this country was proved by the great ovation tendered the Banda de Policia when it toured the United States a few years ago.

"Yes, son, you take it from me, foreign records are a mighty good proposition, and the dealer who neglects this part of his business is in wrong, and the sooner he realizes it the better.

"Another thing to stimulate trade, if the manufacturers could be induced to try it, would be to

make accompaniment records. I believe one concern has done a little along this line, but not enough to amount to anything.

"I have just read with much interest the article in the January Talking Machine World relative to accompanying songs on the talking machine with the player piano, but it would seem to me that the subject of accompaniment records is even more worthy of serious consideration.

"In the home where there is no piano, think of the satisfaction to be experienced by being able to furnish a charming orchestral accompaniment to a song. How often is an evening's enjoyment marred by the absence of a musical instrument, or, if there be an instrument at hand, by no performer being present to accompany the vocalist, who does not feel competent to sing alone? I have been in attendance upon many such occasions where there were several singers available who would have been only too glad to exercise their vocal talents but were forced to remain silent because of the lack

of a piano or other accompanying instrument, or in other cases for the lack of a musician. Talking machine concerts are interesting and entertaining, it is true, but would it not prove a welcome diversion to occasionally change from the "canned" (apologies to John Philip Sousa) to the real, especially when it could be enjoyed with all the harmonious background made possible by the music of a full orchestra at the singer's command?

"The average vocalist's repertoire includes such songs as "The Rosary," "Last Night," "Ashore," etc., and with a few accompaniment records of songs of this class on hand the owner of a talking machine could add to the enjoyment of his entertainments very materially.

"This is just a hint, son, but 'a word to the wise is sufficient,' so goes the old saying. Let us hope it may prove so in this case.

"There is just one more subject I want to take up with you before you go, and that is in regard to hornless machines.

"Do you know, son, that they are the one best bet?"

"I've just heard you say so," I replied, smiling, "and as usual I'm going to take your word for it."

"That's right, son, you're on."

The jobber selected a fat Marcello, bit off the end meditatively and after lighting it to his satisfaction, resumed:

"It doesn't matter whether your customer is De Swell or plain John Smith, sell him an —ola. He'll never regret it, for his ears will be tickled with a little more real melody than the horn talkers can furnish, and then for decorative purposes, the —olas are sure some show.

"Of course there are people who can't afford even \$50 for a 'hornless,' but they're rare. I proved that during the holidays when I sold more —olas than any machine in stock. When a man comes in here, be he retailer or consumer, I talk —ola first, and if I can't land him that high on the band wagon I gracefully descend to his level, of course, but the hornless machine is the big noise in the talker world at present, and I keep that noise booming in every way possible.

"Did you notice that poster in the window when you came in?"

"Well, that's part of the noise. The —ola Girl is very popular just now. I'm sending post cards of her to all my prospective and actual customers; I'm putting here in the columns of our local newspaper, The Blanktown Herald, while the bill boards all over town are being decorated with lithographs of her charming figure, and she reciprocates by selling —olas for me."

"Well, I guess that's about all, son, so long."

Thanking my informant for his courteous interview I closed my note book and modestly withdrew.

HOWARD TAYLOR MIDDLETON.

The little things of life count. It is the scheme of creation. The brain is made up of the tiniest cells and all other matter is composed of atoms. A little point effectively made will often make a sale. David slew Goliath with a stone, but he knew how to throw the stone.

THE STORE FRONT AS A BUSINESS ASSET

An Entirely Different Proposition from the Window Display—How the Store-Front Alone May Be Made the Means of Attracting Public Attention—Arranging the Entrance to the Best Possible Advantage An Important Factor—Some Suggestions Well Worth Considering by Talking Machine Men Who Wish to Be Progressive.

While the store front is entirely a different proposition from the window display, yet the two things are intimately connected, and may be said to go together; the combination forming what may be called the store display.

The same store front is not equally adapted for all businesses, nor even for all businesses in the same line. The brilliant front of the millinery store on the chief thoroughfare, where popular goods are sold at popular prices, would only drive custom away from the select store on the quiet side street, where Parisian importations are sold at figures that would make the ordinary customer gasp. The same principle applies elsewhere—in respect to furs, jewelry and, in some sense, sporting goods, though in a lesser degree. The fact is, the very rich, millionaires and so forth, do not care to rub shoulders with other people—or, perhaps, a better way to put the point would be to say that, the goods these are after are not such as other people can afford to pay for. As a general proposition, it may be said that the more select the business and the more limited the class it appeals to, the less important the question of the store front becomes; indeed, some of these concerns, being almost exclusively confined to known and regular customers, personally introduced, are not housed in the stores at all, but in offices and even in private buildings.

This development—or perhaps it would be more accurate to call it this lack of development—does not concern or interest the average dealer, and if recalled here it is only to get at a real comprehension of the matter. For there is only one way of understanding a thing, and that is to know it thoroughly. In order to answer a question aright, we must consider the whys and the wherefores.

The store front may be said to stand at the beginning of the window display, which, indeed, it, in a fashion, determines, says the Sporting Goods Dealer. Hence arise various questions. Should the store front have the entrance in the center with a window on either side; or would it be better to have the door on one side, leaving the balance of the frontage for a window of extra size? Again, certain windows have a relatively short front parallel with the sidewalk, and a long raking side leading directly to the door. Is this a good arrangement, and what are the arguments for and against? Let us look at the matter in further detail.

The object of the store front, like that of the show window, is to display, and that show front is clearly the best which performs this purpose most thoroughly. Putting aside, as not germane to the issue, those businesses which by reason of their wide reputation, or any other cause, are not fairly available for purposes of comparison, let us limit the inquiry to the stores that make their appeal to the general public that circulate through the streets.

As an essential preliminary, we must know the width of the store front before we can attempt to answer the question whether the entrance should be in the center or at the side. If the frontage be but 25 feet, which is the width of the average building lot in most of our big cities, then manifestly there is no great room for a good entrance in the center, with a display window of any pretensions on both sides of it. By a good entrance we mean a doorway that is not only of fair dimensions in itself, but which is approached in a way that announces its purpose, and this can only be effected by giving a return rake, or interior slope, to the display windows themselves. A narrow, square entrance does not announce itself. It is little more than a recess, and is apt to be overlooked. When detected, it has a somewhat mean and furtive appearance about it, like the approach to a pawnbroker's shop. But, be it noted, this defect is greatly modified if the show windows are of but small depth themselves, for this brings the door

forward, and in some sense makes it part of the direct frontage.

For the reasons here given it would appear that for the store with a limited frontage the better plan is to have the entrance on one side. Where the width is ample, the advantage would be always with the central entrance. It should, however, be remembered that the interior arrangement of the store should have something to say in determining the point. For some stores two counters are better than one, and for others the contrary. A thing is never seen correctly unless it is taken in as a whole; this applies as much to the store front as to other matters.

One other objection to the central entrance to the store of narrow width remains to be mentioned. The window on either side of the doorway is too small to fulfil its purpose effectively, if anything remarkable or varied is required; and if the display is divided between the two windows in a way that allows a certain amount of overlapping, a customer who desires to examine the whole has to cross, and maybe recross, the entrance. In this way he is apt, or at least fears that he is, to draw attention to himself from the inside of the store in a manner that he does not desire. The one big window, beyond its other claims to consideration, avoids this objection; for under this arrangement the sightseer can shift its position at leisure and in a way as to take in all that is presented.

The above is the general rule as applied to the average store that desires to make its display as big and effective as possible. But to this, as to all generalizations, there are numerous exceptions. There are quite a number of businesses that do not aim at making a popular impression. These busi-

nesses are what are known as select. They are inclined to specialize, and the goods they place in their windows are few, but choice. In stores of this kind the double front may present some features of special value; then their owners do not particularly care for imposing entrances and deep windows. There are many highly profitable businesses of this character, especially in the more settled and older communities.

As to that curious arrangement of glass, occasionally to be met with, that presents a minimum of direct frontage to the street, and glides off at a long angle toward the door, there is little that can be said in its favor. Possibly the man who hit upon this tenuous contrivance expected to find customers drop into the store, gradually and by degrees, but surely, led on by the sliding display to the fate reserved for them. If so, it is doubtful if he figured out human nature aright. "Come into my parlor said the spider to the fly" is not the sort of music that the average purchaser takes kindly to, and when it is presented to him he is more apt to hurry on than to linger.

DON'T STAND IDLE.

Don't stand idle in the lonesome land;
Hop on the wagon with the biggest band!
Don't stand idle till the fast train goes;
Have your ticket when the whistle blows!
And still be ready to show your hand
When it's "All aboard for the Promised Land!"

BEING ACCOMMODATING.

It pays to be accommodating, but there must be a line drawn somewhere in every store. Remember that the more you do for your customers, the more it costs you to make sales. And also remember when you are selling goods that the more quickly you can deliver the goods after getting the money, the better satisfied the customer will be. In fact, it pays to study the interests of your customers at all times.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

Your Customers Know

that the greatest inventor of the age has spent much of his life in perfecting the greatest instrument of its kind—the Edison Phonograph.

They know that this instrument is capable of reproducing every character of entertainment with an exactness that preserves all the lifelike tone of the original, not only on the regular Edison Standard Records, but on the long playing (4 minute) Amberol Records as well—

That the remarkable Edison tone quality is produced by the rounded button shaped Sapphire reproducing point—

That this Sapphire reproducing point never needs replacing, nor does it wear out or scratch the records.

And they know that the instrument on which they can make records at home is the Edison Phonograph.

**National Phonograph
Company**

The EDISON PHONOGRAPH

Knowing that the Edison offers so much more than any other sound reproducing instrument *can* offer, will your prospective customers accept an instrument that gives them less?

Everybody knows the Edison, everybody wants it—and every Edison dealer can rake in his share of a lifesized profit if he just goes the way of least resistance and pushes the Edison line.

NEW YORK, FEBRUARY 15, 1911.

NEW or ill-informed talking machine dealers, and even jobbers are wont to question the utility of the agreement exacted by the manufacturing companies owning basic inventions and process patents; in fact, a large percentage do not thoroughly understand the price agreement. Many look upon it as being somewhat dictatorial or as a scheme of the strong manufacturer to coerce the dealer into doing something for the sole gain of the former.

This feeling has now almost disappeared and the reputable dealer now sees the price agreement in an entirely different light and knows by practical demonstration that it is an instrument designed primarily for the good of the dealer, and that he is the greater gainer by its protection.

As a matter of fact the manufacturer gets comparatively little benefit, except in so far as it prevents the wholesale cutting of prices which ultimately would destroy the reputation of his product that would otherwise be maintained.

WHERE is there a person who doubts that a manufacturer now selling his wares under price agreement principles could sell more goods (and get just as much for them wholesale) if he should lay aside the price agreement?

And who is the real beneficiary under such a scheme?

It must necessarily be the one who sells the article to the retail customer and gets the fair profit which the price agreement guarantees.

Where there is no price maintaining agreement covering an article, it is most often, if

not always, sold by department stores at a reduction in price that the dealer cannot meet.

History proves that the price agreement has done more good for the legitimate talking machine dealer than anything else that has ever been discovered since price cutting became popular.

Of course, the benefit derived from such a measure depends largely, if not wholly, on its rigid maintenance, and it is the wise dealer who sticks to the manufacturer whose agreement affords him the greatest protection.

IN speaking on the subject of "Business Building" at a meeting of the Sales Managers' Association of St. Louis recently, Arthur F. Sheldon, founder and head of the School of Salesmanship at Chicago, defined business as the art of securing permanent and profitable patronage. He said: "Advertising as a factor in business building may be likened to the fire under the boilers of business. The man who advertises just a little and then says advertising doesn't pay, may be likened to the man that burned a match under a ten-gallon kettle of water and then swore that fire would not heat water."

These are true words, and in the talking machine industry we find plenty of examples of the fact that it is the constant advertiser who gets the business.

Constant advertising gives to a concern the reputation of stability.

It is necessary these days to have the confidence of the public in order to get its support. The public knows that advertising costs money. It can reason that if a firm has money to keep its advertising always going, it is a reliable concern.

Having created this impression among the readers, the advertisement has performed a service that no other agency could have done so well, and at so small a cost, to say nothing of the direct benefit due to actual orders obtained from the advertising.

Having created this impression in the minds of the readers, the latter are ready to buy, which is the objective point towards which all advertising is aimed.

IN this industry, not only dealers, but many jobbers are too largely indifferent to the importance of advertising. They somehow fail to realize that the great work accomplished by manufacturers of talking machines has been helped and maintained largely by judicious publicity.

The progress of the talking machine and the development toward perfection of the record, have been brought to public attention through well considered publicity and in this way the general character of the business has been advanced. Yet while all acknowledge what manufacturers have done in this respect, there is a most extraordinary indifference on the part of dealers to utilizing local papers in bringing the merits of their wares to the attention of the buying public.

We have preached sermon after sermon on the necessity of the dealer, and jobber for that matter, acquainting the local trade with the goods they carry, and why they

should be in the home of every person loving music—of everyone who desires to keep in touch with the great artists of the world—still the percentage of dealers who really are alive to the advertising proposition is comparatively small.

It is really unfair to expect that the manufacturers should do all the work in this matter of publicity.

How much more effective would it be were they aided in an enthusiastic and sincere manner by the dealers?

IT is a matter of comment that the men in the talking machine trade who are moving ahead—who are winning new records in the volume of their business—who are increasing their list of customers—are the men who believe in and practise advertising.

Of course, a chapter might be written in itself as to how the dealer may secure the best effects from publicity. This is not difficult, however, for if he does nothing else he should invite the public to visit his establishment weekly and enjoy recitals of "the latest records" on "the new style machines" to hand from the manufacturers.

As a matter of fact there are few businesses where there are such opportunities for putting forth interesting advertising as in this industry of ours. All that is needed is a little initiative, and we promise that the results will be satisfactory.

It is a well-known fact that it is the satisfied customers that make business and every plan along these lines is sure to help. Whenever a person finds that a dealer has an ample stock of machines and records on hand and a proper way of showing them, that person may be counted on as a supporter and a friend. There is no better way to get the customers to the store than by recitals.

TRADE for the past month has been unusually satisfactory, and manufacturers, jobbers and dealers all report most favorable conditions. The prospects are excellent and it is now up to those interested to secure the results. The pessimist has been relegated to oblivion and the optimist now takes his place on the band wagon.

THE value of window publicity is an old but always a "live" topic. While all the world despises the man who lives for appearances only, while we all are agreed that the habit of judging our fellows merely by appearances is vicious, still we are agreed also that appearances go a long way, and are often an important index to character. If a man persists in coming to business day after day without a tie, and if his waistcoat front is an advertisement of what he ate for breakfast, we come to the conclusion that he is shiftless and untidy.

So it is with your store; you pride yourself on its general appearance of neatness. You have it swept daily, or perhaps twice daily, and you insist that your salesmen have a smart and clean appearance and that they welcome your customers courteously. You want as fine a display of goods as your clientage will permit—all these things are a matter of course.

BUT do you make that last extra effort to attract your customers to your store? Do you make the first impression so inviting that when they turn into your street or glance at your store from across the way they pause and feel a desire to enter; or, if they go on, feel and remember that you have the very finest display in town?

Don't forget the value of first impressions.

As the eye of man is the window through which his character may be read, so, in literal truth, your show front is the window through which the character of your store may be read.

IT takes all kinds of people to make a world, and all kinds of people have all kinds of opinions. There is the old foggy merchant, for instance, who does not believe in the so-called up-to-date methods—up-to-date

store fixings and arrangements. He is afraid that any radical change will drive away the old-established and steady-going trade that the store has been years in building up.

Up-to-date means increased expenses to him; it is just a clever scheme to wheedle some of his cash away. He forgets that the old reliable trade will, in the process of time, if through no other cause, die off, and that unless new trade is continually added the days of his business are surely numbered.

In order to do a successful business, and keep it ever on the path of progress, the confidence of the public must be secured.

NOWADAYS people have little confidence in any business that does not make some pretensions to being up-to-date. They have an idea that the men who run it are themselves behind the times;

that they do not keep posted on styles, fashions and methods.

The appearance of the store has much to do with making a good impression, and an erroneous impression once formed is the hardest thing to overcome.

The bugbear of expense often stands between a man and success. Have you ever seriously considered what expense means?

Stocking a store with goods is an expense, and a pretty big one. Clerk hire is another large item of expense; so are rent, heating, lighting, advertising, etc.

The biggest amounts are usually dignified with the term "investment," the little fellows are simply called "expense," and every merchant cuts the latter as much as possible.

Call them all investments, treat them as such, and you will be more likely to get profitable returns.

TALKING MACHINE AND PLAYER.

An Interesting Contribution from M. A. Clark Showing How He Utilized the Talker and Player in His Educational Concerts.

Syracuse, N. Y., Feb. 4, 1911.

Editor Talking Machine World:

Dear Sir—We were very much interested to read in the last number of your excellent paper an interesting article entitled "Interesting New Field for Talking Machines," and it occurred to us that you would like to know about the work we have been doing along this line for the Board of Education of our city, as a close inspection of the enclosed program will show what has been done along this line.

We find a very simple and satisfactory way of doing this is to throw off the solo lever of the player-piano, thus leaving the accompaniment for the player and the solo or air to be carried by the talking machine. The number indicated on the program was done very artistically this way. The pitch on the talking machine can be very easily adjusted by a turn to the right or left of the transposing key device on the player, and if any cuts are made by the artist on the talking machine, the same cuts can be made on the player by omitting to pump and allowing the motor to run so as to skip the same number of measures, bars or pages done by the soloist. You will also observe another interesting feature, that of using the harp in combination with the talking machine, which was most effective.

M. A. CLARK.

* * *

The program referred to by Mr. Clark is an interesting one, and shows how cleverly the talking machine may be utilized in educational programs, as an exponent of both the singers' and instrumentalists' art, as well as in conjunction with the player-piano.

A striking number in this program along the lines of the article in last month's World was Caruso's record of "Salut Demeure" (Faust), which was accompanied on the player-piano by F. J. Hamilton, and which made a most pleasing impression. There was also featured the Emma Eames record of the Bach-Gounod "Ave Maria," which was accompanied by Mr. Clark on the Irish harp.

The combination of the talking machine and player-piano in the home is destined to be a combination of no small importance from now on, owing to the increasing use and popularity of the two instruments, and we have been in receipt of a number of letters from our subscribers commenting most favorably on the article which appeared in the January World covering this new field.

A man with the big head is generally pretty well posted. That's usually what starts the gilded addition to his cupola.

PROVED A POTENT ENTERTAINER.

At the Annual Dinner of the Chamber of Commerce, in Spokane, Wash., the Columbia Grafonola Regent Was Used and Admired.

(Special to the Talking Machine World.)

Spokane, Wash., Jan. 31, 1911.

There were several hundred business men present at the recent annual banquet of the Chamber of Commerce, held in the Masonic Temple, this city. They were entertained by the Columbia Grafonola Regent, and with the use of the new reproducer the effect was marvelous. The audience was spellbound with the wonderfully clear tones that the instrument produced. This is the first time in the history of Spokane that any talking machine has been used in such a public affair.

Goble, Pratt & Robbins, Spokane's leading furniture store and exclusive agents for the Columbia line, conducted the concert. The concert has led to a number of large sales being made.

Willis S. Storms, manager of the local store of the Columbia Phonograph Co., in discussing business said: "Although January is generally known as a bad month for talking machine business we expect that our sales this month will surpass those of December. We attribute our great success to the new Columbia sound box."

READING FOR STIMULATION.

Care Should Be Taken by the Busy Man to Read Only That Which Will Prove Helpful as Information or Stimulation.

All men should read, but the reading time at a man's disposal is so small that he should be careful to read only those things that will be helpful. A man who wants to get ahead, who wants suggestions, and who is really looking for help can afford to give the time to two or three good magazines, and though there may be nothing in them that can be directly turned to profit, there will be stimulation, which, passed on to others as "ginger," will materially add to success.

A man said the other day in a magazine something to this effect: "Read this magazine for information, and if not for information, then for stimulation." Not only is this recommended, but it is recommended that by reading you become acquainted with the great workers of the age. Read everything you can get hold of concerning the business methods of men like Judge Gary, J. J. Hill, Hugh Chalmers, John Wanamaker and many others. Learn how they work. It will do no harm. It will do good even to the wise men in this and every other industry.

TALKING MACHINE DEALERS and JOBBERS

and dealers in other specialties, who desire to increase their business during the months when trade in most lines is dull, will find in

Regina Pneumatic Cleaners

the new line they have been looking for.

THOUSANDS of vacuum cleaners are being sold daily and the business is increasing by leaps and bounds. The dealer who handles the *right machine* is certain of a constantly increasing business with liberal profits.

REGINA PNEUMATIC CLEANERS are the best sellers because they are the best cleaners. They have *double suction pumps* and should not be confused with cleaners of the ordinary type. Two pumps operating instead of one insure powerful, constant, unremitting suction. Made in our own factory by skilled workmen. Mechanically correct and fully guaranteed. Liberally advertised for the benefit of the trade, and sold at a reasonable price. We have electric and also hand operated models.

Write to us for full particulars. The proposition is an inviting one.

**This is this new
U-S Junior Model.
Its addition makes
the U-S Line more
attractive than ever.
Read about it.**

U-S Junior \$30

U-S Banner \$45

HERE is the new U-S Model you have been waiting for—the U-S Junior, retailing for only \$30, but possessing all the fine workmanship and unique mechanical superiority of the other machines in the great U-S line.

Perhaps the absence of a low-priced machine has caused you to defer taking on the U-S. Don't delay longer, for any dealer who is looking for a high class trade is losing money every day he does business without such a ready seller as our line **has proved itself to be.**

First we set about making the **BEST PHONOGRAPH and RECORD** the world has ever known. In the judgment of all who have tested the U-S in fair competition with all other kinds—we succeeded. We succeeded in bringing forth a perfect duplication of the human voice and all musical instruments—even to the elusive violin. We succeeded in bringing forth a matchless tone and secured freedom from hissing or scratching.

Then we set about to make the **BEST PROPOSITION** that had ever been offered to the **TRADE.** According to the many dealers everywhere who are interested in the U-S line, we have succeeded. We are able, first of all, to offer the greatest percentage of profits. We assure perfect selling co-operation, laying a foundation for ever-increasing sales. More than this, we place no unreasonable restrictions upon our dealers; we make them **one of us.**

The introduction of the Junior Model is only one more evidence of the progressiveness of the U-S organization, and its determination to give U-S dealers what they can sell.

PHONO

U-S Grand \$85

U-S Opera \$65

U-S Peerless \$200

The idea of **COMPLETENESS** also holds in our big line of records. We are sparing no expense to give our dealers all that is best in the music world, with the result that our list of records includes all the up-to-date selections, played and sung by the greatest artists in the land. There are popular airs from the latest comic opera and musical comedy. And there are classics from the masters. This makes the U-S line a quick and ready seller.

Besides, the U-S Records are indestructible. You can bang them and knock them and kick them, but it won't harm them at all. They are made of a substance that is not affected by weather or climate, long usage or accident.

Get in line with the U-S plan, if you have not already done so. It is the most attractive proposition before the trade to-day, from every point of view.

Use the coupon NOW.

WITH THE INDIANAPOLIS TRADE.

First Month of Year Satisfactory to Talking Machine Trade—New Retail Stores Established—Columbia Co. News—Records Most in Demand—Improvements Made in Store—Musical Echo Co. Featuring Caruso Records—Wulschner-Stewart Co. Increases Sales Force—Good Report—Other News Gleanings of Timely Interest to Trade at Large.

(Special to the Talking Machine World.)

Indianapolis, Ind., Feb. 6, 1911.

The talking machine business in Indianapolis and Indiana has been good for the last month, considering the fact that it was the first month of the new year. Taking it all around the jobbing business out over the State showed up better than the retail business in Indianapolis. The month has been remarkable for the number of new retail agencies established out in the State, and dealers report that talking machines are growing in favor in the rural districts.

Thomas Devine, manager of the Columbia Co. store, made a business trip to Terre Haute to visit the branch house. He reported a good business there.

The Columbia Co. store has been having an unusually good run on the "Madame Sherry" records, David Bispham records and Raymond Hitchcock records. In fact, they sold out in all of these. This was largely due to the fact that David Bispham appeared here recently in a play at the Murat Theater for the Indianapolis Boys' Club. The "Madame Sherry" opera was at English's Opera House, as was Raymond Hitchcock. Some of the new Alice Neilsen records ordered by the Columbia Co. were sold out within a few days after they were received.

Marion Dorian, auditor and treasurer of the Columbia Co., recently paid his semi-annual visit to the Indianapolis store.

Extensive improvements have been made in the Columbia Co. store in North Pennsylvania street. At the suggestion of C. P. Herdman, until recently of Cincinnati, and now assistant manager of the Indianapolis store, the rear wall of the front display window was torn out and replaced with a brass railing, and the floor space of the window was greatly enlarged and readorned. It is now arranged so that the display can easily be seen from Washington street, one-half block away.

The Musical Echo Co., who handle Victor machines, have been making a special display of Caruso records, since that famous tenor is to appear in Indianapolis soon under the management of Ona B. Talbott. An imitation peacock with large tail feathers and with the pictures of prominent musicians properly distributed, formed a part of the window of the Echo Co.

W. S. Barringer, manager of the talking machine department of the Wulschner-Stewart Co., is now putting on an enlarged city force in the Indianapolis city territory and will give much attention to the city both in a retail and a jobbing way. It is the plan to establish a number of retail stores. Mr. Barringer says the new year has started off excellently and that the January business was be-

yond the expectations of the company. The Victor trade is large.

C. L. Price, of the Victor Talking Machine Co., who has been assigned to Indiana territory, reports an encouraging business.

W. E. Ludlow, of the Wulschner-Stewart Co., has gone East and planned to visit the Victor factory while he was away.

The Aeolian Co. report that the Victor business has been quiet as compared with the large holiday business, but the start of the new year has been very encouraging at that. The sale on records has been good. The Aeolian Co. are advertising the Caruso records along with the other companies that handle the Victor.

Large crowds were attracted to that part of Massachusetts avenue where the Kipp-Link Co. are located by the sales that were conducted at the beginning of the year by the large Marott department store. The Kipp-Link Co. handle Edisons.

A. M. Stewart, head of the Wulschner-Stewart Music Co., was married last week to Miss Catherine Lee, of Indianapolis. Mr. and Mrs. Stewart went East on a wedding trip, to be away about two weeks.

OH, BE JOYFUL!

Joy Puts the Indian Sign on That Worry and Beats Pepsin for Aiding Digestion.

Away with lines of thought and furrows of care and worry! The best contentment is enjoyed by a loving, cheerful, joyful soul. Joy brings health and strength to its possessor. As a pleasurable emotion, it strengthens the nervous and muscular system and increases the activity of all vital functions. It removes fatigue and quickens all the powers of body and mind.

Joy acts powerfully upon all digestive processes and works a transformation upon the jaundiced dyspeptic. It expands the lungs which have been contracted, as though by the strong grip of a giant hand, through sadness or disappointment. The sigh of melancholy is changed to a song of gladness. With the change comes the deepening and expanding of those vital organs and the oxygenating and enriching of the blood. Thus, if one would be well and keep well, be happy. Laugh, and bid defiance to dyspepsia. Smile, and drink in health with every breath.

GRACE CAMERON AND THE EDISON AMBEROLA.

The accompanying interesting photo was taken recently in the Edison parlor of the Sampson Music Co., of Boise, Idaho, while Miss Cameron, one of the country's most popular vaudeville and musical comedy "stars," and a favorite Edison artist, was playing an engagement of her latest musical comedy success, "Nancy." Which of her several entertaining contributions to the two and four-minute catalogs of the National Phonograph Co., Orange, N. J., Miss Cameron was listening to

at the time the camera clicked the reports do not reveal, but it is very evident from the pleased expression she wears that she is satisfied both with her own effort and the reproduction it received. The enterprise displayed by the Sampson Co. in taking advantage of Miss Cameron's presence in their city to get this clever bit of publicity is as commendable as is the up-to-dateness of both parlor and stock. The atmosphere of the room is unmistakably Edison.

JOHN KAISER, Treasurer
662 Sixth Avenue

New York, February 1st, 1911.

Dear Mr. Dealer:—

You no doubt have heard that the talent of the Talking Machine Business have banded together and arranged to give a Testimonial Performance in New York City, on March 8th, 1911, for the benefit of the family of the late Frank C. Stanley.

Owing to the fact that you are located many miles from New York, you will probably be unable to attend. We feel that you would like to co-operate with us and help swell the fund for this worthy cause. It was suggested that a large souvenir program be arranged for the occasion in which you can place your card for the sum of \$3.00, \$5.00 or \$10.00, according to your liberality.

| | |
|---------------------------------------|---------|
| Full page—8 inches by 11½ inches..... | \$25.00 |
| Space A—4 inches by 5¾ inches..... | 10.00 |
| Space B—2¾ inches by 4 inches..... | 5.00 |
| Space C—2¾ inches by 2 inches..... | 3.00 |

We appeal to you to do your best and we assure you that the committee will gratefully receive your donation. We will ask you to fill out the form at the bottom of this page, mentioning the space you select and enclose your check or money order to John Kaiser, Treasurer, 662 Sixth Avenue, New York, N. Y.

It will be necessary, in order that the printing of the programs may not be delayed that your reply be in the hands of the committee not later than February 25th.

Thanking you in advance for your co-operation, we are,

Yours very truly,

THE COMMITTEE.

TRADE ON THE PACIFIC COAST.

Falling Off in Business After Holidays Causes Retailers to Complain—Dealers Replenish Stocks—Summary of the Situation—Pacific Phonograph Co.'s Anniversary—Improving Their Quarters—New Stores Opened—Babson Bros.' New Store Complete—What Other Houses Are Doing—Strong Demand Noted for Victrolas—Interesting Items of Personal Nature.

(Special to The Talking Machine World.)

San Francisco, Cal., Feb. 6, 1911.

The talking machine business has fallen off materially in all departments since the holidays, and a good many of the city retailers are complaining of dull business. Except for the first week, disagreeable weather has prevailed throughout the month, and it has been difficult to get people to come out for shopping purposes. A dull period is expected at this season, however, and little disappointment is expressed over present conditions. Stock in general is rather scarce, having been pretty well cleaned up before the first of the year, and new shipments in some lines are rather slow in arriving. Most houses, however, are well supplied with records, for which there is probably a greater demand than a year ago.

The wholesale firms received quite a lot of orders early in the month, when retailers found it necessary to fill in their stocks, but now business is coming in slowly. The rain has greatly interfered with outside business, and traveling men find it difficult to get around, owing to numerous floods and damages to railroad tracks. Country retailers feel extremely optimistic, however, as good crops seem to be assured in every section of the Coast, and it is believed that a general buying movement in the trade will start as soon as the winter rains are over. Collections, as a rule, are more satisfactory than last year, though money is still rather scarce.

Walter S. Gray, Coast manager for the Columbia Phonograph Co., will return next week from his annual visit to headquarters. He has been absent the greater part of the month, being accompanied on the trip by the Los Angeles manager, William Stidham.

The Pacific Phonograph Co., under the management of A. R. Pommer, ended its first year January 10. Mr. Pommer is highly gratified at the progress made during the year, this company having gained a strong foothold all over California, as well as in southern Oregon, and says he will be happy if this year turns out as well as 1910. Since the end of the holiday rush the company has been working on some improvements to its quarters, laying a hardwood floor and putting some new fittings in the office. The lower floor, which was added to the space just before the holidays, will be kept, giving the company a much greater capacity for stock than last year, and this floor is now being equipped with improved fixtures for convenience in handling the stock. Mr. McCracken, the outside man, is making the Southern trip, being now at Fresno. Mr. Pommer reports a fair business for this month, the principal sales being of records, though the demand for Music Master

horns is still greater than the company can supply. Mr. Pommer is enthusiastic over the outlook, especially in the southern Oregon country. While this house gives more liberal terms than most other jobbers, Mr. Pommer is well satisfied with collections, and believes the retail trade in general is in a strong position. He reports large orders from the Sacramento store, and is just leaving for a visit to that place.

A few new Edison stores which have placed initial orders with the Pacific Phonograph Co. are John R. Lester & Co., of Sonora, Cal.; the Auburn Music Co., at Auburn, and the Gate City Pharmacy, at Maricopa, in the oil fields.

Mr. Voltz, who covered the territory from San Francisco to Los Angeles and into Arizona and New Mexico last year for the National Phonograph Co., has made arrangements to continue the work in that territory for the present year.

James Black, manager of the talking machine department of the Wiley B. Allen Co., reports a very fair post-holiday season. He reports some difficulty in getting enough Victrolas to supply the local demand, and a lot of these machines have been brought in from branch stores. The company now carries quite a large stock of machines at its various stores. The talking machine department at the Oakland store is now under the management of F. R. Blodgett, and has been doing extremely well for this time of year.

Babson Bros.' new store, in San Francisco, is now complete, with a full stock of Edison goods. For the benefit of the local retail business this house has started a daily talking machine concert, the novel feature of which is that it is held during the noon hour, when large numbers of office people in the vicinity are at leisure. Mr. Babson says this feature has been quite a success, the attendance being generally good, though he finds local sales rather slow at present. This company's mail order business on the Coast, however, is making rapid progress, and so far has amply justified the trouble of opening a branch here.

Andrew G. McCarthy, treasurer of Sherman, Clay & Co., and manager of their small goods department, is now hard at work on the semi-annual inventory. He says that only two shipments of Victrolas have been received since the first of the year, the factory being apparently unable to supply them, and some sales are accordingly lost. Nevertheless, he finds the retail business at the local store far ahead of January last year. He says the new \$75 Victrola has not interfered with the sale of more expensive machines in any way, but its popularity is cutting into the demand for the old horn machines to a considerable extent. The city is now waiting, Mr. McCarthy says, for the decision on the Panama-Pacific Exposition, and if it favors San Francisco he will want ten carloads of Victrolas at once. Mr. McCarthy will leave for his regular winter tour of inspection of the northern branches about February 14, accompanied by P. T. Clay.

Peter Bacigalupi, the pioneer Edison dealer of San Francisco, announces the arrival of a new granddaughter—the daughter of W. B. Ackerman, manager of the business phonograph department. C. H. Pierce, of Eureka, Cal., has made a num-

ber of improvements in his establishment recently, moving his piano repair shop to another building to make room for talking machine parlors.

Harry Shelton, an Oakland talking machine man, formerly associated with Kohler & Chase, was killed January 9 in a collision of a local train with his automobile.

J. J. McBride, formerly with the Thomas Smith Music Co., at Vallejo, Cal., is starting in the business for himself.

Kohler & Chase have been advertising a special sale for the last week, offering a talking machine outfit at \$7.50.

MAX LANDAY ON LONG TRIP.

General Manager of Talking Machine Supply Co. Now on Annual Tour of United States and Canada—To Visit Fifty-six Cities—Will Introduce New Lines of Needles and Other Specialties.

To visit the office of Max Landay, general manager of the Talking Machine Supply Co., New York, and also a member of the house of Landay Bros., Victor distributors, early this month, was to gain the impression that a class in United States geography was in session, owing to the numerous maps of the country over which Mr. Landay was intently poring. Nothing serious, though, Mr. Landay was simply mapping out his annual business trip to the Pacific Coast, incidentally including the greater part of the United States and a big slice of Canada, in such a way as to preserve his reputation for keeping right up to schedule throughout the entire trip.

Mr. Landay left New York on February 4, and his itinerary includes fifty-six of the largest cities in the United States and Canada, where he will call on the leading jobbers for the purpose of introducing several new lines of imported talking machine needles packed in a new and original manner, and which he feels sure will appeal to the trade at large. He will also feature several specialties of value handled by his company and looks forward to some mighty big business.

Early last month the Talking Machine Supply Co. sent out a new catalog listing all their different makes and grades of imported and domestic needles as well as their other well-known specialties in order that the trade might check up their stock and fill in the open spaces. A numerical catalog covering the same line, is now in course of preparation and will be issued at an early date.

MORAL SOUNDNESS THE BASIS.

Upon the moral soundness of business relations largely depends the stability of credit and trade, the material welfare of the people, and in the final result their general moral standards. As are the morals of business, so are the morals of the nation; for the morality which reveals itself at the point of exchange is the working morality of the people. Widespread business immorality means not merely the undermining of prosperity, it means the triumph of injustice, the degradation of national ideas, and the destruction of some of the highest standards in the people's life.

ACTIVE TRADE IN PHILADELPHIA

During First Month of Year—Hard to Get Goods Fast Enough to Fill Demands—Activities of the Various Jobbers—Recent Trade Visitors—Dealer in New Location—Recent Victor Publicity—Busy Times with Columbia Phonograph Co.—H. A. Weymann & Sons to Rearrange Department—Other News of the Month Worth Recording.

(Special to The Talking Machine World.)

Philadelphia, Pa., Feb. 6, 1911.

During the month of January the talking machine business in Philadelphia was as active as during the holidays. There were not as many machines sold, but there was a tremendous business in records. The only complaint the dealers had to make was that they were unable to get the machines fast enough. This business has not alone been confined to the city, but from every quarter of the district good orders have been coming in and there has been a demand for a general line of machines, cabinets and records.

If every line of the trade in musical instruments was as glowing in the outlook as the talking machine trade in Philadelphia it would certainly be a happy situation, for it is the same story wherever you go; business away ahead of last year, the outlook is for a tremendous business from this on, and if we could only get the machines we would be able to do very much more business. At several of the large firms I was shown a large collection of orders for certain styles of talking machines, and with only five or ten machines of the character in stock with which to supply them. The dealers almost hate to see a machine go out these days, for it frequently leaves them minus a sample. It is to be hoped that the manufacturing situation will clear up shortly. It seems a pity now that the dealers have worked up so tremendous an interest in the talking machines that they are not able to get stock sufficient to keep them going.

Louis Buehn & Bro. report that their business was splendid in January, very much better than a year ago. Edmund Buchn says: "We would have had a phenomenal business had we been able to get all the goods we wanted. In Victrolas particularly we are very short, and the demand seems to be just as great as before the holidays."

Edmund Buehn had a new arrival at his house on Tuesday of last week. It was No. 1. A daughter, Miss Marguerite Buehn by name.

The Buehn business on the Edison business phonographs has also been very large in January and the firm are building up quite a heavy trade on these machines, and are giving that line of their business special attention.

Among the recent trade visitors were: T. O. Esibill, of Bridgeton, N. J., and E. C. Linck, of Williamsport, Pa. They report business in their section as being very good.

The Penn Phonograph Co. report that they have had the largest retail business in January of any month that they have had since they have been in the business, and their wholesale business was away ahead of any previous January. "We certainly would not know that Christmas was over the way people are buying machines," said one of the members of the firm. They, too, note the shortage in goods and feel that they would have been able to have done considerably better had they been able to supply all demands.

L. Zeben, the talking machine retailer, has changed his place of business from 704 South Fifth street to 523 South Fourth street, where he has found much more commodious quarters and with larger room for his increased business.

James Bellaks' Sons have removed their talking machine department from their second floor to the first floor, where they have built several very nice hearing rooms. They have had a very good talking machine business, and felt that they were somewhat handicapped by being up stairs.

The Victor Talking Machine Co. have just supplied the trade with a new catalog. They have also distributed among the dealers large framed pictures of eight of the great artists who sing for their company. These pictures are four feet high

and they will be displayed in the windows one at a time. They are sent to the firms at a price less than cost and have been attracting a great deal of interest. The Victor catalog is the handsomest thing of the kind that has ever been published.

Heppe reports that the business in their talking machine department has been good right along, but also complain of not getting goods fast enough. They have no general manager of their department just at present and are looking for a good man. They have orders at present for upwards of twenty-five Victrolas that they are unable to secure, and are thus very much handicapped.

It is rumored that there will be a change in the name of the firm of Sol Bloom, with fine talking machine rooms on Broad street. Mr. Bloom has not been connected with the firm bearing his name for some time, and report says that the firm will hereafter be known as the Talking Machine Co.

The Heppe firm have just received a fine line of cabinets and are expecting another carload in the course of a few days.

George W. Lyle, general manager of the Columbia Phonograph Co., was in Philadelphia at the end of last week. Saturday night was surely Columbia night at the Metropolitan Opera House, when four of the great artists, who sing for that company alone, were heard in the cast, these including Lipkowska and Constantino, Daddi and Aramonde.

The Columbia Co. report that business, has been very fine in January and it was double what it was last year. Frank Dorian, head of the Dictaphone department, was in this city last week. Richard Faulkner, manager of the Philadelphia Dictaphone department, has been away from the office sick. J. P. Scullin, of Atlantic City, has just opened a very fine store which he will devote to the selling of the Columbia exclusively. It is at 33 South Pennsylvania avenue.

The Columbia Co. have been meeting with splendid success with their new \$50 Favorite machine. They are entirely sold out on this style at present, and have a number of orders on hand which cannot be supplied at present.

The company have been having a great many concerts. This month they have concerts scheduled at St. Paul's Church, Fiftieth and Baltimore avenues; the Philadelphia Electric Co.; the Central Baptist Church, Palmyra, N. J.; the Penn Widows' Asylum; the Methodist Episcopal Church; the Poor Richard Club; the Church of the Epiphany, and at various other places still to schedule. The new Columbia records of songs by Alice Nielsen in English have been phenomenal sellers. Manager Henderson was down to Atlantic City several days last week assisting Mr. Scullin in getting his new store started.

H. A. Weymann & Sons start next week to make extensive alterations in their talking machine department. They will rearrange their entire wholesale department. All the racks will be changed and they will introduce the system now used by the New York Talking Machine Co.

The month of January has been a very good one with the Weymann firm. It has been very much of an improvement over last year, and opened up quite a number of new accounts.

PROMOTION FOR GEO. F. SCULL.

George F. Scull, who since May, 1910, has been assistant to General Manager Carl H. Wilson, of the National Phonograph Co., Orange, N. J., has been selected by Mr. Edison to manage his Edison Storage Battery Co., succeeding E. F. Dodge in that position. The plant of the battery company is also located in Orange immediately adjacent to that of the National Co.

NUMERICAL INDESTRUCTIBLE CATALOG.

The Columbia Co. have forwarded their dealers a new Numerical Indestructible catalog, containing all selections up to and including February, 1911, and the Numerical double disc catalog, containing all selections in ten, twelve inch, Symphony and Fonotopia records, up to and including March. These catalogs are intended for the convenience of their dealers in ordering and stocking records.

Something New—Just Out On The Market

The "Velvet Tone" Needle Balance

An attachment for Talking Machines to minimize the wearing out of Disc Records.

Retail Price \$2.00 Net

Either Nickel or Gold Finish

Style V, Full Size Fits Taper Arm Victor Machines, and Victrolas.

"Velvet Tone" Needle Balance

What it is and what it does:—

It balances the Sound Box and overcomes the resistance of the heavy weighted and dragging needle, and prevents the cutting of the record. Consequently, the strain on the motor of the Talking Machine is removed, for without this resistance the spring will run many more records at each winding and wear many years longer.

The "Velvet Tone" Needle Balance is similar to a pair of weighing scales, as it lifts the excess weight of the sound box off the record, thereby permitting only a slight but sufficient pressure of the needle on the sound wave-lines of the record.

This invention is wholly a saving device, and was originated for the purpose of preventing the destruction of records by playing, and eliminating the troublesome necessity of changing the needle every time a record is played.

The harder a tool is pushed against a revolving grindstone the greater the wear of both. This is exactly what occurs when Talking Machine needles are weighted down on the playing records. By eliminating the weight from the needle and allowing it to "float," so to speak, in the grooves of the revolving record, the wear is reduced to the faintest possibility—and as the record surface is harder than the soft steel needle, the little wear will be all with the needle. The slender point of a needle is continuously meeting with new surface on the spiral groove of a revolving record—it is therefore obvious why needle points became quickly worn and dangerously blunted when weighted with a heavy sound box.

Only the diaphragms of Sound Boxes should vibrate in unison with record-sound waves, but all scratching and outside noises produced by the friction of heavy weighted needles against the record walls can be eliminated by use of the "Velvet Tone" Needle Balance.

Remedy

New Records will last almost indefinitely and become practically indestructible, if always played with the "Velvet Tone" Needle Balance Attachment.

TALKING MACHINE SUPPLY COMPANY

400 Fifth Avenue, New York

THE TALKING MACHINE TRADE IN JAPAN.

Some Interesting Statistics Covering the Business in the Flowery Kingdom—Comments on the Developments and Difficulties of Local Enterprises—The Conditions to Be Faced in Retailing in Japan—Will Be Found Timely Reading for World Readers.

(Special to the Talking Machine World.)

Yokohama, Japan, Jan. 1, 1911.

Some time ago an export journal estimated that the world is spending about \$50,000,000 yearly on talking machines and accessories, and as the little island empire of Japan has taken such a prominent position in naval and military expenditures during the last few years it is interesting to note the comparison between what her people spend on luxuries and amusement against what they consider a necessity for the defense of their country. During the four years from 1905 to 1909 the yearly importation, as per customs returns, of talking machines and records amounted to approximately 60,000 records and 1,000 machines, or expressed in gold, about \$50,000; exceeding this amount in 1907 during the great boom after the war with Russia, and settling down to below this figure in 1908 and 1909. This amount for 50,000,000 people, it will be seen, is exceedingly small compared to large quantities sold in America, where the population is double.

That talking machines are considered a luxury in Japan is readily seen by the fact that they are so classified in the customs tariff, and have a 50 per cent. duty imposed thereon. With this excessive duty, and also the fact that nearly all of the imports referred to above was handled by one firm, the Sankodo Co., the prices paid by the Japanese were excessive. This firm had their head office in Tokio, with three branches, one in Osaka, one in Kyushiu, and one in Hokkaido.

Early in 1909, however, these people became involved in a lawsuit with a claim of 207,000 yen for unpaid accounts, and judgment being given against them, they were practically forced out of business, retaining only one of their stores. At the same time, an enterprising American started a

manufacturing company for the purpose of manufacturing talking machines and records in Japan. The plant was erected at a cost of \$125,000 and commenced turning out records in the latter half of 1909 and machines in the early part of 1910. The retail price was reduced to 25 yen (\$12.50) for a machine and to 1 yen (50 cents) for a record. Foreign competition was practically destroyed, but the manufacturing company soon found the market not large enough to run this plant on an economical basis. The investors expected by the reduction of prices that the machines and records would be purchased by a much wider range of people, and to some extent this was realized, but owing to the fact that the reduction of prices was so great they had to sell two or three times the number previously sold to realize the same amount of business. They have further met with great opposition from "dubbed" records, there being no law in Japan to prevent this practice.

Another difficulty experienced was the impossibility of finding dealers in the country districts to invest money in this business, even if they had the money on hand. Accordingly there was no way but to extend credit to these dealers, who were usually of the lower class, and the losses with these people were so great that the Nipponophone Co. had to open its own branches throughout the country. This they did, and they now have fifteen branches throughout the country: Tokio (three), Osaka (two), Otaru, Nagoya, Kobe, Kyoto, Okayama, Hiroshima, Hakata, Nagasaki and Yokohama, with sub-branches and agencies in smaller cities; and to stock all these branches called for a further investment of 350,000 yen (\$175,000).

Consequently this brings the total investment to over \$300,000 for the business, netting sales not

larger than one of our smallest States. The company have been compelled to go in for the manufacture of steam gages, valves, dies, drills and other small tools, as the plant run for the manufacturing of talking machines only was a failure. In looking over the available statistics in Japan for the last five years, one is at once struck with the fact that the great strides in the talking machine business, which have been so noticeable in other countries, are not at all perceptible here, notwithstanding the fact that a large sum of money has been spent in organizing a good sales system, and further in advertising broadcast in an effort to arouse the enthusiasm of the people.

This, however, is easily understood when it is borne in mind that the average family in Japan has a very small income. So small that even the purchase of a few yens' worth of records can hardly be thought of. As an indication of this, take the tax list showing incomes of 1,200 yen (\$600) per year or more, and one is surprised to find the number of such families in the empire is not more than 100,000. As it is out of the question for people with smaller incomes to purchase machines, it is quite reasonable that this small number of families spread throughout the length and breadth of the country not easy of access makes a very small field for a manufacturing plant to cater to.

These facts and also the extraordinary cost of managing the stores and branches, and also the excessive charges of advertising in the Japanese papers, and with losses from dishonest clerks and bad accounts, make it doubtful if manufacturing talking machines in Japan is at all a profitable business.

J. C. ROUSH A VISITOR.

Among the recent visitors to New York was J. C. Roush, of the Standard Talking Machine Co., Pittsburg, Pa., and secretary of the National Association of Talking Machine Jobbers, who besides talking things over with association members and others in the city, found time to visit the factories.

"The White Blackman"

The Talking Machine Trade in New England

BRIEFLETS FROM BANGOR, ME.

S. L. Crosby Co. Handle the Edison Line Exclusively—A Live National Co. Traveler—Good Victor Trade Reported.

(Special to the Talking Machine World.)

Bangor, Me., Feb. 10, 1911.

The S. L. Crosby Co. recently discontinued several talking machine lines and are now devoting their energies to the furthering of Edison goods. They report a very good business throughout their territory and are making an aggressive campaign for spring trade.

J. W. Scott, and we pause here for a second to add, known as "Scottie," because someone might hesitate and say "who is J. W. Scott?" the Maine traveling representative of the National Phonograph Co., has been here calling on the dealers. The Crosby Co. are enthusiastic over the way things commence to move when "Scottie" is around, adding: "The Edison is the only machine that can be seen after he has traveled over his territory."

Mr. Romaine, expert repairman from the National Co., is also in Eastern Maine tuning up all Edison machines.

M. H. Andrews, the Victor jobber in Bangor, reports a good seasonable volume of business in both wholesale and retail branches.

TRADE GOOD IN SPRINGFIELD.

Various Lines of Machines and Records Have Live Representation in Massachusetts City—Flint & Brickett Co. Close Out Line—What Other Concerns Are Doing.

(Special to the Talking Machine World.)

Springfield, Mass., Feb. 9, 1911.

This city is rated as one of the cleanest and prettiest communities in the country. It is full of large and varied manufacturing interests; has an extensive park system; municipal buildings; is the home of many noted men and is about half way between Boston and New York on the N. Y., N. H. & H. R. R.

In the talking machine industry it is quite active with a number of strong, energetic dealers. Prominent among these is Taylor's Music House, F. G. Howe, proprietor, who handles the Victor

line. He has a fine wareroom in the Y. M. C. A. Building, with a big following of trade.

Flint & Brickett Co., who at one time were factors in the field, have closed out this line, but are still actively engaged in their other business.

M. Steinert & Sons Co. have an excellent Victor department.

The Columbia Phonograph Co. have fine headquarters in this city; are giving the people a lot of knowledge anent the value of the Columbia, and in every way are piling up sales records to a remarkable degree.

QUALITY POINTS IN NEEDLES.

How the Needle Business of W. H. Bagshaw Has Developed with Quality as a Basis—Plan Increased Output.

(Special to the Talking Machine World.)

Lowell, Mass., Feb. 7, 1911.

The three links of point, temper and polish are the units that, interpreted into talking machine circles, represent the long established and well known house of W. H. Bagshaw, the big needle manufacturer. Starting at the very inception of the industry, they have done in their way, great things for the development of good talking machine music, as it is admitted that a needle is an important factor in a machine. Both members of this concern believe that 1911 will witness a magnificent growth of talking machine trade, and with the courage of their convictions, preparations are under way that will make it possible to create a larger output of their "quality" needles.

SELLS EDISONS IN "COMB CITY."

(Special to the Talking Machine World.)

Leominster, Mass., Feb. 10, 1911.

This is the home of the comb industry in the United States; in fact, it is one of the three large comb centers in the world. The change of styles in women's hair dressing, so it is reported, is responsible for the rather quiet business conditions. There are about eighty comb factories in the town, and comb making, of course, is the main employment.

R. B. Andrews is quite a hustler in the talking machine field and is the retail distributor of Edison goods.

BUSINESS GOOD IN NEW BEDFORD.

Outlook Also Excellent—C. F. Spooner, Edison Dealer, Satisfied with Conditions—What Columbia and Victor Representatives Report Regarding Business Generally.

(Special to the Talking Machine World.)

New Bedford, Mass., Feb. 11, 1911.

General business is reported as good for this season of the year with an outlook that is encouraging.

C. F. Spooner, the piano dealer, handles the Edison line exclusively. In a conversation with The World representative, Mr. Spooner said that trade has slowed up some since the holidays, although he made a small gain over a similar period of last year. He adds that February, March and April are exceedingly good months and looks forward to making a strong showing then.

The C. F. Wing Co. are spending considerable money in exploiting the Columbia line, for which they are exclusive dealers.

As is usual with New England cities of prominence, M. Steinert & Sons Co. have a Victor department at their piano headquarters.

FURNITURE HOUSE TAKES ON COLUMBIAS

(Special to the Talking Machine World.)

Westerly, R. I., Feb. 7, 1911.

The Westerly Furniture Co. are another big New England house to secure the Columbia Phonograph Co.'s exclusive representation, starting off with a good sized initial order and a good local advertising campaign.

A LIVE BRATTLEBORO DEALER.

(Special to the Talking Machine World.)

Brattleboro, Vt., Feb. 10, 1911.

Brattleboro is the home of one of the most live talking machine dealers in the six States, and he is L. H. Barber, the piano dealer. He is highly regarded here; is a business man of wide experience and sells a lot of talking machines. Mr. Barber handles the three lines, Columbia, Edison and Victor, and expressed himself as highly pleased at the way 1911 is making good.

TO HANDLE COLUMBIAS EXCLUSIVELY.

(Special to the Talking Machine World.)

Fitchburg, Mass., Feb. 8, 1911.

Kidder & Davis, the big exclusive furniture house, has taken the exclusive Columbia phonograph representation; installed a spacious department with a complete line of Columbia goods, and are going "right after" the talking machine trade.

DITSON CO.'S VICTOR ADVERTISING.

(Special to the Talking Machine World.)

Boston, Mass., Feb. 11, 1911.

Some remarkable Victor advertising is being done by the Oliver Ditson Co. covering the four new Caruso records, 150 new double-faced records and new language records. Large space is used, putting forth the merits of these new goods in a clear, strong manner. A particularly interesting statement is: "A complete stock of new machines, including every style manufactured, and not a single old type machine to be found in our stock." Manager Henry Winkleman reports a very satisfactory February business.

BIG DEMAND FOR "PURITONE" NEEDLES.

(Special to the Talking Machine World.)

Putnam, Conn., Feb. 7, 1911.

Charles E. Dean, of John M. Dean, the big needle factory, reports a fine demand for "Puritone" Needles, which are extensively sold all over the country. These are produced by a special process, which accounts for their unusual pure tonal interpretation of music. These are also manufactured in special envelopes, printed with the jobber's name and address at practically no advance in price.

First in Quickness!

First in Completeness!

First in the hearts of
New England dealers!

The Fast Exclusive Edison Jobbing Service

OF THE

BOSTON CYCLE & SUNDRY CO.

48 HANOVER STREET,

BOSTON, -MASS.

We have won the above transposition of the "National-Service" leader, George Washington, whose birthday we celebrate this month, by our new record breaking service—plus the compound element of "dealers' co-operation."

Telephone, telegraph or write us for an outline of our noted plan. Submission of this won't obligate you in the least and it may mean hundreds of extra dollars for you.

FROM OUR BOSTON HEADQUARTERS

ROOM 12, 178 TREMONT STREET, G. W. HENDERSON, MANAGER.

(Special to the Talking Machine World.)

Boston, Mass., Feb. 9, 1911.

Averaging January's reports of wholesale and retail business, they are indeed gratifying. This month, naturally, slows down from the previous month's achievements, but a noticeable feature this year is that the percentage of "quietness" is a great deal less than former years. Practically everyone reports rounding up additional business over last year, this to go right down the line of machines, records, cabinets and supplies, with every factor increased.

February has opened remarkably well. The past nine days has reaped a volume of talking machine business that is very pleasing, doubly so because the opening of the month's business was problematical from a voluminous standpoint. This statement does not mean to imply that there was any existing pessimism, as, of course, the trade were encouraged from the satisfactory January totals, but they did not have any idea that the trade would break so heavily.

Retail instalment collections were dull during January, but are now beginning to show good signs of life. Following the holidays collections drop considerably, owing to gift purchasing, but a vigorous following of these delinquents is prolific of the proper results.

Columbia Line for Carl Fischer Store.

The Carl Fischer music store—uptown on Boylston street—has created a talking machine department by securing the Columbia line. All their styles of machines and line of records are displayed at Fischer's.

Victors for Moving Picture Theaters.

At the Kozy Theater, Salem, and the Pastime Theater, West Lynn, both managed by H. E. Messenger, the music to go with the moving picture exhibitions consists of Victor talking machines. This idea has proven a very profitable innovation, as the audiences are delighted with the music—judging from the filled houses—and the contingent saving of the orchestra expense makes the management happy.

Player Salesman Makes Record Selling Victrolas.

Harold Speare, with Geo. Lincoln Parker, the Victor dealer (department managed by Charles P. Trundy), shows that there is real business in himself and the goods by slipping up to Lebanon, N. H., and disposing of four Victrolas and a bunch of good records for cash. And by the way, Mr. Speare is not a talking machine man, as he is on the player-piano end of Mr. Parker's business, but it shows how the "hustle" qualities will sell Victors.

Mr. Parker had a Victor exhibit at the Motor Boat Show, doing so because he is a firm believer that a motor boat is not completely equipped without a Victor.

Harry Rosen's Distinctions.

Harry Rosen, the School street dealer, probably is the only dealer in the country who can say that he is the youngest dealer at the same time occupying a store in the oldest building in the city. He handles the Victor, Edison and Columbia lines.

Meets Success with Edison Line.

F. H. Day, 683 Main street, Worcester, Mass., an exclusive Edison exponent, is featuring this line with marked success. He is an able talking machine man; understands just what the people of Worcester want, and from the totals of his business it is evident that his efforts are appreciated.

H. R. Skelton, the Edison "Spoon."

If you happen to alight in a Massachusetts city and notice a general activity; visit the Edison dealers and discern great briskness, it is sufficient to assume that H. R. Skelton, the Edison hush-destroyer in this territory, has just left town. A dealer rightly nick-named him "Spoon," giving as his reason therefor that H. R. is the best "business stirrer" visiting his store. "Spoon" understands

thoroughly all phases of talking machine merchandising, wholesale and retail, and dealers highly prize his co-operation. Moreover "E-d-i-s-o-n" is his alphabet, spelling which makes him so enthusiastic.

Getting Ahead of Last Year's Marks.

Business with the Eastern Talking Machine Co., Edison and Victor jobbers, continues to march away from last year's totals in every department. E. F. Taft, general manager, adds that they are gaining a little in Victrola deliveries, but he reluctantly admits that they are nowhere near what can be accomplished. Mr. Taft is arranging to attend the special meeting of the National Talking Machine Jobbers' Association's executive committee, to be held at Chicago on February 19 and 20.

The E. T. M. Associates are planning a minstrel show to occur in April, when the two irresistible end men, Messrs. Brown and Fitzgerald, will get a chance to set off some laugh explosions.

"The Boston Talking Machine Co." now adorns the outer door sign and office door of this local company on West street.

Finds Business Good with Dealers.

Charles R. Cooper, manager of the Edison end of the Boston Cycle & Sundry Co., made a recent trip to the Edison factories. Mr. Cooper says that business is showing good signs of life with their different dealers in New England, with new ones being added every week—dealers who appreciate quick and substantial service. In their advertising, Mr. Cooper hit upon a novel slogan for this month's copy, which is a revision of a well-known saying, as applied to George Washington, and it will pay live dealers to read it, and incidentally consider!

Guy R. Coner, the traveler of this company, has been rolling up some fine business since he undertook the exploitation of the "Boston Cycle" Edison service.

A Puzzling Policy of Management.

Far be it from anyone to criticize methods of concerns, but it is interesting to notice how a certain department store runs its talking machine department. It's a sort of a "tag, you're it," proposition with the managers of this department. One week there will be a manager; next week, none, ad libitum. A bright man takes the job; the store thinks he makes too much money; the man is fired,

the sales fall with him, and this occurs at every "change of policy." The latter is d.s. for "you are discharged," and this week is an off week for the managerial chair. In off weeks, the writer has found the upholstery man in charge; another week, the sporting goods man; also the book buyer had a turn, with no one knowing the entire list. From what can be learned, a good man (like some they have had), who knows the talking machine game, could develop a tremendous business in a few months' time.

Featuring Columbia Demonstration Record.

The Columbia Phonograph Co. have just been able to feature at retail (10c. each) the new Columbia demonstration record. So great was the demand of dealers for this record that the supply was only adequate to fill wholesale orders. Since the displaying of these in the Columbia windows they have sold hundreds, or rather given hundreds away, as 10c. for a record of this character is a gift to the machine owner.

Local Columbia Co. Personals.

Arthur C. Erisman, manager of the Boston headquarters, attests some remarkable wholesale and retail business, the former consisting of good big orders on the exclusive Columbia plan.

W. E. Getchell, formerly special collector, has been appointed traveling representative to cover New Hampshire and Northern Massachusetts.

E. A. Kingsley, formerly voice teacher in the public schools of Lynn, Mass., and a graduate of the New England Conservatory of Music, has taken charge of the grand opera department of the local Columbia warerooms.

Frank E. Flightner, the Columbia traveler in Western Massachusetts, is pulling off some good, strong deals in that territory.

George W. Lyle, general manager, was a recent visitor to Boston.

NEW MANUFACTURING CONCERN.

(Special to the Talking Machine World.)

Boston, Mass., Feb. 9, 1911.

The Boston Talking Machine Co. is the name of the Boston concern undertaking the manufacture of machines and records, as indicated by the recent inscribing of this name on their offices.

A Bagshaw Needle Talk

POINT, TEMPER and POLISH

are united in the highest possible degree in all Bagshaw Needles.

Our long experience and large manufacture have resulted in the attainment of these three absolute essentials.

The same trio are truly exemplified in all the Needles of our manufacture.

As 1910 was a good business year with those handling our products, so is 1911 BOUND to be an excellent year for our representatives.

You have the right spirit of progress if you deal with

W. H. BAGSHAW

Oldest and Largest Manufacturers of Talking Machine Needles

LOWELL, MASS.

**The Columbia "Favorite" is the *first*
hornless graphophone ever offered at
\$50—and we believe it's the *best* that
can ever be offered at that price.**

Columbia Phonograph Co., Genl., Tribune Building, New York.

LOWER DUTY ON SAPPHIRES.

The Board of United States General Appraisers on February 7 affirmed the claim of the Wells Fargo Co. et al. for a lower duty on sapphires, overruling a 50 per cent. ad valorem rate applied by the Collector in favor of a 10 per cent. assessment. The matter involved an importation of

small pieces of sapphire, cylindrical in shape, intended for ultimate use in the construction of phonographs, but it was conceded at the hearing before the board that in the form imported they are not parts or accessories of such instruments. The Collector classified the importation as "articles composed wholly or in chief value of semi-precious stones, not specially provided for." The

protestants maintained that the merchandise in question was dutiable as precious stones "cut but not set, and suitable for use in the manufacture of jewelry."

RECORD BRUSHES ON MACHINES.

National Phonograph Co. Arrange to Equip Several Models of Edison Phonographs with Brushes Licensed Under Blackman Patent.

It is generally realized that the talking machine owner does not get the best results from his records, whether they are of the cylinder or disc type, if the sound grooves are filled with dust or other foreign matter and numerous efforts have been made to keep the records free from dirt or to clean them before playing. The most successful method has proven to be the placing of specially constructed brushes at such points on the machines as will cause them to pass along the grooves and clean them out before the passage of the needle or jewel. Among the best known of these brushes are the Place brushes, made and marketed by the Blackman Talking Machine Co.

It is now announced that in the near future the National Phonograph Co. will equip several of their more expensive models of Edison phonographs with record brushes, licensed under the Blackman patents, and it is felt that the innovation will prove very popular with both the trade and the public. In any event it will make for more perfect reproduction of records and tend to make them more satisfactory in the long run.

\$11,000 FOR VICTOR TURKEYS.

As an illustration on what a great scale the Victor Talking Machine Co., Camden, N. J., does things, the presentation of Christmas turkeys to their small army of employes may be cited. Sixty days before Christmas the purchasing agent of the Victor Co. began looking around for the best turkeys that it was possible for money to buy, with the hope of securing the very highest grade of birds in quantities sufficient to present one to every employe of the company. Turkeys were very high, but the determination to have only the best necessitated placing an order for about 41,000 pounds of turkeys at 28 cents, a total of over \$11,000. These turkeys were all delivered at the Victor factory three days before Christmas and each turkey critically examined for quality; then placed, with two quarts of the finest cranberries, in a heavy manilla bag which could be slung across the shoulder and carried home. Forty-nine barrels of cranberries were required to supply the 3,000 employes of the Victor Co.

It was indeed a sight to see the thousands of employes of the Victor Co. on their way to their homes the Saturday before Christmas, and no matter where you happened to be in the city of Philadelphia or Camden or on the suburban trains running out of these two cities, you were sure to meet someone with a Victor bag containing a turkey and the cranberries for the Christmas feast.

CARUSO RENEWS CONTRACT WITH VICTOR CO.

Under his former contract with the Metropolitan Opera Co. Signor Caruso received \$2,000 for approximately 100 appearances here and in Europe. This arrangement expires this spring, the new agreement, already entered into by the same company for three years, becomes effective in the fall, and for singing 60 or 70 times in this country Caruso will be paid \$2,200 whenever he sings. His

European engagement will be under other management. Besides appearing in the Metropolitan Opera House in New York, the world's greatest tenor will be on the bills of the Philadelphia, Boston and Chicago opera houses during the season 1911-12. As noted elsewhere, Caruso has renewed his exclusive contract with the Victor Talking Machine Co., Camden, N. J., for 25 years.

LONDON TRADE IN FINE CONDITION.

Growing Respect for Talking Machine Among Music and Piano Dealers—Trade Outlook Bright—Why Not a British Talking-Machine Convention?—J. E. Hough, Ltd., Make Great Sales Record—King's Coronation Speech Could Be Reproduced by Talking Machine Records—George V. Considering Matter—A Wonderful German Dog—Parliament Will Take Up Copyright Question—Professor Sylvanus Thompson on Sound-Reproduction—12-inch Disc Popularity—January Gramophone Records—Bach as a "Plantation" Melodist—Phonograph for Teaching Convicts—Aviator Moissant Once a Phonograph Seller—Edison January List—Pathe Publications—Talking Machines Among Japanese Lepers—Klingsor Progress—Beka Co. to Feature High-Class Selections—Honor for Conductor Wood, of Orchestral and Gramophone Fame.

(Special to the Talking Machine World.)

London, E. C., Feb. 4, 1911.

Talking machine trade in this city opened up extremely well after the holidays, and throughout the month of January conditions have been somewhat more steady than is expected at this particular season, although at the time of writing dealers' sales are just beginning to decline. The pace is kept going right enough by the manufacturers, but with the advent of fine weather and the approach of Easter many of the distributors' preparations for the development of the cycle business, are unfortunately allowed to seriously affect that interest and activity, which must always be foremost in connection with the successful handling of musical instrument goods. It is good to reflect, however, that as season succeeds season we can proportionately dispense with the cycle man, for the musical instrument trade proper no longer looks upon talking machines as rivals to the sale of pianofortes and sheet music, with the result that he finds it to his interest to carry a fair stock of cylinder or disc goods. This trade should be handled by music shops, and it is a pleasant sign of the times that this channel of distribution is becoming wider and bigger altogether by reason of the vast improvement in records and machines in recent years. It is a fact that a few years ago your musical instrument trader would rather have put up the shutters than sell those "awful talking machines," to-day he is proud to sell them because they have reached such a state of perfection that leaves him no possible room for excuse.

Trade may perhaps decline gradually from now onward, but for all that future prospects are exceedingly bright. One or two new lines of a startling nature are promised, and in this respect 1911 should be a very historic year. That it will be a good trading year is the general belief among men whose opinions carry substantial weight. It will be a much better year if some solid attempt is made to grapple with the many difficulties and evils which beset and hamper healthy trade development. In the pianoforte industry a commencement is to be made in this direction by the inauguration of an open meeting or convention, to be held next May, whereat traders will meet to discuss and formulate plans for the removal of the many injurious trading methods associated with their industry. Why not such a convention for the talking machine trade? The preliminaries could be arranged at a fairly representative meeting of the leading traders, a committee formed to carry through the initial work, send out invitations and generally plan a sufficiently good program that would induce an attendance of at least fifty. Once make a start, be it ever such a small gathering, and it would of its own

power grow each year as the idea became more widely appreciated. Will not someone take up the suggestion?

Increase in Expenses Noted.

From the figures reported before by certain firms one is forced to the conclusion that, although 1910 trade was exceptionally good, expenses were comparatively heavier than in 1909, which was anything but a good year. On the other hand, some houses doubled their turnover the previous year as against '09, at a proportionately even cost. But generally speaking, to meet the very keen competition which existed last year entailed heavier expenditure upon advertising, publicity literature, postage, additional employes, and other items, than was the case in 1909.

An Excellent Half Year Record.

Messrs. J. E. Hough, Ltd., report the very gratifying fact that during the six months ending December 31 they sold more than double the number of disc records than in the whole previous twelve months, and their turnover in value showed an advance of seventy per cent. pro rata, which is decidedly pleasing.

Gramophone to Carry Coronation Message.

One of the most practical suggestions made in connection with the coronation ceremonies of H. M. King George V. emanates from an unknown correspondent, who has suggested that the coronation message which His Majesty will address to his faithful subjects should be promulgated by means of a gramophone record. In view of the perfection with which the human voice can now be reproduced, the idea is that this would prove an eminently suitable medium for the purpose. No such method was adopted in the case of the late King's coronation, although the instrument was extensively used for the promulgation of the royal message to his late Majesty's Indian subjects, audible translations of which, in twelve different native dialects, were by this means delivered in all parts of our Indian empire. But in 1902 recording was not what it is to-day, and even had the idea been mooted, it is very certain his late Majesty would never have allowed an imperfect reproduction of his voice to be issued. Present day methods of recording the human voice are sufficiently perfect to justify the belief that if it is compatible with royal dignity, King George will not hesitate to orally address his subjects by means of the gramophone. Through his secretary the King has signified his consideration of the matter, and the whole trade will await the result with intense interest for, should the suggestion materialize, its importance to this industry is obvious. For such a crowning of testimony to the manifold uses and advantages of the talking machine would shed a lasting benefit upon the whole industry, and incidentally raise the prestige and dignity thereof. Let us hope the seed will germinate.

Talking Dog Makes a Record.

No doubt when next we meet him, the famous dog will still be looking wistfully into the trumpet, listening in mute wonder to the voice of the master he has not seen for many a long day, but the fact remains that Don—that's his name—has at last spoken. More than that, he has made a record, in language and pronunciation completely resembling the sounds produced by the human voice. It is vouched for by eminent German scientists, who have subjected Don to a stiff examination. They found that the setter utters the words "Haben" (want), "Hunger" (hunger), "Kuchen" (cakes), "Ja" (yes) and "Nein" (no) clearly and unmistakably, and pronounces his name Don with the utmost plainness. The commission emphasizes that Don's words are not growls or barks, but constitute for all practical purposes actual speech. So impressed were the scientists that they got Don to speak into the recording horn, and, says the report, the animal did not fail at any point. Of course, Don was in his ele-

ment there, and it isn't to be expected that he would lose the only opportunity to send a message to his master. Funny though that Don should have chosen the phonograph, but he did!

To Consider New Copyright Bill.

The new Parliament meets shortly, and one of their first considerations will be the new copyright bill held over from the last Parliament. Ratification of the findings of the Berlin Conference necessarily involves wider changes in the law of England than in that of other countries, the latter being more up-to-date in this regard. Moreover, our copyright law requires simplification and much alteration, which entails delicate questions between England and her colonies. Not only will the bill introduce amendments and extensions, but it consolidates twenty different acts of Parliament and brings our copyright entirely under the statutory law.

An Important Announcement.

Messrs. Craies & Stavridi, of this city, makers of the "Apollo" instruments, have given publicity to the fact that they will in future equip all their gramophones with tapered tone-arms!

"Twins" Are Well Fed.

The "Twins" February list is, as usual, replete with all the latest and best, and includes among others, such popular pieces as "The Chocolate Soldier Waltz," "Country Girl," and "La Poupée," selections, "Nobody Knows Nobody Cares," "Beautiful Garden of Roses," "Rocked in the Cradle of the Deep," "The Diver," etc. It is by such fulfilment of the demands of the record public that the "Twins" have become so popular. So far this season their sales have reached a figure which leaves the whole sales of the previous season in the shade. It's very difficult to control those "Twins," for they grow so fast!

Talking Machines Illustrate Lectures.

The recent lectures on Sound by that eminent authority, Professor Sylvanus Thompson, were not only interesting, but highly instructive to his audience, and caused a deal of attraction in the press. For the purpose of demonstration, the Professor used both the phonograph and a gramophone, and in the course of his remarks referred to Von Kempelen, who, in 1791, produced a machine which by means of a keyboard could be made to say various simple words. But these attempts at the artificial construction of syllables one at a time were in the wrong direction. The scientific method was the reproduction of actual vibrations, and the question arose whether the

The STROH VIOLIN

☞ A new instrument possessing a VIOLIN quality of tone of great beauty and remarkable power.

☞ The "Stroh" is constructed largely of aluminum but the absence of any metallic quality of tone is another notable feature.

☞ All interested should write for an illustrated booklet to the Sole Makers.

NEW YORK and PHILADELPHIA.

FROM OUR LONDON HEADQUARTERS—(Continued.)

waves marked in gramophone records were really the same as those which vibrated the sensitive membrane of the ear. That question, continued the Professor, had been definitely answered in the affirmative by an experimenter who, by connecting a small mirror with his own ear drum, had been able to obtain photographs of the sound vibrations which agitated it, and they were identical in form with others artificially registered under similar conditions. Discussing further the improvements effected in talking machines, Professor Thompson maintained that the disc was superior to the cylinder record. Authorities are not generally in agreement on this point, though.

Cultivating Twelve-Inch Disc Trade.

It looks as though my forecast last month that the leading manufacturers would sooner or later cultivate a 12-inch disc trade is materializing. There is the Gramophone 12-inch single, the Columbia-Rena 12-inch double disc, the Zonophone 12-inch single, the Beka 12-inch double, and now comes news that J. E. Hough, Ltd., will introduce a new 12-inch phono-cut double disc. This, I learn, is not to be put on the market yet awhile, as the firm are desirous of offering the trade a reasonable catalog of titles, which necessarily involves careful choice, and much preparation. The disc, however, will be quite ready and in good time for next season's trade. If it approaches the quality of the Velvet Face record, then dealers will indeed have a line worth handling. But leave it to J. E. H.!

To Exhibit at Leipzig Fair.

The Leipzig Fair commences March the 6th this year and runs on until the 18th. Many English traders contemplate going over, but the list is as yet too incomplete for publication.

Flex Diaphragms for New Edison Model "O."

Always up to date, Mr. Daws Clarke has just introduced one of his well known Flex diaphragms to fit the new Edison model O reproducer. He aptly describes it as a winner, and we are able to fully endorse that opinion.

Records by Schumann Quartet.

The Schumann Quartet—harp, violin, viola and flute—is responsible for six classical selections listed in the current Edison Bell catalog. Messrs. Hough, Ltd., write that never before have the beauties of these fine toned instruments been submitted in such perfection, absolutely free from interfering surface noises. You see, they are Velvet-Face records!

Large Gramophone January List.

A phenomenally fine list of records was issued by the Gramophone Co. in January, apart from the ordinary supplementary issues. We have four selections from the "Quaker Girl"—"Come to the Ball," sung by Mr. G. Carvey; "A Quaker Girl," by Miss Gertie Millar; "Just Like Father Used to Do," by Mr. Harry Carlton, and the waltz song, "Come to the Ball," by the Bohemian Orchestra. Miss Gertie Millar also sings "Moon-struck" and "In Yorkshire," from "Our Miss Gibbs." From "The Chocolate Soldier"—"That Would Be Lovely" and "Sympathy," duets by Miss Jerome and Mr. R. Pembroke.

Madame Melba has recently made two new records, and five other records of some of her most famous numbers, which the company say it has been imperative to have remade owing to the improvement in recording since the time when Madame Melba first made them.

The ordinary supplementary list for February is one of the most interesting and important ever issued. It teems with popular selections and is as follows: "La Mascotte," selection (Andran); "Preciosa Overture" (Weber), and "The Sorcerer," selection (Sullivan), by the band of H. M. Coldstream Guards; "Spirit of Pageantry March" (Fletcher), Black Diamond's Band; "The Soldiers' Chorus, Faust" (Gounod), La Garde Republicaine; "Choral des Epics, Faust" (Gounod), by La Garde Republicaine; "Wedding Dance Waltz" (Lucke), Herr Gottlieb's Orchestra; "As Once in May" (Lassen); Mme. Kirkby Lunn; "Molly Bawn" (Lover), Mr. John McCormack;

"Ingemisco, Requiem" (Verdi), Mr. Evan Williams; "The Rosary" (Nevin), Mr. John Harrison; "De Sun Is a-Sinkin'" (Bohannon), Mme. Eleanor Jones-Hudson; "Peter" (Scott-Gatty), Miss Margaret Cooper; Gems from "The Mikado" Part I and Part II (Sullivan), the Light Opera Company; "Click, Clack" (Scott-Gatty), quartet by the Minster Singers; "Adagio Cantabile" (Tartini) the Renard Trio; "Ave Maria" (Schubert), cello, by M. Jacques Renard; "The Message Boy" (Lauder), Mr. Harry Lauder; "The Belle of the Barber's Shop" (Cohan), by the Two Tingles, and "In the Springtime" (Pelissier), Mr. W. H. Berry.

That Plantation Melody!

During the recent visit paid to London by Mr. Sousa and his band considerable appreciation, it may be remembered, was evoked by the violin playing of Miss Nicolene Zedeler. But this artist was not able to elicit from any of our critics praise to equal that which her performances inspired in one who heard her play at Winston-Salem (U. S.). What of this, for instance? "Miss Nicolene Zedeler, as violinist, was superb. Three times she yielded to encores, once playing 'Dixie' with a multitude of variations. Finally she played some sort of plantation melody that smacked of a corn-shucking in the mountains, with the boss fiddler on the job and feeling fine." It is worth adding as a detail that the "plantation melody" was a Bach Gavotte!

Praise for Edison Bell Velvet-Face Record.

Professor Sylvanus Thompson, the eminent authority on sound, in the course of a recent lecture, made use of the Edison Bell Velvet-Face record for purposes of demonstration. So delighted was he with the general excellence of the disc that he expressed his opinion in a letter to J. E. Hough, Ltd., under date of December 23, 1910, as follows: "The Velvet-Face disc well fulfils its name, for it is wonderfully free from any scratching or scraping sound. If this condition of freedom from that prevalent drawback can, as you say, be

JOHN G. MURDOCH & CO., Ltd., 91 & 93 Farringdon Rd., LONDON, ENG.

produced regularly and with certainty, you have got hold of an important and real improvement." Well, it is a real improvement, and the trade knows it, for they have given the V.-F. disc a splendid reception, which, in view of the popular titles listed each month, bids fair to develop the sales enormously. Among the recent offerings are such selections as "The Chocolate Soldier," two selections and waltz from the new "Quaker Girl" opera, and "The Count of Luxemburg," "Beautiful Garden of Roses," and all the best piano hits, etc. The V.-F. needs only to be demonstrated to your customers, Mr. Dealer, and the rest follows.

Correspondence Courses for Convicts.

An interesting experiment in prison reform is about to be made by the Home Office. A number of convicts serving long sentences and lads in the Borstal institutions are to be given courses of instruction by correspondence through the medium of the International Correspondence Schools. The innovation is the outcome of an experiment undertaken by the authorities of the International Correspondence Schools during this year in regard to twelve inmates of the Borstal institution at Lincoln. That this experiment has shown good results is proved by the expressed determination of the commissioners to extend its application to the other branches of the penal system. The schools are also prepared to teach those who desire to study languages by means of their system with the Edison phonograph. Those prisoners who may be allowed by the authorities this privilege will be furnished with records which will teach them proper pronunciation. They in turn will speak into the machine, and thus the staff at headquarters will have excellent means of marking their progress.

Good Business with Murdoch's.

A recent call at the House of Murdoch leads to the conclusion that business is remarkably good for January, and indeed this was more than borne out by the statements of their manager, who instanced the splendid demand for their unbreakable cylinder record and series of Tournaphone machines. Both the home and export trade returns show a big increase over even time last season, and this satisfactory progress was noticeable in all the lines they handle. Dealers abroad desirous of maintaining trade connections with this country can obtain almost anything in the talking machine line from the great House of Murdoch, who handle practically every make of disc and cylinder records, disc and cylinder machines, sound boxes, needles and every accessory imaginable.

Long Distance Telephony.

Discussing the great progress made in long distance telephony and the possibility of being able to hold ordinary conversation over distances of 3,000 miles or more, in the future, a prominent postoffice electrical engineer says: "The problem to be solved is one of many complexities and difficulties, but one of the most hopeful signs of progress lies in the abandonment of the standards of commerce, and to adopt those of the laboratory in recording the values affecting the efficiency of telephone circuits. The matter is one which must be left entirely to the scientific experts. To the average individual the telephone—like the tele-

graph, electric light, the phonograph, and many other commonplaces of modern existence—is still a mystery. We avail ourselves of the facilities they afford, but how much does the 'man in the street' know of the why and the wherefore of the hundred and one scientific miracles which he employs as a matter of course in his daily life?"

Aviator Moisant's Early Career.

The late John B. Moisant of "flying" fame was one of the first to introduce the Edison records into South America, and to this is attributed the foundation of the fortune of the Moisant Brothers.

Death of Two Prominent Artists.

News is to hand, I regret to say, of the death of two prominent record artists—Frank C. Stanley and Madame Amelia Talexis. Their loss has occasioned profound regret in talking machine circles here, where they were known and respected as much for their vocal ability as for themselves. Mr. Stanley, who died at the comparatively early age of forty, will be remembered as one of the best baritones ever listed on Edison, Victor and Columbia records. A leading Italian operatic soprano, Madame Talexis, was exclusive to the Fonotopia records, of which she is responsible for a goodly number.

The Latest Edison Record List.

The National Phonograph Co. draw attention to the fact that for the last month or so they have been increasing the monthly issues of grand opera records, and point out that selections by the splendid new talent recently secured enables dealers to supply the wants of every lover of operatic music. The advance list for March includes some of the well known arias from popular operas by artists of the first magnitude. Here are the titles: *Grand Opera Amberol Records*.—"Faust—Gegruesst sei mir" (All hail, thou dwelling), (Cavatine), (Gounod), sung in German by Leo Slezak; "Mignon—Styrienne" (I know a poor maiden) (Thomas), sung in French, Selma Kurz; "Gioconda—Cielo e mar" (Heaven and Ocean) (Ponchiette), sung in Italian, Florencio Constantino; "Aida—O cieli azzurri" (Nill Aria) (O sky of azure) (Verdi), sung in Italian, Marie Rappold; "La Bohème—Ah! Mimi, tu piu" (Ah! Mimi, false one) (Puccini), sung in Italian, Giorgini and Beneditti; "Martha—M'appare" (Ah! so pure) (Flotow), sung in Italian, Aristodemo Giorgini; "Traviata—Sempre libera" (The room of pleasure) (Verdi), sung in Italian, Maria Galvany; "Pagliacci—Prologo" (Prologue) (Leoncavallo), sung in Italian, Carlo Galeffi, and "Giroflé-Giroflá—Brindisi" (Drinking Song) (Lecoq), Blanche Arral. *Edison Amberol Records*.—"Thy Voice Is Near," march (T. Bennett), National Military Band; "Drake Goes West" (Wilfred Sanderson), David Brazell; "Taking My Father's Tea" (Hargreaves), George Tormby; "Fall in and Follow Me" (Mills and Scott), Stanley Kirkby; "Put on Your Ta-Ta, Little Girlie!" (F. W. Leigh), Miss Florrie Forde; "Les Papillons Polka" (L. Wenzel) (concertina solo), Alexander Prince; "Early Closing Day" (F. Harworth), Arthur Osmond "Nirvana" (Stephen Adams), Samuel Hemsall "Liza 'Ad 'Old of My 'And" (Alex. Kendall), Jack Pleas-

ants; "The Picnic" (H. Lauder), Harry Lauder; "My Hero"—from "The Chocolate Soldier" (Oscar Strauss), Miss Marie Florence; "Napoleon's Last Charge" (Ellis-Paull), New York Military Band; (a) "A Dream" (J. C. Bartlett), (b) "Last Night" (H. Kjerulf), Frank Ormsby; "Barcarole," from "The Tales of Hoffman" (Offenbach), Metropolitan Quartet; "Where the River Shannon Flows" (J. I. Russell), Will Oakland and chorus; "Lo! Hear the Gentle Lark" (F. Lax), Stanzone and Finkelstein and Edison Concert Band; "Those Songs My Mother Used to Sing" (H. W. Smith), Miss Elizabeth Spencer; "Hear me, Norma," (V. Bellini), Miss Inez Barbour and Miss Elizabeth Spencer; "General Heywood and Our Glorious Banner Marches" (W. H. Santelmann), United States Marine Band; "I Hope I Don't Intrude" (W. H. Delehanty) (Bell Solo), Charles Daab; and "Jolly Fellows Waltz" (R. Volstedt), Sousa's Band. *Edison Standard Records*.—"They All Love Jack March" (Adams) (Knight), National Military Band; "When the Lights Are Low" (H. E. Darewski, Jr.), Stanley Kirkby; "I'm Coming Back to Siam" (Haynes, Carter and Meher), Miss Florrie Forde; "Do What You Can for Ninepence" (Alf. Ellerton), Arthur Osmond; "Ready Every Time" (Bowker Andrews), Peter Dawson; "Hobomoko—An Indian Romance" (E. Reeves), Sousa's Band; "Just a-Wearyin' for You" (C. Jacobs-Bond), Miss Elizabeth Spencer; "Teach Me to Pray" (J. M. Jewitt), Anthony and Harrison; "Nightingale" (G. W. Meyer), Premier Quartette, and "Dance of the Merry Larks" (J. Heller) (xylophone solo), Charles Daab.

H. J. Cullum Honored by Employes.

Mr. H. J. Cullum, head of the well known factoring house of Lockwoods, this city, was recently the object of a pleasing demonstration of esteem on the part of his numerous staff of employes, who presented him with a beautiful silver salver bearing a suitable inscription. Mr. Cullum expressed his gratitude of this kindly mark of good feeling, and incidentally referred to his recent trip to the continent. He admired the enterprise of the Germans, but thanks to an efficient staff, they

had little to learn from that quarter, for at the present rate of progress his business would in a few years compare with the greatest houses in the trade, especially in the shipping department. Certainly the progress of Lockwoods has been phenomenal.

Pantomime Hits on Columbia List.

The Columbia-Rena list for February gives no less than eighteen popular pantomime hits—to say nothing of the medleys by the Band of the Scots Guards.

Latest Pathe Record List.

The Pathe 10-inch list for February has no less than twenty-eight splendid selections, among which we might mention are records by the famous band of H. M. Scots Guards, cornet solos by Sergeant Leggett, banjo and bell solos and a very fine record by the old favorite, Miss Florence Venning, "Love's Old Sweet Song" and "Whisper and I Shall Hear." Billy Merson, who has taken Brighton by storm in the pantomime, gives his famous Russian burlesque, "Wallapazink," and coupled with same is "The Gay Cavalier," while Arthur Leslie, the inimitable mimic, contributes a lifelike reproduction of "I Want to Sing in Opera," Wilkie Bard's latest, coupled with "He Was More Like a Friend Than a Husband."

In a Japanese Leper Hospital.

Miss Mary Martindale, writing from Kumamoto, Japan, contributes to the Church Army Gazette, a vivid account of the Christmas entertainment in a Japanese leper hospital—an account, which, pathetic as it is, is still an intensely interesting description of a party that seems of all things the most incongruous. For, says the writer, of all sad people on God's earth, one would surely think that a leper would be of the saddest. He is an outcast indeed, a dead man while he still moves about among the living, carrying with him the terrible visible signs of decay and corruption.

The building is situated in a remote part of lovely Japan, and is called the Hospital of the Resurrection of Hope. It is the Christmas season, and the lepers are going to have a party. There is a Christmas tree and gifts for all, and the poor disfigured fragments of humanity show their delight in no uncertain fashion at each development.

But, says Miss Martindale, the happiest thing of all was to hear the lepers laugh—yes, really laugh with the heartiest enjoyment. This happy result was brought about by the graphophone, which suddenly burst out with a rendering of the old Italian patois song, "Funiculi-Funicula," with a laughing chorus, and such an infectious one that soon the leper men and women were joining in with all their hearts. Other tunes followed, and the stirring marches and choruses thoroughly appealed to them.

One little lad, sitting in the front row, enjoyed the music amazingly. His poor little body was swollen till he looked like a little image of Buddha; yet how happy he was, nodding his head and waving a gloved and crippled hand to the tune.

Activity at Klingsor Works.

Business at the Klingsor Works is decidedly encouraging, taken as an index of the new year conditions. January sales have exceeded by a long way the company's expectations, and it is a healthy sign of the time that export trade is considerably improving week by week. The Klingsor instruments are in much favor here and abroad, and their suitability for the tropics is a direct outcome of the solid construction of the cabinets, rendering them impervious to varying temperature. Put up in various and artistic designs, the cabinets present a handsome appearance, and may be obtained in oak, mahogany or walnut at prices within the reach of all purses. Another line of special interest to foreign buyers

is the 10-inch double Klingsor record, for it is of pleasing tonal-quality throughout, and is sold at a competitive price which leaves a fair and reasonable profit to dealer-agents. The titles cover every phase of vocal and instrumental music, and include all the latest and best selections. Special attention, too, is centred upon the choice of artists, who include such well-known names as Harry Bluff, Guy Linton, Harry Trevor, Miss Bessie Abelson, Balalaika Band, Klingsor Symphony Orchestra and the Band of H. M. Irish Guards, to mention only a few. Undoubtedly the Klingsor specialties merit the close investigation of all talking machine dealers overseas, and a line to the Klingsor Works, Tabernacle street, London, E. C., will have immediate attention.

A Peculiar Advertisement.

For advertising in the "Wanted" column of the Evening News, "Gramophone, hornless preferred, tailor is willing to make clothes to measure for same," "S. 856" is awarded one of "John Bull's" famous biscuits.

Tend Towards High-Class Records.

In view of the increasing public taste for better-class music—operatic and selections of a classical nature—the Beka Record Co. intend to make special provision for the demand in this direction, and will list each month selections from some of the most popular operatic music; indeed, it is their intention to record a complete set of the Sullivan operas among others. The recording will, of course, be spread over a period of time, a commencement having been made in January. This month's (February) impression contains among other good selling titles, the following: (386) Selections from "The Yeoman of the Guard," Part I and II (Sullivan); (387) Andante and Allegro from "William Tell" (Rossini) and (389) "Sourire d'Avril" and waltz from "Faust"

(Gounod), all splendidly rendered by the Beka London Orchestra. Record 390 is a quartette rendition of "Regular Royal Queen" from "The Gondoliers" and "Strange Adventure" from "The Yeoman of the Guard" (Sullivan). Harry Thornton is responsible for "Long Ago in Alcala" and "In Old Madrid," (393) Billy Whitlock offers his "Laughing Song" and "Billy Whitlock's Party," while (394) contains "Children's Carnival" and "The Hayrick Dance," by Max Witte with his "Fairy Bells."

Now, Sir Henry J. Wood.

His Majesty King George has bestowed the honor of a knighthood upon the famous conductor of the Queen's Hall Orchestra. It is well deserved, and we tender our hearty congratulations to Sir Henry, who we believe is more or less indirectly associated with our leading talking machine concern—the Gramophone Co., Ltd., of this city.

Gramophone Mentioned in Legal Cases.

Occasionally in the law courts references are made by counsel to the Gramophone, sometimes of an instructive, sometimes of an amusing nature, as the case may be. In the latter category a good example was furnished by counsel for defendant in the famous Millennium case. Reference had been made to the opening of a mythical bank, and counsel was cross-examining plaintiff as to the opening ceremony. In a letter which plaintiff had written he stated that it was necessary that a lady should perform the opening, and he went on to suggest that Ellen Terry or Madame Patti might consent to open by telephone. Counsel: How could they open it by telephone? You mean gramophone, don't you? The lady would speak into the gramophone, and you would reproduce it? Plaintiff (quickly): Yes, that is the way. (Laughter).

In another case we had the opinion of the Lord Chief Justice on the musical value of the gramophone. Speaking of a cinematograph show, Justice Avory said: "There was an automatic piano played at one of these exhibitions." Counsel: Or a gramophone. Justice Avory: It might be said that the strains of a gramophone or automatic piano are not music (laughter). Lord Chief Justice: I think they are very good music myself. And so say all of us.

February Zonophone List.

The February Zonophone records, as usual, show a high degree of quality, both as regards titles and artists, not to say anything of recording. To mention a few: "Gipsy Life," by the Black Diamonds Band; "Beloved, It Is Morn," by Miss Violet Elliot; "The Charmed Cup," by Peter Dawson; "The Battle Eve," duet, Ernest Pike and Stanley Kirkby; "John Mackay," by Harry Lauder, and "I Wonder If You Miss Me Sometimes," by Miss Florrie Ford.

Coronation Music and Records.

The musical portion of the ceremonies in connection with the coronation of King George and Queen Mary is to be of a particularly elaborate nature, more so, it is said, than in 1902, the year of our late King's coronation. The arrangement and definite details of the music have yet to be selected, and the information may not be available for some time. But apart from the religious music and marches which will be specially composed for the occasion, it is certain that the list will contain many compositions of the old school available for recording purposes. There will be a big demand for this music, and as soon as the chosen selections are published it is tolerably sure that our manufacturers will need no stimulant to offer records in the shortest possible time.

American Engineer Retained as Adviser.

Dugald Jackson, the well-known American electrical engineer, and for several years—1887 to

1891—connected with many important Edison interests, has been retained by the British Government to advise upon the value of certain telephone property shortly to be taken over by the post office authorities.

TRADE GOOD IN THE PROVINCES.

Talking machine and record sales throughout the provinces have held up remarkably well during January, and, indeed, in some quarters trade was quite brisk. The factors reports would seem to suggest that this is not a little due to the exceptionally large number of songs which have found favor with the pantomime public, and since practically all of them may be obtained on cylinder and disc records, it is perhaps only natural that trade in this direction should be exceedingly satisfactory. Machine trade has eased up somewhat, but a fair amount of business prevails, especially in the medium-priced article. Cycle dealers, many of whom have handled the goods of this industry the last month or so, are getting restless. Shortly they will be having the new cycle models in stock, and then good-bye to the talking machine. What stock is on hand will, in many cases, be jobbed off at cost price or less, while other cycle dealers will just stack their machines and records out of the way, to make room for the cycle. 'Tis true, 'tis pity; pity 'tis, 'tis true, as the poet says, but the fact remains that the secession of interest in the propagation of talking machine trade which prevails about this time of the season in the ranks of the average cycle dealer is largely responsible for any decline in sales noticeable after Christmas. The present-giving season over, it is only natural that talking machine sales slacken up a little, yet if the dealers would but maintain and exert their best endeavors to promote trade, and by keeping fair stocks instill the public with confidence, the one great barrier to an all-the-year trade would be breached. It remains for provincial factors to lose no opportunity to impress their dealers in this wise, and develop a line of argument which, it is to be hoped, will have some little effect in staying the hands of those cycle distributors who are likely to job off their talking machine stocks or neglect to give that attention so vitally necessary at this time of the season to maintain a level sales average.

The Sousa tour throughout the chief provincial centers has had a big effect on Gramophone and Edison record sales. The demand has been greatly stimulated by the good advertisements put out by both companies, and despite the apparent lack of co-operation on the part of many dealers, enormous sales have resulted everywhere. Lockwood's Manchester branch is showing increased returns each week, and the Perophone machines are gaining in popularity throughout the North generally. Daws Clarke, of Manchester, reports that he has recently introduced a new Flex diaphragm for the new Edison model O reproducer, and business so far is very satisfactory.

The chief makes of machines and records enjoy a good demand in Lancashire and the northern counties, and judging by the amount of orders received in London, Columbia, Edison-Bell, Twins, Beka, Zonophone, Pathé and other lines sales are certainly keeping up well. The Glasgow and Edinburgh factors are doing good business with the new Edison Lauder records, and the special Scottish titles recently listed are selling freely. The talking machine trade is holding up fairly well in Yorkshire, but unfortunately there are not wanting faint signs of a disinclination to replenish stocks. From reports to hand several dealers are already selling off their goods at a little above cost price. Belfast way, Edens Osborne, as usual, is doing well. In December alone his output was £250 above that of even time the previous year, and January trade is proportionately as good.

Don't Buy Needles That Damage Records

Grain of
Bad Needles **Cleopatra Needles**

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Cleopatra Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

**Finest Reproduction,
No Ruin of Record.**

ROOSEVELT ON SUCCESS.

The Colonel Gives a Few Hints as to How the Young Man Can Land in the Roosevelt Class.

It has always seemed to me that in life there are two ways of achieving success or of achieving what is commonly called greatness. One is to do that which can only be done by the man of exceptional and extraordinary abilities. Of course, this means that only this one man can do it, and it is a very rare kind of success or of greatness.

The other is to do that which many men could do, but which, as a matter of fact, none of them actually does. This is the ordinary kind of success or kind of greatness.

Nobody but one of the world's rare geniuses could have written the Gettysburg speech, or the second inaugural, or met as Lincoln met the awful crisis of the Civil War. But most of us can do the ordinary things, which, however, most of us do not do. My own successes have come within this second category.

Any fairly hardy and healthy man can do what I have done in hunting and ranching if he only really wishes to and will take the pains and trouble, and at the same time use common sense.

Any one who chooses could lead the kind of life I have led, and any one who has led that life could if he chose—and by "choosing" I mean, of course, choosing to exercise in advance the requisite industry, judgment and foresight, none of them to an extraordinary degree—have raised my regiment or served in positions analogous to those in which I have served in civil life.

PROGRESS ON THE RANGE.

[San Antonio music dealers report that cowboys are using phonographs to quiet the cattle on the range.]

It useter be we charmed 'em
(Anyway, we never harmed 'em)
A-chantin' in the moonlight Sam Bass or Old
Black Joe;
But machinery's wheeze and rattle
Seems to suit these modern cattle,
And they act plum sore and restless when the
phonograph won't go.

Start that new contraption goin'
Or a stampede will be growin'—
Put in a Sousa record, or look out fer forty rows;
On the cowboy's field of glory
Life's another sort of story
Since Melba and Caruso took to singin' to the
cows.

So throw in a chunk from Pryor,
When the West has lost its fire;
Set the stars from op'ry houses yowlin' and raisin'
hob;
The lullabies we sang 'em
Didn't suit the brutes—gosh hang 'em!—
The demon of invention's put the cowboy off the
job.

—Arthur Chapman in Denver Republican.

McGREAL OF MILWAUKEE.

Appreciation of the Well-Known Talking Machine Jobber Which Appeared in the Milwaukee Supplement to The Music Trade Review, February 4, 1911.

As stated in the introduction to the Milwaukee supplement, a music dealer can buy practically everything he wants to sell in Milwaukee. Law-

LAWRENCE M'GREAL.

rence McGreal conducts one of the most extensive businesses in the wholesaling of Victor and Edison supplies in the country. He is a great believer in the fact that piano dealers can handle talking machines to excellent advantage. During his career he has had some experience in handling pianos and knows whereof he talks.

Mr. McGreal "broke into the talking machine business," as he expresses it, in 1897, while connected with the Conroy Piano Co., of St. Louis, which company at that time took on the jobbing of Edison goods. He became connected with the National Phonograph Co. in 1899, as Western representative and traveler and remained with them until he resigned to open a business of his own in Milwaukee. This was in 1902, and on September 1 of that year he opened what is said to have been the first exclusive phonograph store in the West at 173 Third street. He soon went into the jobbing business and has built up a very extensive business on Edison and Victor goods in Wisconsin, northern Michigan, parts of western Iowa, southern Minnesota and northern Illinois. On May 1, 1907, Mr. McGreal leased a large building at 174 and 176 Third street, directly opposite his former location. Two years ago he discontinued the retail, selling it to Miss Gertrude Gannon, who had been manageress of that branch of his business for

several years. He occupies the entire and very spacious fourth floor and half of the third floor for jobbing purposes, and sublets the balance of the building.

Mr. McGreal is a good man to do business with. He knows the retail business and is always willing to lend his aid to his dealers in the way of advice, suggestions for sale campaigns, arrangement of stock, etc.

In a series of articles calculated to show the development of the music trades in Milwaukee, some figures showing the distribution of Victor and Edison machines in the city of Milwaukee year by year come in particularly pat. They are compiled from reports obtained from various dealers and from other sources. Here is the list:

| Sept. 1. | No. | Sept. 1. | No. |
|-----------|-------|-----------|--------|
| 1903..... | 1,240 | 1907..... | 6,610 |
| 1904..... | 2,675 | 1908..... | 7,992 |
| 1905..... | 3,912 | 1909..... | 9,220 |
| 1906..... | 5,130 | 1910..... | 11,140 |

The New Idea Cabinet Co., which is owned and operated by Mr. McGreal, manufactures a line of disc cabinets, with interchangeable tops, adapting them at will for the various types of machines, thus enabling the dealer to carry a limited num-

M'GREAL'S MILWAUKEE HEADQUARTERS.

ber of cabinets, and yet be in a position to meet all the demands of his trade. Cylinder cabinets of unique designs are also made. The new line of special disc cabinets for Victrolas X and XI are meeting with the most gratifying approval by the trade. Orders have been received from several jobbers for a large quantity.

BIG PURCHASE IN SPOKANE.

Graves Music Co., of Portland, Ore., Buy Out Two Phonograph Companies for \$35,000 and Will Establish Permanent Branch in Spokane with W. H. Goodwin as Manager.

(Special to the Talking Machine World.)

Spokane, Wash., Jan. 21, 1911.

The Graves Music Co., with main offices in Portland, Ore., have purchased the entire stock and fixtures of the Spokane Phonograph Co. and the Inland Phonograph Co., paying \$35,000 for the stock and good will. The new company have taken over the wholesale warehouse at Second avenue and Browne street and the store at 7 Post street.

The Graves Co. are one of the largest wholesale and retail importing houses in the Northwest, and it is the intention of the company to establish an up-to-date branch in Spokane, carrying all lines of musical instruments and sheet music. Arrangements are now being made to ship a complete stock to this city. W. H. Goodwin is in charge of the local house, which is the first to be established in the Northwest, outside of the main house in Portland.

LIBRARY IDEA FOR DISC RECORDS.

Some of the Improved Features in the New Line of Echo Record Albums Just Introduced to the Trade.

The new "Echo" Record Album advertised on another page is a distinct advance over the original Record Album put on the market a couple of years ago by the inventor, L. J. Gerson, now talking machine buyer for the Wanamaker stores. The latest Record Album as manufactured by the Echo Album Co., of Philadelphia, Pa., has a number of new points which are worthy of more than passing interest, as will be noted in the detailed description.

THE ECHO ALBUM.

The new "Echo" Album also has a flexible back that will allow the Album to be pressed flat when without records to one-tenth its usual thickness, which allows it to be easily mailed or a quantity packed in small bulk for shipment. The Albums when filled also open out flat when on a table, so that every part of the album is horizontal. A leather pull or "tab" on the back being an improvement over the scratchy brass ring (which will easily ruin fine woodwork), has been adopted to enable the "Echo" Album to be withdrawn easily from a shelf. These "Echo" Albums are made in two sizes to accommodate either 10 or 12-inch records of any make. They are sold by all Victor distributors here and in Canada.

NEW COLUMBIA CO. STARS.

Exclusive Engagement of Nordica and Fremstad of Grand Opera Fame, Announced by the Company.

The double-page announcement concerning the exclusive engagement by the Columbia Phonograph Co., General, of Nordica and Fremstad, the world-celebrated operatic stars, whose names and eminent artistic standing are known everywhere, is of more than passing importance. This applies not only to the trade but the public at large. The facts stated in connection with the engagement of these great vocalists should be carefully considered, as these exclusive Columbia contracts were secured only after the company's records had demonstrated to Mmes. Nordica and Fremstad that the Columbia laboratory could produce recordings that would be faultless reproductions of their voices.

EXECUTIVE COMMITTEE TO MEET.

To Handle Various Matters of Direct Importance as Well as Arrange the Final Details for the Convention in July—Indications Are That There Will Be a Record Breaking Attendance at the Convention.

The executive committee of the National Association of Talking Machine Jobbers will meet at the Congress Hotel, Chicago (the Auditorium Annex), on February 19-20, for the purpose of taking up and discussing a number of matters of great importance to the members of the association. The final arrangements will also be made for the convention in Milwaukee in July, which, by the way, promises to be the most successful in the history of the association. Being the first convention held in the West since the national association was formed in Buffalo, there is a tremendous interest already manifested in the occasion and there are already indications that the attendance will break all records. At the meeting of the executive committee a program will be outlined that will provide for a line of discussion that will prove of most benefit to the jobber and will send him home feeling that the time and money spent in attending the meeting has been well spent.

At the meeting of the committee there will be present practically all the members, Messrs Blackman, Buehn, Taft and Roush having already signified their intention of being present on that occasion.

EDUCATING THE DEALER.

The Duties of Jobbers Defined by G. W. Henderson in the Course of an Interesting Address at the Recent Meeting of the Eastern Talking Machine Associates.

At the recent monthly meeting of the Eastern Talking Machine Associates, an organization formed by and composed of the members of the Eastern Talking Machine Co., Boston, Mass., for the betterment of the general business, an address was made by G. W. Henderson, The World representative in that city. It makes pertinent reading. He said:

"In the general run of commercialism the jobber seems to be getting eliminated, but in the talking machine field it seems that he is getting stronger and stronger. He is the backbone of many dealers. The jobber goes into a city, arouses enthusiasm into a new man and before we know it a new dealer is created. The new dealer starts in, confident in the thought that all he has to do is to open his store doors mornings and the people will flock in. This will be particularly true if the jobber has pictured a glowing account of the ease in securing wonderful profits selling machines and records.

"What is the result if the dealer is left to his own efforts and the jobber confines his interests to saying: 'I hope Mr. Jones will get along all right.' Now you will admit that there are quite a few dealers in New England, and I presume the same conditions exist to a more or less extent right through the country, who have started in with a brass band noise and to-day are not making any more noise than a tin whistle. I hear the statement again and again as to why some of the old dealers do not display the same enthusiasm as they did when they started in. The reason for it is that the talking machine business is a science; to be a successful dealer one must know as much about talking machines as a druggist about drugs, and when a jobber starts a new man apparently under the best conditions and after a few months withdraws his support, so to speak, and by 'support' I mean his tuition, the new dealer gets discouraged at the many phases of the new business and sort of lets things go along as they will.

"What the new dealer needs is education. Who must teach him? The jobber. The jobber's salesmen must not only be salesmen, but they must be business advisers. They should be trained to act as the new dealer's counsel; advise him about the technical features of the machines; instruct him on the scope of the records and their value as a

permanent monthly income; assist him in writing advertisements and in the promotion of business; help him secure a firm footing on the rocky ledge of credits; show him about window displays; about repair work and in the sale of small specialties; and, in fact, aid him in a hundred and one ways for the successful growth of his business.

"When you consider what a jobber's salesmen must be able to do, or what they should be able to do, is it any wonder that the position is an exacting one. He must be trained as a talking machine specialist. When all jobbers and jobbers' salesmen will remember that there is a great deal more than the bare sale to the dealer, there will be but very few non-energetic or lazy dealers. Why? Because the jobber will not waste ten minutes with him; the dealer must be a live one and stay alive, and he will get every encouragement. Further expansion of the general industry will occur when the 'weeds' are hoed out, which will be of immense benefit. And when you reflect what the jobber's salesman must be and that he must be a scientific talking machine and business man, it certainly is a high honor to be able to successfully occupy that chair."

PIANO HOUSES AND TALKING MACHINES.

The entrance of Wm Knabe & Co., the widely known piano manufacturers, into the talking field, by taking on the line of the Columbia Phonograph Co. in their New York warerooms, the particulars of which are published on another page, will doubtless arouse a great deal of interest in the trade at large. It may also be said that The World is authoritatively informed that other piano houses of prominence are also contemplating the talking machine proposition in a serious way. As has been before stated in The World, the various manufacturers have always considered the music trade second in importance to the exclusive dealers as an avenue of distribution for their products.

William Mermod, of William Mermod et Cie, St. Croix, Switzerland, manufacturers of talking machine specialties, is now in this country and will remain for some time. He is the son of the senior Mermod, deceased, and is the largest stockholder in the company.

The Jacot Music Box Co., New York, have surrendered their privilege as distributors of the Victor Talking Machine Co. and will hereafter handle the line as dealers only.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., General, who has been on a Southern trip, visited Baltimore, Washington, Birmingham and Chattanooga. He was accompanied by his daughter, and returns to-morrow (February 16).

No man is as stupid as he who is unsuccessful and stubbornly persists in holding to the methods that make him so, refusing to try up-to-date methods because he "does not believe in them."

WOOD DIAPHRAGMS

What is more important to a reproducer than a good diaphragm?
Wood possesses the element that beautifies the reproduction of sound, and we have produced a

Built Up Wooden Diaphragm

which imparts so sweet and natural a tone that it never fails to charm the listener.

You will marvel over the vast difference between wood and metal diaphragms.

They improve the tone, increase the volume of sound and articulate clearly.

Made for Edison "C", "H", "O" and "R" reproducers and Victor Exhibition Sound Boxes.

Dealer's price, \$3.00 per dozen. Retail 50c. each.

We would be pleased to receive a sample order.

S. B. DAVEGA CO., 126 University Place

 where we are not actively represented

MAKING A RECITAL HALL OF A STORE

The accompanying illustration shows the manner in which an Illinois dealer, C. O. Fenn, of Bloomington, manages to give talking machine recitals in a comparatively small store. The settees, of course, are removed when the concerts are not in progress.

On Mondays, Wednesdays and Fridays from 2

to 4 p. m. Edison concerts are given, while the same hours on Tuesday, Thursday and Friday afternoons are devoted to the Victor. While no further details are at present available, the mere facts stated above stamp Mr. Fenn as a live wire, whose efforts are no doubt yielding fruitage in an excellent business.

FOUND CONDITIONS GOOD.

F. K. Dolbeer, Sales Manager of the National Phonograph Co., Thus Reports Upon Return from Visit to Western Jobbers.

F. K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., who was in Pittsburg, Cleveland and Detroit, calling on the trade, reported for duty at the factory Monday morning. Of his trip he said: "I went out for a hurried visit to some of our jobbers on a special matter and found everything very satisfactory so far as business is concerned. Orders are now not so

For Sale or Trade.

large as during the holidays, but nevertheless they represent a surprising volume of trade for this season of the year. The factory is fully engaged and we are sure the spring sales will come up to expectations."

REHEARING OF CASE REFUSED.

The petition of the Victor Talking Machine Co., Camden, N. J. for a rehearing of the case against the American Graphophone Co. (Columbia Phonograph Co.) was denied recently in the United States Circuit Court of Appeals, sitting in New York. There was no argument nor any opinion written. The order for a dismissal of the case and the bill for costs in both the lower and final courts had previously been filed and a motion for a stay had also been refused. This is the contempt suit in which the defendants had been charged with infringement of the Berliner patent and fined \$1,000, the finding being reversed on review.

The order for an appeal in the case of the American Graphophone Co. against the Victor Talking Machine Co., involving the charge of an infringement of the Jones patent, decided adversely to the complainants on a demurrer recently, was signed and the argument will be heard in the United States Circuit Court of Appeals, Philadelphia, in March or April.

A LIVE PROPOSITION.

The shrewd man takes advantage of his opportunities. The keen-eyed sees them where others see nothing. These two elements were combined in a merchant out West.

When he came to business one morning he saw the store on the left of him placarded:

"Great Bankrupt Sale!"

The store on the right had up a big banner:

"All Goods Going at a Bargain!"

The merchant telephoned to a painter. In an hour an immense sign was over his own door:

"Main Entrance!"

SOUND BOX REPAIRS.

Recent Literature Covering Repairs on the Victor Exhibition Box.

(Special to the Talking Machine World.)

Philadelphia, Pa., Feb. 6, 1911.

It must be admitted that the methods of the Victor Talking Machine Co., Camden, N. J., are along the best possible lines, so far as effective publicity goes. Every phase of their marvelous business is exploited in a manner that cannot help but appeal to their trade in the most convincing manner. For example, their latest announcement is made relative in their booklet, "Instructions for Repairing the Victor Exhibition Box," a detail, presumably, but very much up to the minute.

In this particular the company say: "You should know that the correct reproduction of Victor records depends primarily on the sound box. This fact has prompted us to prepare a booklet minutely describing and illustrating the proper manner of assembling and adjusting Victor exhibition sound boxes. These instructions should be kept permanently in the repair department; for we feel sure that they will be the means of saving you a lot of aggravation, time and money in making repairs. We have illustrated the necessary tools in this booklet which our own experts use in assembling sound boxes, and we urge that every dealer secure a complete set. Poor tools make poor workmen."

COLUMBIA MERCANTILE CO.

The Latest Addition to the Talking Machine Stores of Milwaukee Is the Foregoing.

(Special to the Talking Machine World.)

Milwaukee, Wis., Feb. 10, 1911.

The Columbia Mercantile Co. have just opened their new store at 829 Winnebago street and are drawing most of their stock from the Kunde store. Mr. Ballash is in charge of the new branch.

"Business is very good," said A. G. Kunde. Trade is decidedly better than at this time a year ago and we have plans under way by which we hope to increase our trade each coming month."

Just as soon as Mr. Kunde closes the deal for the renewal of his lease at 516 Grand avenue, steps will be taken for the installation of a new store front.

L. C. McChesney, advertising manager of the National Phonograph Co., attended the joint convention of the Association of American Advertisers and the National Association of American Advertising Managers, at Chicago, recently, before which he head a paper.

Henry J. Hagen, the recording agent of the Universal Talking Machine Manufacturing Co.'s laboratory, is now in Cuba. As Mr. Hagen is acknowledged one of the finest recorders in his line the Universal company are looking forward to listing a list of records of the Spanish-American type that ranks with the best executed.

Recently Henry Siegel, widely known as president of the Siegel chain of department stores in New York, Boston and Chicago, ordered, through Mr. Feinberg, a Grafonola Regent in Circassian walnut, to be placed in his home, "Driftwood," at Mamaroneck, N. Y.

The "Peacock" window display No. 21 of the Victor Talking Machine Co., Camden, N. J., is believed to be one of the most effective of the series. "The Peacock," with its gorgeous array of colors, is one of the most unique and striking attractions for a centerpiece that it is possible to conceive. The bird is made of papier-maché, hand colored true to life, and is a trifle larger than life size, the body being thirty inches high, while the tail is five feet high and five feet six inches wide. Attached to this tail are seven Red Seal records with record rings, and hand-colored pictures of Caruso, Melba, Farrar, Tetrzinni and Gadski.

WITH THE TRADE IN GERMANY.

Disc Record Manufacturers Demand Protection of Leipzig Chamber of Commerce Owing to Increase in French Tariff on Records—Taxing Talking Machines in Prague—Discussing the Matter in Berlin—Popularity of the Hornless Machines—Itinerant Dealers Hurt Holiday Trade—Other Comments.

(Special to the Talking Machine World.)

Berlin, Ger., Jan. 28, 1911.

The representatives of the talking machine disc industry at Leipzig have petitioned the Chamber of Commerce of that town to use its influence to safeguard their products, the sale of which in Germany is said to be endangered through the activity of Pathé Frères, of Paris. This step was instituted because France recently increased the import duty on German discs in its new tariff from 30 to 60 francs per 100 kilograms. This action will kill the disc export trade, which was hitherto flourishing. Germany levies only a duty of 3 marks per 100 kilograms, which stimulates the importation of foreign discs. The Chamber of Commerce has taken action on the facts furnished regarding this flourishing branch of the industry, and submitted them to the Imperial government, proposing as a means of protecting the industry and staving off the impending ruin that these Pathé Frères discs should be taxed at 40 marks per 100 kilograms in the same way as are the parts of other kinds of musical instruments and the necessary articles to play them, like violin bows, which are also taxed at the same rate as the instruments themselves.

Records That Make History.

The talking machine record plays a most important role in anthropological and ethnographical science. The Vienna Academy of Sciences has begun a collection of records which already amounts to more than 1,000. In the department devoted to this purpose hangs a big map on which the districts from whence these phonographical reproductions have already been designated, and they are marked with small flags. This gives a clear indication how the phonograph of the scientific traveler has already penetrated into the most distant parts of the world; in brief, into deserts and mountain retreats of barbarous people. The last acquisitions are dialects from lower Austria and from Sweden, in the form of speech and song, and records of the voices of African Bushmen. After the fierce calls of savages one hears on the records voices in connection with art; one hears Sonnen-thal and Levinsky speaking. Furthermore, the voices of all the members of the Imperial House of Austria are here perpetuated. The catalogs, which fill a big bookcase, contain the words taken phonographically, with the recording date of each.

Taxing Machines Now the Vogue.

House owners in Prague have received a request to declare which of their tenants possesses a grand piano, upright, harmonium, gramophone, phonograph or orchestration, etc., and whether such an instrument is used for amusement only, or for giving instruction thereon. The answers to these questions will be used to prepare statistics, on the strength of which a tax by the municipality might be levied on all instruments which are used for pleasure purposes only.

In Berlin the question of introducing a tax on public amusements has not yet been decided. At a meeting of the town councillors the whole question was handed to a commission to prepare a schedule for such a tax. Unfortunately, in respect of this question no information has yet been furnished the commission by the different talking machine manufacturers who have branches in Berlin. If one considers how energetically the organizations of other branches of trade tackle any question vital to their interests and reads their exhaustive pamphlets, then one cannot do otherwise than regret that the Association of the United Berlin Mechanical Music Manufacturers have shown such a lack of unity and activity. But, unfortunately, the same thing is now happening at Munich, although the town is already preparing a tax on public amusements, from which naturally the orchestrons and talking machines would suffer most.

It is true a big meeting has been called to protest against such a proposal, but those who sent out the invitation to attend the meeting are only the unions of the hotel and cafe keepers, musicians and owners of cinematographs and small theaters, while the unions of the mechanical music branches are holding aloof, though their interests are in a great measure at stake. Their presence would certainly have been desirable, if only from the view of agitation, because the others present numbered several thousand.

Hornless Talking Machine Now in Favor.

In the talking machine trade the hornless instruments are coming more and more to the front, and they may be now classed among the most salable goods. Cheaper types have appeared lately which enable the dealers to sell to customers of moderate means. The dealer finds that these cheaper lines do not make any intending buyer hesitate long before he actually concludes his bargain. The hornless instruments are casier shipped and therefore also more salable than those with horns. It was especially this part of a talking machine which was often a great source of annoyance to the dealer, as it was easily damaged, even with the utmost care.

A Disagreeable Development.

In the disc business there has appeared, especially during Christmas, a most disagreeable development, which was, however, in evidence before, only was not so prominent. Many shops, which were otherwise empty, are, for the present taken by the so-called "occasional" dealers, who try to do business by offering discs at specially cheap prices. It is unnecessary to say that these double-sided discs, which are sold at 1.10 marks (25 cents), cannot be classed with the best goods. These "occasional dealers" try to sell, at the same time, the cheapest machines. This reacts again and the public is not disposed, at least for the present, to touch any talking machines at all. The chief drawback with these cheap machines arises from the fact that they have a comparatively short spring, which prevents the execution of a disc of any size. Further, they have generally an inefficient sound-box, which gives an impression that the manufacturers are not able to produce perfect machines. Steps should be taken by reputable dealers to expose the tricks used by these unscrupulous "occasional dealers," and explain the difference between reliable and inferior machines.

UNCLE HIRAM TO HIS NEPHEW.

Learn to Listen, Good Advice for One Starting Out in the World.

"The little piece of advice that I would give you this morning, Stephen," said Uncle Hiram to his hopeful young nephew, "is this: Learn to listen.

"We all think that our own experiences are the most interesting that ever were, that the things that have befallen us are the most wonderful; but don't monopolize the conversation, Stephen.

"As a rule, what happened to you doesn't interest the other man at all; what happened to him is what interests him most, and if you are wise you will let him tell you about it; and beware of trying to match his experience with something greater out of your own, which, however greater it may have been, will only make him think less of you, for naturally it belittles him, and that is something that you want always to avoid.

"So let the other man do the talking, Stephen, while you listen. Your interest in what he says will commend you to him as a person of intelligence and appreciation. As he talks on he will have a higher and higher opinion of himself, and as surely, as you listen, a better and better opinion of you.

"Stephen, learn to listen. At your age you should not be talkative, anyway; reticence is a fine trait in any man and especially to be commended in the young; and if to that you can add the grace, indeed the rare grace, of being able to listen with earnest attention you will get on. Many a man has prospered in this world by letting some other man do all the talking.

"That will be all, Stephen, this morning."

The man who is satisfied with things as they are never makes them better.

J. F. BOWERS REVIEWS CONDITIONS.

Popular Official of Lyon & Healy Summarizes Results in the Chicago Music Trade During the Past Year for the Tribune of That City.

James F. Bowers, of Lyon & Healy, and former president of the National Talking Machine Jobbers' Association, has just contributed the following review of trade conditions for the past year to the Record-Herald, of Chicago:

"The year 1910 has been an excellent one in the musical instrument industry. It has been especially noteworthy for the demand for goods of the better class. The time has gone by when Chicago was not to be considered seriously as a producing center of musical instruments. The standard harp of the world, so recognized by its use in practically all the great European orchestras, is made here in Chicago, and now the same factories are producing a high-grade piano which is being accepted everywhere by the best authorities.

"Nearly all the piano factories in Chicago and in the near-by towns have been busy during the year and many of them have worked overtime for the past three months.

"Player-pianos—that is, the pianos which may be played by means of a paper roll—have gained greatly in favor, owing to the better type of instrument produced. The latest player-pianos now have the piano. The music is cut very accurately now and an 88-note scale, and, therefore, play every note in there has been a decided improvement in the matter of expression-controlling devices, so that very artistic effects are possible.

"The harp, mandolin, guitar and banjo are enjoying widespread favor. Practically every college and school has its glee and mandolin club and the growth in the number of amateur orchestras is responsible for the largely increased number of harps now being sold.

"Talking machines have continued to increase in favor, especially the higher-priced instruments made in the form of a cabinet. These instruments, in connection with beautifully made records of the voices of great operatic artists, furnish never-ending pleasure in any home circle.

"The sheet-music and book business is about equal to the preceding year. The new copyright law by which the composer receives a royalty upon every player-piano roll and talking-machine record, as well as upon the sheet music, has added materially to the income of American writers."

HUNG IN A PROMINENT STORE.

Some Instructions to Clerks That Possess Real Value—Touch Vital Points.

All clerks will please give strict attention:

"Don't fail to know what goods are in your stock, and where to find them quickly.

"Don't permit a customer to leave the store dissatisfied or offended, before sending for some one higher in authority.

"Don't argue or contend with business associates in the presence of customers.

"Don't take an address for goods to be sent, a c. o. d. order, or a charge, without being positive that you take it correctly.

"Don't always show the cheapest goods first; sales are sometimes lost in that way.

"Don't get excited in times of rush, or any other time. It shows the customers that you are inexperienced, and unaccustomed to an active business.

"Don't be discourteous. It is a fault that cannot be excused.

"Don't disregard instructions from those higher in authority; and never say, 'I was not hired to do that.'"

Without enthusiasm a man is only a statue.

Recently Geraldine Farrar, the operatic prima donna, visited the talking machine department of the Aeolian Co., New York, and expressed her satisfaction with the harmony displayed between the tones of the great organ in the recital hall in connection with the playing of a Caruso record on the Victrola. The great artist said it was marvellous.

HOW THE "VICTOR" HELPS WINDOW DISPLAYS

A Special Department Which Turns Out New Display Every Month—What Conditions the Display Must Fit—A Specially Successful July Exhibit—Interesting Observations.

By ELLIS HANSEN in Printers' Ink.

About four years ago Printers' Ink, in a well written article under the heading of "Window Wisdom," said: "Neglecting one's show window is the greatest of the seven deadly advertising sins."

A well dressed show window may be compared with a friendly greeting to a prospective customer. Everybody looks into the windows, either consciously or unconsciously, and retail dealers should be educated by manufacturers to realize how many friends a store gains through well dressed and interesting window displays. A dealer pays one-half of his store rent for location and window space, and it was to aid Victor dealers in deriving all the possible benefits from their windows that the Victor Company inaugurated its window display department.

While the Victor Company is probably not alone in realizing the tremendous influences that good windows exert in stimulating trade, they, nevertheless, have had the courage of their convictions, and are maintaining a large and costly department for designing and building exclusive Victor trims, and exclusively demonstrating how this important method of retail advertising can be converted into a national advertising proposition of great magnitude.

About ten years ago, when I entered the music business as a window designer, I was instantly drawn toward the talking machine. The Victor appealed to me like a modern Aladdin's lamp, and offered to the designer a field as wide as the entire world of music, and the opportunity of arranging timely windows for any and all seasons.

Fortunately, my firm, Sherman, Clay & Co., of San Francisco, did not restrain me in regard to designing and planning these displays, and in a short time the window devoted to the Victor became the most popular of all our windows, and requests for photos came from everywhere.

Even before I called to Camden to take up the work for the Victor dealers in general, the Victor Company had for years advised their dealers to take proper care of their show windows, and to give window displays more attention, even offering prizes for the best Victor windows. They followed closely the window advertising of Lyon & Healy, and of Sherman, Clay Co., the window displays of these two stores proving to them that all Victor dealers should be educated into this method of advertising.

It was the original intention to have me travel around the country, build displays for each dealer upon whom I called, talk the value of window trimming, and to arouse sufficient enthusiasm in each dealer to make him realize the real value and importance of his window. With the assistance of an artist and a boy and in a very small room in one of the factory buildings, I designed six windows, photos of which I expected to leave with each dealer for their future guidance after I had arranged one display for him.

Then, after the six windows were completed, we advanced to the idea of cataloguing these displays and offering to sell the material to our dealers at cost price. It took us several months to get the department ready, but during that time the idea of ready-made window displays was thoroughly exploited in the Victor house organ, The Voice of the Victor, and when we issued our catalogue success was instantaneous. The orders have rapidly increased each month, and at the present time we have a large force of assistants and helpers, and occupy the entire floor of one of the large Victor buildings.

These displays are sold at actual cost. Our dealers were quickly convinced that the very low price we asked was not an expense, but a first class investment, and we now have the confidence of many hundred dealers throughout the country, to the extent that they have signed our standing orders for all Victor displays issued during the next twelve months. We sell most of the windows for five dollars, but if they were made singly they could

not be prepared for many times that amount, for we have in our employ some of the best artists and show-card writers to be found, and insist that these designers take all the time that their work requires.

To design and manufacture window displays in quantities is by no means an easy task. In the first place, these displays must be striking. While most persons are fascinated by a pretty window, beauty alone is not enough to make a successful display. Each window must not only tell an interesting story, one that will be understood without too much mental effort, but it must, like all other advertising, create a new desire to possess the article displayed. The buying public is too busy to linger in front of a show window, but if

ELLIS HANSEN.

your point is well illustrated, so that it can be understood at a glance, it will unconsciously create sufficient interest in most people to cause them to stop, and that is the first and main object of a show window.

On the other hand, these displays must be inexpensive. It would be unfair to the smaller dealers to design and manufacture expensive displays that only the larger stores could afford to buy.

Another hard problem is to prepare displays for shipment. When it is taken into consideration that we are not only shipping window displays to nearly every point in the United States, but to Europe, South America, Canada, Hawaiian Islands, and even to China and Japan, it will readily be seen that if the material is too bulky or too heavy the cost of transportation will be entirely out of proportion to the entire cost of the display. We issue these news displays every month, and great care is taken to make them as compact and as easy to assemble as possible.

A large show window, containing electric lights and everything else that goes to make up a modern show window, is erected in our shop; we, therefore, see each new display just as it will appear in Victor dealers' windows.

The success of the window display plan, however, depends largely on the co-operation of the dealers, many of whom have written us, offering valuable suggestions.

Nearly all dealers who originally bought our displays have bought again and again, and have shown a great deal of interest and patience in setting up our display windows of odd shapes. Our displays have been so simplified that it requires very little effort to put them together, but at first we underestimated the difficulties with which many of our dealers had to contend.

I have often been asked how the ideas for the

many displays we issue originate, and while it is impossible to put down any set rules for window ideas, it is not a hard matter to make attractive and interesting displays; for instance:

In our Fourth of July window, shown herewith, I took advantage of the leading magazine and newspaper crusade urging the celebration of the Fourth in a sane and safe way, and we presented this window to our dealers with an illustrated circular describing the Fourth of July window in this manner:

The background consists of two large American flags, draped fan shape. In the center is what appears to be a full-sized cannon; the wheels and tail pieces are not different from the real cannon, but the body consisted of a Victor with the horn for the cannon proper. In front of the display is this sign:

THE NEW AND SAFE WAY OF
CELEBRATING THE FOURTH.

Between the two flags is a large shield with the following copy:

ON THE GLORIOUS OLD FOURTH

Bombard your friends and neighbors with patriotic music from the cannon horn of your VICTOR.

They'll enjoy it immensely—and so will you.

We'll be glad to furnish the ammunition by supplying all VICTOR records you may wish.

Come in and let us fire off a few records for you NOW.

And directly below, coming from the cannon horn of the Victor, which has just discharged a Victor record, is a cut-out card, illustrating not the smoke of battle, but the musical burst of a national song.

Back of the cannon is a little girl, her foot on the trail piece, and she has supposedly just fired off the record in her patriotic enthusiasm. She has a canteen hung from her shoulder on which appears:

I bought VICTOR RECORDS
Instead of Fireworks.

showing that she has been taught how to celebrate in a sane and safe manner. Directly in front of the girl are six Victor records built in cannon-ball fashion, each being a record with the name of a good patriotic air on it. The knapsack suspended from the stacked guns bears the words, "Victor Record Ammunition," with lists of patriotic records.

The drum resting beneath the knapsack bears strong copy on its head, showing that "You Can Face the Music in Perfect Safety," etc., and the entire window making an effective display, as shown in the reproduction.

This window could not help but impress the fact that there is another way of celebrating the Fourth of July other than by fireworks and danger, and this is, the Victor way and safety.

Some Victor dealers carried the idea still further. One dealer issued a package, which in appearance was exactly like a firecracker, and when directions were followed and the package opened it revealed a copy of the July Victor advertising of new records. This, in connection with similar newspaper advertisements, made the dealer's store "the talk of the town," and brought in considerable business.

I have also designed several window displays along the lines of the Victor National advertising, and I am, at the present time, working on a display that was suggested by one of the recent magazine ads, and this display promises to eclipse all my former efforts.

Only a few months after we sent out our catalogue of the first six ready-made windows, the plan was introduced in Europe by the Gramophone Company, Ltd., and on my recent trip abroad I had the satisfaction of seeing some of these displays not only in England, Germany and France, but in smaller countries like Norway and Denmark. In the United States, several firms have taken up the idea, and one company is closely following out the plan inaugurated two years ago by the Victor Co.

Yes, Printers' Ink is right. "Neglecting one's show window is the greatest of the seven deadly advertising sins," and, of course, to my mind, it is the greatest.

RETURNS FROM JAPAN.

J. O. Prescott, Who Has Taken a Prominent Part in Talking Machine Affairs in Japan During the Past Year Returns to New York Owing to Effect of Japanese Climate on His Health—Great Opportunities in Land of the Mikado According to Mr. Prescott.

J. O. Prescott, a well-known expert recorder, who has been connected with laboratory work for many years, returned from Tokio, Japan, January 18. A year ago he went to the empire of the Setting Sun to take charge of a talking machine plant known as the Japan-American Phonograph Manufacturing Co. as general manager. He intended to stay the full term of his contract, namely, three years, but the climate was against him and he came back very nearly an invalid, and has been recuperating since at his home in Summit, N. J.

In a pleasant chat with *The World* last week he said: "If my health had permitted, I should have stayed, but the atmosphere of Japan does not always agree with an American. It lacks ozone and the air is so humid that you soon fall into a condition of lassitude difficult, if not impossible, to overcome. To be sure, if you can adapt yourself to Oriental ways; that is, take things as they come in an indifferent, easy-going way, perhaps one could manage. An active American, coming from home full of life, snap and ginger, and wanting to take hold and accomplish something the way we do it here, is forced to give up or become Orientalized. Excuse me, I am not built that way.

"Perhaps I worked too hard getting the plant in proper shape and on a paying basis, which I did—at it day and night—that I became completely prostrated and I had to give up or take the consequences, not pleasant to contemplate. Japan is a wonderful country for the talking machine and it is a great future market. I will probably get into harness here again and re-enter the field at an early day. I believe the next couple of years will witness the introduction of many improvements that will show greater progress than has ever been known in the talking machine trade. My brother, F. M., is now in Europe, but what he is doing I have not the faintest idea."

GOLD GOT BY PHONOGRAPH.

A Gold Coast Cook Who Turned Modern Science to Account.

"I was reminded by a story I saw the other day," said a soldier of fortune, "of some of my experiences on the Gold Coast, when I had a negro cook who had the same fondness for cats as the cook mentioned by another traveler. My cook was named Quace Mensch, and he had an interesting career.

"He was an Accra, and he had been trained by some Englishmen, who had taken him to London. There he had got into a fight of some kind, for which he had spent a year in jail, but he had learned to cook well, and that is something that is worth while in that part of the world.

"Quace Mensch served me so faithfully one year that when I went to England I asked him what I should bring him on my return. He said there was nothing he would like so much as a phonograph, into which he could talk and make records of his own. I thought this was an odd preference, but when I went back to the Gold Coast I took a machine with me, and Quace Mensch was delighted. He served me faithfully for a while, and then he suddenly disappeared. I learned that he had taken to the bush. It was a long time before I heard from him again, and then one day he turned up loaded down with deeds to land which was suspected of bearing gold.

"I asked him how he got the deeds. He grinned. I cannot attempt to give his dialect, but he said the phonograph was responsible.

"I talked into the machine in the Fanti language," he said. "I said, 'Chief, this man is a big juju man, and a friend of mine. You must give him your whole place if you want me to be good to you.'"

"I went to village after village, carrying the

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

MUSIC MASTER

Means extra \$ DOLLARS \$ in profits to the dealer who handles the MUSIC MASTER WOOD HORN.

This horn transforms the Talking Machine or Phonograph into a Musical Instrument. Owners of these machines buy it eagerly. With it they realize their fullest expectation in the reproduction of both instrumental or vocal music. The MUSIC MASTER is more than a horn—it is a sounding board; constructed of solid wood.

It has tone quality which is impossible in horns of metal or veneered wood.

Should your dealer be unable to supply you, write us, and we will send you a sample line of OAK, MAHOGANY or SPRUCE, DISK OR CYLINDER HORNS on approval. If you are not perfectly satisfied with the merits of the MUSIC MASTER, you can return them for credit.

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

talking machine, and saw chief after chief. I would place the phonograph so they could not see what it was like, and then I would say to the chief that I was a juju man, and I was prepared to prove it. He would not believe me, but when I had got him quiet I would turn on the phonograph and tell them that the great juju was speaking. Of course, they had not heard of a talking machine, and when they heard this voice coming from a little horn they would get scared and would beg me to take all they had if only I would promise to get the great juju to look after them. I always promised and they would make haste to deed to me any piece of land that I asked for.

"That negro, of course, had no such thing as a conscience, and you can see what civilization had done for him. I have heard recently," said the narrator to a Sun reporter, "that he is now the richest man on the whole Gold Coast, and he got all he has out of the phonograph I gave him."

Enthusiasm is just plain brain juice, squeezed out and reduced to its highest action power. And

the harder the squeezing the greater the enthusiasm. Squeeze!

DEFINING A PRIVILEGE.

How One Concern Prevails Upon Help to Work Overtime Cheerful'y.

There is a business concern not far from New York City that never hires a man, woman or boy, without making it plain that for six days in the week the office hours are from eight in the morning until five at night. As a matter of fact, the office closes at noon on Saturdays.

That is, if a cheerful willingness is shown by the employes to remain at work all or a part of Saturday when the stress of business demands it. If on such occasions an unwillingness to remain as long as needed is shown by even one employe of any importance, the whole force is kept at work for full time on the Saturday next succeeding. As a result, no employe ever advises another to object. "We give Saturday afternoons as a privilege, not a right," says the manager.

TRADE NEWS OF THE MONTH FROM CLEVELAND

Business Keeps Up in Very Satisfactory Manner—Various Indications of Prosperity Among Jobbers and Dealers—Talking Machine and Moving Pictures in Advertising—Recent Visitors—Eclipse Musical Co. Lease New Quarters—Columbia Co. Buy Out G. J. Probeck Co.—How the U-S Phonograph Co. Is Progressing—Other Items of Interest.

(Special to the Talking Machine World.)

Cleveland, O., Feb. 8, 1911.

Satisfactory conditions in the talking machine trade continued throughout the month of January, from the viewpoint of both the Cleveland jobbers and retailers, and February is making a showing of still further advancement. Expansions, improvements and removals to more elaborate quarters is evidence of general prosperity in the trade and confidence on the part of the dealers in the future possibilities of profitable business.

It is remarked by the dealers that there is a broadening demand for the higher grade machines and operatic records, and in comparing the present taste and artistic attitude of the public with those of its former indulgences, one cannot but realize that the standard has shifted very noticeably in an upward direction. The people are joining with the manufacturers in elevating the status of the talking machine in its more elegant design and mechanical perfection, as well as the perfect reproductions of the records resulting in a wonderful versatile musical instrument.

The February Victor, Columbia and Edison lists of records are attracting many purchasers. "For You Alone," in English, by Caruso, and two solos by Constantino, with the soprano and tenor duet, "Alma, Where Do You Live?" by Spencer and Ormsby, are leading features.

For the first time, probably, the phonograph has been made one of the causes of a divorce suit. The wife of a Cleveland citizen has just secured a divorce and, among other allegations, she testified that every time she had company her husband went to sleep and that he also deprived her of the use of her phonograph.

The Alhambra, a new theater recently built on Euclid avenue, was formally opened January 14. An innovation is the installation of an organ. The fact that a good organ is a good orchestra in small compass which can be played by a single person instead of a small army, and that it therefore possesses economic advantages as well as artistic ones over the usual small theater orchestra, is coming gradually to be recognized. If the Alhambra experiment wins the public favor it will be an example for other theaters, as well as for the town halls of music-loving villages, too far from the center of population to hear the great orchestras.

Cleveland now has 250 motion picture theaters, according to the report of the building inspector. During the year 1910 a total of twenty-five new theaters were constructed in the city, besides a number in the suburban towns. Applications for permits for a number of others are filed for this year.

The value of the talking machine and motion picture exhibitions as attractive advertising features has been recognized by the Cleveland Illuminating Co., who have purchased the latest model Edison kinetoscope, which it is using in connection with the phonograph to throw pictures upon a screen in the show window of the company's exhibit room. The pictures show devices in actual use of notable electrical installations and some of the wonders and novelties of electricity. It is the intention of the company to use the kinetoscope and talking machine, in connection with lectures on the subject of electricity, which will be given before various clubs and societies in Cleveland.

One of the most welcome visitors in talking machine circles of Cleveland is Henry H. Schwenker, traveling expositor and repair expert of the Victor Talking Machine Co. He spent a few days the first of the month with the different dealers exemplifying the construction and mechanical detail of the Victor, illustrating, with proper tools, the simplicity of repairs. He certainly is a great talking machine evangelist and his trail is lined with converts.

F. K. Dolbeer, general manager of sales of the National Phonograph Co., who was in town the first of the month, was pleased with business con-

ditions as he found them in his travels. He intimated a distributor for Edison goods would soon be appointed for Cleveland.

A. F. Peebles, who was for several years with the Columbia Phonograph Co. in Cleveland, is now with the Diamond Rubber Co., 1876 Broadway, New York, in the adjusting department. He visited here last week with relatives and a host of friends.

Thomas F. Green, traveling salesman of Ohio for the Victor Talking Machine Co., spent several days in Cleveland and vicinity the latter part of January and first of February. The dealers gave him a hearty greeting and he rounded up a good bunch of orders. Mr. Green said the business was in a good healthy condition throughout the territory he covers.

Geo. D. Ornstein, manager of the traveling department of the Victor Co., was a guest of the dealers last week. One of the most popular men in the trade, he was given a hearty greeting.

E. R. Burley, formerly with the Eclipse Musical Co., of this city, now with the Neal, Clark & Neal Co., Victor and Edison distributors of Buffalo, spent a few days in the city recently. He was soliciting orders here and said he found trade good in all the towns he had visited.

J. C. Roush, of the Standard Talking Machine Co., of Pittsburg, was also a visitor the first of the month.

A Splendid New Talking Machine Store

One of the most desirable storerooms in the new fourteen story athletic club building located at 1130 Euclid avenue, in the heart of the shopping district, has been leased by the Eclipse Musical Co. for a long period, and has been fitted up in elegant style. The artistic decorations, with a color scheme of white and gold, the commodious full length plate glass booths most conveniently arranged and the large and beautifully furnished reception hall, all brilliantly electrically lighted, impresses one as being about the finest and most modern combinations in the way of a talking machine salesroom to be found in the country.

The wholesale department will be located in the same building, and T. H. Towell, the president of the Eclipse Co., states that "opening day" will be Saturday, February 18. Cleveland may well be proud of such enterprise. The company will handle the Victor and U-S Phonograph goods exclusively.

The Talking Machine Co., under the management of S. A. Mintz, is doing a thriving business. The company handle the Victor and Edison goods.

Charles I. Davis says every day is an advance over the previous day's sales of both machines and records. He is building up a fine trade in Edison goods as well as Victor.

One of the recent events in talking machine circles has been the sale of the G. J. Probeck Co.'s store to the Columbia Phonograph Co. The transfer was made February 1, under the supervision of Marion Dorian, treasurer of the Columbia Co. Geo. R. Madson has been appointed Cleveland manager, and it is his intention to greatly extend operations, making this city more of a distributing center than heretofore. With this end in view, he is negotiating for a large store in the vicinity of Euclid avenue and Ninth street, which will be fitted up in the most modern style with all the attractive accessories at the command of the company.

Geo. J. Probeck will continue in charge of the Dictaphone department and will have his office specially equipped for the business in the new store.

A. W. Robertson, who has been with and of the company for a number of years, will remain in the business office.

Miss Violet Voelker, who has been with the Columbia folks for the past six years and who is one of the most inductive demonstrators, will continue with the company.

Viewed by the citizens of Cleveland as among the more important enterprises of the city are the phonograph and record manufactories of the U-S

Phonograph Co. The new year is reported to have started off with a fine volume of business. The company has just placed a new low priced model of its machine on the market. It is called the U-S Junior, and will have all the improvements shown on the higher priced models, playing both the two and four minute records. There has been a large demand for such a machine and this announcement will be of particular interest to all talking machine dealers, as they can now supply an improved machine which will give the most select quality of music at a moderate price.

The U-S record department has just been installed in larger and more suitable quarters. This was found necessary by reason of the steady and increasing demand for the U-S Everlasting record—the record which absolutely overcomes all "loss from breakage," and which has become noted for its natural quality of tone reproduction.

"The impetus in business during December, especially as regards Victrolas, continued throughout January," said W. H. Buescher, of Buescher & Sons, "and to-day we have several sold for immediate delivery. Business has kept up remarkably well and our record sales are fine. Admirers of Caruso are enthusiastic in praise of his new records, and rarely leave the store without the purchase of one or more. Prospects are very encouraging."

Phil Dorn, manager of the talking machine department of Collister & Sayle, exclusive Victor distributors, said he was very well pleased with conditions of trade in both the wholesale and retail departments, the only drawback being his inability to obtain sufficient Victrolas to supply the large demand. The large sales of machines during the holidays is reflected in the present excellent demand for records, especially, said Mr. Dorn, for the Caruso and Red Seal records.

John Reiling thinks that the Cleveland report of the talking machine business would not be complete without mentioning him. He is building up a fine Columbia business on the West Side and securing a large clientele for records in the different foreign languages, as well as English.

"We are very busy in all departments," said O. E. Kellogg, sales manager of McMillen's. "Our January business made as good a record as that of December and continues to be quite as good as at any time in the past two months. The demand for Victrolas and Amberolas and Edison grand opera records is fine. The piano trade is excellent. We have just taken the agency for the Ahlstrom piano and which is for the first time represented in Cleveland.

During the past month the May Co. have been making special efforts in the sale of talking machines and have had on exhibition in one of their large windows the various machines and records, making a very attractive display. John I. Kearns, in charge of this department, said trade was good and exceptionally so in the record line.

Mr. Friedlander, of the Bailey Co., stated the most satisfactory conditions prevailed in his department, and that he had been busy during the past month re-ordering both machines and records, and yet had been unable to fully replenish the stock. The record trade, he said, was especially active, largely for Red Seal and grand opera productions. The offer of a \$100 due bill, payable in merchandise, to every purchaser of a piano, it was stated, had proven popular, and had resulted in a large number of sales.

HEAVY VICTOR TRADE

Reported by Landay Bros., New York—How Consistent Advertising Pays.

Max Landay, of Landay Bros., the well-known Victor distributors, in speaking of the business in the Victor line for the first month of the new year, said: "We have had the best January in our history, and the business is steadily on the increase. We ascribe this large trade chiefly to advertising, inasmuch as we back up the manufacturer's liberal advertising with continuous local publicity. We believe in a consistent advertising policy and are represented every day in three of the leading newspapers, contracting for the space in advance."

WIN PRICE CUTTING CASE.

Privy Council of British Empire, the Court of Last Resort, Reverses Findings of Lower Courts in Australian Case, and Hands Down Decision in Favor of the National Phonograph Co. of Australia—A Long Fight.

A price-cutting case of more than usual significance and weight was decided by the Privy Council of the British Empire recently on an appeal from the Supreme Court of New South Wales, Australia. The litigation was instituted by the National Phonograph Co. of Australia against Walter T. Menck, a dealer of Sydney, New South Wales. The court of original jurisdiction decided against the National Co., the finding being sustained on appeal to the highest court. Then the matter was taken up to the Privy Council, which is equivalent to the Supreme Court of the United States, and Monday the National Phonograph Co., Orange, N. J., received a cablegram that the Australian courts had been reversed and their position maintained.

The case has been in the courts since 1907, and the appeals to the intermediate court and the tribunal of final resort was carried forward on law points only. While the company have not as yet received any particulars, it is probable the British Privy Council have followed the rulings of the United States courts relative to the monopolistic right of a patent owner to the absolute control of the invention in its manufacture and sale.

No suit of this kind has ever reached the Supreme Court of the United States, and therefore this is the first decision ever rendered by a court from which there is no appeal. It is therefore likely similar action would follow here should occasion arise, according to the opinions of the attorneys of the companies most directly concerned.

Another case before the Supreme Court of New South Wales was decided adversely to the defendant, R. H. Hunter, who was "perpetually restrained from selling or offering for sale, directly or indirectly, Edison phonographs or parts thereof at prices less than current list prices unless authorized to do so by the plaintiffs in writing." This final decree of the highest court of the province was issued September 9, 1910. Comment is unnecessary and superfluous.

WILLIAMS IN REMINISCENT MOOD.

General Manager of the New York Talking Machine Co. Talks of Conditions in the Trade When He First Entered It Ten Years Ago—When the Western Electric Co. Secured the Jobbing Agency for Edison Phonographs.

After the usual exchange of news with The World about business conditions, which he said were excellent, and diversified trade chat, G. T. Williams, general manager of the New York Talking Machine Co., 81 Chambers street, New York, was reminded by a passing remark of how he became a talking-machine man. Mr. Williams is a skilled, practical electrician, and for a long period was connected with the Western Electric Co., both in the East and West, and for a while was the "boss" of a telephone gang in the field, and therefore knows what is what in connection with the service from A to Z. But that is a separate story, though his connection at the time led to his introduction to the talking-machine trade, of which he said:

"Possibly it was about ten years ago when I was with the Western Electric Co. and our relations with the Edison people were naturally very close. At that time the National Phonograph Co. were getting into the market with their wax records and our company thought they saw such a great future for the phonograph that they accepted the jobbing agency for the line and also opened a retail store at Thames and Washington streets, New York. This was brought about by A. S. Martin, president of the Tea Tray Co., Newark, N. J., who was enthusiastic over the proposition. Just think of having a store in that neighborhood! Extreme lower New York.

"I went to the factory in Orange to get posted in the business, staying a week and spending a day

or two in each department of the factory, making daily reports. Finally I was placed in charge of the phonograph branch of the Western Electric Co. Subsequently our Philadelphia house also took on the line. I can remember the time when the gold-moulded records came out, and the manner of making the exchange with the wax goods. It was great!

"Later we got into the disc business and our stock was seven-inch records only, and when the ten-inch goods came along we thought that was the limit, and they were none too plentiful. We also induced Bradshaw to make needles—pins they were called then—and an order for ten thousand was considered big. Our first manager was the best-natured prevaricator—that's better than the shorter and uglier word—and what he did not say about sales were a caution. Hawthorne & Sheble were then getting into the field and contemplated making needles, and one day Hawthorne came in and asked if we were selling many needles. The manager said coolly: 'Just took an order for 8,000,000.' 'Eight million?' was Hawthorne's surprised inquiry. 'Who from?' 'Oh, to go to South Africa.' In fact, everything of an unusual kind in sales, either of records, machines or anything, went to South Africa, according to the cheerful statements of our manager.

"In those days everybody 'dubbed' and no one thought anything about it apparently. Our record stock was arranged in piles of one hundred each, and if you wanted a particular one the whole lot had to be sorted over until it was found."

At this point V. W. Moody, interrupted to say: "And let me tell you that some dealers even to this day keep their record stock in the same way. And as for 'dubbing,' I can remember when the Chicago Talking Machine Co. had a long bench rigged up with 'dubbing' machines."

"Well," continued Mr. Williams, "we certainly accumulated a lot of junk. As for record sales, if a dealer ordered ten at one time we thought we were doing a big business. Now we sell him 2,000 in a single order and think nothing about it. That is the way I came into the talking-machine trade and that was long before I became connected with the present concern. But my experience was great and it makes me laugh whenever I consider the present advanced state of the business. Also the progress which has been made, the perfection of the Victor product, the tremendous investment involved, which has created a really new and staple line of trade. Likewise the volume of sales, not to say anything of the great interest in the talking machine—a misnomer, by the way, though it is possibly too late now to substitute a better, more descriptive or adequate name—shown and developed by the public in its possibilities as one of the finest and best musical instruments ever invented."

S. B. DAVEGA ON WESTERN TRIP.

President of S. B. Davega Co. Now on His Way to Look After Real Estate Investments in Seatt'e, Wash.

S. B. Davega, president of the S. B. Davega Co., New York City, left on February 10 for a trip to the Pacific Coast. Mr. Davega, while visiting the Alaska-Yukon-Pacific Exposition in 1909, was so impressed with Seattle, its commercial possibilities and rapid increase in population, that he made a real estate investment, one of the lots purchased being on Second avenue, which is Seattle's main business thoroughfare. It is because of this investment that he visited Seattle in 1910, and is making another trip this year, his object being to keep in close touch with the real estate situation in order that he will know when the time is right for improving the property. Mr. Davega further states that his interests in Seattle will not in any way interfere with his long-established jobbing business in New York City, and that during his absence (which is not expected to be longer than a month) his son, Harry S. Davega, will assume the active management of the concern.

The satisfaction of undertaking a difficult task and accomplishing it successfully is the greatest incentive to good work.

**JUST OUT
"ECHO"
New Record Albums
OF 1911 STYLE.**

16 Numbered Pockets—Flexible Backs—Leather Pulls

Pat. Appl'd for L. J. Gerson

The "Echo" Album is collapsible, a 1911 improvement permitting them to be packed flat and take up less space for shipment. They can be mailed easily.

The leather pull or tab on the back of the "Echo" Album allows it to be easily pulled out of the Victrola, bookcase, or cabinet shelf. This is an improvement over the brass rings which scratch cabinet doors or ruin polished table tops when Albums are opened out flat.

A record collection properly classified in record albums lettered A, B, C, D, etc., is the only systematic way of keeping them so that they are available on the instant you want them.

GOOD HOUSEKEEPING

demands that records will be no longer kept carelessly in the old style cabinets, or laid here and there in piles on tables, mantel-pieces or window sills. Records are "sound engravings of music," and should be as carefully arranged and kept as a library of books.

THE EDUCATIONAL VALUE

of musical records is not to be denied. The real pleasure of owning a Talking Machine or Victrola is enhanced a thousand times when you can pull out a certain volume in your album collection of music and turn the pages to a particular record without the trouble and fuss, or the risk of damaging Records, liable under the old method.

The "Echo" Record Album is manufactured out of the best materials. The covers are made of strongest bookbinders' board and covered with the best quality of cloth. There are 16 pockets, numerically indexed, for the Records, each made of extra strong tag-manilla paper and each secured to the flexible back of the Album by means of extra heavy fabric. It is impossible to weaken the "Echo" Album through usage, and despite of the weight of the records, positively no damage to them can occur even if the Album should accidentally drop.

SOLD BY ALL JOBBERS AND DEALERS.

Send for a sample album, and write for price to the

ECHO ALBUM CO., Manufacturers
926 CHERRY ST., PHILADELPHIA, PA.

Before we get through we are going to be sure that all your customers know that Columbia Double-Disc Records outlast any others on the market. Keep that statement where you can see it. It's true.

Columbia Phonograph Co., Genl., Tribune Building, New York.

VELVET TONE NEEDLE BALANCE.

A New Specialty Announced—Some of Its Advantages Set Forth.

The "Velvet Tone" needle balance, as it is called, is a new invention to which many advantages are ascribed in the playing of disc records. In fact, it is referred to as an ingenious attachment that will prevent needles from prematurely destroying records. The manufacturer, C. A. Macaulay, Co-

VELVET TONE NEEDLE BALANCE IN POSITION.

lumbia, Pa., in describing the "Velvet Tone" needle balance more fully in his advertisement elsewhere, says the harder the tool is pushed against a revolving grindstone the greater the wear of both. This, he adds, is exactly what occurs when the needle is weighted down with a heavy sound-box on the playing record. The "Velvet Tone" device, according to the inventor, obviates this, preserves the sound lines and improves the tone quality.

EXCHANGE EXTENDS TO CANADA.

The Provisions of the National Phonograph Co.'s Exchange Are Practically the Same as in This Country.

It will be noted in the February number of the Edison Phonograph Monthly, in connection with the new record exchange proposition therein announced, that the statement is made that it does not apply to the Canadian trade. This is not true at the present time, although it was a fact when the Monthly went to press, the proposition having been extended to Canada by bulletin dated January 25. The Canadian provisions are practically the same as in this country, the exception being the last clause relative to the September 15, 1910, exchange giving Edison owners the privilege of returning two standard records as part payment of one Amberol, which exchange was never operative in the Dominion.

The opinions of jobbers and dealers relative thereto are quite typical of the expressions reaching us from all parts of the country. The company are therefore convinced from the enthusiasm which it has awakened that the problem has at last been solved.

GRAFONOLA FOR ATTORNEY-GENERAL

Of the Philippine Islands Purchased During Senor Villamor's Visit to Washington.

Washington, D. C., Jan. 10, 1911.

The manager of the Columbia's store in this city last week had the pleasure of selling a Grafonola

Elite, No. 2, and records and supplies enough to make up an outfit of \$146.41 to Ignacio Villamor, of Manila, Philippine Islands. This gentleman is in this country on business connected with the United States Government, and has the honor of being the Attorney-General for the Philippine Islands. As his name will indicate, he is a Filipino, but a gentleman of great education and fine discernment in the way of grand opera music.

GOOD NATURE AN ASSET.

Makes Friends in Business and Holds Customers—Breeds Confidence and Optimism.

"In my opinion the greatest natural asset a man can have," said a dealer, "is that of good nature. And I am speaking entirely from a business point of view, too. Aside from the happiness that good nature brings to the individual himself, it has distinct business advantages that should not be lost sight of for an instant. In the first place, the good-natured man has lots of friends, and the value of friends who may be made customers, or who may be depended upon to give one of the benefits of anything good they may have, is in itself a good thing. Then, too, the good-natured man is one who is confident, optimistic, and willing to take a bigger chance in the course of his daily work than the suspicious and ill-tempered individual, and since all business is the taking of a chance, to a greater or less extent, this is another resource that should be taken into account."

RETURNS FROM MEXICAN TRIP.

Walter Stevens, manager of the export department of the National Phonograph Co., Orange, N. J., who has been in Mexico looking after his special interests since October 17 last, returned home recently. He found business very satisfactory, notwithstanding the reported political disturbances. Although he was in direct contact with the insurgents at one time in the capital. Mr. Stevens said business with him was brisk.

PERSONAL REFERENCE.

Photogravures of celebrated Victor artists have been made by the Victor Talking Machine Co., Camden, N. J., for sale to their dealers. The size of the picture alone is 33 x 45, on 450-pound steel plate paper, and with the 3½-inch oak frame they are about 40 x 52. They include Caruso as "Vasco Gama," in "L'Africaine"; Calve as "Carmen"; Galski as "Brunnhilde" in "Walkure"; Homer as "Amneris" in "Aida"; Schumann-Heink as "Fides" in "La Prophete"; Sembrich; and Tetrassini as "Lakme." They are sold only to Victor dealers.

F. B. Smith, president of the Wolverine Mfg. Co., Detroit, Mich., was a caller at the executive offices of the Columbia Phonograph Co., General, New York, recently. In connection with their fine exhibit in the current exposition at the New York Furniture Exchange, fifth floor, they are also displaying a number of Grafonolas.

LEWIS H. CLEMENT VISITS THE VICTOR PLANT

SNAPSHOT OF MR. CLEMENT ON HIS WAY THROUGH THE NEW VICTOR MOTOR FACTORY.

En route to Washington, D. C., to attend the National Merchant Marine Congress last month, L. H. Clement, president of the Whitney & Currier Co., Victor distributors and dealers, stopped off at Philadelphia for the purpose of visiting the mammoth plant of the Victor Talking Machine Co., Camden, N. J.—his first visit. The accompanying cut shows Mr. Clement, who, by the way, is also president of the National Piano Dealers' Association, going through the factory buildings under the guidance of H. C. Brown, manager of the Victor Co.'s advertising department. The snapshot is of the two gentlemen in the new motor plant.

NEW SUPPLEMENTARY LIST

Supplementary list No. 2 to the general catalog of the Universal Talking Machine Mfg. Co., Philadelphia, Pa., including the Hebrew bulletin, has recently been issued. The double-disc selections cover a wide range, including a number of the late Frank C. Stanley's renditions.

TIMELY TALKS ON TIMELY TOPICS

While the manufacturers and distributors of the talking machine product have apparently not manifested so active an interest as other industrial lines, notably the piano people, in the development of the American merchant marine, it is evident they are concerned as well. The leading record and machine manufacturers have accomplished more in foreign fields, as the official figures clearly demonstrate, than the entire music trade throughout its history in this country. Possibly there may be room for an argument here, but the preponderance of evidence is with the talking machine trade, and every section of the civilized and not a few segments of the barbarous world offer indubitable proof of this assertion. However that may be, the trade, doubtless as an entity, will approve the passage of the ship subsidy bill by the United States Senate February 2.

This provides for a mail service under a subvention to not only South American Atlantic seaports, but also to the Pacific steamship lines. The measure, known as the Gallinger bill, now goes to the House of Representatives, where Congressman Humphrey, the author of similar legislation, will move the substitution of the Senate proposition. Speaker Cannon has expressed his warm approval of the bill and has said there is a possibility of its passage by the House. President Taft is also urging its enactment. If the bill does not pass at this Congress there is said to be no possible chance for it in the incoming House, with its change of political compliance, already arrayed in hostile attitude.

The Victor Talking Machine Co. are to be felicitated upon the renewal of their exclusive contract with Caruso, the world-famous operatic tenor, to sing only for the Victor records for a long term of years. The Caruso records have been accepted as the highest expression of the tenor voice as an interpretation of the music with which his name has been inseparably connected since his entry into grand opera. His records have also been the means of delighting and entertaining thousands who neither have the money nor the opportunity of hearing him otherwise. If Caruso has made the Victor records famous, they doubly returned the compliment by making him known and admired in every hamlet and home throughout the land. So honors are about even!

Saturday last—February 11—Thomas A. Edison was sixty-four years old. As his associates and business intimates know, his vigor and energy have not abated in the slightest. On his sixtieth birthday announcement was formally made that from thence on Mr. Edison would, in a measure, cease his activity in the sense in which it was understood since he became a world figure. That he would devote his time chiefly to original investigation and research—always his life work—and become more the philosopher and less the man of affairs. In other words, he would henceforth "take it easy." Perhaps he has, but in the world at large he has attracted more attention, if possible, than ever.

That is to say, he is not devoting the major part of his valuable time to the phonograph, though its development has never ceased to be a hobby and he is keenly alive to its future. Maybe he has a further surprise in store—well, be patient; wait and see what occurs, as a little bird says, later on. At present, mum is the word. Mr. Edison is a many-sided man, and he is a student as well as a philosopher and he blazes his own way—original and oftentimes startling—to the average man. Just now he is giving expression to his views on immortality, and they have aroused much acrimonious argument on the part of old school believers. Be that as it may, the "Wizard" has recently made a deliverance on economic conditions which differs from anything ever said before on the subject. He has given great thought and study in the past few years to this important and vital subject,

and his opinions are received with the respect and consideration due their famous author. As to his ability to work, that is one of the wonders of the age. The World felicitates Thomas A. Edison on his latest birthday, and wishes him many further years of usefulness to mankind and continued happiness. The date, it may be added, is also suggestive of another event of which considerable may be heard during the current year.

It is boldly predicted that within two years the sapphire needle or reproducing point for the vertical line record will be superseded by an iridium pointed steel needle, everlasting and indestructible. The prophet responsible for this declaration says he knows whereof he speaks, and is perfectly willing to accept a few substantial wagers, not to mention "side bets," on the correctness of his vision.

In The World's letter from Tokio last month by J. O. Prescott, formerly general manager of the Japan-American Phonograph Co., reference is made to the interpretation placed on the Japanese copyright law by the native courts. He points out that the judicial ruling is that the "singer has a copyright in his peculiar way of singing the song without filing an application for it. Further that when a singer accepts payment for singing for a talking machine company he thereby transfers his copyright for the song as sung by him on that particular occasion." This position of the courts, according to Mr. Prescott, put an effective stop to "dubbing," which had been so rife that these naturally cheaper price records almost ruined the market.

Elsewhere another correspondent, whose interesting letter from Yokohama appears on a near page, makes a diametrically opposite statement regarding "dubbed" records, and who says there is "no law in Japan to prevent this practice." As Mr. Prescott is reputed in recording laboratory circles in this country as generally knowing what he is talking about, and gives facts and figures to prove his contention, perhaps he will be good enough to throw more light on the "dubbing" situation in the empire of the Rising Sun. Japan is not so far but the same reprehensible practice could be followed with the high price American-made records exported to that part of the world, and which might find their way back here to the detriment, if not demoralization, of the home market.

It will be remembered that when the existing United States copyright act was under discussion, an effort was made to incorporate in the text a provision that would protect the particular manner in which a specific musical composition was rendered or interpreted by a singer. Ingenious arguments were adduced to gain this point, but without avail. The "dubbing" proposition in this country, however, subsequently received a knock-out blow in the decision of Judge Chatfield, United States Circuit Court, Brooklyn, N. Y., when a nest of "conspirators," as they were termed in the accompanying documents, who aimed to cripple the business of the largest record-making companies, whose investments represented millions of dollars and years of costly experiments and unremitting work, were placed in the down and out class. They have never peeped since.

While Americans are becoming better acquainted with Japan and the Japanese, there are still a great many things in the empire of the Rising Sun which remain mysteries to this day. Travelers have an interesting collection of tales to relate when returning from that country, of which quite a few are not altogether complimentary to or relished by Americans. It is said the Japs have a latent antipathy to Americans visiting their territory, and say—in their own language, so they will be understood by their own countrymen only who are "in" on the so-called joke—and do things which are not fit to print. However that may be, the American talking machine has been welcomed

with open arms and with genuine admiration and heartiness.

Following the taking over of the talking machine by the deservedly famous Aeolian Co., not only in their main establishment in New York, but also in their branch houses in Chicago, Cincinnati, St. Louis, Indianapolis, Dayton, and Fort Wayne, the equally celebrated firm of piano manufacturers, Steinway & Sons, New York, has been approached with a similar proposition. It was not revealed whether the party working on this "prospect" was a manufacturer or a jobber, and in chatting with The World about the incident the chief of one of the main departments said: "Personally the talking machine is a good proposition to take hold of, and is entirely creditable for the firm proper to handle, but you know the Steinways are very conservative and it does not appeal to them."

The Mexican trade of the National Co. is now being handled direct from the factory.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to the Talking Machine World.)

Washington, D. C., Feb. 10, 1911.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

JANUARY 10.

Baues—3 pkgs., \$158; Callao, 8 pkgs., \$419; 4 pkgs., \$343; 7 pkgs., \$177; Colon, 3 pkgs., \$162; Corinto, 2 pkgs., \$142; Havana, 7 pkgs., \$319; 9 pkgs., \$482; 11 pkgs., \$598; Iquique, 5 pkgs., \$149; Kingston, 4 pkgs., \$300; London, 549 pkgs., \$7,730; Melbourne, 6 pkgs., \$306; Milan, 11 pkgs., \$734; Santiago, 4 pkgs., \$267; Trinidad, 4 pkgs., \$135; Vera Cruz, 165 pkgs., \$2,241; 68 pkgs., \$2,387.

JANUARY 17.

Amapala, 4 pkgs., \$394; Azul, 6 pkgs., \$131; Barcelona, 2 pkgs., \$134; Cape Town, 137 pkgs., \$2,822; Cienfuegos, 3 pkgs., \$1,403; Colon, 2 pkgs., \$115; Frankfort, 16 pkgs., \$2,609; Guayaquil, 4 pkgs., \$258; Hamburg, 84 pkgs., \$3,104; Havana, 16 pkgs., \$885; Las Palmas, 5 pkgs., \$267; London, 290 pkgs., \$4,812; 17 pkgs., \$1,325; 13 pkgs., \$1,400; 147 pkgs., \$3,053; Manila, 59 pkgs., \$3,160; Milan, 16 pkgs., \$1,262; Para, 14 pkgs., \$697; Port of Spain, 2 pkgs., \$112; Rio de Janeiro, 29 pkgs., \$2,835; 78 pkgs., \$5,585; Savanilla, 19 pkgs., \$2,264; Vera Cruz 460 pkgs., \$11,406.

JANUARY 24.

WORTH OF SALESMANSHIP

In a Retail Store Not Considered Wholly from Point of Profits to Be Gained.

The worth of the salesmanship employed in the distribution of goods from a retail store is not dependent or hinged entirely upon what profits may be gained at the present time. The wages paid clerks should not be made to depend upon what business was done during some other period. The cost of selling is a more or less fixed cost, and cannot be gauged by the profits made at any time. If three good clerks are more than the business of the store can afford, then it may be well to allow one to go, but it is not sensible or businesslike to attempt to lower the wages of the three or replace all three with lower-priced help. Two good clerks are far superior to four cheap ones, for they retain not only the trade the store has, but are able to assist greatly in gaining new trade.

WM. KNABE & CO. SECURES COLUMBIA LINE.

The Great New York Piano House Has Exclusive Selling Rights for Columbia Grafonolas, Graphophones and Records Made by the Columbia Phonograph Co.—Intend to Give These Instruments a Magnificent Representation—An Active Advertising Campaign Will Soon Be Started.

News which is sure to prove of great interest to the talking machine trade of the country is contained in the announcement made that the great house of William Knabe & Co. have entered into an exclusive contract with the Columbia Phonograph Co. Ben Feinberg, the special representative of the wholesale department of the Columbia Co., initiated and carried through all the details of this transaction, delivering the signed contract to the head office Friday of last week. Wm. Knabe & Co. are to handle the Columbia line and have secured exclusive Columbia selling rights for the Fifth avenue territory.

It is evident that the Columbia Phonograph Co.'s policy of exclusive selling rights is receiving a splendid indorsement. It is also quite clear that the Columbia Phonograph Co.'s now familiar claims concerning the Grafonola when it was first placed upon the market—claims which have been reiterated consistently ever since—were well founded. Reports say that Wm. Knabe & Co. have been in a receptive mood for some time, and the selection of the Columbia line was determined upon only after the most exhaustive tests and comparisons of product and a most thorough estimate of present and future conditions in the trade.

Wm. Knabe & Co. are planning an extensive Columbia sales campaign. With their thorough knowledge of the music business and the tendencies of the music-loving public, which have in no small measure helped in the wonderfully successful business now enjoyed, they are determined to spare no efforts to make this new charge as successful and as much a vital and typical part of the Knabe business as the famous pianos themselves. Wm. Knabe & Co. are consulting with architects, and arrangements are now under way for the furnishing of elaborate sound-proof demonstration booths and fittings in harmony with the general scheme and character of the Knabe premises, and when these are completed the Columbia will be exclusively represented in this section of New York upon a scale that will be impressive even to a Fifth avenue clientele.

Wm. Knabe & Co. propose pushing this new branch of their business with all the progressiveness and thoroughness that have characterized their usual activity in the musical world.

It is understood that the Columbia instruments will be featured prominently in all the advertising the company puts out, and that a special campaign

of Columbia advertising will soon be started by Wm. Knabe & Co. in the New York newspapers.

The first public announcements are expected to appear about March 1, when the alterations to the Knabe premises will be completed. A series of Grafonola concerts and recitals will probably mark

KNABE HALL WHERE THE COLUMBIA LINE WILL BE FEATURED.

the opening of the department and will figure among the future attractions of the company's great piano warerooms.

The manager of the department has not yet been selected from among the long list of applicants, but it is certain that he will be one of the experts in the talking machine business.

Plans are also being completed for placing the Columbia in the Knabe branch at Baltimore.

Wm. Knabe & Co. will carry a strong line of special art Grafonola case designs, and also in standard cabinets, in harmony with their highest grade pianos, to meet the demand of the people who visit Knabe Hall. This part of the business has been under consideration for some time, and when the arrangements were finally completed this feature of the contract was given particular emphasis. This really means a new departure in the handling of talking machines by music houses, whose field of operations is much broader in strictly musical circles, both professional and lay, than that of the average dealer.

When your clerks are not otherwise employed—keep them busy clearing and re-arranging stock.

DEALERS SHOULD WATCH CREDITS.

The Standing of Instalment Customers Should Be Carefully Investigated Before Sales Are Closed in Order That Prompt Payments May Be Assured—Thus the Dealer Can Keep on the Jobber's Good Books by Settling His Bills Promptly—An Interesting and Timely Chat on This Subject by J. Newcomb Blackman.

"One of the most important duties of the talking machine dealer at the present time, if he expects to last, is that he watch both his credits and his credit. This sounds somewhat cryptic, but the idea I wish to convey is that the standing of instalment customers should be carefully investigated before sales are closed, in order that prompt payments may be assured, and that the dealer in his turn should endeavor to keep on the jobber's good books by settling his own bills with reasonable promptness." Thus said J. Newcomb Blackman, president of the Blackman Talking Machine Co., in a recent talk with a representative of The Talking Machine World.

"The apparent tendency of a number of dealers is to order heavily and with abandon, but to acquire a deep reserve when it comes time to meet their bills. When pressed by the jobber they say something to this effect: 'Awfully sorry, but you see I have had to sell the machines on instalments and have had difficulty in making collections. You'll have to let that bill go for a little while.' And it's the same story next time. The whole trouble is that in all too many cases the dealer tries to do a business wholly out of proportion to his capital, and the first thing he knows he is over his head in debt, with his chief assets, consisting of instalment accounts, being liquidated at the rate of a dollar a week and often less.

"The main point is the fact that such a dealer fails to realize that he is engaged in a real business in which every detail must be studied and modern methods adopted if he is to remain in the trade. The first thing he knows he is in competition with a big and up-to-date dealer or department store carrying a large and complete stock, and immediately gets the idea that he can meet such competition with his limited capital and poor equipment. The result must be failure. He tries to brace up his stock by ordering in large quantities, and when the jobber's bills are to be met, say at the end of thirty days, he is compelled to ask for an extension of time. Then if the jobber is insistent, and he must be to avoid embarrassment himself, the dealer goes to the wall. The jobber has to meet his obligations to the factories with reasonable promptness, or gets no more goods, which means failure for himself, and very often for the dealers doing business with him.

"There is a great deal besides the mere question of service in the relations of the talking machine jobber and the dealer. In signing up, the dealer should assure himself, first, that he can get the goods when he wants them, and secondly, that the jobber with whom he is going to contract conducts his business along sound lines that will make for his success. In other words, if the jobber looks after the financial end of the business, or rather the credits, very carefully, the dealer in his turn should make it a point to meet the jobber's bills with promptness, for by doing that he contributes to the success of all parties concerned.

"We will say, for instance, that two jobbers, doing business in a certain territory, pursue different methods. One extends liberal, but not unreasonable credit, wants his bills met at the time they are due, and does not endeavor to carry on a banking business for the benefit of his clients. The other jobber, on the contrary, offers as an inducement to the dealer unlimited credit, often regardless of his financial standing. What is the result? The second jobber finds that the amount of his capital tied up in outstanding accounts with dealers precludes any possibility of his doing business on even a fairly profitable basis, and he proceeds to close up his affairs. Here is where the dealer suffers, for the jobber is under no obligation to be lenient with him with a view to holding his future trade, and demands prompt settlement of the account. In the effort to effect such a settle-

ment the dealer is either badly tied up and his business suffers severely, or he is forced to close up his affairs entirely.

"The jobber who insists on prompt settlements, in a great number of cases does so, not alone to protect his own interests, but to save the dealer from himself, and keep the latter's affairs in a condition where they are not liable to swamp him upon any sudden call. The dealer who wants the protection of a sound jobbing house should be willing to pay for that protection by making prompt settlements, as in this branch of the talking machine business, as in any other line, one must pay for quality and the security that quality represents. If the Twentieth Century Limited, with its wonderful equipment, would carry a passenger from New York to Chicago for the same fare as the twenty-six-hour train, how many passengers would travel by the slower and less comfortable train? If the better train they are paying for quality.

"Every time a jobber or dealer goes to the wall, while it means a lesson to the remaining firms and may teach them to avoid pitfalls, nevertheless it has a bad effect upon trade at large. Thanks to the realization that modern business methods are essential in this trade as in any other, the tone of the whole business was never better than at the present time. The weak, careless, and I might perhaps say, ignorant, dealers are being weeded out gradually, and, when the field is clear of them, we may all look for better things."

MUSIC OVER THE 'PHONE.

Prominent Financiers Hear Demonstration of New Invention in Connection with the Telephone.

Half a hundred financiers and officers of corporations dining in the Waldorf one night last week as the guests of George R. Webb, the owner of a new telephone invention, heard, coming from the corners of the room, first a solo by Caruso, then a deep voice calling out trains about to depart, then a shrill soprano paging guests in a hotel, and again a deep bass voice announcing train orders.

Mr. Webb, who organized the Maryland Telephone Co., explained that his invention was designed to keep the telephone busy in dull hours, as the night letter now keeps busy the dull hours of the telegraph wire. The apparatus he used, small enough to carry in a coat pocket, reproduced bits of opera, popular songs, gave stock quotations and did other things that a well-behaved telephone has not yet learned to do.

In other words, with Webb's invention, if one person wants to instruct or deliver a message to fifty others he simply says what he has to say into his phone, and at the other ends of the wires the telephone talks the message without the intervention of an ear piece. At any hour a subscriber may call up the exchange and ask for any piece of music and then, hanging up the receiver, he or she may sit down and listen to the melody. Among those at the dinner were several railroad officials who are considering the use of the machine for delivering train orders.

THE STANLEY TESTIMONIAL.

A Great Array of Talent Engaged for Benefit to Be Given for Widow and Family of the Late Frank C. Stanley—How Talking Machine Men Can Help.

On another page appears the page announcement of the testimonial benefit to be given for the widow and family of the late Frank C. Stanley (W. Stanley Grinstead) at the New Amsterdam Opera House, New York, on March 8. The committee of arrangements—consisting of Walter H. Miller, Victor H. Emerson, C. G. Child, John Kaiser and Ernest Ball—held their last meeting at the recording laboratory of the U-S Phonograph Co. and the plans for what will be a successful affair and a credit to the deceased's many friends among the "talent" is assured.

Tickets, costing \$1 each, are now in the hands of the dealers and posters giving the details of the event were distributed last week. A complete and correct list of the artists, some were unintentionally in The World for January, who have volunteered their services and will positively be present follow: Harry McDonough, Wm. F. Hooley, Byron G. Harlan, Henry Burr, Golden and Hughes, Manuel Romain, Elizabeth Spencer, Peerless quartette, Al. Benzler, Harry Anthony, Al. Campbell, Len Spencer, Lucy Marsh, Will Oakland, Billy Murray, Edw. Meeker, Walter Van Brunt, Murray K. Hill, Ed. M. Favor, Marie Narelle, American quartette, Chas. D'Almaine, J. F. Harrison, Vess L. Ossman, Chas. Prince, Marguerite Dunlap, W. H. Thompson, Arthur Collins, Irving Gillette, Frank Coombs, Charles Daab, Elise Stevenson, Edith Chapman, Premier quartette, Harvey Hindermeyer, Steve Porter, Ada Jones, Ernest R. Ball. The program, judging from these names, will be one of exceeding interest.

For further particulars and information address John Kaiser, treasurer of the committee, 662 Sixth avenue, New York.

Suppose You Should Have A Demand For A Record Cabinet?

Have you samples on the floor?

Have you Catalogs and Prices?

Are you agitating the Cabinet question when selling a machine?

Don't you realize that a Talking Machine Outfit is incomplete without a Cabinet?

Are you making the proper effort to sell Cabinets that there is money in for you?

Are you aware that in addition to a splendid range of price and pattern in Disc and Cylinder Record Cabinets.

This is No. 442 Cabinet which has the Victrola Eleventh on top. We furnish the Cabinet in mahogany or oak. It will hold 190 12-inch discs records in envelopes. Can be had with perpendicular wooden divisions or horizontal shelves as desired.

we have brought out special designs for Victrolas Tenth and Eleventh?

Did you know that these can be had in either Mahogany or Oak?

Have you the Catalog which illustrates Udell Cabinets?

Are you going to write for it?

When?

Business for the Past Month Has Been Most Active—Some Interesting Comments on Use of Talking Machine with Player-Piano—Reference to Music Rolls Specially Made for Use in This Connection—Interesting Chat with Chas. D. Allen Who Has Given This Matter Considerable Attention—Clever Victor Exploitation with Ernest Johns as Impresario—Columbia Co.'s Handsomely Arranged Quarters—Wiswell's Eastern Trip—Executive Committee and Officers of the National Jobbers' Association Meet in Chicago February 19 and 20—Reasons Why Talking Machine Co.'s Quarters Are Such a Magnet for Talking Machine Men Found in Illustration on Adjoining Page—Other Items.

(Special to the Talking Machine World.)

Chicago, Ill., Feb. 9, 1911.

January was a great big surprise to the majority of the Chicago jobbers and to those elsewhere in the West, so far as your correspondent has come in contact with them. Trade moved along lines which proves conclusively that there had not only been a large holiday trade, but that stocks had been reduced to a minimum.

Creating Music Roll Accompaniments.

Chicago has cultivated initiative as a habit, and this applies to the talking machine and allied lines, as well as to everything else.

Charles Duncan Allen, who for the last two or three years has been representing player-piano concerns on the road, giving recitals, as well as meeting with great success from a selling standpoint, found that great interest was always excited whenever he found a place for the Victor machine in his program, playing the accompaniment on the player-piano. He found it very difficult, however, to get especially arranged accompaniments from the manufacturers of perforated rolls. He has now started out to remedy this lack. He recently took the matter up with the Q. R. S. Co., which is the music roll cutting branch of the Melville Clark Co., manufacturers of the Apollo player-pianos, with factories at DeKalb, Ill., and general offices at Chicago. In co-operation with Ernest Clark, who is in charge of the music-roll cutting department, Mr. Allen has secured a number of music roll accompaniments, which he is using with great effect. From Mr. Allen has been obtained the following list of music rolls specially made for accompaniments to Victor records, and which are now available:

| Q. R. S. CO., CHICAGO. | | |
|--------------------------------------|-------------------------------------|---------|
| Roll. | | Record. |
| 70099 | Rigoletto Quartet | 96000 |
| 70060 | Traumerei (Maud Powell) | 64134 |
| 70036 | Voi che sapete (Melba) | 85067 |
| 70114 | The Rosary (Schumann-Heink) | 85105 |
| 70094 | Questa O Quella (Caruso) | 64069 |
| 70098 | Celeste Aida (Caruso) | 88127 |
| 70100 | La Donna Mobile (Constantino) | 64072 |
| 70096 | Sextette from "Lucia" | 96200 |
| MELOGRAPHIC ROLL CO., BUFFALO, N. Y. | | |
| 0849 | La Donna Mobile (Caruso) | 87017 |
| 01217 | Sextette from "Lucia" | 96200 |
| 0850 | Caro Nome (Melba) | 88078 |

The Universal Music Co. have a few accompaniment rolls arranged for this work, but they are not listed in their catalog.

There are some twenty rolls being prepared now by the Q. R. S. Co. which will be on the market very shortly.

Mr. Allen is now in charge of the exploitive work for the Schaeffer Piano Mfg. Co., who produce a player-piano containing their own patent pneumatic action. He is a thorough musician, has studied abroad, and for many years was a pipe-organist and director of boy choirs. He says that he knows of many instances in which he has aroused a realizing sense of the musical value of both the Victor machine and the player-piano in the minds of people in his audiences who were previously apathetic as to both instruments. At a recital in Indianapolis the other day he secured a perfect ovation at the start of his program by introducing the Victor "Rigoletto" record, accompanying it on the player-piano.

Chas. D. Allen's Views.

In a chat with The World Mr. Allen remarked: "Accompany the talking machine with the player-piano? Why not? The wonderful records of the world's great singers and instrumentalists are infinitely more beautiful when accompanied by the piano, and as only the few who have spent years in the study of music can play these accompaniments manually, why not the player-piano? Someone has dubbed the records of the great artists' voices as 'canned music,' and possibly the suggestion of combining two varieties of 'canned music' may arouse another brain storm, but what difference if the results obtained justify the means? And when one stops to consider the manifold advantages and pleasures to be derived from this perfectly normal combination of music producing devices, one cannot but be convinced of its great possibilities.

"Many musicians of sterling qualities are but indifferent accompanists, because of insufficient practice in this work, and besides, to accompany well, one must not be hampered by technical difficulties. The highest musicianship consists of something more than mere ability to execute difficult passages correctly, but should rather manifest itself in temperamental interpretation. We must not allow ourselves to confuse the words musician and technician, for they are not synonymous, and many player-pianists, with practically no technical knowledge of music, have developed a far greater musical knowledge and interpretative ability than is commonly realized. To these is opened a new field, rich with beauties, and one in which the possibilities are unlimited.

"For the budding musician one cannot imagine a better educational means, one which will develop him in the broadest sense, than this delightful pastime of accompanying the work of a great master sung by a world-famous artist. Were it necessary for the student to read and execute this accompaniment from the score it would be next to impossible without years of hard work and great expense. If, on the other hand, one's taste leads them to the songs of our childhood, or to the simpler ballad, these, too, are at the command of the merest amateur.

"One should not imagine that the ability to accompany the talking machine requires no practice, but one is well repaid for the time and effort spent in acquiring this ability, and each new endeavor is easier than the one before. The modus operandi is extremely simple; the leading manufacturers of rolls for player-pianos are showing their interest and are at present issuing these accompaniments, and it is to be hoped that this is only a beginning, and that the work will develop to its fullest fruition. It means to the real music lover great pleasure, and furnishes the means for a wonderful musical education for his family and friends."

The "Victor Theater."

The "Victor Theater," which has just closed a month's successful run at Cincinnati, will make its Chicago debut next Monday afternoon at Victor Hall, Lyon & Healy. It consists, as The World readers know, of admirable set scenes, with "tableaux," production of operas and concert recitals by Red Seal artists. The voices issue forth, of course, from Victors and Victrolas, and the stage lights are managed in the most scientific manner, producing most realistic results. Mr. Johns, the stage manager of the theater, and who accompanies the performances by illuminative pictures, is here completing arrangements. The Victor Theater will be on at Lyon & Healy's afternoons and probably evenings for a month. At any rate, both matinee and evening performances will be given all of next week. Handsomely engraved invitations will be sent out to Lyon & Healy's friends for each performance, different lists being used, according to the limits of Victor Hall, until all have had an opportunity to enjoy this remarkable entertaining and educational medium.

A. V. Chandler III.

The trade will regret to hear that A. V. Chandler, the popular and efficient representative of the National Co., is ill at his home in this city with what is feared is incipient pneumonia. Mr. Chandler, however, is a man of excellent physique, and no doubt is entertained by his friends here but that he will successfully weather the storm.

Candidate for Judiciary Honors.

C. N. Goodwin, a prominent Chicago attorney, who was at one time connected with important talking machine litigation, is a candidate for judge of the Superior Court. He is a man of distinguished ability and will honor the high position should he be successful, as he no doubt will be. Mr. Goodwin is a brother of C. E. Goodwin, manager of traveling salesmen for the National Phonograph Co.

Columbia Notes.

In their new headquarters at Washington and Wabash avenues the Columbia Phonograph Co. occupy as handsome, well arranged and equipped quarters as can be found anywhere in the country. The company have had great success locally with the new ten-cent demonstrating record, which has been liberally advertised in the local papers, and has been the means of familiarizing vast numbers of people with the excellence of the Columbia product and is securing many new customers. The demand has exceeded the supply. C. F. Baer, manager of the Chicago office, is enthusiastic regarding this latest exploitive method adopted by the company.

W. C. Fuhri, district manager for the Columbia Co., is now on a trip, including New Orleans, Little Rock, St. Louis and other Southern branch house and distributing points.

Among the visitors at the Columbia headquarters here the past few days were H. H. Niehaus, successor to Phelps & Niehaus, Columbia dealers of Quincy, Ill.; M. Nassau, East Chicago, Ill.; J. C. Randall, Geneva, Ill., and Tom Butler, Marion, Ind.

Wiswell's Eastern Trip.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, returned a week ago from a trip to the Victor and Edison factories, both of which he found enjoying a fine business. The past month was the best January that the talking machine department of Lyon & Healy has ever known, and Mr. Wiswell and the officers of the company look forward to a most excellent year. The company's new stock cabinet for dealers is meeting with a most excellent demand.

Visitors.

Geo. Ornstein, manager of travelers of the Victor Co., has been in Chicago for several days. He was led here by Sam Goldsmith, who has charge of the travelers in this district, and also by Mr. Baisch, who has formerly traveled in Minnesota and the Dakotas. He will now cover Iowa in place of Mr. Fiss, who has resigned from the service.

James Pickens, head of the John Hoyt Piano Co., Davenport, Ia., a large talking machine dealer, is in Chicago this week.

Large Talking Machine Co. Business.

The Talking Machine Co. is another concern which had a record-breaking January. February has opened up with vim and vigor, and the company entertain large expectations for 1911.

Among the visitors who called at the company's headquarters during the automobile show were the following: A. P. Griggs, Davenport, Ia.; John Onken, Chapin, Ill.; August Peters, Benton Harbor, Mich.; Chas. E. McLeran, Mt Pleasant, Ia.; Mr. Butler, of Butler Music Co., Marion, Ind.; Mr. Bergh, of Bergh Piano Co., La Crosse, Wis.; A. V. Lyle, Janesville, Wis.; Mr. Schaeberle, of Schaeberle & Son, Ann Arbor, Mich.; Henry Hahn, Dalton, Ill.; Wm. J. Voss, Appleton, Wis.; F. D. Watson, Leland, Ill.; J. E. Wixon, Mendota, Ill.; A. D. Swanson, Galesburg, Ill.; C. A. Fenn, Bloomington, Ill.

FROM OUR CHICAGO HEADQUARTERS.
(Continued from page 42.)

Executive Committee Meeting.

The executive committee and officers of the National Jobbers' Association meet in Chicago on the 19th and 20th of this month. This meeting is largely preparatory to the annual convention which is to take place in July at Milwaukee. Lawrence McGreal, the well-known jobber of the Wisconsin metropolis, has about completed his part of the arrangements and will submit them to the meeting for final approval.

A Fair Octette.

Readers of The World have noticed ere this that Arthur D. Geissler, general manager of the Talking Machine Co., is a very appreciative man, and one always glad to give full credit to his associates

World has had a good deal to say from time to time regarding the company's male contingent, and the trade by this time is pretty thoroughly conversant with the countenances and faces of Messrs. Keith, Creed, the travelers and other young men who have been factors with Mr. Geissler in building up the business. The World representative has not failed to notice, during his visits to the company's headquarters, that the young women there employed are not only worthy of notice, because of their handsome appearance and many feminine graces, but because of their efficiency in the duties respectively assigned to them. He casually mentioned to Mr. Geissler the other day that a group picture of these young women might not be out of place in The World. The photograph was duly forthcoming, and here it is, together with an index to its fair contents.

and that the formation of certain life partnerships was in contemplation. However, no break in the ranks has yet occurred. Mr. Geissler attributes this to the fact that the young women are loath to leave the environment which they have so long graced. One who is familiar with the spirit of harmony and positive friendship which characterizes the entire Talking Machine Co.'s corps will not question this statement. However, we shall see what we shall see.

SOMETHING BESIDES MONEY.

A man that is in business just for money, will soon find that the business is running him rather than himself running the business. A concern that renders a service, sells a device or material

Lower row (left to right).—Miss Grace Holly, telephone operator; Miss Carla Johnson, head of billing department; Miss Genevieve Farrar, stenographer to Mr. Creed (credit department). Second row.—Miss Anna Schueler, head filing clerk; Miss Ella Katzman, head of the order department. Third row.—Miss A. S. Wolbrecht, head bookkeeper; Miss Agnes McGeary, stenographer to Mr. Keith (sales department); Miss Hallie Boniwell, statistician.

and employes in the remarkable wholesale talking machine business of which he is the head. The

In one sense it is a "strictly business" bouquet that is here presented. Courteous but dignified are adjectives that may be applied to them all. They are all enthusiastic regarding the line with which they are connected, and a moment's conversation with any one of them will show conclusively that she has taken pains to post herself far beyond the requirements of the specific duties which she performs. The positions which they fill are indicated by the lines under the photograph. Miss Genevieve Farrar ranks first in point of years of service with the company, with which she has been connected for the last eight years. It may be stated, incidentally that she bears quite a striking resemblance to her almost namesake, Geraldine Farrar, the famous opera singer and Red Seal artist. Misses Boniwell and Katzman have each given seven years of competent service to the company. Miss Wolbrecht has efficiently "bookkept" for them for six years. Miss Schueler has been there four years, Miss McGeary three years, Miss Johnson two years, and Miss Grace Holly, she of euphonious name, while calculating her service with the company by months rather than by years, is also proving a most valuable member of the staff. For some time there have been rumors to the effect that some of the places occupied by about half of the feminine staff would shortly know them no more; that the subtle god, Cupid, was getting very busy,

where quality is the ideal does not place money as the first consideration, yet the money return is large and certain. As some one put it: "Idealize your life, but you must make a living in order to live a life."

Originality and initiative are nothing more or less than getting one hundred per cent. action into things before someone else comes along and does what you intended to do.

RECITAL OF VICTOR AND PLAYER.

Interesting Photograph Showing Ernest McGill, Seated at a Chase & Baker Player-Piano Accompanying Caruso's Voice on the Victrola—Effective Talking Machine Exploitation Which Should Interest Trade.

(Special to the Talking Machine World.)

Topeka, Kan., Jan. 31, 1911.

The picture herewith shown was taken while

Ernest McGill, of the Chase & Baker Co., was playing an accompaniment on the Chase & Baker player-piano to Caruso's singing of the "Arioso" number from "Pagliacci," on the Victrola. The gentleman standing just to the right of the Victrola in the picture is J. C. Emahizer, at the head of the Emahizer-Spielman Furniture Co., Topeka. The audience present filled the seating capacity of

the recital hall, and very enthusiastically showed its appreciation. Many were converted to the possibilities of the player-piano, who were before somewhat skeptical of its possibilities.

The instrumental solos rendered by Mr. McGill were "A la bien aïnce," by Schuett, and "Whispering Flowers," by Blou-Rosenbecker. Other artists appearing on the program were Miss Leavitt, soprano, who sang with pleasing grace, accompanied first by Miss Hazlerig and then by the Chase & Baker player-piano. Miss Waller, a well-known local violinist, gave violin solos which met with

much applause. The violinist was first accompanied by Miss Tinker and then by the Chase & Baker player.

The Victrola came in for its share of the entertainment by giving orchestral numbers alone—and by reproducing the voices of Caruso, Schumann-Heink and other artists with player accompaniment.

TRADE NOTES FROM BALTIMORE.

Business for the First Six Weeks of the New Year Has Been Most Satisfactory in Monumental City—The Expensive Machines Are Most in Demand—Good Reports from the E. F. Droop & Sons Co.—Columbia Co.'s Excellent Trade—Other News in Tabloid.

(Special to The Talking Machine World.)

Baltimore, Md., Feb. 6, 1911.

"It might sound to you fellows on the outside like mere talk when I say that there has been no let up in the excellent showing of the talking machine business in this city which characterized it during the better part of 1910 and especially during the month of September, but, nevertheless, it is an actual fact. Of course, January has not been as good as December, and none of those engaged in the business expected it to be. But, compared with January of the several preceding years, it has been a corker and I feel thoroughly convinced that the same delightful business conditions will prevail for the most part during the present year."

This statement was made by one of the prominent dealers in Baltimore the past week and is in line with the remarks made by the majority of those who follow the trade here. And judging by the number of customers seen in the various stores by a casual visitor there is no reason to believe that the statements are otherwise than true.

The expensive machines continue to be more popular than ever and many sales of Victor Victrolas and Columbia Grafonolas are reported by the various dealers. Only during the past week Albert Bowden, manager of the talking machine department of Sanders & Stayman, announced that among the many sales made during January he disposed of two Columbia Grafonola Regents to one of the best known business men of this city, while he also reports the sale of a number of Victrolas. Another machine that has pleased the Baltimore

public is the Columbia hornless "Favorite" and many of these have found their way into the homes of persons of more moderate circumstances, where they have afforded much amusement and pastime during the winter evenings. Manager Laurie, of the local branch store of the Columbia Phonograph Co., is responsible for this statement and he is highly pleased with the reception accorded this instrument. He also states that January has been an excellent month for the trade, far ahead of the showing made during January of 1910, and, except December, compared favorably with all the other months of last year.

Manager Roberts, of E. F. Droop & Sons Co., is one of Baltimore's greatest optimists and he says that he has good reasons for being such. He declares that the firm's business has kept up in fine shape and that the excellent showing made during December continued during January and indications are that the same conditions will prevail in February. Like most of the other dealers, he announces that his firm has had splendid results from the higher grade instruments, the demand for the Victor Victrolas being undiminished. "The only trouble I am having these days," declared Mr. Roberts, "is to keep enough machines in stock to satisfy my customers." The high class records are also more to the liking of Baltimoreans, according to Mr. Roberts. This no doubt is due, especially at this time, to the fact that the opera season is on and the excellent renditions heard by the accomplished artists each week appeal to the musical tastes of the residents of the Monumental City, who are great opera lovers.

During the last week Manager Laurie, of the Columbia Phonograph Co., had as his guest Frank Dorian, manager of the Dictaphone. Mr. Dorian reported business with the Dictaphone to be of the record breaking order.

Another dealer who says nice things about the condition of trade is Maurice Silverstein, manager of this department for Cohen & Hughes. Both the Victors and Edisons are having good runs, according to Mr. Silverstein.

A THESIS ON ADVERTISING.

Every Little Letter Has a Meaning of its Own
—An A B C Book for the Business Man.

The word Advertising is composed of eleven units representing ten letters of the alphabet, or five-thirteenths of the total. It shows us that advertising is not quite the whole thing. The letter "I" alone occurs more than once in advertising. It is used fore and aft of the letter "S" to remind us of the Solicitor, who always keeps both eyes on the dollar sign.

A stands for Always, and suggests that all should advertise all the time in all the ways available; if anyone doubts this, let him ask any solicitor and be convinced.

D stands for "Dough"—the more you spend for advertising, the more you get. This has been proven over and over again by the solicitor who persuades the advertiser to dig up. It also stands for a lot of other things, but they do not count like the "Dough," and need not be mentioned here.

V stands for Valvoline, a high-grade oil, which easily brings the Dough when used by the expert solicitor. It also stands for Vacuum, to remind the advertiser of his bank account before the returns come in. The other virtues of the letter "V," if it has any, are immaterial in this connection.

E stands for Easy, and follows V to signify that a liberal use of oil and some earnest work will produce results every time.

R stands for Remorse, which usually overtakes the advertiser when he has been too easy. It also stands for Rum and Rebellion, and while these terms hold no terrors for the solicitor, they are sometimes cultivated by his victim.

T stands for Time, to show that Advertising bills must be paid on time, and that it takes time to get results from advertising. It also stands for Trade. Being the sixth letter, it shows that the advertiser should not expect profitable returns until after the sixth year of constant advertising.

I, in the first place, stands for Ink, which is the principal item of expense to the "Ad." publisher, and explains why space rates vary from one cent to seven dollars per line; it all depends on the quality of the ink used. No advertiser should ever allow his publisher to use cheap ink.

S stands for Success. It is the eighth letter and was placed there to show that only one advertiser out of eight makes good. It also stands for Salve to heal the wounds of the other seven, and Sorrow for the man who doesn't advertise at all.

I, in the second place, stands for Integrity; it is placed after Success to show its relative importance. It also stands for Incidentals, which is the second largest item of cost to the "Ad." publisher. This may seem strange to the novice, but those who have enjoyed the hospitality of the "Ad." solicitor appreciate the fact perfectly.

N stands for Nothing. It is put near the end of advertising to remind us of the old adage, "Nothing ventured, nothing gained," and to teach us that advertising should not be lightly regarded.

G stands for Gold and also for Glory, and was placed at the end of Advertising to show us that consolation awaits the faithful advertiser in one form or the other.—"Dad" Vernicke, in The Macey Monthly.

Rev. Gustave Truinet, a popular Catholic priest of Anacortes, Wash., after purchasing a Victrola from H. L. Dodge, of that city, wrote him the following letter, in part as follows: "I have heard the most beautiful bands and orchestras of Europe, many times I have listened to the grand operas of France and Italy, and I would not hesitate to say that the reproduction of these masterpieces of music, as given by the Victor talking machine, is above praise; it is not only an echo—it is the thing itself."

The Portland (Ore.) Phonograph Co., Victor dealers, have had such an increase in business that two more demonstrating rooms have been added. Esther Cohen has been added to their selling staff.

Dealers Complain About Difficulty in Getting Stock—Cincinnatians Honor Arrival of Talking Machine—Victor Department of the Aeolian Co. to Move to First Floor—Big Fire Destroys Machines and Records—What Various Concerns Have to Report.

(Special to the Talking Machine World.)

Cincinnati, O., Feb. 4, 1911.

What's the matter with the manufacturers? That is the query being put forth by some of the local dealers, who, since January 1, have been unable to supply the demand for popular hits. The trouble lies not with the jobbers, according to the investigators, but the producers. It is a well known fact that the talking machine business is centered in certain seasons of the year and the dealers who are complaining believe the manufacturers should prepare themselves accordingly. As a result of conditions in January much business was lost in this city.

Professor John L. Shearer, of the Ohio Mechanics' Institute, this city, unconsciously gave the talking machine business quite a boost in his talk on "South America" before the Cincinnati chapter of the American Institute of Architects at the January meeting. He showed a scene in Colombia, on a railroad between Porto Colombia and Barranquilla, where the town's entire population had assembled about the little depot, all in holiday regalia. Upon asking the conductor the cause for the assembling of the populace the American was told the gathering was brought about by a desire on the part of the people to do honor to the arrival of a talking machine. This had been imported for use in a festival which was to take place a few days hence. The incident brought forth much laughter from the audience. Why?

The Victor department in the new quarters of the Aeolian Co., 25 West Fourth street, will be located on the first floor. Mr. Ahaus, who has charge of this department, yesterday stated arrangements had practically been made for an entire suite of perfectly ventilated sound-proof rooms, with the prettiest electrical appointments possible. The Aeolian hustlers have already made up their minds not to permit any one interested in talking machines overlooking or not hearing of the Victor department in the new quarters. Last month's business was satisfactory from all standpoints, there being a substantial gain over the preceding month.

Strange things happened to the stock of records of the Joseph Krolage Co. in the fire which took place last Monday night, the conflagration playing havoc with some 4,000 of the cylinder and disc types. The condition of the records showed that the trouble was caused by water and not heat. Those of the ten-inch type, apparently in good condition, have lost all their tone qualities. Others fall to pieces upon being touched. The same is not true of the cylinder records. These are made

of a different composition and went through the fire without being damaged. The disc records were warped and are practically useless. The Krolage Co.'s loss is estimated at \$3,500.

Manager R. J. Whelen, of the Columbia Phonograph Co., reports a splendid January business, in all departments, being particularly pleased over the sales of Grafonola Regents and Favorite, and at no time during the month were they able to supply the demand for these two types.

In the wholesale department the dealers have shown unusual activity in re-ordering goods to replenish their stock sold out during the holidays, and in these re-orders a very noticeable increase is felt in the demand for Grafonolas, and they now fully realize the wide field that is opened up to them by these high-grade instruments, and the new grand opera records. The Alice Nielson records have been received with great enthusiasm.

Marion Dorian, of New York City, one of the high officials of the company, was a visitor the 1st of February, and was very much pleased with the conditions of business in all departments.

The tremendous volume of business done in talking machines during the month of January gives an exceptionally bright outlook for the future, and has resulted in increased enthusiasm on the part of everybody connected with the talking machine department of the Rudolph Wurlitzer Co., both retail and wholesale. Practically all of the petty features which formerly gave both the wholesale and the retail salesmen annoyance, have been eliminated with the advent of the Victrola, and the better class buyer. The business, both to retail and wholesale, consists mostly of big deals that are clean business in every way.

During the past month the retail department of The Rudolph Wurlitzer Co. has been featuring Mr. Johns, of the Victor Co., who has been giving daily concerts in connection with his theater, showing in tableaux various scenes from the opera as they are reproduced faithfully and true to the original scenery and artist. The crowds grew daily, till it was impossible to accommodate those who wished to attend the concerts. The last concert was given January 28, and although numerous requests were received for a continuation of the concerts, Mr. Johns was unable to accede to these requests on account of previous engagements and datings.

At the expressed request of the Rotary Club, an organization of Cincinnati business men, a special concert was given at 8 o'clock, on February 1. The entire list of members were present, with the exception of two, who were out of town on that day. This is an exceptional showing, and tends to bring home the fact that the Victrola is one of the biggest drawing cards in the musical line to-day.

Marked interest is being shown by prospects and Victor owners in the list of Red Seal Records. The demand for selections by artists, who formerly were in little demand, has grown until it now embraces practically the entire list of Victor Red Seal artists.

A recent sale was that of a Victrola XVI. to Mr. Herrmann, concert master of the Cincinnati Symphony Orchestra. Mr. Herrmann especially favors the Instrumental Victor records, and is a frequent visitor to the talking machine salesrooms of the Wurlitzer Co.

John Arnold, the Elm street dealer, is more pleased than ever with his present location, claiming each month's business shows an increase over the corresponding period last year. The wood Cygnet horn of the National Co. is quite popular with his visitors and he is using it exclusively in his demonstrating rooms. Arnold experienced some difficulty in securing the big hits last month and believes his business might have been doubled had this not been the case.

Four Victrolas were among the sales of J. E. Poorman, Jr., in January. His record trade was phenomenal and highly pleasing. During the month thieves broke into his store and evidently thought watches were more valuable than talking machines, for they secured \$75 in tickers.

H. B. Drabelle, of the talking machine department of the R. Wurlitzer Co., is no longer a bachelor. The plunge into the ranks of the Benedicts took place on January 26, the bride being Miss Katherine Reedy. They are now domiciled in a cozy home in Hyde Park.

Stop sending business to your competitors!

That's what you do every time a customer comes into your store, asks for something you don't have, and then walks out again.

Suppose, instead of going to another dealer, the customer consents to wait until you send to your jobber for what he wants. Then suppose your jobber is slow in filling your order, and the customer comes in two or three times and the goods haven't arrived. You surely couldn't blame him for going to another dealer.

Of course, the ideal way is to always have just what people want. The next best thing is to have a jobber who can give you anything you want immediately, if you don't happen to have it.

We can supply you immediately with everything you need in Victors, Victor-Victrolas, Victor Records, record cabinets, fiber cases, horns, needles, repair parts and accessories of every sort. We send the goods the same day the order reaches us—whether you are in a rush or not.

That kind of service is worth more to you than that of a slow-go-easy jobber, and yet it doesn't cost you any more. You might as well have it and not run the risk of losing customers.

Write today for our latest catalog and our booklet, "The Cabinet That Matches."

THE USE OF "TALKERS" IN SCHOOLS.

To Receive the Special Attention of Mrs. Frances E. Clark, for Some Time Supervisor of Music of the Milwaukee Public Schools and Who Has Now Joined the Forces of the Victor—A New Departure in Talking Machine Exploitation That Should Meet with Success—Something of Mrs. Clark's Plan.

(Special to the Talking Machine World.)

Milwaukee, Wis. Feb. 9, 1911.

Milwaukee talking machine circles are highly interested in the announcement that Mrs. Frances E. Clark, supervisor of music in this city's public schools, resigned on February 1 to accept a position with the Victor Talking Machine Co., at a salary of \$3,000 per year, an increase of \$1,000 over her present salary. In her new position Mrs. Clark will have charge of the development of the use of the talking machine in schools. She will prepare exercises for the various grades, with special reference to the kindergarten and primary classes, and will then travel about the country assisting in starting the new system in cities where it is adopted.

Mrs. Clark has been supervisor of the music in Milwaukee schools for the past eight years, and she is regarded as the originator of the idea of making use of the talking machine in teaching music in the schools. Her success in her endeavors in this line has been watched with interest all over the country and is of course largely responsible for her excellent offer from the Victor company.

Mrs. Clark's ideas on the use of the talking machine as an aid in the teaching of music in public schools can best be illustrated by quoting from an excellent address which she made on the subject before the last gathering of the Wisconsin State Teachers' Association, held in Milwaukee. She said in part:

"Modern science has come to our relief in the perfecting of the talking machine. It is necessary to reconstruct our old ideas of the wheezy, blaring, blatant, brassy thing we have known in the days ago. The new talking machine with its wood horn, its bamboo needle and the wonderful records obtainable is a joy and a delight—an artistic success. It has come to be an added power in teaching music in the school, conservatory and the home.

"In many schools where the supervisor is unable to sing well, or where the work must be done by the grade teacher, who often possesses a most unmusical voice, it is a priceless boon to thus be able to teach songs correctly. We may speak of a head tone, but the children do not understand by telling; but let them hear a pure head tone as given by Melba or Sembrich, and it becomes clear. We speak of the opera—children have never heard opera—their parents, perhaps, have never heard opera—they do not understand what we mean. But give to an eight grade or a high school chorus the story of "Il Trovatore," or "Ernani," then turn on the record as sung by our great artists, arias, choruses, duets, orchestra and all, and the whole subject is illuminated.

"In our rural schools, villages and smaller cities it is impossible for children of even high school age to hear more than occasional artists. The great singers do not visit the small places. What then must it mean in the education of the youth of our land to be able to bring into every eighth grade and high school, no matter how remote from the great art centers, the reproductions of the voices of the greatest singers the world has ever known?

"We have the talking machine in nearly thirty of our Milwaukee schools. They are giving entire satisfaction to the teachers and principals.

"As yet there are few records made of songs suitable for classes lower than grammar grades. The need of having records suitable for kindergarten and primary classes is immediate. Could we have records of the little classics of child words it would fill the same place in the lower grades that it is now doing in the grammar grades and high schools."

Indications are that the talking machine may become an instructor in the normal schools of Wisconsin as an aid in teaching music. At a recent

meeting held in Milwaukee of the presidents of the various normal schools, with members of the faculties and board of regents, Miss Helen M. Cundiff, teacher of music in the Oshkosh Normal School, made a strong plea for the use of the talking machine. The talking machine, said Miss Cundiff, would serve a splendid purpose in musical instruction, inasmuch as the best trained voices are now recorded on the records.

If the regents give consent to the use of the talking machine in the normal schools of the State, Miss Cundiff urged that records to the worth of \$500 at least be purchased. These records, she said, could be sent to each school, thereby permitting each individual educational institution to avail itself of the benefits of all the records.

The suggestion of the Oshkosh Normal School teacher was received with smiles momentarily by the heads of the various institutions and members of the board of regents, but the humor quickly disappeared as Miss Cundiff explained her suggestion and showed how the talking machine could

be utilized for excellent purposes in the normal schools. Attention was called to the wonderful success which the talking machine has achieved in the Milwaukee schools, and it is believed that as great success can be secured in providing musical training for the future teachers. Theodore Kronshage, a Milwaukee member of the normal board of regents, seems to be favorable to the proposition and urges that the board give the matter careful consideration.

The attention of various cities about Wisconsin has been attracted by the success achieved by the talking machine in the department of music in the Milwaukee schools under the direction of Mrs. Frances E. Clark, and it is expected that before the year is over many of the up-State schools will have adopted the system. Professor Theodore Winkler, superintendent of musical instruction in the Milwaukee public schools, is advocating the use of the talking machine in teaching music and expects to have the system installed in his school before many weeks.

CAN YOU GUESS WHO THIS IS?

The Latest Prize Contest in the Trade—A Prize in the Form of Large Packages of Fine Imported Needles Will Be Presented to the First Fifty Jobbers or Dealers Who Send in Correct Answers to The Talking Machine World.

A list of great names, a catalog of great records and a line of instruments unsurpassed—the whole reinforced with Columbia exclusive selling rights—that is the Columbia proposition before the live dealer to-day.

Columbia Phonograph Co., Genl., Tribune Building, New York.

GOOD BUSINESS IN MILWAUKEE

For the Talking Machine Men During January—Money Easier and Collections Improve—What the Upstate Talking Machine Dealers Have to Report—High Priced Outfits Have the Call—Victrolas in School Concerts—Items of a Personal Nature—Talking Machine Makes Good in Hospital for the Insane—Executive Committee of the Jobbers' Association to Meet in Chicago to Perfect Convention Plans—Other Trade News of the Month Presented in an Interesting Way.

(Special to the Talking Machine World.)

Milwaukee, Wis., Feb. 10, 1911.

Judging from the manner in which the talking machine business has been improving in and about Milwaukee since the opening of the new year, 1911 ought to be a winner. Jobbers and retailers are unanimous in saying that the total volume of trade since January 1 has been far in excess of that of the corresponding period a year ago. It is nothing unusual to find conditions rather dull just at this time, but conditions are certainly satisfactory this year. One bright feature of the situation is the fact that collections have been showing steady but sure improvement. Since early last fall there has been a tendency for people to hang on to their money, figuratively speaking, but the outlook is now brighter and money is moving more freely.

Local retailers feel that they have cause to be thankful over the fact that conditions in the local machinery field are showing decided improvement. Next to the manufacture of the amber-colored fluid that has made Milwaukee famous, the city is noted for its manufacture of heavy producing machinery of all kinds, and when conditions in this field are satisfactory it means better business for everybody. Since before the holidays there has been a depression in the local machinery and steel field, but now genuine improvement is taking place in this field and people are breathing more freely and are again loosening their purse strings. All the leading machinery concerns report a big increase in their bookings and are gradually increasing their working forces.

• Reports from up-State talking machine retailers are to the effect that money is more plentiful in the smaller cities and towns of the State and that prospects for 1911 are especially bright. Just to show that they are sincere, retailers are placing some fine orders with Milwaukee jobbers for machines, records and supplies. In fact, local jobbers say that their business shows signs of a big increase during the month of February.

As is usually the case in Milwaukee, demand is especially strong for the high-class machines, and most of the local dealers report some fine sales. It was noticeable during the past year that the business was conspicuous, not so much for an increase in the number of sales, but in the quality of the trade.

A Victrola, furnished by Lawrence McGreal, the local jobber, and operated by Walter Timbrook, is proving to be one of the leading attractions at the moving picture entertainments which are being given at the various public school buildings by the Milwaukee Journal. These entertainments are at-

tended by the children and their parents and the idea is to instil into the minds of the people that greater use should be made of the school buildings as neighborhood gathering places. Mr. McGreal always sees to it that a fine line of records is on hand for these entertainments and sometimes there is a question as to which is appreciated most, the moving pictures or the Victrola.

F. A. Fritch, a young man aged 20 years, had a narrow escape from death recently at the establishment of Lawrence McGreal, when an explosion of gasoline in the elevator pit at the McGreal store burned him about the face and hands. Fritch was forced to spend some time at the hospital, but is about once more.

Milwaukee talking machine men are much amused over a story that is going the rounds at the expense of Theodore Borup, president of the Wisconsin Humane Society, and a woman member of the organization. Mr. Borup was sitting in his office recently, when the lady in question called him up in a most excited manner.

"Oh, Mr. Borup," said the lady, "I have a most atrocious case that you must investigate right away. It's perfectly terrible. You know, last night, I attended the theater and saw 'The Nigger,' and in one part of the play someone on the stage tortures a number of dogs terribly to make them bark and howl when they are supposed to be chasing a negro who has committed an awful crime. Why, they must stick pins into them or do some other terrible thing to make the poor things cry so."

Mr. Borup at once called upon Harry Singer, manager of the theater in question, and asked why such an outrage should be permitted.

"Why, we have no dogs on the stage," explained the manager. "The effect of the barking, baying hounds is produced by two big talking machines. If you will step back upon the stage I will be very glad to give you a demonstration."

Dr. M. J. White, superintendent of the Milwaukee Hospital for the Insane, at Wauwatosa, suburb of Milwaukee, is putting the talking machine to rather a novel use. It has long been the belief of Dr. White that music properly selected is a balm

to the troubled soul, and he has taken up the method of curing people with troubled minds by the use of music. His theory that music is a cure for insanity has proven practical and it has been a great success at the county institution where he is in charge.

The attendants and nurses who have aided Dr. White in making his observations unite in testifying to the beneficial effects music has on the mind of a patient. It is found that certain airs, such as the hymn, "I Know That My Redeemer Liveth," did not have a very good effect on those who are insane on religious subjects. Dr. White discovered that some of the fine old songs, "Flow Gently, Sweet Afton," "Dixie," "The Last Rose of Summer," and others, had a tendency to calm a patient who became violent. In the course of the experiment it was found that the "Dead March From Saul," "In the Hour of Trial," "Ben Bolt," and "We Are Tenting To-night," had most injurious effects.

"It is only a modern application of an idea that worked wonderful cures in the days when the world was young," said Dr. White. "The ancient Hebrews knew well the power of music. Especially was it true in nervous diseases and maladies of the mind. Witness the tale of the cure wrought on Saul by the sweet playing of the shepherd, David."

The meeting of the arrangement committee of the National Association of Talking Machine Jobbers, which was to have been held in Milwaukee, January 11, 12 and 13, to complete plans for the coming convention of the association, which will be held in Milwaukee July 11, 12 and 13, was postponed and will be held in Chicago February 19 and 20. There will be a meeting of the executive committee of the association held at Chicago on the same date. Lawrence McGreal, of this city, who is a member of both committees, will be in attendance. Judging from letters received by Mr. McGreal, this year's convention at Milwaukee will be largely attended.

A. G. Kunde, Columbia jobber, 516 Grand avenue, is living up to his record of opening one new Columbia branch store in Milwaukee each month.

Linenoid Recording Horn

The recording possibilities of the phonograph which have been especially emphasized lately have given the sale of recording accessories a big impetus.

The Linenoid Recording Horn is made of pure linen, without seam or joint, and, owing to its construction and its peculiar acoustic properties, is best adapted for recording purposes.

TRADE NEWS FROM ST. LOUIS.

Talking Machine Men Well Satisfied with Business for the First Month of the Year—E. B. Walthall Loses Father—Two Victrolas for Brewer—Interesting Personal Items—What the Various Houses Are Doing.

(Special to the Talking Machine World.)

St. Louis, Mo., Feb. 6, 1911.

The talking machine business for January was up to the season of the year, some concerns reporting that their trade showed an improvement over the same period a year ago.

E. B. Walthall, manager of the Columbia Phonograph Co., was called to his home in Kentucky by a telegram on Dec. 21, his father having died suddenly. He returned here on Jan. 6. During his absence C. L. Byars looked after the business in a very able manner.

William M. Todd, accountant of the Columbia Phonograph Co., left Jan. 21 to enter the account-

ing department of the company at their Bridgeport, Conn., factory. He is succeeded by B. F. Moore, formerly with the National Bank of Commerce here.

C. Kauffman, traveler for the Columbia Phonograph Co., is making his regular trip through southwest Missouri, and is having a good business.

The Aeolian Co. report having had a very active trade in their wholesale department, and that they had a good business in their retail department, with a large run on the new Caruso records.

C. O. Thompson, in charge of the wholesale talking machine department of the Aeolian Co., has resigned. Mr. Thompson had made himself very popular with all whom he had come in contact with by his very agreeable and obliging ways. All his friends wish him the best of success.

L. A. Cummins, traveler for this concern, is now on a trip through Illinois and Kentucky.

The Silverstone Talking Machine Co. report having had a seasonable month. They completed their new Grand Opera booth on Jan. 15. It is encased in art glass and handsomely decorated, presenting a very attractive appearance.

The Koerber-Brenner Music Co. report their January trade as being well up to the season. W. A. Brenner, secretary of this concern, will return the latter part of February from a six weeks' trip to the coast.

J. J. Clegg, traveler for this concern, is now on a three months' trip through the Southwest. A. M. Page, traveler for the same concern, is on a three months' trip through the North.

D. K. Myers, the well known Zonophone jobber, reports trade for January as being fair with improving prospects.

The Thiebes Piano Co. report the sale of two Victrolas to a prominent local brewer, who bought one for his sister-in-law. He also had a selection of \$200 worth of records sent with each instrument on approval. The records were so satisfying that he thanked the firm for the nice selections and kept them all. This firm reports a good January trade.

The Bollman Bros.' Piano Co. report their talking machine business quite satisfactory for the month.

O. A. Gressing, manager of the talking machine department of the Aeolian Co. at New York and branches, is expected here shortly on a visit.

"Doc" O'Neil, the globe trotter of the Victor Talking Machine Co., spent a few days here recently on his way home from a trip to the Orient. The doctor had some very enthusiastic audiences listening to his entertaining tales of his trip.

J. M. Means, formerly assistant manager of the talking machine department of the O. K. Houck Piano Co., Memphis, has been made manager of the same department.

S. W. Goldsmith, traveler for the Victor Talking Machine Co., from the home office, spent a few days here recently calling on the trade.

William Vedder, of the Excelsior Co., Cape Girardeau, Mo., a talking machine dealer, was a recent visitor here.

WHERE CLOCKS SAVED TIME.

With Time Always in Sight Employes Did Not Have to Stop Work and Begin Gossiping.

Every employe who watches the clock is losing time. Yet clock watching is necessary in planning work. Employes watch clocks because they are set at tasks and want to keep posted on the passing of time as their work progresses through the day.

The superintendent of a big city office was annoyed by the constant interchange among employes of information touching the date and the hour, says System. To eliminate these inquiries he installed a large wall clock at each end of the office and arranged all desks so that everyone could see one or the other. Under each clock he placed a large calendar—the largest he could get. Over each calendar he placed an electric lamp that was lighted at dusk. Thus at a glance, any employe could learn the date, hour, minute and second, without disturbing anyone else in the process.

The clocks cost \$24 a year; the lights were estimated at \$3 a year for current and maintenance; the calendars were supplied gratis by a firm whose imprint they bore. The manager saved the entire year's investment during the first month in employes' time that had formerly been wasted.

Fifth and last. When you come to your place of business each morning have the determination in view that you will earn your salary that day, and when you leave at night be sure that all orders which have been given you have been looked after properly. Thus you will increase your employer's business, secure your own advancement, and make yourself a man to be desired, and one who is never out of a good position.

WHICH ARE YOU—LIFTER OR LEANER?

There are two kinds of people on earth to-day;
Just two kinds of people, no more, I say.

Not the sinner and saint, for it's well understood,
The good are half bad and the bad are half good.

Not the rich and the poor, for to rate a man's wealth,
You must first know the state of his conscience and health.

Not the humble and proud, for in life's little span,
Who puts on vain airs is not counted a man.

Not the happy and sad, for the swift flying years
Bring each man his laughter and each man his tears.

No; the two kinds of people on earth I mean,
Are the people who lift and the people who lean.

Wherever you go, you will find the earth's masses
Are always divided in just these two classes.

And oddly enough, you will find too, I wean,
There's only one lifter to twenty who lean.

In which class are you? Are you easing the load
Of overtaxed lifters, who toil down the road?

Or, are you a leaner, who lets others share
Your portion of labor and worry and care?

—Ella Wheeler Wilcox, in The Cosmopolitan.

GEO. P. METZGER'S CAREER

As Published in Tabloid Form in Printer's Ink Recently.

Among the interesting paragraphs appearing in Printer's Ink recently in connection with the publication of the portraits of a number of the contributors to that magazine during 1910 were the following facts connected with the career of Geo. P. Metzger, advertising manager of the Columbia Phonograph Co., New York, who has recently written a number of interesting and able articles on advertising for that publication:

"George P. Metzger, advertising manager, Columbia Phonograph Co., was born in Kansas in 1871, but came East while very young. He was a 'printers' devil' on the Lynn, Mass., Bee, until it failed, and then became proofreader on the Springfield Republican. Determining to learn selling he got a factory experience with a typewriter concern and later started a bicycle business of his own. He later traveled for 'Vim' tires and got started in advertising through writing catalogs. Mr. Metzger's next experience was in connection with the Wanamaker Book Club. After having served as advertising manager of Everybody's Magazine he became the chief member of the Hampton's Advertising Agency staff and continued there until he formed his present connection."

A. O. PETIT IN NEW COMPANY.

A. O. Petit, formerly head of the Edsonia Co., Newark, N. J., and well-known in the talking machine trade, is the head of the Petit Realty Co., recently incorporated in that city with capital stock of \$100,000 for the purpose of acting as real estate dealers, builders, contractors, etc.

You positively cannot succeed now with any kind of salesmanship but the honest kind. No other sort is scientific, practical, or useful in any way. It would not seem that there is need to reiterate such a statement, but one meets constantly with young men who have yet to learn that straight honesty in selling is of paramount importance.

SONORA

The Instrument of Quality

Highest Class

Talking
Machines

and
Records

Styles O and P, \$25 list.

Other Machines \$40, \$50, \$60, \$75, \$100 and \$200
Stands and Cabinets, \$10, \$30 and \$50

We are happy to be able to say that we now have a most desirable line of records to sell with our machines, and that we will add to the list at the rate of about 40 titles per month, all of the highest grade of their kind. They are all hill and valley (sapphire), cut for use with sapphire point. SAPPHIRE RECORDS AND SAPPHIRE POINTS ARE PRACTICALLY INDESTRUCTIBLE. Think of these advantages calmly and conclude what they mean.

Our TONE MODERATOR, AUTOMATIC STOP, INVISIBLE HORN and other points of favorable comparison make Sonora goods exceedingly attractive.

That you, Mr. Dealer, are reading these lines may indicate to you that we are still doing business, and that bluster alone does not constitute facts. We are very much alive, and will be heard from effectively in many ways before many days.

1911 will not be very far gone before you will be glad to be a "Sonora man," or wish you were.

We want general agents of good standing and responsibility.

Sonora Phonograph Co.
78 Reade Street, New York

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially Prepared for The Talking Machine World.)
Washington, D. C., Feb. 10, 1911.

DIAPHRAGM FOR SOUND REPRODUCERS. Nathan Stowell Wakefield, Los Angeles, Cal. Patent No. 980,713.

This invention relates to a diaphragm designed especially for phonographs, telephones, or other sound-reproducing instruments, and the principal object of the invention is the provision of an extremely simple and inexpensive diaphragm possessing superior sound-reproducing properties.

Another object of the invention is to provide a diaphragm of the chambered type consisting of a novel arrangement of discs fastened together to form a unitary structure, and so designed as to reproduce the delicate tones or sound shades as well as accurately reproducing the volume and register of the original sound without disagreeableness, as is the case with diaphragms commonly in use.

In the accompanying drawing, which illustrates one embodiment of the invention, Figure 1 is a perspective view of the diaphragm. Figure 2 is a perspective view showing the inner disc of the diaphragm in section. Fig. 3 is a diametrical section of the diaphragm. Fig. 4 is a plan view showing the inner face of the inner disc. Fig. 5 is an enlarged sectional view of the central portion of the diaphragm.

SOUND-BOX. Wilburn N. Dennison, Merchantville, N. J., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 978,566.

The objects of this invention are to provide a sound-box casing of durable form consisting of easily constructed parts, few in number, and which may be readily taken apart or assembled; to provide a light and rigid stylus bar; to provide a ring or gasket for the diaphragm which is symmetrical in construction and which is securely seated within the casing; to provide an improved form of pneumatic ring or gasket for the mounting of the diaphragm and to make provision for inflating said gasket; to provide a torsional spring mounting for the stylus bar which restrains said bar to oscillate in a plane perpendicular to and upon an axis substantially in the plane of the diaphragm, and to provide means for the convenient and accurate adjustment of the tension upon said spring; to provide means for equalizing the cushioning effect of the atmosphere upon the opposite sides of the diaphragm and to prevent the loss of energy by the leaking of air past the diaphragm in order that the full effect of the action of the diaphragm upon the air may be delivered through the outlet of the sound-box to the amplifying means; and to provide other improvements.

In the drawings, Figure 1 is a front elevation partly in section of a sound-box constructed in accordance with this invention; Fig. 2 a section on line 2-2 of Fig. 1; Fig. 3 a fragmentary side elevation of the sound-box; Fig. 4 a section on line 4-4 of Fig. 3, looking in the direction of the arrows; Figs. 5, 6, 7 and 8 are enlarged perspective views of details of construction, and Fig. 9 is a sectional view on the line 9-9 of Fig. 2, and

Fig. 10 shows modified forms of hollow stylus bars.

TALKING MACHINE DIAPHRAGM. William W. Young, Springfield, Mass. Patent No. 982,197.

This invention relates to improvements in reproducing diaphragms for talking machines, and consists of a more or less porous material impregnated and permeated and surface treated with a filling material or materials of suitable character, hardened, and provided with a raised portion or integral protuberance, if desired, all as hereinafter set forth. This diaphragm is exceedingly compact, hard, and tough, although thin, has smooth and even surfaces, and possesses a uniform thickness throughout, excepting in the center, where may be located the above-mentioned protuberance.

As is well-known, it is not possible to obtain the best results with reproducing diaphragms made of mica or sheet-metal, these, especially the former, being the kind commonly used in talking machines, and besides the mica disks or diaphragms are extremely fragile and also expensive because of the waste incident to procuring discs of the proper size, and the primary object of the invention is to produce a substitute for mica, sheet-metal, and other varieties of diaphragms, which substitute possesses the necessary or desirable features outlined in the preceding paragraph, and in addition is resilient and resonant, is impervious to moisture and unaffected by climatic changes, and is capable of giving out clear, loud and distinct tones of great depth and volume, of evenly distributing the sound waves and quickly, completely and perfectly recovering its stable equilibrium, and of lessening to a great extent, if not eradicating altogether, all alien and discordant noises such as blasts and scratching sounds which are so frequent with the ordinary diaphragm.

Figure 1 is a side view of a diaphragm which embodies the invention, and Fig. 2, a cross-section, on a large scale, of said diaphragm.

STOP FOR GRAMOPHONES. John A. Johnson, Sauk Center, Minn. Patent No. 982,138.

This invention relates to gramophones and particularly to brakes for the same which will stop the rotation of the turn table when the extremity of the record has been reached.

It also contemplates the construction of a device of this type which may be retained from operation while the same is being set.

A further object is the provision of a means whereby the records may be gauged and the brake set to conform with the size of the record.

Figure 1 is a top plan view of a gramophone embodying the present invention, illustrating the box and turn table diagrammatically; Fig. 2 is a central longitudinal section of the brake operating mechanism; Fig. 3 is an interior elevation of one of the operating shaft engaging levers; Fig. 4 is an end elevation of the brake operating shaft illustrating the co-operation thereof with the gramophone shaft.

METHOD OF MAKING ACOUSTIC DIAPHRAGMS. Wm. W. Young, Springfield, Mass. Patent No. 982,027.

This invention relates to improvements in methods of manufacturing acoustic diaphragms for talking machines, telephones and the like.

The object of this invention is to produce an acoustic diaphragm, of the class indicated above, which possesses in a marked degree not only the

essential but the desirable characteristics and qualities of a device of this kind, such as durability and stability, resiliency and resonance, capability of giving out clear, loud and distinct tones of great volume and depth, and of evenly distributing the sound waves, and quickly, completely and perfectly recovering its stable equilibrium, and immunity from blasts and scratching sounds and other alien and discordant noises.

In the accompanying drawings Figs. 1 and 2 are side views of two diaphragms made in accordance with the new method, showing different formations and arrangements of the lesser or minor diaphragms, and Figs. 3, 4, 5, 6 and 7 are sectional views of five diaphragms, on an enlarged or exaggerated scale, illustrating different combinations or arrangements of the diaphragm-forming elements, incident to the putting into effect of said method.

TALKING MACHINE HORN. Wendell Hess, Jr., Troy, N. Y. Patent No. 981,648.

The invention relates to improvements in talking machine horns.

Figures 1, 2, 3 and 4 are sectional views illustrating successive steps in the securing together of plies of cloth in the manufacture of my improved phonograph-horn. Fig. 5 is a central, vertical, longitudinal section showing the cloth-body stretched upon a horn-shaped form. Fig. 6 is a

plan view of one of the segmental blanks of cloth used in the manufacture of the horn. Fig. 7 is a view in side elevation of the horn with a portion of the edge broken away and shown in central, longitudinal section.

ELECTRIC BRAKE FOR GRAMOPHONES. John E. Means, Oil City, Pa. Patent No. 981,935.

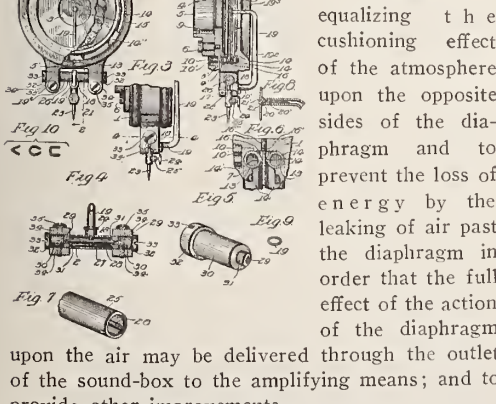

This invention relates to improvements in electric brakes for gramophones, and the prime object

is to provide an improved construction of electric brake mechanism for gramophones whereby the machine will be automatically stopped.

Another object is to provide means whereby the circuit closing mechanism of the electric brake releasing mechanism may be adjusted to operate the brake when the needle has reached any desired place on the record.

In the accompanying drawings: Figure 1 is a plan view of a disc gramophone with parts broken away and showing the application of the invention; Fig. 2 is a vertical section of the same on the line 2-2 of Fig. 1; Fig. 3 is a rear view; Fig.

The more you realize that in the future of this business the best results are yet to come, the more freely you must admit that the Columbia is the only line worth the investment of your time, your energy, and your capital — because Columbia exclusive selling rights protect you.

Columbia Phonograph Co., Genl., Tribune Building, New York

1 is a vertical section of a portion of the machine showing the brake releasing mechanism on an enlarged scale, and Fig. 5 is a similar view showing

an end elevation of the electro-magnets for operating the brake releasing devices.

AUTOMATIC STOP FOR TALKING MACHINES. Delphos C. Nelson, Marion O. Patent No. 982,293.

This invention relates to automatic stops for talking machines, and the object of the invention is to provide means for automatically stopping the movement of a record support when the sound-reproducing device has reached the end of the record, and to provide adjustable means for controlling the actuating mechanism for the stop.

In the accompanying drawings, Figure 1 is a side elevation of a talking machine equipped with this invention, and Fig. 2 is a top plan view of the same, with the sound-reproducing device and its support removed.

COLUMBIA EXCHANGE PLANS.

Some of the Details Set Forth That Will Interest the Talking Machine Trade.

The Columbia Phonograph Co., General, recently notified their trade of the "One-for-one exchange of cut-out disc records," effective January, 1911. The essential portion of this decidedly interesting document is appended:

"To the Trade—The attached list represents all cut-out records announced from time to time since our last record exchange. In view of the advance notice given we presume many dealers have taken advantage of the opportunity thus given to sell their stock, but for benefit of the trade that still have a stock on hand the following exchange is authorized:

"First. Records returnable—Records from the attached list may be returned for full credit upon the following conditions being fully complied with.

"Second. Records not returnable — Broken, cracked or worn records, or records not appearing on the list of cut-out records attached will not be

accepted under any condition. This includes records broken in transit.

"Third. Order required—One new record must be ordered for every old record returned. It may be a record of any selection or price taken from our current double-disc catalog. If the record ordered is of a higher price than the record returned a charge for the difference in price will be made.

"Fourth. Credit—Credit for records returned will be given only upon an equal number of new records being ordered and shipped, and will not be applied on a dealer's account or against any other order for records than the order which must accompany notice of the returned shipment."

Particulars as to notice of shipment and shipping instructions are given. The company also adds:

"No retail exchange is authorized. Any records returned under the terms of this proposition must be all sent in one shipment, on or before February 15, 1911. Positively no records will be accepted or credit allowed for records returned after that date.

"The acceptance of the conditions herein specified must be fully agreed to and carried out, otherwise we reserve the right to refuse the privilege of this exchange to any dealer not complying with the said conditions. The shipment or return of records to us will be considered as an acceptance of all the terms and conditions of this exchange proposition, which is open to bona-fide Columbia dealers only."

SECTIONAL RECORD CABINETS

Are Being Placed on the Market by the Columbia Phonograph Co.

A new departure has been made by the Columbia Phonograph Co. in their record cabinet line. Within a week or so they will place on the market what they call a bookcase cabinet, familiar to the public as sectional book cases. This Columbia book case cabinet is arranged to accommodate disc records BN, BNW and BII. The cabinet is to sell for \$25 and \$30 list. The \$25 cabinet is equipped with racks for albums, while the \$30 cabinet will accommodate nine albums, bound in substantial cloth, with gold lettering to suit, fitting ten and twelve-inch disc records, with a capacity of 100 records. The cabinet work is in golden oak to

harmonize with the machine outfit of the same finish.

As an introduction, only two cabinets, with a high base, will be offered, and later other sections will be marketed with the usual low, solid base.

NATIONAL CO.'S PROMOTION PLAN.

The promotion plan for increasing the sales of Edison phonographs and records, which has been in operation since July last, has been greatly stimulated by the holiday sales; and as a result Edison dealers are now applying themselves to its exploitation more aggressively than ever before. The sales department say that promotion certificates have been reaching them since the holidays from dealers who previously thereto had been skeptical of the merits of the plan and had therefore refrained from pushing it to any extent, but who have since become impressed with its possibilities and are now actively circulating the promotion literature and special record catalogs among Edison owners. One instance is mentioned of just such a dealer in the East who had done absolutely nothing with the plan, but who since the holidays has sent in eight promotion certificates to Orange, N. J., representing sales made during and since the holidays as a direct result of the plan. Sales Manager Dolbeer is sanguine of big things for the plan, now that the Edison trade generally is waking up to its possibilities.

Every customer who enters your store is impressed with the manner in which you conduct your business, the greeting he receives and the courtesies extended him by every one employed in the store. Your personal appearance and the appearance of the store go a long way toward making of him a permanent and profitable customer.

Recently Ben Feinberg, special road representative of the Columbia Co.'s wholesale department, after a very successful short trip, was admitted to Lodge No. 1 of the Elks, New York city. This popular traveler, who lands great orders for his company, is besides a member of the Blue Lodge in Freemasonry, and a member of the uniformed rank Knights of Pythias, and maybe a Knight of Malta and a Granger. At any rate, he is right on the job irrespective of time and place. The latest is Mr. Feinberg landed an order in New York city this week exceeding \$25,000.

THE BEST TRADE MAKERS ON THE MARKET ARE THE LINE OF

ELECTRIC-PLAYERS

MADE BY

THE ELECTROVA CO., 117-125 Cypress Ave., NEW YORK

As a side line for Talking Machine Dealers they are unequalled. They mean easy money and big profits. We will send the arguments that will convince you and your customers.

Write for Catalogs, Prices and List of Perforated Music Rolls. You will be interested.

KEEPING UP SALESMEN'S SPIRITS.

Sales Act as a Tonic to the Man Who Is After Business—How to Avoid or Counteract the "Blue Devils."

"Sales," says a man who has managed traveling salesmen for the most of his business life, in the Hardware Dealers' Magazine, "are to the salesmen what applause is to the actor. When they are difficult and far apart this is bound to react on the seller. Only those who have seen it know how a big, strong man can suffer at such time—or a small, nervous, energetic one.

"Some of the standard remedies for blue devils are those of the salesmen who cure themselves. They have learned that nervous energy runs in periods. Instead of blindly battering themselves against difficult situations on adverse days, they go off and take a rest."

An old hardware salesman whose route card carries him into certain parts of Pennsylvania has for years made it a rule to avoid any territory that is upset by strike, a flood, a mine disaster, or other local disturbance. He says that under such conditions the trade is not worth looking after. So he dodges around the afflicted towns and takes to the others.

How does the "blue day" begin? Perhaps with a customer's complaint about goods previously sent him. Perhaps when he leaves for his office, a batch of unusually heavy household bills have come in. His breakfast has been heavy, or he was up too late the night before.

When he goes out to sell he is not in the mood to do a thing, and usually does not earn his salt while the blue devils are on his back.

What does the sensible salesmen do under such circumstances? He takes an afternoon off, goes to the theater; sits down somewhere with an entertaining book. The next day he goes out with new vigor, and makes a hit.

INSTALMENT SALES PLAN

Inaugurated by the Columbia Co. for the Purpose of Stimulating Sales of Records.

In order to aid and stimulate record sales the Columbia Phonograph Co., General, have evolved a new instalment sales plan, which they have placed before the trade in a recent circular letter, in part as follows:

"This is the season of all others when record sales can be legitimately pushed. The enormous sale of talking machines over the holidays naturally suggests that the first outfit of records will, by this time, be rather familiar to the owner, and he is ready, according to all the results which have been checked up in past years, to add to his record collection. We believe that a great many of these owners can be approached for the sale of a very large additional outfit of records, instead of one or two new records if they are permitted to make the same payments to you which they would if they only bought two or three records, and are permitted to take possession of the complete outfit at once.

"This is, of course, merely an instalment method of selling records—which has never been worked out yet and should prove extremely profitable to your store. The proposition is one which will give you the best and most profitable sales through your store trade and we do not wish to pay agents or canvassers commission, therefore the sale should be promoted through advertising the store, and by any and all of a half dozen different ways except such as would require your paying a commission to agents or canvassers.

"See what use you can make of this advertisement (copies of which were enclosed) and plan of selling records. If your appropriation does not admit of it make a request for such as you think will be needed. Until further notice this plan of selling records may be used over the months of January, February and March, and under the above terms may be sold at regular list price without adding the usual 10 per cent."

J. B. Lane, who has been in charge of the talking machine department of Fred'k Loeser & Co., the premier dry goods emporium of Brooklyn, N. Y., has severed his connection with the firm and C. Hamilton, in charge of the piano section, is now assuming the duties. Possibly this arrangement may be permanent, though a few "stars" in the line are looking up the job.

Opportunity has no set "calling days." But it is both good form and good business to be about the house when the Old Fellow does slip around.

Never wink at the overcharging of a customer. Reprove a clerk as quickly for an error in your favor as for one in favor of the customer.

AN ECONOMICAL BILLING SYSTEM.

A Method That Cut Down Expenses Nearly \$7,000 Annually Described in "System."

In a certain office eight men and four girls were engaged in the work of figuring, copying, extending, adding and verifying bills. To add still further to the complexity of the department's work, press copies of each were made for the files and for the accounting department.

This is how \$6,680 was chopped off this company's payroll.

An entirely new billing system was installed by which machines were used for the work. With one writing were made the original bill, the duplicate for the customer, the office copy, the file copy and the ledger entry. The figuring, of course, had to be done on the order, but this was necessary in any system while the verifying was done before the invoice was made out.

Two men took the orders as they came through and figured them. Turned over to machine operators, these were copied and all records were made at one writing. Accumulators on each machine added one or a dozen columns and proved the work as they went along. To prove the addition the operator noted the columns in the accumulator as the total was copied on the sheet. If it stood at zero in all columns, the addition was correct, and the amount verified.

Previous to the change, much night work had been necessary, and the department rarely caught up with the shipments. Mistakes were made constantly, while the billing department was very expensive. With the installation of machines, only half the floor space was required, half the furniture, fewer printed forms and less stationery. Instead of twelve employes the department was conducted better with six. The cost of the equipment—\$1,000—was saved again and again during the first year. Six thousand, six hundred and eighty dollars were saved on the salary account, although the pay of those who remained was raised.

NATIONAL CO.'S SELLING AND SHIPPING DATES.

The selling and shipping dates of the National Phonograph Co., Orange, N. J., during 1911, follow: Shipping—January, February, March and April on the 24th of the month, May and June on the 23d, July and August on the 24th, September on the 23d, October and November on the 24th, December on the 22d. Selling—With the exception of June, which will be on the 24th, and December on the 23d, the other months will be on the 25th. The company also cautions the trade that any jobber or dealer who anticipates the date and the hour (8 a. m. on each day named) of shipping and selling specified, violates the terms of his agreement.

BUILDING A PERMANENT BUSINESS.

Some Pertinent Observations Regarding Methods That Ensure a Solid Business Structure—Where the Inexperienced Man Is at a Disadvantage in the Talking Machine Trade—Where Moderate Profits in Hand Are Better Than Double Profits in Prospective—Doing Business Within the Limits of Capital—How the Business Frequently Gets Beyond The Dealer—Figuring Quick Assets at Their Real Value.

According to what the captains of industry, the men who have made their pile by gouging the public for a million dollars and then giving back one hundred thousand in the guise of philanthropy, tell us, one of the greatest evils that can befall a young man is the habit of living beyond his income. Of course, in our personal opinion that depends upon how much credit that young man has and how long he can get away with it. The same obnoxious habit, however, in another form is found in the business world. The habit acquired by the small dealer in endeavoring to do a business far beyond his capital. As J. Newcomb Blackman pointed out in last month's World a man with a limited capital cannot expect to meet a well organized and financially strong competitor on equal terms, and an attempt to do so only means a disastrous failure for the weaker party. It is a case where the old adage applies, namely, "Don't bite off more than you can chew."

A man with, we will say, \$2,000 capital may, through frequent turnover of stock, do a business of \$10,000 yearly, and do it in a fairly conservative way, but he has to be careful. Should he attempt to keep up with a strong competitor with hundreds of thousands of dollars back of him and endeavor to increase his \$10,000 business to \$20,000 there is going to be work for the sheriff or a new job for the receiver.

The trouble in any line of business where instalment accounts figure largely is the tendency of the inexperienced man to figure every sale at its face value, and to figure in his current assets all outstanding instalment accounts. Say a man has \$1,500 worth of stock. He has \$3,000 in outstanding instalment accounts, and, in seeking credit immediately figures that his business is worth \$4,500. When the business is dissolved he is surprised and the creditors considerably peeved to learn that the assets have shrunk in the liquidation process to less than half the value placed upon them by the dealer.

Here is where the knowledge of the business really comes in. A dealer can carry a full line of machines at all times and a sufficient stock of records to meet 90 per cent. of any sudden demand, and all at a minimum outlay. That is, if he knows his business. If the dealer can judge the class of trade in his locality he should stock the machines and records that will appeal to that class of trade, and have, say, half a dozen each of the best selling machines on hand at all times. The balance of the line of machines and records made by the manufacturer he represents can be carried as samples at a minimum of expense, and the samples replaced when sold.

When a business gets so far beyond the dealer that instead of being able to meet his jobbers' bills promptly he is forced to use every dollar collected in running expenses, the sooner he puts the "To Rent" sign in the window the better off he will be. Carrying on a successful talking machine business is a great deal like practising as a long distance runner. In the beginning a 100-yard run causes fatigue; but, the practice is kept up and gradually the distance is increased until the runner is capable of doing a Marathon. The talking machine dealer who increases his business gradually, never loses his grasp of every detail, and keeps well within the limits of credit commensurate with his capital, is not going to be thrown on his beam ends suddenly by being asked to settle his jobber's account. Of course there are times when certain conditions arise that cause embarrassment to even the most careful dealer, as, for instance, the 1907 panic, or a local disturbance of that character. At such a

time his reputation for solid business practices in the past will stand him in good stead.

An excellent business rule as laid down by a well-known successful merchant is well worthy of consideration. He said: "When I started in business I endeavored to adjust my affairs so that my assets were sufficiently in excess of my liabilities to preclude any chance of my being ruined by any sudden demand. I kept in such close touch with my business that before going home at night I knew just how my affairs stood, and there was never any worry on my part regarding what the morning might bring forth."

There is really no logic in making a temporary profit of \$5,000 with a chance that the business will be wiped out and result in a total loss when a quarter of that amount may be cleared without danger. It's the material things that count, not the figures on paper. It reminds us of the story of the negro bellboy earning \$1 a week and board who was offered a job of \$50 a week with a traveling one-horse minstrel show. He considered the offer seriously for a moment, then turned to the manager of the show and said: "Looky here, boss, yo' know ah gits dis dollar a week."

A nice, conservative business operating safely within the margin of the capital, and therefore increasing that capital gradually while the business itself is growing is greater than a great big show. A business of the bubble variety may explode at any minute. In this connection it is interesting to note the experience of a man in the stationery field who had with difficulty struggled along for several years without making headway and who was being pressed by creditors. This dealer occupied a great double store at a high rental and had difficulty in stocking it up to make an impressive appearance. Finally he got wise to himself. Securing the permission of the landlord he rented half the store to a man who opened a racket store in his section and also paid for the partitions. The stationery stock was condensed into the half store, a complete assortment was kept without the necessity of the dealer overstocking himself for appearances sake, and the racket store attracted a great crowd of people, many of whom dropped into the stationer's. The business had been brought down to a basis where the dealer could control it.

SCIENTIFIC VALUE OF RECORDS.

The Great Aid of the Talking Machine Record in the Domain of Anthropology and Ethnology Demonstrated in the Use Made of the Records of the Music, Songs and Ritual of the Indian Tribes as Shown in the Play, "The Arrow Maker" at the New Theater.

The latest play presented to the New York public at the New Theater is especially worthy the attention of all connected with the talking machine industry, for the talking machine has had a most important part in its composition. The story is as follows:

"The Arrow Maker," for such is the name of the play, is a dramatization of the American Indian. Mary Austin, the author, has put on the stage the primeval Indian as he himself has described his life in legend, picture writing and tribal custom. And out of it all she has made a three-act play of profound dramatic importance. In order to obtain local color for her work and to make quite certain that the native songs and chants introduced from time to time should be in every way genuine and correct, Miss Austin sought out the collection of Indian talking machine records gathered by the

Government and stored in the Museum of Natural History. It is well known that the Indian authorities of the Government have for some time been encouraging the collection of records designed to preserve the music, songs and ritual of the Indian tribes. And in consequence a large number of such records have already been made, which now preserve to posterity an accurate reproduction of the musical art practiced by the disappearing Indian tribes.

The present occasion, we believe, is the first where such records have been applied to the service of dramatic art. And it is a very proper source of pride for us to know that yet one more avenue of usefulness has been opened to the talking machine and record. In the great commercial development of talking machines, in the almost universal acceptance of the instrument as a means for pleasure and for that only, we have already been prone to forget its equally great scientific value as an aid to the student of anthropology and ethnology, to the acoustician and the physicist. To these utilities has now been added another. The talking machine has taken its place as a legitimate factor in the art of playwriting and as a regular assistant in studying the theory of historical drama.

Almost every day sees new extensions of the usefulness of talking machines in new domains of art and science. That so many of these go unnoticed is the more regrettable when we consider that the public does not even yet take the talking machine with enough seriousness. We are all of us too much inclined to regard it principally as a means for entertainment or as a ready seller to those who want light amusement. But we ought by all means to give due regard to the higher value of the talking machine, if for no other reason than that every addition to its scientific and artistic prestige is so much more advertising.

KEEPING A TIDY WINDOW.

Should Be Watched Constantly in Order that the Displays May Not Become Disarranged—The Dusty, Untidy Talking Machine Window Is an Injury to Any Business.

Speaking of window dressing, as you go in and out to meals keep an eye on your own window and see that nothing has fallen down, says a dealer. I saw a window the other day in which four price tickets had fallen over, and there were two would-be customers outside wondering what the right price was, and they did not seem to like to go in and ask in case it was beyond their pockets. This keeping things smart and tidy is worth a lot. I can tell you of one who was great on "just dusting" when he was free from other work. One day the manager came in and saw him at it, and this is what he said: "So you look after my interests, do you? Well, I will see to it that I don't forget yours." To-day, ten years after, he is second in command of that business house.

HIS SIMPLE RULES.

One of the most successful business men of America has laid down these rules for business: Capital can do nothing without brains to direct it.

No general can fight his battles alone. He must depend upon his lieutenant, and his success depends upon his ability to select his right man for the right place.

Good men are not cheap.

Most men talk too much. Much of my success has been due to keeping my mouth shut.

Too many retailers feel that it is the duty of the manufacturers to do all the advertising, while they sit back and wait for the goods to be called for.

make records

Music such as you have never heard

Just think of it—to hear in your own home the soul-stirring arias and concerted numbers that have immortalized the names of Verdi, Gounod, Donizetti, Mozart, Wagner, Puccini, Leoncavallo and all other great composers. To hear the masterpieces of music that before the days of the Victor were hidden mysteries which few indeed could ever know and understand.

But the Victor has wrought a change so overwhelming that these great concerted numbers are now revealed to music lovers in every corner of the world.

The gems of opera here portrayed are but an introduction to the hundreds of other marvelous Victor records.

And be sure to hear

This interesting and instructive advertisement occupied the double center page of the Saturday Evening Post, February 18, 1911, and brought several million people to a realization of the privileges to be enjoyed by having a Victor in their homes. A splendid advertisement! Fully worth the \$7,200.00 it cost us for the one insertion.

atic selections that will awaken in you a realization of the Victor's great influence—an influence that mainly responsible for the aroused interest in music throughout the United States; and promises, in its tinued growth, a musical nation that will eventually make our country foremost in the recognition of great art.

If you haven't recently heard a Victor, you haven't a clear understanding of its wonderful perfection. And music is so necessary to every American home, it is one of the great duties you owe yourself to go to any or dealer's and hear this most wonderful of all musical instruments.

the Victor-Victrola

And remember, this is only one of our series of double-pages and back covers in the Saturday Evening Post—and they are but links in our extensive chain of magazine advertising which we are doing for the benefit of Victor dealers every month in the year.

Victor Talking Machine Company.

The Columbia exclusive selling rights policy *protects* the dealer and the distributor. That's a fact they *both* know.

Columbia Phonograph Co., Genl., Tribune Building, New York.

MASTER RECORDS NOT DUTIABLE.

Board of United States General Appraisers Decides That Master Records Used in the Construction of Talking Machines Are Not Dutiable as Parts of Phonographs and Therefore the Duty Is Reduced from 45 Per Cent. to 25 Per Cent.

In sustaining claims filed by the Columbia Phonograph Co. and the American Graphophone Co., the Board of United States General Appraisers has just decided that so-called "master records," used in the construction of phonographs, gramophones, graphophones, or similar instruments, are dutiable under the tariff of 1909 as "manufactures composed wholly or in chief value of wax," with duty at the rate of 25 per cent. on the value.

The board's decision, which is written by Judge Sharretts, reverses the action of the Custom House authorities in classifying the records, at 45 per cent. ad valorem, as "parts of phonographs," as specified in paragraph 468. At the same time the board fails to grant the claim of the importers for free entry under the provision in the new tariff act for "models of improvements in the arts, to be used exclusively as models and incapable of any other use," although the alternative claim at 25 per cent. is upheld.

The master records in question are in the form of discs of relatively soft wax, 11½ inches in diameter and 1 inch in thickness, upon one surface of each of which the needle of a recording machine

has impressed a series of vibrations caused by the human voice or by musical instruments. It appears that master records are the initial, but to an important degree essential, part of a process of constructing phonographs and similar articles, and are regarded by the board of appraisers in the same category as negative cinematograph films imported into the United States which have no adaptation for use other than in the production of positive films or photographs.

The testimony placed before the board shows conclusively, in the opinion of Judge Sharretts, that the master records used on graphophones or similar instruments for the production of sound, and that any attempt to so use them would result in the ruin of the record. The testimony also disclosed the processes of manufacture intervening between the initial impressions of sounds on master records and their reproduction on the surface of commercial records capable of use on graphophones, phonographs, or other like instruments.

After reviewing the testimony adduced before the board the General Appraiser reached the conclusion that the government's classification as "parts of" phonographs is untenable, as is the contention of the protestants that the records are "models" and, as such, free of duty. The decision points out that the models contemplated by Congress are those that had for many years been regarded by the Treasury Department as limited to such merchandise as miniature examples that cannot be used for any other purpose than to illustrate the articles of which they are models.

The importers' plea for duty lower than that assessed, therefore, turned on the claim for a rate of 25 per cent. on the records as "manufacturers of wax," which is sustained.

TRADE GOOD IN DETROIT.

Various Talking Machine Houses Well Satisfied with Conditions—Daily Concerts at Grinnell's—Other News of Interest.

(Special to the Talking Machine World.)

Detroit, Mich., March 9, 1911.

Although retail piano dealers are not having as large a trade this spring as they expected, the talking machine dealers are doing a rushing business, they say. The dealers say the trade so far this year has been a big surprise to them. The Henry Doran Phonograph Co., the Columbia Phonograph Co. and Grinnell Bros. all report big business and say the best of the trade is that nearly every sale they make is a high-class machine.

Max Strasburg, manager of Grinnell Bros., talking machine department, is conducting a daily concert in Victrola Hall. All the concerts are largely attended, they being held in the afternoon, and most of the audience is composed of women. The high-class records are played and enjoyed. Mr. Strasburg has made arrangements to have Ernest John, of the Victor Talking Machine Co., with his figures to give concerts and demonstrate the Victor talking machines at Victrola Hall next week. These concerts will be invitation concerts and the general public will not be admitted.

K. M. Johns, manager Columbia Phonograph Co.'s local branch, is in New York.

NEW TEXAS ASSOCIATION.

Owners of Talking Machines in Southwest Organize in Dallas—Robert N. Watkin Elected President—Objects of the Association.

(Special to the Talking Machine World.)

Dallas, Tex., March 8, 1911.

Robert N. Watkin has been elected president of the newly formed association of talking machine owners of the Southwest. Other officers are: Mrs. Clyde Grazier, Temple, Tex., first vice-president; L. A. Stuart, Hope, Ark., second vice-president; Jas. A. Camp, Sentinel, Okla., secretary, and A. A. Carr, Ivan, La., treasurer.

The purpose of the organization, as stated, is to keep talking machine owners interested in the machines and through co-operation to get the greatest enjoyment out of the records, which are at the disposal of anyone owning a machine. All owners of talking machines are eligible to membership.

Never let a customer go out of your store dissatisfied. It is usually up to the salesman. There are some fellows who would rather lose a small sale than work hard to make it. We must take the bad with the good. If a person spends 50 cents now, that does not mean that they always will buy so little, and even if they did, his pleasant words of the store may mean a great deal.

EDUCATION IN BUSINESS.

The Real Salesman of To-day Should Have an Intimate Knowledge of Every Detail of the Goods He Is Selling—Some Suggestions for the Talking Machine Dealer—Wants His Sales Fêrêe to Make Mòre Money for Him.

Education in business is a subject that is receiving a great deal of business from men in all lines of trade at the present time. It is recognized that it is not sufficient for a salesman simply to be experienced in selling any particular line of goods. To measure up to the standard nowadays he must possess a knowledge of every detail. With the great corporations it is the habit to form frequent conventions of their sales forces, at which time they are not only addressed by the sales manager on pure topics of salesmanship, but are filled with details regarding every department of manufacture by the superintendents of these departments. In other words, the superintendent of the branch factory making a certain product sells that particular product to the salesman and uses every argument at his command. He explains just how that product is made and why, and what it is intended to do.

Here is a subject for the talking machine dealers to consider. Does your salesman know every part of every model of machine, why it is made in that particular way and what it is intended to do? Can he explain the mechanism to the customer in an intelligent manner? Though he may be a good salesman generally, if he can't do this the dealer is losing money by not educating him.

Then, again, can the salesman describe the records in detail, tell who it was that made them, tell something of the music contained thereon and in short show a thorough knowledge of the personal and mechanical features entering into the making of that particular record? If he can't there is more room for education. A fifteen year old stock boy may know the titles and numbers of records, but the salesman should know all about them.

The live talking machine dealer will consider this question of education very carefully. He will find that it will pay to take an hour each week at a time when the store is not filled with customers to get his sales staff together and go over the details of his line very carefully. He should give suggestions and ask for them. Whenever new records are issued or new machines are put on the market the data issued by the company regarding same should be read by the staff assembled for that purpose and discussed in detail until every feature is familiar. There is no question but that every one of the talking machine factories will be glad to send a representative to the store of the dealer where possible, to explain to the sales staff the details of manufacture, for such knowledge on the part of the salesman helps the business of the manufacturer as well as that of the dealer.

Of course, there are some dealers who will say they are not running public schools for the benefit of the salesman—that the salesman are supposed to know their business before they enter the dealer's employ. Such dealers have only to think of their tax bills and consider the amount they are paying for public education—for the education of people whose knowledge will never bring a dollar into the dealer's pocket. In that case does it hurt to spend a little money at home?

A CLEVER WINDOW DISPLAY

Made Around the Edison Business Phonograph by the Stone Piano Co., Fargo, N. D.

The Stone Piano Co., Fargo, N. D., recently had a very attractive window display devoted entirely to the Edison business phonograph, consisting of a completely equipped office with a stenographer at work all day transcribing from records. On the exterior of the window was drawn in white with an air pencil the figure of a business man dictating into the Edison business phonograph and the words, "Shorten your day with the Edison business phonograph." A drawing of a clock showed the short Edison day, ending at

three o'clock, as compared with the old business day ending at six o'clock. The clever idea, conceived by Manager Poppler, of the talking machine department, attracted much attention from the passersby and a number of excellent prospects were secured from among those who realized the force of the argument.

A LIVE STORE IN A GOOD LOCATION.

F. L. Steers Controls a Large Share of the Victor Business on Washington Heights—His Attractive Quarters.

The Washington Heights section of New York, that section lying north of 135th street on the extreme west side, is devoted almost entirely to apartment houses of the better class and inhabited by people fairly well off in worldly goods. This is the class of people who make good customers for talking machines, yet surprising to say, there are few dealers who have made an attempt to corner any of that trade.

One man at least has awakened to the opportunity, and he is F. L. Steers, who last May opened a store at the corner of Broadway and 143d street, where he handles the Victor line of machines and records exclusively and with excellent results. The store, though small, is most conveniently arranged and besides the main showroom, containing a sample of each style of Victor machine, handsome shelving for the record stock, there are two sound-proof demonstration parlors, a shipping room and a spacious office. Being located on the corner there are offered three large windows for display purposes and Mr. Steers sees to it that they are always trimmed in attractive manner, chiefly with the window trims designed by Ellis Hansen and furnished by the Victor Talking Machine Co.

The record trade of the store has already grown to surprising proportions and it is the boast of the proprietor that 90 per cent. of any record order may be filled at any time. The store is kept open several hours in the evening as in this section of homes that is the busiest time and im-

promptu recitals in the main showroom are of nightly occurrence. The attractiveness of the store combined with the excellent service rendered at all times have combined to make success possible for Mr. Steers.

F. L. Steers is assisted by his brother, A. L. Steers, and both are real hustlers, sticking to the up-to-date methods, and are strong exceptions to the class of New York dealers who came in for criticism in last month's World.

COLUMBIA AGENCY IN COEUR D'ALENE

Formal Opening the Occasion of Quite a Celebration at Young's Pharmacy.

(Special to the Talking Machine World.)

Spokane, Wash., March 2, 1911.

The Columbia Phonograph Co., of which W. S. Storms is manager in this city, have just placed the agency for their line with Young's Pharmacy in Coeur D'Alene, Idaho. At the formal opening on Saturday evening there was an excellent Grafonola concert and in connection therewith a souvenir in the form of a white carnation was given to each visitor to which a card reading as follows was attached: "The Columbia Phonograph Co. beg to announce the placing of the exclusive agency for Coeur D'Alene with Young's Pharmacy, who will handle a complete line of graphophones, grafonolas, double disc and indestructible records." There was a large attendance and the various Columbia grand opera records were featured in splendid shape. Mr. Storms reports an increase of over 32 per cent. in business for February over last year and is well pleased with the general outlook.

THE FOUNDATION OF SUCCESS.

Systematic promptness lies at the foundation of success. Learn to drive your business, and never let your business drive you. Be careful what you agree to do, but do what you have agreed, and do it promptly.

**Won't You
Have a
Lesson in
Spanish?**

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation—guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

Box 918, Scranton, Pa

The Edison Triumph

\$75.00 Outfit

With Music Master Horn and Model O Reproducer—

as beautiful in outline as it is wonderful in tone quality—just the type of instrument for the great mass of people of high artistic sense and musical taste who can't quite afford the Amberola.

Edison dealers everywhere are making a clean-up on this irresistible instrument—turning Home, Standard and Fireside prospects into Triumph customers.

Order from your Edison jobber to-day.

Thomas A. Edison, Inc., 59 Lakeside Ave., Orange, N. J.

Thomas A. Edison, Inc., is the new corporate name by which the National Phonograph Co. will hereafter be known.

Are you well stocked on Edison Recording Equipment for the Gem, Fireside and Standard?

Home Record making is featured in much of our national advertising and the demand created has swamped many Edison dealers who were not able to supply recording equipment and blank records.

Recording equipment is furnished as part of the regular outfit with Home, Triumph and Idelia styles—it is not furnished with Gem, Standard or Fireside. There's a well worth while additional profit for you in recording equipment, and you ought to sell a recorder every time you sell a machine. All you have to do is mention the home recording feature—and the sale is made.

Selling recording equipment builds up your blank record market—the blank record is the most rapid and continuous record market there is—and by all odds the least troublesome. You don't have to demonstrate blanks.

Write your Edison jobber to-day and get your recorder and blank record stock lined up.

Thomas A. Edison, Inc., 59 Lakeside Ave., Orange, N. J.

NEW YORK, MARCH 15, 1911.

IT has not been the policy of this publica-
tion to comment upon the legal battles
which from time to time have been
waged in this industry with considerable
vigor in defense of patent rights.

We have left those matters entirely with
the courts, which presumably are competent
to deal with them.

The patent situation has been always more
or less uncertain and vast sums of money
have been expended in support of legal con-
tentions, and it would seem as if there was
going to be no particular subsidence of bat-
tles in this particular.

CONDITIONS in the talking machine
industry, owing to important changes
which it is believed will occur within
the very near future, have been somewhat
acute.

The meeting of the Executive Committee
of the Talking Machine Jobbers' Associa-
tion in Chicago did not settle important
matters, and unquestionably there will be
happenings of material interest to the in-
dustry occurring from time to time within
the near future.

The matters affecting records, exchanges,
territory, lines handled—all bid fair to form
topics for considerable discussion within
trade circles.

The talking machine industry, so far as
its jobbing distribution is concerned, is con-
trolled by comparatively few houses, and
they are all keenly alive to the situation.

TRADE conditions continue fair and
there is every reason to believe that
the year will prove a satisfactory one

from many viewpoints. General business is
going steadily better.

The talking machine trade is in an 'ex-
pansive condition, and the output for 1911
bids fair to far eclipse that of any previous
year in point of money totals.

Reports indicate an excellent measure of
activity in the talking machine industry for
the past month. There are exceptions, of
course, but broadly considered, business has
been most satisfactory. It is hardly neces-
sary to say that the dealers who believe in
progressive methods in their business affairs
have profited most.

Business these days gravitates toward the
men who conduct their establishments ac-
cording to up-to-date rules. This is per-
fectly logical. In all lines effort is neces-
sary to win success, and those who "stand
pat" and expect business to come their way
without working for it, are naturally disap-
pointed.

THE business man who refuses to
modify or change his plans is apt to
go backward instead of forward, be-
cause as business competition develops he
cannot make progress in the trade battle.
He lacks the proper weapons and ammuni-
tion, and he has failed to work out plans
to develop and master the campaign.

This is the type of merchant who is al-
ways complaining and finding fault, and not
seeking the reason why "fate is against
him."

There is no standing still in business to-
day. The methods of yesterday will not do
for to-morrow. The man who is up-to-date
is constantly conforming his business to the
changing times, and it is the wise talking
machine man who acts accordingly.

The general trade outlook is excellent,
and the prospects are for a very lively
spring and summer trade. But, after all,
it is up to the dealer to make business ac-
tive. The manufacturers are doing their
share in educating the public—in making a
market for talking machines and records of
all kinds—and the dealer must be original
enough to conceive means of taking advan-
tage of this good work and applying it
locally, to the end that he may profit ac-
cordingly.

THERE is no one subject of more im-
portance in the talking machine trade
to-day than that of credits. If busi-
ness is to be conserved and developed along
healthy lines, jobbers and dealers alike must
watch their credits. How much better at
the end of the year to have restricted sales
to those of known integrity and ability than
to have on the books a lot of bad risks.
How much better to have goods on hand at
inventory time than to have them out with
people of questionable financial standing. It
gives the dealer a much better rating with
the jobber to have these goods on hand than
to show these same goods as "notes and
accounts" past due and carried over.

ONE of the greatest weaknesses in
credits is the matter of collecting.
It is an axiom that many a good
merchant has failed in business because he
was a poor collector. He may be a good

salesman, a good judge of human nature,
popular with his fellow-man and do the
largest business of any merchant in his com-
munity, but if he does a credit business, and
is a poor collector, his failure sooner or
later is inevitable.

Indifference on the part of talking ma-
chine men to this vital department of their
business is certain to wreck it. Every dol-
lar lost on a poor customer means one lost
on a good customer, or, as J. T. Laws, a
well-known credit man, puts it, "You are
compelled to take the dollar made on the
good customer and pay for the goods sold
the bad customer."

It is always well to bear in mind that the
dealer who collects when due has more
money and more friends than the man who
renews the mortgage.

THE extraordinary efficiency of The
Talking Machine World as an ad-
vertising medium has been the sub-
ject of most favorable comments from time
to time, while its merits in a literary way,
as well, have been acknowledged by firms,
companies, individual dealers and jobbers in
every section of the globe. Hundreds of
communications in our files testify to this,
and only recently the S. B. Davega Co., the
prominent Victor and Edison jobbers of
New York, wrote the following unsolicited
letter, which speaks for itself:

"Gentlemen—It gives us great pleasure to
inform you that we have received more re-
plies to our last month's 'ad' and had
greater results therefrom than any 'ad' we
ever had in your paper. Almost two car-
loads of cabinets were disposed of in one
month's time; in fact, one complete carload
of our No. 100 cabinets alone were sold.
The results obtained from our Simplex
Needle Box 'ads' in previous issues were
also very gratifying, and we do not hesitate
to say that The Talking Machine World
has been our best medium for advertising
all of our specialties."

ANOTHER pleasing tribute to the lit-
erary quality and the general excel-
lence of The World reaches us from
Thomas Edens Osborne, the progressive
talking machine jobber of Belfast, Ireland,
who says: "I am sure you will believe me
when I say that one copy of The Talking
Machine World is worth all the other papers
connected with the talking machine indus-
try."

The World has won its place in the fore-
most rank of trade papers throughout the
world because it believes, firstly, in furnishing
the trade not only with the news of the
world, but with helpful, stimulating, educa-
tional articles covering every branch of the
industry; secondly, it believes in giving the
advertiser the value of legitimate circula-
tion—of persistently and systematically get-
ting after old and new dealers and bringing
the specialties advertised in The World to
their attention.

It is safe to say that The Talking Ma-
chine World to-day has a circulation in for-
eign countries which far exceeds all other
publications devoted to talking machines
combined, while in the United States it is

the only publication devoted exclusively to this important industry.

It is not the custom of The World to boost itself, but the number of complimentary letters recently received from subscribers and advertisers have been such that this outburst is pardonable.

TRADE GOOD IN MILWAUKEE.

Spring Business Opens Up in Satisfactory Shape—Good Reports From All Over the State—Summary of the Situation—A Columbia Co. Record—Arrangements Completed for Jobbers' Convention—Concert Program in Advance by Means of Talking Machines—The New Idea Cabinets in Demand—Recent Visitors—The Trade News of the Month in Brief.

(Special to the Talking Machine World.)

Milwaukee, Wis., March 9, 1911.

The spring business has opened in a highly satisfactory manner in Wisconsin talking machine circles and the prospects everywhere indicate that the total volume of trade will be far in excess of the same period a year ago. Optimistic reports are arriving from all over the State from retailers who are confident that much is to be expected this year. Local retailers are finding that business has taken on new life with the arrival of favorable spring weather and a general improvement in the local industrial situation.

Local wholesalers are well pleased with results thus far and say that dealers are placing good orders for the spring trade. Demand seems to be equally good for machines and records of the higher class and this is taken as a most hopeful sign. The new March records in all lines seem to be proving popular with the trade.

The favorable spring weather has created a feeling of confidence about the State and the money that was garnered from the heavy crops of last fall is being let loose more freely. The decidedly better tone in the local heavy machinery situation and the better outlook in labor circles has also worked wonders.

While A. G. Kunde, 516 Grand avenue, Columbia jobber of Milwaukee, was not able to keep up his regular record of establishing one new Columbia dealer in Milwaukee each month during February, he reports that he has several dealers under consideration who are expected to take up the Columbia line within the near future. "Business is good," said Mr. Kunde, "and the prospects are especially fine. We hope to be able to line up an unusually fine trade this spring. Business at the present time is considerably larger in volume than it was at this time a year ago."

Lawrence McGreal, Edison and Victor jobber of Milwaukee, and a member of the arrangement committee of the National Association of Talking Machine Jobbers, has practically completed all arrangements for the convention which meets in Milwaukee, July 10, 11, 12 and 13. Headquarters of the gathering will be at the Hotel Pfister, one of the best known convention hostleries in the Northwest. An interesting program which will be carried out during the convention has been rounded into form by Mr. McGreal and will be made public by the press committee of the association. Milwaukee ranks well to the front as an ideal convention city, with attractions galore, and a most successful convention is promised. Mr. McGreal was in attendance at the meeting of the executive committee of the association held in Chicago, February 19 and 20.

The talking machine was put to a rather unique use at La Crosse, Wis., recently when Prof. L. P. Benezet, who, with Prof. Harry Ross, later brought the St. Paul Symphony Orchestra to La Crosse for two concerts, prepared the public for the treat in store for them by giving a series of three or four talking machine concerns at which the programs to be played by the famous orchestra were reproduced in advance. The idea met with decided favor with the school children and the public at large, who later found themselves more familiar with the music and in a position to better enjoy

the concerts. Preliminary programs were given for the State normal, high school and graded school students.

The Chippewa Phonograph Co., of Chippewa Falls, Wis., recently suffered a loss of about \$6,000 when its entire stock, including talking machines, records, accessories, pianos and other musical instruments was destroyed by fire. An insurance of only \$2,000 was carried. The fire was of unknown origin and destroyed the entire Taylor block, the location of the talking machine company and several other establishments. It is understood that the talking machine company will open up at once in new quarters.

Miss Gertrude Gannon, proprietress of the McGreal retail store, has returned to Milwaukee from a three weeks' pleasure trip in the South. Miss Gannon visited at San Antonio, Tex., New Orleans, La., and at St. Louis, Mo. She reports that conditions in the South are showing much improvement.

The New Idea Cabinet Co., manufacturing the "New Idea" disc cabinet with interchangeable tops for the various types of machines, has installed considerable new equipment in its plant at 180 Fourth street, rear. Two new woodworking machines have been placed in operation, together with considerable smaller equipment. Business has been so good with the company that it is planning to secure larger and more adequate quarters just as soon as its lease on the present building expires. Lawrence McGreal and William Schmidt, two of the officials of the company, report an excellent demand for cabinets.

William Schmidt, traveling salesman in southwestern and western Wisconsin for Lawrence McGreal, is covering his territory once more after a short sojourn in Milwaukee.

Joseph F. Gannon, brother of Mrs. Lawrence McGreal, who has been traveling for the Victor Talking Machine Co. in Illinois, Kentucky and Tennessee, is visiting Milwaukee relatives and assisting in the wholesale department of Lawrence McGreal.

Among the out-of-town Wisconsin dealers who were recent Milwaukee visitors were: W. J. Augustine, of Fond du Lac and Oshkosh, and D. M. Groulx, of Green Bay, Wis. Both dealers were well pleased with the spring outlook.

William P. Hope, traveling representative of the National Phonograph Co., who is now making his headquarters at Marinette, Wis., was a recent Milwaukee visitor.

F. A. Scheuber, mayor of Livingston, Mont., and representative of the Columbia Phonograph Co.,

in Montana, Wyoming and the western portion of North and South Dakota, visited relatives in Milwaukee recently while on his return from a visit to the Columbia factory in the East. Mr. Scheuber is a brother-in-law of A. G. Kunde, Milwaukee Columbia jobber. In addition to the Columbia Mr. Scheuber has taken on the agency for a strong line of pianos while in the East.

"HENRY VIII." CINEMATOGRAPH.

Elaborate Reproduction Secured of Sir Beerbohm Tree's Great Show.

This most ambitious piece of cinematograph work yet done in England has been the photographing of the five chief scenes of Sir Beerbohm Tree's elaborate production of "Henry VIII." Special scenery painted like that at His Majesty's Theater was prepared at a suburban studio. All the other properties were used as at the theater. The whole company of 180 persons, including Will Bouchier and Violet Vanbrugh, went through the scenes, speaking their lines. The film will show for twenty-five minutes.

EDISON STATUE IN ROSELLE, N. J.

To commemorate the fact that Roselle, N. J., was the first place in the United States to have incandescent lights in a building, a statue is to be erected here to Thomas A. Edison. Edison once had a plant in that borough and he tried out the incandescent lights in the First Presbyterian Church.

RECENTLY INCORPORATED.

The Standard Time Co., Chicago, Ill., have incorporated with capital stock of \$20,000 for the purpose of manufacturing phonographs, clocks and slot machines. The incorporators are George Walker, David Marr and C. L. Waldon.

The Universal Phonograph & Record Co., New York, have incorporated for the purpose of manufacturing and selling talking machines, records, etc., with a capital stock of \$100,000. The incorporators are C. Haas, M. E. Ward and S. A. Fuchs, all of New York.

The Chippewa Phonograph Co., Chippewa Falls, Wis., were recently burned out. The loss was partly covered by insurance.

The Henry Co., talking machine dealers of Pittsburgh, Pa., have leased the building at 614 Penn street, that city, for a term of three years.

Get Ready

for the spring trade in vacuum cleaners. Spring housecleaning will soon be here, when cleaners sell more readily than at any other time. Prepare to handle

REGINA Pneumatic Cleaners

They are liberally advertised for the benefit of the trade and carry a name which your customers know and recognize.

REGINAS have *double suction pumps* and do the work twice as quickly and with less effort than others.

They are easy to operate and easy to sell—beautifully constructed and fully guaranteed. Made in our own factory by skilled workmen and sold at a reasonable price. We have hand operated and electric models.

Your jobber can supply you with Regina cleaners if he carries them. If not, write to us for full particulars. The proposition is an inviting one.

We Have Proved that the Wonderful

U-S

Combination

PHONOGRAPH

The U-S Phonograph is not simply "another phonograph." It is a NEW Phonograph—new in mechanical simplicity, new in ease of operation, new in its marvelously rich musical reproduction—NEW FROM THE GROUND UP!

If you are one of those who have been led to believe that the U-S is a "copy," look at the Flexible Tone Arm—did you ever see anything like THAT before? Look at the Self-changing Reproducer Carriage—did you ever see anything like THAT before? Look at the Motor construction, the Pulley Balance Wheel or the wonderful new Improved Diaphragm and "Speaker"—did you ever see anything like THESE before? No! They were introduced for the first time by the U-S and are found *only* in the U-S.

And U-S Everlasting Records are the embodiment of hitherto unheard-of improvements

We want every music and phonograph dealer to make a rigid comparison, by actual side-by-side comparison of our Phonograph and Record and any other phonograph on the market. The result will be none.

That is all we ask. We are left to the dealer's judgment whether to buy or not.

We also positively guarantee that we will not make or injure in any way the sapphire or any other part of the machine is used.

Then, if you conclude that our phonograph is a big opportunity every week includes horn and cabinet machines and records ranging from the classics to the latest and instrumental. We maintain a large stock in New York and are constantly in touch with the world.

Your Time

CONDITIONS IN CLEVELAND.

Both Jobbing and Retail Business Very Favorable—Talkers Getting Firmer Hold on Music Lovers—What the Various Concerns Are Doing—Eclipse Music Co. Move to New Location—Have Handsome Quarters—Interesting Personal Items—Hum of Industry in Factory of U. S. Phonograph Co.—Other News of Current Interest.

(Special to the Talking Machine World.)

Cleveland, O., March 10, 1911.

Conditions generally this winter have been very favorable in the talking machine trade, and Cleveland dealers, both distributors and retailers, are very well satisfied with the business of the past month.

Victor dealers have been handicapped owing to the impossibility of procuring sufficient Victrolas to supply the demand, the factories being unable to

turn out the machines fast enough. In the other grades of machines there has been no difficulty in securing an ample stock.

That the talking machine business in Cleveland is growing is evidenced in the constant additions, extensions and removals to larger quarters by nearly all the dealers in the city. In fact, some dealers are carrying five times the stock they did two years ago, and still feel they are not meeting the requirements of the trade.

The fact is that the talking machine is constantly taking a firmer hold on musically inclined people, and every day sees the business assuming a more popular and prominent position in the music world.

Parties in this city are working on a new disc machine which they claim is a decided improvement, and taken in connection with the low cost of manufacture, will prove a successful venture.

A series of moving picture lectures showing the wanderings of the children of Israel from the time they were led out of Egypt until they entered Canaan are being delivered in a number of Cleveland churches. Columbia records intersperse appropriate music. The entertainments are conducted by Rev. H. W. Cook and are very attractive.

Fire in a block near Collister & Sayle, March 3, resulted in considerable damage by water. Business, however, was continued uninterruptedly.

The Scharwenka piano records of the Columbia Co. have met with popular approval and are making a big hit. The remarkably perfect tone of the piano in these records has been much commented on.

To oppose legislation detrimental to moving picture interests the proprietors of Cleveland motion picture theaters have formed an organization. The purpose also is to take a determined stand against the so-called "motion picture trust." According to local motion picture men they have had no voice in the selection of films, the views they have exhibited being arbitrarily sent out by the exchanges.

At an expense of several thousand dollars, T. H. Towell, president of the Eclipse Musical Co. for several years located at 1870 East Ninth street, has fitted up and furnished what is said to be the largest and finest appointed talking machine store extant. The store has a frontage of 25 feet, at 1130 Euclid avenue, in the new and beautiful Athletic Club fourteen-story building, and extends back 150 feet to an alley. The reception room, 25 x 30 feet, is finished in a color scheme of white and gold, and the walls and ceiling in old gold tints. Amply supplied with easy chairs and rockers, the floor covered with two large rugs, and on one side a display of all the various styles of machines, makes it a most attractive place. At the rear of the reception room are five finely-appointed demonstration rooms, finished in white and gold, constructed of full-length beveled plate glass panels. These rooms extend back, opening from one into the other, and leading to the office in the rear. A passageway runs through on one side of the rooms to the office and shipping room, which is connected with the wholesale department by an elevator. This passage also affords entrance, separately, to each demonstration room. On the opposite side are the record shelves, with tables for the machines, conveniently arranged for the purpose intended.

All the rooms are brilliantly electrically illuminated, sumptuously furnished, and the walls adorned with oil paintings. In fact, everything has been artistically, tastily arranged, and all with an eye to comfort and convenience in transacting business. The opening day occurred on the 3d, and was the Euclid avenue attraction on that occasion.

Conditions in the talking machine department of the Bailey Co. are pleasing and of the most satisfactory character. Mr. Friedlander says the past month has been one of the busiest in sales of machines, of all grades, he has had in some time, and that business is steadily on the increase. He says his record sales are more than double those of a year ago, and largely for Red Seal and the higher-priced productions.

Geo. R. Madson, the energetic, enterprising manager of the Columbia Phonograph Co.'s Cleveland store, is meeting with a hearty welcome and making friends with all with whom he comes in contact. He reports business in February, the first

month of the Columbia's new store under his management, was very satisfactory. "We are increasing our list of record buying customers," said Mr. Madson, "at a wonderful rate, through our 'Demonstration' record. This record is making a big hit in Cleveland. We find a demand for all grades of our products, and exceptionally so for our \$50 Favorite Grafonola, which far exceeds our ability to supply. Our new store at 913 Euclid avenue is rapidly being remodeled and we hope to be settled and have an opening there by the 25th of this month."

G. J. Probeck, manager of the Dictaphone department, reports excellent business.

W. H. Buescher & Sons say February sales of Victor machines and records considerably exceeded those for the same period a year ago, and sales are continually expanding.

The busy hum of industry prevalent at the factory of the U-S Phonograph Co. indicates a growing, prosperous business, and judging from the activity displayed in all departments there has been no falling off in trade since the holidays. "More dealers," said the manager of the sales department, "have taken on this improved line during February than in any previous month, and all, without exception, speak in the very highest terms of commendation regarding the Combination phonograph and Everlasting record. We are in daily receipt of reports from every section of the country, showing that business conditions are fine; in fact, that they were never better, and the wide-awake dealer who pushes the line energetically and enthusiastically is bound to reap a golden harvest during the coming spring months."

McMillen's have been and are still doing a very excellent business in both Victor and Edison goods. Mr. Kellogg has rearranged this department, as well as the piano, making a more presentable display of the instruments and adding to the convenience of demonstrations. H. E. McMillen, the head of the house, is spending the winter in the South and writes that he is much improved in health.

Collister & Sayle are again partially supplied with Victrolas and are making a fine window display of the various styles and different woods. The demand, Mr. Dorn states, continues for the higher-priced instruments and Red Seal records.

Charles I. Davis is making strenuous efforts in connection with his music and other lines to build up a large talking machine trade. He has just remodeled the Victor department and now has three fine demonstration rooms on the ground floor, conveniently and neatly fitted up. The Edison department, reached by a marble stairway to the basement, consists of a fine reception hall and four beautifully arranged demonstration rooms. The whole arrangement is homelike and attractive and his business is rapidly growing.

The Talking Machine Store, for a long time located at 27 Taylor Arcade, has disposed of the goods and the store is closed.

The Talking Machine Co., Flesheim & Smith, and the Aldrich-Harney Co. report business very satisfactory and look for a good, healthy spring trade.

CHANGE NAME AND REDUCE CAPITAL.

(Special to the Talking Machine World.)

Dallas, Tex., March 6, 1911.

The Petmecky Supply Co., of this city, well known in the talking machine trade, have filed amendments to their charter, changing the name of the company to the Talking Machine Co. of Texas, and reducing the capital stock from \$50,000 to \$34,500.

TALKER MUSIC BY WIRE.

Talking machine music transmitted by electricity was one of the novelties at the Electrical Show held in Philadelphia. Two talking machines were installed in a room at a distance from the main showroom and the horns replaced by telephone transmitters. The music was carried to the main room through the medium of wires, where it was listened to through regular telephone receivers.

Bogotá, February 1st 1911

VICTOR TALKING MACHINE COMPANY,

Camden.

As I have had occasion of telling you, my Talking Machine is an excellent Victor III furnished with very handsome records, such as those of Caruso, Melba, Tetrizzini &c.

I have always used Victor needles & always the results have been perfect.

Some days ago a friend of mine begged me to lend him the machine, I acceded with pleasure. As soon as the Graphophone was returned back, I played some records to try how it was; but I must advise you that the needles that my friend sent with the machine were not of "Victor" manufacture.

You cannot guess how afflicted I grew when remarked that the voices had not the beauty & purity by which my Graphophone was especially admired: Caruso's "Vesti la Giubba" was detestable, Tetrizzini's "Io son Titania" had lost entirely its charm.

What I first thought was that the man who had asked it of me had damaged it. However some one observed that I was using needles of other manufacture; directly I sent for a box of Victor needles. With great anxiety I tried the first, think of my joy when I recognised the beauty of the records, when all that were hearing the machine felt that it was as good as ever.

If this letter may be useful for you, you are authorised to publish it. Here, I will induce everyone having a "Victor" to use only your needles. Experience has shown me that the best results are only obtained with Victor products.

Congratulating you for the absolute perfection of your manufacture & wishing for the VICTOR all the good exit it deserves

I am your most enthusiast admirator

J. M. Restrepo-Millán

The Columbia *exclusive* dealer runs his own business to suit himself—what we do is to supply the best machines and records that can be made, and guarantee that he has no Columbia competitors. He has no fear of the others.

Columbia Phonograph Co., Genl., Tribune Building, New York.

TRADE NEWS FROM GOLDEN GATE.

Business Hampered by Weather Conditions, but Shows Steady Improvement—Jobbers at Other Points on the Coast—A. R. Pommer to Visit the East—Pushing the Edison Line—Hauschildt Music Co. Take Over Clark Wise & Co. Stock—A. G. McCarthy Visits Sherman, Clay & Co. Branches—Important Columbia Co. Connection.

(Special to the Talking Machine World.)

San Francisco, Cal., Feb. 28, 1911.

Business has been somewhat hampered by bad weather for the last month, but on the whole there has been considerable improvement over January in both wholesale and retail business. As is natural at this season, the demand for records has been the principal feature and has run heavier than last winter on all lines, but particularly on the more expensive and higher classes of goods. The demand for machines of most descriptions is still quiet, but there is a steady inquiry for some of the newer models, in some cases exceeding the supply immediately available.

The local distributing firms take a very optimistic view of the outlook for the year. Sufficient time has elapsed since the holidays to size up the situation and there is every indication of at least as great a gain as was experienced in 1910. The ground is already pretty well covered in the cities and larger towns of the coast, but all of them, from Seattle to San Diego, are growing rapidly, and at the same time the talking machine is rapidly increasing in favor. The growth outside the cities is hardly less rapid and it is fairly certain that the year will bring the establishment of large numbers of new stores and agencies through the country. Moreover, every new improvement to the talking machine brings it into favor with a host of people who formerly gave it no attention, and the replacement of old machines with new ones of better quality is steadily going on.

A. R. Pommer, head of the Pacific Phonograph Co., expects to leave for the East early in April, or perhaps sooner. He took a short trip to Sacramento early this month and reports the business there in excellent shape with a fine outlook for the distributive business all over the Sacramento Valley. In fact, he considers this one of the best parts of his territory this season. Mr. Pommer reports an exceptionally heavy demand in some lines this month, the sale of records being a surprise, while the Music Master horn has been selling in a larger way than was expected at this time of year. There was some delay in getting new goods during the stormy period, as some shipments were tied up for a week or more. This firm, however, makes a specialty of keeping a complete stock of Edison goods on hand and the provision made for such emergencies just about carried it through. The various improvements in the company's quarters are now complete and it is safe to say that it has one of the most convenient, as well as largest, wholesale talking machine warehouses in the country.

W. A. Voltz, the Edison factory representative in this territory, spent the early part of the month

in San Francisco and vicinity, visiting the Pacific Phonograph Co., Peter Bacigalupi & Sons and leading Edison dealers. He is now traveling through the northern part of the State, calling on every Edison dealer along the route. Mr. Voltz expresses high approval of Babson Bros.' entrance into this territory, saying that their success will give a practical illustration of the possibility of handling Edison goods exclusively, which few, if any, dealers in this territory have done in the past. He covered the greater part of southern California and the oil fields before coming here and found conditions only fair in the South after the first of the year. The oil district, he says, is booming, with few towns springing up all over the country. Mr. Voltz is giving a lot of attention to the Model O, over which he is quite enthusiastic.

Mr. Hopkins, formerly of the Hopkins Bros. Co., of Des Moines, one of the best known talking machine men in the Middle West, arrived here a couple of weeks ago and expects to make this his home and place of business. He says he decided on San Francisco as his future place of residence some six years ago, on his first visit, but has been unable to leave Des Moines until now. He intends to handle Edison goods and is at present with Peter Bacigalupi & Sons in the business phonograph department.

The most important bit of news that has come out in a long time is the announcement just made public that Clark Wise & Co. have sold out their entire business to the Hauschildt Music Co. Mr. Wise has expressed some dissatisfaction with the piano business for several years, but regarded the talking machine department as a decidedly good thing. He has decided, however, to take up an office specialty line, which will require all his attention. He believes that his talking machine department was one of the largest retail concerns of this class in the city and its acquisition will certainly be an important matter for the Hauschildt Music Co. The latter house has also had a large talking machine department in the past and has been gradually gaining headway in the local trade. The company's department in Oakland has had a large business for several years.

Andrew G. McCarthy, head of Sherman, Clay & Co.'s talking machine and small goods business, returned recently from a visit to the branches in the north, cutting his trip rather short to be in at the celebration of the success of the Panama-Pacific Exposition boosters. He is well satisfied with the recent record of the northern branches and is confident that they will show a remarkable increase this year. The situation at Portland is especially encouraging. Mr. McCarthy has been importuned by retailers all over the territory for more Victrolas, and while practically all the machines received are shipped out as fast as they come in, it has been impossible for the last few weeks to prevent an accumulation of back orders. He believes, however, that the number of these machines shipped to the coast will again be increased this year and hopes to fill all orders promptly from now on.

An important arrangement recently closed is the placing of the Columbia goods with the Hauschildt

Music Co. Complete stocks of this line have been taken on at both the San Francisco and Oakland establishments, and with the company's growing business in both cities, the deal is expected to be of considerable benefit to the Columbia Co. A number of other dealers around the State have been supplied with new stocks of Columbia goods during the month and the regular business of the San Francisco office is going ahead in fine shape.

The Geo. J. Birkel Co. are now comfortably settled in their new building in Los Angeles. The structure was especially designed for this firm, with special attention to the talking machine department, and according to all reports from the southern city it is one of the best equipped departments on the coast.

A VISITOR FROM MONTANA.

F. A. Scheuber, of the Scheuber Drug Co., Livingston, Mont., who also handle pianos—a rather strange combination—as well as the Columbia graphophone line, was in New York for several days last week, going home Friday. He visited the executive offices of the Columbia Phonograph Co., General, and renewed their agreement. The company have the exclusive Columbia rights in Montana and the half each of North and South Dakota.

EDISON'S VOICE FOR WIFE ALONE.

The Inventor Declines Soldan High School Boys' Request for a Phonographic Record.

(Special to The Talking Machine World.)

St. Louis, Feb. 28, 1911.

That no record of his voice will ever be made except for his wife is what Thomas A. Edison, inventor of the phonograph, has written to the president of the boys' science department of Soldan High School, who wrote the inventor asking for such a record.

The science club was organized last year and was named the "Edison club." On Monday an "Edison day" was held and desiring to supplement it with a phonographic reproduction of the inventor's own voice, Harry P. Schienberg, the club president, wrote and asked Mr. Edison for a record.

In reply was received Mr. Edison's letter saying that only his wife would ever possess a record of his voice through phonographic perpetuation. The letter is to be framed by the boys of the club.

PROSPERITY AND FREEDOM.

Prosperity is bad for a man or woman if it does not lead them to think nobler thoughts and do nobler deeds. A man may be worth his millions and still be a slave. Let the cogs in your thought-mill be firmly imbedded in the body of the wheel. Then let the thought-wheels whirl as do the worlds in space, until new thought-worlds fly off—Ah! that brain-mill within the cranium is a wonderful piece of mechanism.

Many a six-story brow fronts a one-story intellect.

AN IMPORTANT DECISION.

Interesting Details of the Victory Won by the National Phonograph Co. in Appeal from the Australian High Courts to the Privy Council of the British Empire—Position of United States Courts Virtually Upheld.

Reference was made in the February issue of The World to the case of the National Phonograph Co., of Australia, against Walter T. Menck, a dealer of New South Wales, which was successfully appealed to the Privy Council of the British empire. Further details by S. Dyke, chief of the legal department of the home company, now Thomas A. Edison, Inc., is as follows:

"This is the first time that a case involving these principles has been decided by a Court of ultimate last resort. In this country decisions of the Circuit Courts or of the United States Circuit Courts of Appeals have been uniformly in favor of the basic principles upon which the selling system is founded and the price cutters and other defendants, who have been defeated in these courts, have never had sufficient confidence in their position to carry the case to the Supreme Court of the United States.

"That the Australian case now decided by the Privy Council was taken up to and decided by that tribunal, which is the court of last resort for England and the British Colonies and which corresponds precisely to the Supreme Court of this country, was due to the fact that both the Australian Court to which the case was originally presented and the High Court of Australia, to which it went from there, decided against the National Phonograph Co. of Australia and in favor of the defendant, Menck, though this decision was in defendant's favor in the High Court of Australia by the narrow margin of a vote of three to two, the case being heard by a court consisting of five judges.

"By this decision the principles supporting the

system under which Edison phonographs and records are sold is firmly established, not only for Australia, but also for all the British possessions. The decision will undoubtedly have great weight with the Supreme Court of the United States, should that tribunal be called upon to decide the same or similar issues.

"The views of the Law Lords who sat on the Privy Council may be clearly understood from the following extracts of the opinion, which is so lengthy that we cannot reprint it as a whole:—

"The general doctrine of absolute freedom of disposal of chattels of an ordinary kind is, in the case of patented chattels, subject to the restriction that the person purchasing them, and in the knowledge of the conditions attached by the patentee, which knowledge is clearly brought home to himself at the time of sale, shall be bound by that knowledge and accept the situation of ownership subject to the limitations. These limitations are merely the respect paid and the effect given to those conditions of transfer of the patented article which the law, laid down by statute, gave the original patentee a power to impose."

"And after reviewing the earlier cases, the decision continues:

"In their Lordships' opinion, it is thus demonstrated by a clear course of authority, first, that it is open to licensee, by virtue of his statutory monopoly, to make a sale *sub modo*, or accompanied by restrictive conditions which would not apply in the case of ordinary chattels; secondly, that the imposition of these conditions in the case of a sale is not presumed, but on the contrary, a sale having occurred, the presumption is that the full right of ownership was meant to be vested in the purchaser; while thirdly, the owner's rights in a patented chattels will be limited if there is brought home to him the knowledge of conditions imposed, by the patentee or those representing the patentee, upon him at the time of sale."

An advertising appropriation which is judiciously spent adds no more to the selling price than rent.

CREDIT VERSUS RATING.

Rating a Cold Blooded Proposition on Dollars and Cents Basis—What Credit Means in Relation to a Man's Moral Character.

In these days every business man is careful to maintain his rating, but here and there is one who is careless with his credit. The statement may seem a paradox, but is it?

Printed rating is based on the amount of cold dollars a man may possess, and his record for having met his obligations without delay—resources and business honesty. Let us look at the broader scope of credit.

To copy Webster, our definition of the word would be "belief, trust, influence and reputation."

The question arises, "What course must a man pursue to maintain for himself these four requisites of credit?" The mercantile agencies, in their books for general circulation, do not show the moral status of a man; but, nevertheless, the keen business world to-day does not lose sight of morals in looking up financial standing.

The intemperate man, or the man who speculates or who leads a loose life generally, should be aware of the fact that those in touch with him are going to use care that he does not go beyond his actual assets. An impaired rating, in its more confined sense, can eventually be built up again if not too badly damaged, but the process of restoring lost credit is an uphill job—a decidedly discouraging one at best.

THE FORM LETTER.

Here is a sensible suggestion which one man is carrying out regularly: When you have finished a form letter, no matter how good it seems, mail it to yourself, or to your wife. Look it over two days later, after it has "cooled." If you have a wife, let her read it first and ask her for her honest idea of whether or not it will sell goods. Then you can know.

The Talking Machine Trade in New England

TRADE GOOD IN PROVIDENCE.

Jobbers and Dealers Enthusiastic Over Prospects—J. A. Foster Co.'s Excellent Edison Business—What "The Outlook" and the Columbia Co. Are Doing.

(Special to the Talking Machine World.)

Providence, R. I., March 9, 1911.

Although general business has not been any too startling, the talking machine trade is up to a high standard. Jobbers and retailers alike are enthusiastic and there is every indication of a fine year.

John H. Massey, manager of the phonograph department of the J. A. Foster Co., Edison jobbers, is about again following a brief illness, and reports that business is exceptionally good. He feels sure that 1911 will be a banner Edison year. "Our customers have taken a great deal of interest in the new model 'O' reproducer," added Mr. Massey, "and this has been the means of bringing a number of idle phonographs into use." This company are also selling a great number of their "special diaphragms," a device of their own make, which they claim is an excellent tone builder. The cost of this is small and hundreds are being sold.

William L. Veale, of the talking machine department of J. Samuels & Bro., known as The Outlet, attests a good strong trade in both Victor and Edison goods. February sales were excellent and business is booming. Commenting on this subject, Mr. Veale remarked: "We have been unable to obtain shipments of Victrolas to fully supply the trade, but there is no question that the factory will soon be in a position to satisfy the demand. These signs augur well for a fine trade."

As usual with large cities, the Columbia Phonograph Co. have fine distributing quarters and are reaping a good business.

GIVING SUCCESSFUL RECITALS.

(Special to the Talking Machine World.)

South Berwick, Me., March 8, 1911.

M. A. Gordon, the live Edison dealer in this vicinity, is giving a number of recitals to the public and is featuring this end of the business prominently. These are held in Newichawanick Hall, and Mr. Gordon is generous enough to allow the free use of this name for needle or machine products. Say it quickly—Newichawanick!

CO-OPERATING WITH THE DEALERS.

(Special to the Talking Machine World.)

Boston, Mass., March 8, 1911.

"With the opening of spring," says Charles R. Cooper, head of the Edison jobbing end of the Boston Cycle & Sundry Co., "some dealers need a tonic to sort of boost along their energy. To meet this condition we have inaugurated a special

Edison delivery and co-operation, and if our efforts will do it, all our dealers will have a good, bountiful spring business." "Give me your proposition" on a postal will secure the outline of this plan from Mr. Cooper.

WILL FEATURE THE VICTOR LINE.

(Special to the Talking Machine World.)

Newtonville, Mass., March 6, 1911.

Charles Farrington Atwood has undertaken the agency for Victor talking machines, equipping his store with a complete line. He says he will feature Victrolas, this city being a wealthy suburb of Boston.

A LIVE DEALER IN KEENE, N. H.

(Special to the Talking Machine World.)

Keene, N. H., March 7, 1911.

Certainly a live talking machine dealer here is A. W. Dickerman, who sells Edison and Victor goods. He also handles a line of sporting goods and cameras. Mr. Dickerson ranks with the leaders in volume of talking machine sales.

NEW CLAREMONT, N. H., HOUSE.

(Special to the Talking Machine World.)

Claremont, N. H., March 6, 1911.

Quinby & Quinby are new dealers here. They will handle the Columbia products and will open with a complete line.

E. D. EASTON A BOSTON VISITOR.

(Special to The Talking Machine World.)

Boston, Mass., March 4, 1911.

Edward D. Easton, president of the Columbia Phonograph Co., General, New York, accompanied by Mrs. Easton, was a recent visitor to this city, primarily to attend several performances of grand opera, in which he is greatly interested.

VERMONT DEALER STOCKING UP.

(Special to the Talking Machine World.)

Rutland, Vt., March 6, 1911.

M. A. McClure, the Columbia and Victor dealer, is at present in Boston looking after a "spring stock" supply. He is a piano man of wide experience and has most commodious warerooms in "The Altorf," one of the modern buildings in the city, and transacts a good talking machine trade.

E. T. M. ASSOCIATES' MINSTREL SHOW.

(Special to The Talking Machine World.)

Boston, Mass., March 6, 1911.

S. J. Freeman, publicity manager of the E. T. M. Associates, Edison and Victor enthusiasts, says

that April 17 is the eventful minstrel show day, and that there will be big doings, particularly by the end men, S. H. Brown and W. J. Fitzgerald. A number of prominent New England dealers are planning to attend this big yearly event.

SUCCESS OF THE PETMECKY NEEDLE.

Self-Sharpening Petmecky Multi-Tone Needle Made by W. H. Bagshaw, Makes Strong Appeal to Talking Machine Owners.

(Special to the Talking Machine World.)

Lowell, Mass., March 10, 1911.

It is evident if you want to secure a good profit from needles that it pays to handle the famous Petmecky Multi-Tone (self-sharpening) needles, according to the advertisement elsewhere in this issue of the manufacturer, W. H. Bagshaw, of this city. These retail for 25 cents a hundred, or \$2.50 a thousand, which allows a good margin for the dealer. Ten tunes can be played with each needle, with loud, soft or intermediate tones as desired, from the same needle. Over half the output of the Petmecky needle is sold abroad, which is indicative that the foreign trade is alert to good features in the industry.

C. H. Bagshaw, of this well-known needle house, is greatly pleased at the large Petmecky sales, saying: "The use of this needle will prolong the life of the record for years, and old and scratchy records are made as smooth and musical as new ones. Owing to its peculiar construction the Petmecky is self-sharpening and can be used ten times." Full directions for using this needle are printed on every envelope and dealers can secure them from their jobbers.

A NEW COLUMBIA DEPARTMENT.

(Special to the Talking Machine World.)

Boston, Mass., March 5, 1911.

James A. Holohan has been appointed manager of the new Columbia department of Carl Fischer, who recently installed a complete line. This house is in the Back Bay section of the city, and Mr. Holohan expects to do a lively business.

COLUMBIA TRADE IN SPRINGFIELD.

(Special to the Talking Machine World.)

Springfield, Mass., March 6, 1911.

A. A. Magowan is the hustling local manager of the Columbia Phonograph Co.'s warerooms, where he is creating some big sales totals. He is very joyous, so to speak, over business prospects, as well as over the fittings of the Columbia store, saying: "Our store is very complete and it is not stretching the truth to say it is the finest equipped one in the city. The soundproof booths are a special feature and we have received many compliments on these from our customers."

BOSTON CYCLE & SUNDRY CO.

J. M. LINSOTT, MGR.

48 HANOVER STREET, BOSTON, MASS.

**Fast
Exclusive
Edison
Service**

Mr. Talking Machine Man! Why don't you take a "spring tonic" for your Edison sales? Get an Edison Service and co-operation that will permit the increased profits that you deserve. A "service" that is in sympathy with your business—regular, "on-the-dot" shipments plus fast service when it's required to clinch retail sales.

**Fast
Exclusive
Edison
Service**

We guarantee an Edison Service that will make you the dominating talking machine factor in your territory.

Send us a postal card with "Give me your proposition" and learn what our service means. No obligation at all!

FROM OUR BOSTON HEADQUARTERS

ROOM 12, 178 TREMONT STREET, G. W. HENDERSON, MANAGER.

(Special to the Talking Machine World.)

Boston, Mass., March 9, 1911.

While the past month exceeded 1910's period, yet business was a little disappointing to the trade, particularly in the retail division. It is probable that their hopes were elevated too high, caused by a bountiful January, and while February was really an excellent month, comparatively speaking, it did not seem so large. March has opened up magnificently and the most conservative talking machine man is enthusiastic over the present month's probabilities.

Eastern Talking Machine Co. Doings.

It was with regret that E. F. Taft, general manager of the Eastern Talking Machine Co., was unable to be present at the Jobbers' Association executive committee meeting at Chicago, as he was confined to his house by illness.

The E. T. M. Co. associates have decided that April 17 will mark the minstrel happenings for 1911. Last year the "show" was witnessed by several hundred people and the attendance on the 17th proximo ought to be in excess of a year ago. Brown, Fitzgerald & Co., end men factors, are going to pull some very funny stunts off, so be present!

One of the "acts" on this week's bill at B. F. Keith's theater is Caruso on a Victor, furnished by the Eastern Talking Machine Co. Special scenery accompanies Caruso and the entire bill makes a hit.

This company have also sold a Victor to the State Normal School at Bridgewater, which will be used in conjunction with music teaching, the idea being to show by Victor records how songs should be properly sung.

"It is evident that there is a much better feeling generally throughout New England. Various disturbing elements have been or are being amicably adjusted in the different communities that at one time were threatened with possible trouble, and I am convinced that this will be a tremendous year," remarked E. F. Taft, general manager of the E. T. M. Co., in a chat with The World representative. Mr. Taft's optimism speaks for itself!

The Victor Campaign at Ditson's.

"The right principle and the perfecting of every mechanical detail make the Victor a perfect musical instrument and give it a recognized and exclusive place in conservatories of music, in colleges and universities, in the studios of great musical artists and in the homes of music lovers throughout the world," say the Oliber Ditson Co., Victor jobbers, in some of their good retail ad-

vertising. Business with this well-known house is right up to the mark.

The "Talking Machine Truckman."

Boston boasts of a "talking machine truckman" and he is E. G. Wilkinson, who does a lot of teaming for the various companies. He has been in the field since the inception of the industry and claims to have handled the first wholesale shipment coming into Boston.

Boston Cycle & Sundry Co.'s Good Report.

Edison business with the Boston Cycle & Sundry Co. is decidedly brisk, according to the cheery reports of Charles R. Cooper, manager of that department. Shipments from the Edison factories are held but the shortest period before they are re-shipped to the various New England dealers, who swear by the "Boston Cycle" service.

Mr. Cooper says they are still selling Edison machines to prospects who called at their exhibition at the Mechanics' Fair last fall, at which time the Edison Co. held their big display. It is evident that this exhibit was a tremendous success.

Guy R. Coner, traveling representative, is doing some very forcible work in behalf of the B. C. & S. Co. in New Hampshire and Vermont.

A recent visitor to these quarters was H. N. McMenimen, manager of Sheip & Vandegrift, Inc., Philadelphia, Pa., makers of the famous Music Master horns.

Big Demand for Dean's Needles.

Charles E. Dean, of the house of Dean, Putnam, Conn., makers of Puritone and other brands of high grade talking machine needles, writes that their immense plant is exceedingly busy. Their needle output is shipped all over the country and is held in high esteem by the trade.

A Columbia Co. Veteran—Arthur C. Erisman.

Arthur C. Erisman, manager of the Boston headquarters of the Columbia Phonograph Co., whose likeness The World is pleased to publish herewith, has been connected with the company going to twelve years. He has been in Boston for the past three years, prior to which he was in Toledo, O., for two years; before that at Detroit, Mich., for four years, and preceding that at Philadelphia for three years, all the time being in the Columbia service. He enjoyed doing business when there was no competition and when disc machines sold for \$40 which to-day wouldn't bring \$2. To show how the industry has been revolutionized, Mr. Erisman remarked that years ago if a person could understand one word when a record was being played he would exclaim involuntarily, "Ah!" and this would only occur occasionally. To-day

they'll say "Ah!" if they miss one word, which seldom happens. This is most conclusive evidence as to the successful development of the talking machine and shows that "perfection" has been attained to a wonderful degree.

You wouldn't think that such an "old timer" as A. C. could possess such a youthful appearance, not dwelling at all on his "handsome" qualities, but he attributes the foregoing to living so long in the lively Columbia atmosphere. One can also see, by studying his right hand, the correct way of re-

ARTHUR C. ERISMAN.

straining robust Flora de Hemps when they attempt to escape the camera lens. Under his arm is a pair of skates, as this was taken when he was en route to the skating rink to cut some Columbia double faced discs on the ice. But seriously, Mr. Erisman is decidedly popular with the dealers and retail trade, and that his regime has been successful is best cited by the voluminous growth of the local Columbia business since he undertook the management.

A Visitor from Buenos Aires.

Ernesto S. Tosi, representing Casa Tagini, the big Columbia jobbers of Buenos Aires, South America, was a Boston visitor this month. He has been in the United States for quite a period, but leaves for home in two weeks. Mr. Tosi reports a fine talking machine business in his territory. They maintain a most extensive store, having twenty-

(Continued on page 22.)

Directions for Playing the Petmecky Multi-tone Needle

To obtain a loud tone play the needle with the flatted portion facing the record. For soft tone play with edge facing the record. For intermediate tones play at intermediate angles. Any tone, from the loudest to the softest can be obtained with this needle. To play more than one record change the position of the needle after each record, i. e., turn the needle half-way round. The same needle can be used for soft and loud tone without injury to the record. Each needle will play ten records. Owing to its peculiar construction this needle is self-sharpening, and can be used on the same or different records. The use of this needle will prolong the life of the record for years, and old and scratchy records are made as smooth and musical as new ones.

ENVELOPE—FRONT VIEW

We are the manufacturers of the FAMOUS

"Every Knock a Boost."

People have talked for some time concerning competitors "knocking" each other. This isn't done to a great extent with the Boston fraternity, that is, by the heads of the houses, but there is one salesman, who by right of effort, deserves the presidency of the Knockers' Klub. But the funny part of the whole thing is that he talks so energetically that he is actually driving sales into a competitor. The latter remarked to the writer that he could afford to pay that fellow to "keep talking," and while I hate to give this good thing away, still there is a moral to the story that is worth considering by the whole trade. It surely illustrates the old saying that "every knock is a boost," and when you feel tempted to lower a customer's estimation of a competitive product in an unfair manner, don't do it. It's an advertisement for him—one that he gets from you free!

F. E. Matthewson, legal man for the National Phonograph Co., Orange, N. J., arrived here recently and will spend a couple of weeks.

"A GOOD SALESMAN."

"A good salesman," says a manager, "is a man who has the ability and courage to constantly talk quality and sell his goods through pointing out their merits instead of their defects; a man who is undismayed when he learns that a weak sister has cut prices cent-per cent, but one who in such cases buckles on his armor of quality more firmly and by sheer force of argument and honest representation instills into his customers the confidence he himself feels in his own line.

The function of advertising is to inform, not to instruct. Readers want neither to be yanked, nor to be spanked into buying your goods. They want the bald facts, uncovered by a wig of words and unsprinkled with cajolery.

AROUND THE BALTIMORE TRADE.

Business Conditions Excellent in the Talking Machine Trade—High Priced Machines and Records Have the Call, According to the Managers of Leading Houses.

(Special to the Talking Machine World.)

Baltimore, Md., March 7, 1911.

"People of the Monumental City may be looked upon as a conservative lot of individuals, but when they take to a thing they do not hold back on making purchases," is the way one of the well-known local dealers started out, in telling of the present condition of the talking machine situation in Baltimore. "I have experienced this for the past few months in my line of business. Many of the dealers in pianos and other articles have been telling about Baltimoreans being tight with their money and slow, thus making the road for business men hard to travel when slumps arrive. I cannot agree with these fellows, for things have been moving along in fine style and the prospects are just as bright for the spring and summer as they have been since last fall. The people of this city too are not confining their purchases to small machines and cheap records, but seek the most expensive in both cases."

This statement is pretty much along the lines of those made by all the local talking machine men. Good runs are the go in every instance. It is a noticeable feature that the operatic records continue to be great favorites. This was the case about this time last year when the opera season was in full bloom, as it is now. This year, however, the offerings by the Chicago organization have been entirely new and, consequently, the demand for these productions has been just as heavy if not heavier than last year, when old favorites in the operatic line were produced.

Manager Roberts, of E. F. Droop & Sons Co., in speaking of the trade conditions said:

"You can put me down as an optimist, for I am thoroughly satisfied with the showing for Feb-

ruary. It is true that this month was not quite up to December, but it was far past the same month of 1910. Baltimore is all right and business, from all indications, is going to keep up in fine style at least until the late summer. Then we have to look for a slight lull when many people are away from the city. I am having a good retail demand for the Victor Victrolas, while the high priced Edison machines are also in favor. While I have many requests for smaller machines, most of these are from the dealers or from storekeepers in the rural districts. In regard to records, the operas have caused the run on high grade discs to be very heavy, while of the popular variety the purple seals are in best demand.

Manager Laurie, of the local agency for the Columbia Phonograph Co., reports a good month with the Columbia line of machines and records. In order to better handle the large number of customers two additional sound proof music rooms have been arranged on the first floor in front of the office.

The Victor and Columbia machines have been in good demand at Sanders & Stayman. Like the other dealers, Manager Albert Bowden, of the talking machine department, said that the Victrolas and Grafonolas were the most sought after. President G. Wright Nicols, of the firm, has just returned from a delightful pleasure trip to Bermuda and Florida. Mr. Nicols is the picture of health. He says that his mission was simply for pleasure after a strenuous winter business campaign.

Cohen & Hughes also had good results during February with the Victor and Edison lines, according to Manager Morris Silverstein.

WHAT RECIPROCITY MEANS.

Reciprocity, which means the mutual interchange of rights and privileges, should go hand in hand with the protective policy, to be automatically and instantly used whenever our industries are of sufficient size to require larger markets than our own country affords.

(Special to the Talking Machine World.)

London, E. C., March 1, 1911.

Things here in the talking machine industry have been decidedly good this last week or so, and business continues to hold up satisfactorily. True, sales have not an upward tendency; it is hardly to be expected, perhaps, at this particular time of the year, but of one thing there is sure evidence, and it is that talking machine trade in bulk is very considerably ahead of even time last season. Signs are not wanting, too, of a prolongation of the period usually ascribed to the season proper, without doubt to a great extent due to the sustained activity of certain manufacturers in the advertising field, one effect of which has been to arouse renewed interest among some of the talking machine distributors in the cycle trade section. And while many of the latter class of dealers have allowed interest and energy to lag, others of a more enterprising nature—and who shall say but what they are not on the increase?—are stimulated by the vitality of the manufacturers to maintain at least some semblance of concrete effort in the "selling" direction—more especially, perhaps, in records. But the real reason of this prolonged trade activity is in part found in the ever-increasing and more desirable class of distributor, to wit, musical instrument dealers, in whose hands we have confidence that a proper regard to the requirements of talking machine trading is best exhibited. In some regard the future prosperity of this industry is centered in the exercise of musical knowledge applied to record salesmanship, and if only for this reason, the handling of talking machine goods by the musical instrument dealer should be assiduously cultivated; not necessarily to the entire exclusion of the cycle section, for, while faults may be found, the fact remains that they are responsible for an enormous turnover each year. Like it or not, we can scarcely dispense with this channel of trade, and who knows but what after all the much-maligned cycle man will reform? Treat him well, introduce more frequent exchange schemes, and it is possible the error of his price-cutting ways may in time be revealed to him.

National Phonograph Co. Plans.

From time to time reference has been made in these columns to certain new Edison productions which the National Phonograph Co. intend putting on the market in the near future, but detailed information is still withheld for reasons which must be fairly obvious to my readers. In common with ourselves the factors and many dealers are more or less acquainted with an idea as to the nature of these goods, and it is generally agreed that the company are exercising a wise discretion in withholding the news from the public until such time as sufficient stock is on hand to meet the big demand expected immediately the company make known their proposition. One thing the National

people will shortly put into effect is a new plan to increase the sale of combination attachments with a view to stimulating the Amberol record sales. To successfully launch the proposition the company require information as to the exact number of attachments dealers and factors have in stock, and as soon as this information is tendered the scheme will go ahead quickly. More anon.

Will Not Publish Coronation Address by Gramophone.

The King has decided not to publish his coronation address to the people by means of the gramophone, more's the pity.

Model O Reproducers for Concert Types.

Owing to the success of the model O reproducer, the National Phonograph Co. have advised the trade that they will now issue it for the concert type of phonograph.

Anent the Copyright Bill.

Little information is available as to the actual late upon which the Copyright bill will be introduced, but it is expected to be dealt with during the present Parliamentary session. G. R. Askwith, of the Board of Trade, advises me that in accordance with the usual practice, the fact that the bill passed through one or more stages in the previous Parliament will not exempt it from the necessity of passing through all stages in the present Parliament. During the remainder of the session now in force government business only is to be legislated upon, so that a first reading of the Copyright bill will not be long deferred. Whether or not amendments are contemplated it is impossible to glean with any certainty. Clause 24, par. (D) of the bill published last year provides that "the sole right of making and authorizing the making of records, perforated rolls, or other contrivances by means of which literary, dramatic, or musical works may be mechanically performed shall not be enjoyed by the owner of the copyright in any literary, dramatic, or musical work for the mechanical performance of which any such contrivances have been lawfully made within the parts of His Majesty's dominions to which this act extends by any person before the 26th day of July, 1910." The latter date was probably fixed in expectation of the bill passing into law about that time, and it is a matter of common knowledge of how the delay in getting it through the necessary Parliamentary stages finally resulted in its entire suspension for the time being. Then came the dissolution of the 1910 Parliament in November, and with it, of course, all chance of the bill becoming law that year vanished. Under the circumstances we may, therefore expect the Copyright bill to carry certain amendments, not the least of which will probably be an extension of the aforesaid date to July, 1911, when the bill may pass into law. In one clause of the Copyright bill it is expressly stated that authors will not be assigned under the act any retrospective rights in the matter of the mechanical reproduction of their copyright compositions which shall have been lawfully done before the act comes into force. Whether or not this will actually apply in the Copyright bill shortly to be reintroduced in Parliament is a question which only future events can determine.

Discuss Music Trades Exhibition.

At the invitation of F. W. Bridges, a representative meeting of musical instrument traders was recently convened at the Holborn Restaurant to discuss the advisability of holding a Music Trades Exhibition. Among those present were: W. H. Green (the Gramophone Co., Ltd.), H. J. Cullum (Cullum & Best), and H. H. Glaussent (Pathé Frères), in addition to a large number of pianoforte manufacturers. After discussion, the following resolution, proposed by Mr. Cullum and seconded by Mr. Wood, was carried unanimously: "That in view of the fact that F. W. Bridges has decided to organize an International Pianoforte and Music Trades Exhibition, for the trade only,

AFTER MARCH 25 THE LONDON OFFICE OF THE TALKING MACHINE WORLD WILL BE LOCATED AT 1 GRESHAM BUILDINGS, BASINGHALL St., E. C.

at the Royal Agricultural Hall, from August 14 to 19, next, the entire responsibility and liability for which will be undertaken by himself, all at this meeting hereby form themselves into an honorary advisory trades council, with power to add to their number, with the object of co-operating with the organizer in order that the exhibition may be thoroughly representative and of the greatest benefit to the pianoforte and music trades generally." An executive committee was then elected. Such an exhibition should afford profitable scope for talking machine manufacturers to get into direct touch with the best class of musical instrument dealers, and we trust they will not neglect this favorable opportunity. The hall is admirably situated for the purpose, easy of access from all parts of London, and there is every reason to feel that the time chosen—August—is very suitable, in view of the fact that it is the month when provincial dealers can best afford the time for a trip to London. Mr. Bridges has organized similar exhibitions in the past, and in his hands we have no doubt but what the one in prospect will prove highly successful.

Carl Lindstrom's Excellent Report.

Carl Lindstrom's balance sheet for 1910 has just been published, and fully indicates the remarkable progress of talking machine trade in general, and of Lindstrom machine sales in particular. The year's figures show an increased turnover of over 50 per cent. against the previous year, and the number of employes has increased in the same proportion. The actual figures are 6,520,000 marks gross turnover, as against 4,035,000 in 1909, the gross profit amounting to 1,600,541 marks. After allowing 838,971 marks for working expenses and writing off 209,000 marks for machinery, patents, etc., and placing 629,750 marks to reserve, the net profit available for dividend amounts to 575,754 marks. The dividend declared is 20 per cent. These figures speak for themselves, and we congratulate Messrs. Lindstrom upon a very successful year.

Beka Record Co. Have Good Year.

A similar satisfactory report is to hand from the Beka Record Co. This concern, it will be remembered, absorbed the Fritz Puppel Talking Machine Co. during the year, and they in turn were

One String Fiddle

STROH VIOLS

VIOLIN, VIOLA, ETC.

The mellow and matured tone of these instruments, which are constructed largely of aluminum, yet possess *none* of the characteristics of the gramophone or wind instrument, is only one of its many points which are fully set out in an illustrated booklet which will be mailed free on request to the *sole makers*.

FROM OUR LONDON HEADQUARTERS—(Continued.)

acquired by Carl Lindstrom. The turnover of Beka Record Co. in discs and the Puppel Co. in machines during 1909 amounted to 1,200,000 marks each; their joint turnover during 1910 amounts to 4,500,000 marks, which shows tremendous progress. The gross profit is 1,522,318 marks, from which has been written off for buildings, machinery, matrices, patents, etc., 173,889 marks; general working expenses, 816,920 marks, leaving a net profit of 531,509 marks. A dividend of 8 per cent. has been paid, a portion of the remainder being allocated to writing off further amounts against depreciation, which, by the way, leaves the value of certain property in the balance sheet at the nominal amount of one mark. They further provide for reserve 100,000 marks, bringing a balance of 23,848 marks forward to the next account.

House of Lords Dismisses Gramophone Co. Appeal.

In the House of Lords, February 13, judgment was given in the appeal of the Gramophone Co., Ltd., against the Magazine Holder Co. (now trading under the title of Perfectophone, Ltd.), which raised a question as to the infringement of patent rights in the design of a gramophone cabinet machine. The Gramophone Co. had registered a certain design, and contending that the Magazine Holder Co. had infringed it by a design registered on a later date, brought an action for an injunction. This action was dismissed by Justice Warrington, who held that respondent's cabinet was not an infringement. The court of appeal were of the same opinion, and dismissed the appeal with costs. Against this decision the Gramophone Co. now appealed to the House of Lords. The case for appellants was that their registered design was new and original, while respondents contended that their design only resembled that of the appellants in details which were not new at the time the earlier design was registered. The Lord Chancellor moved that the appeal be dismissed. In his opinion there had not been an infringement of appellants' design. The Earl of Halsbury and

Lords Atkinson and Shaw concurring, the appeal was accordingly dismissed with costs.

The Latest Klingsor Record.

The Regimental Band of H. M. Irish Guards again figure in the current list of Klingsor records with some pleasing selections, of which the following are good examples: "Musical Snapshots" Nos. 1 and 2, "Reminiscences of Wales," "Samson and Delilah," "The Mouse," "Gaily Through the World," and "Land of Hope and Glory." Harry Bluff is well represented; he sings "Our Wedding," "The Whist Drive," "Just for a Girl," and "There's Another Fellow Just Like Me." Four good songs go to the credit of Harry Trevor: "The Sailor's Dance," "The Old Side Car," "My Old Shako," and "The Rebel." All are up to the usual excellent standard of recording, and should be in good demand. Dealers can have lists complete upon application.

National Phonograph Co. Win on Appeal to House of Lords.

Before Lords Macnaughton, Atkinson, Shaw and Robson, and Sir Arthur Wilson, February 4, the National Phonograph Co. of Australia prosecuted their appeal against an Australian dealer of the name of Menck, to restrain him from acting in breach of a contract between them and from infringing their patent rights. The High Court had dismissed the company's action with costs. The company own three patents for improvements in phonographs, sound records, or blanks granted under the patents act (Australia), 1903. In the course of their business the company sold Edison phonographs, records and blanks made under the protection of the patents. They sold to jobbers under jobbers' contracts. Jobbers had power to sell to dealers, but the dealers' contracts were made direct with the company. The respondent (Mr. Menck) was a dealer, and had various dealers' agreements in 1906, and the company entered him on their dealers' list—a position, it was said, of commercial importance. By the ninth head of the dealers' agreement it was provided that "deal-

ers violating any of the foregoing conditions of sale or any other reasonable conditions that may from time to time be imposed by the company may be at once withdrawn from the dealers' list." On the dealer's part it was promised that in case of his name being so removed he would in no way "handle, sell or deal in, or use, either directly or indirectly, Edison phonographs and parts thereof, etc., unless authorized to do so in writing by the company." It was alleged by the company that Mr. Menck had acted in breach of this contract, and also in breach of their rights as patentees. The Australian court decided generally in regard to the alleged breach of contract that no special damage was proved, and none of the alleged breaches was substantiated, but that there had been, in regard to one clause, a trivial violation which technically justified Mr. Menck's removal from the dealer's list. As to the alleged violation of the company's rights as patentees, the High Court thought that there had been no violation. Lord Shaw, in giving their lordships' judgment, said the main objects of the agreements was to secure that there should be no selling of the company's production at less than their standard prices to the public. Commissions were paid to jobbers and dealers, but no undercutting of prices was permitted. As the High Court found, Mr. Menck never even contemplated such a thing, nor did he ever engage in that method of business, either before or after his name was deleted from the dealers' list. A second object of the agreements was to secure, by the prevention of exchange, that the articles of rival manufacturers should not, by the assistance of jobbers or dealers be, so to speak, put into circulation. It was found as a fact that Mr. Menck, in one solitary and small transaction, exchanged a Gem phonograph of the company's make for another of the company's phonographs, and twenty-one records also of their make. Their lordships thought that such a transaction, apparently perfectly reasonable from the point of view of business, did not constitute a con-

vention of the agreement of the parties. The respondent, on having his name deleted, stood free of obligations to the company so far as they were contractual, and considered himself as free as any ordinary member of the public with regard to the dealing in and sale of the company's goods. But Mr. Menck's misfortune consisted in this—that, by the very fact that he entered into contractual relations with the company, he had become seized with the knowledge of the conditions under which they disposed of their goods, and he was not free to urge that such conditions had not been brought home to him. When he, therefore, announced his intention to deal in those articles as ordinary articles of commerce, he must be held to have pursued a mistaken course, the course of treating himself as an unrestricted instead of a restricted trader. The result might involve some hardships to him, but their lordships could not see their way to depart from the principle that a restriction rested upon a purchaser of goods to which were covered by a grant of patent, and which had come into the possession of a purchaser in the full knowledge of the restriction imposed by the patent upon their disposal.

Their lordships reversed the judgment of the High Court, and issued an injunction in a limited sense against Mr. Menck, restraining him, his servants or agents from infringing the company's letters patent. The award of costs in respondent's favor in the court below would stand, and he would also be entitled to his costs as between solicitor and client in the present appeal, according to the condition under which the appeal was granted. Mr. Walter, K. C., and J. H. Gray (instructed by R. O. Read) appeared for the appellants; Mr. Levinson, of the Australian Bar (instructed by Bartlett & Gluckenstein) for the respondent.

Pathé Frères Have New Exchange Scheme.

Throughout the month of March Pathé Frères have an exchange scheme in force on the three-to-one basis, which will offer dealers an opportunity of substituting new records for old, broken or otherwise soiled stock. It is appropriate that the March list of titles is especially strong, and will therefore be a big inducement to take full advantage of this seasonable exchange proposition. Among the vocal selections on the Pathé 10-inch supplement for this month dealers will find some very excellent items, such as "The Quaker Girl," "Your Eyes Have Told Me So," "Don't Go Down in the Mine, Dad," "You Were Coming Through the Corn, Molly Dear," "Sweet Caroline," and many others of an equally popular character.

New "Cardigan" Zonophone Selling Well.

I learn that dealers are placing good orders for the new "Cardigan" Zonophone, selling at £7 10s.; it is such fine value!

The New Favorite Record List.

The Favorite lists always contain much of interest to dealers abroad desirous of handling only up-to-date London successes in vocal and instrumental music. Practically all the Favorite titles are of known value, having made their mark here as quick sellers. The recording, too, is all that one could desire in the matter of tone quality, clearness and volume, and in the matter of surface the Favorite record is characterized by smoothness

and absence of harsh foreign noises. Here are a few of the latest titles: "British Empire March" (original), and "Big Ben" (Hesse), xylophone and orchestra, R. White; "Beautiful Garden of Roses" (J. C. Schmid), and "I Wonder If You Miss Me Sometimes," Stanley Kirkby; "The Chocolate Soldier," and "That Would Be Lovely," from "The Chocolate Soldier" (Strauss), duets by Miss Violet Essex and Stanley Wentworth; "My Dreams" (Tosti), and "An Evening Song" (Blumenthal), Philip Ritte; selections from "The Quaker Girl" and waltz from "The Quaker Girl" (Lionel Monckton), the Favorite London Orchestra; and "Rag-time Frolics" and "Kentucky Patrol," xylophone with orchestra, played by R. White.

In Parliament.

"Half the electors of the country had considerable reason to complain of the Parliamentary procedure of the Radical ministry, who have reduced the House of Commons to the condition of a gramophone, only to register the decrees of the executive, and they proposed next week to reduce the other chamber to the impotency of a chamber of waxworks!" (Laughter and cheers.)

When Is Edison Coming?

When is Mr. Edison coming over? Coronation time is a good time. Is it to be a double event?

Columbia-Rena Notes.

The strong demand for the famous music hall sketches "Parker PC" and "Parker's Progress" on Columbia-Rena still continues unabated. Certainly the enterprise that prompted this departure in records deserves success, and this "Parker PC" and its sequel has undoubtedly attained in full measure.

It is curious to remember that the play "Rosamunde," for which Schubert composed the incidental music and overture, only reached a second performance. That was in 1823, and although the play has never been heard of since, yet Schubert's incidental music lives to-day, one of the composer's greatest masterpieces. The overture to "Rosamunde" is a very popular item with concert audiences, and the musical "elect" esteem it very highly. All of which makes the twelve-inch record of the delightful overture issued this month on Columbia-Rena especially welcome. It is played by the Regimental Band of H. M. Scots Guards, who also, in the reverse of the same disc, contribute Weber's "Invitation to the Dance."

No one will be surprised to learn that Sergeant Leggett's magnificent twelve-inch record cornet solos issued last month has proved the biggest seller in instrumental records yet issued on twelve-inch Columbia-Rena. In the new list we observe that those top favorites in pantomime, "Beautiful Garden of Roses" and "I Wonder If You Miss Me Sometimes" are treated as cornet solos on a ten-inch record by the popular sergeant.

Some Good Sellers in Columbia-Rena Records.

Other good selling titles from the March list are the following: 12-inch records—"1911 Pantomime Pot-Pourri," parts 1 and 2, Band of H. M. Scots Guards; "Old Black Joe" (Foster), and "My Old Kentucky Home" (Foster), Mrs. A. Stewart Holt; 10-inch records—"Boss of the House" and "It's the First Time That I've Been in Love" (Jack Pleasants), Jack Baker; "Miss O'Hara in Her Emerald

Tiara" (Maurice Scott), and "What D'Ye Say, Molly Molloy?" (Bennett Scott), Miss Vera Moore; "Maggie Ryan from Dublin Town" (John Leat), Stanley Kirkby, and "Marie Louise" (Harry Gifford), Jack Charman; "Torchlight March" (Scottson Clark), and "Solferino March" (G. Allier), Band of H. M. Scots Guards; "Keeping Bees" and "The Knights in Armor" (with patter), Will Evans; "There Is a Flower That Bloometh" and "Yes, Let Me Like a Soldier Fall," from "Maritana" (Wallace), Walter Wheatley; "March Past of the Brigade" (arr. E. Hesse), King's Military Band, and "Wee Macgregor Patrol" (H. G. Amers), Band of H. M. Scots Guards.

The International Musica Congress in London.

A very important gathering in London this year will be the assembly of most of the leading musicians of the world at the end of May. The International Musical Congress, the first conference of the kind ever held in the United Kingdom, will afford the opportunity of demonstrating to the public of all lands that some of the best of lyrical music, not to mention the larger works, bears the name of English composers and is worthy of taking equal rank to that of foreign nations. Prominent musicians have associated themselves with this eminently desirable object, and the principal of the Royal Academy of Music, Sir A. C. Mackenzie, has accepted the position of chairman of the executive committee, which he is peculiarly entitled to in view of the fact that he was the president of the last congress held two years ago in Vienna.

Two Special Twin Records.

In addition to an especially strong list of titles for March, the Twin Record Co. have issued a double disc (No. 385), containing those two beautiful ballads, "Heroes of the Mine" and "The Toilers," excellently sung by that popular artist, Herbert Payne. The record, needless to say, is in great demand.

FROM OUR LONDON HEADQUARTERS—(Continued.)

Sons, Ltd., have redoubled their efforts in the direction of cultivating trade in all kinds of musical instruments with our colonies and dependencies, and to that end Edgar B. Samuel spends most of his time abroad. He returned home February 25 after being away thirteen months on a tour covering the chief cities of Australia and New Zealand. From all accounts the trip was in every way a business success, for here, there and everywhere may now be found dealers handling the Odeon and Jumbo records, Dulcephone machines, pianos and many other musical instruments made by B. S. & S. Mr. Samuel says talking machine trade conditions are distinctly good in the colonies, and things are improving all the time. What especially impressed him was the enormous business in Edison cylinder goods prevailing throughout Australasia, where practically every musical instrument dealer features these products, often to the exclusion of all other talking machine lines. But our export trade is increasing each month and the disc is gaining in popularity abroad to a surprising extent, which is not a little due to the enterprise of Barnett Samuel & Sons, Ltd.

The New Gramophone Records for March.

"His Master's Voice" records for March are of a diverse and pleasing character—the right kind of selections at the right time. It is decidedly a strong list, and such a one that dealers can with the utmost confidence place big stock orders. The titles follow: "Pique Dame" overture (Suppé); "La Sirene" overture (Auber); "Ballet Music and Rustic Dance, Colomba" (Mackenzie); and "In Memoriam" overture (Sullivan), by the Band of H. M. Coldstream Guards; "La Source" ballet, selections 1 and 2, and "La Source" ballet, selections 3 and 4 (Déliès), Mayfair Orchestra; "I Will Extol Thee, Eli" (Costa), Mme. Agnes Nicholls; "God Shall Wipe Away All Tears," "The Light of the World" (Sullivan), and "The Pretty Creature" (arranged by Lane Wilson), Mme.

Kirkby Lunn; "Crossing the Bar" (Willeby), Evan Williams; "Pleading" (Elgar), Walter Hyde; "Young Tom o' Devon" (Russell), Charles Tree; "A Soldier's Toast" (Airlie Dix), Harry Dearth; "Flow Gently, Deva" (Parry), Evan Williams and Robert Radford; "De Ole Banjo" (Scott Gatty), and "Dat's Berry Queer" (Scott Gatty), The Minster Singers; "Scherzo" (Bonniseau), piccolo, Eli Hudson; andante and variations, "Kreutzer" sonata (Beethoven), violin, Joska Szigeti; "It's Just Like Being at Home," Harry Lauder; "Waltz Me Round Again, Willie" (Ren Shields), George Grossmith, Jr.; "Tut, Tut! That's a Bygone," Mark Sheridan; "We Really Had a Most Delightful Evening" (David and Lee), Harry Carlton; "The Bassoon" (Quentin Ashlyn), W. H. Berry; "O! Ha Byddain Haf O Hyd" (Davies), and "Mentra Gwen" (old Welsh song), Evan Williams. Selections from Mozart's "Twelfth Mass," "Glorious Is Thy Name" (Gloria in excelsis); "Praise the Lord" (Quoniam tu Solus Sanctus); "Thou, Lord, Art God Alone" (Cum Sancto Spiritu); "Bow Down and Hear Me" (Et incarnatus est); "He Is Blessed" (Benedictus), and "Holy, Lord God of Saboath" (Sanctus), by Mixed Church Choir.

"The Gramophone in the Home."

"The Gramophone in the Home" is the title of a handsomely produced brochure just issued by the Gramophone Co., Ltd. It has been specially designed with a view to interesting that large section of the well-to-do public who have for some reason or other not yet succumbed to the charms of "His Master's Voice." The brochure illustrates different rooms containing a gramophone of a design most in keeping with the character of each apartment, with interesting argumentative selling text attached. It must be admitted that the idea is a particularly good one, and should result—if wisely distributed—in substantial business, well justifying the large expenditure necessarily involved in the production of this excellent brochure-catalog.

Talking Machine Men to Attend Leipzig Fair.

The Leipzig Fair, March 6-18, will be fairly well attended by talking machine traders from this country, but it is noticeable that many prominent men in the trade who have in the past attended regularly will absent themselves this year. The Leipzig Fair is not that storehouse of novelties that it used to be, and this last season or so it has produced few new inventions of real commercial value. Among the visitors from this country there is S. W. Dixon, Gramophone Co.; W. Manson, Zonophone and Twin companies; G. Murdoch, J. G. Murdoch & Co.; A. Balcombe, Barnett Samuel & Sons, Ltd.; O. Ruhl, Beka Record; H. J. Culum, W. G. Smart and E. Tyler, Lockwoods; C. Herzog and A. Ficker, New Polyphon Co.; G. Andres, Andres Bros. & Co.; W. Johnson, of Liverpool, and A. W. Gamage.

Billy Williams' Records Popular.

The Columbia Co. report a mighty big trade in Billy Williams' records. He is responsible for six really good comic songs which are selling in thousands.

Wanted to Tax Pianos in French City.

A hawker and old cigar-end dealer has recently been elected a municipal councillor at Le Puy, France. Among other things he clamors for an extra tax on pianos. "Why pay 10f. a year," he asks, "for a poor dog that can howl on only two notes or so and nothing for a piano that can scream or groan on about eighty?" Without any consideration for the reforms he calls for, his colleagues on the council have all resigned. We do not wonder.

tinent, the mails will be delivered in Berlin and other important German towns much earlier after the first of May, on which date the arrangements come into effect. It is said that a saving of nearly two hours is probable between London and Berlin.

Recording Cries of Street Hawkers.

The Paris correspondent of the Telegraph reports an amusing attempt on the part of a schoolmaster to record the cries of street hawkers. Armed with a recording gramophone, M. Ponge spends his leisure hours lying in wait for street criers in populous quarters. He is preparing a museum of speech, which he will leave behind him for the instruction of future ages. When he hears the Parisian equivalents of "Milk!" or the muffin-man he pounces on them and compels them to sing or ring bells into his receiver. He has already collected the cries of the birdseed man, the vegetable woman, the fishwife, the basket maker, the ol'-clo'es man, the window-pane mender, the flower men selling mimosa, and the shrill tenor who pieces together again "marble, alabaster and porcelain." Two criers resisted all the collector's blandishments and threats. The wife of the chair mender who gathers custom for her husband, and who was afraid that the gramophone was one of M. Bertillon's new anthropometric recording inventions, and the haughty and funereal Hercules who walks groaning sepulchrally, "Tonneaux, tonneaux!"

Sheffield Choir to Start on World Tour.

March 17 the famous Sheffield Choir, under the conductorship of Dr. Harriss and Dr. Henry Coward, will start on their world tour, which is to include visits to Canada, United States, Australia, New Zealand and South Africa, the itinerary ending in September. My readers may be interested to know that this famous choir have recorded of their best on Odcon records, particulars of which can be obtained from Barnett Samuel & Sons, Ltd., of this city.

Edison Record List for April.

The advance list of new Edison records for April to hand, containing a wealth of high-class and popular music, and the grand opera Amberol numbers, are particularly pleasing. The company draw special attention to the new operatic records by Karl Jörn, who is considered one of the best lyric and dramatic tenors on the operatic stage. His contributions to the list under review are favorite numbers in which he has scored the most emphatic success. The full list of new issues is as follows: Grand opera Amberol records—"Forza del Destino—O tu che in seno agli angeli" (Thou Heavenly One) (Verdi), sung in Italian, Carlo Albani; "Il Trovatore—Il Balen" (The Tempest of the Heart) (Verdi), Carlo Galeffi; "Provençal Song" (Dell Acque), sung in English, Marie Rappold; "Incantatrice Valzer" (Enchantress Waltz) (Arditi), sung in Italian, Marie Galvany; "Tannhäuser—Romerzählung" (Wagner), sung in German, Karl Jörn; "Lohengrin—Lohengrin's Abschied" (Wagner), sung in German, Karl Jörn; "Faust—Cavatina, Salut demeure" (Gounod), sung in French, Karl Jörn; "Meistersinger—Preislied" (Wagner), sung in German, Karl Jörn; "Lohengrin Gralszählung" (Wagner), sung in German, Karl Jörn; "Manon—Ah! fuyez douce image" (Masse-net), sung in French, Karl Jörn; "Manon—La Rêve" (The Dream) (Massenet), sung in French, Karl Jörn; and "Solomon" (Hermann), sung in German, Karl Jörn. Amberol records—"The Chocolate Soldier," selection (Oscar Strauss), National Military Band; "Don't Go Down in the Mine, Dad" (Will Gedder), Stanley Kirkby; "Dolores Waltz" (Waldteufel), concertino solo, Alexander Prince; "Yachting" (Terry and Evans), Will Evans; "An Old Garden" (Hope Temple), Miss Violet Oppenshaw; "T-r-o-u-b-l-e" (Collins and Terry), Arthur Osmond; "She Is Far from the Land" (Frank Lambert), Ernest Pike; "Hi, Hi,

Hi, Mr. McKie" (Letters and Murphy), Miss Florrie Forde; "I'm Learning the Lock-Step" (Cliff and Moore), George Formby; "Valse Septembre" (Felix Godin), National Military Band; "As It Began to Dawn" (Charles Vincent), Edison Mixed Quartet; "Somewhere" (Chas. K. Harris), Irving Gillette and chorus; "Genius Loci" (Carl Thern), Kaltenborn String Quartet; (a) "Thy Beaming Eyes"; (b) "Mighty Like a Rose." Miss Elizabeth Spencer; "Levy-Athan Polka" (xylophone solo), Charles Daab; "Les Sirenes Waltz" (Waldteufel), American Standard Orchestra; "Peek-a-Boo!" (W. J. Scanlan), Will Oakland and chorus; "Little Annie Rooney," Arthur C. Clough and chorus; "Elfentanz Waltz," concert waltz, Sousa's Band; and "Pilgrim's Chorus," "Tannhauser" (Wagner), Edison Concert Band. Edison Standard Records—"Ginger, You're Balm" (Champion), Arthur Osmond; "Strauss March" (Mezzacapo), National Military Band; "Keeping Bees" (George Arthur), Will Evans; "Dear Eyes" (Daisy McGeoch), Miss Violet Oppenshaw; "A Fireman Like Me" (Richards), George Formby; "My Wife's Gone to the Country," Edward M. Favor; "Old Berlin March" (Franz von Blon), United States Marine Band; "Sweet Red Roses" (Anita Owen), Miss Agnes Noll; "Way Down East" (Young and Norman), Peerless Quartet, and "Chicken Reel" (J. M. Daly), American Standard Orchestra.

Attractive List of Zonophone Records.

An attractive list of titles for March has been issued by the British Zonophone Co., and in commenting thereon it is very satisfactory to know that despite the enormous aggregate sales of the 2s. 6d. double discs, the Zonophone record (single-sided) sold here for 2s. is as popular as ever. And the reason is apparent, for quality of recording, good surface, and the service of only the best artists tells all the time. Some of the recent titles issued are: "The Lock Step," the Peerless Orchestra; "Our Jack's Come Home" (Devers), Peter Dawson; "How Sad It Is to Say Farewell" (Westrop), Mme. Deering and Ernest Pike; "You Can Always Tell a Married Woman," Miss Florrie Forde; "Who's Who," Mark Sheridan; "Gilt-Edged Bertie" (Lauder), Harry Lauder; and "The Red Cockade" (Tait), banjo, Olly Oakley.

PROVINCIAL NOTES.

There is little news of importance from the provinces this month; the few reports to hand from Manchester, Liverpool and Birmingham are of a somewhat contradictory nature, but I gather that although in some districts trade is slackening up, talking machine business is generally of a satisfactory nature. For the time of year the stability of trade in Lancashire is regarded as particularly good and dealers are keeping up their stocks beyond the usual measure. Daws Clarke reports that his new "Flex" diaphragm for the Edison model O reproducer has met with great success, and he anticipates good repeat orders. In the Midlands talking machine sales have been good this last month, and indeed, Birmingham traders in particular have experienced a most satisfactory season. Busy times are reported at the Colmore Depot, especially in Edison and Zonophone products. Scott Skinner, the veteran Scottish violinist, who plays exclusively for Columbia-Rena records, has been enjoying a most enthusiastic reception in the northern Scottish towns, and dealers have experienced a big demand for his records.

Professor Savary, M.A., has been giving lectures at various places in Ireland, advocating the use of the phonograph as an aid in the teaching of modern languages. The influence exerted by the professor in this direction has produced very satisfactory results for Edens Osborne, the Belfast Edison factor, who reports having sold several machine outfits and language records as a direct consequence of those lectures.

Don't Buy Needles That Damage Records

Bad Needles Cleopatra Needles

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Cleopatra Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

Finest Reproduction, No Ruin of Record.

TIMELY TALKS ON TIMELY TOPICS

Perhaps too little is heard of the selling prowess of salesmen in the talking machine trade. It is certainly an interesting subject not only to the individual immediately concerned, but others as well. As yet the high marks in this respect have not been reported, at least for publication. Recently *The World* was a listener to an argument of this kind between two men well known in the selling field. One of them urged that the best feat in the retail sale he had ever heard of was made by Joseph M. Bryant, in charge of the new talking machine department of Wm. Knabe & Co., New York, who scored \$800 to a customer. H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., general, who was one of the disputants, replied he could "go that a few better," namely, \$1,200. This amount was reached when connected with the company's Boston store. Maybe others will be heard from? Until then Mr. Yerkes heads the list, for \$1,200 as a single retail sale is going some, as the familiar phrase runs.

Greek dancing, now receiving the enthusiastic indorsement of fashionable society, and which is very much in vogue, is greatly aided and developed by the use of the talking machine record. That is to say, the exercises essential, in connection with the music, in the absence of a professional orchestra, is supplied by the high class operatic records. A woman who indulges in Greek dancing for exercise only, in giving her experience, said: "Now, when I get up and feel headachy or as if my doll was stuffed with sawdust I have my exercise. I start the 'Marche Militaire' on my patient machine, and the strains are so inspiring that I go through my paces, so buoyantly that my husband enjoys my dance. Then I put Mendelssohn's 'Spring Song' on and dart forward with a series of leaps, of tossing arms, of waving hands, of sudden swoopings, bended body, lightly turned head strung along seemingly some mental thread until the final pose of perfect rest is reached. I find endless enjoyment in these exercises, and as an orchestra is out of the question the records furnish the necessary music. It is always at my command, and the beautiful and brilliant character of the selections and perfect tempo, far superior, in my judgment, to the performance of many orchestras. Besides the records are within the means of every one, so that Greek dancing may be indulged in at any time."

Another field of usefulness as a means of entertainment, and of which possibly few dealers take cognizance, is in the sick room or with confirmed invalids, and the "shuts ins" generally. A specially significant instance of this field of usefulness may be quoted in connection with Clara Morris, the one time favorite and popular actress (Mrs. F. C. Harriott), who is dictating her memoirs to her husband. She is engaged at this work day and night in her Yonkers, N. Y., home, having been confined to her bed since she suffered a breakdown a year ago and was stricken with failing eyesight. She is barely able to distinguish between night and day. A diary in which she wrote every day in her life since girlhood is being kept up to date for her by her husband. In her leisure moments she takes most interest in listening to grand operas from a talking machine at her bedside.

Very much to the gratification of cylinder and vertical cut disc records using sapphire needles or reproducing points, the importation of the "blanks" are now dutiable at ten per cent. instead of fifty per cent. ad valorem, as originally classified by the customs officials. Reference was made to this decision in last month's *World*, and in the full opinion of the United States General Appraiser it is learned that "the merchandise in question consists of small pieces of sapphire, cylindrical in shape. The collector classified them as articles composed wholly or in chief value of semi-precious stones, not specially provided for, and as-

essed duty thereon at 50 per cent. ad valorem under paragraph 112, of the tariff act. It is not disputed that the articles here involved are intended for ultimate use in the construction of phonographs. In the form as imported, however, they are not parts or accessories of such instruments. The record shows that they have to be subjected to seven or eight operations, some of them involving microscopic work of a highly delicate and skilful nature, by which they are notched and 'balled' on one end before they can be inserted in phonographs as producers or reproducers of sound, the cost of which processes enhances their value about 300 per cent. The question presented to us for determination is whether such articles—which in the condition as imported are shown to be sapphires merely cut or fashioned by a lapidary and many stages removed from the form and shape which fit them for their ultimate utilitarian use—are dutiable as assessed, or otherwise. * * * We find and hold that the merchandise is dutiable at 10 per cent. ad valorem under paragraph 449, and the collector's decision in each case is reversed."

The argument advanced by General Appraiser Sharretts in this case is lengthy and rather elaborate. That aside, those directly concerned in the trade are to be congratulated, and Mr. Sharretts, who handles very nearly if not quite all of the tariff disputes in musical instrument cases, has taken a totally different stand on these goods. Talking machines and parts thereof are assessed the same as musical instruments or parts thereof, namely, 45 per cent. The cases in point are crude parts of violins, for example, which go through a number of processes before becoming a part of the finished instrument, as also are the backs and bellies and bridges. In these instances they are invariably held dutiable as "parts" and assessed accordingly. However, the interpretation of tariff schedules is fraught with surprises, and this is one of them. But there is no "kick" coming. On the contrary, it is a happy solution of a vexed question!

Dealers who are prone to believe they can violate their contracts with the manufacturers in relation to the sale of goods at other than the established prices, or infringe patents which have been adjudicated with impunity, should not overlook the cases of one Greenberg, of New York City, and Edward H. Martin, a music dealer of Webster City, Ia., which appear in the current issue of *The World*. The former was "brought to book" after expensive and annoying litigation by the Victor Talking Machine Co., Camden, N. J., and fined \$1,500 for contempt of court. Martin was "jacked up" by the National Phonograph Co. (Thomas A. Edison, Inc.), Orange, N. J., at the close of proceedings covering over three years, and fined \$350 on a like charge. Both of the defendants were to stand committed until the fine was paid. These suits were brought to establish a principle, moral as well as legal, as between the seller or manufacturer and the buyer or dealer in the enforcing of inalienable rights conferred on the owner of property covered by valid patents. The rulings of the Federal courts in respect to cases of this kind have not only been numerous but uniform, and need not be referred to at length, as they have been reported with more or less fulness, according to their importance, in *The World* from time to time. The two contempt cases mentioned, the first to occur, are significant, and dealers who are inclined to crooked selling methods should bear them in mind and keep in the straight, if narrow, path.

James B. Landay, of Landay Bros., New York, after a recent visit at the factory of the Victor Talking Machine Co., Camden, N. J., came back more optimistic than ever regarding the future of the business. Not but that he always looks on the bright side of things and is generally hopeful; yet a talk with General Manager Geissler is invariably stimulating, and he knows Victrolas and other Victor products the firm can use conveniently and

profitably in their business now will be coming along in due course. It is whispered the Landays may open a branch house in one of the progressive cities of the Middle West. When Max gets back perhaps more definite news may be forthcoming concerning the rumored project—and then, perhaps not.

William Mermod, the controlling spirit and heaviest stockholder in Mermod Frères, St. Croix, Switzerland, who has been in the United States about a month looking over the talking machine field with a view to future operations, returns to Europe in the neighborhood of April 1. His business headquarters is with the Jacot Music Box Co., New York.

One of the latest unexpected hits of the Victor catalog is the "Nightingale" record, Red Seal 64,161. It is a perfect and marvelous reproduction of this celebrated American warbler and is the bird's natural notes, not an imitation. Distributors and dealers in placing orders bought the record with unusual caution. A tremendous demand immediately followed its introduction, and the clamor on the factory for the "Nightingale" from all over the country astonished everybody and a repressing of another edition of magnitude was necessary. Dealers could not even retain a sample in their stores for demonstrating. It looks now as if the "Herd Girl's Dream," which all the companies list, will be another hit of size, according to the record sharps.

The American Talking Machine Co., Victor distributors, with two finely-appointed stores in Brooklyn, N. Y., report the best business they have had since 1906. General Manager Morris says he could handle a bunch of Victrolas and other Victor machines if the factory would only loosen up with several good-sized shipments—sooner the better.

M. Gold, Eastern representative of the Universal Talking Machine Mfg. Co., Philadelphia, Pa., succeeds Louis Silverman, who is now with Thomas A. Edison, Inc., as previously announced in *The World*. Mr. Gold looks after the Universal Co.'s Greater New York business, and goes to Boston, also. Although he only recently went on the company's selling staff, he is reported as doing well. Mr. Gold is an experienced talking machine man.

A German talking machine contemporary states, in its February issue, in the case of the Gramophone Co., London, Eng., complainants, that the tapering arm patent has not been upheld by the court of last resort in the Austrian empire. On the other hand, the so-called goose-neck patent is declared valid by the same tribunal, providing the needle is lifted vertically; that is, if the sound-box is raised on the side, the patent is in the public domain.

AS TO THE EFFECT OF PRAISE.

Not Always Stimulating, Says This Man, Drawing on His Own Experience.

The singer sang well and the applause was insistent. Again he came forward, and this time he sang even better than before.

"It is always so," said one listener to his friend. "Applause stimulates us all. It's a pity that men can't be praised more than they are when they do good work. We are too churlish about such things. We say that a man ought to do his duty anyway and not expect praise for it, when the fact is that if we praised him occasionally it would stimulate him, make him do more and better work."

"When I was a boy out in the woodshed sawing wood," said the other man, "the old man would come along and look at what I'd sawed and say, 'Sammy, you're doing splendidly. Keep it up, my boy.'"

"There was praise for you, but do you think that stimulated me? On the contrary, it made me want to smash the buck and bust the saw and break for the woods."

"Oh, well, of course," said the praise advocate, "there may be exceptions, but as a rule—" and so on and so on.

**The Columbia exclusive selling
rights policy *does* restrict—*competition*,
that's all.**

Columbia Phonograph Co., Genl., Tribune Building, New York.

ANOTHER FINE FOR CONTEMPT

In the Case of the National Phonograph Co. (Thos. A. Edison, Inc.) Against E. H. Martin, of the Martin Music Co., Webster City, Iowa, for Violating a Writ of Injunction in Regard to Price Cutting.

Another dealer has been fined by a United States judge for contempt of court for violating a writ of injunction. The case is that of Edward H. Martin, of the Martin Music Co., Webster City, Ia., which was prosecuted by the National Phonograph Co. (Thomas A. Edison, Inc.), and has been before the court since December 23, 1907. Martin did everything possible from that date until the final decree for contempt was filed by Henry T. Reed, United States Circuit Court, northern district of Iowa, central division, February 22, 1911. The opinion, after reciting the facts, etc., in part follows:

"The defendant is a man of intelligence, and the evidence convinces beyond any doubt that he intentionally violated the preliminary injunction. His efforts to show that the sales of phonograph records subsequent to the issuance of the injunction were by the Martin Telephone Co. or its general manager; and the Martin Music Co., without his knowledge, is a mere ruse to shift the responsibility for such sales. The Martin Telephone Co. is a corporation organized under the laws of Iowa, in the name of which the defendant conducts most of his business. He was its president and principal stockholder and controlled the management of all of its affairs. The defendant, M. M. Martin, is his wife, and is or was a stockholder of the Telephone Co. and its secretary, but took no active part in the management of its business. There was but one other stockholder and he owned only a nominal amount of its stock, and the defendant, Sterling, was an employe under the title of manager or general manager, but acted under the general directions of the defendant, Edward H. Martin.

"The Martin Music Co. was another name under which the defendant conducted a business of dealing in musical instruments, sheet music and other goods usually carried by such dealers; and while there is some evidence that this business was turned over to his son, Fred N. Martin, prior to the commencement of the suit, the evidence leaves no room to doubt that the defendant himself sold a number of these phonograph records and received the pay therefor after the preliminary injunction was served upon him. The violation of the writ was deliberate and intentional and cannot be overlooked. Parties must know that writs of injunction are not issued by the courts as a mere pastime and for their own pleasure, to be observed or not as those against whom they are issued may elect, but are issued to protect and preserve the property rights of parties pending litigation between them; and those against whom they are issued and upon whom they are served must be given to understand that any intentional violation of them will not be tolerated, but will be punished, and by imprisonment if necessary, to uphold the authority of the

court and protect the rights of parties involved in the controversy in which they are issued.

"The contention of counsel that the defendant has been once in jeopardy because of the proceedings at the June term of court, 1908, when the affidavits were suppressed at his instance, and that he cannot now be rightly tried for such alleged contempt is untenable. There was then no hearing upon the merits of the alleged contempt, but only a preliminary hearing at the instance of defendant upon the question of the competency of the ex parte affidavits which complainants proposed to offer in support of the alleged contempt. There was, in fact, no other hearing, the testimony contained in such affidavits was not considered, the charge against the defendant was not heard, and the question of his guilt or innocence of such charge is now presented for the first time for determination. The defendant's plea or defense of

prior jeopardy is therefore overruled, and he will be fined in the sum of \$350 because of his violation of the preliminary injunction, and the costs of taking the testimony before the examiner, which was begun February 5, 1910, including the statutory fees and mileage of witnesses examined at such hearing and the legal fees of the examiner and stenographer for taking such testimony, and the other taxable costs that pertain alone to the contempt proceedings.

"If such fine and costs are not paid within five days after the filing of this opinion and order the defendant will stand committed to the county jail of Webster county, Iowa, until they are paid, and the clerk will issue the proper warrant so committing him. Of the \$350 when paid the clerk will pay the petitioners \$150 to apply upon the services of their counsel that pertain alone to this contempt proceeding. It is ordered accordingly."

LATEST UDELL CABINET.

New Number 452 Made to Go with Either Victrola X or XI with Slight Changes in the Top—Some of the Interesting Features.

One of the latest products of the Udell Works, Indianapolis, Ind., noted for their fine line of cabinets for talking machine records, music rolls, sheet music, etc., is the new cabinet known as No. 452 and designed with a top to fit the Victrola X, it being so arranged that a slight change in the rim will enable it to fit the Victrola XI. In other words, as is pointed out by the manufac-

boxes for used and unused needles, index card on the door and index partitions. There is also a shelf in front which pulls out when the door is opened and on which the records may be handled with convenience.

The manufacturers state that there has been an unusually strong demand from the talking machine trade for this new cabinet and ever since it was first introduced and that the prospects are that it will prove one of the best sellers in their line. The price is one of the attractive features of the new cabinet.

IMPORTANT TREATY SIGNED.

Among the events of unusual note that transpired in Washington during the closing days of the Sixty-first Congress, and of which little if anything was heard, is the treaty signed by the Latin-American delegates to the Pan-American Commercial Conference. The signatories represented twenty-seven countries in Latin America. The treaty was adopted about a week before the adjournment of the Senate, who ratified it, as is required. The treaty deals with a number of questions of concern to all the nations of interest, especially that of copyright. By this agreement, which is dissected as a "second Berne convention," though the benefits are solely confined to the countries of the Western Continent, citizens of the different powers are accorded the same copyright privileges as those of the United States, providing similar laws are enacted. The Republic of Argentina has an act of this kind recently enacted, and therefore equal copyright protection is conferred on the citizens of both nations at once. Mexico will probably take the same step.

UDELL CABINET, STYLE 452.

turers, it is a cabinet made made to serve two purposes. The new cabinet is made in either mahogany or golden oak, the latter either plain or in the popular mission shades, and the capacity is 228 ten or twelve inch records in envelopes.

The cabinet is complete in every way, with

ACTIVE IN THE NATIONAL CAPITAL.

Store of the Columbia Phonograph Co. in That City a Busy Place—Edward D. Easton Stops Off While on His Way to Cuba—Other Prominent Visitors—Favorite Grafonola for Alaskan Boundary Commission—Select Large Assortment of Records to Entertain the Workers While in the North—Other Interesting Items Worth Noting.

(Special to the Talking Machine World.)

Washington, D. C., March 6, 1911.

The Columbia Co.'s store here has seen many visitors during the last two or three weeks. First of all was Edward D. Easton, president of the American Graphophone Co. and of the Columbia Phonograph Co., General, who stopped in Washington for a few hours on his way to Cuba. He was accompanied by his wife, daughter and son. As Washington is the former home of Mr. Easton, he spent a good many delightful moments in talking with old friends and relatives who reside here. Another visitor of note was Paul H. Cromelin, who stopped in the city for a few moments on his way back from Chicago. Mr. Cromelin is another old Washingtonian, having been graduated in law from one of the local colleges, and having at one time been manager of the Washington store of the Columbia Phonograph Co.

Still another handshaker, with a genial smile, was Edw. N. Burns, the manager of the Columbia Co.'s export department, who was in Washington to attend the conference of the representatives of the South American republics, held at the Pan-American Union building in this city. This building, by the way, is one of the most beautiful in the United States, although not very large. It is the gem of all the public buildings of the city, and that is saying something. Other visitors to Washington recently were George W. Lyle, the Columbia Co.'s genial general manager, and Frank Dorian, manager of the Dictaphone Co., who, by the way, is also a former Washingtonian.

A few days ago the Columbia store fitted out a Grafonola "Favorite," two hundred double-disc records and some extra mainsprings and other supplies to be taken by the United States Alaskan Boundary Commission for the entertainment of its fifty or sixty men who are to lay the boundary line between Alaska and Canada during the coming summer. The chief engineer of this expedition told H. C. Grove, manager of the store, that the Grafonola would be their main source of entertainment when in the far north. This expedition will leave about May 25, and will be gone for about two years. During most of that time they will be far removed from all civilization and will depend upon themselves entirely for amusement, of which, of course, the Grafonola "Favorite" will supply the main portion. While most of the records selected for this outfit were of the late and popular music of the day, the outfit included the famous Columbia sextet from "Lucia" and the "Rigoletto" quartet, and several of the David Bispham records, several of the Mardones records, and that famous record, "The Herd Girl's Dream." This outfit will undoubtedly do more good this summer than any other outfit which has been sold by any one for some time.

TO OCCUPY NEW BUILDING.

On May 1 the Greater New York Phonograph Co., who maintain three stores in New York, and are the sole jobbers of Zonophone goods in this territory, will remove into their new building, 308 Grand street. The property was acquired by the company at an expense of \$60,000. They also handle the Victor and Edison lines and are doing a nice business. At the testimonial Stanley concert, March 8, Mr. Mandel, president of the company, and Mrs. Mandel, with lady friends, occupied one of the proscenium boxes.

"The way to fortune is like the Milky Way in the sky, which is a meeting of a number of small stars, not seen asunder, but giving light together," says Lord Bacon. "So there are a number of little and scarce discerned virtues or rather faculties and customs that make men fortunate."

A TRAVELER'S ADVICE.

Points Out Ways by Which Clerks May Increase Their Value to Employers.

An experienced commercial traveler, who evidently keeps his eyes open and his mind receptive, seeks to stir up the thoughtless or inattentive clerks with these pointed suggestions:

Keep a notebook and collect all the information possible that may be of future use. Pencil and paper are so cheap, and brain cells so expensive, that I would say don't trust to your memory when you can have it recorded for all time.

When you meet the other fellow's clerk in the evening, don't let him pick your brains about the business. If you can pick his, that is quite another matter.

Don't miss reading your trade journals, and if you want further information, worry the editor! He sits in his office to be worried. See you don't disappoint him. Don't think you are only a clerk and don't count. You count one, and that is enough to go on with.

Lastly, be punctual—punctual in keeping your promises to customers, of course, but I was meaning more especially in your hours of business, and set the boss such a good example that he will be ashamed to keep you overtime unless he pays you for it.

Last week A. R. Howell, in charge of the advertising of the Columbia Phonograph Co.'s export department at headquarters, resigned to become the advertising manager of a leading manufacturing company in another line. Mr. Howell has been turning out excellent work in his field of Columbia publicity.

Some folks worry so much about what their competitors are doing that they don't have time to do anything that makes the competitor worry.

HELPED TO MAKE FRIENDS.

A Voluntary Tribute to the Columbia Line from Chas. Lonsberg, the Well Known Piano Dealer, of Albany, Ga.

As evidence of the selling popularity of the Grafonola line, the Columbia Phonograph Co., General, this week received the following voluntary and candid expression of opinion from Charles Lonsberg, proprietor of Lonsberg's Book and Music House, Albany, Ga., who handle the pianos of Mathushek & Son and the Cable-Nelson Piano Co.:

"During the time we have had the pleasure of acting as your representative in our city we wish to say: We find that the Columbia graphophone has made many friends and customers for us, both for instruments and records, and we feel like we cannot say too much in behalf of the goods you sell, both in fineness of tone and quality of workmanship you put in these wonderful instruments.

"We have placed the Grafonola 'Elite' and 'Favorite' in some of the best homes in our town and hear nothing but praise for your goods. Our business relations with the company, as well as the traveling salesmen, have been a pleasure to us. Here's to the Columbia Phonograph Co.—may they continue to have the success they so richly deserve."

Every clerk should be continually impressed with the value of knowing the stock—where every piece is located—the price of each article; in fact, have at his finger tips accurate information with regard to everything in his department. Lack of this knowledge cuts into profits. It causes valued customers to wait while the clerk goes to some other part of the store to secure the desired information. Efficient service is only possible through well displayed, good goods, and a thorough knowledge of them.

ATTRACTIVE EDISON WINDOW DISPLAY

A twelve-page booklet has been issued by the Thomas A. Edison, Inc., Orange, N. J., describing and illustrating the initial "Edison Window Display." Display No. 1A is shown in the accompanying cut, a detailed description of which follows:

This handsome setting has for its center piece an imitation stained glass circle, the leaded markings as well as the outline of the letters being done in relief highlighted with gold. The various shadings of the irregular panes blend harmoniously and direct attention to the distinct wording: "Music Hath Charms When Reproduced by an Edison Phonograph." At either side are hand-painted palm leaves, highlighted with sparkling flitters in green and gold. Supporting this crossbar arrangement are two splendid columns so shaded as to give a solid, massive appearance, they being surmounted by handsome panels on

which in delicate air brush work appear the words "Edison Records," with a shaded painting of the real record. This panel has artistic raised scrolls at top and bottom.

The central reading show card partakes of the large central design and shape. It is also decorated with sparkling leaves and is neatly hand lettered. Four hand lettered and neatly bordered signs are furnished for placing in each ten-petal Cygnet Horn, calling attention to "vocal," "violin," "duets" and "band music." An empty Amberol record carton completes the card. The false pedestal fronts match the design of the supporting columns and the entire setting is deep cream in color, with shadings of brown giving that old, much admired ivory finish which, brightened by the highly colored glass effects of the center piece, creates an attractive setting pleasing in its entirety.

A SUCCESS IN EVERY WAY

Was the Testimonial Concert Given at the Amsterdam Opera House, New York, on March 8, for the Benefit of the Family of the Late Frank C. Stanley—Great Galaxy of Talking Machine Artists—Distinguished Members of the Trade Present—Concert Attended by Audience of Two Thousand and Generously Supported—Satisfactory Sum Realized by the Affair—Committee Did Good Work.

The testimonial concert given March 8 in the New Amsterdam Opera House, New York, for the benefit of the family of the late Stanley W. Grinstead (Frank C. Stanley) was a success from every point of view—financially, socially and artistically. The spirit displayed by the "talent," seventy-five strong, and the large audience was a marked feature of this unique event, the first of its kind in the history of the trade.

The artists, together with the chorus assisting them, were grouped on the stage in the form adopted in a minstrel "first part," and through the medium of their songs and jokes proved themselves to be entertainers of the first order. Despite the handicap of bad acoustics they upheld their reputation as vocalists of a high order to the fullest extent, and the concert, as a whole, was like a large family reunion, so intimate are the relations between the artists and the public.

Notwithstanding the length of the program it was pretty closely adhered to, the favorites, known to the trade and the public through the records, were accorded a cordial welcome and generous applause. Among these were Billy Murray, Ada Jones, Collins and Harlan, Henry Burr, Elizabeth Spencer, Harvey Hindermeyer, Monroe Silver, Steve Porter, Edward Meeker, Wm. H. Thompson, Vess L. Ossman and Murray K. Hill. The Victor Light Opera Co. and That Girls' Quartet, special contributions from the Victor Talking Machine Co.'s corps of artists were especially favored.

A large number of distinguished men in the trade were present, the delegation from the Columbia Phonograph Co., General, filling one of the proscenium boxes, included Edward D. Easton, president of the company; Paul H. Cromelin, vice-president; C. A. L. Massie, of the legal staff; T. H. Macdonald, Frank Dorian, H. A. Yerkes, Merwin E. Lyle, John C. Button, Mortimer D. Easton, Tom Murray, Victor H. Emerson, and others. Louis F. Geissler, general manager of the Victor Talking Machine Co., Camden, N. J., occupied one of the principal boxes, with a group of friends, and C. G. Childs, manager of the laboratory; S. H. Dudley, his assistant; John S. Macdonald and others. The Thomas A. Edison, Inc., were represented by Peter Webber, superintendent; Walter H. Miller, manager of the laboratory; William Wirth, president of the "Muckers' Club," Frank A. Madison and Louis Silverman. The U. S. Phonograph Co. were represented by John Kaiser, who occupied a box with Mrs. Kaiser and Albert Benzler and wife, Frank Hofbauer and wife. A few others noted in boxes were G. T. Williams, general manager of the New York Talking Machine Co., and Mrs. Williams; V. W. Moody and wife; J. Newcomb Blackman, president and general manager of the Blackman Talking Machine Co., and Mrs. Blackman, New York; George G. Blackman and wife; R. B. Caldwell and wife; Mrs. Grinstead and family, Orange, N. J.; Louis Buehn, of Louis Buehn & Bro., Philadelphia, Pa.

About two thousand made up an audience notable in many ways and the receipts reached about \$2,800. John Kaiser, treasurer of the committee on arrangements, was complimented by everybody for the capital manner in which he looked after the many details of the concert, and on which he had worked since the inception of the affair in December. His colleagues on the committee, Messrs. Miller (chairman), Emerson, Child and Ball are also entitled to much praise for their untiring efforts in the same connection.

The souvenir program is to be commended, as it contained attractive advertisements of music publishers, manufacturers and jobbers in all parts of the country, as far away as California, which

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

Do you fully realize the great number of **TALKING MACHINES AND PHONOGRAPHS** that have been sold in your territory equipped with Tin Horns? Every one of them offers a source of profit to you.

It will pay you to call the Owner's attention to the fact that the horn is the sounding board of their machine. They would not own a piano with a tin sounding board.

The **MUSIC MASTER** is a Solid Wood Sounding Board—the only solid wood sounding board on the market.

Write for complete description of the **MUSIC MASTER**. If your Jobber can't supply you we will be very glad to send you a sample line of **OAK, MAHOGANY or SPRUCE** Horns to fit any style or make machine.

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

was the best evidence of the kindly feeling and interest displayed throughout in connection with the occasion. Extra copies of the program may be had for twenty-five cents a piece by addressing Mr. Kaiser. The committee wishes to thank those who so cheerfully assisted them in making this event a success. They wish to thank the various talking machine companies and other advertisers in the program for their co-operation. They also wish to thank the "talent" who volunteered for the occasion and who subscribed for the boxes and seats. Likewise they thank the dealers and jobbers who gave their assistance.

It may be added that since the concert, in view of its great success, the "talent" are discussing the advisability of giving one yearly. The purpose of this is to create and maintain a permanent fund for just such occasions as the demise of Frank C. Stanley, or to aid or succor any record artist in distress or sickness who may be without means. To be sure this suggestion is in an embryonic stage only.

The completion of the performance was followed by a reception, and dancing was indulged in until the early hours of the succeeding day. A special train was chartered by Thos. A. Edison, Inc., for the return trip of the Orange, N. J., people at 2.30 a. m.

EDISON RECORD EXCHANGE IN FAVOR.

Regarding their new record exchange, the National Phonograph Co., Orange, N. J., state that the plan continues to find favor among the trade as its provisions are better understood, the consensus of opinion being that the question of disposition of slow-selling and defective records has been settled for a time at least.

A knowledge of the specific conditions which surround sales and selling conditions would teach the people that the business methods of this country have been no better than themselves; that they will improve with themselves; that reforms, like charity, begin at home.

Columbia Records

FREMSTAD—PREMIERE SOPRANO OF THE METROPOLITAN OPERA.

I think my records are magnificent. Your recording process is certainly a marvel of accuracy and faithfulness in reproducing all the original qualities of the voice. The general musical effect of your records is superior to anything else of the sort I have heard. I am notably hard to please in these matters, but I must say you are accomplishing some wonderful results.

Olive Fremstad.

**Profitable to the Dealer
Proved by**

If there is one straight, positive, unmistakable fact it is that the *quality* of Columbia Records is the generally *known*, too.

Quality in Recording Process, Quality in Tone, Quality in Endurance

That's the undeniable gospel—every item of it, for a fact. You only have to listen to hear it around you to see what the dealers are *doing* about it. They have *written* about it.

CONSTANTINO—THE CELEBRATED SPANISH TENOR

Permit me to express to you the high sense of satisfaction I feel with regard to the records recently made in your laboratory. In the course of my career as a singer I have made records for several organizations similar to your own, but never before have the results been so completely gratifying. I am greatly pleased in fact that I have decided to sing exclusively for the Columbia Phonograph Company in future. As to the records themselves, after hearing all of them, they are marvelous examples of artistic and mechanical perfection in the science of recording the human voice. In listening to them I know that it is indeed my own voice that I hear, exactly as if I were singing in person—it is my voice itself that comes from the instrument. The vitality of the voice is absolutely preserved and the tone-quality cannot be mistaken.

Constantino

BAKLANOFF—STAR BARITONE OF THE BOSTON OPERA COMPANY

From the manner in which you have recorded my voice I am convinced that you have discovered the secret of absolutely perfect recording. I could scarcely believe that I should ever hear my voice so faithfully and naturally reproduced. Your Company deserves great commendation for its success in popularizing Grand Opera and music of the higher class in America.

Serge Baklanoff

CAVALIERI—THE WORLD FAMOUS DRA- MATIC SOPRANO

I have just heard samples of the records I recently made
in your laboratory and am charmed to find that you have suc-
ceeded in obtaining such accurate, natural and altogether life-
like reproductions of my work. It gratifies me to know that
my friends will have an opportunity to hear me on Columbia
Records hereafter.

Ima Cavaleri

NIELSEN—SOPRANO OF THE BOSTON OPERA COMPANY

The records you have sent me of my voice excel in per-
fection of tone my most sanguine expectations. There is a
complete absence of the defects which have hitherto been as-
sociated with phonographic reproduction. As I listen to the
records it is impossible to believe that they are the result of a
mechanical contrivance. My voice sounds as if it must come
from a living being and not from any instrument. Undoubtedly
the Columbia Graphophone is the most perfect of any talking
machine in the world; in fact I consider it so incomparably
superior to any machine yet invented that until one has listened
to its reproductions one has no accurate notion of the wonder-
ful accomplishments that modern science has made in repro-
ducing the human voice.

Alise Nielsen

SCHARWENKA—THE RENOWNED COM- POSER-PIANIST

I could never have imagined that such perfect results could
be obtained in the recording of the piano as you have effected
in the records I recently made for you. You have my heartiest
congratulations and deserve the commendation of all lovers
of pianoforte music.

Franz Scharwenka

n'l, Tribune Building, New York

SEND GREETINGS THROUGH RECORD.

Newspaper Reference Made to the Exchange of Letters by Phonograph Record—Custom More General in Business World Owing to Popularity of Business Phonograph.

The clipping herewith is from the New York Sun. The use of the phonograph for the purpose described therein is not new, as readers of The World know. We have frequently reported similar uses of the phonograph record between friends located in Europe and this country:

"I saw the phonograph put to a use which had never occurred to me before," said a business man. "The other day I happened to walk into the office of a friend and found him listening with an air of great satisfaction to a record which he had on his machine. I thought that he probably had been dictating a letter to his stenographer, and was not a little surprised when he told me that he had just received a letter from his brother in Panama.

"My brother has a phonograph, too," he said, "and it was his idea that we might use it as a substitute for letters. It is a great deal more satisfactory than the written ones because we are able to hear each other speak. And then it's more like having a friendly chat, because when you become accustomed to it you assume a more natural tone in speaking into the horn than you can get in a letter. It doesn't cost us much, either. The record goes as third-class mail and we use the same one for a long while. After I have listened to this as often as I wish I will shave it off and make it serve for carrying the answer. Would you like to hear part of this?"

"I then heard his brother tell some very interesting things about what he had been doing in the canal zone and it was better than reading them because it was like having the person there with you."

NEW COLUMBIA GRAND OPERA RECORDS.

Last week the Columbia Phonograph Co., General, New York, gave advance notice that there would be two combinations of Maria Gay records ready for shipment about March 10. They will be issued in single form as well as double face. List price, \$3 for the latter and \$2 for singles.

Following the original announcement concerning the Fremstad records in February, the Columbia Co. notified dealers March 8 that there would be two more double-face and four single records of that artist ready for delivery the following day. The Baklanoff, Heineman and Scharwenka records went to the trade on February 27.

Another notification of moment, of the 6th inst., relates to the list of new Indestructible records which will be ready for shipment on regular orders not later than May 1. As there are many standing orders for sample records on which it would not be possible to ship samples of these selections a sufficient time prior to May 1, it has been decided not to ship samples of these selections on any standing orders. Regular monthly supplement conditions will be resumed on Indestructible records, effective with the June supplement.

A NEW EDISON REPRODUCER.

This is a four-minute reproducer of a single type, and although intended primarily for use on standard machines, it can be used on all Edison phonographs. It is equipped with a larger diaphragm, and produces not only more volume, but better tonal results than the model "H." It is being offered in deference to the wishes of the trade. All types of Edison phonographs (except the Gem and Fireside) equipped with the model "R" will be supplied at an advance of \$3 (Canada, \$3.90) over present list. Sold separately the list price of the model "R" is \$5 (Canada, \$6.50), and an allowance of \$2 is made for the model "C" in exchange. Combination attachments which include the model "R" instead of the model "H" will be sold at the following prices: Gem, \$7

(Canada, \$9); Standard, \$8 (Canada, \$10.40); Home and Triumph, \$10.50 (Canada, \$14.95).

NEW VICTOR JOBBERS.

The Walter G. Clark Co., a sporting goods house of Omaha, Neb., have signed with the Victor Talking Machine Co. as jobbers of Victor goods. The Nebraska Cycle Co. and the A. Hospe Co. already hold Victor jobbing agencies in Omaha.

TO OPEN TALKER DEPARTMENT.

The Hawkins Music House, who have recently moved into new quarters on Merchant street, Decatur, Ill., have announced that they will shortly add a talking machine department and an organ department to their store.

THOS. A. EDISON, INC. ANNOUNCEMENT.

The National Phonograph Co., Orange, N. J., have just made the announcement that on or about this period they will be prepared to furnish the model "O" reproducer for the Home phonograph equipment, both as part of complete machine outfits, as separate instruments and as part of combination attachments. Home phonographs equipped with model "O" reproducers will be supplied on special orders at an advance of \$5 list over the regular equipment, subject to the usual discount, and the models "C" and "H" at present supplied will, of course, be omitted from the outfit. This price applies also to Canada.

The price of model "O" as a separate instrument for use on Home phonographs already equipped to play the Amberol records will be \$10 (Canada, \$13), which price includes all necessary parts, and an allowance is made of \$4 in both countries for models "C" and "H" reproducers taken in exchange. The price of the model "O" home combination attachment is \$15.50; Canada, \$20, and an allowance is made of \$2 (U. S. and Canada), for model "C" reproducers taken in exchange. An adapter to fit in the speaker arm is supplied with each model "O" free of charge, so that the present type of recorder may be used on all machines equipped with the model "O."

DOUBLE-FACE RECORD CASE ARGUED.

The double-face or duplex record case—Victor Talking Machine Co., Camden, N. J., against American Graphophone Co. (Columbia Phonograph Co., General), New York—was argued February 28. The hearing was before Judge Hazel, Circuit Court of the United State, New York City, who, besides Judge Lacombe, has presided in more talking machine suits than any other Federal judge in the country. The issue is alleged infringement of what is known as the Pettit patent, No. 749,092, dated January 5, 1904. The taking of testimony has occupied the best part of two years. Horace Petit appeared for the complainants and Philip Mauro for the defense. Decision was reserved.

Another case down on the equity calendar in the same court for argument and called the previous day was that of the Victor Co. against the Sonora Phonograph Co., New York, on the Johnson taper arm patent. At the request of Mr. Petit the hearing was sent over to April 1, although the defendants answered "ready."

OPEN STORE IN COLUMBIA, S. C.

The Columbia Co., New York, are advised by their Atlanta (Ga.) manager as follows: "You will be interested to know that we have closed a deal in Columbia, S. C., with D. R. Hand, who will operate an exclusive Columbia store. With him will be associated Raymond Voight. Mr. Voight was employed as retail salesman in our Atlanta store for some years, but has been living in Columbia for the last year or so. This deal was put through by our special wholesale representative, W. A. Barfield."

The darkest hour in any man's career is that wherein he first fancies there is an easier way of gaining a dollar than by squarely earning it.

FROM OUR JOKE BOX

Apropos of the coming of a certain play to a Buffalo theater, remarks The Commercial, a story is being told of the author, Israel Zangwill. It appears that he and Andrew Lang had become mutually interested in a certain aspect of sociology. The committee in charge of a big banquet wrote to Zangwill asking him to speak at this function on this particular subject. The noted author replied as follows: "Dear Sir—If A. Lang will, I Zangwill."

On a large estate in the Scottish Highlands it was the custom for a piper to play in front of the house every week-day morning to awaken the residents. After an over-convivial Saturday night, however, the piper forgot the day and began his reveille (can it be played on the pipes?) on Sunday morning. Angry Master (from bedroom window): "Here, do you not know the fourth commandment?" Piper: "No, sir, but if you'll—hic—whistle it I'll—hic—try it, sir."

Rastus had been caught redhanded. "Poaching again, Rastus?" said the colonel, gravely. "I am afraid, Rastus, that you're a bad egg." "Yassuh, dass what I is fo' sho', cunnel," said the old man. "I's jest a plain bad aig, cunnel." "So you admit it, do you?" demanded the colonel. "Yassuh—I admits it, cunnel, becuz, ye know, cunnel, dem bad aigs nebbah poaches, suh," said the old man.

A Cornishman visited London and was gazing into a shop window and obstructing the footpath. A cockney stumbled against him and seeing that he was from the country said to him: "My man, have you seen a wagonload of monkeys pass down the street?" "No—o," Cousin Jack replied; "faaled out of the wagon, ded'ee?"—Cleveland Leader.

An Italian woman was asked in court if she had any musical instruments in her house. "No, signor," she replied, "nothing but rackets." "What?" queried the lawyer. "Rackets—the things you put on talking machines." The court roared. Everyone had heard those rackets.

"You look pretty good," said the manager. "What have you been doing all winter?" "Working in a stoneyard," replied the famous pitcher. "Well, here's your trainer and your doctor. Never lift a finger without consulting one or both of them."

"Yonder is an early robin. See his red breast?" "Yes; and it gave me quite a start at first. I though the intelligent bird was wearing a chest protector."

One of the Suffragettes: "I've lost me best hat-pin, Lizzie." Another: "Where did you leave it last?" "Oh, I remember, now. I left it sticking in that policeman!"—London Opinion.

He: "Good heaven, dear! The clock just struck one, and I promised your mother I'd go at twelve." She (comfortably): "Good! We've got eleven hours yet."

Guest: "Why do you scowl at me so, Freddy?" Freddy: "'Cause you have ate up all the cake, and haven't married either of my sisters yet."

A master plumber has been admitted to the German House of Lords. Perhaps he will look down on his new associates who have been less successful in life.

Cook: "I wonder what would happen if tradesmen allers told the truth?" Housemaid: "Why, there soon wouldn't be no tradesmen, of course."

Lady: "How dirty your face is, little boy!" Boy: "Ye's'm; we ain't had no company for more'n a week."

"You? Why, how could you keep the wolf from the door?" "Ever hear me sing?"

INTERESTING LECTURE BY F. L. DYER

Details of the Manufacture of the Phonograph and the Difficulties Met with in Recording Described by President of Thomas A. Edison, Inc.—Lecture Illustrated with Slides and Offers Valuable Information.

The mechanical features of the phonograph hold a fascinating interest for the average layman, and the methods of recording the instrumental and vocal music, owing to the apparent mystery that shrouds them, prove especially interesting. As the talking machine becomes more widely known and accepted as a really valuable commercial and artistic proposition the public interest in the structural features continually becomes more keen. It is only natural, therefore, that a recent lecture delivered by Frank L. Dyer, president of Thomas A. Edison, Inc., manufacturers of Edison phonographs, on "The Phonograph and Moving Pictures" should have created quite a stir.

In speaking of the phonograph, Mr. Dyer paid special attention to the question of recording and the difficulties met with in that most important department of the business. He said in part:

"The modern phonograph must, to my mind, be accepted as the greatest marvel in the realm of pure mechanics, because it is as much a mechanical device as the watch or a pair of scales. That this is so will be apparent when we examine into its construction and consider its operation. A few fundamental ideas as to the phenomena of sound should be first considered.

"A vibrating body, such as a tuning fork, the human vocal cords or any other source, sets up in the air an enormously complex series of compressed and rarefied areas, which have been referred to for lack of a better expression as sound waves.

"These have been likened to the undulations which are formed on the surface of a body of water when a pebble is tossed into the middle. The waves spreading out in all directions concentrically from the source of disturbance. The illustration, however, is not particularly apt, because it deals only with a plain surface, whereas the so-called sound waves are projected in all directions through space.

"Nevertheless, considering the phonograph, it is very convenient to regard sound as a series of waves, because, by a curious coincidence, the record which the sounds produce and which in turn effects a reproduction or, in other words, creates a new but identical sound, is, in fact, of a wavelike form.

"Considering sound as being graphically represented by a wavy line, we would find that the configuration of such a line would vary according to the character of the sound which it represents. For instance, if the sound were a simple note of low pitch and volume, the waves would be relatively shallow and long; if the same sound were louder, but of the same pitch, we would find that the length of the waves was not changed, but that their height was proportionately increased.

"On the other hand, if the volume of a sound were not increased, but the pitch was higher, we would find that the waves were just as shallow as before, but that they were shorter.

"In other words, as the pitch of a sound increases the corresponding wave is diminished in length, or, to express it in another way, the vibrations per second are increased.

"Similarly, if the volume of the sound is increased the height of the waves is proportionately increased. The number of waves per second determines the pitch of a sound and the height of the waves determines the amplitude or volume of the sound. Most sounds are not represented by simple waves, but, on the contrary, are enormously complex.

"For instance, a flute, a clarinet and a cornet might each sound a certain note with a certain volume; obviously the ear detects the difference between the sounds produced by the three instruments, so that each sound could not be accurately represented by the same graphic line, though, broadly speaking, the length and amplitude of the waves would be the same in each case. The differ-

ence in character between these sounds is determined by another factor that is referred to as overtones, which always occur as multiples of the original sounds.

"If a sound, for instance, is represented by vibrations of 1,000 per second, it will be generally accompanied by overtones of 2,000 per second, by others of 4,000 per second, by others of 6,000 per second, and so on.

"The particular character of these overtones is what distinguishes the sound produced from one source from the sound which may be produced from another, so that in order to represent such a sound graphically the wavelike line, instead of being formed of continuous uniform waves, will be formed of a series of small waves which of themselves partake of a general wavelike formation, and these small waves are in turn formed of still smaller waves, and so on.

"If we were dealing with waves as large as those of the ocean, the smaller and finer vibrations would probably still be beyond the range of direct vision;

FRANK L. DYER.

but with the modern phonograph we have no such space in which to work, and, as a matter of fact, with that instrument the extreme depth of the original vibrations, not counting the primary or secondary or succeeding overtones, is somewhat less than one-thousandth of an inch.

"In other words, the available depth to which we are permitted to go in forming the sound record is only about one-third the thickness of an ordinary sheet of tissue paper, and in this depth we must form our record of the sound waves in such a way that the volume or loudness will be acceptable and the quality will enable us to determine the character of all the instruments that may be performing when the record is made."

The early styles of phonographs, as well as many of the processes of manufacture of records and machines were shown on a screen and the details explained by Mr. Dyer.

VELVET-TONE NEEDLE BALANCE.

Highly Praised After Actual Use Has Proven Its Worth—Substance of a Recent Letter Received by the Manufacturer—Improves the Tone of the Reproduction and Eliminates Scratching.

T. E. Brandon, Nashville, Tenn., under date of March 7, writes A. D. Macaulay, manufacturer of the "Velvet Tone Needle Balance," Columbia, Pa., as follows:

"I wish to congratulate you on the beautiful working of your new invention, the 'Velvet Tone' Needle Balance. I wanted to give it a thorough trial before reporting, and I find that it is simply great. It works like a charm. At first the results were not good, simply because, like all new appliances, it worked a little rough, but after experimenting, with the weight in different positions, and getting everything to running with perfect smoothness, the results are all that could be desired. The tone is greatly improved, the grinding

being superseded by only a slight rubbing, which is scarcely noticeable.

"With regard to the needles—to be on the safe side, I usually throw a needle away, using it on three or four records. However, I do not know that it is necessary to do that, as the wear on the needle must be extremely slight, and the wear on the record practically nothing. Not an unimportant feature is its pleasing appearance, harmonizing as it does with the handsome fittings of the Victrola itself. Taking it all in all, I am extremely well pleased with my investment, and I doubt not your clever device will become very popular among talking machine users."

OPENING OF NEW DEPARTMENT.

Full Line of Columbia Graphophones and Grafonolas Now in Place in Attractive Ware-rooms at Knabe Hall—Sound Proof Booths

The talking machine department of Wm. Knabe & Co., piano manufacturers, Fifth avenue and 39th street, New York, have their opening as The World goes to press. Jos. M. Bryant, who is in charge, under the general supervision of R. K. Paynter, manager of the piano warerooms, has arranged his department to the very best advantage. Five demonstrating booths are provided, with ample floor space for the display of the Columbia line, which Knabe & Co. will handle exclusively. The color and decorative scheme is in dark green and the manner in which the furnishings, etc., are handled is to be commended as artistic. Ben Feinberg, of the wholesale staff of the Columbia Phonograph Co., General, who landed this very important order, coming back from a short Western trip especially for the purpose, will be present on this auspicious occasion. It is certain Wm. Knabe & Co. have made a strong acquisition to their business.

Says a successful sales manager: "We have no formula for selling goods except to keep everlastingly at it and to do what we can to help the dealer in turn sell what we consider the very best goods of their class on earth."

For Sale or Trade.

100 Columbia Disc "BN" Machines equipped with 10-in. turntables. Can use Edison Records in exchange. What have you to offer? Address 41,144, care Talking Machine World, 1 Madison Ave., New York City.

One-Half Interest for Sale

In a long-established retail talking machine store, with 4,000 customers. Located in one of the largest cities in New England. Will be sold only to a live man; one who is able to handle "inside store" trade. Money to be used for the promotion of increased business. Full particulars on request. Everything confidential. "NEW ENGLAND," care Talking Machine World, 1 Madison Ave., New York, N. Y.

Booths for Sale

FOR SALE—Two very fine booths, built of mahogany and plate glass, each about 7 feet 7 inches deep, 10 feet 10 inches wide and 10 feet 8 inches high. Practically soundproof, suitable for demonstrating rooms. Will sell very cheap. For particulars address "G. T. L., care Talking Machine World, 1 Madison avenue, New York City.

For Sale or Trade.

5,000 brand-new double-faced Zon-o-phone Records; jobbing stock; complete catalog, well assorted. Also 20 Zon-o-phone Machines, latest models, assorted types. Original packages. Will sell at a price or trade for Edison Records and Machines. "RECORDS," care Talking Machine World, 1 Madison Ave., New York City.

"A CHIP OF THE OLD BLOCK."

Mortimer D. Easton, Son of the President of the Columbia Phonograph Co., General, Enters the Service of the Company Becoming Connected with the Export Department—Is Splendidly Equipped in Many Respects for His New Position—Speaks Several Languages and Has Traveled a Great Deal.

It is evident, judging from surrounding circumstances and the caliber of the man, that Mortimer D. Easton, only son of Edward D. Easton, president of the Columbia Phonograph Co., General, New York, will carve out a career for himself equal to that of his brilliant and accomplished father. March 6 the younger Mr. Easton entered the service of the company for the first time, going into the export department, the business of which stamps it as one of the big factors in the concern's affairs.

While this is his initial "job," so to speak, young Mr. Easton is by no means a stranger to the com-

MORTIMER D. EASTON.

pany's business. He has accompanied his father on every one of his annual trips to Europe, fourteen journeys in all, and has visited their branch offices and plants on the Continent and in Great Britain, meeting the managers and others connected therewith. In this country he has followed the same practice, and knows personally and in an intimate way the managers of the branch houses and stores from ocean to ocean, and from the Canadian line to the Gulf. Briefly, he knows everybody in the company's service. It can be readily understood from this brief recital that Mortimer D. Easton is fully equipped for the important work before him and that promotion will follow rapidly, because it will be deserved. His appointment, which is a popular one with the entire headquarter's staff, was made on his return from Cuba, where he had been on a pleasure trip with his father, mother and sister.

Mr. Easton graduated from Princeton College in February of this year, instead of last June, as he withdrew from the university during his sophomore year for a time on account of the serious illness of his father. He was extremely popular with the student body, and is still a member of the Campus Club, one of the most exclusive organizations at Princeton. During his vacations he devoted the major part of his time studying the various phases of the business at the factory and elsewhere. He is also a musician of no mean attainments. Among his other intellectual equipments is that of a linguist, and he not only has a mastery of Spanish, French and German, but he speaks these languages fluently, an accomplishment most useful in his present position. The World felicitates his distinguished father, Edward D. Easton, on having such a splendid, common sense son, and wishes the latter all manner of good luck at the outset of his business career. That he will be eminently successful is a foregone conclusion.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to the Talking Machine World.)

Washington, D. C., March 10, 1911.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

FEBRUARY 14.

Bombay, 6 pkgs., \$287; Buenos Ayres, 30 pkgs., \$236; 67 pkgs., \$4,628; 44 pkgs., \$1,228; Callao, 6 pkgs., \$411; Cape Town, 3 pkgs., \$128; Guayaquil, 6 pkgs., \$192; 4 pkgs., \$167; Havana, 21 pkgs., \$1,346; Havre, 2 pkgs., \$115; Iquique, 1 pkg., \$378; 8 pkgs., \$692; Limon, 19 pkgs., \$609; London, 151 pkgs., \$4,573; 30 pkgs., \$1,736; Manila, 80 pkgs., \$2,525; Porto Plata, 5 pkgs., \$426; Rio de Janeiro, 49 pkgs., \$1,871; Vera Cruz, 244 pkgs., \$5,191; Zurich, 1 pkg., \$100.

FEBRUARY 21.

Berlin, 123 pkgs., \$1,645; Bombay, 2 pkgs., \$100; Callao, 5 pkgs., \$210; Cartagena, 24 pkgs., \$1,253; Cienfuegos, 12 pkgs., \$416; Dunkirk, 3 pkgs., \$350; Havre, 11 pkgs., \$230; La Guayra, 4 pkgs., \$148; London, 149 pkgs., \$8,089; 217 pkgs., \$4,120; Para, 11 pkgs., \$881; Santiago, 25 pkgs., \$246; Sydney, 320 pkgs., \$1,472; Tampico, 6 pkgs., \$358; Trinidad, 7 pkgs., \$409; Vera Cruz, 78 pkgs., \$974; Vienna, 9 pkgs., \$270.

FEBRUARY 28.

Bahia, 2 pkgs., \$133; Berlin, 128 pkgs., \$2,073; Buenos Ayres, 252 pkgs., \$8,687; Calcutta, 5 pkgs., \$110; Glasgow, 463 pkgs., \$11,367; Havana, 1 pkg., \$104; Liverpool, 7 pkgs., \$407; Manila, 67 pkgs., \$5,286; Melbourne, 153 pkgs., \$1,279; Montevideo, 7 pkgs., \$329; Para, 7 pkgs., \$660; Paramaribo, 5 pkgs., \$145; Port Limon, 6 pkgs., \$254; Rio de Janeiro, 32 pkgs., \$2,505; 50 pkgs., \$2,265; 32 pkgs., \$2,969; Santiago, 1 pkg., \$150; Tampico, 15 pkgs., \$639; 12 pkgs., \$175; Trinidad, 5 pkgs., \$480; Vienna, 34 pkgs., \$843.

MARCH 6.

Acajutla, 18 pkgs., \$1,010; Barranguilla, 9 pkgs., \$471; Berlin, 125 pkgs., \$1,816; Bombay, 12 pkgs., \$268; Callao, 12 pkgs., \$265; Gothenberg, 10 pkgs., \$173; Guayaquil, 7 pkgs., \$321; Hamburg, 2 pkgs., \$255; Havana, 12 pkgs., \$464; 13 pkgs., \$571; 6 pkgs., \$4,118; 1 pkg., \$316; Havre, 37 pkgs., \$677; Iquitos, 5 pkgs., \$362; London, 44 pkgs., \$4,182; 119 pkgs., \$2,505; Milan, 13 pkgs., \$465; Montevideo, 9 pkgs., \$651; Rio de Janeiro, 84 pkgs., \$7,916; 19 pkgs., \$1,731; Santiago, 15 pkgs., \$217; Savanilla, 10 pkgs., \$469; Vera Cruz, 61 pkgs., \$1,443; Vienna, 6 pkgs., \$493.

Although the recent railroad rate decision is by no means pleasing to the railroad companies and the managers of some of them take such a gloomy view of the future that they claim they will be obliged to buy less and to pay less for what they buy, it seems to be better for the country at large than if the proposed advances had been agreed to. To accept increased costs as a finality and to endeavor to shift the burden to others would have been to set in motion a new set of influences toward raising the general level of values. The upward tendency had to be checked somewhere. The brake has therefore been applied where it will be felt. Notice is thus given that the railroad companies are not to be placed in a position where they might soon be asked by their employes to agree to another advance in wages. Evidence exists that they are not yet satisfied that the ultimate in this respect has been reached."

"Credit is the sympathetic nerve of commerce," says George Peabody. "There are men who do not keep faith with those from whom they buy, and such men last only a little while. Others don't keep faith with those to whom they sell, and such men do not last long. To build on the rock one must keep his credit absolutely unsullied, and he must make a friend of those to whom he sells.

J. M. Howard, manager of the talking machine department of the Chase & West Co., has resigned to take a road position with a calendar company.

COLUMBIA BOOKCASE CABINET.

Latest Creation of the Columbia Phonograph Co. Destined to Find a Large Measure of Favor with Customers of That House—Convenient for Holding Surplus Records.

Of the bookcase cabinet, one of the latest products of the Columbia Phonograph Co., briefly described in last month's World, it may be said it is for the BN, BNW and the BII machine, and is designed in a special golden oak finish, is equipped

COLUMBIA DISC RACK BOOKCASE CABINET.

with booth racks and albums, the albums of a special design never before put out by the company.

The cabinet, with one section and a separate base, as shown in the accompanying photographs, equipped with record racks, sells for \$25, with regular discount, and the same cabinet with complete

COLUMBIA ALBUM BOOKCASE CABINET.

equipment of record albums for both 10-inch and 12-inch records is \$30. The company expect to have these cabinets followed up by another supply, probably a second section which will be substituted for the high leg base, and which will make a very handsome record holder on the style of the sectional bookcase. The cabinet is just the height to put a machine on the top of it, and is believed will make a big hit.

The Will A. Watkin Co., of Dallas, Tex., are getting out some very attractive literature for the purpose of exploiting the Columbia graphophone line, which they represent in that city.

ATTRACTING CUSTOMERS.

In These Days of Strenuous Business It Takes Hard Work to Keep Ahead of Competitors—Some Clever Schemes That Have Brought Trade to Live Dealers—Making the Window Display a Real Factor in the Business.

As the efforts to outdo one another becomes more and more strenuous among retailers it goes without saying that something out of the ordinary must be done to keep abreast of one's competitors. The advertising of a store is the means by which it becomes a center of buyers. What is done to bring a store to the attention of passers-by will not only improve appearances, but the efforts in that direction will be amply repaid by what is concealed in the cash drawer. A few schemes that have proved especially helpful to the retailer are outlined in the following:

An interesting and ingenious advertising device was employed some time ago by a retail store-keeper in New York in connection with his window display. It consisted of three automatic cameras that were hidden and which worked with endless films. The cameras continually photographed the passersby outside the window. Each day's pictures were exhibited in the window the following day, and the man who could identify himself in the group snap-shotted the day before received a prize. The number of people who find pleasure in viewing a likeness of themselves includes most every one. Hundreds upon hundreds gathered about the window of this decidedly up-to-date store, thus permitting themselves to be photographed, or to see whether they had been photographed the day before, as evidenced by the picture on exhibition. The prize, of course, involved but a few cents in actual value, for the number of people who could identify their own likenesses was large.

A retailer in a western city placed in his store window a certain number of live turtles, which corresponded exactly with the number of letters

in his own name. Each of these turtles carried a letter on his back and the letters when correctly arranged spelled the name of the dealer. A placard was posted in the window which read: "Any person seeing these live turtles in a line that spells my name will receive a prize by immediately calling the attention of a clerk to it." A few times during a day passersby who had spent a good portion of the day at the window would rush into the store and notify the clerk that they had discovered the turtles in the order of letters spelling the proprietor's name. Without delay, the clerk would rush out to look into the window with the patient watcher and behold the "marvel." When they both would return to the inside, where the lucky individual would receive a prize for his watchfulness. This new wrinkle in advertising proved most amusing and profitable, not alone to the proprietor of the store, but to the surrounding establishments in the neighborhood.

The retailers who believe in actual education of the consumer can do no better than to display in a show window an enlargement of the original stock of his store. That can be done now and then without becoming obnoxious to the passersby. When the Chantecler craze struck the United States a wideawake milliner in a big city exhibited in a large window a big Chantecler hat, measuring about eight feet in diameter. The monstrous creation of the milliner's art held not only the attention of the fair sex, but those of the male extraction as well, who gave silent approval to the mastercrafting, for the hat, regardless of its great size, was finely conceived. The store in question was much talked about because of the exhibit, and many persons visited the store convinced that if such an undertaking could have been carried out so successfully, that surely such an establishment could be relied upon to cater to and carry out ordinary requirements in millinery work.

A merchant in Ohio some time ago found a way of multiplying his window space four times. It appeared as if the bottom of the window revolved

like an endless chain over two drums, one at each end. The different articles displayed were secured to the moving boards, which were driven by a small electric motor. Such an arrangement permitted the merchant to effectively display a variety of articles exceeding four times the number the window would hold without the ingenious contrivance. The device was strictly hand made, simple in design and inexpensive. The motion, of course, was toward the onlooker and not sideways, hence each display had a quarter space in the circuit, but each display looked to be individual, except when in motion for the change.

A retailer who believes in advertising through the medium of "sandwich men" recently employed a man to walk the sidewalks after dark each night in the neighborhood of the store. The man was decked in evening dress, with silk hat and open shirt front. Upon the bosom of the laundered shirt the trade-mark and name of an article on sale at the store that employed the walker was emblazoned. The man flashed the light at intervals and when persons about least expected it. In time the walker became known by the name which he flashed across his shirt front. Of course, he had a battery secreted in his clothes and a little rubber bulb to press, thus making the illumination.

To live up to the patriotic observances of holidays is a commendable as well as a profitable policy. Dealers will find it especially advantageous to display the photographs of our dead heroes and statesmen as their anniversaries come around. A little bit of historic description is also essential as well as bunting and flags.

DEATH OF EDWARD SMITH.

Francis Edward Smith, a talking machine dealer of Utica, N. Y., died recently in that city from the effects of a stroke of paralysis.

Fire did \$600 damage in the talking machine store of T. A. Wooten, Martin, Tenn., recently

New Idea Record Cabinets for Victrolas X and XI

Twenty of the twenty-one Distributors who were at the meeting of the Executive Committee in Chicago, Feb. 20th, placed orders for these cabinets. The other Jobber did not see the sample.

Made to match and fit Victrolas X and XI in any finish. Capacity 140—10" or 12" records.

Files for holding records are faced and finished in wood to match cabinet. They can only be drawn out far enough to admit taking out and replacing record.

Write for prices and discounts.

Lawrence McGreal - Milwaukee, Wis.

Victor-Victrola XI, \$100
Mahogany or oak

The first and only
instrument of its kind

No other instrument begins to compare with the Victor-Victrola.

It is the pioneer of cabinet talking-machines and is as supreme to day as when it was first put on the market nearly five years ago.

The Victor-Victrola is built on merit. It is the product of the Victor Company and is right up to the Victor standard of quality.

It is fully protected by patents and is backed by the entire resources of the immense Victor organization.

It exerts to day an influence on the development of music which is absolutely without a precedent.

It has educated people everywhere to an appreciation of the world's best music, and made American operatic productions the most stupendous ever known.

And the influence of the Victor-Victrola keeps on growing every day and opens up a greater field for every Victor dealer.

Victor-Victrola XIV, \$150

FINED \$1,500 FOR "AGGRAVATED CONTEMPT."

The Price Cutting Operations of Joseph Greenberg Result as Above—The Persistent and Consistent Action of the Victor Talking Machine Co. in Following Up This Matter Shows How They Intend to Protect Their Trade—The History of the Case Is Interesting.

A price maintaining agreement is a burden in any line of business unless the retailers entering into such an agreement with a manufacturer receive protection against the price-cutter.

The Victor Talking Machine Co. have made it a point to afford their dealers full protection against the price-cutter wherever evidence has been obtained of sufficient strength to make legal action possible and have prosecuted the suits actively and regardless of expense. Every possible effort has been made to follow up the offender to keep him from carrying on such an illegitimate business under other names or through hidden means.

A case in point that should offer a warning to offenders who have not yet been apprehended, where such exist, is that of the Victor Co. against one Joseph Greenberg, who was most persistent in his price-cutting operations, it is claimed, and did not hesitate to assume an alias to escape detection.

A brief history concerning the cases the Victor Talking Machine Co., Camden, N. J., have had against Joseph Greenberg, alias Joseph Goldberg, resulting in this party being fined \$1,500 by Judge Ward, of the United States Circuit Court for the Southern District of New York, for what the court calls "aggravated contempt," is of interest.

Greenberg, it is charged, has continually and stubbornly defied the rights of the Victor Talk-

ing Machine Co. as secured to them by their Federal patents. He has for the past two or three years, it is said, defiantly sold Victor goods at less than list prices and further imported infringing machines and records, which he offered to the purchasing public from push carts and a multitude of various addresses from time to time. Although the case has offered the Victor the greatest difficulties, they have persistently followed his illegitimate transactions, with the result as cited above.

On July 19, 1909, a bill was filed and temporary restraining order issued on account of the sale of a Victor I and five 60-cent records by Greenberg for the sum of \$18.25. This restraining order was ignored by Greenberg, and on August 11, 1909, a petition was offered to punish the defendant for contempt of court, evidence being submitted showing that he had again sold a small Victor machine and records at less than list prices.

Later the court denied the motion to punish the defendant for contempt, owing to the fact that the defendant, in answering the affidavits filed in court, alleged that his name was not "Goldberg," but Joseph Greenberg, and thereby raised such a doubt as to the identity of the person violating the restraining order as alleged in the petition of the complainant that the court held, in view of the conflict of testimony as to the identity of the person who made the sale, that the motion to punish

for contempt must be denied. However, a preliminary injunction was issued against the defendant on September 3 following.

Mr. Greenberg, it is alleged, again resumed his acts in violation of the Victor Co.'s rights and of the preliminary injunction referred to. The Victor Co. again sought to punish him for contempt on April 27, 1910, for having sold a Victor I and a Victrola XVI at less than list prices, and also for having sold imported Beka and "Favorite" records and for having also disposed of two imported Lindstrom machines, which infringe the patents of the Victor Co. In this proceeding the defendant was designated by the name which he had strenuously claimed as his proper name in the first proceeding—Joseph Greenberg.

His answering affidavits followed the general scheme of his affidavits in the first contempt proceedings and were drawn so as to confuse the court as to the identity of the person who committed the acts. As a result of this confusion the court was not sufficiently convinced to punish him for contempt.

The Victor Co. were convinced, however, of the falsity of the defendant's affidavits, and obtained from the court leave to take further proof of Greenberg's acts of contempt, and on the 14th of June, 1910, Judge Ward passed an order, the pertinent parts of which follow:

"Ordered, Adjudged and Decreed that the said motion for contempt be and the same hereby is denied without prejudice, however, to the renewal of said motion upon additional proofs to be taken before Harrison B. Weil, who is hereby appointed the master with full powers of a master in chancery to take proofs on behalf of the complainants and defendant in these contempt proceedings and to report thereon with all convenient speed."

The question for the master to determine, therefore, was "Did the defendant, Joseph Greenberg, or some other person, commit the acts in violation of the preliminary injunction?" On January 11, 1911, the master's report was filed, holding the defendant guilty of contempt. On March 7th, Judge Ward's opinion was given as follows:

"Joseph Greenberg, the defendant, has been guilty of aggravated contempt in violating the preliminary injunction issued against him in this cause. He has in addition put the complainant to as much trouble and expense as he could in proving the contempt. An order may be submitted on one day's notice to his attorney fining the defendant in the sum of fifteen hundred dollars (\$1,500) payable to the complainant as compensation, and that he stand committed until payment is made."

This case should have a good moral effect on certain dealers who are wont to cut prices on talking machine products and to discount the manufacturers' rights in connection with the price and patent maintenance. The fact of the matter is that this stamp of dealer invariably believes he will escape punishment at the hands of the law by hook or crook. The fate of the Greenbergs or "Goldbergs," as a class for the same offense is therefore settled most emphatically.

THE MOST VALUABLE ASSET.

"The most valuable asset on earth to any business man is the reputation for fair dealing. As soon as the public is convinced that he does not want to get the better of them, that he is ready to give them good measure, they will set about making his fortune. And the best way to win such a reputation is to deserve it. Don't try to cajole the public into thinking you something you are not. Instead, try to be what you wish to have them think you."

Good retail advertising is good salesmanship on paper, and the advertisement that fails to convince, that fails to arouse interest, that fails to create or enlarge a demand, fails because it lacks in certain fundamental principles.

If you have a good temper, keep it. If you have a bad temper, don't lose it.

SCHARWENKA RECORDS

Made by the Columbia Phonograph Co in Great Demand—The Great Pianist-Composer Heard to Advantage.

The talking machine records made for the Columbia Phonograph Co., General, New York, by Xaver Scharwenka, the composer-pianist, are praised highly by all music lovers who have heard them. Dealers who maintain departments for the sale of these goods also report them splendid selling selections. An authority, speaking of Scharwenka, says he is in many respects the most artistic player who has ever appeared in this country. While capable of the most brilliant and sonorous effects where requisite, his playing is notable above all else for its almost unimaginable delicacy and refinement of style and the beautiful legato singing tone he never fails to display. In his work is

found throughout the caressing touch of the artist who loves his instrument.

Scharwenka's compositions are known to every student of pianoforte music in the world and are universally played. Of his most popular composition, "The Polish Dance," Opus 3, over three million copies have been sold since its first publication. Numerous others (notably "The Spanish Serenade") have attained wonderful popularity. The two numbers mentioned have already been recorded by Scharwenka for the Columbia, together with two favorite Chopin numbers, and doubtless more of his own compositions will be recorded in the future.

The records are twelve-inch double-disc, as follows: A-5260, "Valse Brillante," Opus 34, No. 1 (Chopin); "Polish Dance," Opus 3, No. 1; A-5261, "Fantasie Impromptu," Opus 66 (Chopin); "Spanish Serenade," Opus 63, No. 1.

XAVER SCHARWENKA, WHO HAS MADE COLUMBIA RECORDS,

THE BERLINER PATENT.

Expression of Opinion Thereon Concerning the Policy of the Victor Talking Machine Co. by General Manager Louis F. Geissler.

Camden, N. J., March 9, 1911.

The Talking Machine World, New York:

Gentlemen—Referring to the expiration of the Berliner patent, we would state that as far as this matter is concerned, our general counsel, Mr. Horace Pettit, perfected on March 6 our appeal in the Victor vs. Hoschke case, involving the expiration of the Berliner patent, and has, since Judge Hazel's decision Tuesday, the 28th ult. (following Judge Hough's decision), completed the record and had it made up and filed in printed form.

It was lodged on the morning of the 6th inst. in the clerk's office in New York, copies duly served and petition presented in the United States Circuit Court of Appeals to have the case added to the calendar.

This petition was allowed and the appeal will probably be argued some time in April.

This is probably a "record" for an appeal, as we doubt whether there is any other case on file in the Federal courts where an appeal has been perfected and filed in the appeal court within six days of the decision of the lower court.

I would also say that it is the present intention, in the unlikely event of an adverse decision of the Court of Appeals, to petition the U. S. Supreme Court for *certiorari* to hear the case on appeal.

While the Berliner patent No. 534,543 is, and has been, an important and valuable one, yet the Victor Co. has been alert for many years past to all improvements and has abundantly protected by patents its various improvements in the talking machine art, which patented improvements are necessary to the proper construction and use of commercial disc talking machines and records of to-day. To the Victor inventors and patentees is due the great advance in the art since Mr. Berliner's invention, and the claims of the Victor Co.'s United States patents, of which it owns many, broadly include and cover commercial disc records and method employed in manufacturing the same.

The Victor Co., therefore, as we believe, notwithstanding the eventual expiration of the term of the Berliner patent, is abundantly protected and will be able to control the disc machines and records of a commercial, practical type for a number of years to come, through its foresight in the patent field, as well as in its well-established and equitable commercial methods. Therefore any copy or imitation of our goods, as we contend, and hereby give notice, constitutes infringement of our patents.

Among others of our patents we would refer to the following United States patents: No. 896,059, issued August 11, 1908, E. R. Johnson; No. 814,848, issued March 13, 1906, E. R. Johnson; No. 814,786, issued March 13, 1906, E. R. Johnson; No. 739,318,

issued September 27, 1903, E. R. Johnson; No. 548,623, issued October 29, 1895, Emile Berliner; No. 705,126, issued July 22, 1902, Osten & Spaulding; No. 850,883, issued April 16, 1907, E. D. Gleason; No. 902,280, issued October 29, 1908, L. F. Douglass; No. 760,606, issued May 24, 1904, T. B. Birnbaum; No. 749,092, issued January 5, 1904, A. N. Petit; reissue No. 12,963, issued May 25, 1909, H. C. Miller; reissue No. 13,044, issued November 23, 1909, H. C. Miller; reissue No. 13,069; issued January 4, 1910, E. R. Johnson; No. 946,442, issued January 11, 1910, E. R. Johnson; No. 947,227, issued January 25, 1910, J. C. English; No. 951,292, issued March 8, 1910, E. C. Smith; No. 677,476, issued July 21, 1901, H. L. Short; No. 817,868, issued April 17, 1906, C. A. Parsons.

We would also like to emphasize the importance of our patents controlling the Victrola type of machine, which, as is well known to the trade, is one of the most valuable improvements on the market. It bids fair in itself to control an enormous percentage of the future trade of the talking machines of the world and to this point no doubt your readers are already thoroughly converted.

Yours very truly,

VICTOR TALKING MACHINE CO.,
LOUIS F. GEISSLER, General Manager.

MISLEADING CORPORATE TITLES.

Amendment to Corporation Law Proposed for the Purpose of Requiring Every Corporation Doing Business in This State to Clearly Indicate by Its Title That It Is Incorporated.

The trend toward the corporate form of business organization has become strong in recent years, and many long-established co-partnerships have become corporations. In many such cases the use of the firm name has been continued, without any qualifying words to indicate the fact of incorporation.

At the request of members of the association this subject was recently considered by the Committee on Commercial Law. The committee was of the opinion that under certain conditions the use by corporations of imperfectly descriptive titles might prove a great detriment to creditors.

The committee therefore made the following recommendation:

"Resolved, That this committee recommends to the executive committee that action be taken to procure an amendment of the law so as to require any corporation, domestic or foreign, doing business in this State to clearly indicate by its title that it is incorporated. It is suggested that the prefix 'The' or the affix 'Inc.' are the simplest means to accomplish this result. This is suggested in order to save from loss any persons who may grant credit on the basis of individual assets of members of supposed firms when perhaps, by reason of incorporation, these are not at the risk of the business."

The recommendation of the committee was approved by the board of directors, and the proposed amendment will therefore be prepared and offered at the present session of the legislature.

Such a provision of law now exists in a number of States. In this State the assumption of corporate titles by individuals or firms is restricted by law, but the style of the title which a corporation may use is only partially regulated, as in the case of certain classes of financial corporations.

G. T. Williams, general manager of the New York Talking Machine Co., 81 Chambers street, New York, said this week business has never looked better for several years than now. Goods were going out to their dealers in a steady stream and the entire territory which they traveled was sending in batches of fine orders. The demonstrating, accounting and shipping departments were having about all they could handle. This is a satisfactory report.

In view of recent judicial proceedings and decisions it is said the Leeds & Catlin Co. will again reenter the talking machine business. This nebulous report comes via Middletown, Conn., and the wish is undoubtedly father to the thought in that neighborhood.

THOS. A. EDISON INCORPORATED.

This Will Be the Title of the New Corporation Succeeding the National Phonograph Co.—All the Various Concerns in Which Mr. Edison Is Interested Are Merged Under This Corporate Name—An Excellent Move.

(Special to the Talking Machine World.)

Trenton, N. J., March 4, 1911.

On March 2 the National Phonograph Co. filed with the Secretary of State an amended certificate changing its name to Thomas A. Edison, Incorporated. The company has an authorized capital stock of \$2,000,000. This is the first step of a movement contemplated for nearly five years to combine under one head all the companies at Orange in the manufacture and sale of Edison phonographs, moving pictures and other products.

The Edison Portland Cement Co. and the Edison Storage Battery Co., along with other smaller companies which have to do with marketing the several products of Mr. Edison's inventive genius, will continue as they are now, but it is probable they will be absorbed later, according to the statement of F. K. Dolbeer, general manager of the National Phonograph Co.

Mr. Edison does not figure as a stockholder in the new company, Mrs. Edison holding the control. The names of the stockholders are given as Mina M. Edison (Mrs. Edison), Ernest J. Berggren, secretary and treasurer; Frank L. Dyer, who has been president of the Edison companies for the last three years; Carl H. Wilson, general manager; William Pelzer, vice-president, and Harry F. Miller, the last named private secretary to Mr. Edison.

The change of the National Phonograph Co., known particularly to the music trade, to that of Thomas A. Edison, Inc., is regarded as an excellent move. The name of Mr. Edison is indissolubly connected with the phonograph as its inventor, and its value as a business asset in an advertising way is incalculable.

In speaking of the new or, rather, reorganized, company, which began its corporate and active interest this month, F. K. Dolbeer said to The World: "This reorganization or merging of the different companies was made for business convenience. No change whatever is made in the product of the National Co., or its method of doing business, excepting such as may be for its interests, the development of its property, and the furtherance of the trade's welfare. The entire trade have been officially notified to this effect."

C. H. Wilson, general manager, referring further to the move, said as follows:

"The change in question does not in any way affect contracts and agreements to which the National Phonograph Co. is a party. The officers of the Thomas A. Edison, Inc., will be the same as heretofore existed for the National—the status of the National Co. having in no way changed other than in name, which will hereafter be the Thomas A. Edison, Inc. The taking over of the Edison Business Phonograph Co. by the Thomas A. Edison, Inc., of course, obliterates that company, and its business will hereafter be conducted by the Thomas A. Edison, Inc." The officers of the National Phonograph Co. were, and for the Thomas A. Edison, Inc., will be: Frank L. Dyer, president and general counsel; William Pelzer, vice-president; C. H. Wilson, general manager; E. J. Berggren, secretary and treasurer; and H. F. Miller, assistant secretary and treasurer.

HOW THE MEN ARE HELPED.

Thomas A. Edison has invented a way of giving the workmen in the Edison Portland Cement Works their Sunday off. Hitherto it has been supposed that similar plants must be operated every day, lest the kilns cool and destroy the linings. He has found that by giving the kilns a half turn at intervals of four hours between 6 o'clock on Saturday night and 7 on Monday morning, allowing them to cool gradually, the harm to the linings does not take place, and he has given orders that this plan be adopted in his works. The men greatly appreciate Mr. Edison's thoughtfulness.

DON'T DELAY—NOW IS THE
TIME TO INVESTIGATE.

The Talking Machine Supply Co.

400 Fifth Avenue, New York

PIONEERS AND LEADERS IN HIGH GRADE GOODS

SOMETHING NEW IN SIDE LINES.

How a Talking Machine Dealer Featured a Popular Novel in Conjunction with a Record of the Same Name, and Made It Pay.

It is often my custom while enroute to the office of a morning to stop in front of a certain talker shop window and gaze therein, and very rarely do I find myself disappointed. Almost invariably there is something displayed there of enough interest to suggest further investigation, and I like that, for it usually results in a pleasant chat on trade matters with the proprietor, who is a brilliant business man and a keen advertiser.

Upon the morning in question my eyes encountered a myriad of books forming a background for an attractive sketch in color. A young woman sat at a piano singing a plaintive love song. The setting was simple in the extreme, just the books and the vocalist, with some records, both disc and cylinder, scattered about, but what made the whole scene beautiful was the wonderful expression upon the face of the girl who sang. The artist had pictured there a blending of emotions which caused the passerby to pause and ponder.

In the foreground of the window hung a large poster, shaped like a cross and bordered with roses, upon which was inscribed the following:

THE ROSARY,

The Greatest Book of the Day—Now Running Through Its 27th Edition.

A love story of exceptional charm by Florence L. Barclay, based upon the exquisite song of the same name.

The book grips you from the very first page, but when you reach Chapter 6th and Jane Champion sings—Well! you'll want both book and record; listen:

Jane smiled at them good-naturedly; sat down at the piano, a Bechstein Grand; glanced at the festoons of white roses and the cross of crimson rambles; then without further preliminaries struck the opening chord and commenced to sing.

The deep perfect voice thrilled through the room.

A sudden breathless hush fell upon the audience.

Each syllable penetrated the silence, borne on a tone so tender and so amazing sweet that casual hearts stood still and marveled at their own emotion; and those that felt deeply already responded with a yet deeper thrill to the magic of the music.

"The hours I spent with thee, dear heart,

Are as a string of pearls to me;

I count them over, ev'ry one apart,

My rosary—my rosary."

Softly, thoughtfully, tenderly, the last two words were breathed into the silence, holding a world of reminiscence—a large-hearted woman's faithful remembrance of tender moments in the past.

The listening crowd held its breath. This was not a song. This was the throbbing of a heart, and it throbbed in tones of such sweetness that tears started unbidden. Then the voice, which had rendered the opening lines so quietly, rose in a rapid crescendo of quivering pain.

"Each hour a pearl, each pearl a prayer,

To still a heart in absence wrung;

I tell each bead unto the end, and there—

A cross is hung!"

The last four words were given with a sudden power and passion which electrified the assembly. In the pause which followed could be heard the tension of feeling produced. But in another moment the quiet voice fell soothingly, expressing a strength of endurance which would fail in no crisis, nor fear to face any depths of pain; yet gathering to itself a poignancy of sweetness rendered richer by the discipline of suffering.

"O memories that bless and burn!

O barren gain and bitter loss!

I kiss each bead and strive at last to learn

To kiss the cross—to kiss the cross."

The accompaniment, which opens with a single chord, closes with a single note. Jane struck it softly, lingeringly; then rose, turned from the piano and was leaving the platform, when a sudden burst of wild applause burst from the audience.

We have recordings of this superb vocal master-

piece just as Jane sang it, with all the fire and pathos of the original—and we have the book.

Purchase them both and spread for yourself and friends a bounteous repast of melody and literature.

* * * * *

It is needless to say I called upon the inventor of this clever bit of advertising and found him radiant.

"A golden harvest!" he cried enthusiastically in response to my query as to whether his scheme was bearing fruit.

"As soon as that book, 'The Rosary,' came out I read it and liked it so much that I decided to lay in a supply and feature it in connection with the

SOME ORIGINAL RECORD PUBLICITY.

record. The results have been everything that one could wish."

"Do you depend entirely on the contralto rendition?" I asked.

"No, indeed; besides the record by Madame Schumann-Heink, I have sold a great number by Wm. H. Thompson, Alan Turner, The Knickerbocker Quintette and Henry Burr.

"It just happens that the song and the book fit perfectly and I have made the most of the circumstance."

Mr. Dealer, is there not some logic in this gentleman's remarks and some cause for thought in his experiment?

"The Rosary" in book form is still among the ten best sellers and the records are on your shelves.

Why not get busy?

HOWARD TAYLOR MIDDLETON.

TALKING MACHINE EXPORTS.

The Figures for January Presented—Reports Show Strong Gain in All Departments of Industry—Some Interesting Figures.

(Special to the Talking Machine World.)

Washington, D. C., March 6, 1911.

In the summary of exports and imports of the commerce of the United States for the month of January (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for January, 1911, amounted to \$292,347, as compared with \$202,764 for the same month of the previous year. The seven months' exportations of talking machines, records and supplies amounted to \$1,816,962.

If you are a dealer who is honestly trying to make the greatest possible amount of profit out of the smallest possible amount of capital; a dealer who is trying to keep his stock up-to-date and in order, one who is in business to serve, then you will find the catalog one of the most valuable helpers that ever came into your place of business.

SOME TRADE NEWS FROM ATLANTA.

The Goode Music House of Greenfield, S. C., Takes on Columbia Line—Manager Terhune Discusses Conditions in Florida.

(Special to the Talking Machine World.)

Atlanta, Ga., March 7, 1911.

Richard Thornton has been appointed assistant manager of the Columbia Co.'s store here, distributors for Georgia, Florida, Alabama and South Carolina. The Goode Music House of Greenfield, S. C., a concern worthy of its name, has placed a substantial order for Columbia machines, both graphophones and Grafonolas. This order was secured by W. A. Barfield, special representative of Atlanta headquarters. The Goode Music House have made plans for an extensive campaign in Columbia goods.

Conditions in Florida, as reported by W. Terhune, the Columbia Phonograph Co.'s manager here, are very good at the present time. Mr. Terhune has just returned from a trip to Jacksonville, St. Augustine, Palatka and Tampa, and has received many substantial orders from old customers, mostly orders calling for Grafonolas of one type or another. He reports that the sale of Grafonolas in Florida is particularly satisfactory.

In Jacksonville the Columbia Co. are represented by Ely & Silvernail and the Rhodes, Futch-Collins Furniture Co. Both of these dealers report a very good business. In Tampa the representatives are the Rhodes, Pearce, Mahoney Furniture Co. They handle the Columbia line exclusively and have practically all the talking machine business of that town.

The Haverty Furniture Co., Savannah, Ga., writing to Mr. Terhune recently, said: "We know it will be interesting to you to hear that on February 25, we sold more records than any one day previously. We attribute this to the most excellent records that the company is now getting out. We wish to make special comment on the two piano records coming out next month, by Xaver Scharwenka. These are certainly the most perfect piano records we have ever heard. A person not knowing the difference, would certainly say that it was a real piano."

SIX STEPS TO MOUNT.

There are just six steps to the Ladder of Fortune; when you have ascended them you stand on the broad platform of success.

The first is Self-Confidence, for if you don't believe in yourself you can't expect anyone else to believe in you.

The second is Industry, for no matter how much you may believe in your capabilities, if you are not industrious all your talent will go.

The third is Perseverance, for industry which goes by fits and starts is motive power which is wasted, while continued application conquers all things.

The fourth is Probity, for dishonest success is colossal failure.

The fifth is Temperance, for if you become drunk, either with wine or prosperity, you are on the road to ruin.

The sixth is Independence, and when you stand on this step you can dictate your own terms to the world.

MAPPING OUT THE DAY'S WORK.

"He who every morning plans the transactions of the day and follows out that plan carries a thread that will guide him through the labyrinth of the most busy life," says Victor Hugo. "The orderly arrangement of his time is like a ray of light which darts itself through all his occupations. But where no plan is laid, where the disposal of time is surrendered merely to the chance of incidents, chaos will soon reign."

Salesmanship does not consist of forcing goods upon a customer. It consists of showing him how he will benefit by making a purchase. "Satisfaction to the customer" is the only foundation upon which all lasting businesses are built.

The Columbia exclusive selling rights policy is "compulsory" in that it compels your competitors to compete with each other.

Columbia Phonograph Co., Genl., Tribune Building, New York

OPTIMISTIC IN SAINTLY CITY.

Sales Exceed Expectations for This Season of the Year—Small Victrola Styles in Favor—High Priced Machines in Favor—New Quarters for Aeolian Co.—O. K. Houck to Add "Talker" Department—May-Stern Columbia Exhibition—Piano Houses Giving More Attention to Talking Machine Business—Startling Dictaphone Display—Interesting Budget of News from All Points.

(Special to the Talking Machine World.)

St. Louis, Mo., March 9, 1911.

Talking machine dealers express great satisfaction with business conditions since the first of the year. Not only have inquiries and sales been good, but the average purchase has been very high, an unusual condition especially for this time of year, according to the department managers.

A. J. Robinson, of the Thiebes Piano Co., says that their average sales in the machine department have been averaging at least a half more than is the year in, year out record. "The small Victrola has proved a good machine for the salesman," said Mr. Robinson, "and it has been the pivot on which the sale of many machines have been made."

Manager Levy, of the Aeolian Co.'s wholesale department, announces the prospective removal of that department from the Aeolian Building to 1009 Pine street, where the department will have space commensurate with its needs. "We are very badly crowded in our wholesale department," said Mr. Levy, "and we have already encroached upon space that other departments need, so some department must give way, and as our business can be handled independently of others to better advantage, we will go. In the new building we will have everything an up-to-date wholesale establishment should have, parlors for demonstration of instruments and records, salesrooms, warerooms, packing rooms and all will be fitted in the best style. We intend to have the best equipped wholesale department in the West. In addition to the advantage this move will give my department it will contribute to the welfare of the retail talking machine department and other departments of the business."

George D. Ornstein, Victor sales manager, spent several days with the local trade, arriving February 18.

The O. K. Houck Co. expect to add a talking machine to their local store in the near future. They enjoy good trade in the machines at their other stores.

Recent dealers calling on the local trade were: John Winkler, of Mascoutah, Ill., and John Hoch, Chesterfield, Mo.

Some department and furniture stores have been showing a lively interest in the talking machine trade recently. The May-Stern Furniture Co. carried a large window display of Columbia machines and the Grand Leader department store have been including the organization of a \$1 a week Victor Club in their regular advertising. A machine and ten single records are offered for \$38.50, with \$2.50 down and no interest.

The Paragon Quartet, popular local vocalists, recently visited Camden and some excellent records were obtained of their voices. These records are making a hit and are to be in the next Victor catalog.

L. C. Wiswell, talking machine manager for Lyon & Healy, Chicago, was a recent visitor here and his announcement that he now had twelve record demonstration rooms and was contemplating the construction of sixteen more gives an idea of the growth of their business. That the talking machine business is just coming into its own is apparent to St. Louis piano men, some of whom have considered the talking machine as a side line. The Thiebes Piano Co. have given half the first floor salesroom to record demonstration rooms, dividing the space with sheet music. The entire fourth floor is given to machine demonstration parlors. This fourth floor, Mr. Wiswell declared, was the equal of any he had seen. The F. G. Smith Piano Co. are also liberal with first floor space, devoted, however, to display of machines. Mr. Robinson, of the Thiebes Piano Co., says that they are now reaping their harvest from the record business and declares that within a very short time that department will equal in total business the machine department. The Columbia Phonograph Co. and the Silverstone Talking Machine Co. are exclusive talking machine houses and have no conflicting interests in their display space and they both think that the advertising so gained is a splendid investment.

Mr. Gilbert, of the Victor Co., was a recent visitor.

The Columbia Phonograph Co. had a striking window display of Dictaphones the first of the month that attracted much attention from business men. An office scene was reproduced, a wax dummy presenting the business man at his desk in a business-like attitude and the mouthpiece of a Dictaphone in his hand. Another wax figure at a desk as far away as space permitted represented a stenographer busily writing from Dictaphone dictation. A large sign across the back of the window read: "The following firms use more than 100 Dictaphones: Robert Johnson & Rand Shoe Co.; Lewis Publishing Co.; Simmons Hardware Co.; Western Electric Co.; Brown Shoe Co.; Peters Shoe Co."

George W. Crisp has been added to the selling force of the Aeolian Co.'s retail talking machine department.

George Schmitt has sold the Southern Phonograph Co., at 1703 South Broadway, to L. C. T. Rickert, of Belleville, who is manager. Mr. Schmitt retains his bicycle repair business.

Gus Kleinkauf, of Joplin, Mo., has sold the talking machine business conducted in connection with his drug store to the Newton & Smith Music Co., formed by partnership of two young men who have been the Joplin representatives of J. W. Jenkins Sons Music Co., of Kansas City.

J. H. Algaier, of the National Phonograph Co., who makes his headquarters with the Silverstone Talking Machine Co., was off his travel route several days during February because of illness.

The A. F. Mengel Music Co. recognized the

Tetrazzini concert here by giving a special Victrola Tetrazzini concert the Saturday previous to the appearance of the star in person.

Max Landay, of the Talking Machine Supply Co., New York, was a February visitor.

C. O. Thompson, who was for a long time with the wholesale talking machine department of the Aeolian Co., has turned to pianos and is in charge of the prospect files for the Kieselhorst Piano Co.

TO HANDLE PATENT CASES.

Bill to Amend Commerce Court Act Includes Provision to Effect That Patent Appeals Be Handled by That Tribunal.

In connection with the railroad rate decision handed down by the Interstate Commerce Commission last month, which in all probability may come up in due time on appeal before the newly organized Commerce Court, it is interesting to note the provisions of a bill introduced by Senator Bacon, amending the act by which this tribunal was created. The measure was introduced on June 23, 1910, and referred to the Committee on the Judiciary, which a week ago to-day submitted a favorable report. In this bill it is proposed to allow the present judges of the Commerce Court to permanently retain their positions, and thus do away with that provision of the existing law by which judges of the United States Circuit Court are transferred for temporary duty on the commerce bench. Furthermore, it is proposed to give the Commerce Court jurisdiction of all appeals and writs of error from final judgments and decrees of circuit courts of appeals in patent cases.

Should these amendments be enacted the plans for the establishment of a special court of patent appeals, similar to the new Court of Customs Appeals, will be frustrated. In some quarters the organization of specialized tribunals is looked upon with much favor, but at the same time there are many eminent legal authorities who oppose legislation looking towards limiting the powers of the Federal courts to the hearing of particular classes of cases. One of the strongest arguments in favor of the establishment of customs, commerce and patent courts is that the organization of additional tribunals of last resort materially relieves the Supreme Court of the United States, which is far behind in its work because of the large number of cases that come up before it.

THE GENTLE ART OF COLLECTING.

Be a good collector. One of the best evidences of business ability is the gentle art of collecting. The man who is a poor collector is generally a poor remitter, and you know what happens when you become a slow payer. You pay the highest price for everything you buy; you lose the cash discounts. You can afford to borrow money and pay interest in order to secure the cash discounts. Keep track of it a year and note the aggregate amount saved.

BERLINER PATENT PASSED UPON AGAIN.

Judge Hough Hands Down Important Decision Vacating Injunction Against Sonora Co., Who Claimed That Patent in Question Expired February 11, 1911—Judge Hazel's Approving Memorandum—Appeal Lodged from the Latter's Ruling Will Come Up in April.

The decision of Judge Hough, United States Circuit Court, New York City, handed down February 25, and that of Judge Hazel, of co-ordinate jurisdiction, endorsing these findings, delivered a few days later, namely, March 1, regarding the expiration date of the Berliner patent, has aroused widespread interest in the trade. The first case argued before Judge Hough, February 7, was that of the Victor Talking Machine Co., Camden, N. J., against the Sonora Phonograph Co., New York. The second, heard by Judge Hazel, the Victor Co. against Wm. H. Hoschke, vice-president and general manager of the Sonora Co.

In December last, on the 15th, to be specific, Judge Hough decided the Sonora Co. were infringing the Berliner patent in the use of the so-called "mechanical feed" machines, and they were enjoined. The injunction was observed, but in view of the approach of February 11, when the defense contended the patent expired, a motion was entered and argued that so much of the injunction applying after that date should be vacated. Counsellor Pettit for the complainants made a strong plea, but the court accepted the opposing view and granted the motion.

Preceding the opinion the court made this preliminary statement of facts: "Upon a final hearing in this cause decree was entered the 15th day of December, 1910. The suit is upon Berliner patent No. 534,543, which, by its terms, expires on the 19th of February, 1912. The injunction aforesaid being in force a motion is made to limit or modify the same, upon the ground that it appears, from the records of this court, that the invention of the patent in suit has been adjudicated to be the same as that secured in the Dominion of Canada by letters patent No. 41,901, issued to the same Berliner (as assignee of Sues) on February 11, 1893, and, therefore, expiring under Canadian law on February 11, 1911. Motion heard upon the entire record herein upon affidavits and exhibits filed for the motion, and reference was also had to the original records of the various causes resulting in decisions hereinafter referred to."

THE DECISION IN FULL.

"The only contention of defendant needing consideration is that so far as the claims of the Berliner patent here relied upon are concerned (Nos. 5 and 35) it is, in the courts of this circuit, if not in all the courts of the United States, *res adjudicata* that the patent in suit expires by force of section 4887 Revised Statutes with the Sues Canadian patent above mentioned. The inquiry whether the matter is *res adjudicata* will be made without any expression of opinion on my part as to the merits of the question as originally presented in previous litigations.

"The point has been stated, in the language of counsel, though it is certainly true that even if defendant's contention be correct, the status of the Berliner patent in respect of the Sues patent is not and cannot be *res adjudicata* in the sense in which that phrase is often used because the persons and parties in and to this action are not identical with those of the litigations on which defendant relies. Yet, the rule invoked is stronger than that of *stare decisis*, for 'where questions affect titles (to land) it is of great importance to the public that when they are once decided they should no longer be considered open;—such decisions become rules of property and many titles may be injuriously affected by their change.' The duration of a patent being the limit set to a lawful monopoly certainly concerning it is quite as important as the title to land; and is, indeed, a species of title; for that which the patentee has not shown a clear right to is the property of the public.

"The real proposition of defendant is that since 'a judgment is conclusive upon a matter legitimately within the issue and necessarily involved in the decision,' it has been settled and solemnly decreed, in an action brought by this complainant against another defendant, that the patent right which was the basis of the former suit and is the basis of this terminated on Feb. 11, 1911, and that this result was declared in a litigation wherein the issue was presented by the pleadings, and was, in the opinion of the courts of this circuit, necessary to the judgment then made and still in full force and effect. If these assertions be true the question is not an open one in this court.

"The Berliner patent was first adjudicated and the rights of these complainants therein first declared in 140 Federal Reports, 860; and the decree there directed was affirmed in 145 Federal Reports, 850. (Victor Talking Machine Co. against American Graphophone Co.—Columbia Phonograph Co.) The Appellate Court said that they did not 'find it necessary to add anything to the careful and exhaustive discussion of the issues' made by the court below, with one

exception. That exception bears no relation to this controversy, so that in effect the opinion of the trial court became that of the higher court.

"An examination of the record shows that the Sues Canadian patent was not pleaded nor was any allusion to it made in the cause. The defendants, however, did plead the Sues American patent, No. 427,279, and introduced the same in evidence; and of this patent, Hazel, J., said that the specifications thereof stated that 'the invention related to improvements in the reproducing apparatus of Berliner, and that the construction and mounting of the stylus formed no part of the invention.' Wherefore, it was held that 'the improvement of Sues is not anticipation.' This finding, being based on appropriate pleadings and evidence, and having been adopted by the Circuit Court of Appeals, amounts to a decree of that court that the Sues American patent was not for the same invention as that contained in the Berliner patent.

"If the two Sues patents (Canadian and American) be compared it is so obvious as to need no discussion that the specifications and diagrams reveal the same invention; the diagrams are identical and the specifications identical in every material point. When the claims, however, of the two patents are compared they are quite different. Those of the American patent are appropriate to the invention that Sues had in mind, namely, a particular form of swinging arm; but the claims of the Canadian patent, and especially claims 5, 7, and 11, are much broader; and undoubtedly raise the question whether (1) they are or are not the equivalents of the invention of Berliner as revealed in the patent in suit and supported by the decision above-referred to; and (2) whether the claims so stated (if construed as equivalent to Berliner's claim 5 and 35, or either of them) are supported by the revelations of the specifications and diagrams.

"This question was, I think, squarely raised in the next case brought on the Berliner patent and heard on motion for preliminary injunction by Townsend, J., (Victor Talking Machine Co. against Leeds & Catlin Co.). An examination of the record therein shows that the Sues Canadian patent was distinctly pleaded, not only as a reference, but specifically as a bar under Section 4887 Revised Statutes, on the ground that it had been granted on Feb. 11, 1893, for a term of six years only and had therefore expired before answer filed. Two questions relating to the Canadian patent were therefore presented, and necessarily presented for the decision of the court in that case: (1) Did the Canadian patent cover the identical invention of Berliner, and (2) had the Canadian patent expired with the end of the six-year term? Obviously both these inquiries had to be answered in the affirmative in order to benefit defendants; a negative answer to either was enough for the complainants.

"I see nothing in the pleadings or the logic of the matter compelling the court to answer one question before the other; or preventing it from considering both—both were in issue, and both presented justiciable matter. Townsend, J., chose to answer both, and definitely found, as he had a right to, that 'the Canadian patent in terms describes and claims the broad generic invention of Berliner covered by the claims here in suit' (5 and 35), and added that 'if this (Canadian) patent expired, as claimed, in 1899, the patent in suit expired at the same time.'

"Having thus answered the first query he was bound to respond to the second, and that he answered in the negative, finding that the life of the Canadian patent for purposes of Section 4887 was the eighteen-year period which the defendants in this case rely upon. An appeal having been taken the defendants assigned for error so much of the holding of the court below as was against them, saying that the 'Court erred in not holding (that this patent) ex-

pired Feb. 11, 1899, with the expiration of the term of six years for which the prior Canadian patent, No. 41901, of Feb. 11, 1893, was granted.

"In the higher court this matter was elaborately considered by counsel, and it was specifically urged that 'this Canadian patent was not intended for any broader invention than the Sues (American) patent, and did not describe any broader invention than that patent.' The language of the earlier case as to the Sues-American patent was quoted, and the point urged that 'Townsend, J., in the court below, was right in granting the preliminary injunction, though he was apparently mistaken in his conclusion where he stated that the Canadian patent in terms describes and claims the broad generic invention of Berliner covered by the claims here in suit.' On such a record and such arguments the decision of Townsend, J., was affirmed in open court, and when brought up on certiorari to the Supreme Court again affirmed. (Leeds & Catlin case.)

"I think it apparent from the foregoing resumé that the only proposition left for argument on defendant's part is that Townsend, J., erred in holding, on a point plainly pleaded, regarding the Canadian patent in suit; and complainant's counsel with his usual frankness has admitted as much. But, if such error was committed both appellate tribunals also erred in failing to correct a wrong finding on an issuable fact. It is, of course, possible (and complainant has done it) to point out that the Circuit Court need not have answered the query as to identity of invention, and the decisions on appeal do not specifically approve the finding so made.

"This species of hair-splitting must be left to appellate tribunals, which find themselves embarrassed by their own decisions. This court can only follow the apparent effect of previous authoritative rulings.

"It is not overlooked that complainant has introduced on this motion, considerable testimony tending to show that in the opinion of experts, and of Messrs. Berliner and Sues, that the Canadian-Sues patent is for the same invention as that described in the Sues-American patent; and it is claimed that had Townsend, J., had before him what is now before the court he would not have held as he did. But his decision was that, admitting similarity in specifications and drawings, the claims being different, the broader claims were justified by the antecedent description.

"Perhaps this was wrong, but if so it was an error, not arising from lack of evidence or misleading evidence, but from an erroneous inference drawn from a comparison of two documents, both in evidence before him and before me. The documents have not changed, and no amount of evidence can change their language or the meaning thereof. It is five years since Judge Townsend's decision has become widely known, and investments have been made on faith of it; in short, a better instance could not be found of the importance of not lightly disturbing a matter once authoritatively settled.

"The motion is granted, the order to be settled in accordance with the practice indicated by rulings in similar previous cases quoted by the court."

As to Judge Hough's position it was generally held by a number of attorneys that no appeal could be taken. Horace Pettit, general counsel of the Victor Co., was of a different opinion, and said so. On February 27 the same issue was brought before Judge Hazel, in the case of the Victor Co. against Hoschke, referred to above. On the following day the Court filed the appended memorandum:

"Upon reading the decision of Judge Hough rendered in Victor Talking Machine Co. et al., against Sonora Phonograph Co., in equity, 6-87, I am persuaded of its correctness and that patent No. 534,543 expired February 11, 1911, that being the term of the expiration of the Sues-Canadian patent. Decree for defendant dismissing the bill. Dated February 28, 1911."

This decision gave the Victor Co. the unquestioned opportunity to take the case to the United States Circuit Court of Appeals, Second Circuit, for review, and application was immediately made for a motion to that effect. This motion appeared on the calendar of Court of Appeals, March 6, counsel for both sides agreeing to be ready at the convenience of the court, in order to expedite the final adjudication of the question in dispute. The hearing had not come on when *The World* went to press.

You lose more business by not pushing collections than by pushing them. If you make your customer pay his bills, he will continue to trade with you, whereas if you don't make him pay, after his account gets about as large as he thinks you will allow it, he goes elsewhere to trade, and there you are!

There is something more than mere figures that enters into the average deal that a successful salesman puts through. Personality enters very largely into most transactions, and the ability to understand and read human nature means, and points to, success.

TRADE NEWS FROM PHILADELPHIA.

Business for Past Month Exceeded Expectations—Falling Off of Former Years Not in Evidence—Important Columbia Records—Wanamaker's New Quarters—The Demand for High Priced Talking Machines and Records Continues—The Outlook Most Satisfactory All Along the Line.

(Special to the Talking Machine World.)

Philadelphia, Pa., March 5, 1911.

The talking machine business in Philadelphia during the month of February has been good. Generally it was most satisfactory to all the dealers. It was not as large as it was in January, but it was considerably better than February a year ago. The dealers did not expect as big a February as January, and especially not in records, for the reason that the many holiday machines sold naturally brought a big January to the record business. The dealers still complain of a shortness of stock, but not to the extent of January, for in the meantime the factories have been able to get out more goods, and as sales have fallen off, the manufacturers have been able to keep the trade fairly well supplied.

Before this time the Wanamaker talking machine department had hoped to be provided with larger and better quarters, but for some reason no move has yet been made, but the department is being conducted in the mezzanine section of their piano department, and they are very much handicapped on account of their large trade. By the 1st of April they hope to be satisfactorily housed.

W. J. Elwell, who is in charge of the talking machine department at Heppes, reports that business in February kept up wonderfully well. While they expected a dropping off, it was not to the extent of former years. They are finding some trouble in getting goods of a certain class fast enough, and for some time they have had standing orders which they were unable to fill. They have just secured a new traveling salesman, Frank Schaller, who is at present up the State, and is doing some very satisfactory work for them. He was for a number of years connected with the house of J. E. Ditson & Co., who are closing out their business here and which will be absorbed by their Boston and New York stores. The Heppes are just in receipt of a carload of fine talking machine cabinets, which they needed badly and which present some of the latest designs.

The Columbia Phonograph Co. have been doing a splendid business in February. They have just assisted in a very successful opening of the talking machine department at the store of John A. Wuchter, at Allentown. It occurred on February 16, 17 and 18. During the exhibition several Grafonola and piano recitals were given, the concerts being under the direction of Hamilton Bouvier, of the Philadelphia branch of the Columbia Phonograph Co. More than 1,300 people visited Mr.

Wuchter's Grafonola parlors during the opening days and the immediate sales were so large that Mr. Wuchter was compelled to go over to New York, accompanied by Mr. Henderson and Mr. Robinson, of the Philadelphia store, to make a selection of more than \$2,000 worth of new machines and records. Mr. Robinson, who is about to be married, thinks so well of the retail business possibilities at Allentown, that he has formed a personal alliance with Mr. Wuchter and will hereafter reside in Allentown.

The Columbia Co. are arranging for recitals in several of the larger cities in Pennsylvania in the near future and the following is their Philadelphia schedule for the month of March: March 11, 3 o'clock, Philadelphia Electric Auditorium, Woman's Club of Ethical Society; March 16, 8 o'clock, Tenant Memorial Presbyterian Church, Fifty-second and Arch streets, West Philadelphia; March 21, 8 o'clock, Wakefield Presbyterian Church, Germantown avenue and Fisher's lane, Germantown; March 22, 3 o'clock, the Philadelphia Electric Auditorium, Woman's Club of Philadelphia, Germantown and Frankford; March 23, 8 o'clock, Epworth M. E. Church, Fifty-sixth and Race streets, West Philadelphia; March 27, 8 o'clock, St. Matthew's Protestant Episcopal Church, Eighteenth and Girard avenue, Philadelphia. The Columbia are making heavy sales on the new piano record by Scharwenka and the vocal records by Baklanoff, Nielsen and Fremstad. They report that they have been selling records of a considerably better class this year than last, which is the general condition at all the Philadelphia stores. They are arranging for a very attractive St. Patrick's Day window display.

Joseph Murphy, connected with the Columbia Co., will be married shortly. There is considerable romance about the engagement, which "Joe" is delicate about referring to unless you can get him off in a corner and have a heart-to-heart talk. And if you have ever tried such a thing you will understand what a difficult task it is. "Joe" can certainly talk when it comes to extolling the merits of the Columbia, but you never heard such silence when it comes to referring to himself.

The territory which Mr. Robinson has been covering will hereafter be looked after by R. B. Cope, well known in the talking machine world.

Louis Buehn & Bro. report that their February business was very good. They had a considerable increase over last February and their collections have been most satisfactory. Mr. Buehn says there is nothing really tangible in the situation, but he believes that the talking machine men are going to have a very good business this spring. As far as getting stock is concerned, Mr. Buehn says the situation is easing up very considerably. Their men are all home from the road at present, but start out the beginning of this week.

The Penn Phonograph Co. also report that their business has been fine in February, much larger than last year. Among the recent visitors to the Penn headquarters here were: B. H. Farr, of Reading, Pa., and Charles Schwartz, of York, Pa. Both men report most encouraging conditions in their sections.

C. A. Reed, who at present has a talking machine store at Sixth and Erie avenue, is about to open another store at 2815 Germantown avenue.

H. A. Weymann & Sons have had an exceptionally good February, a third greater than last year, and they have been able to get a large stock of machines of both the Edison and Victor on hand, and are in excellent shape for any demands that may be made upon them. Norbert Whitley just returned last Saturday from a trip up the State, and with the exception of pre-holiday trip, it was better than any he had last year. He found the business everywhere in a splendid condition. The firm put on a new salesman last week to look after the retail end of the talking machine business, one of the many departments of their store.

Says a traveling authority: "Undoubtedly the interests of commercial travelers as a class of men are bound up with, and inseparable from, the interests of the retail merchants everywhere and at all times. Anything that hurts the retail merchant, hurts us."

Our bid for your trade

is based on the promptness of our service.

It doesn't cost you any more to get prompt service from us than rather slow service from someone else, and it is sure to pay you better.

The jobber who doesn't fill your orders promptly often makes you hold up your customers and puts you in constant danger of losing trade.

A good live jobber understands that his interests are best served by looking after the dealer's interests, just as wide-awake dealers know that the way to build up their business is to take proper care of their customers.

That is why we always ship all goods the same day the orders are received.

You can get from us whatever you need in record cabinets, horns, needles, fiber cases, repair parts and other accessories as well as Victors, Victor-Victrolas, Victor Records.

And you can figure out just about when the goods will reach you.

That saves you a lot of worry and is sure to be of advantage to you.

Remember us on future orders. Try us on a rush order that is in the biggest kind of a hurry and you won't be disappointed.

Better write to-day for our catalog and our booklet, "The Cabinet That Matches."

Talking Machine Jobbers and Dealers Well Satisfied with the Business for February—Executive Committee Meeting of the Jobbers' Association Well Attended—Interest Shown in National Phonograph Co.'s Change of Name—Items of a Personal Nature—Sold Victrola to New Yorker—What the Various Well-Known Concerns Are Doing—Recent Visitors of Record—A Surprise Package From the Zimmerman Co.—Commercial Talking Machines Exhibited at the Business Show—A General Summary of the News of the Month of Trade Interest.

(Special to the Talking Machine World.)
Chicago, Ill., March 11, 1911.

February walked right up to the chalk line, so far as the jobbers were concerned, in great shape. For a short month the February business was somewhat surprising. The leading houses here say it was one of the best months in their history. Local retail business made a very fair showing and the prospects are for a considerable improvement during the present month.

That was a remarkable meeting of the executive committee of the National Talking Machine Jobbers' Association, reported elsewhere in this issue. It was one of the best attended meetings the committee has ever held. Quite a few members outside of the committee were in attendance. It was a near-convention. Matters of grave importance were discussed in a broad spirit. One would go far to find a finer body of men.

In connection with the report of the committee meeting some of the details regarding the arrangements and entertainment features of the National Association, to be held at Milwaukee in July were presented. It is going to be a big time. Milwaukee is a beautiful city and there is plenty to see and enjoy. No jobbers should miss this convention. It promises to be a vitally important one.

National Changes Name.

The news of the change of name of the National Phonograph Co. to Thomas A. Edison, Inc., has excited a great deal of interested comment in the trade. It is considered a shrewd move and a mighty good one. The name of the "Wizard" constitutes an asset of which it is not surprising that the company should wish to take full advantage.

Chandler Is Well.

A good constitution, reinforced by a persistent baked potato diet, is able to withstand all ordinary disease ravages. Amberola V. Chandler, the comely and courteous representative of the Thomas A. Edison, Inc., nee the National Phonograph Co., has fully recovered from a cold which threatened to develop into pneumonia, and is again shedding rays of optimism from his benign presence on the trade.

Ornstein a Visitor.

George Ornstein, manager of traveling salesmen for the Victor Co., is paying one of his ever-welcome visits to this city this week.

Davidson's Good Sale.

Cecil Davidson, of the Talking Machine Shop, sold a Victrola the other day to a man whose place of business is within a couple of blocks of one of New York city's leading talking machine stores. Cecil, by the way, promises a personal news item in the near future. In the express phraseology of the country weekly, we wonder what it can be, Cecil.

George Davidson is spending a short vacation at Hot Springs, Ark.

Good Lyon & Healy Business.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, reports their business in February exceeded that of any like month.

In a corner window of the big store is exhibited a beautiful Victrola of the Vernis Martin design, which attracts a great deal of attention from passers-by.

The Victor theater, after several weeks' stay at Lyon & Healy's, has moved on. It was necessary to hold night performances in order to accommo-

date the crowd, and proved a big success from an exploitive standpoint.

Columbia Items.

W. C. Fuhri, district manager for the Columbia Phonograph Co., returned from a general Western and Southern trip yesterday. Trade conditions, particularly in the South, he reported as most excellent.

Paul H. Cromelin, of the Columbia Phonograph Co., General, was a recent visitor at the Chicago headquarters. The company is doing a fine business, both wholesale and retail, at its new store at Washington and Wabash avenue.

Anent the Talking Machine Company.

Stand at noon at Madison and State streets, Chicago, and you will agree with the Talking Machine Co. that it is about the busiest corner in the world. This fact, appropriately illustrated, is shown in a telling way in the company's page advertisement in this issue.

February was a remarkable month with this company. It was not only the biggest February, but one of the biggest months they have ever had.

Dan Creed, credit manager for the Talking Machine Co., who has been working day and night for several months is recreating, vacationizing, and a few other things in the South. The trip includes Mardi Gras festivities and a stay at Hot Springs, Ark.

Traveler George P. Cheatle is just finishing a successful trip through Michigan, and H. S. Conover is starting on an Iowa journey.

Salter Progress.

The Salter Mfg. Co., of this city, makers of talking machine cabinets, will shortly have something new and attractive in that line on the market.

Good Commercial Machine Exhibits.

The Business Phonograph Co., of Chicago, dealers in Edison business phonographs, and the Chicago Dictaphone department of the Columbia Phonograph Co. will both have fine exhibits at the business show which opens at the Coliseum on Wednesday of this week.

Enlarges Victor Stock.

A. P. Griggs, of Davenport, Ia., was a recent visitor. He is putting in a new stock-shelving system and will hereafter carry the complete Victor catalog, together with a reserve stock of each number.

Parker a Visitor.

L. C. Parker, manager of the talking machine department of Gimbel Bros., Milwaukee, spent a day in Chicago recently and inspected the various talking machine departments around town, in order to get pointers for the remodeling and enlargement of his department. The company is doing excellent business and reports many sales as the result of the exploitation they are receiving through the Victor machines they have sold to the public schools of that city.

Resigns Position.

Mr. Bach, who for several years has had immediate charge of the talking machine department of Rothschild's, has resigned. He has not determined his plans for the future.

Created Excitement.

Considerable excitement was caused in the Chicago office of The Talking Machine World recently by the arrival of a registered package. Visions of gold nuggets, or of solid stacks of greenbacks plunged the entire office force, including the cat, into a state of mind bordering upon frenzy. When the package was finally opened it was found to contain a neatly bound volume on "Sales Help," issued by the C. E. Zimmerman Co., advertising specialists, Chicago. Edward C. Plume, formerly of the Columbia Phonograph Co., is now general manager of the Zimmerman Co., and he has evidently imbibed large quantities of the advertising spirit. Witness the registration stunt. The book, which is exceedingly well written, describes the special syndicate newspaper advertising copy proposition for merchants in different lines, gives a good,

swift talk on advertising in general, and suggests canvasses for the salesmen.

Manager Alfring, of the Aeolian Co., St. Louis, is a Chicago visitor this week with his wife.

Kreiling & Co., 1504 North Fortieth avenue, Chicago, manufacturers of the well-known "Tiz-It" all-metal horn connections for cylinder machines, report a very special demand for their specialty. It is handled by leading jobbers all over the country.

The George P. Bent Co., manufacturers of Crown pianos, who occupy the fine warerooms on Wabash avenue, near Adams, will add a Victor department. Handsome quarters are being prepared on the second floor.

Max Landay a Visitor

Max Landay, of the Talking Machine Supply Co., New York city, was in Chicago during the Jobbers' Association executive committee meeting. He was on a needle trip, which will take him to the Coast, and reported excellent business.

New Idea Record Cabinets.

Lawrence McGreal states that 20 of the 21 distributors who were at the meeting of the executive committee of the Jobbers' Association in Chicago recently gave him orders for the New Idea record cabinets. The other jobber did not see the sample. Cuts and descriptions of these remarkable cabinets will be found in the advertisement elsewhere in this issue.

JOBBER MEET IN CHICAGO.

Executive Committee of the National Talking Machine Jobbers' Association Meet and Transact Business of Importance.

(Special to the Talking Machine World.)

Chicago, Ill., March 1, 1911.

The executive committee of the Talking Machine Jobbers' Association held one of the most important meetings in the history of the organization at the Congress Hotel on Sunday and Monday, February 19 and 20. A number of matters of vital interest to the trade were discussed, including the 10 per cent. exchange proposition of the National Co. The attendance was unusually large, quite a few members being present who were not on the directory. An encouraging roster of new members was recorded, and final arrangements for the national convention in July at Milwaukee were made.

President Perry B. Whitsit called the meeting to order Sunday morning at 10.30. There were also sessions Sunday afternoon and Monday morning. In order to expedite business dinner was served Sunday in the green room, where the sessions were held.

An amusing divertimento was furnished by Mr. Reynolds, of Mobile, who told of sending out one of Secretary Roush's "chestnut" form letters regarding the Edison exchange proposition. One old colored woman, who received one of these letters, took the term "chestnut," which, of course, referred to old records, literally, and in payment of a bill for \$8.10 sent in \$5 cash and 108 real-thing chestnuts, the kind that grow on a tree, which she figured were worth 7½ cents, according to the Mobile jobber's letter. Mr. Reynolds was so tickled over the affair that he sent the woman a receipt in full, and he brought the package of chestnuts, just as they came through the mail, to the meeting, opened it up, and distributed the contents among the members, who ate them with a great deal of relish. He also read the letter which accompanied the unique payment.

Lawrence McGreal, chairman of the committee on arrangements of the National Talking Machine Jobbers' Association convention, to be held in Milwaukee on July 10, 11, 12 and 13, made his report, which, it is needless to say, was unanimously accepted and adopted. The convention will be held

Here's the Busiest Corner in the World

State and Madison Streets, Chicago, Ill.

and

We have been the *busiest* Talking Machine Distributor in the world for the last four months, working night and day, but getting out the orders—that is—getting them out as well as the factory supply would permit.

You have suffered from the shortage—we know it—but conditions are now much better.

Victrolas are beginning to come in—today we could fill your orders complete—tho' when you read this our promise will be fifteen days old.

Gentlemen, things are coming our way. This last big shortage of Victor Goods has helped our business more than any other one thing. It proved that in a crisis *you* could depend on us.

You, who are our customers, *stick*—and you, who are not, *try us*. We are a young bunch, "*wholesale exclusively*", and willing to put up a pretty strong fight to get your business.

"Forget the Freight" (a small item.) but "Get the Goods" and the Retail Profit, (a *big* item).

The Talking Machine Company

133-137 N. Wabash Avenue, (New Number but same location) Chicago, Ill.

FROM OUR CHICAGO HEADQUARTERS.
(Continued from page 46.)

at the Hotel Pfister, and a banquet and ball will be given there the night of the 13th. The other entertainment features will include a ball game between Eastern and Western talking machine teams, a boat ride, with dinner served on the boat, and an automobile excursion to Donges Bay, with dinner served there.

The secretary's report showed that since the last meeting of the executive committee on August 4, 1910, there have been added new members as follows: J. F. Schmelzer Arms Co., Oklahoma City, Okla.; Lit Bros., Philadelphia; The Talking Machine Co., Philadelphia; R. L. Penick, Montgomery, Ala.; Sherman-Clay Co., Seattle, Wash.; Philip Werlein, Ltd., New Orleans, La., and Schultz Bros., Omaha, Neb.

The treasurer's report showed the association to be in excellent condition, with all bills paid and a comfortable cash balance on hand.

Those in attendance at the meetings were as follows: Perry B. Whitsit, Perry B. Whitsit Co., Columbus, O.; J. C. Roush, Standard Talking Machine Co., Pittsburg, Pa.; F. H. Putnam, Putnam-Page Co., Peoria, Ill.; W. G. Walz, W. G. Walz Co., El Paso, Tex.; J. Newcomb Blackman, Blackman Talking Machine Co., New York; Louis Buehn, of Louis Buehn & Bro., Philadelphia; H. H. Blish and George Silzer, of Harger & Blish, Des Moines, Ia.; Rudolph Wurlitzer, Fred Siemon and E. H. Uhl, Rudolph Wurlitzer Co., Cincinnati and Chicago; H. F. Miller, Penn Phonograph Co., Philadelphia; Jas. F. Bowers, L. C. Wiswell, Marquette Healy, H. Hopkins, Lyon & Healy, Chicago; Lawrence Lucker, Minnesota Phonograph Co., Minneapolis, Minn.; George Koehler, of Koehler & Hinrichs, St. Paul, Minn.; George Mickel, Nebraska Cycle Co., Omaha, Neb.; Ross P. Curtis, Ross P. Curtis Co., Lincoln, Neb.; Burton J. Pierce, J. W. Jenkins Sons Co., Kansas City, Mo.; J. F. Schmelzer and Arthur Trostler, J. F. Schmelzer Arms Co., Kansas City, Mo.; Max Strausberg, Grinnell Bros., Detroit, Mich.; W. H. Reynolds, W. H. Reynolds Co., Mobile, Ala.; Lawrence McGreal, Milwaukee; Max Landay, Landay Bros., New York; F. L. Dyer, president, and Carl H. Wilson, general manager, National Phonograph Co., Orange, N. J.

Sunday night the visitors attended in a body the "Get Rich Quick Wallingford" play at the Olympic, and afterward enjoyed luncheon at the College Inn.

Traveler Meagher, for Lyon & Healy, came down Sunday from Milwaukee with a bunch of live wire dealers from the city of beer and beauty. They were George Eichholtz, C. C. Warner, E. F. and D. C. Scheff, and Harry W. Krienitz. P. J. Kraus, of Kraus & Grau, Port Washington, Wis., was also one of the party.

The only difference between a rut and a grave is in the width and the depth.

THE STORY OF A LIVE DEALER.

Some Facts Regarding One Dealer's Method of Keeping Ahead of His Competitors Told Without Polishing—A Classy Proposition—Who Met the Other Fellows as He Was Finishing and They Were Starting—Getting After the Summer Business While the Snow Is on the Ground and Doping Out the Christmas Campaign While the Flowers Are in Bloom—Not a Fable.

In a Middle Western city of several hundred thousand inhabitants there is a talking machine dealer who is accepted as a good example by merchants in other lines of business in that city and who proves a source of real worry to his competitors. He's one of those fellows who don't wait to see which way the cat is going to jump, but who jumps with the cat and always lands on his feet.

While some of the other dealers are turning bright ideas over and over in their minds and sticking their toes into the water before taking the plunge, as it were, Perkins (that's not his name and for that reason we use it) jumps right in and begins swimming for the other shore. That's the kind of hairpin he is. As a rule he is leaving the goal before the leaders of his competitors have sighted it. You know the kind, or ought to, so here's where the preliminaries end.

When we saw Perkins rushing down the street through snow nearly up to his knees, and bucking a forty mile gale that turned the breath to icicles, we took occasion to remark that the weather was bad for business and ask him what he was doing to kill time these winter days.

"Doing to kill time?" says he, "Great Scott, man, don't you know that the summer will be here in a few weeks? Going to have my summer campaign started in another month. Why I've been doping this stuff out for the last six months, all calculated to cop the simoleons when the daisies are in bloom."

"Naturally we remarked that we were some surprised at this gent's foresightedness and asked for details.

"Can't give you the real inside info," pipes Perkins, "but I can tip you off sufficiently to put you in the way of acquiring real knowledge regarding the talking machine business.

"In the first place I have got the name and address of every sky pilot, regardless of creed, for miles around. I have got in touch with those who are going to pull off the summer night's festival stuff. Every man who owns a bungalow, a motor boat or a mud scow, if he uses it for pleasure, has his name entered in my good books, and you can bet your life all these aforementioned parties are going to get some mighty interesting talking machine literature with Perkins' name spread all over it, while he still is scraping the snow off the walk. He is going to know just how the talking machine can aid in the summer enjoyment and he'll know in time to include the purchase of a talking machine, in his plans.

I am going to send a talking machine, a well selected bunch of records and a good operator to every open air entertainment that I can discover and am permitted to attend, and believe me that machine is going to need plenty of oil and a long rest when it gets through working. Can you imagine me in the grasp of the fond parents who see their promising offspring going into ecstasies over the "Babes in Toyland" or some such music? Can you see the young man who will dare hesitate to dig when his girl nestles close up under his wing and murmurs that all she wants is one of Perkins' talking machines to make the home they are planning complete? Can you see the lodge member who hears the strains of "He's a Jolly Good Fellow" issued from the horns of two talking machines simultaneously—there is only one talking machine, of course, but he sees two—who will not want a machine for his own use at home?

"Of course, some of these people may have cooled off by the morning, but when they turn out their pockets and find a dozen or so of Perkins' circulars conveniently folded for quick perusal, they are mighty apt to get a second attack of

'talking machinitis.' But, joking aside, though, I have not really been joking, you know, I have had expert advertising men preparing folders, newspaper advertising copy and a bunch of general printed matter that shows much class, and all of which connects the talking machine with the good old summer time. It costs a little money, of course, but I'll have the biggest part of my summer business done, the profits banked, and be on my way to Europe with the wife before the majority of my competitors get wise to the fact that the robins have come again. And you can take it from me that I'll be mapping out the next Christmas campaign while sitting on the porch in my shirt sleeves or under an electric fan."

Some class to Perkins, eh? Kind of asleep at the switch—what? Yet his is the only method which will give a lead over a hot twentieth century competition. That idea of getting up early in the morning to beat the other fellow is antique. Nowadays you have got to start several months ahead and be through the night before. You have all heard of Coney Island and therein lies an excellent example. As a general rule, the workmen have to shovel away the snow before they can finish work on the cooling amusements for July and August. Don't want to sermonize, you know, but the Perkins plan is worth cottoning to. Don't let March go by without drafting the summer campaign in the rough at least. Then come around in the fall and thank us for the suggestion.

EXTRA COPYRIGHT CHARGES ABOLISHED.

The Columbia Phonograph Co., general, New York, have announced a new arrangement as to the price of copyright records, which went into effect recently, as follows: (1) The extra charges for copyright, on disc records when sold at retail, are abolished. 2. The extra charges to dealers, for copyright, on disc records other than double-faced records listed at 65 cents are abolished. 3. Instead of the present copyright charges there will be an extra charge to dealers of 2 cents each on all double-faced disc records listed at 65 cents.

The first sample of the Columbia Co.'s new sectional record cabinet, following the style of the popular sectional book case, was received at the executive offices this week. It is a beautiful article in every sense of the word, and its utility is apparent at once.

THE LENGTH OF THE LETTER.

"There has been so much written about the necessity of writing short letters by some people, it's considered almost a crime to write a long one," says a successful merchant. "I believe in the short letter whether it be a single paragraph or two paragraphs—when a short letter tells enough of the story to turn the trick, but if it takes a full page or two full pages to do this, then two pages for mine. Probably the most successful letter our company ever sent out was a letter of two full pages.

"The question of whether or not the letter will be read depends not so much on the length of the letter as on the opening paragraph.

"You will catch the reader's attention right at the start by telling him something of interest to him."

Victor Talking Machines and Edison Phonographs

C H I C A G O

TO MAKE THE MULTIPLEX.

Chattanooga Company Recently Incorporated to Make and Market Invention of Nashville Man—Will Start by Manufacturing Machines Holding Four, Six, Eight and Twelve Records Respectively—Will Later Make Moving Picture Machines.

(Special to the Talking Machine World.)

Chattanooga, Tenn., March 8, 1911.

Talking machine men in this city and throughout the State have evidenced much interest in the plans of the Multiplex Phonograph Co., which was recently incorporated, with headquarters in this city, for the purpose of manufacturing a special form of talking machine and later engaging in the manufacture of motion picture equipment. The stock of the new corporation has been put on the market and a considerable amount of it is reported to have been sold.

The Multiplex was invented by a Nashville, Tenn., man, and is designed to carry several records at one time, playing them one after the other until the series is exhausted, without rewinding. Manufacturing operations will be begun at an early date, and in the beginning four models of machines will be made, namely, for holding four, six, eight and twelve records, respectively.

The officers of the company are: D. W. Hughes, of the Hughes Lumber Co., president; S. C. Goodwin, of Birmingham, Ala., vice-president; W. F. Neill, of the Crescent Theater, secretary and treasurer, and D. T. Blakey, general manager.

FOLLOW-UP LETTERS.

Follow-Up Letters Simply Salesmanship by Mail—Spreading Out the Arguments Through the Series—Catering to the Prospect's Intelligence—Some Good Suggestions.

A great many talking machine jobbers and dealers have used and do use follow-up letters in bringing their prospects into line, but in all too many instances the results are not commensurate with the amount of time and attention they give that department nor the money investment involved. The question arises, is the follow-up system itself at fault or are the individual methods wrong? We are inclined to the latter view.

The follow-up letter is not simply a means of keeping the name of the dealer before the prospect, for if that were the case a printed postal card would do. The follow-up letter is not simply a means of calling the attention of the prospect to the goods handled by the dealer, for an illustrated catalog could do that better and very likely at less expense. The function of the follow-up letter is really that of a capable salesman. It's business is not only to attract attention to the goods, but to so put the facts before the prospect that he will become interested and buy directly through the influence of the letter, or at least place himself in the position where the flesh and blood salesman can close the deal.

Say the dealer has a follow-up system of six letters. If each letter is a unit in itself the effect of the series is lost. The opening argument of one letter must fit into the closing argument of the previous one in order that the whole may prove coherent. To send out six letters, each a complete unit in itself, is like sending six different salesmen to interview one man and each of them armed with a separate argument, totally foreign to that of his associates.

When the salesman calls upon a prospect he gives his first visit over to the introduction and the opening arguments. If the prospect is "cold" the salesman calls again and offers new arguments related to and supplementing those of his first visit. The third call sees him offering still more arguments, but all fitting into the one selling talk begun at the first call. So it goes on, and that should be the method pursued in sending out follow-up letters. When the prospect has received one line of argument in the first letter do not repeat it, but supplement the argument in the second letter, and give still more points in the third, and so on.

A man is not going to buy a talking machine while in a maze. He's going to think about it and

DID YOU GUESS IT?

That Back View of Max Landay Passing the Flatiron Building Made a Hit with the Trade—Here He Is Face to Face and Proving That He Is to Be Numbered Among Those Who "Come Back."

Were you among the many members of the trade who discovered the identity of the man who turned his back on you in last month's illustration? Did you send in your answer and get a package of needles—mighty good needles, too?

Of course it was none other than Max Landay, and he meets you face to face this month through

the medium of The World, if he hasn't met you already in the flesh. As this issue goes to press Mr. Landay is on his way home from the Pacific Coast, the distance point of his trip in the interest of the new Landay Bros. line of imported needles and other specialties.

According to last advices Mr. Landay has met with success that surpassed even his rosy expectations, and that without getting a day behind in his schedule for the trip. Mr. Landay writes that the jobbers have been much taken with the attractiveness of his needle proposition, both as regards quality, price and attractive packing, and that from present prospects he will break records made on all previous trips through the country.

Will meet you
FACE TO FACE
on -----

in his letters the dealer must give the prospect credit for using his brains. Say the prospect is not interested in the proposition until the fourth or fifth letter, and then proceeds to analyze it. If he is really interested he will catch up the thread of the previous argument with the reading of the first paragraph and marshal those previous arguments in his mind's eye.

The talking machine dealer who prepares his follow-up letters as carefully and consistently as he does his own selling arguments for use in the

store he won't be far wrong when it comes to getting results. If a dealer doesn't give the prospect credit for possessing a brain sufficiently strong to permit of his following a line of argument, intelligently served up, through a few letters that dealer will save money in first class postage and letter heads by sending out plain circulars bearing all the arguments available on one page. He has to appreciate and cater to the personality of the prospect if he is going to make a success of the follow-up letter system.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially Prepared for The Talking Machine World.)
Washington, D. C., March 10, 1911.

PHONOGRAPH. Estey M. Turner, Pasadena, Cal. Patent No. 983,183.

This invention has reference to improvements in phonographs and is designed to produce a machine of this character with which the sound may be recorded or reproduced to as great an extent as desired even though far exceeding the limits of the record tablet, the structure being such that

when the record on one tablet is about exhausted or the limits of the tablet are about reached, a second tablet will come into action automatically so that during the recording or reproducing of the sounds with the second tablet a third tablet may be placed on the machine after the removal of the first tablet and on the completion of the second tablet the third tablet will be automatically introduced into action, and this operation may be

repeated indefinitely so long as the operator desires.

Figure 1 is a side elevation of the machine. Fig. 2 is a central vertical section longitudinal of the machine. Fig. 3 is a plan view of the machine. Fig. 4 is a section on the line A-B of Fig. 3.

PHONOGRAPH. William W. McCauley, Madrid, Ia. Patent No. 983,155.

This invention relates to that class of phonographs in which the reproducing disc is provided with a weighted extension to yieldingly hold same in engagement with a phonographic record.

The object is to provide a device in the nature of an attachment that may be applied to phonographs of this class to apply a yielding pressure to the reproducing disc in order to yieldingly hold the reproducer to the record so that shocks and jars to the phonographic instrument will be prevented from throwing the reproducer out of its proper path of travel on the phonographic record so that in using extremely hard records of the kind ordinarily called indestructible records the follower may be held firmly to the record to there-

by more accurately reproduce the sounds than is possible with a reproducing instrument that is held toward the record by a weight only.

Figure 1 shows a sectional view of a part of an ordinary phonograph having improved spring pressure appliance connected therewith. Fig. 2 shows an enlarged, detail view of the arm that supports the reproducer of a phonograph with improved spring attachment applied thereto. Fig. 3 shows a sectional view on the line 3-3 of Fig. 2, and Fig. 4 shows a side elevation of the attachment disconnected from the phonographic instrument.

STYLUS, OR NEEDLE FOR SOUND RECORDING AND REPRODUCING MACHINES. Julius Jetter, Camden, N. J. Patent No. 983,061.

This invention relates to the sound recording and reproducing mechanism of phonographs and other sound recording and reproducing instruments, and it consists of an improved form of stylus or needle applicable more particularly to the reproduction of sound from disc records.

This invention comprises further means for adjusting or feeding such stylus or needle whereby all wear upon the same is compensated for.

In the accompanying drawings illustrating the

invention: Figure 1 is a view in elevation of a sound-box carrying the improved form of stylus forming the subject of this invention, showing the same in the position of use, and showing also, in dotted lines, the position of the sound-box when it becomes necessary to feed the needle or stylus forward, and Figs. 2, 3 and 4 are views illustrating details of my invention.

NEEDLE FOR SOUND REPRODUCING INSTRUMENTS. Ernest Alfred Allwood, Alcester, England. Patent No. 984,789.

The present invention has relation to needles for use with sound reproducing instruments, and comprises improvements whereby the sound reproducing and vibratory qualities are greatly enhanced.

Figure 1 is a front elevational view of one form of the present invention. Fig. 2 shows a side view of the needle illustrated in Fig. 1. Fig. 3 illustrates a pointed needle previous to stamping. Fig. 4 shows a modified form of needle subsequent to stamping. Fig. 5 is a vertical section of the needle shown in Fig. 4. Figs. 6, 7 and 8 are further modifications of the improved needle.

PHONOGRAPH REPRODUCER. Frank L. Dyer, Upper

Montclair, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 985736.

This invention relates to phonograph reproducers and the object thereof is particularly to improve the construction described and claimed in the application of Louis A. Chipot, Serial No. 474,843, for phonograph reproducer styluses, filed January 28, 1909. In the application of said Chipot, a phonograph stylus is provided, which is formed with different contours in planes at right angles to each other, or at some different angle to each other, so that the stylus as viewed in one direction is narrower than when viewed in the other direction. The cross section of the stylus in one direction is of suitable size and form for tracking a record groove having certain characteristics, and its cross section in the other direction is of suitable size and form for tracking a record groove having different characteristics. The stylus was designed particularly for use in tracking record grooves having respectively 200 threads to the inch and 100 threads to the inch, although, of course, it is obvious that it might be used in connection with record grooves having different pitches or different characteristics by modifying the contours of the stylus above referred to. This stylus was mounted by the said Chipot in any suitable manner so that it could be shifted readily through an angle of 90 degrees, or through whatever angle was requisite to permit the stylus to be used for tracking the two records of different characteristics above referred to. The stylus was thus adapted to be used in a single reproducer comprising a diaphragm, sound box, floating weight, and a single stylus lever, upon one end of which is preferably mounted a holder for the stylus. In this preferred form, the holder is rotatably mounted upon the lever, so that by rotation of the holder, either contour may be presented in position for tracking the desired record. In the improvement upon this construction, arms or projections are provided upon the said holder, which can be easily manipulated to rotate the holder, and stops or projections upon a relatively fixed member, as the floating weight, adapted to co-act with the arms upon the stylus holder in order to limit the movements of the holder and properly position the stylus for tracking the different records. There is also provided indicating means to designate the particular record with which the stylus is in position to co-act when one of the arms above described is in contact with its appropriate stop.

Figure 1 is a side elevation, partly in section, of a phonograph reproducer constructed in accordance with the invention, and Fig. 2 is a bottom plan view showing the stylus lever, stylus holder and stylus, together with the arms upon or integral with the stylus holder, the stops upon the floating weight co-acting therewith, and the indicating means.

Figure 1 is a side elevation, partly in section, of a phonograph reproducer constructed in accordance with the invention, and Fig. 2 is a bottom plan view showing the stylus lever, stylus holder and stylus, together with the arms upon or integral with the stylus holder, the stops upon the floating weight co-acting therewith, and the indicating means.

SOUND-REPRODUCING INSTRUMENT. Harlan H. Ballar, Pittsfield, Mass. Patent No. 985,496.

This invention relates to improvements in sound reproducing instruments, but more particularly to sound boxes for phonographs, graphophones, and the like. The greatest problem in the construction of these instruments has been to eliminate the metallic sounds caused by the contact of the stylus holder with the metallic portions of the sound box. Heretofore, the bar carrying the stylus

PHONOGRAPH REPRODUCER. Frank L. Dyer, Upper

holder has generally been supported upon metal projections or lugs upon the rim of the diaphragm holder, and controlled by spring arms also fastened to this rim. This connection of metal parts causes the vibrations of the stylus to be transmitted to the diaphragm holder, and produces the metallic sounds so common to instruments of this type.

In the present invention, this metallic contact has been avoided by means of vibration insulation separating the metallic parts.

Figure 1 is a top view of the sound box complete. Fig. 2, a section on 2—2 of Fig. 1. Fig. 3, a section on 3—3 of Fig. 2, with all parts above the section removed.

PHONOGRAPH. Peter Weber, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 985,716.

This invention relates to phonographs, and the object thereof is the provision of an improved means for mounting the phonograph horn or sound conveying means, whereby the end thereof connected to the neck of the reproducer on the traveling carriage may be permitted to travel with the said carriage in a horizontal line, while the body of the horn or the mouth thereof swings through a small angle. This result is achieved preferably

by the provision of a rocking support for the horn so shaped as to accomplish the result desired.

Figure 1 is a front view of a cabinet having a phonograph mounted thereon and a phonograph horn contained therein so mounted as to embody the invention. Fig. 2 is a cross-section on line 2—2 of Fig. 1, the phonograph and horn being shown in elevation,

and Fig. 3 is a detail, partly in section, showing the manner of connecting the horn to the reproducer neck.

PHONOGRAPH STOP DEVICE. Peter Weber, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 985,717.

This invention relates to phonograph stop devices and the object thereof is to provide a simple, novel and efficient means for stopping the motor of the machine automatically when the reproducer reaches the end of the record or any other desired predetermined point.

Figure 1 is a front elevation of a phonograph provided with the invention, the front of the cabinet of the machine being shown as partly broken away to show the inclosed parts. Fig. 2 is an end view looking from the left in Fig. 1. Fig. 3 is a detail of construction, and Figs. 4 and 5 are details showing the position of the line connections and detent means when the machine is in "on" and "off" positions, respectively.

COLUMBIA HEADQUARTERS IN ALLENTOWN, PA.

John A. Wuchter has secured the exclusive Columbia selling rights for Allentown, Pa., and intends to make the Columbia a prominent feature of the piano business he is establishing in that city. The illustration herewith is an interior view of Mr. Wuchter's newly-opened premises and gives an idea of the spacious showroom specially equipped for the display and demonstration of the Columbia line.

The Columbia is not a new or untried proposition with Mr. Wuchter, for it forms a part of his piano business in Egypt, Pa. In fact, his actual experience with the Columbia and his confidence in the possibilities of the line—especially in the Grafonolas and the splendid grand opera series of double disc records—have induced him to launch

out in a very extensive way in the larger city.

Grafonola concerts in the morning, afternoon and evening were features of the opening of the new store on February 16, and proved so successful that they were repeated on the two following days and a special program was arranged for Washington's Birthday, when a large audience attended.

We learned from Mr. Wuchter when in New York a few days ago, arranging for additional shipments of Columbia product, that the concerts had resulted in the sale of all the machines he originally had on the floor. In addition to this he had distributed 400 of the Columbia demonstration records, which he expressed as "the record breaking business getter."

COMPLAIN OF PRICE CUTTING.

According to Some New York Dealers It is Quite a Simple Matter for Shrewd Customers to Secure a Substantial Discount from the List Price of Machines—Hard to Get Real Evidence.

There is quite a considerable howl being raised by a number of dealers in New York regarding the prevalence of price cutting in certain quarters. It is claimed that some concerns, despite the fact that they are supposed to be bound by price agreements, have cut the regular prices as much as 20 or 25 per cent. for the sake of making a sale, and where they do not care to chance making a cash discount, reduce the price of the machine itself by throwing in "free gratis" from \$10 to \$50 worth of records.

The proprietor of one concern in speaking of this matter said: "During the past few months we have run across several people in this locality who have purchased machines at reduced prices. They come into our store, look around, and when prices are mentioned, state that they can do better downtown. We show them our agreement and explain that we cannot take one cent off the list price of any machine, but they walk out and the first thing we know they call us up and ask us to put their machine in operation—the machine they purchased downtown for the sake of the discount. "As a rule, we get the record business and there

is a little profit in that, but it isn't pleasant to follow up a prospect for several months and then find that he has purchased a machine from another concern at less than the price we are forced to ask. The purchasers acknowledge that they have secured a special price, but wisely refrain from giving the name of the concern from whom they bought the machine. When we complain to the manufacturers they reply that they are watching the price cutters closely and will proceed against them in every case where sufficient evidence can be obtained to warrant a suit. There's the rub. We know that the trouble exists, but to prove it to the satisfaction of a court is a different matter. It's dollars to doughnuts that if we attempted to shade the price to save a customer we'd be pulled up short on the first sale."

CUSTOM HOUSE MUSICALE.

The last auction of unclaimed articles disposed of by Col. J. H. Storey, head of the seizure room of the public stores, was to the accompaniment of ten imported talking machines. In the bunch of records that came with them across the sea were a number of operatic airs by Italian and French virtuosos, prime donne and primi tenori. The canned music had been in possession of the Colonel for one year, but he only recently got it out to fix it up to attract customers. The whole force in the public stores has recently been spending lunch hour, when Uncle Sam had no demand on its services, listening to imported melody. The sale took place on March 4. It was called Colonel Storey's musicale.

Live every minute of the day. Work, play, rest, but don't loiter, hesitate, or stagnate. Moments are to be used, not wasted. Think hard, work with all your might, throw yourself into your recreation with enthusiasm, rest as absolutely as if you had not a care in the world, but live every minute.

The man who gets enthusiastic only about his play, allowing his work always to seem drudgery, is on the road to a sour and disagreeable old age.

THE BEST TRADE MAKERS ON THE MARKET ARE THE LINE OF

ELECTRIC-PLAYERS

MADE BY

THE ELECTROVA CO., 117-125 Cypress Ave., NEW YORK

As a side line for Talking Machine Dealers they are unequalled. They mean easy money and big profits. We will send the arguments that will convince you and your customers.

INDIANAPOLIS TRADE NEWS.

Talking Machine Business Keeps Up Well During Month—Dealers Pleased with Conditions—Columbia Goods in Strong Demand—Being Well Advertised—Many Victrolas Sold—Wulschner-Stewart Co.'s New Record Keeping System—Kipp-Link Co. Pushing Edison Line—Talking Machines Used in Court House—Other Interesting Brieflets.

(Special to the Talking Machine World.)

Indianapolis, Ind., March 8, 1911.

The talking machine trade has had a good run during the last month. This is more than can be said for some other musical instrument lines—pianos, for example. Of course, no one knows just why the talking machine business has kept up as it has, but the theory among the dealers is that it is due to two or three causes. In the first place, the weather has been unusually warm during the month. The belief of the dealers is that there has been enough saving in coal bills to encourage people to buy talking machines, although these same people do not feel like tackling anything more expensive than a talking machine. Then again there has been a reduction in some lines of foodstuffs. This has meant a small saving to the people, although not sufficient to cause them to undertake any considerable expense. Also the people have paid high prices for food so long that they are a little skeptical about the reduced prices continuing or about further reductions that are promised. But the talking machine dealers believe the little saving in the expense of living has helped business. A good grade of talking machines have been sold during the month.

Thomas Devine, manager of the Columbia Co., says that their business was surprisingly good during the month, and he attributes this in part to the way they have been boosting their demonstration records. "They are an immense drawing card," said Mr. Devine. "No one takes the stand that he is too rich or too classical in his selection of records to be above making a pass at a good double disc record for a dime."

In advertising the demonstration record, Mr. Herdman, assistant manager of the Columbia Co., got up a special window. A large number of the demonstration records were suspended from wires in the display window and were kept in motion by a fan which was not visible from the street. This window proved to be very attractive.

One of the big features of the campaign preceding the election of officers of the Indianapolis Commercial Club was the use of a Columbia graphophone. It was used in support of the "Young Men's ticket" of the club, and special records were prepared. The way in which they were prepared was interesting. In order to make exceptionally loud records a Twentieth Century machine with a

large horn and an indestructible record was used, the big machine playing into a smaller machine with a recorder on it. When the matter prepared specially for the election was to be inserted a cardboard was placed over the mouth of the big horn, thus shutting off the sound, and then the record maker got in his say. For example, a popular musical selection was placed on the big machine and it was started. Then somewhere in the piece the cardboard was slipped over the horn and the man with the big voice yelled into the recorder on the little machine: "Vote for the young men's ticket!" Then the cardboard was slipped away and the big machine continued to shoot the musical selection into the recorder on the little machine. It was the first time, so far as is known, that this plan was ever used in an election in Indianapolis.

H. H. Myers, who has been covering Indiana territory for several years for the Columbia Co., recently resigned to go into the land business. F. J. Cook, who succeeded Mr. Myers, was in Indianapolis recently on his way to the north. He said he had just completed a very successful selling trip. He complained, however, of the shortage on certain styles of Grafonolas, notably the "Favorite" style, which retails at \$50, and for which there seems to be an endless demand.

The Wulschner-Stewart Co., who handle the Victor, report a good business for the last month in both a retail and a jobbing way. Nearly all of the sales have been Victrolas, and a few small machines have been sold.

The Wulschner-Stewart Co. have established a new system of keeping their records. The records are placed in numbered envelopes with an opening on one side so that the name of the record may be seen. Then the cases where the records are kept are numbered accordingly. In this way it can be seen at an instant when the department is out of a certain kind of records. The entire record room is to be arranged in this way. The cases in which Edison records formerly were kept are to be removed so as to make space for additional Victor records. The same system has been established in the jobbing department. Close attention will be given to the records in this department, and orders will be given promptly when any line has been exhausted. As soon as the system is in working order the company will guarantee to fill all orders complete with the least possible delay.

The "Italian Street Song" has been one of the big hits with the Wulschner-Stewart Co. in the last month and the company have been completely swamped with the demand for Caruso records.

The Musical Echo Co., in the window in which they are advertising the Victrola, are also advertising the "Bohemian Girl" music. The "Bohemian Girl" ran at the Murat Theater one week during the last month.

The Kipp-Link Phonograph Co. have a new plan for pushing the Edison machines. The company

advertise in the newspapers that an Edison machine and a large selection of Amberol records, "the longest playing and best record ever made for any talking machine," will be delivered to any home free of any cost and will be allowed to remain there for three days so that the family may invite their friends in to listen to the music. "You are not responsible for anything," say the company, "under no obligations to spend a nickel." The names of those who wish to examine a machine under such conditions are to be filled out in blanks published in the advertisement. A feature of the advertisement is a large picture of the Kipp-Link Co.'s store in Massachusetts avenue.

A number of commercial talking machines are in use in the State House and Court House here. Several dictaphones are in use in the Court House and two or three in the Attorney-General's office in the State House. Judge Remster, of the Indianapolis County Criminal Court, uses a Commercial machine almost exclusively, dictating all of his opinions on it.

The cabinet business with the Udell Co. has been unusually good for the last month, four new styles of the piano-player cabinet line have been put out, and three new styles for the disc playing machines, including No. 10 and No. 11. There have been no specially large shipments, but many of them.

NOVEL DEFENSE IN CUT RATE CASE.

Restraining Order Granted in Favor of National Phonograph Co. Against Tarey & Co., Marion, Ind.—Claimed to Lease Instead of Sell National Co. Products.

(Special to the Talking Machine World.)

Indianapolis, Ind., Feb. 20, 1911.

The ingenuity displayed by some dealers to sell goods at cut rates and still make themselves believe the agreement entered into to maintain the contract price has not been violated is worthy of a better cause, to say the least. The latest example of this manifestation is furnished by Tarey & Co., Marion, Ind., selling the Edison line at less than the established price. The National Phonograph Co., Orange, N. J., ascertained that Messrs. Tarey were cutting prices, secured the evidence and then argued a motion, through their local attorney, for a preliminary injunction.

The case came before the Circuit Court of the United States, District of Indiana, last Wednesday. The defense set up they had not sold the Edison records in question, but only had "leased" them for a period of ninety-nine years. The judge asked whether the sale of a horse could be effected in the same manner, and designated the so-called "lease" a "transference subterfuge." The restraining order was granted.

The yesteryears don't count, but you can make this year figure!

Here is a sample of what the trade thinks of the new

Edison Record Exchange Proposition

—one letter chosen at random from a huge mass of correspondence from the liveliest Edison dealers in the field.

“Your Bulletin, No. 59, in regard to cut-out and surplus Records received. The best way to express our feelings is to say merely:

“We thank you.

“Now then, how can we repay you, partially at least, for the loss this plan means to you? In this way. On each monthly list there have probably been good salable Records that haven't looked good to us and that we therefore haven't ordered; where, if we had, it might have meant increased sales for us. Now we can afford to take a chance on such Records, for if they do turn out to be poor sellers, you are willing to do as per your Bulletin.”

This new Record exchange proposition was explained in full in the February issue of the Edison Phonograph Monthly. If you didn't get your copy or have lost it, write us for a copy to-day.

With this new Record exchange proposition in view you can well afford to keep your Edison Records stocked shipshape and up-to-date.

THE CHAIN OF PUBLIC SERVICE

That Must Be Maintained by the Successful Merchant—Five Important Links.

The public to-day, more than ever before, demands service. The only way that you can serve the public properly, and place upon your list a large number of names of satisfied customers, is by having a good sales organization. When you mention salesmanship, we all naturally think of the man who waits upon us in the store. He, however, in our opinion, is only one link in the chain of the true salesmanship of a store.

This thought can be illustrated with a chain having in it the following links:

First.—An advertising campaign.

Second.—Proper show window displays.

Third.—Connection between advertising and sales force.

Fourth.—Salesman's thorough knowledge of goods and policies.

Fifth.—Arrangement and display of goods on wareroom floor.

In other words, it takes all of these links together to make true salesmanship in a store.

If a lady desires a talking machine and you have an attractive ad. in the paper, after looking it over, she resolves to visit your store and look at the various styles displayed. She does not make up her mind to buy, but simply wants to see what you have. When she arrives at your store, if the show window is nicely and attractively arranged, that backs up your ad. and invites her to enter. If she is met at the door by a courteous, clean and obliging salesman, he backs up both the show window and the newspaper ad., and makes the lady feel that she is very welcome, even though she does not choose to place her order.

PREFERS EDISON THE INVENTOR

To Edison the Philosopher—Some Interesting Views of Irving Dixon on Edison's Views on Immortality—What We Have Escaped.

Discussing the views of Thomas A. Edison, on "The Immortality of the Soul," Irving Dix, of Shelton, Pa., in the course of an interesting article in the New York Times, said that the world should be thankful that the famous inventor was never much interested in religion. "And that he did not believe in the immortality of the soul, it should be doubly thankful," says Mr. Dix, "for, if he had been seriously interested in these things, we might have had Edison's 'Intimations of Immortality,' Vols. I. and II.; the 'Philosophy of Prayer,' by the Rev. Thomas A. Edison; Edison's 'Power of the Gospel,' 'The Science of the Soul,' by Thomas Edison, D.D.; Edison's 'Dictionary of Religious Terms,' etc. But we should have had no Edison electric light, no Edison phonograph, no Edison telegraph system, no Edison electric railway, to mention only a few of his well-known inventions. Verily, the Creator of man moves in a mysterious way his wonders to perform. And He does not spoil a good inventor to make a poor philosopher. The world can well do for a while without Edison's 'Science of the Soul'—but how it would miss the electric light, for instance!

"So far as immortality is concerned, I, for one, would be much in favor of electing Edison among the immortals, whether he believes in immortality or not. He is, it seems to me, also entitled to sainthood. Thus, while I question Edison the Philosopher, I bow myself to the dust before Edison the Inventor, for his inventions have really been a blessing to mankind. He said, let the lame ride, and it was so; he said, let sounds be multiplied, and it was so; he said, let there be more light, and there was more light; he said, let there be more music, and there was more music; he said, let distance be divided, and distance was

divided. And for these things, among others, Edison should be forgiven for his peculiar views on immortality. For is he not the greatest single benefactor the human race has had, along material lines? It would seem so; and thus his immortality is assured, whether he wills it or not, so far as this life is concerned. And I believe that such an ingenious spirit will be needed in another world."

DEVELOPING MUSICAL TASTE.

Important Part Played by the Talking Machine in That Connection Emphasized by Karleton Hackett—An Opportunity to Actually Hear Real Music at Home and Study It Afforded by the Talking Machine.

The only way to develop musical taste is to give people what they can take in and then gently lead them to better things, not deny them everything because they cannot take one flying leap from nowhere and land in the middle of completely developed artistic tastes, says Karleton Hackett in the Chicago Post. But while the great majority will buy ragtime, there is a large and constantly increasing number who have learned how to use the player-piano and the talking machine for education in the most severe forms of music.

The range of possibility in the music for these various forms of mechanical reproduction is extraordinary. You can get a wide selection of nearly all the classics, which is interesting as showing the demand that has already grown up and the practical use made. Everybody who has a machine will have a few fine records, even though his own taste may be in the deepest stage of ragtime, for he knows enough to realize that he ought to have them, and none of us is without some form of artistic self-respect.

But the main point is that through this means people actually hear music, and while their musical desires may be on a par with their literary attainments—both at a low ebb—the only hope of better things is to make a start. The successful things begin at the beginning, where there is genuine interest; a growth from within, not a something painted on the outside. Thus "canned music," which people can have and from which they gain nourishment holds out promise. The people who have done things always began with what was at hand and as soon as possible moved on to something better, instead of sitting by the wayside bemoaning their fate.

So those who cannot play or sing are everlastingly right to avail themselves of the chance to hear those who can do both, to bring them into their houses, getting pleasure and profit thereby, and if they hear some bewailing the future of musical taste in this country, they may comfort themselves with the thought that these good folks are always bewailing something, so it might as well be "canned music" as anything else.

Meanwhile they will go on doing the best they can for themselves, with the determination that their children shall have better opportunities than they themselves.

ACCOMPANYING RECORDS.

How Lovers of the Player-Piano and the Talking Machine May Add to Their Enjoyment—Music Rolls May Now Be Had to Accompany Many of the Leading Numbers.

Dealers have frequently been asked by patrons, who do not play the piano by hand, if it were not possible to accompany their favorite records with the Pianola, and it will be of interest to know that this can be done very successfully with music rolls in the regular Pianola catalog and not as yet cut expressly for this purpose. The Victor, as is well known, is a regular feature on the Saturday afternoon concert programs at Aeolian Hall, accompanied by the Aeolian pipe organ, but it may be interesting to know that after the Recital Hall

program has been finished a demonstration of the Pianola piano accompanying the Victor records is given in the talking machine department on the eighth floor. From four to six numbers are given and the accompaniments are played by Mr. Gressing, who, by the way, was one of the pioneer player men, and is very much at home at the Pianola piano.

PROFITS IN WANT ADS.

A Talking Machine Dealer's Plan for Getting Business at the Expense of Others.

A dealer in talking machines has found letters in the want columns of the daily newspapers a very fruitful field for his sales.

He looks over the list of miscellaneous wants each morning and very frequently meets with the advertisements of persons wanting second hand talking machines and other goods in his line.

To each of these he sends a personal letter urging that the prospect call at the dealer's store and inspect his line before buying.

These letters are all focused on one argument or selling point. The one great advantage offered is the superior satisfaction to the prospect of owning a new and first-class instrument, free from the flaws that usually are found in second hand goods.

It will readily be seen that such a mailing list is very valuable, inasmuch as it includes only real prospects. Every person addressed is really contemplating the purchase of an instrument. This method has resulted in many sales.

LAWYER SMASHES A WILL.

It Was on a Wax Phonograph Cylinder and He Fell While Carrying It.

A dispatch from Buchanan, Mich, says that after living in expectancy for five years heirs of Hodson Burton were doomed to disappointment by the awkwardness of a lawyer. Before his death, over five years ago, Burton took the novel method of telling where his wealth was hidden by talking into a phonograph and having the record filed away with his will in a lawyer's safe, where it was to remain for five years.

The will told the heirs that he had planted his fortune and that his own voice would tell them the exact locality. His wish was complied with and not until April 3 did the heirs gather at the home of his son, Luke Burton, to hear what the phonograph had to say.

When they were all gathered in the parlor the arrival of the lawyer with the record was announced. He entered the house and unwrapped the precious article in the kitchen. As he stepped through the door into the room where the heirs were he tripped over a footstool, fell and broke the record into so many pieces that it was impossible to get it to say a word.

PERSONALITY IN BUSINESS.

No matter how large the business grows, it is always an expression of personal force, just as the personal force of a nation is the sum total of the personal force of its people.

We believe that our customers and employes feel that our business is as much a matter of personality to-day as it was in the beginning, says A. Montgomery Ward. Behind each transaction is personal guarantee, and we trust that behind each customer is personal interest in the growth and the perfecting of a system that seeks to interpret the personal desires of each man, woman or child who deals with it.

Thus its policy is a composite of the ideas of all its customers, expressing their will in all its undertakings, while its increase, growth and success are, we believe, as much matters of personal pride and gratification to our patrons as they are to ourselves and our employes.

GOOD BUSINESS IN CREAM CITY.

Fine Spring Weather Helps Trade Materially—Surpassing Last Year's Record—Reports from the Small Towns of the State—W. A. Kaun Music Co., Open Victor Department—Talking Machine Men Interested in New Credit Bureau—Hoeffler Mfg. Co. Pushing U. S. Phonograph Line—To Organize New School Department for Victor Co.—What the Talking Machine Jobbers and Dealers Have to Say Regarding the Situation.

(Special to the Talking Machine World.)

Milwaukee, Wis., April 8, 1911.

Unusually fine spring weather has done much to add life to the local retail talking machine business, and there is every indication that the total volume of trade this spring will be far in excess of that of a year ago. The only disquieting feature at the present time is the fact that industrial conditions in this city are not quite as satisfactory as they might be. Milwaukee is distinctly a center for the manufacture of heavy machinery, and many of the plants turning out this line of goods are not operating with full forces. Considering this state of affairs, local retailers believe that they have every reason to feel grateful that trade is in excess of last year. Improvement is already taking place in general conditions here, and it is believed that the month of April will be entirely satisfactory.

Up to the present time retail trade in the smaller cities and towns of the state has been unusually good, probably due to the fact that the farmers of Wisconsin are finding themselves in the midst of prosperity. This has resulted in a fine wholesale trade, and local jobbers say that business has been good. Now, however, farmers are in the midst of their busy season, the annual spring's work requiring their undivided attention. Business in the larger cities of the State has shown no abatement as yet.

"We believe that the year 1911 will be entirely satisfactory in every respect," said Lawrence McGreal, Edison and Victor jobber. "Considering the depression in some lines here in Milwaukee, retail trade is fine, and the reports coming from about the state are decidedly hopeful. Demand, as usual, in Milwaukee is strong for the high-class machines, and dealers in some instances have had trouble in keeping enough Victrolas on hand to meet the requirements of their trade."

A. G. Kunde, 516 Grand avenue, Milwaukee, Columbia jobber, is highly pleased with the success that is being scored by the Columbia. "Columbia sales during the months of February and March were far in excess of the same period a year ago and April is starting out well," said Mr. Kunde. "We expect trade to be still better when the expected new styles of machines make their appearance."

The latest recruit to the Milwaukee retail talking machine trade is the William A. Kaun Music Co., 209 Grand avenue, who have installed a complete line of Victor machines and records, in charge of Joseph F. Gannon, brother-in-law of Lawrence McGreal, who has been traveling in Illinois, Kentucky and Tennessee for the Victor Talking Machine Co. The William A. Kaun Music Co. are located in the heart of the downtown district and enjoy an especially fine sheet music business.

Sam Goldsmith, district manager of the Victor Talking Machine Co., was in Milwaukee on business recently.

Milwaukee talking machine dealers are highly interested in the new credit bureau which has just been opened by the retail merchants' division of the Merchants and Manufacturers' Association, in charge of James A. Fetterly, secretary of the retail division. All of the department stores carrying a talking machine line have enrolled with the bureau, and the proposition is receiving favorable attention from other dealers. There is no denying the fact that the new bureau will be in a position to offer the best of service and will prove invaluable to the concern that enrolls to receive its benefits.

The quarters of the talking machine department at Gimbel Brothers will be more than doubled

when the work of remodeling, which is now being carried on, is completed. Four handsome new sound-proof parlors have been installed and a large concert auditorium is being fitted out where Victrola concerts will be featured. The entire Victor line is carried, and under the able management of L. C. Parker, the department has made some wonderful strides within the past year.

The Hoeffler Manufacturing Co. are meeting with much success in handling the line of the U. S. Phonograph Co. J. H. Becker, Jr., manager of the talking machine department of the company, has returned from a trip about the state, where he located many new U. S. dealers. Mr. Becker is much encouraged by his success and feels that the U. S. line will become a factor in the talking machine trade of Wisconsin. The Hoeffler concern now handles the Edison, Victor, U. S., Zonophone and Regina lines.

A big display of 4,000 U. S. records in the windows of the Hoeffler Manufacturing Co. recently attracted no end of attention and brought the house a brisk trade in the entire U. S. line.

Mrs. Frances E. Clark, former supervisor of music in the Milwaukee public schools, who accomplished so much in introducing the Victor talking machines in the local schools that she attracted country-wide attention, left Milwaukee during the latter part of March to assume her new duties with the Victor Talking Machine Co. at Camden, N. J. Mrs. Clark will organize a new school department and will prepare records for use in the schools, paying particular attention to records for use in the lower grades. Milwaukeeans expect that she will meet with phenomenal success in her new field, where the possibilities are great. She will receive a salary of \$3,000 in her new position.

DOES NOT AFFECT "TALKER" TRADE.

The Much Discussed Decision in the "Patent Medicine" Case Recently Handed Down in the Supreme Court in No Way Affects the One-Price System in Vogue in the Talking Machine Trade.

Some of the daily papers, in reviewing the recent Supreme Court decision on the subject of price maintenance on certain so-called "patent" medicines manufactured under *secret processes*, have erroneously reported the effect of this decision, and overlooked the *difference* between control through a secret process and the protection granted by United States statutes relating to patents and patent rights.

In speaking of this case an officer of the Victor Talking Machine Co. said:

"In connection with the patent medicine decision, the manufacturer attempted to control the price of a product made by a *secret process*, there was no *patented* article for sale, hence this manufacturer was *not* accorded the privileges of the patent law, which the courts have decided in addition to granting the exclusive right to manufacture gives to the owner of a United States patent the right to designate the price at which such *patented* article may be sold.

"If the inventor discloses to the public the result of his efforts and does not keep them secret, and if the same may become the subject of a *patent*, he is then entitled to particular and special privileges for the term of seventeen years. This is the position of a company manufacturing such patented articles as the Victor talking machine, and the '*patent*' medicine decision above referred to has absolutely no bearing on the one price system so well established and maintained by the Victor Co. in their relations with their distributors, dealers and the purchasing public."

TOLSTOY VISITS EDISON.

Son of the Famous Writer Sees All of the Inventor's Treasures.

Count Leo Tolstoy, son of the great philosopher and writer, who is now visiting this country, paid a visit to Thomas A. Edison at his laboratory in Orange, N. J., a couple of weeks ago. He was cordially received, and saw some of the sights of Mr. Edison's treasure house that are denied to all but a chosen few. The father of Count Tolstoy and Mr. Edison were mutual admirers.

Mr. Edison received his visitor in his library, and devoted half an hour to showing him his recent inventions and the models he has had made for his indestructible cement house that can be cast in molds.

The famous Room 12, which has painted over the door, "This room is not open to any visitors on any pretext whatever," was revealed to the distinguished foreigner. In that room Mr. Edison keeps specimens of every known material, ready to be supplied at a moment's notice for any experiment that may require it.

Count Tolstoy expressed himself as greatly pleased with the visit.

If you have a good temper, keep it. If you have a bad temper, don't lose it.

Cabinets of Distinction Made by Specialists with Big Money and Sales-Making Possibilities.

NO. 452. UDELL DISC RECORD CABINET. It's beautifully finished. The workmanship is the best and when Victrola X or XI is set on, it makes a very complete outfit.

For Victrolas X and X Udell Cabinet No. 452

Made in Mahogany or Oak, any finish.

Holds 228 10 and 12-inch Disc Records.

Slight change in rim makes top fit either Victrola X or XI.

Shelf to handle records on. Boxes for new and old needles. Indexed compartments and card on door.

The extremely close price on this Cabinet is only possible because of the flood of orders we are receiving.

Write for *New Catalog* and name of your nearest jobbers handling Udell Cabinets.

Victor-Victrola XI, \$100
Mahogany or oak.

The Victor-Victrola is responsible for the great musical awakening

To the Victor-Victrola more than any other musical instrument is due the unprecedented awakening of interest in music, which has taken place throughout America during the past few years.

The development of the Victor-Victrola, and this growing appreciation of the world's best music have been co-incident.

There is a completeness in the Victor-Victrola which satisfies a demand hitherto never fully met.

Its perfect reproducing qualities combined with its artistic appearance, make it the most complete musical instrument in the world.

The Victor-Victrola adds a new dignity to the talking-machine industry. Its refined elegance makes it a component part of the complete music room. It is a fit companion for the finest piano.

The success of the Victor-Victrola is wonderful, and the demand increases daily.

Every dealer should take advantage of the great opportunity offered by the Victor-Victrola.

Victor-Victrola XIV, \$150
Mahogany or oak.

Victor-Victrola XVI
Mahogany or quartered oak, \$200.
Circassian walnut, \$250.

Victor-Victrola X, \$75
Mahogany or oak.

Columbia Double-Disc Records live up to all the claims we make for them. They are "double discs, double value, double wear, double everything except price," and the Columbia Demonstration Double-Disc Record is convincing new thousands every week.

Columbia Phonograph Co., Genl., Tribune Building, New York.

MARCH SALES GOOD IN CINCINNATI.

Talking Machine Houses Surpass Merchants in Other Lines in That City—Details of the Arrangement of the New Aeolian Co. Quarters—Wurlitzer Co. Doing Strong Victor Business—Personal Items of Interest—Columbia Machines and Records in Strong Demand—Krolage Co. Plans—Other News.

(Special to the Talking Machine World.)

Cincinnati, O., April 9, 1911.

The dealers were favored with a prosperous business for March. While merchants in other lines complain of having experienced a dull month the talking machine boosters announce the sales for the period just closed to have been greater than during March, 1910.

A rack capable of holding 25,000 records will be one of the features of the new home of the Aeolian Co., 25 West Fourth street. Each record will have a separate "home" and the rack will be dustproof. This department will be on the first floor of the new building. The exhibition rooms will be 8 by 12 feet and each will be equipped with fancy mahogany cane-seated chairs, tables of the same wood and Persian rugs. Different colored lamps will be placed on small pedestals in each room. Victor concerts will be given daily on the Victrola, accompanied by the Pianola-piano.

The Aeolian hustlers will spring a surprise upon the local trade this summer. They have formed a baseball club, which will be a part of the Spalding Saturday Afternoon Commercial League. L. H. Ahaus will be "Our Captain." He claims if the players live up to the reputation of the firm there is no reason why the club should not finish at or near the top of the ladder at the end of the season.

The Rudolph Wurlitzer Co. report the demand for the Victor line was very diversified, in strong contrast to previous conditions, which were unsatisfactory in several particulars. An insistent demand for one type machine, such as, for instance, the Victrola No. 16, while very gratifying, is unsatisfactory on account of the shortage in this style of instrument. The same thing can be said in the record department, where the demand runs entirely to the high-class records.

With an effort, however, on the part of the Rudolph Wurlitzer Co. and their dealers to cause a demand for the general line instead of specializing on one type machine, the business last month assumed large proportions without working hardships on the department, to whom most of the retail department and the dealers look for their supplies. The sales this month have ranged from the Victor "O" machine to the Victrola No. 16, and the Victrola No. 14 has proven its selling qualities by the large number of sales credited to that type machine.

L. F. Kieffer, representing the Rudolph Wurlitzer Co. in the State of Indiana and northern Kentucky, married a Paducah (Ky.) girl, and his many friends in the wholesale trade will undoubtedly be pleased to hear the good news.

The greater part of the month of March, with the exception of the last week, was favorable to business on account of the fair weather conditions,

and the retail trade was very active. The record business was also very active. The Rudolph Wurlitzer Co. have shown some splendid Victor windows during the month, the best one being a display of the three highest-priced Victrolas made, the Moorish marquetry, the Vernis Martin and the Circassian walnut shown in a decorated window. The concerts have been well attended, and have become a feature of the business.

The Columbia Phonograph Co. report a very active month in all departments, the new records by Nordica, Fremstad, Baklanoff, Heinemann and Scharwenka having created much interest among their regular customers, as well as bringing in a large number of new customers, many of whom, after seeing and hearing the Grafonolas, traded in their old machines on the purchase of the Grafonola.

Newspaper advertising of the special demonstration records also brought hundreds of new customers to the store, resulting in a largely increased business in all classes of records and up-to-date graphophones. The Grafonolas De Luxe B at \$225, the Regent at \$200, and the Favorite at \$50, were the instruments most in demand the past month. The wholesale trade has been brisk, and one very noticeable feature is that the mail orders have greatly increased, and when the dealers order goods in large amounts by mail without solicitation it proves beyond a doubt that conditions are good and demand for this class of goods is steady and strong.

C. G. McNeill, of this city, formerly connected with the Standard Publishing Co., has taken charge of the Dictaphone department, and under his management the company are expecting big results. The Dictaphone business for the month of March was four times the amount of business done in March of 1910.

Business at John Arnold's place during the first part of March was a little quiet, but the month closed with a substantial increase over the corresponding period last year. He is making a fine display of Edison goods.

J. C. Groene may enter the talking machine arena. He recently opened a wareroom at 135 East Sixth street and has on exhibition some Edison goods. If the location warrants the outlay he may put in a full line.

The Joseph Krolage Co. will gradually accumulate a large supply of new records instead of replacing the stock destroyed in the recent fire. The corporation is going into the music publishing business, and one of its first numbers will be "Old Man Grump," a local celebrity from a cartoonist's standpoint. This has been dedicated to Garry Hermann and will make its appearance on the opening of the local baseball season, April 12.

The machine business was one of the features of the month at the Milner Music Co., West Sixth street.

J. E. Poorman, Jr., 641 Main street, found business rather quiet last month from the talking machine standpoint, but the loss was made up in the demand for sporting goods.

Do not tell what profit you are making, as you will thereby only invite competition.

DORAN PHONOGRAPH CO. EXPAND.

Detroit Jobbers Secure Additional Floor Space—Have Established 45 Agencies in Six Months—Carry a Strong Line of Machines.

(Special to the Talking Machine World.)

Detroit, Mich., April 4, 1911.

The Doran Phonograph Co. have leased the second floor of the building at their present location, 45 Michigan avenue, and are engaged in making alterations which will more than double the floor space.

The growth of this company has been rapid since they purchased the Mazer Phonograph Co. last June. The Mazer Co. were organized four years ago, and had done a moderate business. Henry S. Doran and his associates, when they took it over, adopted an aggressive policy. In September they incorporated and began to go after up-State business. In the six months which have passed since then they have established no less than 45 agencies, mostly in the larger cities of the State. Besides this big increase up-State their retail business in Detroit has expanded until it demands the increased accommodations which now are in process of accomplishment.

The capital stock of the corporation is \$20,000. The officers are: Henry S. Doran, president; James M. Carmichael, vice-president; Charles D. Bush, secretary and treasurer; Bruce Carpenter, general manager.

The lines carried by the company are the United States, of which they have the State agency; the Columbia, the Victor and the Edison. James A. Bennett and Hugh Gully are two traveling men who are looking after the State trade.

MOTION PICTURES FOR SALESMEN.

Motion pictures as a method of training traveling salesmen have been introduced by one large mercantile house, says System. At the monthly meeting of salesmen the firm rented a film from a moving picture concern, hired a machine and operator and put on the screen, tacked up in one of the largest rooms, a motion picture story entitled "How Salesman Lawson Made Good" and other appropriate subjects. The pictures appealed to every salesman present and at the same time furnished a pleasant as well as an instructive form of entertainment, following the regular discussions and business routine of these meetings.

NEW COLUMBIA QUARTERS IN DETROIT.

(Special to The Talking Machine World.)

Detroit, Mich., April 4, 1911.

The Detroit branch of the Columbia Phonograph Co., now located at 242 Woodward avenue, will have new quarters about the first of May. A large store in the new McCreary building on Broadway has been leased, possession to be given as soon as the building is completed. The Columbia's number will be 114. K. M. Johns is manager of the Detroit branch.

It is a bad habit, but the privilege of customers, to play off competitors against each other,

PROFITABLE COMPLAINTS.

Soliciting Complaints and Adjusting Them Frequently Mean Bringing Old Customers Back to the House—How One Concern Worked the Plan Very Successfully.

The question of handling the complaints that crop up in any business generally proves sufficiently serious to the merchant without his being encouraged to welcome and, in fact, solicit such complaints. In several instances, however, it has been found that capital may be made out of complaints, if they are ferreted out and that at small expense they may be made to prove excellent advertising for the house.

A big Western house, for instance, in looking over its books recently discovered that quite a number of people who had been customers of the house for a period of time had not purchased anything for some months or even years. A special letter was sent out to the entire list of such patrons, calling attention to the fact that they had not purchased anything for some time past and requesting that if they had any complaints to make that they submit them to the house, together with any suggestions that they might feel inclined to make.

Over 20 per cent. of the letters brought replies, most of them making complaints and several claiming cash adjustments, but at the same time orders were received for goods valued at practically 75 times the cost of the cash adjustments. Then, too, and what is more important, the people who made complaints and had them attended to were naturally well satisfied with the treatment accorded and became loyal supporters of the house and its methods of doing business. These satisfied customers tell their friends of their pleasant experiences and the result is that they, too, are influenced with the house and so it goes on.

It is sometimes asked, "How is a house to act when a complaint, though involving a trifling amount, is unfair?" According to those who have tried the plan out, it has been found that in such a case, if actual intent to defraud is not clear, to give in to the customer, for such an act will undoubtedly mean much future business from that customer.

As one authority says: "The proper handling of a complaint turns it into an advertisement no matter whether it is taken up in the office, the store, the factory or by mail—the principle is the same. In the hands of a diplomatic adjuster, it becomes a basis upon which to build business. It not only offers the house an opportunity to get in closer touch with the customer and show a genuine interest in him, but it brings to light weaknesses which should be remedied to insure a future for the business.

"Whether a customer's grievance is real or imaginary, the house cannot afford to neglect his complaint. Even though it is not justified, it is real to the customer or he would not go to the bother of complaining. His future trade and the influence he may have on other customers or prospects calls for a prompt and satisfactory settlement of the trouble. The big manufacturer and the corner grocer, the large wholesaler and the little retailer, have all found it a wise policy to adjust complaints at once. A diplomatic adjustment gives an impression of fairness and good intention and appeals to one side of the customer that can be reached in no other way. Whether the man has come to your office to voice his complaint, or whether it came by letter from a distant State, the same attitude can be taken. Fairness inspires fairness in return—it is a psychological truth that the merchant cannot afford to ignore, and the customer is quick to respond to the interest manifested in him.

"Then the complaint may be settled so liberally that the customer will feel under obligation to reciprocate. Human nature is very much alike among all classes of customers—buyers appreciate generosity in complaint adjustments and usually they are not slow to show that appreciation."

Pay your accounts punctually and see that you get your cash discount.

CHARM OF MUSIC UNDER FIRE.

How an Exploring Party Won Natives of South American Village with Talking Machine.

"Leigh, Costin and myself," said Major P. H. Fawcett, R. E., in describing some exciting incidents of the exploration of the course of the River Heath in Bolivia, carried out last year by a party of which he was the head, "were some distance ahead of the leading canoe, the other having fallen behind owing to the difficulties of threading the labyrinth of snags.

"On rounding a turn on the river we saw about a mile ahead a collection of newly made palm huts on the point of a large sand bank, and at the same moment heard an uproar of barking dogs, shouting men and screaming women and children, emphatic testimony to their appreciation of their civilized neighbors. We immediately endeavored to reach the huts before they had disappeared.

"Opposite the sandbank was a red earth cliff, cut out by the river, and some 20 feet to 30 feet in height, extending the whole length of the sandbank. Against this cliff and on the sand were tied up fifteen large canoes and various rafts, known as balsas. With South American savages it is foolish to show any hesitation, so passing directly under the high bank we landed opposite the huts.

"There was no sign of a savage—only barking dogs. As the second canoe came up, however, an arrow struck it, passing completely through about an inch and a quarter of wood, succeeded immediately by more arrows and by fire from shotguns, which latter had probably been stolen at different times from the rubber pickers on the Madre de Dios and Tambopata. How someone was not hit it is difficult to understand.

"Seeing that reprisals were out of the question, Major Fawcett trusting, in the proverbial influence of music, told one of the party to put a record on a small talking machine taken along, which must have been a new experience to savages. The rain of arrows, soon began to abate. In time the

savages showed themselves ready to parley and the party landed and were assisted up the cliff. After an interview with the chief lasting about half an hour, according to Major Fawcett, the party returned to the bank, with the chief's son wearing my hat and all of us the best of friends. We were not molested by Guarayos again throughout the river, although there was evidence of an extensive population."

DOING A BIG VICTOR BUSINESS.

The E. E. Forbes Piano Co., of Montgomery, Ala., are doing a fine business in the Victor line, under the new management of H. B. Coreaux, recently with John Wanamaker's talking machine department, New York. Mr. Coreaux having received good training under the management of Louis Jay Gerson, is making the best use of his acquired experience.

TALKING MACHINE CALLS COWS.

There seems to be no limit to the practical use of the phonograph. Instance two Wisconsin boys who are devoted to the game of drafts, but who find their pleasure marred every day by the necessity of going after the cows at milking time. So, it is reported, the boys made several phonograph records, consisting of those time-honored words, "Come, Bos," and placed the machine on the edge of the pasture lot. And the docile cows are said to come home obediently, and the checker game is not disturbed.

THE VIRTUE OF SINCERITY.

Says Hugh Chalmers, one of the most successful salesmen in the United States: "A man cannot be insincere without injury to himself. Whether you are talking to one man or to a thousand, whether you are talking to me or to a customer, you are throwing thoughts to his brain; you cannot see them, but they are tangible, and you cannot throw insincere thoughts to the brain and not have the brain catch insincere thoughts."

**Won't You
Have a
Lesson in
Spanish?**

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools

Box 918, Scranton, Pa

Push the Edison Phonograph

—the one sound-reproducing instrument that works right with you and that you don't have to make excuses for. The instrument that gives you every selling argument, and against which no competitive argument can stand up.

Amberol Records: The Edison Phonograph (every style from the Gem to the Amberola) plays both the regular Edison Standard Records and Amberol Records, which play more than twice as long.

The Sapphire Point: The Edison is the instrument with the button-shaped sapphire reproducing point that never wears out and never needs to be changed—and *this* is the secret of Edison purity of tone.

Home Recording: Every one of your customers can make records at home on the Edison—can record the songs and stories of family and friends. Demonstrate this great Edison feature to every prospect.

In selling the Edison, you don't have to generalize—be specific—

For instance, take the new
Edison Triumph \$75 Outfit

You surely cannot have forgotten that there were a number of your customers who declared that they wanted an Amberola badly but they positively could not afford it.

Write personally to every one of them and tell them about the Triumph with its handsome Music Master Horn and the Model O Reproducer.

Invite them to see it and hear it. They'll come on the run. And that's more than half the sale.

Stir up the town, advertise. Don't leave people to dig out the news of this great instrument for themselves.

Thomas A. Edison, Inc., 59 Lakeside Ave., Orange, N. J.

Thomas A. Edison, Inc., is the new corporate name by which
the National Phonograph Co. will hereafter be known.

WITH THE OQUAKER CITY TRADE.

Apparent Dulness Noted in Talking Machine Business During Month of March—Proves Better Than Piano Business—Look for Spurt in Sales with the Ending of the Opera Season—What the Various Jobbers and Dealers Have to Report Anent Conditions—Talking Machine Co. Take Over Sol Bloom Store—Columbia Concert in Allentown—Recent Visitors of Note to Philadelphia Trade.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 8, 1911.

Like in all other lines of the music trade, as well, it seems, as is the case with all trades, there was an apparent dulness in the talking machine business in Philadelphia during the month of March. It has not been as striking as in the piano business, which demonstrates that while the piano business is established, the talking machine business is still in its rapid growth, and it seems to have been merely stunted during March, in comparison with the first two months of the present year. It shows a considerable increase over the business done last year, and that in itself is most encouraging. In fact, there is nothing discouraging in the talking machine business in Philadelphia, and some of the dealers affirm that March was fully up to their expectations, and attribute that more was not done to the fact that we are just at the tail end of an exceptionally long and hard winter; a winter during which it has been necessary to bear an unusual expense, and besides the Lenten season has detracted considerably.

The opera season, so far as the regular ten weeks of continuous opera is concerned, closes on Wednesday evening of this week, with still two more performances to be given by the Metropolitan Opera House Co. The dealers believe, with the close of the season, there is going to be quite a spurt in the talking machine business, every season adding new friends to the singers and an increased interest among their old friends, who will not be privileged the hearing of their voices in person and will be glad of the chance to keep up their acquaintance through the records they have made. Each season adds to the list of operatic records, and at the present time all tastes can be satisfied.

Louis Buehn & Brother report that their March business in Victors and Edisons was fair. It was better than it was during the March of last year, but it was not up to what they had expected. The bulk of their business was on the big machines, and they are under the impression that April is going to be a very good month. The Victor Co., the Buehn Brothers note, have issued a number of records which have filled a long-felt want, and they were very glad to get them. Henry Zeamer, of Columbia, Pa., was a recent visitor at the Buehn store. He reports things very satisfactory in his section. They have been giving a number of entertainments, which has assisted them in their sales, and these have been so popular that at every opportunity the people come after him. The Buehn Brothers have an exceptionally attractive window decoration this week.

Frank K. Dolbeer, general sales manager of Thomas A. Edison, Inc., made the rounds of all the big dealers in Philadelphia last week. He stopped off here on his way home from Washington and Baltimore.

The Penn Phonograph Co. note that breezy March was the best month they have ever had. From present appearances they believe that April is going to be fine. They report that goods are not coming in at a very regular rate, especially the higher priced machines, in both Edison and Victors. They believe that they could have done considerably more business in March had they been able to get the goods, and more promptly. W. P. Swartz, of York, Pa., was a visitor at their store this week. He says that the talking machine business in his section is very good, and that the general business is suffering less than in most sections.

Mr. Elwell, the manager of the Hepe talking machine department, is very much pleased with the accomplishment of his department of the big Hepe store during the month of March. The class of goods sold was of a very fine character, both in machines and records. The Heppes note that there is a shortage of a certain line of goods, which has hampered them materially.

It is reported that W. C. Holzbauer, who was for many years with the firm of J. E. Ditson & Co., who have just closed up here, has been engaged by John Wanamaker. He is to be in charge of the small goods department.

The Columbia Phonograph Co. have received a large consignment of the new records by Fremstad, Nordica and Maria Gay, which are meeting with a very big sale. Manager Henderson is taking a little trip up the State this week to look over some of the trade. Marion Dorian, the treasurer and auditor of the Columbia Co., spent a couple of days here last week.

March was an excellent month with the Columbia Co.—in fact, it was the second best month since Manager Henderson took charge of the store, the only month beating it being last December. The firm are continuing to give concerts here almost nightly.

Sol Bloom, Inc., has been succeeded by the Talking Machine Co. at 143 South Broad street. They advertise, "We have installed an innovation in the way of an inspection department for our patrons and all talking machine owners. If your machine does not work to your entire satisfaction just notify us, addressing Department A, and one of our experts will call to look over your machine and advise you of any trouble that may exist."

James Shearer, manager of the instalment department of the Columbia Co., is a very happy, though somewhat excited man these days, owing to the fact that his wife and family sail from Scotland on April 1 for this country. As Mr. and Mrs. Shearer have not seen one another for two years, it is needless to say there will be a happy reunion.

I note the following in the Allentown Democrat of March 1, 1911: "Wuchter, the Columbia Grafonola man, of South Seventh street, yesterday gave a free concert, using records furnished by Nordica and Fremstad. The crowd on the inside

of the store and on the pavement finally became so large that a detail of reserve policemen had to be summoned to keep the crowd in order. Mr. Wuchter was the first dealer to receive a shipment of these records from the Columbia factory, having placed his contract two days after Nordica signed her exclusive Columbia contract."

On Saturday, March 18, the Stephens Music House, of Norristown, Pa., opened their new graphophone department with two grand concerts, the first being held at two o'clock in the afternoon and the other in the evening. Both concerts were thoroughly enjoyed by large audiences and many demonstration records were disposed of. The concerts were given under the personal direction of Hamilton Bouvier, musical director of the Columbia Phonograph Co.'s Philadelphia office, who played several piano solos and also accompanied many of the records on the piano. The Philadelphia store has booked a great many concerts to be held during the next few weeks in different parts of the city and State and anticipate a busy time.

Among recent callers at the Philadelphia office of the Columbia were Signor and Madame Zerola and Signor Francesco Daddi, of the Metropolitan Opera House; Albert Krell, president of the Krell Auto-Grand Piano Co.; W. F. Wallace, treasurer of the General Music Supply Co., of New York, and John H. Parnham, of Hardman, Peck & Co., New York City.

H. A. Weymann & Sons report that their March business in both Victors and Edisons was very good, not only at the local store, but the men on the road did exceptionally well. Harry Cake, one of their dealers of Pottsville was here last week. A. C. Weymann was late getting to the office this morning, and the brothers wondered what was detaining him. They did not have to worry long, for while I was in the store a 'phone message came, stating the reason—it was a new baby girl. He doesn't know whether he will call the young lady Victoria or Edisona.

ADVICE TO THE ENVIOUS.

The Employe Will Gain More by Sticking to His Own Than Wishing for the Other Job.

A shrewd observer, in speaking of such clerks and other employees who are at times envious of "the other fellow's" job, adds as a word of sound advice as follows:

"See if you are filling your own position as well as or better than anyone else can fill it. Start to grow and keep on growing in knowledge and ability until you are bigger than your position. Then you will find a better one ready for you. Not the other fellow's job, but your own—the one you are qualified for and able to fill. The other fellow is taken care of and so are you. Don't worry about him—nor yet about yourself. But set about to so improve yourself, to grow so much better than the work you are now doing that your employer can't afford to keep you there."

Your time may be valuable, but if it's worth more than a dollar a minute you should seek a situation and leave the job to your understudy.

NEW YORK, APRIL 15, 1911.

WHILE trade in the majority of industries in this country has been disappointing during the past four months, the talking machine business must be considered an exception, for its volume, broadly considered, has been most satisfactory.

And this is due in a large measure to the faith of all members of the craft in the present and future of the business.

Much of the disturbance prevalent in the commercial world these days can be credited to the destruction of confidence.

There is no sound reason why business should not be good to-day, and it would be good if everyone determined to look on the bright side and pushed the wheels of progress along the road of optimism.

Ninety-five per cent. of the business in this world is done on credit; in other words, on confidence, and when that is assailed the underpinning of the business structure is bound to be shaken.

It will pay everyone to think, work and act along the lines of confidence in order to achieve success.

Business, after all, is what we make it.

When we wise mortals determine that business is bad—it is bad; when we insist it is good—it is good.

This is putting the matter in an elementary way—for, after all, the subject is as largely psychological as it is economic or political.

Now, to get down to the fundamentals.

Decisions by the Supreme Court and the superstition that Congress is a disturber of business should be eliminated in favor of the overwhelming fact that the agricultural outlook for this year was never brighter and according to the best authorities we shall take seven billion dollars out of the ground

this year, which should certainly help to correct some economic mistakes.

The members of the talking machine trade will do well, therefore, to continue their policy of optimism regarding the development of the talking machine and the future of the business. Things are coming their way, and will come their way in a larger degree, provided they are up and doing and continue to work along the same enthusiastic lines as they have in the past.

IT must not be overlooked that even in the best of times it is not easy for everyone to be satisfied in regard to the volume of business transacted. Every retailer who means to be progressive is constantly developing plans to bring buyers to his establishment. Stock must be displayed attractively, sound-proof rooms must be created, attractive windows inaugurated, effective and original publicity carried on, all with the object in view of keeping the name, place and store before the public continually.

One of the best plans in our opinion of keeping in touch with customers is to employ men for no other purpose than to call on the purchasers of instruments with the object of ascertaining if they are in proper condition.

In a great many machines some slight disorder in the mechanism either of the sound-box or the machine itself is apt to disgust the buyer with the instrument, and, instead of going to the establishment from which the machines was purchased, he oftentimes goes to another establishment to have repairs made.

By keeping in touch with purchasers of machines the dealer is able not only to please his customers, but he is also enabled to make his customers constant purchasers of records. A great many people, once they make an initial selection of machine and records, do not again come to the store, whereas if they are followed up, and the latest records brought to their attention, they will become frequent purchasers of records and other supplies.

A much larger record trade can be transacted by dealers if, instead of waiting for customers to come to their store, they will go after them. And this should not be difficult in view of the fact that every dealer has at his disposal a large list of live "prospects."

THERE has evidently been some misunderstanding regarding the recent decision handed down by the Supreme Court which held that manufacturers' agreements with distributors or retailers for the maintenance of retail prices at an arbitrary figure, are illegal.

A great many editorial writers in the daily papers have made some rather misleading and untrue deductions from the decision referred to. They have not pointed out that this decision does not affect *articles protected by patent*. Under the statutes a patentee is given the sole right not only to manufacture but to prescribe the price, and by whom, and in what manner his product shall be sold.

It has been held time and time again by the Supreme Court that the right of a patentee to fix and maintain prices of his prod-

uct does not violate the provisions of the so-called anti-trust law.

It is not improbable that inasmuch as the case at issue related to proprietary or patent medicines some writers believed that control of prices by patent was involved. This, of course, is not so. As a matter of fact, "patent medicine" is rather a misnomer, for most of the so-called "patent medicines" are not protected by patent. An interesting reference to this subject appears in our news columns and is well worth reading.

PREPARATIONS are now actively under way for the convention of the National Association of Talking Machine Jobbers, to be held in Milwaukee, Wis., in July, and the present indications are that there will be a rousing attendance, at which many matters of importance to the industry will be discussed. There are a number of matters pending which are of vital interest to the jobbers and the trade at large, and an interchange of opinions will doubtless do much to clear the atmosphere.

During the past month the Eastern Talking Machine Dealers' Association also came together and reported progress for the past year. Efforts are being made to increase the membership of this association, and to interest the dealers of the Eastern States to a larger extent in the association.

Members of the trade, be they jobbers or dealers, should make it a point to attend meetings of their associations. In this way they are kept in close touch with the trend of trade events. This keeps at high pressure the enthusiasm the association has aroused. Without enthusiasm little can be accomplished. Therefore, frequent meetings will do much to eliminate those feelings of antagonism that stand as a barrier to friendly relations between competitors. Organizations can and do assist members to reap more of the benefits of trade than the mere individual can ever obtain, for at the meetings are continually coming up the ever interesting and profitable topic of what lines are most popular, and what are least. Systems and methods are discussed, and all can learn.

The question of giving your competitor an advantage need not be considered, as all are alike benefited, and the friendly feeling that is sure to flow from such gatherings results often in explanation that otherwise may never have occurred. These meetings keep alive within one the issues that interest him most, and thus is created a taste for the higher side of one's avocation.

"DUBBING" records is now a practice of the past, so far as public exploitation is concerned in this country, since the decision of Judge Chatfield, of the Federal courts, was rendered. Possibly this nefarious business may be carried on surreptitiously, but it is doubtful. At the same time, conditions elsewhere are to be considered. For example, F. W. Horne, an American who formed and is the president of the Japan-American Phonograph Manufacturing Co., of Japan, writing from Yokohama, under date of March 14, says:

"For your information I would advise you that dubbing records of all makes is in

full force in this country, including the Victor, Columbia and Nipponophone. There is one particular concern in the city of Osaka that has dubbed and cataloged 175 of the Nipponophone records of native talent, for which they have not paid one cent to the artist for recording. They are offering and selling these dubbed records at forty sen (twenty cents gold) each. It remains to be seen whether this can be stopped by the proposed law and our attorney has advocated and requested the Bureau of Patents to so construe the copyright law. This law, if so interpreted, will only affect the artists who virtually sell the right to their voice, which in the great majority cannot be obtained. At the present time there is not any law which covers unfair competition, but I am advised that such a law is being seriously considered by the government."

It will be recalled that Judge Chatfield's opinion dealt more particularly upon "unfair competition" than any phase of the question. The defense relied upon the "patent situation" to relieve them of their liability and urged most ingenious arguments in support of their false position, but without avail. The specious reasoning was brushed aside by the court as untenable, and it would be well if the Japanese Government would accept this able decision as a governing rule. No exception can possibly be taken to it either in justice or fairness.

In the choice of a location, do not think that the lowest rent is the cheapest, or that you can hunt up customers if they do not come to you. It is cheaper to pay a high rent than to lose time in going round. But, of course, the rent must be in proportion to the available means.

A GREAT DEPARTMENT

Devoted to Talking Machines Is Now Being Built in the Philadelphia Store of John Wanamaker—Covers an Area of 6,000 Square Feet—Some Details Worth Reading.

(Special to The Talking Machine World.)

Philadelphia, Pa., April, 1911.

What will probably be the most complete talking machine department in the country as well as one of the most beautiful, is now about to be built in the Philadelphia store of John Wanamaker. It will be situated on the second floor in the middle division, opposite the grand court in which finishing touches are now being made to the big St. Louis pipe organ which, with one exception, is the largest in the world.

The plans for the talking machine department cover an area of over 6,000 square feet, and in this will be erected the beautiful Oak and Gold gallery that was purchased by Mr. Wanamaker from the German exhibit of arts and crafts in the varied Industries building at the Louisiana Purchase Exposition held in St. Louis in 1904. This gallery measures 88x28 feet, and is rich in its carvings, paintings and genuine symmetry. This gallery will be used exclusively for Victrolas, and will make, without exception, the handsomest music room in the world.

The layout for the department was based on plans suggested by Louis Jay Gerson, and include a series of rooms at one side that will be made absolutely sound proof for the purpose of furnishing privacy and comfort to record purchasing patrons. It embodies an up-to-date system of keeping record stock, there being special sets of demonstrating records in addition to the regular record stock.

No records used for demonstrating and selling purposes will be sold, and each purchaser of a record will receive a brand new record in a sealed envelope, guaranteed absolutely perfect.

At one end of the series of rooms will be the office of the manager, Mr. Gerson, while at the other end there will be equipped a first-class repair shop and stock room.

TRADE BUILDING METHODS

Adopted by Wise Merchants to Create Business.

Something is to be learned from the method adopted in an Eastern town with a view to securing the trade of the farmers of the surrounding territory. A number of the merchants of this town representing different lines of business unite in an arrangement with a man who makes regular trips through the country, distributing their circulars and printed matter and in other ways promoting their interests. He makes two or three trips monthly, covering on their behalf a radius or about ten miles. In this way the dodgers or pamphlets furnished by manufacturers find a natural outlet as well as such circulars or circular letters as may be specially prepared by the merchants. It is not unlikely that something along this line might advantageously be done in other places by talking machine men. There may be in work of this character an opportunity for some who are not more profitably employed to get busy and useful. An energetic and tactful man might make such service justify itself by its results, and at the same time become a stepping stone to more permanent and more remunerative work. The getting together of the merchants of the town for such united action is certainly commendable, and might lead to other forms of co-operation. The effort to make use to the best advantage of this itinerant service would naturally have a stimulating effect on the merchants represented, as they endeavor to provide suitable printed matter for general distribution and perhaps make special appeals adapted to the varying circumstances of the prospective customers thus canvassed, as something like personal relations are gradually established. The making of the effort would in itself be a good thing as emphasizing the too generally neglected duty of going out for business instead of simply waiting for it to come.

It is not pleasant to have debts, but it is better to owe money for a new and good installation than to lose it in an old one.

SALTER MFG. CO.
CHICAGO, ILL.

Our latest Catalogue of Cabinets is just out, write us for a copy to-day. All Salter Cabinets are equipped with Improved Patent Felt Lined Shelves.

No. 764
CAPACITY 338 RECORDS.

All shelves are numbered.

Each record has separate compartment.

Our Shelves are made of Solid Wood with Felt (which lasts), not complicated paper index files, which tear and quickly soil, also injures records.

TRADE ON THE PACIFIC COAST.

March Sales in Excess of Those for February—Conditions Generally Are Excellent—Columbia Machines as Prizes in Newspaper Contest—Shortage in Victrolas—Hauschildt Music Co. to Continue Talking Machine Lines—Heine Piano Co. to Reopen Department in Downtown Store—What the Various Managers Have to Report Anent Business.

(Special to the Talking Machine World.)

San Francisco, Cal., April 7, 1911.

Eugene W. Scott, local manager of the Columbia Phonograph Co., reports that business conditions in this city are excellent, and the March sales have considerably exceeded those of February in all the lines which are carried by this company. Mr. Cyrus, traveling salesman for the local office, has been spending some time in the Sacramento country and has found business in that region very good, considering the high water following the heavy rains in the late winter. The San Francisco Chronicle, which is running a large prize contest, has added a Grafonola Regent to its list of prizes. A matter of considerable congratulation for the office in this city is the fact that the San Francisco Call will inaugurate a big contest on April 1 in which it will offer \$1,200 worth of Columbia machines. Considerable interest has been shown of late in the records of singers who have been in San Francisco during the past few weeks. Following the Bonci concerts an especially heavy sale of Bonci records was noticed, and already interest is being shown in the Alexander Heinemann records, as Mr. Heinemann is soon coming to this city.

Andrew G. McCarthy, vice-president of Sherman, Clay & Co., is still laboring under the same difficulty of getting enough Victrolas to supply the orders which this firm are constantly getting from various portions of this end of the country. The Eastern trade is so busy, he says, that the manufacturers find it hard to supply both sides of the continent, and the West is suffering slightly for that reason. Shipments are being received all the time, but orders still keep ahead of the shipments. It is expected that larger shipments will soon be forthcoming. A decided increase in business during March of this year was noticed over that of the same month last year, and the outlook for the coming months is very encouraging.

The Hauschildt Music Co., who are now finishing their first month's sale of the stock of Clark Wise & Co., will carry all the lines of talking machine goods that were carried by the retired firm. Richard Wise, who has been making a specialty of talking machines for years with the Clark Wise Co., will take charge of this department on April 1 for the Hauschildt Music Co. This firm will

spend considerable effort in extensive advertising, and expects to build up one of the largest talking machine departments on the Coast.

J. J. Black, of the talking machine department of the Wiley B. Allen Co., speaks very highly of present business conditions in this line. City trade, he says, is exceedingly good. Among the branches which are making a good showing are the Oakland and the San Jose stores. Mr. Black notes an increased demand for the higher class of goods during the past few months. The general tendency is toward the Victor-Victrola and other high-class goods. The new style Victor-Victrola now on the market about three months is selling very well and is supplying a long-felt want. Along with increased sales of this machine is to be noticed a decrease in sales of the horn machine. Mr. Black mentions the lack of Victrolas, orders for which are more numerous than the goods to fill them. A large shipment is expected within two weeks. F. P. Corcoran will soon make a business trip, visiting various branches of the Wiley B. Allen Co. He will devote his time specializing on the Victrola end of the business for the spring selling campaign. Lawrence Wilson, who has been with the Wiley B. Allen Co. for many years, will now serve that firm in the capacity of publicity manager, and intends to arrange for some attractive window displays in various branches at once.

While the record business is making hardly as great a showing, in comparison with that on machines, as it did a month or so ago, it is keeping up extremely well. Among the records which are especially popular just now are a number of selections from grand opera, the Neilson records, and the admirable Scharwenka records of the Columbia Co.

The Heine Piano Co., which started out in their downtown store with a talking machine department, which was later abandoned, announced their intention recently of reopening this adjunct to the business, and are now making preparations. An entire floor will be given to this department, and the stock will be put in within a few days. With the new arrangements he has made for the conduct of the talking machine business, Mr. Heine is confident of making it a success.

W. A. Voltz, Western representative of the National Phonograph Co., has been making his headquarters here all month, but has been away most of the time making trips to outside points all over northern California. He reports great success, and considers conditions in this district favorable for a good season. He expects to complete his work in this vicinity before long.

A. R. Pommer, head of the Pacific Phonograph Co., is getting in a lot of special talking machine goods, which he expects to use in extensive window display work. This will be one of the fea-

tures of his advertising campaign this summer, by which he expects to bring out a larger demand for Edison goods. This company are keeping their large storage space well filled up, and will continue as before to keep their stock complete in every way.

The Fitzgerald Music Co., of Los Angeles, handling the Columbia line, are making a strong feature of their talking machine department, making it one of the main features in all publicity work.

THE PHONOGRAPH IN MEDICINE.

By GORDON LLOYD, M.D.

It is now proposed to use the phonograph as an aid to diagnosis.

Perhaps the greater part of what we know of the heart and its diseases has been learned by listening at the chest. Each contraction of this vital organ is accompanied by two sounds, the "first" and "second" sounds, respectively, and when anything goes wrong with the heart the normal sounds are altered and new sounds added. Of these added sounds, the "murmur" caused by the leakage of the valves of the heart is most significant.

The writer has long revolved in his own mind the idea of utilizing the phonograph as a means of recording these sounds, so that the physician might study them at leisure in his own office, submit them to consulting specialists and reproduce them before students for purposes of instruction. And now comes the news that Cabot of Boston, probably America's leading diagnostician, has taken up the plan seriously and intends to harness this triumph of Edison along with the X-ray and other mechanical contrivances for the study of man diseased.

By this means all the remarkable "heart cases" discovered in the great clinics of Berlin, Vienna or New York may be preserved and issued to students the world over as "records" for study. And in consequence our ability in one of the most elusive and difficult phases of medicine will be tremendously enhanced.

The mortality records show that physicians themselves die from heart disease more frequently than from any other cause. And by the aid of the phonograph the time will come when the doctor may listen to his own heart. Moreover, the taking of phonographic records at regular intervals will enable us to compare accurately the action of the heart to-day with its action three months ago.

Also breathing sounds, which tell much of the condition of the lungs, may be recorded, preserved and compared. And our great-grandchildren will be able to hear us breathe and the beating of our hearts as well.

SIXTEEN YEARS' EXPERIENCE

Handling Talking Machines, Records and Accessories

Does Count

VICTOR

Experience is a great teacher.

The results of our experience are yours to command.

Especially if these goods are handled exclusively. Just how much it counts you can easily demonstrate to your own satisfaction by placing your orders with us for Victor and Edison Machines, Records and Supplies, and becoming familiar with Eastern Co. service.

177 TREMONT STREET

BOSTON, MASS.

DISTRIBUTORS OF EDISON AND VICTOR MACHINES, RECORDS AND SUPPLIES

EDISON

If you do not handle our GRAND OPERA NEEDLES you are not supplying your customers with the best.

SAINTLY CITY GLEANINGS.

Trade Optimistic Anent Business—Exhibitors at Household Show—Columbia Co. Having Big Call for High Priced Machines—O'Neil's Knowledge of the Orient Cleverly Utilized—Representative Dealers Kick About "Small Fry" Who Cut Prices—Recent Visitors from Various Parts of the State—Other Items.

(Special to The Talking Machine World.)

St. Louis, Mo., April 8, 1911.

The trade comment among local men is largely centering upon the increased size of bills for single sales. Not only is a better class of machines being sold, but more records are going with the machines on first orders. "It is nothing uncommon," said Manager Robinson, of the Thiebes Piano Co., "to sell a \$300 order," as he displayed three \$100 bills that had just been passed to him. Only a short time ago such sales were very uncommon. I attribute this largely to the great strides that have been made in the manufacture of records. Within the last year the record improvement has been especially noticeable. Mr. Byars, of the Columbia Co., spoke of the same trend of the trade since the disc machines have to compete with the cylinder machines. "Now we have less trouble selling a higher-priced machine than we formerly did the low-priced machines, and the cylinder machines have almost disappeared from the city trade. They are still being sold heavily in the country." In all of the downtown stores March was spoken of as an especially good month.

The Aeolian Co. had a display of Victrolas and the Columbia Phonograph Co. a display of all makes of their disc machines at the Household Show at the Coliseum during the two weeks of that exhibition, and both companies express gratification at results.

C. L. Byars, manager of the Columbia retail department, said their company had made a number of sales of the "Favorite," the \$50 model, at the Coliseum, as well as of other Graphophone styles, and have numerous prospects on their books, and expected to realize several thousand dollars' worth of business from the exhibit. The Columbia policy at the show was to play anything the customer requested, the noise being too great to permit a set program. J. L. Reid, of the Columbia retail department, was in charge of the exhibit, and made many friends by his work there. He was assisted by A. F. Butterfield and Mr. Byars.

At the Victor display, in a tea garden, opera records were used, chiefly, and Mr. Levy, of the Aeolian Co., reports a number of sales. Mr. Crisp, of the Aeolian retail department, was in charge.

The Columbia Phonograph Co. have been consistently using one of their large display windows for a purely record display, and find it very profitable. The discs are shown and variety is given with large placards announcing features with prices. This window brought heavy sales on the special 10-cent demonstration record. The second window at the storeroom is used for a machine display.

H. N. McMenimen, sales manager for Sheip & Vandegrift, makers of the "Music Master" horns, was here recently.

Several records by the Paragon Quartette, a St. Louis German organization, are attracting considerable attention in the Victor stores.

Ambassador O'Neil, of the Victor Co., was a visitor here recently who attracted more than passing attention. He was full of interesting tales of his experiences in the Orient, where he obtained a number of records of Japanese and Chinese music and speeches. While at the Aeolian store a local Chinese entered, and Mr. O'Neil was sent to greet him, and through his ability to converse with the Celestial, Qung Long Lee left the store the owner of an expensive Victor machine with the promise that some Chinese records would soon come to him. At the Thiebes store Mr. O'Neil is chiefly remembered for his intimate talk to the salesmen on the making of records and of the points to be noted in selling. Manager Robinson declares that the enthusiasm and interest given the sales force through that hour's talk is the best

one incident he can remember in connection with his sales force.

R. A. Thompson, recently of San Antonio, but who was introduced to the piano trade through his employment with the Kieselhorst Piano Co., in this city, is talking machine prospect clerk with the Thiebes Piano Co. Mr. Thompson was recently called home by the illness of his father, and decided not to return to the Southwest.

The St. Louis Star, a local daily, is offering 200 graphophones, furnished by the Columbia Phonograph Co., as prizes in a circulation contest.

G. Hill, of Gill & Hill, dealers at Caruthersville, Mo., has been in St. Louis for two weeks receiving medical treatment.

Wholesale trade has been especially good with the Edison machine and records, according to Mark Silverstone, manager of the Silverstone Talking Machine Co., the Edison agent here. He says, however, that retail trade has held up excellently.

The A. F. Mengel Music Co., Boyle avenue and Olive street, are planning enlarged quarters, and will add greatly to the space allotted Victor machines and records.

Philip Knapp, of Knapp Bros., prominent Columbia dealers in Belleville, Ill., has been much in St. Louis recently, being a member of the committee from his city engaged in promoting a traction franchise across the city bridge into St. Louis. Other retail dealers recently in the city were: Wayne Allen, of the Allen Music Co., Columbia, Mo.; C. N. Lanhart, Mattoon, Ill.; W. W. Fischer, Murphysville, Ill.; John Prada, Paris, Mo.

Dunbar Kirtland, of the Columbia Phonograph Co., spent a three weeks' vacation during March at Helena, Ark.

Judging by some comment heard among the downtown retail dealers there is going to be an argument soon between them and the jobbers over the present plan of permitting machines to be handled by small dealers in the city. Said one downtown manager: "Our greatest handicap at present is price-cutting by the little fellow. While it does not seem fair for me to criticize the small dealer, perhaps, he is certainly not fair to us in the way he does business. I am speaking now only of the dealers who carry only one or two small machines in stock, and when they get a possible purchaser for a larger machine take him to the home of some person to whom a downtown store has sold a good machine and depend upon the demonstration there to make the sale. That in itself is not so bad, but when they tell the customer, 'Now, I do not keep that machine in stock,

but I can get it for you and save you \$10 or \$15.' It even happens that this small dealer will send his possible customer into our store to see machines with the promise of saving him money when he gets ready to purchase through him. This imposing on us is not as bad as the cutting feature. That is demoralizing the trade, as it is becoming fairly well known. We think that those of us who have money invested in machines should be permitted to have fair profits, and that the jobbers should realize through their own retail experience that the small agent does the trade more good than harm. We don't want to see a cheap machine kept in the corner cigar stand or newspaper depot as an advertising feature become a competitor with us, but that is virtually what it becomes when the owner is permitted to get on the wholesale books as a dealer, and that one machine is about all some of the small dealers have to show for a stock."

A. Colegrove, Edison dealer at Taylorville, Ill., has been quite seriously ill, and Mark Silverstone, of the Silverstone Talking Machine Co., visited him.

Wayne Allen, of the Allen Music Co., Columbia dealers at Columbia, Mo., spent March 13 and 14 in St. Louis to better acquaint himself with the Columbia Table Graphophone, regarding which instrument he is an enthusiast. He reports prospects for the sale of 10 to 15 of this style of graphophones within the next few months.

R. P. Bartlett, manager of the Des Moines store of the Columbia Phonograph Co., spent the week of March 20 visiting his parents in this city, his father being the head of the Bartlett Candy Co.

Charles Kauffman, traveling sales manager for the Columbia Phonograph Co., left March 21 for a two months' trip through Missouri.

John A. Hurtmiller was a Columbia visitor the week of March 20, combining business with pleasure.

C. M. Morris, who has been identified with the local store of the Columbia Phonograph Co. for several years, has been transferred to Des Moines, Ia., leaving his work here March 19. He was succeeded by R. E. Bruce, late of the Hamilton-Brown Show Co.

Joe Ryan, formerly of the shipping department of the St. Louis Talking Machine Co., is now with the Columbia Phonograph Co. in the shipping department.

In advertising it is not altogether what you say, but very much depends on how the man you are after feels when he reads what you say.

Spring Housecleaning

begins this month and vacuum cleaners will be in greater demand than ever before. Dealers who act quickly can secure some of this profitable business.

REGINA.

Pneumatic Cleaners

are liberally advertised for the benefit of the trade and carry a name which your customers know and recognize.

REGINAS have double suction pumps and do the work twice as quickly and with less effort than others.

They are easy to operate and easy to sell—beautifully constructed and fully guaranteed. Made in our own factory by skilled workmen and sold at a reasonable price. We have hand operated and electric models.

Your jobber can supply you with Regina cleaners if he carries them. If not, write to us for full particulars. The proposition is an inviting one.

The Talking Machine Trade in New England

BUSY TIMES IN PORTLAND, ME.

Steady Increase Noted in Talking Machine Sales—Columbia Store Moves—Remarkable Business Showing.

(Special to the Talking Machine World.)

Portland, Me., April 8, 1911.

Lewis W. Frickett, manager of the talking machine department of Cressey & Allen, handlers of Victor and Edison machines, gives out some fine, cheery words, saying: "Business in Portland is very good indeed. We look back on one of the most profitable winters that we ever had. We have noted particularly, with a great deal of satisfaction, the quality of business which we are getting. There is no question in our minds but the high-priced goods and records are what the people want."

The Columbia Phonograph Co. recently removed to 550 Congress street, corner of Oak, where they have large and handsome quarters. George P. Donnelly, manager, says that their business the last month increased 150 per cent. over the same month of a year ago, which is a splendid result of hustling work. Continuing Mr. Donnelly remarked: "We are looking ahead to an excellent business during the summer months, and we believe that our new show window, which is second to none, will be excellent advertising in many parts of the country, as thousands of people going to and from the summer resorts in Maine stop over in Portland. About \$4,000,000 are spent every summer by people vacationing in northern New England."

Mr. Donnelly also says that the new Grafonola "Favorite" is all its name implies—a favorite—and they are having hard work to keep pace with the demand. They are likewise having a fine grand opera record business, and especially on the records made by Mme. Nordica. The people of Maine apparently take pride in the fact that she is a native of this State.

Mr. Halfpenny, wholesale man, is pulling off some good contracts in this section.

TO HANDLE GROWING TRADE.

(Special to the Talking Machine World.)

Fitchburg, Mass., April 9, 1911.

F. B. Matthews, the Edison dealer, has built two new booths to care for his growing patronage. He

is one of the hustling dealers of the State, maintains a fine store, and is working hard to create a big volume this year.

A PROMINENT "TALKER" MAN.

W. D. Wilmot Draws Attention of Newspaper Artists—A Working Optimist.

(Special to the Talking Machine World.)

Fall River, Mass., April 8, 1911.

Newspaper artists are strong followers of talking machines, it is evident, from the way they are adopting various ideas which surround the indus-

try. Here is one of W. D. Wilmot, the big talking machine dealer of this city, who handles Edison and Victor goods. He is a big commercial booster and has done more to aid the growth of optimistic conditions than any other one person. Mr. Wilmot holds the secretaryship of the Merchants' Association, where a synonym for Wilmot is Optimism and its complement is Work. He is a big dealer in type writers, sporting goods, office supplies, etc., as well as handling talking machines, and his working force varies from ten to twenty people, according to the season.

Mr. Wilmot is a Mason and a Shriner, member of the A. O. U. W., N. E. O. P., and several other societies. He is highly esteemed by everyone who meets him and ranks high in the social and commercial world of Southern Massachusetts.

NAMING BAGSHAW NEEDLES.

Referred to as "No-Scratch" Needles in Enthusiastic Letter of Man Who Had Given Them Thorough Trial.

(Special to The Talking Machine World.)

Lowell, Mass., April 7, 1911.

Needles do more to mar the playing surface of records than perhaps any other cause. Various attempts have been made to manufacture needles which will not at any time scratch or destroy the surface. Recently W. H. Bagshaw, the big needle house, sent a package of needles to a man who complained about the destroying of his records by various kinds of needles. He tried the Bagshaw make and was so enthusiastic over their qualities that he voluntarily wrote a letter of thanks and appreciation, dubbing the needles with the name of "No-Scratch." The letter in full is reproduced elsewhere in this issue and is certainly a strong testimonial to the achievements of W. H. Bagshaw toward perfecting a needle that will accomplish those ends.

W. H. Bagshaw, of this house, says: "Although we believe our 'No-Scratch' needles are the best toward saving records on the market to-day, our experimental department is still working on the matter and we are not going to be satisfied till we produce a needle that will be an innovation to everyone. There is an art in making needles that is only secured after constant years of study and production, and when we offer the 'No-Scratch' needle to the trade, it is the last word on the subject. We are extremely glad to be able to offer these to the trade, and orders already received for these amount to a large quantity."

Geo. H. Watson, of this city, who gave the Bagshaw Co. the unsolicited "No-Scratch" praise, is treasurer of the W. A. Mack Co., large sheet-iron workers, this concern ranking with the largest houses in the city.

CONCERTS IN NEW HAVEN.

Much Excellent Publicity Secured for Columbia Line by That Method—Efficient Correspondence—Linenoid Horns in Demand.

(Special to the Talking Machine World.)

New Haven, Conn., April 7, 1911.

If there is a stroke oar for piano records, it is H. M. Blakeborough, manager of the Columbia Phonograph Co., who is a decided enthusiastic Columbian on Scharwenka's records. Likewise he is strong on Nordica's records, which are the latest addition to the Columbia list of artists.

Mr. Blakeborough is meeting with fine success giving concerts, one in particular being given at the Colonial Club. The morning papers gave big space to this one and called it "a rare musical treat." All their big artists contributed their part to this concert via the Columbia Grafonolas, "Mignon" and "De Luxe."

In his business digging, Mr. Blakeborough has given considerable study to efficient sales correspondence, and as this is the writer's hobby, there were mutual thoughts at once. In the specimens shown, written in a most chatty style, are fine examples of compelling the reader's attention.

Linenoid Recording Horns are a big seller with the Pardee-Ellenberger Co., as recording is a fad that is growing constantly with machine owners. The Linenoid horn is handsomely finished in black enamel and gold striped, at a retail price of but \$2. This company only sells to jobbers and dealers who want one or more, are requested to order from their jobber, who will either have them in stock or can easily secure some from the Pardee-Ellenberger Co.

A WAR TALK TO SHARP NEW ENGLAND DEALERS!

A few miles from us on April 19th, 1775, the embattled farmers stood and fired the shot heard 'round the world. They were fighting for liberty and a deliverance from oppression.

To-day, the embattled talking machine dealer is fighting from a deliverance of snail-speed service. It is causing him need'ess worry, anxiety, disturbance of mind, loss of patronage and loss of profits. A 1911 Revolution is eminent and one shot will be sufficient to throw off that slow service bondage which is gradually destroying the red corpuscles of a flourishing retail business and its prestige.

Make that time NOW and shoot in a postal to the Boston Cycle & Sundry Co., Exclusive Edison jobbing generals, and learn how their equipment can be your base of supplies. No matter where you are manoeuvring for retail sales, you will have plenty of ammunition to make the customer surrender, the former being invaluable for close fighting when you MUST HAVE FAST SERVICE.

Exclusively Edison and Exclusively Wholesale.

BOSTON CYCLE & SUNDRY CO., 48 HANOVER ST., BOSTON, MASS.

FROM OUR BOSTON HEADQUARTERS

ROOM 12, 178 TREMONT STREET, G. W. HENDERSON, MANAGER.

(Special to the Talking Machine World.)

Boston, Mass., April 10, 1911.

The trade turned the quarter pole of the year business track in very satisfactory time. When the word "go" was given three months ago, with everyone in fine form, a breaking of business sales records was expected, and averaging the performances so far of all contestants, it can be said that the trade as a whole had a normal growth over 1910. While true that the fraternity has had a lot of things to contend with this year, yet their energy in seeking business is not only most commendable but has been prolific of this good result. "Educate the public" is the slogan, and the influence of good advertising, concerts, recitals, and other promotive work are creating new talking machine devotees daily. A maintenance of this aggressive policy should make 1911 the most profitable year in the industry's history. While in past years the coming two or three months have not compared quite as well as a holiday season, the outlook this year has never before been so encouraging and a most substantial volume of business is expected by jobbers and dealers alike.

Occupying Larger Victor Quarters.

Jordan, Marsh Co. have removed their Victor talking machine department to their new building, where they now enjoy most spacious quarters. Four mahogany soundproof booths, reported to have cost \$3,200, with consistent, pleasing furnishings throughout, make this one of the most ideal departments in the country. E. B. Holmes, manager, says the response from people who enjoy purchasing in luxury, so to speak, has been large.

Boyd's Delightful Pastime.

F. S. Boyd, the well-known talking machine man, is serving on the jury, a job which he likes immensely (?).

Edison Business Boosters.

H. R. Skelton, the Edison order scout, has been diligently following the blazed trail about this section of the reservation. He is acquiring a fine bunch of scalps in the shape of Edison business boosters, the names of which not only make a fine adornment for his wigwam but incidentally testify to his prowess as a hunter.

Chamberlain as an Automobilitist.

A. W. Chamberlain, manager of the Edison department of the Eastern Talking Machine Co., has been presented with an \$800 Buick roadster by his friends (or enemies) and he will soon be spinning along the bark of trees and hitting other obstacles in the path of the auto novice. No! A. W., I don't care for a ride.

Peck Makes Change.

Cecil A. Peck, for many years with the Victor department of the Oliver Ditson Co., is now associated with the Victor end of Henry F. Miller & Sons Piano Co.

It's "On Again."

It's "on again" at this writing for that department store talking machine manager, the many changes of which have kept the writer busy following. As The World likes to give authentic information, the manager's name is withheld for fear it will be but a memory ere this appears. To those who like alliterations, how is "myriad managers?"

Cooper Primed with Suggestions.

Charles R. Cooper, manager of the Edison end of the Boston Cycle & Sundry Co., "exclusively Edison and exclusively wholesale," has been dopping over dealers' retail problems and says he has some fine suggestions to offer the trade. They are now in process of completion, and dealers who are fortunate enough to secure this service evidently will have considerable aid.

Mr. Cooper adds that business is holding up fine and he anticipates an April far ahead of any previous similar period.

Among the recent visitors to the Boston Cycle & Sundry Co. was Mr. Gove, of the Brockton Sporting Goods Co., Brockton, Mass. Mr. Gove reports business as flourishing there.

Guy R. Coner, the popular road man of the Boston Cycle, leaves to-morrow for a trip through Maine, New Hampshire and Vermont.

Mistaken Ideas About "Talker" Departments.

To a talking machine man department stores have funny policies anent their talking machine departments. One concern in particular relegates talking machines to a lane leading off the shipping by-path, where a blue print and guide are almost necessary to find it. This house is up-to-date and progressive in every other department, and when there is no fluctuation in talking machine profits—guaranteed large—practically speaking, why hide the department? Even with this handicap the manager is making good; he is one of the most experienced men in the business, and when the writer advocates giving the department a "show," he does so with an assured feeling that the change will be most profitable to the house. He has found by experience that this department is hidden, and if it is now making good, with people wasting time doing the Christopher Columbus stunt, the business volume will be tremendously increased if only given a half-way prominence.

Meeting of Eastern Talking Machine Associates

The Eastern Talking Machine Associates held their regular monthly meeting at the company's headquarters on the 30th ult., when arrangements were completed for their coming minstrel show, which is to be given April 17. W. J. Fitzgerald, on behalf of the committee, reported splendid progress. The famous comedy twins, Messrs. Brown and Fitzgerald, the fun cut-ups, promise to rival last year's success, and Old Mother Gloom won't even have a look-in on that night.

A. W. Chamberlain, president, sprung a surprise by introducing as the first speaker of the evening W. D. Wilmot, of Fall River, who made an interesting speech on "What is the best service a jobber can render the dealer?" which was enthusiastically received. The next speaker was George K. Cheney, mechanical and laboratory expert of the Boston Talking Machine Co., who gave an excellent and valuable talk on "The art of making both disc and cylinder records." Mr. Cheney has been identified with record making from its early beginning and knows the business in every detail. Aside from this he is a fluent speaker, which, plus a subject well in hand, is most entertaining.

Some Interesting Data from Mr. Taft.

E. F. Taft, general manager of the Eastern Talking Machine Co., gives some long-time information when he says that the Eastern Co. have been in the field sixteen (16) years. In the talking machine industry this extensive experience should be a great aid to dealers, as the company has gone through a period covering every phase of selling. As an idea of this long time, which will be appreciated by talking machine men, it can be said that if Mr. Taft started playing 2-minute records 16 years ago he would have played by to-day 4,204,800 records.

Growing Columbia Trade.

Manager Arthur C. Erisman, of the Columbia headquarters, has received a fine unsolicited letter from superintendent of the Pierce School, Manchester, saying that while they originally purchased a Columbia for marching, they have changed their decision and are using it to give the scholars a course in grand opera.

Mr. Erisman also gives out the gladsome tidings that their March business was the largest for any month in the history of the house, and this means in excess of any December or other notable month. Naturally he is a little elated at this achievement, but adds, smilingly, "While March was immense, it probably won't stand very high in the list when 1911 closes. I have just bought a secret tonic for business building, so watch how we grow."

Entertains with Victor Concert.

At the recent banquet of the Pilgrim Publicity Association at the American House, Harry Rosen, the School street talking machine dealer, furnished

the music, playing a number of songs in which the diners joined. This is the big boosting New England association, and its membership comprises all leading advertising and publication men.

Mr. Rosen gave a similar concert at the fair of the Evangel Chapter of the Epworth League, where the program was continuous.

Concert giving is becoming quite a fad, and Mr. Rosen is playing at a number of them. He uses a Victor machine with a 24-inch bell brass horn, with loud needles.

A Popular Talking Machine Man.

"Billy Fitz" is the hail word of most everyone who knows Wm. J. Fitzgerald, who has been with the Eastern Talking Machine Co. for a number of years. It goes without saying that a service of

WM. J. FITZGERALD.

this character fits Fitz (no joke) as one of the most versatile men in the business. Aside from the business end, he has cultivated the musical end of the profession, and to-day he knows the leading artists of national and world renown, while locally he knows everyone, a large majority of all being personal friends. When the former are in town they seldom fail to drop in to shake hands with "Billy Fitz." Mr. Fitzgerald has worked in every department of the Eastern Co. and can repair an Edison or Victor as easily as he can sell them. His hobby is selling governors, having sold Governor Foss, ex-Governor Draper, ex-Governor Douglas, ex-Governor Russell and others.

THE GROUCH IN BUSINESS.

An expert on grouchiness in business men addresses these poor afflicted merchants in these sharp-pointed observations:

"Your mouth is drawn down at the corners and your brow is wrinkled because of your habitual frown. Your grouch has been visible on your face so long that it has trained the muscles so that when you relax the grouch look is still there. You are a hard loser, and when things go wrong woe unto those who come into your presence.

"You pity yourself and consider that you are an abused man, and this self-pity makes you a sort of a hero unto yourself. When you see the other fellow have a grouch you denounce him; that's always the way with a grouch, he criticizes the thing in another which he himself is possessed of to a greater degree.

"You have some good qualities, every one has, but you let that grouch of yours so completely overshadow your virtues that the world only sees the grouch.

"This grouch of yours is going to ruin your stomach, your health and your business unless you wake up and get rid of the habit."

You can sell a Columbia Grafonola to any man who has \$50, \$100, \$150 or \$200 to spend on a musical instrument and you have a first option on all the money he is ready and able to spend for records.

Columbia Phonograph Co., Genl., Tribune Building, New York

THE THIRD DEGREE.

How the Authorities at the Famous Cherry Hill Prison Wring a Confession from a Suspect by Means of the Talking Machine—Another Notch in the "Talker's Gun Stock."

As special correspondent for a magazine whose sole aim is to increase the popularity of the talking machine, it is my pleasant duty to follow up all clues which may result in new laurels for my paper, and the wonderful instrument it represents.

For some time previous to the day upon which this story opens, I had read a few scattered paragraphs in the papers about the use of music in connection with prison work. The Salvation Army and philanthropic societies in general, so said these paragraphs, had found music of great assistance in soothing the prisoners' minds into a state of calm, which enabled them to absorb the word of God. As Cherry Hill was the prison in which melodious conversion was most popular, it was there I journeyed.

"I am very glad to know you, Mr. Middleton," said the warden cordially, as I was ushered into his private office, "and really your calling just at this time is most opportune. From your card I judge you are a talking machine expert."

"There is very little I do not know in that line, sir," I answered modestly.

"Very good, I am glad to know it," continued the warden, "for I am in a position to put your knowledge to a most severe test. We have a particularly vicious character locked up over there"—he pointed through the office window to where the grim outlines of one of the prison wings showed sharp and clear in the afternoon sunshine—"and I mean to make him confess. I have tried the sweating process without the least effect; in fact, there does not seem to be a redeeming trait in the man, but, at last, we have arranged for a final ordeal, which we hope will break down his sullen reserve and send him to the chair."

"What is his crime?" I asked with growing interest.

"One of the most dastardly known to the criminal calendar," he replied. "A little girl eight years old was kidnapped from the lawn of her father's home last Wednesday night, and her body was found frightfully mangled in an old house on the Chelsea road early this morning. As Jim Slater was seen in the neighborhood shortly after the crime, he was arrested, and after Captain Dennis had questioned him at City Hall, he was sent down to me for a further sweating in the hope of making him confess. We have practically no evidence, but there is something so positively devilish about his personality in general, and in his reckless bearing that almost confirms his guilt."

"What is your plan of campaign?" I inquired.

"I am coming to that now," he went on, flicking the ashes carefully from a long black cigar, "the little girl's father is the owner of a talking machine, and often of an evening, he would ask her to record what she had been doing during the day, or recite a nursery rhyme, or perhaps, sing a little song into the horn, for this father was so fond of his little girl that he loved to hear her

fresh young voice even after its owner was in the realm of slumber. I have the machine and a number of records made by the child locked up in the closet over there, and I want you to hear the records and decide for me which is the best for our purpose. Then I will have Slater brought in while we determine the effect of her voice upon his nerves."

He went to the closet and took out the talking machine. I set it in operation, playing all the records one by one.

"I think this is the most appropriate," I said at last, taking one from its box, "because it is a song. Children when alone are more apt to sing than to talk, and, perhaps, she was singing this very lullaby when attacked, who knows?"

"I agree with you," cried the warden enthusias-

THE VISION IN THE PHONOGRAPH.

tically, and he touched the bell on his desk. A guard came in and saluted his chief.

"Bring Slater up, Maloney. You have better slip on the bracelets, too, I guess. We can hardly afford to have an accident happen at this time, do you understand?"

"Yis, sorr," drawled Maloney and withdrew.

"Now, Mr. Middleton, is the machine ready?"

I answered in the affirmative.

"All right then, I will arrange my theatricals accordingly." The warden arose and going to the windows, pulled down the blinds, making the office as black as night.

"When I throw on this light," he explained, at the same time pressing a button which flooded the apartment with blinding radiance, "start the concert."

He had no sooner turned off the light when the door opened and two figures entered—the guard and his prisoner.

"Well, going to try some more of your damned tricks, are you?" asked a deep voice with a ring of bravado. "Fire away! If you think your bum theatre nonsense will phase me, you are off your base, old man. I know you and your third degree. You may have sent some innocent men to the chair by your rotten show, but not me, see?"

"Slater!" cried another voice from the darkness, which I recognized as the warden's, "we've got you just where we want you, and it will be very much better for you to make a clean breast of the whole affair and have done with it. I know beyond the remotest shadow of a doubt that you killed Madge Maitland!"

"You lie like hell," answered the prisoner easily.

A faint click sounded from across the room, and a great white light swept the gloom away and disclosed the accused man, his manacled hands raised to shield his face from the glare. The light was my cue, and feeling for the starting lever—the talking machine was in the shadow—I pushed it over. From out the horn came the voice of a child singing a lullaby to its doll. Slater dropped his hands and stood for a moment in a sort of a trance with hair erect and face pasty and gray with terror.

Then from between his chattering teeth came the words, "God in Heaven, it's her! I see her comin' down the path in the moonlight. It's her ghost came to take me to hell. For God's sake, take her away; don't let her touch me!" He screamed and his features twisted themselves into a hideous mask of agony. Sinking upon his knees, he held out his arm in a final appeal for mercy from the spirit which his fear had created, but the song went on, the thin childish soprano unruffled and unheeding.

"Take her away, I say! God, she's got me; I feel her icy fingers on my throat; one of her curls is twinin' around my finger; it's cold and clammy like a snake; it's bitin' me! Take it off before it poisons me! O God, I'll confess; I done it; I killed her; I'm willin' to die; only don't let it bite me; don't let her take me to hell." His voice sank to a gurgle and he fell to the floor with a moan.

"Raise those blinds, Maloney," came the even voice of the warden. The white light went out and was replaced by the cheering radiance of the setting sun, which flooded the windows with red and gold and sent a path of glory across the floor. It touched the upturned face of the prostrate man, bringing its agonized expression into horrible relief. The warden knelt down and felt the pulse beneath the manacles. "The district attorney has lost a job this time," he remarked, a tinge of regret in his voice, "the prisoner is dead."

HOWARD TAYLOR MIDDLETON.

The Hawkins Music House, who have recently moved into new quarters on Merchant street, Decatur, Ill., have announced that they will shortly add a talking machine department and an organ department to their store.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

General Conditions in the Talking Machine Trade Much Better Than at the Same Time Last Year—Great Increase in Sales of Machines and Records—Liberal Advertising the Rule with the Manufacturers—Jobbing Off of Odd Lots of Records at Low Prices a Real Trade Evil—Amendment to Copyright Law Introduced in Parliament—Census Figures for 1907—New Styles of Perophone Machines Please the Trade—J. E. Hough, Ltd., Win Suit Involving Record Order—What Is Offered in the New Record Lists of the Different Companies—Murdoch & Co.'s New Sound Controller—Inaugurate British Shopping Week—George Robey Starts Action to Prevent Use of Name—Gramophone Co. Shares at £2—Herbert's Activity Impresses British—Introduce Jap-Fiddle—Some Special Records Put Out by the Various Companies That Are Worthy of Particular Attention—Good Reports from the Talking Machine Houses in the Provinces.

(Special to the Talking Machine World.)

London, E. C., April 6, 1911.

Unlike even time last year, talking machine conditions could scarcely be more firm and bright than at the present period. Sales have maintained splendidly, and although one does not expect trade to increase now, it is a remarkable fact that in more than one instance the past month's trading figures are ahead of the busiest times experienced last season. Proportionately, the greatest increase is to be found on the record side, and while machine sales are certainly very good, a noticeable decline is apparent now that the days are lengthening. The manufacturers reckon not of it, however, for if anything, their output of publicity literature is greater than ever, not to mention the substantial amount of newspaper advertising still in force. And in this connection it is a welcome sign of the times that many dealers too, profiting by example rather than precept, have exercised a maintenance of local publicity schemes, which has had a most beneficial effect upon sales. Public interest in the new issues each month is still effective, and a continuance of the present policy of manufacturer, factor and dealer, is the best possible method for the propulsion of sales.

The foregoing indication of things is perhaps all the more satisfactory when one considers the many drawbacks incidental to this industry. That of chief concern at the moment is unquestionably the jobbing-off at any old price of the seemingly almost inexhaustible stocks of disc and cylinder records—some bought of manufacturers who have discarded certain matrices, others of bankrupt concerns. This evil has unfortunately been pregnant more or less for the last three years at least. Either the great stores have overloaded their stocks with a lot of out-of-date stuff that it is difficult to sell, or there is a certain clique going about the country buying up record stocks of dealers on the verge of financial ruin. It may be both. But whichever reason holds good the evil is with us all the time and the legitimate trader who would foster healthy trade methods, is considerably handicapped in the face of this price-cutting competition. Disc records at 6d, cylinders as low as 3d, and many very good records at that, offered for sale in various parts of the country, is creating a feeling of insecurity in the minds of the small dealers who, one invariably notices, console themselves with the thought that the talking machine industry is going to the dogs. Manufacturers have no desire to encourage the custom of this type of man, and with that the whole trade will agree, yet meeting facts squarely, one must recognize that here the matter does not end. Other really energetic and enterprising retailers ever and anon, adversely feel the effects of these job-price records, and it therefore behooves manufacturers

to find a remedy. Their lack of co-operation is largely the cause of all the trouble, or so it would seem, for if they were in joint agreement surely it is not too much to suppose that some preventive measures could be devised against flooding the market with this unhealthy competition. Discussing matters with your correspondent one of the leading makers recently expressed himself as being desirous to promote some active combinations for the suppression of price-cutting delinquents, but in his own words "It is next to impossible to meet on common ground until such time as all the record makers agree to adopt a one-price system." It is a fact that more than one make of record is sent out to different factors under varied rates, be it a fixed charge or in the disguise of discounts for cash, quantities, and so on. True enough, but isn't that the best possible argument for an attempt to lay the foundation of unity?

Amending Copyright Bill.

The bill to amend the law of copyright was introduced in Parliament March 30 by Mr. Sidney Buxton, president of the Board of Trade. It was read a first time without comment. In parliamentary circles it is regarded as a non-controversial measure, but it will be a matter of considerable surprise to us, if it passes the question stage without strong opposition from certain M. P.'s, for only then will it be apparent that no effort has been made to lay before them the hardships which one at least of the clauses must inflict on not a few of the smaller record companies. The clause referred to leaves a monopoly in the hands of composer or publisher, in that there is no stated or fixed royalty provision, while the right is vested to refuse publication by records to all or any one manufacturer. The whole trade, I believe, is in agreement that a royalty—so much per record sold—should be fixed by law, and that once permission is given to any one maker to record then that permission automatically passes to all other record makers upon payment of royalty terms. As things are, matters will soon reach a head when the bill becomes law, and a not intolerable condition is likely to result.

Figures on Musical Instruments.

Under the census of production act the trade returns for the year 1907 have just been issued. The total value of musical instruments produced here amounted to £1,867,000; gross output, £1,057,000 net output, and the number of persons employed totalled 10,117. Included in these figures is an amount of £69,000 against talking machines and records. Nothing very startling, but on that basis it would be no exaggeration to compute the figures for 1910, at least, in the neighborhood of £300,000.

New Line of Perophone Machines.

Messrs. Lockwood's, of 43 City Road, the great twin and zophonophone factors, and the proprietors of the famous Perophone machines, have just put on the market a new range of concealed horn models, which are a revolution in the cabinet class of instrument. When closed, these models, which are of exceedingly striking designs, bear no resemblance to talking machines, and when open they disclose a wood horn, built on scientific and exceptionally graceful lines.

They are put on the market at prices which compare more than favorably with the standard types of machines and we predict an immense demand for them. They can be thoroughly recommended as a satisfactory and profitable line for colonial and foreign traders. Terms and other particulars will be sent on application to the sole shipping agents: Messrs. Cullum & Best, 91 Finsbury Pavement, London, E. C.

Hough Wins Important Action.

Last month Judge Parry had before him the action listed as between Lang & Another v. J. E. Hough, Ltd. Plaintiff appeared, placed an order

THE LONDON OFFICE OF THE TALKING MACHINE WORLD IS NOW LOCATED AT 1 GRESHAM BUILDINGS, BASINGHALL St., E. C.

for some thousands of disc records with the defendant firm, who claimed that one of the stipulations of the contract was in effect that the records should not be sold by or for the English Record Company. After the delivery of a certain number of the records the question arose as to the use of a certain label. Plaintiffs eventually canceled some four thousand records, the number required to complete the order. Defendants refused to comply, except on the understanding that a certain amount was paid by way of liquidated damages. Plaintiffs now claimed for the return of money paid, or to have the records manufactured under any label they wished. Mr. W. Henderson for J. E. Hough, Ltd., stated that plaintiffs had definitely assured Mr. Hough that these records would not be supplied to the English Record Company, which company sold talking machines and records on the gradual payment system to Tom, Dick and Harry, and defendants regarded it as detrimental to have their records associated with this system. After some further remarks in which Mr. Lang admitted that he had received his order from the English Record Co., judgment was given for the defendants, with costs.

Important New Gramophone Records.

In addition to many special issues during the month the Gramophone Co. have just issued advance information of three new records by the greatest of all Italian sopranos, Mme. Tetravzini. The titles are: "Bolero" (I Vespri Siciliani), (Verdi); "Bel Raggio" (Semiramide), (Rossini), and "O Luce di Quest Anima" (Lerinda di Chamounix), (Donizetti).

The ordinary supplementary list for April contains many notable and interesting novelties. There is a duet "The Gendarmes" (Offenbach), made by Geo. Grossmith, Jr., and Edmund Payne, which is the first time these two great comedians have ever made a joint record. To fill the growing demand for more waltzes, the Gramophone Co. have issued this month no less than seven pretty selections by the well known orchestra conducted by Herr de Groot. Other interesting titles are as follows: "Ivanhoe," selection (Sullivan), and "L'Italiana in Algeri," overture (Rossini), by the

One String Fiddle

STROH VIOLS

VIOLIN, VIOLA, ETC.

The mellow and matured tone of these instruments, which are constructed largely of aluminum, yet possess none of the characteristics of the gramophone or wind instrument, is only one of its many points which are fully set out in an illustrated booklet which will be mailed free on request to the sole makers.

band of H. M. Coldstream Guards; "Scenes Neapolitani" (Massenet); "Temptation Rag" (Lodge), Pryor's Band; "In the Shadows" (Finck), Bohemian Orchestra; "Has Sorrow Thy Young Days Shaded?" (Moore), Mr. John McCormack; "Widcombe Fair" (Heath), Mr. Charles Tree; "The Dagger Speech" (Macbeth), Mr. Arthur Bourchier; "Flower Song," "Faust" (Gounod), Mme. Edna Thornton; "Agatha Green" (Margaret Cooper), Miss Margaret Cooper; "Gentle Spring" (Lanc Wilson), Miss Percival Allen and Mme. Edna Thornton; "Cynthia" (Wolseley Charles), Mr. Tom Clare; "You Can Do a Lot of Things," Mr. Mark Sheridan; "Good-bye Till We Meet Again" (Lauder), Mr. Harry Lauder, and "All Clear Out of the Park," Mr. George Graves.

Four new Caruso records were issued in March. They are marvelously recorded, and following upon the newspaper advertising indulged in by the company, the public inquiries caused dealers to place big orders.

A New Sound Controller.

A very effective and useful device in the shape of a sound controller will shortly be marketed by John G. Murdoch & Co., Ltd., the well known factors. For the time being it is adaptable for use on the Exhibition, Symphony and Tournaphone sound boxes, but arrangements are contemplated whereby it will be possible to manufacture other sizes suitable for all the leading makes. This new sound controlling device is in the shape of a plate, with an inner lining of rubber, which fits over the diaphragm without in any way curtailing the freedom of the stylus bar. By means of a small screw acting directly upon the plate, one is enabled to control the vibration of the diaphragm at will. If, in playing over a particularly loud record, it is desired to modify the volume, all that is necessary is to give the screw two or three turns, thus bringing the device into action by pressure upon the diaphragm.

In view of the tendency of some makers to increase the volume of their records, the user will

heartily welcome this ingenious sound controller. It must be admitted that there is a large body of talking machine lovers who find that many of their favorite record selections are in volume much too loud for quiet enjoyment in the average-size room common to most houses, hence this new idea of Messrs. Murdoch's will no doubt come as a boon and a blessing to talking machine users, and should be in great demand. It will sell at a moderate figure, varied according to size of sound box, and from the dealers' viewpoint should prove highly profitable. Trading, terms, etc., may be had upon application to the company at Farington Rd., London, E. C.

All British Shopping Week.

At the instance of a large number of traders throughout the country an all-British shopping week has been inaugurated during which period nothing but English goods will be shown in the windows of the shops associated with the movement. In the musical instrument department of some of the large stores may be found a display of disc machines of entirely British material and construction throughout. This instrument, "The Dulcephone," is the product of Messrs. Barnett Samuel & Sons, Ltd., and every constituent part is guaranteed to be of home manufacture. Thus motor, horn, cabinet, taper arm and sound box, etc., are in every respect "all British." Selling at five guineas, the machine is of wonderful value, and is alike an excellent tribute to British resources, as it is to the enterprise of B. S. & S.

Talking Machine Artists Participate.

The Orlando Football Club, composed of the employes of John G. Murdoch & Co., Ltd., held their annual Bohemian concert at the Holborn Restaurant, March 27. An excellent feast of good music was provided by a large number of popular talking machine artistes, whose services were greatly appreciated. "Twere invidious to particularize; each gave of his (or her) best in contributing to a most delightfully, enjoyable evening. There were the usual felicitous speeches, and with the

popular president, Mr. George Murdoch, in the chair, a general spirit of bonhomie prevailed. Amongst the visitors were to be noticed quite a number of manufacturers, factors, dealers and others of the industry, a fact which in itself is stray testimony of the general esteem in which Messrs. Murdoch are held by the whole trade. These days, the opportunities for talking machine men to foregather in social converse, are few and far between, hence this was an occasion of more than ordinary importance from a trade point of view. More social gatherings of this kind would be welcome.

Geo. Robey's Action.

George Edward Wade, professionally known on the music-hall stage as George Robey, was plaintiff in an action in which he mentioned his unpleasant experiences by the receipt of letters and personal visits at the stage door of people who desired to expostulate with him. Plaintiff brought an action against Mr. Francis Salmon O'Brien, his wife Ada, and George Robey (Ltd.), of Coventry. He claimed an injunction to prevent defendant's passing off goods under his name, and he also complained that defendant's advertisements were defamatory of him. Defendants asserted by their pleadings that Ada O'Brien had carried on business as George W. Robey or George Robey since 1905. They denied that they passed off their goods as plaintiff's or that the advertisements contained any matter defamatory of plaintiff.

Mr. Duke, K. C., and Mr. Harold Simmons (instructed by Messrs. J. B. and G. S. Beirne) appeared for plaintiff, and Sir Edward Carson, K. C.; Mr. George Elliott, K. C., and Mr. J. F. Eales (instructed by Messrs. Maddocks and Carlson) were for defendants. Mr. and Mrs. O'Brien, it was stated by Mr. Duke in opening the case, had for some years dealt in bicycles at Coventry. Afterwards they began to deal in gramophones and gramophone records. They used the name of George Robey in advertising their business. The only connection plaintiff had with gramophones

JOHN G. MURDOCH & CO., Ltd., 91 & 93 Farringdon Rd., LONDON, ENG.

was when he a few years ago entered into a contract with the Gramophone Co. for the making of records of songs which were popular. Defendants issued records of George Robey's songs, and there could be no question that during the last twelve or eighteen months they had been circularising and advertising the business as that of George Robey. Their advertisement stated that "7s 6d secures immediate delivery of the world-famed Robey phone, terms to suit yourself, at half shop cash price." "George Robey, the world's provider, Coventry," was also a part of the advertisement quoted by counsel. Amongst the published matter issued by defendants was a representation in which plaintiff was depicted in the familiar role of Mrs. Blobs, widow. Mr. Duke said there was another publication, in which plaintiff was represented as a domestic servant singing into a gramophone, "Let Me Love Thee." Continuing, counsel said as a result of the advertisements plaintiff was annoyed by the receipt of letters and finding indignant purchasers of the gramophones at the stage door. Defendants entered into a contract with a young man named George Robey, by which he was to enter their employ and they were to be at liberty to use his name. In the course of his evidence, plaintiff said he was educated for a civil engineer. He attached great importance to the value of his name. Defendants' business was brought to his notice by letters he had received, addressed to "George Robey, England." They came to his private house. One came from Ireland, addressed "Mr. George Robey, the World's Provider." The audience used to shout when he was on the stage, "George your gramophones are rotten!" What price gramophones?" (Laughter). Sir Edward Carson: "Did you get cheers?" Witness: "Jeers." (Laughter). Witness said he had people at the stage door waiting to see him about the gramophones. "But," he proceeded, "I never saw them. I have my man at the stage door." Sir Edward Carson pointed out that defendants had offered to call the firm G. W. Robey, and asked if that would suit witness. Plaintiff: No. Sir Edward: You want Robey and all the initials in the alphabet. His Lordship: Suppose they called it Wade? Would not that do? It would make no difference to me, because I am not known publicly as Wade. Sir Edward Carson: Have you been known as the "world's provider?" No; fun provider they have called me on the bills. Frederick Watson, lodging-house keeper, Cardiff, spoke of having purchased a gramophone from defendants. Mr. Duke: Could it play? Rotten! (Laughter). Sir Edward Carson: Is that the name of the tune? (Laughter). Witness: It made a squealing noise. Witness proceeded to say that he sent the gramophone back to defendants and it played worse when returned to him. Everything, he added, was stamped "Made in Germany." Mr. Edward Foster, resident manager of the Grand Theatre of Varieties Birmingham, said plaintiff's name was an asset to him apart from his performance. As to the publication of an illustration of a servant at a gramophone, he stated that when he saw it he concluded it was an absolute copy of one of Robey's stage attitudes. George Robey, of Coventry, stated that he

had worked for O'Brien (Ltd.) at different periods and they had used his name for trading purposes. Mr. Walter Gibbons, managing director of the London Theatres of Varieties, stated that the name of George Robey was a great asset to plaintiff, and it would do him considerable injury if the public were led to believe he was connected with defendant's business. Sir Edward Carson, for the defense, contended that plaintiff had disclosed no cause of action. There was no right of property in a name, and plaintiff was not entitled to the injunction asked. The jury gave a verdict for plaintiff for £100. Judgment was accordingly entered with costs, and an injunction was granted by his lordship.

April List of Zonophone Records.

The April list of zonophone records to hand contains many titles of an attractive nature, and judging by the advance orders already placed, they are likely to enjoy a big demand. La Garde Republicaine Band is responsible for two fine selections, and the following also call for mention: "The Faries' Greeting" (Heed), the Peerless Orchestra; "Tis But a Little Faded Flower" (Thomas), Madame Deering; "You Taught Me How to Love You," Miss Florrie Forde; "John Bull's Biscuits," Mark Sheridan; "William Tell," Selection (Rossini), (Ocarina Solo), Signor Tappiero, and "O Hush Thee, My Babe" (Sullivan), beautifully rendered by the Zonophone Concert Quartette.

New Columbia Celebrity Records.

Unquestionably the great event of the month is the issue by the Columbia Co. of a remarkable series of Columbia grand opera records. The catalogue covers practically every school and period of Italian opera, no less than sixty-seven double-faced records being listed. As interesting as the repertoire is the standing of the artists, and here the Columbia Co. have established a record, for they present world-famous artists whose work has long been coveted in the permanent recorded form, but which has not hitherto been available. The various artists have already been referred to in the news columns, and include the great Cavaliere. Coupled with this soprano are Boninsegna and Bronskaja, the former an exponent of the dramatic arias in grand opera, the other the celebrated Russian coloratura soprano. There is also Bettina Freeman, a talented young American mezzo-soprano. Among the celebrities of the other sex must be noted the names of Constantino, tenor, and Mardones, basso. The baritones are Campanari and Blanchart. These Columbia celebrity records are with a few exception practically all 12-inch records.

Sounds Rather Familiar.

According to a Brighton critic, a famous pianist, at his recital a few days ago, "let loose roaring Niagaras of rushing sound. Suddenly on the astonished sea, beating the raging tumult into insignificance, a still louder phrase would crash out all-conqueringly. The pianist's hands, smiting titanically, moved so fast that at times they were scarcely visible. One noticed that the perspiration rolled from the pianist's forehead, and the constant use of the sustaining pedal had worn a hole in the sole of his boot." The critic, in his flood of eloquence, omitted to add that every soul in the audience was also affected!

Some Pleasing Twin Titles.

The "Twin" titles for May are of a varied and pleasing nature, covering all phrases of music from comic to classical. It is just one of those lists in which dealers have confidence—especially at this period of the season—confidence borne of the knowledge that with a fair stock of "Twins" on hand they need never fear a "quiet" time! Sounds bad, but its good—from a sales point of view.

Indicates Healthy Conditions.

At the moment of writing, the shares of the Gramophone Co. are quoted at over £2, a fact which is always satisfactory, indication of healthy trade conditions.

New Record Appears.

Under the auspices of John G. Murdoch & Co., this city, another record has made its appearance on the British market. It is a 10-inch double disc, needle-cut, of average good quality as to tone and artistes, and is known under the title of "Bel-canto." The price has not yet been decided upon, but it will most probably be fixed in accordance with that generally recognized as the standard figure.

English View of Victor Herbert.

Victor Herbert, whose new opera, "Natoma," has just been successfully produced in America, evidently believes in the strenuous life. His schedule for one day has been quoted here as follows: 1.30 a. m., returns to New York from Philadelphia, after rehearsing "Natoma;" at seven, rises to keep a recording engagement at the National Phonograph Co.'s laboratory that lasts three hours; at 10.30 sees a reporter; from 12 to 3, correcting proofs sent over from the printer; from 3 to 4 another interview; at 4, the young women cast for the leading role of a new comic opera arrives to try over her part with the composer; from 5 to 7, he is working on another opera recently ordered to be completed in a certain number of days; at 8.15, conducts a special perform-

ance of "Naughty Marietta" (another of his operas). Then midnight train to Philadelphia. It makes one giddy.

Not in These Trousers.

There is a discussion in the press just now as to the origin of the phrase "Not in these trousers," which the street-gamins are so fond of applying to the wearers of the harem skirts who venture into the light of publicity, and which many musical artists introduce into their "gags." We believe that Charlie Austin can claim the distinction of having originated this quaint phrase, since he has used it consistently for some years past in his sketches "Parker P. C." and "Parker's Progress." Folk-lore students of the future will find the phrase duly crystallized in permanent form in the popular sketches on Columbia-Rena records.

Some Columbia Notes.

There is a delightful surprise for lovers of Savoy opera in the new list of Columbia-Rena 12-inch records. A new combination of talented artists is presented under the name of the Columbia Light Opera Company, and on one side of a 12-inch disc they provide some of the choicest excerpts from the familiar (and one-timed banned) opera "The Mikado." On the other side of the disc, admirable variety is provided in other extracts from "The Mikado," played by Prince's Orchestra.

Three Columbia-Rena records by Billy Williams were issued on February 24. In two days they had leapt up in sales to several thousands and at the moment of going to press we learn that every one of the three had beaten every other record sale—save only the "Parker P. C." disc. We observed a prominent advertisement in the *Daily Mail*, too, of the Billy Williams records on February 28, in which the inimitable "man in the velvet suit" was spoken of as "laughter-making Billy Williams." And so he is.

Other titles demanding special mention here, are

as follows: "The Sea" and "The Englishman," by Edgar Coyle; "The Quaker Girl," selections I and II, by the band of H. M. Scots Guards; "Heroes of the Mind," by Stanley Kirkby, and "Sons of the Sea," by Harold Wood; "My Wife" and "Constable Duffey," by George Gilbey; "Those Lovely Bells" and "One-Two-Three-Four-Five," by Arthur Peet; "Hearts of Oak" and "A Life on the Ocean Wave," by Bernard Dudley; "The Girl With a Brogue," by Miss Ada Jones, and "Charming Weather," duet by Miss M. Mayhew and Irving Gillette—both selections from "The Arcadians;" "Rescue the Perishing," duet by Harry Anthony and James Harrison, and "Looking This Way," duet by John Young and Marie Tillotson.

The Stroh Jap-Fiddle.

A new line just introduced by Messrs. Geo. Evans & Co., of this city, is the Stroh "Jap-Fiddle." It is made of ebonized mahogany, with polished aluminum fittings, and the entire absence of glued parts will especially recommend it to musicians in tropical climates. In the matter of reproduction, the tone quality is rich, mellow and full, without the slightest taint of nasal or other objectionable tone characteristics usually inseparable from instruments of this class. Upon reference to the illustrations elsewhere in this section, it will be seen that the Jap-Fiddle is easy of portability and compactness, by reason of an ingenious arrangement enabling the trumpet to be closed in right up against the body of the instrument. The Stroh Jap is easily mastered, and will commend itself especially to those unable to afford the time required to properly master a violin or other stringed instrument.

Klingsor Popularity.

The increasing popularity of the Klingsor instruments with the better class traders in the home and foreign markets is amply demonstrated by the substantial repeat orders on hand at the Klingsor Works, London. Orders from the Colonies are

exceedingly good, and this last few weeks sales have been on the upward tendency, which plainly indicates that a commencement of the colonial season is in sight. A splendid addition of up-to-date popular titles has just been made to the Klingsor record list, and these new issues will prove a good investment for colonial and foreign buyers.

Clarinet Quartette Records.

J. E. Hough, Ltd., announce having made exclusive arrangements with the famous Renard Clarinet Quartette, who will shortly record a number of classical selections, and in addition, some of the foremost national airs of England, Scotland, Wales and Ireland. The sort of records that dealers find "quick sellers."

LATEST EDISON RECORDS.

(Special to The Talking Machine World.)

The Edison Phonograph Records for May, 1911, are as follows:

Grand Opera Amberol (orchestral accompaniment unless otherwise indicated).—30045 Norma—Meco all' altar di Venere (With Me in Rome) (Bellini) (Sung in Italian) Carlo Albani; 30046 Germania—Ferito, Prisoner (Wounded, a Prisoner) (Franchetti) (Sung in Italian) Carlo Galeffi; 30047 Freischütz—Wie nahte mir der Schlummer (Before My Eyes Beheld Him) (Weber) (Sung in German) Marie Rappold; 35021 Otello—Ave Maria (Hail Mary!) PROVINCIAL NOTES.

From reports to hand from the leading centers, the well defined and welcomed fact that talking machine sales are quite satisfactory is certainly a pleasing sign of future prospects. It is generally believed that the summer's trading figures will be miles ahead of even time last year—modestly good as sales were then. This optimism is largely based upon the present excellent condition of talking machine business, and a general feeling of security now prevalent in all other industrial markets. The trade returns show that the markets are firm and steady, strikes and labor troubles few, money is easy, and in view of the stimulating effect on trade expected as a result of the coronation, and other important ceremonies, we should really enjoy a boom time in such articles of luxury as musical instruments.

Good trade reports reach me from Manchester, Liverpool and Lancashire generally, where dealers are having a good time just now supplying the enormous demand for Billy Williams' new records listed by several of the disc companies. Indeed, this demand is common to traders located in all parts of the country, for the manufacturers have created a real boom this time by their newspaper and other advertising schemes. Daws Clarke is maintaining good sales for his famous "Flex" diaphragm, which is now sold by agents appointed in various foreign countries, colonies, etc., the

latest convert being India, where the Flex has received a good reception from traders and users alike. Mr. Clarke is open to receive applications for agencies where not represented.

Nottingham way the great evangelist, Gipsy Smith, recently conducted a ten days' mission, one concrete result of which is that the sales of his Columbia-Rena records have increased enormously.

Mention is made in several advices of the wonderful reception accorded by traders throughout the leading Provincial centers of the new Zonophone "Cardigan" machine. It has certainly filled a gap, if not the proverbial long-felt want, but it is a satisfactory index of the trend of the time to know that the higher priced machines are so popular.

The sales of Beka records are very noticeably on the increase in the provinces, which indicates very strongly, especially at this stage of the season, that a good thing well advertised need have little fear of competition.

Dundee and Edinburgh traders were recently visited by Mr. W. Manson, of the Twin and Zonophone companies. In the course of a short chat Mr. Manson stated that he found things were very satisfactory in Scotland, and was of opinion that comparatively trade is improving all round. Twin and Zono sales were excellent.

In Wales certain of the dealers are feeling the effects of the big strike in the coal mining industry, but it is really surprising to find that one or two factors—notably Tilley, of Cardiff, have this season increased their turnover considerably. Good!

The Belfast factor, Mr. Edens Osborne, as usual, has been exceedingly busy this last few weeks. Various entertainments, lectures and other affairs, are indebted to him for the loan of an electric Auxetophone, which, as most of the Belfast journals say, discourses sweet music to an appreciative audience. We commend Mr. Osborne's worthy example to the consideration of other dealers.

TALKERS AT THE LEIPZIG FAIR.

Little in the Way of New Inventions to Interest the Visitors, but Good Volume of Business Was Realized—Selling British Goods in Germany a Hard Task Well Accomplished—The Various Concerns Exhibiting and What They Had to Offer—Other Details.

(Special to the Talking Machine World.)

London, Eng., April 8, 1911.

In common with the excellent trading conditions experienced by most of the exhibitors last year, the recent fair held at Leipzig, March 6-18, was in every way equally satisfactory. Apart from the very fine representative display of standard talking machine products, there was little if anything of a startling nature in the way of new inventions, but for all that there was abundance of evidence that progress is being made in more directions than one. Although not more than a glimmer upon the horizon, there is gradually arising on the part of the Continental public a desire for machines of better quality than the average standard offered by most of the manufacturers. Not that high-priced instruments are unknown in Germany. Far from it. But the educational policy of certain of the makers has had the pleasing effect of stimulating a greater demand for machines of quality and reliability among the greater middle class. The manufacturers have not been slow to take full advantage of this tendency, and it was not surprising therefore to find the exhibits of better-class instruments altogether more extensive than in previous years. The famous Peterstrasse, the center of the talking machine section, was as usual the haunt of business men from all parts of the world. A thoroughly cosmopolitan crowd of visitors, good-natured, and withal good and large buyers. Ever and anon one would observe an unusual look of animation upon the face of a salesman; he had just pocketed an unusually large order! And despite the time of year business all round was splen-

did, and many large contracts were placed for immediate delivery to foreign parts, in addition to the usual orders for delivery of goods against advice.

Great interest was evinced in the exhibit of Messrs. Carl Lindstrom's, which was far and away the largest there. A series of new gramophone grand cabinet instruments on show attracted many trade visitors, who, needless to say, carried their admiration further than mere curiosity. Over sixty different models were on view, and the firm have every reason to be satisfied with the orders booked. They also made a special display of their latest introduction in the way of records—a 12-inch double-disc known as the "Parlophone." In the matter of tone this record is of splendid quality, and was much praised by all who heard it. The price is very moderate.

To attempt the seemingly impossible task of selling English talking machine goods in Germany is not unlike taking coals to Newcastle. But Craris & Stavtidi have in a sense proved this to be a fallacy. Their "Apollo" wooden horns have quite captured the Continental market, and the firm are now busy executing orders for dispatch to Berlin, Cologne, Dresden, Vienna, Budapest, Christiania, Moscow, St. Petersburg and other continental trading centres. It is a well deserved tribute to British quality of workmanship.

An effective exhibition of machines and records was made by the Beka Company, of Berlin, their display being much admired. Interest was shown in a cheap hornless machine, and taken altogether the amount of business done was highly pleasing. A brave display of instruments was also made by the Triumphone Company, and the novel construction of their new motor attracted a deal of attention. The spring barrel is so arranged as to allow of removal without the necessity, as in others, of taking the motor to pieces when a new spring is required to be fitted. It is a practical and useful innovation, and will undoubtedly earn the commendation of all whose business it is to repair these sometimes devilish bits of machinery.

An excellent feature of the situation, and one perhaps that reflects more than anything else the prosperous condition prevalent in talking machine circles, was found in the quite unusual number of displays of parts and accessories. It is decidedly an indication of trade progress, and may without undue optimism be regarded as a healthy sign of future trade prospects. Apart from the many German exhibitors of parts, etc., the chief Swiss houses put in an appearance, and the very fine displays made by Messrs. Palliard, Mermod Freres, and Herman Thoreus, deserve special mention. Their main forte is motors, the prices for which are higher than those of other continental firms, but even in Germany there are to be found many large buyers. The reception of these Swiss motors was this year more satisfactory than last, which is sterling testimony to their quality.

Foreign visitors displayed great interest in the Hesk company's exhibit of a new home recording attachment for disc machines. It is adaptable for use on all disc instruments, is easily fitted, and is said to work very satisfactorily. The cutting stylus is evidently of the hill and dale type, for to reproduce, a sapphire sound box is necessary. It proved to be quite a novelty at the fair, and some nice orders were booked by the Hesk company.

The needle and trumpet manufacturers were very much in evidence, and their displays were varied and interesting. Some very substantial orders for delivery to England, the Colonies and foreign centres were secured by the different concerns. The artistic treatment and designs of the horns came in for much praise, and the new, not to say curious shapes of some of the needles, evoked friendly criticism—and orders.

The slot machine trade here in England is of

anything but satisfactory proportions, compared to the splendid business experienced by the continental makers. A representative show of these automatic penny-in-the-slot machines was noticeable at the fair, but the bulk of trade orders were for delivery to continental traders supplying the near home markets, where the cafe system is the vogue.

The new hornless instrument shown by the firm of Holzweissig attracted much attention, and some nice contracts were entered into on the part of buyers from all parts of the world. There is no gainsaying the fact that this class of instrument has won for itself a substantial position as a competitive line of great commercial value, for its popularity covers the summer months, and right through the winter season also. Hence it is one of the best all the year-round trading lines that dealers could possibly have, and full recognition of this fact was apparently very general, judging by the large orders placed by the home and foreign buyers.

Although showing nothing much out of the ordinary, the Symphonium concern made an excellent impression with their fine series of machines, and sapphire disc records, which evoked much praise and satisfactory orders.

Large contracts were also booked by the Polyphon Co., whose extensive range of models attracted a deal of interest, many being of quite novel construction. Business activity reigned throughout every day, for visitors and buyers were numerous. This company also had on show various samples of their disc record, and good business resulted.

Several records were noticeably displayed, but as a body, the record manufacturers adopted the same attitude as last year, that their products were sufficiently well known, and did not call for special exhibits. Still, most of the record houses were represented in one way or another, and quite a number of makers themselves were to be seen about with the visitor-buyers, and many a quiet order-booking was made in the course of a friendly chat.

English orders were beyond the average, and related mostly to contracts for disc machines; ordinary horn styles, hornless, and cabinet, and for disc records. On the whole, very fair prices ruled, and in one or two instances—notably for a certain series of cabinet instruments—some remarkably close deals were made. The general feeling prevalent in continental trading circles is one of satisfaction, and it is conceded by men who should know that there is every indication of bright prospects for the whole European talking machine industry.

CUTTING DOWN THE PAPER BILL.

In Long Letters Using Both Sides of Carbon Copy Has Numerous Advantages.

"Write on one side of the paper only," was formerly a form of instruction generally given out wherever letters were written. But with the advent of the writing machine it became a general practice and the legend was no longer necessary.

However, like all rules, there are exceptions to it. Here is one of them.

When you make a carbon copy of a letter write on *one* side of the letter sheet only, but on *both* sides of the second sheet. This not only saves paper, but also places all of the record you want to keep on one sheet of paper where you can get it all together. Your files are for your private use, not for outsiders; and when you go to them to find a letter to John Doe, it is mighty exasperating to find the first sheet of the carbon copy, but no trace of the second.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to the Talking Machine World.)

Washington, D. C., April 8, 1911.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past three weeks from the port of New York:

MARCH 18.

Berlin, 26 pkgs., \$1,038; Buenos Ayres, 16 pkgs., \$642; Callao, 10 pkgs., \$322; Freemantle, 19 pkgs., \$562; Havana, 6 pkgs., \$184; Iquique, 6 pkgs., \$230; London, 137 pkgs., \$2,466; Manila, 33 pkgs., \$1,333; Marcorio, 6 pkgs., \$327; Para, 47 pkgs., \$875; Porto Columbia, 6 pkgs., \$455; Rio de Janeiro, 5 pkgs., \$304; Singapore, 3 pkgs., \$138; Valparaiso, 4 pkgs., \$128; Vera Cruz, 62 pkgs., \$1,591; Vienna, 4 pkgs., \$114; Yokohama, 1,134 pkgs., \$20,181.

MARCH 25.

Bahia, 141 pkgs., \$8,068; Berlin, 19 pkgs., \$600; Buenos Ayres, 147 pkgs., \$2,386; Callao, 4 pkgs., \$898; Chemulpo, 3 pkgs., \$116; Colon, 5 pkgs., \$164; 5 pkgs., \$193; Guayaquil, 1 pkg., \$102; 18 pkgs., \$630; Hamburg, 1 pkg., \$100; Havana, 27 pkgs., \$1,224; Limon, 5 pkgs., \$181; London, 159 pkgs., \$3,182; 43 pkgs., \$2,176; Milan, 12 pkgs., \$730; Para, 22 pkgs., \$1,668; Rio de Janeiro, 25 pkgs., \$1,056; Tampico, 3 pkgs., \$121; Tumaco, 3 pkgs., \$107; Vera Cruz, 36 pkgs., \$1,927; Vienna, 6 pkgs., \$171; 114 pkgs., \$3,493; Yokohama, 12 pkgs., \$750.

APRIL 3.

Amapala, 2 pkgs., \$162; Berlin, 50 pkgs., \$1,489; 33 pkgs., \$590; Bluefields, 5 pkgs., \$100; Buenos Ayres, 14 pkgs., \$271; Colon, 6 pkgs., \$115; Guayaquil, 6 pkgs., \$229; Havre, 8 pkgs., \$312; London, 4 pkgs., \$3,446; 236 pkgs., \$7,753; Melbourne, 3 pkgs., \$100; Para, 46 pkgs., \$2,173; Rio de Janeiro, 47 pkgs., \$3,194; San Domingo, 7 pkgs., \$442; Santiago, 1 pkg., \$155; St. Petersburg, 8 pkgs., \$164; St. Thomas, 3 pkgs., \$182; Trieste, 61 pkgs., \$179; Vera Cruz, 58 pkgs., \$1,619; Vienna, 41 pkgs., \$1,425.

NEW GERMAN PATENT BILL.

Measure to Deprive Americans of Advantages Under Present Agreement.

A committee of the Reichstag in Berlin, this week, discussed a new bill regulating patents, which has been drawn as a result of the petition to the Imperial government of the German Machine Manufacturers' Association, asking the abrogation of the German-American patent agreement of February 23, 1909.

The petitioners assert that the Americans have an advantage in competition because they are not compelled to manufacture in Germany, whereas German holders of patents are required to make their articles here.

A representative of the government told the committee that the passage of the new measure before the Washington conference in May was regarded as absolutely necessary. He pointed out that the insertion of a clause forbidding the transfer of patents to a third person was quite legal and the only question arising therefrom was whether the clause was admissible in view of the terms of the German-American agreement. In the course of the discussion, which was adjourned, several of the committee referred to the variations between the German and American texts of the agreement.

THE REGINA PNEUMATIC CLEANERS.

The Regina pneumatic cleaners, some particulars regarding which appear on another page, have proven an excellent side line for the dealer. This fine appliance, manufactured by the Regina Co., New York and Chicago, has double suction pumps and does the work quickly, easily and perfectly. They are easy to operate and easy to sell—beautifully constructed and fully guaranteed and are sold at a reasonable price. The Regina may be operated by hand or electric current.

"DAVEGAS" THE TITLE

Of a New Retail Talking Machine House Just Opened at 405 Broadway.

Davegas is the title of a new concern at 405 Broadway, New York, that will handle the lines of Thomas A. Edison, Inc., and the Victor Talking Machine Co., as dealers. The store opens to-day (April 15) and besides talking machines, etc., will also carry a large stock of sporting goods. Harry Davega, son of S. B. Davega, of the S. B. Davega Co., 126 University place, this city, is the president, and P. M. Lopez, secretary of the corporation. Harry Davega has been in the business all his life, and was the active manager of S. B. Davega Co., a position he filled with skill and great ability. The success of the new concern is a foregone conclusion, as the location is excellent from every point. The World tenders its good wishes to Davegas.

S. B. Davega, president of S. B. Davega Co., the well-known Victor and Edison jobbers—in fact, the oldest jobbers in New York—returned recently from Seattle, Wash., where he had gone in February to look over conditions in that hustling city of the Pacific Northwest. Mr. Davega owns a valuable block of real estate in the heart of Seattle and therefore is personally interested in its progress and welfare.

LANDAYS ARE FAVORED

With the Custom of Many Titled Visitors from Europe.

Landay Bros., New York, add another illustrious name to their long list of notables who have visited their store, 400 Fifth avenue, and placed orders for goods. They had the honor of supplying the Duke of Manchester with some Victor goods the other day. In an interview with The World, Max Landay gave the inside facts as to why they have been favored with so many orders from the peerage of England. He said that about five years ago the Countess von Hatzfeldt ordered an expensive Victor outfit. She was so pleased with the tone of the instrument that she has recommended Landay Bros. to all her friends. This means a great deal, as she is a favorite with the Queen of England. Before leaving Max said that he would not be surprised to receive an order for a Victrola from ex-King Manuel, of Portugal, for his lady friend.

NO FRAUDULENT TRADE-MARKS

To Be Permitted in Great Britain—Important Bill Just Introduced.

A bill has been introduced in Parliament to amend the Merchandise Marks Act, so that in the case of goods being imported in the United Kingdom bearing any name or trade-mark of a fraudulent description, the importer may be required to produce documents and furnish information as to the name and address of the person by whom the goods were consigned to the United Kingdom. The penalty for withholding such information is £100. The information when secured may be communicated to any person whose name or trade-mark is alleged to have been imitated or is imitated by anyone.

ABSORBS THE SAPPHIRE CO.

The Indestructible Phonographic Record Co., 352 Livingston street, Brooklyn, N. Y., have taken over the Sapphire Record & Talking Machine Co., New York. The latter have been in business only a short time, but concluded they better quit than go ahead, as the enterprise required more capital than was anticipated. They were incorporated April 1.

Insist on cash payments from unknown persons, and with everyone restrict credit as much as possible. Of ten long credit customers, one will take you in, and you will lose with that one all you have made out of the other nine. Be particularly cautious with new customers who pay small bills quickly, and then give large orders without any cash payments being stipulated.

Fibre Needle Attachment

Attachment in Position.

SIMPLE TO ATTACH

This fibre needle attachment will help you make sales on fibre needles, which means

BIG PROFITS

Some people when inquiring about fibre needles will not buy if they have to bring their sound box to be fixed for FIBRE NEEDLES, others will postpone purchasing FIBRE NEEDLES until they get their sound box adjusted. This may cause the customer to possibly forget about it or they may have their sound box adjusted in a different store, all of which will mean loss of sales to you. If you have our

PROGRESS IN TALKING PICTURES.

Advance in Recording Art Has Made Practical Solution of Problem Possible—What Is Necessary in Successful Combination of Talking Machine and Cinematograph—Where Psychology Enters Into the Problem—Some Troubles That Beset the Experimenter—Obtaining Synchronism Between Talking Machine and Projector—How Recording Necessities Limit Free Movement on the Part of the Actors.

Every observer who has followed the progress of cinematographic art during the past few years has doubtless been impressed with the advantages that would clearly arise through a union of the film-picture projecting apparatus with the talking machine record. The proposition is easily stated in terms, and as easily comprehended, but its practical realization is quite a different matter. Nothing seems more natural than that the actors who present silent tabloid drama through the medium of the instantaneous photographic camera and projecting machine should at the same time record their voices on the wax of the talking machine. Yet nothing in the whole realm of cinematography can be compared for difficulty with this apparently simple idea.

It is sufficient to say that, until the last year or two, there has been no chance of a successful attempt in this direction, simply because the art of sound-recording had not reached such refinement as would permit of any satisfactory union of the two elements. Within the last year or so, however, there has been seen a noteworthy advance in the art of recording, so that the time now appears to be ripe for some definite step in the direction of a complete affinity between the moving picture and the talking machine.

In the present remarks we desire to point out some of the practical conditions which limit and bound the path of the experimenter who tries to unite the talking machine with the film projector, and to show what are the main and essential obstacles to be overcome, in order that thereby a start may be made toward clearing the ground and furnishing to future experimenters some notion of the direction which they must all take, if success is to be theirs. This article, in effect, is a brief analysis of the factors which enter into the problem of talking-motion-picture attainment.

When a man walks up and down a room, talking and gesticulating, his words and the appropriate gestures accompanying them synchronize with each other so perfectly and naturally that it seems as if the two operations of speech and gesture were one. The same notion seems even more plausible when we note how, with growing excitement, his steps back and forth over the floor seem to time themselves with his words. As a matter of fact, however, what we are witnessing is a series of entirely distinct and altogether separate processes, directed by the brain, and forming, in their aggregate, the complex phenomenon which appears to our senses. Some external circumstance has excited, through eye or ear, the mysterious something which we call "mind." This in turn has re-acted upon one set of motor nerve centers to produce speech through its action on the vocal cords and upon other sets to bring about muscular movements of the hands and arms. Although the re-actions from the source of original sensation are one in their original impulse, they are two and individual in their causation.

Two separate things, in short, are being done. The psychological reactions which result in the psychological motions leading to speech and gesticulation are separate reactions, and each can and does exist without the other. We speak, but do not move, or move without speaking; each at will.

We may take these remarks as a basis for observation of the talking motion picture problem. Although the immediate cause of the actions and words which we see and hear in such picture presentations are thought of as the result of activities simultaneously co-ordinated on the part of the actors, yet the physical and mechanical mediate

causes are distinct and separate. The whole problem is to co-ordinate these separate mechanical processes in such a way as to make one run with the other, infallibly and naturally.

This problem is what we refer to when we speak of "synchrony." But there is more to be considered than the mere synchronism of talking machine and projector. For it must be remembered that the actual doings on the stage which we desire to represent are the product of a perfectly co-ordinated series of actions and re-actions on the part of the actors. If it were possible to separate the speech and action entirely, if we could so train the actors that they could go through their appropriate posturings and then, afterwards and separately, speak their lines while thinking a perfect representation of the unacted physical motions; if in short, we could make our actors not only speak their lines perfectly when doing the "business" before the camera, but also think their "business" perfectly, though without physical corresponding motion, while in front of the talking machine horn; then the problem would not be so difficult. It would then be simply a matter of running the picture film so carefully that the action would not run behind or ahead of the words. And this could be done with ordinary care on the part of the film and talking machine operators, respectively, or better still, through some mechanical system of mutual control between the rotary motions of the films and the talking machine cylinder or turn-table.

Unfortunately, however, except when the speech and accompanying "business" are of the simplest and most elementary character, except in fact where the two classes of actions to be co-ordinated are in the simplest relations of rhythm, it will be found impossible to separate them and then carry them out one by one with any natural correspondence as a result. In the course of ordinary, not to say dramatic speech and co-ordinate action, we continually perform most complex series of physiological motions, involving a great variety of relations and sub-relations one to the other. And the more complex the relations are, the less does it become possible to detach any of them from the rest, perform it separately and then fit it in to the general scheme again.

Clearly, then, the first question that arises, the first problem to be solved, is that involved in the possibility of performing the two operations of sound and motion recording simultaneously. No difficulty is presented in the second of these, since the eye of the camera is now of sufficient capacity and rapidity of action to enable the just recording of motions undertaken over large spaces and under conditions involving both complexity and rapidity. But in the case of sound recording, the problem is by no means as yet so well in hand. So far no satisfactory recording of musical or other sounds has been possible except when the machine has been brought into very close proximity with the source of sound. Free movement about a stage during the recording of action in front of the camera has therefore been incompatible with the recording of sound. Hence, in all experiments which have been made hitherto it has been necessary to record the sounds separately. Not only so, but absolutely no free movement or reproduction of stage business has been possible. The actors have been obliged to place themselves directly in front of the recording machine horn, and even then have had to exercise the greatest care, lest some essential part of their speeches be lost. The Edison interests state that they have now developed such a recorder, one of sufficient delicacy to catch sounds of all kinds accurately within a radius of twenty feet from the horn, while the actors are performing their stage business.

Although no details have been given out, it seems most probable that this problem has been solved, in so far as a solution has been gained, through the employment of improved external means for deflecting the heterogeneous series of sound-waves toward a central focus; in short by an improved sound refractor. Anyone who is familiar with practical acoustics can imagine the kind of wave refractor and conductor which might conceivably be used for this purpose.

After the matter of sound-recording, comes the further one of synchrony between the motions of film and sound machine. Let us see precisely what the problem is.

The camera is started working in front of the actors on the stage. It is only necessary, in addition, that the talking machine should begin to rotate at such a time in advance of the first spoken words that the first of these will be recorded only after the machine has attained its proper speed of rotation. But this speed of rotation must bear some definite relation to that of some moving element in the camera, so that the motion of the one may control that of the other. If, therefore, we have, let us say, two electric motors, one to drive the camera shutter and film and the other to rotate the talking machine, and if these synchronize with each other, then it is plain that the operator who controls the one can also control the other. It then becomes a matter of adjusting the starting point of the recording stylus in its travel so that it begins its recording at some convenient moment after the camera has begun its work, or so that it begins simultaneously with the camera, if action and words also begin coincidentally.

Since the talking machine must be behind the projecting screen, while the projector itself is some distance in front, it is plain that synchronous motors for driving each element present the most obvious solution. This does not mean that the two motors must necessarily travel at the same revolutions per minute, but simply that their respective revolutions per minute must bear some definite relation one to the other. Synchronous motors have been developed, and several patents have been granted here and abroad for such motors. The synchrony is attained by certain proportionate systems of winding the rotating and magnetic elements of the two motors, and by other cognate methods.

Other methods for obtaining a proper union between projection of the picture and reproduction of sounds have contemplated engraving the sound-record right on the edge of the film. In this case, of course, there would have to be some means devised for transmitting the vibrations communicated to the stylus of the talking machine through the record, to the back of the projecting screen. This might perhaps be done on the same principle as used in the telephone. So far, however, nothing has been done in this way except experimentally.

Enough has been said to indicate in a broad and general manner the practical problems which must be faced by those who would undertake to unite sound and sight recording. Of the artistic or commercial possibilities of the union it is unnecessary to speak here. They are plain to all. That the day will come when grand opera may be given in every hamlet throughout the country is certain.

With characteristic timeliness the Edison interests recently made an announcement which indicates that Mr. Edison, who has been working on a combined moving and talking picture machine, has succeeded in accomplishing some wonderful results in this union of the film picture projector apparatus with the talking machine record. Full details have not been given out, but sufficient is known to indicate that some move of great importance in this line is imminent.

George Allen Hedden, who formerly traveled New York State for the National Phonograph Co. (Thomas A. Edison, Inc.), is now proprietor of the Hotel Knickerbocker, Third avenue and Twenty-fourth street, New York City, a smart and well-conducted place. When in the trade Mr. Hedden had the reputation of landing some of the largest single sale orders on the company's books. He was also one of the most popular men on the road, and this reputation has followed him into his new field of business activity.

"Advertising," says Dean Williams, of the University of Missouri, "is merely store news, business news. That its publication is paid for does not make it any the less important news. Often it is the most important news in the newspaper. It is always news that appeals to the pocketbook of the reader."

TIMELY TALKS ON TIMELY TOPICS

The interest in South American affairs, especially the commercial development, grows apace with manufacturers and merchants in this country. It is unnecessary to recall the great strides made by the talking machine trade in Latin America, for they have been steady and progressive, particularly in connection with goods coming from the United States. Naturally news from that part of the world is always welcomed, no matter from what source. It was therefore thought that when Georges Clemenceau, ex-premier of France—editor, diplomat, physician, a man of the broadest culture—visited the South American countries and engaged to write a series of letters for the New York Times, the correspondence would be of the greatest value in more ways than one. But they have been woefully disappointing also in more ways than one. In explanation it has been urged that M. Clemenceau was writing a lot of twaddle, such as can be taken from any encyclopædia, and keeping his own opinions on matters commercial and political “up his sleeve.”

Another view is that the distinguished Frenchman, who lived in New York for several years, is familiar with American institutions and was married here, was on a special mission to Latin America in behalf of copyright legislation. Some authorities in talking machine circles are of this opinion, and if that is the case and he is responsible for the new law in Argentina, then Clemenceau is being severely criticised. As one in a position to know recently remarked to The World: “The Argentine republic has recently enacted a law which is said to be the most drastic regarding reproduction privileges of any ever enacted by any nation. It is believed the other countries will probably follow suit, and, it is anticipated, the American talking machine record manufacturer may be called upon to pay excessive royalty fees

or else ‘lay down’ on the whole proposition. It is this that is causing some anxiety regarding the future of the export business in that part of the world.”

One thing Clemenceau wrote about which is true, is as follows: “In the pampas, dwellings that look modest and even less than modest, generally boast an easy chair, a chest of drawers, with a clock, a sewing machine, and talking machine, which, when fortune comes is completed by a piano. The talking machine is the theatre of the pampas. It brings with it orchestra, song, words, and the whole ‘art,’ paraphernalia suited to the aesthetic sense of its hearers. Thus, on all sides, dreadful nasal sounds [must be the cheap European machines referred to, as only the best go from the United States—Ed.] twang out to the great joy of the youth of the colony, whose artistic career will probably end in a colonist’s ‘fauteuil,’ (stall, also easy chair).”

Reference to copyright in another paragraph is a reminder that Canada is to have a new act, and it is going to be a most unique measure. Hitherto, while the Dominion has had a species of local copyright in operation, it was really a superfluity. The country was governed to all intents and purposes by British copyright, and what was entered at Stationers’ Hall, London, became immediately, by virtue of such action, copyright in Canada. Now, if the proposed measure becomes law, the Dominion will take copyright matters into its own hands and make its own regulations. It is a natural movement and, from the standpoint of national growth, a significant one. The Hon. Sydney Fisher, Minister of Agriculture, under whose charge copyright enactments are placed, attended the conference of the Board of Trade held in London last June, when a copyright measure was formulated and

introduced into Parliament by the government, and is still pending.

Recently the Canadian government issued a memorandum setting forth the heads of the new act with the sections of the old act which they supersede. The new act will provide specifically that “the importation into Canada of copies made out of His Majesty’s Dominions of any work in which copyright subsists is prohibited.” Just how this will affect the importation of records into Canada remains to be seen. When Paul H. Cromein, vice-president of the Columbia Phonograph Co., General, a conceded expert on copyright, has looked into the question with his usual perspicacity and clearness of judgment, the trade will be apprised of the meaning and intent of the Canadian act. If music publishers and record manufacturers are compelled to establish branch plants across the border in order to reap the benefit of copyright in the Dominion, it will be something of a hardship, though probably the accomplishment is not so difficult on second thought. However, it is just as well not to cross a stream until it is actually reached.

After an expenditure of \$40,000—probably more than less—a concern essaying to enter the field as manufacturers of machines and records, retired on April 1, fully satisfied it would require at least six times that amount to “buck the game.” Deciding discretion the better part of valor they “threw up both hands” and quit. Another boldly announced they were about coming to the front with a capital of \$60,000,000, and were to buy up eighteen running concerns, enlist the efforts of the Attorney-General of the United States to “maintain free speech,” whatever that means, declare existing patents void and nullify court decisions. This broad-gauge proposition—truly a wonder—has failed to materialize to date. Yet that is the way the world wags, and if the trade did not have a sense of humor the business would be dull, indeed.

DISCUSS "CREATIVE ADVERTISING."

H. C. Brown Discusses This Subject at the Closing Meeting of the New York Piano Manufacturers' Association.

At the last meeting and dinner for the season at the Murray Hill Hotel, New York, of the New York Piano Manufacturers' Association, during the evening of April 19, H. C. Brown, advertising manager of the Victor Talking Machine Co., Camden, N. J., has been specially invited and will deliver a lecture on "Creative Advertising." The trade knew how brilliantly Mr. Brown has conducted his department, and what great work in advertising and general and effective publicity he has accomplished for his company. Therefore his address promises to be something worth while on his chosen subject.

The association is one of the strongest in the country, embracing in its membership the leading manufacturers in the metropolis and vicinity. This quarterly combination dinner and business session always calls out a large attendance, for they are functions of unusual interest. Mr. Brown will have not only an undue of caliber, but also one keenly alive to what he may say about advertising. R. C. Kammerer, secretary of Geo. Steck & Co., will arrange the menu, and that means a spread that will appeal.

U. S. PHONOGRAPH CO. IN NEW YORK.

Eastern Selling Office Opened at 5-7 Union Square—To Go After Business in Aggressive Manner—Full Line of Goods on Display—Those Looking After Eastern Business.

The opening of an Eastern selling office at 5 and 7 Union Square, New York, by the United States Phonograph Co., Cleveland, O., emphasizes the fact that that company are reaching out for business in an aggressive way. The branch is displaying a full line of their machines and records, including a concealed horn cabinet of an attractive design. Demonstrating booths are to be provided and will be installed in about a week. The Eastern house will be under the direct management of L. H. Green, who will have as his assistants on the outside, E. E. Prairie, who has been traveling for the company for several months, and another experienced talking machine man. J. H. Champ, one of the vice-presidents of the company, was here this week looking after the details of the office and approving plans for placing it on a basis to receive jobbers and dealers and show the line adequately. T. H. Fowell, general manager of the company, was also in New York recently for the same purpose.

The literature and printed matter of the company is quite elaborate, including their machine catalog in fac-simile colors, hangers, show cards and the regular monthly bulletin in pamphlet. The May list, received on the 13th inst., is not only very attractive, but includes a number of exclusive selections, which go on sale April 28. It embodies eighteen four-minute and nine two-minute Everlasting records and eight foreign selections. Experts in recording declare these records among the most brilliant and perfect in the art.

TO MOVE TO LARGER QUARTERS.

Joseph H. Mayers, who handles the Victor and Edison lines of talking machines and records at 180 East Houston street, New York, is preparing to move on May 1 to a double store at 196 on the same street, where he will have practically double his former floor space, which room is badly needed for the accommodation of his growing business. The new quarters will be equipped with several sound-proof booths, and will be so arranged that recitals may be readily given in the main showroom when desired.

"SONGS OF OTHER DAYS."

The Victor Talking Machine Co., Camden, N. J., have issued a lecture in pamphlet form "Songs of Other Days." It is illustrated with Victor rec-

ords, a copy of which will be supplied the dealer for the asking. In connection with this valuable aid and splendid business developer they say that after a copy has been received, then ask the school superintendent, or some prominent minister, or some popular young politician or lawyer to read it at a recital to be arranged in the dealer's store, at the Y. M. C. A., at the school or church, or anywhere where complete and proper arrangements can be made. The results will be directly beneficial in creating increased record sales.

LOCAL CONVENTION COMMITTEE.

Lawrence E. McGreal, the Milwaukee jobber, this week informed Max Landay, of Landay Bros., New York, that he had been appointed chairman of a committee who will have charge of the program on July 12 (Wednesday). The day's entertainment will include a ball game, athletic contests, a shore dinner, automobile trips, etc. Mr. McGreal, in his letter commissioning Max for his duties, says he will have authority to appoint the umpires, stakeholders, water carriers, etc. It is also suggested that should Mr. McGreal "throw a fit" in the course of the exercises Max is authorized to have a bucket of water ready to revive him. There is some talk that Mr. Landay may attend the ball game in pink pajamas.

On the 11th inst. the Victor Talking Machine Co., Camden, N. J., announced four special hits to go on sale at once, as follows: 10-inch, 5839, "By the Saskatchewan" (from "The Pink Lady"), sung by Werrenrath and Haydn Quartet; 10-inch, purple label, 60040, "Beautiful Lady" Waltz (from "The Pink Lady"), sung by Lucy Isabelle Marsh and Victor Orchestra; 12-inch, 31823, Gems from "The Pink Lady," by Victor Light Opera Co.; 31824, Gems from "Madame Sherry," by Victor Light Opera Co.

Thomas Kraemer, former general manager of the Hawthorne & Sheble Manufacturing Co., Philadelphia, Pa., now out of business, a year and a half ago accepted an offer from Japan to take over the duties as general manager and factory superintendent of the Japan-American Phonograph Manufacturing Co., Tokio, Japan, succeeding J. O. Prescott. Mr. Kraemer intends to stay another year or two in the land of the rising sun and then return to Philadelphia. His assistant, O. H. Watzig, formerly with the Neophone, Ltd., London, Eng., is in charge of the recording department.

PHONOGRAPH AS ANNOUNCER.

To call attention to certain advertised articles a department store manager in northern Iowa placed a large phonograph in the lobby of his store. This phonograph worked automatically and every five minutes it would call out some sentence. "Special shoe bargains in the basement." "Ask the clerk to show you our new line of silks." "Exceptional bargains in chinaware to-day," observes a writer in System.

The records for this phonograph are taken the day before every sale and always remind a customer of the things advertised in the morning papers. The novelty of this form of advertising was commented upon by customers as well as newspapers and kept the name of the store in the mind of every individual hearing the "barker" given in this unusual manner. The scheme might savor too much of the street corner faker to be approved of by all merchants, but it pulled big results for this particular store. At the same time novelty always has its appeal and sound makes a quick impression on the mind—combine the two ideas and you are sure of getting your message "over."

C. P. CHEW WITH T. A. EDISON, INC.

C. P. Chew, recently covering the Greater New York territory for the Victor Talking Machine Co., Camden, N. J., is now on the selling staff of Thomas A. Edison, Inc., and will travel New York State. He is a star in his line.

FROM OUR JOKE BOX

A GOOD CUSTOMER.—"By the Lord Harry," said a stout man, looking down from the balcony skirting the upholstery department of a well-known general provider, "this is an immense place—huge, simply stupendous!"

"Oh, yes; nice place," said the shopman, obligingly.

"The stores ain't a comparison. No, sir, not a comparison, sir. How much of a stock does this represent?"

"About \$500,000 worth."

"Good—first rate! And furniture—how about furniture?"

"Over \$50,000."

"Admirable! Take a house and go right through it, I s'pose—furnish it complete, could you, from top to bottom, eh?"

"Yes, everything, from carpets to bric-a-brac."

"And lace curtains and tapestries—you keep them?"

"Keep everything."

"And you know what style is, too—Renaissance, Pompadour, Henry II, and the Louis?"

"No one better than our manager. Perhaps you'd better see him. Mr. X—, here, one moment."

And the manager came up with a smile on him like a half-moon.

"No idea of it," mused the customer; "no idea. Had an impression you had to go to Paris for such things. Good taste; everything correct; surprising, really."

"If you could give me an idea," ventured the manager, "of about what you required, sir, you know—"

"Ah, yes, I forgot. I want a stick of sealing-wax. Magnificent establishment, sir!"

IN PROPORTION.—Wife—I want a cap, please, for my husband.

Shopkeeper—Yes, madam. What size does he wear?

Wife—Well, I really forget. His collars are size 16; though I expect he'd want about size 18 or 20 for a cap, wouldn't he?—London Opinion.

Suffragette—We believe that a woman should get a man's wages.

Married Man—Well, judging from my own experience, she does.—Tit-iBits.

There is quite a difference between earning money, making money and getting money. The first may be called Honesty, the second Speculation, and the third Robbery.

Old Actor—Your grievance is just. Probably an error. It was undoubtedly intended to appear "supported by a picked company of players," not "a pickled company."

First Manager—Did your company have a long run?

Second Manager—No; but we had a long walk.

After a girl has been engaged three or four times she finds it almost as exciting as a man does when he gets his hair cut.—Chicago Daily News.

"Your daughter plays very sweetly on the piano."

"That's my wife playing."

"I know it."—Birmingham Age-Herald.

The girl next door who declares in glad cadenzas that she cannot sing the old songs ought not to tackle the new.

Minister—What shall we put on your tombstone?
Editor (faintly)—We are here to stay!

"Marry you? Why, you couldn't dress me."

"I suppose I could learn."

"I don't get what I deserve for my poetry."

"You're lucky."

ANNUAL MEETING OF DEALERS.

Eastern Talking Machine Dealers Association Now One Year Old—Excellent Progress Reported in All Directions—Officers for the Ensuing Year—Interesting Addresses Made by Jobbers and Representatives of the Big Manufacturers.

The Eastern Talking Machine Dealers' Association, having safely passed through the trials and tribulations that beset a new organization during the first year of its existence, held its first annual meeting at the Cafe Lion d'Or, New York, on Wednesday last, April 12, upon which occasion the reports of the officers were received, and the officers elected for the ensuing year. At the business session in the morning President Storck, in presenting his report for the year, expressed his pleasure at the progress made by the association, and the interest shown in the movement not only by the dealers themselves, but by the manufacturers and jobbers and their salesmen. He also reported that the outlook for the coming year was most encouraging.

The treasurer in his report stated that despite the heavy expense incurred in getting the affairs of the association running smoothly there was a satisfactory balance in the treasury at the end of the year, which was steadily increasing as the organization grew. The secretary in turn was equally optimistic, and reported that the membership of the association had increased rapidly as soon as the dealers in the territory covered realized the importance of the organization and its value to them personally.

The following officers were elected for the coming year: Frank C. Storck, Red Bank, N. J., president; E. T. Glover, Plainfield, N. J., vice-president; A. Lasus, New Rochelle, N. Y., treasurer, and A. Lustberg, Huntington, L. I., secretary. The executive committee will be announced at a later date by President Storck.

In the course of the business session a resolution was passed reducing the annual dues of the active members from \$5 to \$3 and of the associate members from \$3 to \$1.50, the object being to induce every dealer of standing in the Eastern States to enroll with the association as soon as possible.

Following a pleasant luncheon the members of the association reconvened in the afternoon for the purpose of listening to the addresses of several invited speakers, representing the manufacturers, the jobbers and the trade at large. The first speaker was Max Landay, of Landay Bros., the prominent Victor distributors of New York, who gave the dealers an excellent idea of trade conditions in general and the outlook as he found it upon his recent trip to the Pacific Coast. Mr. Landay stated that the talking machine business was big and was still growing, and that as a matter of fact it had really just commenced at the present time. He also took occasion to point out the importance of attractive window displays and clean and well-arranged stocks in the stores themselves as a means of holding and increasing business.

Henry C. Brown, advertising manager of the Victor Talking Machine Co., next addressed the

Will Buy Surplus Stocks.

Will buy clean Edison or Victor surplus stocks. Address SURPLUS, care Talking Machine World, 1 Madison Ave., New York, N. Y.

For Sale.

5,000 Edison two-minute records, all new, clean stock; 14 cents each, in 300 lots. A. J. Denniger, 335 North St., Rochester, N. Y.

For Sale or Trade.

5,000 brand-new double-faced Zon-o-phone Records; jobbing stock; complete catalog, well assorted. Also 20 Zon-o-phone Machines, latest models, assorted types. Original packages. For Sale or Trade.

100 Columbia Disc "BN" Machines equipped with 10-in. turntables. Can use Edison Records in exchange. What have you to offer? Address 41,144, care Talking Machine World, 1 Madison Ave., New York City.

dealers and offered some excellent and valuable suggestions regarding selling methods calculated to increase the record business materially. He exhibited a sample of the new back label on the Red Seal records, and emphasized the importance of the dealer and his salesmen being thoroughly familiar with the music on the record in order that they might demonstrate and talk about it in a convincing manner. Mr. Brown also displayed to the dealers a new card system for keeping track of record sales and prospects, in which each separate record bought by a customer is listed on a card bearing his name, and the dealer is able at all times to see just what records the customer has in his library and act accordingly.

In speaking of conditions in the machine trade Mr. Brown gave it as his opinion that the demand for machines this year would exceed the heavy demand for 1910, the extent of which he illustrated by stating that at present the company were behind on orders for 170,000 Victor machines and 30,000 Victrolas. This in part explained why the dealers could not get all the machines of certain types they desired, and he advised early ordering for fall and the holidays, even though not entirely convenient, in order to avoid disappointment at that time.

Mr. Brown discussed at length the widespread advertising done by the Victor Co., and pointed out many ways by which the dealers should profit by the heavy expenditures of the manufacturer for advertising by backing the general campaign locally in their own cities and towns.

The next speaker was George P. Metzger, advertising manager of the Columbia Phonograph Co., who entered into a live talk upon salesmanship. He stated that his own experience told him that the field for talking machine sales had only been scratched, and that there was virgin ground below the surface waiting for the wideawake dealer, for there were thousands of people who had not been impressed by the first talking machines put on the market years ago, and who were unacquainted with the progress made in producing both machines and records within recent times. Mr. Metzger suggested house-to-house canvassing and the giving of free concerts at private entertainments as a means of placing the present-day talking machines and records before the great mass of prospects who are not easily reached by other methods.

Mr. Metzger called particular attention to the show window as a means of advertising, and emphasized the fact that full advantage should be taken of the space that represents such a large proportion of the rent and really affords the introduction to the store. The interesting and instructive address was brought to a close with the playing of the Columbia demonstration record on a Grafonola for the benefit of those who had not heard that unique and excellent piece of record advertising.

The closing address was made by Ora E. Reinhart, head of the newly organized window display department of Thomas A. Edison, Inc., and the services of which are offered free to Edison dealers, the materials used in the display being sold to them at cost. Mr. Reinhart discussed the question of window display as an expert in that line, and gave the dealers some valuable hints in that direction. While suggestions will be made to fit the individual needs of the dealers applying for the service, the regular displays will be forwarded to the dealers desiring same each month, and will be so arranged that the same foundation may be used for three months, the details being changed monthly in order to give freshness to the display.

The next meeting of the association will be held at the Lion d'Or on the second Wednesday in June.

When a man's in the selling end of the business what he really needs to know is the manufacturing end, and when he's in the factory he can't know too much about the trade.

Do not start business in a place because it happens to please you, but study the local conditions, and only establish yourself where they are of such a nature as to indicate prospective success.

A HANDSOME DEPARTMENT

Is That Conducted by Wm. Knabe & Co. and Devoted to the Sale and Display of Columbia Records.

The formal opening of the talking machine department of Wm. Knabe & Co., Knabe Hall, New York, took place March 21, and on that and succeeding days a large number of people visited the section devoted to a fine display of Grafonolas, graphophones, records, etc.—a complete line of Columbia goods, which they will handle exclusively.

The quarters set aside for this department have been artistically tinted in cream white and pale green wall panels, with plate glass mirror doors opening into the demonstrating booths. The arrangements for handling the record stock are admirable and most convenient. Heavy bright lined velvet carpet and fine rugs cover the floor. The entire place is brilliantly illuminated. In addition to the allotted space, they will also utilize the \$10,000 art room adjoining for the display of the Grafonolas, on which they specialize. The room in question, with deep panels of embossed pink silk, cost Knabe & Co. that figure to decorate and furnish, and is used for exhibiting the finest examples of Knabe's art grand and upright pianos.

It is the intention of Wm. Knabe & Co. to have specially designed Grafonolas for their trade only, and with this purpose in view the art department of the great piano house are preparing cabinets that will range in price up to \$1,500 in cost. This work is to be completed and finished at the Baltimore factory, and the mechanism subsequently installed by the Columbia Phonograph Co. Joseph M. Bryant, in charge of the department, said the opening was auspicious in the highest degree, and that the sales since had exceeded their most sanguine expectations. At times they had as many as sixty callers, three-fourths of whom placed orders.

FEATURING COLOMBIAN COMPOSITIONS.

El Grafico, of Bogota, Colombia, S. A., in an article on "Our Music Abroad," says: "Colombian airs have always called for considerable attention abroad for the originality of their rhythm and poetic grace of expression. At present they are not only sought for private entertainments, but solicited for public purposes as well. This success is due in great part to Emilio Murillo, indefatigable composer and promoter of our national airs, who has set himself to bring to light the Colombian musical compositions. They are being enthusiastically hailed principally in the United States. (The Yankees are so fond of all our productions!) The celebrated Mademoiselle Dazie has been engaged for the Victoria Theater of New York, where she sings very correctly the Colombian airs of Murillo and dances to the music of the Colombian composer so as to do one's heart good. To this should be added the fact that Mr. Sause, with the Columbia Phonograph Co., asserts that the most successful records are Murillo's Colombian compositions."

Engage capable assistants and pay them satisfactory wages. Treat them well so that they may take an interest in your business. Do not act toward them in a narrow-minded manner, but do not be too indulgent. Make inquiries about their capacity and then require each one to do his best.

Every Dealer in the United States should have within easy reach a copy of

THE TALKING MACHINE WORLD

It is the only paper published in this country devoted solely to the talking machine interests.

The extraordinary efficiency of The Talking Machine World as an advertising medium has been the subject of most favorable comments from time to time, while its merits in a literary way, as well, have been acknowledged by firms, companies, individual dealers and jobbers in every section of the globe. Hundreds of communications in our files testify to this, and only recently the S. B. Davega Co., the prominent Victor and Edison jobbers of New York, wrote the following unsolicited letter, which speaks for itself:

"Gentlemen—It gives us great pleasure to inform you that we have received more replies to our last month's 'ad' and had greater results therefrom than any 'ad' we ever had in your paper. Almost two carloads of cabinets were disposed of in one month's time; in fact, one complete carload of our No. 100 cabinets alone was sold. The results obtained from our Simplex Needle Box 'ads' in previous issues were also very gratifying, and we do not hesitate to say that The Talking Machine World has been our best medium for advertising all of our specialties."

Another pleasing tribute to the literary quality and the general excellence of The World reaches us from Thomas Edens Osborne, the progressive talking machine jobber of Belfast, Ireland, who says: "I am sure you will believe me when I say that one copy of The Talking Machine World is worth all the other papers connected with the talking machine industry."

The World has won its place in the foremost rank of trade papers throughout the world because it believes, firstly, in furnishing the trade not only with the news of the world, but with helpful, stimulating, educational articles covering every branch of the industry; secondly, it believes in giving the advertiser the value of legitimate circulation—of persistently and systematically getting after old and new dealers and bringing the specialties advertised in The World to their attention.

It is safe to say that The Talking Machine World to-day has a circulation in foreign countries which far exceeds all other publications devoted to talking machines combined, while in the United States it is the only publication devoted exclusively to this important industry.

Sample copies free for the asking. By the year, One Dollar.

NEW YORK

JOHNSON RECORD PATENTS UPHELD.

Judge Ray in Exhaustive Review Grants Decision to the Victor Talking Machine Co.—The Control of the Disc Record with Lateral Undulating Groove Remains with the American Manufacturer.

The case of the Victor Talking Machine Co., Camden, N. J., against the American Graphophone Co., New York, argued in November last before Judge Ray, U. S. Circuit Court, Southern District of New York, sitting at Norwich, N. Y., at the time, was decided in favor of the complainants.

The charge is infringing what is known as the Johnson cut record patent No. 896,059, issued August 11, 1908, which the defendants claim is in contravention of the well-known Jones patent, which they own.

Judge Ray's decision, which was handed down March 29, is broad and comprehensive, and by it foreign manufacturers are estopped from attempted inroads upon the trade in this country, by importation of records which are an infringement upon the Johnson patents.

The decision perpetuates the control of the disc record with lateral undulating groove, such as at present is employed, in the hands of American manufacturers.

It is the first time that the Johnson patent has ever appeared in any court, and, therefore, the decision in detail will be of manifest interest to the entire talking machine trade of the world.

Following are excerpts from Judge Ray's decision:

The Johnson Patent Described.

The patent in suit, "Record for Talking Machines," was granted to Eldridge R. Johnson, assignor to Victor Talking Machine Co. Aug. 11, 1908, on divisional application filed Nov. 12, 1904, original application filed Aug. 16, 1898. While the complainant alleges in a general way that substantially all the claims are infringed, it points out and specifically alleges infringement of certain claims. . . . In what is called the parent patent, patent to Eldridge R. Johnson, assignor to Victor Talking Machine Co., No. 778,975, dated Jan. 3, 1905, application filed Aug. 16, 1898, the claim made was for a "cutting tool for sound-recording machines." Johnson tells how to make or form a cut-out record. He says, after telling how to cut out and form a record, "It is understood that in reproducing the record thus formed may be used for reproducing purposes directly, or a more durable and indestructible record may be reproduced by various processes from the original record. . . ."

Nov. 19, 1897, Joseph W. Jones filed an application for a patent in this same art, and which the defendant claims fully covered the same invention described in the Johnson patent in suit, and a patent issued thereon on the 10th day of December, 1901, for "Production of Sound Records," No. 688,739. That patent has been the subject of considerable litigation. . . .

It is obvious from the specifications of the Jones patent that he did not claim the discovery or use of any new or improved mode or method of "cutting or engraving" the spiral grooves—the laterally undulating grooves—in the wax or wax-like tablet. He plainly recognized that this had been done before, and that there was more than one way of doing it. After describing his disc or tablet of suitable recording material he specifically says, "Upon the surface of this tablet I then form, by the use of a sound-recording machine, in a well-known manner a spiral groove of practically uniform depth that contains lateral sinuosities or irregularities corresponding to or representing the sound-waves recorded." In short, he cuts or engraves his spiral groove in "a well-known manner."

Validity of Jones' Invention Upheld.

In American Graphophone Co. against Universal Talking Machine Co., the Circuit Court of Appeals, Judge Townsend writing the opinion, upheld the validity of the Jones patent as disclosing invention in the mode or method of making commercial sound records by (1) cutting or engraving a record groove of uniform depth by means of the lateral vibrations of a suitable stylus upon a disc of wax-like material; (2) coating the same with a conducting material; (3) then forming a matrix thereon by electrolysis; (4) then making therefrom duplicate records by impression. This case was decided Jan. 14, 1907. I find no reference in that case to the then pending application of Johnson for the patent in suit, issued in August of the next year, 1908. Judge Townsend refers to the Bell and Tainter patent, No. 341,214, claim 9, of which was for "The method of forming a sound or speech record which consists in engraving or cutting the same in wax or a wax-like composition, substantially as described." Of this Judge Townsend said, "An examination of the Bell and Tainter patent shows that the assumption as to its broad scope are without foundation. There is not a word of reference in the specifications to the engraving laterally of undulating records, or of any records of uniform depth." This indicates a departure by Jones from Bell and Tainter in both these respects, as, indeed, the specifications and claims of Jones show. Clearly Jones cut or engraved on his tablet a record-groove "of appreciable and practically uniform depth" having "lateral undulations corresponding to the sound waves." From the opinion of Judge Townsend we would infer that it was here that he found patentable invention in the Jones method. The distinction drawn between Bell and Tainter

and Jones seems to have been that Bell and Tainter cut or engraved sound grooves on cylinders or on tablets vertically instead of laterally and without regard to uniformity in depth.

Board of Examiners Grant Claims.

After Johnson had divided his original application and filed his application for the patent in suit, Nov. 12, 1904 (serial No. 232,389), the principal examiner finally on April 3, 1908, rejected claims 1, 2, 3 and 9 (which seem to be the same as claims 1, 2, 3, and 4 of the patent in suit), and the claimant appealed to the board of examiners in chief April 8, 1908. Among others the Jones patent in question here was cited. July 7, 1908, the board of examiners reversed the examiner in chief. It was held that Johnson was rightfully in the Patent Office with his divisional claims and that Jones did not anticipate as he had filed and abandoned claims for the same subject matter as is embraced in the claims before the board of the patent in suit. Amongst other things on this subject the board said: "Jones has no more equity against the applicant's right to a patent for the subject matter of the appealed claims, nor, if possible, even as much as Clark and Johnson, No. 624,625, May 9, 1899, have, upon whose patent Jones claims for the subject matter here appealed were rejected."

I think it quite clear from the prior art, the proceedings in the patent office, the exhibits and testimony, that Johnson had clearly in mind the actual cutting out and removal from the groove of a part of the substance of the disc or tablet on which the original record was to be made in the art of making sound records upon tablets of wax or other suitable material of the laterally undulatory groove type, and that he was the first to conceive this idea and reduce it to practice. In August, 1898, he said, "It is essential in order to produce a clear record that the material be cleanly and neatly cut from the grooves in the process of recording so that sharp, well defined lines will be formed in the walls of the grooves." In describing his tool and its operation he says, "These edges (a') are carefully formed to present a cutting edge, so that as the moving record is traveled against the face a of the tool A when held in position, as indicated in Fig. 1, the knife edges a' will clearly cut the material from the record, forming a clean-cut groove, with the undulation or sound waves produced by the vibration of the stylus formed in the record, as shown in Fig. 5, and illustrated in cross-section in Fig. 3." His Fig. 1 of the parent patent shows the knife, or cutting tool at work. Fig. 5 shows the groove on the tablet, and Fig. 6 shows the record groove with the laterally undulatory sound waves in the sides thereof.

This is beyond anything shown or described in the prior art, or in Jones, and, I think, was beyond anything Jones had in mind when he applied for his patent, although Jones, broadly speaking, described it, aside from the peculiar form of the groove, elliptical form. Did this originate with Johnson in 1896, as he claims, and before Jones filed his application?

An Improved Sound Groove Attained.

It is clear that Johnson had been at work in this field, this art, and this particular branch of it prior to August, 1898, when he filed his application and claimed the cutting tool. It is not, therefore, improbable that he made his discovery in 1896, when he says he did. It is clear that he knew all about it Aug. 16, 1898, for, as stated, he then had invented and then claimed and later was granted a patent for the cutting tool that would do the work which he described. I think it may be well doubted that Johnson appreciated that, in view of the prior art, he had made a patentable invention in producing a disc sound record such as he described in his parent patent of Jan. 3, 1905, applied for in 1898: that is, "A disc sound record having a cut-out laterally undulatory groove of substantially constant or even depth, such lateral undulations corresponding to the sound waves."

However, he clearly reserved the right to claim it, for he said, "It is understood that in reproducing the record thus formed may be used for reproducing purposes directly (that is, reproducing the sounds) or a more durable and indestructible record may be reproduced by various processes from the original record. (That is, duplicates might be made by various processes.) This feature, however, forms no part of my present invention herein described." That is, he did not go into the feature of a duplication of the original for commercial purposes. . . .

If Johnson himself and his witnesses, C. K. Haddon, B. G. Royal, W. H. Nafey, A. C. Middleton and A. A. DuBois, are to be credited, in fact, unless their statements are to be rejected, Johnson made and completed this invention (now held to be an invention) in the early summer or fall of 1896, which included the making of the lateral undulating record of even depth cut in a plate of wax-like material and the making of an electroplate upon such record of wax-like material by covering it with plumbago and making it electro-conductive. If this was done he demonstrated that a matrix made by such process of electroplating the record could be obtained for making duplicate commercial records.

Discoverer of the Cut-Out Process.

I do not think it necessary here to go into the details of the evidence which leads me to the conclusion that Johnson, corroborated as he is, made this invention in 1896. He either did or he, Haddon and others, have concocted a plausible story and committed deliberate perjury. I cannot find anything in the case to justify a conclusion that he got his ideas, incorporated in the specifications of the so-called

parent patent, from Jones. On the other hand, while there is no evidence that Jones got his ideas from Johnson, he did not seem to appreciate and certainly did not claim that he had made any discovery in cutting his groove into not out of the wax-like tablet. He said nothing about actually cutting out a groove by the lateral or zigzag movement of the stylus. In fact it does not appear from the Jones patent that he did in fact cut out a spiral groove of practically uniform depth containing lateral sinuosities or irregularities corresponding to or representing the sound waves recorded. He claims nothing of the kind as a discovery or invention, or, if he did, it was rejected and in the rejection he acquiesced. It is easily seen that such a groove as Jones described might have been produced in a soft wax-like material without cutting out any of the material. Such a groove could have been made by displacement, and mere cutting is quite different from cutting out and removing a part of the material. . . .

However, it is perfectly clear that Jones was not the inventor of the cutting-out process in either the flat disc or the cylindrical sound records. Jan. 9, 1897, eleven months before Jones filed his application, Alfred Coening Clark and said Eldridge R. Johnson filed an application for a patent for a "Sound Recording and Reproducing Machine," which the specifications expressly state was adapted to make records upon either rotating discs or revolving cylinders and the original sound reproduced therefrom. . . .

The record substantially concedes infringement by defendant, assuming the Johnson patent to be valid, and no time need be spent on that question, although I am of the opinion that sustaining the Johnson patent in suit does not destroy the Jones patent. I think both are valid, but that Jones includes and uses what belongs to Johnson. In short, should Johnson do just what the Jones patent describes and all that it describes, he would infringe Jones, while Jones in doing what he does infringes Johnson. . . .

Estoppel and Other Conditions Considered.

The opinion here takes up the question of estoppel and other conditions alleged to have a bearing on the trading relations between the Victor Talking Machine Co. and the American Graphophone Co. (Columbia Phonograph Co.) in connection with the Jones patent, and deals with them at length, with the result that the court denies every contention of the defendants. The argument then concludes as follows:

Nov. 19, 1897, about two years after Jones filed his application for his patent he attempted to amend by inserting the following claims:

"1. The herein-described method of producing original sound-records, which consists of cutting or engraving upon a tablet of suitable material, by means of the lateral vibrations of a suitable stylus, a record-groove of appreciable and practical uniform depth, the same having lateral undulations corresponding to the sound waves, substantially as described.

"2. An original sound record formed of a wax-like material and having engraved upon its surface a spiral groove containing lateral undulations of uniform depth, the depth being slight but appreciable, and the undulations corresponding to sound waves, substantially as described."

These claims were rejected on the prior art and Jones acquiesced. Defendant cannot be heard now to say these rejected claims formed any part of the Jones invention. As I look at it Johnson claimed and was granted a patent for what in substance was denied to Jones.

Jones claimed but was denied a patent for (1) the method of producing an original sound record which consisted in, (a) cutting or engraving upon a tablet of suitable material, (b) by means of the lateral vibrations of a suitable stylus, (c) a record groove of appreciable and practically uniform depth, and (d) the latter having lateral undulations corresponding to the sound waves.

And again, the product, viz.: (1) an original sound record, (2) formed of a wax-like material, and (3) having engraved upon its surface a spiral groove, (4) containing lateral undulations of uniform depth, the depth being slight but appreciable, and (5) the undulations (lateral) corresponding to sound waves.

The patent granted Jones is for a method of producing commercial sound records which consists in cutting or engraving upon a tablet of suitable material, by means of the lateral vibrations of a suitable stylus, a record groove of appreciable and practical uniform depth, and, having lateral undulations corresponding to the sound waves, as step one, and then coating the same, etc. In short, it stands out perfectly plain that the first step of the Jones method or process which consists in making the original record was claimed by Jones as his invention, and rejected on the prior art. It was subsequently patented to Johnson as the inventor thereof.

The Court Can Draw No Distinction.

I can draw no distinction between what Jones claimed and had rejected, and claim 3 of the Johnson patent in suit. Johnson cuts on a tablet of suitable material, by means of the lateral vibrations of a suitable stylus, a record groove of appreciable and substantially uniform depth, having lateral undulations corresponding to the sound waves. Wherein does this differ from the rejected Jones claim and step one of the Jones process or method? And why is it not patentable? It is the making of the original record which may be used to reproduce sound.

However, it would not be a commercial success as a sound record for reproducing sounds because not durable. But the commercial records could not be produced without it. Add the other steps of the Jones method or process and we have the successful commercial records of Jones. But in practicing the Jones process the defendant infringes the Johnson patent. Clearly defendant infringes claim 3 of the patent in suit. And as clearly to my mind, the de-

defendant infringes all the claims of the patent in suit in issue here unless it be claims 14 and 23, which add in broad terms the production of duplicates or commercial records from the original by any process, or any means which will accomplish the end. The defendant insists there is only one known process of producing duplicates from the original and that the one described in the Jones patent and there claimed.

All Johnson says in the patent in suit as to reproducing sound records from the original is, "It is understood that in reproducing, the record thus formed may be used for reproducing purposes directly or a more durable and indestructible record may be produced by various processes from the original record." He does not point out or describe or claim either one of the "various processes" referred to. Jones did and does and was granted a patent for that particular or specific process of reproducing a more durable and indestructible record; that is, the commercial sound records for use in reproducing the recorded sounds, music or speech.

Infringement of Johnson Patent Declared.

I cannot find that Johnson anticipated or was prior to Jones in his method or process described in his patent No. 688,739, dated Dec. 10, 1901, for reproducing sound records from the original record made according to the Johnson invention; that is, by coating such original with a conducting material, then forming a matrix thereon by electrolysis, and finally separating this matrix and pressing the same into a tablet of suitable material in the way described; or, in the language of claim 2, by next rendering the surface thereof (of the original record) electrically conductive, then forming a matrix thereon by electrolysis, next separating the matrix from the original record disc without the use of heat, and finally impressing said matrix into a disc of suitable material to form the ultimate record. Whether or not this part of the Jones patented process was old in the art does not concern this litigation; the defendant infringes the Johnson patent now owned by the complainant, by using his method or process of producing the original record and his patented original record from which the duplicates are subsequently made. If there are methods of reproducing records from the original record other than that described and claimed by Jones, clearly the complainant may use it without fear of the Jones process. There will be a decree accordingly, with costs, and for an accounting.

In view of all the prior litigation and all the facts, I may as well say here that if the defendant desires to appeal and takes the appeal within thirty days from the entry of the decree hereon, the issue of an injunction will be suspended pending such appeal and until the determination thereof, providing it gives a bond in the sum of ten thousand dollars (\$10,000), conditioned to pay all costs, damages and profits awarded against it herein, and provided it moves such appeal to a hearing promptly by asking that same be advanced.

VICTOR CO.'S FOREIGN LISTS.

Send Out an Advance List of 86 "Specials" Covering Almost Every Language—Revised Schedule of Opening Days and Shipping Dates.

In accordance with their policy of increasing their foreign lists as rapidly as possible the Victor Talking Machine Co., Camden, N. J., have sent out an advance list of eighty-six "specials," to go on sale as soon as received by the dealer. The company realize the opportunity the foreign speaking population offers to Victor dealers, and it is therefore their intention to increase the catalogs from time to time as rapidly as they are able to secure suitable artists and increase their laboratory facilities.

The list referred to includes German, Arabian, Turkish, Russian and Neapolitan records. In the same lot two Christian Science records are also announced. Perhaps this is the first time the latter were ever offered the trade. About the same time the February supplement of new Victor Chinese records (Cantonese dialect) were shipped to go on sale when received.

The Victor Co. have found it advisable to allow distributors to ship the monthly supplement records to dealers one day earlier than heretofore, beginning with the April supplement. The change is concurred in by practically the unanimous vote of Victor distributors. A revised schedule of "opening days" and shipping dates in force for the remainder of 1911 was announced at the same time.

The Cincinnati Columbia store recently placed a Grafonola Regent, mission style, in a new cafe on Vine street, which harmonizes with the artistic oak fittings of the place in the same design and finish. A piano salesman recommended the Grafonola in preference to an automatic piano.

Business brevity is sometimes cultivated to such an extent that the abruptness sways dangerously near discourtesy.

Advantages of Co-Operation in Sales Department.

By H. H. FISH, Los Angeles.

Co-operation—what a wealth of meaning is expressed by that one little word; how simple it is to spell; how easy to pronounce; yet I venture to say that very few of us pause to think when we come across it in print of the wonderful possibilities it contains. Without it what would become of civilization?

Imagine, if you can, a person placed on an uninhabited island, dependent entirely on his own resources, no one to aid him, not even a beast of the field to help him till the soil, but condemned (by the absence of co-operation) to plod along indefinitely, an outcast, a lonesome exile, and one can readily see that he would soon sink to the level of all brute creation, where only might is law and the strong dominate the weak.

History has proven over and over again that families, communities, States and nations have signally failed in their endeavors when they scorned co-operation. I think the motto of the great State of Kentucky expresses it all in a very few words, "United We Stand, Divided We Fall." If in the ordinary walks of life it is so essential to co-operate, then how much more it becomes a necessity in business relations. It is the keynote and backbone of all commercial institutions. Take, for instance, any large department store; it would matter not what ability its owner or manager had, if the heads of the different departments were not in unison. That store would be a failure. Twenty men pulling together might easily draw a wagon from a mud hole—one couldn't even move it. But to return to the question under discussion, that is our own case. Where could we find a better example of the advantages of co-operation than among the eighty odd employes of our own great music house, the Southern California.

There is a certain inherent instinct in most of us to be loyal to our own particular house; to work for the same common end, success for our business, and as a general rule, when you benefit your employer, you benefit yourself. Why should a talking machine salesman feel out of humor when a prospective Victrola customer should change his mind and say, "Well, after all, I think a piano would probably suit us better." Maybe he will ask your opinion of pianos in general, mentioning several standard makes, as the Chickering, Steinway, Weber, Knabe and A. B. Chase, etc. Do you think that it would be fair to our fellow-salesmen of the piano department to answer this man's query something like this: "I really don't know anything about pianos, that is out of my line." Would that be using business tact? Emphatically no; and, besides, it would lower you in his estimation, as he would probably think that you took very little interest in the business welfare of your firm and also were lacking in courtesy to him. How easy to tell him of some of the different makes we handle, and before you get into deep water turn him over to one of our many able piano salesmen and let them do the rest.

While you have probably lost that customer for the time being, at some future date, when the piano is not so new, you may interest him again in the Victrola, and this time land him.

It seems to me a hard problem to decide as to which department had the best opportunities to aid the others. Of course, the first floor has this advantage; they see them first, and no doubt many a faint-hearted talking machine customer is shown to the elevator and landed on the third floor, before he really has the time to object. Still, on the other side of the question, our record customers ask if such and such a song is published, or say that this particular piece being sung by some artist would just suit their voice and, of course, that is our chance to direct them to the sheet music department.

Again, many of our patrons, after hearing some of the wonderful solos performed by the great staff of artists employed by the different talking machine companies, become ambitious to learn some instrument themselves. Quite often they in-

quire as to the relative difficulties of the different ones. Thus we get our cue to refer them to the small goods department.

Not only are we able to co-operate for our mutual benefit, but by keeping our customers interested in their machines and records, we will find that they will also co-operate with us and will bring their friends in and so we are forming a network of never-ending business, which with proper handling will not decrease but grow larger and more profitable. As a general rule people who trade regularly at one place show a preference for some particular salesman. This preference may be for several reasons, viz.:

This salesman may have waited on them the first time they purchased in his place of business, or maybe on account of a former acquaintance with him, and sometimes because he, the customer, is better treated by him. The first two reasons are legitimate, the last one is to be deplored, as it shows a lack of harmony or co-operativeness among the employes of that house.

Every salesman should strive to show the same courtesy and attention to another's customer as he would to his own, and in consequence the customer will always feel at home if the one they happen to ask for it out. Another thing, it would be well for us to keep in mind is that every purchaser is different. You will often hear the remark among clerks, "Here comes Mr. —; it is a pleasure to wait on him." On the other hand, there is the crabbed customer, that nothing seems to suit, whom you generally have a hard time to please. A great many times this cranky person only needs a little co-operation to get him started on the right way to being more congenial and easier to suit.

Help him out by offering him a few suggestions, that is probably just the trouble; he doesn't know himself what he wants and you may happen to strike just what he likes best. Of course, he may ignore your little hints, but by judicious handling nearly all of them can be made to see that you are really anxious to help them, and it may be the means of getting more business for the house in the future.

No one person in an establishment of this size can be the whole thing, no matter how much he or she may desire, but they must to a certain extent, at least, depend on the help of others.

So in conclusion I think we will all get along better, feel better toward each other, and last, but not least, get better business results, if we only take for our motto, "Co-operation."

INSTALL COLUMBIA LINE.

(Special to the Talking Machine World.)

Hyde Park, Mass., April 6, 1911.

Burnes Bros., house furnishers, have added a talking machine department, featuring the Columbia line. The business so far has been extremely gratifying, and more prominence than ever will be given this branch of their business.

Said a merchant of experience: "I would much rather a man should come into my store and blow me up than to go by it altogether.

"If he goes by I have no chance at him at all. If he comes in when he is angry at something we have done or not done, it gives us a chance at him. We can explain or right his wrongs, or at least apologize for what we have done or not done. We can soothe him, file down his horns; possibly work him over into a good friend, and sell him something before he goes out. I have seen that done by the right man, and in the right way, many a time in my life."

People say that George Westinghouse did not invent the air-brake. It does not make any real difference whether he did or not; the fact remains that he knew how to get the railroads to use it. He was the distributor and consequently the indispensable man.

Arthur Collins
Pronounced by many to be the world's greatest delineator of negro dialect in song. It's a genuine treat to hear his U-S Records.

Ada Jones
This clever and versatile impersonator has made some unusually catchy and artistic records for the U-S.

Henry Burr
All the world has been charmed by the rich voice of this singer—unquestionably a leader in his class. Burr's best work is reproduced on U-S Records.

Byron C. Harlan
Widely known singer whose work in the duet of Collins & Harlan has become famous. You get as good as the original in U-S Records.

THE COUNTRY'S BEST DEALERS ARE FALLING IN LINE. They feel a sense of satisfaction in selling a phonograph and record that represent the very last improvement—the top-notch of perfection. You will realize immediately upon seeing and hearing this machine played that this ideal is reached in the

U-S Peerless \$200.

U-S Opera Model \$65.
Other Horn Models:
U-S Banner \$45.
U-S Junior \$30.

U-S Grand \$85.

**Combination PHONOGRAPH
Everlasting RECORDS**

For nearly a year we have been challenging the world to test the U-S machine and record along with any others, and *we have made good*. Have you made this test? If not, do so at once in the interest of good business and good music.

From the point of tonal qualities, you will realize that a pure, mellow, practically scratchless phonograph reproduction has at last been made a reality.

From the point of ease of operation, you will see that there is no other machine that can come anywhere near the U-S. These are all not only wonderful talking points, but features of real merit. There's the Flexible Tone Arm giving increased sound-amplifying radius; the Self Changing Reproducer Carriage; the wonderful Motor; the improved Diaphragm—and all the other *exclusive* U-S improvements.

Then you come to the U-S Everlasting Records—can't scratch—can't break—bringing a tone of genuine musical quality, not a mere mechanical reproduction of sound. A repertoire of the latest selections by the best talent.

There can be no question about it—the U-S is *the* proposition of today. Mail us the coupon today and we will prove this statement to your satisfaction.

Columbia 2-minute and 4-minute Indestructible Cylinder Records are the only cylinder records that *last*.

Columbia Phonograph Co., Genl., Tribune Building, New York.

RECORDS BY MARY GARDEN.

Great Exponent of Modern French Opera Is Now in Evidence With a Number of Remarkable Records Which Reflect Credit on the Columbia Phonograph Co.—They Include Two Numbers from 'Traviata,' One from "Le Jongleur" and Another from "Herodiade"—Dealers Should Stock Up for Her Concert Tour.

The Columbia Phonograph Co. are now offering a series of remarkable records by that great exponent of modern French opera, one whose interpretations have written a new page in operatic history and whose absolutely unique personality has dominated musical affairs in both the Old World and the New—Mary Garden.

The truly remarkable distinction of being the first American to really conquer the fastidious French public—the most conservative and prejudiced in the world, where its national traditions are concerned—belongs to Mary Garden alone. To Oscar Hammerstein the American public is indebted for its introduction to this unique figure in modern opera. Miss Garden's first American appearance having been made in the Manhattan Opera House, with which she was associated up to the time its company was absorbed by the Metropolitan Opera House interests, and practically every remembrance of that famous episode in New York's musical history is associated in the public mind with the name of Mary Garden. During the season just past, Miss Garden, as leading soprano of the Philadelphia-Chicago Opera Company, has scored new and even greater triumphs in Chicago, Philadelphia and New York.

Such operas as "Salome" and "Natoma" and more especially those of the modern French school—"Thais," "Louise," "Pelleas et Melisande," "Herodiade" and "Jongleur de Notre Dame"—have in the mind of this public become peculiarly associated with Miss Garden's name, and with her incomparable art. A condition such as this implies in any singer the possession of qualities of the very highest distinction, not alone a magnetic voice, but also a personality and a capacity for emotional realism in interpretation that projects itself over the footlights with the compelling force that only a very great artist can exercise.

Mary Garden's contributions as recorded by the Columbia Phonograph Co. are two selections from "La Traviata" (Verdi) on double disc A-5284, "Quel est Donc ce Trouble Charmant" (Ah! Fors e Lui) (What Can Be This Feeling?), soprano solo in French with orchestra, and "Pour Jamais ta Destinée" (Sempre Libera) (The Round of Pleasure I'll Enjoy), in French with orchestra. The second double disc (A-5289) includes a selection from "Le Jongleur de Notre Dame" (Massenet), "Liberte" (Oh, Liberty, My Life and Love!), soprano solo in French with orchestra, the second being "Herodiade" (Massenet), "Il est Doux, il est Bon" (Kind is He and Good), soprano solo in French with orchestra.

An idea of the excellence of these records may be gleaned from the fact that immediately after

Mary Garden heard them she sent the following communication to the Columbia Phonograph Co., which certainly tells its own story:

"I always said that *never* would I sing into a phonograph of any kind, but one does not always

live up to everything one says, happily, for after months of tireless persuasion the Columbia Phonograph Co. won out, and here I am saying, like every one else that will hear them, that the Columbia Records are without a rival! They are so soft and musical, losing all that beastly metallic quality that mars the phonograph in general. My sincere compliments for their eternal success. (Signed) MARY GARDEN."

In view of the fact that Mary Garden is now on a concert tour which will carry her as far as the Pacific Coast, Columbia dealers everywhere should make it a point to carry a good stock of the Mary Garden records.

TRADE MAKES GOOD SHOWING

In Both Manufacturing, Jobbing and Retailing Lines Is the Report of All Concerns.

It is the general opinion that trade is not only making a fine showing, but is growing better, besides. This very flattering report is shared by manufacturers, jobbers and dealers. The factories have not caught up on orders for certain types of machines, though the record account is in good shape. The jobbers in the metropolitan district, without exception, say their sales to dealers are of greater volume than for two years, and they are confident it will continue right through the spring and possibly up to the middle of June. The tenor of advices from different parts of the country is about the same.

Style, art, service, the things which differentiate one product and one store from another, are real things and influence the public. The vital things that make retailing would be missing if any other methods were to become universal.

THE SALESMAN'S STANDPOINT.

The Customer Finds the Salesman in a Chatty Humor and Draws Forth Some Interesting Views Regarding Store Management and His Employer.

I had just bought some records and was lingering for a moment's chat with the intelligent salesman who had waited upon me. It was a small store and not a busy store, but it was my habit to trade there, largely because of that particular salesman. A newsboy bustled in and threw an evening paper upon the table before us, and a moment later the proprietor came down the aisle, picked up the paper and took it with him to the office. I attached no significance to the act, but my friend the salesman looked at me and smiled; we were so well acquainted that he felt at liberty to talk freely to me, said a World correspondent.

"Mr. Blank is a well-informed man and he knows the business end of his business thoroughly," said he, "but if I were the proprietor of a store I would not only allow my employes to read the daily papers, but I would insist upon their doing so at my expense and upon my time."

My face must have expressed some of the mystification I felt, for he continued:

"Instead of being the exception it is almost the rule that customers will make some allusion to current events or refer to some startling item of news, and the salesman who cannot respond intelligently labors under a tremendous handicap. If the customer finds that his observations call forth a sensible and genial response he is almost certain to complete his purchase and come in again—in the end he is likely to become a permanent customer. But if the salesman answers half-heartedly or evasively, or if his reply discloses an inexcusable ignorance of the subject, the customer is pretty apt to feel as if a wet blanket had been thrown over him.

"Quite likely you are right," I said, "and I have no doubt but that you read the papers."

"I certainly do," was the emphatic reply. "Mr. Blank does not allow us to read in the store, but in my own home I carefully look over every paper published in the city. I consider it as much a part of my preparation for my day's work as my morning shave, and I have too much respect for the occupation I have chosen not to do everything possible that may enhance my value to my work and to my employer."

"Your argument convinces me," said I. "Why don't you suggest some of these things to your employer?"

The clerk shrugged his shoulders and again smiled.

"Mr. Blank is a good man to work for," he responded, "kind and considerate, but he is not one who invites or welcomes suggestions from his employes."

I walked out and on my way home pondered upon what I had heard. When my friend the salesman owns his own establishment I shall do all my trading there.

NEW TETRAZZINI RECORDS.

Great Soprano Spends Three Days at the Victor Laboratory and Makes Four New Records Which Are the Best Ever Turned Out of the Voice of the Great Diva—Will Go on Sale April 28—Will Have a Large Demand.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 1, 1911.

On Saturday the Victor Talking Machine Co., Camden, N. J., notified the trade regarding a new series of Tetrizzini records. They say: "The great soprano's three days' engagement started immediately after her recent concert appearance at the New York Hippodrome, where she sang to an audience of over five thousand enthusiastic

MME. LOUISA TETRAZZINI.

music lovers, which was simply a repetition of her many triumphs on the great concert tour which carried her to the Pacific Coast and back." Each of the records will bear on the reverse the Victor's new descriptive label.

The following new records will go on sale April 28, with the May supplement. It was impossible for the company to send out samples of these records to distributors together with the May sample records: 88291, "Carnival of Venice," part 1; 88292, "Carnival of Venice," part 2; 88293, "Traviata," "Ah, fors è lui," "Sempre libera," and 88294, "Carceleras" (from "Las Hijas del Tebedeos"), Spanish. On and after April 1 the Tetrizzini records will be sold at the usual Red Seal record discount, and on and after the same date these records will all be listed in the 88000 series.

The seven remade numbers which will also go on sale simultaneously with the four new numbers above are as follows: 88295, Rigoletto—"Caro nome" (Dearest Name); 88296, Mignon—Polonese, "Io son Titania" (I'm Fair Titania); 88297, Lakme—"Dov'è l'Indiana bruna" (Bell song); 88299, Lucia—Mad Scene (flute obligato by Walter Oesterreicher); 88301, Barbiere—"Una voce poco fa" (A Little Voice I Hear); 8304, Ballo in Mas-

chera—"Saper vorreste" (You Would Be Hearing); 88305, Sonnambula—"Ah, non credea mirarti" (Could I Believe).

It will be noted the new and remade Tetrizzini records are listed in the 88000 series, and the five numbers remaining in the Tetrizzini list will be transferred to the 88000 series and listed in the next general record catalog (May) under the following new numbers: 88298, Dinorah—"Ombra leggiera" (shadow song), Italian; 88300, Nozze di Figaro—"Voi che sapete" (What is This Feeling?), Italian; 88302, Romeo et Juliette—Valse (Juliet's waltz song), Italian; 88303, Lucia di Lammermoor—"Regnava nel silenzio" (Silence O'er All), Italian; 88306, "Aprile," Italian.

CENSORING DISCS IN RUSSIA.

Talking Machine Discs of Objectionable Character to the Political Powers of Russia Are Now Subject to the Same Rules as Ordinary Printed Matter.

It is well known that in Russia every newspaper, in fact all printed matter, is subject to censorship. That is to say, if there is any objection to any part of the contents of such paper or book, the objectionable portion is made illegible, or if necessary, the whole book or whatever it may be is destroyed. Lately the Russian censorship has decided that disc records for talking machines are also subject to the same rules as ordinary printed matter.

Those who know the practices of Russian officials will now no longer be in doubt about buying talking machines for their homes, as they now have it in their power to get the necessary records very conveniently and cheaply.

PAY DUTY AS FURNITURE.

Hornless Talking Machines Shipped to Austria-Hungary Are So Classified.

It may interest American exporters of talking machines to know that Austria-Hungary has decided that hornless machines on a high wooden base (similar to a music cabinet) need not pay duty as talking machines, but only as furniture, i. e., according to the material used chiefly for its construction.

THREE POINTS OF SELLING

That Play An Important Part in Bringing Every Transaction to a Successful Conclusion.

In selling goods, the point that must be kept in constant view is that one must hold the attention of the listener until he is given more than a superficial knowledge of the use and merits of the article under consideration.

In this view of the case the salesman becomes an instructor. And the more he can educate the possible buyer, the more likely is the latter to understand the goods, and feel satisfied with his purchase when made. As an experienced salesman has said:

The process of properly selling goods consists of three parts.

First.—Know the proposition from every standpoint—that of the manufacturer, the consumer and the competitor who always is ready to expose some real or fancied defect.

Second.—A disposition on your part to go to a possible purchaser; not to sit down and wait until he comes around asking for goods.

Third.—An ability to fit yourself, your argument and your information, so as to convince, so far as truth will permit, with the temper, needs, desire and disposition of the other man.

ANENT TOO PARTICULAR PEOPLE.

Some people cannot work unless the conditions are ideal. If they are going to write a letter the pen must be of an especial make, their stationery to their liking and the room hushed to the silence of the tomb. The art of concentrating the atten-

tion under difficulties, of holding steadily to one line of thought, in spite of distractions, is apparently unknown to them. But in the nature of the case, the usefulness of such people is very limited. There would be comparatively little work done if the world's workers waited for ideal conditions. Everyone should learn to do first-class work with conditions as they find them.

SALESMANSHIP AND ADVERTISING.

H. C. Brown, advertising manager of the Victor Talking Machine Co., Camden, N. J., was one of the speakers at the last dinner of the season of the Sphinx Club of New York, which was held at the Waldorf-Astoria on April 11. The subject for discussion was "Salesmanship as an Adjunct to Advertising." Other speakers in addition to Mr. Brown were M. P. Gould and J. D. Kenyon, vice-president of Sheldon's School for Salesmanship. This dinner, the 115th, marked the close of the club's fifteenth year.

SONORA

"The Instrument of Quality"

HIGHEST CLASS

Talking Machines and Records

To be Used With Either Needle or Sapphire

SONORA PHONOGRAPHS:

WITH INVISIBLE HORN:

To make them Convenient and Beautiful.

WITH COVERED CASES:

To Eliminate the Scratch of the Needle.

Sonora Phonograph Co. 78 Reade Street
NEW YORK

A PROGRESSIVE FLORIDA HOUSE.

The Rhodes-Pearce-Mahoney Furniture Co.,
Tampa, Fla., Doing Extensive Columbia Ad-
vertising in That Section of the State.

(Special to the Talking Machine World.)

Tampa, Fla., April 9, 1911.

The Rhodes-Pearce-Mahoney Furniture Co., the exclusive Columbia dealers of this city, are advertising the Columbia line on a large scale in the local papers and using almost the whole space of their two immense show windows for the display of

Columbia product the past two weeks. Columbia business has developed wonderfully with this firm, and the Columbia is altogether an important part of this great furniture company's business. Some idea of its importance is indicated by the full-page advertisements in the Tampa Sunday papers devoted solely to advertising Grafonolas, graphophones and records. In addition to the large window displays a special feature is made of Gra-

fonola concerts in the evenings. This is how J. T. Mahoney, general manager, expresses himself in a letter recently sent to the Columbia Phonograph Co.:

"It must be quite a sense of satisfaction, indeed, pleasant, for you to open order after order for Columbia graphophones, records and supplies from our store in Tampa. I say sense of satisfaction because I so persistently refused to talk graphophones with you for years, and you evidently knew just how much business I was losing while you still continued to 'show me' the error of my ways. To-day we have a splendid department, a complete

stock, and a very satisfactory business, and I feel sure that we can easily double our last year's record. I really believe I'm getting to be partial to the Columbia line, for we are this week giving it our two immense show windows and a full page in the Sunday Morning Tribune. The Columbia graphophone line is all right—a money-maker for the retailer and a satisfactory proposition for every customer."

You remember we said first that your goods were like the man from Missouri—"they wanted to be shown"; and good goods do—they want to be shown to the customer—and the customer in his turn wants to be "shown." It's what the boys call a show-down all around, and the goods which in the end show up the best are the long sellers, the steady sellers and the repeaters.

One of the wisest men who ever lived in this world used to say not only "when in Rome do as the Romans do"—but "when talking in Rome—talk Roman!" If you are making your argument and appeal to some fine old gentleman or lady of the old school, think first of the character they bear—the fine high principled life and the honor and the truth that governs them in their judgments—and then make your appeal on that, as a writer in The Hardware Magazine aptly says: If you're talking to a judge of values—it's folly to play cheap.

STEADY IMPROVEMENT NOTED

By the Blackman Talking Machine Co.—Passing Last Year's Mark—Demand for the Blackman Specialties.

J. Newcomb Blackman, of the Blackman Talking Machine Co., reports business in both the Victor and Edison lines to be very satisfactory and to be making a considerably better showing than for the same period last year. The lack of Victrolas of the more popular styles is the only cloud on the business horizon at the present time.

The Blackman specialties, including the Place brushes for both Victor and Edison machines, considered indispensable by many talking machine owners, and the Playrite and Melotone needles, which are continually making new friends throughout the country, among those who realize that not all the high grade needles are imported.

YOUR GOODS AND HOW TO SELL THEM

Silence Is Not Golden in Business—It's the Talk That Counts—Five Necessary Rules in Plain Salesmanship—When the Sale Is Really Completed—Where Attention Pays.

"He who whispers down a well
About the goods he has to sell,
Will never make as many dollars
As he who climbs a tree and hollers."

And yet they will tell you that silence is golden; it is, but the trouble with it in business, and especially in store-salesmanship, is that you can't cash it. You may have as good a line of commodities in your store as there is to be had at any price, but if you make a business of letting them talk and show themselves while you comfortably entertain, you may work up a great reputation as a pleasant fellow and delightful companion, but you won't make much money at it.

Profits or ease—you can't have both in business!

Your goods are like the Man from Missouri—"they've got to be shown!"

And if you're going to sell them, there are five things you must do; five things you will have to do to make a success, either as a storekeeper or a clerk (and the same five rules or steps in salesmanship apply to the manufacturer, and the jobber, and the drummer).

First, to know and understand the nature and the use of the thing sold—where it came from, who made it, what for, and how to make it work.

Second, attracting attention to your goods.

Third, arousing an interest in them, on the part of those whose attention has been attracted.

Fourth, working up that interest to the point of conviction concerning their desirability.

Fifth, leading the customer who is convinced up to the point of doing something about it; action!

Attention alone is simply the first baby step in salesmanship, says "Store Salesmanship." Interest is the second, a little firmer and a little stronger. Conviction is the mental result in the mind of the man or woman to whom you show the goods, as he says to himself or herself, "I believe that is a good thing; I really do; I ought to have it." Is that enough? Have you made a sale yet? Has

your customer bought anything? Have you got any money out of it? Have you transacted any business?

No! Yet some of the "professors" on the subject of salesmanship very solemnly and learnedly affirm that by this time you have completed all the steps in the process of effecting a sale. You have done nothing of the kind.

No sale is made until the goods are delivered to the purchaser and the price paid to the seller. What counts is the action.

The whole point about this thing is this: That while you must first of all show your goods and attract attention to them, and interest your customer in their good qualities, and convince him that they are exactly what he wants, still beyond all of this the big thing you are driving at is the consummation of the sale—the action—the result—the money!

Now we have analyzed what happens in every sale. We have shown the order in which every sales argument is presented, and the gradual process by which every man sees—likes—wants—gets!

It's the "gets" that count. You can make a sale as quick as lightning sometimes—when a real business man comes in on a run—doing a determinator. two-step—rushes at you with his hand out and his finger up—"Give me twenty records of such and such a make—quick!"

That's action—Action all of a sudden. You've made a sale in a hurry; but don't forget that before he has made the grand rush each of those other mental steps of attention, interest and conviction had preceded his action exactly in the order named.

No man ever yet bought a nickel's worth of anything under the sun whose mind had not advanced in this same invariable and inevitable channel of successive progress from indifference to possession.

You can't get away from it; and so in order to understand how to sell your goods, you and every other one of us must understand and appreciate the law of mind which underlies a sale.

First, then, attention.

The attracting of attention to the goods you want to sell. How are you going to do this? And how are you going to accomplish it along the line of least resistance—the easiest way—the quickest route?

FEW REAL WORRIES

When Proportions Are Adjusted Fairly—The Troubles of the Child Reflected in Business Are No More Real—Looking for Happy People.

There are not very many real troubles of any of us when we adjust our proportions fairly. We are very apt to laugh at the little troubles of the child who is all broken up with his disappointment, but our very real trouble is not more real to us than his little trouble is to him. From the height of our superior wisdom we look upon the whole situation which tries the child and we can see that it will all be over in a few minutes, that it is nothing but an April shower. On a different plane, and looked at from a different height, our own trouble is no more real; it will all be over in a few years, and the "few years" are no more to us than the few minutes are to the little child. If you want to see some very genuinely happy people go into a hospital of children, where pretty serious things are going on with their young lives, and the wise nurse will tell you that they are happy because they have nothing but some real troubles and are not worrying over imaginary ones!

TRADE NOTES FROM BALTIMORE.

(Special to The Talking Machine World.)

Baltimore, Md., April 4, 1911.

The Columbia store here has just completed the construction of booths for the demonstration of records and machines, which has not only improved its appearance, but is also adding greatly to the comfort of customers.

Lewis R. Dertzbaugh, Frederick, Md., who is exclusive Columbia dealer in that town, has been so successful that he has now fixed up a handsome showroom exclusively for Columbia goods, and he reports very bright prospects of a steadily increasing business.

Huntley-Hill-Stockton Co., music dealers, Winston-Salem, N. C., who placed their first order last November, have met with such success that they contemplate a considerable extension of their graphophone department.

ACTIVITY IN INDIANAPOLIS.

Developments in Alleged Case of Price-Cutting Stir Up Trade—Kipp-Link Co. Still Handle Victor Line—Special Dictaphone Department in Columbia Co. Store—Some of the Records That Are Selling Well—Wulschner-Stewart Co. Pushing the Victor Goods—Aeolian Co. Giving Daily Concerts—Proving a Great Feature of Attraction—Other News of the Month Which Is Worthy of Record.

(Special to The Talking Machine World.)

Indianapolis, Ind., April 1, 1911.

A case of alleged price-cutting in the Victor line has attracted considerable attention among talking machine men in the last month. Competition among the Victor dealers is warm, and as the report goes one dealer sent two detectives to the store of another Victor dealer, where they made a proposition to buy a \$40 machine, provided the store would throw in free of charge six records. The detectives represented that they had been to the Columbia store, where an attractive proposition had been placed before them. The detectives, it is said, paid for the machine and then made out the statement upon which is based the charge of price-cutting. At the store where it is alleged the price-cutting was done it was said that the men watching for price-cutting had been walking up and down in front of the store for two days. Mr. Goldsmith, special representative of the Victor Co., was in the city, and it is said he was here to investigate the price-cutting and that a stop was put to it. The Columbia people were greatly displeased because they were brought into the case by the detectives, who said they had had special inducements in the way of prices at the Columbia store, and that therefore they were asking for the decrease in the Victor price.

A report that the Kipp-Link Co. had discontinued the Victor line was denied by the company, who say that the jobbing business had been going along with big increases. The Edison dealers out in the State were greatly pleased with the service they were getting from the Kipp-Link Co.

The Columbia Co. have received their first shipment of the Fremstad records, and the first lot of Baklanoff records, which everyone pronounces to be the best yet, it is said. Business has been good for the last month with the Columbia.

The Columbia Co. have organized a special department for Dictaphones and have placed two expert typewriter salesmen in the field. One week during the month a Dictaphone was placed in the display window, where it was operated by a stenographer, and with one of the representatives of the company doing the dictating. There was not one half-hour during any day when there was not a crowd of onlookers. Even when it was raining the crowd remained. Many Dictaphones are in use in Indianapolis.

The Columbia piano records by Scharwenka have been giving great satisfaction. The records of the Columbia Co. by Alexander Heinemann, the German folk songs, also have been making great headway. It seems that they were just what many of the people had been waiting for.

Business was good last month with the Musical Echo Co., with the Victrola still in the lead.

The Wulschner-Stewart Music Co. have been concentrating the effort of their talking machine department on the Victor line. The company have been doing some systematic advertising, and announcements have been run daily in a number of the out-State papers. These advertisements have brought many prospects to the Wulschner-Stewart dealers out in the State.

The wholesale talking machine department of the Wulschner-Stewart Co. is now in a thoroughly equipped condition, both as to records and machines. There has been, however, a demand for the Victrola XI, which could not be filled on account of a lack of machines of this style from the factory. It is predicted by the manager of the Wulschner-Stewart talking machine department that this will be the best year the firm have ever seen in the talking machine line.

"Travel, Travel, Little Star," by Montgomery

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

You know that a wood veneer horn has no vibrating qualities and when covered on one side with glue, as is necessary to construct a horn, it has no more acoustic qualities than a bone has.

Your customers are continually asking for a wood horn. Then WHY NOT sell THE MUSIC MASTER—THE ONLY SOLID WOOD HORN MADE?

THE MUSIC MASTER WOOD HORN is noted for its acoustic qualities and the sounding board to a Talking Machine.

Should your Jobber be unable to supply you, write us and we will send you a sample line of OAK, MAHOGANY, or SPRUCE MUSIC MASTER HORNS, for Disc or Cylinder Machines on approval.

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

and Stone, has been one of the biggest hits during the last month with the Wulschner-Stewart Co. It was necessary to order a new supply of these records before the April records went on sale. The company has made a newspaper feature of this record, as Montgomery and Stone were dated to appear at English's Opera House this month.

The Aeolian Co., who handle the Victor line, have been giving daily recitals at 10.30 and 3.30. In these recitals the well-known artists, such as Melba and others, were featured, one in the forenoon and another in the afternoon. So much interest was shown in the recitals that the parlors of the Victrola department were overcrowded at times. The business in the talking machine department of the Aeolian Co. for the month closed up very well; in fact, better than had been anticipated at the first of the month.

One of the Indianapolis daily newspapers has started a new department, which is run once each month, and in which the names of all of the new records are given. "Nothing more interesting

could be presented," said one talking machine dealer, "as many of the best people in the city are interested in the new records each month."

Business has been going along nicely with the Udell works, and the new styles of cabinets have been attracting unusual attention.

MURILLO ENTERTAINS IN BOGOTA.

Advices have been received by the foreign department of the Columbia Phonograph Co., General, New York, from Bogota, United States of Colombia, S. A., that on January 25 Emilio Murillo, the celebrated Colombian composer and musician, entertained the Press Club, of the capital city, with a series of his works as recorded on the Columbia records. From all reports it was quite a musical event, the newspaper men enjoying a wide selection. At the close Senor Murillo and the Columbia Phonograph Co. were toasted. Murillo recently sailed for Europe.

GET READY FOR CONVENTION.

The Great Annual Reunion of Jobbers Will Take Place in Milwaukee in July and Secretary Roush Is Sending Out Some Mighty Snappy Publicity Keeping Everybody Advised—Expected That 90 Per Cent. of the Membership of the Association Will Attend the Meeting—Outline of Program.

It is possible this month to give the readers of The World a pretty complete program of the Talking Machine Jobbers' Association, which meets in Milwaukee in July. We wish to impress upon the jobbers that while the entertainment program is probably the most complete and elaborate that has ever been prepared for a meeting of this association, there are prime reasons for attending other than this. The business sessions will bring forward matters of a most vital nature.

In this connection we would also urge upon all our members the necessity of doing effective work for the extension of the membership of our organization. If all of our present members will cooperate and do personal work between now and July, we can gather in all of the eligibles of the United States and hold a convention the force and influence of which will be irresistible. In the May and June issues of The World will appear illustrated articles regarding Milwaukee. Do not fail to read them.

Special railroad and hotel rates have been secured. All the cost of the entertainments are included in one banquet ticket, so that if you know your own personal extravagances you can figure the trip down to one cent, if, as Secretary Roush sagely remarks, you provide a return ticket beforehand. Here is the program:

FIRST DAY, MONDAY, JULY 10.

9.00 a. m.—Getting acquainted.
11.00 a. m.—Special address of welcome by Mayor Seidel.
12.30—Luncheon.
2.00-4.00 p. m.—Association meeting.
6.00 p. m.—Dinner.
8.00 p. m.—Theater party (special).
11.00 p. m.-4.00 a. m.—Palm Garden (special program).

SECOND DAY, TUESDAY, JULY 11.

10.00 a. m.—Visit to Milwaukee breweries in automobiles.
12.30—Luncheon.
2.00 p. m.—Boat ride on Lake Michigan, meeting of association on boat, lunch and refreshments. Return at 7.00 p. m.
9.00 p. m.—Dreamland—a beautiful Milwaukee resort.

THIRD DAY, WEDNESDAY, JULY 12.

10.00 a. m.—Ball game—Eastern and Western jobbers.
12.30—Luncheon.
2.00-4.00 p. m.—Association meeting.
5.00 p. m.—Automobile ride to Donges Grove.

VICTOR USERS! PROTECT YOUR RECORDS FROM GETTING SCRATCHY.

Patented June 28, 1910
Dealers should
Use the

Velvet Tone Needle Balance

On All Demonstrating Machines and Victrolas

The "Velvet Tone" will reduce your operating expenses—for it protects your record stock from injury or careless handling, especially when playing for customers.

No separate demonstrating sets of records necessary when the "Velvet Tone" Needle Balance is used.

Your customers will buy the "Velvet Tone" after seeing you use it, especially because it prevents wearing out their records.

Price, Mailed (Postpaid) \$2.00. (Gold Color or Nickel.)

For sale at all Victor Talking Machine Stores. Send for illustrated circulars. Discount to the Trade.

A. D. Macauley, 714 Walnut Street, Columbia, Pa.

(Donges Grove is about 12 miles from Milwaukee and most of the ride is along the lake front.)

6.30 p. m.—Chicken dinner will be served at grove.

11.00 p. m.—Palm Garden. (By special request the Jobbers' Quartet.)

FOURTH DAY, THURSDAY, JULY 13.

10.30 a. m.—Bathing at McKinley Beach.
12.30 p. m.—Luncheon.
2.00-3.30 p. m.—Open meeting.
4.00 p. m.—Seeing Milwaukee, either in automobiles or rubber neck wagons.
7.00 p. m.—Banquet (special speakers).
10.30 p. m.-1.00 a. m.—Ball.

FIFTH DAY, FRIDAY, JULY 14.

Secretary's room always open.
Special arrangements have been made for sight-seeing trips of Milwaukee and Chicago with specially appointed guides, visiting Chinatown and all other points of interest.

Special automobiles will be placed at the service of the ladies during the entire five days.

Burton J. Pierce, of Kansas City, who is captain of the Western jobbers' ball team for this year, has announced his line-up for the Milwaukee game as follows:

Blish, second; Curtis, third; Roush, center; McGreal, right field (for a few minutes); Simon, first; Davisson, short; Blish, left field; Wiswell, Pierce, battery.

Finally, brethren, come to the convention in July. Bring your wife or your sweetheart, or your combined wife and sweetheart; but come!

PRESS COMMITTEE.

Secretary Roush's Good Work.

J. C. Roush, secretary of the National Association of Talking Machine Jobbers, whose efforts in sending out snappy letters and notices to the members of the association and the jobbers in general last year was responsible in a large measure for the great success of the convention, is decidedly on the job again this year and has already sent out some mighty catchy and convincing literature calculated to swell the attendance and arouse much interest in the convention to be held in Milwaukee; Wis., on July 10, 11, 12 and 13 next:

The city of Milwaukee was chosen as being centrally located for the jobbers of both the East and the West, and according to present prospects close to 90 per cent. of the total membership of the association will attend the meeting if nothing unforeseen occurs.

The sort of straight-from-the-shoulder, gingery matter that Mr. Roush is sending out to members is well illustrated in the following letter, the last to be sent out so far and dated April 14. In it Mr. Roush says:

"If You Can't Earn Your Own Living, Get a Political Job." Brother Member:—In a recent debate at Reno, Mr. Jim Jeffries failed to convince Mr. Jack Johnson.

Some seven or eight years ago Mr. Jeffries was the leading man in his line of work. Business was good, and, having all the money he could handle at the time, he concluded to take a rest.

To be sure he planned to "come back" again at the proper time.

But everything was rosy and there seemed no good reason why he should spend so many hours a day keeping his muscles strong, his wind good and his heart and nerves in trim.

Eventually a meeting with Mr. Johnson was arranged. Mr. Jeffries was STILL tolerably content with what he HAD done.

Mr. Jeffries did not care to stand up in the training ring and swap punches. He did not see the necessity of practicing side-steps, feints and rushes.

He knew all about them. Why seven years ago he had done all of that he ever NEEDED TO DO.

Mr. Johnson did not overlook boxing and wrestling, the clinching and side-stepping.

As a result, Mr. Jeffries received Mr. JOHNSON'S compliments on the point of the jaw, and his business career closed.

Be wide awake and keep your business healthy. (Try Milwaukee, July 10th to 14th—Don't get mossy.)

Tone up its liver, strengthen its biceps, steady its heart and keep its nerves in order.

Once in a while a man decides that he is doing so much business that he can stop hustling for a while and run on momentum.

Momentum is a gradual process toward a full stop. The momentum business is usually prematurely full-stopped by the straight-arm jab of a competitor, who finds his opening in the fifteenth round.

If you want to stay in business, keep hustling, and have at LEAST ONE REPRESENTATIVE from your firm at-

tend our ANNUAL CONVENTION, July 10th, 11th, 12th and 13th, 1911, Milwaukee. THERE IS A SPECIAL REASON THIS YEAR.

This is sure the TWENTIETH CENTURY sign of wide-awakeness.

Mr. Jeffries doesn't need to train any more. He's licked. Let this ALL SOAK IN.

Yours until July 10th,

ROUSH, of Pittsburg.

VICTOR-VICTROLA FOR \$50.

New Style Entitled Victrola IX Will Be Ready for the Trade Early in May.

The Victor Talking Machine Co. have just announced the production of a new style of Victor Victrola, entitled No. IX, in mahogany and oak,

VICTOR-VICTROLA IX—OPEN

to be retailed at \$50. As can be seen from the illustrations, Victor Victrola IX is a beautiful little instrument which possesses all the Victor virtues at a price within the reach of everybody.

This new Victrola IX will unquestionably do much to extend the trade of dealers if properly in-

VICTOR-VICTROLA IX—ALMOST CLOSED.

duced in local markets. Shipments of this new Victrola IX in limited quantities will be made on or about May 1st, and so scheduled as to reach each section simultaneously. On initial orders Victrola IX will be supplied in mahogany only, and the manufacturers announce that only one sample will be shipped by express.

RECORD OF BRYAN'S TRUST SPEECH

Filed in a Case Before the Supreme Court in Missouri.

(Special to The Talking Machine World.)

Jefferson City, Mo., March 27, 1911.

In his brief filed in the Supreme Court, Saturday, in the case brought by the State government to oust the International Harvester Co. from Missouri, the defendant quoted William J. Bryan's so-called trust speech, as delivered to a phonograph for use in the presidential campaign of 1908, as the basis of an argument. "In this record speech," the brief said, "Mr. Bryan stated that the irresistible tendency of trusts is to raise selling prices, lower the prices of raw materials, reduce the quality of manufactured products, and lessen wages." None of these results, the defense finds, followed the organization of the International Harvester Co. It was an Edison cylinder record referred to in the brief.

SLOT MACHINE TRUST.

New Company Will Develop and Reorganize Automatic Vending—Will Have Large Capital—Plan is to Use the Machines to Introduce and Advertise Goods for General Sale—An Important Move of General Interest.

Plans have been completed for the consolidation of practically all of the important automatic vending machine manufacturers in this country and a large number of manufacturers of chewing gum and other specialties distributed in this way into a single organization, which is to take a large part in the retail candy and chewing gum field, using the slot machine devices largely as an advertising medium through which to create a market for the large packages of the same goods which will be sold over the counter.

The new company, which is to be known as the Autosales Gum & Chocolate Co., will have a total capitalization of from \$7,000,000 to \$10,000,000 in bonds and stock. The company already has an underwriting of \$2,500,000, or more than the amount required to put the plan into operation, and it was said at the office of Charles R. Flint & Co., who are the organizers of the enterprise, that the new company expects to begin business before the end of this month.

Charles R. Flint was largely interested in the formation of the American Chiclet Co. and the Sen-Sen Chiclet Co., which are now the dominant factors in the chewing gum trade through their control of the chiclet forests in Central America, whence the raw material for chewing gum is obtained.

The consolidation, which will take in eighteen companies already operating in the vending machine field, will market, besides the products of these concerns, the chewing gum specialties of the American Chiclet Co. and the Sen-Sen Chiclet Co. The former concern, which is capitalized at \$9,000,000, was itself formed in 1899 through a consolidation of practically all of the large manufacturers

of chewing gum then in existence. The Sen-Sen Chiclet Co., capitalized at \$4,000,000, was organized in the same year to consolidate manufactories in the United States and Canada of breath perfumes. While at first the new company will simply buy from these companies according to its needs, it is expected that as the slot machine and over-the-counter business is developed the Autosales Gum & Chocolate Co. will become the exclusive slot machine sales agent of these two companies.

The eighteen companies comprised in the consolidation control at present some 250 trade names and brands. Among the largest of the companies taken in are Stollwerck Brothers, the Colgan Gum Co., the Bon Bon Co., the Newton Gum Co., the Franco-American Chocolate Co. and the Franco-Swiss Chocolate Co. The manufacturing companies are the International Vending Co., the Boston Coin Machine Co., the Union Vending Co., the Automatic Beam Scale Co., the United States Coin Lock Co., the New York Coin Operated Machine Co. and the Individual Drinking Cup Co. These concerns control the patents for vending and weighing machines of all kinds from the penny-in-the-slot variety to the machines taking higher denominations of coins, and cover the distributing field all over the country.

Some of the companies taken in, such as the United States News Co., are valuable for their distributing contracts, and it will be the immediate purpose of the new company to do away with the present waste in the trade arising from the duplication of machines.

The company will start in with about 200,000 machines, and will immediately reorganize the operating methods so as to cover a wider field and at the same time increase the efficiency of machines through having them frequently inspected. A large part of the profits which the organizers expect to result from the consolidation will come from the savings in operation, but one of the largest factors, Charles R. Flint's representative said, would be the building up of an

over-the-counter business in larger packages. All of the goods sold in the slot machines will be facsimiles in miniature of the larger packages which the company will manufacture.

BEING ON TIME EVERY TIME.

Better to Be a Little Ahead of Time if Anything—Handling a Disagreeable Job—Punctuality in Ordering Goods.

If you cannot be punctual to the minute, it is better to be ahead of the time than behind it. The one who is habitually behind time loses many of the best bargains of life. He loses the respect and confidence of his fellow-men; he loses faith in himself.

If you have a disagreeable task awaiting you, the easiest way to get it off your hands is to do it at once. "Promptness takes the drudgery out of an occupation." The man who is a little behind time is obliged to hurry so much that he has no time for the beauties of life as he goes along.

He misses the comfort of the one who can take things more leisurely, and he makes himself the object of amusement for others simply because he is always compelled to do things on the run.

If he is behind time in ordering goods, he loses the cream of the trade. If he is behind time in announcing a new consignment, he likewise misses the seasonable custom. If he is behind time in delivering goods to customers, he loses their confidence. If he is behind time in paying his bills, he loses the advantage of the discount. In fact, it sometimes seems as if the man who once falls behind is soon enveloped in a series of obstacles little and big.

A store in Philadelphia recently caused something of a stir in that city when the advertisement of the store appeared in the newspapers with the names of the salesmen.

More Money for Talking Machine Men

Just as Edison's invention of the Talking Machine opened up a rich field of endeavor to thousands of energetic business men, so the invention of the

Water Witch

VACUUM CLEANER

has broadened that field to an almost unappreciable size.

Talking Machine Men all over the country are greatly increasing their incomes by selling vacuum cleaners.

Every man who is successful in selling a luxury like a Talking Machine can be even more successful in selling the Water Witch Vacuum Cleaner, which is admittedly a household necessity.

Cut down your percentage of overhead expense by adding another line. A WATER WITCH in your store would be a strong drawing card and take up very little room.

Our patents give us an absolute monopoly of the water operated Vacuum Cleaner field.

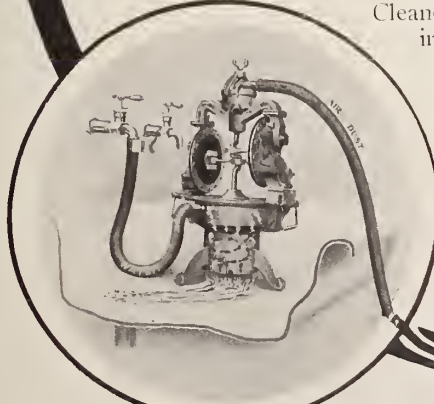

To be efficient in the highest degree a Vacuum Cleaner must be operated by power. Heretofore, the only portable power cleaners have been operated by electricity. This means that 9,300,000 homes in this country (unwired) can't use an electric cleaner, but can use the WATER WITCH Vacuum Cleaner because it's operated by ordinary water pressure in the kitchen sink or bathtub. Only the light vacuum hose is carried to the rooms.

Made of aluminum, weighs only 22 lbs. Ball-bearings—almost noiseless. 20% more efficient than best portable power cleaners. Sells for \$85.00 (20% to 100% less than good electric machines). Costs nothing to operate.

Dirt and germs automatically mixed with water in the machine and washed down the drain. No dirty bags or screens to empty. It's the only really hygienic cleaner. A sensation wherever exhibited. Guaranteed 5 years. 10 days' trial.

We help you by extensive magazine advertising. (Our agency contract guarantees this. All inquiries referred to representatives. **QUICK ACTION NECESSARY.**—Live men everywhere are rapidly taking up desirable territory. Write to-day (before someone else gets the territory you want) for our proposition and application blank.

HYDRO VACUUM CLEANER CO.,
895 Niagara St., BUFFALO, N. Y.

VICTOR CO.'S NEW DEPARTURE.

Announce That, Beginning with Their April Bulletin, Every "Red Seal" Record Will Have Descriptive Matter Attached to the Reverse Side for the Benefit of the Customer.

The Victor Talking Machine Co. announce to the trade, with their April bulletin, the perfection of a new and exceedingly important feature, which is bound to have a very great and advantageous effect upon the sales of Victor records. For some time past there has been a pretty well formulated desire among thousands of Victor customers for something in the nature of descriptive matter bearing on each individual record, especially those of the more serious type. The new move, now announced, comprises the attachment to every record of a descriptive label on the reverse side, which gives in terse and clear language a synopsis of the plot pertaining to the opera from which the selection is taken and of the particular situation therein which the selection covers. (See illustration herewith.)

It is only necessary to make the bare announcement of this important feature to make its possibilities understood by every Victor dealer and sales-

man. The knowledge thus so easily acquired will enable every man or woman who sells Victor records to have a thorough acquaintance with their stock, and to be able, therefore, to advise customers with an authority and conviction otherwise impossible. As the company aptly says: "Red Seal records have not always been understood by either the dealer or his customers, owing to the fact that opera is not only expensive, but is heard only in the large cities, and each opera is given so seldom that it is hardly possible for any except real students of music to acquire the general knowledge necessary to its thorough understanding—but with these complete descriptions right on the back of each record, there will come a musical awakening that will make the great operatic arias as familiar in American homes as they are in the musical centres of Europe."

Everybody practically, whose opinions are of the slightest importance, has testified to the wonderful educational value of first-class sound reproduction as manifested in Victor records, and it needed only the addition of the descriptive labels to make Victor reproductions not only negatively but positively instructive. The great awakening in musical matters that has come into our national life during the last few years is to be traced very largely to the perfection of sound reproductions of great voices and great music.

To the dealer the new move is of special interest. Not alone will it tend to make his salesmen more efficient, to say nothing of himself, but it will also have the immediate effect of stimulating record buying on the part of customers. For with increased knowledge will come added curiosity and desire to explore the inner mysteries of musical art. All of which tends to the consider-

able increase of the dealer's revenue. The wise dealer, therefore, will not fail to give this new Victor feature all possible publicity.

MOTION PICTURES IN COLOR.

Device That May Revolutionize the Cinematograph Is Shown in London.

A new invention by Captain Otto Fulton relative to what he calls "filmless cinematograph" bids fair when perfected to revolutionize the entire process of motion photography, in addition to reducing considerably the possibility of fire in the moving picture theaters. The inventor explained his new contrivance at a private demonstration in London the other day.

"The screen on which films are projected is white," says Captain Fulton, "but this invention necessitates the employment of a dark one, as the light is thrown at the picture through powerful lenses, and not through it, as is customary when using films.

"The material used for the picture is composed of a specially treated opaque paper, which is certainly non-inflammable, and everlasting, thus rendering it possible to preserve pictures depicting national events and proceedings of historical importance."

Among the features of the private demonstration was the reproduction of pictorial postcards, which were projected upon the screen in their actual colors. They were clear in every detail, the hues being correctly reproduced. A portrait postcard of King George was projected, and the inventor demonstrated the manner in which metallic shades, such as gold, silver and lusters could be produced.

A sovereign, for instance, was shown, the coloring being reproduced exact, and the inscription could be read with ease. The ordinary motion pictures are projected in a similar manner to films, but they are considerably larger, while the machine itself is of more solid construction than the projector now generally in use.

Captain Fulton claimed that his invention would prove invaluable for research work, and illustrated how a portion of flesh, not having been previously prepared, could be exhibited on a screen. Obviously, objects of this nature, when portrayed in their natural coloring, would be of infinitely more value to the medical experimentalist than if they were reproduced in black and white, as has hitherto been the case.

By means of the Fulton machine it is also possible to take pictures in fog or in rain, which, by the application of a special preparation, are rendered extremely clear.

A few details are still wanting to make the invention quite perfect. The results shown at the private view prove, however, that the device contains "the germ of a great idea."

AN INTERESTING SIDE-LINE.

Live Vacuum Cleaner Proposition Offered to the Talking Machine Dealer by the Hydro Vacuum Cleaner Co., of Buffalo, N. Y.—A Power Machine for the Home Without Electricity—Machine Operated by the Water Pressure from the Ordinary Faucet.

(Special to the Talking Machine World.)

Buffalo, N. Y., April 10, 1911.

Talking machine men can very often make a good deal of money by becoming territorial agents for some article of household use that is entirely foreign to the talking machine business. When so situated that the talking machine business does not occupy all their time, many are finding that a vacuum cleaner is a very lucrative proposition to handle. Their experience in selling talking ma-

chines is very valuable in introducing the use of a vacuum cleaner in a home, and their wide acquaintance with machine owners gives them an opportunity of which few could avail themselves.

Approximately \$1,000,000 has been spent during

THE "WATER WITCH" VACUUM CLEANER.

the past few years in educating the people up to an appreciation of the necessity and economy of vacuum cleaning. As a result of this widespread advertising vacuum cleaners are no longer looked upon as novelties or luxuries. They are considered a necessity in every well-ordered home where health and comfort are of primary importance. Thousands have been sold; thousands are still being sold every month, yet the demand keeps on increasing. A few years ago vacuum cleaners of the household type were unknown. To-day there are a number of different machines—some good, some fair, and many practically worthless. Yet all find buyers in numbers that keep the manufacturers hustling day and night to meet the demand.

A concern in this city which has won excellent success is the Hydro Vacuum Cleaner Co., 891 Niagara street. Their machine, which is entitled the "Water Witch," is largely in demand.

Speaking on this subject with one of the officers of the company he said: "Before the introduction of the 'Water Witch' there were but two classes of machines—those operated by electricity and those operated by hand or foot power, applied by the operator or an assistant. A number of the electrically operated machines were really efficient and quite satisfactory. Unfortunately, however, only those having electricity in their homes could use them.

"People without electricity were obliged to do the best they could with a "hand" machine, many of which require more labor to operate than is required by the old-fashioned methods of broom and carpet sweeper. Furthermore, thousands of electrically equipped homes are in the smaller cities where no day service is maintained by the local electrical plant. Naturally, no one desires to clean house at night.

"Between the home equipped with electricity and the average home of the fair-salaried business or professional man lies a field of nearly 10,000,000 homes able to pay for a really efficient power cleaner, but without electricity. Practically all these homes are equipped with municipal water.

"The 'Water Witch' vacuum cleaner is operated by ordinary city water pressure, in the kitchen sink or bath tub. It costs nothing to operate. It is the only cleaner that does efficient work without the aid of electricity. There are 10,000,000 homes equipped with municipal water. There are 700,000 equipped with electricity. In other words, 9,300,000 homes in this country that cannot use an electric cleaner can use a 'Water Witch.' The selling price of the 'Water Witch' is \$85, which yields a profit of \$25 to \$35 to the agent, depending upon the size of his territory. Talking machine men who are interested in an additional line would do well to write to the manufacturers.

Consider your opponents to be honorable people, and do not believe everything the customers tell you about them.

If you are overworked and want to take the rest cure—stop advertising. You will soon be lost in the shuffle.

GOOD REPORTS FROM BALTIMORE.

Trade Shows Increase as Compared with the Same Period a Year Ago—Close of Opera Whets Appetite for Grand Opera Records—Manager Roberts of the Droop Co. Cannot Get Enough Victrolas and High Priced Edison Machines—Columbia Phonograph Co. Report Big Sales—Other Houses Also Pleased with Conditions.

(Special to The Talking Machine World.)

Baltimore, Md., April 6, 1911.

The month of March for 1911 has shown quite an increase in the volume of business as compared with that for the same month in 1910. In explaining this the local dealers declare that the popularity of the large machines and high-price records are the main reasons for the better showing of business. This statement is pretty well unanimous and seems to indicate that the people of Baltimore realize that they get better results for their money by going after the expensive and well-made machines and leaving the small ones for the little dealers in remote sections of the city or in country towns.

While the opera season has come to a close in so far as Baltimore is concerned, there has been no let-up in the demand for the records containing the various selections of the well-known song birds. The requests for these continue to pour in. This does not mean, however, that the popular songs and other records are not sought after, for the demand in this line is also brisk, according to the dealers.

Manager Roberts, of E. F. Droop & Sons Co., is enthusiastic over local conditions. "The only kick I have," he said, in talking with a representative of The Talking Machine World "is that I cannot get enough Victor Victrolas and high-priced Edison machines to keep up with the demand at our store. The demand for the Victrolas and the Edison Triumphs and Amberolas has been large, and I am greatly pleased with the outlook for the remainder of the spring. The small machines have also been going well, but these, for the most part, have been more in demand in a wholesale way among the little dealers here and the country merchants. I find that the volume of our business for last month exceeded that for the same month of 1910, yet the number of sales were less. In investigating this feature of the business I find that it is due to the great demand for the high-priced machines. This demand seems to increase every year until now we have very few retail purchasers for the small machines. Our record business has also been tip-top in every line."

Cohen & Hughes also announce that things have been breaking well for them in trade lines during the past month. Manager Morris Silverstein states that March has shown up better than the same month last year, although not quite up to the fine showing of February. He has many good prospects for the spring months and looks for a continuance of the excellent trade conditions for the remainder of the spring. Like the other local dealers, Mr. Silverstein complains about the shortage

of Victor Victrolas, the demand for these high-grade instruments being in excess of the supply. Mr. Silverstein also reports good wholesale business with the Victor line, in consequence of the increased facilities at the store for handling this feature of the trade. Cohen & Hughes have also been advertising extensively and this has brought about good results. Mr. Silverstein was a guest at a dinner of the directors of the Cumberland Telephone Co. He gave a concert on one of the Victrolas, and many of those present were so pleased that they gave in orders for machines.

The De Luxe Grafonolas and the Regent Grafonolas, as well as other lines of Columbia machines, have figured in many big deals during the past month, according to Manager Laurie, of the local office of the Columbia Phonograph Co. The Columbia trade, from reports received, has been keeping pace with the excellent trade of the other lines of talking machines, while the prospects for the remainder of the spring and early summer are excellent.

At Sanders & Stayman, Manager Albert Bowden stated that both the Columbias and Victors have been sought after in great shape, and that results for March have shown an improvement over the same period of last year. Similar reports are made by Hammann & Levin regarding the Victors and Edisons.

INTERESTING VIEWS ON MEXICO.

Interesting Observations of E. N. Burns Regarding Conditions in the Sister Republics to the South of Us Make Timely Reading.

Tarrying but a few days in Havana, Cuba, on his recent trip, from which he returned to headquarters April 3, Edward N. Burns, manager of the export department of the Columbia Phonograph Co., General, New York, utilized a month's time in the City of Mexico. In reference to his journey and experience he said to The World:

"In Cuba, where I stayed two days only, I found business very good in our line. As a fact, general conditions in the island are slowly but surely reaching a sound basis, due to the advice, attitude and action of the conservative merchants and planters. The government has become stable, and President Gomez deserves much praise for his firmness and wisdom with which he directs public affairs. Turmoil has practically ceased in all parts of Cuba, and the dawn of a brighter and better day for Cubans of all classes has arrived. Many Americans are constant visitors to the island, enjoy themselves, and bring in a great deal of money.

"I went direct to the City of Mexico from Havana. In Mexico the business of the Columbia Co. has increased, though there has been a falling off of fully 30 per cent. in general mercantile affairs due to the insurrection. In fact, the talking machine trade, strange to say, has suffered less than any other. As for the political trouble now existing it is certainly serious, and will continue so unless certain changes are made in President Diaz's cabinet, and reforms instituted and concessions granted which are demanded by the country at

large. If the insurrectos had a leader of any prominence or force of character the so-called war would be still more serious. They need a leader of caliber. Now, of course, Diaz has proclaimed a policy that may carry out these ideas, but what the people insisted upon was the resignation of Vice-President Coral, who was particularly obnoxious. Mexicans would not stand for him in any sense of the word. Since my return Coral has left Mexico, and this will go far to remove a most objectionable source of trouble. At the present time, however, no one can tell how the insurrection is coming out.

"Americans are not unpopular or disliked in Mexico. Perhaps there was a time when a class of Americans who would be considered undesirable anywhere created this impression. But the kind of Americans now there are men of character, standing and reputation, and they are on the friendliest footing with the best grade of Mexicans. Our people now in Mexico are welcomed, and after a residence of two years are drawn as jurors, irrespective of citizenship. The Mexican courts want the benefit of American intelligence and enlightenment in this capacity.

"American capital in permanent investments in Mexico is the heaviest, but the Canadians are also strong. Canadian capitalists are now building the waterworks in the City of Mexico, and they also own the entire street railway system. The Canadians own the banks in Cuba and pretty much throughout the West Indies, so you may figure how they stand.

"I shall go to Europe in May with my family, leave them in Switzerland, and visit the Columbia branch offices and factories on the Continent. From there I will go to South America, confining my time almost entirely to the Argentine and Brazil. I do not believe I will reach the West Coast. The copyright situation in South American countries is very interesting, and its development requires careful attention on the part of the talking machine trade."

SAYINGS OF A LIVE MERCHANT.

Keep your whole stock on dress parade as far as possible.

Advertise truthfully, persistently and judiciously, and as to what is judicious advertising, each man must determine for himself.

Would you build up a trade, young man? Then go to work, work hard, work all the time, and keep everlastingly at it.

If you are troubled with the catalog houses, meet them on their own ground.

Do not miss the chance to become personally acquainted with every one with whom you come in contact.

Don't allow dust to settle on you, or on your goods; and above all, don't let your clerks loaf around like a gang of loafers.

If it is hot weather in your store don't hide the water cooler.

In selling on credit, it is always decidedly best to have a specified time for settlement, and insist upon payment when that time comes.

A Live Proposition for Live Dealers

Can be sold to every buyer of records. A necessity for all owners of records. A proven big seller in Talking Machine Departments everywhere.

DUSTOFF RECORD CLEANER

Repeat orders come without solicitation from dealers who once stock these goods. They sell themselves. There is a real demand for good record cleaners and DUSTOFF is the only one that fills the bill.

You Can Now Buy Dustoff Record Cleaners in Individual Cartons. :: They are Selling Faster and Faster.

COMMERCIAL MACHINE EXHIBITS AT CHICAGO.

The Dictaphone Department of the Columbia Phonograph Co. and the Edison Business Phonograph Co. Make Very Handsome Exhibits at the Annual Business Show Recently Held at the Coliseum, Chicago—Some Excellent Business Deals Occur as a Result.

The annual business show at the Coliseum in Chicago came to life again last month after a protracted absence. The Chicago branch of the Dictaphone department of the Columbia Phonograph Co. and the Edison Business Phonograph

Chicago, was personally in charge of the exhibit and had efficient aids demonstrating the latest models of Edison business phonographs. Their work was resultful, as Mr. Barnes reports that an unusually heavy business was the result of the ex-

THE EXHIBIT OF THE EDISON BUSINESS PHONOGRAPH CO.

hibition. Mr. Barnes, by the way, has worked up a simply remarkable business since he has been going it for himself. He laid the foundation when he was directly in the employ of the Edison Co. In the past three or four years he has had to repeatedly enlarge his quarters in the First National Bank building, and recently fitted up a large room for his school for machine operators, and rent-

Co. of Chicago, both had exhibits. Pictures of the booths are shown herewith. The photograph of the Dictaphone booth shows a busy scene. Among the gentlemen seen around the booth is W. W. Parsons, manager of the Chicago Dictaphone department, and district manager for the Central West, E. A. Parsons, W. W.'s brother and business associate, is also there with the

ed additional quarters for the repair department.

EXHIBIT OF THE DICTAPHONE BRANCH OF THE COLUMBIA PHONOGRAPH CO.

goods as usual. Mr. Hansen and Mr. Morrell, who are experts at transcribing and other things, are in the group, and the record barber shop is in full operation. On a panel on one of the main pillars of the gate are inscribed the names of some of the big Chicago users of Columbia Dictaphones. They did an excellent business during the show.

The Edison Business Phonograph Co. had a most interesting exhibit of Edison machines. It was very prominently displayed in space No. 38, and constituted one of the largest and most attractive booths of the show. E. C. Barnes, who is the whole thing of the Business Phonograph Co. of

ed additional quarters for the repair department.

USED FOR DANCING.

How a Prominent Social Matron of New York Utilized the Victor Orchestra in Her Country Home.

An interesting little happening and a practical demonstration of how the Victor could be used for dancing occurred at Aeolian Hall last week. A prominent social matron of New York was selecting a list of records and while so doing told Miss Spaulding about a little affair she was arranging

for her young daughter's friends and how much they enjoyed dancing, but that it would be impossible to secure suitable music at their country place. Miss Spaulding at once suggested using her Victor and the Victor dance orchestra records. The lady expressed great doubt and was unwilling to believe that the records would do for dancing, so Miss Spaulding promptly had two of the large rugs rolled aside, Miss Perry put record No. 31,415 on a Victrola and, very much to the astonishment of Mr. Emmrich, her assistant, that young man found himself being spun around the large show floor with Miss Spaulding as his partner. This demonstration was so convincing and so delighted the customer that a complete set of the dance orchestra records were ordered.

The salesman is the engineer, furnishing the force; the buyer is the tender, furnishing the material, and the credit man is the car that carries the load. The object of the whole outfit is the load.

TRADE NEWS FROM CLEVELAND.

As in Other Cities the Higher Priced Machines Have Had the Call the Past Month—How the Talking Machine Is Guiding Simple Mortals to Their Final Abode—Columbia Co. at Home in New Quarters—An Old Song Brings Up Memories—Eclipse Musical Co.'s Attractive Showrooms—Other Items of Interest.

(Special to the Talking Machine World.)

Cleveland, O., April 9, 1911.

The continued demand and sales of the higher priced machines have been given impetus by the spring weather, and the April volume of business is looming up large. Increasing business is the general report from salesmen, retailers and jobbers, and it looks as though the entire talking machine trade was entering an era of increasing prosperity.

Opera records had the call and big sales were made during the last month. Favorite artists, selected from the various March and April lists, could be heard at all hours of the day at all the stores, and the many sales forced a number of renewal orders to the factories for the more popular numbers.

About the only complaint made by the trade is their inability to procure from the factories sufficient Victrolas, Columbia Grafonola "Regents," or the Grafonola "Favorite" to meet the increasing demand. The distributors state they have a number of orders awaiting the receipt of shipments long overdue.

With quite a number of removals to larger quarters and enlargement and improvements by other talking machine dealers already made, others are talked of, altogether showing an unusual revival in the business.

Marion Dorian, of the Columbia Phonograph Co., on his way to the Pacific Coast, stopped over here for a couple of days, March 28-29, to take a look at the company's new store.

H. E. McMillen, proprietor of the McMillen Music House, has returned from the South, where he spent the winter, feeling greatly invigorated in mind and body.

John A. Rummel, representative of the Herzog Art Furniture Co., Saginaw, Mich., was in the city several days the first of the month. He spent his time talking cabinets with the talking machine dealers.

F. B. Guyon, one of the oldest, if not the first to engage in the talking machine business in Cleveland, but who for several years past has been engaged in the jewelry business, has disposed of his jewelry store. He will now devote his time to the Sero-Phonograph Co., in which he has been interested from the commencement.

The Sherman-Clay Co., Portland, Ore., claiming that Christ Taffe, with several aliases, left that city recently for Cleveland, taking with him a phonograph and a number of records on which

he had failed to pay a balance of \$91, had his trunk and several boxes attached at the depot by a constable. A search of the trunk and boxes in a justice's court led to the finding of the phonograph, but the records are still missing.

A duplicate of a new organ, called the Hope-Jones Unit Orchestra, just installed in the Hotel Statler, at Buffalo, if it meets with approval there, will be put in the Statler Hotel here, now under construction on Euclid avenue. The instrument is said to combine the organ, violin, flute, drum and bells, and is intended to take the place of orchestras in the hotels.

In the alleged belief that the world will come to an end within the next ten years, a new religious sect styling themselves "Revived Spiritualists," have been holding ghostly incantations in a dark and gloomy basement, lighted only by occasional flickering phosphorescent gleams, the silence broken only by words supposed to be direct from God and transmitted to the faithful by means of a phonograph. After months of preparation and numerous manifestations of the Lord through the medium of the phonograph, the members have started on an inspired journey to a promised river in California, in which all their sins are to be washed away. Thus is the talking machine adding new achievements to its wonderful possibilities in guiding sinful mortals to their final abode.

The Columbia Phonograph Co. are now settled in their new quarters in this city. The store, fronting 18 feet on Euclid avenue, extends back 180 feet, where it is 26 feet in width and where are located the cashier's office, the Dictaphone department and four tastily arranged demonstration rooms, with extensive record shelves conveniently near. The main salesroom, 18 x 50 feet, fronting on Euclid avenue, extends to the cashier's office, and the stairway leading to the wholesale department and repair room in the basement. The entire store has been handsomely decorated in green and old ivory, is nicely carpeted, comfortably furnished and lighted by a number of electric chandeliers. The beautiful main salesroom affords ample quarters for an elaborate display of machines, cabinets and horns, and the show window is large and attractive. The location is about midway, diagonally, from the Eclipse Musical Co. and Buescher & Sons, centering the leading exclusive talking machine dealers and distributors in the new bustling business center of the city. Geo. R. Madson, the manager, says it is one of the most complete wholesale and retail stores in the country and he is very proud of it.

A group of friends were chatting in the Eclipse Musical Parlors, discussing various topics, when there rang out soft and clear the words from that old loved air:

"Oh don't you remember sweet Alice, Ben Bolt. Sweet Alice with hair so brown."

Someone was singing it. The words rose clear and sweet and the animated discussion instantly ceased. When the verse was finished all eyes were centered on the Victrola. Then the voice began the words of the second verse. There was an attractive appeal in the high soprano; it was an artist singing; one who felt the pathos of the song. When it ended the voice lingered on the last words:

"And of all the friends who were schoolmates then,

There remain Ben, but you and I,"

and half broke in a little pathetic sob.

One group that had listened intently was made up of a middle aged man and four or five women. When it was over the man hurried to the demonstrator. He was smiling when he returned. "We'll hear it again to-night," he told his companions, "thanks to science and the new April records. Why, yes, of course, it's one of them." As his lady friends looked incredulous, he explained: "Its Farrar's voice. She couldn't have sung anything more beautiful." The old song is considered by thousands one of the loveliest ever written.

A new harp record by Sassoli, and several other selections, were wrapped up with Ben Bolt when the party left.

83 Chambers Street New York

TRADE NEWS FROM CLEVELAND.
(Continued from page 45.)

It is a self evident fact that trade is remarkably good at the store of W. H. Buescher & Sons, who report that business continues pressing. "We haven't caught up with our holiday trade yet," said Mr. Buescher. "On several orders for \$200 machines other types were delivered, temporarily, until we could obtain the one desired, and we have not yet been able to make the change. We have found it necessary to purchase Victrolas from dealers, at dealers' prices, which, of course, isn't very profitable nor satisfactory. The sale of April records opened remarkably well on the morning of March 28, and the demand has continued right along." Large audiences of buyers are constantly in attendance, keeping three or four demonstrators busy most of the time. The firm is also doing a desirable wholesale business.

The Eclipse Musical Co. have got nicely settled in their new quarters on Euclid avenue, and since the opening last month have done a thriving business, having made sales of a number of Victrolas and the new U-S phonographs. Visitors all speak in terms of admiration of the beautiful store. The wholesale department occupies the same floor space as the retail, 25 x 150 feet. It is connected by elevator with the shipping room on the ground floor. A dust-proof room has been fitted up, with a capacity of 8,000 feet of record shelving, sufficient, it is estimated, to contain all the domestic and foreign disc records produced. The intention, Mr. Towell says, is to always have in stock all the records catalogued. Ample space has been devoted to the storage of machines, cabinets and other goods.

The phonograph department of the May Co. is an attractive resort for large numbers of the thousands who visit that establishment daily. Good sales of machines and records during March, including a number of Victrolas, was reported. The company has a fine line of both Victor and Edison goods, and in connection with the piano trade, is doing a prosperous business.

When Charles I. Davis opened his Cleveland store, about a year ago, he installed the Victor and Edison line of goods, devoting a small space to both, but within the year has built up a large business, which has grown to such an extent that he has just completed remodeling the entire store. Five individual demonstrating rooms are devoted to Victrolas and Victor goods, while the Edison line is amply displayed in the cozily furnished basement rooms. The store is equipped in the most attractive form and it is safe to assert that Mr. Davis will make a big success of the talking machine department, as well as of his other undertakings. He is pushing the talking machine end aggressively and it is his intention to install both lines eventually in his other fifteen successful stores which he controls.

On the evening of March 29 Mr. Davis gave the first of a series of "Victrola Concerts," in his enlarged demonstrating parlors. A large audience were in attendance and were greatly pleased with the hour's entertainment.

A. E. Friedlander reports the Bailey Co. are doing a fine business. He stated the demand for Victrolas and the higher grade machines was good and increasing, and that the record trade was phenomenally large. The company have added to this department a complete line of small musical instruments and accessories.

Phil Dorn is busy in the Collister & Sayle talking machine department. He states the demand for Victrolas, Victor Red Seal and Purple Label records is surprisingly good and continually increasing. He says it is still impossible to obtain a sufficient supply of Victrolas, which daily increase in popularity.

Sales Manager O. E. Kellogg, of McMillen's, said the volume of trade during the past month had been surprisingly large and that collections were good. The Victor Victrolas and more expensive machines and records were principally in demand, said Mr. Kellogg. He stated the piano trade, as well as in all lines of musical instruments, was good.

John Reiling, proprietor of the West Side Co-

lumbia phonograph store, had an excellent trade in March and is greatly pleased, as it continues to improve. He has a large number of foreign record patrons, who, he says, are not only good customers, but good pay.

SECURES BIG ORDERS FOR NEEDLES.

Max Landay Finds That New Form of Packages and Lower Prices Appeal to Jobbers—Will Finish Trip Within Week or Two—Good Business at Headquarters.

Max Landay, of the Talking Machine Supply Co., New York, and also of the house of Landay Bros., the well-known Victor distributors, returned on March 20 from a very successful trip to the Pacific Coast and intermediate points, during which he made a special feature of the imported needles handled by his company, which he offered in new packages and at prices that enabled them to compete with needles of domestic manufacture on that score. As to the size of the orders booked by Mr. Landay suffice it to say that over 180,000,000 needles were sold in Chicago alone, one single order being for 24,000,000. The various other specialties of the company were also in demand among the jobbers called on by Mr. Landay.

Owing to fatigue and a slight indisposition Mr. Landay brought his trip to an end in New Orleans and came home by ship. It is his intention to finish the original trip as planned, covering the cities east of St. Louis within the next week or so.

The Talking Machine Supply Co. are introducing to the trade a new and practical fiber needle holder, which has several interesting features and which is described in their advertisement in another page of this month's World. The company will also have other interesting announcements to make to the trade in the near future.

Regarding the Victor business, both wholesale and retail, it is stated that the higher class of machines and records are greatly in demand, and that the chief difficulty is in getting a sufficient number of certain styles of Victrolas.

New Idea Record Cabinets for Victrolas X and XI

Finished in Mahogany or any style Oak, to match X or XI Victrolas; Capacity, 140 ten or 12-inch records.

Weight, crated, 80 lbs.

A Beautiful Piece of Furniture

You will sell one every time you sell a X or XI. One dealer in Milwaukee has sold thirty-six New Idea Cabinets since February 15th. Another sold 11 during the same period. Every Distributer, so far, to whom we have made shipments, has sent duplicate orders. This looks like it's selling some, doesn't it?

The Sliding files are indexed and are faced and finished in wood to match the cabinet. They can only be drawn out far enough to admit taking out and replacing records.

Promote yourself into the busy-business class: The Columbia line—Columbia Grafonolas, Disc and Cylinder Graphophones, Double-Disc and Indestructible Cylinder Records—puts you right there; and the Columbia policy of exclusive selling rights keeps you there all right.

Columbia Phonograph Co., Genl., Tribune Building, New York

NEWS FROM SOUTHERN CALIFORNIA.

Trade Throughout Southern Sections of State Very Active—Many New Dealers in Line and Jobbers All Report Increased Interest in the Talking Machine Business—Birkel Co.'s New Building—Some Columbia Enthusiasts—Talking Machine Men on the Border Keep Tab on the Mexican Troubles—Victor Machines for High Schools—A Number of Business Changes.

(Special to the Talking Machine World.)

Los Angeles, Cal., March 26, 1911.

Trade throughout all southern sections has been very good, in spite of the exceedingly heavy rains which have done some damage in minor ways. During the last two weeks of February the rainfall was much heavier than it has been in the same season for several years past. No complaint is heard, however, as such an abundance of water means bumper crops, and bumper crops mean prosperous business in all lines. With the exception of a few wash-outs on railroad lines, no other damage is noted.

The Geo. J. Birkel Co. are now in their handsome new five-story building on Broadway, after many delays. The talking machine department is one of the most attractive and complete in the country, consisting of several large glass-partitioned rooms. A recital hall with a seating capacity of two hundred has been provided for the exclusive use of the talking machine department, and weekly Victor concerts are now given under the direction of Graham Cook, manager of that department.

W. S. Jones, the exclusive Columbia dealer for Santa Maria, has lately moved into his new quarters. The store presents a very "classy" addition to Santa Maria's business district. The Favorite Grafonola plays an important part in his business.

J. R. Brakey, of Ventura, is another enthusiast over the new Columbia Favorite, which he has had much success with recently. He is one of Ventura's progressive merchants, and this fact is emphasized by his attractive store and show windows.

The Red Cross Drug Co., Edison and Columbia dealers, report a brisk trade in machines and records.

F. A. Homan, of Homan & Co., Fresno, is spending a week in Los Angeles during which he is familiarizing all new trade happenings.

The Pacific Land and Products Exposition, now being held at Shrine Auditorium, in this city, is attracting many visitors from out-of-town, as well as from many far-away States. The object of the exposition is a sort of commercial and industrial display gathered from many different sections to show their products.

San Diego has been seeing much excitement on account of its close position to the Mexican border, where our troops have been guarding the line. Every day numerous eye-witnesses come to the city from the scene of battle with many tales. J. S. Delozier, of the Delozier Furniture Co., at El Centro, Imperial county, is a Columbia dealer who is within a few miles of Calexico and Mexicola, where much fighting has been done. Mr. Delozier visited Los Angeles a few days ago and related some in-

teresting stories, as well as showed some interesting kodak pictures taken at the scene of action.

The San Diego dealers are conducting a vigorous campaign for the installation of talking machines in the public schools.

Bowman Merritt, at Fillmore, Cal., which has a population of 150 people, has just succeeded in selling two more Amberolas. He has just placed an order for a full catalog of records and several machines.

Marikle's Music Store, at Escondido, recently purchased the stock of J. Kirkpatrick, who has joined the piano selling force of the Wiley B. Allen Co. at San Diego.

Geo. P. McKay, at Oceanside, has been rearranging and adding to his department, as has Geo. W. Putney, of South Pasadena.

I. L. A. Broderson, of Long Beach, has taken over the small goods and talking machine business of the Caldwell-Kirby Co., at Redlands, Cal. Mr. Broderson intends to conduct a splendid department for talking machines, which are to be specialized.

Farley & Wilson, of Fresno, have purchased the business of C. F. Story Pharmacy at San Dimas, which included a line of Edison goods. Since acquiring the business the new owners have added the Victor and given a good-sized space for this branch.

Mr. and Mrs. G. L. Robbins, of Porterville, were visitors to Los Angeles for several days last week. Mr. Robbins has been a talking machine man for quite a while now and is one of the most enthusiastic in the coast trade.

The Bryan Zimmer Co., of Whittier, Cal. have been doing a splendid business in high-priced Edison instruments. Mr. Bryan is much pleased with the success of the line, especially that of the Amberola.

Geo. Leveque has purchased the Edison business of E. H. Berchase, at San Juan Capistrano, Cal.

W. E. Elliott, at Rialto, Cal., is a new and successful Edison dealer. He recently disposed of a specially finished Amberola.

Geo. P. Austin, of Oxnard, recently visited the city, ordering at that time two Amberolas.

Wright & Marsh have purchased the entire business of the Boyd Drug Co., at Elsinore, Cal. The talking machine line will receive close attention from the new owners.

The Southern California Music Co. have made some changes in their wholesale department. They have added a special stock room for Amberolas, of which they have just received a number in five different finishes. O. A. Lovejoy has been making some very successful records of a troupe of Hawaiian musicians who are now appearing in this city. The retail department of the Southern California Music Co. claims some distinction for having sold an Edison Amberola and a choice collection of records to His Honor Mayor Alexander, who is a great admirer of Thomas A. Edison and his many wonderful inventions.

The city schools have purchased a number of additional Victors for school work within the last 60 days. In all there are about twenty-five city schools which use the talking machine in connection with studies.

The Pasadena High School has installed a splendid talking machine and records, which are to be used by Miss E. Bush, musical supervisor. This is practically the first instrument purchased for Pasadena, which has a very large number of schools.

Several representatives of Eastern houses have recently called in this neighborhood. Otto Schultz, of the Wurlitzer Co.; Max Landay, of the Talking Machine Supply Co., and Roy J. Keith, sales manager of the Talking Machine Co., are among the number.

W. J. Reynard is on his way up the valley after completing a trip around the kite.

The local offices of the Southern Pacific Railroad Co. have lately ordered a number of Edison business phonographs, of which they use several hundred.

The Crown City Music Co., at Pasadena, Cal., report a number of recent Victrola sales.

The Pasadena Music Co. are doing a good business and are engaged in a vigorous advertising campaign.

SHOULD BE SPECIALLY TRAINED.

Joseph F. Johnson, dean of the New York University School of Commerce, has the following to say regarding the training of an advertising man: "The advertising man is one who must be trained just as the lawyer or the doctor must be made from the raw material of students. Some will say that the advertising men, like poets, are born and not made. Some may be born as great, natural orators and actors and lawyers, etc., have been born; but most are the product of education and training. The need for the elevation of the advertising business to the status of a profession is a crying one. There is no way in which money can be so easily dissipated as by unsound advertising."

March Proves an Excellent Month and Year as a Whole Makes Better Showing Than 1910—Future of Business and Its Activity Rests with the Individual—Trade Can Be Had if It Is Sought for—Recital Program Given by Lyon & Healy That Will Interest Trade Throughout Country—A Profitable Way to Get Prospects—Busy Times with Talking Machine Co.—Comments on Special Session of Congress—Art of Entertaining the Ladies—New Columbia Records Please—The Enterprise of Geo. W. Salter—Edison Concern Occupying New Quarters in Chicago—

(Special to the Talking Machine World.)

Chicago, Ill., April 4, 1911.

March, notwithstanding the various types of weather it brought with it, has proven a very good month with talking machine jobbers. Most of them say that business is better than last year. Of course, there is a little slacking off, as compared with February, but this condition of affairs is found in any year.

Line Up for Summer Business.

There is no doubt that within certain limits the maxim "Business is what you make it," maintains in fact. While we shall soon be in the midst of what is usually termed the period of summer dulness, The World believes, and it is backed by the opinions of important men in the trade, that a little careful planning of campaigns in advance will serve to bring fairly good business at a time when business activity is usually permitted to lapse. If this is done, thought and industry will reap its due reward, and the immortal sixteen-day Sakara of Iylo will bloom out of season for the delectation of the faithful.

Good Recital Programs.

When a talking machine dealer sits down to prepare a program for a recital, he generally thinks he has a very easy task before him. Soon, however, he finds that the compilation of a program which will maintain the interest of all and yet contain numbers appealing to everybody, is not such a sinecure after all. Lyon & Healy are certainly experts in preparing programs of this nature; something which the continued success of the Victor recitals given by them in Victor Hall on the ground floor of the big store amply verifies. They make out seven fifty-minute programs, and these programmes are repeated every day for a month, and are presented in the most attractive form. Following will be found a complete set of programs which Lyon & Healy used in Victor Hall during the month of March. They will, no doubt, be found useful by dealers preparing for Victor recitals:

VICTOR TALKING MACHINE CONCERTS.

- 10 to 10:50 A. M.
- 1—31380 Merry Wives of Windsor Overture (Nicolai) Pryor's Orchestra
 - 2—4274 Wearing of the Green (Old Irish Air)....Myers

- 11—88055 Paghiaacci, Prologo (Leoncavallo).....Ancona
- 12—87030 Madame Butterfly, Finale Ultimo (Puccini).....Farrar

Program subject to change.

Talking Machine Company Items.

The energetic Talking Machine Co. had a good March. In fact, General Manager A. D. Geissler says it was a record breaker for the third month of the year.

Sales Manager Roy J. Keith is now on an extended trip along the Pacific Coast, but will return early next week. The Talking Machine Co. has an extended business along the Coast, and evidences are accumulating in the company's offices to show that Mr. Keith is making some important additions to their list of coast dealers.

Mr. Geissler reports that the Victrola business is phenomenal, and it is hard to supply the demand, especially on the Victor No. 11, \$100 type. The company are preparing something new, and of great interest to the trade, which will be ready for announcement next month.

Timely Paragraphs.

President Taft believes that the special session of Congress should be confined to the passage of the reciprocity treaty and to the establishment of a permanent tariff board. Both measures would be far reaching in their effect, and the country at large would be thoroughly satisfied if the present session did this and nothing more. Besides this, the consummation of this proposed legislation would have very little effect on business, while a general opening up of the whole tariff question at this juncture would bring commercial demoralization in its train.

When you think about it real hard, the American people are rather superficial in their thinking processes. The views generally expressed are usually derivative. It is sad, but true, that we are doing too little fundamental thinking. If we would analyse things ourselves and form our opinions first-hand, many of the problems which confront us as people and as a trade, would speedily disappear.

Approved Victor Move.

The new plan of the Victor Co. in printing the explanations of the selections on the back of the Red Seal records, together with the song poem or translation, is the subject of a great deal of favorable comment in the trade. It certainly adds to the educational value of Victor records.

Entertains the Ladies.

A man with a grouch went into the record department of Lyon & Healy's the other day, and it was actually a study in evolution to watch the grim, pessimistic leer disappear and be replaced with a regular all-pervading A. V. Chandler smile, as the owner of the grim visage came under the optimising and refining influences of the sweet, suave, and surprising bevy of feminine record clerks. He of the former grouch remarked that it was an interesting experience to come up there; the girls were all sq blankety, blank, blank pleasant. The "girls" thereupon centered around a victrola and hid their combined blushes in the top thereof, but they were pleased nevertheless.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy's, believes in talking things over with the employes of the department en masse. Consequently, he took all of the young women of the retail record department and of the office out to dinner the other night. He took Blackman and Hopkins along to help him out, and Mrs. Wiswell and Mrs. Blackman did the chaperoning. The "banquet" took place at the States Restaurant, and afterwards they all went to the Olympic and viewed the adventures of "Get-Rich Quick Wallingford." Those participating were as follows: Mr. and Mrs. L. C. Wiswell, Mr. and Mrs. M. Blackman, Mrs. Clark, Mr. H. B. Hopkins, Misses M. Tapper, Sadie and Esther Rapps, S. Lessick, M. Bower, A. Neilson, Z. Marker, M. Brackinridge, C. Fitzmaurice, and Misses Berland, Blatch, Stein and Nilson.

Good L. & H. Business.

Lyon & Healy's business for March was the best for that month for some years. The company are now offering their famous Victor cut-out booklet, which consists of a beautiful cardboard cut-out representation of a Victrola, with a number of descriptive pages to the trade. The company's page advertisement in this issue describes and illustrates a remarkably convenient disc record album, the invention of L. C. Wiswell.

George W. Lyle a Visitor.

George W. Lyle, general manager of the Columbia Phonograph Co., has been on a trip along the trade. He met district manager W. C. Fuhri of Louisville, and returned with him to Chicago, where he spent a day or two looking over things here. He expressed himself as greatly pleased with the manner in which the fine new quarters at Washington and Wabash have been fitted up.

The local office of the Columbia Co., by the way, greatly exceeded last year's record, both as regards March and the first quarter of the year.

New Columbia Records.

Some new records in the symphony series have been received by the Chicago office of the Columbia Co., which do not appear in the April bulletin, but will shortly be listed specially with the other products of the company's laboratory. Of especial interest is the appearance of the Nordica records. They reveal the fact that the prima donna retains in large degree the vocal powers which made her famous, and the records show a supreme interpretation.

(Continued on page 50.)

FROM OUR CHICAGO HEADQUARTERS.
(Continued from page 48.)

tative ability. Several records by Olive Fremstad, also furnish peculiarly fine instances of recording, and the velvety tones of the Swedish songstress are delightful to the ear.

Great Cabinet Plant.

The factory of the Salter Mfg. Co., 339 South Oakley avenue, Chicago, is one of the largest and best equipped plants devoted to the manufacture of talking machine record cabinets, music cabinets and similar types of cabinet work in the country. George W. Salter, the president of the company, has been actively engaged in cabinet manufacture for over a quarter of a century and was among the first to produce record cabinets on an extensive scale. Not only has the company's product been always characterized by the most minute attention

GEO. W. SALTER AT HIS DESK.

to detail and perfection of construction and finish, but the company have from time to time inaugurated distinct departures in the record cabinet line. The horizontal felt-lined shelf feature introduced by them two or three years ago gave new evidence of their ingenuity and enterprise. Cabinets containing this feature were placed on the market almost simultaneously with the introduction of the double-faced record in a large way, and solved the problem of convenient and safe storage for this type of record. As a compartment is provided for each record and both sides come in contact with a soft surface, it does not mar the record. They are just bringing out a new line of these admirable record cabinets in new designs of a most artistic nature. In several of these new styles all waste space is utilized, and doors open on record bins in the side as well as in the front of the cabinet.

In the accompanying illustration Mr. Salter is seen at his desk, simultaneously O. K.-ing some large orders for supplies and passing on some gratifying big orders for Salter cabinets. Mr. Salter does whatever comes to his hand with all his might. When he works he works hard, and when he plays he plays hard. For two or three

weeks each summer he goes up to northern Michigan, and the local papers in that section of the country usually team with big records of catches by the enterprising Chicagoan. A few years ago Mr. Salter won a diamond medal for making the world's record for bait castings.

Mr. Salter has a most efficient assistant in the conduct of his large business in the person of John Mortimer, who not only looks after the sales end of the business, but is a practical factory man, as well as responsible for many of the good features incorporated in the Salter cabinets. Several of the new Salter styles are illustrated elsewhere in this issue.

Big Dictaphone Deal.

The Columbia Phonograph Co. have just sold to the Illinois Central Railroad Co. for their freight claim department in this city 94 model A Dictaphones, 25 model B Dictaphones, together with shaving machines, etc. Geo. D. Smith, in charge of the Dictaphone railway department, is here, supervising the details of the big deal.

New Edison Quarters.

The offices of the allied Edison interests have been moved from the building at the corner of Wabash and Washington streets to suite 1336 in the new People's Gas Co. building, 150 Michigan avenue. The new name, Thomas A. Edison, Inc.,

OPEN CHICAGO HEADQUARTERS.

U.-S. Phonograph Co., of Cleveland, Occupy Spacious Quarters for Their Wholesale Trade at 225 West Washington Street—Geo. M. Nisbett New General Sales Manager Knows the Ropes Thoroughly—Wholesale Quarters Also Established in New York at 5-7 Union Square—Business Prospects Excellent.

(Special to the Talking Machine World.)
Chicago, Ill., April 11, 1911.

Arrangements were consummated this week whereby the U. S. Phonograph Co., of Cleveland, O., will establish Chicago headquarters at 219-225 West Washington street. A handsome main

GEORGE M. NISBETT.

floor warerooms will be occupied and sumptuously fitted up, where a large stock of the company's machines and records will be kept for the convenience of dealers. The company will, of course, do no retail business.

Final details regarding the new establishment were made during the visit to the city last week of T. H. Towell, treasurer and general manager; Geo. M. Nisbett, general sales manager, and W. C. Patrick, Western representative of the U. S. Phonograph Co., Cleveland.

All of the gentlemen are very enthusiastic about the prospects before the company and report an increasing number of loyal dealers who are meeting with marked success in handling the company's line. Mr. Patrick will hereafter make his headquarters here and will have general charge of the headquarters in this city.

The news of the appointment of Geo. M. Nisbett as general sales manager of the company

on the door looks good. Geo. Harden, Western representative; Mr. Lapreau, in charge of battery sales; C. B. Frayer, Western representative for the Edison Storage Battery Co., and A. V. Chandler, who looks after the Edison Phonograph interests in this vicinity, are all provided with quarters which afford them many conveniences not enjoyed in the old location.

Training Victor Dealers.

Mr. Schwenker, of the repair department of the Victor Co., is again in the city. The last time he was here he devoted his attention to the jobbers. Now he is putting in his time with the dealers around town, schooling them in proper methods of doing repair work.

The Victor in Athletics.

Arthur D. Geissler recently commenced a course of athletics in the Chas. Postal Physical Culture Studios. He shortly found himself going through various "stunts" to music furnished by a Victor talking machine. He says that the faculty of the school, as well as the students, are now thoroughly convinced of the value of music as a therapeutical agent, although the original idea was simply to help in introducing the proper rhythm in the physical exercises.

comes as a surprise to his many friends here as elsewhere, who tender him their best wishes for his largest success in his new and responsible position. He first came into prominence in the trade as Western manager for the National Phonograph Co. Upon the closing of that company's office in Chicago he went with Babson Bros., in charge of their wholesale department, and later returned to his old love, the National Phonograph Co., as manager of their Mexican business, with headquarters in the City of Mexico. He has a wonderfully wide acquaintance with dealers throughout the country, and is a man of ideas and aggressiveness. Both Mr. Nisbett and the U. S. Phonograph Co. are to be highly congratulated.

The United States Phonograph Co. have also just opened wholesale quarters at 5-7 Union Square, N. Y., in charge of E. E. Prarie, a gentleman well known in the talking machine trade.

WHY THE EMPLOYER SMILES.

"The business man," says a western expert, "deals with five M's—Money, Material, Machinery, Men and Merchandise. It is not hard to get money, material and merchandise. Each of these is a given quantity, and with each and all of them a given result can be accomplished. The big thing is to get men."

Men are not of such certain quantities as money, materials and machinery. A machine will do a known quantity of work in a known time. A man will do such work as he is willing and capable of doing. Men, then, are the most important factors in the conduct of any business.

This is the reason why the head of an establishment shakes hands with himself whenever he sees one of his young men blossoming out into a fountain of future usefulness. He knows the value of the right sort of a man. It makes him happy to feel that he has caught one of them in the rough and is helping to polish him off.

Washington, D. C., April 10, 1911.

SOUND DISTRIBUTING HORN. William S. Cobb, Flushing, N. Y. Patent No. 986,908.

The invention relates to an improvement in sound regulators, being more particularly directed to the construction of a sound intensifying horn whereby such sound is rendered more distinctive and the tone thereof materially improved.

The main object of the present invention is the provision of a sound regulator formed to provide a plurality of interior sound passages through which the sound waves are arranged to travel in succession, the construction and control of such passages providing for the rapid and uniform expansion of the sound volume in traveling from one passage to the next whereby to intensify and improve the tone of such sound.

Figure 1 is a view in elevation, partly in section, of the improved horn. Fig. 2 is a similar view broken away, showing a slightly different construction.

SOUND BOX. John A. Williams, Brooklyn, N. Y., assignor to Henry C. Miller, Waterford, N. Y. Patent No. 987,205.

The present invention pertains to improvements in sound boxes.

Figure 1 is a longitudinal sectional view, on the line 1-1 of Fig. 2; Fig. 2 a front face view, the compression-ring or plate being partially broken away; Fig. 3 a perspective view of the various parts of the box, with the exception of the stylus-bar or arm; Fig. 4 a vertical sectional view of the combined indicating and locking device for the adjusting screw;

Fig. 5 a perspective view of the stylus-bar or arm; Fig. 6 a sectional view on a somewhat enlarged scale, showing a slight modification of the mounting of the diaphragm, and Fig. 7 a perspective view of a modification of the means employed clamping the diaphragm.

ACOUSTICAL INSTRUMENT. Louis Lumiere, Lyon, France. Patent No. 986,477.

This invention relates to improvements in acoustical instruments, such as telephones, microphones,

ment which is generally known as the diaphragm, or the body which in the process of sound recording is thrown into vibration by the sound waves, and whose vibrations are traced and recorded by means of a stylus in the original record, while in the process of reproduction the diaphragm (as a general rule, the diaphragm of a separate machine), is thrown into corresponding vibrations by a stylus to which it is attached being made to follow the undulations in the record.

The invention also relates to the sound box in which the said diaphragm is mounted.

Figure 1 shows a folded strip of material from which the improved diaphragm may be made; Fig. 2 is a plan view of a modified form of folded strip of material from which a diaphragm may be made; Fig. 3 is a plan view of the diaphragm; Fig. 4 is a sectional elevation of the diaphragm; Fig. 5 is a sectional elevational view of a slightly modified form of diaphragm; Fig. 6 is a diagram to illustrate the way in which the surfaces or elements of the diaphragm are twisted; Fig. 7 is an elevation of a sound reproducing machine fitted with the diaphragm made in accordance with this invention and illustrates a convenient method of carrying the diaphragm and connecting it to the stylus bar, and Fig. 7a is a sectional detail of Fig. 7. Fig. 8 is a plan view of the machine shown in Fig. 7; Fig. 9 is a side elevational view partly in section of a modified form of sound reproducing machine provided with my invention; Fig. 10 is an enlarged view, partly in section, of the diaphragm and stylus bar mounting shown in Fig. 9; and Fig. 11 is a bottom plan view of the reproducer shown in Fig. 9.

Advertising must attract the attention of the passer-by, and, having done this, must hold him long enough to make him want the article or something like it and draw him into the store to inquire about it. After this, it is the salesman's business to see that he becomes a satisfied purchaser.

TALKING MACHINE EXPORTS

The Figures for February Presented—Reports Show Strong Gain in All Departments of Industry—Some Interesting Figures.

(Special to The Talking Machine World.)

Washington, D. C., April 6, 1911.

In the summary of exports and imports of the commerce of the United States for the month of February (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for February, 1911, amounted to \$244,001, as compared with \$177,070 for the same month of the previous year. The eight months' exportations of talking machines, records and supplies amounted to \$2,060,963.

HYMNS AND SERMONS VIA TALKER.

The Latest Innovation Introduced in the Presbyterian Hospital in Pittsburg, Pa.

An innovation for relieving the monotony and soothing patients has been adopted by Superintendent Margaret Woodside, of the Presbyterian Hospital, Northside, Pittsburg, Pa. It consists of a phonograph, which will render gospel hymns and deliver sermons to patients. The installation of this machine has proved a gratifying success. Each evening during the week days the phonograph is operated from 7 until 8 o'clock.

Sunday afternoon the phonograph service will begin at 2 p. m., and Superintendent Woodside expects the nurses will be there with their friends. A large number of those who are active in the Presbyterian church are also expected to be present to-morrow afternoon for the service.

AWARDED FIRST PRIZE.

The Porto Rican Agent of the Columbia Line Secures High Honor at the Insular Fair Recently Held in San Juan.

Gonzalez Padin Hermanos, agents for the Columbia line in San Juan, Porto Rico, W. I., who exhibited the Grafonola Mignon at the recent Insular Fair, were awarded the first prize. This fair is the first one of its kind ever held in Porto Rico, and is described by a correspondent as of equal importance in the island as the St. Louis manufacturers, as well as native merchants and Exposition was in the United States. American planters, were represented.

TO HANDLE SMALL GOODS AND TALKERS.

(Special to The Talking Machine World.)

Chicago, Ill., April 3, 1911.

On the return of Emil Simon, of the Simon Piano Co., Spokane, Wash., from the East, the other day, en route home, he announced he would enlarge his music instrument business by adding small goods and talking machines. Before leaving for New York he had made arrangements to engage a manager, who is a first-class small goods man, and he placed a substantial order when here. It is probable he will handle the Victor line as a dealer and probably may go in as a distributor.

sound recording and reproducing machines and musical instruments in general. As applied to sound recording and reproducing apparatus, it relates more particularly to that part of the instru-

BALALAIKA ORCHESTRA RECORDS.

The Records of the Imperial Russian Balalaika Court Orchestra Made by the Victor Talking Machine Co. Will Be Announced in the May Supplement—An Important Announcement.

One of the greatest and most successful novelties of the present musical season, now drawing to a close, has been the Imperial Russian Balalaika

laika, while two "Cembalos," familiar to those who have seen so-called "Hungarian" orchestras, complete the equipment of this unique band.

The precision, skill and beautiful tone produced by this orchestra have been the wonder of all critics, and the first concert of the organization in the Metropolitan Opera House, New York, produced something like a sensation, every newspaper in the city devoting considerable space to it. Mr. Andreeff wisely confines his programs almost entirely to

Russian folk-songs are especially interesting. No nation in the world possesses a greater love for music than the Russians, and the songs of the peasants, characteristic of various occasions, such as weddings, dances, legends, the regular round of daily toil, etc., are numerous.

The first of these most interesting and remarkable records are published by the Victor Talking Machine Co. in their May supplement, a list of which appears on page 53.

THE IMPERIAL BALALAIKA ORCHESTRA, OF WHICH W. W. ANDREEFF IS CONDUCTOR.

Court Orchestra. This remarkable organization is under the direction of W. W. Andreeff, who was the first to study and develop the possibilities of the peculiar Russian stringed instrument from which his orchestra takes its name.

The Balalaika is a three-stringed instrument, somewhat like the mandolin, but triangular in shape. For centuries, in a primitive form, it has been used by the Russian peasants, but Mr. Andreeff has undertaken successfully to develop its artistic possibilities and make it a vehicle for the artistic performance of music, especially in ensemble. Associated with the Balalaika, and acting as a bass to it, is the Domra, a large type of Bala-

Russian folk music, ancient peasant tunes elaborated and orchestrated in a manner adequate to the possibilities of the very excellent band which he has trained. The Balalaika has scored a veritable triumph in Europe, while in Russia every regiment has its orchestra of such instruments, a state of affairs which only came into existence after Mr. Andreeff had brought the possibilities of the Balalaika to light.

The Victor Talking Machine Co., with their usual and expected enterprise, secured the exclusive services of Mr. Andreeff and his band, with the result that a number of records of the Balalaika Orchestra have been made in the Victor laboratories. The

creasing profit on Edison
Blank Records.

A Recorder is part of the regular equipment
of Home, Triumph and Idelia styles—but at
least a half dozen blanks should go with every
sale. This great feature is only one of the
many big selling advantages of the Edison.

There's plenty of time yet. Get to it.
Better write your Jobber to-night.

Thomas A. Edison, Inc., 59 Lakeside Ave., Orange, N. J.

Thomas A. Edison, Inc., is the new corporate name by which the National Phonograph Co. will hereafter be known.

MUSIC IN SCHOOLS.

The Director of Music Has Adopted Talking Machines—Records of the High Class and Classic Only Will Be Used—Meeting with Success and Praise from the Authorities.

(Special to The Talking Machine World.)

Houston, Tex., May 5, 1911.

Talking machines as a means of enabling the children of the Houston ward schools to hear and become familiar with the best instrumental and vocal music is an innovation in the regular school methods introduced by Miss Winifred Shunway, director of music, that is meeting with marked success in this city.

"At first," she said, "I was beginning to despair of the talking machine as likely to become popular, but now a large number of the boys and girls actually beg permission to stay after class hours to hear selections that have appealed to them."

The schools now having machines are, in the order in which they were installed, Reagan, Fannin, Taylor and Longfellow. At the Fannin School there are now about \$100 worth of records from grand opera singers and the finest orchestras and instrumentalists.

"I decidedly approve of the use of talking machines for this purpose," said Miss Shunway in speaking of the success she had met with in her novel plan to uplift the standard of musical taste on the part of the children at large.

"In the first place, there is no other way to bring music of this class within reach. The best records and best reproducers only are used. It trains them away from ragtime and makes them appreciate and love the best that has been produced by the world's best musicians."

The talking machines are taken from class room to class room and are made a feature of the regular music course. This is done once or twice weekly.

The list of records is constantly being increased at each of the schools, the higher-priced records always being procured to obtain the best and clearest results.

Miss Shunway insists that all music heard in the schools under her direction be strictly classic. As an instance of this a number of visitors at the Dow School a few days ago were surprised to hear one of the students playing the "Soldiers' Chorus" from Gounod's "Faust" as a march for the others to leave the building by.

Through her efforts the standard and effectiveness of the music classes in the schools have been elevated and enhanced, placing the Houston schools probably at the head of the list for the entire State from a standpoint of cultivated taste. In fact, she has really created her department and made it an indispensable one to the regular curriculum.

It is hoped soon to have talking machines in every school in the city, and to have repertoires in the way of records that include every desired musical production and the voice of every singer of National fame in a way similar to the method of keeping the printed libraries always complete.

THE COLLECTION DEPARTMENT.

An Important Factor That Makes for the Stability of a Business.

A merchant's place of business may be up to date, his advertising and his sales methods may be perfect, but there is one branch more than any other one in which he has got to be up to the times in order to thrive, and that's his collection department.

In the case of the manufacturer and the wholesaler this detail is comparatively a simple matter, for the transactions are apt to amount to such sums and are on such a cold business basis that customers expect to prove their trustworthiness when asking credit, and expect to be held accountable in case they fail to come to time.

In the case of the retailer, especially the man doing business in smaller towns where everybody knows everybody else, the conditions are different. The personal element enters here. Customers would resent having to give references in order to get credit for having a few initial purchases, and first thing a dealer knows bills have been run up and he is in a quandary to know whether he ought to lose a customer by cutting off credit and resorting to hard measures—which in the end may be futile—or whether he had better extend a little more credit and take chances on being paid in the end.

The collection department of these merchants may not exist, excepting under their hats; but here, too, all the merchant whose business is sickening needs to do is to copy the methods of some fellow tradesman that has the trick of collecting what is due him.

RECORDS OF INDIAN MUSIC.

Distinguished Visitors to the United States Are Dr. and Mrs. Desai, Who Are to Make Phonograph Records of the Secret and Sacred Music of India of Which No Written Record Exists—How It Has Descended from Mouth to Mouth Since the Days of the Great Mogul.

A recent visitor to New York, who has attracted considerable attention in social circles, is Satyabala Devi, a noble woman of the highest, or Brahmin caste, who is the wife of Dr. N. L. Desai, a native of India, who holds degrees from English and Scotch universities, and who was for years the personal physician of the Nawab of Rampur. Another Indian potentate, the Maharaja of Rewa, is responsible for the visit of Dr. and Mrs. Desai to America, for the mission of this strangely modern couple from the Ancient East is to obtain phonographic records of the secret and sacred music of India, of which no written record exists, which has descended from mouth to mouth from the days of the Great Mogul, and of which the luminous-eyed Satyabala Devi is the last living custodian.

When asked to tell something of the mission which brought them to New York, Dr. Desai said:

"Our object in visiting your great country is to set to European musical notation the ancient music of India, and to prepare phonographic discs of that music, that our collection of 2,700 pieces of music, in 288 different melodies, may be preserved to India. This stock of music, which my wife carried for many years in her head, comprises the lost history of the music of the world, for the music of India is much anterior to the music of Greece, and even Egypt, as the researches of European scholars have established.

"This music, which has hitherto been transmitted only from memory, if not put to notation will die out in the near future, and Satyabala Devi is the only person who has this vast stock of the most complicated music stored up in her memory. It is for this reason that, under the patronage and protection of the Maharajah of Rewa, we are in America."

INVENT PHONOGRAPH DIAPHRAGM.

J. H. Ellis Says Celluloid Contrivance Has No Mechanical Shrillness.

J. H. Ellis, Badger State Business College, Milwaukee, Wis., says he has invented a diaphragm that perfects the phonograph.

"For years I have been working on the reproducing apparatus of the phonograph, trying to devise some method of softening its tones," said Mr. Ellis.

"My diaphragm is of celluloid. Using this in place of the copper or metal diaphragms, the tone carries just as far, has no mechanical shrillness, and more nearly reproduces the human voice than anything I have yet heard."

EDISON DEFENDS INVENTION.

Says Moving Picture Machines Should Be Used in the Schools.

So far from feeling the responsibility for the evil effect that the moving-picture shows are regarded as having on the young, Thomas A. Edison is of the opinion that moving pictures will eventually take their place with the map and the blackboard.

"I can teach more geography in fifteen minutes with the moving-picture machines than the schools as now equipped can teach in as many days," was his retort to Arthur D. Chandler, who taxed him with having invented a machine that was harmful to the young people.

Mr. Chandler is president of the Board of Education of Orange, N. J. He related his conversation with Edison in the course of a talk at a dinner of the Society of the New Church recently.

"I put it this way to Mr. Edison," he said: "Mr. Edison, your moving pictures have made a lot of money for you, but for the world in general they seem to have been a curse. What are you going to do about it?"

"Why," Mr. Edison replied, "in a few years every grammar and high school and every church in the country will have a moving picture machine in it. I'll illustrate what I mean. You be the class and I'll be the teacher.

"The lesson to-day will be on Madagascar. First, I'll throw a picture on the screen showing the geographical relation of Madagascar to Africa. Then we will have some moving pictures of principal streets of the big towns. They will show just what is going on in those streets, whether there are trolley cars and such things or whether it is an uncivilized place.

"Then we might show a motion picture, say, of a mountain range, taken probably from a railroad train, or we might show stereopticon views of places. Nobody ever remembers such dry things as the products of places as they are now taught. I would show pictures of the products and how they are raised. In that way, you see, I could teach more geography in fifteen minutes than you can teach in fifteen days. When the machine and films can be had cheap enough they will be used."

LOWER RATES ON "TALKERS."

Question of Freight Classification Presents Problem to Canadian Railway Experts.

"Is a talking machine a musical instrument? If so, why? If not, why not?"

These questions came before Messrs. Mills and Maclean, of the Railway Board of Canada recently, when a Montreal company asked that its product should be placed in the same category as "other musical instruments" and be hauled at the same carload rate.

E. J. Walsh, the tariff expert of the Canadian Manufacturers' Association, supported the application, but the freight expert of the railways took the ground that talking machines were never shipped in carload lots and that the grievance of the company was purely a fictitious one.

"It is still," he said, "a question as to whether a talking machine is a musical instrument. Personally, with the recollections of some of them to which I have had to listen when I wanted to go to sleep, I have my doubts."

"Unfortunately, our musical expert is not here to-day," said Mr. Maclean. Judgment was reserved.

THE LATEST IMPROVEMENT.

The Customer (trying phonograph)—There's something wrong with these grand opera records. There's a horrible racket in each one that spoils the effect of the music.

The Demonstrator—Ah, yes. One of our latest effects. That's the conversation in the boxes. Wonderfully realistic.—Chicago Daily News.

TRADE ON THE PACIFIC COAST.

Good Reports from All Coast Points with Great Activity in the Northwest—Allen Representative to Visit Honolulu and the Orient—Rothschild Co. Enlarge Talking Machine Department—Heine Co. Reopen Phonograph Department—Commissioner McCarthy's Cheery Report Regarding Sherman Clay's Business—The News of the Month.

(Special to The Talking Machine World.)

San Francisco, May 6, 1911.

Walter S. Gray, Pacific Coast manager for the Columbia Phonograph Co., has just returned from a trip over the northern part of his territory, covering Portland, Seattle and Spokane. He reports satisfactory business all along the line. At Spokane there is great activity in the music business, the Eilers Music House having just started a new building and Kohler & Chase having doubled their capacity by the annexing of another store, where their growing business with the Columbia goods will be more conveniently accommodated. At Seattle the branch store of the Columbia Co. made the best record of the year with its March business, and the April trade has kept up to the same level. Mr. Gray found conditions in Portland very satisfactory. The outlook on the Coast and the business which has been done in the last few weeks are of the best, Mr. Gray says, and he is much pleased also with the fact that many new accounts are being opened constantly of greater size than former new accounts.

The recent Alexander Heinemann concerts in this city were followed by a very brisk demand for Heinemann records, with the result that the local stock of these was soon exhausted.

Marion Dorian, auditor of the Columbia Phonograph Co., is now in Los Angeles, working on the company's books in that city, and is expected in San Francisco early next week. This is the annual auditing trip to the various Columbia offices.

E. W. Cyrus, who for some years has been traveling man for the local office of the Columbia Co., has severed his connection with this office to take a similar position with the Dallas store.

Lawrence K. Wilson, of the Wiley B. Allen Co., will leave shortly on an extended trip to Honolulu and the Orient, which will be of a business nature as well as of a pleasure trip nature. This is the first trip to the Orient of any Allen representative, and it is expected that good results will follow from it. He will go alone and expects to be away several weeks.

Nelson J. Birkholm, who has charge of the record department of the Wiley B. Allen Co., is installing the new system of filing—a new departure from the usual way of keeping records.

With the new system the service of the department will be greatly increased and the business will be made easier to handle. The department has been enlarged and the Red Seal end of the business is being specialized upon by Mr. Birkholm, who will soon visit all the Allen agencies to push this line of goods.

F. P. Corcoran, traveling man for the Wiley B. Allen Co., has returned to this city after an extended Southern trip. He found very pleasing business, especially in Los Angeles, San Diego and San Jose. After one or two months he will make a tour of the North.

James J. Black, manager of the phonograph department of the Wiley B. Allen Co., reports that Victor-Victrola machines, style XVI, are being received more regularly than formerly and that the company has assured the Western trade that they can depend upon a much more steady supply from now on. Mr. Black also reports that the Oakland branch, which for the last three months has been under Mr. Blodgett's charge, is showing a 25 per cent. increase, and is holding forth promise of becoming one of the most productive fields in the State.

The Hauschildt Music Co. have moved the talking machine goods from the old Clark Wise store to their own store on Grant avenue, in this city, and are at present getting the stock ready for sale. The stock made up of the Wise and Hauschildt stores, recently reinforced by large shipments, will give the Victor goods a very able representation. Richard H. Wise, for years in charge of the Clark Wise talking machine department, is in charge and has several assistants in his department, which occupies one whole floor for sales purposes, with part of another floor and basement for storeroom. The company expect to put a great deal of attention on this end of the business, opening with a sale the third of this month.

The Standard Phonograph Co., which for three years has been located on the main floor of the Eilers Music House, have moved their entire stock to the Oakland store, in the Bacon building, where the two will be consolidated. Manager W. E. Horrisberger reports an excellent business in the trans-bay city.

The Eilers Music House has moved into its new building in Portland, Ore., where it is finely housed to care for its growing business. One whole floor of the company's six-story building is devoted to the talking machine department under the able management of G. H. Eilers.

The Heine Piano Co. have reopened their phonograph department, which has been closed for about six months, under the management of C. F. Lundberg, an old talking machine man in this city, formerly with the Clark Wise house. The business was resumed last Thursday and has started off

well, according to the reports of the company. The department is given almost an entire floor, and has four sound-proof demonstrating rooms. It will carry a complete line of Victor machines and records.

A. R. Pommer, head of the Pacific Phonograph Co., is kept busy handling the orders which are coming in faster than the goods to supply them, and reports an especially lively business in the interior. The factory is behind on orders, and shipments which are received are disposed of in advance. This season has been the record season in the history of the company, according to Manager Pommer. Mr. McCracken, traveling man for the company, has returned from the South, where he found excellent business in the talking machine line. He is now in the North.

W. A. Voltz, of the National Phonograph Co., is on his way to the southern part of the State by way of Reno, having spent some time in the Northwest.

Alfred Widdop, a Fort Bragg Edison and Victor dealer, came to San Francisco about two weeks ago alone to pay his debts here, stayed two days, during which time he cashed a check of \$2,600, most of which was paid out to local dealers, and mysteriously disappeared. Search by the police failed to locate him and his whereabouts now are unknown. His business in Fort Bragg has been taken over by W. D. Coombs, to whom Mr. Widdop was indebted, Mr. Coombs assuming the liabilities.

Among out-of-town dealers who have recently been in San Francisco purchasing goods for their stores are: A. Avery, of the Avery Drug Co., Coalinga; J. L. A. Broderson, Redlands; E. Edstrom, Vacaville, and J. L. Green, Napa. Judging from their orders the interior business is anything but slow.

Andrew McCarthy, vice-president of Sherman, Clay & Co., reports business as continuing much more heavily this spring than in former years, and says that if the company could get more Victor machines they would be happier, as orders keep ahead of the shipments from the East. Victrolas are especially popular in town as well as in the country, where the traveling men of the company are having admirable success with their goods. Mr. McCarthy, who was recently appointed a park commissioner in this city, is kept pretty much on the go, with the new duties added to his business engagements.

"A credit man hurts not only himself but business in general when he extends credit to those not entitled to have it or in excess of a man's capacity for credit. The tireless pursuit and systematization of information is therefore the highest duty of the credit man."

SIXTEEN YEARS' EXPERIENCE

Handling Talking Machines, Records and Accessories

Does Count

EDISON

Experience is a great teacher.

The results of our experience are yours to command.

Especially if these goods are handled exclusively. Just how much it counts you can easily demonstrate to your own satisfaction by placing your orders with us for Victor and Edison Machines, Records and Supplies, and becoming familiar with Eastern Co. service.

Mahogany or oak.

Victor-Victrola XVI
Mahogany or quartered oak, \$200.
Circassian walnut, \$250.

The perfection of the Victor-Victrola

Musical perfection has been the goal for centuries, yet it was never attained until five years ago when the Victor-Victrola was produced.

And the wonderful perfection of this instrument has caused it to be universally acknowledged the world's greatest musical instrument.

The Victor-Victrola has not only revolutionized the talking-machine business, but made the Victor business the most important in the entire musical instrument industry.

Successful from the very first, the demand has increased by leaps and bounds, overtaking our factory capacity in spite of the new buildings we are constantly erecting.

Every day orders are pouring in from all parts of the country, showing the public appreciation of this wonderful instrument, showing that dealers are wide awake to the opportunity it offers and making the most of it.

And the Victor-Victrola business is still in its infancy. The future is fraught with golden possibilities which no dealer can afford to overlook.

Business Satisfactory—Opera Helps Record Sales—Music as a Therapeutic—Caldwell Piano Co. Have Opened Their Handsome Talking Machine Department—Business Active with the U-S Phonograph Co.—Wurlitzer Co.'s New Quarters—R. Svehla Purchases Reiling Business—Busy Times with Eclipse Musical Co.—Other Items.

(Special to The Talking Machine World.)

Cleveland, O., May 9, 1911.

The month of April was a prosperous and very satisfactory one for the talking machine dealers generally, but since the first of May business has quieted down somewhat, as it has in other lines of the music trade, and which seems to be the case with most other trades. Judging from the large stocks of machines and records carried by most of the dealers, it would seem that they anticipate a good volume of business this season.

W. H. Hugg, representative of Thomas A. Edison, Inc., Orange, N. J., was here recently, and reported he found business fair in the various towns he visited. He says the company will bring out the new disc machine and records in the fall.

The Opera Club, a well known and popular organization of Cleveland, will open up the Euclid Avenue Garden Theater season the week of May 29, with the presentation of the "Bohemian Girl" and "Mikado." The talking machine dealers are arranging to elaborately feature the gems of these two operas, beginning the middle of May. The personnel of the club compose the city's best known talented singers and as the advance sale of tickets has been large, indicating the interest already manifested, these records will unquestionably be in great demand. The exchange and seat sale opens at Burrows Bros., May 18.

Insanity is being cured at the Massillon, Ohio, State Hospital for the Insane. The superintendent says the day of mistreating madness with cruelties is past in this State. The strait-jacket, thumb-screws, crib and other instruments of torture have been replaced by pianos and phonographs, and other pleasures, together with some light work. Long strides have been made in non-restraint methods, and the introduction of the phonograph seems to have pacifically influenced the minds of the inmates more than anything else.

The management of the Cleveland baseball team contemplate adding a motion picture machine to their training equipment. The idea is to give young players the opportunity of seeing themselves in action and thus enable them to overcome such defects as they may be addicted to. Pictures would be taken of the players in practice and shown on a screen in the evening, accompanied with phonographic selections.

Not a little comment has been heard concerning the use of a dictaphone in connection with the bribery charges in the legislature at Columbus. It seems the detectives had a dictaphone concealed in the room, where the bribes were given and the conversation took place, and were thus transmitted to a stenographer.

The last of the downtown penny arcades, where

once rows of phonographs, before which crowds stood in lines waiting their turn to hold the tubes to their ears and hear "Two Little Girls in Blue," "Annie Laurie," and in later years "Bedelia," and "The Glow Worm," has been dismantled, and the equipment set up in the White City resort. Its closing marks the passing of this form of amusement in the city. The advent of the motion picture shows marked the end of the penny arcades.

The Caldwell Piano Co., corner of Prospect avenue and East Ninth street, one of the largest and most beautiful piano stores in Ohio, have opened a Victor talking machine department along with the line of Henry F. Miller, Kurtzmann, Ebersole, Howard pianos and Angelus player-pianos. The new department is on the second floor, next to the private office of E. T. Caldwell. The handsome main salesroom affords ample room for an elaborate display of machines and Victrolas, and the two large show windows facing on Prospect avenue and Ninth street are very attractive. The entire store is handsomely decorated, carpeted throughout, comfortably furnished and lighted by hundreds of electric lights. There is a large exclusive recital hall with a seating capacity of 325 persons, where weekly recitals are given on the Victrola and Angelus player. The ladies' rest room, just off the recital hall, is very comfortably furnished with large easy chairs, sofa pillows, writing desk and telephone for the convenience of guests. The new department is in charge of H. D. Scroxton, formerly with W. D. Andrews, of Buffalo, N. Y., who has had several years' experience in the phonograph and talking machine line. Mr. Scroxton says the new department is one of the most complete retail stores in the country, and is very proud of it.

Conditions with the Eclipse Musical Co. are of the most rosetate character. The retail business of the company is growing in the most satisfactory manner, while trade in the wholesale department is keeping up to the normal average. Mr. Towell stated that the demand for goods from various sections indicates that the talking machine business generally is in excellent condition. The display of Victor and U-S machines in the reception room is one of the most attractive to be found anywhere. During the past month the window displays of the company have been a feature much commented upon. The special Easter display, together with the exhibit of U-S machines attracted unusual attention, both from the public and local dealers. The hit of the month, however, was "The Pink Lady" window.

Everything at the new store of the Columbia Phonograph Co., on Euclid avenue, is moving along satisfactorily and Mr. Madson, the manager, reports an excellent trade in machines, and a big record sale for the month. The Metropolitan Opera House Company was here April 20, for three days, and the sale of Fremstad, Destinn and Amato records were brisk. Mary Garden was also here May 1, and there was a big demand for her records, which are in high favor. At the Easter concert of the Epworth Memorial Church the Columbia gave a Grafonola recital, and report several to be given in the next two months.

G. J. Probeck, manager of the Dictaphone department, reports business very good.

Business at the factories of the U. S. Phonograph Co. is in the most prosperous condition. Geo. M. Nisbett, recently appointed manager of sales, has energetically taken hold of affairs and is aggressively at work in his shirt sleeves. "You ask me how business is?" he said. "Well, it is rushing. We are very busy in the factory and way behind on orders, forcing us to work overtime with all the help we can secure. And the same conditions exist in the record plant, where we are largely in arrears on orders. We are now getting up our June list, which will consist of twenty-five 4 minute, twelve 2 minute, 4 grand opera four minute selections, ten 4 minute and eleven 2 minute foreign records. I am well pleased with the situation here and the outlook is of the most encouraging character."

Conditions at H. E. McMillin's are on the whole very satisfactory. "Business with us," said Manager Kellogg, "is exceptionally good. The month of April, and continuing thus far in May, in all departments, exceeded our expectations, the peculiar and somewhat remarkable feature of the Victrola business being the fact that several parties traded in their pianos for Victrolas. Another feature of our business was the purchase of the Edison stock of L. B. Coblitz & Co., Woodland avenue, the bulk of the purchase consisting of foreign records."

The Rudolph Wurlitzer Co., which have for some time been located at 206 Prospect avenue, has moved to the more commodious store at 800 Huron road, which has been fitted up in elegant style. In addition to the automatic musical instruments, heretofore exclusively dealt in, the company have added a complete line of pianos and player-pianos. The company contemplated taking on the Victor line, but have not yet fully decided the matter.

The Brown Bros., Ontario street, are making good steady sales of Columbia goods. They carry a complete line of machines and records, and have a cozy demonstration room and attractive show window.

R. Svehla, of 5101 Flat avenue, where he has an established music business, has purchased the West Side Columbia store of John Reiling, who retires from active business. Mr. Svehla is refurnishing and refitting the store and will carry a large stock of musical instruments and the Columbia line of goods exclusively. He is an enthusiastic Columbia adherent and has handled the line for several years. He is doing a fine business and expects to largely increase it.

Business continues fairly active at the store of W. H. Buescher & Sons, although the management expressed no enthusiasm over conditions. The firm are well entrenched with scores of patrons, and are never without a prospect in sight for a Victrola, or other Victor machine and cabinet.

At the May Co.'s business was reported just fair at present, but that the April trade was poor. J. I. Kearns, in charge of the talking machine department, said he couldn't account for the dropping off in business in the past month, as the vol-

ume of trade in March was unusually large. However, he stated, he was making some sales daily of Victrolas, and the higher class machines and records, and is looking forward to improved conditions this month.

E. A. Friedlander, of the Bailey Co., said business was very fair at the present time. "Our 1911 April business," he said, "was considerably larger than for the same month in 1910, covering the entire line of Victor records. Our Edison trade is pretty fair, mostly Amberol records. There is a good call for Red Seal and opera records. For the first time in a good while we now have in stock a complete line of Victrolas. We recently arranged to supply the new high-toned Berghoff with Red Seal records, to be played on the Auxetophone with the orchestra."

Among the thousands of business men in the city there are few to be found more optimistic than Charles I. Davis. "Business is moving along very well," he said. "It isn't entirely satisfactory, but I haven't any reason to complain. The demand for talking machines, more especially for Victrolas, the Edison Amberola and Triumph, with the improved recorder, is good, and the pleasing feature is that they give entire satisfaction to purchasers. Our record trade is fine and constantly increasing. I opened a talking machine department in my Pittsburg store, April 29, installing both Victor and Edison goods. The attendance at the opening was large and business there is very promising."

The Aldrich-Hawey Co., are very well satisfied with conditions and report trade in Columbia talking machines and records as fair, and comparing favorably with furniture business.

The Talking Machine Co. located in the Arcade, are getting their share of trade, although the manager stated business was only fair. "We are selling some machines," he said, "but the demand is not active. The call is largely for the higher priced machines in both the Victor and Edison line. Opera, Red Seal, and others of the higher priced records, scheduled in both the April and May lists, have been in better demand within the past two weeks. Business, I think, will improve when the weather becomes thoroughly settled."

NEW UDELL CABINET CATALOG.

Attractive Booklet Just Issued Illustrating and Describing Various Styles of Disc and Cylinder Record Cabinets.

The Udell Works, Indianapolis, Ind., whose line of talking machine record cabinets and the quality thereof are quite familiar to the trade generally, have just issued an attractive little catalog devoted to their extensive line of cabinets for both disc and cylinder records. Of the twenty-three cabinets illustrated and described in the pages, six of them are intended for the disc records, and of these a number are fitted with special moldings on the top and finished with the intention of holding and harmonizing with certain of the more popular styles of Victor talking machines and Victrolas.

The finishes of the cabinets are varied and include early English, fumed, weathered, and golden oak and mahogany. The assortment includes models with the record compartment for the discs either horizontal or vertical, and in the cylinder cabinets clamps are arranged in the drawers that permit of the records being filed in their original flannel-lined packages.

The new volume, which is bound in a handsome brown cover, is well printed and the illustrations are clear and comprehensive. It should prove of special value to the dealer who handles a part of the line and desires to sell the balance of the cabinets by catalog, and should prove a convincing argument for the talking machine dealer who has not perceived the wisdom of handling cabinets or is wavering regarding the line he will install.

The catalog will be sent cheerfully to any dealer who requests one, though in the talking machine trade the cabinets are sold to retailers only through the jobbers.

Buy small quantities often, and always take advantage of the discounts for cash.

HEARING RECORDS BY 'PHONE.

The Phillip & Crew Co. of Atlanta Inaugurate a New Long Distance Telephone Scheme of Extending Their Sales of Records Outside of Atlanta with Great Success—The New Plan Caused Quite a Sensation Locally.

(Special to the Talking Machine World.)

Atlanta, Ga., May 5, 1911.

To hear Caruso sing over the long distance telephone—a rare experience, truly, but one that a few Atlanta people enjoyed in their homes last night.

It was the enterprise of an Atlanta concern which inspired it, and another instance of twentieth century progressiveness, which made it possible.

The Phillips & Crew Co., Atlanta's big piano and music house, which also sells Victor talking machines, has about decided to adopt the long distance telephone scheme as one of their methods of extending their sales of records outside Atlanta, and the recent record-sending was a test.

There is nothing so persuasive as letting a man enjoy a little bit of a good thing you would have him buy, and a thousand silver-tongued agents sent, say, to Macon to describe to a prospective purchaser of a talking machine the beauty of Caruso's voice and the perfection of its reproduction could not be as convincing in a week as ten minutes of Caruso himself singing through the telephone.

So the scattered Atlanta audience found last night. The records of solos by the great tenor were sent over the Southern Bell telephone wires to Macon and then by the same circuit back to Atlanta, so that when the records were heard here they had traveled twice the distance from Macon to Atlanta.

Their clearness and strength was practically unimpaired by their long journey, and it would scarcely have been difficult when the matchless tones of the famous singer floated over the wires to believe that he had, after all, come to Atlanta and was singing at the telephone in his suite at the Piedmont.

The success of the test opens up a new usefulness for the telephone in Georgia and another big advance in the popularization of the talking machine.

TALKING MACHINE EXPORTS.

The Figures for February Presented—Reports Show Strong Gain in All Departments of Industry—Some Interesting Figures.

(Special to the Talking Machine World.)

Washington, D. C., May 1, 1911.

In the summary of exports and imports of the commerce of the United States for the month of February (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for March, 1911, amounted to \$224,456, as compared with \$221,642 for the same month of the previous year. The nine months' exportations of talking machines, records and supplies amounted to \$2,285,419.

GOING AFTER THE BUSINESS.

H. B. Coreaux Pushing Victor Line for E. E. Forbes Piano Co. in Montgomery, Ala.—Recitals a Specialty That Interest.

(Special to the Talking Machine World.)

Montgomery, Ala., May 10, 1911.

H. B. Coreaux, who recently became manager of the talking machine department of the E. E. Forbes Piano Co., in this city, has taken hold of things in lively fashion and is getting good results. He has inaugurated a series of Friday evening Victrola recitals, at times giving mixed programs of as many as twenty-five or thirty numbers. Private house recitals are also encouraged and attractive blank programs are furnished free by the company, their name appearing prominently on each card.

Won't You
Have a
Lesson in
Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools
Box 918, Scranton, Pa.

Some Edison dealers, in addition to making a clean-up on Edison Phonographs and Records, are making Home Recording Equipment and Blank Records a part of every sale and bringing home an additional profit on shaving blank records.

Home Recording is one of the most fascinating features of the Edison. It's a sure-fire selling feature and a constant profit bringer.

You're not giving yourself a square deal if you don't work this home recording feature to the limit—you're letting good money go by.

Get your Edison jobber to fix you up.

Thomas A. Edison, Inc., 59 Lakeside Avenue, Orange, N. J.

There's no more sense in an Edison dealer not taking advantage of the additional profits on shaving blank records than there would be for a camera supply house to neglect the "developing and printing" end of the business.

When anybody once gets the home record making habit, he's just as enthusiastic over it as the camera fiend over photography—they'll tell you in any camera store that the real profit is on supplies, (developing and printing.)

Your case is parallel. And you're not getting all there is in it for you unless you play the game all the way across the board. Sell a recorder with every outfit—push blank records—and say, have you got your shaving machine yet?

Write your Edison jobber about it now.

Thomas A. Edison, Inc., 59 Lakeside Avenue, Orange, N. J.

GETTING OUT OF THE RUT.

What a Knowledge of Modern Methods and Conditions Means to the Successful Man.

One of the things that a live merchant must watch out for is to avoid getting into a rut—getting into the habit of doing business just the same way year after year, regardless of general conditions or of the progress made by others in the same line. To get into a rut means to get a good start on the business toboggan, going down.

In this connection an interesting story is told of a firm of seed merchants of the present generation who had inherited the business from their father, and who in turn had inherited it from his father, the founder. The present methods of doing business were those followed by the founder ninety or more years ago, and the latest owners of the business saw it was slipping away from them very fast. The finishing touch came when a merchant in the same line opened a store in the immediate neighbor-

*Knowledge is Wealth—
and a knowledge of
Udell Cabinet values
means money in your
pocket and an enhance-
ment of your reputa-
tion.*

Your copy of The New Udell Catalog just off the press illustrates Cabinets for Victors I, II, III, IV, V, VI, Victrolas IX, X, XI.

You can have the Cabinets in either Mahogany or any of The Victor Oak finishes.

You can have your choice of six interiors.

You will have a splendid range of price and pattern.

You only have to write for The New Udell Catalog No. 36 illustrating Cabinets for Disc and Cylinder Records.

You will certainly write to-day to

hood and went after the business in latest style. The sheriff was becoming a very much to be dreaded person in the eyes of those operating the long established store, when one bright morning a young man breezed in with considerable assurance and delivered himself of the following:

"You gentlemen have an invaluable reputation for reliability and fair dealing, but I don't think you know much about running a modern business. I do. I've got ten thousand dollars to lose. Give me a quarter interest with a guaranty to give me a free hand at managing the business, and I'll show you something."

For weeks the deal hung fire. The idea of trusting the good name of the firm into the hands of a fly-by-night youngster who spoke of typewriting and of adding machines and of trolley cash-cars seemed dangerous; but there was precious little choice.

"We'll stay where we are, providing the landlord'll let us knock the front out of this building and put in show windows. The street is good enough for us," the youngster said. Then, following a dinner, he talked turkey to his three partners, each almost old enough to be his father. Many things of which the partners had not dreamed the youngster told them; told them about the value of advertising and of up-to-date catalog-making; told them how to play up leading seeds, how to offer prizes and premiums to win over the attention and interest of the customers.

"Where in the world did you learn to run a seed business?" one of the partners asked the junior member of the firm one day, when it was assured that the business was forging back to its old place near the top.

"Where did I get it? Where you yourself might have got it. I studied how other seedsmen were making it go; and when there was something I didn't know I went to their stores and bought seeds and chatted, as customers will, until I got all I wanted to know."

EXPORT TRADE IN LATIN AMERICA.

Some Timely Remarks on a Subject That Is of General Interest to the Talking Machine and All Branches of the Industry.

A gentleman familiar with the export trade in the Latin-American countries, his company having developed an excellent business in recent years, said of Mexico: "Our Mexican advices are so uncertain that the entire trade is threatened. The talking machine business was growing rapidly, but the insurrection is assuming such formidable proportions that no one can tell what may happen. No shipments are being made into the City of Mexico excepting by water, via Vera Cruz and Tampico. All other communication is practically shut off.

"The feeling against the Americans, who have the largest interests at stake in Mexico, is that of the Latin-American against the Anglo-Saxon. The Germans have viewed our advances in Mexico and all Central and South American countries with suspicion. Having many banks under their control they have influenced the newspapers, and the motives and actions of Americans have been distorted and purposely misconstrued. You may readily imagine the effect on an excitable and emotional race who are liable to 'go up in the air' on the slightest provocation.

"In the present crisis you may imagine the attitude of England if her interests were involved as are ours! She would have had an army across the border long before this and every public work or piece of property controlled by English capital would have been amply protected. She would not have hesitated a moment about entering Mexican soil under the circumstances. Things are certainly in a bad state there. Diaz does not nor ever has observed constitutional rights, but his is the only kind of government that will stand in Mexico—a rigid enforcement of right and order. Mexicans, as a people, have not the slightest idea of political fairness. It is unfortunate, but nevertheless, true."

Sales letters, like living salesmen, should have individuality.

"CONFIDENCE is like a LUTE STRING,
giving forth sweet sounds in
its PERFECTION"

Trade Mark

The VIOLINIST, in CONSTANT FEAR that his STRINGS will BREAK, or become imperfect, because they are not properly made, loses CONFIDENCE in himself and his VIOLIN responds only to his fears.

Our New Discovery in the manufacture of

Violin Silk Strings

which we have named:

Bombyx-Mori

creates CONFIDENCE to such an extent, that his knowledge of his art makes it impossible to produce any sounds but those that are SWEET and PERFECT.

Bombyx-Mori Silk Violin Strings

are made of the fiber drawn out from a silk worm, when it is just ready to spin its cocoon. Stronger than GUT, more musical than the ordinary SILK STRINGS of commerce, an entirely up-to-date proposition and offered here for the first time in any country.

Many years of experiment and much care in manufacture have made it possible to offer without hesitation this wonderful STRING, which is GOOD IN ANY CLIMATE, and will displace when known any other SILK STRINGS which have been used. Write for price per bundle of 30.

A BRIGHT SPOT

Plans have been made which will make the National Association of Talking Machine Jobbers' Convention, which is to be held in Milwaukee, Wis., on July 10th, 11th, 12th and 13th, a memorable affair.

It will indeed leave "a bright spot" in the minds of those who attend.

This is the first time the organization has held its annual Convention in the West and indications point to a large attendance of members, not only from that section but from the East as well.

A great deal can be gained by a Convention sojourn.

One is brought into close contact with fellow jobbers coming from every section of the country; and an exchange of views regarding talking machine affairs is always of value.

Matters of vital importance which will be discussed at the business sessions promise to be entertaining and beneficial and should not be missed by anyone who has the interests of the talking machine trade at heart.

The social events will add to the Milwaukee sojourn and will be of particular delight to all.

NEW YORK, MAY 15, 1911.

JUDGING from the program which the National Association of Talking Machine Jobbers has outlined for the convention which will meet in Milwaukee in July, an interesting time is in store for those who will attend.

This will be the fifth annual reunion of the association, and it will be admitted that since its beginning splendid work has been accomplished in perpetuating an organization along lines which are most helpful to the best interests of the talking machine trade.

Organization among the jobbers, as among the dealers, means the protection of legitimate trade, the closer intercourse of competitors, and the engendering of a better and broader feeling regarding trade matters generally.

The old narrow jealousies which seemed to obtain in business in days ago disappear with the intercourse brought about through membership in trade associations, and in no industry has the value of such a movement been more clearly apparent than in the talking machine trade.

The talking machine jobbers have worked, and are still working, as one large family for the advancement of the industry, and still they are the keenest kind of competitors in business matters.

At the convention in Milwaukee, in July, business topics of more than ordinary interest are scheduled for discussion, while there is a social side to the gathering that will make a very pleasing diversion.

Secretary Roush, and others in charge of the convention, are already hard at work putting the finishing touches on the plans for the gathering. Bulletins are constantly reaching members reminding them of the

importance of the convention in Milwaukee, and nothing is being left undone to insure a large attendance at this extremely important meeting.

The location for this year's convention is admirable, being convenient to both jobbers in the East and West, and this in itself will bring about a much larger attendance than could have been expected at the gathering in Atlantic City.

FOR years The World has been impressing on the dealers the wisdom of inaugurating a campaign locally whereby talking machines may be used by schools and other public institutions for educational purposes.

We are indeed pleased that at last a definite program has been outlined by the Victor Co. in this respect. Under the direction of a former superintendent of public schools, who is also a competent and experienced lecturer, special records are now being prepared which cannot fail to make the talking machine an essential feature of the curriculum of every progressive school in the United States.

While most valuable in larger cities, yet it is in the smaller towns and villages that the talking machine is going to prove a tremendous factor for school work.

Apart from the exercises and lectures which can be heard through this medium, and which are never heard in the smaller schools, there is the ability to hear the voices of all the world-famous singers as well as the leading orchestral organizations.

The educational value of the talking machine in the school will some day be estimated at its true worth. The movement is yet in its infancy. There are thousands of people in this country who have no adequate conception of the evolution of the talking machine, and its present position as an instructor and entertainer, and the labors of the manufacturers in broadening out the sphere of use of the talking machine should be helped by the enthusiasm and practical work of the jobber and the dealer.

They can do much to interest the people of their towns and cities by injecting a little trade enthusiasm into the business. There is no use in sitting down content with present progress, for the man who is not going ahead is going backward, and this is also true of the industry. It is the inauguration of new ideas in the talking machine business that will tend to make it in the future as in the past one of the most progressive and interesting industries in this country.

EVERY day we learn of the wider use of talking machines in every line of effort. As a vocal teacher it is now widely recognized and used in the studios of many leading instructors. The skeptics of years ago in regard to the artistic and musical value of the talking machine, are now its most enthusiastic adherents and supporters.

They recognize that the talking machine is to-day one of the greatest factors in promoting a love and appreciation of music ever conceived.

Of course, there are plenty of critics who claim that the majority of talking machine users play ragtime and other popular stuff, but this proves little. The fact is there are thousands of people who formerly never had music in the home who are now able to hear and enjoy the compositions of the masters. And it is a notable fact that those who start with the purchase of ragtime, or popular records, in a very short time come to appreciate the high-class song and operatic selections.

This is the experience of the majority of dealers. And it is a cheering and gratifying sign. It emphasizes the growth of real musical taste and appreciation in this country.

There is much missionary work yet to be done, and an army of people to be converted, and here is where the dealers must help.

The manufacturers in their literature, in their advertising, and in their general plan of campaign are doing splendid work in broadening out the demand for the talking machine, and it needs real live, active, earnest work on the part of the dealer to help them secure the results that are so necessary for the development of the industry.

Business must be pushed systematically and progressively, and with a full faith in its possibilities and its future.

WHILE trade has not been over-brisk in the majority of industries, yet in the talking machine field the volume of trade has been fair for the past month, and in many sections it exceeds that of last year. There have been a number of disturbing factors, such as the backward spring, the trust cases before the Supreme Court, the troubles in Mexico, and the apprehension of a disturbance of tariff rates by Congress.

This has been offset, however, by unusually sound fundamental conditions. Financial conditions are good; the prospects are for a harvest of unusual excellence; credit conditions are improved, while there is a large accumulation of capital not only in this country, but in foreign sections, all available for investment in new enterprises.

With the disappearance of the uncertainty which has prevailed, there is no question that we are bound to have a very satisfactory business in all lines of trade. Reports from World correspondents this month show an upward business trend in mostly every section, and with the prospects for a larger talking machine trade most gratifying.

PERSONALITY is the greatest asset that any retail business man can have.

He may have the goods, the price, the location, but he must have the personal magnetism in order to have business success. Every man stands for something in his own business, and represents ideas of his own. The heads of our largest financial institutions are men of wonderful personality, whose influence is felt in every department. The value of personality is just as potent, however, in the smallest talking machine store.

PLANS PATENT LAW INQUIRY.

Senator Gore Wants Investigation by Joint Committee of Congress.

(Special to The Talking Machine World.)

Washington, D. C., May 8, 1911.

Senator Gore, of Oklahoma, has framed the following resolution for presentation to the Senate:

"That a joint committee is hereby created to be composed of the chairman of the Committees on Patents of the two houses and two other members of the said committees to be designated by the respective chairman thereof. Any vacancy occurring on the committee shall be filled in the same manner as the original appointment. And said committee so constituted is empowered and directed to examine and compare the patent laws of this and other countries with special reference to the compulsory working of patents and the issuance of compulsory licenses for the manufacture of patented articles; to ascertain the methods of sale, leasing, disposing and control of patented articles in the United States; to ascertain whether patents are used or unused in the establishment of industrial trusts or monopolies and to investigate all other matters material or pertinent to the purposes of this resolution, and to report their findings to Congress with recommendations as to any needed legislation to protect the public interest and to promote the general welfare."

THE WORLD AT HOME.

Subscriber Wishes to Read It by His Fireside.

In enclosing an order for one year's subscription to The World, Ralph W. Pittock, Los Angeles, Cal., writes:

"This is the direct result of the article on page 36 of the April 15 issue, 'The Salesman's Standpoint.' Although I have been threatening to subscribe to The World some time past, I have just somehow 'kept putting it off.' After reading this little article I feel that I must have The World to

read 'in the peace and quietude of my own home.' A great many times I do not get time to look over The World, whereas if I have it in my own home, I can peruse it thoroughly and digest the contents.

"I feel that every salesman in the talking machine business should have The World, 'as we are never too old to learn' and there are very many good things in The World each month which would help everyone if they would only take the time to read it." Quite a number of subscribers are now having their World sent to their homes so that they can read it after the day's work is over. Such interest is not shown in many trade papers.

DEPENDING ON ONE'S SELF

Is Better Than Trusting to Luck or Notes Sometimes in Business.

A great many business men in the talking machine industry, as indeed in every other business, are over-prone to depend upon outside sources rather than upon themselves for financial assistance when any kind of crises arise in the development of their business. Talking on this topic recently a veteran New York wholesaler said to a representative of System:

"The greatest and most constant danger that has confronted me has been the impulse to run to the bank for a loan. I believe in borrowing when necessary, but only when it really is necessary. It is such a simple matter to sign a note, that the borrowing eraze becomes something like the drug habit if not kept in check.

"Once I thought it imperative to borrow \$10,000. I got the money without the slightest trouble, but when I returned to the office I opened my ledger and sat for ten minutes looking at the entry. It was a neat sum to show on the book, but my pleasure at seeing it there was clouded by the thought of my \$10,000 promissory note at the bank. Trade conditions were not exactly bright, and I looked ahead sixty days and wondered if I would have \$10,000 to spare when the note came due.

"That night I was unable to sleep, but I went to the office the next morning with a fixed resolve. I took up the note as soon as the bank opened, for the lump-sum was still intact. Then I went through my establishment and trimmed every outgoing. I put the screws on the collection department, and got up a series of letters to my salesmen, asking their co-operation in bringing sales up to a certain figure during the succeeding two months, offering a special bonus for results.

"A panic struck us just before the note would have matured, but I found myself snug in harbor. If the bank had held the note, I should have spent many a sleepless night over it. The best of it was that I discovered how unnecessary and foolish the loan had been.

"I've seen many a man go under simply because he found it too easy to borrow money."

NEW USE FOR RECORDS.

Records Made of Voices of Wolves at the Manito Zoo for Use in the Production of Eugene Walter's Play, "The Wolf."

W. H. Goodwin, of the Graves Music Co., Spokane, Wash., recently gave his experience in "canning" the voices of wolves at the Manito Zoo for use in the production of Eugene Walter's famous play, "The Wolf," in that city. There was some little objection on the part of Chauncey and Dick (the wolves) to having their voices recorded in that manner and no little danger attendant upon the work, as might be expected. Mr. Goodwin persisted, however, with such good results, after three hours' work, that three records were taken, and when tested later were found to be an absolute success, and even louder than necessary; in fact, they were so loud that it was necessary to put some cotton in the horn. The phonograph is placed back of the stage behind the scenery, and with the stage in total darkness, the blood-curdling howling of the wolves adds a terribly realistic effect to the duel to death between "Jules Baubien" and "William MacDonald," the American engineer, in the climax of the last act.

"Symphonion"

THE PIONEER OF MUSICAL INSTRUMENTS

Musical Boxes with interchangeable tune-discs.

Talking Machines with and without horns. 100 different models.

Double-sided Records, 10" and 12" size, both the finest repertoire.

Phono Cut Disc Records. Needle Cut Disc Records.

Orchestras with piano-strings and vibrating hammers to play with paper-rolls.

To work by Weight. To work by Electric Motor.

Electric Pneumatic Pianos with self-acting piano- and forte-modulation. First-class Quality! The acme of perfection. Lowest Prices!

We are prepared to make arrangements for sole sales agencies in any territory.

Symphonionfabrik Aktiengesellschaft, - Leipzig-Gohlis (Germany)

No talking-machine owner can hear Mary Garden, or Lillian Nordica, or Olive Fremstad, except on Columbia Records. Those three voices *alone* are great enough to build a talking machine business on.

Columbia Phonograph Co., Genl., Tribune Building, New York.

NEWS FROM INDIANAPOLIS.

Dictaphones to Be Used in Taking Records of the Speed of Autos—Columbia Favorite a Big Seller—Victor-Victrola and Other High Priced Victor Goods Enlarge Their Market—Price Cutting Eliminated—Special Mary Garden Window Promotes Record Sales.

(Special to the Talking Machine World.)

Indianapolis, Ind., May 8, 1911.

An entirely new use has been found for the Dictaphone handled here by the Columbia Phonograph Co. Thomas Devine, manager of the local branch here, has arranged with the men in charge of the Indianapolis motor speedway to have the Dictaphone used in taking records of the speed of the autos in the big automobile races which will be held at the speedway on Memorial Day.

The plan is to have the announcer in the judges' stand call into the Dictaphone the numbers of the machines and their time as they pass on the race course. Then the records will be transcribed by four stenographers. Three machines and at least 100 blank records will be needed for the races. Managers of the speedway believe that by using this method they will reduce the possibility of mistakes in the speed records to the minimum. The speedway men believe also that this plan will ultimately be adopted for all of the big motor car races in the world.

The races on Memorial Day will be about the biggest ever held at the speedway, which has been the scene of races by Barney Oldfield and other daring drivers and of airship races by Brookins and other daring navigators of the air. One of the events on Memorial Day will be a 500 mile race which will begin in the middle of the forenoon and will not close until the shades of evening are falling.

The Dictaphone business of the Columbia Co. for the last month has been the best in the history of the company in this city. Many of the largest public service corporations and commercial organizations of the city have taken up the use of these machines. The management of the Columbia store is unusually well pleased with the outlook for business in this line. The only difficulty is in getting enough machines from the factory to fill the demand.

The Columbia Co. have also had a good run with the "Favorite" \$50 Grafonola machine. The local house has been unable to get these machines from the factory fast enough to fill the demand.

The Musical Echo Co., which handles the Victor line exclusively, has been having an encouraging business in Victrolas. "The Beautiful Lady," from the comic opera "The Pink Lady," has been the record in chief demand with the Musical Echo Co.

The Wulschner-Stewart Music Co., which handles the Victor line, have been having a nice business, particularly in the better class of machines. They have been giving attention to the summer resort people and already have shipped several machines to the lakes for those who will leave early for their summer outings. It is noticeable that

the resorters this year are using the higher priced machines more than ever before.

It is said that the price cutting in the Victor line, which for some time gave trouble locally, has been eliminated and business is now running along in a steady way, although competition remains hot.

The Aeolian Co., which handle the Victor line, have been giving special attention to the summer resort business and expect to have a nice trade in machines and records with those who go away to the lakes for the summer season.

The Kipp-Link Co., which handles the Edison line, have been having an encouraging business in all styles of the Edison machines. This concern, which located in Massachusetts avenue about one year ago, has made a record for hustling.

The Columbia Co. have had a big sale in the Mary Garden records, encouraged in part by the fact that Mary Garden's itinerary in the last month included Indianapolis, where she sang at the new Shubert house. The Columbia Co. made a special Mary Garden window display, which included a life-size figure of the famous singer. This company also have had a pleasing demand for the Nordica records.

COURTESY OF SALES FORCE COUNT.

Thomas G. Constantine contributes a very great truth in the following, which we clip from System: "The greatest factor in the success of any retail business is the courtesy and enthusiasm of

the salesman. Men may talk about the savings effected through their system of buying, and all that, but we don't depend on the wholesaler for our patronage. It is the public that buys from us—the public whom we must please—and our only way of pleasing the public is through the salesman."

IMPROVED GEM AND FIRESIDE MACHINES

The Thomas A. Edison Co., Inc., Orange, N. J., have announced that they are prepared to supply Gem and Fireside machines equipped with model "R" reproducers, instead of model "K," on special orders at an advance of \$2.50 list (Canada, \$3.25) over regular equipment. Where the model "R" is furnished as part of such equipment, the model "K" will not form part of the outfit. Model "K" reproducers will also be accepted in exchange for the model "R" and an allowance will be made for them in both the United States and Canada of \$2.50 list. The list prices of the model "R," sold separately, are: United States, \$5; Canada, \$6.50. The model "R" is a four-minute reproducer only, so that in order to play the two-minute records it is necessary to have a model "C." Dealers are pleased with the improvement in tonal quality and volume offered by the model "R" reproducer.

What we call initiative in a business man is knowing the next move, and making it at the right time.

DISPLAY CABINETS FOR SHEET MUSIC

Displays 60 sheets on floor space of 16 inches.

The music publisher spares no expense in getting attractive and flashy covers for his popular music because it means sales. There are hundreds of dealers who are only selling half the popular music they might if they displayed it properly. We build 18 different sizes and styles of cabinets for this purpose. These fixtures will double your sales, they economize in space.

**Combination PHONOGRAPH
Everlasting RECORDS**

U-S Peerless \$200

U-S Grand \$85.

U-S Opera Model \$65.
Other Horn Models:
U-S Banner \$45.
U-S Junior \$30.

There is a demand in your locality right now for the best phonographs and best records in existence. If you are willing to enjoy the distinction and the profit of filling that demand get in touch at once with the liberal U-S proposition.

The U-S is *the* machine for every music or phonograph dealer, because it is a *genuine musical instrument* and embodies many exclusive features which make it sell *solely on merit*. To these we add liberal arrangements and continued co-operation, making a combination which is a *real profit builder for you*.

The U-S AUTOMATIC CHANGE PRODUCER CARRIAGE instantly adjusts the machine for a two-minute or a four-minute record by a twist of a shift key.

The IMPROVED DIAPHRAGM brings out music detail with unequalled clearness, while the MANDREL BALANCE WHEEL keeps the reproduction always true to pitch. To listen to the U-S is practically the same as hearing the original, the music is so *natural* in quality.

U-S Records represent a new departure in that they are break proof, scratch proof, wear proof, and practically eliminate the usual scratching and hissing.

These are not mere talking points; they are *real improvements*—found in no other phonograph. Therefore no other phonograph can give your customers the satisfaction they will get from the U-S. What better reason for selling it?

The phonograph business is *growing*, fast. The phonograph for you to handle is the one which is keeping pace with that growth—the U-S. Let us tell you our plans for helping you.

U-S Phonograph Co.
CLEVELAND, OHIO
U. S. A.

W. H. Thompson

For two years leading barytone with Mme. Schumann-Heink. Acknowledged in both Europe and America to be unsurpassed as a portrayer of ballads in barytone. He has made several U-S Records; they are great.

Frank Coombs

His has been pronounced the "Sweetest voice in vaudeville." Recently scored a tremendous success in Hammerstein's Manhattan Opera Co. Coombs' many hits both in vaudeville and opera are sufficient evidence of the quality of his U-S Records.

Cal Stewart

His famous "Uncle Josh" sketches have made the whole world laugh. His best impersonations are found on U-S Records. They are without doubt among the best talking records ever put out.

Murray K. Hill

To have Hill's U-S Records is to have a pocket edition of some of the best current vaudeville hits. His specialties—jokes, parodies, songs and recitations—are favorites everywhere. Don't fail to hear them on U-S Records.

The Talking Machine Trade in New England

FIRE WILL NOT DETER CROSBY CO.

From Pushing Edison Goods Anew—Suffer in the Great \$4,000,000 Conflagration in Bangor—Not Discouraged, However.

(Special to The Talking Machine World.)

Bangor, Me., May 9, 1911.

The S. L. Crosby Co., Edison jobbers, suffered the loss of their building and stock in the \$4,000,000 conflagration of last week. This fire was one of the worst to occur in the Eastern States. Already means and methods are being vigorously followed to rebuild the burned section. The Crosby Co. are optimistic, as can be seen from this statement to The World: "The fire has not discouraged us and we shall soon be pushing the Edison products with more vigor than ever." May the best of luck be with them in their work.

DOING LARGE COLUMBIA BUSINESS.

(Special to the Talking Machine World.)

Hyde Park, Mass., May 9, 1911.

C. L. Burnes, manager of Burnes Bros., furniture dealers, recently sent the Columbia Phonograph Co. a letter wherein they testified to the large business which they are transacting and indorsed the Columbia line for any other furniture house.

VICTROLA CONCERTS AN ATTRACTION.

(Special to the Talking Machine World.)

Providence, R. I., May 6, 1911.

The Victor department of J. Samuels & Bro., which they call "the store of life and progress," has been quite successful with their new series of Victor Victrola and Auxetophone concerts. W. L. Veale, of this department, who, by the way, has seen a good deal of service in the talking machine field, adds that business is good, and always shows a fine improvement following these concerts.

TO REPRESENT COLUMBIA LINE IN AYER.

(Special to the Talking Machine World.)

Ayer, Mass., May 8, 1911.

J. J. Barry & Co., the big furniture house of this city, have taken the exclusive representation of the Columbia line and have installed a complete stock.

CAREFUL INSPECTION SYSTEM

Prevents Defective Needles Creeping in with Shipments of Bagshaw Needles—C. H. Bagshaw's Interesting Chat.

(Special to The Talking Machine World.)

Lowell, Mass., May 9, 1911.

"It occasionally happens, although we use the greatest caution to prevent it, that a defective Bagshaw 'No-Scratch' needle finds its way into a box. However, this has been so minimized that in a whole year there would only be a few of them. Consider that our output is the largest in the country, and the foregoing is certainly a fine tribute to our modern talking machine needle production and inspection systems," says C. H. Bagshaw, of W. H. Bagshaw, the big talking machine needle manufacturers of this city.

Mr. Bagshaw avers that while their big volume of business might dominate the output and cause a trifle delay in shipping schedules, they never receive complaints about the quality and efficiency of any of their many shapes and styles of needles. This is likewise true with their "No-Scratch" brand of needles.

"LINENOID" HORN HAS WIDE SALE.

One of the Successful Specialties Made by the Pardee-Ellenberger Co.—Report Great Activity on Edison Goods.

(Special to The Talking Machine World.)

New Haven, Conn., May 6, 1911.

W. O. Pardee, president and treasurer of the Pardee-Ellenberger Co., Edison jobbers, gives out an interesting business condition wherein he says: "While there is no great boom in business, there seems to be a steady amount of trade, comparing very favorably with other lines."

This company manufactures a pulp recording horn named the "Linenoid." This horn has had a wide sale. The material of which it is constructed—pure linen pulp—is rolled into sheets, and when in a pliable condition it is molded to the form, allowed to "set" and then finished. Mr. Pardee says: "The nature of this material is to give the 'Linenoid' horn the correct acoustic properties, and being

molded in one piece, without seam or joint, adds immensely to its merit."

There is great activity with this house on Edison goods, the new reproducers having stimulated business considerably. In fact, they cannot get these goods fast enough.

SOME LATE BOSTON NEWS.

Pelton Co. Take Columbia Agency—Local Columbia 40 Per Cent. Ahead of Last Year—Parker's Victor Display at Mechanics' Institute—Winkleman's Effective Victor Works.

(Special to the Talking Machine World.)

Boston, Mass., May 10, 1911.

Here are a few interesting Boston items to come in since yesterday.

"Business is holding up exceptionally well," says Arthur C. Erisman, manager of the Columbia Co.'s Boston headquarters, "and in April we are 40 per cent. ahead of last year. The outlook is magnificent, and I predict a banner year unquestionably. While conditions may be seasonable during the summer, the volume will be larger than last year by far, particularly with Columbia dealers."

The Pelton Piano Co., of 168 Tremont street, have taken the Columbia agency, and before the initial samples were in, they report several Grafonola table sales.

Geo. Lincoln Parker has a Victor display at Mechanics' building where "The World in Boston" is exhibited. This is a missionary exposition and will run for a month's term. C. P. Trundy, manager of the Victor department, has just secured two battleship sales coups, by selling a Victrola and a good big order of records, each, to the officers' mess of the battleships "North Dakota" and "Nebraska." These complete the seventh Victrola that Mr. Trundy has sold to battleships, which incidentally shows that his business marksmanship is in the sharpshooter class.

There are at least two things that Henry Winkleman, manager of the Victor department of the Oliver Ditson Co., does effectively; one is covered by his very successful administration of his Victor offices, and the other is to have Victor goods sold before received from the factory. No matter how fast they come in, Mr. Winkleman manages to keep right ahead of the volume with sales. And while here, there is one thing that Mr. Winkleman won't do. Characteristic of "big" men, he will not have a photograph taken and no amount of persuading has yet been resultful. So The World man can't show the talking machine fraternity just how "beautiful" Mr. Winkleman is.

CHEERFUL OVER BUSINESS OUTLOOK.

(Special to the Talking Machine World.)

Portland, Me., May 6, 1911.

The new warerooms of the Columbia Phonograph Co. are proving to be business bringers, and George P. Donnelly, Portland manager, is very cheerful at the summer outlook. This city is one of the most favorite summer resorts in the New England States and the population is nearly doubled in these few months. Mr. Donnelly's kind statement, "I believe that every man in the business should read The Talking Machine World," is appreciated.

A salesman—a real salesman—leads his customer along from stage to stage, watching every mood, never trying to skip stages, never trying to excite desire where interest does not exist, never trying to stir the will until the article is desired. His knowledge of the goods is so absolute as to be unconscious, like a man's knowledge of his own house, permitting him to walk all over it in the dark.

The man of forty must not think himself old. He is only beginning really to live. A man's usefulness is gone only when he ceases to grow. Age is not a matter of increasing years so much as of waning enthusiasm.

Send Us Your Order for EDISON Goods!

Why? Just Service! The very best of service. "Exclusively Edison and Exclusively Wholesale" is our best guarantee of dealers' co-operation. Everything is in stock from small parts to Amberolas. We eliminate exasperating profit hold-ups from slow service or a jobber's "all out—will send sometime" complaint. Our orders go on the first express. A fire department couldn't fill your orders any faster. Sound an alarm by your "test" order and watch how quickly we respond.

ADDRESS US AT 48 HANOVER STREET, BOSTON

J. M. LINSKOTT, Mgr.

BOSTON CYCLE & SUNDRY Co.

FROM OUR BOSTON HEADQUARTERS

ROOM 12, 178 TREMONT STREET, G. W. HENDERSON, MANAGER.

(Special to the Talking Machine World.)

Boston, Mass., May 9, 1911.

That second annual Minstrel Show of the Eastern Talking Machine Co.'s Associates came off in great style on Monday evening, April 17—just too late to get into the April World. The audience was big and applauding; standing room was even at a premium and everyone went away saying "twas a fine show." There were a number of prominent talking machine men scattered about the spectators. The program was lengthy and was a laugh-maker from the opening chorus. The scenery was painted by S. H. Brown, who was a big factor in the success of the evening. Mr. Brown also was one of

THE TALKING MACHINE ASSOCIATES MINSTRELS.

the end men and the parodies that he sprung (who put that "pr" in the word "sprung"?) tickled everybody. General Manager E. F. Taft, J. W. Scott, John L. Gately, H. R. Skelton and a number of the corps diplomatique got roasted. The World man remembers "his" and has something in the safe for Brother Brown.

"Constantly," by Wm. J. Fitzgerald, as well as his one-act comedy as "Casey," in the fireman stunt, pulled well. At some parts of the program Billy Fitz was a whole show in himself. M. Read came across with the song "I'll Lend You Anything I've Got Except My Wife," and when a stranded member of the troupe tried to borrow two bits after the performance on the strength of it there was nothing doing. Perhaps the "I've Got" phrase saved our friend Read. Eddie Welsh made a hit in a character sketch; in fact, all the headliners of the company were decidedly funny.

Just one more! "All That I Ask Is Love," by R. McCourt, was quite melodious, and here's hoping he got it. The ladies also contributed to the joy-making.

The accompanying illustration shows the troupe before they were "blackened up" for their show. The girls firmly intended to don the pigment, but it is said that Fitzgerald and Brown, the end men, ate what remained and thus played a joke on the girls. These young ladies are Miss E. M. Scott, Miss M. A. Sheehan, Miss Ida Ripley and Miss Alice Ripley. The circular display of hands, stockings and shoes are owned, respectively, by Wm. J. Fitzgerald, F. Finn (tambo ends), E. A. Welch, D. McLaughlin, G. R. Alcott, M. Price, R. M. McCourt, Fred Bond, Mr. Lynnfield, B. F. Reardon, L. E. Knox, G. M. Reese, H. P. Cadagan, M. L. Read and S. H. Brown, the last two being the "bone ends." Miss A. J. Davis was pianist the first part and Miss Florence W. Marble held a similar position in the second part. The aids were A. W. Chamberlain, S. J. Freeman, Geo. T. Waldron and Fred Kern.

May Be Announced Soon.

If everything goes well and the man higher up in that department store permits, you'll soon be reading about who the new manager is. This new manager is a good talking machine man; has been on the job about a month, and if the official ax doesn't fall ere the next issue, I'm going to run

the risk of publishing his name. This managerial juggling has been amusing to the trade, but it looks now as if someone will have to create a new joke.

What Edison Service Means.

Charles R. Cooper, manager of the Edison department of the Boston Cycle & Sundry Co., is optimistic over the so-termed "spring rush," and he reports a decidedly strong demand on their Edison service. They are adding new accounts right along, which are being secured through the ability of Mr. Cooper. There are many meanings to the word "prompt," but old Kid Webster evidently secured a knock-out when he said it means "prepared, ready and willing, acting with alacrity."

Charles Dean attests a business that denotes a hustling shipping department, and this not only covers all the talking machine needle styles that they make, but for their "Puritone" brand.

Looks Like Book Full of Orders.

John L. Gately, the Eastern wholesale special representative of the Victor Talking Machine Co., has spent a lot of time about Boston recently, and that being the case, it vouches for itself from the order end. Mr. Gately would never make a good habitue of a desert.

That Bron-ix Club Sounds Familiar.

Within the walls of the talking machine fraternity here there exists a club called the "Bron-ix Club." This club is ruled with an iron hand, and according to its charter is for the promotion of social warfare—I mean welfare. The body is in session on notice of the Imperial Dreadnaught, this office being the highest one. A number of out-of-town talking machine men have attended the ceremonials and initiations of these Bron-ixists, and it made a lasting impression as to just what the Boston members can do when they get started. Ask some of those fellows around Orange or Camden, N. J. Perhaps they may say that the Folies Bergere has nothing on the Folies Bron-ix.

JUST WHISTLED.

His was no operatic song;
He whistled as he went along—
Just whistled!

And folks that heard him on the way—
They felt their spirits getting gay,
And shouted to the skies, "Hooray!"
Because he whistled!

And so, when breaks the thunder loud,
Just whistle!
To join the hallelujah crowd,
Just whistle!
A song can ever beat a sigh
And help to send your troubles high;
Be sure you'll get there by and by—
Just whistle!

Some people put so much trust in God that they get too lazy to help themselves.

On the Square!

BAGSHAW NEEDLES

What the foot is to the rule and the pound to weight, is acknowledged that "BAGSHAW" is THE STANDARD to judge Talking Machine Needles.

This is worth thinking over by *jobbers* anxious to improve their needle business. A liberal package of our famous "NO-SCRATCH" Needles sent gratis and postpaid. Dictate a letter for them now!

W. H. BAGSHAW - - Lowell, Mass.

Oldest and Largest Makers of Talking Machine Needles—All Styles, Shapes and Sizes
ESTABLISHED 1870

The Columbia Grafonola "Favorite" is well named. Sales prove it. Fact is, by that same token all the other Grafonolas are "favorites," too.

Columbia Phonograph Co., Genl., Tribune Building, New York.

ACTIVITY IN DES MOINES.

Business Gains Reported—New Harger & Blish Representatives—Latter Concern to Give Noon-day Concerts—The School Campaign—Music Festival Helps Columbia Trade—Victor Exchange System Taken Advantage of—Other Items of General Interest.

(Special to the Talking Machine World.)

Des Moines, Iowa, May 9, 1911.

Optimism is the keynote this month with the three Des Moines jobbers of talking machines. Although all the jobbers had looked for a falling off from the March business, the month which has just closed proved to be the best of the year here. Every jobber and dealer reports a good business during the month. Harger & Blish, Iowa jobbers for the Victor and Edison machines, say that the showing, particularly in the retail business, was a big gain over April, 1910. George C. Silzer, manager of the concern which is the biggest talking machine jobbing house in Iowa, reports the retail business for April five times that of April, 1910. Manager Bartlett, of the local jobbing house of the Columbia, estimates a fourfold increase in business over the corresponding month in 1910. The Chase & West talking machine department, which also jobs the Victor, reports a good gain in business.

Des Moines and Iowa people are buying better goods than they did two years ago and there is a great demand here for grand opera and classical records. According to the local dealers and jobbers there is also a marked improvement shown in the class of machines now being sold here.

As an indication of the optimistic tone in business in Iowa the Victor Co. have just put two direct representatives on the road in the State. E. J. Hipple will handle the eastern half of the State and W. H. Hoffman the western. The Chase & West talking machine department also put on two special representatives during the month.

Harger & Blish are planning important improvements for the interior of their store here. A number of additional sound-proof rooms will be built and the main room greatly enlarged. The firm plan an innovation here in the shape of noon day concerts. These concerts will be started about the first of June and will continue through the summer months.

Another innovation in the local talking machine world was inaugurated here this spring by Harger & Blish and has proved to be a great success. This is the school educational campaign. The assistance of Miss Elizabeth Wright, supervisor of music in the Des Moines public schools, was enlisted and concerts in fifteen of the local schools have been given during the year. The Easter concerts proved to be of unusual interest and entertainment to the school children. The programs were arranged by Miss Wright and carried out by the Victrola with the end in view of creating in the children a taste for the best in music, as well as for mere entertainment. Incidentally it has proved to be a great advertising feature. Thomas Harris, a well-known Des Moines furniture dealer is in charge of the Harger & Blish school department.

The local Columbia branch is also intending to make a number of improvements on the store, but so far no definite plans have been announced. The Columbia people made big use of the visit of Bonci here for the Greater Des Moines music festival. Printers' ink on the great tenor was spread thick and fast during the week and as a result there was a tremendous demand for Bonci records.

The exchange system on the Victor machines is being taken advantage of very largely by Iowa dealers and Harger & Blish report that nearly 100 per cent. of the permits issued have used the exchange privilege.

MEDIUM CONTROLS PHONOGRAPH.

Dr. James H. Hyslop, Head of the American Society for Psychical Research, Has Discovered a Medium Who Produces Physical Phenomena More Wonderful Than Those Attributed to Eusapia Palladino.

Dr. James H. Hyslop, head of the American Society for Psychical Research, has discovered a medium of the Eusapia Palladino type who produces physical phenomena more wonderful than those attributed to the Italian woman.

This medium, a girl of twenty whose identity is not disclosed, for the reason, according to Dr. Hyslop, that she is not actuated by mercenary motives and has no intention of producing the phenomena in public, has been the subject of persistent investigation and experiment for the last two years.

There have been hundreds of sittings under the direction of two physicians of established reputation, who are mentioned by pseudonyms, and Dr. Hyslop himself.

The result of the investigations so far has been to prove that what have been considered by some in the case of Palladino to be supernatural phenomena have been produced by the subject herself while in a state of hysteria.

That the girl is a true hysteric has been demonstrated by exhaustive scientific tests. She develops areas of anesthesia and hyperesthesia. Sometimes one side of her body from the larynx down is insensible to pain, while the other is in a condition of excited sensibility or hyperesthesia. Again, and almost in a moment, these conditions are reversed in the right or left halves of her body. Frequently she is in a cataleptic condition.

Among the phenomena produced by this girl, who is called "Miss Burton" in Dr. Hyslop's report, are many of those common to the professional medium, such as the production of raps, the levitation of heavy tables, playing a tambourine, ringing bells, and so on.

Added to these were some original manifestations. For instance, whereas the girl is not musical and can neither sing nor whistle while in a normal state, when in the trance condition and in the dark singing and whistling are produced simultaneously; and the mode of the production of this phenomenon has not been explained satisfactorily. Dr. Hyslop says that the whistling is that of an expert vaudeville performer, and that if the young

woman could produce such sounds in a normal state she could realize a small fortune from her performances.

Among the more complicated experiments performed was the starting and stopping of a phonograph at a distance with both hands and feet of the medium held. After half an hour's experiment this succeeded, but the medium showed increased heart beat from 60 to 80 and had a sick headache all the next day.

NEW AMBEROL ITALIAN RECORDS.

The Thomas A. Edison Co., Inc., recently announced a list of Italian records by new talent, which are now in the hands of their jobbers and on sale. The selections are all Neapolitan folk-songs and have been pronounced by native experts to be finely sung and recorded. Of the artists it may be said they are splendid vocalists. Gina Ardito is well known in metropolitan circles and in many of the larger cities of the East as an accomplished singer. Her voice is a full, rich soprano and her vocal style is finished and pleasing.

Eugenio Torre is more intimately known. His career has been meteoric and remarkable. Born in Naples, he was a common soldier in the Italian army when his commanding officer heard him singing about the barracks and told him that his place was not in the army, but in grand opera. This same officer helped young Torre to secure his discharge and to find assistance to complete his musical education. It was only a few months afterwards that Torre made his debut at the Royal Opera House in Naples, of which the celebrated Martucci is conductor. After half a season there Torre was engaged to sing principal tenor roles at the Lyric in Milan. At the close of that season Torre obtained an engagement in America singing in this country for three years with the National Grand Opera Co., the International Opera Co., the Italian Opera Co., with the San-Carlo Opera Co. and the Montreal Opera Co. This is his fourth year on the operatic stage, and third year singing throughout the States and Canada.

The list follows: (Amberol)—Solos by Eugenio Torre, tenor. Orchestra accompaniment. 7,508, "Chitarrata trista!" (Falvo); 7,509, "Si 'sta Chitarra" (Nardella); 7,510, "A partenza d' 'e suldate" (Gambardella). Duets by Gina Ardito and Eugenio Torre. Orchestra accompaniment. 7,511, "Oratorio d' America" (Montagna). 7,512, "Carme" (De Christofaro); 7,513, "O Carceratiello," (Pappalardi); 7,514, "A sfortunata" (Cataldo); Solo by Gina Ardito, soprano. Orchestra accompaniment; 7,515, "Santa Lucia," Solo by Eugenio Torre, tenor. Orchestra accompaniment. 20,613, "E Cerase," (Montagna); 20,614, "Frauniata" (Falvo); 20,615, "Canzona gelosa" (Longone).

Experience teaches that the qualities which make most for success are health, honesty, ability, initiative, knowledge of the business, tact, sincerity, industry, open-mindedness, enthusiasm and loyalty.

CROMELIN GOES WITH EDISON.

The Former Vice-President of the Columbia Co. Becomes General Manager of the Interests of Thomas A. Edison, Inc., in Great Britain and Ireland—Took Up His New Duties on May 1st—Some Interesting Facts Regarding Mr. Cromelin's Long Career in the Talking Machine Trade.

The resignation of Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, New York, to accept the important position as representative of Thomas A. Edison, Inc., Orange, N. J., in Great Britain and Ireland came as a great surprise to the trade. Mr. Cromelin communicated his intention to the Columbia Co., with which he has been identified for many years, March 30, to take effect on or about May 1. It was his intention after the latter date to be a frequent, if not a daily, visitor in Orange, to go over the plant, become familiar with the product and meet and know the officers, heads of departments and the personnel of the factory management previous to his departure for the other side, May 25, to take up his new line of duty, in the company of Frank L. Dyer, president of the corporation, a personal friend of many years' standing.

While Mr. Cromelin will be the managing director of the Edison interests in the territory referred to, he will give his special attention to the Phonograph, and also the moving picture business, which is growing rapidly. He will devote a great deal of his time to the development of the Edison storage battery in the United Kingdom. The exploitation of these specialties alone in a manner which the corporation desires will open up a field of activity, rich with promise.

As those acquainted with the facts well know, Paul H. Cromelin is one of the best known figures in the talking machine trade, and his advancement from one position of importance to another and his final election as a director of the American Graphophone Co. and vice-president of the Columbia Phonograph Co., General, has been steady and deserved. In fact, in recent years he has been regarded as one of the commanding men in the American trade, whose accomplishments, pleasing personality and general fitness have been recognized by everybody with whom he came in contact, irrespective of partisan business affiliations.

He is now in the prime of life, if he may not be rated as a comparatively young man, being in his forty-first year. As a graduate of the Washington (D. C.) High School he entered the service of the Second National Bank of that city as messenger when sixteen years of age, rising through every grade until he became receiving teller of the Lincoln National Bank, of the same place, which he assisted in organizing. In the interim he began the study of law, specializing on the practical science of banking, finance and economics, and in 1891 he graduated from the Columbia University, standing third in a class of sixty-nine, being one of the three leading men receiving honorable mention. Two years later he was admitted to the bar, and later was tendered and accepted the position as chief accountant of the Columbia Phonograph Co., General, and secretary of the American Graphophone Co., assuming the duties in June, 1896.

Then followed his rapid promotion to manager of the Washington office, going from there to St. Louis as manager, in which capacity he traveled the South and West, opening new agencies and establishing connections in the principal cities. A short time subsequently he was instructed to proceed to Europe, when he was appointed director of the Berlin office, with exclusive control of the Columbia Co.'s business in Germany, Austria-Hungary and Russia, and in this capacity, during four years, became thoroughly familiar with the talking machine business in Europe. He was one of the organizers of the American Chamber of Commerce in Berlin and chairman of the Committee on Organization.

Mr. Cromelin managed or participated in many important trade agreements in furtherance of the interests of his company, and of the entire trade,

for that matter, in connection with copyright legislation in Germany, the United States, Great Britain and Mexico. In February, 1903, Mr. Cromelin was chosen an official of the Columbia Co., as mentioned above. As manager of the company's exhibits in the St. Louis World's Fair he earned additional honors.

Mr. Cromelin's negotiations with the leading operatic artists of Europe, whereby their services in connection with laboratory recordings was secured by his company, is only another field of activity in which his talents and ability have shown conspicuously, as he was eminently successful in the work. As a diplomat in legal and commercial matters he has few, if any, equals in the trade, either here or abroad.

This recapitulation means that Mr. Cromelin is eminently fitted to fill his new position with the Thomas A. Edison, Inc., and he is to be congratulated, as well as the corporation with which

PAUL H. CROMELIN.

he is now allied. Mr. Cromelin is making preparations to stay abroad indefinitely, sailing on the Kaiserin Augusta Victoria, May 25.

When Mr. Cromelin was seen by The World he said: "The position was tendered me by Mr. Dyer some time ago, and after very careful consideration I accepted it. My relations with the Columbia Co. have been so pleasant that this severance was made with great reluctance, for I have always felt that my life work would be with them. I have recognized, however, that the Thomas A. Edison, Inc., is one of the great organizations of the world destined to have a great future, and I want to participate in the development of what I know will be a wonderful business in their various products throughout the world."

Being asked the significance of Mr. Cromelin's connection with the company, Frank L. Dyer, president of the Thomas A. Edison, Inc., said: "At the present time our European business is being handled entirely from the head office in London, in charge of Thomas Graf, who has been with the company for a great many years and in whom we have entire confidence. With the development and growth of the business in Europe, Mr. Graf proposed that the continental business should be handled from Berlin, limiting the functions of the London office to the control of the British territory. The contemplated arrangement, therefore, is to transfer Mr. Graf to Berlin, as he suggested, and have Mr. Cromelin take charge of the British business, with headquarters in London."

INDIANA'S GOVERNOR MAKES RECORDS.

(Special to the Talking Machine World.)
Indianapolis, Ind., May 5, 1911.

Gov. Thomas R. Marshall, Indiana's chief executive, recently heard his voice for the first time on an Edison Home Phonograph. The records, which were made with the assistance of W. E. Kipp, of the Kipp-Link Phonograph Co., Indianapolis jobbers, were prepared for a banquet held in Peru, Ind.

In order to stimulate the Governor (who is a Democrat) to his best effort, Mr. Kipp first let him hear one of the Edison records made by the erstwhile leader of his party, W. J. Bryan. Governor Marshall immediately proceeded to surpass Mr. Bryan's record, and was so delighted when he heard the reproduction of his speech that he acted like a schoolboy. As a further result of the incident, Mr. Kipp received Governor Marshall's permission to install an Amberola in the executive mansion for the entertainment of his family.

BLACKMAN CO. ENLARGE QUARTERS.

Well-Known Jobbers Add Several Hundred Square Feet to Space in Store and Basements—Lease Extra Loft—Business Good.

The Blackman Talking Machine Co., whose premises, including the store basement and sub-basement at 97 Chambers street run through to Reade street, have previously subleased a large section of the floors on the latter street to other concerns. In arranging with new tenants the first of the month, however, the Blackman Co. took occasion to reserve an extra section of several hundred square feet in both the store and the basements for their own increased demands. On the store floor the offices in the rear will be moved back 30 feet or so and extra demonstrating booths, of which there are already six, will be erected in the space thus acquired. The increased space in the basement will be used for the storage of larger stocks of records, and in the sub-basement for the storage of machines, this being in line with the Blackman policy of having sufficient stocks on hand to meet all demands of their dealers without depending to any great extent upon rush shipments from the factories. The company have also leased a loft 25 x 75 feet at 92 Chambers street, directly across the street from the store, which will also be used for storage purposes.

In speaking of the business situation, J. Newcomb Blackman, president of the company, stated that they had, on April 30, closed their fiscal year, and that the annual report showed a substantial increase over the previous year in the volume of wholesale business. An especially notable feature was the increase in the volume of record sales, indicating that the dealers were giving more careful attention to that department of their business. The Blackman Co. are going ahead steadily and expect even better results for their efforts during their fiscal year just begun. At the present time the only cloud on the horizon is the slackness in the collection department, which condition prevails in practically every line of business, and which is due to the general situation rather than to causes wholly within the trade.

MORE ROOM FOR PUBLICITY MEN.

Geo. P. Metzger and His Valued Aides Secure Needed Space for Their Fine Work on Behalf of the Columbia—Other Changes.

A shift has been made in several of the offices at the headquarters of the Columbia Phonograph Co., General, in the Tribune building, New York. Geo. P. Metzger, advertising manager, has taken the quarters heretofore occupied by Paul H. Cromelin, who resigned on the first of the month to become connected with the foreign staff of the Thomas A. Edison, Inc. His capable staff, consisting of Messrs. Cotton, Avery and Houfel, occupy the adjoining office, the suite furnishing these gentlemen the much-needed room they have craved for a long time. It is needless to say that the publicity campaign in charge of the corps, for which they have received many deserved compliments, will take on additional brilliancy, were it possible, in the future, as they have now "room according to their strength."

The advertising corps of the export department have removed into Mr. Metzger's office, and Merwin E. Lyle, chairman of the product committee, heretofore at the recording laboratory, 102-104 West 38th street, has returned to the executive offices permanently, and is located in a cosy room overlooking the East River.

"DOCTORING A BUSINESS."

How the Modern Merchant Studies the Faults That Are Crippling His Business and How He Remedies Them and Triumphs Over His Defeats—An Interesting Study for the Man Who Is Complaining About Decadence of His Business—A. W. Rolker Tells How Merchants Won Out.

There are numerous instances where business does not pan out in the manner that the proprietor would wish or as is necessary if the business is to be continued. The proprietor himself works hard and studies the problem earnestly, yet cannot find out why his business is in such bad shape. He is so wrapped up in his own affairs that his range of vision is narrowed and he can only view his business from the inside. This is the time when the merchant should take the time to look around him and study the means by which his competitors succeed and make their businesses grow. It is the merchant who can realize the faults of his methods and eradicate them that shows the influence of modern trade conditions. The man who stays in his shell and insists in doing his business in his way regardless of consequences belongs to another age and soon finds it out.

In his recent article in the Saturday Evening Post, under the caption, "Doctoring a Business," A. W. Rolker cites some very interesting instances where merchants have won out by studying the faulty details of their businesses impartially and improving on them. He says:

Few business stories are more interesting than those that show how the modern merchant studies the faults that are crippling his business, and how he remedies these until he triumphs over his defeats. If he finds upon analysis that enough customers do not come into his place he sends advertisements into the highways and byways and leads people into his place by the ears, so to speak. If he finds that his sales are ample, but that he has too many outstanding accounts, this tells him he must bolster up his collection methods—or, perhaps, must cease extending credit. If he notices he is being crowded off the face of the earth by competition he may find he has not been putting enough money back into his business. Or he may find that he does not know how to buy; or that his sales methods are at fault or objectionable; or that he is failing to keep up to date on business methods. Any one of a thousand-and-one reasons, he may find, is his stumbling-block—from the elementary one of talking too much to the opposite extreme of saying too little.

When for years a man has dabbled, trying to push a business that never did more than barely make both ends meet, the task of putting it on a sound footing often seems almost hopeless to him. Yet for a man that is wide awake nothing is simpler, for he needs only to study the methods of merchants that are successful, and then copy them.

In one of our big Eastern cities there is a man who keeps what we shall call The Persian Art Shop. For seven years he had done a very fair business selling Persian rugs, Persian tapestries and Oriental beadwork and brasses and bronzes. But, just as he began to look forward to flourishing properly, trade gradually began to fall off. Before long he was not making expenses. He did not have to figure where the trouble lay. He could see this with half an eye. People were not coming into his store as they used to. The problem facing him was, Why had customers deserted him?

He knew it was not owing to faulty business methods. His show windows were arranged with the same scrupulous care as during the time his business was successful. The wares he displayed were more attractive than ever, and just as reasonable. He himself, he knew, had not abated in the courtesy with which he waited on customers. He was beginning to fear his slump had occurred because a number of department stores in the vicinity had invaded his line, when a neighboring merchant shed light on the subject.

"Have you noticed how this street has been running down?" he asked. "Two or three years ago any number of well-to-do people traveled through

this street, but now nobody thinks of Thirteenth street. All the carriage and automobile people go through the next block."

The Art Shop man spent much of the next few days standing in front of his own store observing, and what he saw convinced him that the criticism his neighbor had made was right. The fault was that, owing to the coming of a pair of big department stores, trade on the neighboring street had been stimulated and his own street had lost traffic. For a week the man sat, broken in spirit, staring ruin in the face; then his nerve returned and he began to plan how to meet the situation.

"It's this way" he argued to himself. "There's no use sitting here and wasting time figuring how soon I'm going to blow up. If customers don't happen to come this way it's up to me to bring them here. The department stores in the next street are bringing people from all quarters of the city, and if they do that why can't I? Besides, here are hundreds of thousands of people concentrated throughout eight hours every day by those two shops; why can't I butt into that crowd and reap some of the benefits of their advertising? I'll just have some handbills printed and I'll station a — No, I won't; I'll get some fellow to write me up a clever sign and I'll send a sandwichman to — No, now I've got it! I'll get my sign and I'll pick out some swarthy, picturesque old Italian that looks like a Persian, and I'll tog him out in Persian costume and get him to parade up and down the street through that department-store crowd."

Three days later, in a morning, the Art Shop man departed for business with a beating heart. For six dollars a week he had hired his Persian, for nine dollars he had had a plenty-good-enough Persian costume made, and for four dollars he had had a canvas sign painted—a total of only nineteen dollars; but in that simple nineteen-dollar experiment was locked his future, whether he would succeed or fail.

About 9:30 o'clock in the morning four customers were in the store, which was unusual for that hour. Before the four left three others arrived, and the slim but steady procession continued and increased. At times the proprietor was literally swamped with business, for he could not wait on customers quickly enough to prevent them from growing impatient and leaving without buying. Whereas formerly he counted forty or fifty customers a mighty fair day's work, now there were frequently as many as fifteen in his place at one time. By the night of that first day he estimated that he had done more business than he had done in any week—barring holiday seasons—for a year.

This happened in August, in fly season, when trade should have been slow. In less than a week the Art Shop man had to have two salesmen helping him. When the holiday trade began he added seven salespeople, making a total of ten persons where formerly he had been able to do all his own selling, with the assistance of one young woman.

To-day the Art Shop man does not send a Persian to carry signs. He has got too high up in the world for that. His customers would not like it. Once interested in advertising he studied the subject, and he decided on a plan that in his particular case works even better. Now he buys lists of names from jewelry firms, grocers, druggists and other tradesmen who cater to the most wealthy trade. Every three months he circularizes these people with a striking and artistic folder of hand-made Persian paper ornamented with Persian hieroglyphics in an Oriental color scheme. All of this costs him much money but pays him fabulously, for his wares jumped in price from a hundred to a hundred and fifty per cent.!

Not much is left to-day of the original Art Shop. This store now comprises two numbers on the coveted Fourteenth street.

It makes no difference what line a business man is in—whether he keeps an art shop, a stationery store, a grocery or any other retail store; or whether he runs a steam laundry or has a milk route; or whether he is a wholesale merchant or a manufacturer whose annual output amounts to several hundred thousand dollars—in every case when a business begins to sicken, to the expert the principle of diagnosing the trouble and applying the

remedy is simply a matter of comparing his own methods with those used by concerns that are successful.

NEW ACOUSTIC DIAPHRAGM

Being Placed on the Market by the Talking Machine Co. of Springfield, Mass.—Is the Invention of W. W. Young, Who Makes Some Strong Claims Regarding Its Merits.

(Special to the Talking Machine World.)

Springfield, Mass., May 10, 1911.

Patents have been granted to W. W. Young, of this city, for an acoustic diaphragm that may be used on any talking machine. This device is made of fiber or aluminum and is full of holes and melody.

"It produces much clearer, richer and full-volumed tones, and the half tones which go to make up the character of a musical note are brought out better by this diaphragm than by any other," says W. W. Young to The Talking Machine World, and while his remarks certainly cover the invention thoroughly, he says it must be used to fully appreciate its merit, and he will send a sample for this test to interested persons.

Continuing, Mr. Young says: "Vocal music is reproduced by this diaphragm so that it sounds altogether better than with mica. The sound is pure and clear and without the piercing sharpness that so often characterizes vocal music. A student in acoustics would be likely to say that a satisfactory diaphragm could not be made of the materials used by me, but I have discovered and patented a chemical solution that hardens any porous material, such as wood, paper, cloth, leather, etc., to which it is applied. This solution makes materials fire and waterproof."

Even ordinary writing paper or cotton cloth can be treated with Mr. Young's chemical solution, it is said, and these would be made so hard that they would almost ring like a piece of metal. Mr. Young says it is this hardening process which gives the resonance necessary for the reproduction of sound.

The Talking Machine Co., of 218 Worthington street, this city, are the selling agents, to whom all correspondence covering inquiries, requests for samples, prices, letters or orders should be addressed. In writing for sample, the fiber diaphragm is used more especially for disc machines, and the aluminum for cylinder machines.

That much of the advertising work of to-day is superficial is inevitable—advertising on its present basis is new and all business men are not prepared for its serious consideration. Most of them give but incidental time to it and are inclined to consider a "good ad," one which pleases their eye and "advertising" a succession of clever stunts. They are all looking for so-called "good ideas" and many are overlooking the best one—to wit: persistency in plain and truthful statements.

The business problem before the American people to-day, commercially speaking, is the problem of distribution—of getting things from where they are to where they ought to be. The two big factors in this problem are advertising and salesmanship.

Granting the fact that your firm and product has a great deal of prestige, it is your duty to keep your name or the name of your firm constantly before the trade. Another strong feature is to keep your present customers posted as to on display.

The window is one of the cheapest and most efficient methods of advertising. That is, if it is done properly. Be sure to have a clean window, as a dirty, fly specked window is useless, absolutely useless.

C. Becker, vice-president of the U-S Phonograph Co., 5 and 7 Union Square, New York, was a visitor in New York this week. Mr. Prairie, the manager, reported business was going ahead rapidly.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

Factors and Traders Well Satisfied with Past and Present Conditions—Proposed Advertising Campaigns by Manufacturers Expected to Boom Sales—Co'onial Markets Active—Recent Important Developments in the Trade—British Zonophone Co., Ltd., Absorb Twin Record Co.—Some of Their Future Plans—Prices of Jumbo Records Reduced—Launching of Edison Combination Attachment Proposition—What Is Offered in the Latest Record Lists—New Artists for National Phonograph Co.—A. Balcombe Makes Change—Success of Edison Velvet Faced Records—New Partolophone Disc Catalog—Interest Shown in New Canadian Copyriht Bil—Preparing for International Music Trades' Exposition—Other News of the Month.

(Special to The Review.)

London, Eng., May 3, 1911.

Talking machine business this last few weeks has been somewhat quiet, although well up to the average, time of year considered. We have experienced a most successful season—a season of much longer duration than the ordinary, and despite the inevitable sales depression common to the coming few months, the trade as a whole is exceedingly well satisfied with the course events are shaping, for there are not wanting signs that the use of machines for outdoor pleasure is much on the increase. It was noticeable last summer. Musical instrument traders undoubtedly experienced a revival of sales beyond the usual, partly by reason of the introduction of so many instruments of the hornless type, and this summer an improvement is looked for. Certain of the big manufacturers have under consideration advertising plans of a far-reaching nature. By this means it is intended to prosecute and stimulate sales as never before, and we feel sure the result will amply justify expenditure in that direction. At the present time machine and record sales show a decided downward tendency, but the future holds good promise of an early revival, more especially in those lines particular to summer trading.

In contradistinction to conditions in the home market, orders from abroad indicate that the colonial season is about commencing, and some nice contracts have been placed in London. According to the official export figures recently published, a marked increase in general trading is noticeable. As an index of talking machine prospects, it may be regarded as a healthy sign and one that manufacturers cultivating foreign trade should take full advantage of at the present time.

Quite some excitement has been occasioned in trade circles this month by the announcement that the British Zonophone Co. would absorb the Twin Record Co., and the rumors that have for so long been afloat in regard to a Zonophone double record are now crystallized. As reported elsewhere in this issue the company intend to issue both a 10-inch and 12-inch double record at the retail price of 2s. 6d. and 4s., respectively. Two price reductions have also been made, that of the Beka Meister 12-inch double record from 5s. to the sensational figure of 3s. 6d., and the Jumbo record—10-inch double—from 3s. to 2s. 6d. Needless to say these important facts have whetted the appetite of certain know-alls, and like Oliver Twist they want more. Well, they may one day be satisfied, but not just yet. For the present we refrain from commenting upon those rumors which idle (?) tongues, for want of something better to talk about, give as "absolute facts!"

There is little of interest from the provinces this last week or so. Talking machine and record sales appear to be anything but satisfactory, judging from advices to hand, and while the factoring section of the trade are not doing so badly, it must be admitted that individually business has been very slow with the dealers. Perhaps as a direct

result of these conditions, money is somewhat tight and dealers find it difficult to meet their bills promptly; at least that has been the experience of some manufacturers this month; others don't care to talk about it. Enterprising, as usual, T. Edens Osborne, of Belfast, is now advertising the suitability of hornless machines for entertainment aboard yachts, etc. The advertisements are catchy and occupy good positions alongside reading matter in the local newspapers.

Important Zonophone Move.

The British Zonophone Co., Ltd., this city, advise me of an important announcement made to the trade April 28, the effect of which is that they have come to an arrangement with the Twin Record Co., of Christopher street, London, whereby they will absorb the "Twin" double record sold here at 2s. 6d. In addition to acquiring the Twin trade-mark and good will, the British Zonophone Co. take over all trade obligations and arrangements, although, in respect of agreements, a new one will most probably be put in force, having regard to altered circumstances. All future issues of Zonophone records will bear a dark green label with the Twin and Zonophone trade-marks prominent thereon. It is intended to manufacture both a 12-inch double record to be retailed at 4s., and a 10-inch double at the price of 2s. 6d. All the popular Twin titles—in fact, the whole Twin catalog—is to be retained in its entirety, while the pick of the titles from the Zonophone list will gradually be embodied on the double-sided record. Already a specially selected impression of 150 double-sided 10-inch and eighteen 12-inch is in force, and deliveries may now be had. This impression contains only the "known" sellers from the Zonophone catalog, and additions to the list will be made from time to time from this source, apart from the listing of current selections. In order that everyone may start with a clean sheet, so to say, a big exchange scheme is shortly to be promulgated. Under this arrangement dealers will have an opportunity to unload their old stock upon advantageous and generous terms. The situation calls for special treatment, and we feel sure that dealers may rely upon a liberal interpretation in that regard. These developments indicate the dawn of a new era in the history of this trade, particularly so in regard to the introduction of the 12-inch double record, and we tender our hearty congratulations to the British Zonophone Co. upon their enterprise.

The New Beka Meister Records.

In introducing these new records the company claims a very great and notable advance upon older methods of recording, and confidently assert that never before has such exquisite tone, combined with full volume and faultless execution, ever been produced by mechanical means. A strong opinion, but not one whit exaggerated, for after testing these issues I can fully endorse the statement. The records are truly a revelation in quality and price. They are 12-inch double-sided, and are priced at the sensational figure of 3s. 6d. Here is the value: "Meistersinger Overture," and "Tannhauser—Entry of the Knights" (Wagner); overture parts I. and II. "Carmen" (Bizet); "Orpheus" overture parts I. and II. (Oppenbach); "Oberon—overture" (Weber), and "Torchlight Dance" (Meyerbeer), all beautifully played by the Meister Orchestra. There are two magnificent violin solos by Prof. Hugo Heerman—"Heyre Kati" (Hubay) and "Cauzonetta" (Ambrosie), and "A Dream of Love," part I and II. (Hoch), cornet solos faultlessly played by E. Kruger. The selections call for no comment, but their value—two for 3s. 6d.—is something never before attempted. O Ruhl, Ltd., of 77 City road, London, will supply all information upon request.

"Jumbos" Now Sell at 2/6.

Under date of May 1, Barnett Samuel & Sons, Ltd., advise the trade the future price of Jumbo records will be 2s. 6d. instead of 3s. The trading

THE LONDON OFFICE OF THE TALKING MACHINE WORLD IS NOW LOCATED AT 1 GRESHAM BUILDINGS, BASINGHALL St., E. C.

policy and the quality of the records remain as before. So that no losses may be occasioned, the company announce that they will meet the trade fairly, their proposal being of a liberal nature. We observe with satisfaction that one of the trading features is the maintenance of price, while the dabbling class of dealers is altogether excluded from handling "Jumbos."

The New Edison Proposition.

The Edison combination attachment proposition is now launched. Briefly summarized, it means that dealers are now able to offer a set of ten records (including five of the best Amberolas ever recorded) complete with each attachment on the following special basis: For the "Gem," 20s.; "Standard," 26s.; "Home," 36s.; "Triumph" and "Idelia," also 36s. These are the inclusive prices retail to the public. Dealers having stocks of attachments on hand can purchase a special package of 10 records (to be sold only with an attachment) at less than half the usual trade price. The trade prices for the attachment outfits, of which dealers have been advised, carry increased profits and should do much to stimulate the trade in its own interests to push this new scheme in a whole-hearted manner. As the National Phonograph Co. points out, it furnishes dealers with a splendid opportunity to awaken new interest among those phonograph owners who have put aside their instruments because of the limited entertainment afforded by the short records. The proposition certainly merits a good reception, and we have little doubt but that traders will take up the matter with energy. It is a great pity that the scheme had to be delayed because of the difficulty experienced by the company in obtaining information as to stocks in the hands of the trade, and but for this factor dealers would have had the benefit of it long ago. They must now make good their oversight by energy and enthusiasm.

Edison Electric Shaving Machines.

The list price of the Edison electric shaving machine has been increased from 11 to 12 guineas, and for the hand machine from 7 to 8 guineas, owing to increased manufacturing cost.

Gramophone Records for May.

In addition to the usual supplementary list of records for May, the Gramophone Co. have issued a splendid series of new records by Madame Tetrassini, selections from the "Quaker Girl" and a special list of new Scotch titles. Scotland has ever been to the fore in her appreciation of all that is good in the world's music, perhaps more particularly for her own school of music, and these latest Gramophone records will therefore strongly appeal to all music lovers north of the Tweed. The supplementary list this month teems with tuneful ballads and instrumental music of the lighter type. Conspicuous among the former are Harry Lauder's great pantomime success, "Roaming in the Gloaming," and Lionel Mackinder's "I've Got the Time; I've Got the Place," which is the feature of Geo. Grossmith's successful "Coronation Revue." In addition to these, the complete list is as follows: "O Sole nio" (Di Capua), "Stars and Stripes March" (Sousa), "Bells of St. Malo" (Rivemer?), and "Coon Band Contest" (Pryor), by the band of H. M. Coldstream Guards; "Waltz Dream Waltz" (Straus), "Daybreak Valse" (Brunet), "Ghost's Two-Step" (Dunkels), and "Irish Jig" (original), by Iff's Orchestra; "For You Alone" (Geehl), and "The Garden I Love" (Nutting), John Harrison; "The Ringers" (Löhr), Harry Dearth; "The Deathless Army" (Trotère), Thorpe Bates; "Is Love a Dream" (Jones). Robert

FROM OUR LONDON HEADQUARTERS—(Continued.)

Michaelis; "Jock o' Hazeldean" (traditional), and "But the Lord Is Mindful, 'St. Paul'" (Mendelssohn), Madame Kirkby Lunn; "Before the Battle" (Hedgecock), John Harrison and Robert Radford; "Good-night" (Scott-Gatty), quartette by "The Minster Singers"; "In the Park; the Girl in the Train" (Leo Hall), W. H. Berry; "My Beastly Eyeglass" (monologue), Tom Clare; "A-hunting We Will Go" Mark Sheridan; "Ladies, Beware" (Leslie Stuart) (with violin obligato by W. H. de Groot), Miss Phyllis Darl; "The Lass With the Lasso" (Leslie Stuart), Miss Olive May; "I Beg Your Pardon" (Leslie Stuart), Geo. Grossmith, Jr., and Edmund Payne, and "Don't Forget You're a Lady" (Leslie Stuart), Geo. Grossmith, Jr.; "Open the Gates" (Crosby-Knapp), Evan Williams, and "Adrift on an Ice-flow," Dr. Wilfred T. Grenfell, C. M. G.

New Artists for National Phonograph Co.

The National Phonograph Co. announce the acquisition of two new artists in the persons of Frank X. Doyle, a popular young concert tenor, and Guido Gialdini, whose whistling accomplishments have made for him a great name. Mr. Doyle's recent contributions are "I Love the Name of Mary" and "For Killarney and You." Mr. Gialdini is first heard in the June Amberol supplement with "Birds of the Forest—Gavotte." Although not so extensive as usual, the June list of Amberol and Standard records is characterized by titles that will specially appeal to dealers at this time of the year. The complete list is as follows: Amberol records—"Evening News Waltz" (Ivan Maclean), Alhambra Orchestra; "When Father Papered the Parlor" (Barnes and Weston), Billy Williams; "For Old Times Sake" (Charles Osborn), Vincent Hards; "The Toilers" (Piccolomini), Peter Dawson; "Cock-a-Doodle-Do in the Morning" (Harrington and Neal), Miss Florrie Forde; "The Girls I've Left Behind Me" (R. Penso), Stanley Kirkby; "I Have to Go 'Round to the Sergeant," Arthur Osmond; "Introduce Me to the Lady" (R. Penso), Jack Charman; "No

Wonder I Look Jolly" (Murphy and Lipton), George Formby; selection from "The Gondoliers" (A. Sullivan), National Military Band; "Young American Polka" (J. Levy), xylophone solo, Charles Daab; "Bonnie Doon" ("Ye Banks and Braes") (James Miller), Miss Marie Narelle; "Triumphal March" (K. L. King), New York Military Band; "Song Bird," intermezzo (H. Alford) (Bells solo), Charles Daab; "Rainbow" (P. Wenrich), Miss Ada Jones and Billy Murray; "What a Friend We Have in Jesus" (C. C. Converse), Edison Mixed Quartette; "Spinning Song" (H. Litloff), piano solo, Karel Bondam; and "The Bridge," Knickerbocker Quartet. Standard records—"The Red Dragoons" march (E. Adams), National Military Band; "I've Found Kelly" (W. Hargreaves), Billy Williams; "You Wish Me to Forget You" (R. Donnelly), Ernest Pike; "Maggie Ryan from Dublin Town" (Harrington, Lane and Neal), Stanley Kirkby; "I'm Henry the Eighth, I Am" (Murray and Weston), Arthur Osmond; "Temptation Rag" (H. Lodge), New York Military Band, and "Beautiful Garden of Roses" (J. C. Schmid), Arthur C. Clough and chorus.

Gramophone Co.'s Advice to Dealers.

In the course of one of their many interesting letters to the trade they have this to say: "The year 1911 is going to be a boom year for 'His Master's Voice,' but we cannot reap the full benefit of the boom by sitting still. We must go out and meet it together, and it is the energetic dealer who realizes this and takes such opportunities as the present list gives who will reap the biggest harvest. Our coronation advertising and big summer scheme will start in May, and full notice will be given in due course," etc. With such publicity and helpful assistance as now given by the Gramophone Co., it would almost seem impossible for dealers to sit still; yet there are those who, while they get the inquiry benefits of this publicity expenditure, need to be constantly reminded of the necessity to follow-up prospects. Doesn't seem true, but it is some consolation to know that this

class of dealer is in the minority, at any rate as far as it affects Gramophone traders.

Megaphone Telephones.

A mysterious deep-toned voice, which might have belonged to an invisible giant (says a daily paper) startled passengers waiting for tramway cars at the Embankment. It gave uncanny directions from the roof as to seating capacity of approaching cars. The voice represents the latest in the use of megaphone-telephones. An inspector two or three hundred yards away from the queue station makes announcement as to seating capacity and destination of the cars, through a telephone which has its reproducing power intensified by special device, and yet again magnified by the megaphone fitted in the roof of the queue station.

Resigns His Position.

At the moment of going to press we have been given to understand that A. Balcombe has resigned his position as manager of the musical instrument and talking machine departments of Barnett Samuel & Sons, Ltd., with which firm he has been honorably connected for the past twenty-one years. It is Mr. Balcombe's intention to associate himself with O. Ruhl, Ltd., of 77 City Road, this city, sole agents for Beka records and Lindstrom disc machines.

Edison-Bell Velvet Faced Records.

The building up of the Edison-Bell velvet face record repertoire is proceeding apace, the complete list now consisting of about 130 titles. All are picked gems covering every phase of music. The violin solos are especially fine and sound to great advantage by reason of the velvety surface practically eliminating all harsh needle scratch. In the matter of bands and orchestras the list is rich, and it would be difficult to find a more select combination of musicians than that gathered together under the style of King Edward's Horse. A number of the latest issues have reached me from J. E. Hough, Ltd., and I find them particularly attractive from every point of view. Characterized by a clean, smooth surface, splendid recording, and

popular titles embracing topical, sentimental and classical selections, these V. F. records indicate marked progress in that strenuous fight for perfection with which all record manufacturers have to contend. The following figure in recent lists: "Once Again" and "Eily Mavourneen," both sympathetically rendered by Miss Ruby Helder; "I Am the King of Spain" (duet from "Maritana") and "Solenne in Quest'ora" (from "The Force of Destiny"), sung by Messrs. Virgo and Carr, whose voices blend to perfection in these two popular duets; "Jewel Song" ("Faust") and "Romanza" (Cavalleria Rusticana), well sung by Miss Elda May; "Bill Adams" (humorous recitation), and "The Whistling Stammerer," by G. H. Swazelle, the well-known raconteur, who has told these stories to the late and present king; "In Sympathy," by Wilson Pembroke, and "She Is Far from the Land," by T. Kinniburg, is a treat to listen to; and "I'll Sing Thee Songs of Araby" and "Thora," both pleasingly rendered by R. Evans (tenor). And here are some picked titles from the list of Edison-Bell gramophone discs: "Kitty Dear" and "Meet Me To-night in Dreamland," by Stanley Kirkby; "Yiddle on Your Fiddle, Play Some Rag-time," Stanley Kirkby, and "Lena Schmidt," F. Miller; "Torchlight Parade" (banjo solo), and "Queen of the Burlesque," Olly Oakley; "The Darkey's Awakening" and "Sweet Jessamine" (banjo solos), by Olly Oakley; "Standard Bread," A. Willis, and "T-r-o-u-b-l-e," Jack Charman; and "Quaker Girl" (selection), and "Waltz" from "Quaker Girl," by Court Orchestra.

An Effective Production.

The new 1911-12 catalog of "Partolophon" disc machines, just issued by Carl Lindstrom, of Berlin, is a pleasing and effective production, illustrating their extensive series of ordinary and cabinet types of instruments, and in addition, tone arms and sound boxes. Of the ordinary standard machine there is listed no less than 46 of artistic and varied designs at prices within the reach of all. Very handsome, too, are some of the hornless machines, cataloged to the number of 10. It would be difficult, indeed, to find words of praise to describe the beauty and taste centered in the designs of the eight interior-horn cabinet instruments. All are of a most pleasing appearance and represent perfection of workmanship to a high degree. In other sections of the catalog there are displayed a goodly series of motors of varying strengths, and all of the utmost reliability, and traders' requirements in the direction of tone arms and sound boxes are fully catered to.

The Registration of Firms Bill.

Under this bill every firm carrying on business in the United Kingdom, under a trade name which does not consist of the names of the partners, will be called upon to register the full name, usual residence, and other occupation (if any) of the person or persons concerned.

Firms having branches abroad must give the name of any foreign partner, and all changes of partnership, or in titles, will have to be registered. Failure to notify these requirements within a specified time will render the parties liable to a fine of £1 for every day it is delayed; and failure to

register at all will render them liable to two years' imprisonment, with or without hard labor!

Late Twin Record Hits.

The Twin Record Co. have issued five more screamingly funny songs (on three records) by the one and only Billy Williams. The titles are: "Mrs. B." and "There's Something Nice About a Girl"; "You're the One" and "Chanticleer," and "Let's Go Where the Crows Go," with which is accompanied, on the reverse side, "By the Sea," excellently rendered by Mark Sheridan. All should be good sellers for, apart from the popularity of the artists, the records are really fine.

On a Summer Vacation.

Says "John Bull": A detective who went to a house in Acton to arrest a man, heard a phonograph playing: "I Don't Suppose I Shall Do It Again for Months and Months and Months." Its owner won't; he's got an invitation from His Majesty for 12 months at any rate.

Communicating with a Moving Train.

H. Von Kramer, a Birmingham engineer, has devised a wonderful system whereby it is possible to get into direct telephonic communication with a moving train. The idea consists of two large frames of electric wires fixed round the railway coach below the footboards, and at a convenient distance from the line, is laid a wire, either underground or fixed on low posts, which is connected up with signal boxes and stations, and so with the ordinary telegraph and telephone service. When one speaks into the receiver on the train, electric waves in the frame induce waves in the earth wire, which reproduce the message. Conversely, messages on the earth wire are picked up by the train, and it is even possible for two moving trains to communicate with each other. It should prove a great factor in preventing collisions. An experimental stretch of line was completed with the system and recently inaugurated by Miss Marie Corelli. It turned out a great success.

Columbia Grand Opera Records Popular.

Dealers are reaping a golden harvest in the sales of the Columbia new series of grand opera records as a direct result of liberal advertising indulged in recently by the company, not to mention the wonderful value centered in the records themselves. Judging by the big spaces now running in such newspapers as the *Telegraph*, *Mail*, *Mirror*, etc., and in the weeklies, the Columbia company show ample proof that advertising is to be regarded more in the light of investment than speculation, even at this particular time. That food products well advertised mean profitable business is a fact worthy of the attention of those talking

machine firms who regard it as practically useless to spend money now. We may be at the fag end of the season, but there is yet plenty of trade going, and the man who advertises will certainly get the most.

H. M. King George Becomes a Patron.

His Majesty King George has been pleased to become a patron of the International Musical Congress, which is to be held in London this month.

Canada's New Copyright Bill.

According to the proposals embodied in Canada's new copyright bill, a somewhat serious state of affairs is revealed. Hitherto the copyrighting of a work in the United Kingdom automatically applied to the whole British Empire, but Canada has now decided that every work, to be secure against piracy, will not only have to be registered, but also set up and printed in the Dominion. This applies to charts, maps, books, musical compositions, designs, prints and photographs, records and perforated rolls. And further, publications in Canada and any other country must be simultaneous to secure copyright; that is, if the time between registration in either country does not exceed 14 days. If this means, as it certainly would seem, that a record cannot be sold in Canada unless made there, without liability of infringement or duplication, it must seriously affect the exports of those foreign manufacturers whose trade is not of sufficient proportion to warrant the establishment of a manufactory there.

International Music Trade Exhibition.

The proposed International Music Trades' Exhibition, to be held at the Royal Agricultural Hall, London, Aug. 14 to 19, bids fair to prove a most successful undertaking. Apart from the large pianoforte firms, the talking machine industry will be influentially represented by the Gramophone Co., Columbia Phonograph Co., and Pathe Frères, but there is ample space for other concerns, who will find this a splendid opportunity to increase their business connections with the hundreds of dealer-visitors expected. Owing to the many attractions during that month, London will be the venue of thousands of traders from all parts of the world, and a big attendance at the exhibition is a foregone conclusion. All particulars may be obtained from F. W. Bridges, 119 Finsbury Pavement, London, E. C.

Mme. Cavaliere to Columbia Co.

Madame Cavaliere, the great international soprano, has written to the Columbia Co. a glowing testimonial concerning the records she made in the Columbia Grand Opera series. Her letter runs as follows: "I have just heard samples of the rec-

ords I recently made in your laboratory, and am charmed to find that you have succeeded in obtaining such accurate, natural and altogether life-like reproduction of my work. It gratifies me to know that my friends will have an opportunity to hear me on Columbia records hereafter."

Some Noted Columbia Records.

Played by Prince's Grand Concert Band, the famous "William Tell" overture is recorded complete on two 12-inch Columbia records, and other interesting issues in this month's list are: "Will

o' th' Wisp, piccolo solo by Albert Fransella, and "The Carnival of Venice," flute solo by the same artist; "Sabbath Morning on Parade," and "Our Bluejackets—Naval Patrol," by the Band of H. M. Scots Guard; "Yiddle on Your Fiddle," and "You Want to Go to Tokio," by Chas. Holland; "I Fear No Foe" and "Thy Sentinel Am I," by Bernard Dudley, and "If with All Your Hearts" and "Then Shall the Righteous Shine Forth," from "Elijah," both beautifully rendered by Walter Wheatley, in a masterly way.

engaged and the cost of the reproduction." Seconded by Mr. Shields, of the Columbia Co., this second resolution was also carried unanimously.

A resolution of approval of the measures which had been taken for the protection of public rights in the bill now before Parliament was passed by the meeting.

It was agreed that Mr. Broad should be spokesman for the deputation, which consisted of Mr. Robertson, Gramophone Co., Ltd.; Mr. Sterling, Columbia Co.; Mr. Hough, J. E. Hough, Ltd.; Sir Herbert Marshall, Sir Herbert Marshall & Sons, Ltd.; Mr. Klaber, Perforated Music Roll Co., Ltd., and Mr. Mason, Orchestrelle Co., Ltd. The meeting finally closed with a hearty vote of thanks to the Gramophone Co. and to the chairman, Mr. Robertson, for their praiseworthy efforts on behalf of the whole industry.

Later.—News is to hand that the deputation was received by Sidney Buxton, May 2, who expressed his sympathy with the mechanical instrument trade, and promised that the matters brought under his notice should receive careful consideration.

What Mr. Hall Caine Thinks!

The eminent novelist, Hall Caine, writing in the London Daily Telegraph, under date April 28, says: "I have been present, for the first time, today, at a sitting of a Grand Committee of the House of Commons, and I am afraid I must say that it has seemed to me a fearful and wonderful thing." After criticizing the mental confusion apparent with some of the speakers, he continues:

Musical Records.

"A still more glaring illustration of confusion of thought came to us during another solid half-hour which was devoted to musical records. It was objected, to the provisions protecting composers from the reproduction of their songs, that (a) a great industry had grown up in the manufacture of unauthorized records of various kinds, and therefore legislation ratifying copyright in songs might ruin large vested interests unless limited by a compulsory license; and (b) that, as the mechanical inventions which made records possible were not created or contemplated by the composers, the composers had really no right to profit by the results.

"Was ever confusion worse confounded? The fact that a great industry had grown up in the absence of law by taking property which has not been paid for is the most illogical of all possible arguments why we should continue to allow property to be confiscated, or dealt with outside the owner's control. A mechanical invention does not exist for itself, but for the music it is intended to reproduce. It is not the Pianola as a machine that I want in my house, but Elgar, whose works it can interpret. Therefore, the composer, being the prime factor in the enterprise, is the first party the law ought to protect. Yet, as the law now stands, I pay the inventor, the cabinetmaker, the shopkeeper, and the agent, but I do not pay the one man without whose work the work of all the others is useless. With what clarity of mind or honest exercise of the moral sense can members of Parliament pretend that they are protecting copyright while they are doing their best to dig the grave of it?"

"But, indeed, the last, and strongest, and most painful of the impressions made upon my mind by to-day's first meeting of the Copyright Committee was just this impression of the absence of the moral sense. For instance, it was said (I think without protest) that, inasmuch as mechanical musical inventions had brought happiness into the homes of vast masses of the people, they ought not to be disturbed, or, if touched at all, they ought to be tenderly protected against the encroachments

BRITISH RECORD MANUFACTURERS SEEK PROTECTION.

Meet and Take Steps to Have Stringent Clauses in New Copyright Modified—Strong Resolutions Passed—General Confusion Evident—Sidney Buxton Promises Assistance.

(Special to the Talking Machine World.)

London, Eng., May 5, 1911.

Talking machine traders throughout the world will find the latest developments in regard to the copyright bill of great interest. It has passed the first and second reading in Parliament and is now under discussion for amendment of certain clauses by a committee appointed by the government. In effect the bill differs very widely from the act of last year, which, as our readers are doubtless aware, fell through automatically with the dissolution of the old Parliament last December. Indeed, the provisions of the act as at present published are much more drastic. Whereas originally the clauses dealing with copyright as applied to records and perforated rolls, expressly and unconditionally withheld from authors any claims of a retroactive nature, the present bill provides that "where any person has, before July 26, 1910, taken any action by which he has incurred any expenditure or liability in connection with the reproduction or performance of any work in a manner which at the time was lawful, nothing shall diminish or prejudice any rights or interest arising from or in connection with such action which are subsisting and valuable at the said date, unless the person who by virtue of this section becomes entitled to restrain such reproduction or performance agrees to pay such compensation as, failing agreement, may be determined by arbitration." In other words, for all practical purposes the present act is retrospective in so far as, and providing that the copyright owner is willing to pay the costs entailed in the mechanical reproduction of his composition, he is vested with the right to call for a reckoning-up with all of the record makers who may have issued prior to July, 1910, any record of such composition. Apart from its actuality, the operation of this clause is likely to entail endless confusion and complication of interests between the parties concerned and if any one clause calls for amendment it is this.

New Copyright Act in Force July, 1912.

The Grand Committee began their consideration of the act on April 28, and according to present intention they will sit every Tuesday and Thursday until the bill is finished. After discussion of matters not particularly relevant to this industry, Mr. Rawlinson, K.C., moved to omit the paragraph which enacted that copyright should include the sole right "in the case of a literary, dramatic or musical work, to make any record, perforated roll, cinematograph film, or other contrivance by means of which the work may be mechanically performed or delivered." He explained that his object was to direct attention to the case of those people who made rolls for musical instruments and records for gramophones and similar instruments of torture (laughter). If the clause passed in its present form, people who had put their money into the industry would lose it. The clause was an absolute departure from the present law, and exceptional treatment was due to an industry which had grown up under the existing law. He had therefore put down amendments, which would come at a later part of the bill, to provide for compulsory licenses, as in Germany, Russia and the United States, and to prevent the bill from being retrospective in this matter. Mr. Buxton, president of the Board of Trade, who has charge of the bill,

said "it placed the composer in exactly the same position as any other author, but he admitted that there was a good deal to be said on both sides of this question. He suggested, however, that the best way to raise the subject would be by means of a new clause." Sir H. Craik said he had never heard a lawyer advance a weaker argument for a departure from law than that robbery had been committed in the past. These people had taken what they had no right to take. "No!" At any rate, they had no moral right. Croydon Marks, M.P., Mr. Edison's attorney here, reminded the committee that the clause gave record makers protection from piracy, from which the industry suffered at the present time. Mr. Buxton said he did not share the fear that the bill would place any burden on an industry which had grown up and which had produced a large amount of employment and pleasure. The government were prepared to give very careful consideration to the question, and he hoped the sub-section would be passed on the understanding that the matter would be raised later. Mr. Rawlinson thereupon withdrew his amendment.

An Important Trade Meeting.

Wednesday, April 26, was a momentous day in the history of the talking machine trade, for it signaled an important and thoroughly representative meeting of record manufacturers at the offices of the Gramophone Co., Ltd., to discuss the steps which had been taken for the protection of their interests, and to appoint a deputation to wait upon the president of the Board of Trade, who had consented to receive it. J. D. Robertson, of the Gramophone Co., was voted to the chair, and apart from representatives of the perforated roll trade, the following members of talking machine firms were present: S. W. Dixon and J. D. Robertson, Gramophone Co., Ltd.; Louis Sterling and James Van Allen Shields, Columbia Phonograph Co., Ltd.; J. E. Hough, J. E. Hough, Ltd.; Croydon Marks, M.P., National Phonograph Co., Ltd.; Max Samuel, Barnett Samuel & Sons, Ltd.; O. Ruhl, Beka Record Co.; H. Heyder and A. Vischer, Klingsor Works; Fonotipia Co., Ltd.; E. Sommerfeld, Favorite Record Co.; Messrs. Craies and Stavridi, S. P. Turner, Pathé Frères, Ltd.; George Murdoch, John G. Murdoch & Co., Ltd.; J. Dow, Mr. Herzog, New Polyphon Supply Co., Ltd.; J. Broad, Mr. Barrand, Dacapo Record Co., Ltd.; and Messrs. Auerbach and Frenckel, English Record Co., Ltd.

Croydon Marks' resolution, "That no copyright should be conferred upon any work published at the date of the passing of the act," was carried unanimously. A further proposal by the same gentleman to the effect "that compulsory license should be procurable by all at any time, on equal and equitable rates, and that in arriving at the rates there should be no discrimination between manufacturers, and regard should be had to the artists

of the people who are trying to create new vested interests. Think of that! Because the gramophone is a pleasure to me, I am not to pay for it—that is to say, the essential part of it, the music of it. I am to steal that part, and the law is to help me in the stealing of it!

"Why will not honest people be honest with themselves? Either they have the right to take the work of the author and composer without paying for it, or they have no right to do so, and ought to be told to keep hands off."

STATEMENT FROM KLINGSOR WORKS

London, Eng., April 25, 1911.

Editor Talking Machine World, New York City, N. Y.:

Dear Sir—Owing to some of our competitors having bought some of our Klingsor type of cabinets from our furniture manufacturers and ad-

vertised same under various names similar to those of our Klingsor models, we shall feel obliged if you will kindly make a distinct statement in your next issue of *The Talking Machine World* which will make it clear to all intending buyers that although our competitors are using some of our cabinets for their machines similar to ours, they will not be able to make our Klingsor patents, which give our machine the qualities which are so appreciated, namely, a natural and clear reproduction, mellow and sweet music, pleasant to listen to and which does away with harsh and tinny music. For this reason the Klingsor remains the only musical talking machine. Intending buyers should insist on seeing our registered name, Klingsor, which is cast into our double soundboard. We remain, dear sir,

Yours faithfully,

KLINGSOR WORKS.

THE ACOUSTICON IN CONGRESS.

Its Value in Magnifying Sound Makes It of Great Value When Used in Connection with the Telephone—How the Modern Legislative Chamber May Be Equipped.

(Special to *The Talking Machine World*.)

Washington, D. C., May 9, 1911.

The little black metal disc standing upright on Speaker Clark's desk in the House of Representatives is not, as a recent French visitor thought, a target at which Western and Southern member might practise gunplay, but an acousticon, a truly remarkable device which the superintendent of the Capitol has been giving a thorough trial.

The acousticon is a sound magnifier, and to it is attached a copper cable. Connecting with this cable are ordinary telephone wires, the number of which may be practically unlimited, which connect in turn with ordinary telephone receivers. It is the intention of the Capitol authorities to place one of these receivers in every committee room and office in the building, and in every office of the new Congressional office building, when that is completed. When this system is in working order, if a member does not wish to get in before the Chaplain's prayer or the reading of the journal, he may enjoy a cigar in his office until he hears through the receiver the Speaker's voice proclaim that "the gentleman from New York is recognized for five minutes," when, if he desires, he can proceed to the floor, or, if the particular bill under discussion is of no interest to him, remain where he is until something else comes up. No matter in what part of the chamber a speaker is standing, the acousticon transmits his words faithfully, and the man at the receiver can hear with as much distinctness as though he stood at the Speaker's desk. Whether the speaker's voice is raised to a shout or lowered to a whisper does not interfere with the clearness of the transmission.

It is even thought, though the trials so far have not actually been carried to that length, that the acousticon wire might be connected with an ordinary long-distance telephone, so that a member in Chicago or New York could sit in his library and listen to the remarks of his colleagues upon the floor of the House in Washington.

The value and convenience of the device is undoubtable, and would greatly facilitate the conduct of business. Should no quorum be present the Speaker need merely remark, "All gentlemen at receivers will please come upon the floor," and, as if by magic, the wheels of legislation can in a few moments be set going. In fact, one enthusiastic member sees no reason why two of the instruments might not be placed in operation, one working each way. In the House chamber would be placed a receiver in the form of a large megaphone, from which would issue the tuneful quotations of poetic members or the reverberating tones of the deep voiced, to be caught up by the acousticon upon the Speaker's desk and distributed impartially among the members listening at their receivers in Buffalo, Carson City, Canton, or Mobile. Thus would be eliminated the necessity of coming to the Capital City at all.

Timid Senators are also becoming interested in the acousticon. With Tillman and Jeff Davis there, and John Temple Graves looking in, they cannot but reflect upon how much more delightful it would be to sit in a secure committee room, with the door safely bolted, and listen to the sound of the shoutings of the captains, than to be actually upon the field—perhaps trampled beneath the hoofs of their chargers.

Another device of a somewhat similar nature is planned for members' individual offices. By means of the dictograph, as it is called, a member may sit at his desk in one room, or walk up and down the floor, and dictate letters or speeches to a stenographer several rooms removed. When he has finished his dictation he can ring a bell, and the stenographer reads back his notes, the sound being magnified, so that the member may get an idea of how the speech will sound when delivered upon the floor of the House. Should a member wish a conversation to be recorded, without the knowledge of the other party thereto, it is easily accomplished, or if he wishes another member, not privileged to be bodily present at a conference, to hear what is being said, wires connecting at a central switchboard are coupled up, and the thing is accomplished.

But suppose that sometimes some of the people's representatives should forget to ring off connections!

THE TRAVELING MAN.

Some of the Necessary Traits—What He Should Know and How He Should Be Treated.

I have had some experience as a salesman on the road, and have been on intimate terms with many of the best and have picked up some points from them, and in looking them over carefully I notice those who have gone to the front have been men who have been blessed with good health and an even disposition; who never get into a controversy with customers; who never get into politics; who are always pleasant in their manners and who know how to leave a customer just as pleasantly without an order as with one.

Who know enough to get away as soon as they have gotten through with business and keep what they know under their own hats, says a writer in the *Hardware Dealers' Magazine*.

A dealer don't want his orders discussed or shown. The transaction should be confidential. The success of any salesman depends very much on the manufacturer or jobber he represents.

The best possible feelings should exist between them and with perfect confidence in each other.

Will also say in connection with this that the correspondent in the office must be very careful how he writes to a customer, as well as to the salesman. A pleasant letter should be written to them. A word of encouragement goes a long way with a salesman who is far from home and is doing his best, although not getting the results wished for.

Put him in position to make money enough to keep him out of debt. With these conditions existing, nothing short of a panic can keep him from success.

There is as much novel entertainment, as well as plain evidence of recording quality, on the *demonstration* side of the Columbia Demonstration Double-Disc Record, as can be bought for six times 10 cents—and pretty nearly every purchaser of one of them takes pains to prove it to his friends.

Columbia Phonograph Co., Genl., Tribune Building, New York

WORLD WONDERS ECLIPSED

By the Wonderful Inventions Which Are Now in Everyday Use—This Is an Age of Magic and We Hardly Know It.

Several new sets of seven wonders of the world are now in daily use—wireless telegraph and phone, airships, phonography, moving, speaking, pictures, micro-photography, electric furnaces and spectrum analysis. Any one of the seven is greater by far than were the famous seven wonders of all antiquity. And other combinations could be easily formed, says Edgar Lucien Larkin in the American.

One not in this list, the stopping of a passenger train from high speed in a very short time by a distant train dispatcher by wireless transmission of electric waves, is greater in itself than all wrought by Greeks and Romans. Airships, dirigible from a station on the earth, are also greater triumph of mind than any achievement of all Mesopotamians or Egyptians.

The Owens River aqueduct in California is superior to any feat of engineering ever performed, for pyramids, hanging gardens and temples with the ancients were not so magnificent as this water conduit, with its remarkable siphons. Likewise the Panama Canal.

The entire wonders of all ancient times are eclipsed by the mighty works at Niagara Falls.

Photo-microscopy by means of the new Jena glass, ultra-violet light microscopes, has simply opened the corridors of a new, almost infinite, universe—that of the excessively minute. Hitherto unknown objects by literal millions are discovered by means of the new science of microscopy and then photographed. Thus numberless species of bacteria whose existence was not suspected are discovered, photographed on moving picture films, then magnified again and thrown on a screen, where all can peer into the deeps of a universe as complex as the stellar structure.

Phonographs are so wonderful that the imagination is surpassed. Every language can now be recorded for future generations to compare with languages then spoken. Had the primeval Sanscrit Aryans made use of phonographs, and these survived the wreck of time and hateful war, we should now be able to hear the root words of all Aryan languages.

The transmission of grand opera, concerts, oratorios, songs, orchestra music, speeches, sermons and all sounds desired from a center to the people of an entire State is one of another set of seven or of a hundred modern marvels.

The transmission of newspapers, printed as the news arrives from all parts of the world, in your own homes, is in sight. A book would be required to even mention the advance in physiology and biology, with the greater advance in the recondite and abstruse studies in mind-properties.

Intensive farming is bringing every foot of land to a point where it produces full capacity. Intensive storekeeping should bring the available public up to its highest purchasing power."

GEO. M. COHAN MAKES RECORDS.

Yankee Doodle Comedian Sings Ten of His Songs for the Victor Talking Machine Co.—Gets Liberal Contract.

It is reported that George M. Cohan, "The Yankee Doodle Comedian," has at last fallen under the spell of the talking machine, for a consideration said to be in the neighborhood of the amount paid Caruso, and has recently made records of ten of his songs for the Victor Talking Machine Co. The records are the first ever made by the comedian, and, it is stated, have proven very satisfactory.

SUCCESS OF NEW ATTACHMENT.

New Fiber Needle Attachment of the Talking Machine Supply Co. Meets with Instant Favor of Trade and Machine Owners—Simple and Effective.

The Talking Machine Supply Co., 400 Fifth avenue, New York, report that their new fiber needle attachment, recently put on the market, is one large success, and that dealers are pushing the attachment for all it is worth. The fiber needle possesses features that appeal to many talking machine owners, and the fact that with the new device, which is simple in operation and meets the situation perfectly, they find it an easy matter to use such needles as their fancy dictates, without being under the necessity of carrying the entire sound-box to the store of the dealer to be fitted for use with fiber needles. The price of the attachment is another factor in its favor. The other specialties of the Talking Machine Supply Co., including their various brands of steel needles of high quality, are also much in demand, and each morning the mail brings in orders of a volume that furnishes a reason for Max Landay's smile.

RECORDS BY DAMROSCH ORCHESTRA.

Thomas A. Edison, Inc., Orange, N. J., recently made a number of records played by the full Damrosch orchestra in New York. The selections are said to be among the finest "instrumentals" ever recorded by Walter H. Miller, manager of the laboratory.

WHAT HE SHOULD KNOW.

After a man has been selling goods for some years he should either know all about human nature, or confess his failure and quit the job. A great salesman, and a manager of other men who sell, shows a shrewd appreciation of the nature of men, when he says: "It should make no difference what objection a man makes to my machine. In one sentence, this is the answer that should be made to him: 'That, my dear sir, is one of the very reasons why you should buy one.' He can't afford to buy. That is the very reason he ought to have one, because, with one of our machines in use, he will make so much more money that his financial condition will be easy. His business is too

small. That is the very reason, because our machine will increase his business. He doesn't believe in new-fangled methods. That is the very reason, because our machine will teach him how much those methods will help him."

BUSINESS KEEPING UP WELL.

Landay Bros. Report a Strong Demand for Victrolas and Red Seal Records—Have Not Received Royal Warrant as Yet.

Landay Bros., the well-known Victor distributors of New York, state that business in their line at the present time is of a very satisfactory volume, and that thus far this year the record for the corresponding months of 1910 has been left well behind. The strongest call is for the various styles of Victrolas and the Red Seal records, and Landay Bros. make a specialty of catering to that class of trade in their well-located Fifth avenue showrooms. The house are somewhat surprised that they have not received a warrant as purveyors of talking machines and records to His Majesty, King George of England, in view of the fact that the members of the English peerage have proven such good patrons.

K. D. BISHOP A VISITOR.

K. D. Bishop, president of the U-S Phonograph Co., Cleveland, O., was in New York last week, calling at the office, 5 and 7 Union Square, and also upon John Kaiser, manager of the recording laboratory, 662 Sixth avenue.

THE REGINA CO.'S NEW QUARTERS.

The Regina Co. will probably get into their new premises, in the Marbridge building, Broadway and 34th street, before June 1. They figured on moving out at Broadway and 17th street today (15th), but the alterations necessary will not be completed in time.

IT HAPPENED IN NEW HAVEN.

There was a young clerk of New Haven,
Who was always a-boardin' and savin';
They called him a bore—
He now owns the store,
And is doing quite well in New Haven.

GREATEST FACTOR IN BUSINESS.

One of the greatest factors in modern business life is advertising. Occasionally we still find a business man who claims that it does not pay to advertise, but such relics of the past are getting scarce, while the number of men who have passed the stake boat in the race for success by using up-to-date advertising means increases all the while and the proof of the value of advertising grows.

"If I were asked to define salesmanship in one sentence," said a man who has sold goods for years, "I would say it was nothing more nor less than making the other fellow feel as you do about the goods you have to sell."

Improved model of the Columbia Grafonola "Regent" and first announcement of the new Columbia Grafonola "Regent Junior."

The Well-Proved Columbia Grafonola "Regent," with drawer extended, showing accessibility of record turn-table.

The Brand-New Columbia Grafonola "Regent Junior," listing at \$150. Same drawer as in the new "Regent."

You have never been able to place a hornless instrument of any make alongside the Columbia Grafonola "Regent" and make a sale on the basis of comparison—there is no substitute for it.

And yet here is this Columbia Grafonola "Regent" improved; the instrument that has had a large share of the \$200 business all to itself.

Heretofore access to the turn-table was obtained by raising a section of the table-top. In the new model this feature is done away with and all the mechanism is contained in the sliding drawer. This new arrangement leaves the table-surface of the instrument free and unobstructed to be used for its legitimate purpose.

Two hundred dollars as always, in Mahogany, (Golden, Fumed or Mission Quartered Oak—straight legs—to order, at no change in price). Circassian walnut, to order, \$250.

It was only natural to expect that further developments of this distinctive type of instrument, which so perfectly combines utility with entertainment, would be brought about.

The Columbia Grafonola "Regent Junior" is a little "Regent," designed to meet that very demand that the Grafonola "Regent" has proved to exist—a demand for a similar musical instrument of the same utility,

Columbia Phonograph Company,

DEALERS WANTED: EXCLUSIVE SELLING RIGHTS GIVEN

Creators of the Talking-Machine Industry. Pioneers and Leaders in the Talking-Machine At.

Choice of mahogany or oak in the Columbia Grafonola "Favorite," and a reminder of the pyramiding demand for the Grafonola "Mignon."

The Columbia Grafonola "Favorite" now has a double door and sells for \$50 in oak or mahogany.

The Columbia Grafonola "Mignon," which is a wonder in its tone, and a winner in its sales.

function and quality, of smaller dimensions and lower price.

Here, true enough, is a Columbia Grafonola "Regent" that will meet the demands of a very distinct class grade, and at \$150—a price that will be a temptation to any person who has an ear for music and knows its value when he sees it.

The Grafonola "Regent Junior" is a sure introduction to a great deal of new business, much of which has been waiting for the right instrument at the right time.

Don't miss this present opportunity to get a firmer foothold on the high-grade musical instrument business.

The Columbia Grafonola "Regent Junior" is furnished in genuine mahogany. The instrument is well-balanced and substantial, yet the elegant simplicity and gracefulness of the design give the appearance of an instrument of much lighter construction. The table-surface measures 40 inches by 26 1/2 inches and the height is 30 inches.

Any size disc record can be accommodated on the turn-table, which is located in the drawer as in the improved model of the Grafonola "Regent."

A powerful 4-spring motor of standard high-grade Columbia efficiency provides for the running mechanism.

METZGER ON ADVERTISING.

The Clever Manager of the Publicity Department of the Columbia Phonograph Co. a Speaker at the Recent Gathering of the Connecticut Piano Dealers in Meriden, Conn.—His Helpful Suggestions Appreciated.

George P. Metzger, manager of the advertising and general publicity department of the Columbia Phonograph Co., New York, in the course of a few impromptu remarks on advertising before the fifth annual convention of the Connecticut Piano Dealers' Association, in Meriden, Conn., April 21, said in part:

"Advertising, so far as piano dealers handling talking machines are concerned, may be divided into four headings: Newspaper advertising, window advertising, store service and canvassing. During the course of his remarks Mr. Metzger outlined the scope and possibilities of newspaper advertising for telling the public a straight story about the goods that the dealer had to offer.

He illustrated by saying that Mary Garden was hard to capture, but now that the Columbia Co. had done the trick dealers should make capital out of the chance of selling records reproducing the voice of this favorite opera star. If the endorsement of a piano by Mary Garden or Lillian Nordica or Olive Fremstadt is supposed to give prestige to a piano, what piano dealer would deny that records of the living voices of those artistes are most appropriately offered for sale in the piano store? The two businesses—talking machines and pianos—should go together. Experienced dealers have long since found this out.

Regarding the advantages of graphophone recitals in piano warerooms, Mr. Metzger made it clear that they were invaluable in locating prospects. He declared that there are thousands of unknown prospects. "I live in a nice house in Stamford, Conn," he said. "No one has ever asked me if I own a piano, or if I want one. So far as I know my neighbors have also been unsolicited. Stamford is not different from other communities. There must be thousands who could be interested in pianos if approached properly. Likewise talking machines. It takes the average man quite a while to earn a dollar and much longer to save it, and it requires a whole lot of conviction and personal influence and human contact and faith and interest to get him to reach down and haul it out and hand it over for music."

The speaker laid particular stress upon the value of attractive window display, which he said was the most direct and effective way of getting customers into the store, and cited several examples where this method had been productive of great benefit to the dealer. Further, window dis-

plays often are neglected, but there was such a thing as paying too much attention to the window and too little to other features.

"Doubtless you dealers remember what Mr. Dooley said about a certain prominent personage," observed Mr. Metzger. "He described him as being like a great, fine house with a grand staircase at the front entrance. You go up this staircase, open the great, big front door, and find yourself in the backyard. The said prominent personage is typical of some stores in every town in the country. You drift along the sidewalk and you are stopped by an attractive store front—brilliantly polished plate glass, convincing display of goods inside the window, everything as it should be about the entrance. You step inside and the contrast is startling. Every ounce of influence that the front of the store could be made to exert has been effective. But inside the door you feel that most of the salesmanship is out in front.

"The next process in the making of sales seems to be lacking. The salesman may be courteous and obliging—entirely ready to sell you what you want, after you find out; but no positive effort is made to sell you the thing you may have come in after—not to mention something else in addition, which you likely enough would want if you were reminded of it. No customer ever wants a salesman to get pestiferous. It is true enough that a good many customers do not want the salesman to offer them anything except what they ask for. But if it is done in the right way they will not take offense; and I honestly believe," remarked the epigrammatic advertising manager, "every salesman in this business ought to take it home to himself that two-thirds of the people who come into the store and say what they want can be made to want a good deal more. All they want is to be shown, like the time-honored individual from Missouri."

In conclusion Mr. Metzger pointed out the various avenues through which the dealer might extend the influence of his business, notably that of direct canvass, a method, in his opinion, seldom fully taken advantage of. The address was attentively listened to and subsequently Mr. Metzger was warmly congratulated for his sage advice and suggestions.

COLUMBIA CO. BRIEFLETS.

The Columbia Phonograph Co., General, have notified the trade as follows: "On our July list we have a 65c. 10-inch double-disc record—A1010—listing on one side a duet by Jones and Van Brunt, 'All Alone,' and on the other side a solo by Arthur Collins, 'In the Land of Harmony.' We understand both of these selections are popular at the present time, and in order to get the full benefit from them we have decided to place them

on sale immediately." At the same time the firm announced 18 10-inch double-disc records in Swedish and Finnish to go on sale immediately. These records will be included in their next foreign catalog. No notice will be sent to dealers direct.

The company further add: "On account of the present popularity of music from 'The Pink Lady,' you are authorized to put on sale immediately record A1008. This record is a 10-inch Blue Label (75c.), will appear on our July supplement, and contains on one side the waltz song from 'The Pink Lady,' 'My Beautiful Lady,' soprano solo by Idelle Patterson, with orchestra accompaniment. On the other side is 'Fairy Moon,' sung by Columbia Male Quartet, orchestra accompaniment." Dealers have not been notified of this action by the executive office.

TRADE IN DETROIT RATHER QUIET.

But the First Four Months as a Whole Makes an Excellent Showing—Higher Priced Machines and Records in Demand—Columbia Phonograph Co. Open New Quarters—Doran Phonograph Co. Will Remove.

(Special to The Talking Machine World.)

Detroit, Mich., May 9, 1911.

The talking machine business in Detroit is undergoing a slight lull just now, after an unusually heavy business in the first four months of the year. No one visiting the stores would suspect that it was a lull, however, if he was not so informed, for everyone on the job is so busy that an interviewer has to take his talks piecemeal, between sales.

The business is running more and more to the highest-priced machines. "A few years ago," said the manager of the talking machine department of Grinnell Bros., "we used to think we had done a pretty good bit of work if we sold a \$50 outfit. Now we feel that to dispose of a \$50 machine is hardly worth while. Most of the sales are of outfits ranging from \$160 to \$225."

The managers of other stores gave like testimony. There is a good reason, they think, in the fact that people are realizing that a good machine will play a low-priced record in faultless style, while a cheap machine will not play even the costly records just right. Also, it is becoming a patent fact that "best" in the talking machine business means more than "best" in almost anything else. A talking machine furnishes vocal and instrumental music; music depends as much on the rendition as on the composition. If the rendition is not the best, the music is not liked, at least by people of musical talents. The highest-priced machines play the records best—hence the demand for the best talking machines.

The Detroit branch of the Columbia Phonograph Co. has moved into its new quarters, 114 Broadway, and just about the time this is going to press will be holding a formal opening. This week Manager Johns and his staff are working like—like—most anything strenuous, getting the new store into shape. It is in the brand-new building the other half of which is occupied by the Starr Piano Co. Manager Johns stated that the April business of the company was bigger than that of March, and considerably bigger than that of April a year ago. President E. D. Easton, of the Columbia Co., stopped in the city on his way home from a Western trip and inspected the new store.

The Doran Phonograph Co. are going to move, instead of taking the floor above the present location on Michigan avenue and making a two-story business of it. They already had begun the alterations necessary to the enlargement when they discovered a larger and better located store available for their purposes and changed their plans. They do not say where the new store is, for they have not quite completed negotiations for it, but are pretty well satisfied that the deal will go through.

The most provoking man to have in charge of your work is the man who knows how to do his work right and then doesn't do it. Where a man is ignorant, you can teach him, but where a man knows and then neglects to do his work right, he is a pretty hard case.

BLACKMAN TALKING MACHINE CO.

J. NEWCOMB BLACKMAN, President

97 CHAMBERS STREET

NEW YORK CITY

TIMELY TALKS ON TIMELY TOPICS

At times The World has referred to the extraordinary business transacted by the Victor Talking Machine Co., and once in a while quoted figures regarding the wonderful total of the orders unfilled. In this respect the statement made by H. C. Brown, manager of the advertising department of the company, in his address on "Creative Advertising," delivered before the New York Piano Manufacturers' Association recently, is in point. The World has taken occasion, without official figures at hand, to say that the company were 10,000 Victrolas behind on orders. The true state of affairs appears to be, according to Mr. Brown, who is certainly in a position to know, that the unfilled machine orders for the entire world is 170,000, and of these 70,000 are Victrolas. It seems less than a year when Louis F. Geissler, general manager of the company, said the Victor Co. were laboring under a shortage of 84,000 machines of all kinds. The latest report is therefore significant of the marvelous growth of this great company, and they are to be congratulated, not only upon their foresight in following methods that have gained them the confidence of the public, but also upon the finish and quality of their product, which, after all, contributes greatly to their strength and makes their position so impregnable. Further details in support of this opinion would be superfluous.

It cannot be gainsaid that the question of quality as against quantity is a prime factor in the talking machine trade, at least in this country. The American manufacturers have long since learned the truth of this observation by actual experience. Besides the matter of patents protecting domestic genius and products, the introduction of foreign goods, attempted at various times and under conditions that were looked upon askance at times, has never appealed to dealers here in a convincing way. A record is probably a record everywhere; but when it comes down to the final analysis it is only the product that is fully understood and is appreciated by the people at large which commands the market. In this respect one country is like an-

THE POWER OF MUSIC.

Still Another Field Awaits the Invasion of the Talking Machine Dealer.

"The pen is mightier than the sword," is a well-known quotation, and "The talking machine is mightier than chains and shackles; more powerful than red-hot irons," is a saying soon to become as popular as its famous predecessor.

The charm of music has been known to man for centuries, but not until very recently has it been demonstrated conclusively and put to a practical use. The insane asylums of to-day use music to calm the shattered minds of their patients and find it eminently successful, even in the most violent cases. There is something so soothing in the sweet mingling of sounds that the poor maniac in the very midst of his raving cannot resist its subtle influence, and becomes as docile as a child. The padded cell and the straightjacket are no longer a part of the institution which has experimented with music along the lines above described and made it a part of its system.

Menageries, trained animal shows, and zoological gardens have all found music a humane substitute for the lash and hot iron in the taming of wild beasts and in disciplining them when unruly. Lions are particularly susceptible to music's magic spell. In the case of an incorrigible African lion which belonged to a traveling show, and upon which every ruse known to the intrepid trainer had been tried without success, every experiment seeming to make the savage beast spring more heavily against the yielding bars of his prison, his blood whipped into a very froth with demon-like fury, the circus band was called into the animal tent and stationed before his cage. A low, sad refrain was rendered with great expression, and the effect was instantaneous. The wild leaps grew shorter, the roars

other, and while the American public are great admirers of the magnificent music of the masters, as interpreted and rendered by the famous artists and are liberal buyers of these records, still there is a large trade in so-called popular or folk songs. In other words, foreign makers of records may, if circumstances permit, gain something of a foothold here, but unless they manufacture a product equal to the splendid goods bearing the domestic brand, and known far and wide, their standing will be uncertain, not to say precarious, judging by past performances.

More interest is being manifested in export trade than ever before. This is especially true of connections in Latin America. The manager of a talking machine manufacturers' foreign department, who had been invited to attend a convention of manufacturers apparently eager to establish friendly commercial relations with neighbors of the United States to the south, and say a few words, said subsequently: "I was surprised at the elementary ignorance of the export trade displayed by American merchants and manufacturers who were present. That is to say, they asked if their printed matter should be in the language of the country in which they wished to open a market for their goods! You know, the question has been threshed out for years and years, and the veriest tyro, it seems to me, would know what to say. Then as to packing—another chestnut, by the way—customs conditions and bank exchanges, and peculiarities of the people, naturally may be unknown, and are proper inquiries. But it only goes to show what the average business man here, desirous of cultivating an export trade in that part of the world, knows of what he should know. Generations of mercantile houses in Europe have given these propositions close study, at first hands, and now, when we are eager to enter their profitable markets and gain a foothold, not to say an influential standing, the thought seems to be all this valuable information may be acquired by a 'correspondence course, so to speak.' It makes me tired."

less furious, until at last they ceased entirely and the king of the forest lay down with a huge purr of content completely mastered by the entrancing melody.

Taking these facts into consideration, would it not pay the up-to-date dealer to demonstrate the superiority of the talking machine over the form of music now in vogue at the institutions heretofore mentioned, by showing how any character of melody could be kept constantly on hand at a ridiculously low price. Where a band or orchestra is now engaged a talking machine could be substituted and the difference in the cost of maintenance would be phenomenal.

Every dealer with the "get there" germ in his system is eternally hunting for something new, and when he finds it, he makes it help him in his business. The above is a suggestion for such a dealer.

HOWARD TAYLOR MIDDLETON.

ENTHUSE YOUR CUSTOMERS.

Make every customer that comes into your store feel that his presence, as well as the business that he does with you, is necessary to your success. Enthuse him with cheerfulness and bright prospects for the future, and at all times see that he receives attention and courteous treatment. Gain his confidence and never betray it. Remember that it is the man behind the gun and not the gun that wins the battle.

One man says you have succeeded because you have located at a certain place at the right time. Another says you have succeeded because you have had the opportunity. Abraham Lincoln said: "Don't whine about the lack of opportunity. There are opportunities for every one who is able to convince the world by his industry that he is worthy of success."

Mr. Dealer:

WHY do you lose sales on fibre needles?

Here are two reasons!

- 1st. THE customer was not aware that the arm on the sound-box must be changed to fit the fibre needle.
- 2d. THE customer promised to bring the sound-box in to have the arm changed, but either forgot to do so, or had the arm fixed by another dealer.

ALL of the above means loss of profits to YOU.

GET OUR FIBRE NEEDLE ATTACHMENTS FROM YOUR JOBBER AT ONCE, and when your next customer comes in for FIBRE NEEDLES, just say

The Fibre Needle Attachment

is only 50 cents, therefore enabling you to use fibre needles without changing the arm on your sound-box.

IT WILL PAY YOU TO PUSH THE FIBRE NEEDLE ATTACHMENT, as it will mean

IMMEDIATE SALES AND IMMEDIATE PROFITS

The Fibre Needle Attachment.

TAKE NO CHANCES

Columbia Phonograph Co., Genl., Tribune Building, New York

WORKING FACTORY NIGHT AND DAY.

General Manager of the Columbia Phonograph Co. Issues the Order to Keep Machinery Going Without Break.

The general manager of the Columbia Phonograph Co., on April 23, issued the following notice to the trade: "We are pleased to advise you that orders have been issued by our president, on account of the rush of business to which we are unable to keep up, that, beginning with to-day, and for an indefinite period the factory is to be worked both night and day. The business is in a very flourishing condition and we find it necessary to take this action in order to be able to cope with the enormous demand for our product."

Announcement has also been made that the Favorite Grafonola in mahogany, sold heretofore at \$60 list, on and after this month the list price would be \$50, the same as in oak.

H. A. Yerkes, manager of the wholesale department, who returned Monday from a run over the New England territory, reports creating a number of new dealers, and so far as could be ascertained, trade was of the expansion order.

Edward N. Burns, manager of the Columbia Co. export department, now in Europe, going before his scheduled time on May 1, cabled Monday he and his family arrived safely. After attending to a few important matters on the Continent and locating his folks in Switzerland, Mr. Burns will sail from Hamburg to Buenos Ayres, Argentine, S. A., and travel the entire Continent. He will not be back here before September.

The business of the export department has not been curtailed in the City of Mexico, notwithstanding the political upheaval, the magnitude of which dwells largely in the imagination of the resident daily newspaper correspondents. Possibly the data is difficult of verification, but "wireless" advices have it that President Diaz sent around the corner from the palace to R. Cabanas, general manager of the Compania Fonografica Mexicana, for the latest Mary Garden and Fremstad records to while his time and give zest to his otherwise precarious existence, were such a condition possible.

R. F. Bolton, manager of the Columbia Co.'s wholesale distributing agency, 89 Chambers street,

Opportunity to Buy.

Competent man to take charge of our Talking Machine Department. We handle Edison and Victor Lines. We are prepared to pay salary or salary and commission or division of profits. Write the LEACH PIANO CO., LTD., Montreal, Que.

New York, on Monday shipped his initial order to the Armstrong Piano Co., 603 Broad street, to their new location in Newark, N. J. The bill footed up \$2,200.

AN ASSET TO THE COMMUNITY.

What the Merchant Owes to the Community He Lives In—Money Not Always the Best Thing—An Honorable Business of Great Value to All.

A man owes to the calling by which he lives the best there is in him; he has no right to lower the standard, nor is it necessary for him to do this in order to satisfy any reasonable desire for gain.

To the merchant yet unborn we are obligated to bestow not only an institution in every way as honorable as the one we fell heir to, and one as much more capable as the advancement of civilization demands, and in doing the best for ourselves.

The first instinct in a man's mind is self-preservation, and the Almighty made it to be a laudable one, says G. W. Porter in the Hardware Dealers' Magazine. Next comes his family and then the community or country in which he lives. Some narrow down to the second; that is, we go no farther than the family. Our interest stops there, and there are a few instances on record where the idea of self-preservation has been so thoroughly rooted and so constantly nourished that it has been known to crowd out every generous impulse that happened to sprout.

These human beings very often make money, but they never make men and they build no monuments other than the one over their dust. They never reason except on a dollar-and-cent basis. The password to their intellect is Money. They

always make the dollar sign when they approach a proposition and they retire with the same sign. Such a man is a detriment to any community beyond the few dollars he is forced to spend in order to gather more from the people therein.

If you interest yourselves in nothing in your locality outside your own store let me ask you in fairness what right have you to expect to excite any interest in others? First, then, before you criticize your community for infidelity to you examine your own disposition. Get right with your people, and then you have some claim, and between you and me it will not long be a secret.

If we are engaged in an honorable business; if properly and honestly conducted, it is an asset to the community. If the value of our lands is based not alone upon what they produce, but also upon the institutions and equipment and facilities necessary to grow, harvest and market the produce; if the size, honesty, capability and wealth of these institutions is but a reflection of like conditions elsewhere in the community, there is no reason except ignorance why this should not be realized, and ignorance can be overcome.

CHARACTER MUST BE MAINTAINED.

"The salesman," says an experienced manager, "should present goods just as they are, not 50 per cent. of the truth nor 125 per cent. of the truth. The character and reputation that means so much to the house must be maintained by the salesman. He is not a free agent, but the personal ambassador of his firm.

The good-fellow racket is overworked. It has value, but it must be remembered that self-interest is the motive that compels a man to sign orders. Show a man how to sell and you have paved the way for him to buy.

THE WADE FIBRE NEEDLE CUTTER

Just Placed on the Market by the Talking Machine Co., Chicago, and described on page 42 of this Issue of the World.

GOOD PHONOGRAPH A TREASURE

Writes Walt Mason, the Famous Poet-Philosopher—Getting the Real Music at Home and in Comfort—A Few of the Terrors of the Theater and Concert Hall Avoided—Good Outfit Never Yet Started a Riot—The Logical Way to Really Enjoy Music.

The smart writers on the big newspapers never miss a chance to say something cunning about phonograph music, which they profess to despise, but a good deal may be said in behalf of that sort of music, writes Walt Mason, the famous poet-philosopher, in the Emporia (Kan.) Gazette. When a man owns a good phonograph and a list of good records, he always has a sane and inexpensive entertainment ready to hand. The word "good" should be emphasized in this connection, however, for it is easily possible to obtain a phonograph that will torture a whole neighborhood, and it is this fact which has caused a prejudice against the machine. A man who hears a few tin-panny records played over and over by the folks next door begins to wish he had the toothache for a change.

A good phonograph, playing good music, never yet caused a riot. The man who owns it frequently is requested by his neighbors to leave the windows open, so they can participate in the noise, and nobody ever goes gunning for him. The phonograph habit grows on him, and after a while he'd rather hear a song from the machine than from the original human singer. This fact was illustrated recently when a celebrated chorus appeared in Emporia. A local phonograph fan had several records made by that chorus, and enjoyed them. When the organization came to town his wife and other distant relatives insisted that he should go to the concert.

"You enjoy the singing of that outfit through the phonograph so much," they said, "that you should hear the real thing." So he girded his loins and put on his beautiful garments and went to the concert, and had a beastly time. The hall was too hot and he was covered with honest sweat throughout the entertainment. He was surrounded by women who had soaked themselves with perfumery, and who were always whispering or giggling. The seat he occupied was designed by some man who had a grudge against the race and wanted to break as many backs as possible. Moreover, the singers were so homely that it was a trial to look at them. One had no chin, and another wore side whiskers, and several had bad teeth, and they were always bowing and smirking and making themselves ridiculous.

The phonograph fan was sick of the whole disgusting business before the entertainment had been in progress for fifteen minutes, and would have

given \$5 to be at home, but the perfumed women were packed around so close he couldn't get out without stepping on their laps. There was no end to the concert. The singers were anxious to give full value for the money, and they responded to every encore and wailed tiresome songs that made the fat sick at heart. Every time you go to a public entertainment you are exposed to this annoyance. A few people in the audience will like a certain song, and will clap their hands and stamp and scream until it is sung over again. They don't care whether you like it or not, they don't care how many may be bored. Utterly selfish, they kick up their racket until they get what they want, like babies screaming for their rattles.

With a phonograph in the house you escape all such disagreeable experiences. You can hear the best songs without having to look at side whiskers or bad teeth. There is no tiresome bowing, no responding to encores. If a phonograph singer begins a song that you don't like you can shut him off with one motion, and nobody's feelings are hurt. You can sit in your favorite chair, with your feet on the mantel, and have no women packed around you like sardines in a box. Under such conditions you enjoy music, and when you are tired of it you can stop the machine, and beat your wife, and break some furniture and have a good time generally. That the phonograph is abused and ridiculed is largely the fault (?) of the manufacturers. If they would record only good music, and cut out the rag-time monstrosities and the silly talking records, their wonderful machines would enjoy a better reputation, and the policy would pay in the long run.

* * *

[Perhaps Walt Mason overlooks the fact that most manufacturers would prefer to record only the highest class of music, but they aim to supply the market with what is demanded, and popular songs and talking records are good sellers. The manufacturers are not in business for the benefit of their health, nor as musical educators pure and simple.—Ed. T. M. World.]

FREE MOVING PICTURES.

Dr. Leipziger Suggests That Public Lectures Include Them.

A number of the members of the New York public lecture corps got together last week at the Astor to whoop it up for Dr. Henry M. Leipziger, their chief. He was at the speakers' table and heard all the demonstration in his behalf. After he had made his speech some one got up and proposed the Chautauqua salute for the doctor. He got it.

All the speakers joined in praising the New

York system of free public lectures. Dr. Leipziger told of the necessity of educating the adults as well as the younger generation. He favored illustrated lectures and read testimonials from people who had been benefited by some of the 5,400 lectures given during the past year.

He thought that the rivalry of the moving picture shows which were taking many away from the lectures would not last long, especially after moving pictures were added to the lectures, as he proposed they should be.

The other speakers were Justice Isaac Franklin Russel, Egerton L. Winthrop, Jr., and Dr. George W. Knox, of the Union Theological Seminary. Dr. Willis F. Johnson presided.

"RUSH" BUSINESS AT THE EDISON PLANT.

Business at the factory of Thomas A. Edison, Inc., Orange N. J., during the month of April was splendid—far in excess of that of April, 1910; in fact, it was a banner month, and the company are encouraged in the belief that May will be equally as heavy, if, indeed, not heavier. This augurs well for summer business. There was a brisk upward movement among the higher-priced instruments—the special Triumph equipment and the Amberola—and a demand for the modern-priced instruments with Model "O" and "R" equipment. The factory is considerably behind in orders for these reproducers, both as separate instruments and as part of Amberol attachments, and although production has been increased they cannot yet see light. They have managed, however, to supply all jobbers with at least part of their initial orders and expect in a week at the most to entirely cover the trade. The demand for Music Master horns has been very heavy, and the manufacturers have so far been unable to supply the requirements of the Edison trade. Record orders took a tremendous spurt with the announcement of the new record exchange plan, and have been climbing steadily ever since.

Goods and prices are not all that go to make up a successful business. People nowadays like to trade at a store that is up to date in business methods; one that has a system of arranging and displaying goods artistically; a store that has a reputation for being strictly honest and honorable in all its dealings, and a store whose reputation and character stand for something more than dollars and cents.

A bank will help a dealer who has a clean, attractive store much quicker than it will a dealer who doesn't give a tinker's damn whether the store is clean or not.

**The Voice of
the Talking
Machine is
Through the
Diaphragm**

The New Art Diaphragm

MADE IN BOTH FIBRE AND ALUMINUM

is full of holes and music, and constructed on entirely new principles. Produces wonderful, clear, rich and musical tones, better than anything yet used. Made to fit all Talking Machines and Phonographs. ¶ Will help to sell more machines and records than any other device yet brought out of any description.

VALUE OF PRICE MAINTENANCE.

Why It Is Best for Manufacturer, Retailer and Purchaser Discussed by L. B. Jones, the Well-Known Advertising Expert of Rochester—Restrictions on Retail Price Does Not Mean the Elimination of Competition but Puts Trade Battle on Basis of Quality and Service Rather Than on Mere Cheapness.

Does the restriction of retail prices benefit or injure the public?

The right of the manufacturer to maintain a restricted price policy must, in the last analysis, depend upon the answer to that question. If such price restriction actually throttles competition, it is a bad thing—if, on the other hand, it encourages competition in quality and in service, it is a good thing.

There is more than one kind of commercial competition. There is competition in price, with its ever-attendant danger of loss in quality. There is, where established, maintained and published prices prevail, a healthy competition in quality. The former is sometimes and the latter almost universally to the benefit of the ultimate consumer.

The manufacturer who restricts the prices at which his goods are to be retailed to a certain figure, is just as much in competition with other manufacturers of similar goods as are those who do not restrict prices—but in a more healthful way. Bear in mind, however, that this discussion refers only to an individual concern or corporation—not to a combination between natural competitors to create an artificial price. That's another and quite foreign subject, though, unfortunately, likely to be confused by some people with the real question at issue.

The manufacturer who publishes a price list on his goods, allows a certain discount to the dealer in those goods and then insists on that dealer selling his goods at the list price, is by no means free from competition. If he sells wisely, he has familiarized himself with the average percentage that it costs the dealer to handle his goods, and he makes his discount large enough to pay the dealer a normal profit—a profit that will be satisfactory to him, but not big enough to prove a constant temptation to cut prices. In making his list price, this wise manufacturer will put it at a figure that will pay him a normal profit, after giving a discount to the dealer that will likewise pay him his normal profit. Such manufacturer is as much in competition with other makers of goods as though he had no established price—but his consumer customers get a square deal; they all buy his goods at the same price.

The retailer must make a certain percentage of profit over and above the cost of doing business or go into bankruptcy. Isn't it manifestly fairer to the consumer if the dealer nets 5 per cent. on what he sells to Smith and 5 per cent. on what he sells to Brown than it is for him to lose 5 per cent. on what he sells Brown and make it up by netting 10 per cent. on what he sells Smith? And that's just what happens every day where retail prices are not restricted. Every retailer knows this, though the buying public does not. The restricted price plan is, in fact, particularly favorable to the small consumer, the man whom the courts are ostensibly trying to protect. It has been decreed that the railroads shall not discriminate against the small shipper by giving a lower rate, whether directly or by rebate, to the big shipper than the small shipper enjoys. Carried to its logical conclusion, the price restriction policy means the same thing. All retail purchasers are treated alike. It means the square deal.

And how is the manufacturer affected? He has a widely advertised article at say \$10. It is generally known that his goods are sold at list price only. The dealer is already receiving a normal discount. This manufacturer usually keeps ahead in improvements in his line, but, for the sake of argument, we will admit that a competitor announces an important and genuine improvement. What happens? One of three things: An improvement in the article in question to meet the competition, a cut in price in order to pick up the cheaper trade in this line, or, if the margin of

profit will not admit this, an entire abandonment of the manufacture of such article. In cutting the price, if that method be followed, the price at which the goods are to be retailed may still be restricted at whatever lower level may be decided upon as a normal price at the new level forced by the competing improved product. Price restriction has in no way prevented a general lowering of price; it has simply maintained a uniform price.

A restricted price means that the goods are to be sold at a certain price, that the retailer is not to go either above or below that price; but if the established price is abnormally high for the quality of the goods, it cannot live. No mere restricting of price can annul the laws of supply and demand or of commercial competition. Indeed, goods that are sold at known prices offer themselves to the keenest competition because it is so easy for the manufacturers of competing articles to figure just what can and must be done.

The result is that the manufacturer of restricted price goods is alive to the fact that he must constantly back up his prices with quality. He is averse to changing his methods or permitting the retailers to change their methods of handling his goods, because he takes an honest pride in his one-price-to-all policy. The result is a constant effort to better his products, a constant effort to give his customers more for their money. It is a competition just as keen and far-reaching, as bitter if you like, as a competition in price-cutting. Because one manufacturer of automobiles restricts the retail price of his car to \$4,000, another to \$3,000, another to \$2,000 and another to \$1,000 does anyone maintain that there is no competition in automobiles? And similarly there is competition between dealers even though they maintain prices—a competition in service to their customers that makes or ruins their business, and, locally, the business of the concerns whose cars they handle.

Take hats. Dunlap and Knox derbies are restricted at \$5. You can't buy one for less, yet you can buy a pretty good-looking derby for \$1 and a better one for \$2, and something really good for \$3. But Dunlap and Knox are by no means free from competition. It's a competition of quality. They just put style and goodness into their hats, else men would buy the cheaper ones. They compete with each other and with the imported hats and with, perhaps, some other \$5 hats. They compete with the cheaper hats by offering better style and quality. But it would be absurd to say that hats cost more because Knox and Dunlap don't permit the retailer to cut prices on their goods until the season is over.

To the careful observer there can be but one conclusion as to the merits of the policy of price restriction. That policy means a square deal to the ultimate consumer. It means that one man's money is as good as another's. It means that those manufacturers who adopt the policy must make good goods in order to maintain their prestige, must be ever on their mettle to anticipate competition, must forestall it by making improvements and making them before the other man does. The market is still open for those who do business on the other basis, but if their goods do not equal or better the restricted price goods, the public will buy the restricted price goods.

Competition began with commerce. Competition must continue to exist so long as there are two or more separate concerns manufacturing similar goods for the same market. If one of these concerns makes highly superior goods and is equally alert in its selling methods, it will, by reason of the law of the survival of the fittest, get the big share of the trade. Whether prices are restricted or not has nothing to do with the case further than the fact that the concern that makes the goods of known quality is in a position to make its prices known and stick to them. Having quality, it can afford to compete on a quality basis. No underhanded methods by which one customer is gained at the expense of another need be resorted to.

The price restriction policy means a square deal for the consumer, a reasonable profit to the dealer and a constant effort toward betterment of the product on the part of the manufacturer.—Printers' Ink.

READY FOR BUSINESS.

Ohio Concertophone Co. Prepared to Make Contracts with Dealers to Handle Their Concertophones—Some of the Details.

(Special to the Talking Machine World.)

Cincinnati, O., May 7, 1911.

The Ohio Concertophone Co., owner of the Concertophone, which is being manufactured at Rising Sun, Ind., and will also be partly made at 641 Main street, this city, have just opened up a suite of offices in the Grand Hotel building, West Fourth street.

After having gone through a great amount of experimental work the company are prepared to do business. The officers are: President, John J. Dittgen; vice-president, Otto Zimmerman, music printer of this city; secretary and treasurer, J. F. McFee; and general manager, A. L. Irish. Among the directors are prominent Cincinnatians. Mr. Irish is well known to the talking machine industry, being the one who put the Talkophone on the market at Toledo.

The Concertophone, which will run 25 records, has been tested out for hotels and grill rooms, barber shops and poolrooms, and other places where men congregate. One was recently installed in the lobby of the Gilsey Hotel, Cleveland, and \$8.45 was collected the first day. The one in the poolroom, basement of the same building, averages \$20.40 per week.

DISPLAY AT REAL ESTATE SHOW.

The Columbia Phonograph Co. Made Hand-some Exhibit at the Real Estate and Ideal Home Show at Madison Square Garden Recently.

The Columbia Phonograph Co. had an exhibit of their entire line at the Real Estate and Ideal Home Show, which was held in Madison Square Garden recently. The company occupied a space 17 x 20 feet, on the main aisle, and made a special exhibit of the Grafonolas, particularly of the new \$50 model, which is peculiarly adapted for use aboard yachts, motor boats, in summer cottages and camps. A complete stock of grand opera records, including those by Mary Garden, Fremstad, Cavalieri and others were also featured. The space was appropriately furnished and decorated, as it would be naturally, when such a master in effective display as Hayward Cleveland, manager of the company's Twenty-third street store, is in charge. The latter, by the way, made something of a hit with a special record used by the McKnight Realty Co., to exploit their exhibit. It was kept going constantly in connection with a Grafonola.

VISITORS AT THE EDISON FACTORY.

Among the visitors at the plant of Thomas A. Edison, Inc., at Orange, N. J., recently were: F. H. Van Duzer, Port Richmond, S. I.; H. F. Dutcher and Mr. McManus, Nyack, N. Y.; H. G. Stanton, of R. S. Williams & Sons Co., Toronto, Ont.; F. H. Putnam, of Putnam-Page Co., Peoria, Ill.; O. G. Andrews, with J. H. Barney, Jr., & Co., Newport, R. I.; A. W. Toennies, of Eclipse Phonograph Co., Hoboken, N. J.; W. E. Henry, Covina, Cal.; C. Howell, of Rudolph Wurlitzer Co., Chicago; Rudolph Wurlitzer, Jr., of the same company, Cincinnati, O.; E. H. McFall, of the National Automatic Fire Alarm Co., New Orleans, La.; Louis Buehn and E. B. Buehn, of Louis Buehn & Bro., Philadelphia, Pa.; L. L. Goodman, A. B. Smith, C. E. Robertson and G. S. Schnell, Philadelphia, Pa.; George Weichel, North Wales, Pa.; A. B. Butcher, Camden, N. J., and G. A. Wurtele, manager phonograph department of Gimbel Bros., Philadelphia.

A commercial traveler is on friendly terms with the porter of a sleeping car that he uses frequently. "Well, Lawrence," announced the salesman one morning, gleefully, "I have good news for you. We've had a birth in our family—twins." "Dat am no birth, sah," said Lawrence; "dat's a section."

BUSINESS IN AUSTRALASIA.

Craven-Taylor Co. Achieving Big Success with The Columbia Phonograph Co.'s Line in the Development of a New Market.

Of the many activities of the Columbia Phonograph Co., General, its commercial relations with Australia and New Zealand, through its representatives, Craven, Taylor & Co., headquarters at 226 Clarence street, Sydney, N. S. W., tend to assume remarkable importance, judging by the results that have been accomplished by this progressive firm during the very short time it has represented the Columbia in these two countries.

After scarcely nine months' Columbia business, Craven, Taylor & Co. have found it necessary to secure a long lease of a five-story building giving accommodation for three times the quantity of stock their former Sydney premises allowed, and in addition to this, wholesale premises have been secured in Melbourne to enable them to better care for the trade in that city and Victoria.

These most gratifying results have been accomplished despite the fact that the disc type of machines and records which Craven, Taylor & Co. are pushing the more extensively are but little known, and that the bulk of the dealers are more than comfortably stocked with old-type cylinder machines and records, which have not found an over-ready demand.

Craven, Taylor & Co. are conducting wholesale business only, and have been extremely fortunate in securing very able retail representation in Sydney, the metropolis of the commonwealth, through Cameron & Hill, who have opened a splendid store on George street, right in the heart of the shopping district, where they are featuring the complete Columbia line—disc and cylinder graphophones, double-disc and indestructible cylinder records—exclusively.

A thorough survey of the New Zealand territory, covering both the North and the South Islands, has proved immensely satisfactory, showing strong indications of a steadily increasing market as the Columbia product and the Columbia policy, which is fully maintained by Craven, Taylor & Co., become better known.

The Columbia Phonograph Co. are certainly wide awake to the business possibilities in these two countries and have good reason to expect a steadily increasing business with such a progressive representative as Craven, Taylor & Co., who are thoroughly familiar with local conditions and requirements, to look after their interests.

SLOT MACHINE COMBINATION.

Authorized Capital Will Be \$6,000,000 Stock and \$3,600,000 Bonds.

Allotments to the syndicate underwriting the Autosales Gum & Chocolate Co. have been made, and it is stated that the subscriptions were so large that they had to be scaled down. This company were recently incorporated to merge about thirty different concerns operating slot machines and manufacturing chewing gum and chocolates.

The authorized capital of the new company will consist of \$6,000,000 stock and \$3,600,000 6 per cent. bonds. Not all of that amount, however, will be issued at the present time.

While there are still some details to be closed up in regard to the merger, it is believed that the following companies will be included: Stollwerck & Co., which manufacture and own automatic vending machines operating throughout the United States and Canada; Cogan Gum Co., of Louisville, Ky.; Bon Bon Co., of New York; Bon Bon Co., Ltd., of Canada; Ripe Fruit Gum Co., of Chicago; Newton Gum Co., of San Francisco; United States Coin Lock Co., of New York; Union Vending Machine Co., of New York; Boston Coin Machine Co., of Boston; Franco-Swiss Chocolate Co., Franco-American Chocolate Co., United States News Co., of New Jersey; Green & Fish Co., of Boston; Automatic Beam Scales Co., Grover & Haskell Co., of Boston; Individual Drinking Cup Co., Automatic Vending Co., of New York; Inter-

national Vending Co., Bloodberry Gum Co., Bradshaws, Ltd., Railway Automatic Scales Co., Keystone Trading Co., Royal Remedy & Extract Co., National Automatic Weighing Machine Co., Gum & Sweet Meat Co., Champion Scale Co., Manhattan Introduction Co., and the Gum Supply Co.

THE CIRCULARIZING DELUSION.

Some Pertinent Comments Upon the Waste of Time and Money Spent in Endeavoring to Get Business by Means of Circulars or "Dodgers"—Hard to Kill Superstition.

However open-minded an advertising man may be concerning the proposed second-class postal changes, he cannot help feeling how utterly amateurish has been almost all of the opinions put forward by critics of publishing and advertising.

It was said, for instance, before the close of the recent Congress that it should matter little to the Government even if the proposed tax on magazine advertising did drive advertisers out of the magazines. They would then use circulars, it was blithely urged, and Uncle Sam would get still more postage!

The spectacle of the National Biscuit Co. or the Procter & Gamble Co. circularizing the American housewife through the mails is almost comical if it were not so nearly imbecile. Assemblyman Fry introduced into the New York Legislature recently a bill providing a penalty for stuffing handbills into letter-boxes and doorways. This bill simply represents a now universal distaste for the circular, as well as concern for municipal cleanliness and conservation of energy. In the old days, when circularizing was popular, one of the shrewdest of the circularizers declared that he was perfectly aware that two-thirds of the circularizing was pure waste, but he didn't know how to do any other kind! Needless to say, this same advertiser years ago learned how to do periodical advertising and has long, long ago quit circularizing except through dealers.

The circular sent through the mails is not one whit less of an intruder than the "dodger" distributed locally. It has no standing in the consumer's mind, even if it gets to him. The periodical, on the other hand, is deliberately chosen, sought out and paid for by the reader with the complete understanding that it is to be partly advertising. The fact that the average reader wants his advertising just as much as his reading matter was rather lost sight of in the recent postal excitement.

If advertisers should suddenly, by some unimag-

inable calamity, be compelled to go back to circularizing again, a more severe dent in business progress would be made than any panic which Wall Street gymnastics have ever been able to accomplish. There are still too many who have a hankering for circularizing. A Western manufacturer asked C. M. Post not long ago where he could get a list of names to circularize his product, and Post told him in no uncertain words how mistaken he was and how expensively foolish his proposal. As Printers' Ink aptly says: Old superstitions are hard to eradicate.

HONORED BY HIS ASSOCIATES.

Gift of Handsome Watch Fob with Gold Locket Set with Diamond to Paul H. Cromelin by His Associates of The Columbia Co. Previous to Formally Severing Connection.

On the Thursday before he formally severed his connection with the Columbia Phonograph Co., General, Paul H. Cromelin, vice-president, was presented with a very handsome watch fob, with a gold locket set with a beautiful solitaire diamond. The inside was engraved with the lettering, "Paul H. Cromelin, from His Associates in the Columbia Phonograph Co., Thursday, April 27, 1911."

No formal presentation was made, but the fob was placed on Mr. Cromelin's desk, with a letter signed by everyone of the staff at headquarters, from the junior office boy, all of the young ladies, the heads of departments, with their respective corps, to General Manager Geo. W. Lyle and President Easton, about 55, so that each contributed a share and participated in the graceful tribute. It is unnecessary to add that the recipient was nearly overcome with pleasure when he arrived in the morning and found the gift and what it meant.

Price maintenance is based upon the broad principle that the manufacturer, the jobber and the retailer, are entitled to a just living profit in the sale of a commodity, and it goes further than this: it takes into consideration the consumer.

Judicious advertising does not consist in spending a whole lot of money, but rather in taking advantage of opportunities and making every dollar invested in advertising an actual asset to the business.

No matter how good the line you are selling and how reasonable your prices are, until you enthruse a dealer with the value of your goods and their merits you cannot hope for the largest possible amount of business.

THIS LINENOID RECORDING HORN

WILL DEVELOP YOUR RECORD BUSINESS.

In every city there are hundreds of people who would like to have their voices or music recorded—The Linenoid Recording Horn

MAKES RECORD MAKING EASY—

BECAUSE it is especially designed for that purpose. It is made of pure linen, *seamless*, and has the greatest carrying qualities of any phonograph horn on the market.

This is because of its peculiar textureless and non-metallic construction. It carries to or brings from the record only the pure unmixed sound of the voice or instrument. The length gives carrying qualities and wonderful volume.

Just tell your customers what this horn will do. You will be surprised by the number of people who will want it to make records with. Made of pure linen, moulded in one piece without seam or joint. Size, 25x6, the correct proportion for record making. Don't neglect this feature.

THE PARDEE-ELLENBERGER CO., New Haven, Conn.

The Columbia Grafonola "Regent" has had a high class of business all to itself. It still *keeps* that monopoly; the new "Regent Junior" suits a little different taste, at a little lower price, and takes a little less space.

Columbia Phonograph Co., Genl., Tribune Building, New York

TRADE NEWS FROM BALTIMORE.

Business Fair During the Past Month, but Not Up to Dealers' Expectations—Some of the Alleged Reasons for Dulness—Good Reports from Surrounding Country—What the Various Houses Are Doing to Capture Sales.

(Special to The Talking Machine World.)

Baltimore, Md., May 4, 1911.

"The past month has not been a very lively one with the talking machine dealers in Baltimore," said one of the well-known dealers in speaking of trade conditions with a representative of the Talking Machine World. We expected to have the rush continue until well on into the summer, but it looks now as though we are in for the usual late spring and summer falling off. This is particularly the case with the high-priced machines, which went fine during the fall and winter. In fact, figures show that the past six months have been among the best for the big fellows, while the sales of high-priced records kept up in excellent shape all through the cold months. It is impossible to say what has caused the falling off during the latter part of April and the first part of the present month, unless the unseasonable weather and the various big attractions which have been in progress during the past month have figured against the trade. Baltimore has been the center of many big conventions and other meetings during April and the first section of May, while the races and various Wild West shows and circuses have held the boards. It may seem strange to say so, but it is a fact that the talking machine dealers always suffer when these special spring attractions come to town. Then the weather has been most peculiar and I have no doubt whatever that this has had something to do with the present condition of trade. Personally, I do not look for any big rush again until the Fall, although I expect the Summer trade to be better than it was at that time last year."

This statement about expresses the general sentiment of the local talking machine men. The bulk of the business has been with the small machines, although there has still been a good demand for the high-priced records. Baltimore seems to have become a great city for opera and all the new selections in this line as well as many of the old favorites have been in constant demand.

Manager Laurie, of the local branch store of the Columbia Phonograph Co., stated that while business locally has been more quiet than for several months' past, the reports from the out-of-town sections handled by the local branch have been very satisfactory. Some idea along this line can be gleaned by the announcement of the company's traveling representative who has just returned from a trip through the States of Virginia and North Carolina. He informed Manager Laurie that he had signed up several new contracts while on the trip and that business all through the sections in which he visited was particularly brisk. Mr. Laurie stated that the Columbia Favorites are having a nice run, but there has been noticeable a decrease in the demand

for Grafonolas. The high-priced operatic records are popular, while the greatest hits in the popular song records are those of the airs sung by Bert Williams.

At Cohen & Hughes, who handle Victors, it was stated that the month has not been as heavy in the way of sales as for the several preceding periods. They still look for some good weeks though before the usual Summer lull sets in.

Manager Albert Bowden, of Sanders & Stayman, who handle both the Victor and Columbia lines, announced that the month has not been up to what has been generally desired. He says that he has several good prospects which should help along the Spring trade.

At E. F. Droop & Sons Co., Manager Roberts in his usual optimistic manner, said that while the month did not show up quite as well as March or February, he still looks for good results during the balance of the Spring, and has hopes for the early Summer trade showing up well.

GRAFONOLA REGENT, JR.

Is the Name of a New Style to Be Put on the Market by the Columbia Phonograph Co.

The Columbia Phonograph Co., General, New York, have notified the trade that they have placed on the market the Grafonola "Regent Junior." This machine will list at \$150. In style it resembles somewhat the Regent, though it is smaller in size and without record capacity. Its equipment is a regular four-spring motor with 12-inch turn table and slide drawer, and for the present will be furnished in mahogany only. This new table Grafonola is unique and very attractive. Its size and compactness will be found an advantage which will give it a market where a larger table will not serve, and with all its other advantages and at the reasonably low price they have fixed.

CATCH RECORD THIEF.

Persistent Detective Work Results in Capture of Culprit "with the Goods on Him"—Held for Trial—A Previous Conviction on Same Charge.

The Blackman Talking Machine Co. have solved the mystery of the disappearing records, which has been the source of considerable trouble during the past few weeks, and as a result of some real Sherlock Holmes stuff the gatherer of waste paper who visited the store each morning is now out under bail awaiting trial before the Court of General Sessions. The theft of the disc records, chiefly Red Seal, had reached a point where on several occasions over \$50 worth of records were stolen in one day, so an elaborate trap was laid and the culprit caught in the act after over a week of steady waiting. As he left the store with the records concealed in a large bag with the waste paper two detectives on watch outside made the arrest. All the records were secretly marked in order to avoid all chance of the evidence proving faulty, for in a previous case a conviction was lost owing

to the fact that there was no mark by which the records could be identified as belonging to the company. In a previous record-stealing case in which the Blackman Co. figured the thief was convicted and received a three years' prison sentence.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., May 10, 1911.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

APRIL 18.

Bahia, 65 pkgs., \$2,442; Berlin, 69 pkgs., \$1,604; Bluefields, 3 pkgs., \$136; Brisbane, 14 pkgs., \$947; Callao, 7 pkgs., \$478; Cienfuegos, 3 pkgs., \$119; Curacao, 6 pkgs., \$120; Demerara, 18 pkgs., \$707; Havana, 13 pkgs., \$977; 6 pkgs., \$135; 6 pkgs., \$512; Havre, 3 pkgs., \$307; Iquique, 4 pkgs., \$293; Limon, 2 pkgs., \$101; Liverpool, 6 pkgs., \$500; London, 22 pkgs., \$2,750; 185 pkgs., \$3,438; 55 pkgs., \$2,425; Rio de Janeiro, 62 pkgs., \$4,591; Sourabaya, 23 pkgs., \$851; Surinam, 6 pkgs., \$217; Vera Cruz, 27 pkgs., \$856; Vienna, 12 pkgs., \$120.

APRIL 23.

Barranquilla, 6 pkgs., \$316; Berlin, 26 pkgs., \$585; Buenos Ayres, 19 pkgs., \$1,164; Colon, 9 pkgs., \$161; 4 pkgs., \$160; Gothenberg, 4 pkgs., \$99; Guayaquil, 21 pkgs., \$717; Havana, 2 pkgs., \$397; Havre, 56 pkgs., \$796; London, 2 pkgs., \$120; Macoris, 11 pkgs., \$228; Manila, 112 pkgs., \$5,091; Vienna, 39 pkgs., \$850; 51 pkgs., \$1,806.

APRIL 30.

Berlin, 76 pkgs., \$2,072; Buenos Ayres, 182 pkgs., \$11,527; Callao, 3 pkgs., \$163; Ceara, 16 pkgs., \$887; Colon, 8 pkgs., \$340; Demerara, 3 pkgs., \$150; Havana, 13 pkgs., \$400; 1 pkg., \$102; Kingston, 5 pkgs., \$256; La Guayra, 20 pkgs., \$1,197; La Paz, 8 pkgs., \$584; London, 106 pkgs., \$3,454; Southampton, 2 pkgs., \$127; St. Kitts, 6 pkgs., \$152; Sydney, 76 pkgs., \$3,455; Vera Cruz, 92 pkgs., \$2,859.

MAY 7.

Antigua, 3 pkgs., \$129; Cartagena, 23 pkgs., \$1,290; Guayaquil, 5 pkgs., \$372; 22 pkgs., \$575; Havana, 3 pkgs., \$167; 2 pkgs., \$259; Havre, 104 pkgs., \$1,172; Jacmel, 2 pkgs., \$158; London, 180 pkgs., \$3,659; 12 pkgs., \$297; 1 pkg., \$100; Manzanilla, 2 pkgs., \$416; Milan, 5 pkgs., \$141; Singapore, 1 pkg., \$362; St. Petersburg, 9 pkgs., \$167; Sydney, 1,178 pkgs., \$9,051; Valparaiso, 1 pkg., \$131; Vera Cruz, 136 pkgs., \$4,830.

Thomas Goggan Bros., of Houston, Tex., who handle such well-known pianos as the Chickering, have a handsomely arranged Victor department as a feature of their store. In addition to talking machines they handle a full line of small goods and sheet music.

NEWS FROM SOUTHERN CALIFORNIA.

Trade Rather Uncertain During April—Some Recent Trade Changes—Various Personal Items of Interest—Mischa Elman Proves an Attraction—The Talking Machine in the Mexican Insurrection—Visitors of the Month—New Stores Being Opened.

(Special to the Talking Machine World.)

Los Angeles, Cal., May 4, 1911.

April, which is generally an uncertain month, has been both good and bad. Some dealers have fared well, while others are complaining of a little quietness, which, however, seems passed, since the rainy season is practically over. A few changes are reported in the trade since that writing, among which we find Richard M. Hendee has taken over the business of W. R. Walsh & Co., Otay, Cal., who have handled phonographs for several years. Chas. G. Fairbanks is the successor to Farley & Wilson at San Dimas, Cal.

Ed. E. Parker, of Sisson & Parker, Lindsay, Cal., paid a visit to Los Angeles a few days in view of making several additions to their store and stock.

F. Clausen, of Templeton, Cal., who is an Edison dealer in that city and who never before visited Los Angeles, was a recent caller upon the local jobbers.

R. L. Rochefort, Holtville, Cal., Imperial Valley, visited Los Angeles. Mr. Rochefort has been ill for some time past, but is now fully recovered and is working up a trade in machines and records.

Thomas H. Macdonald, of the Columbia Phonograph Co., has been spending several days in and about Los Angeles. In company with Wm. F. Stidham, manager of the local branch, he has visited many of the adjoining towns. Mr. Stidham reports a splendid trade, especially in Symphony records, which are now being issued by his company.

The recent visit to Los Angeles of Mischa Elman, the famous Russian violinist, is worthy of considerable mention, his appearance here having caused a great demand for his Victor records. Albert D. Wayne, manager of the retail department of the Southern California Music Co., supplied a Victrola and a special selection of records for his use in his apartment at the Alexandria and had the pleasure of visiting him as well as entertaining him in the Victor department. Mr. Elman allowed Mr. Wayne to display his famous \$10,000 Amati violin in the Broadway windows of the company, where it was a great public attraction during his stay in this city. Mr. Elman was detained in Los Angeles several days longer than expected on account of a slight illness. Percy Kahn, his worthy accompanist, who is also known for his assistance in making Victor Red Seal records, was a visitor and shared the pleasure of the Victrola in Mr. Elman's apartments. The instrument was autographed by both Mr. Elman and Mr. Kahn and has been displayed to the many patrons of the talking machine department.

We regret to note the death, during the middle of the month, of P. A. Collins, proprietor of the Pasadena Music House, Pasadena, Cal., which came after a long illness. Mr. Collins was a long established Victor and Edison dealer, which lines were carried in connection with his piano store.

There are two new dealers on Hill street which is now recognized as a new shopping district. These are the Baxter-Northrup Co., 514 South Hill street, Columbia dealers, and The House of Jones, 610 South Hill street, which has a splendid line of Victor goods, including Victrolas and Red Seal records. Both new concerns report gratifying trade.

The Andrews Talking Machine Co., 422 South Broadway, are enjoying a good share of trade and have recently added the Columbia line.

The South Western Sales Co., with offices in the Security building, are doing nicely with the Dictaphone, for which they are agents.

E. S. Deble, of the Southern California Music Co., San Diego, Cal., was presented with a nine-pound baby boy which he intends to make a talking machine man of.

W. A. Voltz, of Thomas A. Edison, Inc.,

is now in Southern California after a long stay in the northern part of the State. He is meeting with prosperity on every hand.

K. I. Okada, 313 Jackson street, is one of the many prosperous Japanese talking machine dealers in this city.

Frank A. Ingersoll, of the Wm. R. Gratz Import Co., who sells talker needles, has his headquarters at 502 Jeffries building, in this city. Mr. Ingersoll has just returned from a trip up the coast to British Columbia.

Geo. P. Austin, of Oxnard, is again breaking records for sales in his vicinity.

Normandie Avenue School gave a delightful May festival entertainment a few days ago for the purpose of raising enough money to buy a talking machine. All told, the school raised \$250.

A. G. Farquharson, special representative of the Columbia Phonograph Co., who has just returned to Los Angeles after an extended trip in Arizona and along the Mexican border, reports the following unique conditions at the seat of war:

"It is a well known fact that the average adobe house of the Mexican peon is severe in its simplicity," says Mr. Farquharson. "A string of chili peppers, a picture of the Saviour and a graphophone constitute, in most cases, the entire furniture. On the occasion of the capitulation of a town or village, some pillaging necessarily takes place, and the Federal soldier or fire-eating Insurrecto has very little use for the chilis, being already well supplied therewith, nor does the emblem of religion tempt him; but a graphophone, to take the place of a much needed band, an instrument whose martial music will enable him with flying colors to march, 'e'en to the canon's mouth,' or whose soft strains of 'La Golondrina' or 'La Paloma' at the bivouac, 'mid camp fires and cigarette gleaming,' will waft him to hacienda and home. Hence it is no uncommon thing to see a fierce Insurrecto, mounted on his sturdy mustang and arrayed cap-a-pied, with a graphophone swinging from his saddle bow, or to find at least one transport wagon of the Federal army loaded with a complete talking machine department."

At Naco, Ariz., a small town on the Mexican border, Jacob Marks, a Columbia enthusiast, entertains Uncle Sam's troopers with a Grafonola Favorite, to whom he has already sold several. At the town hall every week a dance is given and Mr. Marks, attired as Captain Sousa, presides over a "B C" machine, the strains from which entrance the merry couples and waft far away across the line to the land where stalks the spectre of war.

George T. Fisher, of Tucson, whose beautiful music store is the finest in the territory, reports good business in his Columbia, Edison and Victor departments.

Bisbee, in the heart of the copper mines, shows its appreciation of the well stocked Muir Music House.

The Redewill Music Store of Phoenix are erecting a fine \$50,000 building and have planned an up-to-date talking machine department.

B. Tilton, of Prescott, enthuses over the future prosperity of his city and is kept busy supplying his many music-loving patrons.

W. Andrew Jones & Co., of Flagstaff, report brisk business, which is steadily growing.

Among the callers of the month at the Columbia headquarters were: W. F. Kiel, of San Jacinto, Cal.; J. R. Brakey, Ventura, Cal.; Mr. Caldwell, of Caldwell & Thornburger, Whittier, Cal.; C. E. King, Santa Paula, Cal.; Mr. Pendleton, of Pendleton & Clark, Barstow, Cal. All are pleased with business conditions and enthusiastic over the future outlook.

SET THE WIRES AFIRE.

Fire in the office of the United States Telephone Herald on the fourth floor of No. 132 West Thirty-fourth street, at the luncheon hour the other day, blocked traffic on Broadway in the shopping district for over half an hour.

The United States Telephone Herald is a corporation that furnishes musical compositions to subscribers over the telephone. In response to a call, A. E. Memmert, the chief engineer, had just turned on a song called "I'm All Alone," when

there was a flare and an explosion and the wood-work of the instruments caught fire from the defective insulation. Memmert didn't wait to see if "I'm All Alone" had been properly connected, but yelled "Fire!" and ran for an alarm box. The fire was put out with little trouble.

VICTROLA SHIPPED TO INDIA.

The talking machine department of Chas. H. Ditson & Co., 8 and 12 East 34th street, New York, recently made a sale of a Louis XVI Victrola and three hundred Red Seal records to A. W. Ogden, Madras, India. The goods were shipped May 8 in a special zinc-lined case. It was a cash sale, and John J. Wood, the manager of the department, feels a little bit proud of the clean cash transaction.

No great sale has been made without fighting again—and again—until the arguments went home.

THE TRADE IN THE SAINTLY CITY.

Volume of Business During April and for Opening Days of May Pleases Dealers—Much Interest Shown in the Victrola IX—News of the Salesmen and Managers—Considerable Price Cutting Charged by Dealers—Record Noise of Skating Rink for Use in Court—Visiting Dealers Place Good Orders.

(Special to The Talking Machine World.)

St. Louis, Mo., May 8, 1911.

Local talking machine men appear in the best of spirits and speak of especially good business in April and of May opening with a rush and several of them reported sales for May day, which was unseasonable enough to be almost wintry, that were very exceptional for any season of the year.

With the Victor agents the talk is all of what the new Victrola IX will do when it is put on sale. Manager Levy, of the Aeolian Co., wholesale department, said that the new machine was meeting with exceptional demand and that less than 20 per cent. of the dealers had not placed orders. The first shipment of the new machine is due here May 8 and it will require a good many shipments to catch up with the demand already established. "It is the machine we have been wanting for a long time," said Mr. Levy, "and I fully expect that it will set a new record for talking machine selling. We are looking for a big run in our retail department and what the wholesale department will do is already shown by our order books."

Manager Robinson, of the talking machine department of the Thiebes Piano Co., has a large placard in the show window inviting any and all to come in and ask about the new \$50 Victrola. He says that this sign has brought many callers and they have been very enthusiastic when told what was promised and that he has quite a list of persons who are to come for a demonstration as soon as the machine can be shown. "I think that this machine means the end of the horn," said Mr. Robinson. "The hornless machines have proven popular from the first, but the price keeps many persons away from them. This machine comes at a price that is within the reach of scores of persons who can appreciate quality and who have felt that they could not pay the price asked. It will prove a great winner."

L. A. Cummins, who went to the Aeolian Co. as a traveling salesman when that company bought the St. Louis Talking Machine Co., a year or more ago, has resigned. At this writing he is not yet attached, preferring a few days' vacation before he finally accepts one of several places open to him. The Aeolian Co. has not announced his successor.

Thomas A. Edison Co., Inc., have not yet announced a successor to J. H. Allgaier, their traveling salesman in this territory, who killed himself by jumping from a hotel window in Quincy. Mr. Allgaier had been in the local field but about a year, but had impressed the local trade with the fact that he knew his business and had made many friends. It is thought that his determination to die was due to ill health and domestic troubles. His family came here from Philadelphia shortly after he came, but soon became dissatisfied and returned to that city. While here Mr. Allgaier made his headquarters with the Silverstone Talking Machine Co., in this city.

Retail dealers report excellent sales of Easter records, especially vocal selections. Two concerns

which profited greatly by window displays were the Bollman Bros. Piano Co. and the Thiebes Piano Co. The former concern had an especially handsome design worked out in a large window with an abundance of lilies and rabbits and a scroll design and mentioned "Open Ye Portals" and the "Hallelujah Chorus" as specialties. The Thiebes Piano Co. mentioned especially "Jesus Christ Is Risen To-Day" and "Angels Ever Bright and Fair." Both of these houses report large sales of talking machines with good sales of expensive records. Most of these records went for home use, but a greater number than for any previous years were understood to be bought for special Easter services and entertainments.

In speaking of record sales, it is freely commented that there is a lack of educational records to be sold. The correspondence school advertisements have caused many foreigners who own machines to drop into local stores and ask if they have lessons in English grammar for sale, stating that they have seen such lessons advertised for foreign languages, but they would like to get a few for English. In this connection also is the constantly widening field for school work. The St. Louis schools have not yet made the advance in taking up the talking machine that local dealers would like to see, but many teachers, especially high school teachers, are buying machines and are using them to a certain extent with their classes. The feeling is, however, that if there were more records this trade could be pushed harder.

R. E. Thompson, of East St. Louis, has taken a position with the wholesale taking machine department of The Aeolian Co.

Along the line of the interview published in last month's World with a local retailer complaining that the wholesalers were permitting too many neighborhood men to get on their lists as dealers is a complaint from all of the downtown retailers that the neighborhood men have become especially active in price cutting. They say that it is next to impossible to get direct evidence upon which to base a complaint, but that they know from conversation of persons who come to the stores inquiring about machines that they have been offered a cut price on any machine that they select, but that this neighborhood dealer has impressed upon the customer the necessity of saying nothing, and as the dealer is usually an acquaintance or a friend, the customer keeps still, and after examining the machines and mentally deciding which is wanted, leaves the big store to get a \$10 or \$25 off, according to the bond of friendship and the price of the machine. The dealers complain that with the manufacturers keeping prices at narrow margins and the small dealer cutting prices, there is not as much joy in life as there should be with an increasing trade. In this connection, however, it should be said that retail dealers are praising the recent service given them by local jobbers and that the improvement within this calendar year has been especially noticeable.

The Silverstone Talking Machine Co., wholesale and retail Edison agents, had an unusual commission a few days ago in an order to make records of the roller skating noises that reached a livery stable from an overhead rink. The Langan & Taylor Moving Co. keep forty-five horses in a stable at 3313 Olive street and the upper story this winter has been rented for a roller rink. Recently Langan & Taylor have noticed that their horses were ailing and they put the problem up to their veterinary, Dr. S. I. Schwab, who declared it was neurasthenia. Langan & Taylor decided they would sue somebody, the owner of the building or the owner of the rink, and to prepare their case consulted Mark Silverstone and he sent a machine to the stable and got some excellent records of a skating rink. The noise uttered by the machines when these records were put on were truly wonderful. But when the rink folk heard of the noise records (it may be that they were permitted to hear them) they decided to shut down the rink and the case will not go into court, so a jury misses one of the most novel talking machine shows that was ever billed.

Ambassador Conover, of the Talking Machine Co., Chicago, recently spent several days with the trade here.

The Aeolian Co.'s wholesale talking machine department has moved the greater part of the stock into the new quarters at 1009 Pine street, directly in the rear of the main store, but the plans for the new department have not as yet been completed.

Manager C. B. Walthall, of the Columbia Phonograph Co., reports a splendid business for April in all departments of the local store. The \$50 Favorite model, hornless, is living up to its name so well that it cannot be kept in stock and advance orders are booked for both local delivery and shipment. Record sales are especially satisfactory, the Gay, Garden, Baklanoff and Fremstad records proving the leaders.

The Columbia Phonograph Co. supplied a \$200 machine that was offered by the Knights of Columbus for a voting contest at their recent carnival, which ran for two weeks in one of the large halls and drew city-wide crowds. The machine was kept in use during the entire run of the carnival and during the afternoons was the only music in the building and drew many surprised comments as to the satisfactory music it furnished for a large gathering. Miss M. Crowley, of 2940A Clark avenue, was awarded the machine and when she called at the Columbia store to select the library of records that accompanied the gift she expressed great gratification over her prize and commented that she was one of many who learned for the first time during the demonstration of the machine at the carnival that the Grafonolas were really hornless and, in fact, that there were hornless machines that were satisfactory.

Marion Dorian, treasurer and auditor of the Columbia Phonograph Co., spent a week in the St. Louis store in April checking up the books. Upon leaving for Kansas City he expressed his satisfaction at the business gains in this territory.

W. W. Fisher, Columbia dealer at Murphysboro, Ill., was a recent caller in St. Louis.

E. D. Easton, of New York, president of the Columbia Phonograph Co., spent one day in St. Louis in company with District Manager W. C. Fuhri, of Chicago. Mr. Easton came from Kansas City and departed for New York.

Miss A. Traube, of the Traube Furniture Co., of Alton, Ill., Columbia dealers, was a recent caller at the Columbia store here to select an order of records and discuss promotion of record sales with Manager Walthall. She was greatly impressed with the possibilities of the 10-cent demonstration record.

George A. Crisp, recently with the Aeolian Co.'s talking machine department, is now connected with the Columbia Phonograph Co.'s retail department.

THE COLUMBIA POSITION DEFINED.

Manager Lyle Makes a Statement Concerning Recent Talking Machine Litigation.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., in an interview with a representative of The World, made the following statement:

"Our attention has been called to a circular letter recently sent out by the Victor Co. under date of April 12, referring to Johnson patent No. 896,059, covering the manufacture of disc records.

"Some of our dealers have inquired with reference to the effect of this decision on the talking machine industry, and especially with reference to the handling of our product.

"In our opinion Johnson patent No. 896,059 referred to, together with Jones patent No. 688,739, owned and controlled by us and under which the Victor Co. were licensed, means the protection of the American market against foreign manufacture for a long time to come.

"Our trade need have no fear regarding the effect of the decision on our product, as we will now, as heretofore, hold harmless anyone handling goods of any description manufactured and sold by us."

CONDITIONS IN QUAKER CITY.

While Past Month Did Not Come Up to Expectations It Was Better Than Same Period a Year Ago—Buehn & Bro. to Open House in Pittsburg—Dealers Awaiting Victor IX Machines—Excellent Reports from Heppes—Max Landay a Visitor—Budget of Columbia News Tells of Business Activity.

(Special to The Talking Machine World.)

Philadelphia, Pa., May 8, 1911.

The talking machine dealers have felt the April dulness, but not to the extent as the other lines of the trade. Most of the dealers admit that the month did not come up to their expectations, but it was better than April of last year, and for this they seem duly thankful.

The purchasers of records have switched off again from the grand opera music to that of a lighter character, which is as true a sign of the return of spring as the coming North of the robins. The Victor, Edison and Columbia companies have gotten out an unusually attractive list of records, as represented in the May catalog.

Last week the merchants and manufacturers of Philadelphia held another excursion, covering the Lehigh Valley. The Buehn firm were to accompany the excursion as usual as the representatives of the talking machine interests, but Mr. Buehn was unable to go on account of other business, but they sent one of their finest Victrolas along with the part for their entertainment and to exhibit it when possible.

The Buehn firm have arranged to open up a branch house in Pittsburg for the jobbing in that section of the Edison line. Edmund Buehn, a member of the firm, will go to Pittsburg temporarily. Just how long he will stay will depend on circumstances, but he expects to remain until the business is thoroughly established. It will be opened on May 15, and the warerooms will be located at 713 Penn avenue.

The firm are anxiously anticipating the arrival of the new Victor IX. machine, on which they expect some very good results. The advance sale on these instruments has been very satisfactory. The models R and O, reproducers supplied by the Edison Co., have made an emphatic hit. The model R particularly is going to meet with a very large majority of success, Mr. Buehn believes.

E. C. Miller, president of the Penn Phonograph Co., has been elected president of the Philadelphia Stock Exchange for the fourth time. This is an honor which does credit to Mr. Miller.

The Heppes report that business in April in their talking machine end was not quite up to the notch, but then the first three months of the year had set such a pace that they could hardly hope that it was going to continue in the same way during the entire month. "But," as Mr. Elwell, the manager, says, "it was not so bad as to make us put up a holler about it." May has also started a little quiet, but Mr. Elwell believes that it is going to be a very satisfactory month and will go considerably ahead of last year. The business, he says, is more or less spasmodic. For two or three days they will make a "ten-strike," and then it will drop off for a few days, resume and drop in a way that is hardly understandable.

Max Landay, of Landy Brothers, of New York City, was here the past week showing the trade the firm's patent attachment for fiber needles. The dealers generally look upon it as a good thing, and Mr. Landay was very much encouraged over his first trip.

T. K. Henderson, manager of the Columbia Phonograph Co., says that their April business was way ahead of April of last year. He also notes that there is an encouraging improvement in collections. Mr. Henderson made quite an extensive trip among the Columbia dealers, both in this and adjoining States last week. The first week in May, he says, the retail business was a little quiet, but it is picking up again. George W. Lyle, the general manager of the company, was here last week on his way to Chester to visit his son, who is a student at the Chester Military Acad-

emy. Edward D. Easton, the president of the company, was also here last week, as was also C. W. Woddrop, assistant treasurer of the company. R. B. Cope is on the road for the firm and is sending in some good orders. The firm have secured a new Columbia dealer in the West Philadelphia Camera Shop, who are in a position to do much business for the company. They also have several large dealers in contemplation. O. C. Dorian has just returned from a trip to Wilkesbarre, Hazleton and that section, calling upon the trade. Mr. Henderson notes that the Mary Garden records have been wonderful sellers, and also the records made by Guido Deiro on the accordeon, the latter being a feature at Keith's the past week. The records of Amato's voice have also been very much sought after.

SECURE NEW STORE IN SPOKANE.

Kohler & Chase Lease Building Adjoining Their Present Quarters on Sprague Avenue—Plan Series of Talking Machine Recitals.

(Special to the Talking Machine World.)

Spokane, Wash., May 16, 1911.

Kohler & Chase, the well-known piano and music house who handle the Columbia line extensively and who have built up such a successful business in this city, recently closed a deal whereby they secured a long-time lease on the building 816-818 Sprague avenue, which has been handsomely re-

modeled. The work will be completed this week, when the firm will take possession. The deal means annexing the adjoining store to the piano company's present quarters and secures a frontage of 50 feet on Sprague avenue and a total of 10,000 square feet of floor space, over double that heretofore occupied by them, in addition to the ware-house, which will add 7,000 square feet.

It is planned to give talking machine and piano recitals every two weeks. The Columbia department will be in charge of Willis Storms. S. S. Hayes, manager, says that when completed the warerooms will be the most complete as well as the handsomest in the Northwest.

U-S PHONOGRAPH CO. RECORD LIST.

The U-S Phonograph Co., of Cleveland, O., with New York headquarters at 5-7 Union Square, have issued a very complete booklet containing lists of selections including grand opera records by Signor Giuseppe Peratori, tenor; Cav. Carlo Carica, tenor, and Mme. Louise Barnolt, soprano. These artists are represented by selections from all the leading operas in both two and four-minute records. The volume also contains a number of interesting band records, vocal solos and duets, as well as a number of instrumental numbers that must find a large market. Their foreign selections include records in Bohemian, Hebrew, German and Italian, while their line of popular musical is extensive and interesting.

IMPROVE YOUR SYSTEM AND INCREASE YOUR RECORD SALES

BY USING THE BLACKMAN CYLINDER RECORD TRAY

(Patented Dec. 23, 1909.)

A Record Tray With Record Label for Less Than One Cent

The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

THE BLACKMAN FOLDING TRAY USED IN THE SYRACUSE WIRE RACKS

enables you to carry a large stock in a small space, and also use the Rapke Label. We furnish wire racks at regular prices, either wall or revolving style, with opening to accommodate Blackman Trays. Write for prices.

Manufactured by

BLACKMAN TALKING MACHINE CO.

J. NEWCOMB BLACKMAN, Pres. "THE WHITE BLACKMAN" 97 CHAMBERS STREET, NEW YORK

INCREASE YOUR HARMONICA SALES 100 PER CENT.

THE talking machine dealer who is displaying this Hohner Harmonica Assortment realizes that it is the greatest Harmonica selling proposition the trade has ever known, and that he needs only to replenish his stock in order to satisfy the demands made upon him for these goods.

The Assortment consists of a beautiful display stand, lithographed in many colors and gold, together with 12 excellent selling Hohner Harmonicas of various styles and assorted in seven different keys. There are three different assortments, one containing Harmonicas to retail at 25 cents each, one with 35-cent instruments and another with 50-cent Harmonicas. Any one of these Assortments will return 50 per cent. cash profit and you possess a decidedly attractive stand that will last indefinitely.

If you have not received our catalog, we will send you a copy, post-paid, upon request. It will tell you of the many advantages to be gained by getting better acquainted with the world-famous Hohner Line.

OUTLOOK PLEASURES MILWAUKEE.

Some Developments Which Tend to Make Talking Machine Men Optimistic—Many Changes and Improvements in Talking Machine Departments—Player-Piano Used with Victrola Interests at Gimbel Bros.—U-S Phonograph Co. Line Doing Well with Hoeffler Co.—Local Retail Talking Machine Dealers' Association Reorganized—Some Recent Visitors—The News of the Month.

(Special to the Talking Machine World.)

Milwaukee, Wis., May 9, 1911.

Milwaukee retail talking machine dealers are more than pleased at the way business has improved this spring. One prominent retailer goes so far as to say that his trade at the present time is just double that of a year ago. Good weather and a better tone in all lines of business have reacted favorably upon the talking machine field, and the prospects are bright until the hot weather season at least.

Genuine improvement has taken place in the local industrial field, and this has been one of the most potent factors in creating general confidence. Many of Milwaukee's heavy machinery manufacturing plants have been operating at a low stage for several months, and this has meant that hundreds of men have been out of employment. Orders are now coming in briskly at all of these plants, working forces are generally at a normal stage, and the prospects are favorable.

Dealers in the smaller cities and towns of the State are predicting a big season. Crop prospects in Wisconsin were never brighter than they are this spring, and there is every indication that there will be plenty of ready money, much of which will go into the coffers of talking machine dealers. Local Milwaukee wholesalers report that country dealers are ordering well in both machines and records, indicating that dealers have plenty of confidence.

The spring building season has opened most auspiciously in Milwaukee and contractors and architects say that a record number of residences, flats and apartment buildings are going up this season. In view of the fact that practically every talking machine dealer has sales prospects which will be closed just as soon as the prospective customers have completed their new homes, this state of affairs is exceedingly bright.

There has been some complaint in the collection line during the winter and early spring months, but money seems to be easier at the present time. Bankers say that clearings are unusually satisfactory and that the amount of money in circulation about the State is much greater than at this time a year ago.

Several Milwaukee retail establishments have entered upon the spring trade with improved or remodeled quarters. The Joseph Flanner Music House, 417 Broadway, has spent nearly \$5,000 in remodeling its talking machine department. The second floor has been fitted up and at least half given over to this department. New soundproof parlors have been installed, new furnishings purchased, and the stock of Victor machines and records more than doubled. Alfred Hille, manager of the talking machine and musical merchandise departments of the house, announces that particular attention will be paid to the talking machine end of the business and it is expected that the trade will be increased remarkably. The Joseph Flanner music house is one of the best known in Milwaukee, and Mr. Flanner feels that he will be able to build up an extensive talking machine trade. A few machines have been carried on the first floor in the past, but no efforts have been made to accomplish much in the line.

The new parlors of the William A. Kaun Music Co., 209 Grand avenue, have been thrown open to the public under the charge of Joseph F. Gannon, brother-in-law of Lawrence McGreal. The parlors are located on the second floor of the Gram building and are fitted in elegant style. The entire Victor line is carried and an excellent business has been secured in the short time that the department has been opened. Mr. Gannon reports the sale of several Victrolas to well-known Milwaukeeans.

The remodeled quarters of Gimbel Bros.' talking machine department have been completed and more than double the space is now available, making the largest talking machine establishment maintained by a department store. Four new soundproof parlors have been erected and equipped. The acoustic properties of the new parlors are especially fine, and Manager L. C. Parker says that business has taken on a decided gain since the facilities of his department have been increased and improved. Mr. Parker uses the fiber needles altogether and finds that they give satisfaction for demonstration purposes. Mr. Parker has prepared an interesting table showing the exact location of sales made by his department, which is attracting much attention. A large map of the city has been made use of, the location of each sale being designated by colored points.

A. G. Kunde, Columbia jobber, 516 Grand avenue, has improved the exterior and interior appearance of his store at least 100 per cent. by the installation of a handsome new front. Various improvements have been added to the interior, including the installation of a new electric lighting system, and Mr. Kunde says that a steadily increasing business is the result of improved appearances. Mr. Kunde announces that a formal opening will be held in the near future. W. C. Fuhri, of Chicago, district manager of the Columbia Co., was in Milwaukee recently congratulating Mr. Kunde on the steady gains which are being made by the Columbia line in Milwaukee county.

The Columbia Mercantile Co., recently organized, have moved from the Mack building, where they conducted offices, to 829 Winnebago street, where they have opened a new Columbia store. Manager Balsch reports a good business, with prospects fine.

E. F. O'Neil, representative of the Victor Talking Machine Co., was in Milwaukee recently, looking over the remodeled talking machine department of the Joseph Flanner music house. Mr. O'Neil carried away a good-sized order for Victor goods.

An interesting series of concerts is presented to the public daily by L. C. Parker, manager of the talking machine department of Gimbel Bros., who, for the first time in Milwaukee, is using the player-piano as an accompaniment to the Victrola. The experiment is attracting no end of attention and the new Victor recital hall on second floor is filled at the time of each scheduled concert. All the best and newest grand opera records are played. The Angelus player is used in the concert work, and Manager Parker himself generally presides.

The steady increase of business has forced the New Idea Cabinet Co. to seek larger quarters, and they have secured a lease on a factory building at 3306-08 North avenue. The newly acquired structure is 60 x 110 feet, one story and basement, and will permit the company to increase their output to at least 150 cabinets per week. The plant is now being remodeled and the company expects to be located in their new home within a short time. Considerable new equipment is being added, all to

be motor driven, and the plant will be one of the finest of its kind in the Northwest.

"We are meeting with a brisk demand for the 'New Idea' cabinets," said Lawrence McGreal, one of the officials of the company, "and despite the fact that we are turning out 50 to 60 cabinets weekly, we are behind on orders. We are now getting out a new cabinet for the new Victrola IX and hope to have it completed by the time the first consignment of the new Victrolas makes its appearance. We have been securing some fine orders for the Victrola IX and I am doubtful as to whether or not we will be able to secure machines enough to satisfy the dealers."

J. H. Becker, Jr., manager of the talking machine department of the Hoeffler Mfg. Co., reports a successful business in the United States Phonograph Co.'s line. Mr. Becker has secured two new dealers in Milwaukee for this line and their reports are gratifying. Mr. Becker expects that by next fall he will have doubled the business in the U-S machines and records.

The McGreal baseball team, of which Lawrence McGreal, well-known Milwaukee jobber, is president, is still leading all the teams in the Milwaukee city baseball league. The team has all but captured first place in the league for the past two seasons and Mr. McGreal believes that the time is ripe this year for carrying off the banner.

George D. Ornstein, manager of salesmen of the Victor Talking Machine Co., was in Milwaukee recently on business. Mr. Ornstein's mother and sister are residents of Milwaukee.

Leslie C. Wiswell, manager of the talking machine department of Lyon & Healy, of Chicago, was in Milwaukee recently, accompanied by his daughter.

Lawrence McGreal recently made a business trip to Chippewa Falls, Wis., and Winona, Minn., calling upon several of his dealers. By the time this is in print Mr. McGreal will have returned from a short business trip to the East.

News has been received in Milwaukee that the Chippewa Phonograph Co., of Chippewa Falls, Wis., which suffered the loss of its establishment by fire some time ago, has opened up in new and larger quarters. A satisfactory settlement has been made with the insurance companies and the loss not covered by insurance was not as large as earlier anticipated.

The Milwaukee Retail Talking Machine Dealers' Association has been brought to life and has been reorganized upon a firm basis. George H. Eicholz has been elected president, and says that he will prevent the association from meeting with another untimely death. All the dealers in Milwaukee have joined the organization in the belief that co-operation will result in general benefit. Present plans

are that regular meetings shall be held for the discussion of trade topics.

J. H. Becker, Jr., manager of the talking machine department of the Hoeffler Mfg. Co., has issued 5,000 colored postals bearing an excellent view of the interior of the Hoeffler store at 306-308 West Water street. Mr. Becker, as usual, has a very interesting window display at the Hoeffler store. Seven large photographs of Caruso, Melba, Calve, Tetrizzini, Schuman-Heink, Sembrich and Galski have been placed in the window along with a fine showing of Victor machines. An unusually large display of U-S machines and records, together with countless American flags, has been attracting much attention. Recent visitors at the Hoeffler store included: Roy J. Keith, of The Talking Machine Co., of Chicago; Manager Barnes, of the Business Phonograph Co., of Chicago; J. D. Wilde, U. S. and Victor dealer, of Ripon, Wis., and H. H. Lueck, U-S dealer, of Grand Rapids, Mich.

TRIBUTE TO COLUMBIA RECORDS.

Henry Russell, Consulting Director of the Operatic Department of the Company, Writes in Praise of Records by Noted Artists.

The Columbia Phonograph Co. have recently received the following letter from Henry Russell, director of the Boston Grand Opera Co. and consulting director of the operatic department of the Columbia Co., which was written on board of the steamship George Washington on March 30 while Mr. Russell was on his way to Europe:

"In the hurry of my departure for Europe I failed to give you my impression of the work accomplished by the Columbia Phonograph Co. since my association with it in the capacity of consulting director of the operatic department.

"I visited your laboratory and heard the new records of Miss Mary Garden which, from every point of view, were truly a remarkable reproduction of her voice. What was more surprising and of even greater consequence was the fact that her records convey some of the subtle charm of her personality, a proof of the perfection to which your company has brought the art of recording.

"I also listened to new discs by Mme. Nordica, and I congratulate you on the admirable results obtained and the fact that you are the only company that has succeeded in making successful records of this great singer.

"The records of Alice Nielsen, Olive Fremstad and other eminent singers who have sung for you are all on the same level of incomparable excellence. I do not hesitate to say that records of this kind will do more to develop the operatic

taste of the American public than anything I know of."

HANDSOME NEW QUARTERS

Of the Geo. J. Birkel Co., in Los Angeles, Cal.—Entire Floor Given Over to Talking Machine Department—Sound-Proof Booths and Recital Hall Handsome'y Fitted Up.

(Special to The Talking Machine World.)

Los Angeles, Cal., May 6, 1911.

The new store of the Geo. J. Birkel Co. in this city is one of the handsomest on the Pacific Coast, having been designed especially to meet the requirements of the business in which the company are engaged. The building consists of six floors and basement, the latter being given over to the storage and receiving departments. The first floor is occupied by the offices and the musical merchandise and sheet music departments. The remaining floors, with the exception of the third, are given over to the display of the various lines of pianos being handled by the company, while the third floor is occupied entirely by the talking machine department. In the talking machine department there are eleven sound-proof booths and a large recital hall in which weekly recitals will be given, and the whole is fitted up in a most elaborate manner.

PRaise OF EDISON WINDOW DISPLAYS.

The Edison Window Display Department is a most emphatic success. Jobbers and dealers who have used the Edison displays are lavish in their praise not only of their artistic quality, but particularity of the ingenuity of the basic fixtures which are part of the displays. These fixtures are entirely adjustable and interchangeable and permit of the displays—or at least some part of them—being used in any size window, no matter how small or large. The initial displays are still being supplied to the trade, and in such numbers that Mr. Rinehart, manager of the display department, has been obliged within the past two weeks to almost double his working force.

A special Decoration Day window display is being prepared—of a patriotic character, of course, typical of the holiday—and parts of this display, following the idea of economy upon which the service is based, will be used to construct the regular monthly display for the month of June.

M. Gaumont, the French savant, has invented some further improvements in a machine called the chronograph, which consolidates the phonograph and the moving pictures so that their effects are produced simultaneously, the action being suited to the word.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

Chicago Jobbers and Dealers Are Well Pleased with General Condition of Business for the First Four Months of the New Year—Material Gains Shown Over Corresponding Period of 1910—A Larger Trade Movement Expected—The Masses Again Buying Talking Machines—Some Opinions of Prominent Members of the Trade Confirmatory of the Foregoing—Permanent Jewel Needle Co. Takes Over Business of Permanent Needle Sales Co.—Additions to Lyon & Healy Sales Force—Sales Manager Keith's Good Record—News of the Month in Detail.

(Special to the Talking Machine World.)

Chicago, Ill., May 6, 1911.

Local jobbers are particularly optimistic regarding present business. Considering the reports they hear regarding other and even more staple lines of trade, they are decidedly gratified at the showing they are making. The first four months of this year made a material gain over the corresponding period of 1910, and April in some instances is reported as having broken former records for that month. While it is true that the bulk of the business seems to be coming from the larger towns, yet business in the smaller places seems to be reviving to some extent.

Whatever the contributing causes may be, there can be no question that we are on the eve of a larger trade movement in the talking machine field and that there is a keener and more general interest being shown than for a long time. Possibly the introduction of the lower-priced hornless machines may have something to do with it, and it is a singular fact that, notwithstanding the heavy demand for these types, the more expensive machines seem to be in as great demand as ever.

There seems to be a feeling abroad that the masses are coming back as large purchasers of talking machines and that the trade is entering upon a new period of larger prosperity.

April made a good showing from a local retail standpoint, and in one or two instances is said to have exceeded that of February or March. Business so far this month shows the usual effect of the "moving" period, but is fully as active as last year, if not more so.

Wiswell Optimistic.

"It is an actual fact that the talking machine trade is making a wonderful showing, in this territory at least," said L. C. Wiswell, of Lyon & Healy. "All of our travelers have been having the most successful trips for this season of the year that they have ever had, and at the same time they all tell of having listened to tales of woe from salesmen in other lines. Last month was the biggest April we have had. Although shipments of hornless machines have been more liberal of late than for some time, there is still a shortage, and the manner in which the demand is running would indicate that the capacity of the factories will be crowded to the utmost for months to come. The advance orders on the new Victrola IX, \$50 machines, are the largest that we have ever had on any new type which has made its appearance, although we have not yet even received samples."

A Four Months' Record Breaker.

"We have certainly every reason to be satisfied with our business so far this year," said Arthur D. Geissler, general manager of the Talking Machine Co. "Our books show that the first months of 1911 have made a very large increase over the corresponding period of 1907, the biggest year we ever had. Whatever may be the experience in other lines of trade, the talking machine business, at least that of the Victor Co., the only line we handle, is certainly experiencing a demand for phenomenal proportions. Of course, we are working hard and energetically, and the various systems adopted by this company for aiding their dealers in their business, together with our own

specialties, have, of course, much to do with the results."

The company have adopted "Tamaco," a contraction, of course, of "Talking Machine Co.," as a trade name in connection with the "cabinet that matches," and other specialties brought out by them. The latest addition to the line is a particularly handsome new style of cabinet designed to match the Victrola X and XI. An illustration will be found in the company's advertisement in this issue. They are peculiarly attractive examples of the cabinet-making art, are of genuine mahogany, beautifully figured and highly finished. They are equipped with the new Tamaco record album, which needs to be pulled out only a few inches to be opened, are particularly attractive in appearance, and can be supplied by the company separate from the cabinet if so desired. With each cabinet is furnished a Tamaco record index, in full imitation leather binding and cut-out thumb indices.

Co umbia Business Good.

W. C. Fulri, district manager of the Columbia Phonograph Co., reports business with him as excellent. April made a much better showing than they had expected all over the Western and Southern territory. Mr. Fulri made a flying visit to New York a week or so ago. He found everyone enthusiastic regarding conditions, and reporting that Columbia factories were working double shifts to supply the demand.

C. F. Baer, manager of the Chicago office of the Columbia Co., reports that the wholesale business in the territory covered by the Chicago office increased 25 per cent. in volume in April over the corresponding month of last year. Retail business also showed a healthy increase, and the indications are that they will do a much larger retail business in the new quarters at Washington and Wabash than in the new location. "The large number of new Columbia dealers being established in this territory is encouraging," said Mr. Baer. "In the last week of the last month alone we established no less than five new \$500 dealers.

"We are having a remarkable sale on the latest Columbia grand opera records, those by Nordica, Fremstad, Nielsen and Gay. The demand for the various types of Grafonolas is remarkable, the \$200 Regent library table type being still in the lead. The \$150 Mignon is having a wide sale, which is also true of the \$100 Elite model, while the new \$50 Favorite machine is proving an immense seller."

U-S Co. Making Headway.

W. C. Patrick, Western representative of the U-S Phonograph Co. at Cleveland, is conducting an energetic campaign locally from their recently established Chicago warerooms at 219-225 West Washington street. He has put four salesmen out in the city, and reports having already established a number of local dealers.

President Easton a Visitor.

President E. D. Easton, of the Columbia Phonograph Co., spent Tuesday of last week at Chicago headquarters. He was on a trip among the branch stores of the Central West, and was accompanied by Mrs. Easton.

Keith's Interesting Trip.

Roy J. Keith, sales manager of the Talking Machine Co., returned the middle of last month from his very successful trip to the Pacific Coast. He found the Far Western trade doing an excellent business. The Coast dealers, he says, are live wires, all of them. They go after the trade aggressively, carry big stocks, and make forceful displays. Mr. Keith spent a day at his alma mater, Leland Stanford University, and also Sunday at San Raphael, the guest of Peter Bacigalupi. Together they visited Leon F. Douglass, whose beautiful home is also at San Raphael.

Reports Good Edison Business.

A. V. Chandler, who travels Illinois for Thomas A. Edison, Inc., says that there is a distinct improvement in business with the majority of dealers

on whom he calls. "Last year there was considerable complaint, and I seldom find a dealer now that does not speak of having had a very satisfactory winter and spring business. The way orders have been coming forward the past few weeks is exceedingly encouraging. They show that stocks are low and that dealers are looking for good, brisk trade. Dealers have taken hold of the Edison wagon proposition with avidity. A number of the Illinois trade have signed up within the last few weeks, and those who now have the wagons are doing an excellent business with them.

N. G. Kreusch, the Edison traveler for Indiana, was a recent Chicago visitor.

Victor Visitors.

George Ornstein, manager of traveling salesmen for the Victor Co., is on a special trip to Denver, was met here by Mr. Fitzpatrick, the Michigan traveler; Mr. Hipple, the Iowa traveler, and C. L. Price, who covers Indiana.

Sam Goldsmith, district manager of salesmen for the Victor Co., is on a special trip to Denver, Salt Lake City, and other Western points.

Walter Scott, comptroller of the Victor Co., was a visitor to Chicago last week.

Cecil Davidson a Benedict.

Cecil Davidson, of the Talking Machine Shops, and Miss Catherine Madden, who had been George Davidson's assistant at the Jackson street store for some time, were quietly married last month. Mr. Davidson is one of the most popular young men in the retail trade of Chicago, and he has been deluged with congratulations on his good fortune by those who have had the acquaintance of the charming bride.

Good Record Album Business.

Lyon & Healy report an excellent demand for the new disc record album introduced last month and which is described in their advertisement in this issue.

Good Dictaphone Business.

In addition to the big deal made last month in the installation of Dictaphones for the Illinois Central Railroad Co., George D. Smith, who is in charge of the Dictaphone railway department of the Columbia Phonograph Co., has just closed a contract for furnishing Dictaphones to the Chicago & Eastern Illinois offices.

W. W. and E. A. Parsons have closed some big Dictaphone deals recently, and the company's commercial machine business in Chicago is brisk.

New Lyon & Healy Traveler.

H. M. Lansdowne, who has been added to the talking machine force of Lyon & Healy, covering Northern Indiana and Michigan, is giving a good account of himself.

Will Market Direct.

The Permanent Jewel Needle Co., of Highland Park, Ill., who have hitherto distributed their product through the Permanent Needle Sales Co., have taken over the business of the latter company, and will hereafter market the Permanent Jewel Needle for disc machines. The company will manufacture as heretofore at Highland Park, but will conduct general and sales offices at 222 North State street, between Lake and South Water, Chicago.

Seaman's Cincinnati Trip.

F. H. Seaman, assistant manager of the Chicago branch of the Rudolph Wurlitzer Co., has been spending the week at the Lane headquarters in Cincinnati. The company, like the other jobbers, report a very satisfactory talking machine business. In the retail department the sales force has been considerably increased, and Manager L. Kern Cameron reports a greatly increased business as compared with last year.

The Wade Fibre Needle Cutters.

The Talking Machine Co., of Chicago, have just placed on the market a new fiber needle cutter, shown in an illustration appearing elsewhere, and which is the invention of Mr. Wade, who is in charge of their repair department. As will be seen

(Continued on page 44.)

The "Tamaco Cabinet That Matches"

Here is something absolutely unique!

CHARGE 12 PER CENT. INTEREST.

How Utah Credit Men Manage to Have Bills Met Promptly.

Those who have difficulty in having their bills met when due and often have to carry the purchaser along for a considerable time after the limit of credit has expired should be interested in a recent move of the Utah Association of Credit Men, whereby the members of that body have agreed, and what is more, hold to the agreement, to charge 12 per cent interest on all over-due accounts. The important part of the matter is that the ruling has had the effect of reducing the number of delinquents materially and has proven most satisfactory. There is little doubt, however, that the strength of the organization back of the movement has contributed in no small degree to its success, for to get on bad terms with one credit man means that the retailer or consumer gets on bad terms with the association as a body.

ANENT THE JOBBERS' CONVENTION.

Arrangements Nearing Completion for Meeting in Milwaukee in July—The Present Program—Record Attendance Expected—Many Matters of Importance Will Be Discussed—Special Rates Secured for Hotels—Something of the Convention City Itself—A Few "Roushisms" That Make Time y Reading.

Preparations for the great convention of National Association of Talking Machine Jobbers, to be held at the Pfister Hotel, Milwaukee, Wis., July 10, 11, 12 and 13, are rapidly nearing completion.

Much interest in the convention session will center in the many important questions that are now pending before the talking machine trade.

Chairman McGreal, of the arrangement commit-

PFISTER HOTEL—CONVENTION HEADQUARTERS. . .

tee, has things well in hand, especially the banquet. He has appointed various committees, who have charge of each day's doings. This will assure an event brimful of special features and interest. There will be something doing every minute, as you will see from the following program:

First Day, Monday, July 10.

- 9:00 a. m. Getting acquainted.
- 11:00 a. m. Special address of welcome by Mayor Seidel.
- 12:30 p. m. Luncheon.
- 2:00 to 4:00 p. m. Association meeting.
- 6:00 p. m. Dinner.
- 8:00 p. m. Theater party (special).
- 11:00 p. m. to 4:00 a. m. Palm Garden (special program).

Second Day, Tuesday, July 11.

- 10:00 a. m. Visit to Milwaukee breweries in automobiles.
- 12:30 p. m. Luncheon.
- 2:00 p. m. Boat ride on Lake Michigan; meeting of association on boat; lunch and refreshments. Return at 7:00 p. m.
- 9:00 p. m. Dreamland—a beautiful Milwaukee resort.

blocks of the Pfister, while the Republican House is nine blocks from the Pfister.

It behooves the various State commissioners to urge every association member and those jobbers

and distributors who are not members to be present at this convention.

Milwaukee is centrally located and can be reached easily from the North, East, South and West, hence no one has an excuse for not being in attendance.

Everyone should not fail to arrange a liberal stop-over at Chicago, as there are many points of interest in and around Chicago that are well worthy of seeing.

Milwaukee, the metropolis of Wisconsin, is a city with a population of about 400,000. In a business way, Milwaukee may be classed as an industrial city. While its jobbing interests are large, the basis of its strength is in its manufacture. It leads the country in the manufacture of machinery, household tinware, tanning, brewing, etc.

Milwaukee is a beautiful city. It is located on the bluffs overlooking Lake Michigan, on Milwaukee Bay, a beautiful sheet of water bent like a curve in horseshoe form, which has often been likened to the bay of Naples. One may drive for six miles along the shore of the lake on the high bluffs, beginning at Juneau Park and ending at Whitefish Bay, one of the most beautiful drives on the American continent. The city is fringed by a belt of parks, Lake Park, on the northeast corner of the city, being one of the most beautiful. Among the other parks which are worth a visit are Lindworm Park on the upper river; Washington Park on the west side, and Mitchell and Humboldt Parks on the south side.

A spot which is always of interest to visitors is

HOME OF MILWAUKEE YACHT CLUB.

the National Soldiers' Home, just on the western suburbs. Here on a broad tract of five hundred acres of park land are numerous buildings in which are housed 2,500 veterans of the Civil War, where they receive every care and attention from the United States Government. Band concerts are given in the afternoon during the summer, and the Soldiers' Home is well worth a visit.

Secretary Roush is sending out some very interesting as well as spicy talks on "Why Every Member of the Association Should Be Present at the 1911 Convention."

Don't disregard his epistles, for they bear reading and rereading. Food for thought in them all.

—ROUSHISMS.

"An optimist is a man who doesn't care a rap what happens, so long as it happens to the other fellow."

"It was worth the price of admission to see that 'Crowd' speeding toward first base when Moffitt gave the Milwaukee Baseball Magnate a free ticket."

"The Chalfonte was a fine place, but—Oh. You Regular Places."

"It was probably the size of his 'assist' that saved Dolbeer from the mob's violence."

"If you have appendicitis you don't go to a cheap surgeon to be operated on. When your business has the appendicitis, for Heaven's sake, don't go to a cheap advertising surgeon to have it operated on. Have one with brains and skill—forget the few cents you may save on his services. In other words, get wise and attend the National Association of Talking Machine Jobbers' Fifth Annual Convention, and Protect your talking machine appendix."

"Testimony by Rapke: 'I suffered from monkey-hydrophobia, was dragged from a state of coma by a liberal absorption of Roush Hot Air Tablets, made old Vienna on crutches, and after twenty-four hours of Convention treatment—to sea with the crutches, and hence I became almost human.'"

"There is a Reason for Everything, but we wonder why in Blazes they make Ginger Ale Bottles round on the end."

"Round bottomed bottles are barred during the Convention."

"Experience is the name everyone gives his mistakes."

"CREATIVE ADVERTISING."

This Was the Subject of the Very Interesting Address Delivered by H. C. Brown, Advertising Manager of the Victor Talking Machine Co. at the Last Quarterly Meeting and Dinner of the New York Piano Manufacturers' Association.

At the last quarterly meeting and dinner of the New York Piano Manufacturers' Association, April 19, at the Murray Hill Hotel, New York, on special invitation H. C. Brown advertising manager of the Victor Talking Machine Co., Camden, N. J., delivered the appended address on "Creative Advertising."

"I believe all advertising is creative if it is honest. Advertising must be honest in order for the goods to live, and anything creative must live. You, as piano manufacturers, have many problems, and many of them are different from ours in the talking machine field. One of your greatest problems is that of price maintenance. Let me tell you that we—the Victor Talking Machine Co.—are probably the one-price house of the world. Every one of our dealers knows that our goods are placed in his store at one price and that they are going to move out at another price. He knows that these prices are the same for all dealers; that no other dealers can sell for less. He knows that he is protected in these prices; that he is safe. I believe that this policy has upbuilt the Victor Co. to the point where it now is. That is one thing.

"Again, our advertising has always been creative; it has never been anything else. It has been honest. We have never misrepresented. We have always tried to give more than could be expected of us.

VICTOR USERS!
PROTECT YOUR RECORDS FROM GETTING SCRATCHY

Patented June 28, 1910
Dealers should Use the

Velvet Tone Needle Balance

On All Demonstrating Machines and Victrolas

The "Velvet Tone" will reduce your operating expenses—for it protects your record stock from injury or careless handling, especially when playing for customers.

No separate demonstrating sets of records necessary when the "Velvet Tone" Needle Balance is used.

Your customers will buy the "Velvet Tone" after seeing you use it, especially because it prevents wearing out their records.

Price, Mailed (Postpaid) \$2.00. (Gold Color or Nickel.)

For sale at all Victor Talking Machine Stores. Send for illustrated circulars. Discount to the Trade.

A. D. Macauley, 714 Walnut Street, Columbia, Pa.

That has been the policy and practice of the house. One of our secrets of success is that no matter how great the expectation of the purchaser of any of our products, we try to have him find more in it or get more out of it than he has expected. When he buys he will be surprised and pleased. He will tell his friends. They in turn will become patrons and tell others. It is the nearest approach to an endless chain I know of.

"In this connection I believe you have a responsibility resting upon you to assist in raising the United States as a musical nation. I believe you should, each of you, do some creative advertising and impress upon the public the great power and potentiality of music for pleasure and good. There are a great many silent pianos—pianos bought as ornaments, stuck in the parlor and left untouched. This should not be, and it can be changed by advertising.

"I think you will bear me out in the statement that a good deal of piano advertising is not honest, and that it is the dishonesty in advertising and some trade customs that is working great harm to your big industry. The fact that pianos are sold at any old price is working great detriment. When Mrs. Smith, say, buys a piano at \$290, and a neighbor of hers who is a better bargainer gets the same piano for \$225 the neighbor is going to let Mrs. Smith know all about it, and Mrs. Smith is not going to be pleased, either, with the piano or with the dealer.

"I believe creative publicity would greatly help the player-piano industry, which now occupies so large a portion of the entire piano industry. It seems to me a great mistake for dealers to handle so many different pianos. According to my observation, most dealers handle from six to eight different kinds. I believe this is wrong. Three grades ought to be better—a high-priced, medium-priced and low-priced instrument. If the dealer would concentrate on these, I believe he would do better and that it would be better for the manufacturers.

"I notice that many pianos are distributed through an exclusive territory arrangement. That is not a practice of ours. It has been our experience that where we did this we suffered for it. As soon as the dealer found that he was protected in his territory he lay down. When we put a second dealer into the territory, dealer No. 1 woke up at once, with the consequence that both dealers did a large business—more than double that of the first. I am sure that this general condition in the piano trade could be corrected by creative advertising—advertising, that is to say, which creates new interest and new patrons.

"It is true, as your president, Mr. Lawrence, says, that the Victor Co. is 170,000 instruments behind in their orders to-day, and that 70,000 of these are the Victrolas, which are priced at \$200 each. This is because we have manufactured the very best instruments it is possible to make, and told people about them. One of our dealers in New York City pays a rental of \$25,000 a year and maintains an expensive organization. You can understand that he must have to sell a good many instruments to do that.

"Our business has been a feeder to the piano trade, although some of you feel that your business has been a feeder to us. We do not feel that we have hurt the piano business at large, but, instead, helped it a great deal by enlarging the number of music lovers. We know we have helped piano dealers financially by helping them over dull seasons in the piano business, and bringing to their stores a class of trade which otherwise would not have come.

"In conclusion, all advertising is good. Only dishonest advertising reacts. It is one of the best possible investments that any man can make. In closing, let me cite one instance of how a firm started a business on a small scale and have built it up in a short time to a tremendous industry. The Cudahy Packing Co., Kansas City, put the 'Old Dutch Cleanser' on the market less than ten years ago. The total investment required was not more than \$100,000 or \$200,000, but you couldn't buy that business to-day for \$10,000,000. If they could do it, I believe you could accomplish similar results also in the same length of time."

Your jobber holds the reins

of your progress along the road to success. If he has not the ability to handle your orders properly, your progress will be slow. We will give you service that will send you along at a gallop.

A jobber who fails to fill orders promptly places your business in as much, if not more, danger than his own. There is no more certain way of driving your customers to your competitor than your failure to fill an order when promised. Neglect on the part of your jobber may be responsible, but your customer does not look that far. He blames you.

The orders we fill are never late or bungled, and, no matter of what size, are given the same careful attention. We ship every order the same day it is received.

If you want to please your trade all the time let us be your source of supply. Victors, Victor-Victrolas, Victor Records, record cabinets, horns, needles, repair parts and accessories of every sort, always on hand. No delay while we "send to the factory."

Give us a chance to prove these assertions, and you will congratulate yourself. At any rate send for our catalog, and our booklet: "The Cabinet That Matches."

CINCINNATI'S SUMMER TRADE

Promises to Be Active Owing to the Demand for Records by Campers—Trade Is of Fair Volume with Excellent Prospects—Victrola Concerts in the Home—Grand Opera Records and High Priced Machines Have Call.

(Special to the Talking Machine World.)

Cincinnati, O., May 8, 1911.

Although the summer season has been somewhat delayed by the inclement weather, the campers are already preparing their plans and at all the talking shops one hears of the visits of those who adopt the "back to the simple life" method during the heated season. There is every reason to believe that more machines will be used in the Middle West by campers this year than ever before. None of the dealers have made any special effort towards reaching this class and it appears that the demand is a genuine recognition of the merits of the "talker" as an amusement device. Business in general appears to be fair, the demand being greater for machines than records.

"April business has been like April weather," said Manager R. J. Whelan, of the Columbia Phonograph Co., "plenty of sunshine and plenty of showers, but take the month as a whole in all departments, retail, wholesale and Dictaphone, the business shows a substantial increase over April of last year.

"The new grand opera symphony records by Nordica, Fremstad, Mary Garden, Baklanoff, Maria Gay and Alice Nielson, have played a very important part in the record trade. The piano records by Scharwenka have had an enormous demand, and large express shipments from the factory have been necessary to keep up with our orders for them. Another record that has proven unusually popular is 'Schubert's Unfinished Symphony,' A5267, 12 inch blue label, which has taken well with all classes of trade."

The new "concert grand" reproducer is attracting much attention, many pronouncing its repro-

duction the most perfect they ever heard. Several very interesting sales have been made of the Grafonolas in April, the Grafonolas Regent and Favorite being the most popular instruments in demand.

The wholesale trade is more than holding its own; many dealers have been in the store recently inspecting the latest line of Grafonolas and graphophones, selecting what they desired while there. C. F. Brower & Co., one of the largest and best known furniture firms in Lexington, Ky., have just put in their complete line of Grafonolas and high grade records. They pronounce their opening a big success and say they are going after the business in the "Blue Grass" country.

C. G. McNeill, manager of the Dictaphone department, states things are moving nicely, and he has several large deals on hand.

The following gives one an idea of what is being done at the Victor department of the Aeolian Co.: "Our plan of giving complimentary Victrola concerts right in the fashionable homes in the evenings is working out just fine," says Manager Ahaus. "One recently given for the Schuster School of Dramatic Art and Expression was unusually interesting from an educational standpoint as well as a producer of sales. We undoubtedly impress our guests in their most receptive mood and believe more seriousness is indulged in than during a demonstration (commercially given, as a rule) in the store. While the salesman tries to impress most favorably the artistic virtues of the Victrola during business hours, there is always that tendency of the customer to have as little time as possible, while at a concert your patrons come for the express purpose of hearing the Victrola, which is decidedly a pleasant advantage. We have had several concerts in the past two months, for which the host had very beautiful programs printed, and the intense interest and enthusiasm manifested by our listeners is bound to have a telling effect for us. Business generally has been fair and we have added H. B. Drabelle, formerly with the Rudolph Wurlitzer Co., to our forces."

The talking machine department of the Rudolph Wurlitzer Co. report a most satisfactory April business directly traceable to increased efforts along these lines: Window displays have been excellent. "The Pink Lady" window installed on the 27th is one that has been universally admired. A life-sized picture of a lady in pink forms the center piece of the window, while the background and floor draperies consists of pink silk. A scroll studded with electric lights and two handsome Vernis Martin Victrolas complete an artistic display.

The record business, which was somewhat slack early in April, picked up so that the delivery department was forced to supplement their messenger calls with assistance from the telegraph company later in the month.

A number of Victrolas were sold and the trade in small sized Victrolas for summer camps has already made itself felt. "The Pink Lady" records created an immense sensation and for the last few days of the month the talking machine department was congested with record buyers.

The advance orders for the new Victrola IX. have been very favorable, which indicates that this new style will be popular with the trade.

John Arnold, 507 Elm street, is doing some billboard advertising about the city and is feeling the effects of this method of publicity. He reports a good demand for complete outfits during April, particularly in the Edison line.

Quite a number of machines were sold at J. E. Poorman's place during the month just brought to a close. Poorman during April used a new method of reaching the trade. He carries in addition to phonographs a line of bicycles and mailed 5,200 letters from the Covington post office to prospects in this city, reminding them of the enjoyable days of old on old trips and casually mentioned "that phonographic concert we heard." It has brought results far beyond the dealer's anticipation.

W. E. Pelton has been placed in charge of the talking machine shop of the Lyric Piano Co. in this city.

New Idea Record Cabinets for Victrolas X and XI

A Beautiful Piece of Furniture

You will sell one every time you sell a X or XI. One dealer in Milwaukee has sold thirty-six New Idea Cabinets since February 15th. Another sold 11 during the same period. Every Distributer, so far, to whom we have made shipments, has sent duplicate orders. This looks like it's selling some, doesn't it?

Finished in Mahogany or any style Oak, to match X or XI Victrolas; Capacity, 140 ten or 12-inch records.

Weight, crated, 80 lbs.

The Sliding files are indexed and are faced and finished in wood to match the cabinet. They can only be drawn out far enough to admit taking out and replacing records.

Write for Catalogs, Prices and Discounts.

it *ought* to be: It safeguards our dealers
against unfair competition.**

Columbia Phonograph Co., Genl., Tribune Building, New York

VICTORS FOR THE SCHOOLS.

Recently Organized Educational Department of the Victor Talking Machine Co., Under the Direction of Mrs. F. E. Clark, Begins Operations—Some Points Brought Home to the Dealers Regarding Their Opportunities in That Direction.

The Victor Talking Machine Co. have launched their latest campaign, which has been carefully worked out, for the installation of talking machines in the public and private schools of the country, and in view of the tremendous strides made by the talking machine as an educational factor, up to this time, it seems as though the new campaign cannot fail of success.

In a recent letter to the trade the Victor Co. have the following to say regarding their latest move and what it means to the dealer:

"The Victor in the public schools is assured. In the cities of Chicago, Minneapolis, Milwaukee and many others they are already a most important feature in the school curriculum, and we are simply overwhelmed with inquiries from schools in every section of the United States.

"To develop this immense business, which at present is coming to us practically without solicitation, we have inaugurated an educational department, and have placed at its head Mrs. Frances Elliott Clark, one of the most brilliant women in the educational world of America.

"Mr. Clark resigned as supervisor of music in

the public schools of Milwaukee, Wis., to enter upon this great work, which she is well qualified, by many years of successful experience as supervisor and lecturer on musical topics, and by wide acquaintance with the supervisors of the country and school conditions generally, to carry to a successful issue in every detail.

"The problem of ways and means of using the Victor to advantage in schools has been admirably demonstrated by Mrs. Clark, and she will undoubtedly organize such a campaign as will result ultimately in placing a Victor in nearly every school in the country."

A special school information sheet was enclosed with the letter to be filled out by the dealer, and giving detailed information regarding the schools which have already purchased Victor machines or Victrolas and the names of those in charge. These sheets are to be returned, filled out, to the Victor Co., who through their educational department will take up the subject of music study by means of the Victor with the school authorities and thereby materially increase the business of the dealer in that particular direction.

The Victor Co. have also issued a folder which explains to the dealer just how the Victor fits into the musical departments of the schools and how the fact may be brought home to those in charge. One of the most convincing paragraphs names a few of the things the Victor can do for the schools, which are given as follows:

Sacred songs for opening of schools.

Marches for assembling and recess use.

March, waltz and two-step rhythms for calisthenics and gymnasium work.

Illustrate the different instruments of the band or orchestra.

Illustrate the kinds of voices: soprano, alto, baritone, tenor and bass.

Teach a great number of old familiar American songs right from the record.

Teach a great number of folk-songs of other lands from the voices of artists.

Study aria, recitative, art song, oratorio and opera.

Give five complete operas and numerous excerpts from a hundred others.

Give concerts especially arranged for parents.

Give social center dances under proper conditions.

Bring to the hearing of the children the marvelous art of the greatest singers in the world, in the greatest songs ever written.

"The possibilities are boundless," say the company. "Just as fast as the school people can be informed of the uses of the Victor they will put them in. Who will make the sale? You? If you do not see the sign-board pointing the way to big business, some other fellow will get busy.

"Do not be put off because the school year is nearing its close. Many will buy for use during the closing exercises, and the bright dealer will make his demonstrations now, get a promise and a big list of prospects all worked up for September 1."

VICTOR AT IDEAL HOMES SHOW.

Very Effective Display Made by J. T. Bremner of the Bremner-Chalmers Co.—Sold a Number of Victrolas—Bremner-Chalmers Co.'s Business to Be Reorganized.

J. G. Bremner, of the Bremner-Chalmers Co., who have a store in New York and another in Brooklyn, exhibited a line of Victor goods on the balcony of the Ideal Homes Show, recently held at Madison Square Gardens, New York. It was in the personal charge of Mr. Bremner and his sales were very gratifying. He sold a Victrola XVI to a prominent real estate concern, who made effective use of it in connection with their exhibit. Mr. Bremner, who has bought out the interests of Mr. Chalmers, will reorganize the concern under a new name with increased capital. He also handles a full line of small goods, and has recently added pianos. A new place will be opened in Cranford, N. J.

WHERE ADVERTISING PAYS.

There is one way in which advertising helps the salesman, and that is, it helps to sell the finer, better grade of goods—the more profitable products of the factory. When it comes to casting up salesman's accounts at the end of the year, not only are his salary and traveling expenses and amount of sales taken into consideration, but the amount of profit that he made is probably the determining factor in rating him for the next year's business.

PROTECTION

Regina Pneumatic Cleaners

are manufactured under the Kenney (Basic) Patents, insuring ample patent protection to all dealers who handle them. They are licensed to be sold at a reasonable and uniform restricted price which allows the dealer a nice margin of profit.

They are extensively advertised in the principal magazines for the benefit of the trade, and inquiries are referred to dealers whenever possible.

REGINA PNEUMATIC CLEANERS all have *double suction pumps* and are furnished in hand operated or electric models.

They are easy to operate and easy to sell—built for long and hard service and fully guaranteed.

NOW IS THE TIME to get started in the Vacuum Cleaner business.

If your jobber does not carry REGINAS write to us for full particulars.

The proposition is an inviting one.

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

The Charm of a Talking Machine or Phonograph is real Music, this can be realized with a

"Music Master Wood Horn"

The authorities have long recognized that the MUSIC MASTER WOOD HORN meets the demands as an amplifier of Musical Tones of a Talking Machine. It offers by far the best value of any Horn in the market. There are no shams, no cheapness, no concealed faults in any part of the MUSIC MASTER WOOD HORN. Besides, this is the only HORN which carries a *GUARANTEE*.

It has paid Jobbers and Dealers and it has paid us—this our policy of always holding quality above sales, and worthiness above price. Show the MUSIC MASTER to your customer. They will tell you that there is not a more honest or more beautiful wood horn made than the MUSIC MASTER.

Should your Jobber be unable to supply you, write us at once.

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

HORACE SHEBLE HONORED

By the Heads of Departments of the American Graphophone Co. Upon His Return from Europe—Novelty Offered by Means of Grafonola-Mignon—Interesting Speeches Made.

(Special to The Talking Machine World.)

Bridgeport, Conn., May 6, 1911.

Last Friday night the heads of departments of the American Graphophone Co. gave a banquet in honor of the return of the factory manager, Horace Sheble, who has been traveling in Italy, Switzerland and southern Europe for the last two months. The table was tastefully decorated with flowers and national colors, and the menu suggestive of the places he had visited.

One of the unique features of the dinner was music by the Grafonola Mignon. The records consisted of choice selections by talented artists, descriptive of the people Mr. Sheble had been among. The musical selections referred to started

with "My Mariuccia Take a Steamboat." As his first landing was Gibraltar, in Spain, the "Toreador Song" was given suggestive of this first country; "Visions of Salome" and "Bedouin Love Song" as suggestive of Algiers; "Ave Maria," "Carnival of Venice" and "La Forza del Destino" typified Italy; a Swiss yodel, as well as overture from "William Tell," for Switzerland, and "Marsellaise" for France, ending with "Take Me Back to Old New York" and "Home, Sweet Home."

After the dinner was over a little "talkfest" followed and this was started off with a record by Bert Williams, "You Are Going to Get Something You Don't Expect."

Short speeches of welcome were made and humorous happenings which occurred during his absence related, to which Mr. Sheble replied in an interesting description of his journey. Mr. Sheble had with him a large number of photographs which he had made at different points of his trip, and as he described scenes and places in a very entertaining and personal way, the photographs were

circulated around the table and examined by each one.

H. A. Budlong, executive officer, acted as toastmaster. The front cover of the menu card was decorated with blue label double disc records in reduced fac-simile, one selection being "Home, Sweet Home," and "I Was Happy When the Band Played Dixie" and the legend "Hail to the Chief." The back cover was similarly decorated, the selections being "Say Au Revoir, but Not Good Bye" and "Sing Me to Sleep, the Shadows Fall."

The unique menu is appended: "And bring hither the fatted calf, and kill it; and let us eat and be merry; and they began to be merry." Vesuvius cocktail (golden oak or mahogany), Mediterranean oyster cocktail, chicken-okra, a la Dago (Italian colors), River, Po planked shad, Nile-green cucumbers, chicken Pompeii—Sicilian peas, filet-mignon—Vatican, hearts of lettuce—French dressing, Spanish ice cream, a la Gibraltar, Swiss cantons—Alpine icing, north African coffee, Florentine cigars, Venetian cigarettes, smuggled beer.

The toasts are subjoined: H. A. Budlong, toastmaster, permanent address: Missouri; J. I. Brereton, "If you want to know who's boss start something;" F. L. Capps, "Life is one demnition grind and yet I still press on;" W. E. Parker, "E'en tho' it be the just estimation of a hair, thou shalt by the laws of Venice hang;" R. L. French, "My orders are to rush;" W. P. Phillips, "It's up to me to raise the devil;" W. S. Tyler, "Whose chemistry could quickly tell who's fit for heaven and who for h-1;" Chas. Morison, "Our records, like the hairs of our heads, are all numbered;" A. C. Wright, "It is naught, it is naught," saith the buyer; Homer Reid, "Pass the hat for your credit's sake and pay, pay, pay;" Horace Sheble—from a far country, "Tell us about it."

THE REGINA LICENSE

And the Conditions Under Which the Regina Pneumatic Cleaners Can Be Sold May Interest Trade.

The Regina Co., of New York City, are doing an immense business with their Regina pneumatic cleaners. These specialties appeal especially to talking machine dealers as a profitable side line—one which will pay them well and also interest visitors to their store. The copy of the license issued in connection with the Regina pneumatic cleaners, and the conditions under which they are sold are herewith set forth:

"This machine is covered by United States patent No. 847,947, dated March 19, 1907, and is licensed under the following restrictions controlling this and also all future sales and use thereof; any violation of these license restrictions revokes and terminates the license for use of this and all other Regina pneumatic cleaners in violator's possession and forfeits the title to said machines to the Regina Co., and also subjects the violator to suit for infringement of said letters-patent. Any purchase is an acceptance of these conditions.

"Conditions.—Dealers may advertise, sell and dispose of this machine only at the price and conditions established by us; nor is any discount, rebate, premium, donation or bonus to be allowed or given in connection with any such sale; this notice must not be removed or defaced.

"No guarantee given by us shall be valid in case of violation of any of these restrictions."

THOSE WHO SUCCEED.

The men whom I have seen succeed best in life have always been cheerful and hopeful men, who went about their business with a smile on their faces and took the chances and changes of this mortal life like men, facing rough and smooth alike as it came, and so found the truth of the old proverb, that good times and bad times and all times pass over.—Charles Kingsley.

Advertising is news—news more vital to the family than nine-tenths of the so-called news that goes into the newspaper.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)
Washington, D. C., May 8, 1911.

SOUND-BOX FOR TALKING MACHINES. Alex. Fischer, Kensington, London, Eng. Patent No. 989,139.

This invention relates to bearings for mounting a stylus on sound boxes of talking machines, and has for its object the improvement of the bearings and coating parts described in former Patent Number 904,523, November 24, 1908, sound boxes for talking machines.

In former patent above, the spindle c is mounted in brackets b provided with bearing surfaces concentric with the curved portion of said spindle c and the centers of which lie within said spindle. In the present improvement, however, there is substituted for those other curved surfaces with their centers outside of the spindle c, as will appear below.

Figure 1 is a front elevational view of a sound box with improvement applied thereto; Fig. 2 is a side elevational view of the parts shown in Fig. 1; Fig. 3 shows a modified form of construction according to the present invention; Figs. 4 to 7 show details of the bearings, and Fig. 8 shows a perspective view of the stylus and associated parts.

SOUND-REPRODUCING OR SOUND-RECORDING MACHINE. George H. Underhill, Boston, Mass. Patent No. 989,737.

This invention relates to improvements in sound-reproducing and sound-recording machines. While applicable in many of its features to sound-reproducing machines of various types employing but a

single record, it is directed more particularly in certain of its features to multiple record machines or those wherein there are employed a plurality of records adapted to be brought successively into reproducing or recording relation to suitable reproducing or recording mechanisms.

This invention will be best understood by reference to the following description, when taken in connection with the accompanying illustration of one specific embodiment thereof selected for illustrative purposes only.

In the drawings, Figure 1 is a side elevation of the embodiment of this invention selected for illustration, certain of the parts being broken away for clearness; Fig. 2 is a detail showing in section the swivel or jointed attachment of a record cylinder support; Fig. 3 is a detail of the tilting sound box rest; Fig. 4 is a front elevation partially broken away, of the machine illustrated in Fig. 1. Fig. 5 is a section, partially broken away, taken on the line 5-5 of Fig. 4, but shown on an enlarged scale. Fig. 6 is a plan view of the machine illustrated in Fig. 1.

Fig. 7 is a detail of the feed screw gearing. Fig. 8 is a side elevation, and Fig. 9 a front elevation of the details of the device for locating and locking the record carrier. Figs. 10 and 11 are details of the feed mechanism for the sound box. Figs. 12 and 13 show the links or units of the endless record carrier respectively in elevation and plan. Fig. 14 shows a separate detail of the carrier locking device. Fig. 15 is a diagram of the electric circuits. Figs. 16 to 22 show details of the improved sound box.

PRODUCING PHONOGRAPHIC RECORDS. Isidor Kitsec, Philadelphia, Pa. Patent No. 990,144.

This invention relates to an improvement in means for producing phonographic records.

One of the objects of the invention is to produce a record without actual contact between the means actuated by the vibrating diaphragm and the material on which the record is produced.

A second of the objects is to produce a recording device provided with means to adjust the same for the purpose of enlarging or reducing the undulating recording lines.

In this device, 10 is the sound collector and 9 the vibrating diaphragm. The recording means are here illustrated as the siphon 1 dipping with one terminal into the liquid 6, the other terminal being in juxtaposition to the plate adapted to have recorded thereon the record. The means to suspend the siphon 1 are here illustrated as consisting of the horizontal thread 5 secured to the uprights 4, 4. To this thread is secured the plate 3, and on this plate is the tube 2. One of the legs of the siphon is carried through this tube. The plate 3 is connected through the rod 8 with the vibrating disc 9.

AUTOMATIC MAGAZINE NEEDLE HOLDER. Max Graft, Philadelphia, Pa. Patent No. 898,544.

The invention applies to all disc talking machines and consists of a multiple revolving needle holder mounted on a supporting arm by which attachment is made to the reproducer of the talking machine.

The whole contrivance operates in such a way as to allow all the needles to be used consecutively and afterward removed all at one time, and others put in their place. This device may be made of gun metal, aluminum, brass, iron, steel, nickel or other material or materials.

Figure 1 represents a rear elevation. Fig. 2 a front elevation with outer plate and thumbscrew removed. Fig. 3 represents a central section, and Fig. 4 is an assembly of all the parts showing the connection with the reproducer M of the machine, as the device would appear in actual use with needles in place resting upon the record P, which is supported on the turntable R.

SOUND RECORDING AND REPRODUCING MACHINE. Julius Harris, Liverpool, Eng., assignor of one-half to Thomas King Emery, Liscard, Eng. Patent No. 989,707.

This invention has reference to phonographs, gramophones, and other similar auto-musical instruments, and instruments driven by spring motors, and especially those in which the records are

of the disc type, and the general object of the invention has been to provide improvements in connection with such instruments by which they are more easily worked and at the same time the mechanism is simple, inexpensive and effective, and capable of giving uniform and reliable results or effects, both in the taking of records and in playing them.

THE BEST TRADE MAKERS ON THE MARKET ARE THE LINE OF

ELECTRIC-PLAYERS

MADE BY

THE ELECTROVA CO., 117-125 Cypress Ave., NEW YORK

As a side line for Talking Machine Dealers they are unequalled. They mean easy money and big profits. We will send the arguments that will convince you and your customers.

Write for Catalogs, Prices and List of Perforated Music Rolls. You will be interested.

If your business is any part *cylinder*, the Columbia Indestructible Cylinder Record will liven up that part of it like a bonfire under a balky horse.

Columbia Phonograph Co., Genl., Tribune Building, New York

In these drawings, Figure 1 is a plan of one part, and Fig. 1A a plan of the other part of the improved mechanism, and Fig. 2 is an elevation

partly in section of the improved mechanism. Figs. 3, 4 and 5 are details described, and Fig. 6 shows a part of the hand actuating means.

SHAVING MACHINE FOR SOUND RECORDS. Thomas H. Macdonald, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 990,366.

This invention relates to certain improvements in graphophone and phonograph shaving machines, intended for shaving off the surface of a cylindrical sound record in order to obtain a smooth surface for use in further recording.

The apparatus is especially useful in connection with so-called "dictaphones" or machines for dictation purposes. One object of the invention is to enable the operator to obtain a very minute and accurate adjustment of the shaving knife, even while the machine is running, whereby sufficient material will be removed from the cylinder, but no more material than is necessary. By this economy in the material shaved off the cylinder can be shaved and used a greater number of times. The result of this invention is to prolong the lifetime of a dictation blank.

Another object of the invention is to prevent clogging of the knife by chips or shavings.

Fig. 1 is an end view, partly broken away, of the parts of a shaving machine containing the invention; Fig. 2 is a detail, showing the knife-holder carrying the shaving knife and mounted in the knife-bar, the view being from the direction II of Fig. 5; Fig. 3 is a side view of Fig. 2; Fig. 4 is a plan of the knife-holder and knife; Fig. 5 is a front view of the knife-bar, showing the diagonal position of the knife; and Fig. 6 is a diagram to indicate the direction of the operation.

PHONOGRAPH REPRODUCER. Charles P. Carter, Kingston, N. Y., assignor by mesne assignments to Thomas A. Edison, Inc., West Orange, N. J. Patent No. 991,424.

This invention relates to phonograph reproducers of the Edison type in which a floating weight is pivoted to the body of the reproducer and the stylus is carried by a lever pivoted to the floating weight and connected to a reproducer diaphragm or other means for producing sound vibrations.

This invention has for its object the mounting of the said lever in such a way that the stylus shall be free to move up and down and also horizontally or laterally in order to follow the sound record groove faithfully. The lever is mounted upon a horizontal pivot pin in such a manner that the stylus lever is free not only to rock about the said pin in a vertical plane in tracking the sound record groove but also to rock about the said pin in a horizontal plane and also to move bodily laterally upon the said pin in following the irregularities of the record groove. This construction also employs an elastic or spring means for maintaining the stylus lever centrally in alinement with the record groove and for returning the lever to said position after deviation therefrom and for restraining its lateral movement upon the pivot pin.

Reference is hereby made to the accompanying drawings of which Figure 1 is a central vertical section of a phonograph reproducer constructed in accordance with the invention, certain parts being shown in elevation. Fig. 2 is a bottom plan view of the same, certain parts being shown in section; and Fig. 3 is a detail view similar to Fig. 2 of a modified form of my device.

PHONOGRAPH REPRODUCER. Alexander N. Pierman, Newark, N. J., assignor by mesne assignments to Thomas A. Edison, Inc., West Orange, N. J. Patent No. 991,361.

This invention relates to phonograph reproducers of the pneumatic type, or, generally speaking, of the type in which undulations corresponding to sound waves are impressed upon a current of any suitable moving fluid by the operation of a suit-

able valve through which the fluid is allowed or caused to pass, the valve being operated in accordance with the sound waves as by connection with a reproducing stylus tracking a record groove.

The object of the invention is to improve the quality of sound reproduction of a novel valve structure, the valve being extremely thin, very flexible, and of inconsiderable weight, so that defects due to momentum and inertia of parts are avoided and a more faithful reproduction obtained.

Reference is hereby made to the accompanying drawings forming part of this specification, illustrating a preferred embodiment of my invention, in which—

Figure 1 is a central vertical section through a phonograph reproducer embodying my invention, certain parts being shown in side elevation; and Fig. 2 is a plan view of the port plate with the valve mounted thereon and covering the port.

NEW YORK OFFICE FULLY EQUIPPED.

The New York Phonograph Co. Showrooms at 5 and 7 Union Square in Charge of E. E. Prairie—To Cover Eastern Territory.

The New York office of the U-S Phonograph Co., 5 and 7 Union Square, is now fully equipped, and as stated before, is in charge of E. E. Prairie, under the general management of L. E. Green, manager of the Bishop-Babcock & Becker Co. Mr. Prairie has a full exhibit of the line and this week stated to The Review that business was developing very rapidly, better than he expected in new territory, which covers the entire eastern part of New York State, including the Greater City, etc., eastern part of Pennsylvania, Delaware, New Jersey and Virginia. He is assisted by D. Calish, looking after outside sales.

LATEST COLUMBIA DEALERS.

Quimby & Quimby, music dealers, Claremont, N. H., have recently joined the ranks of Columbia dealers, ordering a good stock of machines and records to start with. They will handle the line exclusively.

Another piano house who have taken on the Columbia line exclusively is the Lauter Co., Newark, N. J.

When writing ordinary advertising copy the object of the writer is to say something, or use an illustration, which will arrest the attention, then tell his story in a manner which will hold interest, and say things in the advertisement which will arouse the buying instinct and cause the name or trade-mark of the advertiser to be remembered.

MAN'S ECONOMY.

How the Feminine Section of the Editorial Household Rubs It In.

One day as a farmer of extraordinary meanness was starting out for the town to do his weekly shopping, for even he has to buy something for the support of his family, his wife came out and asked him to buy her a darned needle.

"What's the matter with the one I bought you last winter?" asked the farmer.

"The eye has broken," she replied.

"Bring the needle here," he said. "I'm not going to allow such extravagance. I'll have the needle mended."

The woman, wise in her generation, made no protest. She brought out the broken needle.

The economical farmer rode away into town, and made his first stop at the blacksmith's shop. He took out the needle and gave it to the blacksmith.

"I want that mended," he said.

The blacksmith knew his customer, and, keeping his face perfectly straight, said the eye should be mended in an hour's time.

The farmer rode away, and the blacksmith walked across the road and bought a new needle for five cents. When the farmer called again the blacksmith gave him the new needle.

The farmer looked at the smooth, polished surface of the steel and remarked that it was a good job. "How much will it be?" said he.

"A quarter," said the blacksmith, and the farmer as he paid it remarked that he knew that the needle could be mended, but his wife would have gone to the expense of buying a new one.

RECORD EXCHANGE PLAN SUCCESSFUL.

The new record exchange plan of the Thomas A. Edison Co., Inc., is reported as having done a world of good in reassuring the timid and redoubling the confidence of the more confident dealer by opening up an outlet for the inactive stocks on their shelves and insuring them full value for every dollar invested in Edison goods. It is said to have re-established their faith in Edison products and Edison policies, and again proved to the trade that they can depend upon the corporation at all times to come to their aid in the solution of vexing business problems—even though it be at a sacrifice on their part, as it is described in this particular instance.

The thing that hampers men, that holds them back more than anything else, is the doubt of their own ability.

An order-taker is a man whose aim is to sell goods. A salesman is one who aims to sell goods at a profit.

EXECUTIVE COMMITTEE MEETS.

Eastern Talking Machine Dealers' Committee Hold First Meeting, Following Annual Convention, on April 26, When President Storck Appointed Important Committees.

The first meeting of the Executive Committee of the Eastern Talking Machine Dealers' Association, after the annual convention on the 12th inst., was held April 26 at the Cafe Lion d'Or, New York. The committee announced subsequently by President Storck follows: Frank C. Storck, Red Bank, N. J.; E. T. Glover, Plainfield, N. J. (vice-president); A. Lasus, New Rochelle, N. Y. (treasurer); A. Lustberg (secretary), Huntington, L. I.; R. Montalvo, Jr., New Brunswick, N. J.; Meyer Goransky, Yonkers, N. Y.; T. Riddell, Brooklyn, N. Y.; C. A. Laureigh, Orange, N. J., and J. G. Bremner, of the Bremner-Chalmers Co., New York. All but the last three named were present.

Besides approving the treasurer's report, indicating the association was in a flourishing condition, routine matters only were attended to, special emphasis being placed upon the new schedule of annual dues, namely, a reduction from \$5 to \$3 for active members, and \$3 to \$1.50 for associates. Since the convention over twenty new members have joined. At the next quarterly meeting of the association, June 14, every dealer in the Eastern territory, irrespective of membership, is invited and urgently requested to be present.

No great war has been won without hitting again—and again—until the opposition collapsed.

GETTING OLD CUSTOMERS BACK.

An Important Factor in Increasing Business—
Small Disputes That Prove Bad Advertisements—Going More Than Half Way.

Not least among the ways to increase business is to "kiss and make it up" with old-time customers who have broken away because of some slight misunderstanding. An editor of a prominent newspaper recently admitted to a friend that he hadn't been inside a certain store for four years because he had once been offended in a dispute with a salesman over a pair of shoes. The matter was reported to the merchant, who immediately sent the man a check for the full amount in question, and a letter which called forth a hearty response and a renewal of patronage. This set the merchant to thinking, and he checked up his old-time customers that had left, got after each one of them, and found it possible to renew relations with nearly half of them by clearing up some slight misunderstanding that had given them offense. The principle involved suggests a wide application, says Printers' Ink. Where there were once sound reasons for satisfactory business relations between two houses it is likely there still are good grounds for renewal. It may sometimes be necessary to "go more than halfway," but even lovers have amply demonstrated that it pays to conquer pride for the sake of peaceful associations.

COLT'S BAND MAKING RECORDS.

The Well Known Organization of Hartford Engaged by the Boston Talking Machine Co.

Chester W. Smith, leader of Colt's Armory Band in Hartford, Conn., has signed a contract with the Boston Talking Machine Co., 41 West street, Boston, Mass., to make master records at the laboratory of the company in that city two days each week. Mr. Smith states that the work will not interfere in the slightest with his regular musical work in Hartford, where the band is very popular. The Boston Talking Machine Co. expect to have their records and machines on the market some time the coming fall.

NEARLY EXTINCT DIALECTS

Of Native Indian Tribes of Northern California Now Phonographically Recorded for Future Generations.

(Special to the Talking Machine World.)

San Francisco, Cal., June 3, 1911.

After nine years of labor Prof. A. L. Kroebet, of the Department of Anthropology of the University of California, this week concluded his labors of making phonograph records of the nearly extinct dialects of the native Indian tribes of Northern California. The records will be placed in museums of the various parts of the State.

The investigations have determined, it is declared, that only one of the six tribes recognizes the difference between the masculine and feminine, with several unable to express the difference between singular and plural.

The most serious handicap under which the progressive merchant has to labor is the lack of intelligence or experience, on the part of some merchants who do not understand proper business methods, and through their ignorance sell many items at prices which do not cover the cost of doing business, much less allow a profit for themselves.

Printers' Ink says: "Conditions change so rapidly that the memory of how it was done five or ten years ago is often the poorest kind of place to go for trustworthy information for present action. Tradition is good—for historians."

TALKER AS A DETECTIVE.

Adopted in Denmark to Secure Record of Offensive Remarks Made to Telephone Operators—How the Plan Could Be Adopted as a Reformatory Factor in the Household.

Annoyed by subscribers who used unseemly language over the wires when told the line was busy, the Copenhagen Telephone Co. installed phonographic apparatus at its central exchange. Then, after a record of offensive remarks was secured, the authors were summoned to the director's office, confronted with the evidence and scared into promising to put a bride on their tongues. There is little necessity for such procedure on the part of any telephone company in this country. The man who swears at "central" is rapidly becoming extinct. Perhaps it is because he has realized the futility of any such demonstration against an impersonal creature who is not allowed to talk back. But Copenhagen's novel use of the phonograph suggests the possibilities for effecting reformations that lurk in that harmless looking instrument. The idea which has proved so successful in Denmark is capable of indefinite extension for good.

There is the domestic application of the idea, for instance, says the Pittsburg (Pa.) Times. The sensitive wife who, lacking the militant qualities of the suffragette, has hesitated to remind an over-eloquent husband that the tongue is an unruly member, might purchase a phonograph with the intensified recorder and put it under the dining table to report meal-time remarks. In order to test the capabilities of the phonograph for such work, it might be advisable for the first experiment to have the matutinal coffee cold and the beefsteak particularly tough and underdone. This plan would induce the husband to put forth his most eloquent efforts at expression, revealing the latent wealth of the vocabulary he reserves for domestic purposes. Then, after a day or two, when a particularly delicious meal has put him in good humor, the address he delivered on the previous occasion might be reproduced for his edification. Little explanatory comment would be required. Then tears, promises to do better, a happy household, curtain! The Denmark idea is worth trying, and if it works in this climate, the uses to which it can be put are incalculable.

COURTESY IN BUSINESS

One of the Strongest Forces for Securing and Holding Trade—A Virtue That Pays.

How often a business concern is at the mercy of an incompetent clerk. A merchant may invest in a commercial palace wherein he installs attractive goods at right prices, but of what avail if his employes fail in courtesy? A saving grace is its universality. Of what avail to transfer patronage when the competitor may be even more discourteous?

We heard a man say he always reported discourtesy for the sake of others who might be incommoded by it even as he had been. He was on the street car one morning in a pouring rain and he asked the conductor to stop the car at the next corner, making his request the instant the car passed the preceding street. The conductor was pompous and enjoyed the evident chagrin of the umbrellaless passenger, who said to him as he passed out, "Your discourtesy is unpardonable and will cost you dear." He had influence and asked that the conductor be taught a lesson, but not discharged. He was fined ten days' pay and publicly reprimanded.

The car official said he wished others would act in the same dispassionate, but curative, manner when their employes failed in courtesy.

We know a store where "courtesy" is the slogan, but many of the employes fail in the illustration.

A salesman found a customer most exacting one morning and after she had split hairs in rejecting the goods she was seeking to duplicate, he snapped out, "No use to show you any more goods, madam, as you evidently do not wish to purchase." He was justified in thinking it, but not in saying it, and the customer reported him and he was discharged, and being past the Oslerized age, he has sought work faithfully for seven months unsuccessfully. He is tabooed because of his white hair, and for no other reason, as the men he interviews cannot know how and where he stumbled—how he failed in courtesy, a lapse more fatal to him than it would have been to a younger man, as it was less excusable, for if a man hasn't learned to be affable and diplomatic at fifty his case is hopeless.

Not many virtues pay such a big premium as courtesy. Note how it leaves its imprint on the face until every man he knows is working for the reinstatement of the courteous man when he forgets to report for duty on time or commits some other breach of commercial etiquette. There is every inducement in the world for men and women to be courteous in the business or in the social world, and he who fails to read the signs of the times as he runs will be left at the post.

Not only be courteous, but insist on courtesy from others when they are transgressing the unwritten law of a soulless corporation or of an individual.

AN AUTOMATIC "BARKER."

Western Merchant Uses Talking Machine for Making Announcements to the Public.

To call attention to certain advertised articles a department store manager in Northern Iowa placed a large talking machine in the lobby of his store. This talking machine worked automatically and every five minutes it would call out some sentence. "Special shoe bargains in the basement." "Ask the clerk to show you our new line of silks." "Exceptional bargains in chinaware to-day."

The records for this talking machine are taken the day before every sale and always remind a customer of the things advertised in the morning papers. The novelty of this form of advertising was commented upon by customers as well as newspapers, and kept the name of the store in the mind of every individual hearing the "barker" given in this unusual manner. The scheme might savor too much of the street corner faker to be approved of by all merchants, but it pulled big results for this particular store.

HELPING DEALERS TO SETTLE.

Western Distributer Encourages Selling of Victrolas with the Larger Profits.

A Western talking machine distributer claims to have discovered a new method for inducing delinquent dealers to square up accounts and actually aiding them in accomplishing that result.

The jobbers in question had a dealer on their books who had been in arrears for a comparatively small amount for some time. They finally interested the dealer in the selling of Victrolas from catalog and the profit of his first sale of a \$200 machine cleared up his entire account. The dealer has since stocked Victrolas regularly and is getting on top of the heap very rapidly.

"It is safe to assume that the average salesman will lose, during the year, 20 per cent. of his customers from death, retiring from business, dissatisfaction, failure to be on the spot at the right time, and many other causes not within the control of the salesman," says a veteran. "To make good this shrinkage and be on the safe side, it is wise to start out with the determination that your list of customers shall be increased not less than 20 per cent. during the year."

TRADE ON THE PACIFIC COAST.

Improved Crop Conditions Make Trade Outlook Most Pleasing—W. S. Gray Descants on Situation on Return from Extended Trip—Immense Victor Business Being Done by Sherman, Clay & Co.—Bacigalupi to Remove to New Quarters—Heine Piano Co. Reopens Talking Machine Department with the Victor—Columbia Business Active with Kohler & Chase—Changes in Sales Staff.

(Special to The Talking Machine World.)

San Francisco, Cal., May 29, 1911.

Walter S. Gray, Pacific Coast manager of the Columbia Phonograph Co., is again in San Francisco after a considerable stay in the Northwest, from which he returned last week. The journey north was made with Marion Dorian, the auditor of the company, who is now on his way East. Mr. Gray finds Coast business in the talking machine line very good, that of the Spokane and Portland districts being somewhat in advance of the business for the same months last year, while the Los Angeles territory, from reports sent in to Mr. Gray, is away ahead of last year. Mr. Gray particularly emphasizes the growing business activity of the southern district and says that it has shown a wonderful increase in the last few months. The San Francisco office of the company has placed a large number of new Dictaphones with the Southern Pacific Co. lately, some going to complete the equipment of the passenger department, and the rest being installed in the freight department. The new equipment makes the total number of these machines in use by the Southern Pacific about 200. Records of the Salt Lake City Tabernacle organ have been received in the city office and have proved very attractive to buyers.

The place of E. W. Cyrus, who resigned from the city office of the Columbia Phonograph Co. about a month ago to go to Dallas, Tex., has not yet been filled.

Andrew McCarthy, vice-president of Sherman, Clay & Co., speaks in a satisfied way about the company's Victor business for the last month, which he says is ahead of the same month last year in the retail department, though the wholesale is about stationary. As usual, the better class of goods, including Victrolas, are in demand, and the Red Seal records still sell steadily. The Victrola room of Sherman, Clay & Co. has lately been further decorated with several pictures of such singers as Farrar, Scotti and Caruso, these pictures being enlargements on dark brown sepia presented by the Victrola Co., and handsomely framed in mahogany.

W. F. Morton, traveling man for Sherman, Clay & Co., has returned from a very successful trip in

Southern California, where he made many sales with the Victor goods, considerable demand for which was found in some of the smaller towns. After a short stay in town he is to cover the northern territory.

Peter Bacigalupi & Sons have sold their lease on the present market street premises occupied by the company, having received a cash bonus for it. The owners plan to erect an expensive theater on the site, and occupants will vacate the building on the first of the month. The Bacigalupi firm expect to secure a permanent store nearer the center of town, between Third and Fourth streets on Market, and are trying to locate on the ground floor. The company have closed out the stock of straight pianos, but will continue their talking machine line and will enlarge their stock of Edison goods.

The Heine Piano Co., who recently reinstalled their talking machine department under C. F. Lundberg, report a steady business with Victrolas and the better class of records. Recent advertising which has brought about considerable interest in this company's goods is the window display of the Auxetophone, lately received in stock. The company says that summer homes are being fitted up, early as it is, and this is bringing in quite a bit of business in the talking machine line.

The Hauschildt Music Co.'s talking machine department is now running in full swing, and is doing a good business with records especially, both operatic and popular selections being in demand. A shipment which has just been received includes a lot of cabinets as well as machines and records.

S. E. Babson, of Babson Bros., in this city, starts in a few days for Chicago on a two weeks' business trip. He reports the sale in the city store of many of the Amberol four-minute records, grand opera being in the fore.

Peter Bacigalupi, the well-known talking machine merchant, and L. F. Douglass, the Victor talking machine man, have returned to this city after a few days' automobile tour of the counties north of the city, during which they visited Mr. Bacigalupi's ranch at Guerneville.

Walter B. Keller, who has been in the talking machine business in San Francisco for some time, has taken charge of the store of the Eureka Phonograph Co. The firm plan elaborate extensions of their lines and expect to supplement the talking machine business with general musical merchandise.

Lawrence K. Wilson, of the Wiley B. Allen Co., has left for the Orient, where he will be for several months. Honolulu will be visited before going on to the Orient.

The San Francisco store of Benj. Curtaz & Son reports that the Red Seal record business has been very good this spring. Mail orders have come in from country districts very heavily recently.

The Spokane branch of Kohler & Chase has been

doing a splendid business with the Columbia goods. The quarters of the Spokane store devoted to the talking machine department were recently enlarged and are in much better form to handle the northern business.

The San Francisco Call is about to finish the contest now running at which many prizes of value will be awarded. Among these are a great number of Columbia talking machines and records valued at \$1,200.

SALESMEN'S ASSOCIATIONS.

How the Promotion of Social Relations Between Employes and Discussions of Business Problems Result in Profit for the Employer.

Noticing an inquiry concerning salesmen's associations, I take pleasure in giving you some of our experiences and benefits derived therefrom, as we have one, which was inaugurated about six months ago, writes a correspondent.

We have one of the most profitable and successful associations thus far, conducted strictly according to parliamentary rules. Subjects for discussion are announced in advance by the chairman and every member is expected to co-operate by giving his idea on the subject announced. Our secretary keeps a careful record of all meetings and points of interest brought out.

The subjects are always relative to the store and merchandise contained therein: How to make better salesmen; how to reduce percentage of customers lost; how to make all departments pay better percentage; how to avoid the accumulation of stickers in all departments; how to keep out discord and create perfect harmony among the boys and perfect team work throughout the store.

We succeed superbly. Every man of us is growing bigger every day. More courteous, more energetic, more enthusiastic and more diplomatic as the meetings grow in interest, and I will say the attendance has been full almost without exception.

Culture and store education is advanced by criticism, severe but friendly, from each member, as he feels it his duty to condemn improper, or approve by encouragement, every good action. Education by absorption is very evident, as we have learned to criticize and learn to be criticised without taking offense; but, on the other hand, profiting by such criticism.

At a great many of our meetings we are favored with some representative of the wholesale trade, so that we are instructed and edified from within our ranks and outside by men of scientific knowledge of their lines, who favor us with an educational talk on the process and manufacture and best way of presenting their lines to the customer.

SIXTEEN YEARS' EXPERIENCE

Handling Talking Machines, Records and Accessories

Does Count

EDISON

Experience is a great teacher.

The results of our experience are yours to command.

Especially if these goods are handled exclusively. Just how much it counts you can easily demonstrate to your own satisfaction by placing your orders with us for Victor and Edison Machines, Records and Supplies, and becoming familiar with Eastern Co. service.

“John Doe has secured the exclusive selling rights for Columbia Graphophones, Grafonolas, and Records in Busyopolis.” Has that announcement appeared in the papers in your locality yet? It will if it hasn't. Why don't you “see it first”?

Columbia Phonograph Co., Genl., Tribune Building, New York.

TRADE IN CINCINNATI.

Great Campaign Under Way to Place Talking Machines in Schools and Other Educational Institutions—Campers Find the Talking Machine a Most Delightful Entertainer—Smaller Type Machines in Demand—Grafonola Regent, Jr., Makes a Hit—R. J. Whelen of the Columbia Co. Discusses the Business Outlook—Milner Musical Co. Pushing the Edison Phonograph in Vigorous Fashion—Elaborate Advertising Campaign Planned.

(Special to the Talking Machine World.)

Cincinnati, O., June 8, 1911.

The talking machine trade of the Middle West, knowing that it is up against the usual summer season dulness, is already preparing its campaign for fall business. Advertising literature is being prepared, much of which will be mailed during the middle of the summer, thereby paving the way for sales later on. The jobbers here expect to open up a new field through the schools. Instruments will be placed in the schoolrooms at the beginning of the next term and records of an educational type used principally. This naturally will arouse the interest of the pupils and the parents will hear of the advantages of talking machines from their lips. This idea can be pushed to advantage in small centers as well as big towns.

The past month proved to be the hottest May in the history of the weather bureau, and as a result a movement to summer camp and country homes was felt earlier than usual by Cincinnati talking machine dealers. This has always affected the sale of Victor Victrolas, and while it created a demand for machines to equip the vacation parties, it had a detrimental effect on business and hundreds of Victrola prospects are out of the reach of the ambitious talking machine salesman.

While the talking machine has always been a feature of camp life, this feature of the business never assumed very great proportions, especially in the case of those handling the better makes of machines and records. In spite of conditions, the retail department of the Rudolph Wurlitzer Co. report a very satisfactory May business both in machines and records, although results can be traced more to the aggressive work done by our salesmen and the literature distributed through the mails than the natural demand for the product. Comparatively few in the fashionable districts will be home in a few weeks' time and those who are still in Cincinnati are making preparations for moving away for the season, and as a result Victrola sales in that quarter will be few and far between. There is a big field, however, in the middle class, many of whom do buy Victrolas, especially in the summer season, and the Victrola X has already demonstrated its peculiar suitability as a summer instrument on account of the fact that it can easily be carried from one part of the house to another.

Recent sales on the smaller type machines have been unusually heavy. The record business has been holding up fine and with the splendid lists that the Victor Co. have been giving us there will

be no excuse if the department does not continue the past good record made the early months of this year. The wholesale departments report an active demand on Victor machines and records and heavy advance orders for the new Victrola IX. Many of the old dealers have dropped out of the running, but those who continue active are now sending their requisitions for machines and records in a way seldom equaled in most cases.

At the Milner Musical Co. business is reported to be very good. Just now this concern is conducting an aggressive advertising campaign throughout the country surrounding Cincinnati. The Edison phonograph is being made the leader for this campaign. It is understood that this concern intends to give the “free trial” proposition a thorough try-out at this time, and if returns prove encouraging, to use this method of disposing of phonographs throughout West Virginia and Kentucky in large numbers this fall.

Manager Stotler says that he is planning a very elaborate advertising campaign for this fall and expects in the near future to add several new salesmen to his phonograph department in order that they may become thoroughly familiar with his ideas and plans for the fall trade. He predicts that during the next few months business will be very quiet, and is making preparations to get after business with hammer and tongs, in order that the record of last year may be exceeded.

Manager R. J. Whelen, of the Columbia Phonograph Co., reports May business to be a little slower than usual, caused by “spring fever” of the public, he supposes, but even at that, business has gone ahead of May, 1910. One of the most interesting features of the month's business was an elaborate window display of the “Dictaphone,” their large window being furnished as a regular office, Dictaphones installed, transcribers at work and dictators hustling out their correspondence by the Dictaphone system. It attracted unusual attention from all passers-by, many of them coming into the store for a personal demonstration. Results in publicity and business were all that could be desired.

The arrival of the “Grafonola Regent Junior,” \$150 Library Table, has been greeted with enthusiasm, one being sold the first day it was placed on sale. The “Junior” will undoubtedly prove a very popular musical instrument. The general demand still continues for the high-grade Grafonolas and grand opera records, the “Favorite” being in the lead in the greatest number of sales in the Grafonola line, while the Nordica, Fremstad and Garden records are easily in the lead in the record sales.

Mr. Whelen further states he does not anticipate that business will decrease to any extent during the summer months, for the time has come when Grafonolas, graphophones and records are a part of every up-to-date summer cottage, camp and resort, and they are “toted” around on all occasions, taken out on the rivers, picnics, dances, and come in for their share of all summer amusements.

No man will make a good salesman unless he takes a special interest in his customers.

THE MULTINOLA.

A New Creation Which Will Be Ready for Shipment Shortly.

(Special to The Talking Machine World.)

Cleveland, O., June 9, 1911.

The illustration herewith is a photograph of a new instrument named the “Multinola.” It shows the instrument displaying its controlling mechanism and the records in carriers. It is a continuous multiple record phonograph, as its name implies, embodying entirely new features, while its mechanical correctness, combined with its simplicity, renders it easy of operation and proof against accident.

The American Multinola Co. are completely

financed and will soon be prepared to make deliveries promptly in large quantities, and correspondence is invited with representative dealers for exclusive territory not already allotted.

William N. Thornburgh, general manager, said: “Our purpose is to launch this new disc instrument, recently developed. It is nothing short of a marvel in simplicity, purity and sweetness of tone, unequaled by any other similar device. It is distinctly unique on account of the radical departure from old principles, and its future popularity is insured.”

The company's expert in charge of musical productions and appliances is H. T. Hail, formerly of Philadelphia, who is well and favorably known to the trade generally.

The officers of the company include some of the most prominent men of Cleveland, and all are enthusiastic over the possibilities of this new instrument, which has been praised by all who have seen it.

ACOUSTICAL FILTRATION.

This Is the Process Which J. G. McKendrick Has Devised for Eliminating the Scratching and Blasting so Peculiar to Many Records—A Description of His Method of Securing Results—A Rather Involved Method, but Nevertheless an Interesting Theory.

The scratching and "blasting" that sometimes mar the musical tones of a talking machine can now be cured, according to an English inventor. These harsh notes that spoil the singing of a soprano just when she is soaring to the topmost peaks of melody are called "frying-pan noises." Souls that have been jarred by the intrusion of the rasping discords will be delighted to learn that the remedy is simple. If the music from the talking machine record is passed through 54 feet of tubing filled with dried peas and beans, the noise as of frying-pans is filtered out—perhaps absorbed by affinity. John G. McKendrick is the inventor who has made this discovery, and in a communication sent to Nature, a London, Eng., paper, he reports that by his process of "acoustical filtration" he has eliminated the hissing and grating sounds. He used a gramophone enclosed in a wooden cloth-lined box, with a tube passed tightly through a hole from the end of the taper arm that carries the sound box of the instrument. When the sound box is tightly closed by raising and locking the front lid, the sounds of the machinery, and also the vibrations from the free side of the diaphragm of the sound box, are completely damped. In this connection he says:

"The noises, caused by the friction of the needle point on the hard disc of the record, pass, of course, along with the musical sounds, through the taper arm to the tube that escapes from the box. This tube is suitably connected with lengths of tin tubing, 1.5 inch in diameter, and the sounds are thus conveyed through as many feet of tubing as may be found necessary. I have found the most efficient length of the entire tube, until it reaches the horn or resonator to be, say, 54 feet. The effect of the long tube, while empty, is to increase the volume of the tones, but, of course, the noises are also intensified.

"I have always been struck by the fact that the friction noises seem to be quite separate and distinct from the musical tones, either when a voice is singing with an accompaniment, or during the reproduction of an orchestral piece of music—indeed, by an effort of attention, I have so trained myself that I can hear one without hearing the other. This suggests that in the ear there is a mechanism for the detection of noises of high pitch as distinct from ordinary musical tones. It occurred to me that by causing the sounds to pass through numerous narrow channels, freely communicating with each other, the noise-sounds, presumably caused by short waves of high pitch, might be damped off by interference, while the longer waves, corresponding to musical tones, might pass through unaltered, except as regards loss of energy from friction. My purpose was attained by filling a segment of the tin tube, say, from four to eight feet in length, with a mixture of hard peas and beans, corrugated by age or drying. The experiment succeeded. The friction noises were damped down, while the musical tones, although rather 'dulled' in quality, that is to say they lacked brilliancy, were purer, and, to my ear, much more natural."

Mr. McKendrick tried such substances as glass balls, marbles, small fir cones, gravel, and shreds of tin, but the best effect was obtained with the peas. Greater brilliancy was obtained by using zinc tubes filled with fragments of corrugated zinc, and the use of these has been protected by patent. A combination of the zinc with the peas and beans is said to produce delightful effects, the music being so immensely improved that the attention is not at all disturbed by "frying-pan" noises. To quote further:

"As listening to music so reproduced is a kind of auditory illusion, any contrivance that will heighten the illusion may be expected to give most pleasure if the illusion is of the right kind. Usually one feels a sense of unreality in the music appar-

ently rising from the low tone of the "horn," more especially in listening to a human voice. To get rid of this, I angle the horn, so as to reflect the sound waves from a tin reflector (parabolic in character) so placed as to send the sounds to the other side of the room. One then ceases, while listening, to think of either the gramophone or the horn, as the sounds come from the reflector, and the effect is much more real and natural.

"I believe the application of this method of acoustical filtration may be applied by ingenious mechanics in such a way as to do away with the necessity of building up such an array of tubes as I have arranged. The method enables one, in a room of moderate size, to listen to pure music. One cannot help observing how it mellows a voice that, heard in the ordinary way, sounds harsh (from the production of overtones of high pitch), and how it brings out the pure tones of the string instruments. The various instruments in an orchestra sound better. Everything is reduced in proportion, and, to use an illustration from art, it is like passing from one of Efty's huge pictures to a delicate and beautiful Meissonier, in which one sees and appreciates every detail in an area of small dimensions."

TALKING MACHINES FOR COURTS.

Trial Proves That Machines Make Good Substitute for Stenographers.

(Special to the Talking Machine World.)

Montreal, Ont., June 6, 1911.

A sham court trial was held here recently for the purpose of testing the talking machine as a substitute for stenographers. Witnesses told their stories with the recorder beside the box. The result was reported as satisfactory, and the Government will be recommended to abolish stenographers.

The point with me is to get people talking about the store and its personnel. In doing this I build for ourselves and for the community. The success of the one means the growth of the other.

MOTION DISPLAYS FOR WINDOWS.

Serve to Attract Attention to a Greater Degree Than a More Elaborate Stationary Display.

Window displays may be divided into two distinct classes, namely, motion and motionless displays; the former is preferable and should be used whenever possible. There is nothing that will attract the attention of the passer-by so quickly as life or motion in the window. In the smaller stores a motion window is not always possible. Where electricity is available a motion window can be very easily arranged. Where it is not available motion can be obtained by fastening a string to your door with some object in the window suspended so that in the opening and closing of the door motion will be produced.

Dealers are coming to realize that through the medium of window displays they are able to accomplish the ultimate object of advertising at a minimum of expense, that it behooves every dealer to utilize the window to the fullest extent in inducing people to enter his store.

INCREASE OF 85 PER CENT.

In Victor Business Reported by C. Bruno & Son During Last Year.

As an instance of the rapid increase in the sale of Victor goods, C. Bruno & Son, the wholesalers and importers of musical merchandise, one of the oldest and largest houses in the trade, and who were also one of the first jobbers appointed by the Victor Talking Machine Co., Camden, N. J., recently stated that last year their business in this line had increased fully 85 per cent. Their trade in talking machines is almost strictly wholesale, their retail sales not running over \$300 for the year.

A slow-paying customer is a bad asset and makes very unfair competition for your good customers in his vicinity. He hurts both ways.

**Won't You
Have a
Lesson in
Spanish?**

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

SALESMANSHIP AND OTHER THINGS.

The World Representative Interviews a Prominent Member of the Talker Fraternity with Some Success.

I was lurching the other day with the Philadelphia manager of a big talking machine corporation and the conversation drifted round to salesmanship. My friend was rather gloomy on the subject.

"I have just instructed my assistant to fire another salesman," he remarked, disgustedly.

"How that young fellow has been hypnotized the house with the idea that he could sell goods remains a mystery, but this morning he was caught with the goods.

"A dashing gentleman of eloquent address, whose clothes fit him as if they grew there, strolled into the store and asked to hear some records of the voice of a well-known and very popular operatic star who is singing at the local opera house just now.

"You deliver, of course?" I heard him ask, pleasantly.

"You don't expect us to deliver records, do you?" remarked the misguided youth. "Why, you can carry them under your arm, you know."

"I stepped in at this stage of the game and endeavored by an exercise of diplomacy to administer an antidote for the weakling's asininity, but to no purpose. 'My dear sir,' I began, but was not allowed to finish.

"Not another word," exclaimed the dashing gentleman. "I shall go where I can at least have my purchases sent to my apartments. There are other talking machine emporiums in this town, I believe," and with a great display of offended dignity and a clang of the street door, he was gone. Result—A customer lost, and to make matters worse I have since learned that he was the very artist about whose records he was inquiring. I wonder if I can get another salesman in this town?" he reflected seriously in conclusion.

"Are they so rare?" I asked, surprised.

"Rare!" he roared; yes and no. Salesman, no. Good salesman, yes. A young man of breeding and pleasing manners is a find, I can tell you," he continued, viciously jamming his oyster fork deep into the ice by way of emphasis.

"As your own paper has it: 'Personality is the greatest asset that any retail business man can have. He may have the goods, the price, the location, but he must have the personal magnetism in order to have business success. Every man stands for something in his own business, and represents ideas of his own. The heads of our largest financial institutions are men of wonderful personality, whose influence is felt in every department. The value of

personality is just as potent, however, in the smallest talking machine store."

He replaced the clipping very carefully in his leather wallet.

"That editorial appealed to me so strongly that I cut it out," he said.

"An effort toward competent salesmanship which is largely governed by personality," he went on, "should prevail throughout every trade institution, from the proprietor to the office boy. The difficulty is, however, that those at the head are so engrossed with the big things that they rarely have the time or inclination to investigate details. They leave that to their assistants.

"There should be schools for such things, on a much larger plane than now exists, just as there are schools for stenography, bookkeeping, etc. In other words, academies, where they turn incompetents into skilled business men. When that condition of affairs prevails, I will not be forced to order the dismissal of a salesman because of as-

"WITH A CLANG OF THE STREET DOOR HE WAS GONE."

sumed arrogance or sheer ignorance, as I did today.

"Waiter, bring the soup."

I waited until my friend had passed upon the merits of the mulligatawny, then asked casually, "Do you allow your salesmen to smoke in any department of your place of business, or do you prohibit it entirely?"

"If I find an employe smoking a cigar I explain to him in a fatherly manner that he is transgressing, and request him to desist, but if it be a cigarette, I fire him on the spot. Any young man who will smoke a cigarette while mingling with customers or the office force, especially if ladies are present, is not the sort of chap to associate oneself with in any capacity, be it business or social. Listen to what Thomas A. Edison, the Grand Old Man of the talking machine industry, has to say on the subject." Again he consulted his leather wallet.

Spreading another clipping on the tablecloth and adjusting his glasses to his liking, he read:

"Acrolein is one of the most terrible drugs in its effect on the human body. The burning of

ordinary cigarette paper always produces acrolein. That is what makes the smoke so irritating. I really believe that it often makes boys insane.

"We sometimes develop acrolein in this laboratory in our experiments with glycerine. One whiff of it from the oven drove one of my assistants out of the building the other day. I can hardly exaggerate the dangerous nature of acrolein, and yet that is what a man or boy is dealing with every time he smokes an ordinary cigarette."

"Cigarettes start very satisfactory conflagrations, too, when dropped through gratings into a pile of waste, as a Philadelphia talker house has reason to remember. You recollect the circumstance, do you not?"

I nodded an affirmative.

Then, switching back to the former subject, he borrowed a stubby pencil from the accommodating head waiter, scribbled industriously for a few moments on the back of the menu card. Suddenly he ceased and handed me the result of his labors. This is what I read:

"Competent salesmanship demands brains, personality, magnetism, common sense, tenacity, neat attire, pleasing manners, a thorough knowledge of the business in hand, a—"

"There's no more room on the confounded card, as you have probably discovered," he explained as I stopped reading. "Tell me where in thunder I'm to get my new salesman!"

Afterword.—The writer does not hesitate to admit that some of the opinions set forth in the above may be slightly overdrawn. The reader is simply asked to take the story for what it is worth, coming as it does straight from the lips of one of the big men in the business.

HOWARD TAYLOR MIDDLETON.

ATTENTION, CUSTOMERS!

You should be courteous and prompt in your treatment of customers—not only when you employer is around but when you have a slack time to yourself, so as to make the customer feel that his trade is appreciated by yourself and the firm. Cheerfulness I consider a great asset to sales, as it puts the customer in a receptive mood, whereas a dry stare or indifference makes him the reverse.

During business hours especially, your full attention should be given to the business, i. e., to fix your mind on the general business of the store, so as to be able to give information to your employer on any item which he should ask about. Be awake.

Bump up against the man with contrary opinions; it keeps the weeds out of your mental garden.

63,020,300 NEEDLES

IN 10 DAYS

This is an Example of BAGSHAW NEEDLE Production and Distribution

We can show by our books wherein during a period of 10 CONSECUTIVE working days we made shipments of Talking Machine Needles to JOBBERS only in the United States—a total of 63,020,300 Talking Machine Needles.

This certainly has never been equalled by any other Needle Manufacturing Concern in the world. We believe that this quantity is larger than the average 10-day production of ALL OTHER Talking Machine Needle Makers combined.

Quality alone is responsible for this remarkable achievement.

W. H. BAGSHAW, Lowell, Mass.

OLDEST AND LARGEST MAKERS OF TALKING MACHINE NEEDLES

Established 1870

A BRIGHT SPOT

Plans have been made which will make the National Association of Talking Machine Jobbers' Convention, which is to be held in Milwaukee, Wis., on July 10th, 11th, 12th and 13th, a memorable affair.

It will indeed leave "a bright spot" in the minds of those who attend.

This is the first time the organization has held its annual Convention in the West and indications point to a large attendance of members, not only from that section but from the East as well.

A great deal can be gained by a Convention sojourn.

One is brought into close contact with fellow jobbers coming from every section of the country; and an exchange of views regarding talking machine affairs is always of value.

Matters of vital importance which will be discussed at the business sessions promise to be entertaining and beneficial and should not be missed by anyone who has the interests of the talking machine trade at heart.

The social events will add to the Milwaukee sojourn and will be of particular delight to all.

PERRY B. WHITSIT, THE PERRY B. WHITSIT COMPANY, COLUMBUS, OHIO, PRESIDENT. J. N. BLACKMAN, BLACKMAN TALKING MACHINE COMPANY, NEW YORK CITY, VICE-PRESIDENT. J. C. ROUSH, STANDARD TALKING MACHINE COMPANY, PITTSBURGH, PENNSYLVANIA, SECRETARY. LOUIS BUEHN, LOUIS BUEHN & BROTHER, PHILADELPHIA, PENNSYLVANIA, TREASURER.

EXECUTIVE COMMITTEE:

NEW YORK, JUNE 15, 1911.

EVERY progressive talking machine man should understand the importance of a good collection department, for that is very vital to the business.

A man may transact a good volume of trade; but, if he is lax in his collections the first thing he will be floundering around in very deep water.

No matter how up-to-date he may be in other departments of business—his sales methods may be above criticism—his sales-rooms may be attractive—his salesmen spic and span and fascinating—his stock may be complete; but, if he is weak on his collections he is not going to thrive very long.

The retailers, particularly the men doing business in the smaller towns, where most of their customers are known to them, are placed in a different position than in the large cities, where an individual simply represents a sale, and the personal element does not enter into consideration.

References should be obtained so that when machines are sold it will be known that they are well sold.

We have had, during the past few months, a number of letters from subscribers in which they have stated that parties to whom they have sold machines have disappeared with the machines.

WE have also received a good many communications from men which show that they have not learned the necessity of good collections.

Now talking machines are not well sold unless they are sold to responsible parties, and the man is simply fooling himself who is putting out good stock in the homes of people who are not responsible.

It is far better to take the necessary time

and inquire into the financial responsibility than to hurry out a machine and figure that another sale is made and more profit can be entered up.

The profits in many cases become losses.

In ascertaining information concerning a customer it is well somewhat to go into the subject of character.

If a man bears a good character and has good recommendations it is pretty safe to say that he is well worthy to be granted reasonable time in the purchase of a machine, and surely every talking machine dealer owes it to himself and to those with whom he is doing business to see to it that his business is safeguarded in every possible way.

Now, of what advantage is it to do a good bulk business and then find that there are a vast number of machines in the hands of irresponsible parties, or that someone has silently slipped away bearing the machines on which there were large payments due?

That is not good business, and talking machine men cannot take this lesson too seriously.

IN this country we are too much in the habit of dealing in bulk so that we oftentimes get in the habit of talking bulk business, and we get dissatisfied with small sales and do not pay attention to details that we should.

Every business that is reared successfully is based on a foundation of close attention to details.

Study the character of every successful business man in this country and you will find that he is never wearied regarding details.

He may not have followed up every single one closely himself, because that, of course, is a physical impossibility; but, he organizes his business in such a manner that he has someone who sees to it that details are faithfully watched.

You cannot build a house without paying close attention to the adjustment of every particle of material in the structure.

We do not begin from the top down, but always from the foundation up, and everything must fit.

So it is with a business structure!

Everything should fit in so thoroughly and completely that when it is reared it will stand any stress of storm or bad weather which may come upon it.

IT is true, we have had in this business, which is comparatively young, a lot of men who have been inexperienced.

They did not have a good business training.

We have, too, a fair percentage of keen, well-educated, trained business men.

But, as in all trades, slack business methods will be found, and they, to a certain extent, injure the others.

Talking machines are good property.

They are worth one hundred cents on the dollar, and they are as good as gold dollars every time.

Therefore, one should be as careful in handling them as they would be in handling Government bonds.

They represent standard values, and these values have been non-depreciable.

Even in the panic talking machines were not, and could not be slaughtered; therefore, if every dealer would figure that his stock is worth one hundred cents on the dollar, that there are no slumps—no stock going out of style, like dry goods and millinery, but in season and out, his stock is worth exactly its inventory price, he will gain more respect for his business.

He will absorb some increased love for his profession and in the end he will conduct his business on broader and better lines.

We repeat, too much emphasis cannot be placed on the collection end of the business.

It will make things easy all around!

ALL aboard for the Milwaukee Convention!

There is no doubt from the plans which have been submitted to us that the National Association of Talking Machine Jobbers will have a rousing good time at the Milwaukee meet.

There are a number of matters of manifest importance to the trade which will be brought up for serious consideration.

It certainly will pay jobbers to leave their business long enough to journey to the City by the Lake so that they can get in closer touch with their fellow jobbers.

This is the first time since its formation that the organization has ever met in the West, and it is therefore predicted that there will be an unusually large attendance of men from the West.

A very pleasing program has been prepared so that time will not hang heavily on one's hands in Milwaukee in the good old summer time!

A GOOD reputation is a man's best trademark. Reputation is not what a man thinks of himself, but what others think of him. A man's estimate of himself isn't apt to pass current. Most men would put the value far too high. Some few would put it too low. Generally the estimate is in inverse ratio to the value, but an unprejudiced public may be trusted to strike a just level.

When it is announced that a new miracle-working electric device has been invented the world is skeptical. If it is stated that Edison is the inventor, skepticism is changed to faith. In the reputation of the Wizard of Menlo the public puts its trust.

George Bernard Shaw says he has written and can write better plays than Shakespeare's. But Shaw's opinion and Shaw's reputation are a long ways apart, and the verdict is still in favor of the poet of Stratford.

N. P. Willis, who is scarcely remembered by a succeeding generation, considered himself the greatest American poet. That was Willis' estimate.

Bryant, Longfellow and Holmes set themselves upon no pedestal, but their reputations were and are secure. They rest upon the estimate of the public.

We can build but we cannot dictate a reputation.

FIT ANY PHONOGRAPH

U-S EVERLASTING RECORDS command an immediate market. They fit any phonograph, and it has been closely estimated that there are 1,500,000 phonographs in this country—all waiting for new selections—better selections.

U-S EVERLASTING RECORDS have the combined feature of everlastingness plus superior reproduction; so that neither handling, playing, nor variant temperatures can impair their wonderfully smooth singing tone, which comes nearer to the original voice and instrument than has ever before been produced.

There are sixty-two new U-S EVERLASTING RECORDS for June. They include eight selections by Eugenio Torre, the greatest singer of Neapolitan songs; two whistling records by Guido Galdini, the most wonderful quality whistler the world has ever known; selections from "The Pink Lady," the present furore; and four new Grand Operas.

OUR FREE ADVERTISING HELPS; illustrated circulars and high-class Record Lists further your sales. The U-S EVERLASTING RECORDS will be money-makers for you and will emblazon the way for the

U-S Combination Phonograph

U-S Opera Model \$65.
Other Horn Models:
U-S Banner \$45.
U-S Junior \$30.

U-S Grand, \$85
Larger Cabinet Model:
U-S Peerless \$200.

—the ultimate line which you will carry. The U-S COMBINATION PHONOGRAPH is an entirely new invention with more exclusive features than all other phonographs combined. The Pulley Balance Wheel—Flexible Tone Arm—new style Motor—improved Diaphragm—Automatic Double Reproducer, which permits immediate changing from two to four-minute playing, and vice versa—all work toward the superior U-S tone, and so aid to sell the U-S Phonograph before any other. The "U-S" plays any cylinder records.

We would be pleased to have you examine our superior phonographic products, and hear our U-S EVERLASTING RECORDS, at any of our Branches, as shown below; where you may also note our extraordinary facilities for shipping direct from any of these points.

Fill in and mail the coupon to us to-day for our selling plan which has proven so attractive to progressive dealers.

BERLINER PATENT EXPIRES FEBRUARY 19, 1912.

The United States Circuit Court of Appeals so Decide in an Opinion Handed Down by Judge Lacombe, the Presiding Judge—The Full Text of the Decision Appears Below as Well as an Interesting Letter from General Manager Geissler of the Victor Talking Machine Co.

Finally the expiration date of the Berliner patent has been determined. The adjudication of this much discussed and controverted question was made by the United States Circuit Court of Appeals, Second Circuit, May 26. Judge Lacombe, the presiding justice, wrote the opinion, which was concurred in by Judges Ward and Noyes. It reviews and reverses the decisions of Judges Hough and Hazel, and fixes the "life" of the patent for the full term of 17 years, namely, the expiration occurring February 19, 1912. The case thus decided is that of the Victor Talking Machine Co., Camden, N. J., against William H. Hoschke, vice-president and general manager of the Sonora Phonograph Co., New York. The full text of the opinion follows:

"The patent in question is the well-known Berliner patent, which has been frequently before the courts. Its two claims, Nos. 5 and 35, are basic and have been held valid by the Supreme Court (Leeds & Catlin against Victor Talking Machine Co.; Talk-O-Phone Co. against same). The single defense in this suit is that the Berliner patent expired with the expiration of the original term of a Canadian patent granted to Wernes Suess, assignor to Emil Berliner, the term of which Canadian patent expired on February 11, 1911. The normal life of the Berliner patent, if not curtailed by the expiration of some foreign patent, would extend until February 19, 1912. Suess was an employee of Berliner at the time the patents were taken out.

"The two claims of Berliner read as follows:

"5. The method of reproducing sound from a record of the same which consists in vibrating a stylus and propelling the same along the record by and in accordance with the said record, substantially as described."

"35. In a sound reproducing apparatus consisting of a traveling tablet having a sound record formed thereon and a reproducing stylus shaped for engagement with said record and free to be vibrated and propelled by the same, substantially as described."

"The three claims of the Suess Canadian patent to which defendants refer as indicating identity of invention are as follows:

"5. In an apparatus for reproducing sounds from a record tablet, the combination with a reproducer mechanism consisting of a sound conveying tube and a diaphragm and stylus mounted at one end of the tube, of a freely swinging supporting frame for the said reproducer mechanism, substantially as described."

"In an apparatus for reproducing sounds from a record tablet, the combination with a reproducer mechanism consisting of a sound conveyor, and a diaphragm and stylus mounted at one end thereof; of a supporting frame for the said reproducer, loosely pivoted to swing freely both laterally and vertically, substantially as described."

"11. In an apparatus for reproducing sounds from a rotating record tablet, a reproducing stylus mounted to have a free movement over the surface of the record tablet, substantially as described."

"The following review of the history of litigation in this circuit on the Berliner patent is essential to an understanding of the questions now presented: In September, 1905, the validity of these two claims was sustained by Judge Hazel and infringement found in Victor Talking Machine Co. against American Graphophone Co. That decision was affirmed by this court for reasons stated in April, 1906. In the same month, April, 1906, and in a suit against other defendants, application was made to Judge Townsend upon affidavits for a preliminary injunction against alleged infringement of these same claims.

"In opposition to that application it was contended that the Suess Canadian patent covered the invention claimed by Berliner, that by reason of a failure to pay certain fees on the Canadian patent its normal term was shortened and it expired February 11, 1899; and that the Berliner United States patent expired on the same day, seven years before the application for the injunction. (Victor Talking Machine Co. against Leeds & Catlin.) Judge Townsend, after disposing of several other questions which arose in the case, held that the Canadian patent described and claimed the broad generic invention of Berliner, covered by his United States patent; and further held that the latter patent was not limited by any lapse of the Canadian patent occurring prior to the expiration of the original term of such Canadian patent. He granted a preliminary injunction.

"Appeal was taken from Judge Townsend's order to this court which, without writing any opinion, affirmed such order in open court. A certiorari to review this decision was issued by the Supreme Court and the decree was affirmed, the court holding that the duration of a United States patent is not limited by any lapsing or forfeiture of any portion of the term of a foreign patent for the same invention by means of the operation of a condition subsequent. In a suit brought against the Sonora Phonograph Co., a decree for injunction during the lifetime of the Berliner patent was entered December 15, 1910. An application was subsequently (February, 1911)

made to Judge Hough to limit said injunction so as not to extend beyond February 11, 1911, upon the ground that the full term of the Canadian patent expired on that day. He held that the identity of the two patents was already determined in prior litigations and modified the decree as prayed. (Victor Talking Machine Co. against Sonora Co.)

"The case at bar came on for hearing before Judge Hazel, much testimony having been taken as to the issuance of the two patents and bearing upon the construction thereof. Judge Hazel concurred in Judge Hough's opinion and entered a decree dismissing the bill March 1, 1911. It is from such decree that the pending appeal is taken; it is argued here that the only question in the case has been disposed of by the former decisions and that the decree of dismissal should be affirmed.

"We find no constraining decision. Judge Townsend at circuit had before him some affidavits and documents and the question was presented to him, whether or not the inventions were identical. He need not have answered it but he choose to do so, and made findings and expressed a conclusion thereon. When the same question subsequently comes before another judge at circuit on substantially the same evidence, it is to be expected that he will follow Judge Townsend's findings and conclusion. But if the evidence is materially different, so that he feels convinced that upon the new record Judge Townsend would have decided differently, we do not understand that he is so constrained.

"As to this court, when an order is 'affirmed on the opinion of the court below' it approves the reasoning, adopts the findings and concurs in the conclusions of the court below. When itself writing nothing, making no record of its findings as a court of appeals it merely announces 'order affirmed,' it is to be understood that for some reason it prefers not to adopt the opinion of the court below; either that it has reached the conclusion by a totally different process of reasoning, or that while, in the main approving the opinion, there is something in it which the appellate court does not wish to approve.

"In the case at bar all that this court has done has been to affirm Judge Townsend's conclusion that by reason of the non-payment of dues on the Suess Canadian patent the United States Berliner did not expire twelve years ago. And that decision on the record then presented, did not necessarily involve a finding as to the identity of the inventions claimed in the two patents. The syllogism of Judge Townsend was:

"Major premise: When an invention protected by a United States patent has also been protected by a Canadian patent, and before the expiration of its normal term the Canadian patent lapses because of non-payment of dues, the United States patent will expire at the same time.

"Minor premise: The invention protected by the Berliner United States patent was also protected by the Suess Canadian patent.

"This court and the Supreme Court both held that the major premise was unsound and therefore inquired no further. The question whether or not the two patents cover the same invention has been argued by both sides at great length. It is much simplified if we bear in mind the object of the statute, which was to provide that when an inventor had secured a monopoly in a foreign country by taking out a patent therein, in addition to the monopoly he had secured here, and the monopoly abroad terminated by expiration of the patent there, the people of this country should also be free to make and sell the patented invention. It is apparent that the real question to be considered is not what information is given to the world by specifications, but what is the invention which the claims protect and of which they secure the monopoly. In other words, what is the correct construction of the claims of the two patents, the language in which they are expressed not being identical?

"Claims 5 and 35 of the Berliner United States patent have been repeatedly construed by the courts in this country and found to cover a broad, basic invention. The three claims of the Suess Canadian patent have not been construed by the courts of that country, so we do not know authoritatively what invention it was which those claims secured to the patentee in Canada. But the Suess application expressly states that his invention has reference only to improvements in the reproducing apparatus adopted for use in the method of recording and reproducing sounds heretofore invented and published by Emil Berliner.

"Subsequently to its issue the Canadian patent office granted a patent to Berliner himself undoubtedly covering his broad invention and containing the very claims 5 and 35 of his United States patent. In view of these circumstances we have no doubt that, if at any time during its lifetime the Suess patent had come before the Canadian courts to be construed, it would have been found not to protect the broad invention of Berliner, but only the specific and detailed form of improvement which Suess contributed to the art. This being so, it is immaterial whether or not in the specifications of the Canadian patent there is contained sufficient information to indicate what the broad invention was. We are satisfied that the inventions covered by the claims of the two patents are not identical, and that the life of the Berliner United States patent is not dependent on the term of the Suess Canadian patent.

"The decree is reversed with costs and cause remanded with instructions to decree in conformity with the views expressed in this opinion."

May 31 following General Manager Geissler, of the Victor Co., issued the following notification to Victor dealers, as appended:

"The Victor Co. is pleased to announce that it has just secured another important victory by the decision of the United States Circuit Court of Appeals, of New York, filed May 26, 1911, reversing the decision of the court below, and sustaining the Victor Co.'s contention that its Berliner patent, No. 534,543, did not expire, as averred by the defendants, with a certain prior Suess Canadian patent. Our counsel, Horace Pettit, has advised us that the court has held, as contended on our behalf, that the said Suess Canadian patent was for another invention, and that the Berliner patent, No. 534,543, so often adjudicated by the Federal courts as valid and infringed, is entitled to its full term of seventeen years, and does not expire until the expiration of that term, February 19, 1912.

"It will be noted that we have again made good our assertions that this Berliner patent would doubtless be held by the United States Circuit Court of Appeals to be entitled to the full seventeen-year term, as set forth in some of our communications to the trade, among others, our circular letter of April 12, 1911. It has never been our practice to make assertions without having substantial reasons for them. We believed, in this case, that the facts were such that the Court of Appeals should sustain our contention as a just and equitable one, and in this we have not been wrong.

"It is hardly necessary for us to again notify the trade and public generally that we will promptly and diligently proceed against all infringers of this Berliner patent, No. 534,543, and particularly those who may have again started to infringe, under the contention that the patent may have expired. We believe that certain concerns are obviously in contempt of court by their infringing acts, and against these the necessary proceedings will be promptly instituted."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Four Weeks.

(Special to The Talking Machine World.)

Washington, D. C., June 10, 1911.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

MAY 14.

Barranquilla, 5 pkgs., \$255; Berlin, 20 pkgs., \$1,400; Calcutta, 3 pkgs., \$500; Callao, 10 pkgs., \$791; Cucuta, 2 pkgs., \$120; Havana, 3 pkgs., \$193; London, 4 pkgs., \$600; 99 pkgs., \$3,241; Para, 11 pkgs., \$528; Rio de Janeiro, 62 pkgs., \$6,193; 510 pkgs., \$22,189; 4 pkgs., \$318; Stockholm, 25 pkgs., \$765; Sydney, 19 pkgs., \$757; Teneriffe, 12 pkgs., \$482; Vera Cruz, 74 pkgs., \$3,295; Vienna, 19 pkgs., \$230.

MAY 21.

Barranquilla, 10 pkgs., \$100; Beira, 2 pkgs., \$580; Berlin, 90 pkgs., \$2,956; Bolivar, 4 pkgs., \$158; Buenos Ayres, 278 pkgs., \$23,995; Callao, 8 pkgs., \$848; 7 pkgs., \$301; Cape Town, 65 pkgs., \$1,706; Guayaquil, 4 pkgs., \$135; 2 pkgs., \$170; Havana, 3 pkgs., \$167; Havre, 101 pkgs., \$2,213; Iquitos, 2 pkgs., \$153; Kobe, 1,208 pkgs., \$1,676; London, 158 pkgs., \$4,226; 4 pkgs., \$550; Port Madryn, 3 pkgs., \$256; Puerto Mexico, 6 pkgs., \$179; St. Johns, 3 pkgs., \$420; Sydney, 65 pkgs., \$1,759; Vera Cruz, 229 pkgs., \$7,057.

MAY 28.

Batavia, 7 pkgs., \$158; Callao, 3 pkgs., \$224; Colon, 5 pkgs., \$146; Havana, 4 pkgs., \$942; Havre, 17 pkgs., \$330; Iquique, 12 pkgs., \$349; Kingston, 5 pkgs., \$271; La Guira, 5 pkgs., \$261; London, 125 pkgs., \$3,700; 6 pkgs., \$260; Melbourne, 285 pkgs., \$7,543; Para, 43 pkgs., \$1,875; Rio de Janeiro, 15 pkgs., \$578; Vera Cruz, 52 pkgs., \$1,902; Vienna, 2 pkgs., \$125.

JUNE 5.

Berlin, 104 pkgs., \$3,547; Buenos Ayres, 127 pkgs., \$5,819; Callao, 2 pkgs., \$175; 5 pkgs., \$232; Cartagena, 9 pkgs., \$641; Chemulpo, 4 pkgs., \$121; Guantanamo, 3 pkgs., \$110; Guayaquil, 6 pkgs., \$419; Havana, 5 pkgs., \$866; Havre, 15 pkgs., \$630; Hong Kong, 1 pkg., \$151; Kingston, 6 pkgs., \$414; London, 89 pkgs., \$1,684; Manila, 7 pkgs., \$583; Para, 24 pkgs., \$1,634; Rio de Janeiro, 112 pkgs., \$5,804; Santiago, 11 pkgs., \$258; Singapore, 3 pkgs., \$125; Yokohama, 13 pkgs., \$781.

It takes sand to make sandpaper what it is, and it takes sand to do most anything worth while.

The Talking Machine Trade in New England

"NEW ART" DIAPHRAGM INTERESTS

Dealers Throughout the Country—Something Worthy of Investigation and Consideration.

(Special to The Talking Machine World.)

Springfield, Mass., June 7, 1911.

Quite a number of dealers are taking interest in the "New Art" diaphragm, which is made in both aluminum and fiber and retails for one dollar with a big profit to the dealer. This is the invention of W. W. Young, of The Talking Machine Co., 218 Worthington street, this city, and was described at length in the last issue of The World.

In another part of this issue will be found a coupon, which with a business card, is good for a sample diaphragm and prices. So it is apparent that a dealer is well paid for the slight work in sending that in, as in addition to getting an article worth one dollar he will be put in touch with a live specialty seller.

MILLIONS OF NEEDLES.

Regarding the Big Output of the Bagshaw Factory—Some Interesting Details—Business Active with Wardell—Other Items.

(Special to The Talking Machine World.)

Lowell, Mass., June 7, 1911.

"63,020,300 needles in 10 days" is the schedule of the output of the talking machine needle plant of W. H. Bagshaw, of this city, according to their advertisement in another section of The World. Their comments on this are worth reading, as the achievement certainly establishes a high-water mark for talking machine needle production. Analysis shows that this figures 6,302,030 needles a day, which on an eight-hour basis, makes their output nearly a million an hour, or to be exact, 787,754 needles. Getting down to an even finer basis, it means 13,129 talking machine needles a minute or 217 needles a second.

Thus every time the watch ticks 217 talking machine needles are produced; every time the minute hand jumps around 13,129 needles are made; every time the hour hand moves up five pegs, 787,754 needles lay ready, while each night over 6,000,000 needles are ready for shipment. With 63,020,300

needles manufactured in 10 days, and considering 30 working days to the year, it means the production of 18,906,090,000, or nearly nineteen thousand million needles annually, which, according to the saying, "is going some."

It is needless to add that business with the house of Bagshaw is brisk.

Thomas Wardell, or "Tom," as everyone calls him, the Edison jobber, attests a seasonable business, particularly on the retail end. He says that the manufacturing industries of this city are working on but a five-day schedule, although they are full-handed. This does not make the city any too prosperous, but it is not affecting the talking machine industry to any great extent.

Pursuant to a general agreement among music stores, they close at 12.30 Thursdays till September. This permits their being open Saturday afternoons and evenings, at the same time allowing for a brief respite from business during the week. Among those who are doing this are M. Steinert & Sons Co., Ring Piano Co., and Louis Grunewald, Jr.

TAKE ON COLUMBIA LINE.

A Prominent Furniture House of Nashua to Handle the Columbia Exclusively.

(Special to The Talking Machine World.)

Nashua, N. H., June 6, 1911.

The L. Carlton Furniture Co. have taken the exclusive Columbia graphophone and records representation and are outlining a vigorous campaign for business.

SUFFER ENTIRE LOSS BY FIRE.

(Special to The Talking Machine World.)

New Bedford, Mass., June 1, 1911.

Richard Zerbone, talking machine dealer of this city, recently celebrated his third fire within a short time, this time being a full loss. The first two blazes only made a partial loss. Insurance officials viewed the last fire with suspicion and settlement was held up, but the matter is understood as now being settled. However, this lacks confirmation.

NEW HAVEN NEWS GLEANINGS.

How the Lineoid Recording Horn Helps to Develop a Dealer's Record Sales—Columbia Recitals Attract Large and Fashionable Audiences—Advantage Taken of the Visit of a Recording Artist—Other Gleanings.

(Special to The Talking Machine World.)

New Haven, Conn., June 7, 1911.

In their boosting of the Linenoid recording horn, the Pardee-Ellenberger Co. are putting great stress upon the fact that the sale of this horn will develop a dealer's record business tremendously. Owing to the features of the Linenoid and its peculiar construction, it gives fine carrying qualities and a powerful volume, which naturally makes record making easy. Many talking machine owners are unaware of the pleasure in hearing their own voices and a proper educational campaign on the part of dealers will arouse a big interest in this work. W. O. Pardee, president and treasurer, is very enthusiastic over the probabilities of the Linenoid Horn, and the sale of it is growing tremendously. Literature and prices will be gladly sent by him to any dealer writing to him.

Under the able management of H. M. Blakeborough, manager of the Columbia Phonograph Co., a fine series of recitals is being given to the public. They are grand opera treats and are given by the Regent, De Luxe, Mignon, Elite and Favorite Columbia Grafonolas.

When Guido Deiro, the accordeon artist, recently performed here for several weeks, Mr. Blakeborough made up a fine window display of his instrument, photographs and records, as well as serenading in a Columbia the audiences as they entered and departed from the theater. The result was that he sold numbers of Deiro's records. Mr. Blakeborough gives a valuable tip to dealers when he advocates their following the theaters and when an artist appears who has made records, to make a window display and take the "cake when it is passed around."

AN INTERESTING TESTIMONIAL.

(Special to The Talking Machine World.)

Richford, Vt., June 2, 1911.

The World man saw an interesting testimonial written by F. W. Mitchell, of this city, to the Columbia Phonograph Co.'s Boston headquarters, and the second paragraph entitles Mr. Mitchell to a humorist's medal. Here is the letter: "The new Grafonola Favorite came to-day and it is a beauty. It is a pleasure to handle Columbia goods, as I have yet to find a customer that is not satisfied. If St. Peter could only get Columbia Grafonolas I believe he would discard the harps."

AN OPTIMISTIC BURLINGTONIAN.

(Special to The Talking Machine World.)

Burlington, Vt., June 8, 1911.

W. A. Moulton, head of the American Phonograph Co., distributors of Edison and Victor machines, records and supplies, is most optimistic, saying "Business is good. Our grit is better than ever." This company is one of the most energetic distributors of goods in this eastern section and are doing a whole lot of work in the promotion of business here.

A PART OF THE ORGANIZATION.

An employe who receives human treatment from his employer feels himself a vital part of the organization in which he is working. He takes a deeper and more personal interest in it. Consequently, he not only becomes part of the organization, but the business becomes part of him, so that no matter if it is in business hours or out of business hours, he feels himself a part of the business and thus gives it a standing with all men.

Is Your Edison Service Right?

A chat on RIGHT SERVICE

We don't mean if you are "satisfied," but is it RIGHT?

RIGHT SERVICE means promptness and completeness; one without the other is but a half-service.

In fact, your service cannot be prompt unless complete. We consider these service divisions integral, and wouldn't think of soliciting the business of New England dealers unless we are at all times ready to render RIGHT SERVICE.

Everything in stock at all times from small parts to Amberolas; a most complete Edison Emporium.

A "test order" recommends our RIGHT SERVICE. Will you send it?

FROM OUR BOSTON HEADQUARTERS

ROOM 12, 178 TREMONT STREET, G. W. HENDERSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., June 1, 1911.

With the advent of the month of brides comes a little let-off of talking machine business. This does not mean that anything of a startling nature has occurred other than an expected let-up. The volume of both wholesale and retail business is in excess of last year for the similar period, which is significant in itself. Everyone is cheerful and optimistic, and the indicator points to "big business" as soon as the warm days are over.

Vacations are now in order, and the boys are drawing lots for the choice weeks. Absence occasions a little delay, broadly speaking, in general routine work, but it is more than made up when they return fresh for a good fall battle. Each one works in the other's place, so no new employees are required. Perhaps the most versatile talking machine man is E. F. Taft, general manager of the Eastern Talking Machine Co. During the summer Mr. Taft can be seen signing checks one minute; banging a typewriter the next; making a retail sale; drawing off invoices; booking a wholesale order, et al., and if necessary, there isn't a position in the store that he cannot fill. This isn't supposed to be an "Eastern item," so we'll have to stop on Mr. Taft's repertoire of accomplishments and take them up a page at a time ere long.

An Experiment in the Record Line.

Every time I think of George K. Cheney, the mechanical expert and talking machine man now

enough for Mr. Cheney, and consequently the United States again got him.

For the past year Mr. Cheney has been located in Boston with the Boston Talking Machine Co., as mechanical expert and inventor. His mind is full of ideas anent talking machines and their manufacture, but the Patent Office can tell more about these than we. It is the first time Mr. Cheney has resided in Boston, and the City of Culture agrees with him all right, for in Atlantic—a suburb—he has a fine home and lots of ocean to fish in. By the way, that's George's favorite pastime—fishing—and he says he catches a lot of them. Perhaps he uses diaphragms for bait and talks to them, but this won't be questioned. Socially he is a high degree Mason and a Shriner. With practically all his future before him, Mr. Cheney will undoubtedly make many interesting and noteworthy accomplishments in the talking machine field.

Taft to Milwaukee Convention.

E. F. Taft, general manager of the Eastern Talking Machine Co., Edison and Victor jobbers, is planning to attend the Jobbers' convention at Milwaukee. Mrs. Taft will probably accompany him. "I shall play baseball on the Eastern Jobbers' team; second base position preferred," added Mr. Taft, smilingly.

The Eastern Talking Machine Associates are planning a rousing time on June 17, a holiday here, when the entire body will jaunt to Providence, and at a seashore resort play games, enjoy a fish dinner and have an all-round good time. The E. T. M. Associates are some hustlers on the fun stuff.

The Value of Prompt Service.

There's quite a chat on "Right Service" as applied to the Edison business of the Boston Cycle & Sundry Co. Charles R. Cooper, manager of this department, is a firm believer in aiding the dealer in every right way and makes it his special object to see that every branch of this business is ready at a short notice to furnish everything that an Edison dealer would need in the promotion of his business. Quoting a paragraph from Mr. Cooper's copy, it is no wonder that their business is continually growing. Here is his statement: In fact, your service cannot be prompt unless complete. We

consider these service divisions integral, and wouldn't think of soliciting the business of New England dealers unless we are at all times ready to render Right Service."

A recent visitor to these quarters was F. K. Dolbeer, general manager of Thos A. Edison, Inc.

A Quaker City Visitor.

E. Bauer, sales agent of the Keen-O-Phone Co., makers of "New Idea" talking machines, Philadelphia, Pa., was here recently with two models of these machines.

Holmes' Compositions.

E. B. Holmes, manager of the talking machine department of Jordan, Marsh Co., has composed two musical numbers which will shortly appear on Columbia records.

Boyle Bros. Take on Columbia Line.

Boyle Bros., which is reputed as one of the largest instalment houses in New England, have taken the Columbia representation and will soon have a fine display of goods. This company are big advertisers and it is their intention to get after this market in an aggressive manner.

Arthur C. Erisman, manager of the Boston offices of the Columbia Phonograph Co., has just returned from the New York headquarters. Mr. Erisman reports that the past month has been decidedly successful in both wholesale and retail volume.

Much Esteemed Traveler.

A member of the wholesale traveling fraternity who is warmly esteemed by his trade is J. F. Luscomb, the Columbia traveler in western Massachusetts and Vermont. Mr. Luscomb having been a musical instrument dealer himself at one time, knows both phases of the industry and he makes a special point to assist dealers in their retail promotion.

Working Under a Heavy Schedule.

John M. Dean's big talking machine needle factory at Putnam, Conn., is working under a heavy schedule. The demand for "Puritone" needles, furnished both with and without the dealer's name, is strong. Samples and prices of this brand, or any of their many styles, furnished gratis.

Alas! He Is Gone.

Several items have appeared herein regarding the management of their talking machine depart-

GEO. K. CHENEY.

connected with the Boston Talking Machine Co., whose photograph appears herewith, I cannot help thinking of the man playing poker, holding a royal straight flush in his hand, with aces by his feet, kings in his pocket and queens behind his ears. Perhaps one wonders what this has to do with Mr. Cheney, since he doesn't play poker (?), but let me ask, has he plenty of cards to play with? In other words, Mr. Cheney's knowledge of the ins and outs of the talking machine game fits him to occupy one of the foregoing positions, as many of his friends will probably agree.

Before entering the talking machine arena back in 1897 with the National Gramophone Co., Mr. Cheney was an expert machinist and creator of machinery. A year later Mr. Cheney started the making of records, being one of the first to make the lateral cut disc records with the present process of engraving on wax. He then went with the Universal Talking Machine Co., which was followed with a connection with the Victor Talking Machine Co. With the latter company he was stationed at China making records, but eight months of talking a harlequin of English, Chinese and Portuguese, mixed ad lib. (called Pigeon-English), was

Mr. W. H. Bagshaw,
City.

Dear Sir:

I have tested the needles sent with yours of April 25th on Victor and Columbia records, and am much pleased with them. I should like to get some of the loud, as well as more of the medium, if you will advise where they can be had.

Truly yours
W. S. Southworth

"I like your NO-SCRATCH Needles very much indeed."
WALTER S. BALDWIN,
Laconia, N. H.

"Thanks for calling my attention to NO-SCRATCH Needles to use on Victor machines. I have tried them and find them the most satisfactory needle to use."
F. A. TUTTLE,
Lowell, Mass.

"Your NO-SCRATCH Needles, which I have tested on the Victor talking machine with song and band records, are found very preferable to all other needles."
LEWIS GOOSSENS,
Lowell, Mass.

Jobbers: Write for our proposition on "NO-SCRATCH" Needles, with samples.

Oldest and Largest Makers of Talking Machine Needles.

Established 1870

Columbia *quality* has been such an important subject to talk about that maybe we have not reminded you often enough of the Columbia *profit-margin*. Are you good at figures?

Columbia Phonograph Co., Genl., Tribune Building, New York

ment. So many managers have been there that a card catalog could be made of them, but in the April World the writer announced that the store had a change of heart; were waking up and had decided to keep a good man permanently. We promised in the May World to publish this manager's name this month, but alas, he has gone. When you consider that this is one of Boston's largest department stores, and regarded as an up-to-date spot, there is all the more fun watching the parade. Why not try the floor sweeper, the engineer, or give the office boy a stab at it?

TRADE NOTES FROM ST. LOUIS.

Summer Business Discussed—Anxiously Awaiting New Victrola IX—Regarding Price Cutting—L. A. Cummins with Victor Co.—Business in Arkansas and Kansas—Silverstone's Unique Record—St. Louis Schools and Talking Machines—Talking Machines for Ice Cream Parlors.

(Special to the Talking Machine World.)

St. Louis, Mo., June 9, 1911.

There is an old-time belief in St. Louis that business must touch bottom each summer, and Manager E. B. Walthall, of the Columbia Phonograph Co., says that a good many talking machine men hold that there is no use trying to do business in summer. That may account for the spotted reports as to the condition of the local talking machine trade at present. At the Columbia store it
